INTERNATIONAL SCIENTIFIC COMMITTEE

PRELIMINARY CHAMBER, A NEW INSTITUTION IN THE ROMANIAN PROCEDURE LAW

Alexandru MARIAN*

Abstract

The Prosecutor, in charge with the criminal prosecution, informs the Court through the indictment drawn up by him. Given its importance, as Court informing document, the law provides special treatment for its content and form. Both the end of the criminal prosecution and the arraignment, as distinct moments of the procedure, are parts of the criminal prosecution, considered criminal trial phase. The New Criminal Procedure Code introduced this new phase, the preliminary chamber, with the purpose to verify the lawfulness of arraignment. Thus, incorrectly drawn up files are stopped from being presented before the Court.

Keywords: *criminal trial, preliminary chamber, judge, prosecutor, judge, defendant.*

1. Introduction

An important new entry in the New Criminal Procedure Code is the preliminary chamber, an institution which leads to the new judicial position provided by art 3 paragraph 1 of this Code, specialized in examining the lawfulness of lawsuits.

The Romanian lawmaker thought that it was necessary to introduce it, given the judicial environment, in general, and, in particular, the lack of celerity in the criminal trials, especially, the lack of trust of the justice seekers in the justice action, together with the social and human costs resulted by the criminal trial, by a high consumption of the time and financial resources.

The lawmaker based the introduction of the preliminary chamber on the desire to observe to the requirements of lawfulness, celerity and equity of the criminal trial.

The preliminary chamber is a new concept aiming at creating a legal frame, able to eliminate the excessive length of the criminal procedure during the trial phase and assuring, at the same time, the lawfulness of the lawsuit and the evidence.

Also, another aim was to eliminate the deficiencies that had led to decisions of the European Court of Human Rights against Romania for exceeding length of the criminal trial.

2. Preliminary Chamber

The procedure of the preliminary chamber encompasses rules that eliminate the possibility to further return of the case to the prosecutor, during the trial phase, as the lawfulness of the evidence and the lawsuit had already been decided upon by this preliminary chamber.

The Judge of the preliminary chamber is bound to verify the conformity of the evidence produced during the criminal investigation, together with the guarantees related to the procedure lawfulness.

Thus, the lawfulness of the evidence production has been closely related to the assurance of the equity character of the criminal trial.

If the preliminary chamber judge finds necessary to invalidate the evidence proof, due to an essential violation of the procedure rights of one party, he will eliminate it as proof of evidence. The lawmaker focused on improving the justice action and the circumstances that determine the beginning of the justice administration.

The content of the provisions regulating the institution of the preliminary chamber and the solutions adopted represent the guarantee for the conditions so as the procedure during the criminal investigation have a fair character for a judgment on merits.

The presentation of the motives of the law project on Criminal Code, which became Law no 135/2010, said that: „when analyzing the deficiencies of the procedure system, appeared the need for a modern system concept, able to answer the necessity to create a justice adopted to the social expectations, and also the necessity to improve the quality of this public service”[1].

The new Procedure Code stipulates that this preliminary chamber is a new institution, whose purpose is to create a modern legal frame.

At the beginning, the initial thesis on creating the new Procedure Code, approved by the Romanian Government Decision no 829/2007, this trial phase is called preliminary step. For unknown reasons, the lawmaker gave up to this expression.

The preliminary chamber procedure is not completely new for us; such phase existed in the

Romanian legal system known as preliminary meeting.

This preliminary meeting was introduced b the Decree no 506/1953, abrogated afterwards by the Decree no 473/1957.

Article 269 of the first legal act provided the following: "the files received from the prosecutor are to be examined in a preliminary meeting so that the court, judging the merits, receives only the cases where the evidence is necessary, sufficient and legally administrated, and thus, the court, judging the merits, could decide whether the facts are supported by evidence or not and whether the defendant committed them or not and therefore, found guilty for this".

We can easily notice that the institution of the preliminary meeting was a procedure step similar to the preliminary chamber, easily described by the definition of the late, "a procedure step, preamble to the judging step, when the judge, especially assigned for this, according to the competence of the court, verifies the lawfulness of the court, of the evidence or of the procedure actions carried out by the criminal investigating bodies"[2].

We can see that both procedures represent preliminary steps of the trial, with the purpose to analyze the act of notification of the Court in order to find the observance of the law requirements. The aim of these procedures is to stop files that have been incorrectly drawn up, before being presented before the judging Court.

The institution of the preliminary meeting led to many judicial debates and controversies[3] on intricacy resulted from the content of the regulation on aspects on which the Court could rule decisions, such as guilt of the author or on which the Court could issue appreciations on the probative character and the truthfulness of the pieces of evidence.

Law no 3/1956 brought amendments on the institution of preliminary meeting in order to reach an agreement with other institutions of this law.

For instance "the writ of summons" became „accusation conclusions".

The same law set that the Court President and the prosecutor shall draw up a report instead of a "President's presentation" and "Prosecutor's report".

During the preliminary meeting they used to acknowledge the classification and the cease of the criminal case, and according to the same law, the Curt could re-open a criminal case after it had been ceased by the effect of classifying it in the preliminary meeting. This re-open was made only at the express demand of the prosecutor and only pursuant to the reasons proposed to be reviewed, with precise application. For this reason, the prosecutor had to attach to his request, the papers with the new circumstances to be analyzed, as base for his action. Therefore, the Prosecutor would draw up new accusations, brought before the Court, and the trial was re-begun with the arraigning phase, followed by a new preliminary meeting, carried out in the known circumstances.

In practice, new debatable aspects appeared concerning, for instance, the fact that during the preliminary meeting the Court had to decide or not, on the guilt of the defendant, and then decide on the arraignment, being sure about the guilt of the accused person. Also, another controversy was related to the circumstance where the Court decided on the probative character of the evidence, on their truthfulness, whether the case was classifiable or not if there were illegal or doubtful pieces of evidence, or pieces of evidence fought against with others proving the lack of guilt[4].

It was thought that the main characteristic of the preliminary meeting was to assure the best conditions for the judgment on merits, not being able to anticipate the solution ruled by the Court of First Instance.

The preliminary meeting decided whether the pieces of evidence were legally administrated and sufficient, leading to the preparation for the trial and helping the Court to decide if the facts were supported by evidence and the if accused found guilty for having committed them.

Proof analysis consisted in verifying whether they were legal and also whether they had been legally administrated, according to the Criminal Procedure Law. Thus, any possibility to verify the guilt of the author was eliminated.

At that time, there was an opinion about the judges of the preliminary meeting who shall not adopt "a preconceived opinion about the guilt of the accused"; that would take place during the oral contradictory and free debates in the judging session.[5]

Another issue raised by the legal text, at that time, was about the incompatibility of the presence of judges, who had taken part to the preliminary meeting, at judgment on merits. The former Supreme Court decided that judges' participation to the preliminary meeting is not incompatible with their presence in the trial court, as the preliminary meeting doesn't rule on the merits and the arraignment is not a "ruling on the merits"[6].

This, in our opinion, is debatable, because the judge, no matter how impartially he would judge, he couldn't "forget" his opinion on the accused, made during the preliminary meeting; that is why we think

[6] Supreme Court, *Criminal Decision no 324/30 March 1954.*

the decision is not right and it affects the principle of presumption of innocence of the defendant and his right to a fair trial.

The preliminary meeting was justified by the Supreme Court practice[7] because they thought it has the possibility to correct the legal qualification of the facts presented by the Prosecutor; by changing the legal framing of the fact in the preliminary meeting, we can have a classification, due to the amnesty, or due to the lack of the preliminary plea or to the presence of another reason that makes impossible the beginning of the criminal trial. Finding that the alleged fact of the accused, complies with all the features of a more severe crime, the Court, during the preliminary meeting, can change the classification, without sending back the papers to the criminal investigating authorities. The case can be sent back when the evidence are not sufficient for a right qualification. The competence of the preliminary meeting, during the previous legal system, was quite generous. It had the power to rule on all law matters, both the material and the criminal procedure, provided it was not on merits, it didn't anticipate on the trial session, it didn't pronounce on the guilt or absence of guilt of the author.

About the facts, during the preliminary meeting, the Court could decide whether the facts had been or not supported by an intention, and thus, decide on bringing more pieces of evidence or classify the case.

A decision on a classification during the preliminary meeting, due to the presence of a cause which makes impossible the beginning of the criminal trial, or due to the insufficient lawfulness of the actions or data (evidence), the preliminary meeting is not replacing the Prosecutor but verifies whether there are conditions for a judgment on merits, the prosecutor still being the accusing part; the preliminary meeting becomes a preparatory step for the judgment, like an instrument for establishing the truth; the trial session has the exclusive right on stating the truth and the guilt of the author.

Another author[8,9] thinks that: during the preliminary meeting, the evidence cannot be taken into consideration in order to establish the truth as, not being definite, they cannot be considered as object of analysis; the analysis criterion is the evidence value and this value is clear only when the evidence is definitive and considered as a total. Another author thinks it is hard to believe that a judge, who, during the preliminary meeting, has studied the circumstances for arraignment, doesn't have an opinion about the guilt of the defendant. Thus, he could be contested for pre-judgment. We think that judges who presided the preliminary meeting, are no longer compatible with judgment on merits, contrary to the opinion of the Supreme Court. Many authors believe that it is impossible to decide that a charge is well grounded and not to have an opinion about the guilt of the defendant.

During the preliminary meeting, the judge has to reach a decision: whether the defendant shall be found guilty, given the evidence produced during the criminal prosecution and confirmed during the preliminary meeting, and thus the file shall be transferred to be trialed; if the evidence lead to the opposite opinion, the judging panel shall classify the case; and in case the panel cannot reach a verdict, they shall send back the case for a complete criminal prosecution, and if this cannot happen, they will classify the case (in dubio pro reo). Finding out the truth, including the guilt, is an objective both for the preliminary meeting and for the trial phase and eliminates the risk to have the judges, influenced by the actions of the preliminary phase while judging on merits in court room.

Thus we can see that preliminary chamber is not completely new to our legal system and it has predecessors in other similar institutions in compared law.

The New Criminal Procedure Code adopted a new fundamental principle – separation of judicial functions. According to art 3 paragraph 1, the criminal trial is divided into 4 judicial functions: criminal prosecution, provision of fundamental rights and freedoms during the trial, verification of the lawfulness of the arraignment and judgment. The function of verifying the lawfulness of the arraignment, carried out by the judge of the preliminary chamber, doesn't belong to the criminal prosecution phase or to the judgment. Therefore, the judge of the preliminary chamber doesn't participate to criminal prosecution action or to judgment.

The preliminary chamber institution of the New Criminal Procedure Code is very similar to other institutions in the compared law.

In the American procedure system, the preliminary hearing represents an important trial step. Its purpose is to establish whether the evidence procured by the prosecutor is sufficient to justify the accusation brought against the defendant. This preliminary hearing takes place before a judge who, after the prosecutor's speech, gives the defendant the opportunity, through his lawyer, to defend himself, deciding whether there are enough and grounded reasons to bring the case in front of a jury. The jury has the right to reject the evidence if it is not well grounded or to send it forward to the Chamber of the Grand Jury.

If the file is rejected for lacking evidence, the arrested defendant is freed at once. If he is free and the file has been rejected, the defendant is not bound anymore to observe the conditions set by the

[9] Kahane S., *Course of Criminal Procedure*, Lithography of Education, Bucharest, p. 227.

prosecution (for instance, not to leave town). Anyway, a file rejection during the preliminary hearing doesn't mean that the Grand Jury cannot lodge another accusation against the defendant, sometimes, afterwards. Thus, an accused can be prosecuted and arrested again, for the same deed, even though his file was rejected during the preliminary. Although the defendant has the right to a preliminary hearing, he can lose this right if the State gets an accusation from the Grand Jury before the preliminary hearing. It is a tactical move of the Prosecutor to avoid the "probable cause hearing".

There are cases when the defendant doesn't have the right to the preliminary hearing, such as the situation when the file is brought before the Grand Jury before the defendant being arrested or an offence, and the defendant finds out about it after the Grand Jury issued a sentence decree.

If the Judge preliminarily heard a file and this has been sent to the Grand Jury for trial, with enough evidence, the Grand Jury is not influenced by the decision of the Judge who sent the file. The Grand Jury can either acquit the defendant either reject the file for lack of evidence. The preliminary hearing shall last for a reasonable time period, meaning "no more than 10 days since the beginning of the hearing, when the defendant is arrested, and no later than 20 days, when the defendant is free".

The justice in the United Kingdom uses the preliminary hearing in order to establish whether there is evidence to justify the arraignment. The accused party has the opportunity to acknowledge the accusation brought against him/her. If there is enough evidence, the judge sends the case for trial and if he thinks there isn't, the case is rejected. The victim of the offence and other witnesses are, usually, compelled, to testify during the preliminary hearing.

In France, the judge of the first instance can use several procedure instruments, such as: issuance of searching warrants, request of producing certain evidence and annulment of others, issuance of warrants for witnesses or demands for experts opinions and testifies. The instruction judge issues and order if there is not a file; or he can decide there is sufficient evidence for a trial and can make a recommendation for the Court of Appeal for a preliminary hearing.

If the Court of Appeal supports the recommendations of the Judge of instruction, they will send the case to the Cour d'Assise, the only Court in France with jury (Court of Appeal and Cour d'Assise are part of the same instance as the Judge of Instruction). The Judge of Instruction is notified through the initial indictment issued by the Public Ministry.

3. Conclusions

The Preliminary Chamber seeks to solve matters on lawfulness of the arraignment and of the evidence.

According to art 54 of The New Criminal Procedure Cod, the judge of the preliminary chamber has competence in: verifying the lawfulness of the arraignment decided by the Prosecutor, verifying the lawfulness of the evidence and of the procedure papers drawn up by criminal prosecution authorities, solving complaints brought against resolutions for no criminal prosecution or arraignment, and also other situations, expressly provided by law.

At the same time the judge of preliminary chamber can judge certain ways of appeal against resolutions for no criminal prosecution or arraignment, but also legal disputes against resolutions on preventive measures in preliminary chamber on conclusions about the solutions of the demands and exceptions of this preliminary procedure.

The preliminary chamber procedure is a written one, of no more than 60 days since the registration of the file. This period includes also the term for solution of possible disputes drawn up, according to art 347 paragraph 1 of the New Criminal Procedure Code, by the defendant and by the Prosecutor against the solution ruled in Conclusions, by the Judge of Preliminary Chamber.

Recent jurisprudence has registered many debates on the sanction for non observance of this term, legally provided. It is considered as a procedural term and by its violation shall not affect the validity of the procedure and of the conclusions of the judge of preliminary chamber, maybe only disciplinary sanctions for him.

Another debate appeared in the jurisprudence is the one concerning the 5 day term given to the Prosecutor by the Judge of Preliminary Chamber in order to remedy possible errors. According to art 346 paragraph 3, letter a of the Criminal Procedure Code, this judge shall rule his decision about sending the case to the Prosecutor's Office if the Prosecutor hasn't remedied the deficiencies within 5 day time.

In absence of deficiencies and if the criminal prosecution was legal and well grounded, the judge of preliminary chamber decides on sending the case to the next phase, judgment on merits, complying with lawfulness, celerity and equity.

UNDERCOVER PARTNER

Alexandru MARIAN*

Abstract

The undercover partner takes part in the process of providing the investigating bodies with information. This institution carries out activities similar to undercover investigator. These both represent a proactive investigating instrument used by criminal authorities to obtain better results concerning the fight against criminality. Under the cover another identity, they carefully search for crimes or favorable circumstances for commitment of others new.

Keywords: *partner, investigator, investigation, prosecutor, judge.*

1. Introduction

The institution of undercover partners was introduced in the new Criminal Procedure Code by Law no 281/2003, with the purpose to fight against criminality

Previously, several acts have been adopted with provisions on using undercover investigators (for certain cases, we use "undercover policeman"), such as Law no 143/2000 on fight against drugs trafficking and illegal drug use, which by its art. 21 stipulates that: "Prosecutor can authorize the use of undercover investigators to discover facts, to identify authors and o obtain evidence in cases where there are well grounded reasons to consider that a crime related to drugs trafficking or illegal drugs use has been committed."

Law no 218/2002 on organizing and functioning of Romanian Police sets in its art. 33 that "in order to prevent and fight corruption, trans-border criminality, human trafficking, terrorism, drug trafficking, money laundry, IT crimes and organized crime, on the demand of the Romanian General Police Inspectorate, having the approval of the Prosecutor's Office of the Court of Appeal, the Romanian Police can make use of undercover informers in order to obtain information for a trial. The Prosecutor's authorization shall be issued by a Decree, for a maximum 60 day time which can be extended, provided there are well grounded reasons; each time, the extension cannot overpass 60 days. All these authorizations shall be confidential and not be made public".

Law no 39/2003 on prevention and fight against organized crime stipulates in its art 17, that "in case there are well grounded reasons that a crime has been committed by one or several members of an organized group, that cannot be proved or whose authors cannot be identified by other means, undercover policemen can be used to gather information and identify facts and authors". These policemen are employees of the Ministry of Home Affairs.

According to art 22 of Law n 678/2001 on fight against traffic with human beings, undercover investigator can be use to gather information necessary for the beginning of the criminal prosecution.

2. Undercover partner

According to art 138 paragraph 10 of the Criminal Procedure Code, undercover investigators are persons using false identity in order to obtain information and data about a committed crime. The provisions on undercover investigators provided both by the Criminal Procedure Code and by special laws, allow us to have different approaches of this institution.

According to art 141 paragraph 1, letter a of Criminal Procedure Code, undercover investigators are used when "there is reasoned suspicion about the preparation and about a committed crime against national security provided by the Criminal code and other special laws, such as crimes involving drug trafficking, arms trafficking, human being trafficking, terrorism or assimilated to them, such as financing terrorism, money laundry, counterfeiting money or other values, electronic payment instruments, blackmail, deprivation of liberty, tax evasion, in case of crimes of corruption, crimes assimilated to those of corruption, crimes against financial interest of European Union, crimes that are committed by means of IT or electronic communication devices or in case of other crimes provided by laws with punishment by prison of 7 years or more or if there is a reasoned suspicion about a person being involved in criminal activities related to the above mentioned crimes".

Using false identity, pursuant to law, undercover investigator can gather information on the crime, on the persons suspected of committing or having committed a crime. Their actions cannot be considered as constraints or encouragement to committing or continuing to commit crimes.

* PhD Lecturer, Faculty of Law and Administrative, Sciences "OVIDIUS" University of Constanţa, Romania, (e-mail: **marian.alexandru1961@yahoo.ro**).

Undercover investigators are special policemen assigned to do this with clear purpose of gathering information.

We considered necessary to make mention all these legal acts which regulate the institution of undercover investigator as the undercover partner we analyze in this work does the same actions as the undercover investigator. The law doesn't define the partner but we can adopt the definition of the collaborator of justice, as in the Recommendation no 9/2005 of the Committee of Ministers of the member states of EU on protection of witnesses and collaborators of justice[1] .

Thus, a collaborator of justice is the person who faces criminal charges or has been convicted of taking part in a criminal association or other criminal organization of any kind or in offences of organized crime, but who agree to cooperate with but who agree to cooperate with criminal justice authorities, particularly by testifying about a criminal association or organization, or about any offence related to it or other serious crimes.

The undercover partner is the person assigned to obtain information just like the undercover investigator with the purpose of gathering information about crimes and their authors.

As the specialized literature doesn't offer a definition for undercover partner, many times it was described as an undercover investigator but to use it this "to cover also the activity carried out by a person who is not employee of the police, is illegal"[2].

Others[3] think that undercover partner is the person who "within the limits of permission given by the Prosecutor carries out certain actions to discover crimes, to identify authors and to obtain useful data to establish the existence of a crime and start the process of holding authors criminally liable".

Law no 143/2000[4] on prevention and fight of illegal drugs trafficking and use, with its article 22, stipulates the employment of partners, meaning specially trained policemen acting as undercover investigators, and their collaborators who can obtain drugs, essential chemical substances, pursuant the previous authorization of Prosecutor, in order to discover criminal activities and identify criminals.

Thus, a collaborator of the undercover investigator can be a police informer or a person investigated in another case, who decided to cooperate with judicial bodies in order to discover crimes and identify their authors.

A more extended definition would say that any person, no matter if he is member of not of a police or informative structure, who helps during the actions of discovery, research, investigation and bring to justice those who committed the crime. Thus, collaborators can be both informers and persons accused for having committed crimes, but also persons who testify about crimes which are not related with them in any way.

Provisions of art 148 paragraph 5 of Law no 143/2000 state that undercover investigators obtain information, based on the Prosecutor's authorization who is the beneficiary of this information. The prosecutor surveillance and carries out the criminal prosecution.

For this, undercover investigators draw up minutes.

The fact that the undercover partner is allowed to get drugs, chemical substances and precursors, is possible due to the Prosecutor's permission, which is also mentioned in a minutes, the only document considered evidence.

The partner can be heard but only as witness with protected identity, as specified by law at art 125-130 of Criminal Procedure Code.

The importance of the activity done by the undercover investigator and partner led to the necessity of United Nations Convention against Transnational Organized Crime: each state shall take appropriate measures in order to encourage persons who participate or who have participated in organized criminal groups to supply information useful to competent authorities for investigative and evidentiary purposes on such matters as: identity, nature, composition, structure, location or activity of these groups; links including international links, with other organized criminal groups; offences that organized criminal groups have committed or may commit; to provide factual, concrete help to competent authorities that may contribute to depriving organized criminal groups of their resources or of the proceeds of crime[5].

Each state shall consider providing for the possibility, in appropriate cases, of mitigating punishment of an accused person who provides substantial cooperation in investigation or prosecution of an offence or organized crime.

These persons shall be granted protection against possible threats or acts of violence or intimidation. These references concerning the partner institution

Are provided by art 15 and art 16 of Law no 143/2000 on persons who have committed an illegal substances offence and who decided to cooperate

with judicial authorities to identify and punish others who committed offences involving drugs trafficking. These collaborators, who committed one of the offences provided by art 2 – 10 of this law, who have cooperated and informed about other offenders, are to have their punishment mitigated by half.

On the other hand, the law stipulates also a case where the punishment is no longer enforced for the person who, before the beginning of the prosecution informs the authorities about his participation in a group or in an agreement to commit one of the offences provided by art 2-10, allowing identifying and bringing to justice of other participants[6].

Such benefits are also mentioned by law no 39/2003 on prevention and fight the organized crime[7].

Art 9 paragraph 2 of this law states half of the legal punishment for the person who committed one of the crimes provided by art 7 paragraph 1 or 3 of the same law and who, during criminal prosecution or judgment, informs and facilitates the identification and the bringing to justice of one or several members of a criminal group.

This category of collaborators is not regulated by Criminal Procedure Code or by any other law; that's why we think that any person can become a collaborator. This does the same things as the undercover investigator, without being a police officer or agent and therefore we can ask about the difference between them.

We also remark that the lawmaker didn't state anything about the conditions or limits of the partnership or its duration

Compared to the informer who is a person who is not involved in the criminal activity and who informs about facts he accidentally found out, the collaborator is a well known in these criminal groups and often collaborates with judicial authorities.

According to provisions of art 148 paragraph 5 of the Criminal Procedure Code, only investigators can carry out investigating actions. Thus, thinking that collaborator enjoys the same authorization as the investigators is an extended interpretation of the law.

Assignment of an investigator and the choice of a collaborator imply necessary measures of recruiting, selection and training.

Both of them must be familiar with the world of criminality, its modus operandi, its slang; they must be members of the action zone, have the same origin or, at least, the same education like other criminals; they must have self esteem, be able to assess correctly reality and have good memory and patience.

Many expressed their opinions[8] about the fact that the papers the collaborators draw up are absolutely null for the criminal investigation process, according to art 102 paragraph 2 of the Criminal Procedure Code related to art 280 Criminal Procedure Code.

Therefore, the only possibility to contribute to unveil the facts and identify the author is the hearing a witness according to art 114 of the Criminal Procedure Code.

Jurisprudence often encounters situations where a person commits offences and draw up several reports in order to obtain several reductions of the punishments.

The High Court of Cassation and Justice motivated a rejection of the appeal made by a defendant, pursuant to art 19 of Law no 682/2202 and art 16 of Law no 143/2000, stating that: "the person who committed on of the crimes provided by art 2-10 of Law no 143/2000, and who during the criminal prosecuting informs and helps to identify and bring to justice other offenders related to drug crimes, enjoying the mitigation by half of the punishment limits according to art 16 of Law no 143/2000, cannot be granted a new mitigation by half of the punishment as the provisions have the same content"[9].

As using collaborators is a common practice, sometimes their activity exceeds their competences and become similar to the provocateur.

There are opinions[10] according to which "in order to enter under the incidence of art 101 Criminal Procedure Code, the provocative activity of a crime must have clear form of instigation to initiate in a person's mind the idea to commit an offence; it cannot be represented by requests, deception, innuendos, false promises, threats, blackmail, harassment or repeated demand based on mutual sympathy.".

The High Court of Cassation and Justice decided that[11] "there is no violation of art 101 paragraph 3 of Criminal Procedure Code, as it is not a instigation to commit offences, given the fact that the defendant involvement in drug trafficking was known both by the collaborator and the defendant. In other words, the defendant already had a tendency to commit such offences (taking into account that at that time he was already brought to justice for similar actions); the fact that the defendant committed the offence after he had been contacted by co defendant, who had talked with collaborator on buying a drug quantity, doesn't confer the later a provocateur feature as it is provided by art 101 of Criminal

Procedure Code and sanctioned by the European Court of Human right in its jurisprudence".

That is the reason for which there should be no confusion between the activities of determining, of inciting, if there is no clear evidence of intention, wand those of creating some opportunities or some favorable conditions to carry out an illegal action, conceived and continued on his own.

Sometime, it the collaborator who incites, determines or pushes, even by material cooperation, to commit a crime so that afterwards he should benefit from a reduction of the punishment, as set by law.

That is why we strongly think some clear regulations to be adopted to state the circumstances where we have instigation and to forbid these practices as the content of art 101 paragraph 3 of Criminal Procedure Code stipulates the elimination of the illegal evidence.

The only documents that regulate the institution of the collaborator are the special laws. The competences of the undercover collaborator were considered similar to those of the undercover investigator.

The tasks of the undercover partner have been set by the extensive interpretation of the definition of the definition of the undercover investigator.

Thus, the Criminal Procedure Code decided to make use of undercover investigators and therefore of collaborators only when "the measure is necessary and proportionate with limitation of fundamental rights and freedoms, given the characteristics of the cause, the importance of information and of evidence[12]".

Collaborator can be heard as witness as it is set by art 125-130 of Criminal Procedure Code, defining a new category of witness, the threatened one who receives additional protection, according to art 126-129 of Criminal Procedure Code.

3. Conclusions

Using the undercover investigator and partner helps to obtain information concerning crimes. The undercover investigator has to report to the Prosecutor in charge with the case periodical reports on his activity. Such reports are confidential and they are drawn up by investigators based on the data obtained, together with all the details of the activities carried out by them, all focused on serious offences, committed or which are being prepared to be committed, and on their authors.

The partner obtains data and information, sometimes even pieces of evidence, that he gives to the undercover investigator. This one writes the minutes about the actions undertaken by him and by the partner.

Both of them can be heard as witnesses during a trial, according to art 125 of the Criminal Procedure Code, without being asked about their person.

Authorities want to keep their identity confidential, in order to offer protection to them and their families and at the same time to continue their activity inside criminal groups and protect the methods.

When there is a risk concerning the hearing of these persons during the trial, the prosecutor can inform the judge for rights and freedoms on anticipated hearing according art 308 and 352 of the Criminal Procedure Code. If, afterwards, during the trial, this is no longer possible, and if they have already testified before the prosecuting bodies or the judge for rights and freedoms, pursuant to art 308 of the Criminal Procedure Code, the Court shall decide that the statement be read and taken into account while judging the case.

In our opinion, the Romanian law doesn't offer a satisfying explanation on the fact that these undercover investigators or partners, or collaborator in justice can commit offences in order to gain respect and confidence of the members of the criminal groups.

We consider that the crimes committed inside the criminal groups must be thought absolutely necessary and less serious than those for which they obtained permission from the prosecutor and totally proportionate to the envisaged purpose.

Therefore, we think that our legal system should consider offering clear rules concerning this issue.

THE PRINCIPLE OF SEPARATION OF JUDICIAL FUNCTIONS

Denisa BARBU[*]

Abstract

The fundamental principles of the criminal procedure are general rules applicable throughout the criminal procedure in order to achieve its purpose. The fundamental principles are covered by art. 2-12 C.C.P. and are: the legality of criminal procedure, separating the functions of the judiciary, the presumption of innocence, finding out the truth, ne bis in idem, a requirement for moving and exercising penal action, is fair and reasonable term of the criminal trial, the right to liberty and security, the right to defence, respect for human dignity and privacy, the official language and the right to an interpreter. The European Court of Human Rights is conscious that by protecting the fundamental principles it does not only aim at the protection of super eminence of the inextricably right tied to the state of law. These principles represent a set of obligations imposed on the State that has as the sole purpose the protection of fundamental rights and freedoms.

Keywords: *right to defence, presumption of innocence, guaranteeing the freedom of the person, the legality, the separation of judicial functions.*

1. Introduction

The current criminal procedure code brings important changes to some of the old code of criminal procedure, but devotes a number of new institutions, which have not existed in our criminal procedural legislation. All of these changes are reflected primarily in Title I of the General Part of the Code, which governs the procedural criminal law principles[1].

In connection with the principle of separating the functions of the judicial doctrine, the following conclusion was reached, namely, that there are 3 functions: judicial prosecution, defense and jurisdiction (criminal law conflict substantially in the courts of law), showing that they are resolved, by the authorities of their respective differentiated parties involved in the criminal proceedings.[2]

It may thus be inferred that the legislature did not take into account the doctrine opting for regulating four functions which are incompatible with the exercise of other functions, unless the function available on the rights and freedoms of individuals during criminal investigation and verification of the legality of sending or not sending to court, which are compatible with one another; cf. art. 3 para. 3 C.c.p.

A number of issues concerning the incompatibility of judicial functions in the same case were put into the jurisprudence of the ECHR, laid down a clear situation regarding the impartiality of the Court which adjudicates the case fund and the judge who ordered the preventive measure of preventive arrest or arranging the sending to court.[3]

So, the jurisprudence of the ECHR is labile, and felt that taking preventive measure by the Court is not sufficient to establish bias judgment, but there must be objective justified grounds with regard to its impartiality.[4]

Thus, such acts are related to the function available on the rights and freedoms of individuals in the phase of the criminal prosecution, as was provided for in the present Code of criminal procedure, providing however an incompatibility between it and the function of the Court, while the two functions are not incompatible in terms of the ECHR's jurisprudence.[5]

2. Content

In the framework of the principles which guarantee respect for the rule of law, we find:

- the legality of the criminal process;
- the separation of the judicial functions
- finding out the truth
- ne bis in idem

As shown in literature, we can define the General principles of law as the fundamental prescriptions containing essential ideas must permeate any rule of law with a legal phenomenon, having a creator role, but also by the fact that they

basically contain objective conditions which need to be in any law.[6]

The separation of judicial duties is a fundamental principle that binds rather judicial functions by the separation of the incompatibility.

The resolution of the criminal case involves the exercise of several judicial functions throughout the criminal process[7]:

A. the function of prosecution[8]: the prosecutor and the criminal investigation bodies gather evidence to determine whether or not there are grounds for referring to court.

B. the function available on the fundamental rights and freedoms of the individual in criminal investigation: the judge of rights and freedoms (with the exceptions stipulated by law) has on the acts and the measures under criminal prosecution that restrict the fundamental rights and freedoms of the individual (the right to liberty, to privacy, etc.)[9]

- judicial review through the judge of rights and freedoms guarantees the rights and freedoms of persons involved in criminal proceedings.

Within this function, the judge of the rights and freedoms pronounces with regard to:

a) preventive measures:

- taking the measure of pre-trial detention or arrest;[10]

- the confirmation of the mandate of preventive arrest issued in absentia;

- the extension of the pre-trial detention measure or arrest;

- the replacement of judicial control or measure of judicial control on bail with the measure of arrest at home or arrest;

- the settlement of termination by operation of law, revoking, replacement of the measure of pre-trial detention or arrest;

- the complaint lodged by the defendant against the order of the Prosecutor took the measure of judicial control or judicial review or control on bail, etc.

b) the consent searches or domiciliary or the use of special informatics methods and techniques of monitoring or research, as well as other methods of proof:

- the settlement proposal authorizing the Prosecutor to carry out an informatics or domiciliary search;

- the resolution of the Prosecutor's proposal for approval of technical supervision;

- the confirmation of technical supervision measure authorized under the emergency conditions by the Prosecutor;

- the resolution of the Prosecutor demand extension of mandate of survey;

- the settlement proposal authorizing the Prosecutor to obtain general data or processed by providers of publicly available electronic communications networks, other than the contents of communications and retained by them;

- the settlement proposal authorizing the Prosecutor to obtain data on the financial status of a person.

c) precautionary measures:

- the resolution of the appeal brought against the order of the Prosecutor regarding precautionary measures;

- the resolution of the Prosecutor' s proposal to capitalize the assets, when there is no consent of the owner;

- the resolution of the appeal brought against the conclusion of the recovery of seized assets, when there is no consent of the owner;

- challenging the Prosecutor's solution of things.

d) provisionally safety measures:

- the obliging to the provisional medical treatment/ provisional medical hospitalization of a suspect or accused in the criminal investigation phase;

- the lifting of the provisional measure obliging to the medical treatment/provisional medical hospitalization of the suspect or accused;

e) other procedures under C.c.p.:

- hearing the witness in accordance with anticipated hearing;

- taking, extension, revocation of the measure non-voluntary hospitalization in the clinic to carry out forensic psychiatric expertise;

- physical examination of a person in the absence of the consent of the person concerned;

- the issuance of the mandate of remembrance at the request of the public prosecutor in which to execute the mandate of remembrance is necessary the penetration without consent in a home or establishment, in the framework of criminal prosecution;

- the opposition concerning the reasonableness of overdue the criminal prosecution;

These two functions are exercised within the criminal investigation phase.

C. The function of checking the legality of bringing or non-bringing to trial is exercised by the judge of the preliminary room which verifies the legality of bringing to trial act and the evidence on

[10] In the competence of the rights and judgments there is also the conclusion of the defendant request regarding home arrest, in order to permit leaving the house.

which it is based and also check the legality of the solutions for bringing to trial.

D. The Court Function[11] shall be carried out by the Court in legality established panels (art. 3 para. 7 C.c.p.). It specifies the phase and consists of:

- the management of the probation
- the assessment of the evidence for the purpose of the pronouncement of a judgment
- the verification of the claim made by the solidity of the Prosecutor, to the parties and to the trial subjects being guaranteed the rights in the article 6 of ECHR.

From our point of view, although the legislature has omitted, there is also the function of the enforcement of criminal judgments.

From these judicial functions, there are exceptions:

- under article 3 paragraphs 3, the function of checking the legality of bringing/not-bringing to trial is compatible with the function of the judgment-judge of preliminary chamber will participate in the preliminary judgment of the case (art. 346 para. 7 – the Chamber judge which ordered the start of the preliminary judgment exercised the function of the Court in question).
- by default, it has been waiver form the provision on the rights and freedoms of the individual, these tasks can be fulfilled by other judicial bodies:
- art. 141 para. 1 of C.c.p.- authorization by the Prosecutor of the interception of calls for a maximum of 48 hours;
- art. 209 of C.c.p.- suspect apprehension or accused of the criminal investigation or Prosecutor for not more than 24 hours;
- art. 203 paragraph 2 of the C.c.p. Prosecutor has judicial preventive measure control against the culprit[12].

The effects of the separation of judicial functions[13]:

- It strengthens the protection of the fundamental rights of the persons concerned in the criminal proceedings;
- by separating the function of criminal prosecution of the provision with regard to fundamental rights and freedoms, it protects the right to liberty of the person, the right to privacy;
- by separating the function of criminal prosecution of the verification of the legality of sending trial protections, a fair trial is carried out[14].

3. Conclusions

What should be noted is that this principle takes into account only judicial bodies with competencies in criminal procedure, without the injured individuals or on the defendant. Thus, it refers only to the separation of the activities of judicial bodies, regardless of the phase they are in criminal procedure, regulating a situation in fact and giving an important role of defense by erecting a correlative function at the level of the indictment.[15]

However, the legislature did not expressly enshrine the separation of the judicial functions of the Court, the prosecution and the Defense - for various reasons, primarily because it does not provide a clear principle of prosecution, because the Prosecutor cannot withdraw charges after bringing into court by seizing the appeal court, so as not to be possible to continue the trial in the absence of criminal accusation.[16]

Also, it was not expressly regulated the function of defense, although the code enshrines the fundamental principle for the rights of defense.

PROTECTION OF THREATENED WITNESSES

Nadia Claudia CANTEMIR-STOICA*

Abstract

First, I wish to make a presentation of historically institution and subsequently parallels between past and current regulators to expose whether the legislature has reached desire - namely ensuring effective protection of witnesses threatened and vulnerable. Also, I decided to analyze the topic from the perspective of the criminal procedural provisions of Law 682/2002 and witness protection, which are republished to expose the conditions and criteria by which to ensure this status. I also want to present besides theoretical and practical ways in which the National Office for Witness Protection gives effective legal provisions. Not least, I will bring criticism of current regulation and not by law ferenda proposals.

Keywords: *hear witnesses, protective measures, threatened witness, danger, vulnerable witnes.*

I. Introduction

One of the most important guiding ideas of the criminal trial is finding out the judiciary truth, meaning the achievement of consistency between the surrounding reality at the time of an offense and conclusions the judicial bodies reached following the submission of evidence in criminal proceedings.

At the foundation to establishing the truth in a criminal case are witness statements that are useful to judicial bodies so that any person who has committed an offense provided under the criminal law to respond according to his/her guilt and no innocent person may be criminally prosecuted.

Relative to this category of procedure subjects, as the jurist philosopher Jeremy Bentham sustains, in conducting a difficult criminal trial, the witnesses are believed to be called the eyes and ears of the justice. The statement of these procedure subjects is particularly critical in the proceedings, and not infrequently the courts have tipped the scales of justice based on these confessions. Regarding the testimony, Alfred Binet said that a testimony can be accurate and also completely false.

In criminal proceedings several people can be heard, witnesses also being included in their category. Pursuant to provisions under Art. 114 C.p.c. *any person who has knowledge of facts or circumstances which constitute evidence in criminal case can be heard as a witness.*

In the fight against organized criminal groups in particular witnesses are the only people who can provide conclusive evidence to the judicial bodies so those who commit such crimes to be held criminally accountable. Very often, those who violated the legal compliance relation are trying to prevent these witnesses to testify, resorting to teasing or even aggressive techniques and methods. Given the fact that these witnesses fear for their or their family life or health, call for support from the state against blackmail, intimidation which they could be exposed to.

Witness protection is the process whereby procedural and non-procedural specific witnesses protection measures are ordered for those who testify in criminal proceedings in order to efciently ensure their safety - and sometimes for their relatives - before, during and after their testimony[1].

II. Generalities about the status of threatened witness

Threatened witnesses institution is not a new aspect in the new coding but it should be noted tha fact that substantial changes have been made that make the new provision to enjoy the clarity of the legislature.

The legislature intends to qualify this category as being a distinct one when considering how the magistrate will decide upon assessing the evidence. Thus, the samples do not have a predetermined value and they are subject to free assessment of the judicial bodies following consideration of all the evidence in the case. However, inasmuch as the judge considers that in that case a solution of conviction, waiver of punishment or sentence postponment should be applied, judgment can not be based mainly on statements of the investigator, of collaborators or *protected witnesses*.

We welcome the position that the legislature sought to amend the legal provision and regulate the fact that these statements should be viewed with skepticism and to be useful in order to establish the truth only to the extent that they can be corroborated by other evidence.

Separate from the provisions that we find in the Code of Criminal Procedure we observe that Law 682/2002 on the protection of witnesses also ensures the protection and assistance of witnesses, of whose

* Permanent Attorney-at-law in the Bucharest Bar, PhD. Discipline of criminal procedural law Nicolae Titulescu University (e-mail: **av.nadiacantemir@yahoo.com**).

[1] Remus Jurj-Tudoran Special surveillance methods and protection of witnesses in complex criminal cases, C.H. Beck Publisher.

physical integrity and liberty is threatened. We find that there is no overlap between the two rules invoked, the provisions of the special law being more comprehensive and useful to supplement the provisions of the common law.

III. Methodology of granting the status of threatened or vulnerable witness

We note that we will analyze the institution subject to discussion on one hand in the light of the provisions of criminal procedure and on the other hand considering Law 682/2002 on witness protection. At the same time, we make reference to the old provisions of the criminal procedure code to expose the innovations brought by the legislator to the procedural legislation.

Thus, the witness is granted this status on the suspicion that life, physical integrity, freedom, property or professional activity or family member[2] thereof may suffer changes following the elements is about to provide to judicial bodies.

The institution was introduced in the old criminal procedure code by Law 281/2003 and it was governed under Articles 86^1-86^5. We find that on one hand the legislator has broadened the scope of the situations in which a threatened witness status may be attributted, namely when the goods or professional activity of the witness could be in danger and on the other hand extension of the effects is only limited to family members and not on any other person, as it was stipulated before.

According to the special law the notion of witness means the person who is in one of the following situations:

1. is a witness, according to the Code of Criminal Procedure, and by his/hers statements providing information and data crucial for finding the truth about serious crimes or which contribute to prevention or recovery of major damage that could be caused by committing such offenses;

2. without a procedural capacity in the case, by crucial information and data he/she contributes to uncovering the truth in cases of serious crimes or to prevent major damage that could be caused by committing such offenses or their recovery; this category includes a person who is a defendant in another case;

3. he/she is executing a custodial sentence and, through crucial information and data that he/she provides, he/she contributes to uncovering the truth in cases of serious offenses or to prevent or to recover major damage that could be caused by committing such offenses.

Also, according to the special law, the protected witness is a witness, his/her family members (spouse, parents and children) and close persons thereof (the person to whom the witness is connected through strong affective relationships).

We find, therefore, that Law 682/2002 on witness protection conferres this quality to more categories of people, expanding the scope of those who will contribute to finding the truth in a criminal case and who is necessary to benefit from state protection.

The provisions of the criminal procedure are consistent with the considerations of the decesions of the European Court of Human Rights which state that Article 6 of the Convention does not explicitly requires consideration of the interests of witnesses in general and of victims of the crime in particular. However, their life, freedom or safety may be jeopardized, as well as other interests that fall within the scope of art. 8 of the Convention. Such interests of victims and witnesses are protected in principle by other substantial provisions of the Convention, which means that the signatory states should organize their criminal proceedings in such a way that those interests are not put unduly at risk[3].

Leaning over the provisions of criminal procedure, we find that the legislature does not confer the status of threatened witness to a person depending on the seriousness of the offense committed in that case, so the institution can apply whatever penalty provided by law for the offense concerned.

The literature states the view that the notion of threatened witness or vulnerable witness should be extended to co-accused who is willing to provide statements that bring criminal liability of the other perpetrator because: in factual terms, there is no distinction between actions that could be exercised against him/her and the consequences he/she might suffer in comparison with those brought against a witness.[4]

Pursuant to provisions under Art. 113 C.p.c. the injured party and the civil party benefitis from protection measures regulated by the legislator for threatened or vulnerable witness, when the conditions provided by law are met. Also, undercover investigators and collaborators with real identity or another assigned identity can be heard in criminal proceedings, taking into account the special

[2] according to Article 177 C.C. a family member means: ascendants and descendants, brothers and sisters, their children, and people became by adoption law, such relatives; husband; persons who established relationships similar to those spouses or betwen parents and children where they live toghether. The provisions of criminal law concerning family member within the limits provided in par. (1) shall apply in the case of adoption, and its offspring or adopted person in relation to natural relatives.

[3] See ECHR judgment of 26th of March 1996 in Case Doorson v. The Netherlands, par. 70.

[4] Nicholas Volonciu, Andreea Simona Uzlău, Raluca Moroşanu, Georgiana Tudor, Daniel Atasiei, Corina Voicu, Cristinel Ghigheci Victor widow, Teodor Viorel Gheorghe Catalin Mihai Chirita new Code of Criminal Procedure, commented, Hamangiu Publishing House, Bucharest 2014, p. 311.

provisions where threatened witnesses are heared. It is stated in the legal doctrine that the same protection should be given to the experts.

IV. Protection measures that may be ordered for witnesses

During the criminal proceedings, when the witness is given the status of a threatened person, the prosecutor, will compulsorily have to apply the following steps to protect the life, integrity or property of the person providing relevant information to the judicial bodies:

witness home or temporary housing surveillance and security providing;

escorting and securing witnesses or members of his family while traveling;

Identity Data Protection, by giving a pseudonym the witness will sign the testimony with;

examination of the witness without him/her present, by means of audiovisual, transmitting with voice and image distorted when other measures are not sufficient.

These safeguards regulated by the legislature are aimed on the one hand to anonymisation of witness so the suspect or defendant or intermediates thereto may not recognize the witness person such as to be unable to exert pressure or threats thereof or worse than this in order not to threaten his/her life or integrity.

Analyzing the covered measures we note that we face two hypotheses relative to the person of the witness. Thus, the first assumption is that the identity of the witness was never known by the suspect or defendant and in such case a pseudonym should be granted and also his/her hearing by audiovisual means and the second hypothesis is that the real identity of the witness is known and pressures or threats have been exercised thereof or on family members, and in such circumstance arises the issue of his/her protection, in which sense it is required to be supervised and accompanied to ensure a permanent protection.

Under the special law, the legislator lists additional safeguards and specialized assistance, such as witness protection in a state of detention, arrest or serving a custodial sentence, in conjunction with the bodies administrating the detainment, identity change, change of appearance, reinsertion in another social environment, professional retraining; job change or security; providing an income until inding a job.

Safeguards consisting of surveillance and guarding the house of the witness or providing a temporary shelter and companionship or providing protection of the witness or members of his family during travel will be enforced by people who work in the National Office for Witness Protection that is an operating unit of the Ministry of Internal Affairs, directly subordinated to the General Inspectorate of Romanian Police having general jurisdiction, by the police units operating in that case, prison administration, educational center or detention center.

Looking at both the provisions of the criminal procedure law and the special law rules, we raise the question whether this status of threatened witness will be assigned only with the witness approval or the judicial body could do it even against his/her will. We find that Law 682/2002 states that the consent of the witness is required in order to be included in a protection program. In our opinion, it is also necessary the manifestation of will in a positive sense by the witness where he/she was granted refugee status under the rules of criminal procedure, because this one can assess clearly whether life, integrity, goods, professional activity could be threatened by the information he/she provides in a criminal investigation.

V. Judicial bodies competent on the status of threatened witness

Judicial bodies competent on granting this status to the witness are the prosecutor, judge of preliminary chamber or trial court depending on the stage of the proceedings in which lies the criminal trial at the time the witness is exposed to one of the situations presented by law. Thus, a request to the judge for rights and freedoms requesting the arrangement of such a measure or verification of its legality will obviously be rejected as inadmissible.

We shall note that the prosecutor may order the protection of the threatened witness either ex officio or upon the request of the witness, of one of the parties or a procedural subject. It will decide by a reasoned order that will not be found in the case file because of the confidentiality reasons. Thus, if the witness would be given a pseudonym, the identity and actual address will be mentioned in a register which also will be kept under special conditions.

The protection measure taken in the prosecution stage will be maintained as long as the cause that determined its establishment exists and the prosecutor will have the obligation to check at reasonable intervals whether it is still necessary. If the threatening condition did not stop, the protection measure can be maintained throughout the criminal proceedings. Drawing a parallel with Law 682/2002 and Government Decision no. 760 of 14 May 2004 approving the regulation implementing Law no. 682/2002 on the protection of witnesses we find that the measure can be maintained as long as necessary, even after the completion of criminal proceedings.

In the preliminary chamber procedure we find that this measure may be ordered by the judge for preliminary chamber ex officio if it finds that there was a threat for the witness or upon the notification

of the prosecutor. We find as objectionable this legal text by the fact that on one hand the witness, parties or injured person is/are not conferred with the possibility to require the implementation of protection measures and on the other hand we deem impossible the hypothesis according to which the preliminary chamber judge finds that the witness is in one of the situations where protection is required, given that in this procedure no evidenceis administered. Perhaps the legislator has given an opportunity to make such requests only to the prosecutor and preliminary chamber judge, because at the time when the criminal code of procedure entered into force, the defendant only and not the other parties or the injured person could participate in the preliminary chamber procedure. To the extent that such a situation occurs, in our opinion, the witness may make a request to the preliminary chamber judge and if he shall deem appropriate, he will take this measure of protection.

In practice, the courts[5] before the entry into force of the Criminal Procedure Code, it was decided that the request of the petitioner, before the court, to be included in the Program of witness protection is inadmissible because the law stipulates cumulative fulfillment of the conditions laid down in art. 4 of Law 682/2002 and governs a special procedure in this respect, initiation of which falls within the jurisdiction of the criminal investigation body or of the prosecutor verifying the compliance with the requirements of law in order to formulate a proposal for inclusion in the program, the Court having no capacity from this perspective.

In front of the court, the legislator rightfuly understood to establish the same holders as in the prosecution stage except the suspect given the fact that this procedural subject cannot participate in this capacity during trial. The ex officio court may also order one of the protection measures listed above and additionally may decide to not make public the trial session at the hearing within which the witness shall be heard.

On the termination of these protection measures, we note that, in the prosecutor's case only, the legislator stated the obligation to check if the conditions that determined the protection measures shall be maintained and that the possibility for the trial court to rule on their termination was no regulated. We believe that in such a situation, the judge is competent to order, pursuant to art. 52 and art. 351 par. 3 Ccp because, after the case came within the competence of its administration, any measure can be taken by the court only, being inadmissible - for reasons of independence of the magistrate in the settlement - for another body to decide the case, even on incidental matters[6].

Depending on the person making the request, we note that the legislator establishes distinct ways to prove that the witness is in threat. Thus, if the prosecutor makes the proposal, the request shall contain the name of the witness to be heard during the trial and the actual reasons on the severity of the threat and the need for the measure. Instead, if the request is made by the other holders, the court may order the prosecutor to conduct some research on the merits of the request for the establishment of protection measures. That means that during the trial, the prosecutor may perform prosecution activities that will be considered by the trial court.

The procedure is conducted in a closed session, in the presence of the prosecutor and in the absence of the person who made the request. The trial court will decide in a ruling that is not subject to appeal and it shall be kept in confidence in a specially provided place at the court.

VI. Hearing of the protected witness

Both in the criminal prosecution and during the trial, the witness whom was given a protected identity will be heard by audiovisual transmission means without having to be physically in the office of the criminal investigation body or the court. Specifically, he will be in another room or location and a live voice distorted and blurred image transmission will be performed.

The practical application of these procedures require certain organizational measures, such as:

determining the location (room) in which the witness will be in order to be heard and making the connections between the equipment in the session room / room for the hearing of the criminal investigative body and the one in the location where the witness is;

prior adjustment of the equipment prior to distort the voice and image, making thus impossible the recognition of the person; the statement and questions must be understood;

if both rooms are in the same building, the protected movement of the witness, so as not to be noticed / recognized when entering / exiting the building[7].

The second paragraph of article 129 of the Criminal Procedure Code which was repealed provided that *at the request of the judicial body or of*

[7] Nicolae Volonciu, Andreea Simona Uzlău, Raluca Moroşanu, Georgiana Tudor, Daniel Atasiei, Corina Voicu, Cristinel Ghigheci, Victor Văduva, Teodor-Viorel Gheorghe, Cătălin Mihai Chiriţă, New Criminal Procedure Code, commented, Publisher Hamangiu, Bucharest 2014, p. 316.

the heard witness under par. (1) a probation officer can participate in the hearing, who has the obligation of keeping the professional secrecy regarding the data he acknowledged during the hearing. The judicial body has the obligation to inform the witness on the right to request a hearing in the presence of a psychologist.

Therefore, by repealing this text we note that the hearing of the witness will not be attended by a probation officer or psychologist, in our opinion the reason of the legislaton being that of limiting the number of persons who become aware of the identity of the person heard.

After the witness is heard by the judicial body, the main proceeding subjects, the parties or their lawyers can address questions to the witness. According to the legal provisions, this hearing of the witness is registered through technical means and is reproduced entirely in writing. By comparison with the normal procedure for hearing the witness we note that the registration of the statement is optional and remains at the discretion of the prosecuting authority or upon the express request of the witness.

This statement shall be signed by the prosecuting authority, the prosecutor, the judge for rights and freedoms or the presiding judge and the witness and will be kept as confidential at the prosecutor's office or at the court. We find that the only situation in which the witness could be heard by the judge for freedoms would be in the anticipated hearing procedure.

The media on which the witness statement was recorded shall be kept as confidential at the prosecutor's office and after the decision to send to trial the defendant this mean will be kept at the court so that only persons authorized to take note of it. Confidentiality should be also considered by court personnel from the time of the request in order to avoid those interested in finding out the identity of the witness. Therefore, the request must not be filed to the public file of the case, but a separate volume, non-public, kept in a special place, must be made[8] .

To the extent that such information on the real identity of the witness is disclosed, individuals who are guilty of this incident are subject to criminal liability under the accusation of disclosure of confidential or nonpublic information (art. 304 Criminal Code), negligence in keeping the confidentiality of information (art. 305 Criminal Code) and, in the circumstance of offenses committed intentionally, an offense on the undercover investigator, the protected witness or person included in the Witness Protection Program was committed, the punishment is harsher[9].

VII. The evidentiary value of threatened witness statements

The statement of the threatened witnesses enjoy divisibility but not retractability. Thus, the judicial bodies can appreciate as valid certain statements made by the witness but if such witness withdraws its statements, declaring other things, he might respond in terms of criminal law. We find that this category of statements is not subject to the principle of free assessment of evidence, but according to art. 103 par. 2 Code of Criminal Procedure, the decision to convict, waive the sanction implementation or defer the sanction cannot rely decisively on the protected witness statements.

Given that at the beginning of the study I mentioned that these provisions can be applied to investigators with real or protected identity and to collaborators, the injured person, civil party or experts, then in such case, too, their statements shall not be decisive in assessing the conviction of a person. Thus, in order to avoid mistrials based on such evidence and considering the derogating conditions of hearing these people, that restrict to some extent the possibilities of defense, the law restricted in its turn th evidentiary value of the statements of the investigators, collaborator, protected witness[10].

In an older practice, the European Court held that a breach of the art. 6 para. 1 and para. 3 letter d of the European Convention occurred, as anonymous testimonies were the sole basis of conviction, after they had represented the sole ground for prosecuting. Or, during no stage of criminal prosecution or trial the plaintiff had no opportunity to question the anonymous witnesses, while the absence of any confrontation deprived him of the right to a fair trial[11].

Given the recent jurisprudence of the European Court, I believe that *mutatis mutandis*, the rule that

[9] Art. 20 of Law 682/2002 (1) The act of disclosing intentionally the true identity, domicile or residence of the protected witness and other information that may lead to his identification, whether they are likely to endanger the life, physical integrity or health of the protected witness, shall be punished with imprisonment from 1 to 5 years. (2) the punishment is imprisonment from 5 to 10 years if: a) the act was committed by a person who had knowledge of such data while performing his duties; b) a serious physical or health injury was caused to the protected witness. (3) If the act resulted in the death or suicide of the victim, the punishment is imprisonment from 15 to 25 years. (4) If the act in para. (2) let. a) is committed by negligence, the punishment is imprisonment from 2 to 5 years.

[11] See E.C.H.R., Saidi versus France, decision dated 20 September 1993, para. 44.

the court cannot rely a conviction exclusively or decisively on statements of the witnesses that could not be heard in court (exclusively or decisively) suffered a slowdown in Europe and in the protected witness matter, so that a solution of conviction based on those statements is not considered by the court as incompatible with art. 6 para. 3 letter d of the European Convention as long as the inconveniences resulted from the protection of witnesses are counterbalanced by other available procedural guarantees; one must consider that art. 103 par. 2 NCCP took over the conventional standard before the Al- Khawaja and Tahery jurisprudence, and consequently, at the moment the law provides a standard of protection which is superior to the conventional one that is binding on national courts[12].

VIII. Comparative aspects with other states and threatened witnesses institution regulation at EU level

The threatened witness institution is based on the Resolution of the European Council dated 23 November 1995 on the protection of witnesses in the international organized crime fight, the Resolution of the European Council dated 20 December 1996 on individuals who cooperate in the judicial process in the fight against organized crime and Recommendation of the European Council No. R (97)13 on the intimidation of witnesses and the rights of defense adopted on 10 September 1997 by the Committee of Ministers and addressed to Member States.

Most EU Member States have regulated provisions on the protection of witnesses in the Criminal Procedure Code or special laws. Poland has instituted an extraprocedural witness protection program and where the health or life of key witness or the person closest to him/her are in danger they can be assisted by state organs to change place of residence, service, or they may receive new identity documents in order to leave the country or even perform surgical interventions.

Switzerland considered when discussing the new unified code of criminal procedure that is necessary to have provisions on the protection of witnesses in a federal criminal procedure code. As such, it considers that it is necessary to consider the interest of finding the truth rather than the necessity of a physical protection of witnesses.

In the United States, starting from the extent of intimidation of witnesses and the enormous impact it has on solving some major criminal cases, in 1970 the Control of Organised Crime Act was adopted, which laid the foundation for Federal Protection program, now called the Witness Protection Reform Act of 1984, which is the source of programs worldwide.[13]

IX. Conclusions

In the legal doctrine[14]was raised the issue on the witness who received a new identity according to the old criminal legislation and who participates in the criminal proceedings after 1 February 2014. After the entry into force of the new Criminal Procedure Code, it is mandatory for the court vested with prosecution of such cases to review the situation of the witness to see whether protection measures regulated by the legislator should be taken, given that the laws have changed.

In a recent interview given to a publication known among legal practitioners[15], the director of the National Office for Witness Protection has provided some interesting information about the activity of the institution he leads. Thus, at the moment, in Romania 60 witnesses, Romanian and foreign citizens (70% of Romanian citizens were resettled in Romania, the remaining 30% in other countries) are offerred protection. Identity of the individuals, most of them officers of the Interior Ministry, is not public, because through them interested persons may identify witnesses who are offered protection. Referring to the site of this Office, we find that indeed, the only information available to us at the contact details is the address where the institution has its headquarters.

The person who enters the program may be forced to change jobs, and the state although it has a partnership concluded with the Ministry of Labour cannot compel an employer to relocate the witness in that institution, the Office only providing support based on the activity to be performed by the witness. At the same time, he and his family benefit from health insurance and if problems occur and visits to a doctor are required, the Office will initiate actions so as to be seen by a specific doctor, while the identity is further protected. Also, the protected person and family members will receive financial support until the witness finds another job. In order to ensure full protection, he can benefit from holding a lethal defense weapon and the contact with members of the Office shall be held by a single contact person.

We tried in this study to provide information on the threatened witness institution according to the

COMPARED LAW ISSUES REGARDING THE JUDGE SUPERVISING THE LIMITATION OF FREEDOM

Gabriela-Nicoleta CHIHAIA*

Abstract

According to Law no. 254/2013 regarding the execution of sentences and custodial measures ordered by the court during the criminal trial, the judge that oversees the limitation of freedom process to monitor and control the execution of sentences and ensures the legality of custodial measures. Although Spanish and Italian law systems influenced the institution of this judge it did not copy the regulation from this countries, but continues the line started in our country by Law no. 275/2006, which regulated the judge delegated for the execution of custodial sentences.

This study aims without trying to be exhaustive, to present different models adopted by European countries in the matter of justices that control the activity during the execution of custodial sentences. Thus we analyzed the laws of Italy, Spain and Germany.

Without trying to prioritize these European regulations, the paper aims to present the legal nature of the activity of this type of justice in relation to the regulated activity of the Romanian legislation, which mentions that his or hers responsibilities are administrative and also administrative jurisdictional. We also note the similarities between the powers of this type of judge in the European countries presented, regarding, for example, the complaints of inmates against prison conditions or infringements of their rights, but at the same time the difference which will be highlighted in particular in relation to the status of these judges.

In the last part of the paper we present a number of problems and we propose possible solutions to their law by adopting new legal provisions taken from the laws of the European countries analyzed in this study.

Keywords: *judge, supervision, control, deprivation of liberty, comparative law.*

1. Introduction

This paper aims to present some aspects of the laws of European countries with tradition in criminal law in general and penal execution law, especially concerning the judge of supervising the custodial sentencing phase. We will analyze existing legislation in this field in Italy, Spain and Germany. Incidentally, the first two countries have been a source of inspiration for the Romanian legislature when we created this institution of the judge in charge of regulatory oversight of deprivation of freedom in our land, as it appears in Law no. 254/2013 on the execution of sentences and custodial educational measures ordered by the court during the trial[1].

However, the Romanian legislature just inspired itself from the laws of other European countries, keeping the line that began with the adoption of Law. 275/2006 on execution of punishments and measures ordered by the court in criminal proceedings[2], which repealed the outdated provisions of Law no. 23/1969 and other previous laws, and updated the criminal execution legislation in Romania. This law was the first legislative measure in Romanian which concentrated in a single framework imperatives and rules of enforcement regarding measures and penalties involving deprivation of freedom, through it the matter of sentencing came to rally the international acts of significance, such as the Universal Declaration of human rights, the European Convention on human rights and fundamental freedoms Recommendation of the Committee of Ministers of the Council of Europe R (87) 3 of 1987 on the European prison rules and is also intended to create a near optimal national legislation similar to that in other EU countries[3].

This paper intends to present similarities, but especially the differences, primarily between the status such judges in Romania and the judges responsible for supervising the execution of sentences of the three European countries, and at his place of work. Romania is the only country, at least of those that are mentioned in this study in which the judge in charge of supervision of the deprivation of freedom operate effectively in places of detention or prisons, centers for detention and remand centers, educational centers and detention, in all other states his activity is done in the courts. It also notes, as we

[2] Law no. 275 of 4 July 2006 on the execution of punishments and measures ordered by the court in criminal proceedings, published in the Official Gazette no. 627 of 20 July 2006.

[3] Costel Cristinel Ghigheci, Mihaela Vasilescu, role and place of the delegated judge for the execution of custodial sentences in the Criminal Law Review, no. 1/2008, p. 147.

will show below that in some countries, eg Germany, the work of judges with responsibilities on the execution of custodial sentences are carried out in chambers, meaning a body of judges, consisting of three members.

We will check and analyze the tasks that these judges have with regard to the execution of custodial sentences and we see the main purpose of these is to supervise and control the legality of sentencing and the resolution of various problems that may arise with regard to the rights of individual freedom for the prisoners in this four countries.

In the last part, the paper aims to identify possible solutions, taking into account the laws of the three European countries mentioned, which can be adopted by our country, to improve the status and role of the judge in charge with supervision of deprivation of liberty, proposing some solutions needed in the law on the regulation of this institution.

O the romanian regulation of this institution, particularly important for enforcement of custodial sentences, but exercising supervision of the legality of enforcement of preventive measures executed by prisoners as subjects to be addressed are not only convicted persons but also those who are in remand, reason which does not make clear the status of judge. The vast majority of written work, otherwise not many on the problem of Criminal Sanctions Enforcement, does not address the institution of the judge in charge of supervision of deprivation of liberty and merely present legal provisions concerning the designation and its powers. We believe that because of this, the regulations of the three countries may still be a source of inspiration for the Romanian legislature in an eventual completion and / or amendment of laws in this matter.

1. Supervision judges in Italy (Giudici di sorveglianza)

Italian law regulates a whole judiciary oversight as part of the Italian judicial system, which is responsible for overseeing the functionality of enforcement. It is regulated by Law no. 354 of 26 July 1975 on the penitentiary rules and the application of restrictive measures of deprivation of liberty[4]. The law implementing the provisions of article 27 of the Italian Constitution, according to which criminal liability is personal, the defendant is not considered guilty until final conviction. However, the punishments can not consist in treatment contrary to humanitarian principles and should aim to re-educate prisoners, excluding the death penalty[5].

The law confers such judge in Italy an expanded role that includes resolving issues concerning the rights of prisoners during the sentence, and prison management including alternative sanctions or their arrangement either for the final part of the sentence or the period before execution. Thus, this type of judge in Italy operating in the field of criminal execution after his conviction became final.

While in other legal systems we note that the execution of the sentence, even in detention, has an administrative nature, in Italy it has a full jurisdiction[6].

Italian law does not regulate the institution of this type of judge as the sole judge, as happens in our country, but provides two judicial bodies, the first being the magistrate surveillance, operating in small groups as part of the Office of Probation, competent for part or all district Court of Appeals, and the second is the Probation Court, established as a branch since 1986 with jurisdiction extended to all Courts of Appeal[7].

Regarding magistrate surveillance it should be noted that according to Italian law this type of judge is the only judge, so although the name in Romanian institution of law Criminal Sanctions Enforcement Italian is "magistrate surveillance", in this paper we prefer using the term "judge in charge of supervision" not to create confusion about the jurisdiction of the magistrate in our country, knowing that according to Romanian law, magistrates are both judges and public prosecutors.

Judge supervision decisions are subject to appeal to the Court of Probation, but in many cases they are executed provisionally, as the Court does not decide cases only after a few months, thus exceeding the term of forty-five days mentioned by law.

In turn, the judgments of the Court of Probation can be appealed.

By decree of the President of the Court of Appeal, a judge may be delegated temporarily to exercise oversight functions as a magistrate when he or she is missing. The magistrates exercising oversight functions must not exert in the same period other judicial functions.

Law no. 354 of 26 July 1975 in article 69 provides that the judge in Italy has the following responsibilities:

1. monitor prevention and punishment organizing institutions, reporting to the Minister, the needs of different services, the most attention heading towards rehabilitation measures;

2. to inform the Ministry of Justice on the need to implement new services in prisons;

3. exercise, among other things, direct supervision to ensure that the execution of custody of the accused is implemented in accordance with the law and regulations;

4. oversees the implementation of the measures of personal security;

5. Reviews the degree of social danger of a convict, in accordance with paragraph 1 and 2 of art. 208 Criminal Code, the application, implementation, transformation or revocation, even anticipated, of safety measures.

6. by decree approve the rehabilitation treatment program for each prisoner or, if it considers that there are elements which constitute an infringement, he returns it with comments. Also approved by decree is admission decision of the administration of the detention as a prisoner working outside it. He or she also gives during medical treatment, provisions designed to eliminate any infringement of the rights of detainees or internees.

By order, which may be appealed only at the Supreme Court, decides on complaints of prisoners and internees involving the compliance of rules on the allocation of prisoners to jobs, reward and remuneration thereof, as well as training activities in labor and social security and on the conditions for the exercise of disciplinary power, the sanction, the statement of objections and the right justification;

7. decides by decree with reasons about permissions, the period of semi-freedom for the prisoners and hospitalisation, and approves changes in probation programs, social services and home detention.

8. decides by ordinance on reducing the penalty before full execution of the punishment, and to reduce debt.

9. expresses a reasoned opinion on the proposed pardoning of prisoners.

10. carries out other duties prescribed by law.

At the same time, this judge shall be given extensive powers, regarding complaints of prisoners that are object of carrying out labor in detention and regarding disciplinary action. For exercising its discretion, the law expressedly provides supervisory judge obligation to go frequently to listen prisoners in jail on the complaints they make.

It should be noted that before the 1986 reform, on issues regulated by sections 4, 5, 6, 7, the judge shall decide on all measures by service order , but by Law no. 663 of 10 October 1986 was implemented a full jurisdiction by eliminating service orders and there was adopted so the judge's decisions can be appealed at the Court of Cassation Court (Supreme Court).

Court supervision, constituted as I stated earlier in the Courts of Appeal, is a collegial body and specialized, consisting of magistrates fulfilling these functions exclusively with help in their work by experts in various fields, such as psychology , social services, education, psychiatry and criminology and forensic science teachers.

Court supervision is led by a president who is now responsible on the leadership and organization of court supervision, the proposal of the Superior Council of Magistracy on appointing experts or members to help the tribunal, to insure the replacement of judges in case of absence and works in emergency activities designated by law and by regulations.

Court supervision functions as both first instance and the appeal court on judge's decisions.

As a first instance tribunal is competent on the supervision regarding the granting and revocation of alternatives to detention, probation and optional execution of custodial sentences. As the court of appeal, the Court decides on some of the surveillance measures ordered by judges supervision.

The actual work is done in a full four members, two of whom are judges, one being the president and the other are two experts, a change in the judges or experts leading to the invalidity of the decisions. Court always decides ordinance, passed in a closed hearing.

Court oversight has the powers to grant and revoke sanctions alternative measures to deprivation of liberty, such as house arrest, probation, parole, postponement of punishment.

As appears from powers presented an important role is supervisory matters the judge of parole / early persons sentenced to imprisonment (art. 70-71 of the Law no. 354/1975).

Thus, the judge of probations shall adopt, by ordinance, in a closed hearing without the presence of the parties request for release early, no later than 15 days after an opinion from the prosecutor in this regard, but can even in his absence. Against this ruling, appeal may be filed by the convict's lawyer, the prosecutor and the convicted person, within 10 days from notification to supervisory tribunal.

2. The superivison judge in Spain (El juez de Vigilancia penitenciaria)

By establishing the position of judge in charge of supervision of deprivation of freedom(prisons), the Organic Law General Penitentiary since 1979[8] has sought to create a specialized judge, to be

[8] General Penitentiary Organic Law no. 1 / 09.26.1979, http://www.institucionpenitenciaria.es/web/export/sites/default/datos/descargables/legislacion/LEY_ORGANICA_GENERAL_PENITENCIARIA_1979.pdf, accessed January 20, 2016.

invested with certain powers and to perform a number of tasks in order to ensure execution of sentence of imprisonment on a person who has been convicted and receive appeals to resolve on amendments that could arise during the execution of punishment. Prior to this law, the execution of imprisonment in Spain was in the hands of the Administration[9].

Under Spanish law, the judge in the position of supervision of deprivation of freedom means strengthening security for penalty, which is governed by the principle of legality.

As a result, the judge shall perform the following tasks:

1. duties incumbent upon the court in controlling the actual execution of punishments and the rest of the powers derived from extending the right to exercise powers with respect to this type of control.

2. through the Organic Law General of Prisons, the Judge is also entrusted with the judicial review of the Prison punishment affecting fundamental rights or the rights and privileges of inmates in their execution.

As a result of the above, via Article 76.1 of the Law, shall be assigned the task of protecting the rights of detainees and address the abuses and irregularities that might occur within a prison sentence. This stems primarily from the need to guarantee individual rights of detainees. Judges exercises control in all matters involving both regime and that could influence the treatment and rights of detainees in the absence of this feature as fell to the administrative jurisdiction.

So, in Spain, the judge guarantees the proper functioning of prisons, to the extent that it can directly affect the rights and privileges of prisoners.

Effectively, the Organic Law General Penitentiary gives judges the right to submit proposals to the General Directorate of Prisons on: organizing and conducting supervision services, coordination of cohabitation in the prisons organization of the workshops tuition / education / training, health, religious and economic administrative activities and prison treatment. On the other hand, decisions on requests or complaints by prisoners against the regime and treatment in prisons as far as they affect fundamental rights or their rights and privileges at the prison.

Spanish law establishes, however, some limitations regarding judges' supervision, he has no right to modify or change the destination of a convicted prisoner or to order the transfer of detainees to other prisons because these matters are within the competence of administrative bodies in according to Article 77 of the General Penitentiary Organic law judge surveillance just having the right to address proposals Administration.

In Spain, judges in charge of supervision operate in the courts of first instance and appeal.

According to the law, in the Court of First Instance, these judges have jurisdiction to rule on the motions for conditional release of prisoners and agree the revocation of enforcement which could translate to execution of the sentence in custody. Regulation of 1996 on law enforcement, provides that the dossier forwarded to the judge before the execution of three quarters of his sentence, he verifies the compliance with rules of conduct during detention in the Criminal Code of 1995.

Spanish Penal Code provides for two exceptional situations when one can get parole, in both cases the prior consent of the judge's oversight of the custody situation where the prisoner has already conducted two thirds of the sentence and was marked by constant progress of activities through work, cultural or occupational, prisoners who have reached the age of seventy years, those who are to meet this age during the end of the penalty or for those suffering from incurable diseases serious, regardless of the duration of execution of the sentence.

However, as a member of the Court of First Instance, the judge has the right to revoke parole, if the person released commits a new crime or do not follows the rules of conduct that have been imposed and the right to approve the proposals of the prison on the sentence reduction privileges involving the division of inmates in isolation cells, authorise permission from prison exceeding two days.

In the Court of Appeal such judges have jurisdiction to hear appeals on decisions of an administrative nature, namely: to rule on appeals against disciplinary sanctions imposed on prisoners, to rule on appeals on initial classification and advancement, promotion or relegation. Regulation enacted in 1996 on enforcement law, extends the period of handing down the decision on the status of the initial two months to be able to analyze more closely the behavior of the prisoner. Moreover, every six months is necessary to analyze carefully each inmate in order to review, if appropriate, the execution of his sentence. If not a change of regime / status of the prisoner, this is notified to the person concerned. In this case, the detainee may request a report by the Director, who will decide on maintaining or regime change. Against the judgment of directors can bring supervisory appeal by the judge.

According to the Organic Law on the Judiciary, rulings by Judge surveillance deprivation of liberty may be challenged through petitions for review, appeals or complaints.

[9] Ramón García Albero, Núria Torres Rosell El juez de Vigilancia penitentiary https://www.exabyteinformatica.com/uoc/Dret/Ejecucion_y_derecho_penitenciario/Ejecucion_y_derecho_penitenciario_(Modulo_6).pdf, accessed January 3, 2016.

The petition may be directed against all actions taken by Judge surveillance custody. Such appeal shall be submitted to the same judge who delivered the judgment against which we act, within three days after the last notification of the decision. The advantage is that if the request for review does not require the presence of a lawyer or a prosecutor.

According to the Organic Law on the Judiciary[10] there are two types of decisions that can be challenged in this way: decisions on execution of punishments, unless they have been issued with the aim of resolving the appeal against a judgment of administrative unconnected status prisoner and decisions that make reference to the prison regime if they were not delivered with the aim of resolving administrative appeal against a judgment.

Given that the provisions of the Organic Law on the Judiciary ha certain inconsistencies, it was later established that one can resort to appeal and complaint in the following cases: against decisions on the status of the detainee and against decisions on prison regimes, namely: approval of sanctions isolation for a period exceeding fourteen days to establish measures to be taken in case of complaints or requests by inmates on the regime and treatment of prisons which affects their fundamental rights, licensing permission for a longer period of two days, except third-degree prisoners, the transfer of detainees in prisons for enforcement in closed regime based on the recommendation of the Director of the prison, against decisions relating to enforcement.

The appeal may act against the decisions can not be challenged by appeal. This type of action to be submitted to the same body in which power is call.

3. Judges of supervision in Germany (Richter Überwachung Freiheitsberaubung)

In Germany, the regulation of the judge supervising the execution of punishment is regulated by the Prison Act, act concerning the execution of prison Sentences and Measures of rehabilitation and prevention involving deprivation of liberty[11], but the law requires more than one individual judge, but a room / full criminal Court (Straf Landsgericht) - second degree court in whose jurisdiction the penitentiary is, which has special jurisdiction and exclusive execution of sentences, both custodial and non-custodial.

Decisions shall be taken as a Chamber composed of three judges, including the judge acting as president.

Among the powers of this room includes, inter alia, the determination of appeals on measures penitentiary administration governing individual matters regarding the execution of the imprisonment or execution of reform and prevention in the deprivation of liberty, whether the applicant argues that rights have been violated by adopting a measure or if it has been refused or omitted. This includes disciplinary action on detainees in detention. Parties to the case are the applicant, the detainee and the prison authority that ordered the measure challenged or refused or failed to apply a measure, the prosecutor and a lawyer is not compulsory.

The court will rule without a hearing, an order that will include a brief description of the essential elements of facts and the dispute status. As for the details, they can be found in the documents in the dossier, containing its source and the date they were issued, so that documents can support the facts and the dispute status. The court is not obligated to explain the reasons for its decision can not be challenged if it contains the motivationg, as stated in the decision. There may be a prisoner hearing by audio-video system.

If a measure is unlawful, the prison administration is wrong or other rights have been violated if the detainee Court will annul the measure and when the measure has already been applied, the court may decide that the measure be canceled by the prison authority. Even if the measure became meaningless after the previous withdrawal or otherwise, the Court may decide to request that the measure was unlawful, whether the applicant has a legitimate interest for such a statement.

Against this judgment only to appeal, which will be submitted to the judgment of the General Court, within a month of the decision.

Another task of the Court of execution is the delivery of early release after serving condemned by at least 2/3 of their sentence. This sitting is done by a sole judge, unless the ordering parole from a sentence of life imprisonment where there is need for a panel of three judges, after serving at least 15 years of imprisonment. To dispose conditional release, the court receives a report on prison inmate behavior during detention. The detainee is heard, but this can also be done by video, not necessarily that it be physically presented to the court.

The procedure on conditional release is not public and is conducted without the presence of the prosecutor, who, however, send the file a report. The decision handed down by Judge supervisory appeal on both the prosecutor and the detainee, the call will be resolved by a higher court, the Court of Appeal.

4. Considerations on the similarities and differences between judges surveillance of imprisonment in European states presented and Romania

It is noted that the laws of the three European countries covered by this study, regarding the judges supervising the execution of custodial sentences judicial is not one striclty administrative-jurisdictional, as regulated by Law no. 254/2013 in our country. Their work aims at precisely the issues on, for example, protecting the rights of detainees do not undergo an administrative review, but a judiciary one. Thus, complaints of inmates against the limits of their rights during detention is performed by judges supervising the execution of punishment as a court, in a first instance, and not as an intermediate stage / preliminary inspection.

I conclude that the legislation offered by European countries could be adopted by our country, in the sense of recognizing judge oversight of the custody status completely as a magistrate judge who exercises powers exclusively jurisdictional and to work in the enforcement court. It could thus be established in the courts or a special section on execution of punishments in the case of larger courts or some specialized in this respect, the courts with a personel scheme reduced.

Thus, these judges would not have the administrative duties for the purposes of the present (chairing the conditional release), but would settle directly release prisoners prematurely, solve detainee complaints against decisions of the prison, and on the administration regarding rights or decisions of the committee to establish, individualization and regime change execution of custodial sentences as judges chair with full jurisdiction in the matter of enforcement.

It may issue verdicts that can be appealed to by them, to appeal to a higher court, the Court having jurisdiction over the place of detention where there was also a subsection specializes in criminal section on execution of punishments.

However, I believe that these specialized panels could take over tasks that currently meet them as judges delegates at the offices of enforcement, on the issuance of warrants of execution, the execution of educational measures custodial and non-custodial supervision and control sentencing and other non-custodial sanction ways (waiving of punishment, conditional sentence, suspension of sentence under probation, parole) in close contact with the Probation Service.

Conclusions

This study aimed to present the judge institution regulating suprevision of deprivation of liberty in three European countries, Italy, Spain and Germany, with a long tradition in the field of penal execution, the first two of them being a source of inspiration for the Romanian legislature.

In Romania, the judge was introduced by Law no. 254/2013, but it has largely continued the previous law regulating sentencing, Law no. 275/2006, its role is to oversee and control the execution of custodial sentences and custodial educational measures (which apply to those who committed crimes during the minority), the powers of the legislature even being qualified as administrative tasks and Administrative - jurisdictional.

We have made a short on the three other European countries, although judges conduct also administrative activity, represented for example by performing checks at places of maintenance, their main business is a full jurisdiction court in the courts in which it operates. It is noted that these countries have preferred the creation of sections or rooms court specialized in the field right Criminal Sanctions Enforcement, in which the magistrate supervising the execution of sentences in the criminal courts or in addition, unlike the Romanian legislation which provides that judge in charge of superivision of deprivation of liberty, although part of a court, is named as such in a prison or place of detention, working exclusively in that prison.

In the absence of papers addressing this issue, we considered it useful to present how they solved sentencing supervision of European countries, these regulations can be a source of inspiration for any legislative amendment. I wish that this work will pave the way of other studies on the right Criminal Sanctions Enforcement in general, and activity of the judge in charge of supervision of freeom, in particular, to come to a knowledge and understanding of the role of particular importance in the custodial sentencing phase.

ISSUES ON SCIENTIFIC RESEARCH IN PLACES OF HOLDING

Ioan CHIŞ[*]
Oana Alexandra CHIŞ[**]

Abstract

Scientific research in prisons is not a new problem. New is the way of granting benefits to persons who show such while serving sentences of imprisonment. Some shortcomings in establishing the criteria, rules and way of determining the authors, led to the emergence in 2016 of over 300 works published under the name of condemned authors.

Keywords: *scientific research in prisons, innovations and inventions, books in prisons, intellectual work in prisons.*

Topic discussion

A controversial issue lately is the possibility of scientific research in prisons, the development of published papers, innovation and inventions, work performed by persons convicted and serving sentences of imprisonment.

Execution of custodial sentences aims, among others, to "form a correct attitude towards the rule of law, to the rules of social coexistence and to work, as to reintegrate into society of persons detained or hospitalized."[1]

As such one of the activities considered essential for socialization is lucrative activity, open and semi-open detention schemes being directly related to participation in work of the convicts, even more, parole is about following the steps of the two regimes. Under these conditions, in prison, work becomes an essential support for socialization activities, thereby obtaining the necessary revenues to improve living conditions, payment of obligations to the state and civil injured parties or directly supporting the families of those convicted prisoners.

Physical labour, skilled or unskilled, industrial type of work or provision of services, work in the interest of the prison, work under voluntary activity as a hobby are known, in prison, as the most frequently used. Intellectual work in places of detention, although rarely highlighted, is possible, where those sentenced had such concerns before sentencing, being part of social groups where work of this kind was the basic concern of those regarded.

Even during the totalitarian era, the use at work represented the main pillar of "re-educating" prisoners, who were considered "special labour force" for achieving industrial and agricultural objectives, and when "forces of skilled labour were satisfied, those who have a professional qualification could be used even for unskilled labour."[2] Intellectual work had a greater appreciation at that time, money legally assigned for this type of activity being 50% of those charged "as a reward for inventions, innovations and rationalizations"[3], compared to the 10% of incomes allocated, resulting from the use of skilled and unskilled labour. Although there was no emphasis on any intellectual activity of prisoners, it was recognized that there may be such a source of income, 50% of the reward for such work being done was considered income to the state.

After the great reforms in Romanian criminal law, introduced by the advent of new criminal, procedural criminal, criminal executional and probation legislation, forms and methods of re-socialization of convicted or institutionalized persons reflect European views on the matter, especially after the implementation of Council of Europe Recommendation no. 2006/2, which states as an organizing principle of programs in places of detention the idea of not differentiating work of intellectual activity. Concretely, it is established that all the advantages enjoyed by those participating to work, would be recognized for those participating in intellectual activities (education, training, social and educational activities, scientific research or intellectual work)[4]. The provision includes the idea, in principle, of the prohibition of financial or other penalty for participating in educational activities.

Law 275 of 4th of July 2006 on the enforcement of sentences, at this moment repealed as a result of the new provisions in executional criminal law, had generous provisions on the assimilation of

[2] Law 23/1969 art. 9.
[3] Law 23/1969 art. 11.
[4] Recommendation of the Committee of Ministers to member states on the European Prison Rules Rec (2006) 2 of 11 January 2006, art. 26 point 6 and art. 28 section 1 and section 4.

intellectual work with manual labour[5], even pay by the minimum wage to those who participated in such activities, which was actually a positive discrimination to all citizens who were enrolled in some form of study[6].

Recommendation No. R(87) establishes a more pronounced correspondence between work and intellectual activities, rule 78: "Education should be regarded as an activity of the prison regime as well as the productive activity - the same status and the same basic remuneration, provided that it be integrated into normal schedule of activities and part of the authorized individualized treatment program."

Stimulating the participation of convicts in formative activities such as schooling, job qualifications, retraining, specialization, individual study of fictional or scientifical literature, scientific research, innovation and inventing activities, writing of fictional, scientific or other type of papers, participation in creation workshops (theatre, music, painting, hobby), participation in religious events and holidays, meetings with volunteers, participation in organized collective sessions (conferences, lectures, contests like "Who knows wins", literary evenings, and others) are particularly monitored and classified as degrees of socialization through which they accumulate "credits". In addition to those activities, there can be organized formative cultural and recreational activities that contribute to the intellectual development of convicts.[7]

Among the manifold activities of the universe of prison, scientific research and the innovation and inventions activities occupy a modest but important place, especially since some convicts, benefiting from the absence of clear regulations, became "writers' overnight, with works that were published in various publishing houses, then invoking the provisions of Law 254/2013 benefited from days considered executed, when analyzing the conditions for parole proposal.

No wonder that in prisons there are people who can invent, discover what others have not been able to, write books or can even address specific science areas. It is natural because those sentenced come from society, and conviction does not apply to what they know but to the crimes that they committed. Long gone is, we hope, the time during which by court orders, orders of the Services or by abusive administrative measures, men of culture, science, researchers in various fields were sent behind bars precisely because they belonged to a higher class that did not accept leadership by a pseudo intellectuals.[8]

Over time, during the long days and nights of solitude in the cell or by the company of other prisoners in the same room, prisoners were trying to create objects, instruments, tools, toys, books, paintings, tattoos in order to complete the period of sentence more quickly or were attempting to manufacture weapons of offense or defence tools needed for the escape from the places where they were detained, drugs, alcohol, braids to dress, or all sorts of figurines used to sell or in the try to corrupt other detainees or even those who were guarding them.

With the humanization of detention regime, the multitude of goods and objects that are allowed to be in the keeping of convicts are very many and can increase the degree of civilization of days of detention, and even create a false illusion that the detention life is similar to that of freedom, that detainees are granted rights, again and again, well above what they deserve, especially those who have committed acts condemned not only by law but also by public opprobrium.

Given that, by Sentencing Law 254/2013 and its implementing regulation, and by administrative

[5] Art. 57 section 10: "It is equated to work the activity done by convicted persons who participate in activities for education and training".

[6] Art. 61 pt. 3: "Persons sentenced to imprisonment that participate to educational courses or qualifications or retraining receive, during courses, monthly, a remuneration equal to the minimum wage".

[7] M.J. Order no. 2199 / C / 2011:

Article 105: Artistic activities are such as: a) painting, drawing, graphics, pottery, sculpture, technical applications, fretwork, handicraft, embroidery, tapestry, basketry, fabrics, garments; b) reading groups, literary clubs, theatre, music, dance; c) other artistic events.

Article 106: Cultural dissemination activities are of the following type: a) exhibitions, films, performances; b) conferences, lectures, debates, book reviews, book releases, editing magazines, local radio and TV broadcasts. Article 107: Sports activities aim to maintain a physically and psychologically tonus and an adequate health status.

Article 112: Activities to be held in a community could be like: viewing and presentation of shows, participation in religious services, participation in sport and occupational activities, organization and viewing of competitions, organizing and viewing of exhibitions, book presentations, visits to cultural sites, public and private institutions, governmental organizations and NGO's, trips and camps.

[8] Law 254/2013 art. 96 Part of the penalty is deemed as served based on the work performed and /or training school and training:

"(1) The punishment deemed as served based on work performed or training school and training in order to grant parole is calculated as follows:

a) in the case of paid employment there are deemed 5 days to 4 days of work performed;

b) in the case of unpaid work there are deemed 4 days 3 days of work;

c) if the work is done at night, there are deemed 3 days for two nights of work;

d) in case of participation in general education for compulsory general education forms there are deemed 30 days for completion of a school year;

e) in case of participation in training courses or retraining, there are deemed 20 days for completion of a qualification or requalification;

f) in case of published papers or patented inventions and innovations, there are deemed 30 days for each scientific paper or patented invention and innovation.

(2) The reduction of penalty faction which is deemed as served based on work performed or training school and training cannot be revoked. "

decisions, convicts are allowed to have on them, in the holding chambers, an impressive variety of goods, new methods of spending time in detention began to appear, through creative, sports, cultural, social activities, hobbies and manufacturing of items, goods, equipment, crafts, scientific works, innovations and inventions serving prisoners for barter, to "buy" various services from other inmates, to corrupt staff, to demonstrate to socio-educational services the "progress in resocialization", to win days deemed as executed according to an algorithm established by law, to send for marketing outside the prison different items, to give to orphanages, retirement homes garments made by the convicts.

Besides this so-called legal "occupations" of convicts in realizing various products that can be useful and harmless for the detainment or staff supervision, using objects received legally can help in the making of a number of other prohibited items to find on prisoners during detention. Nothing prevents inmates to manufacture from players or radios, from the microprocessors of electronics, equipment used for listening or transmission of information or data, nothing stops them to manufacture weapons like stiletto, knife, electric shock guns, chemical 'weapons' that can burn skin or eyes, or even more to "create" alcoholic beverages, hallucinogen or toxic substances.

In the aftermath of the events of 1989, prisoners have been granted by the state with far more European-style rights, constitutional rights as well as specific features and output permissions, which enabled them to buy, legally or illegally, objects that "they need "to break the law. By law, regimes were established on a progressive basis, in the sense that convicts may take various personal conducts with control becoming less severe, which facilitates their activities outside supervision, control, searches. In these conditions, the time in which they can make up things or objects is increasingly out of concern that they will be discovered.[9]

Daily, in prisons, there are found mobile phones, drugs, alcohol, and crafted weapons. It is well known that prisoners "prepare" meals on makeshift stoves, realize sweets, drinks, various desserts for them or to trade them for cigarettes or items of clothing or shoes. Crafting games of chess, backgammon, dice, playing cards, is no longer an occupation for convicts, those above being allowed to prisoners as social games, like listening to music or reading magazines, newspapers, books. In these conditions of humanised regimes of imprisonment, the fact that some convicts with upper intellectual qualifications use their knowledge to write books of literature, research, travel, history or in various fields seems to be quite a positive fact.

The question is whether writing papers in prisons, along with innovation and inventing solutions to problems are possible in such conditions. To what extent should prisoners have the benefit of such occupations? Yes, we believe that the development of works of any kind is consuming time out of a day of work, and if this time is counted in hours and the work, the paper is part of the individualized socialization programme, it can be considered "intellectual work" with all the positive consequences that can be drawn from it. We must always bear in mind that for every convicted person, on the occasion of commencement of the deprivation of freedom, an individual program of social reintegration[10] is designed, which will consider:

- determining educational, psychological and social needs, identified in the prison population, requiring the development of new programs;
- development of the program itself;
- submission to advisement and approval by superiors at the place of detention;
- submission for approval by the specialized department;
- piloting the program and recording observations necessary to adapt the content;
- review of the program in terms of content or methodology of work;
- submission to advisement by superiors and for approval by the head of the unit of the revised program;
- the implementation of the revised program;
- submission by the specialized department for the dissemination in all places of detention.

Whether these works are "scientific" or not should not be concern of the detention facility, but of those institutions and state bodies (institutes relevant for organization of those activities, universities, Romanian Academy, polytechnics, publishers or other such institutions) that have jurisdiction of such assessment, approval, recognition, issue of patents, certificates or diplomas such as to assess the scientific nature and importance of the work or the quality, originality or novelty, usefulness, popularity enjoyed by the public.

Like other authors[11], we believe that errors in the assessment of such works, which appeared after 2014 and have been the delight of the media[12], were

[9] In the period after the 1989 Revolution, during riots in the year 1990, in the detainment places occupied by convicts there were made hundreds of crowbars, knives, daggers, incendiary bottles, a cannon with nails and carbide the Jilava penitentiary, a bomb made of an oxygen tube, wrapped in grease and tied to electricity cables to be armed within distance, at the prison Baia Mare.

[10] ORDER by Ministry of Justice no. 2199 / C / 2011, art. 10.

[11] Marin Bucur - „A legislative monster created sham and debauchery in prison!" - Source SNL Penitentiary internet site.

[12] Speech of the Justice Minister in the SCM meeting: "You must know that the number of papers in preparation is growing exponentially and I will give some figures. December 31 (...) there were 45 papers in preparation, according to data that are given to me by the National

also due to misunderstanding of responsible parties such as Justice Minister, whose opinions were rejected by the Superior Council of Magistracy in the meeting on January 28, 2016.

The errors of assessment were due to the fact that although Law 254/2013 provided that the authors of works would gain days considered executed, there is no implementing regulation of Law 254/2013 (not even the day I was working on this paper the regulation was not published) to detail their rules under which the assessment in the Commission for conditional release must be made, therefore, taking advantage of the lack of regulations, some prisoners have "written" and "published" even 5 works each benefiting for every one of 30 days considered as executed, which seems a nonsense.

National Penitentiary Administration was forced to use a decision of the Director General No. 619 of 2011, which was anyway repealed by the appearance of Law 254/2013, which set rules about publication in journals recognized by CNCSIS or publishers recognized by CNCSIS or that were part of the communications published in the proceedings of international or national conferences. It also required a recommendation from a professor in the specialty of the content or work objectives.

I believe that the view of SCM on the need to create "objective, fair and transparent criteria in terms of establishing the scientific character of the works developed and published, as well as some more rigorous criteria for the drafting of the work" is in the position to determine the correct executive procedures.[13] Looking for the "guilty" among members of the parole committee, among judges who have ruled over parole commission proposals, among prison directors or general manager of NAP, is only a matter without support, since the chronology of the regulatory framework has produced such a situation. If Law 275/2006 introduces the possibility of parole and accumulation of days considered as executed by developing scientific works, its implementing Regulation HG 1897/2006 does not introduce the procedures and criteria of assessment, requiring the issue of Decision 610/2011, which sets the methodology. This Decision shall ultra activate even after the advent of Law 254/2013, as there hasn't appeared within the statutory period (or 3 years) a regulation implementing that law. Here's how the detainees came to write in 2015 331 works, 5 times more than in 2014, noting the possibility of gaining days considered as executed on "written and published papers."

Compared to the old regulations where the convict gained 3 days considered as executed for 2 days spent working on the development of a scientific paper, Law 254/2013 introduces a new system by which you gain 30 days considered executed for each published work. Convicts with outstanding financial possibilities saw the opportunity to publish even five books a year, designed under entirely unclear conditions, but certainly not by their own research, so that publishers have received a number of works, some of which are particularly valuable, not having the ability to verify the authors. Moreover, parole commissions recorded that the papers were published, the authors on the cover were the convicts requesting release and, not having expertise on the scientific character or scientific content thereof, had no choice but to grant them the 30 days considered executed. Certainly shallow work in the committees was due to lack of investigating the charts of working days, of working hours, space and utensils or tools used, not investigating, even randomly, if the "authors" know the contents of works purported to be written by them. The role of public opinion and the media was decisive in taking measures to halt the charade of "prison academics."

In January 2016 the Judicial Inspection performed a control in all prisons[14], to identify the administrative and judicial practice concerning the application of Law 254/2016 art. 96 para. (1) f), followed by a report to the Superior Council of Magistracy, which decided to refer the Ministry of Justice with the following proposals:

The urgent adoption by GD of the Implementing Regulations of Law no. 254/2013 on the execution of sentences and custodial measures ordered by the court during the criminal trial.

Inclusion in the draft Regulations to Law no. 254/2013 of the definition of the term 'scientific work', used by the legislator in art. 96 para. (1) f) of Law no. 254/2013, regulating the procedure for drawing up scientific papers, the criteria for granting winning days and the procedure for contesting the

Administration of Penitentiaries. January 6th, there were over a hundred works and nobody knows the figure right now. And I make this conversation in SCM because we are not talking here only about teachers, publishers, we are talking about delegated judges, we are talking about courts before which these works were presented. I want to say it is just as discriminatory for so-called intellectual labour, although I do not have any reason at this time to identify a work from the list of 2015, which by European standards can be considered scientific, so I see that we have a very detailed procedure (...) I say that point of law did not apply and that is to say by the prosecutors, not me. But the result is over 350 written works, and the benefit is 30 days, so we still discriminate between physical work, where we get a day off for four days of work, and give 30 days to a collection of papers which is called scientific work. And I, as Minister of Justice, have the obligation to see this."

[14] Judicial Inspection Report no. 5619/IJ/3329/DIJ /2015 regarding the identification of administrative and judicial practice in the application of art. 96 para. (1) f) of Law no . 254/2013 by judges of custody and supervision of the courts.

measures taken by the commission for granting such rights.

It is necessary to establish rigorous prerequisites to be satisfied cumulatively, namely:

- development of scientific works only in areas where university studies are organized;
- proof of specialization of custodial person in the field in which he wants to develop a scientific work;
- specification by the custodial person of the type of scientific work that is intended to be developed (treaties, research reports, studies, articles, scientific papers, etc.);
- the estimated time necessary to elaborate the scientific work, taking into consideration its complexity;
- written recommendation on relevant topics in the field chosen from a professor or an associate professor in the specialty of the paper to be drafted, with their handwritten signature, confirmed by the university where they belong and accompanied by a provisional work plan which includes the main issues to be addressed, a structure of the work, bibliography to be consulted, minimum information sources and an estimate of the volume of work;
- the custodial person must present, both the teacher / associate professors who give the recommendation, and the board of education and psychosocial assistance, an initial plan of work, the theme / themes to be addressed, the structure, sources of information, means of writing / editing;
- the commitment of the person who ordered the work of scientific development to comply with the rules of good conduct in scientific research, technological development and innovation;
- it should be required that the person would give an affidavit, under penalty of criminal law (art. 326 Criminal Code regarding false statements), of showing that he is the author of the work developed and the work is not plagiarism;
- setting by the Commission for selection and allocation at work of the time appreciated as necessary to elaborate the scientific paper based on documents that accompany the request of the custodial person and recommendation of Professor / Associate Professor.

Regulating of objective, fair and transparent criteria in establishing the scientific nature of the work developed and published, namely:

- scientific character of a paper drafted by custodial persons must be determined by the National Authority for Scientific Research from the Ministry of Education and Research, the only institution empowered nationwide with responsibilities in this regard;
- attaching to the request, additional to the scientific work, a copy of the manuscript, compiled by the custodial person as submitted in original to the publisher, in order to remove any doubt regarding its development during the period of execution of sentence;
- regulating how to quantify the benefit of the work of several authors of scientific papers, among whom there are custodial people, using a similar document sheet FRACS (Chart of Reporting scientific research) used by higher education institutions with the approval of the National Authority for Scientific Research;
- granting a different number of gained days as a result of the elaboration of scientific work, depending on the type and complexity of scientific work developed.

Preparation by the specialized committees in prisons, completely, thoroughly and in accordance with the proposals previously formulated of minutes, based on which the court can verify how they have been granted certain benefits (gained days / compliance or not with conditions of parole);

Altering or supplementing of legal provisions, by providing the supervisory judge / the court the procedural tools necessary in order to check and censor proposals / measures taken by committees in the penitentiary, enabling them to remove the reducing fraction on the punishment prescribed by the Commission, in case it is found that the measure was taken in violation of the law;

Removal, through legislative change, of the finality attribute of the measure to reduce punishment fraction, considered as executed based on work performed or training school and training, according to art. 96 para. 2 of Law no. 254/2013. "[15]

Following CSM Decision no. 37 of 27 January 2016, the Government decided to suspend the application, until September 1st 2016, of the legal provisions relating to the reduction of sentences for prisoners who publish scientific papers. Regarding the timing of this decision many different opinions may arise, personally I consider that authors of papers, inventions and innovations among convicts will open lawsuits on failure to apply Law 254/2016 because of an act without legal force.

Pending the completion of rules, criteria and executive procedures on scientific research in places of detention, draws attention a particular invention inspired by a convict, V.B. Convicted as a hacker to 5 years for establishing a criminal group with the purpose of cloning and use of credit cards, V.B. has created one of the most popular inventions in the world: a new type of ATM fraud-resistant by hackers. The invention, filed with OSIM 2010 "Method and system for securing the use of cards with magnetic strip", called anti-skimmer, received at the 41st edition of the International Exhibition of Inventions in Geneva, the Press International award

[15] Judgment of the Superior Council of Magistracy no. 37 of January 27, 2016

and attention of all Swiss banks. This award is ranked 6th in the 50 of the Exhibition. We shall see whether he receives 30 days considered as executed.

Conclusions

Scientific research in prisons, the development of published papers, innovation and inventions performed by persons convicted and serving sentences of imprisonment is a legal activity, as provided by the Law 254/2013 and the New Criminal Code and New Criminal Proceedings Code. The many discussions and issues that arise from this activity are due to the fact that the Parliament and the Ministry of Justice have failed to concieve and pass regulations for a correct implementing of these provisions.

PREVENTIVE MEASURES - EXCEPTION TO THE PRINCIPLE OF THE RIGHT TO LIBERTY AND SECURITY

Marin-Alin DĂNILĂ*

Abstract

Considering the specific obligations arising from the exercise of criminal action and civil action in criminal proceedings and taking into account the need to ensure a better conduct of activities that are undertaken in solving criminal cases, it sometimes appears necessary, taking certain procedural measures.

Procedural measures were defined [1] as institutions available for criminal procedural law and criminal judicial bodies consisting of privations or certain constraints, real or personal, of the conditions and circumstances under which the criminal proceedings are being realized. By the function pursued by the legislature, these measures work as a legal means of prevention or suppression of circumstances or situations likely to jeopardize the effectiveness of the criminal proceedings through the obstacles, difficulties and confusion which they can produce [2].

Procedural measures arise as opportunities, but not being specific to any criminal case, judicial bodies take measures according to the specific circumstances of each criminal case. From this derives the adjacent character of the criminal procedural measures to the main job [3].

Keywords: *procedural measures, legislator, coercion, suspect, fundamental values.*

1. Introduction

1.1. General considerations on procedural preventive measures

Procedural measures are also provisional and may be revoked when the circumstances which compelled their decision disappear.

Preventive measures are criminal procedural law institutions, with a nature of coercion, and the suspect or defendant is prevented from carrying out certain activities that would have a negative impact on criminal proceedings or on achieving its aim [4].

The new Romanian Criminal Procedure Code, adopted by the Law no. 135/2010 regarding the Code of Criminal Procedure, as amended and supplemented by Law no. 255/2013 for the implementation of Law no. 135/2010 on the Criminal Procedure Code and amending and supplementing certain acts which contain criminal procedure, is rethinking largely the system of preventive measures applicable to individuals, according to the principles derived from relevant international regulations on human rights and accumulations resulting from the jurisprudence of the European Court of Human Rights and the national courts one [5].

Stressing the functionality of preventive measures, the law (art. 202, para. 1) shows that those are taken if necessary, in order to ensure the proper conduct of criminal proceedings, of preventing absconding the suspect or the defendant from prosecution / trial or the prevention in committing another offense.

Given the fact that a persons liberty is one of the fundamental human values, between the legislative changes that have occurred since December 22, 1989, there were enrolled also the ones regarding the system and the regime of preventive measures. In this regard, the previous Code of Criminal Procedure was amended successively, in the field of preventive measures by [6] laws and the Constitution. Also, legal provisions on preventive measures were the subject of numerous decisions of the Constitutional Court. Not lastly, the legal regulations of the preventive measures have led to instances of inconsistent application of the criminal procedure law, causing the delivery, by the High Court of Cassation and Justice of numerous decisions in solving appeals on points of law promoted in this matter.

Given the fact that by the imposition of preventive measures, it is caused a prejudice to individual freedom, national and European legislation instituted a series of legal safeguards to prevent abuse and arbitrariness in taking and keeping them. Therefore, whenever the question of taking, maintaining, extending or confirming a preventive measure is being posed, beyond the provisions of the Criminal Procedure Code, account must be taken on other provisions applicable, in particular the provisions of the Romanian Constitution (Article . 23) and the European Convention on human rights and fundamental freedoms (particularly art. 5 on the right to liberty and security, as interpreted by the European Court of human rights), the Constitutional Court decisions, decisions of the High the Court of Cassation and Justice in solving appeals on points of law [7]. With a principle value, art. 9 (2) NCPC

* Faculty of Law, „Nicolae Titulescu" University of Bucharest (e-mail: **Danila_Marian_Alin@yahoo.com**).

states, as mentioned above, the exceptional character that preventive measures must have in criminal proceedings based on the rule established in para. (1) EC.

Incidentally, in full accordance with the values expressed by the European Convention, whenever the Criminal Procedure Code provides for measures during the criminal trial that restrict the exercise of fundamental rights, the legislature has provided that the restriction of these rights is permissible only by law and if it is necessary in a democratic society.

Introducing in the criminal procedure law, in 1990, the provisional release on bail and provisional release under judicial control available to judicial authorities were set as tools for a better individualization of the measure of preventive arrest and at the same time, there was a balance between the prevention custodial and non-custodial preventive measures.

Through the provisions of the Code of Criminal Procedure it has been achieved a conversion of provisional release preventive measures and the interdiction to leave the country or locality in the contents of a single preventive measures, judicial control, provided in two ways, proper judicial review and judicial control on bail.

Being a legislative novelty, in our legislation was introduced the preventive measure of house arrest, measure of restraint by which the defendant is deprived of freedom of movement outside his home.

To conclude on aspects with an introductory character, we emphasize that preventive measures have their basis in the needs created by the highest interests of attaining the criminal proceedings [8], and their regulation in all codes of criminal procedure is another argument on the necessity of such institutions, even if between the fundamental principles of the criminal trial, the presumption of innocence is also a part.

According to art. 202 paragraph (4) the preventive measures that can be placed on the suspect or the accused (as an individual) are: detention, judicial, judicial bail, house arrest and preventive detention.

If there are special reasons justifying a reasonable suspicion that a legal person committed an offense under the criminal law, and only to ensure the smooth conduct of criminal proceedings, there may be ordered the following preventive measures, according to art. 493 par. (1):

a) the prohibition of initiating, or, where appropriate, the suspension of the procedure of dissolution or liquidation of the legal entity;

b) the prohibition of initiating or, where appropriate, the suspension of the merger, the division or capital reduction of the legal entity, began before or during prosecution;

c) the prohibition of patrimony operations likely to involve reduction of the assets or the insolvency of legal entities;

d) the prohibition on concluding certain legal documents, set out by the judiciary;

e) the prohibition on activities likely to those during which the offense was committed.

2. Content

Given that by taking preventive measures the fundamental right of inviolability of the person [9] is being prejudiced, the legislature has established solid procedural safeguards which require strict observance of laws that allow such procedural measures.

Procedural safeguards mentioned above consist precisely in many conditions to be fulfilled cumulatively in order to have a preventive measure. Choosing the preventive measure to be taken is done in the light of its purpose, seriousness, the manner and circumstances of committing the offense and the person against whom it is taken.

In order to take preventive measures, there must be realized cumulatively a number of general conditions, analyzed below.

I. To be evidences or indications which point to the reasonable suspicion that a person has committed a crime.

We consider as superfluous establishing this first condition for taking a preventive measure, because preventive measures, species of the procedural measures, involv necessarily the existence of a legal framework or the phase of the proceedings, which can not exist without evidence or indications of which results that an offense has been committed [10]. Also, being personal procedural measures, the decision on taking certain preventive measures implies the existence of the suspect quality (only for assumption of apprehension) or defendant (for the other preventive measures).

In these circumstances, when it is determined the opportunity of taking any one of the preventive measures in the law, in the case file there is necessary an evidence on which was ordered the prosecution against a specific person or the initiation of criminal proceedings, procedural acts that have in common the premise of a reasonable suspicion that the person committed the offense.

II. Preventive measures are necessary in order to ensure the proper conduct of criminal proceedings, preventing the suspect or the defendant from absconding prosecution or trial or to prevent commission of another offense.

By regulating this requirement, the legislature established the driving force in making any preventive measures, namely to ensure the proper conduct of criminal proceedings. It is estimated that this objective is ensured by preventing the

absconding of the suspect or defendant from carrying out judicial activities. Additionally, by taking preventive measures, it cand be aimed the general prevention, by preventing new crimes.

III. The preventive measure must be proportionate to the gravity of the accusation against that person on whom is taken and necessary for achieving the goal through its arrangement.

In connection with this condition, some work [11], estimated that between preventive measures and the system of criminal sanctions is needed a certan consistency, because, in this view, the state of freedom in criminal proceedings should correspond, to a certain extent, to the one existing after the criminal sanction and beig given the seriousness of the accusation on the person against whom criminal repression begins during prosecution or trial of the case.

In this respect, it is considered that a criminal sanction would be inappropriate as a non-custodial completion of a trial in which the defendant was found in custody. Such a situation would be likely to highlight a certain disparity between hardness or the harshness ritual in criminal trial and the penalty imposed as a result of its conduct.

IV. There has to be no cause preventing the exercise of criminal action or movement.

V. The suspect or defendant must be heard in the presence of the chosen or appointed ex officio lawyer.

From all the rules of criminal procedure results that these five general conditions must be met for any of the preventive measures taken by the law. Beside the general conditions set out above, in order to take certain preventive measures (eg, detention, judicial review, etc.) are required also some specific conditions.

In order to ensure personal freedom, our legislation provides that preventive measures are taken, usually by the judge of rights and freedoms, the judge of preliminary chamber or court (depending on the phase in which the criminal proceedings are) and prosecutor, the only measure that the criminal investigation authorities can take is retaining for less than 24 hours.

According to Art. 203 par. (1), the detention measure may be taken against the suspect or defendant by the criminal investigation body or by the prosecutor, only during prosecution. The procedural act during wich the decision of ordering the detention is the decree. Regarding the enforcement of detention, the prosecuting authority will draft a letter to the administration of the prison where the suspect or defendant will be executing [12] the preventive measure.

Judicial review and judicial control on bail may be ordered against the defendant by the prosecutor or judge of rights and freedoms during the phase of criminal prosecution, by the judge of preliminary chamber, during the procedure of preliminary chamber, and by the court during the trial. The procedural act when the prosecutor takes the decision on measures as judicial review or judicial control on bail is the decree. This preventive measure it is ordered by the judge of rights and freedoms, preliminary chamber judge or by the court when reasoned.

In order to implement preventive measures, the judicial authority shall notify, through a letter prepared under art. 82 of Law no. 253/2013 on the execution of penalties, educational measures and other non-custodial measures ordered by the court in criminal proceedings, the institutions able to monitor compliance with the obligations imposed on the defendant.

Preventive measures of house arrest and detention shall be ordered against the defendant by the judge of rights and freedoms during the phase of criminal prosecution, the judge of preliminary chamber, the procedure preliminary chamber, and the court during judgment. The procedural act ordering these preventive measures is a motivated decision. Regarding the execution of preventive arrest the competent judicial body will issue an arrest warrant.

Regarding the content of the act which disposes a preventive measure, the current regulation does not contain express provisions showing common elements that must be included in the procedural act.

The rightfull cease of preventive measures is a legal obstacle in maintaining them. So, whenever the law provides that the preventive measure ceases, the court is obliged to order its dissolution.

In art. 137 of the Criminal Procedure Code were previously laid down general provisions regarding the act of taking preventive measure. Thus, in the act ordering any of the four preventive measures were indicated: act that was the subject of the accusation or indictment, the legal text where the punishment provided for the offense was mentioned. Assuming detention and arrest, the act taking these measures should indicate the additional case provided for in art. 148 and the concrete bases of which arose its existence. In the case of the obligation not to leave the city or country, the document that such action had to show concrete reasons that have determined the measure, without referring to any of the cases provided for in art. 148.

Cases where preventive measures rightfully cease are provided for in art. 241, ranked in cases of general cease, applicable to all preventive measures, and specific cases only regarding arrest and house arrest.

General cases of legal preventive measures cessation.

First, preventive measures cease on deadlines provided by law or determined by judicial bodies.

Arguably, it can be said that the deadlines provided by law in cases where preventive measures were placed on the maximum length of time limits provided by law are expired; for example, the preventive arrest of the defendant ceases as it had been taken for 30 days and that period expired. Thus, the period of the arrest of the defendant is not more than 30 days and after such period, during prosecution, if it wishes to maintain this measure, the judge of rights and freedoms has a constitutional and criminal obligation to decide to extend the arrest.

When the judicial body has set a preventive measure for a period longer than the maximum period provided by law and this deadline set by the judicial body has elapsed, it can be said that the measure of prevention has rightfully ceased as it was the deadline set by the judicial body.

Preventive measures shall be stopped automatically or under the circumstances when it was given a solution for the suspect or defendant to be exonerated from criminal liability. In this respect, art. 241 paragraph (1), lit. b) indicates that preventive measures shall automatically be stopped in cases where the prosecutor has a solution not to indict or the court gives a solution to pay, giving up criminal proceedings, waiving penalty, postponing the penalty or suspension of sentence under supervision, although not final.

Also, according to art. 241, paragraph (1), lit. c) preventive measures cease the date of the final judgment, when the defendant was convicted. Lastly, preventive measures cease in other cases specifically provided by law. By this expression are considered to be covered art. 399, para. (3) according to which preventive detention measures cease while court issues:

a) An imprisonment not more than the duration of detention and arrest;

b) A prison sentence, suspending the execution under supervision;

c) A fine penalty, which accompanies imprisonment;

d) An educational measure.

3. Conclusions

It is also thought as being still relevant the jurisprudence of the Supreme Court in solving the appeal on points of law, prior to the current Code of Criminal Procedure, which established that in case of the court's failure to check, during the trial, of the legality and validity regarding the preventive arrest of the accused before the end of the period provided by law, draws the rightfull cease of preventive arrest and an immediate release of the arrested defendant. Although the decision relies only on stopping the preventive measures, it is considered that the failure to check the legality and merits of any preventive measure by the judge for preliminary chamber or the court leads to the cessation of the preventive measure.

Particular cases of preventive arrest and house arrest ceassing, according to art. 241 par. (1):

a) During the criminal investigation, on reaching the maximum duration of 180 days;

b) During the trial of the first instance, on reaching the maximum term provided by law;

c) During the appeal, if the measure has reached the term of the penalty imposed in the sentence. Regarding the cease of preventive arrest during the appeal, it is being noted the provisions of art. 399 par. (6) under which the defendant convicted by the first instance and found in preventive arrest is released as soon as the duration of detention and arrest are equal to the length of the sentence handed down, although the judgment is not final.

While ceassing preventive measures is a legal obstacle in maintaining them, the revocation of preventive measures is a procedural act which opportunity is estimated by the judicial organs. Given the provisions of art. 242 par. (1), the revocation of preventive measures appears as a procedural act for the judicial bodies to abolish preventive measures when the reasons that caused disappeared or new circumstances have arisen, resulting the illegality of this measure. In a slightly different wording it is observed that revocation of preventive measures is taken in the same procedural regime as in the earlier legislation.

The repeal of preventive measures can be made on request or ex officio. In case of repeal regarding the detention or preventive arrest, it will be ruled, simultaneously, the release of the suspect or defendant, if he is not arrested in another case.

For knowing permanently the opportunities in maintaing or repealing the measure, if the preventive measure was taken during prosecution by the prosecutor or the judge of rights and freedoms, the criminal investigation body is obliged to immediately inform, in writing, the prosecutor about any circumstance that could result in repealing the preventive measure. If it considers that the information justify the repeal of preventive measure, the prosecutor rules it or, where appropriate, refers the matter to the judge of rights and freedoms that took the action, within 24 hours after receiving the notice. The prosecutor must also notify ex officio the judge of rights and freedoms, when it finds himself the existence of any circumstances which justify repealing the preventive measure taken by it.

From provisions in art. 242 results that repealing the preventive measures is an act by which either the body that ordered the measure or other competent judicial body may go behind a decision, revoking it if the measure was taken illegally or if the grounds for adopting it have ceased. In this

respect, it is on record that the regulation seen as a principle, contained in Art. 9 paragraph. (4) wich states that when it appears that a measure deprivating or restricting liberty was imposed unlawfully, the cognizant judicial bodies are obliged to decide repealing the measure and, where appropriate, the release of the detained or arrested person.

Preventive measures, as procedural measures, are interlocutory and are being taken based on specific circumstances related to the criminal case and the person og the perpetrator.

It is possible that, during criminal proceedings, there could intervene items that require the replacement of the initially taken preventive measure with another preventive measure. In this regard, in the Code of Criminal Procedure was performed the distinction between replacing the preventive measure with a lighter or heavier one.

ACCESS TO A COMPUTER SYSTEM. BETWEEN LEGAL PROVISIONS AND TECHNICAL REALITY

Maxim DOBRINOIU[*]

Abstract

Nowadays, on a rise of cybersecurity incidents and a very complex IT&C environment, the national legal systems must adapt in order to properly address the new and modern forms of criminality in cyberspace. The illegal access to a computer system remains one of the most important cyber-related crimes due to its popularity but also from the perspective as being a door opened to computer data and sometimes a vehicle for other tech crimes. In the same time, the information society services slightly changed the IT paradigm and represent the new interface between users and systems. Is true that services rely on computer systems, but accessing services goes now beyond the simple accessing computer systems as commonly understood by most of the legislations. The article intends to explain other sides of the access related to computer systems and services, with the purpose to advance possible legal solutions to certain case scenarios.

Keywords: *cybercrime, access to computer system, cyber-attacks, information society services, botnet, email access, point-of-sale, web access, criminal law, offence.*

1. Introduction

In a very complex virtual environment, at the European level, the applicable national legislations on cybercrime are mainly based on the Council of Europe Convention on Cybercrime, concluded in 2001 in Budapest. A good document and a real beacon for law enforcement and judicial systems across Europe (and many other countries) for more than a decade. But we now witness that some of its provisions seem to be far away behind the nowadays technological developments and the actual operation tools and methods used by the criminals in cyberspace.

Some countries understood the need for a more comprehensive legal approach of the new improvements in the criminal cyber-activity, while others still remain bound to the old concepts and try to improvise in the search for the correct solutions in complex cases involving new sort of cyber-attacks and new IT&C means of committing cyber-related crimes.

2. Terms and definitions

The CoE Convention defines the computer system as "any device or group of interconnected or related devices, one or more of which, pursuant to a program, performs automatic processing of data".

Computer data is regarded as "any representation of facts, information or concepts in a form suitable for processing in a computer system, including a program suitable to cause a computer to perform a function".

Meanwhile, the service provider means "any public or private entity that provides the users of its service the ability to communicate by means of a computer system", as well as "any other entity that processes or stores computer data on behalf of such communication service or users of such service".

Sometimes, mistakes are made in the understanding computer programs and data as indispensable parts of computer systems, and thus, people wrongfully regards the user's interaction with them as an interaction (see access) with computer systems. For example, a simple interaction with an antivirus application installed on a PC cannot be regarded as an access to (entering) the remote antivirus server belonging to a certain IT security company.

3. Access to computer systems versus access to information society services

Acting as a source of inspiration for national legislations, the CoE Convention on Cybercrime provided for, in Article 2, the illegal access to a computer system as "the access to the hole or any part of a computer system without right", while at point 46 of its Explanatory Report, the European legislators came with much deeper conclusion, stating that the access should be seen and interpreted as "entering of the hole or any part of a computer system (hardware, components, stored data of the system installed, traffic and content-related data)".

This understanding provided for national legislations the grounds of incriminating acts like "hacking", "cracking", "computer trespass" or any other operation in which the perpetrator illegally succeeds to "enter" or to "break into" a computer system, either it is a standalone one or a remote workstation connected to a network.

[*] Nicolae Titulescu University, Bucharest (e-mail: **office@e-crime.ro**).

Furthermore, a common agreement concluded that there is no (and shouldn't be) "access to a computer system" in situations like: sending an email message from one computer system to another or file transfers between systems.

The meaning of "enter", "break into", "hack into" and likewise terms is that of the creation of a direct and continuous virtual liaison between an individual and a machine, of a nature that allows the individual to treat the computer system almost like a physical location (ex. a house), having the possibility to perform different actions while inside (ex. turning the light on/off, resting on a sofa, opening the fridge in search for food, using the toilet etc.).

Once this direct link is somehow disconnected (irrespective whether it is resumed in the future) the virtual presence of the individual into the machine is over and is quite similar to getting out or leaving the "house".

Over time, either by interpreting the CoE Convention on Cybercrime (and its Explanatory Report) or creating their own provisions, national legislations preferred the term of "access to" in order to identify and further prosecute certain interactions between individuals and computer systems. But, in reality, taking into consideration the above mentioned considerations and the technical ways such interactions occur, one could notice that just few of the real situations are properly covered by the legal articles involving the "access to" expression, as it could be exampled herewith.

Access to a Computer System

In its simplest way, the access to a computer system (network) requires a direct interaction with the peripherals (keyboard, mouse) in order to launch commands to the Central Processing Unit and make the system work.

Furthermore, using a system's functions and the possibility of processing data could also be regarded as "access" to that system[1], because the interaction and the continuously "logical" liaison between the user and the machine is one of the kinds that creates the conditions for the existence of a virtual presence of that specific user "into" the system.

From a distance, there are multiple possibilities to have an access to a system, especially when, using his own system and specific tools, the user finds a way to (re)create and administer the virtual continuous liaison with the targeted computer (in the same network or in Internet). Is the well-known case of using a Remote Access Tool (or Remote Administration Tool), a software that creates a continuous communication channel between two separate systems, with the possibility for a user to virtually be present in another one's system (with the purpose of performing administration tasks or solving specific issues).

The problem with some of the national legislations is that the "access to computer data" is conditioned by the "access to a computer system", while the real life shows multiple ways to get hold of computer data without actually "enter" or "hack into" a computer system.

In either the situation presented, the key factor for the "access" is the existence of a (direct or remote) continuous communication channel able to provide a virtual presence of a user within a computer system.

A particular instance of the "computer system" is represented by the smartphone or tablet (communication equipments with operating systems). Any unauthorized use of either such terminals may be easily regarded as a crime of "illegal use of a communications terminal equipment" (if available in legislation[2]), in legal conjunction with the crime of "illegal access to a computer system", taking into consideration that the use of the terminal equipment is equivalent with the "entering in" that "system".

Access to a Web resource

Accessing an Internet resource, such as a webpage, may rather be regarded as the obtaining (remotely) of computer data than an access to a computer system (ex. the web-server).

Technically, it is commonly understood that, when requested by a user (upon entering the respective URL), a copy of the targeted remote webpage is being sent by the hosting web-server directly to the user's browser and then showed him on the monitor. All the operations (at physical, network, TCP[3] or application level) are performed without user's acknowledgement or intervention, while the data traffic simply follow the TCP/IP and HTTP[4] protocols.

It is clear that, in this case, the user cannot (and does not) access the remote web-server and he does not actually "enter" the computer system that operates as web-server in searching for the desired webpage content (computer data). It is more a data exchange, during an established bidirectional and sequential communication between user's browser (PC) and the remote web-server.

As a matter of fact, it is a classic act of a transfer of computer data from a computer system. When committed without right, this is a crime prosecuted and punished by the majority of national legislations. Surprisingly, this situation was not

[3] Transport Control Protocol.
[4] Hyper Terminal Transfer Protocol.

comprised in the CoE Convention on Cybercrime, but there are suspicions that the European drafters thought of it in the context of the "illegal access to a computer system with the intent of obtaining computer data".

As a particular case of accessing a web resource, the situation when the web-servers send and install in users' PCs the so-called "cookie files" (the same time they send to browsers the desired webpages) may also not be considered as an "access to a computer system", because these files cannot ensure a continuous virtual link between a person (ex. webpage owner) and the destination PCs. They are just small scripts (computer programs) that record and track users' online activity on certain webpages and "help" webpage administrators to easily direct them adware or similar content during the next visits (browsing).

Using "cookie files" is merely a subject of an "illegal interception of computer data" (as a form of cyber-surveillance), but is not considered as a crime (by the majority of national legislations), due to the fact that the users' consent over reception, installation and operation of such software is legally expressed by acknowledging the situation clicking a visible alert available on most of the websites.

Access to an E-mail account

This is a very much disputed situation, both in academia and judicial practice.

It is commonly known that an E-mail account is a space allocated on a Mail server for a specific client (user), identified by a unique E-mail address. The authentication methods usually consist of a username and a password.

E-mail, as generic perceived by people, is not a computer system. It is not a computer program either. It is an information society service or, simply, a "publicly available electronic communications service"[5]. Or, a communication performed by electronic means.

According to Article 2 point (h) of the European Directive 58/2002, the electronic mail is "any text, voice, sound or image message sent over a public communications network, which can be stored in the network or in the recipient's terminal equipment until it is collected by the recipient".

From this technical reality, when it is about an "illegal access to an E-mail account" the judicial system must ensure that there exist a crime of "illegal access to a computer system" or just something else.

Irrespective of the tool a person use for interaction with a remote Mail server – through an E-mail client software (computer program) or a Web Mail service (ex. Gmail, Yahoo etc.), the act of sending, receiving or just reading electronic messages is very hard to be considered as an access to a computer system (the Mail server).

In this case, an eventual offender is not entering the remote Mail server, nor breaking into or hacking into that system. The user simply benefits from the functions of that particular system, which are: receiving, sending or storing E-mail messages from, to or on behalf of the legitimate account owner.

Even when an E-mail client software or a Webmail service is used, messages are often sent or received as copies of specific computer data. Data processed inside or outside a network or between multiple networks.

So, it is merely a sequential communication of data, and thus not a continuous virtual relationship (interaction) between the user and the remote machine (the Mail server), and therefore not a real access.

Surprisingly, we do have an access. Not an "access to a computer system", but rather an "access to an electronic communications service" or simply an "access to a computer service". As mentioned before, E-mail is a computer service, and its usage by a person better fits into this context of "access" seen as a possibility to obtain, to benefit from or to effectively use that service.

Access to Cloud Accounts

Cloud Computing is a general term for the delivery of hosted services over Internet[6]. In Cloud Computing, users access software applications remotely through the Internet or other networks via cloud applications service providers[7].

Simply, cloud computing is a service. An information society service available for users (clients) based on certain access credentials. However, those users don't actually "enter" or "get-in" the remote servers, so there is no "access to a computer system". The files the legitimate users are working on are not stored locally, but on remote servers, while the users interact only on electronic copies of those files (that are transferred to local machines for each particular purpose – read, write, modify, delete).

In case of a perpetrator using, without right, a cloud computing-type service, thus obtaining computer data as results (photos, personal information, financial, official, classified or any other type of information), from a criminal law perspective there is merely an "unauthorized transfer of computer data" (computer data is identified and extracted by the attacker), in conjunction (if the case) with a "data interference" (data is altered or suppressed in any way), a "computer-related fraud" (if a loss resulted), a "computer-related forgery" (if a legal consequence was created), etc.

[5] https://ico.org.uk/for-organisations/guide-to-pecr/key-concepts-and-definitions/
[6] http://searchcloudcomputing.techtarget.com/definition/cloud-computing
[7] http://www.financialforce.com/resources/what-is-cloud-accounting/

For all that, the existence of a distinct criminal law provision of "illegal access to an electronic communications service / information society service" would be a better legal solution in this scenario, too.

Access to ATM and POS

There is no doubt that an Automated Teller Machine (ATM) is a computer system. In fact, it is a computer linked to a cash dispenser.

When used by a credit card holder in order to take out cash or to perform certain financial transactions, the interaction with this terminal should always be considered as an "access to a computer system". Thus, in the situation of the access to the ATM by a person with a fake (forged, cloned) credit card or by a person with a valid credit card but with no right or consent from the legitimate holder, there will be an offence of "illegal access to a computer system" along with an offence of "unauthorized conducting of financial operations"[8] or "circulating forged electronic payment instruments"[9].

A Point of Sale (PoS) is an electronic device that operates with the purpose of authenticating an electronic payment instrument (credit card) and its holder to the financial computer system in order to validate a transaction (ex. purchase). Being an electronic device interconnected with an electronic payment system, one should consider it as a part of the whole computer system.

Thus, a person who presents a forged card to a PoS or a valid card but with no consent from the legitimate holder may be liable for committing the offence of "illegal access to a computer system" in legal conjunction with the offence of "unauthorized conducting of financial operations". Irrespective if the interaction between the PoS and the valid card is through embedded chip or wireless[10].

Access to Online Banking

This is another misinterpreting of the term "access to a computer system".

It may look pretty much as an access to a computer system when a person logs in and use the online banking facilities, but, again, the technical realities come to reject this solution.

A portal for online banking is primarily a web interface, an electronic communication service or an information society service, provided in certain conditions by a financial institution (a bank) to its clients. The legitimate users may have access to the information on their bank account (balance, credits, list of transactions etc.) or they may perform some bank-specific operations (online transfer of money to other bank accounts, foreign exchange etc.). But in no circumstance, the user (bank client) is "entering" the bank's computer system. He only relies on the specific data the bank is sending to him, via the web interface (portal), based on his online requests. And, as mentioned before, this is just a sequential bi-directional communication of data (like email exchange) and not a continuous virtual communication channel, as required for the existence of an "access to a computer system".

The same rationale applies in the situation of Mobile Banking, an electronic financial service provided by the banks to their clients, with the purpose to be used on mobile phones, in the form of mobile applications. These mobile applications act as the online interface with the (financial) service offered by the bank, and, through them, a user just only communicate (with the meaning of information exchange) with the bank's computer system or network, while not actually accessing ("entering", "hacking-into") that system.

So, in the case of an attacker using without right an online financial service, there should not be an indictment for "illegal access to a computer system", but merely an indictment for "unauthorized use/access of/to an internet society/electronic communications/online financial service" (in a theoretically possible legal connection with the crime of "unauthorized transfer of computer data" from the bank's computer system, and a "computer-related fraud").

Access to Wi-Fi Hotspots

Different approaches have been recorded, either in academic studies or practical cases, related to the situation of an electronic device (ex. smartphone or a laptop) connected to a Wi-Fi Hotspot in order to get connected to Internet. The legal solutions offered by specialists and authors varied from "illegal access to a computer system" to "illegal interception of data" or simply "theft".

From a technical point of view, a Wi-Fi Hotspot (or Access Point) is a real computer system, because it fits the definition provided by CoE Convention on Cybercrime and numerous national legislations. But the attention of an individual is not focused on the device itself, but on the electronic signals broadcast by the router, carrying TCP/IP packets of data, allowing the connection to Internet. Irrespective if the signal is unencrypted or encrypted with WEP, WPA or WPA2 PSK.

For this reason, this type of wireless connection (to Internet) eliminates the legal possibility of incrimination based on the provision of "illegal access to a computer system" and even on the provision of "illegal interception of data".

In this particular case a possible legal solution would be the incrimination of "the connection

[8] See Article 250 of the Romanian Criminal Code.
[9] See Article 313 of the Romanian Criminal Code.
[10] See PayWave provided by VISA.

without right to a network", with good results in prosecuting the unauthorized access to Internet through Wi-Fi Hotspots.

Access to Computer System through Malware

Hourly, computers and networks from around the world are infected, directly or remotely, with malware. This malware reaches targeted computers via multiple ways of propagation: external storage devices, infected E-mail attachments, infected websites (see Watering Hole Attack), P2P connections, File Transfer operations etc.

The most common infections are Viruses, Worms, Trojans, or Keyloggers. Most of them have a disruptive program to run in order to alter, modify or delete computer data on host system or to affect its good functioning. Some of them are just creating backdoors to perform further actions against the host or to use the host's computing capabilities to launch other virtual operations.

Depending on the design and operation features of such malware, we may have various possibilities of computer-related crimes.

If the malware installed into a computer is of a kind that modify or erase data there should exist the crimes of "data interference" and "system interference".

If the malware operates as a Keylogger, there should only be the generic crimes of "illegal interception of computer data" and "unauthorized transfer of computer data from a computer system".

If the malware contains a software module acting as a RAT[11], there is a crime of "illegal access to a computer system", for the reasons already described.

In Cybercrime and Cybersecurity literature, as well as in real life cases, there were disputes on the opportunity of an indictment of "illegal access to a computer system" in the situation of a Botnet creation.

As commonly defined, a Botnet is a group of computers connected in a coordinated fashion for malicious purposes[12]. Attackers often target unprotected computers and get control over them by infecting with viruses, worms or Trojans. By the use of such collection of "zombie" computers, attacker could further perform multiple Cybercrime specific activities (ID and Data Theft, DDoS[13], Spam, Phishing, etc.). While some of the IT Security specialists may consider that the creation of a Botnet has the technical ingredients for the existence of an "access to a computer system" (taking into consideration the way the Botnet Herder[14] remotely controls and gives instructions to the infected computers), there are also technical arguments that there is no "illegal access to a computer system" on the grounds that a continuous virtual communication channel is missing in the "relationship" between the Botnet Herder and each of the infected machine.

As it is regulated now, in most of the legislations, the "illegal access" ends immediately after the "entrance" of the perpetrator into the target system (directly or remotely), while there are no (or just few) provisions for the rest of the actions the attacker might further perform once "inside" the system.

In this case, a good solution would be the existence of an indictment of "*the access to a computer system that resulted in an unauthorized influence of the function of that computer system*".

Access to Externally Stored Computer Data

Apart from the information stored or processed within a computer system, there are multiple cases when the offenders are looking for computer data stored in external storage means, like Hard Drives, USB Flash Drives, CDs, DVDs, etc.

While most of the national legislations addresses just the obtaining of computer data that is stored, processed or transmitted in/from/to a computer system, almost none provides a solution for the situation data is obtained from a storage mean or device.

Usually, in order to access (see, obtain, process etc.) that electronic data, a user must connect the external storage device to a computer system. His own or another one's, but operated in legitimate conditions. Technically, when such connection occurs, data is temporarily copied into the RAM's host computer in order to further be displayed or available to the user.

Although there is no sign of an "access to a computer system", as defined by the CoE Convention on Cybercrime or the national legislations, there is a "transfer of computer data from a storage device", which, if is performed without right, may result in an offence of "unauthorized transfer of computer data from a storage device"[15].

On the other hand, for a more clear legal situation, *de lege ferenda* should be created a distinct provision incriminating the "unauthorized access to computer data" – as recommended by the CoE Convention on Cybercrime, but not in the general context of the data stored, processed or transmitted in/from/to a computer system, similar to the

[13] Distributed Denial of Service (cyberattack).
[14] The person who controls the Botnet.
[15] See Article 364 of the Romanian Criminal Code – "the unauthorized transfer of computer data from a computer system or a data storage device".

incrimination of the "unauthorized access to online child pornography materials".

4. Final remarks

The above analysis, from both technical and legal perspective, unveils various circumstances where the representatives of the legal sector may wrongly use the criminal charge of "illegal access to a computer system" when the cases actually deal with electronic communications services or information society services.

While still complying to the general recommendations of the CoE Convention on Cybercrime, national legislations should look forward to identifying new and comprehensive legal solutions in order to solve actual controversial situations from real life, and to prepare to properly address (through tough criminal provisions) the new improvements the cybercriminals add to their activity against computer data and computer systems.

Least but not last, national legislations need to focus their criminal provisions on the real impact the electronic communications services already have on the societies, economies and people, creating those solutions that better fit their law enforcement requirements, but from a technical perspective that goes beyond the simple "access to a computer system" way of thinking and interpretation.

FIGHTING THE CLASSICAL CRIME-SCENE ASSUMPTIONS. CRITICAL ASPECTS IN ESTABLISHING THE CRIME-SCENE PERIMETER IN COMPUTER-BASED EVIDENCE CASES

Cristian DRIGĂ[*]
Svetlana PURICI[**]

Abstract

Physical-world forensic investigation has the luxury of being tied to the sciences governing the investigated space, hence some assumptions can be made with some degree of certainty when investigating a crime. Cyberspace on the other hand, has a dual nature comprising both a physical layer susceptible of scientific analysis, and a virtual layer governed entirely by the conventions established between the various actors involved at a certain moment in time, defining the actual digital landscape and being the layer where the actual facts relevant from the legal point of view occur. This distinct nature renders unusable many of the assumptions which the legal professionals and the courts of law are used to operate with. The article intends to identify the most important features of cyberspace having immediate legal consequences, with the purpose to establish new and safe assumptions from the legal professional's perspective when cross-examining facts that occurred in cyberspace.

Keywords: *cybercrime, criminal law, digital evidence, cyberspace, forensic investigation.*

1. Introduction

Bringing criminal cases involving computer generated or stored evidence, as well as crimes committed entirely through information systems to justice is a major challenge for the legal system in general and for all the actors involved, ranging from the investigators, to prosecutors, judges and defense attorneys. The judicial system relies heavily on assumptions developed during a long time in processing physical-world crime cases. The rapidly-evolving digital age crimes, being partly or totally committed inside a new medium with different properties than the physical world, requires major changes in the way in which the legal professionals regard the criminal cases. While the laws slowly adapt, a more rapid adaptation can be achieved through understanding cyberspace and its governing "laws" as well as through putting aside the classical crime-scene assumptions and developing new ones. This article intends to identify such assumptions that cannot be used anymore in the digital crime cases and attempts to identify new assumptions that are safe to operate with in the pursuit of justice in the digital society.

2. Generic assumptions in regular crime cases

If a common crime takes place in a closed room, chances are that at the crime scene, evidence on how it was committed could still be found intact. On the other hand, for crimes committed in the street and public places, chances to find the same evidence intact are almost zero, given the multitude of elements that could destroy it. Similarly, while in closed space crime cases the possible suspects could be narrowed down to those having access or entering that particular room, in public-space crime cases, anyone passing by leaves a trace, thus being a potential suspect. These are typical assumptions that can be made with some degree of certainty when starting a forensic investigation in the physical world.

The key role of such assumptions is to help streamlining the first step in the forensic investigation[1], namely establishing the perimeter from where relevant evidence could be collected, the possible sources of information, the methods and tools that should be used and the type of evidence that could be obtained, and, in the court of law, to help analyzing the results of the investigation.

3. Assumptions in cyberspace crime cases

In criminal cases involving computer generated or stored evidence, as well as in crimes committed entirely through information systems, a new dimension is added to the traditional three dimensional space of the perimeter to be established as a first step in investigation: the cyberspace[2].

Be it the personal digital space or the greater public Internet, its unique properties like the ability

[2] http://thelawdictionary.org/cyberspace/

to cross the limits of rooms and buildings, national borders or even continents, as well as the multitude of devices and electronic services which may be part of it, raise a whole set of issues both for investigators as well as for the legal professionals. In such cases neglecting one possible source of evidence or failing to correctly establish the digital perimeter of the investigation[3], could easily lead to either failing to prove the offender guilty beyond any reasonable doubt, or worse, to grave judicial errors.

Even if it contains the notion of "space", the cyberspace does not possess the same properties the physical world has, rendering unusable many of the assumptions the legal professionals are used to operate with in the real life crime cases. Even if the forensic investigation ultimately examines physical devices seized from a specific physical location and the information stored inside them, prosecuting, judging or defending a suspect in a computer related crime case requires a good understanding of the nature of cyberspace and its properties as well as putting aside some of the real-world crime case assumptions.

Possibilities such as remote access and control of computer systems, automation of computer crime through malware programs, on-line identity theft, anonymization techniques as well as hijacking network identity, are but a few of the extremely common situations in cyberspace with significant legal consequences that need to be tackled since the early stages of the forensic investigation and thoroughly examined during the trial phase in the courtroom. The difference between guilty and not guilty can ultimately go down to the difference between 0 and 1 in a bit of information discovered inside an information system which was either neglected or correctly understood.

For instance, the closed room assumptions are not applicable to computers connected to the Internet no matter if the room containing the computer was even locked from inside. Also, if the computer through which the crime was committed belongs to a certain person does not make that person the author of a particular crime. On the contrary, given the statistical occurrence of computers being part of automated bot networks committing crimes[4], or the frequency of the computer malware infections providing remote access to perpetrators, transforms the personal virtual space into a public place, making it more likely in some cases to reverse the initial assumptions or to establish new ones, in order to safely operate when investigating cyberspace in the pursuit of justice.

As a different medium with its own unique properties and interactions, the cyberspace can provide relevant evidence which correctly understood as nature and properly collected, preserved, analyzed and interpreted, could make the difference between sound cases from the legal point of view and terrible prosecution failures. In courtroom, understanding the nature of electronic evidence, the interactions that could take place and the unique properties of the cyberspace, could level up the degree of certainty when sentencing the offender.

4. The nature of cyberspace

Traditional dimensions VS. dimensions established through conventions

The physical-space forensic investigation has the luxury of being tied to the laws of the science governing the investigated space or the nature of the objects in question (physics, chemistry etc). Cyberspace on the other hand, has a dual nature which brings in new variables into the forensic equation which are of critical importance from the legal point of view in establishing the truth in criminal cases:

The physical layer or the infrastructure - governed by the laws of physics (namely electricity, mathematics, etc) and comprising of the actual physical information systems, devices and networks subject to containing the evidence in form of digital information;

The virtual layer - built entirely from the data stored in or circulating the systems and networks, it comprises the software programs and services available at a certain moment in time, together with their automatic or user generated information, the usage rules and possible actions and interactions between systems, programs or services, the intended behavior or the actual behavior at given time of certain devices, software programs, services or computer systems. It basically defines the landscape in the digital space, the actions that could be taken by an individual and the data either automatically or user generated. As a distinct medium, the virtual layer is governed entirely by the conventions established between the various actors involved at a certain moment in time.

Both layers are of great importance when analyzing the virtual crime scene. While the former provides the actual information bits, the latter, correctly identified and analyzed allows the re-construction of the facts as they happened in a particular case.

The physical layer, being the closest to the physical world, thus susceptible of scientific analysis, defines certain characteristics of the information it could contain, leading to mandatory actions and precautions to be taken in the forensic

[3] U.S. Department of Justice, Office of Justice Programs, National Institute of Justice, *Electronic Crime Scene Investigation: A Guide for First Responders*, Second Edition (2008), 19.

[4] Romanian Computer Emergency Response Team, *REPORT on Cyber Security Alerts processed by CERT-RO in 2014,* (2015).

investigation in order to produce results admissible in court as evidence. The virtual layer instead, being the sum of both formal and informal conventions between software developers, hardware manufacturers and/or service providers to which we add the user actions and the user generated information, is subject to continuous evolution, its properties continuously changing, hence the impossibility to establish the same principles and assumptions from the classical criminal cases. However, being the layer where facts occur, it is of the utmost importance in assessing the events in a manner that could be relevant for the court.

5. Legal issues in virtual-space crime cases

Lawful usage, Terms of usage, Liberty of usage.

Regulating the Internet and the cyberspace in general is a hot legal topic under continuous development at international level[5]. Laws and treaties are developed to establish standards to which the various actors should adhere, in order to bring in some predictability in cyberspace that would allow more in depth enforcing of the real world established laws into the virtual society, shaping at least part of the virtual space through legal means.

As a trend in regulating cyberspace we see tremendous efforts in imposing new laws to the service providers which offer the infrastructure for the information society. However, beyond the physical infrastructure, few laws manage to properly regulate the actual virtual cyber-landscape in a manner that would increase the number of assumptions which can be made in investigations, therefore, efforts should be made in each case and trial stage for assessing the degree in which the perimeter of the crime, through its actors, was compliant with the applicable legal provisions.

Laws attempting to regulate the actual virtual space are usually implemented by the service providers through technical means enforcing a certain behavior or usage scenario, as well as through terms of usage of services, placing the legal responsibility to the end-users. Both aspects may become relevant in some of the cases in court in an attempt to determine the actual circumstances of a case.

Trust-related issues in cyberspace investigations.

Being established through conventions between multiple entities, as opposed to the physical space in which laws of physics, chemistry and other sciences are always applicable, cyberspace as a forensic investigation perimeter requires assessing the medium-specific properties, the boundaries and the applicable "laws" at the moment when the crime was committed. Being spread across multiple systems, networks, regions and participating entities, the investigated perimeter is highly dependent on the trust that can be attributed to each and every actor involved.

One important step, easy to neglect when starting an investigation, is to establish a thorough list of the participating entities from which, further on, the entities that can be trusted should be established both as source of evidence and for crossing them out from the list of suspects. The Internet being a public place, the open-street scenario and assumptions are the safest to apply even for computers with apparently a single user in a room locked from the inside.

In courtroom, the *presumtion of innocence* and the *benefit of the doubt* as two of the founding blocks in criminal justice, are most likely to throw out cases in which the aspect of throughly identifying the participating entities and properly addressing the issue of trust for each of them was neglected.

Discovering the perpetrator earlier, without assessing the "circle of trust" and delimiting it from the "circle of possible suspects" can be considered at most a lucky occurrence. Indeed such event reduces the costs and the investigators can move to the next case. From a technical point of view the findings may even prove right, but without the admission of committing the crime or without other non-digital evidence to corroborate the facts in the absence of admission, chances are that either the defense will appeal to the benefit of the doubt or, in case all parties ignore the issue, judicial errors might occur.

Time-related issues.

Being a continuously changing landscape, the cyberspace, even if it comprises of a single device, puts pressure on the investigators to capture a snapshot of the virtual perimeter at the moment when the crime occurred, either by reconstructing it from the recovered digital evidence seized from storage mediums belonging to the suspect, or by literally freezing parts of the information circulating through trusted provider's networks and servers using the proper procedural legal means.

The time issue, from the legal point of view is directly dependent on the trust issue and failing to assess if the time was correctly set and recorded in the investigated systems and in the network or service provider's systems, can lead to errors in identifying the perpetrator, especially in cases where identification relies on this correlation as the only means to connect the crime to the suspect's computer.

Network infrastructure assessment and legal compliance.

One such aspect relevant in court of justice, in cases where the device investigated is connected to

[5] Organization for Economic Co-operation and Development, *The role of internet intermediaries in advancing public policy objectives*, (2011).

the Internet, is the degree in which the service providers (Internet service providers ISPs, On-line service providers, etc.) comply with the applicable laws (for instance by implementing all the technical means required by the law) thus offering some degree of certainty regarding the evidence they provide and the facts that occurred in a certain criminal case.

Aside from the problem of jurisdiction under which a certain piece of the personal virtual space of the suspect or some of the digital evidence resides, assessing the real status of the Internet service provider offering connectivity to the suspect is more likely to be cross-examined by the defense in search for vulnerable spots of the investigation.

The *presumtion of innocence* in case of computer networks requires eliminating all other scenarios in which the perpetrator is somebody else than the suspect. For instance, if by any chance the ISP is not a legally established service provider but instead an individual providing Internet in a private network spanning several flats or buildings, the circle of suspects is mandatory to be enlarged to all the systems in the network and to their owners. Same situation applies when the connection to the outside word is made through a network switch instead of a router, or without having implemented proper technical means to detect or eliminate the impersonation of the suspect's computer by someone else in the network. Failing this assessment and to correctly identify the limits of the physical network at the time of the domiciliary raid can either lead to judicial errors or to providing ammunition for the benefit of the doubt defense strategy in court.

At procedural level, of a special importance are the legal instruments chosen to complete the steps of seizing and collecting the digital evidence from the service providers. Non-repudiation, juridical responsibility for the contents and integrity of the data, are but two of the most important legal aspects subject to scrutiny in the court of law.

The Entry Points legal issue.

The virtual space being collectively built and designed for interaction and spanning numerous devices, networks, software programs and services, presents as many entry points for someone to commit a crime as the multitude of elements comprising it.

This specific nature of the virtual space makes it impossible for digital investigations to address all the entry points in a manner that would eliminate entirely the possible alternative scenarios of committing a crime. The reason for this assumption is mathematical and is based on the myriad of combinations that can be achieved by inter-connecting the physical elements sustaining the virtual space, to which we add the possible combinations between the software programs, services and human elements interacting and defining the investigated virtual space.

To tackle the multiple entry points problem, the best-practice manuals always recommend performing classical police investigations in addition to the digital investigation prior to submitting the case to court. Classical evidence would short-circuit some of the most common defenses which appeal to the benefit of the doubt derived from the possibility that the crime was committed by someone else.

From the legal point of view, failing to address the physical open points in which the perpetrator could've commit the crime by hijacking for instance the network identity of the suspect through IP spoofing or ARP spoofing techniques, will always be exploited by the defense.

Other commonly met defense scenarios in the court of law exploit the software related entry points, such as the possibility of remote controlling a computer system as well as the automation of such control through computer viruses and similar means, the Trojan Horse defense[6] being such an example scenario, in which the defendant denies responsibility for committing the crime given the presence of viruses inside his computer systems which could either provide remote control capabilities to the actual criminal located somewhere else or could automatically commit the crime, in both cases without the knowledge of the defendant.

Staying current with the latest developments in the cyber-security field, given the raise of numerous new methods of penetrating a network or someone's computer, and especially with the statistics regarding the occurrence of certain types of attacks and exploitation of IT infrastructure can also indicate some of the alternative perpetrator scenarios that should be addressed and eliminated when building the court case.

6. Final remarks

Given the volatile and always changing nature of cyberspace, classical crime-scene assumptions are but a source of errors for the legal professionals in re-constructing the facts that occurred in committing a computer related crime. The legal system is used to rely on technical experts to gather the relevant data and to “translate” it into the concepts with which the legal professionals are used to operate.

Given the distinct nature of cyberspace, no matter how good the “translation” is, the findings and the information that can be obtained from the technical experts, processed using the physical-space crime-scene assumptions, could lead to miss-interpreting the evidence. Without understanding the properties and the possible actions in the investigated medium, the cross-examination in

[6] Susan W. Brenner, Brian Carrier, and Jef Henninger, *The Trojan Horse Defense in Cybercrime Cases*, 21 Santa Clara High Tech. L.J. 1 (2004).

courtroom is more likely to fail in discovering the truth and the parties involved in the trial are often put in the impossibility to grasp the relevant aspects and nuances of the facts, in order to further ask the experts the right questions.

The forensic examination of the physical electronic devices is subject to standardization. Adherence to standards is key to securing the evidence and collecting it in a forensically sound manner.

But the physical devices are but a small part of the cyberspace. The rest of the investigated perimeter, where the facts actually occur, being so volatile and differing from case to case, can only be subject to best-practice manuals in an effort of establish common would-be standards. To cope with this problem, understanding the cyberspace nature and a thorough examination of the virtual landscape in all stages of the trial as well as staying informed with the latest relevant evolutions in the field become mandatory even for legal professionals.

In the pursuit of justice, in cases involving digital evidence and cybercrime, the common assumption that being related to computer systems makes it solely the job of computer experts to understand the nature of cyberspace, becomes the most important assumption to put aside.

HUNGER STRIKES AND FORCE-FEEDING IN PRISONS

Radu-Florin GEAMĂNU[*]

Abstract

This study will try to give an overview and assess the international and European standards regarding the management of hunger strikes.

We will analyse the international and European standards regarding the force-feeding a prisoner on a hunger strike.

The paper will focus on the study of the ECtHR judgements regarding the force-feeding of hunger strikers.

Also, we will address the U.S. case and the force-feeding of prisoners which is considered to be, in certain cases, an act of torture based on the international human rights standards.

To close with, the study will attempt to go through the recent developments in the Romanian legislation, analysing the legislation and its conformity with the European principles and recommendations, bearing in mind the prohibition, in absolute terms, of torture or inhuman or degrading treatment or punishment.

Keywords: *hunger strike; force-feeding; prison; ECHR; Declaration of Malta; Romanian legislation.*

1. Introduction

Hunger strike is a severe form of protest of convicted persons with possible negative consequences mainly on their health or life, but also in general on the enforcement of custodial sentences and on the safety of detention facilities.

Perseverance in hunger striking can have irreversible effects on the person's health. Given that during detention convicted persons are in the custody of the state, the state has a very important role: to ensure enforcement conditions which can guarantee the protection of life, health and physical integrity of detainees. Against this background, perseverance in hunger striking can pose serious problems to the state agents as soon as the status of the hunger striker degrades to the extent that the person's force feeding becomes necessary.

As a consequence, the tension between the duty to secure the right of a prisoner to life and the duty to respect the autonomy of the individual needs to be addressed, in accordance with medical ethics and also with the legislation of the particular country.[1]

The controversial and emotive issue of forcible feeding of prisoners who are on hunger-strike raises the difficult question weather, and if so when, the infliction of painful but potentially life-saving treatment may constitute prohibited ill-treatment, despite a refusal of consent. In essence the argument is between two principles: respect for the moral autonomy of the prisoner, against the responsibility of the state for the fate of those it has deprived of liberty.[2]

2. Content

2.1. World Medical Association (WMA) standards

It was said that one of the most spectacular violations in recent history that were brought before the public and widely discussed involved force-feeding of hunger strikers by health care professionals.[3]

The WMA Declaration of Tokyo[4] provides some general principles regarding the clinical independence of the physician and the force-feeding of the prisoners: *A physician must have complete clinical independence in deciding upon the care of a person for whom he or she is medically responsible.*

Where a prisoner refuses nourishment and is considered by the physician as capable of forming an unimpaired and rational judgment concerning the consequences of such a voluntary refusal of nourishment, he or she shall not be fed artificially. The decision as to the capacity of the prisoner to

form such a judgment should be confirmed by at least one other independent physician. The consequences of the refusal of nourishment shall be explained by the physician to the prisoner.

The development of medical standards and ethics in case of force-feeding a prisoner during his/her hunger strike was realised through a special declaration of the WMA, dealing with hunger strikers.

According to the WMA Declaration of Malta on Hunger Strikers[5], an ethical dilemma arises when hunger strikers who have apparently issued clear instructions not to be resuscitated reach a stage of cognitive impairment. The principle of beneficence urges physicians to resuscitate them but respect for individual autonomy restrains physicians from intervening when a valid and informed refusal has been made. An added difficulty arises in custodial settings because it is not always clear whether the hunger striker's advance instructions were made voluntarily and with appropriate information about the consequences.

Physicians should respect individuals' autonomy. This can involve difficult assessments as hunger strikers' true wishes may not be as clear as they appear. Any decisions lack moral force if made involuntarily by use of threats, peer pressure or coercion. Hunger strikers should not be forcibly given treatment they refuse. Forced feeding contrary to an informed and voluntary refusal is unjustifiable. Artificial feeding with the hunger striker's explicit or implied consent is ethically acceptable (Declaration of Malta, principle no.2).

Physicians attending hunger strikers can experience a conflict between their loyalty to the employing authority (such as prison management) and their loyalty to patients. Physicians with dual loyalties are bound by the same ethical principles as other physicians, that is to say that their primary obligation is to the individual patient (Declaration of Malta, principle no. 4).

In this respect, it was stressed out that health care professionals employed as civil servants of the prison authority [as it is the case in Romania – *A/N, R.F.G.*] and subject to civil service rules also may encounter demands for dual loyalty and limitations of medical independence and confidentiality. This is particularly the case whenever nonmedical superiors in the administrative prison hierarchy abuse their responsibility of supervision by interfering in medical issues.[6]

On the contrary, private health care professionals, subject to no other command than their professional code, are less likely to defer to prison authorities who pressure them to compromise exclusive loyalty to their patients. Full-time prison health care professionals are more likely to succumb to institutional cultures that subordinate patient interest to agendas of the prison than are part-time professionals who also work outside of prison walls and maintain continuous contact with health care in the community. Dual loyalty is least likely to arise where health care services are organized independently of the prison authorities. Prison authorities then take responsibility only for medical tasks deemed necessary for safety and security or for forensic purposes.[7]

Of particular importance are the guidelines for the management of hunger strikers set out by the Declaration of Malta (no. 10, 12, 13):

If no discussion with the individual is possible and no advance instructions exist, physicians have to act in what they judge to be the person's best interests. This means considering the hunger strikers' previously expressed wishes, their personal and cultural values as well as their physical health. In the absence of any evidence of hunger strikers' former wishes, physicians should decide whether or not to provide feeding, without interference from third parties.

Artificial feeding can be ethically appropriate if competent hunger strikers agree to it. It can also be acceptable if incompetent individuals have left no unpressured advance instructions refusing it.

Forcible feeding is never ethically acceptable. Even if intended to benefit, feeding accompanied by threats, coercion, force or use of physical restraints is a form of inhuman and degrading treatment. Equally unacceptable is the forced feeding of some detainees in order to intimidate or coerce other hunger strikers to stop fasting.

As we can see, the WMA considers force-feeding ethically unacceptable. There is a confict of values between the duty of care to safeguard life and the right to physical integrity. Physicians should, however, prevent any act that could amount to torture or inhuman and degrading treatment. If a decision is nevertheless taken to force-feed a prisoner on hunger strike, such a decision should be based upon medical necessity and should be carried out under suitable conditions that refect the medical nature of the measure. The decision-making process should follow an established procedure, which contains sufficient safeguards, including independent medical decision-making. The methods used to execute force-feeding should not be unnecessarily painful and should be applied with skill and minimum force. Force-feeding should

[5] *WMA Declaration of Malta on Hunger Strikers*, adopted by the 43rd World Medical Assembly, St. Julians, Malta, November 1991 and editorially revised by the 44th World Medical Assembly, Marbella, Spain, September 1992 and revised by the 57th WMA General Assembly, Pilanesberg, South Africa, October 2006, accessed March 25, 2016, http://www.wma.net/en/30publications/10policies/h31/index.html.

[6] Pont, Stöver, and Wolff, *Dual Loyalty in Prison Health Care*.

[7] Pont, Stöver, and Wolff, *Dual Loyalty in Prison Health Care*.

infringe the physical integrity of the hunger striker as little as possible.[8]

But, as it was stressed out, the Malta Declaration does not resolve the dilemma. It provides only that the ultimate decision on whether to intervene or not should be left to the medical doctor.[9]

Once the prisoner's judgement is no longer rational or unimpaired, then he or she is no longer in a position to withhold consent, thus entering a condition wherein a concept of presumed consent can be held to operate. At least, such an approach is more easily reconciled with respect for the inherent dignity of the human person than is forcibly feeding a conscious and rational prisoner against his or her will.[10]

Rodley's above mentioned approach may be true if there is no prior consent of the prisoner, but the dilemma (whether medical practitioners should intervene) is at its most extreme where a hunger-striking prisoner loses consciousness and with it the ability to make a rational decision about whether to continue the hunger strike, but has left instructions that, even if this were to happen, he is not to be force-fed. There is an obvious tension in all these instances between the recognition of prisoner's right to choose, which is closely related to their right to physical integrity and human dignity, and the positive obligation on the state under Article 2 of the ECHR to protect human life.[11]

The respect for individuals' autonomy should be present in the case of hunger strikers. In this respect, it is mandatory that both the prison administration and the medical staff can communicate with the prisoner in order to know the reasons and the problems that need to be addressed in order to cease the hunger strike.

In any case, the force-feeding of a prisoner is not an ethical medical standard. To this end, the medical ethics only allow for artificial feeding in certain cases, with the compliance of certain conditions, but in the same time observing that the patient's autonomy is not infringed.

Finally, it should be stressed out that these minimum medical rules of ethics and guidelines are of the most importance, as the ECtHR examines and considers hunger strike from medical perspective, so the analyse of the cases is made in principle on the basis of the therapeutic necessity to artificially feed a prisoner.

2.2. European Convention of Human Rights and the case-law set out by the European Court of Human Rights

a.) Nobody should die in detention and Member States should ensure that every detainee is afforded the basic human dignity of dying outside of prison. Member States should ensure that all persons in detention receive the same level of medical care obtainable by other members of society.[12]

The shaping up of this future golden rule (*nobody should die in detention*) regarding the execution of prison penalties can be analysed in relation with the hunger strikes and the need to suspend the execution of the prison penalty on medical grounds.

Moreover, the equality of the quality of medical services recieved by prisoners (as other members of society) means, *inter alia*, that the prisoners should be subject to the same ethical and medical standards in case of hunger strike.

Although at international level the **United Nations Standard Minimum Rules for the Treatment of Prisoners**[13] are silent about the hunger strikes and force-feeding, at the European level, the **Recommendation no. R (98) 7 of the Committee of Ministers concerning the ethical and organisational aspects of health care in prison**[14] establishes a series of principles and recommendations which medical healthcare in prisons has to meet, including in relation with the hunger strike procedure (nos. 61-63 of the Recommendation):

The clinical assessment of a hunger striker should be carried out only with the express permission of the patient, unless he or she suffers from serious mental disorders which require the transfer to a psychiatric service.

Hunger strikers should be given an objective explanation of the harmful effects of their action upon their physical well-being, so that they

understand the dangers of prolonged hunger striking.

If, in the opinion of the doctor, the hunger striker's condition is becoming significantly worse, it is essential that the doctor report this fact to the appropriate authority and take action in accordance with national legislation (including professional standards).

As it can be noted, the Recommendation includes the issues of refusal of nourishment in the generic term of right to health of the detainees, whereas the focus is on the medical act.

b.) Article 3 of the European Convention for the Protection of Human Rights and Fundamental Freedoms (ECHR) enshrines one of the basic values of the democratic societies whose core purpose is to protect a person's dignity and physical integrity – prohibition, in absolute and unqualified terms, of torture or inhuman or degrading treatment or punishment[15], thus protecting, *inter alia*, the persons deprived of their liberty against the abuses of the prison administration.

Given the exposed position of the persons deprived of their liberty, member states need to give special attention upon fulfilling their obligation to taking all necessary measures in order to ensure the protection of those persons against torture or inhuman or degrading treatment or punishment. At this stage, mention should be made that a large proportion of the cases before the Commission and European Court of Human Rights (ECtHR) case-law have been introduced by prisoners, who are perhaps in a particularly vulnerable position, almost, if not all, aspects of their lives being subject to regulation by authorithy. The potential for interference and restriction in fundamental rights and freedoms is considerable.[16]

The unconditional terms of article 3 also mean that there can never, under the Convention or under international law, be a justification for acts which breach the article. In other words, there can be no factors which are treated by a domestic legal system as justification for resort to prohibited behaviour – not the behaviour of the victim, the pressure on the perpetrator to further an investigation or prevent a crime, any external circumstances or any other factor.[17]

c.) ECtHR case-law on article 3 of the Convention. The force feeding of the detainee within the hunger strike procedure can lead, as it can be easily noted further below, to the violation of the provisions of art. 3 of the Convention for the Protection of Human Rights and Fundamental Freedoms.

Ill-treatment must attain a minimum level of severity if it is to fall within the scope of article 3. The assessment of this minimum is, in the nature of things, relative; it depends on all the circumstances of the case, such as the nature and context of the treatment, the manner and method of its execution, its duration, its physical or mental effects and, in some instances, the sex, age and state of health of the victim.[18]

Forced feeding of prisoners staging a hunger strike. In its previous case-law, the Commission stated that in its opinion forced feeding of a person does involve degrading elements which in certain circumstances may be regarded as prohibited by art. 3 of the Convention.[19]

In the ***Herczegfalvy v. Austria*** case, the Court considered that the position of inferiority and powerlessness which is typical of patients confined in psychiatric hospitals calls for increased vigilance in reviewing whether the Convention has been complied with. The established principles of medicine are admittedly in principle decisive in such cases (patients who are entirely incapable of deciding for themselves); as a general rule, a measure which is a therapeutic necessity cannot be regarded as inhuman or degrading. The Court must nevertheless satisfy itself that the medical necessity has been convincingly shown to exist.[20]

In other words, involuntary therapeutic treatment is unlikely to give rise to any Article 3 issue provided always that this is administered in accordance with contemporary medical standards.[21]

In this particular case it is above all the length of time during which the handcuffs and security bed were used which appears worrying. However, the evidence before the Court is not sufficient to disprove the Government's argument that, according to the psychiatric principles generally accepted at the time, medical necessity justified the treatment in issue. Moreover, certain of the applicant's allegations are not supported by the evidence.

[15] *Article 3 – Prohibition of torture*
No one shall be subjected to torture or to inhuman or degrading treatment or punishment.

Hence, no violation of Article 3 (art. 3) has been shown.[22]

In the ***Nevmerzhitsky v. Ukraine*** case[23], the applicant complained that he had been held in detention and in particular in the isolation cell despite the fact that he had been suffering from a number of chronic diseases. The applicant also maintained that he had been deprived of adequate medical treatment while remanded in custody. The applicant alleged that he had been force-fed while on hunger strike, without any medical necessity being established by the domestic authorities, which had caused him substantial mental and physical suffering. In particular, he alleged that he had been handcuffed to a heating appliance in the presence of guards and a guard dog (in his further complaints he did not mention the guard dog), and had been held down by the guards while a special medical tube was used to feed him.

On the force-feeding of the applicant: The Court reiterates that a measure which is of therapeutic necessity from the point of view of established principles of medicine cannot in principle be regarded as inhuman and degrading. The same can be said about force-feeding that is aimed at saving the life of a particular detainee who consciously refuses to take food. The Convention organs must nevertheless satisfy themselves that the medical necessity has been convincingly shown to exist (see *Herczegfalvy v. Austria*, § 83, cited above). Furthermore, the Court must ascertain that the procedural guarantees for the decision to force-feed are complied with. Moreover, the manner in which the applicant is subjected to force-feeding during the hunger strike shall not trespass the threshold of a minimum level of severity envisaged by the Court's case law under Article 3 of the Convention. The Court will examine these elements in turn.

At the outset, the Court notes that the applicant did not claim that he should have been left without any food or medicine regardless of the possible lethal consequences. However, he claimed that there had been no medical necessity to force-feed him, as there had been no medical examinations, relevant tests or other documents that sufficiently proved that necessity. He claimed that the decision to subject him to force-feeding had been based on the analysis of the acetone level in his urine. He further maintained that the force-feeding had been aimed at his humiliation and punishment, as its purpose had been to make him stop the hunger strike and, in the event of his refusal, to subject him to severe physical suffering.

As to the manner in which the applicant was fed, the Court assumes, in view of the submissions of the parties, that the authorities complied with the manner of force-feeding prescribed by decree. However, in themselves the restraints applied – handcuffs, a mouth-widener, a special rubber tube inserted into the food channel – in the event of resistance, with the use of force, could amount to torture within the meaning of Article 3 of the Convention, if there is no medical necessity.

In the instant case, the Court finds that the force-feeding of the applicant, without any medical justification having been shown by the Government, using the equipment foreseen in the decree, but resisted by the applicant, constituted treatment of such a severe character warranting the characterisation of torture. In the light of the above, the Court considers that there has been a violation of Article 3 of the Convention.

Medical assistance and treatment provided for the applicant: The applicant suspended his hunger strike on 14 July 1998, resuming in October 1998. However, from the records submitted by the Government it is clear that the applicant was not examined or attended by a doctor from 5 August 1998 to 10 January 2000. In the Court's view, this cannot be deemed to be adequate and reasonable medical attention, given the hunger strike and the diseases from which the applicant was suffering. Furthermore, the Government have provided no written records as to the force-feeding throughout the hunger strike, the kind of nutrition used or the medical assistance provided to him in this respect.

In these circumstances, the Court considers that there has been a violation of Article 3 of the Convention as regards the lack of adequate medical treatment and assistance provided to the applicant while he was detained, amounting to degrading treatment.

In ***Ciorap v. Moldova***[24], Strasbourg Court held that there is a violation of article 3 of the ECHR, as repeated force-feeding of the applicant performed in a manner which unnecessarily exposed him to great physical pain and humiliation, was considered torture. As it can be observed from the judgement, the Court held a violation of article 3 not only because of the force-feeding, but also because of an intervention of several factors, especially the unnecessary use of force, namely handcuffing and the fact that the forced-feeding was not supported by valid medical reasons.

[22] ECtHR, *Herczegfalvy v. Austria*, §83-84.

[23] ECtHR, *Nevmerzhitsky v. Ukraine*, no. 54825/00, §78, 93-99 and §102-106, 5 April 2005.

[24] ECtHR, *Ciorap v. Moldova*, no. 12066/02, §84-85 and §88-89, 19 June 2007. The Court was struck by the manner of the force-feeding, including the unchallenged facts of his mandatory handcuffing regardless of any resistance, the causing of severe pain in order to force him to open his mouth and the pulling of his tongue outside of his mouth with metal tongs.

In ***Pandjikidzé and Others v. Georgia***[25], relying on article 3 (prohibition of inhuman or degrading treatment) of the Convention, the first applicant complained in particular about the lack of reaction on the part of the competent authorities to his 115-day hunger strike (to show disagreement with the criminal proceedings against him), while he was held in pre-trial detention.

The Court observed that he had never been force-fed and had not complained to the Court that the authorities should have taken such action. Even though his state of health must have declined, it did not appear from the case file that his life had been exposed to an obvious danger as a result of the authorities' attitude, and therefore that force-feeding would have been justified by any "medical imperative", or that he had been deprived of medical treatment appropriate to his state of health, or that he had been medically unfit to remain in prison. The Court therefore declared the complaint **inadmissible** (manifestly ill-founded) pursuant to article 35 (admissibility criteria) of the Convention.

In ***Özgül v. Turkey***[26], the applicant went on hunger strike while he was in prison. A few months later he was admitted to a hospital ward reserved for prisoners, but he refused treatment. The Institute of Forensic Medicine examined him and diagnosed him with Wernicke-Korsakoff syndrome[27], recommending that his sentence be suspended for six months. His request for release having subsequently been denied. One month after he had been sentenced to life imprisonment, when his health deteriorated, the doctors decided to impose treatment on him. The applicant complained in particular about the authorities' medical intervention against his will.

As to the medical intervention complained of by the applicant, the Court observed that article 3 (prohibition of inhuman or degrading treatment) of the Convention imposed an obligation on the State to protect the physical well-being of persons deprived of their liberty, for example by providing them with the requisite medical assistance. The persons concerned nevertheless remained under the protection of article 3, whose requirements permitted of no derogation. In the present case, the Court noted that the applicant had been under permanent medical supervision in a hospital since late December 2001. Until 15 March 2002 the doctors had not imposed treatment, but on that date they noted a deterioration of his state of health and found medical intervention and force-feeding to be necessary. Thus, for as long as the applicant's medical condition had been satisfactory the doctors had respected his wishes and they had only intervened when a medical necessity had been established. They had then acted in the applicant's interest, with the aim of preventing irreversible damage. Moreover, it had not been established that the aim of the medical intervention was to humiliate or punish him. It could be seen from the file that there had never been any question of using means of restraint. The Court thus found the complaint **inadmissible** (manifestly ill-founded) under article 35 (admissibility criteria) of the Convention.

Re-imprisonment of convicted persons suffering from the Wernicke-Korsakoff syndrome. The Court has established that article 3 may go as far as requiring the conditional liberation of a prisoner who is seriously ill or disabled, notably where the detainee either can no longer receive adequate treatment while in detention, or his or her condition is so poor that it would be inhuman and degrading to keep him or her in detention. Exemplary cases in which a detainee's condition was no longer deemed compatible with detention, necessitating either temporary or permanent release, include *inter alia*, the conditional liberation due to the continued detention of a detainee suffering complications of a hunger strike.[28]

For example, in ***Tekin Yıldız v. Turkey***[29], the applicant was diagnosed with Wernicke-Korsakoff Syndrome in July 2001. His sentence was suspended for six months on the ground that he was medically unfit, and the measure was extended on the strength of a medical report which found that his symptoms had persisted. A warrant was issued for his arrest in October 2003 after he was suspected of having resumed his activities with the terrorist organisation. On 21 November 2003 he was arrested and sent back to prison. Despite an early ruling that he had no case to answer, he remained in prison for eight months and it was not until 27 July 2004 that he was finally released.

The Court held that there had been a **violation of article 3** (prohibition of inhuman or degrading treatment) of the Convention on account of the applicant's re-imprisonment from 21 November 2003 to 27 July 2004. It observed in particular that the fact that an applicant had inflicted harm upon himself by going on a prolonged hunger strike did not release a State from any of its obligations towards such persons under article 3. Considering, in the instant case, that the applicant's state of health had been consistently found to be incompatible with detention and that there was no evidence to cast doubt on those findings, it found that the domestic

authorities who had decided to return the applicant to prison and detain him for approximately eight months, despite the lack of change in his condition, could not be considered to have acted in accordance with the requirements of Article 3. The Court further held that **there would be a violation of article 3** of the Convention if the applicant was re-imprisoned without there being a marked improvement in his medical fitness to withstand such a measure.

In ***Sinan Eren v. Turkey***[30], the applicant was diagnosed as suffering from Wernicke-Korsakoff syndrome in October 2002 and his sentence was suspended as a result. In January 2004 a medical report concluded that the suspension of his prison sentence was no longer justified on medical grounds and a warrant was issued for his arrest. The applicant absconded. Alleging that the stay of execution of his sentence had been lifted based on a medical report of no scientific value and which clearly contradicted the previous medical reports, the applicant submitted in particular that he was suffering from Wernicke-Korsakoff Syndrome and that his possible return to prison would constitute a violation of article 3 (prohibition of inhuman or degrading treatment) of the Convention.

The Court held that there had been **no violation of article 3** (prohibition of inhuman or degrading treatment) of the Convention. It observed in particular that, having examined him on 11 September 2004, the panel of experts appointed by the Court had unanimously concluded that the applicant was not suffering from any neurological or neuropsychological disorders that made him unfit to live in prison conditions. The Court could only share its own experts' opinion and it therefore considered that the applicant's return to prison would not in itself constitute a violation of article 3 of the Convention.

d.) ECtHR case-law on article 2 of the Convention. Exceptionally, the issue of refusal of nutrition and force feeding can pose a problem also in the light of article 2 of the Convention. When a detained person maintains a hunger strike this may inevitably lead to a conflict between an individual's right to physical integrity and the High Contracting Party's obligation under art. 2 of the Convention – a conflict which is not solved by the Convention itself.[31]

In ***Horoz v. Turkey***[32], the applicant's son died in 2001 while in prison after going on hunger strike to protest against the introduction of "F-type" prisons, designed to provide living spaces for two to three persons instead of dormitories. Before the Court, the applicant complained in particular that the judicial authorities' refusal to release her son, contrary to the opinion of the Institute of Forensic Medicine, had led to his death.

The ECtHR held that there had been no violation of article 2 (right to life) of the ECHR with regard to the death of the applicant's son, since it had been impossible to establish a causal link between the refusal to release him and his death. It observed that the death in this case had clearly been the result of the hunger strike. The applicant had not complained either about her son's conditions of detention or of an absence of appropriate treatment. The Court found that the authorities had amply satisfied their obligation to protect the applicant's son's physical integrity, specifically through the administration of appropriate medical treatment, and that they could not be criticised for having accepted his clear refusal to allow any intervention, even though his state of health had been life-threatening.

Also, when analysing the findings of the ECtHR in the *Nevmerzhitsky v. Ukraine* case, one can observe that the judgment does not settle the significant question of when, if at all, a medical doctor may recommend that a prisoner be fed without his consent. However, it can be argued, in the light of the Court's full and uncritical referral to the declarations of the WMA, that is now recognized at a European level that established principles of medicine require a doctor not to intervene in the case of a prisoner who wishes to continue with a hunger strike and who is capable of making an informed decision in that regard. At the very least, a state that follows a doctor's advice to respect such a decision should not find itself subject to a complaint on the ground of having failed in its duties under article 2 to protect life. The provision in respect of the prisoner who whishes not to be treated even after he has lapsed into unconsciousness as a result of a hunger strike, is less clear, but the same argument may succeed here.[33]

e.) From the **procedural point**, where an individual raises an arguable claim that he has been seriously ill-treated in breach of article 3 of the Convention, the member state has an obligation to initiate a thorough, prompt, independent and effective investigation, which should be capable of leading to the establishment of the facts of the case and, if the allegations prove to be true, to the identification and punishment of those responsible. This means that the authorities must always make a serious attempt to find out what happened and should not rely on hasty or ill-founded conclusions to close their investigation or as the basis of their decisions. They must take all reasonable steps available to them to secure the evidence concerning the incident, including, *inter alia*, eyewitness testimony, forensic

evidence etc. Any deficiency in the investigation which undermines its ability to establish the cause of injuries or to identity the persons responsible will risk falling foul of this standard. For an effective investigation into alleged ill-treatment by state agents, such investigation should be independent. Thus, the investigation lacked independence where members of the same division or detachment as those implicated in the alleged ill-treatment were undertaking the investigation. The independence of the investigation implies not only the absence of a hierarchical or institutional connection, but also independence in practical terms.[34]

For example, in ***Leyla Alp and Others v. Turkey***[35], the Court held that there had been a **procedural violation of Article 2** (right to life) of the Convention in respect of one of the applicants, and a **procedural violation of Article 3** (prohibition of inhuman or degrading treatment) of the Convention in respect of five other applicants, finding that the investigation and proceedings conducted by the national authorities had failed to satisfy the requirements of promptness and reasonable expedition implicit in the context of the positive obligations at issue.

2.3. The standards of the European Committee for the Prevention of Torture and Inhuman or Degrading Treatment or Punishment

According to article 1 from the European Convention for the Prevention of Torture and Inhuman or Degrading Treatment or Punishment, the European Committee for the Prevention of Torture and Inhuman or Degrading Treatment or Punishment (CPT) shall, by means of visits, examine the treatment of persons deprived of their liberty with a view to strengthening, if necessary, the protection of such persons from torture and from inhuman or degrading treatment or punishment.

When analyzing the activity of the CPT, Leidekker argues that perhaps the most striking development since 2001 is the altered attitude of the CPT as regards examining medical interventions; until fairly recently, the CPT preferred not to assess the content of a medical intervention carried out on a person deprived of his/her liberty.[36]

For some reason this approach changed: in the last few years, the CPT assessed a medical intervention, as it considered the situation of a prisoner who had been repeatedly forcibly fed by the Spanish authorities[37] in the course of his hunger strikes.[38]

Still, so far, the CPT has taken a cautious approach vis-à-vis medical interventions, which is rather similar to the manner in which the European Court of Human Rights tends to address such matters. The Court's approach is based on the concept of 'therapeutic necessity'.[39]

As a general principle, the CPT does not believe that it is the Committee's role to pronounce on the question whether it is right to force-feed a detained person on hunger strike.[40]

However, the CPT emphasized certain standards which should be met in the event that a decision is taken to force-feed a prisoner.

The minimum standards set out by the CPT are provided in the *Report to the Spanish Government on the visit to Spain (2007)*[41]:

If a decision is taken to force-feed a prisoner on hunger strike, in the CPT's view, such a decision should be based upon medical necessity and should be carried out under suitable conditions that reflect the medical nature of the measure. Further, the decision-making process should follow an established procedure, which contains sufficient safeguards, including independent medical decision-making. Also, legal recourse should be available and all aspects of the implementation of the decision should be adequately monitored.

The methods used to execute force-feeding should not be unnecessarily painful and should be applied with skill and minimum force. More generally, force-feeding should infringe the physical integrity of the hunger striker as little as possible. Any resort to physical constraint should be strictly limited to that which is necessary to ensure the execution of the force-feeding. Such constraint should be handled as a medical matter.

CPT/Inf (2001) 31, §33. "*(…) the issue of the artificial feeding of a hunger striker against his/her wishes is a delicate matter about which different views are held. (…) The CPT understands that the World Medical Association is currently reviewing its policy on this subject. To date, the CPT has refrained from adopting a stance on this matter. However, it does believe firmly that the management of hunger strikers should be based on a doctor/patient relationship. Consequently, the Committee has considerable reservations as regards attempts to impinge upon that relationship by imposing on doctors managing hunger strikers a particular method of treatment".* See, M. Leidekker, *Evolution of the CPT's Standards Since 2001,* Essex Human Rights Review, Volume 6 (2009), 103, accessed March 25, 2016, http://projects.essex.ac.uk/ehrr/V6N1/Leidekker.pdf.

[41] *CPT, Report to the Spanish Government on the visit to Spain*, no. 14.

Force-feeding a prisoner without meeting the standards set out above could very well amount to inhuman or degrading treatment.

According to the CPT standards, regarding the patient's consent, in the event of a hunger strike, public authorities or professional organisations in some countries will require the doctor to intervene to prevent death as soon as the patient's consciousness becomes seriously impaired. In other countries, the rule is to leave clinical decisions to the doctor in charge, after he has sought advice and weighed up all the relevant facts.[42]

For the CPT, when examining a medical intervention, article 3 of the ECHR remains the reference point; in other words, it is not under the CPT's mandate to decide on primacy among conflicting fundamental rights, such as the right to life versus the right to physical integrity, which is at the core of the ongoing discussion about forced feeding of hunger strikers.[43]

Concluding, it was stressed out that the landscape in which the CPT operates is altering rapidly. It took years of intensive lobbying before the CPT could be established; now, international monitoring of detention conditions appears to be fully accepted.[44]

2.4. The U.S. case

If at European level there is, as noted above, a minimum of standards and regulations in place concerning hunger strikers and force feeding of detainees, within the North-American legislation the prison administration has rather permissive margin of action, whereas the case-law under certain conditions validates the intentional deprivation or reduction of food rationing for detainees.

Against this background, a prisoner's allegations in his conditions-of-confinement claim that he was deprived of food, drink, and sleep for four days were insufficient to state a claim for physical injury.[45]

The prison's feeding rule required a prisoner to stand in the middle of his cell, with the lights on, when the meal was delivered and that he wear trousers or gym shorts. If the prisoner did not comply with the rule, the meal was not served. The prisoner wanted to eat in his underwear, so on a number of occasions over a two-and-a-half-year period, he refused to put on the pants or shorts and, as a result, was not served. Because he skipped so many meals, he lost 45 pounds. The prison also refused to serve the prisoner when he had a sock on his head because this could be used to hide a weapon. The prisoner's cell walls were smeared with blood and feces that he refused to clean. Under these circumstances, the prisoner's food deprivation was self-inflicted. The prisoner failed to show how many of his missed meals were missed for reasons that could not be related to his refusal to comply with a reasonable condition on the receipt of food. The prisoner experienced no real suffering, extreme discomfort or any lasting detrimental health consequences.[46]

On the other hand, denying food for a 50-hour period was held to go beyond what was necessary to achieve a legitimate correctional aim.[47]

Also, a trial court's order that prison officials place a defendant in solitary confinement and feed him only bread and water on the anniversary of his offense was impermissible.[48]

Special issues have been reported concerning **the situation of detainees at Guantánamo Bay**, as excessive use of force and force feeding of prisoners have been established to be documented and usual practices whereas such practices at the level of the Council of Europe, as noted above, have been considered inhuman and degrading treatment or even torture[49].

In this sense, there are recurrent reports of contexts in which excessive force was routinely used, including the context regarding the force-feeding during hunger strikes. According to reports by the defence counsels, some of the methods used to force-feed definitely amounted to torture[50].

[49] See, for example, ECtHR, *Nevmerzhitsky v. Ukraine*; ECtHR, *Ciorap v. Moldova*.

[50] *"They are being force-fed through the nose. The force-feeding happens in an abusive fashion as the tubes are rammed up their noses, then taken out again and rammed in again until they bleed. For a while tubes were used that were thicker than a finger because the smaller tubes did not provide the detainees with enough food. The tubes caused the detainees to gag and often they would vomit blood. The force-feeding happens twice daily with the tubes inserted and removed every time. Not all of the detainees on hunger strike are in hospital but a number of them are in their cells, where a nurse comes and inserts the tubes there."* Accounts given by Attorney Julia Tarver (28 October 2005) *in Situation of detainees at Guantánamo Bay*. Report of the Chairperson-Rapporteur of the Working Group on Arbitrary Detention, Leila Zerrougui; the Special Rapporteur on the independence of judges and lawyers, Leandro Despouy; the Special Rapporteur on torture and other cruel, inhuman or degrading treatment or punishment, Manfred Nowak; the Special Rapporteur on freedom of religion or belief, Asma Jahangir; and the Special Rapporteur on the right of everyone to the enjoyment of the highest attainable standard of physical and mental health, Paul

[*Concluding the Special Rapporteur considered that*] such treatment amounts to torture, as it inflicts severe pain or suffering on the victims for the purpose of intimidation and/or punishment.[51]

In the *Situation of detainees at Guantánamo Bay* Report[52] the authors underlined that, as we showed above, both the *Declarations of Tokyo and Malta* prohibit doctors from participating in force-feeding a detainee, provided the detainee is capable of understanding the consequences of refusing food. This position is informed by the fundamental principle, which recurs throughout human rights law, of individual autonomy. (…) Further, some domestic courts have decided, based on an individual's right to refuse medical treatment, that a State may not force-feed a prisoner[53]. While some other domestic courts have taken a different position, it is not clear that they have all given due consideration to the relevant international standards[54].

At national level, according to the United States Government, Department of Defense policy allows health professionals to force-feed a detainee in Guantánamo Bay when the hunger strike threatens his life or health.[55]

From the perspective of the right to health, informed consent to medical treatment is essential[56], as is its "logical corollary" the right to refuse treatment[57]. A competent detainee, no less than any other individual, has the right to refuse treatment[58]. In summary, treating a competent detainee without his or her consent - including force-feeding - is a violation of the right to health, as well as international ethics for health professionals.[59]

Concluding, it was stressed out that the Government of the United States should ensure that the authorities in Guantánamo Bay do not force-feed any detainee who is capable of forming a rational judgement and is aware of the consequences of refusing food. The United States Government should invite independent health professionals to monitor hunger strikers, in a manner consistent with international ethical standards, throughout the hunger strike.[60]

2.5. National legislation regarding the hunger strike

The majority of national legislations in Europe, as well as relevant international medical ethical codes, today consider that a competent adult may choose to refuse medical treatment even if it could save his life. Consequently, the authorities involved in the management of a hunger strike by a prisoner may often be faced with two potentially conficting values: their duty of care to safeguard a life and the prisoner's right to physical integrity (including the right not to have a treatment imposed on him).[61]

a.) Having regard to the difficulties posed by a detainee's refusal to feed himself/herself, the legal regulations created a detailed procedure for hunger strikers which establishes some clear tasks for the prison staff, but also with the intervention of the judge in charge of the supervision of deprivation of liberty in order to guarantee the respect of the hunger striker's rights.

The hunger strike procedure is detailed in art. 54 from the Law no. 254/2013 on enforcement of penalties and of measures ordered by the judicial bodies during the criminal proceedings[62] and art. 119-122 from the Government Decision no. 157/2016 for the approval of the Regulation of application of the Law No. 254/2013[63]. Against this

[62] Law no. 254/2013 on enforcement of penalties and of measures ordered by the judicial bodies during the criminal proceedings, published in the *Official Journal of Romania*, Part I, no. 514 of August 14, 2013.

[63] Government Decision no. 157/2016 for the approval of the Regulation of application of the Law No. 254/2013, published in the *Official Journal of Romania*, Part I, no. 271 of April 11, 2016.

background, person who refuses food is monitored by the prison administration.

According to the above mentioned provisions, in case a sentenced person intends to refuse food, he/she notifies the supervisory agent verbally or in writing and submits to such agent any possible applications concerning the grounds for food refusal.

The supervisory agent shall notify immediately the head of the detention section about the matter, who shall hear the sentenced person and shall take appropriate measures, if the matters invoked fall under its jurisdiction. In case the sentenced person remains determined to refuse food, the head of the section shall inform the director and the doctor of the penitentiary.

The prison director hears the detainee and records in the standardized form the issues indicated by the detainee, the reasons which led to that form of protest, the measures ordered, as well as the detainee's option to further refuse food or to accept it. If the detainee upholds the hunger strike, the director has to inform the judge in charge of the supervision of deprivation of liberty and send him in writing a standardized form with indication of the date and hour when he was informed, accompanied, as case may be, by the detainee's grounds for food refusal [Regulation of application of the Law No. 254/2013, art. 120 para.(1)-(2)]. From the time of notifying the judge in charge of the supervision of deprivation of liberty, *it shall be considered that the sentenced person is in a situation of food refusal*.

Starting from the moment when a person is considered to be in food refusal, the legal provisions establish in detail the role of the judge in charge of the supervision of deprivation of liberty and the tasks he has to fulfill.

If the aspects noted by the detainee refer to aspects pertaining to the jurisdiction of the judge in charge of the supervision of deprivation of liberty (establishing or change of the regime in which custodial sentences are enforced, exercise of the detainees' rights or complaint against the decision of the discipline commission), the judge in charge of the supervision of deprivation of liberty is obliged to hear the detainee and will decide on the aspects raised by the detainee[64].

Having regard to the radicality of this form of protest, as well as the possible negative effects on the state of health or even life of the detainee, we think that the hearing of the detainee on hunger strike has to be performed by the judge in charge of the supervision of deprivation of liberty immediately.

According with the legal provisions, if the announcement occured during the working hours of the Office of judge in charge of the supervision of deprivation of liberty, the convicted person is heard on the same day. If the announcement occured after the working hours the hearing will pe performed the next day [Supreme Council of Magistracy Decision no. 89/2014 for the approval of the Regulation for organizing the activity of the judge in charge of the supervision of deprivation of liberty, art. 37 para.(2)[65]].

If the problems raised by the convicted person refer to other issues (not for the judge's competence), the judge in charge of the supervision of deprivation of liberty can hear the convicted person.

In such a situation the judge in charge of the supervision of deprivation of liberty can present to the prison director proposals concerning the measures which he consideres to be necessary [Regulation for organizing the activity of the judge in charge of the supervision of deprivation of liberty, art. 37 para.(2)].

Furthermore, if the detainee declares that he renounces the food refusal, the judge informs the prison director and notes this in the dedicated form. If the detainee declares that he does not renounce the food refusal, as well as in case the detainee was not heard, the dedicated form, containing the proposals of the judge in charge of the supervision of deprivation of liberty, is presented to the prison director [Regulation of application of the Law No. 254/2013, art. 120 para. (4)-(5)].

If the person refuses to make any declarations this has to be recorded in a protocol. For identity of judgment this last solution is also applicable where the convicted person says he is illiterate, when the matters stated have to be recorded in a protocol.

Following the hearing, if the person upholds its decision to refuse food, the judge can present to the prison director proposals in the dedicated form.

In must be observed the law-maker's approach consisting in the regulation of the administrative participation of the judge in charge of the supervision of deprivation of liberty in the hunger strike procedure as an individual task. The alternative solution – limitation of the judge's intervention strictly to giving court minutes in case the hunger striker complained about the exercise of his legal rights – we think would have very much restricted the judge's role. However, it is obvious that the judge's intervention within the food refusal

[64] It must be stressed out that, in the case-law developed under the previous legal framework, one can observe that in some cases there was an abuse of the regulation on food refusal, as the inmates adopted this form of protest only to gain access sooner to the judge, without respecting the audience program. See, *Report of the Judicial Inspection within the Supreme Council of Magistracy on the respect of legal provisions by the delegated judges, in accorance with the provisions of Law no. 275/2006 on enforcement of penalties and of measures ordered by the judicial bodies during the criminal proceedings,* no. 1806/IJ/1179/DIJ/2013, 25, accessed March 25, 2016, www.csm1909.ro/csm/linkuri/20_09_2013__60704_ro.doc.

[65] Supreme Council of Magistracy Decision no. 89/2014 for the approval of the Regulation for organizing the activity of the judge in charge of the supervision of deprivation of liberty, published in the *Official Journal of Romania*, Part I, no. 77 of January 31, 2014.

procedure should not be limited to solving the complaints concerning the exercise of the rights of the hunger striker.

According with the applicable legal provisions, the intervention of the judge in charge of the supervision of deprivation of liberty within the food refusal procedure is aimed not only to giving a decision concerning the exercise of rights, but also the hearing and deciding in relation with the issues raised by the convicted person which refer to the establishment or change of the regime for the enforcement of custodial penalties or, as case may be, the complaint against the decision of the discipline commission. The judge can also hear the convicted person in case he has other requests which are not subject to his jurisdiction, acting as an element of mediation, balance and equidistance between the convicted person as a hunger striker and the prison administration. Against this background one should note the very important role which the judge in charge of the supervision of deprivation of liberty has to play, who has to identify and analyze the causes which made the convicted person go on hunger strike.

The prison administration shall be under the obligation to temporarily transfer the person that refuses food in a medical institution within the medical network of the Ministry of Health and to notify the family of the sentenced person or someone close to the sentenced person, in case the health or bodily integrity of the sentenced person is seriously affected by refusal to eat.

Renouncing food refusal can be made through written or verbal statement before the prison staff, announcing the judge in charge of the supervision of deprivation of liberty (by letter accompanied by the statement concerning the renounciation to food refusal) or before the judge in charge of the supervision of deprivation of liberty [Regulation of application of the Law No. 254/2013, art. 122 para.(1)].

A special problem arises when several convicted person **as a group or the totality of the inmates** refuse food. In this case a discussion has to take place with each convicted person and the action will become the more stringent issue to be solved so that the prison administration will channel all its efforts towards mitigation of the event which can easily degenerate in general revolt or serious disturbance of order. In such cases the prison administration has to immediately make use of energy and means of positive influence, satisfaction of legitimate requests of the prison population. The prison administration also has to prepare the intervention forces so as to be able to defend the institution in case of danger.[66]

In any case food refusal, despite the fact that it is not a structural issue regarding the prison regime, has to be carefully looked at and assessed for each case individually, given that it is possible that the convicted person's requests are legitimate. Exposion to such physical suffering, even if not for a long time, or even when the detainee could not resist physically and morally several days, has to trigger at the level of the prison administration a special investigation as to establish if the detainee's version is not the right one. It is a ground for honour and deontology to be able to repair, even after a longer time, a situation which seems to have no solution.[67]

b.) In what concerns the food refusal, the prison's obligation arises as soon as the convicted person declares that he refuses to eat. Starting here the prison staff have to immediately fulfill all tasks as provided in the applicable regulations. The obligation of the prison administration is to undergo the intermediate stages up to the hearing of the convicted person by the judge in charge of the supervision of deprivation of liberty within the shortest time possible. If the prison staff do not fulfill the legal tasks, the judge in charge of the supervision of deprivation of liberty can intervene only to the extent in which non-fulfillment of these tasks interpheres with the exercise of one of the detainee's rights.

In other words, despite the fact that the judge's role within the food refusal procedure is limited acording with art. 54 para.(7)-(11) from the Law no. 254/2013 on enforcement of penalties and of measures ordered by the judicial bodies during the criminal proceedings, only to the hearing and deciding on the issues raised by the hunger striker (if the issues raised by the convicted person refer to matters of his jurisdiction), the judge can intervene within this procedure, upon the detainee's request, if one right of the detainee is affected by the behaviour of the prison staff.

In such a situation the delegated judge [now - *judge in charge of the supervision of deprivation of liberty*] held[68] the violation of the right ot medical healthcare, treatment and care, despite the fact that the detainee M.C. submitted a written request concerning food refusal to the head of the departement, which the latter, however, did not register, did not transfer the detainee to a room without food and did not order a medical consultation to be performed. Consequently, the judge held that the violation of the legal procedure affected the right to medical consultation, taking into

[66] I. Chiș, *Drept execuțional penal [Execution of Criminal Penalties Law]* (Bucharest: Wolters Kluver, 2009), 359. As it was noted, such cases in which the detainees are refusing meals in a group can cause violations of the ECHR standards. See, for example, ECtHR, *Leyla Alp and Others v. Turkey.*

[67] Chiș, *Drept execuțional penal [Execution of Criminal Penalties Law]*, 360-361.

[68] The delegated judge, Codlea Prison, judgement no. 63/2012, unpublished.

consideration also the fact that the prison staff exercised their tasks concerning food refusal only 4 days after the food refusal was announced, that is when the detainee complained before the judge.

Looking at the actions performed by the prison staff, it cannot be checked if the detainee refused food or did consume food, as he had not been transfered to a room without food and he had not been consulted by a physician; the prison administration's arguments concerning the fact that the intention to refuse food was not carried out during the day cannot be accepted because, if the detainee had accepted food, this would have been registered in a special register, including the detainee's signature, which was not the case.

3. Conclusions

The management of hunger strikers in prison is a controversial issue. Both Recommendation No. R (1998) 7 on the ethical and organisational aspects of health care in prison and the WMA Declaration on Hunger Strikers leave to the physician the discretion to act in a situation where a hunger strike becomes life-threatening for the prisoner.[69]

Professionals caring for prisoners should strictly and exclusively adhere to their role as caregivers to their inmate patients, acting in complete and undivided loyalty to them, and should firmly refuse to take over any professional obligation that is outside the interest of their prisoner patients. Professionally, they should be supervised by an authority other than the prison authorities, for example, the public health service or their professional association. In addition, inspections should be performed by an agency or organization that is independent of the prison authority or ministry of justice.[70]

Of course, when analysing the ECtHR case-law, one can observe that forcible feeding can in some circumstances violate the prohibition of torture and other ill-treatment under international law, where it is administered so as to cause unnecessary suffering or where not medically necessary. Medical ethics require doctors to respect the will of the hunger striker as long as the latter's judgement is rational and unimpaired.[71]

The medicalization of dealing with hunger strikes, which can be easily observed in the international standards (WMA) or the ECtHR case-law means that the action, when dealing with prisoners on hunger-strike, should be adressed by medical professionals, observing the ethics and methodology of their profession.

So, it must be stressed out that the decisions regarding force-feeding a prisoner on hunger strike must be of a medical nature, as asessed by the professionals (medical staff), without the involvement of the prison administration (as is the case in the U.S. law).

There is no need to involve the prison administration, as force-feeding a person does not involve an administrative decision regarding the order or discipline in the prison, but rather consists in a medical issue, which must be dealt with by the medical staff. As *van Zyl Smit and Snacken* emphasized, such a [*therapeutic*] relationship is itself a more humane way of dealing with the issue than relying on instructions given directly to prison officials.[72]

No human being should perish in detention, but trends in Europe show that more people die behind bars now than have in past years.[73] The Council of Europe must ask of its member States that laws and policies be examined in order to make changes that will allow for every human being to die with dignity, not chained to a bed while in detention.[74]

This trending principle must be taken into consideration when dealing with severe cases on hunger strikes among the prison population. For example, it would be in accordance with the ECtHR case-law to temporary release a prisoner suffering from Wernicke-Korsakoff Syndrome, disease generated by the complications from a hunger strike.

Turning to the Romanian case, it is important to stress out the evolution of the Romanian legislation since the entering into force of Law no. 254/2013 on enforcement of penalties and of measures ordered by the judicial bodies during the criminal proceedings, continuing with the adoption of the Government Decision no. 157/2016 for the approval of the Regulation of application of the Law No. 254/2013, emphasising the special attention given by the Romanian legislator in drafting and adopting legislation within the framework of international and European recommendations.

On the management of the hunger strikers, it should be stressed out the clear procedure provided for in the Romanian legislation, with the involvment of the judge in charge of the supervision of

deprivation of liberty, an independend body with competence on supervising and controlling that the legality of custodial sentences is ensured.

There are no special provisions on force-feeding a prisoner, the Romanian legislation acknowledging the medical nature of the measure, providing that a person with complications from a hunger strike must be admitted immediately into a hospital, the medical procedures and ethics being incident in such a situation.

Concluding, when dealing to a hunger strike and the need of force-feeding the person, it is important to observe only the medical standards and ethics, without the involvement of the prison staff, as force-feeding a person is generally acknowledged as a measure of medical nature.

CRIMINAL TERRORIST GROUP IN THE NEW CRIMINAL LEGISLATION OF ROMANIA

Mirela GORUNESCU[*]

Abstract

In the Romanian criminal law, there is a specialized regulation that defines criminal terrorist group, as variant of plurality of offenders. The present study presents this kind of criminal group by identifying the elements of differentiation compared to the organized crime group regulated by the Criminal Code).

Keywords: *terrorism, organized criminal group, plurality set up, criminal law.*

1. Introduction

The terrorist phenomenon has always been a threat perceived as such by the world's states and for this reason considerable efforts have been undertaken to prevent and fight against it. Thus, one of the first countries that have taken legislative measures in this regard is Belgium, which since the 19th century has adopted an action plan to fight the phenomenon by introducing, in its criminal law, the "attack clause" which allowed the extradition of the perpetrators of political murders1.

International organizations have also adopted several of legal instruments which have as their main objective the prevention and fight against terrorism. Naturally, one of the most active organizations is the United Nations which, through its regulatory arrangements, succeeded in creating a coherent framework to enable the signatory states to fight efficiently against acts of terrorism.

At the European level, on 27 January 1977, the European Convention for the suppression of terrorism was adopted in Strasbourg2, amended by the amendment protocol to the European Convention for the suppression of terrorism, adopted in Strasbourg on 15 May 20033. The preamble of this legal instrument shows that the member states of the European Council, signatories of the convention, „considering that the purpose of the European Council is to achieve a closer union between its members, conscious of the growing unease caused by the multiplication of the acts of terrorism, wanting to take efficient measures so that the perpetrators should not escape prosecution and punishment, being convinced that extradition is a particularly efficient means to reach this result", have decided to adopt the measures included in the convention.

The main approach taken by this legal instrument was to exclude terrorist offenses from the category of political offenses, which would have made extradition ineffective. The very first article of the Convention shows that: „For extradition between the contracting states, any offense mentioned below will not be deemed a political offense, as an offense related to a political offense or as an offense inspired by political purposes: a) the offenses contained in the scope of the Convention for the suppression of the illicit taking of aircraft, signed in Hague on 16 December 1970; b) offenses covered by the scope of the Convention for the suppression of unlawful actions directed against civil aviation safety, signed in Montreal on 23 September 1971; c) offenses contained in the scope of the Convention on the prevention and suppression of offenses against persons enjoying international protection, including diplomatic agents, adopted in New York on 14 December 1973; d) offenses contained in the scope of the International Convention against the taking of hostages, adopted in New York on 17 December 1979; e) offenses included in the scope of the Convention on the physical protection of nuclear material, adopted in Vienna on 3 March 1980; f) offenses covered by the scope of the Protocol for the suppression of unlawful actions of violence at airports used by civil aviation, concluded in Montreal, on 24 February 1988; g) offenses within the scope of the Protocol for the suppression of unlawful actions against the safety of maritime navigation, concluded in Rome on 10 March 1988; h) offenses within the scope of the Protocol for the suppression of illegal actions against the safety of fixed platforms located on the continent, concluded in Rome on 10 March 1988; i) offenses within the scope of the International Convention for the suppression of terrorist attacks with explosives, adopted in New York on 15 December 1997; j) offenses within the scope of the International Convention for the suppression of the financing of

[2] Ratified by Romania by law no. 19/1977, published in the Official Gazette of Romania, Part I, no. 34 of 4 March 1977.

[3] Ratified by law no. 366/2004, published in the Official Gazette of Romania, Part I, no. 913 of 7 October 2004.

terrorism, adopted in New York on 9 December 1999."

Paragraph 2 of the same article also extends the scope of the European Convention on: a) attempt to commit any of these main offenses; b) complicity to one of these main offenses or attempt to commit one; c) organization activity to order others in committing or attempting to commit one of the offenses listed.

Through this regulatory technique, the Convention establishes the area of offenses which it considers terrorist phenomenon and it excludes these from the area of political offenses that have special regime with regard to international judicial cooperation in criminal matters.

The doctrine notes that terrorism today has acquired a global dimension with two aspects. The first concerns the possibility of the terrorists to move comfortably in any part of the world, making use of false identities and enjoying travel facilities similar to those of tourists or business people. This allows them to study in detail the objectives that they seek to attack, to make various monetary and banking operations, attract the proselytes to the side of the military cause of the terrorist group to which they belong, etc. The second aspect of the terrorism globalization takes into account the fact that terrorists have spread to a maximum the area of their own logistics activities, but also of the actions taken, causing a difficult monitoring of their organization and planning activities by the structures for the prevention of terrorism4.

In the national legislation, the prevention and fight against terrorism is achieved mainly by Law no. 535/20045, and other regulatory documents as Law no. 656/2002 on prevention and sanction of money laundering, and the establishment of measures to prevent and fight against financing terrorism6. However, given that, according to art. 2 letter b of the latter regulatory document, it is shown that „the financing of terrorism means an offense under art. 36 of Law no. 535/2004 on preventing and fight against terrorism", we believe that the regulatory document that mostly provides for the fight against terrorism in Romania is still Law. 535/2004.

2. Outline of the terrorism phenomenon in the national legislation

The very first article of Law no. 535/2004 includes a definition of terrorism, which is presented as: „the range of actions and/or threats that are public danger and affect the national security, having the following characteristics: a) are committed with premeditation by terrorist entities, motivated by extremist beliefs and attitudes, hostile to other entities against which they act violently and / or destructively; b) aim to achieve specific political objectives; c) concern human and / or material factors within public authorities and institutions, civilian population or any other segment belonging to them; d) cause states with a strong psychological impact on the population, meant to draw attention to the aims pursued." Given the wording of the definition, we appreciate that the four traits of the terrorist acts must be met cumulatively, not being enough that only one or some of them to be found on one occasion. The conclusion is also claimed by the way article 2 of Law no. 535/2004, is worded, according to which: „the actions committed by terrorist entities are sanctioned under the provisions of this law, *if they fulfill one of the following conditions* (s.n.M.G.): a) they are usually committed with violence and cause unrest, incertitude, fear, panic or terror among population; b) seriously infringe upon human specific and nonspecific factors, and material factors; c) pursue specific objectives, political, by determining state authorities or international organizations to order, renounce or influence decisions in favor of the terrorist entity."

3. About "terrorist entity and other varieties of plurality of offenders formed

Law no. 535/2004 provides about certain varieties of the plurality formed which may manifest in the regulatory area of the law. The plurality formed is that the criminal law incriminates the mere composition of a group of people, which aims at committing offenses. In this case, it shows that, contrary to the hypothesis of natural plurality, according to which the gravity of the offense is determined by what is being actually done (present activity) by the participants (incest, bigamy, etc.), in case of the plurality formed, the seriousness of the offense is generated by what the members of the group propose to do in the future (future activity)7. This form of plurality is created by the will of the legislator, because the purpose pursued by those who have associated poses a great social danger (for committing crimes). The doctrine also identifies the conditions of existence of the plurality formed to be fulfilled cumulatively: a) there should be a group of at least three persons; b) the group should have the same criminal purpose; c) the group should have a significant duration of existence over time; d) the

[4] M. Atanasiu, F. Repez, "Securitatea şi apărarea ţării în contextul ameninţărilor teroriste", http://cssas.unap.ro/ro/pdf_studii/securitatea_si_apararea_tarii_in_contextul_amenintarilor_teroriste.pdf, p. 18.

[5] Published in the Official Gazette of Romania, part I, no. 1161 of 8 December 2004.

[6] Republished in the Official Gazette of Romania, part I, no. 702 12 October 2012.

[7] M.I. Rusu, Drept penal. Partea generală, Ed. Hamangiu, Bucureşti, 2014, p. 270.

group should have some organization with leadership and hierarchical structure8.

Law No. 353/2004 defines " the terrorist entity" as: "the person, group, structured group or organization that: a) commits or takes part in terrorist acts; b) is preparing to commit terrorist acts; c) promotes or encourages terrorism; d) supports terrorism in any form". In turn, the the terrorist group is: "a structured group of more than two persons, established for a certain period of time and acting in concert to commit terrorist acts". A structured group in accordance with this regulatory document is a group that is not randomly formed to immediately commit an act of terrorism, does not require a constant number of members and does not require establishing, beforehand, of their role or a hierarchical structure". The terrorist organization is a "hierarchical structure, with its own ideology on organization and action, having representation both nationally and internationally, and that, in order to achieve specific goals, uses violent and/or destructive ways". We have to notice that these definitions do not do anything other than contribute to the lack of clarity of the incrimination standards which they complete.

The statement is supported, all the more so, art. 367 Criminal Code also includes a para. (6), which has the value of interpretative rule, in that it defines the concept of "organized criminal group" as: "structured group, consisting of three or more persons, formed for a specific period of time and to act in a coordinated manner in order to commit one or several offenses".

Paragraph (1) of article 367 Criminal Code, in the basic variant, the following is incriminated: "The initiation or set up of an organized crime group, joining or supporting, in any form, of such a group", which is punishable by imprisonment from one to five years and the prohibition on the exercise of certain rights. The deed becomes more serious: „when the offense within the purpose of the organized crime group is punished by law with imprisonment for life or punishment of imprisonment for over 10 years", for this variant, the penalty being imprisonment from 3 to 10 years and the prohibition on the exercise of certain rights.

Still, as in the previous Criminal Code, the provision according which "where the actions referred to in paragraph (1) and paragraph (2) were followed by committing a crime, the concurrence of offense shall apply" has been maintained in article 367 para. (3) Criminal Code.

The text of art. 35 of Law no. 535/2004 is added to all these texts, in accordance with which: "(1) The association or initiation of an association establishment for the purpose of committing acts of terrorism or joining or supporting, in any way, such an association shall be punishable by imprisonment from 5 to 12 years and the prohibition of certain rights, without being able to exceed the maximum penalty prescribed by law for the offense falling within the purpose of the association." The legal definition above-mentioned shows that the element that makes the difference between the regulation of art. 367 Criminal Code and art. 35 of Law no. 535/2004 considers that "acts of terrorism" are found in the program of the organized crime group. In accordance with art. 32 of the Special Law, the commission of one of the following acts shall be acts of terrorism which, by their nature or context of their commission, may lead to a serious damage of a country or international organization, when they are committed to intimidate the population or to coerce a public authority or an international organization to perform, not to perform or abstain from performing any act or for seriously destabilizing or destroying the fundamental political, constitutional, economic or social structures of a state or international organization, and shall be punished according to the law for the crime committed, whose special limits are increased by one third, and with the prohibition of certain rights: a) murder, manslaughter or injury; b) threat or deprivation of liberty; c) destruction; d) communication of false information which endangers the safety of flight or navigation of a ship or aircraft; e) the commission, by using a device, a weapon or substance, of an act of violence against a person in a civil airport, if the act endangered the safety and security of the airport, as well as the commission of any act of physical or psychological violence against a person on board a civilian aircraft in flight or in flight training or on its navigation personnel; f) destruction or serious deterioration by using a device, a weapon or a substance, of the installations of a civil airport or an aircraft in service or not in service, but which is at an airport or causing damages that make the aircraft unavailable for flight or which are likely to endanger its safety in flight and airport service interruption, if the act is likely to jeopardize or compromise the safety and security at that airport; g) destruction or damage to installations or air navigation services or disrupting their operation, if the act endangered the flight safety; h) placing on a civil aircraft, by any means, of a device or substance able to destroy that aircraft or to cause damages which make it unfit for flight or which is likely to endanger its safety in flight; i) taking an aircraft without right, by any means, and without the right to exercise control over it; j) seizure of a ship or a fixed platform or control over it, by violence or threat; k) committing violence against a person on board of a ship or a fixed platform, if that act is likely to endanger the safety of the ship or fixed platform; l) destruction of a fixed platform or a ship or causing

[8] V. Dobrinoiu, I. Pascu, M.A. Hotca, C. Păun, I. Chiș, M. Gorunescu, N. Neagu, M. Dobrinoiu, M. Sinescu, Noul Cod penal comentat, Partea specială, Editura Universul Juridic, București, 2014, p. 857.

damage to a fixed platform or the cargo of a ship, which jeopardize the safety of the platform or navigation vessel; m) placement on a ship or fixed platform, by any means, of a device or a substance able to destroy or cause damages to the platform, ship or cargo that compromise or are likely to endanger the safety of the platform or the navigation of the ship; n) destruction or seriously damaging the fixed platform or navigation facilities or services or causing serious disruptions in operation, if any such act is likely to endanger the safety of the fixed platform or navigation of a ship; a) failure to comply with the regulations on weapons and ammunition, the regime of nuclear and other radioactive materials, and failure to comply with the regime of explosives; p) attack that endangers national security, attack against a community and acts of diversion; q) fraud committed through computer systems and electronic payment means and offenses against the security and integrity of computer systems and data; r) takeover without right of the collective passenger transport means or cargo. Paragraph 3 of the same article completes the regulation in the sense that "the commission of certain actions, for one of the purposes provided for in para. (1) shall also be deemed acts of terrorism and shall be punished by imprisonment from 7 to 15 years: a) manufacture, acquisition, possession, transport, supply or transfer to other persons, directly or indirectly, of chemical or biological weapons, explosive devices of any kind, and research in the field or development of such weapons or devices; b) introduction or spread into the atmosphere, soil, subsoil or water of products, substances, materials of any kind, microorganisms or toxins likely to endanger human health or animal health or the environment or the intent to fire, floods or explosions that have the effect of endangering human life; c) interfering with or disrupting the supply of water, electricity or any other fundamental natural resource, which has the effect of endangering human lives." Although the listing is consistent, we chose to include it in the present study because the element that distinguishes the offense provided for in art. 367 Criminal Code and one in art. 35 of Law no. 535/2004 is exactly the specificity of the action in the context of association. Whenever the subject of association commits such an offense, the special text shall be incident, but only if the association fulfills its characteristics found in the law.

Given this complex regulations, we believe it is not difficult to outline the organized crime terrorist group. However, we do not see the usefulness of subdividing this type of group depending on the size and the level of organization found in real situations, especially given that these terms may not be found in any text of the present criminal law.

4. Conclusions

The terrorist group is an aggravated form of the offense of establishing a criminal organization, as the action is defined in art. 367 Criminal Code. The elements that make the delimitation of the two offenses are connected to the situation of each, but also to the purpose for which each was created with special attention to the nature of the crimes falling within the program of the criminal group. The level of abstract danger is included in the same range of punishment, but the level of real danger is related to the elements indicated by the texts in the special law and they may be found as related to the analyzed actions.

SEVERAL CONSIDERATIONS OF COMPARED LAW ON SELF-DEFENSE (I)

Lamya-Diana HĂRĂTĂU[*]
Traian DIMA[**]

Abstracts

Criminal legislations of other States regulate self-defense in approximately similar manners, without major differences as compared to the conditions required by the Romanian law-maker to be fulfilled in order for the offence to become justifiable/exempt from liability. In this study, we chose to make a comparison in respect of self-defense from the perspective of 18 States[1] around the world and, in the end, we will summarize several conclusions on the extent to which the Romanian law-maker could draw inspiration from their legislations.

Keywords: *self-defense, compared law, justifiable grounds, grounds for exemption from liability.*

Introduction[1]

The concept of self-defense is closely related to the theory of criminal offence, given that its applicability entails the exemption of the criminal nature of the offence and, consequently, the exemption from criminal liability.

We believe that, from this perspective, the study of self-defense ought to be intensified. The fact that the case-law noticed, over time, that courts of law sometimes faced difficulties in giving effect to self-defense in certain cases, determined us to conduct a comparative analysis of the conditions which need to be fulfilled in this respect.

1. Bulgaria

The Bulgarian criminal code stipulates, in the wording of Article 12 of the Second Chapter, dedicated to Criminal Offences, Section II Generalities, that the offence of the person who defends himself in a justified manner against an assault against State interest, public interest or against himself or another person shall not be deemed dangerous from the social perspective, provided that the defense is proportionate to the assault.

Considering that, in Article 9 of the Bulgarian Criminal Code, criminal offence is defined as a socially dangerous action, committed in a guilty manner and provisioned for in the criminal law, it may be noticed, from the definition of self-defense, that the offence committed in this manner loses its degree of social jeopardy, meaning one of the three key features envisaged by the law-maker, which will lead to the absence of criminal nature and of criminal liability.

Furthermore, paragraph (2) of the same text reveals that the action breaking the limits of defense proportionate to the nature and jeopardy of the assault shall be construed as excess of self-defense.

The Bulgarian law-maker described in paragraph (3) of Article 12 of the Criminal Code the instances which, having regard to the nature and jeopardy of the defense, shall not be deemed to be excess of self-defense. Among these, the following have nevertheless been declared unconstitutional:

1. (declared unconstitutional) – the assault originates from one or several persons;

2. (declared unconstitutional) – the wrongdoer is armed;

3. (declared unconstitutional as regards the terms "country house or business-related building") – the assault took place by entrance using force or theft from a house, country house or business-related building;

4. (declared unconstitutional) the assault took place against an engine, water vessel or movable rolling stock;

5. (declared unconstitutional) the assault took place during the night;

Further to such provisions being declared unconstitutional, in reference to the actual circumstances in which the assault takes place, it may be noticed that, for instance, although the number of wrongdoers is 3 or more, it may however amount to an excess of self-defense limits on the part of the assaulted person.

On the other hand, the same paragraph provides that, if, however, the assault may not be averted otherwise, then exceeding the limits of proportionate defense shall not be deemed to be excess of defense, because the assaulted person could only have responded as he did.

[**] PhD Professor, Faculty of Law, "Nicolae Titulescu" University of Bucharest, criminal law department.

[1] Full texts of the provisions of international criminal codes forming the object of this study were consulted at http://www.legislationline.org/documents/section/criminal-codes.

Paragraph (4) of the same article states that the person exceeding the limits of proportionate defense shall not be punished if he was in a state of freight or confusion at the time of his response, given the nature of the assault.

2. Republic of Moldova

In the Criminal Code of the Republic of Moldova, self-defense is stipulated in Article 36 of Chapter III – Circumstances that exempt the criminal nature of the offence.

Thus, the act provisioned for in the criminal law, committed in self-defense, shall not amount to a criminal offence.

The conjunction between this first provision and the provisions of Articles 14 and 15, defining the criminal offence as a prejudicial act (action or inaction) set forth in criminal law, committed with culpability and subject to criminal punishment, and that an action or inaction that although formally has signs of an act set forth in this code, but due to lack of importance, does not meet the prejudicial degree of a criminal offence, shall not be considered a criminal offence, it follows that the act committed in self-defense eliminates the key features of the criminal offence, as they are set out and, consequently, criminal liability.

Paragraph (2) of Article 36 specifies that a person who commits an act in order to repel a direct, immediate, material, and real attack against himself, against another person, or against public interest and which seriously endangers the person or the rights of the assaulted person or public interest shall be in a state of self-defense.

Furthermore, a person who commits an act set forth in paragraph (2) in order to prevent another one from violently entering into a residential or other area, thus endangering a person's life or health or by threatening such violence, shall be in a state of self-defense.

Hence, it may be noticed from this definition that self-defense meets in a similar, but not identical manner, the same conditions as provisioned for in the Romanian Criminal Code. One of the differences consists of the fact that the Criminal Code of the Republic of Moldova does not refer to the act of the person who, in a state of self-defense, exceeds the limits of proportionality as a result of distress or freight caused by the assault.

3. Poland

In the Polish Criminal Code, self-defense is regulated under Article 25 and forms part of Chapter III called Exemption of criminal liability.

According to the first paragraph of the above-mentioned article, the act of the person averting a direct and unlawful assault against any value protected by law shall not be a criminal offence.

Please note that, unlike the Romanian Criminal Code, which lists the values against which the assault is directed, the Polish Criminal Code refers to any values, its scope being much wider.

Further on, it is stated that, if the limits of proportionate self-defense are exceeded as compared to the severity of the danger, the court may mitigate the sentence or give it up altogether.

Notice shall be made that unjustified excess of self-defense is regulated, which, in the opinion of the Polish Criminal Code, does not exempt criminal liability, however, acts as legal mitigating circumstance (same as the regulation in the Romanian Criminal Code), the law-maker letting the court of law to decide either to decrease the sentence, or to give it up entirely, taking into account the particular circumstances under which the criminal offence was perpetrated.

Nevertheless, at the same time, paragraph (3) of the same article sets forth that the court will not enforce any sentence if the limits of self-defense were exceeded because of freight or strong emotion caused by the attack. This regulation seems to be grounds for non-liability (non-liability excess), as provisioned for in Article 26 of the Romanian Criminal Code.

What is different is that the law introduces the possibility not to enforce any sentence if the limits of self-defense are exceeded, a provision that is absent from our law but which, in our opinion, is not equivalent in the Polish Criminal Code, either, to an exemption from criminal liability, because the fact that no sentence is imposed is the consequence of the offence losing its criminal character. However, the act committed in this manner will still be construed as criminal offence.

4. Slovenia

In the Slovenian Criminal Code, self-defense is regulated under Article 22 forming part of Chapter 3 called General provisions on criminal offences, Section 1 – Crime and criminal.

Thus, in accordance with paragraph (1) of the article referred to above, "an act committed in self-defense shall not constitute a criminal offence", thus losing its criminal nature, and is not stipulated as justifiable grounds, as it is in the Romanian Criminal Code.

The second paragraph defines self-defense as the act committed with a view to averting an immediate and unlawful assault on himself or on any other person. It is observed that this regulation is similar to the one existing in the Romanian law.

Furthermore, the situation of excess of self-defense is also regulated, stating that, if the offence necessary for defense was committed by exceeding the limits of self-defense, the sentence may be decreased; if exceeding the limits of self-defense was the result of a state of distress or freight caused by the assault, the sentence may be removed. Therefore, in case of unjustified excess of self-defense, it seems as a mitigating circumstance, while

the justified excess seems to be grounds for removing the sentence entirely.

It is observed that, in the case where the limits of proportionate defense are exceeded, criminal liability will mandatorily be diminished, whereas, in the case where the lack of proportionality is the result of a state of distress or freight caused by the attack, then criminal liability *may* be removed.

It should be emphasized that, unlike in the Romanian Criminal Code, where criminal liability shall not be incurred in the latter case, in Slovenia, its removal is optional. Moreover, presumed self-defense is not regulated at all.

5. Georgia

Self-defense is stipulated in the Georgian Criminal Code in Chapter VIII dedicated to Non-incriminating circumstances.

Thus, in accordance with Article 28, the person harming the perpetrator of an assault in order to protect himself or his legal interests shall be deemed in necessary self-defense.

Paragraph (2) of the same article sets forth that self-defense shall also exist regardless of the person's possibility to prevent the attack or ask another person for help.

Paragraph (3) states that the injury of the wrongdoer shall occur with a view to retrieving property of which the assaulted person was deprived illegally, within the limits of the law, if this occurred immediately after the assault.

In the last paragraph, the Georgian law-maker refers to the failure to fulfill the conditions for self-defense having regard to the nature and danger of the assault, for which this grounds will not be given relevance to.

6. Italy

In the Italian Criminal Code, self-defense is regulated under Article 52, included in Title III called On criminal offences, Chapter I – On perpetrated offence and attempts.

Thus, as deriving from the said article, the person having committed a criminal offence in self-defense shall not be punished, when he was forced to defend his own or a third party's right against immediate and unlawful danger, provided that the defense is proportionate to the danger.

Furthermore, in the cases referred to in Article 614 of the Italian Criminal Code, incriminating home invasion, self-defense is presumed if the assault relates to one of the places indicated in defining that criminal offence, and the assaulted person may use a weapon held legally or another appropriate means to protect his or a third party's safety or his own or a third party's property, even when the wrongdoer withdraws or there is threat of danger. The same provision also applies in the case where the assault takes place in any other location where business or profession-related activity is conducted.

From these provisions, it may be noticed that an absolute presumption of self-defense is being created[2], where proportionality is requested only as regards the fulfillment of conditions for the weapon being used by the assaulted person in his response, to be owned legally, and when the person's property is targeted, the assault shall also be directed at the person himself.

Please note that, in most of it, the Italian regulation is, in principle, similar to the one in the Romanian criminal law, but there are also significant differences. In this respect, self-defense, in the opinion of the Italian law-maker, is not justifiable grounds, as the act provisioned for by the criminal law is not a criminal offence, because the person protecting himself acts without guilt, since he is forced, states the law-maker, to defend a right pertaining to himself or to a third party.

As for self-defense, in the hypothesis where the aggressor commits the criminal offence of home invasion, the Italian law is more permissive for the person protecting himself, and the latter, in his defense, may use a fire weapon without deeming that the proportionality principle was infringed, also presumed in the case where the aggressor withdrew from the person's home, and the latter still used the weapon. In consideration of such regulation, the case described herein for the purpose of this study would pose no other questions. We may not help but wonder, however, how this regulation could be in line with the provisions of the European Convention on Human Rights.

7. Latvia

Self-defense is detailed, in the Latvian Criminal Code, in the provisions of sections 28 – 30 forming part of Chapter III called "Circumstances which exclude criminal liability".

According to section 28, the circumstances which exclude criminal liability are necessary self-defense, detention causing personal harm, extreme necessity, justifiable professional risk, and the execution of a criminal command or criminal order, even if acts committed in such circumstances correspond to the constituent elements of a criminal offence.

In accordance with section 29, necessary self-defense shall be an act committed in defense of State or public interest, or of the rights of himself or of a third person, and also in defense against assault or threat of assault. Criminal liability applies if the limits of defense proportionate to the nature and severity of the assault have been exceeded.

[2] Article 52 of the Italian Criminal Code was amended by Law No 59 of 13 February 2006, when the right to self-defense was regulated in case of a home assault.

It may be noticed that the Latvian law-maker ranks first, in respect of self-defense, the protection of State or public interests and only then the person and his rights, while in Romanian law prevalence is given to the person and his rights and only afterwards to general interest.

According to paragraph (2) of the same section, defense is disproportionate to the nature and danger of the assault, when it was not necessary in order to prevent or avert such assault.

A new element is brought by the provision in paragraph (3), stipulating that causing harm to the assailant through negligence, while averting the assault, shall not be criminally punishable. Also, if the assaulted person had the possibility to avoid the assault or ask for help, he will also be in self-defense, in responding.

Another innovation of the Latvian law-maker consists of the regulation in section 30 called Apparent self-defense (putative, comment added).

According to this text of law, a person shall be in apparent self-defense when he mistakenly thinks that an assault such as described in Section 29 is taking place. In cases when the particular circumstances in which the offence was committed have provided a basis for assuming that an actual assault was in progress, the person who responds by mistake, without knowing that his assumption was incorrect, shall fall under the scope of necessary self-defense, and therefore shall not be held under criminal liability.

Furthermore, a person who exceeds the limits of proportionate self-defense which would be permissible in the circumstances described above, shall be held in accordance with the provisions of excess of necessary self-defense. At the same time, if the assailant was harmed during the act of defense, in the condition of an apparent assault, the provisions governing criminal offence committed by negligence shall apply.

As regards this regulation, we hereby express our agreement and will submit a proposal for an intended law (*lege ferenda*) so that putative self-defense, already discussed in Romanian doctrine, be expressly provided in the Romanian Criminal Code, as well. And, by way of example, we refer to the situation where the "apparent" assault comes from a person handling a rubber snake or any other instrument in a threatening manner, but which has all the attributes to be believed by the victim to be real. In this case, we opine that the victim's fending amounts to self-defense even if the assault was only apparent.

8. Estonia

In the Estonian Criminal Code, self-defense is provided for in item 28 of Chapter II called Criminal Offence, Section I dedicated to grounds exempting the criminal character of the offence.

In accordance with the above-mentioned article, paragraph (1), an act is not unlawful if the person combats a direct or immediate unlawful assault against his legal rights or those of another person, by violating the legal rights of the assailant, and without exceeding the limits of proportionate self-defense.

Further on, the excess of self-defense is regulated, whereby a person is deemed to have exceeded the limits of proportionate self-defense if he acts with deliberate or direct intention in self-defense, by means which are obviously incongruous with the danger arising from the assault, thus intentionally causing severe harm to the assailant. Since the Estonian law-maker provides no specific indication in respect of such excess of self-defense, it is to be construed that the person fending the assault in such a manner will no longer benefit from the mitigating consequences of self-defense, in light of the wording of paragraph (1) item 28.

Article 57 item 8 stipulates excess of self-defense as a mitigating circumstance.

Unlike other legislations, in the Estonian Criminal Code, the possibility of the assaulted person to prevent the assault or ask for help does not exclude the right to self-defense.

It is also worth mentioning that the Estonian regulation of self-defense is similar to Romanian law, with several differences.

9. Finland

Self-defense is stipulated in the Finnish Criminal Code in Section 4, forming part of Chapter 4 called Grounds for exemption from liability.

According to this text of law, the act that was necessary for a person to protect himself against a direct or threatening assault shall be deemed self-defense, save for the case where it obviously exceeds the limits of proportionate defense, considering the nature and severity of the assault, the person of the victim and of the assailant, and also other circumstances.

Where the defense exceeds the limits of proportionality (excessive self-defense), the perpetrator shall be exempt from criminal liability if the circumstances in which he defended himself determined him to respond as such, given the danger and sudden nature of the assault.

From this provision, it may be inferred that excess of self-defense may escape criminal liability only if the disproportion is correlated with the dangerousness and sudden nature of the assault.

The Finnish Criminal Code contains no special regulations in respect of presumed self-defense.

Unlike the Romanian law, certain new elements may be noticed in the Finnish legislation governing self-defense. Thus, in analyzing a case of self-defense, consideration shall be given both to the conditions in which the assault and the defense took place, the person protecting himself, but also the

person of the assailant and other circumstances, as well. These legal clarifications seem correct, in our opinion, in analyzing different situations of self-defense because the persons involved (the assailant and the person protecting himself) may have significant particularities, such as physical strength, intellectual abilities, profession, training, etc., which could help in forming a fair conclusion as to the existence or inexistence of self-defense.

10. Sweden

In the second part of the Swedish Criminal Code, dedicated to the theory of criminal offence, in Chapter 24 called On general grounds for exemption from criminal liability, there are provisions governing self-defense.

Thus, in accordance with Section 1, an act committed by a person in self-defense constitutes a criminal offence only if, having regard to the nature of the aggression, the importance of its object and the circumstances in general, it is clearly unjustifiable.

A first definite similarity between the Swedish and the Romanian law is the fact that the Swedish law-maker also considers self-defense as justifiable grounds for exemption from criminal liability if the act was committed in self-defense.

Furthermore, as provided by the Swedish law-maker, the right to act in self-defense only exists if it is directed against:

1. a threatening assault on a person or property;

2. a person who violently or by the threat of violence obstructs the repossession of property when caught in the

act;

3. a person who has unlawfully forced or is attempting to force entry into a room, house, yard or vessel;

4. a person who refuses to leave a dwelling when ordered to do so.

It is observed that, unlike the Finnish Criminal Code, for instance, the Swedish law-maker specifically regulated the circumstance where the assault is directed at the home of a person, the refusal to leave it, or even repossessing property. Furthermore, self-defense in the Swedish opinion is also different from Romanian regulations.

11. Norway

Self-defense is also stipulated in the Norwegian Criminal Code in its First Part, containing general provisions; more specifically, in Chapter 3 called Conditions governing criminal liability.

The wording of Section 48 of the said Code reveals that no one may be punished for an offence committed in self-defense.

The person acting with a view to preventing or fending against an unlawful assault shall be deemed to act in self-defense, provided that the act did not exceed what appeared to be necessary for that purpose.

However, the Norwegian law-maker, just as the Romanian one, provides that the act of the person who exceeds the limits of proportionate self-defense shall not be punishable if such excess is due solely to emotional upset or consternation caused by the assault. However, there are no regulations on presumed self-defense.

12. Switzerland

Title II of the Swiss Criminal Code regulates self-defense.

Hence, in accordance with Article 15 of the said Code, if a person is unlawfully assaulted or threatened with imminent assault, the assaulted person and any other person are entitled to ward off the assault by means that are reasonable in the circumstances.

Article 16 paragraph (1) refers to excess of self-defense, according to which, if, in defending himself, a person exceeds the limits of proportionate self-defense, as defined in the preceding paragraph, the court shall reduce the sentence. Therefore, justified excess acts as mitigating circumstances.

According to paragraph (2), it is laid down that if the offence is committed by a person in excess of the limits of proportionate self-defense as a result of excusable excitement or panic, it shall not be deemed as a criminal offence and therefore shall be exempted from punishment. This means that lawful excess is assimilated to necessary self-defense, while in the Romanian law it is non-punishable excess.

13. Germany

Self-defense is regulated in the German Criminal Code in Title IV called Self-defense, Necessity and Duress.

In accordance with section 32 of the above-mentioned title, a person who commits an offence in self-defense does not act unlawfully.

Self-defense is defined as any defensive action that is necessary to avert an imminent unlawful assault on himself or another.

According to section 33, whose sub-title is Excess of self-defense, a person who exceeds the limits of proportionate self-defense, as compared to the assault, out of confusion, fear or terror shall not be held criminally liable.

It is to be noticed that, in the German Criminal Code, criminal liability is also exempted if the obvious incongruity between the assault and the response is due to the state of confusion or fear which could have seized the assaulted person, as a result of the aggression.

14. France

Chapter II of the French Criminal Code, called Grounds for absence or attenuation of liability, regulates self-defense.

According to Article 122-5 of the said Code, a person is not criminally liable if, confronted with an unjustified assault upon himself or upon another, he performs at that moment an action compelled by the necessity of self-defense or the defense of another person, except where the means of defense thus used are not proportionate to the seriousness of the assault.

Moreover, a person is not criminally liable if, to interrupt the perpetration of a criminal offence against property, he performs an act of defense other than wilful murder, where the defensive act is strictly necessary to remove the jeopardy and the means used are proportionate to the gravity thereof.

In accordance with Article 122-6 of the same Code, self-defense shall be presumed when the offence is committed in the following instances:

- to repulse at night an entry to an inhabited place committed by breaking in, violence or deception;
- to defend himself against the perpetrators of theft or pillage carried out with violence.

Extensive similarity is noticed between the French regulations and those in the Romanian Criminal Code. Mention is to be made that the French law-maker does not treat self-defense as a justifiable grounds, either, criminal liability being exempted in consideration of the lack of guilt.

15. Belgium

Self-defense is laid down in the Belgian Criminal Code in the Title dedicated to Criminal offences and misdemeanors, in the Section Justifiable grounds.

In accordance with Article 416 of the same Code, "the act of a person defending himself against an actual assault directed at himself or at another shall not be construed as murder, bodily harm or battery".

In the relevant literature, self-defense is the reflection of a principle of law according to which any person facing a jeopardy shall be entitled to defend himself, his reaction shall however be moderate, not exceeding the limits of the assault[3].

The doctrine emphasized that the assault needs to be imminent, unlawful and directly threatening the physical integrity of the person, his health, freedom or dignity.[4] Furthermore, the assault shall be effective and sufficiently severe[5], and not originate from an authority, since it would not be unlawful in that case[6].

Article 417 refers to presumed self-defense. According to that article, a person shall act in self-defense when he averts the entry into a house, outbuilding, by breaking in, violence or climbing, during nighttime. This presumption is, however, deemed by the law-maker to have a relative character, while, as set forth in paragraph 3 of the same article, a person shall be in a state of absolute self-defense when he protects himself against an offence of theft or burglary committed with violence against himself or against another person.

The Romanian law-maker may have drawn inspiration in regulating self-defense from the Belgian legislation, given the striking resemblance of the two regulations. It is observed that, in the opinion of the Belgian law-maker, too, defense is a justifiable grounds exempting the criminal liability of the offence.

16. Spain

Self-defense is regulated in the Spanish Criminal Code in Book I, called General provisions on criminal offences and misdemeanors, the persons responsible, the penalties, safety measures and other consequences of criminal offences, Title I – On criminal offences and misdemeanors, Chapter II – On the grounds of exemption from criminal liability.

In accordance with Article 20 item 4 of the above-mentioned Code, the person committing an act in defending his rights or the rights of another shall be in self-defense, as long as the following conditions are fulfilled:

- the aggression is unlawful.

In the case of defense of property, the aggression shall be of such a nature as to jeopardize the integrity or amount to an imminent loss. If the assault targets the dwelling or its rooms, trespassing shall be deemed unlawful aggression.

- the use of proportionate means to avert or prevent the assault.
- lack of sufficient provocation on the part of the defending person.

Article 20 item 6 of the Code stipulates that the person who committed the criminal offence in a state of panic shall not be held criminally liable.

The stipulation of the conditions listed herein above is an indication that self-defense is not expressly regulated in the case where the limits of disproportionate defense, as compared to the assault, are exceeded.

The regulation in the Spanish Criminal Code is also similar to the Romanian Criminal Code, except

[3] J.J. HAUS, Principes généraux du droit pénal belge, t. I, 3e éd., Gand Publishing House, Librairie générale de Ad. Hoste, 1879, Brussels, Swinnen, 1977, p. 469, n° 616.

[4] Court of Cassation, decision of 28 February 1989; p. 662; (for more details, http://www.actualitesdroitbelge.be/).

[5] Revue de droit penale criminelle, Liege, 1992, p. 1013.

[6] P. Lambert, Legitime defense, Postal Memorialis – Lexicue du droit penal et des lois speciales, Kluwer Waterloo Publishing House, 2008, p. L.20/5.

that in the Spanish law-maker's view self-defense does not amount to justifiable grounds, but is deemed as a reason exempting criminal liability.

17. Portugal

Article 32 of the Portuguese Criminal Code sets forth self-defense, forming part of Chapter III called Grounds exempting criminal nature and guilt.

Thus, an act constitutes self-defense when committed as the necessary means to repel a present and unlawful aggression on legally protected interests of the agent or of a third person.

Additionally, the Portuguese law-maker further regulated, in Article 33, the situation of excess of self-defense.

According to that provision, exceeding the limits of self-defense shall not exempt from criminal liability, but may mitigate it.

As also stipulated by the Romanian law-maker, if, however, the excess of proportionality limits as compared to the severity of the assault is due to a state of fear or distress, then criminal liability shall be exempted.

18. The Republic of Haïti

Self-defense is regulated in the Criminal Code of Haïti within the category of grounds exempting criminal liability, in Articles 273 and 274.

In order for self-defense to be held, it is necessary for the assault to be directed at a person or his property, and the assault needs to be current, actual, imminent, unlawful, and the response shall be proportionate to the assault.

In accordance with these legal regulations, a person shall act in self-defense when responding to the perpetrators of thefts or burglaries, for which violence was used. Such a regulation is not to be found in the Romanian law and, in our opinion, should also be adopted by the Romanian law-maker.

In case of excess of self-defense, when the limits of proportionate defense are exceeded, the law-maker of the Haïtian Criminal Code did not provide the consequence of criminal liability being exempted.

Conclusions

In the countries whose legislations were referred to herein above, we did not found the two-tier classification (justifiable grounds and grounds exempting criminal the liability, in relation to self-defense) whereby the criminal offence or criminal nature of the act is removed, except for Belgium, where self-defense is ranked among justifiable grounds.

In specifying the circumstances of the assault, the laws of neither of the countries analyzed above specify that the assault needs to be material, which, in our opinion, leaves room for interpretation.

In the legislation of other countries, in case of self-defense, among the values jeopardized in the assault is also the person's property, which in Romanian law is not provided, the defended values pertaining to the attributes of the natural person.

In certain countries (Malta and the Grand Duchy of Luxembourg), self-defense is regulated in light of the criminal offences against life, health and bodily integrity.

Not all countries reviewed in our study regulate presumed self-defense or self-defense occurring during nighttime, while other countries have much more extensive regulations, as compared to the Romanian Code, in respect of "presumed self-defense".

Not all countries have a full regulation for "justified excess" and "pardonable excess" in the field of self-defense, as well as the consequences of exceeding self-defense in such cases.

In certain countries, there were very significant regulations in the field of self-defense, as well as the consequences of exceeding the limits thereof.

The concept of self-defense is regulated in all countries subject to our review, being a universal one, with various particularities specific to each country.

As compared to other countries, we believe that the regulation of self-defense in the Romanian Criminal Code is better, but still perfectible, in consideration of certain situations and ECHR requirements.

THE JUDICIAL INDIVIDUALIZATION OF THE PUNISHMENT. ALTERNATIVES TO DETENTION IN THE UNITED KINGDOOM CRIMINAL LAW

Andrei-Viorel IUGAN[*]

Abstract

The simple fact that a person commits a crime doesn't mean necessary that that person must be imprisoned. It's for the court to decide which is the proper sanction that must be imposed to that person.

The state must create a very organized system of alternatives to detention, and as a result of those alternatives detention should be the ultimate measure for the judge to pronounce.

The legislation must regulate a wide variety of means of individualization, alternative to detention, and the courts must choose the one that assures the social reintegration of the delinquent and the restore of the public order.

In this study we are going to present how are the alternatives to detention regulated in the UK's crimal law system and what are the results of this system.

Keywords: *the postponing of the execution of the punishment, suspension under supervision of the sentence, discharghe, probation.*

1. Introduction

The beginnings of the probation concept and use of in the UK are linked to the name of Frederic Rayner, a printer from the south-east of England, who donated money to the Anglican Chirch for it to intervene in order to find suitable solutions for the social reintegration of missfits, offenders and criminals. More missionaries were appointed to work next to the Courts, with the aim of saving the sinners's souls from the sin of drink by providing support in finding a job and housing. Appointment of the first missionaries in 1876 represented the beginnings of the Probation Service. The success of these missionaries was so great that, with the adoption by the Government of the Probation Act of 1907 (Probation of Offenders Act), their powers were extended to all offenders not only those addicted to alcohol. The main role of probation in this first phase was to provide social assistance, not being an actual form of punishment. The probation order, as set out in the 1907 law (Probation Act), was not a rulling of a Court, but a chance offered to the offender for him to change his/her behavior without being punished by the Court, which is basically a substitute for a punishment.[1]

It should be noted that currently England's probation services 's main activities consist in the effective supervision of offenders in order to reduce the occurence of relapse and for protecting the public, and also providing information to the judicial bodies in order to make a judicial individualization proportionate to the seriousness of the offense and to the offender's person. In this regard, the probation service can prepare pre-sentence reports on demand. Such a report should contain an analysis of the offence/crime comitted, relevant information about the offender, the risk of relapse and recommendations for the sanction to be imposed on it. If the conclusions of the report recommend a custodial sentence, the drafting of a contingency plan is necessary, plan containing measures to be applied in prisons in order to reduce the risk of relapse. A copy of the report shall be communicated to the defendant and another copy to the public prosecutor.

2. Content

2.1. A short presentation of the UK' legal system

Offenses in the UK fall into two categories: minor/light ones called also summary offenses and medium and serious offenses referred to as indictable offenses. The minor offenses in turn are divided into two types: 'motoring offences' (eg speeding regulations) and 'non motoring offences', and generally include offenses that caused a loss of up to £ 5,000, the hitting offense, etc. Such offenses are tried only by the courts of magistrates.

The second category of offenses also includes two kinds of offenses: "triable-either-way offences" which include offenses that caused a loss of £ 5,000 or more, theft, driving under influence, and "indictable only offences" including serious crimes such as murder, deprivation of liberty/ unlawfull confinement, robbery etc. "Triable-either-way offences" can be prosecuted either in the courts of magistrats as well as by the Royal Court. If the magistrates considers that a greater punishment than

[1] A.M. Van Kalmthout, Reintegrarea socialã si supravegherea infractorilor în opt tãri europene, Craiova, Ed. Sitech, 2004, p. 35.

they are competent to apply is required, they send the file to the Royal Court. In England and Wales the Court of Magistrates may impose a penalty of up to 12 months in prison.

If the offense is of a reduced seriousness, a warning (caution) can be applied. This applies whenever there is sufficient evidence to justify a potential conviction, but is thought that to refer the case to the Courts would not be of public interest. The offender must admit his/her guilt and agree to receive the warning (caution). The warning (caution) may be simple, the person being cautioned of his unacceptable canduct and on the consequences of committing a new offense or conditioned. In the latter case the offender is obliged to follow certain social rehabilitation programs or repair the damage caused.

The warning (caution) can be applied by the police except for serious offenses of a medium or serious gravity, when the decision belongs to the Crown's prosecutor.

If it is considered that the case should be referred to the courts for trial, depending on the gravity of the offense, it shall be directed either to the Court of Magistrates or to the Royal Court.

The Court of Magistrates's work is based on the principles of the justice of the peace - magistrates are members of the public. They have no legal training and are not paid for their work as a Magistrate. They are dependent on the advice and expertise of an official with legal training named "justice's clerk".

There are also a number of paid magistrates which have the legal training. These are employed in some Courts of Magistrates and hold an obvious influence on the culture and practice of those courts.[2] The court may order either the conviction to imprisonment for life, imprisonment for a specific period, suspended sentence (suspended sentence order), probation (community sentences), a fine, may drop the charges or may order the defendant to pay a compensation.

The suspended sentence was introduced in 2003 and it applies to the cases where the court rules on imprisonment for a period of 12 months or less. The court may suspend the execution of that sentence for a compound term between six months and two years, period during which the convicted person must perform certain obligations. These are identical to those foreseen for probation. If the convicted person does not comply with these obligations, the suspension will be revoked and the court shall order effective enforcement of the punishment.

2.2 Alternatives to detention

Regarding probation (community sentences), the defendant must meet several requirements, including:

- To perform unpaid community work for a period between 40 and 300 hours;
- To attend professional training courses;
- To attend certain social reintegration programs. Such programs exist for example for car thieves, for those who drive drunk / under the influence, for those convicted as a result of domestic violence atcs, for those who are guilty of racism, etc.
- Not to perform/conduct certain activities;
- To be electronically monitored (curfew).There is the possibility that the convicted person is not allowed to leave his/her residence after a certain hour;
- Not to change his/her residence without the probation officer's consent;
- To undergo psychiatric medical treatment (only with the consent of the defendant);
- To undergo treatment in order to get rid of drug addiction (only with the consent of the defendant);
- To undergo treatment in order to get rid of alcohol dependence (only with the consent of the defendant);
- To meet with the probation officer assigned with its supervision according to a program/schedule drawn up by the latter. Basically the convicted person must report to the probation service headquarters at least 12 times in the first 3 months and at least 6 times in the next 3 months.

Regarding the provision of assistance to drug users, it should be noted that in 1998 the Drug Treatment and Testing Order was adopted. This program implies in a first phase that the supervised person shall meet once a week the community psychiatric assistent. The supervised convicted person shall meet twice a week a probation officer (unlike an ordinary person who under probation must perform only two such visits per month). Also, the person following this program must report once a month to the magistrate who convicted him, in order for his/her progress to be evaluated. People included in this program submit periodically urine samples in order to check whether they have been using drugs. Following an assessment carried out by the British authorities on the initial results of this program, it has been found that the weekly amount spent by a drug addict before integration in the program was about 400 pounds. The subjects of this program were committing a total of about 107 offenses per month before being included in the program, afterwards the number of crimes decreased to 10. It has also been found that many of the persons concerned have stopped using drugs. [3]

[2] *Idem*, p. 43.
[3] *Idem*, p. 55.

Waiving charges (discharge) is ordered if the court considers that it is not necessary to impose a sentence. Waiving charges can be unconditional or conditional. In the first case the defendant is not subject to any future restrictions regarding his future conduct, while in the second case it is possible that the defendant can still be held accountable for his actions if a new offense is committed in a specific time frame set by the court (this time frame can't be higher than 3 years).

The granting of a compensation occurs for offenses/crimes such as murder, hitting, stealing, etc., and can be applied as a unique punishment or alongside other types of punishment such as the ones mentioned above. In the Courts of Magistrates the defendant may be compelled to pay a compensation amounting to a maximum of £ 5,000 per offense. If the defendant is judged by a Royal Court, there is no such limit. In determining the amount of the compensation to be paid, the Court must take into consideration also the financial resources of the defendant. [4]

2.3. Results of the UK's crimal system

Between July 2013 and July 2014 in England and Wales were registered about 3.5 billion offenses, of which only 2,059 billion have come before the Courts of Magistrates. Around 1,394 billion defendants were tried by the Courts of Magistrates, 1,083 billion being found guilty, out of which 788.287 were fined and 42.987 were sentenced to imprisonment, compared to the 102.911 on which probation was ordered, the 25.331 on which the suspended sentence was applied and to the 104.844 to which other sanctions were applied.

Within the Royal Courts 85.943 persons were convicted, out of which 77.156 based on an admission of guilt agreement and 8787 without such an agreement. Of those who entered into such an agreement, 1603 persons were fined, 41.639 were sentenced to imprisonment, 20.765 received suspended sentences and 9915 persons were placed under probation. As it concerns those who have not concluded such an agreement, 182 were fined, 6297 were sentenced to imprisonment, 1344 received suspended sentences and 642 were placed under probation.

In total, within the above mentioned period 90.923 persons were sentenced to imprisonment (the average length of the sentence was 15.6 months), 160.908 persons were placed under probation and for 47.000 persons the suspended sentence was ordered.[5]

The statistics also show that the number of recorded offenses in the UK is steadily declining, now being the lowest since 1970 (when these type of statistics started being recorded).

The most common form of punishment applied by the British courts is the fine (over two thirds of those convicted were sanctioned with a fine). This is because most of the offenses were minor ones (summary offences), which are falling withing the Courts of Magistrates's jurisdiction. In 85% of summary offences cases, fines were imposed.

The number of persons sentenced to imprisonment also decreased by 12% in the past two years, in the reference period mentioned above only 8% of defendants being incarcerated. Notwithstanding the prison population increased by about 1-2%, together with the average length of the sentences ordered, from 15 months to 15.6 months.

Amid legislative reforms, an increase in the number of persons who have received a suspended sentence was registered, correlated with a reduction in the number of sentences through which probation (community sentence) was ordered.

In terms of more serious offenses like the offenses of a average and high gravity, the most common form of punishment ordered is imprisonment. The percentage of sentences ordering imprisonment is of 27%, the highest in the last decade. 21% of the convicted persons (for the same type of offense) were placed under probation (community sentence), compared to the 19% which were fined and the 12% which received a suspended sentence. Over a quarter of those who committed this type of offenses were tried by the Royal Courts, 57% of whom were sentenced to imprisonment. This proves a specialization regarding such serious offenses and a firm reaction of the judges in this kind of cases. [6]

It also noted that the number of first offenders is steadily decreasing since 2007, correlated with an increase in the number of recidivist offenders. Between June 2013 and June 2014, 104.100 convicted persons had been previously convicted or warned at least 15 times. About 38.9% of those convicted in the same period had a "rich" criminal record, as opposed to a procentage of 26.9% from ten years ago.

Of those who had 15 or more previous convictions or warnings, 38% were incarcerated for average or high gravity offenses, while only 11% of first offenders were sentenced to prison for the same type of offenses. In the case of first offenders the most common sanction was the warning (57%).[7]

[4] *A Guide to criminal Justice Statistics*, last updated 19th November 2015, disponibil la adresa https://www.gov.uk/government/uploads/system/uploads/attachment_data/file/217725/criminal-justice-statistics-guide-0811.pdf.

[6] *Idem*, p.11-15.

[7] *Idem*, p.17-19.

With regards the relapse rate, based on different types of sanctions, the results of a study conducted between 2000-2010 must be noted. The study reveals that of those who benefited from a warning (the sample was of 135.722 persons) 15.7% have committed criminal offenses within the next year, in the next two years 23.3% of them committed criminal offenses, the percentage increased to 28.5% after three years, to 32.1% after four years, to 34, 7% after five years, to 35.9% after six years, to 36, 8% after seven years, to 37.4% after eight years, just to find that after nine years 38% of these persons had committed criminal offenses. The average number of offenses committed for each of these individuals was of 2.43 after one year, 3.02 after two years, 3.52 after three years and 5.50 offenses after 9 years.

With regards those against which noncustodial sanctions were ordered, under the supervision of the probation services (the sample was of 73.075 persons) after one year 32.3% of these persons relapsed, 44.7% committed new offenses after two years, 51.9% after three years, 56.6% after four years, 59.8% after five years, 62.5% after six years, 64.7% after seven years, 64.7% after eight years and 67.8% after nine years relapsed. The same statistics show that the average number of offenses committed by persons who relapsed was of 3.53 after the first year, 4.97 after two years, 6,20 after three years, 9,85 after eight years and 10.36 after the ninth year.

By comparison, of those who had been sentenced to inprisonment (54.108 persons), after the first year 45.8% of them committed at least a new offence, that percentage increased to 59.4% after two years, to 66.1% after three years, to 70% after four years, to 72.5% after five years, to 74.5% after six years, to 76.1% after seven years, to 77.4% after eight years and to 78.4% after nine years. The average number of criminal offenses committed by persons who relapsed was of 4.45 after one year, of 6.63 after two years, of 8.60 after three years, of 10.28 after four years and of 15.54 after nine years. [8]

3. Conclusions

Every criminal system is efficient, regarding the alternatives to detention, only if the persons placed under supervision don't commit new offences end if they are not imprisoned.

The economy that the state makes with not imprisoning a person, but place him under supervision, will have a opposite effect if that person commits new crimes.

This reality must be taken in consideration and must lead to a real reform regarding the alternatives to detention in the Romanian criminal law.

We presented the UK's criminal model so we can understand what we have to do in our criminal system.

Like in the UK, one of the most important problem is the underfunding of the probation system.

The lack of financial and human resources have negative effects i our country.

Without a perfect organised probation system there can't be a surveillance of the conicted persons.

However the probation system crisis is only a side of the economic and social crisis that our country is confronted in the last twenty years. Without a strong economy and without a well organized social system it's impossible to create workplace and assure the social reintegration of the convicted persons.

THE PREVENTIVE ARREST OF A PERSON IN PREVENTIVE DETENTION STATUS

Bogdan MICU[*]

Abstract

The paper addresses a practical issue of great relevance, namely that of opportunity and utility of preventive arrest of a person who is already in detention in another case. The issue is also extended and other preventative measures and is related to the fulfillment of the requirement of "threat to public order" imposed to be met in this matter.

Keywords: *preventive arrest, house arrest, danger to public order, preventive measures.*

1. Introduction

In judicial proceedings in the field of criminal law, it is often found the need to have and enforce preventive measures aimed mainly to ensure the proper conduct of the criminal trial. Under no circumstances, however, such measures, which have a negative impact on the rights and freedoms of the persons referred to may be taken if the general and special conditions required by the law are not met.

As indicated by art. 202 para. (4) Criminal Procedure Code, the preventive measures are: arrest, judicial review, judicial review on bail, house arrest and preventive arrest. The choice of either of these measures with regard to a concrete situation will be taken based on the fulfillment of the legal conditions, but also in agreement with the principle of proportionality also provided for in art. 202 para. (3): "any preventive measure shall be proportionate to the seriousness of the accusation of the person to whom it is taken and it is needed for the achievement of the aim pursued through its disposition."

In recent jurisprudence, we could notice the trend of taking the measure of preventive arrest, the most severe of the preventive measures, with regard to persons who were already in the custody of the State, either they were in the situation of serving a sentence, or they were the subject of another preventive arrest warrant. With regard to this practice, we appreciate that it is inconsistent with the conditions under which it may order the preventive arrest. To argue this opinion, we will proceed, first of all, to analyze the conditions that must be met for the preventive measure of arrest to be ordered.

2. The conditions under which the preventive arrest of a person may be ordered

Thus, firstly, to take the preventive measure of arrest in the custody of the State, it needs to be found that the measure is necessary to ensure the general goal of preventive measures, as shown in art. 202 paragraph (1) Criminal Procedure Code. According to the quoted text, any preventive measure may be ordered: "if there is evidence or reasonable indications which show reasonable suspicion that a person has committed a criminal offense" and if it is necessary "in order to ensure the proper conduct of the criminal trial, of preventing the circumvention of the suspect or defendant from prosecution or trial or to prevent the committing of another crime."

Given the provisions included in article 202 para. (1) to (3) Criminal Procedure Code, we have to find that for taking the preventive measure of arrest all general conditions of preventive measures should be fulfilled:

a) to have solid evidence or indications showing a reasonable suspicion that a person has committed an offense [art. 202 para. (1) Thesis 1 Criminal Procedure Code]. The condition was assessed in the specialized doctrine as superfluous because preventive measures necessarily imply the existence of a procedural framework which cannot exist without evidence or solid clues that show that a certain offense was committed[1].

However, we also notice in the specialty doctrine that the wording "there are strong clues" which shows a reasonable suspicion that a person has committed an offense is similar to that contained in article 5 paragraph 1 letter c) thesis 1 of the European Convention for the defense of human rights and fundamental liberties "there are credible reasons" to believe that a person has committed an offense[2]. In the case law of the European Court of human rights

[*] Asociated Professor, PhD, Faculty of Law, "Nicolae Titulescu" University of Bucharest (e-mail: **bogdanmicu@mnpartners.ro**).

[1] I. Neagu, M. Damaschin, "Tratat de procedură penală, Partea generală", Universul Juridic Publishing House, Bucharest, 2014, p. 587.

[2] A. Ţuculeanu, C. Sima, "Condiţiile reţinerii şi ale arestării preventive în reglementarea noului Cod de procedură penal", in "Revista Dreptul" no. 3/2015, p. 61 and the followings.

it is stated that "credible reasons" means the existence of reliable data or information, to convince an objective observer that it is possible that the investigated person committed the offense, the reasoning inferred in the circumstances of each cause[3].

b) the measure involving deprivation of liberty to be necessary in order to ensure the proper conduct of the criminal trial, circumvention of the suspect, or defendant from criminal prosecution or trial or prevention of committing another crime [art. 202 para. (1) thesis 2 Criminal Procedure Code]. Obviously, by these provisions the legislator has set the determinant goal of taking a preventive measure, which is to ensure the proper conduct of the criminal trial[4], the legal nature of the preventive measures being that of the "means of activating the criminal prosecution, the criminal process generally"[5].

About the assumption "to prevent the circumvention of the person committing the offense from prosecution or trial", the doctrine shows that it might be missing because the proper conduct of the criminal trial implies the presence of the suspect or defendant in prosecution or trial activities[6]. At the same time, views have been expressed, according to which the basis relating to the prevention of committing another offense, being a too general formulation, may not be accepted as a distinct basis for deprivation of liberty of a person, but rather a circumstance that can serve, adapted to the conditions of article 223 para. (1), letter d), final thesis of the Criminal Procedure Code, to the arrest of the defendant[7].

c) The preventive measure shall be proportional to the seriousness of the charges of the person against whom it is taken and it is needed for the achievement of the aim pursued through its disposition. [art. 202 para. (3) Criminal Procedure Code] The doctrine notes that among the prevention measures and the system of criminal sanctions, there should be a certain resonance because the status of freedom during criminal trial must correspond to a certain extent to the one existing after the application of criminal sanction, even showing that the criminal repression begins during the prosecution or trial of the case[8].

However, the requirement of proportionality of the measure in relation to the seriousness of the accusation is reflected in articles 53 para. (2) thesis II of the Constitution of Romania, under which the restriction of the right to freedom may only be ordered if the restriction is proportional to the situation that caused it, is non-discriminatory and shall not affect the existence of that right. The deprivation of liberty of a person is optional, being a serious measure, it is justified only if, in the circumstances of the case as a whole, other measures, less severe, are insufficient to achieve the goal shown in art. 202 para. (1) Criminal Procedure Code[9].

Moreover, art. 202 para. (4) Criminal Procedure Code lists in a certain order the preventive measures. The sequence used by the legislator also indicates the severity of the measure within the framework of preventive measures, the order of preference being given to measures which provide a lower level of interference on the rights and freedom of the person.

d) there is a cause that prevents the beginning of the criminal action or the exercise of criminal action [art. 202 para. (2) Criminal Procedure Code]. The condition is characterized as being unnecessary in the context the existence of any of the causes of the art. 16 Criminal Procedure Code[10] stops the whole course of the criminal procedure under which such a measure of prevention could be ordered [11].

e) the suspect or defendant should be heard in the presence of the lawyer chosen or appointed ex officio, insofar as he / she does not evade prosecution and does not exercise his /her right to silence.

These general conditions listed above must be met for the disposition of any preventive measure, regardless of its seriousness. Specific conditions of each of the measures to be ordered are added to all these.

Regarding the preventive arrest of the defendant, the special conditions are indicated by art. 223 Criminal Procedure Code: a) to have solid

[10] According to article 16 Criminal Procedure Code, the criminal proceedings may not be started, and when it was started it can no longer be exercised if: a) the deed does not exist; b) the deed is not specified by the criminal law or has not been committed with the laid down by law; c) there is no evidence that a person has committed the offense; d) there is a justifying cause (self-defense, state of necessity, exercise of a right or the fulfillment of an obligation, the consent of the injured person) or non-liability (physical coercion, moral coercion, non-attributable excess, minority of the perpetrator, irresponsibility, unintentional poisoning with alcohol or other psychoactive substances, error, unforeseeable situation; e) prior complaint is missing, authorization or referral to the competent body, or some other condition prescribed by law, necessary to start the criminal action; f) amnesty, prescription or death of the suspect or defendant; g) prior complaint was withdrawn, reconciliation, or a mediation agreement was signed; h) there is a cause of impunity; i) there is an authority of judgment; j) there has been a transfer of proceedings to another state, according to the law.

[11] I. Neagu, M. Damaschin, op. cit., p. 589.

evidence or clues which show reasonable suspicion that a person has committed an offense; b) preventive arrest measure is necessary in order to ensure the proper conduct of the criminal trial, to prevent the circumvention of the defendant from prosecution or trial, avoid committing a crime; c) to record alternative performance of any of the situations referred to in article 223 Criminal Procedure Code.[12]

The specialty doctrine shows that in the Criminal Procedure Code there are two main categories in which the preventive arrest may be ordered, each having its own conditions[13]. The two categories are: assumptions of preventive arrest separate from the threat condition for public order [provided for in article 223 para. (1) letters a) - d) Criminal Procedure Code], namely, assumptions of preventive arrest ordered in consideration of danger to public order posed by the defendant [provided for in article 223 para. (2) Criminal Procedure Code].

I. Assumptions of preventive arrest separate from the threat condition for public order [provided for in article 223 para. (1) letters a) - d) Criminal Procedure Code] involving the meeting the following requirements:

a) there should be evidence indicating reasonable suspicion regarding the commission of an offense by the defendant. The requirement stresses that for taking the measure of preventive arrest, as the most severe of the preventive measures, it is not enough to have strong indications that an offense has been committed, as evidence is needed[14].

d) to be one of the situations listed in article 223 para. (1) letters a) - d) of the Criminal Procedure Code:

- the defendant fled or hid in order to evade the prosecution or trial, or has made any preparations for such actions;
- the defendant attempts to influence another participant in the offense, a witness or expert or to destroy, alter, conceal or steal material evidence or determine another person have such behavior;
- the defendant pressures the injured person or tries to reach a fraudulent agreement with him / her;
- there is reasonable suspicion that, after the beginning of the criminal action against him, the defendant has committed intentionally a new crime or is about to commit a new crime.

As related to these issues, it is not enough to invoke them in an abstract manner, but factual evidence should be presented[15]. For example, in the case of Griskin against Russia, the arrest was based on the existence of a threat of destruction or forgery of evidence. However, the authorities have made reference to this threat without indicating concrete reasons to justify that the defendant could abuse the freedom to commit acts of destruction or forgery of evidence, and for this reason, the breach of conventional provisions has been found[16].

II. The hypotheses of preventive arrest ordered in consideration of danger to public order which the defendant poses [provided for in article 223 para. (2) Criminal Procedure Code]

In the case of certain serious offenses, paragraph (2) of art. 223 of the Criminal Procedure Code provides for the possibility of taking the measure of preventive arrest of the defendant and in the other case, in compliance with the following conditions:

a) there should be evidence indicating a reasonable suspicion that the defendant has committed a crime that falls within the categories listed in article 223 para. (2) Criminal Procedure Code. As we the specialty doctrine provides, the offenses referred to in paragraph (2) of article 223 of the Criminal Procedure Code are also found in paragraph (1) of article 223 Criminal Procedure Code, being included in the generic formulation used by the legislator in paragraph (1) of article 223 Criminal Procedure Code: "the defendant has committed an offense," without further details. The difference between the two texts - paragraphs (1) and (2) of article 223 Criminal Procedure Code consists in establishing different situations (grounds) that legitimate the preventive arrest of the defendant [17].

Thus, basis of depriving the defendant of his liberty, as follows from paragraph (2) of article 223 Criminal Procedure Code refers to the following offenses: an intentional crime against life, a crime which has caused personal injury or death to a person, an offense against national security laid down in the Criminal Code and other laws, offenses of drug trafficking [18], weapons smuggling, human trafficking, terrorism, money laundering, counterfeiting of money or other values, blackmail, rape, illegal restraint, tax evasion, abuse, legal abuse, corruption, an offense committed by means of electronic communication, or any other offense for which the law provides for punishment by imprisonment of 5 years or more.

[17] A. Ţuculeanu, c. Sima, URop.cit., p. 61 and following.

[18] The Constitutional Court admitted the exception of unconstitutionality regarding the phrase "drug trafficking" mentioned in the provisions of art. 223 para. (2) Criminal Procedure Code by Decision 553/2015.

b) there is no cause that prevents the beginning or the exercise of criminal action of those provided for in article 16 Criminal Procedure Code;

c) the criminal action should have been started for the crime for which there is a reasonable suspicion that it has been committed;

d) the measure is necessary to ensure the proper conduct of the criminal proceedings, to prevent the circumvention of the defendant from prosecution or trial or to prevent him commit a new crime (the proper conduct of criminal proceedings);

e) the measure is proportional to the seriousness of the accusation against the defendant and it is required for the achievement of the aim pursued in ordering it;

f) defendant was heard by the judge in the presence of the lawyer chosen or appointed ex officio;

g) defendant's deprivation of liberty would be necessary for the removal of a threat to public order.

This requirement is particularly of interest for this study, which is why we will analyze it in a thorough manner.

Thus, the doctrine notes that by this requirement, the legislator has established a legal alternating criterion which it reports for the incidence of situations that legitimate the deprivation of liberty, as appropriate, in the circumstances referred to in article 223 para. (1) letters a)-d) Criminal Procedure Code or, in their absence, the complex character referred to in article 223 para. (2) Criminal Procedure Code [19].

For the purpose of the threat for public order, the judge of rights and freedoms, the preliminary chamber judge, or the court will have to take into account the following criteria: the seriousness of the offense, the manner and circumstances of committing the offense, the entourage and environment from which the defendant comes, criminal history and any other circumstances relating to the defendant, hypotheses of preventive arrest measures ordered in consideration of danger to public order posed by the defendant [provided for in article 223 para. (2) Criminal Procedure Code].

However, we cannot fail to notice that there is no legal definition for the term "public order". In the Explanatory Dictionary [DEX], the term "public order" means political, economic and social order in a state which is ensured through a set of rules and special measures and translates by the normal functioning of the state apparatus, maintaining the peace of the citizens and compliance with their rights[20].

In the specialty doctrine, it is shown that the public order disturbance, to a certain extent, is related to the things felt by public opinion and not only by the objective data justifying this placement in detention as an exceptional measure. In doing so, the judge need not necessarily be insensitive to the public opinion, but he must provide a balance between the conflicting interests of the victim and the offender, for the purpose of respecting the rights of each party and the public interest [21].

Against this background, according to a separate opinion, the public order is understood as a component of the rule of law and it concerns the proper conduct of life in society, ensuring public safety and security of citizens[22]. In the same way, it has been shown that the assessment of threat to public order should be considered evidence on record showing the exterior elements made or to be made, and that would demonstrate the existence of a present danger for a collectivity of people so that the arrest is necessary to eradicate the hazard in question[23].

As regards the existence of a threat to public order, and in the case law of C.E.D.O., several emphases were made. For example, the Court found the breach of the provisions of art. 5 of the Convention because the authorities did not show any actual circumstance (negative) on the defendant, and the existence of a threat to public order arises only from the seriousness of the offense, the cause not being complex[24].

The domestic case law showed in a concrete situation that leaving at liberty the defendant investigated for illegal restraint and blackmail, poses danger for public order, considering the circumstances of committing the offense and the defendant. For this, the Court pointed out that the defendant exercised violence on the victim, confined him illegally, by transporting him to a basin dam and threatening him to throw him in the lake if he did not pay his debt. The danger to public order also results from the defendant's quality, under-officer with I.S.U. Instead of acting, according to his professional status, to save his fellows, he acted to the contrary, causing suffering to the victim of the crime. In the absence of a resolute response, such actions would encourage crime climate and would lessen citizens' confidence in the authorities[25].

3. The necessity to find the existence of the current danger to public order

We may find that in terms of the danger requirement for public order, there are principle changes compared with the previous Code of Criminal Procedure, which we do not find in the legal practice reflected properly.

Thus, in art. 223 para. (2) of the Criminal Procedure Code in effect, the term used by the legislator is: "it is found that the deprivation of liberty would be necessary for the removal of a threat to public order." Differently, art. 148 paragraph (1) letter f) of the Criminal Procedure Code 1968 shows that preventive arrest could be ordered if the general conditions of preventive measures were fulfilled: f) the defendant committed a crime for which the law provides for life imprisonment or jail for more than 4 years and there is evidence that his discharge is a real danger for the public order".

Under the previous Criminal Procedure Code, the assessment of danger was made by reference to the further behavior of the person, related to which the question of preventive arrest arose. Based on the appreciation elements made available to the Court it is shown that leaving the defendant free would cause danger to public order. This way, the phrase "danger to public order" designated a state that would endanger in the future the normal conduct of the social cohabitation rules, if the defendant was free, aiming at all social values protected by the criminal law. With regard to the fulfillment of this requirement, two elements had to be taken into consideration: the practical danger of the action and the perpetrator.

Differently, the new Criminal Procedure Code uses the expression: "it is found that the deprivation of liberty would be necessary for the removal of a threat to public order." In this way, on the occasion of analyzing the need of taking the measure of preventive arrest, it is no longer taken into consideration the social behavior of the defendant. Under the new provisions, it must be noted that at that time, the defendant's freedom is a danger for public order, danger in full swing, and that the only way to stop this danger is deprivation of freedom.

4. About the impossibility of ordering the preventive arrest in consideration of danger to public order posed by the defendant for persons already arrested

In these circumstances, it appears as surprising the common practice of preventive arrest of a person who is already in the custody of the State, either under a different preventive arrest warrant, or even under a writ of execution of a punishment applied in another case. We believe that such a practice does not represent anything other than a manifestation of inertia in implementing legal provisions better known from the previous Criminal Procedure Code, whereas the new provisions cannot cover such practice.

Our affirmation considers that it is excluded to find as fulfilled the requirement: "his deprivation of freedom is necessary for the elimination of a threat to public order with regard to a person who is already in the custody of the authorities. In no case, one cannot assert about a person held in a detention center and preventive arrest or even in a prison that his freedom since that time presents real danger for public order, for the simple reason that the condition of freedom does not exist at the time of the evaluation. In these circumstances, the new measure of preventive arrest cannot be regarded as necessary for the removal of a state of danger, which is why it appears as unlawful because it does not comply with the requirements for taking such measures.

We are unable to accept any possible motivation which would refer to the need for the new arresting warrant that would ensure the prevention of possible future circumvention of the person in detention but that could be released either because the preventive measure would reach the maximum period, would be revoked, replaced or the person would be released under parole or released as the punishment period would be fulfilled. Even in such cases, we may not talk about a real danger for public order, but about a future and possible danger. In these circumstances, the danger could be ascertained only after the release of the person placed in detention, making it impossible to be proved prior to the release.

An arrest warrant issued if the person to which it refers is already in the custody of the State is meaningless and and lacking real efficiency, because it may not be enforced. Moreover, it shall comply with the general scheme and be extended or checked within the terms specified by law, since it has a limited period in time. We believe that it is a useless legal effort to order a preventive measure which does not have the effectiveness imposed by art. 202 Criminal Procedure Code and it is even more useless to verify a measure that was never enforced.

It would be even more difficult to accept the assumption that following a request of preventive arrest by the Prosecutor's Office, the Court would appreciate that this is not proportional with the seriousness of the situation analyzed and orders house arrest. In this case, the person for whom the measure was taken is already in the custody of the State, and at the same time, he would not be allowed to leave the house.

5. Conclusions

We appreciate that the preventive arrest may not be legally ordered in consideration of danger to

public order posed by the defendant in respect of a person who is already arrested preventively or who is imprisoned to serve time, whereas such a measure is unlawful. The element of unlawfulness relates to the failure to comply with the special condition indicated in art. 223 para. (2): Criminal Procedure Code. "it is found that the deprivation of liberty would be necessary for the removal of a threat to public order."

THE CRIMINAL OFFENCE OF MONEY LAUNDERING – A SERIES OF THEORETICAL AND PRACTICAL CONSIDERATIONS

Constantin NEDELCU[*]

Abstract

The paper at hand addresses the extremely complex and sensitive matter relating to one of the most controversial offences in the criminal laws of Romania – in particular, the criminal offence of money laundering. This paper bears both theoretical and practical interest, in that it points out specific instances of court case-law which were given different constructions by various judiciary authorities.

Keywords: *money laundering, concealment, aiding and abetting, concurrence of offences, concurrent regulations.*

1. The criminal offence of money laundering as reflected in international legal instruments

The criminal offence of money laundering is reflected in international legal instruments, and this as a result of the particularly high degree of social jeopardy that is attached to the criminal offence in question.

Thus, the recitals of the 1990 Convention on Laundering, Search, Seizure and Confiscation of the Proceeds from Crime of the European Council[1], state that this legal instrument was adopted in the context of all signatory states being convinced of the need to pursue a common criminal policy aimed at the protection of society, considering that the fight against serious crime, which has become an increasingly international problem, calls for the use of modern and effective methods on an international scale, believing that one of these methods consists in depriving criminals of the proceeds from crime, and the shared conclusion that for the attainment of this aim a well-functioning system of international co-operation must be established.

In accordance with Article 6 of the above-mentioned Convention, called: "Laundering offences", such criminal offences shall consist of the following, when committed intentionally: a) the conversion or transfer of property, knowing that such property is proceeds, for the purpose of concealing or disguising the illicit origin of the property or of assisting any person who is involved in the commission of the predicate offence to evade the legal consequences of his actions; b) the concealment or disguise of the true nature, source, location, disposition, movement, rights with respect to, or ownership of, property, knowing that such property is proceeds; and, subject to its constitutional principles and the basic concepts of its legal system: c) the acquisition, possession or use of property, knowing, at the time of receipt, that such property was proceeds; d) participation in, association or conspiracy to commit, attempts to commit and aiding, abetting, facilitating and counselling the commission of any of the offences established in accordance with this article.

Paragraph 2 of the same article also includes several clarifications as to the manner in which the provisions incriminating laundering offences are to be implemented or applied in the domestic law of the signatory states. They will appraise whether: a) the predicate offence was subject to the criminal jurisdiction of the state Party; b) the offences do not apply to the persons who committed the predicate offence; c) knowledge, intent or purpose required as an element of an offence set forth in that paragraph may be inferred from objective, factual circumstances.

In addition, paragraph 3 of the same article further states that each Party may adopt such measures as it considers necessary to establish also as offences under its domestic law all or some of the acts referred to in paragraph 1 of this article, in any or all of the following cases where the offender: a) ought to have assumed that the property was proceeds; b) acted for the purpose of making profit; c) acted for the purpose of promoting the carrying on of further criminal activity.

Under the aegis of the European Union, other legal instruments were also enacted aimed at penalizing offences of money laundering, in testimony to the fact that this phenomenon is deemed to be extremely severe, all Member States expressing the need to fight against it. The onset was that, if certain coordination measures are not adopted at the level of the Community, then money launderers or terrorism financers could attempt to take advantage, in facilitating their criminal activities, of the free movement of capital and of the freedom to provide

[1] Ratified by means of Law No 263/2002 published in Official Gazette of Romania, Part I, No 353 of 28 May 2002.

financial services relating to the integrated financial area[2].

With a view to addressing these concerns in the field of money laundering, Council Directive 91/308/EEC was adopted on 10 June 1991 on prevention of the use of the financial system for the purpose of money laundering. This legal instrument requires Member States to prohibit money laundering and force the financial sector, including credit institutions and a wide range of other financial institutions, to identify their clients, to keep appropriate records, to set forth internal procedures concerning personnel training and money laundering and report any money laundering suspicions to the competent authorities.

Another legal instrument adopted under the coordination of the European Union is the Council Framework Decision of 26 June 2001 on money laundering, the identification, tracing, freezing, seizing and confiscation of instrumentalities and the proceeds of crime (2001/500/JHA)[3] which, in its recitals, refers to the European Council in Tampere of 1999, pointing out that money laundering is at the very heart of organized crime and should be rooted out wherever it occurs. In this respect, it is further stated that "The European Council is determined to ensure that concrete steps are taken to trace, freeze, seize and confiscate the proceeds of crime". In this context, Article 2 of Framework Decision No 2001/500/JHA stipulates as follows: "Each Member State shall take the necessary steps consistent with its system of penalties to ensure that the offences referred to in Article 6(1) (a) and (b) of the 1990 Convention, as they result from the Article 1(b) of this framework Decision, are punishable by deprivation of liberty for a maximum of not less than 4 years." By means of this legal instrument, an obligation undertaken at the level of the European Council was assimilated in the Community law of that date.

Setting out from the objective reality that money laundering often takes place in an international context, the European Union acknowledged that any measures adopted exclusively at national or even Community level, without having regard to international coordination and cooperation, would only achieve limited results. For this reason, the measures adopted by the Commission in this field should be in line with endeavors undertaken by other international authorities. In particular Community actions ought to continue to take into account the recommendations of the Financial Action Task Group (herein after referred to as FATF), which is the main international body fighting against money laundering and terrorism financing[4].

These considerations led to the enactment of Directive 2005/60/EC of the European Parliament and of the Council of 26 October 2005 on the prevention of the use of the financial system for the purpose of money laundering and terrorist financing.

In the very first article of the directive, it is laid down that Member States shall ensure that money laundering and terrorist financing are prohibited.

At the same time, the following conduct, when committed intentionally, shall be regarded as money laundering: "a) the conversion or transfer of property, knowing that such property is derived from criminal activity or from an act of participation in such activity, for the purpose of concealing or disguising the illicit origin of the property or of assisting any person who is involved in the commission of such activity to evade the legal consequences of his action; b) the concealment or disguise of the true nature, source, location, disposition, movement, rights with respect to, or ownership of property, knowing that such property is derived from criminal activity or from an act of participation in such activity; c) the acquisition, possession or use of property, knowing, at the time of receipt, that such property was derived from criminal activity or from an act of participation in such activity; d) participation in, association to commit, attempts to commit and aiding, abetting, facilitating and counselling the commission of any of the actions mentioned in the foregoing points."

The same text indicates that money laundering shall be regarded as such even where the activities which generated the property to be laundered were carried out in the territory of another Member State or in that of a third country, while knowledge, intent or purpose required as an element of the activities of money laundering may be inferred from objective factual circumstances.

In close connection with the phenomenon of money laundering, the Directive further defines the concept of "serious crime" which shall mean, at least: "acts as defined in Articles 1 to 4 of Framework Decision 2002/475/JHA on combating terrorism; any of the offences defined in Article 3(1)(a) of the 1988 United Nations Convention against Illicit Traffic in Narcotic Drugs and Psychotropic Substances; the activities of criminal organizations as defined in Article 1 of Council Joint Action 98/733/JHA of 21 December 1998 on making it a criminal offence to participate in a criminal organization in the Member States of the European Union; fraud, at least serious, as defined in Article 1(1) and Article 2 of the Convention on the Protection of the European Communities' Financial Interests; corruption; all offences which are punishable by deprivation of liberty or a detention

order for a maximum of more than one year or, as regards those States which have a minimum threshold for offences in their legal system, all offences punishable by deprivation of liberty or a detention order for a minimum of more than six months".

2. Considerations on the evolution in Romanian law

Under the influence of such regulations, in the Romanian legal system, Law No 21/1999 was enacted for the prevention and penalizing of money laundering[5]. In Article 23(1) of the said law, the criminal offence of money laundering was defined as follows: "**a)** the exchange or transfer of valuables, knowing that they derive from the commission of criminal offences: trafficking in narcotic drugs; failure to comply with the arrangements for weapons and ammunitions, in an aggravating form; failure to comply with the arrangements for nuclear materials or other radioactive materials; failure to comply with the arrangement for explosives; counterfeiting currency or other valuables; procurement; smuggling; blackmail; illegal deprivation of liberty; swindle in the banking, financial or insurance systems; fraudulent bankruptcy; theft and concealment of motor vehicles; failure to comply with the protection arrangements for certain goods; trafficking in animals protected in their country of origin; illicit trade in human organs and tissue; criminal offences committed by means of computers; criminal offences committed by means of credit cards; criminal offences committed by persons forming part of criminal groups; failure to observe the regulations governing the import of wastes and residues; failure to observe the regulations governing gambling; for the purpose of concealing or disguising the illicit source thereof, and also for the purpose of concealing or abetting persons involved in such activities or presumed to evade the legal consequences of their actions; **b)** concealment or disguise of the true nature, source, disposition, movement or ownership of property, knowing that such property is proceeds of one of the criminal offences referred to in letter a); **c)** the acquisition, possession or use of property, knowing that such property is proceeds of one of the criminal offences referred to in letter a)".

Therefore, it may be noticed that the Romanian law-maker opted for the alternative of expressly indicating the criminal offences which may be regarded as predicate offences in relation to money laundering, as this offence is obviously connected with the phenomenon of organized crime and of serious crime.

Upon repealing Law No 21/1999 and its replacement with Law No 656/2002, the Romanian law-maker's option changed, the current Article 29 in the new regulation no longer lists the criminal offences which may be regarded as predicate offences in light of the offence of money laundering. As compared to the previous form of this criminal offence, the new text broadly maintains the wording, the relevant doctrine stating that when the object of "laundering" consists of illicit money, in fact, the author of the money laundering offence performs the following activities[6]:

I. first of all, he gets (receives) the cash originating from the commission of criminal offences (*reception of money*).

II. second of all, the money launderer devises a money laundering *scheme* (*laundering itself*), which, in most cases, is structured in *three stages*:

- the first stage – *placement* – this is the stage when the money deriving from illicit activities is placed in circulation, is actually placed with institutions falling in the category of those referred to in Article 8 of Law No 656/2002, more specifically: banks, investment funds, insurance companies, etc. Therefore, in this first stage, illicit proceeds are *scattered*, which means that the overall amount is divided into portions smaller than EUR 15,000 (in RON equivalent) and then actually *placed*;
- the second stage – *sedimentation or stratification* – involves the separation of illegal proceeds from their source. This is achieved through the creation of totally or partially fictional financial or commercial transactions, by setting up "shell" companies. The money launderer draws up fictional import-export documents, in reliance upon which money is transferred *from the initial placement institution (bank)* as payment for fictional export services or operations, to another bank;
- the third stage – *integration* – involves the legitimization of proceeds derived from the commission of criminal offences, by re-entering them in the legal financial, banking or commercial circuit.

The wording of Article 23(29) of Law No 656/2002 also underwent other amendments, as compared to its form upon the effective date of the law. The text was supplemented with three other paragraphs, which set forth that: if the offence was committed by a legal entity, in addition to the penalty of fine, the Court shall impose, as the case may be, one or more complementary sentences, as stipulated in Article 136 (3) a)-c) of the Criminal Code.

[5] Published in Official Gazette of Romania, Part I, No 18 of 21 January 1999. Currently repealed by Law No 6556/2002.

[6] Al. Boroi, M. Gorunescu, I.A. Barbu, *Dreptul penal al afacerilor* [Criminal Business Law], C.H. Beck Publishing House, Bucharest, 2011, p. 367.

From the perspective of the subjective side, paragraph (4) in Article 29 of Law No 656/2002 expressly lays down that: "knowing the source of property or the pursued purpose may be inferred from objective factual circumstances".

Paragraph (5) of the legal text extends the scope of the above-mentioned provisions, being irrelevant whether the criminal offence from which the property derived was committed in the territory of Romania or abroad.

3) Practical difficulty in enforcing the incriminating regulation set forth in Article 29 of Law No 656/2002 on the prevention and fight against money laundering and terrorism financing

As already indicated herein above, upon repealing Law No 21/1999 and replacing it with Law No 656/2002, the Romanian law-maker's option changed. Thus, Article 23 of this new legislative enactment[7] defined the criminal offence of money laundering, with no reference to the type of criminal offence which may become predicate offence in relation to it. Not even the technique of reference to the concept of serious offence was used, which was defined at that time by the relevant laws in force. Under such circumstances, separation between the criminal offence of money laundering and the criminal offence of concealment and abetting, already existing in the Criminal Code, became even more burdensome. The doctrine attempted to explain the difference between money laundering and the two classical criminal offences within the meaning that the regulation governing money laundering should only apply to the cases where concealment and abetting relate to the phenomenon of money laundering, and also in the instances where "concealment" refers to a real estate asset. In all other cases, the texts referring to concealment or abetting, as applicable, shall apply[8].

Another opinion is that, in fact, no distinction is possible between the three criminal offences, the intervention of the law-maker being required, within the meaning of indicating once again the offences which may be regarded as the predicate offence in relation to the criminal offence of money laundering[9]. Another vivid controversy existing in the legal practice and appropriately reflected in court practice refers to the active agent of the criminal offence of money laundering. As regards this constituent element, it was stated that the active agent of the criminal offence of money laundering may be the author of the predicate offence, but also a person specialized in money laundering, not related in any manner whatsoever to the predicate offence. In legal practice[10], it was specified that the author of the criminal offence of bribe taking exchanging the money received for "*his activity*" into foreign currency and depositing it to the bank in the name of his mother will also be held liable for the criminal offence of money laundering, a solution which both the undersigned, and the relevant literature[11], adhere to. In another view, it is deemed that the active agent of the criminal offence of money laundering is always different from the active agent of the criminal offence from which the property originates[12].

In a yet more radical opinion, it is stated that the principle *ne bis in idem* would be infringed, should the author of the predicate offence be penalized for money laundering, as he is penalized twice for committing the same offence because, in certain factual hypotheses, he automatically commits the criminal offence of money laundering, too. For instance – in the hypothesis described in letter c), the author of the criminal offence of theft takes possession over the property immediately after consummation of the predicate offence, thus automatically and simultaneously committing the criminal offence of money laundering.

In line with this last opinion, we also believe that the criminal offence of money laundering may not be committed by the author of the predicate offence, in any circumstances whatsoever. We also deem that the phrase "knowing that such property is proceeds" included in the incriminating rule set forth in Article 29 of Law No 656/2002 should account as an exclusion, from the category of potential active agents in the criminal offence of money laundering, of the person having committed the predicate offence, because the phrase would seem futile otherwise in respect of the latter.

3. Conclusions

The criminal offence of money laundering is an offence which was traditionally connected to the phenomenon of organized crime, the criminal offences from which money or property to be laundered originated being expressly and restrictively stipulated by the regulation defining this criminal offence. In line with the new legislative realities, the criminal offence left the area of

[7] Which became Article 29 after re-publication in Official Gazette of Romania, Part I, No 702 of 12 October 2012.

plurality, constituting and being constantly mistaken for other criminal offences regulated under the Romanian criminal law, such as concealment or aiding and abetting. Although the doctrine repeatedly requests legislative interventions to help clarify these matters, but also others in connection with the capacity of active agent, all amendments brought so far have not led to such clarification, and the case-law also faces difficulties of interpretation and enforcement when it comes to the incriminating regulations in the field of money laundering.

THEORETICAL AND PRACTICAL CONSIDERATIONS RELATING TO THE OFFENSE OF DRIVING A VEHICLE UNDER THE INFLUENCE OF ALCOHOL OR OTHER SUBSTANCES. COMPARATIVE LAW ISSUES

Alin Sorin NICOLESCU[*]

Abstract

Along with the enforcement of the New Criminal Code, the offense provided by art. 87 from the Emergency Ordinance no. 195/2002 was abolished and introduced in the New Criminal Code in art. 336 under the name "Driving a vehicle under the influence of alcohol or other substances". The introduction of this offense in the Criminal Code was made as a result of some modifications regarding the offense objective content and sanctioning character. The most important modifications consist in the incrimination conditions in respect to the moment alcohol must be identified in the blood so that the material element of the objective side of the offense is met. This modification further led to a series of problems, mainly regarding the moment the offense is consumed, moment that in the legislator's opinion is the moment the biological samples are taken. This opinion does not consist with the fact that this offense is a danger offense and it is consumed at the moment it occurred. According to the Romanian Constitutional Court decision no. 734/2014, after the moment the offender is stopped in traffic, he no longer represents a danger to the values protected by the criminal law and it would be absurd to punish him for an action that no longer represents a danger to society, considering the moment the biological samples are taken. Moreover, this legal issue lead to acquittal solutions regarding the offense provided and sanctioned by art. 336 from the Criminal Code.

Keywords: *offense, biological samples, driving, vehicle, alcohol.*

1. Introduction

"A society cannot exist, as a whole, without a series of fundamental values defended by legal rules. One aspect of a developing social life has been represented since ancient times by the social values protected by the legislation that the completely social life depends on. "After the emergence of the state, the function of defending of the essential social values that the society is based and develops is realized by means of criminal law."[1]

By applying sanctions for committing some dangerous actions or considered by the society as being dangerous, it is found the importance of criminal law in everyday life and its indispensability, in general, of the offenses in the road that the society frequently deals with lately, and the number of the convicted people in this respect is in continuous growth.

It is very important that the regulatory acts should adapt themselves to the society and, especially, to the level of values the society is built and formed, thus, the law is in a constant change, trying to fold close to the perfection on the needs of the community. Of course, the balance between the social realities and the normative field that establishes the relations between individuals is not always perfectly accomplished, thus, the interpretation of the rules in the spirit they were created for, suggests the fair application of these ones and, without doubt, the law finds applicability in the national culture and morality. It is admitted the fact that the society is continuously changing and it is therefore imperative that the rules should become acquainted with the occurred social changes.

With the occurrence of the new Criminal Code Penal[2], the Romanian law system has undergone a reform as regards the criminal legislation. This reform was welcomed in most cases by the great authors and theorists, however, as any new issue; it was the subject of some criticism, which, in some cases, surpassed the beneficial side of the new legislation.

As a novelty, a number of offenses of the special legislation were introduced in the new Criminal Law. Thus, offenses, such as those in the field of Government Emergency Ordinance no. 195/ 2002 regarding the circulation on the public roads, were abolished and introduced in the Criminal Code under the influence of some regulatory changes, which later led to a number of legal issues that required even the intervention of the High Court of Cassation and Justice or of the Romanian Constitutional Court in order to solve some legal problems or to establish the unconstitutionality of the acts.

Art. 87 of the Government Emergency Ordinance no. 195/ 2002 was abolished by art. 121 section 1 of Law no. 187/ 2012 for the

[2] Law no. 286/2009 regarding the (new) Criminal Law, published in Official Gazette. No. 510 of 24th July 2009.

implementation of the Law no. 286/ 2009 regarding the Criminal Code.

The present study focuses on the analysis of the stipulations of the incriminating text of the art. 336 of the new Criminal Code, corresponding in G.E.O. no. 195/ 2002, art. 87. The offense is regulated in a simple variation, an assimilated variation and an aggravated variation.

2. The Analysis of the Offence

2.1. Legal Content

In a simple form, the Criminal Code defines as a criminal offence, the action of a person of driving a vehicle on public roads for which the law requires the possession of a driving license at the time of collecting the biological samples has an alcoholic impregnation of over 0, 80 g/l of pure alcohol in blood[3]. It is noticed that the new regulation takes over many of the constitutive elements of the offence, as it was previously regulated in the Emergency Ordinance no. 195/ 2002, but with some differences:

Driving on public roads does not concern only a vehicle or tram, but the material element of the offence reveals the condition of driving any kind of vehicle[4] for which the law provides the obligation of possessing a driving license.

It is noticed the fact that in this situation, the legislator extended the incrimination procedure on any type of vehicle, the only condition is that the legislation provides the obligation of possessing the driving license of the driver of the vehicle in question.

It is also noticed the fact that the minimum allowed limit referring to the alcoholic impregnation in the blood is the same, i.e. 0.80 g/l of pure alcohol in the blood, but with the specification that this one is necessary to exist at the time of biological sampling.

In the assimilated form, art. 336 finds guilty the deed of the person who drives a vehicle on public roads that the law provides the obligation of possessing a driving license under the influence of some psychoactive substances. The normative text takes the same structure of the old regulation with the following differences[5]:

The action of driving must relate to a vehicle for which the law provides the obligation of owning a driving license, as in the case of the simple form.

As regards the active subject, this one must be under the influence of psychoactive substances, as opposed to the old regulation where the condition of the active subject was that this one was under the influence of some substances or narcotic products or drugs with similar effects to these ones.

The aggravated form is provided in paragraph (3) and is represented by the deed of the person who drives a vehicle on public roads for which the law provides the obligation of possessing a driving license at the time of biological sampling and has an alcoholic impregnation exceeding 0, 80 g/l of pure alcohol in blood or the person is under the influence of some psychoactive substances, if this person carries out public transport of people, transport of substances or dangerous substances or is in the process of practical training of people in order to obtain the driving license or during the practical tests of the exam in order to obtain the driving license. It is noticed the fact that there are no changes of the constitutive elements of the offence in relation to the previous regulation.

2.2. Pre-existing conditions

The legal object is constituted by those social relations that ensure the safety on public roads.

The offence prescribed by art. 336 lacks of material object, being a crime of danger the driving of a vehicle on public roads according to the conditions prescribed in the text of incrimination being means through the offence is committed and not its object.

In the case of the simple and aggravated form the active subject is unqualified, being any person who satisfies the required conditions by the law for criminal responsibility. In interpreting the aggravated form, it is necessary that the active subject should perform a certain activity, such as: making public transport of passengers, transport of substances or dangerous products or he/ she is in the process of practical training of some people to obtain the driving license or is during the practical examination to obtain the driving license, thus, the active subject must be qualified in this situation

The passive subject is the state, "over which it passes these consequences of all violations of the rule of law, implicitly the consequences that violate the traffic rules on public roads."[6]

2.3. The Constitutive Content

In terms of the objective side, the material element of the simple and aggravated offence prescribed by art. 336 in para. (1) and (2) is carried out by the action of driving, under para. (1) by a person who has an alcoholic impregnation over 0, 80 g/l of pure alcohol in blood at the moment of biological sampling, and in the case para. (2) by a

[6] Alexandru Boroi, *Criminal Law. Special Part.*, Ed. Universul Juridic, Bucharest, 2014, p. 503.

person who is under the influence of some psychoactive substances.

It is mentioned that the collection of the biological samples is done in the authorized health care units or in forensic medicine institutions and carried out only in the presence of representative of the traffic police officers. The determination of the concentration of alcohol or the presence of substances or narcotic products or drugs with similar effects to these in the organism is done in authorized forensic medicine institutions in accordance with the methodological norms established by the Ministry of Public Health. Also, the traffic police officers establish the presence of the alcohol in the exhaled or preliminary test the presence of substances or narcotic products or drugs with similar effects in the organism with the aid of some certified technical means, for example: ethyl test.[7]

As regards the aggravated variation prescribed in para. (3), the material element is performed under the influence of the same actions of driving, but in specific terms and conditions:

In the first way of committing the offence, the vehicle must meet the conditions to be used as a means of transport in order to public transport of passengers;

The second way provides the transportation with a vehicle by the person in the situations prescribed in para (1) and (2) of the substances or dangerous products;

The third situation requires that the person under the incidence of the above mentioned paragraphs to be in the practical training of some people in order to obtain the driving license;

The fourth way requires that the person referred to in art. 336 may be located during the practical exam in order to obtain the driving license.

The offence is one of danger; so consequently, the immediate consequence will count in endangering the safety on public roads.

"In order to fulfil the objective side of the offences referring to the safe circulation on the public roads, there must be a causal link between the action or inaction that constitutes the material element and the specific result. The causal link comes from the very materiality of the offence and should not be proved."[8]

In terms of the subjective side, the offence provided and punished by the art. 336 can be committed in the form of a direct or indirect attempt.

The reason or the aim of the commitment of the crime has no relevance for the existence of the offence, but they are to be considered in the individualizing of the possible punishment that will apply to the defendant.

The offense is likely to be committed as an interrupted attempt. It might commit an attempt to the offence provided in art. 336 of the Criminal Code, the offender who was in an advanced state of drunkenness (blood alcohol level over 0.80 g/l) climbed at the wheel of a car, started the engine, geared lever I of speed to move forward, but a friend or even a police officer actually stops this person. The preparatory acts, even though possible, as the attempt, are not punished.

As regards the more favourable law to the conditions of the incrimination, having an extension of the rule of incrimination, the Criminal Code has more stringent regulations. In terms of the system of penalties, the Criminal Code has a favourable character because it provides an alternative to the simple variant and assimilated variant both imprisonment and fine penalty.

The commitment of the offence is punishable by imprisonment of between one to five years or fine in both simple and assimilated variation. As far it concerns the aggravated variant ion, the commitment of the offence is punishable by imprisonment between 2 and 7 years.

3. Decision no. 3/ 2014 of the High Court of Cassation and Justice

As shown above, the incorporation of the art. 87 of GEO no. 195/ 2002 in the content of the art. 336 of the Criminal Code was made subject to some amendments, aspects that have caused a number of differences, a non-unitary practice and even the investment of the superior courts for the purpose of solving some laws or establishing the unconstitutionality of provisions referring to the objective side of the offence, the moment of the offence and in particular on what evidence, derived from the work of sampling and analysis of the biological samples, we can discuss about the incidence and the criminal nature of the deed. So:

The High Court of Cassation and Justice published its decision in the Official Gazette no. 392 on 28th May 2014. The jury for solving some points of law in criminal matters no 3/ 2014 had as objective to pronounce a prior decision to solve a principle of the law regarding the interpretation and enforcement of the stipulations of art. 336 para. (1) of the Criminal Code for the purpose of establishing the result of the alcohol with criminal relevance in the hypothesis of a double biological samples.

The notification of the Criminal Section of the High Court of Cassation and Justice was determined by the so- called mismatch of the provisions of the art. 336 para. (1) of Criminal Code with the existing methodological norms regarding the sampling, the storage and the transportation of the biological samples to judicial probation through establishing

[7] G.E.O. 195/2002, art. 88.

[8] Alexandru Boroi,*Criminal Law.Special Part*, Ed. Universul Juridic, Bucharest, 2014, p. 504.

the alcohol or the presence of narcotic substances or drugs with similar effects, in the case of the people involved in events or circumstances related to road traffic, approved by the law of Ministry of health no 1512/ 2013, especially those in art. 10 para. (1).

The Court of Appeal from Alba- Iulia, the Criminal Section and for cases involving children decided to notify the High Court of Cassation and Justice regarding the pronouncement of a prior decision to solve the principle of the law regarding the enforcement and interpretation of art. 336 para. (1) of the Criminal Code, for the purpose of establishing the blood alcohol result with criminal relevance in the hypothesis of a double biological sample.

Since the legislator did not take over the entire incriminating text of art. 87 of G.E.O no. 195/ 2002, in the practice of the courts was raised the problem of the moment of the alcohol level with criminal relevance for the reintegration of the objective side of the offence. It is reminded that the old regulation implied an alcoholic impregnation that exceeded 0, 80 g/l of pure alcohol in blood at the time of driving the vehicle, thus, enabling to establish this deed through retroactive calculation[9] that was possible due to the methodological rules regarding the sampling, the storage and the transport of the biological samples in order to judicial probation through the establishment of the alcohol or the presence in the organism of substances or narcotic products or drugs with similar effects to these ones in the case of the involved people in in the events or circumstances referring to the road traffic[10].

3.1. The opinion of the instances in Romania

Most Courts of Appeal in Romania have submitted opinions regarding the law issue undergone to solve, at the request of the High Court to solve the law issue undergone to the analysis, and for this purpose, the interpretation has been one common, as follows : in the case of a double biological taken samples, the one with criminal relevance and that completes the objective side of the offence is the first sampling as this is the time closest to the time of detection in the traffic of the driver under the influence of the alcohol or other substances**[11]**.

At the level of the Courts in from the District 1, 4 and 5 Bucharest, it has formed the opinion that: "determining the criminal activity depending on the result of the first sampling corresponds most to the social protected values . Thus, if the result of the first sampling is higher than of the second, then the alcoholic impregnation from the time of the commitment was higher than the existing at the time of the two samples, fact that proves the degree of superior social danger".

The Court in District 2 expressed the point of view in terms of criminal relevance of the evidence with the highest value.

On the basis of the principle in dubio pro reo, the Law Court of District 6 expressed the opinion according to which the level of the blood alcohol with criminal relevance should be given by the lowest value because not the first taken sample is lower, since the blood alcohol content takes the form of a curved with an increasing and decreasing period. If the sampling of the two blood proofs is done during the increasing period, the first sample has a lower value and will be more favourable to the defendant. If the sampling of the two samples is carried out during the decreasing period, the second sample will be lower and more favourable to the defendant.

3.2. The opinion of "Mina Minovici" Forensic medicine Institute

There is also an official point of view of the National Forensic Medicine Institute "Mina Minovici" that replied that the criminal relevance of the ethylic intoxication is given by the value of the alcohol from the first blood taken, arguing that:

"Collecting two blood samples was part of the methodology to determine the ethylic intoxication and was useful for establishing the phase of the intoxication (absorption or elimination) and the rate of the individual elimination in case of the request the expertise of the retroactive assessment of alcohol. For the purposes of the new Criminal Code, the extraction of a single blood sample in a moment as close as possible to the road event is necessary.

This provision should have replaced the old provision of collecting two blood samples provided in the Order of the Health Minister no 1.512/ 2013, but pending the modification of the order of health minister, the National Institute of Forensic Medicine "Mina Minovici" stated that the value of the alcohol from the first blood sample gives the probative value for the existence of the alcoholic intoxication.

The alcohol consumed by a person enters a dynamic process in the body called metabolism. The concentration of the alcohol in various parts of the body will be different from one moment to another, until the completely elimination from the body. Complex mechanisms governed by dozens of individual, general and particular factors interfere in the metabolism of the alcohol. Thus, each person reacts in his or her own way, both in terms of method or metabolism, as well as, especially, as regards the clinical manifestations rendered by behaviour.

[9] Art. 10. (1) To determine the blood alcohol content, two bloos samples will be taken at an interval of one hour each other, each sample being represented by an amount of 10 ml blood.

[10] Approved by the Order of the Health Minister no. 1.512/2013.

[11] Decision of High Court of Cassation and Justice no. 3/2014.

Although the pathophysiological mechanisms are very well known, it has not been found so far any acceptable model based on which it could be faithfully reconstructed the path of the alcohol in the dynamics of the process of absorption and elimination from the body. In this respect, it has been developed multiple models of the evolution of the blood concentration in the body, the closest to the reality being the one imagined by Widmark.

It has been shown that the only scientific way to establish the level of the alcoholic intoxication is through the blood analysis of the taken sample, and the probative value of the expertise regarding the retroactive estimation of the alcohol has been greatly exaggerated, the retroactive interpretation of the alcohol is not a usual expertise in the European countries and is rarely allowed.

Since it is impossible to quantify all the factors that contribute to the metabolism, it applies models of calculation of graphical expression that are simplified, estimated or resulted from the statistical averages. In the submitted opinion, this represents a first argument for the relative character of a retroactive interpretation of alcohol.

The speculative nature of this kind of expertise provides the main argument. To reproduce the metabolism of a certain amount of drink, this one must be objectively known, as well as all the circumstances of the respective alcohol consumption. The defendant provides all the information in all these cases. It is necessary to know that at a certain level of blood alcohol, established undoubtedly through the laboratory analysis, it can be reached through an infinite number of variations of consumption. By default, there will be an infinite number of possible concentrations in a previous moment. Therefore, through this type of expertise, it is concluded that if the person had swallowed the alcoholic beverages declared, he/she would have had certain blood alcohol content in the accused moment. The recalculated blood alcohol content does not reflect the real value, but only one theoretically possible, resulted only from the declared consumption.

The veracity of the declaration of consumption cannot be scientifically verified, as there are not certain criteria in this regard. The data from the declaration of consumptions are subjective and can be more or less real, regardless the good faith of the offender, especially due to the fact that they are mentioned after a long period of time (months or even years), and in most cases the declarations are incomplete, unreal, improbable or sometimes really absurd.

Citing the experience of decades, the National Institute of Forensic Medicine "Mina Minovici" specifies that, in almost all the cases in which the results were below the limit of offence through recalculation, the declarations of consumptions reports were not real, but there were no scientific arguments to specify this thing. However, these cases are not isolated, representing between 1/ 2 to 1/ 3 of the total of these expertise in recent years."[12]

In order to sustain those mentioned, the National Institute of Forensic Medicine "Mina Minovici" presented a statistics of this type of expertise to understand the extent of the phenomenon: "There were performed 3722 of expertise for the calculation and retroactive interpretation of the blood alcohol content in 2013, and it has to be noticed the progressive decrease in the number of the requests to perform this type of expertise in the last 4 years. Of the 3.722 of expertise, in 68 % of cases, it has been calculated the blood alcohol content could have been higher than 0,8 g/l at the moment of driving."[13]

Thus, we notice that the National Institute of Forensic Medicine "Mina Minovici" presents a series of arguments that are out of the scope of the criminal law in the way that it presents the situation of the blood alcohol content from the biological and metabolic point of view, perspectives which are in a close connection with the completion of the objective side of the offence that is the subject of the analysis , sustaining and reinforcing the opinion according to which the relevant value of the blood alcohol content is given by the first biological sample taken by the medical staff.

3.3. The Opinion of the Department of legislation, studies, documentaries and legal information within the High Court of Cassation and Justice

In order to form the unitary point of view on the matter of law, it has been requested the opinion of the Department of legislation, studies, documentaries and legal information within the High Court of Cassation and Justice that also presented the situation according to which the moment of the first sample of the biological samples is relevant for the retention of the offence of "driving a vehicle under the influence of alcohol or other substances."

The department of the legislation, studies, documentaries and legal information within the High Court of Cassation and Justice argued that: "Introducing the condition that the person should have an alcoholic impregnation of over 0,80 g/l of pure alcohol in blood at the time of collecting the biological samples", the legislator of the new Criminal Code aimed at excluding the possibility of a later recalculation of the alcohol impregnation in blood as the memorandum of reasons reveals, and not the exclusion of the connection between the action of driving on public roads of a vehicle and the

[12] Decision of High Court of Cassation and Justice no. 3/2014.
[13] Idem.

moment when the existence of the alcohol impregnation in blood of over 0, 80 g/ l is found. In order to eliminate the inconveniences created by the recalculation of the alcohol impregnation in blood, the legislator opted for the moment of sampling the biological samples, as a close moment when it can determine the alcohol impregnation with a high degree of accuracy and which are relevant, at the same time, for the action of driving on public roads of a vehicle and for the safety on public roads.

Therefore, the time of collecting the biological samples constitutes a single moment located in the immediate vicinity of a driving action of a vehicle on public roads that is relevant for the safe circulation on public roads and allows the determination of the alcohol impregnation in blood with a high degree of accuracy.

This is what results from the provisions of art. 190 para (8) of the new Criminal Code procedure that uses the phrase "in the shortest time" referring to the collection of biological samples in the case of the offense provided in art. 336 para. (1).

Thus, the regulation contained in art. 336 para. (1) of the Criminal Code, excluding the further recalculation of the alcohol impregnation in blood and setting a unique moment of collecting the biological samples, immediately, subsequent to the driving action on public roads, estimates that the moment of the second sampling cannot be considered as a moment with relevance to the safe circulation on public roads. "[14]

3.4. The relevant judicial practice

The decision no. 3/ 2014 of the High Court of Cassation and Justice has taken into account a number of aspects relating to the judicial practice of courts in criminal matters, such as: the criminal Sentence no. 565/ 5th . 03. 2014 of Court from Miercurea- Ciuc; the criminal Sentence no. 674 of 27th. 02. 2014 of the Court from Arad and the criminal decision no. 230/ A of 20th .03. 2014 of the Court of Appeal from Cluj.

Thus, by the penal sentence no. 565/ 5th .03. 2014 of the Court from Miercurea- Ciuc that noticed the fact that there were two samples of biological samples, in this case, from the defendant sent to court for the commitment of the offence prescribed by art. 87 para. (1) of the Goverment Emergency Ordinance no. 195/ 2002 (according to the report of toxicological alcohol analysis no. 118/ 47/ A-12 issued by the County Service of Forensic Medicine in Harghita on 20th.03.2013 , the defendant presented a blood alcohol content of 0,85% at 20:45, and at 21:45 presented a blood alcohol content of 0,65 %) , it has been established that the result of blood alcohol content of criminal law, in the event of a double sampling, is the second sampling, disposing on the basis of art. 396 para (5) in relation to art 16 para (1) (b) of the Code of Criminal procedure, the defendant's acquittat of for commiting the offence under art. 336 para (1) of the Criminal Code.

The solution of the court took into account the fact that art. 336 para (1) of the Criminal Code has not been drawn up in terms that are sufficiently clear conclude, beyond any doubt, that the deed of the defendant may be punished from the point of view of criminal law, being doubtful the obligation of the concrete framing in which the defendant acted in the text of art. 336 para (1) of Criminal Code, especially since the European Court of Human Rights decided that, in the criminal matters, the analogy to the detriment of the defendant is prohibited, so the terminology used in the drafting of art. 336 para (1) is ambiguous, inaccurate and is likely to deprive the predictability this rule of incrimination.

Noting that the Health Minister Order no. 1.512/ 2013 takes further effects, reported to the constitutional principle of retroactivity of the more favourable criminal law, the court considered that the provisions of the new Criminal Code which accuse the deed of the defendant of driving a vehicle under the influence of the alcohol must be interpreted as being, by reference to the second sample, a more favourable criminal law from the mandatory retroactive effect of which the defendant cannot be excluded. [15]

As regards the motivation of the court and the interpretation of law institutions that are closely related to the commitment of the offence prescribed and punished by art. 336 of Criminal Code, we specify that the court has misinterpreted and misapplied the stipulations of art. 336 of Criminal Code, it has misapplied the legal stipulations referring to the more favourable criminal law in the sense of the Order of the health minister no. 1512/ 2013 and art. 10 of its content referring to the collection of the two biological samples. The Court in Miercurea-Ciuc wrongly detained the situation of the judgment of the second biological sample, as having criminal relevance, in the criminal sentence no. 565/ 5th .03.2014.

The Court in Arad offered a solution of acquittal by the criminal Sentence no. 674/ 27th.02.2014 based on art. 16 para. (1)(b) of Code of Criminal Procedure in the case of a driver found in the traffic without possessing a driving license and tested with the ethyl test device and found the presence of alcoholic impregnation of 0, 80 mg alcoholic vapours/ l in the exhaled air. The defendant has been transported in order to collect biological sample and according to the toxicological analysis, he had a blood alcohol content of 0, 75 g/l of pure alcohol in blood at 04: 36, and he had a blood alcohol content of 1,05 g/l of pure alcohol in blood at 05:36.

[14] Idem.

[15] Decision of High Court of Cassation and Justice no. 3/2014.

The Court has motivated in the sense that that the incriminating criminal norm- art. 87 para (1) of G.E.O. no. 195/ 2002- introduces the deed of a person driving on public roads a vehicle and having an alcoholic impregnation of over 0,80 g/l of pure alcohol in blood in scope of criminal unlawful act. From the definition of the legal text, it is strongly underlined the fact that the minimal threshold of blood alcohol content must exceed the value of 0,80 g/l of pure alcohol in blood, the deed does not represent an offence if this value does not exceed. The accomplishment of this blood alcohol content value must be synchronous with the action of driving a vehicle on public roads in the absence of any temporal determinations introduced in the incriminating norm. Therefore, the achievement of the blood alcohol value that attracts the incidence of the criminal law at a subsequent moment of the cessation of the driving action on public roads does not have any relevance as long as it cannot be deduced from this the existence of some similar values to the alcohol blood at the time of driving. For this reason, the methodological rules of collecting biological samples in force at the date of the commitment of the deed stipulated the necessity of accomplishment of this operation within a maximum period of 30 minutes and set up the need of collecting two biological samples. The offender could refuse this operation under the penalty of the impossibility to require the retroactive recalculation of the value of alcohol.

The simple ingestion into the body of a quantity of alcohol, as long as this has not been absorbed and has not been reflected in a blood alcohol level, higher than the value of 0, 80 g/l of pure alcohol , lacks of criminal meaning, given the principle of the strict legality principle of the criminal liability.

By applying these assertions, the overall value in the present case, it is noticed that the defendant presented a value of 0, 75 g/l of pure alcohol in blood at about one hour when stopped in traffic. The second sample resulted at 05:36 has led to a value of 1, 05 g/l of pure alcohol in blood, resulting in the necessity of this incremental chart at the blood alcohol level that the defendant was in the phase of absorption at the first biological sample, as attested by the report of the forensic expertise regarding the retroactive interpretation of the blood alcohol content carried out in question. "[16]

Compared to those exposed in the criminal Sentence no. 674 of 27th .02.2014 by the Court in Arad, it is mentioned that it treats very well the concern of the retroactive calculation and its importance in the case of the restoration of the objective side of the offence. It clearly shows the moment of performing the offence and the moment of the level of alcohol in blood with criminal relevance for the purposes of establishing of the present offence. We also mention the situation shown above represents an exceptional case in the field of performing the incriminated offence in GEO no. 195/ 2002 art. 87 para. (1), namely: the situation when the driver who faces metabolically with an alcohol impregnation below the criminal limit at the time of driving, but he/she reaches the level of 0, 80 g/ l of pure alcohol in blood at the moment of sampling the biological samples due to the ascending curve of alcohol caused by the rate of its assimilation.

Through the penal decision no. 230/ A of 20th .03.2014, the Court of Appeal in Cluj- the criminal and juvenile Department rejected the defendant's P.C. application for the trial of the cause in the simplified procedure of the recognition of the accusation and based on art. 396 para. (5) related to art. 16 para. (1)(b) of the Code of criminal procedure with the enforcement of art. 5 of Criminal law, has ordered the acquittal of the defendant from the accusation of committing the offence of driving under the influence of alcohol or other substances prescribed by art. 336 para (1) of Criminal Law (by changing the legal classification of the offence prescribed in art. 87 para (1) of Government Emergency Ordinance no. 195/ 2002) with the enforcement of art. 4 of Criminal Code.

In order to pronounce the sentence, the court found that on 5th. 05. 2012 around 21:30, the defendant drove on public roads, being involved in a road crash, and resulted with slight injury of the called G.B. The defendant had an alcohol impregnation of 0, 70 g/l of pure alcohol in blood at 00: 20, respectively 0, 55 g/l of pure alcohol in blood at 01: 20 as shown in the toxicological analysis from 9th .05. 2012.

A forensic report was also drawn up and established the fact that at the date of 5th .05. 2012, the defendant had a blood alcohol of 1, 15 g/ l at 21:30, report which, in the opinion of the Court of Appeal was considered that it had no longer relevance due to the changes in law to the incriminating text (the defendant being convicted by the penal Sentence no. 107/ 22nd .01.2014 of the Cluj- Napoca Court to 4 months of prison for performing the offence prescribed by art. 87 para. (1) of the Government Emergency Ordinance no. 195/ 2002 with the enforcement of art. 320 para 7 of the Code of criminal procedure, with the conditioned suspension of the penalty execution).

It was considered that according to the art. 336 para (1) of criminal Code, it is an offence to drive on public roads a vehicle by a person who has an alcoholic impregnation of over 0, 80 g/ l at the time of collecting the biological samples.

[16]Idem.

In this case, the defendant did not have a blood alcohol content of over 0,80 g/ l at that moment, fact that has led to the conclusion that the act committed is no longer prescribed by the criminal law, being discriminated in this respect so that the provisions of art. 4 of Criminal Code[17] are applicable.

The opinion of Prosecutor's Office attached to High Court of Cassation and Justice has been sent through the address 910/C/1276/III-5/2014 on 14th April 2014 within which it also noted the changes of the incriminating conditions as regards the moment at which it is necessary the existence of the alcohol impregnation of the driver to meet the material element of the objective side of the offence against art. 87 of GEO no. 195/ 2002.

Over this issue, the Prosecutor argues on the conditions of incriminating prescribed in art. 336 para (1) of Criminal Law, as having a double meaning:

It fixes the moment of collecting the biological samples as a unique moment of determining the alcoholic impregnation in blood which is relevant to the retention of the offence prescribed in art. 336 para (1) of Criminal Code;

It involves a single biological samples. Over this issue, the Prosecutor's Office mentions that there is no legal correlation in the view that the methodological norms regarding the collecting, storage and transport of the biological samples in order to judicial probation through the establishment of the blood alcohol content or the presence of substances or narcotic substances or drugs with similar effects in the body in the case of the people involved in events or surroundings regarding the traffic, approved by the Order of the Health Minister no 1512/ 2013, which in art. 10 para (1) provide that " to establish the blood alcohol two blood samples will be collected at an interval of an hour from each other , each sample being represented by a quantity of 10 ml blood" and according to art. 12 para (1), " in the case that two blood samples were collected, at an interval of one hour from each other, the retroactive estimation cannot be carried out. [18]

This retroactive estimation is necessary and useful in fixing the constitutive elements of the offence in the form in which it exists in the previous rules, not finding its application in the form of the incrimination in art. 336 para (1) of Criminal Code.

The Prosecutor's Office also presents the situation of collecting the biological samples that constitute a unique moment situated close to the action of driving on public roads a vehicle which has relevance to the protection of social relations regarding the safety on the public roads and which allows the determination of the blood alcohol impregnation with a high degree of precision making reference to art. 190 para (8) of the Code of criminal procedure that fixes "in the shortest time" as moment of collecting.

Concluding, the Prosecutor's Office appreciate that the probative value of the second sample, detected at an interval of one hour from the time of the first sample, cannot be considered as having criminal relevance.

By analysing all the aspects of the problem which were subjects to the debates, the High Court of Cassation and Justice decides that " in the hypothesis of a double collection of biological samples, the result of the blood alcohol is the one given by the first sample" on 12th May 2014.

4. The decision of the Constitutional Court of Romania no 732/ 2014

After this date, the Constitutional Court has decided on the solution of the complaint about the infringement of the constitution of the disposals of art. 336 para (1) and (3) of the Criminal Code. The Court of Justice objected ex officio this complaint in the file no 984/255/P/2012 of the Court of Appeal in Oradea- the criminal Division and for causes involving minor on the occasion of the solution of the made appeal in a criminal case where the defendant was sent to court for performing the offence prescribed by art. 87 para (1) of the Government Emergency Ordinance no. 195/ 2002 regarding the driving on public roads.

In the motivation of the complaint about the infringement of the constitution, the Court of Appeal in Oradea sustains that the disposals of art. 336 para (1) and (3) infringe the constitutional stipulations of art. 1 para. (5) regarding the obligation of respecting the Constitution, its supremacy and its laws, of the art. 21 para (3) relating to the right of a fair trial, and of art. 73 par. (3) (h) relating to the regulation of the offences, penalties and the regime of these fulfilments by organic law, as well as of the art. 20 regarding the international treaties as regards the human rights on the domestic laws in relation to the stipulations of art. 6 paragraph 1 regarding the legitimacy of the incrimination from the Convention for the protection of the human rights and of fundamental freedoms. Thus, it considers that the legislator, by incrimination of the action of driving a vehicle under the influence of alcohol or other substances as it is regulated this offence by art. 336 of Criminal Code, deviated from the general principle of the legitimacy of the incrimination of art. 7 paragraph 1 of the Convention for the protection of the human rights and fundamental freedoms, according to which "no one can be convicted of any act or omission which does not constitute an offence according to the national and

[17] Decision of the High Court of Cassation and Justice no. 3/2014.
[18] Idem.

international law at the commitment moment", namely by art. 1 of Criminal Code which in par. (2) prescribes that "No person may be penalized for a deed which was not prescribed by the criminal law at the time it was committed". [19]

The Court of Appeal in Oradea also mentions that the legislator attempted the dissociation between the commitment of offence, which coincides with the detection of the driver in traffic, and the consuming offence, which, in the new legislative vision, would be the collection of the biological samples on the conditions under which this offence is one of danger and therefore is consumed when it occurred. In other words, when stopped in the traffic, the offender no longer presents a danger for the social values protected by the criminal law and it would be absurd to be punished for an act which no longer represents a public danger, reported to the time of collecting the biological sample. Moreover, the new regulation, no longer allows to collect two biological samples in order to establish the level of alcohol at the time of catching in the traffic of the author of the act, abolishes a scientific sample, which is conclusive and useful to the case, the one which consists in the retroactive calculation of the blood alcohol.

In reasoning of its decision, the Constitutional Court of Romania mentions that the art. 336 par. (1) of Criminal Code did not take the same text as art. 87 par. (1) of Criminal Code of Government Emergency Ordinance no. 195/2002 , but it amended the incriminating conditions as regards the moment when it is necessary the existence of the blood alcohol impregnation in order to be able to find the meeting of the material element of the objective side of the crime, as it results from the exposure of reasons of the new Criminal Code, by amending the content of the offence of driving a vehicle under the influence of alcohol or other substances, the legislator sought to exclude the possibility of a retroactive estimation of the alcohol level in order to avoid the inconveniences created by this estimation. The legislative solution prescribed by art. 87 para. (1) of the Government Emergency Ordinance no. 195/2002 imposes a retroactive calculation of the blood alcohol level which lies in determining the existent blood alcohol level at the moment of driving and it requires the collection of two blood samples to establish the ethylic intoxication phase (absorption or elimination) and the rate of individual elimination in case of the request of the expertise of retroactive estimation of the blood alcohol.

"The alcohol impregnation of over 0, 80 g/l of pure alcohol in blood present at the time of collection of biological samples places, thus, the consumption of the offence at the later time of its commitment, in the conditions in which the essence of the offences of danger is the fact that they are consumed at the time of their occurrence. Once with the stopping in traffic, it ceases the state of danger for the social values protected by the provisions of art. 336 of Criminal Code, thus, related to the moment of collecting the biological samples, the calling of the criminal liability to account is not justified. The determination the degree of the alcohol impregnation and, implicitly, the framing in the field of the criminal unlawful depending on the time of the collection of the biological samples, may not always be immediately after the commitment of the deed, represents an external and randomly criterion of the behaviour of the offender in order to criminal responsibility contrary to the constitutional and conventional norms mentioned above." [20]

By a majority of votes, on 16th.December. 2014, the Court found that the phrase "at the time of collecting the biological samples" of the content of the provisions of art. 336 para. (1) of Criminal Code is unconstitutional because it prejudices the constitutional provisions of art. 1 para. (5) related to the principle of respecting the laws and of art. 20 regarding the assertion of the international treaties as regards the human rights on domestic laws reported to the provisions of art. 7 paragraph 1 regarding the legitimacy of the incrimination from the Convention for the protection of human rights and fundamental freedoms. The mentioned phrase lacks of predictability the incriminating norm under the circumstances in which the principle of respecting the laws and of the legitimacy of the incrimination require the legislative to enact through texts which are sufficiently clear and precise to be applied, including, through the insurance of the possibility of the concerned people to comply with the legal requirements. [21]

The declaration of the normative phrase "at the time of collecting the biological samples" as being unconstitutional, makes that by returning to the criminal relevance of the moment of driving and that of the sampling as a constitutive element of the objective side, the necessity of the retroactive calculation of the alcohol level should be again necessary. In other words, the Court recalls in the view of the regulation the previous incriminating reasoning through the retroactive calculation of the blood alcohol. The Decision of the Constitutional Court also makes the effects of the Decision of the High Court of Cassation and Justice no. 3/2014 to stop.

[19]The Decision of the Constitutional Court of Romania no. 732/2014.
[20] Idem.
[21] Idem.

5. Methodological norms regarding the sampling, storage and transport of the biological samples of 12th December 2013

The successive legislative changes led to the phenomenon of incoherence and, in some cases, to the misapplication of the law due to the problems referring to the enactment and implementation techniques of the needs of the society in the normative document.

As regards the application of the methodological norms referring to the sampling, storage and transport of the biological samples to judicial probation through the determination of the blood alcohol or the presence in the body of substances or narcotic products or drugs with similar effects to these ones in case of the people involved in events or circumstances related to road traffic, it feels the need to makes some remarks:

Firstly, once with the entry into force of the New Criminal Code, they acted upon the procedure of collecting the biological samples, the methodological norms referring to the sampling, storage and transport of the biological samples to judicial probation through the determination of the blood alcohol or the presence in the body of substances or narcotic products or drugs with similar effects to these ones in case of the people involved in events or circumstances related to road traffic approved by the Order of the Health Minister no. 1512/2013, published in the Official Gazette of Romania, Part I, no. 812 of 20th December 2013, it feels the need to make some remarks. These norms stipulated that the biological samples which can be sampled from the involved people in events or in circumstances related to road traffic to determine the blood alcohol or the presence in the body of drugs, can be represented by blood samples (in the case of the determination of the blood alcohol) and samples of blood and urine (in the case of the determination the presence of drugs in the body)[22]. The collection of the biological samples in order to establish the blood alcohol or the presence of the drugs in the body will be made in the shortest possible time since the occurrence of the traffic event or the circumstance which required their sampling.[23]

The issue over which it was successively intervened following the Decision no 3/ 2014 the Decision no. 3/ 2014 of the High Court of Cassation and Justice and of Decision 732/ 2014 of the Constitutional Court lied in the number of the biological samples taken by the medical staff to prove the commitment of the offence. Thus, the Order initially obliged to determine the blood alcohol the collection of two blood samples at an interval of one hour from each other, each sample being represented by a 10 ml blood quantity.

After the decision of the High Court of Cassation of Justice, published in the Official Gazette on 28th .05.2014, the methodological norms referring to the sampling, storage and transport of the biological samples to judicial probation through the determination of the blood alcohol or the presence in the body of substances or narcotic products or drugs with similar effects to these ones in case of the people involved in events or circumstances related to road traffic were amended by the Order 1192/2014 on 23rd.10. 2014, establishing that to determine the blood alcohol it is sampled a single blood sample of 10 ml.

In the first instance, the legislative material related to the interpretation of art. 336 of Criminal Code and the collecting of biological samples in the field of forming the probative material in order to act the criminal responsibility of the people who commit the respective offence, found its legislative coherence and enforcement because it was no longer necessary to sample two blood samples to set the occurrence and probation of the offence, since the only evidence with criminal relevance was the sampled evidence, the retroactive calculation did not find its enforcement due to the Decision of the High Court of Cassation and Justice.

Subsequently, the Decision 732/ 2014 of the Constitutional Court of Romania, published in the Official Gazette on 27th.01.2015 that declared the unconstitutionality of the phrase "at the time of collecting the biological samples" meant the returning to the retroactive calculation in order to establish the occurrence of the offence. The problem in practise appeared due to the Order 1192/ 2014 of 23rd.10. 2014 which was still into force and supposed the collection of a single biological sample, the methodological norms referring to the sampling, storage and transport of the biological samples to judicial probation through the determination of the blood alcohol or the presence in the body of substances or narcotic products or drugs with similar effects to these ones in case of the people involved in events or circumstances related to road traffic were again amended by the Order 277/ 2015 of 18th. 03. 2015 that obliged this time the collection of two blood samples at an interval of one hour of each other in order to determine the blood alcohol, and each sample being represented by 10 ml to retroactively calculate and determine the blood alcohol at the time of driving

Thus, we notice that the period between 27th.01.2015 (the time of the publication of the Decision of the Constitutional Court) and 18th.03.2015 (the time of the Order 277/2015) still performed the previous amendments brought over the methodological norms referring to the sampling, storage and transport of the biological samples to

[22] Art. 7.
[23] Art. 9.

judicial probation through the determination of the blood alcohol or the presence in the body of substances or narcotic products or drugs with similar effects to these ones in case of the people involved in events or circumstances related to road traffic , thus, the collection of biological samples involved the collection of a single blood sample, even though, it was necessary the retroactive calculation that involved two biological samples, aspect that was impossible to achieve to establish the occurrence of the offence.

The only plausible solutions in accordance with the regulation, pronounced by the prosecutor's office and instances, in the case when the driver was found in traffic between 27th .01.2015 and 18th.03.2015 to whom it was collected only a single biological evidence that was at the limit of 0, 80 g/l of pure alcohol, and without existing the result of the alcohol test because he/ she refused this evidence, are the classification of criminal prosecution, respectively the acquittal in the phase of judgement, being incidents art. 16 para. (1)(b), the thesis I of the Code of Criminal Procedure. Of course, there is also a special situation made by the driver who, at the time of the collection of the single biological sample has sufficiently high blood alcohol that, beyond any reasonable doubt results that at the time of driving he/she had an alcohol impregnation I blood which placed in the field of criminal unlawful. To understand better the situation, we will take the example of the driver found in the traffic on 28th .02.2015 at 20:00, to whom it is collected a single biological sample at 21:00 that lying in 10 ml of blood from which it results an alcohol impregnation of 2,2 g/l of pure alcohol. In this case, the solution of conviction of the instance will be legal, as the forensic expertise notes that, under no circumstances, at 20:00 the driver could not have an alcohol impregnation lower of 0,8 g/l.

6. Solution of acquittal of the offender, related to the decision of the Constitutional Court of Romania no. 732/2014

By the criminal verdict no 12 of 4th.06. 2015 pronounced by the Military Court from Iasi, it was prescribed to abstain from the enforcement of the penalty against the defendant F.V., sent to court for the commitment of the offence of "Driving under the influence of the alcohol of other substances" provided by art. 336 para. (1) of the Criminal Code with the enforcement of art. 5 of the Criminal Code. The stipulations prescribed by art. 81 C of the Criminal Code has also been applied to the defendant, drawing the defendant attention to the stipulations of art. 82 para. (3) of Criminal Code

The first instance retained that the defendant F.V. was sent to court for the above mentioned offence through the indictment of the Military Prosecutor's Office attached to the Military Court from Iasi from 6th.08.2014, given in the file no. 74/P/2014, the deed lying in that the defendant was topped in traffic and tested with the ethyl test, resulting a value of 0,57 mg/l of pure alcohol in the exhaled air.

Two biological samples have been collected to obtain the blood alcohol, resulting the value of 1,25 gr% (of pure alcohol in blood) at 00:40 and 1,10 gr.% (of pure alcohol in blood) at 01:40 . The defendant provided two types of alcoholic drinks (different), and two values of blood alcohol were established through the report of expertise at the time of the discovery, respectively 1,35 gr% and 0,50-0,40 gr% depending on the type.

An appeal was declared against the criminal verdict by the Military Prosecutor's Office subordinated to Military Court from Iasi. The reasons of the appeal were strongly related to the effects of the Decision of the Constitutional Court no. 732 of 16th.12.2014, published in the Official Gazette no. 69 of 27th.01.2015 according to which the phrase "at the time of the collection of the biological samples" from the stipulations of art. 336 para. (1) C of the Criminal Code are unconstitutional.

The instance of appeal had in view the fact that at the date of 27th.01.2015, when the decision 732/2014 of the Constitutional Court was published in the Official Gazette, the phrase "at the time of collecting the biological samples" from the content of the stipulations of art. 336 para. (1) C of the Criminal Code was suspended by law in the first stage (45 days) and the judicial effects ceased because the Parliament did not agree with these unconstitutional provisions with the stipulations of the Constitution.

After 27th.01.2015, the date of the publication in the Official Gazette of Decision of the Constitutional Court no. 732/2014 through which it was noticed the unconstitutionality of the phrase "at the time of collecting the biological samples" from the content of art. 336 para. (1) of the Criminal Code and the lack of the legislative intervention according to art. 147 para (1) of the Constitution, the stipulations of art. 336 para. (1) of the Criminal Code do not provide the condition of incrimination as regards the moment when the existence of the alcohol impregnation in blood is necessary to be able to notice the meeting of the material element of the objective side of the offence.

In the absence of this essential condition of the body of law (art. 336 para. (1) of Criminal Code), not only the recipients of the criminal law do not have a clear representation of the constitutive elements of the objective and subjective nature of the offence in such a way to provide the consequences that result from the failure to comply with the standard and to adapt the

behaviour according to it, but the deed prescribed by art. 336 para (1) of Criminal Code- leaves the field of the criminal illicit because the text becomes inapplicable in the lack of the same condition-essential requirements.

The considerations of the decision of the Constitutional Court cannot add to the law because the Constitutional Court is not a positive legislative, and neither the courts have the competence of enactment, the substitution of the of the competent authority in the field (the Decision of the Constitutional Court no. 838/2009), the Parliament having the exclusive competence to regulate the offences, penalties and their execution by organic law.

In conclusion, by the deed prescribed by art. 87 para (1) of G.E.O. no. 195/2002 or the art. 336 para (1) of the Criminal Code when from the commitment of the offence until the final judgement of the case, after the date of the publication of the Decision of the Constitutional Court no. 732 from 16thDecember 2014 in the Official Gazette, respectively 27th.01.2015 – the instance will notice that are incident the stipulations of art. 4 of the Criminal Code regarding the enforcement of the criminal law of discrimination, so that even if the imputed deed exists, this one is not stipulated in art. 16 para. (1) B thesis I of the Criminal Procedure, circumstances which by the enforcement of art. 396 para. (5) of the Criminal Procedure brings the acquittal of the defendant.

Based on art. 396 para (5) related to art. 16 para (1) B thesis I of Criminal Procedure Code , Military Appeal Court acquitted the defendant F.V. for the offence of " driving a vehicle under the influence of alcohol or other substances" prescribed by art. 336 para. (1) of the Criminal Code.

As compared to the considerations which the Decision no. 84/ 2015 of the Military Court of Appeal bases on, it is appreciated that this has incorrectly interpreted and understood the constitutional stipulations from the content of the art. 147 of the Constitution, it interpreted the passivity of the institution of the Parliament in the sense of the total discrimination of the criminal deed in the content of art. 336 of the Criminal Code.

A criminal deed so serious cannot exist from the scope of the criminal illicit law. Moreover, the law must be interpreted in the spirit for which it has been designed, not just formally.

7. Aspects of compared law

As regards the situation of the blood alcohol content when driving, an important aspect is represented by the maximum admitted limit of alcohol impregnation in blood under which the driver should adapt for not entering in the scope of the criminal illicit law at the level of the European Union.

The legislation on alcohol consumption in Europe is basically divided into two large regions: Western Europe has an allowed limit of alcohol of 0, 5 per thousands, while many of the members of the former communist bloc have zero legal limits.

There are also nuances and variations from one country to another, and also exceptions for different categories of drivers, thus, for example, the regulations related to the alcohol consumption is applied to the cyclists in Poland.

The following table represents the maximum limit of alcohol allowed in the member states of the European Union, as follows[24]:

Country	*The maximum allowed blood alcohol level g/l (%)*
Austria	0.05
Belgium	0.05
Bulgaria	0.05
Cyprus	0.05
Croatia	0.05
Denmark	0.05
Estonia	0
Finland	0.05
France	0.05
Germany	0.05
Greece	0.05
Ireland	0.05
Italia	0.05
Leetonia	0.05
Lithuania	0.04
Luxemburg	0.08
Malta	0.08
Poland	0.02
Portugal	0.05
Great Britain	0.8
Czech Republic	0
Romania	0
Slovakia	0
Slovenia	0.05
Spain	0.05
Sweden	0.02
Holland	0.05
Hungary	0

A different aspect compared to the situation from Romania is represented by the fact that in countries such as Austria or Leetonia, the level of the blood alcohol with unlawful relevance is

[24] http://www.drinkdriving.org/worldwide_drink_driving_limits.php#bac_limits

reported to the experience of the driver or the type of the driven vehicle, thus, if in Austria the legal limit is 0, 05 for the drivers who obtained the driving license less than two years or for those who drive cars bigger than 7, 5 tones, the limit is of 0,01. In Leetonia, the maximum allowed limit is of 0,02 for the drivers who have an experience of less than two years. A concentration of 0.12 draws the increase in the limits of penalty, thus, the penalty may reach at two years in prison.

In France, the maximum allowed limit of the blood alcohol level is of 0.02 per thousand for the drivers who drive vehicles intended for public transport, exceeding this limit draws the sanction represented by the fine penalty and the suspension of the right of driving for a period of maximum 3 years. A concentration of 0,8 per thousand draws the suspension of the right of driving for a period of 3 years, the penalty of fine of up to 4.500 euros and the imprisonment penalty of up to 2 years.

In Germany, the limit is of 0.03 for the driver under 21 years, for the professionals and for those who have less than 2 years of experience on road. Also, the detection in traffic of the drivers with blood alcohol content higher than the allowed limit draws and further promotes a psychological examination to regain the right to drive.

It is also mentioned that in Italy, the drivers caught in traffic with blood alcohol content exceeding 0. 15 will be penalized with the confiscation of the vehicle.

8. Conclusions

The alcohol, swallowed in the body in big quantitates and in a relatively short time, causes temporary sensory loss, producing a series of pathological phenomena, such as: mental confusion, lack of coordination, visual, auditory, sensory confusion, etc.

The studies carried out by experts have demonstrated that the alcohol, even consumed in small amounts, reduces significantly the power of discretion, the capacity of concentration and the attention of drivers, affects their reflexes, the time of reaction, etc. and the number of errors when driving and of the infringements of laws increases in direct proportion report to the amount of swallowed alcohol. It was found under the later aspect that the people under the influence of alcohol drive with higher speeds in relation to concrete conditions of circulation, fail to enter properly with the vehicles in curves, pass more frequently on the opposite side, are no longer able to appreciate the distances and are too much close to vehicles in front of them, they engage in risky overtaking, etc.

The offence of driving a vehicle under the influence of alcohol or other substances is an offence with I higher level of social danger, and following the whole normative changes and the intervention of the state we consider that there is no problem in interpreting the stipulations of art. 336 of Criminal Code.

As it was lately shown, the judicial practice has not been uniform in the enforcement of the stipulations of art. 336, the decisions of the courts of Romania provide solution totally different in similar situations.

Of course, it is admitted that, in the past, due to the Decision of the High Court of Cassation and Justice no. 3/2104, of the deficient content of art. 336 and of the methodological norms regarding the sampling, storage and transport of the biological samples, there were problems of law in practice which resulted in uneven practice and legal issues relating to the interpretation of the provisions regarding the drivers of vehicles who are in exercising the right to drive who have in blood an alcohol impregnation higher than 0. 80 g/l.

Once with the entry into force of the new Criminal Code, the Romanian system of law has known a comprehensive reform, and as regards the highway legislation, the offences such as those from the field of the Government Emergency Ordinance no. 195/2002 relating to the circulation on the public roads were abolished and introduced in the content of the Criminal Code under the influence of some normative changes. This reform was, in most of cases, welcomed by great authors and theorist, as any new aspect, was subject to some critics that in some cases have surpassed the beneficial side of the new regulations.

It is considered that the intervention of the Constitutional Court relating to standardisation of the interpretation and practice in the field of the analysed offence has been a positive thing that does not leave place for the interpretations of any nature, although there were situations where, for example the Court of Appeal from Ploiesti notified the High Court of Cassation and Justice requiring a pronouncing on a prior decision through which it is given a resolution of principle to the question of law on which the Constitutional Court ruled. In other words, the Court of Appeal from Ploiesti notified the High Court of Cassation and Justice relating to the pronouncement of a prior decision to offer a solution on the interpretation of the decision of the Constitutional Court.

THE ARREST PROCEDURE IN ACCORDANCE WITH THE DEMANDS OF THE CONVENTION

George Octavian NICOLAE[*]

Abstract

In order to arrest an individual certain criminal procedural formal and basic conditions must be met. However, due to our country's ratification of the European Convention on Human Rights, besides this criteria, it is also necessary that our domestic law be in accordance with the demands of article 5, paragraph 1, point "c" of "The Convention" and the jurisprudence regarding it. The focus of this project is on the analysis of the indissoluble link between our national criminal law regulations regarding the arrest procedure and the demands of the European Convention for human rights.

Keywords: *the arrest procedure, European Convention on Human Rights, criminal law, reasonable suspicion, evidence.*

1. Introduction

Pre trial detention constitutes the most intrusive preventive measure in the Romanian penal procedure.

For this reason, the Criminal Procedure Code clearly states the conditions which have to be met and when the authorities can choose it.

In order to conduct a proper analysis of this institution, certain notions have to defined and grasped such as the standard of proof, reasonable suspicion and the threat to the public.

Also, the judge who is asked to grant an arrest warrant, must account for article 5 of the European Convention For Human Rights (ECHR), provisions which offer certain procedural and mandatory guaranties for the accused.

2. Content

According to art. 202 Criminal Procedure Code (C.p.p.), preventive measures, which include the arrest procedure, may be adopted if there is evidence or indications which point to the reasonable suspicion that a person has committed a crime and are necessary to ensure normal criminal proceedings, preventing the accused to skip trial or to prevent new crimes.

In order to arrest an individual during criminal prosecution, reasonable suspicion should emerge from the evidence that the defendant perpetrated an offence and the conditions art. 223 letter. (a), (b), (c) or (d), Criminal Procedure Code, should be met.

However, in order for pre-trial detention, only a reasonable suspicion that the accused person has comitted an offence from the list mentioned in art. 223 paragraph (2) of C.p.p. is necessary, or that an offence punished by the law with 5 or more years of imprisonment be comitted.

Other factors which are to be analised include the seriousness of the crime, the manner and circumstances of committing it, his entourage and the social environment of the accused criminal history or other circumstances regarding the person, the necessity of the detention in order to prevent public disorder.

Preventive custody may be ordered exclusively by the judge, depending on the procedural stage when the measure is actually analised.

Thus, functional competence belongs to the judge of rights and freedoms, during criminal investigation, preliminary chamber judge during the preliminary procedure and to the court during the actual trial.

Under Article 339, paragraph 10 of the Criminal Procedure Code, after the judgment in the first instance, until the case is appealed, the judge may order, upon request or ex “officio” the arrest of the convicted individual.

In order to execute the arrest mandate, certain general conditions are required for taking preventive measures mentioned in Article 202 of the Criminal Procedure Code:

- evidence or indications showing reasonable suspicion that a person committed the offense;
- the overwhelming necessity for preventive measures in order to ensure normal criminal proceedings, preventing the accused to skip trial or to prevent new crimes;
- art. 16 of the C.p.p. is inaplicable.
- the preventive measure must be in relation to the gravity of the accusation.

Upon analyzing the legal text, it is clear that the burden of proof belongs the prosecutor, who needs to prove only a reasonable suspicion that the accused has committed a crime, which can stems from both direct and indirect evidence.

[*] PhD Candidate, Faculty of Law, “Nicolae Titulescu” University of Bucharest (e-mail: **nicolae.georgeoctavian@yahoo.com**).

It should be noted that the standard of proof is not particularly high, the prosecutor must administer the evidence only to establish reasonable suspicion that the defendant committed the offense and should not prove his thesis beyond any reasonable doubt.

In other words, the evidence supporting the criminal charges made in an arrest request should not be as concrete as the ones needed for a conviction.

In this sense, the High Court of Cassation and Justice has stated that the recognition of *the presumption of innocence* does not exclude preventive measures but in fact ensures that they will only be taken within the framework and under rigorous conditions laid down by the constitutional norms and the provisions of criminal procedure. Reconciliation between the necessity of the pre trial detention and the presumption of innocence throughout the criminal proceedings can be attained by observing the dynamics of the latter, from an abstract notion regarding the guarantee of the fundamental rights of an individual, hereby acquiring substance in the criminal process.[1]

According to Article 97 paragraph. 1, Criminal Procedure Code, evidence is represented by any factual element which serves to determine the existence of a crime, to identify the person who committed it and all the circumstances necessary for a fair settlement of the case and to uncover of the truth.

Evidence is the means provided by the law for stating the facts constituting evidence which can be obtained by the judicial authorities by various methods.[2]

The probation procedures are the legal way of obtaining evidence.

Clues constitute facts which can reveal an event or the guilt of the person who committed the crime.[3]

Domestic legal personalities have stated that conclusive clues can stem from sources outside the normal criminal procedure, such as a complaint, a denunciation, an informative report or during a crime in progress.

The clue is a fact, circumstance, situation which by itself has no evidentiary value, constituting merely the basis for suspicions essential to the judicial activity but which, when part of a sistem of elements in perfect accordance with themselves and with the other existing evidence, can serve to determine the judicial truth.[4]

The court dealing with an arrest request can not validate the legality of the evidence obtained by the prosecution, nor may issue opinions on the accused's defenses related to the merits of the case.

The judicial practice has established that when analysing an arrest request, the evidence administered during the pre-trial stage is indicative of the probable cause that justifies the arrest.

Thus, at this stage the judge is forbidden to analyse if the evidence has been gathered in accordance with our judicial procedures by the investigators or defences which refer to the merits of the case.

Until further notice, the evidence administered by the prosecutor cannot be ruled aut by the judge called upon to decide on the arrest, but merely allowed to examine the existence of probable cause and the other legal conditions, without the possibility of providing an opinion regarding the legality of the evidence, as this is an atribute reserved for the court conducting the actual trial.[5]

Article 53 of the Criminal Procedure Code, also states this: the judge of rights and freedoms is forbidden to analyze the legality of evidence, this activity is to be conducted exclusively by the preliminary chamber judge upon completion of the prosecutorial stage.

Moreover, the rights and freedoms judge can not change the legal classification retained by the prosecutor nor may he consider the application of Article 16 of the Criminal Procedure Code. He can only establish if the legal classification, which derives from the evidence permits the pre trial arrest.

In addition, due to our country's ratification of the European Convention for Human Rights, besides to this criteria, it is also necessary that our domestic law be in accordance with the demands of article 5 paragraph 1, point c) of the Convention and the jurisprudence regarding it.

Article 5 regarding the unlawful deprivation of liberty, can intersect with other fundamental rights protected by the Convention, such as the right to a private and family life, the protection of the individual's home and correpondance –article 8-, the freedom of expression –article 10-, the freedom of assembly and association –article 11- and not lastly the freedom of movement –article 2 protocol no. 4-

Beyond this correlation between the right ot liberty and security guaranteed by article 5 and the other fundamental rights protected by the Convention, there some common points between the warranties provided by this text and those stated in the article 6 which protects the right to a fair trial.[6]

Thus paragraph 2 of article 5 states that ,, Everyone who is arrested shall be informed

[1] I.C.C.J., criminal Division, decision no. 4284/2009, www.legalis.ro

[6] Corneliu Birsan, Conventia europeana a drepturilor omului, editia 2, editura C.H. Beck, Bucuresti, 2010, p. 227.

promptly, in a language which he understands, of the reasons for his arrest and of any charge against him." and paragraph 3 letter a of article 6 establishes the right ,, to be informed promptly, in a language which he understands and in detail, of the nature and cause of the accusation against him".

By comparing the two texts, the warranty instituted by article 5 is applicable in the case of a deprivation of liberty, thus establishing the possiblity of analysing the legality of such a measure and article 6 guarantees the right to receive suficient information in order to comprehend the nature of the charge and to mount an effective for the accused.

Thus, this right must be related to another warranty provided by article 6, namely the right for any accused individual to enjoy enough time and facilities for his defence. Both warranties are established by the general right to a fair trial - article 6 - .[7]

Thus, the two, which one may say intertwine,are aplicable at different stages, namely the one provided by article 5 par. 2 from the point the accused is actually deprived of his freedom, whereas article 6 par. 3 for the wholle criminal process whether or not the individual has been arrested.[8]

The same legal reasoning is applicable regarding to the correspondence between article 5 paragraph 3 -,, shall be entitled to trial within a reasonable time or to release pending trial." And article 6 par. 1 ,,everyone is entitled to a fair and public hearing within a reasonable time".

We concur that in the first case that we have discused, the warranty provided by the Convention refers to a detainee and to the necessity of analysing the legality and the opportunity of a preventive measure that is so intrusive.

In regards to the second case, the duration of the wholle criminal case is to be analysed in relation to certain factors, such as the complexity of the case, the conduct of the parties involved and the diligence of the authorities.

The Court emphasized that any preventive measure must be in accordance with the purpose of art. 5 of the Convention, namely to protect the individual against arbitrary deprivation of liberty.

By analyzing the firm statement at the beginning of art. 5 of the Convention, which defines and postulates the presumption of liberty, followed by an complete list of exceptions to this rule, one can establish the universal principle that the state of freedom is the natural state and the deprivation of an individuals freedom has essentially an exceptional character.[9]

Given this legislative postulate and it's jurisprudence, the arrest of the person appears as an exceptional measure and should be accompanied by strong guarantees against the arbitrary.

For that reason, taking into consideration the impact of deprivation of liberty on the fundamental rights of the person concerned, the proceedings should meet the basic requirements of a fair trial.[10]

Thus, par.1 of art. 5 establishes a positive obligation of the state to protect the freedom of its citizens, and if the state acts in a such a manner which leads to a violation of the Convention, it will be held accountable.[11]

The purpose of art. 5 lies in protecting against the arbitrary deprivation of any person of liberty.

The Convention is intended to guarantee rights that aren't merely theoretical or illusory but in fact practical and effective.[12]

The Court stated that, in case of deprivation of liberty, it is particularly important that the general principle of legal certainty be satisfied. Domestic law itself must be in accordance with the Convention, including the general principles expressed or implied therein.

It is therefore essential that the conditions for deprivation of liberty under domestic law be clearly defined and that the law itself be foreseeable in its application, so that it meets the standard of "lawfulness" set by the Convention, a standard which requires that all law be sufficiently precise to allow the person – if need be, with appropriate advice – to foresee, to a degree that is reasonable in the circumstances, the consequences which a given action may entail.[13]

We consider that the principle of legal certainty is respected by our national legal framework applicable in this matter, that national provisions are accessible, predictable, precise and contain sufficient safeguards against arbitrary action.

In the matter of deprivation of liberty, the standard of European Court of Human Rights is more mild than in the case of the extension of such measures.

The Court held that in the case of an arrest for the first time, the courts need not rely on strong presumptions, but may place high faith in aspects such as the severity of the criminal charges, the position of the suspect in society, the nature of the offense.

Thus, taking such measures are necessary only plausible reasons, with no additional conditions.

[7] ECHR, Judegment of 25 March 1999, Case of Pelissier c. France.
[8] Corneliu Birsan, Conventia europeana a drepturilor omului, editia 2, editura C.H. Beck, Bucuresti, 2010, p. 228.

[10] ECHR, Judgment of 13 February 2001, Case of *Schöps v. Germany.*
[11] ECHR, Judgment of 14 October 1999, Case of *Riera Blume and Others v. Spain.*
[12] ECHR, Judgment of 28 April 2005, Case *of Albina v. Romania.*
[13] ECHR, Judgment of 23 September 1998, Case *Steel and Others v. United Kingdom.*

The notion of reasonable suspicion or plausible suspicion is an autonomous concept developed in the jurisprudence of the Court and depends on the particular circumstances of each case.

These plausible reasons must be based on facts and evidence strong enough to satisfy an objective observer that the person concerned may have committed the offence.[14]

According to the conventional standard, authorities are obligated to produce strong evidence to support a criminal charge against the accused, making it impossible to arrest a person based on some simple insights, impressions, rumors and prejudices.

This does not mean that the evidence must justify a criminal conviction, the nature of preventive arrest which doesen't entail a form of early execution of the punishment, but a preventive measure reserved for exceptional situations.

The case law of the European Court of Human Rights has developed four basic acceptable reasons for detaining a person before judgment when that person is suspected of having committed an offence:

- the risk that the accused would fail to appear for trial; [15]
- the risk that the accused, if released, would take action to prejudice the administration of justice;[16]
- the risk of committing further offences;
- the risk of causing public disorder.[17]

The danger of an accused's absconding cannot be assessed only on the basis of the severity of the sentence risked. It is necessary to take into consideration a serious number of factors related to the person's character, his moral values, his home, his occupation, his assets, family ties and all links with the State in which he is pursued.[18]

The risk of the accused disturbing the proper conduct of the proceedings cannot be calculated *in abstracto*, but in fact must be supported by factual evidence.

We appreciate that the court must procede to a concrete analysis of the good conduct of criminal proceedings.

Thus, if the majority of evidence which substanciates the criminal charge has already been administered, the risk that the accused would prevent the rule of justice and hinder the prosecution from the purpose stipulated by Article 285 of the Criminal Procedure Code greatly diminishes.

Regarding the risk of the defendant of commiting new criminal acts, the court must take into account that a criminal history does not lead, automatically, to the conclusion that there is a *ab initio* prooven risk of a new offense in the future. It is true that the existence of prior criminal weights significantly in terms of shaping the risk of committing new crimes, but this must be combined with the overall elements of the case.

In relation to the risk of disturbing the public order, the Court recognized that the particular gravity and public reaction to certain crimes can cause a social disturbance, justifying the need for preventive measures.

However, the reason of social disturbance, even if it is regulated by our domestic law, can not be regarded as relevant if it is not based on concrete facts able to convince a objective observer of the certainty of disturbances to public order, reasoning that the court must assess on a case by case basis.

Although the threat to public order should not be confused with the social ressonance of the crime, they present some common points. Thus, both legal practice and doctrine outlines that concrete danger for the public order is quantified by taking into consideration both the personal circumstances of the accused and the other factual details, such the nature and gravity of the offenses and the negative social resonance produced in the community.

Also, the court must consider the provisions of art. 202, para. (3) Criminal Procedure Code, which state that any preventive measure must be proportionate to the gravity of the accusation against the accused and be necessary in order to obtain the legal purpose of the the measure.

Moreover, according to the jurisprudence of the ECHR, the national court is obliged to take into cononsideration „ex officio" other preventive, alternative and less restrictive measures, prescribed by law, which could lead to the preventive aim in the same measure.

So, we appreciate that the whole arrest procedure regulated by our Criminal Procedure Code is predictable, accessible and clear. Our recent judicial practice prooves that the provisions of Article 5 of the ECHR are applied, in view of the primary role of Convention.

3. Conclusions

The arrest procedure in the Criminal Procedure Code represents the result of several decades of refining and reform of the legal text.

So, we appreciate that the whole arrest procedure regulated by our Criminal Procedure Code is predictable, accessible and clear.

However, given the profound intruzive nature of the pre trial detention, with each analysis of an

[18] ECHR, Judgment of 4 October 2005, Case of *Becciev v. Moldova.*

arrest request, the rights and guaranties of article 5 of the ECHR have to be met.

Thus, given the cases in which the European Court for Human Rights has found an article 5 breach of the individuals rights, for the national judge, applying the provisions of the Convention for Human Rights is ever more frequent.

Moreover, our recent judicial practice prooves that the provisions of Article 5, ECHR are applied, in view of the primary role of Convention.

THEORETICAL ASPECTS REGARDING THE NEW OFFENSE COVERED BY ART. 246 OF THE CRIMINAL CODE MISSAPPROPRIATION OF PUBLIC AUCTIONS AND OFFENCES COVERED BY ART. 65 OF LAW NO. 21/1996 REPUBLISHED. COMPETITION LAW

Rodica Aida POPA[*]

Abstract

The present study aims to bring to the attention of the legal law specialists the theoretical aspects related to a new incrimination as the one covered by art. 246 of the Penal Code, the misappropriation of public auctions, as well as aspects of yet another incrimination, that is the one covered by art. 65 of Law no. 21/1996 republished-competition law, trying thus to prevent certain different interpretations about the typicality of the two incriminations and encourage the possibility of highlighting other arguments that will lead to an application as accurate as possible of the two incriminations.

Presently there is no case law for the two incriminations therefore the theoretical analysis has to present interpretation arguments which will help the judicial bodies to easily classify the factual basis of the content of the two constitutive laws offering the possibility of a more detailed and contextual interpretation in relation to the reality.

The way the public auctions take place is a constant preoccupation not only for the participants who are involved in the procedure and directly interested in abiding the under law and ensuring a fair competitive climate but also for the public opinion which is as equally interested in ensuring fair social-economical relationships based on the market principles.

Simultaneously, the way the legal conditions of the second incriminations-that is the one from art.65 Law no.21/1996 republished - are interpreted in relation with the competition practices will lead to the clarification of the norm and its correct enforcement.

Keywords: *misappropriation of public auctions, anti-competitional practices; constitutive contents of the two incriminations; fair competitive climate.*

1. Introduction

The study of the two incriminations, that is the one referring to the misappropriation of public auctions covered by art. 246 of the Penal Code and the one covered by art.65 of Law no.21/1996 republished-the competition law, presents an interest from a broad perspective for the business environment since it deals with aspects regarding the compliance of some special conditions regarding organizing auctions as well as ensuring the context of preventing illegal, anticompetitive practices.

Presently, in Romania the consolidation and diversification of the business environment is an important part not only of the economy but also of the rule of law; the relationships between partners of the private environment but also the public sector that can interfere under certain circumstances, being based of special laws that can create breaches that will be solved in Court.

Thus, the two incriminations can be found –the first in the Penal Code , respectively the crime of misappropriation of public auctions, being regulated by Title II Crimes against property , in Chapter III Crimes against property by disregarding trust, while the offense covered by art. 65 of Law no. 21/1996 republished the competition law is included in the content of the special law mentioned; the common aspect of the two incrimination is the breach of trust of those working in the business environment.

From another perspective knowing how to interpret the content of the two incriminations allows the judicial bodies as well as the criminal prosecution bodies and the Courts to relate to coherent interpretation circumstances in general so that in particular cases to ensure procedural measures and the administration of evidence in order to establish the base for the legal classification of the incriminations

Thus the study will be useful in the jurisprudential area regarding the two incriminations with real consequences for the companies' prevention and emergency plans in creating a climate of trust for all business partners.

We also consider that the study is meaningful for the legislator from the point of view of the evolution of the case law as well as for the need to modify in relationship with the concrete situations that might generate such an approach in the future.

At the same time the study might be the object of further research by Company Law specialists as well as different approaches in international

[*] Judge at the High Court of Cassation and Justice, Offences Department, University Lecturer with a Doctorate in law, within the Department of Public Law at the University of Law "Nicolae Titulescu" (e-mail: **aidap@scj.ro**).

comparative law as well as Union Law with multiple consequences in the case law area as well as in the legislation area to the extent to which the legislator might intent to modify the above mentioned incriminations.

In addressing the theoretical aspects of the two incriminations mentioned we will present the conditions imposed by the legislator about their constitutive content by approaching both their common and different elements. This is the contribution and novelty of this study which we hope to be interesting to many.

The examination of the legal conditions of the two incriminations means to underline from the perspective of our own arguments which was the legislator intent and what are the implications of the application of the presented considerations.

We will thus bring to your attention each incriminated legal condition from the point of view of its way of regulating and we will present arguments for their interpretation also showing the concrete ways for practitioners to apply them in order to effectively establish the contribution of those breaking the legal provisions.

One can easily follow the judgment and the modality in which it effectively find its application through the given explanations as well as the indication of possible adjectival law measures and the administration of certain evidence which will contribute to orienting the investigation and case law in the conditions under which, until this moment, as far as we are aware, there is no cause definitively judged or dealt with.

From this perspective we want to analyze the degree of predictability and the norms' quality aiming to achieve an as correct as possible application of the legal condition of the two incriminations.

So far, in the specialized literature the incrimination covered by art.246 from the Penal Code has been analyzed in many comments on the articles of the new Penal Code, came into force in 2014, under its constituent content, as well as in a study to which we have no judicial references since this new incrimination has been recently introduced in the Code.

As for the second incrimination from the competition law, that is art. 65, it was the object of some studies published in the specialized literature[1].

2. Theoretical aspects

2.1. Theoretical aspects regarding the misappropriation of public auctions covered by art.246 from Criminal Code –new incrimination added in the Criminal Code

The Romanian legislator structured the content of the special part of the Criminal Code in a different way from the old code, grouping the crimes in titles, reconsidering the protected social values which will lead to the regulation in title I in more chapters on the crime against person, in title II, crimes against property, in title III, crimes against authority and State border, in title IV, crimes against making justice, in title V crimes of corruption and malfeasance while in office, in title VI, crimes of forgery and fraud, in title VII, crimes against public safety, in title VIII, crimes against social relationships, in title IX, crimes related to elections and referendum, in title X, crimes against national security, in title XI, crimes against the fight potential of the armed forces, in title XII, against humanity and of war.

Title II, Chapter III from the Criminal Code regulates crimes against property, by trust infringement among which misappropriation of public auctions, in the content of art.246.

We notice two new things: first, the mentioning of the way the property of a person is affected-through breaching the trust and good faith in relation with the goods that belong to a person an second, the introduction of a new incrimination –the misappropriation of public auctions.

The legislator has purposely incriminated concrete ways of misappropriation of public auctions, considering that it is necessary to regulate them through a special norm, granting thus special attention to the way procedures of public auctions take place, because abiding all legal conditions grants the trust of the participants, encourages the fair competition and strengthens the environments 'safety.

The way it is regulated, the norm also has a preventive character, discouraging those who might want to fraud a public auction.

In other words, the public auction procedure can be breached in the ways mentioned in the content of the norm, as we will further show, affecting the property through breaching trust, since breaching the legally enforced conditions of a procedure will affect the feeling that the law is abided, the good faith being breached in ways that endanger the business relationships.

The before mentioned incrimination is related to a particular condition, that is the existence of a public auction.

[1] Adriana Almășan, *The anti-competition agreements in public acquisitions: is criminal replacing contraventional or viceversa?* in the Romanian Magazine for Public-Private Partnership nr. 13/2015, Presearch Center.

The public auction is carried out according with certain procedures regulated by the new Code of Civil Procedure, under legal seizure, be it judicial execution or foreclosure or during the process of granting public supply contracts, concession, according to the conditions expressly provided by two government emergency ordinances, that is Emergency Ordinance no.34/2006 on granting public supply contracts, concession contracts, and Emergency Ordinance no.54/2006 regarding the concession agreements regime on public goods or under special regulated conditions.

We want to mention that further on we will specify some aspects we consider important related to the content of the crime, without however to present the elements that clearly define the crime of misappropriation of public auctions since these aspects can be found in the comments on the articles of the new Criminal Code.

It is interesting that this crime is related to the participants at the auction, those people who have a call, under the requirements of the law, in the case of specific auctions, that is when the auction announcement mentions in some ways the existence of certain conditions regarding the participants to the respective procedure.

We assess that the legislator has drawn on incriminating two clear ways, through the meaning of their content, regarding the action of removing a participant from the auction that is coercion and corruption

The two ways are alternatively estimated, so that under the aspect of assessing the evidence that will be administrated by the judicial bodies, there cannot be any doubts regarding the interpretation.

Of course, as far as relevance, the two ways can effectively generate specific differences in the process of establishing the actions of physical or moral coercion or corruption through offering a sum of money big enough to determine a participant to withdraw himself from the auction.

We assess that the judicial bodies that deal with such crimes have to know the way it took place, so that they proceed to specific search of the premises depending on the object of the auction, when the implicated people refuse to present the necessary documentation in order to establish the acquisition or concession conditions; the use of special surveillance methods, formulating the precise requests to the competent judge of rights and liberties.

The means of coercion or corruption through withdrawing a participant from a public auction are practices that we can call anti-competition, regulated by the Criminal Code, in the case of the crime of misappropriation of public auctions that through their nature are supposed to take place underground, which offers the judicial bodies the possibility to use the searches and the special surveillance methods.

We also consider that any evidence can by used, such as documentary evidence when from the modus operandi clearly resulted the existence of documented evidence showing that a certain participant at the auction was targeted through physical or mental threats in order to convince him to withdraw or through money offers between participants to change the wining price.

Also, the administration of testimonial evidence through public hearing of witnesses to the public auction, people who might knew of certain illegal activities or the nature of coercion or corruption or the agreement to change the price, can clarify the context of the crime.

We agree to the opinion expressed in the specialized literature that the way the contents of the crime of misappropriation of public auction has been regulated, as far as the first modality is concerned, there constitutes a special norm of incrimination the deed of blackmail done during the auction procedure and as far as the second incrimination modality, there constitutes a special norm of incrimination the deed of bribe done during the procedure of public auction [2].

Thus we consider that under the conditions in which the evidence, that might lead to clearly establish the way the crime of misappropriation of public auction took place, was appraised, the legal description of the deed is ensured.

As far as the second normative modality of incrimination regarding the agreement between participants, the judicial bodies are in charge with establishing objectively and subjectively the way the agreement has been initiated, which were the means of changing the price, how did the action took place effectively.

It is interesting to notice that the second modality of creating the constitutive content of the incrimination, the agreement between participants can affect just one concrete element of the auction and not the whole process-that is the final price, which leads to the conclusion that if the agreement is done for a different element of the public auction, such as the object or the nature of the object of the auction, the constitutive content of the misappropriation of the auction does not take place, in this second modality.

2.2. Theoretical aspects regarding the incrimination regulated by art.65 of Law no. 21/1996 republished, competitive law[3].

The incrimination regulated by art. 65 from the before mentioned law constitutes a more complex

[2] Adina Vlăsceanu, Alina Barbu, The new Criminal code commented by comparison with the old one, Publishing House Hamangiu, 2014.

[3] Art.65. *(1) The deed of any person that has a position of administrator or legal representative or any other leading position in a company to design and organize with intent either of the banned practices according to the provisions of art.5, paragraph (1) and that are not excepted*

special norm, in which content besides the ways of committing a crime in paragraphs 2 and 3, there are regulated also a clause of non-punishment as well as one of reducing the punishment under certain conditions.

Further on we will examine a couple of particularities of this incrimination without aiming to do an analysis of the constitutive content of this incrimination.

We have to underline the fact that from the perspective of the used legislative technique in paragraph 1, the legislator also used the cross referred rule, referring to the banned practices covered by art.5 paragraph (1) conditioned by their exemption under the conditions of paragraph (2), art.5.

The active subject of this incrimination is a qualified one, the administrator, legal representative or someone who has a leading position in the company, under this aspect the sphere or leading positions being much broader, leading us to the conclusion that supposing that the deed is committed by somebody else than the above mentioned people, the deed is only done by the actively indicated subject.

In other words, if the deed is committed by an employee with no leading position, he/she cannot be held liable for the deed since he/she does not have the quality regulated by the law.

We consider interested for the analysis of the constitutive content the concrete way of organizing with intent, the practices before mentioned, without being necessary to detail the two actions since their semantic meaning also covers the juridical one.

Of course then we have to establish the factual basis which will describe the legal incrimination model of art. 65 of Law no.21/1996. It is necessary to analyze which were the ways of organizing intently used of the banned practices.

Based on the evidence presented the judicial bodies have to establish the conditions in which such a crime has been committed.

We consider that the documentary evidence referring to the company formation can be run to the way the company's activities, which are the concrete activities, how they compare to the other companies with the same type of activities from the point of view of competition rules and regulations, how can it be proved that illegal practices were intently used.

Thus, the documentary evidence, the expertise related to the nature of the used practice, the testimonial evidence are meant to explain if a banned practice has been designed and organized, how was it put into practice, what consequences had on the private sector, did it affect or not the competition through imitating or controlling the production, selling, technical development, investments.

We consider that the incrimination from art. 65, competition law sanctions the illicit behavior of those doing it, its gravity being enhanced by the quality of the actively qualified subjects, their intent being clearly underlined by the creation of alternative contents and especially by the usage of banned practices.

In the specialized literature there have been performed analyses of the contravention and crime reaching interesting conclusions related to the nature and content of penalties and consequences under the

---

according to the provisions of art.5 paragraph (2) constitutes crime and imposes a prison term from6 months to 5 years or a fine and the disqualification from certain rights.

(2) Will not be punished the person that before the begining of the prosecution makes a criminal complaint about his taking part in the crime mentioned in paragraph (1) allowing thus to identify and hold liable the other participants. (3) the person that commited the crime mentioned in paragraph (1) and that during the prosecution makes the complaint and thus helps to identifiy and hold liable the other persons can benefit from reduction in half of the penalty.(4) the Court orders the display or publication of the final criminal conviction.

Art. 5 of Law no. 21/1996 republished *(1) There are banned any agreements between companies, decisions taken by companies'associates, concertated practices, that have as object or effect to prevent,restrict, or distortion of competition on the Romanian market, or on a part of it especially in those parts that: a) establish directly or indirectly buying or selling prices or other transaction conditions; b) limit or control the production,selling, tehnical development or investments; c) divide markets or supply sources; d) condition the closing of contracts on the acceptance from the partners of suplimentary conditions in no way related the object of the contract 2) the prohibition regulated by paragraph (1) does not apply to the agreements between companies, or to the decisions taken by associations of companieswhen they cumulatively met the following conditions: a) contribute to the enhancement of production or distribution of goods or to the promotion of ethnic or economic progress ensuring at the same time for the consumer an advantage comparable to the one got by the agreement parties b) impose to the companies only those restrictions that are essential for attaining the goals set ; c)do not offer the companies the possibility of eliminating the competition (3) The categories of agreements, decisions and practices exempted from the provisions of paragraph (2) as well as the conditions and classification criteria are those established by the rules and regulations of European Union Council or European Comission regarding the application of the provisions of art.101 paragraph (3) from the Treat regarding the functioning of the European Union to certain categories of agreements decisions of associations or common practices, called regulations exemptions on categories which apply accordingly.*

(4) Agreements, decisions and common practices regulated by paragraph (1) that meet the conditions covered by paragraph (2) or are part of the categories covered by paragraph (3) are considered legal, without the necessity of being notified by the parties and the decision of the Constitutional Court. (5) the responsibility of gathering evidence about a breach of the provisions of paragraph (1) lies with the Competition Council. The company or association that invoke the benefit of the provisions of paragraph (2) or (3) has the responsibility to prove that the conditions regulated by these paragraphs are met.

(6) every time the Competition Council applies the provisions of paragraph (1) to the agreements, decisions or practices to the extent that these can affect the commerce between the member states, these also apply the provisions of art.101 from the Treat regarding the functioning of the European Union.

aspect of its way of application as well as solving the civil action[4].

2.3. The common and distinct aspects of the two incriminations covered by art. 246 of the Criminal Code and art. 65 of Law 21/1996 republished, competition law.

From presenting aspect of both incriminations, we reached the conclusion that they are both meant to ensure a prevention context aiming to prevent the committing of such deeds that breach the trust of the public and private sector.

Both incriminations sanction the breach of the rules regarding either public auctions or illicit activity.

Also, they both ban the anti competition practices that might affect the activity of the companies.

Both incriminations have alternate content in which they are made.

From the point of view of differences, the subject of the two incriminations are different; while when misappropriating the public auction the subjects are mere participants, in the incrimination from art.65, the active subject is qualified.

The alternating content in which the two incriminations take place has a specific character.

Also, while for the incrimination of misappropriation of public auctions there is no punishment or possibility for a punishment reduction, for the incrimination in art. 65 from competition law paragraph 2.3 there is such a clause.

Under the evidence aspect, both incriminations can be proved through different ways that help establish the detailed context of the deed, the methods used, offering the possibility to a fair legal classification by the judicial bodies.

Conclusions

The study aimed to examine a series of theoretical aspects of the crime of misappropriation of public auctions, as covered by art. 246 of Criminal Code and the crime covered by art.65 of Law no.21/1996 republished, competition law, without examining the constitutive contents.

The presentation was centered on underlining theoretical aspects of the two incriminations, in the conditions in which there is no case law, and also on common elements that lay down the prevention character in combating the anticompetitive practices in the business area.

The study reached its purpose through examining some particularities of the two incriminations which favor the coherent application through ensuring a fair judicial classification of the factual basis.

We also have presented procedural aspects related to the administration of evidence in proving the two incriminations, which offer a note of pragmatism orienting the specialists in their activity of analyzing, interpreting and application of the two crimes.

Of course, other studies of the same incriminations will be able to base themselves on the case law that will be published and analyzed offering the possibility of finding particular aspects depending on the alternative contents of the two incriminations, ensuring the variety in their application.

THE EVOLUTION OF ROMANIAN CRIMINAL AND CRIMINAL PROCEDURAL RULES APPLICABLE TO JUVENILE OFFENDERS

Andrei-Lucian PUŞCAŞU*

Abstract

With the evolution of societies, this trend to punish offenders has undergone substantial changes. Thus, ancient legislators began to gradually express concern for the adoption of a different criminal sanction regime for juvenile offenders. Through the given research we want to analyze the evolution of the criminal and criminal procedural rules applicable to Romanian juvenile offenders.

Keywords: *educational measure, minors, Romanian Criminal Code, sanctions.*

I.1 In Roman Law

The eminent professor Ioan Tanoviceanu highlighted in his book that "the old used to punish children even with death" and gave as an example the testimony of Quintilian who claimed that the Areopagus of Athens put to death a child who had pulled out the eyes of a bird[1].

With the evolution of societies these trends to punish offenders have undergone substantial changes. Thus, ancient legislators began to gradually express concern for the adoption of a different criminal sanction regime for juvenile offenders.

In this respect, the Roman law through the law of the XII tables, divided minors into two categories; puberus and impuberus, respectively, puberty being of 14 years for boys and 12 years for girls.

Unlike puberus, impuberus benefited from a diminished criminal responsibility which drew lighter sanctions. For example, in case of a theft the puberus was beaten with rods and the victim had the right to kill him, whereas the impuberus was punished only with the rods and forced to compensation[2].

In Justinian's legion, The Digests, we may notice an improvement in the condition of juvenile offenders. Thus, it was stipulatedthat the child up to 7 years old (infans) was absolutely unable to get administered criminal responsibility, the one between 7 and 12 years old, 14 respectively for girls (infans proximus) was liable for criminal responsibility only if he committed the act with knowledge, and the one over 12, 14 respectively for girls (pubertati proximus) was liable for criminal responsibility.

We find similar regulations in the Canon law as well as in the French, Italian and German Law [3].

I.2 Legislations in the Romanian Countries

In the XVI-XVII centuries the idea of excluding minor penalty began to advance and part of the XIX century codes, thanks to the promotion of the principle of particularization of penalties some special provisions applicable to juvenile delinquents were established. The first Romanian regulations containing references to minority status were "The Romanian Book of Teaching" by Vasile Lupu in 1646 in Moldavia and "The Correction Law" by Matei Basarab in 1652 in Wallachia.

These codices contained 16 causes of removal or mitigation of punishment, including the age of the offender list:

Before the age of 7 the minor is not criminally liable, "the cocoons are forgiven of everything, no matter the mistake";

Between 7 and 14 years old for boys and 7 to 12 years old for girls the minority represented a mitigation question;

[3] Ioan Tanoviceanu, op. cit., 696-697.

Between 14 and 20 years old for boys and 12 and 25 for girls a regime of diminishing mitigating sanctions was instituted, mistakes will be less punished, except the extremely serious facts."

In the same time, The Romanian book of Teaching also stated that "those under 25 years old will be less punished for the mistakes"[4].

Similarly, The Chronicle of Criminal anaphora by Armenopol from 1799 stated that minorities constitute a mitigating issue[5].

The Legal Manual, by Andronache Donici from 1814 in Moldavia, unlike the legislations above, was a real setback since it stated without making any distinction between major offenders and the minor ones, that the willingly killer shall be punished with the punishment of the head, no matter the age[6].

The Criminal Book, by Ion Sandu Sturza from 1826 and applicable in Moldavia, as well as The Criminal Book, by Stirbei Barbu, come into force in 1852 in The Romanian Country, represented an important step towards the transition to modern criminal codes existing at the time.

It is emphasized the fact that in these legislative works, the juvenile criminal liability has been increased[7]:

Before the age 8 years old the minor is not criminally responsible;

Between 8 and 15 years old, if it was proved that he acted "without knowledge and without thinking" the juvenile deliquent supervision was entrusted for care to parents. But if he acted „"inteligently", according to the nature and extent of crime or guilt", both the punishment and the place of execution was established;

Between 15 and 21 the minor was liable for criminal responsibility.

I.3 The Criminal Code of 1865

Entered into force on May 1, 1865 under the reign of Alexandru Ioan Cuza, the first Romanian Penal Code[8] removes diversity from the criminal matters, by replacing the Criminal Code of Ioan Sandu Sturdza from Moldavia and the Criminal Code of Barbu Ştirbei from Wallachia.

Similarly to the above regulations, the legislature of the code in 1865, devotes under the Title VI of Chapter I, entitled "The Causes defending against penalty or reduces punishment" (art. 61- 65), provisions applicable to juvenile offenders.

It may be noted that criminal liability entails significant differences in the sense that:

a) before the age of 8 years old the minor was not criminally responsible and could not be subjected to civil damages;

b) between 8 and 15 the juvenile delinquent was liable for criminal responsibility if it was proved that he acted "with knowledge";[9]

Where it was appreciated that the minor in question had not "worked skillfully," the court either entrusted the custody to his parents for supervision and education, or sent him to the monastery for a period of time no longer than the age when the offender turned 20;

c) between 15 and 20 years oldthe juvenile was liable for criminal responsibility, but a minority represented a mitigation.

Also in art. 63 of the Penal Code. it was provided that "when it was decided that the accused had worked skillfully or he was older from 15 years full to 20 years full, penalties would be decided as it follows ":

- If his offense is punished with hard labor for life or limited time he will be convicted from 3 years to 15 years in prison.
- In other cases, the judge is authorized to apply imprisonment for a time at least equal to the third part or at most half the time which he could have been sentenced to one of the penalties relating to those cases. "

Regardless of the offense committed, the minor was applied only correctional penalties expressly provided which also attracted courts and correctional jurisdiction against those with jurors. This orientation of the criminal legislature led to the support of the opinion reasoned in the doctrine[10] that the crimes committed by minors were in fact offences and not crimes because they were sanctioned only by correctional penalties.

In the case of an offense by a minor together with a major the jurisdiction the offense was for the trial court jury except the case when the major participants major were dead or missing unjustified from the judgment of the case.

Regarding the arrangements for penalty, we think it is important to emphasize that the provisions

[4] Ioan Tanoviceanu, op. cit., 698.

[5] Ibidem, op. cit. 698. An example can be given : " A murderer quarreling with a man hit him twice with the ax and cut his throat. The boyars who judge him in 1799 quote Armenopol, Book VI, Title VI, prescribing cutting the hand, but because "it was insurmountable for the lawful age" they proposed two years of prison. The Lord gives three years of prison. ".

[6] Ibidem, op. cit. 698.

[8] Penal Code from 1865 was promulgated on October 30 1864 and implemented on May 1865.

[9] The provisions of the Criminal Code of 1865 were incomplete in regard to the concept of " knowledge" the legislature preferring to leave it to the discretion of the judge. Professor Ioan Tanoviceanu argues in his book that the correctional courts were doing incorrectly because they first examined whether the deed required the implementation of punishing or penalty and later declared that the juvenile delinquent acted with knowledge.

[10] Ioan Tanoviceanu, op. cit., p.716.

of art. 64 provided for a derogation from the general law providing that imprisonment is executed in an "establishment specifically intended for this" or "in a separate part of the correctional house prison."

In this respect, the Regulation on the prison regime[11] has regulated that the penalties applicable to minors will be executed in the homes of convicted juvenile correctional education.

I.4 The Criminal Code of 1937

The entry into force of the Penal Code[12] and Criminal Procedure[13] in 1937, establishes a new punitive treatment and special rules of research and trial of juvenile offenders, considerably improved.

The material is also to be found in the Criminal Code in Title VII - "The causes that defend the criminal or diminish the punishment", Section XI - "minority" art. 138- 153.

In the new conception of the criminal legislator all persons under the age of 19 were considered minor, while establishing criminal liability according to two stages:

a) before the age of 14, called childhood, the child is not criminally liable;

b) between 14 and 19 years old, adolescence, the juvenile is liable for criminal responsibility if it proved that at the time of the offense, he had acted with discernment;

Also, the legislature's Criminal Code of 1937 considered appropriate to replace the criterion of "knowledge" with discernment, thus managing to eliminate the existing conflicting discussions both in practice and from the doctrine[14].

The burden of proving the existence of discernment is the responsibility of the courts which could request a medical examination whenever there is doubt about the mental state of the juvenile delinquents. For the first category as well as for adolescents who committed the offence without discernment, according to art. 140 of the Penal Code. and art. 575 C. pr. pen., courts could order the following measures of educational, guardianship and protection, until the age of 21 years old:

1. the child custody entrusted family to oversee as well as the informing of the education authority in order to take disciplinary measures provided by the school rules;

2. reassignment to the closest relatives where juvenile offender had no family or if it this one did not present "sufficient guarantee of morality";

3. the custody entrusted to an honorable person patronage of a company or a public or private institution authorized by the State for this purpose if the minor had no relatives;

4. If the Court finds that the above measures couldn't be applied, it could order the juvenile offender to be entrusted to a moral re-education institute.

Regarding the enforcement regime of the minors criminally liable, this was the composite of educational safety measures (supervised freedom, corrective education) and penalties (reprimand, educational imprisonment or simple correctional detention).

By taking **supervised release**, the convicted juvenile was allowed to leave on a trial period of one year under the supervision of his legal representative or a public body created for this purpose, a judgment being deferred until the deadline. The measure could not be taken against the teenager who suffered imprisonment exceeding one month.

At the expiry of the above, the court, based on information received, was to consider whether it was necessary to extinguish the criminal action as a result of improved juvenile delinquent behavior or if it was necessary to revoke supervised release and taking corrective education measure or the imposition of a sentence.

In terms of **corrective education** the court decides to take such action if, in relation to criminal antecedents, the living environment or the nature of the crime, finds that the juvenile offender was in a "state of moral decay."

The measure could be taken indefinitely, but until the age of 21 years old at the most and its execution was done in specially designated institutions under the guidance of a board of supervisors, to straighten the juvenile delinquent behavior until this one learnt a trade.

If the Supervisory Board determined, after the passing of a period of one year, that the child had improved his behavior, it could order his release on a trial period of two years.

Where two years after finding that the adolescent behavior has evolved the release became final and otherwise, the court could decide admission to an institute of remedial education until the age of 21 years at the most.

The **reprimand** punishment consisted of the minor reprovment instruction in the offense and his warning that in case of committing a new criminal offense will be subject to a more serious penalty.

Reprimand may not be ordered where the teenager has committed an offense for which the law stipulated correctional imprisonment or simple detention exceeding one year or if it has committed an offense for which he has been applied any of the safety measures.

[11] Decree no. 1002/1874 General Regulations of the Juvenile Correction Center , published in the Official Gazette . no. 104 of May 14, 1874.
[12] Criminal Code of Carol II published in the Official Gazette no. 65 of 18 March 1936 entered into force on January 1, 1937.
[13] Code of Criminal Procedure of Carol II published in the Official Gazette no. 66 of 19 March 1936 entered into force on January 1, 1937.
[14] Ioan Tanoviceanu, op. cit., 716.

The correctional imprisonment or simple imprisonment are executed in special institutions and it could be applied to the juvenile delinquent for a period:

1. from 3 to 15 years if the offense was punishable by law with "criminal punishment";

2. half of the limits of punishment if the offense was punishable by law with correctional imprisonment or simple imprisonment, but the maximum punishment can not be more than 3 years.

In the event that a major was trialed for an offense committed during the period in which he was aged between 14 and 19, it was the task of the court to apply the penalties outlined above.

Regarding criminal liability prescription as well as the sentence execution, we specify that the legislature's Criminal Penal Code of 1937, unlike 1865, manages to register a new breakthrough. Thus it is established by way of exception that in the case of the offenses committed by minors, the limitation periods set for adults are reduced by half.

Shortly after the entry into force of the 1937 Criminal Code, this one has undergone important amendments and additions applicable to criminal treatment of minors[15]:

a) the decrease of penal majority from 19 to 18;

b) the replacement of child and adolescent notions with that of the minor;

c) the lowering of the age at which he was liable for criminal responsibility from 14 to 12 years;

d) between 12 and 15 the juvenile was liable for criminal responsibility if it was proved to have acted with discernment;

e) between 15 and 18 the minor was liable for criminal responsibility, but the minority is a question of mitigation.

Also, by Decree Law no. 3629/1939[16] the legislature inserted into art. 144 of the Penal Code. a provision that was a real setback in the matter of the minority. Thus, the juvenile offender over 15 found guilty of offenses which related to public order inside or outside safety of the state was liable to the same sanction regime as for adults.

In terms of the Criminal Procedure Code in 1937, it contains derogations for the minor offender under Title I, Book a- VI entitled "Special procedures and measures of public interest".

Juvenile defendants are of the exclusive competence of specialized panels composed of a single judge, appointed by the Minister of Justice for a term of three years on the recommendation of the President of the tribunal, of the tribunal judges.

However, in the courts with several departments, senior prosecutor was obliged to appoint a prosecutor to settle only juvenile cases.

Where a criminal offense is committed with the participation of majors with minors criminally liable or if a major is prosecuted for crimes committed when he was a minor common law procedure is applied under the jurisdiction of the courts.

The complaints or the denunciations related to injuries created through crime by minors exclusively address the specialized court.

In this respect, the criminal procedural legislator has established the requirement of conducting research and training with these cases, by juvenile courts, the prosecutor and the defense of the minor having the right to attend the investigation.

Also, the Public Ministry had to submit a report containing the conclusions regarding the act and the existing evidence as well as the proposals regarding the measures it considers appropriate.

During the investigations were gathering information on the moral and material situation of the family of the minor character on his history, on the conditions under which he grew up and on his intellectual development.

Similarly to the current provisions in force, during investigations the court may order preventive measures.

With the completion of investigations, the court set a hearing or it could obtain dismissal by closure, if it was not considered when necessary to take protection measures.

At the first hearing, the court was obliged to verify that juvenile delinquent has legal aid and otherwise it could appoint a lawyer.

In order to protect the juvenile, the court proceedings were not made public, the people who could witness the debates being exhaustively provided. After hearing the juvenile the court had to order his removal from the courtroom.

Decisions and actions taken against children were brought out by the tribunal's prosecutor, with the help of the police officers or judicial police agencies or companies of patronage.

The court could apply one of the preventive measures of art. 140 of the Penal Code, in the case of the minors exposed to committing offenses under criminal law, as well.

The Penal Code of 1936[17] reissued in 1948 did not bring significant changes to the existing penal provisions at the time.

Not the same can be said about the Criminal Procedure Code, republished in 1948[18] and fully

[15] The Law of 24 September 1938 published in the Official Gazette no. 222 of the same date.
[16] Published in the Official Gazette no. 233 of October 7, 1939.
[17] Published in the Official Gazette no. 48 of 27 February 1948.
[18] Published in the Official Gazette no 36 of 13 February 1948.

amended by Decree No. 186/1949[19] and no. 198/1950. By these acts, special provisions applicable to research and trial of the juvenile offenders have undergone many reforms.

Thus, according to the new provisions the offenses committed by minors under 15 years old were judged. according to the power and the ordinary proceedings, by the ordinary courts, apart from the cases where the law provided otherwise.

The judge had all the powers of criminal prosecution body being able to delegate the performance of certain acts of research to the militia officers or judicial organs of social assistance.

On completion of the research, the judge, in relation to the seriousness of the offense, may order the prosecution filing or settlement.

The new regulation was kept on holding hearings provision, people can participate, whilst stability I that the proceedings of flagrant crimes could not be applied when judging juvenile offenders under 15 years old.

Changes in the prosecution and trial of offenders have been brought by Decree no. 213/1960 amending the Code of Criminal Procedure.

Tracking offenders are carried out according to common law procedure except as otherwise expressly provided.

To carry out criminal prosecution had summoned a parent, guardian or person in whose care the minor guardianship authority and delegate to be present.

The new provisions also require and social inquiry by the prosecuting authority itself or by the guardianship authority.

One positive aspect worth mentioning is the mandatory legal assistance in the prosecution of juvenile defendants.

Regarding the trial of cases involving minor offenders, exclusive jurisdiction in the first instance the responsibility of a special panel who could appreciate the special status of the juvenile delinquent, consisting of judges specially appointed Minister of Justice and judges of the people.

The legislator also extend the jurisdiction of the court and to the causes that with minors and majors were judged criminally liable or where the minor age of 18 during the trial.

The new regulation kept the provision regarding the people who can participate, whilst establishing as well that the proceedings of flagrant crimes could not be applied when judging juvenile offenders under 15 years old.

Changes in the prosecution and trial of offenders were brought by Decree no. 213/1960[20] amending the Code of Criminal Procedure.

The tracking of the juvenile offenders was carried out according to common law procedure exceptthe derogationss expressly provided.

To carry out criminal prosecution one of the two parents had to be summoned to be present, the guardian or the person in whose care the minor was, as well as the guardianship authority delegate.

The new provisions also require social inquiry made by the prosecuting authority itself or by the guardianship authority.

One positive aspect worth mentioning is the mandatory legal assistance in the prosecution of juvenile defendants.

Regarding the trial of cases involving minor offenders, the exclusive jurisdiction in the first instance was the responsibility of a special panel who could appreciate the special status of the juvenile delinquent, consisting of judges specially appointed by the Minister of Justice and judges of the people.

The legislator also extends the jurisdiction of the court regarding the causes in which, together with the minors criminally liable, the majors were judged as well, where the minor turned 18 during the trial.

Proceedings in cases involving juvenile defendants were nonpublic, except the situation in which juvenile defendants over 15 years were tried with adult defendants.

In cases involving juvenile defendants, the prosecutor and the lawyer's presence was mandatory.

Taking preventive measures against minors aged between 10 and 18 exposed to the commission of the offense shall be ordered by the court or by the prosecutor's proposal or the guardianship authority.

Pending a decision in this regard, the minor may be detained by police bodies.

If the court notification was not made within 5 days of arrest, detention extension measure couldbe taken, but only by the prosecutor and for a period of maximum 30 days.

During detention, to motivate the document instituting the proceedings, social investigation had to be carried out by the guardianship authority.

Judgment in cases concerning the protection of minors exposed to commit criminal acts could be held urgently by the special panels mentioned above. Listening to the minor was mandatory and the court could hear evidence or dispose of restoration or completion of the social investigation, situation that drew the return of the file of the guardianship authority.

If a sentence was delivered regarding a protection measure, it was also agreed on the persons who owed maintenance according to civil law, the mandatory contribution to the costs that the state supports for the maintenance of the minor.

[19] Published in the Official Gazette no 25 of 30 April 1949.
[20] Published in the Official Gazette no. 9 of 18 June 1960.

At the request of the guardianship authority of the prosecutor or any interested person, the court may lift the measure taken before the period when the minor reaches the age of 18.

In similar circumstances, the court may order the extension of the measure which establishes that the juvenile remains in the rehabilitation institute, with no more than 2 years over the age of 18, if deemed necessary.

As regards the arrangements for enforcement of criminal sanctions applicable to juvenile delinquents or to those exposed to commit criminal acts, we think it is important to note that the law on the organization of prisons and institutions for prevention from 30 July 1929 following institutes were regulated[21]:

1. correctional institutions for juvenile convicts who are serving a sentence;
2. forced education institutes for the minors unsuitable for penal code;
3. institutes of protection for abandoned minors, vagabonds, mentally retarded and ill mannered who were prone to committing crimes.

Section II: The treatment of juvenile offenders according to the Criminal Code of 1969 and subsequent legislation

Penal Code which entered into force on 1 January 1969 gives expression to the principles of the classical school and the positivist one in the senseof their contemporary acception, it reflects the Romanian legal thinking, the experience of our country and of other countries in criminal justice and it takes into account the Romanian tradition in this matter[22].

Unlike the previous regulation which provided the minority only among the causes responsibility that defend the criminal or shrinks it, The Criminal Code of 1969 devotes to this matter a distinct title, Title V of the General Part, respectively.

We also want to highlight the fact that the new criminal enactment records a new breakthrough in that it provides minority among the causes eliminating the criminal nature of the act.

This change had as justification the fact that it was appreciated that the lack of discernment directly affects the criminal guilt offense and the existence of the offense implicitly.

In this regard, according to the doctrine[23] that existed at the time, through causes eliminating the criminal nature of the act it was meant those conditions, situations or circumstances whose existence during the commission of the crime make it impossible to carry out one of the essential features of crimes.

It is worth mentioning that the criminal legislature opted for increasing criminal liability limits thus the minor:

a) before the age of 14 is not criminally liable;

b) between 14 and 16 criminal liability only if it is proved that he committed the offense under the criminal law with discretion;

c) between 16 and 18 held criminally responsible.

Regarding the enforcement regime of the juvenile offender, the Criminal Code of 1969 establishes a mixed system composed of sanctions educational measures and punishments.

For a sanction of the two categories listed above the court was to assess the seriousness of the offense committed and analyze the physical status, intellectual development and welfare of the juvenile delinquent, his behavior, the conditions in which the child was raised and any other items capable of representing his person.

It is essential to note that the penal provisions provided for a prioritized enforcement of educational measures as opposed to punishment. The court may pronounce a sentence to execution of a sentence only if it considered that "taking an educational measure would not be sufficient to rehabilitate the minor." [24]

In this case we exemplify the following judicial practice [25]:

By penal No. 77 of 4 April 2002 the Court of Brasov the juvenile defendants R. A and D.A.G. were convicted to the 3-year imprisonment for the offense of robbery.

Defendants appealed against the sentence asking for sentence reduction.

The appellate court found that the sentence is objectionable in terms of judicial individualization of the penalty imposed to the minor defendant as the prosecution file follows that:

1) before committing the crime the defendants had behaved totally improperly in family and society,disobeying the authority and supervision of the family;

2) both defendants were from broken homes;

3) the transcripts of the two defendants showed they were both repeaters in several years.

[23] Vintilă Dongoroz et al. *Theoretical explanations of the Romanian Penal Code. General part*, (Ed. Academiei Române, Ed. All Beck, 2003, vol. I), 298.

[24] The doctrine held that through the expression " take an educational measure would not be not sufficient " should be understood both the fact that by an educational measure would not be able to ensure the rehabilitation of the minor as well as the situation where, in comparison to the age close to major of the minor where the educational measure could not be executed over a period sufficient to ensure effectiveness . – Vintilă Dongoroz et al. , op . cit. 227.

[25] Brasov Court of Appeal, Criminal Division, Decision no. 113 / AP June 12 , 2002, in Maria-Crina Kmen, Ruxandra Rata, op . cit. 40.

In relation to all these elements that characterize the two defendants, the court of appeal considered it appropriate to apply an educational measure such as internment in a rehabilitation center.

As educational measures they regulated, reprimand, supervised freedom, internment in a rehabilitation center, hospitalization in a medical-educational.

By applying the reprimand measure the child was scolded by the court that explained to him the social danger of the crime committed and he was advised to direct his behavior under the warning that if he commits a criminal offense he will have a more severe educational measure or will be subject to punishment

Supervised freedom consists in allowing the minor in liberty for one year under the supervision of parents or of a guardian and in warning the juvenile delinquent of the consequences of his behavior. In case the court considered that they could not provide supervision satisfactorily juvenile custody supervision was disposed to a trustworthy person, preferably a closer relative, at his request, or to an institution legally responsible for the supervision of minors.

Also, during the execution of the measure, the court may impose juvenile delinquent to fulfill one or more obligations, namely: a) not to frequent certain established places; b) not to come into contact with certain persons; c) to perform without remuneration work in a public institution set by the court, lasting between 50 and 200 hours, no more than 3 hours per day, after school, on public holidays and vacation.

If the court considered that the educational measures outlined above are not sufficient to straighten the conduct of the minor, it could dispose of internment in a rehabilitation center, through which it was provided the opportunity to acquire the necessary teaching and professional training according to his skills.

The measure of internment in a medical-educational institute could be applied to juvenile delinquents who needed medical treatment and a special education due to their physical or mental state.

Penalties that could be imposed were imprisonment or a fine provided by law for the offense committed reduced by a third and the minimum punishment after this reduction may not exceed 5 years. If the offense is provided for the death penalty for the minor the penalty shall apply from 5 years to 20 years.

The doctrine[26] was argued in the courts by asserting that the court dealing with the trial that juvenile offenders should first determine which of the two categories of sanctions was the right and only after analyze concretely what penalty was to be imposed.

In all cases, convictions for offenses committed during minority do not entail any disability or limitation.

Among the ways to individualize the sentence of imprisonment it was provided the possibility of conditioned suspended sentence and suspended sentence under supervision or control.

Similarly with criminal Legiuirea from 1937 on criminal offenses committed by minors limitation periods and criminal liability of the sentence were halved.

Shortly after the entry into force of the provisions of the Criminal Code of 1969 it was assessed as appropriate waiving the joint enforcement regime applicable to minor offenders that date in favor of a sanctioning system composed exclusively of educational measures.

In this regard it was adopted Decree no. 218/1977[27] on certain transitional measures for penalizing and reeducation through labor of persons who have committed offenses under criminal law.

According to the law mentioned above, the minor criminal responsibility aged between 14 and 18 who commits:

1) an offense for which the punishment is imprisonment of more than five years, it had custody of juvenile delinquent in working or learning team while establishing "strict discipline and behavior";

2) very serious offenses, could decide the extent of sending in special education and rehabilitation work centers over a period of 2-5 years.

In doctrine[28], some authors rightly opined that with the entry into force of the decree abovethe provisions of the Criminal Code on educational measures were implicitly repealed, except internment in a medical- educational institute. This conclusion stems from the imperative expression of Articles 2 and 3 of the Decree.

The express repeal[29] of Decree No. 218 / 1977 and Law No.59 / 1968 the whole concept on punishing the whole concept the juvenile offenders had returned broadly to the fundamental thesis of the original version of the current penal code.

CODE SETTING TRENDS IN ELECTORAL MATTERS - CODE OF GOOD PRACTICE IN ELECTORAL MATTERS - VENICE 2002

Mircea-Constantin SINESCU*
Mihai-Daniel ONIȘOR**

Abstract

The integrated and ongoing effort of the of the states in the European area to modernize and adapt their laws to the current needs and exigencies of the citizens is transposed, in terms of constitutional matters, in the actions of the European Commission for Democracy through Law, better known as the Venice Commission, as Venice is the place of the proceedings of this Council of Europe's advisory body on constitutional matters.

Keywords: *constitutional justice, universal suffrage, electoral fraud prevention, strict vote confidentiality.*

1. Foreword

The Venice Commission was established in May 1990 by 18 Council of Europe Member States. Currently, the Venice Commission has 60 member states: the 47 Council of Europe member states, plus 13 other countries (Algeria, Brazil, Chile, Israel, Kazakhstan, the Republic of Korea, Kosovo, Kyrgyzstan, Morocco, Mexico, Peru, Tunisia and the USA).

The role of the Venice Commission is to provide legal advice to its member states and, in particular, to help states wishing to bring their legal and institutional structures into line with European standards and international experience in the fields of democracy, human rights and the rule of law. These fundamental principles of the European constitutional heritage stand as the guidelines for the Commission works in three areas: democratic institutions and fundamental rights; constitutional justice and ordinary justice; elections, referendums and political parties. [1]

2. Content

Ever since its establishment, the Commission's work has consisted of providing opinions on the draft electoral laws in various states, including Romania. This action has taken on a completely new dimension in 2002, following the setting up of the Council for Democratic Elections. Thus, the Venice Commission and the Council for Democratic Elections, in their efforts to ensure the stability of electoral legislations, have developed the principles of the European electoral heritage by developing the Code of Good Practice in Electoral Matters. [2]

As the wording itself of the Guidelines[3] and of the Explanatory Report to the Code of Good Practice in Electoral Matters[4] clearly specifies, the five principles underlying Europe's electoral heritage are universal, equal, free, secret and direct suffrage. Furthermore, elections must be held at regular intervals.

Obviously, a main component in the attempt to ensure fairness of the elections is linked to the free nature of the suffrage and is set forth in paragraph 3.2 of the Guidelines on Elections related to the Code - Freedom of voters to express their wishes and actions to combat electoral fraud:

i. voting procedures must be simple;

ii. voters should always have the possibility of voting in a polling station. Other means of voting are acceptable under the following conditions:

iii. postal voting should be allowed only where the postal service is safe and reliable; the right to vote using postal votes may be confined to people who are in hospital or imprisoned or to persons with reduced mobility or to electors residing abroad; fraud and intimidation must not be possible;

iv. electronic voting should be used only if it is safe and reliable; in particular, voters should be able to obtain a confirmation of their votes and correct them, if necessary, respecting secret suffrage; the system must be transparent;

v. very strict rules must apply to voting by proxy; the number of proxies a single voter may hold must be limited;

vi. mobile ballot boxes should only be allowed under strict conditions, avoiding all risks of fraud;

[2] adopted by the European Commission for Democracy through Law at its 52nd Plenary Session (Venice 18-19 October 2002), adopted under CDL-AD(2002)23rev by the Parliamentary Assembly of the Council of Europe in its 2003 session – 1st part and by the Congress of Local and Regional Authorities in Europe in its Spring session 2003.

[3] Adopted by the Venice Commission at its 51st Plenary Session (Venice, July 5-6 2002).

[4] http://www.venice.coe.int/webforms/documents/?pdf=CDL-AD%282002%29023rev-rom

vii. at least two criteria should be used to assess the accuracy of the outcome of the ballot: the number of votes cast and the number of voting slips placed in the ballot box;

viii. voting slips must not be modified or marked in any way by polling station officials;

ix. unused voting slips must never leave the polling station;

x. polling stations must include representatives of a number of parties, and the presence of observers appointed by the candidates must be permitted during voting and counting;

xi. military personnel should vote at their place of residence whenever possible. Otherwise, it is advisable that they be registered to vote at the polling station nearest to their duty station;

xii. counting should preferably take place in polling stations;

xiii. counting must be transparent. Observers, candidates' representatives and the media must be allowed to be present. These persons must also have access to the records;

xiv. results must be transmitted to the higher level in an open manner;

xv. the state must punish any kind of electoral fraud.

Another aspect highlighted in the Explanatory Report of the Code of Good Practice in Electoral Matters is the equality of voting rights, which "requires each voter to be normally entitled to one vote and to one vote only. Multiple voting, which is still a common irregularity in the new democracies, is obviously prohibited – both if it means a voter votes more than once in the same place and if it enables a voter to vote simultaneously in several different places, such as his or her place of current residence and place of former residence." [5]

Stressing out the state's obligation to ensure the fairness of elections and to sanction any possible fraud in electoral matters, the Venice Commission argues that electors should be able to cast their votes for registered lists or candidates, which means that they must be supplied with ballot papers bearing their names and that they must be able to deposit the ballot papers in a ballot box at the premises that the state has to make available for electoral operations.

Furthermore, electors must be protected from threats and or constraints that are likely to prevent them from either casting their votes or from casting them as they wish, whether such threats come from the authorities or from individuals. The state is obliged to prevent and sanction such practices.

A first recommendation for preventing election fraud is that the voting procedure be kept simple.

Thus, starting from the idea that political forces involved in elections are represented equally in the central electoral commissions and, as such, substantial fraud is difficult, the fairness of the ballot should be judged by two main criteria alone: "the number of electors who have cast votes compared with the number of ballot papers in the ballot box. The first measure can be determined by the number of signatures in the electoral register.

Human nature being what it is (and quite apart from any intention to defraud), it is difficult to achieve a total congruity between the two measures. Any further control such as numbering the stubs of the ballot papers or comparing the total number of ballot papers found in the ballot box plus those cancelled and unused with the number of ballot papers issued to the polling stations may give some indication, but one should be under no illusion that the results of these various measures will coincide perfectly.

The risk in multiplying the measures used is rather that the differences in the totals, and in the end the real irregularities, will not be taken seriously. It is better to have strict control over two measures than slack – and hence ineffective – control over a large number of variables.

Any unused ballot paper should remain at the polling station and should not be deposited or stored in different premises. As soon as the station opens, all the ballot papers awaiting use must be in full view on the table of the senior station official. No ballot papers should be stored in cupboards or in other places.

The signing and stamping of ballot papers should not take place at the point when the paper is presented to the voter, because the signatory or the person affixing the stamp might mark the paper so that the voter could be identified when it came to counting the votes, which would violate the secrecy of the ballot.

The voter should collect his or her ballot paper and no one else should touch it from that point on.

It is important that the polling station officials include multi-party representatives and that observes assigned by the candidates be present." [6]

The Commission also attaches considerable weight to the postal voting or proxy voting, which, however, is acceptable and encouraged only where the countries organizing the election procedure are capable to put in place measures designed to prevent electoral fraud. This voting method is rather used in western countries:

"It should be allowed only if the postal service is secure – in other words, safe from intentional interference – and reliable, in the sense that it functions properly. Proxy voting is permissible only if subject to very strict rules, again in order to prevent fraud; the number of proxies held by any one elector must be limited.

[5] Point 11 of the Explanatory Report adopted by the Venice Commission at its 52nd Plenary Session (Venice 18-19 October 2002.
[6] Points 32-36 of the Explanatory Report to the Code of Good Practice in Electoral Matters.

Neither of these practices should be widely encouraged, if problems with this postal service are added to the difficulties inherent in this kind of voting, including the heightened risk of "family voting". Subject to certain precautions, however, postal voting can be used to enable hospital patients, persons in custody, persons with restricted mobility and electors resident abroad to vote, in so far as there is no risk of fraud or intimidation. This would dispense with the need for a mobile ballot box, which often causes problems and risks of fraud. Postal voting would take place under a special procedure a few days before the elections." [7]

The beneficiaries of the Code of Good Practice are also informed that the use of mobile ballot boxes should be avoided as much as possible, where they involve a serious risk of fraud, in the absence of very strict rules such as the attendance of several members of the polling station election commission representing different political groupings.

The Commission's recommendations do not lose sight of the military voting either, which, truth to say, does not benefit from an incriminatory protection under the Romanian criminal law, in the sense of an express provision requiring that a special supervisory commission be set up in order to prevent the risk of superior officers' imposing or ordering certain political choices to be expressed during elections.

With respect to electronic voting, the Explanatory Report encourages the application of this voting method, especially when a number of elections are taking places at the same time, even though certain precautions are needed to minimize the risk of fraud, for example by enabling the voter to check his or her vote immediately after casting it. The recommendation in this case is to design the ballot papers in such a way as to avoid confusion and, if possible, to provide for a machine that could print votes onto ballot papers, with ballot papers to be placed in a sealed container where they cannot be viewed or accessed. Note is made that this voting method should necessarily ensure vote confidentiality, in addition to vote security and reliability.

Electronic voting methods are secure if the system are capable to prevent deliberate attack and if they can function on their own, irrespective of any shortcomings in the hardware or software employed. Furthermore, the voter must be able to obtain confirmation of his or her vote and, if necessary, correct it without violating in any way the secrecy of the ballot. Last but not least, the electronic voting system must be transparent, in the sense that it must be possible to check whether the system and the voting process are functioning properly.

In terms of vote counting, the Commission recommends that votes should be counted at the polling stations, to eliminate the need to transport the ballot boxes and accompanying documents, thus mitigating the risk of substitution of votes.

Vote counting, too, should be conducted in a transparent manner. Another requirement, which, unfortunately, has not be transposed in the Romanian election law, is that voters registered in the polling station be authorized to attend the counting operation, along with the national and international observers whose presence on the premises must be allowed in all circumstances. One of the practical precautions recommended is that the record of proceedings should be written in ballpoint pen rather than in pencil, as text written in pencil can be erased.

Another recommendation is to avoid as much as possible treating too many ballot papers as invalid or spoiled and to make an attempt, in case of doubt, to ascertain the voter's intention instead.

In terms of election security in relation to the polling premises, the Code of Good Practice pays particular attention to the polling stations, given that the quality of the voting and of the vote counting systems and the proper compliance with the electoral procedure depend on how polling stations are organized and operate. In this regard, the Code speaks of a series of technical irregularities noticed by international observers, such as "wrongly printed or stamped ballot boxes, overly complex ballot papers, unsealed ballot boxes, inadequate ballot papers or boxes, misuse of ballot boxes, insufficient means of identification of voters and absence of local observers. All these irregularities and shortcomings, in addition to political party electioneering inside the polling station and police harassment, can seriously vitiate the voting process, or indeed undermine its integrity and validity." [8]

The Venice Commission also recommends that the principle of strict vote confidentiality be applied not only in vote casting, but also during the vote counting process, specifying further that noncompliance in this case must be punished by disqualification of any ballot paper whose secrecy is violated. In line with the secret suffrage principle, family voting (whereby one member of a family influences the vote cast by the other members) must be prohibited and the list of persons actually voting should not be published, given that this kind of conduct, too, may represent a choice made by the individual.

Another important issue tackled by the Venice Commission deals with regulating the funding of political parties, which, in the Commission's view, should be transparent and operate at two levels: "The first concerns campaign funds, the details of which must be set out in a special set of carefully

[7] Points 38-39 of the Explanatory Report to the Code of Good Practice in Electoral Matters.
[8] Points 105-106 of the Explanatory Report to the Code of Good Practice in Electoral Matters.

maintained accounts. In the event of significant deviations from the norm or if the statutory expenditure ceilings are exceeded, the election must be annulled.

The second level involves monitoring the financial status of elected representatives before and after their term in office. A commission in charge of financial transparency takes formal note of the elected representatives' statements as to their finances. The latter are confidential, but records can, if necessary, be forwarded to the public prosecutor's office." [9]

In addition, the Commission recommends the member states to arrange that specific public bodies supervise the parties' accounts, especially where the funding of political parties is sourced from public funds.

Efforts made by the Venice Commission to consolidate and unify legislations in electoral matters, as transposed in the Code of Good Practice in Electoral Matters, were later followed by stronger trends towards strengthening democracy through electoral process surveys performed by experts in the field.

Thus, under CDL-AD(2010)043, the Council for Democratic Elections, at its 35th meeting (Venice, 16 December 2010), and the Venice Commission at its 85th Plenary Session (Venice, 17-18 December 2010) adopted the Report on Figure Based Management of Possible Election Fraud[10], whose role was to assess the possibility of detecting electoral frauds through statistical methods.

The experts in charge of carrying out the survey that has materialized into the said Report found that two of the most important obstacles in conducting elections that are fully compliant with the international standards of democracy are the lack of electoral experience and/or the ambiguities or omissions in written laws, both of which are inevitably leading to elections that are distorting the public will.

As such, in the opinion of the Venice Commission and of the Council for Democratic Elections, implementing a clear and unambiguous legal framework plays a special role in the conduct of genuine and honest elections.

The Venice Commission and the Council for Democratic Elections recognize, however, that "ambiguities in written law may be the result of lack of electoral experience or legal drafting skills, in particular during periods of political transition from authoritarian regime to democratic form of governance.

However, if advice to remove possible ambiguities in legal framework is systematically ignored, questions may arise with regard to the nature of intentions to keep such ambiguities, as they are generally conducive for fraud.

If ambiguities remain in the legal framework, generally, the election administration would be expected to clarify them. As this may amount to determining the outcome of election, in particular if the clarifications are provided after the vote, such responsibility may test the limits of the authority of the election administration.

Generally, international (including European) standards for democratic elections do not provide for specific antifraud measures. Rather, standards emphasize on respect for fundamental civil and political rights and provide general guidance for establishment of sanctions for possible fraudulent activities as well as legal remedies for complainants against alleged fraud." [11]

To identify possible fraud, the experts consider it necessary to analyze the vulnerable stages in an electoral process. Chronologically speaking, the first stage in the electoral process that is most prone to the risk of election tampering is the registration of persons entitled to vote. At voter registration stage, the following potential election fraud hazards have been identified by the authors of the Report:

"(a) To many voters entries in the polling station voter lists due to inclusion of non-existing voters, deceased voters, voters residing abroad and/or voters included in the lists more than once (multiple entries);

(b) Too few voters included in the voter lists, resulting in disenfranchisement of eligible voters through omissions from the voter lists;

(c) To many voters added to the voter lists on election day, especially if on unclear grounds; and

(d) Manipulation of electoral constituency borders to favor the incumbents on the basis of incorrect numbers of population and/or registered voters." [12]

To assess allegations of voter registration fraud and prevent fraud linked to eligible voter registration it is recommendable to update the Voter Register by comparing it with the population census figures. In the case of voters residing abroad, the Commission gives examples of practices applied by some countries, whereby, in the absence of international standards, such voters are required to register themselves with the diplomatic representation offices in advance.

The alternative of allowing registration of voters on the election day, which is practiced in some states, may create conditions for electoral frauds. In some states, legislation requires that the voter

[9] Point 109 of the Explanatory Report to the Code of Good Practice in Electoral Matters.
[10] The Report was based on the comments made by 2 experts – Nikolai Vulchanov (Bulgaria) and Anders Eriksson (Sweden).
[11] Points 17-19 of the Report on Figure Based Management of Possible Electoral Fraud.
[12] Point 45 of the Report on Figure Based Management of Possible Electoral Fraud.

registration be completed some period of time before election day, after which the voter register is closed and updates of records are not permitted any more, such alternative being seemingly preferable for transparency considerations.

In any case, in the opinion of the Venice Commission, the following three aspects of an election process are crucial for preventing possible electoral fraud: transparency of the process, accountability of all state officials involved in the conduct of election and public confidence in the process. The transparent and professional performance of the Election Administration, the public scrutiny of voter lists, use of appropriate results forms, timely and comprehensive reporting of results, the presence of election observers and the parallel vote tabulation/counting are the key conditions for any election process to be conducted in full compliance with the principles of democracy.

The conclusions of the Report drafted by the experts on identification of possible electoral frauds are as follows:

"* Detection and prevention of possible figure based fraud requires detailed analysis of the legal provisions that have an impact on the election results and outcome, in particular when voters' choices result in narrow margins;

* Voter registration fraud requires significant resources; therefore issues related to potentially incorrect voter registration figures are more likely to arise from insufficient understanding of the system for voter registration and sloppy performance of the responsible authorities rather than due to international fraud;

* The most efficient methods to combat figure based election fraud stem from transparency of the electoral process; and

* Distinction should always be made between possible fraud and insufficient election administration experience; reasonable allegations for committed fraud should only be made after in-depth analysis of the relevant circumstances." [13]

4. Conclusions

In line with the considerations above, the constant recommendations made by international and European bodies (European Commission for Democracy through Law - Venice Commission) are in the direction of creating a flexible, integrated, consistent and transparent legal framework, that is free of ambiguities; in other words, an electoral legislation that, on the one hand, is easy to understand by individuals, while, on the other hand, prevents possible electoral fraud.

In conclusion we propose the transposition and incorporation of the recommendations above under the umbrella of an Election Code, leaving aside election crimes, an issue to which lawmakers have devoted a special title in the Revised Romanian Criminal Code, which would nevertheless become fully effective, if the entire regulatory framework in election matters were consistent and uniform, eliminating any blurring or irregularities in the application of incriminating legal texts, so that the election process may become the true expression of the free will of the people.

EU COMPETITION LAW AND THE TELECOMS SINGLE MARKET: NETWORK NEUTRALITY IN THE AFTERMATH OF THE TSM REGULATION

Noemí ANGULO GARZARO[*]
Amaya ANGULO GARZARO[**]

Abstract

Since the early 1990s, a sharp increase in the Internet traffic has been experienced. Technology, once again, has proven to be able to develop faster than regulation. In this endlessly evolving scenario, operators in the technology markets, as well as end-users, often find themselves under-protected. Therefore, it comes as a major concern the need to regulate those technological markets and, more specifically, the use –or abuse– of Internet.

All Internet traffic should be treated equally and that is, precisely, what network neutrality aims at. Consequently, network operators may not take advantage of their position in the market to affect competition in related markets. All in all, network neutrality is crucial to achieve the highest degree of competition. In the absence of network neutrality, the Internet would find itself unable to qualify as a market merely driven by innovation, and it would unfailingly turn into one ruled by deal making. Competition law claims that the higher the neutrality is – i.e., the more equal the treatment is, the better it is for the consumer. If network operating companies create an exploitative business model, they might be able to block competitors' websites and services; in other words, it may facilitate adoption of anticompetitive practices – namely, the abuse of their dominant position.

Transcending all the arguments raised against network neutrality –such as the prevention of an overuse of bandwidth–, we will demonstrate that it must be deemed essential from a Competition law perspective. In addition, we will argue, the imperative necessity of leaving the market under the tough scrutiny of competition authorities, which are best placed to assess the anticompetitive character of the practices brought about by market operators.

Keywords: *EU Competition law, network neutrality, Telecommunications Single Market, TSM Regulation, European integration.*

1. Introduction

The use of the Internet has experienced an outstanding growth, due both to its worldwide development as a means of communication and to its validation as an engine of economic progress[1]. Such increasingly important role played by the Internet has raised the awareness of competition authorities over the risk that operators of the network may succumb to the temptation of distorting the competitive dynamics of the market, unduly favoring the network traffic of some content providers over the applications or information of others[2]. Ultimately, not only the Internet, but also all the telecommunication networks, have been placed in the spotlight of competition authorities[3]. All in all, it is of major importance guaranteeing that all traffic is treated equally – i.e., network operators may not take advantage of the structure of the market –of their commercial bonds *vis-á-vis* downstream operators– to affect competition either in the market of reference or in related market. Affiliated content providers should not wilfully benefit from a preferential treatment when it comes to traffic management. That is, precisely, what network neutrality aims at: the more neutral the network is, the better for users, as it may enable them to enjoy a wider scope for choice.

With regard to the European Union (EU), the importance of the electronic communication networks is likewise unremitting: they bring along several benefits that range from a potential increase in innovation, through a widening of access to information, to a facilitation of the interaction of content providers and end-users, who utilize the

[2] Directorate General for Internal Policies, *Network Neutrality Revisited: Challenges and Responses in the EU and in the US*, Study for the IMCO Commission (2014), 11.

[3] Some authors underline that it is not until 15 years ago that competition authorities have begun to monitor the internet sectors more carefully. *Vide* Rolf H. Weber, "Competition Law Issues in the Online World", in *20th St. Gallen International Competition Law Forum ICF* (2013), accessed 3 February, 2016, http://ssrn.com/abstract=2341978, 1. In this research paper we will make reference to "network" to refer, primarily, to the Internet, but the fast development of electronic networks, such as the ones used for mobile communication, forces us to include all those other networks that may also be captured by their provider.

platform to telecommunicate[4]. However, the EU, instead of irrevocably opening up the Telecomms market to competition, has opted for regulating it more intensely[5].

In this study we will challenge the decision of the EU institutions of adopting a Regulation. We intend to identify what is the hurdle that has impede the development of the Telecoms Single Market so far. We will conclude that, albeit the adequacy of a regulation to ensure harmonization, the mere existence of the Telecoms Single Market is dependent on the preservation and ensurance of the network neutrality principle. Further, we will demonstrate that it is high time to de-regulate the market and to open it to the scrutiny of competition authorities, which are best placed to assess, on a case by case basis, whether the practices carried out by network operators do actually harm the competition dynamics.

2. The Telecoms Single Market, a chimera in the EU agenda?

To date, the EU has experienced a low level of network neutrality incidents, but there is a consensus on the fact that network providers do have incentives to anticompetitively discriminate against unaffiliated providers of complementary products with a view of excluding them from their network[6]. Further, the debate over the desirability of protecting the neutrality of telecommunication networks was not due to a worry about the Internet; instead, the English *Law of common carriage* did include an obligation for communication and transport network providers to render the service without unduly discriminating among their users[7].

In this scenario, the EU is determined to take the necessary measures to establish a Telecoms Single Market that works under conditions of vigorous competition and enables thus the creation of a legal environment that guarantees access of all European content providers to the network[8]. In short, it aims at achieving a connected continent[9].

2.1. Electronic communication networks: Internet as the paradigm of modern telecommunication networks

When it comes to the telecommunications sphere, EU regulatory philosophy is technologically neutral[10]. This implies that no difference will be made regarding the diverse technology platforms – i.e., the considerations made with regard to a specific platform –e.g., the Internet– may be equally valid for the other electronic communication networks[11]. In this research paper, when clarity requires a greater exemplification, we will consistently resort to the Internet as an example of a network, but the conclusions drawn may be extensively applied to any other type of electronic network.

The Internet is a platform that enables the communication between two distinct groups of actors, who provide each other with benefits: on one side, content providers, who make use of the network to upload information or applications; and, on the other side, end-users, who access the network to download such information or applications[12]. Therefore, network providers are in charge of rendering access to the network through the provision of data transmission services to their customers, who may be either content providers or end-users[13].

The specificity of this type of multi-sided markets is the creation of externalities – that is,

In this paper we will not enter into the analysis of the physical operation of the network; therefore, by network providers we refer to operators that provide Internet Access and transport services over the network. On the differences, *vide* Barbara van Schewick, "Towards an Economic Framework for Network Neutrality Regulation", in *The 33rd Research Conference on Communication, Information and Internet Policy (TPRC 2005)* (September 2005), 3.

network effects[14]. The higher the number of users –participants– of a given network is, the higher the value of the network is, as the number of parties with whom the subscriber could potentially interact has increased[15].

As a consequence of those externalities, first, users of a particular network may be less likely to opt for a network different from the one of the leading provider – manly due to the switching costs; and, second, a provider that offers access to a wide number of users has an significant market power not only in the segment of the provision of the network, but also in the related segment of the provision of content[16]. These barriers to entry hinder the access of new operators to the segment of the network provision and, in addition, are prone to generate distortions in the competitive dynamics of the market[17].

In relation with the switching costs, they may be either inherent or strategic – that is, they may arise from the nature of the product or the market (such as the need to inform other users of new contact information of learning costs) or they may be created by the network provider to keep users from changing providers (such as contract cancellation fees)[18]. Furthermore, the network itself requires a certain size to be efficient, so newly created networks are less likely to grab the attention of users so as to encourage them to change their network provider[19]. While strategic switching cost may be efficiently addressed through regulation –by, for example, simply banning their inclusion in the contracts for the provision of the network–, inherent switching costs, specially those arising from the nature of the market, unfailingly require a case by case analysis. Whereas regulatory responses are intended to apply indistinctly, competition responses are tailored to the factual circumstances of the case. A regulatory *ex ante* intervention is only justified to the extent that its social benefits are larger than the costs, as burdensome rules that diminish network providers' return may reduce network providers' incentives to innovate at the network level and to deploy network infrastructure[20]. Contrariwise, an *ex post* intervention of the competition authorities serves a double purpose: on one hand, it may not constrain the incentives of network providers to innovate, as they will be allowed to look for the most convenient way to expand their profits, with the sole limitation of respecting the competition dynamics of the market; and on the other hand, it may also foster application-level innovation, as content providers will benefit from a undistorted neutral network[21].

As for the significant market power of network operators, it is certain that in markets where no network provider has a dominant market share operators are more inclined to look for interoperability and interconnection options[22]. However, it is also unquestionable that network providers will seek to enlarge their networks in order to capture the externalities derived from the size of the network, to the detriment of both active and potential operators. Provided that they cannot further expand the size of their network, network providers will proceed to project their market power in the adjacent related segment of the provision of contents.

In such a scenario, it comes as indispensable the preservation of a neutral network, which will hamper an unconstrained expansion of the network providers' market power throughout the segment of the provision of content. Some detractors of network neutrality regulations have claimed their need to discriminate among network users with a view of managing the capacity of the network, which is limited[23]. Nevertheless, network neutrality claims do not hinder such management need since network operators are indeed allowed (and, to the extent that the bandwidth is limited, obliged) to prioritize –not

[14] Kenneth R. Carter, J. Scott Marcus and Christian Wernick, *Network Neutrality… op. cit.*, 11.

[15] The mere act of joining a network boosts the value of the network to all network users, even if they were not parties to the transaction, as explained in Kenneth R. Carter, J. Scott Marcus and Christian Wernick, *Network Neutrality… op. cit.*, 12. Also *vide* Rolf H. Weber, "Competition Law Issues in the Online World", *op. cit.*, 2.

[23] The bandwidth is limited. The Internet, as well as other electronic networks, is a good whose use and consumption limits the access of other users –rival good–. On the rival character of the Internet, *vide* Noemí Angulo Garzaro, Amaya Angulo Garzaro and David Férnández Rojo, "Neutralidad en la red y competencia en la UE: la regulación del mercado de las comunicaciones electrónicas tras el Reglamento sobre el Mercado Único de las Telecomunicaciones", in *Revista de Derecho de la Competencia y la Distribución* (La Ley, n. 17, 2015), 3.

discriminate– the execution of the contents that run through their network[24].

The neutrality of the network may be sought through regulatory measures or its preservation may rather be left in the hands of competition authorities. Whereas in the realm of a monopolistic market, where there is just a single network provider, a regulatory intervention is imperative in order to accomplish the liberalization of the market, in so far as the market gradually opens to competition, regulatory intervention must diminish[25]. In conclusion, regulation is a necessary step in the transition from a monopolistic market to normal competition. Indeed, in the European arena there existed various monopolistic telecoms markets – nearly as many monopolistic markets as Member States[26]. It must be borne in mind that the ultimate goal is the establishment of a Telecoms Single Market, working under conditions of vigorous competition[27]. Consequently, we will proceed to analyze to what extent the initial picture –that is, the several existing monopolistic national telecoms markets– has changed – i.e., whether national telecoms markets have been finally liberalized and, nowadays, are effectively competitive. Only if national telecoms markets are competitive, we may proceed to the next step towards the attainment of the Telecoms Single Market: an EU-wide telecoms market, where no undertaking is favorized, nor wilfully discriminated, due to nationalistic interests.

2.2. The pursuit of the Telecoms Single Market: from several monopolistic national markets to a (non-yet) competitive EU-wide electronic communications market

In the pursuit of a Telecoms Single Market, the EU has adopted different regulatory instruments, whose binding force varies from one instrument to the other, as well as it does the objective of the EU institutions: from liberalizing the monopolistic national markets to trying to accomplish a single competitively working EU-wide telecoms market.

The first legislative package was passed in 1998. It was formed by one general and four specific directives: the Framework Directive 2002/21 and the Authorisation Directive 2002/20, the Access Directive 2002/19, the Universal Service Directive 2002/22 and the Directive 2002/58 on privacy and electronic communications[28]. By passing such a regulatory package, the EU aimed at designing a European Framework for electronic communications, which was ultimately intended to make the first move in the path towards the attainment of the Telecoms Single Market – i.e., the liberalization of the Member States' national telecommunication markets[29]. National telecoms markets were, in the majority of cases, monopolist[30]. However, such legislative package did not specifically address network neutrality[31].

In 2007, the Commission suggested a review of the legislative package. In the context of the review, proponents of network neutrality raised their awareness in respect of the identification of violations of network neutrality, and different alternatives were thus considered: (1) to impose specific network neutrality rules; (2) to maintain the existing regime unchanged, or (3) to maintain the existing regime, but make the appropriate improvements with regard to consumer rights[32]. Finally, a midway option was preferred and, in 2009, a new regulatory framework was passed.

The regulatory framework enacted in 2009 put in place measures intended (a) to ensure that consumers are fully informed of the relevant practices of their network operator; (b) to reduce the strategic switching costs; (c) to empower national regulators to impose minimum Quality of Service standards on network operators; (d) to establish the

[24] Such prioritization is referred to as 'Quality of Service'. *Vide* Noemí Angulo Garzaro, Amaya Angulo Garzaro and David Férnández Rojo, "Neutralidad en la red y competencia en la UE… *op. cit.*, 3-4.

right of end-users to access content and applications of their choice[33].

In April 2011, the Commission asked the Body of European Regulators for Electronic Communications (BEREC) to undertake a fact-finding exercise with regard to the attainment of an open and neutral Internet[34]. The BEREC, after its traffic management investigation, published in May 2012 a report concluding that there was an undeniable problem regarding open Internet in Europe[35]. Right after that report, in Spring 2013, the European Council requested the Commission to make a proposal for achieving, once and for all, a single market in the telecommunications sector and, in September 2013, the Commission finally adopted a legislative package aimed at building a connected, competitive continent, where all traffic would be treated equally and no unjustified, disproportionate discrimination would be allowed[36].

The form of the legislative instrument was openly debated, as several delegations raised their concerns in relation with the adoption of a regulation[37]. Transcending those reticence's, the Commission, in its Impact Assessment, concluded that the most adequate instrument was a regulation and, accordingly, on 27 October 2015, the Telecoms Single Market Regulation, which contains the first EU-wide net neutrality rules, was finally passed, after undergoing two reading votes in the European Parliament, who introduced, in its first-reading vote, amendments banning zero rating and defining specialized services as physically and logically separate to the Internet[38]. However, the Council of Ministers revised the amended text and, in a trilogue with the Commission and the Parliamentary Committee Chair, made it resemble the original proposal[39]. Likewise, the introduction of potential amendments in the second-reading vote of the Parliament equally failed.

The final text is subject to controversy, as, on one side, its ample ambiguity hinders a direct application by the Member States of key aspects – e.g., the Regulation introduces multiple exceptions, which are to be appreciated by the network provider, to the general principle of equal treatment of the traffic; and, on the other side, it implies the adoption of additional rules, what could impede the ultimate transition from regulation to competition law[40]. Indeed, while harmful divergence among Member States must be combated, if a competitive Telecoms Single Market is to be achieved, flexibility needs to be ensured[41]. From our standpoint, the solution does not rest in the adoption of further pieces of legislation – i.e, in regulating the market more fiercely, instead, as we will address in the following section, the time for a de-regulation, for leaving the market in the hands of competition law (and of competition authorities), has come.

3. The de-regulation of the Telecoms Market: rowing fiercely, but purposefully, against the current

Market regulation takes place in a three-stage process: (1) market definition; (2) market analysis; and (3) imposition, when needed, of remedies[42]. When, after analyzing the market, one concludes that it has proven to be self-correcting – that is, when, thanks to the correcting powers of the market itself,

there is low likeliness that the harm to competition is long-lasting, competition laws are preferred –rather than sector regulation– to react to anti-competitive behavior[43].

The core goal of proponents of network neutrality is the observance of the principle of non-discrimination when network providers manage the traffic that flows over their limited network. Competition both in the segment of the provision of contents and in the segment of the provision of the network must be granted – or, to put it in other words, network providers must refrain from either excluding competitors by abusing of their market power or projecting such market power in adjacent markets to unduly discriminate among market operators[44]. It is submitted that, in order to address those distortions of competition, competition authorities are best placed[45].

Competition authorities are empowered to assess, in view of the factual circumstances of the case, whether, in order to be cleared, the prioritization strategies carried out by network operators do meet the transparency standars and, similarly, whether such strategies are proportionate to the aim –deal with traffic congestions– and non-discriminatory. Sometimes, normal business strategies may be confused with anticompetitive practices, mainly due to the fact that market operators adopt future-oriented measures that cry for a balance between the benefits –in terms of incentives to innovate– and the harm to competition[46]. In any case, a foreclosure of the market –impeding or hardening the entry of operators to the market or, if they are already active, the provision of their services– indicates the existence of an anti-competitive behavior[47]. In a market opened to free competition, network providers would not be allowed to hide behind favorable regulatory provisions to shield from the competition authorities' scrutiny.

The adoption of overtly stringent legislation hinders a flexibilized application of the competition principles that ground the attainment of a Telecoms Single Market working under conditions of vigorous competition[48]. Further, it may thwart operators' incentives to innovate, which comes as essential in this endlessly innovation-based competitive high tech markets[49]. Likewise, too traditional an approach on the side of competition authorities may also impair the dynamics of the market; competition authorities must be thus ready to adapt their assessment and enforcement actions to the fast evolving technological progress, not undermining its development[50].

In conclusion, the achievement of a competitive Telecoms Single Market mandates its de-regulation and ultimate opening to competition. First, the once fragmented national markets have already been effectively liberalized. Second, the fast development of the high tech markets prevents the perdurance of long-lasting anti-competitive practices that could justify a regulatory intervention. And, finally, measures taken by national regulatory authorities, which could have been justified on the basis of a pure national public interest, risk to be deemed anti-competitive for the sake of establishing an EU-wide Telecoms Single Market.

4. Conclusions

The EU has embarked on the task of regulating the Telecoms Single Market more intensely. At the beginning of the telecoms markets liberalization process, the existence of several national markets obliged Member States to resort to regulation in order to open their national markets to competition. Today, focus is placed on the achievement of an EU-wide telecoms market –rather than several national markets–, working under conditions of vigorous competition.

It is submitted that the Telecoms Single Market will only be established if –counter to the latest decision of the EU regarding the adoption of a Regulation– the practices of market operators are

[43] Several legal commenters have supported this view, *vide* Nicolai Van Gorp and Olga Batura, *Challenges for Competition Policy in a Digitalised Economy*, Study for the European Parliament, IP/A/ECON/2014-12 (2015), accessed 1 March, 2016, http://www.europarl.europa.eu/RegData/etudes/STUD/2015/542235/IPOL_STU%282015%29542235_EN.pdf, 62-63. supervised by competition authorities. From our standpoint, the adoption of a Regulation does not contribute to the ultimate attainment of the Telecoms Single Market: while regulation is indispensable in the transition from several fragmented monopolist national markets to several liberalized national markets, the achievement of an EU-wide telecoms market implies its opening to the forces of competition.

All in all, competition authorities are best placed to adapt their analysis of a particular prioritization conduct that, albeit necessary, may unduly harm the competition dynamics in the Telecoms Single Market by obviating network operators' obligation of non-discrimination among competitors. That is, competition authorities may balance whether the prioritization strategies carried out by network operators are indeed proportionate to the aim –deal with traffic congestions–.

The EU, as said, has opted for the regulatory instrument that ensures best an integration of the national legal systems. However, not only did it opt for a more stringent normative instrument, but also the Regulation itself is not absent of controversy, and, as pointed out by the literature, its ambiguity is expected to give rise to interpretative problems that may harden its uniform application throughout the Union.

Time (and research conducted hereafter) will tell to what extent this has been a missed opportunity of deregulating the telecoms market and leaving it in the hands of competition authorities.

CONSIDERATIONS WITH REGARD TO THE USUFRUCT OVER THE RIGHT OF VOTE AS GUARANTY APPLIED IN THE BUSINESS ACTIVITY

Florin CONSTANTINESCU[*]

Abstract

The aim of the present article is to scrutinize the usufruct over the right of vote related to a share as legal concept (from foregoing and current Romanian legislation and doctrine standpoint) and to highlight also the legal traits and the effective benefits provided as guaranty. To the same extent, the consolidation of the legal regime of this concept as guaranty is also the pursued objective.

Although the usufruct over the right of vote has been not considered as a valid guaranty, the companies from Romania (mostly the banks) used this mechanism as guaranty within the (sophisticated) lending transactions.

It is worthy to be mentioned that the right of vote may be related to a share belonging to a joint-stock company or to a social part belonging to a limited liability company.

The main scope of such guaranty is to strengthen the creditor's rights besides other established hard collaterals (mortgages over real estates, shares, receivables etc.). Thus, the creditor may influence the corporate will of a company (within the general shareholders meeting).

Moreover, the guaranty has to be set up in the form of a notarized deed (authenticated by a Notary Public) aiming to be considered a writ of execution and to enable the creditor to commence the foreclosure if needed.

Having in mind the above, this paper mainly regards: the content of the right of vote related to a share, security, social part, the applicability of the usufruct to the shares belonging to different companies (joint-stock companies listed or not listed to the Stock Exchange, other companies of capitals and persons), the relevant differences between the usufruct as dismemberment of the ownership right and the usufruct as guaranty, the significant aspects regarding the guaranty agreement, proposals to amend the legislation.

Keywords: *Usufruct, Joint-Stock Company, Limited Liability Company, Shares, Social Parts.*

1. Introduction

1.1. Which is the area/domain covered by the theme of the present study?

The present study aims to analyze the legal framework related to the usufruct over the right of vote related to a share, security, social part or part of interest belonging to a company and to provide arguments in order to consolidate the status of guaranty of this legal concept. In accordance with the Romanian New Civil Code, the usufruct is considered a dismemberment of the ownership right. On the basis of the usufruct right, the holder of the usufruct right has the exclusive use of the asset inclusively the right to enjoy the benefits deriving from the use of the asset ("to pick up the fruits").

Following this judgement, the usufruct over the right of vote tends to secure the reimbursement obligation of a society towards a creditor. Taking into consideration all these traits, the guaranties area (pertaining to the civil law) is the first covered area on one hand. On the other hand, such guaranty is applicable to the shares, securities etc., which form the share capital of the societies regarding the commercial activity (professional traders). Having in view the field of applicability we deem that the commercial law is the second covered area.

So there is a *mixtum compositum* between the civil traits of the guaranty and the commercial aspect regarding the applicability of this guaranty. Such mixture does not involve a contradiction in legal terms but it highlights a necessary complementarity.

I.2 Which are the importance of the study and the pursued objectives?

The envisaged importance of the study consists in:

(i) fortifying the legal status of the usufruct over the right of vote as a guaranty;

(ii) fostering the visibility and the utility of such guaranty both within the sophisticated transactions and ordinary (domestic) transactions;

(iii) providing ancillary legal arguments and a new perspective over such guaranty aiming to be extensively utilized by the legal professionals (practitioners, theoreticians, students) and companies (joint-stock companies, limited liabilities companies etc.) in current activity.

The pursued objectives of the study are:

(i) to consolidate the legal regime of this guaranty that may enhance the creditor's rights both when such guaranty is accompanied by a movable mortgage over the shares/social parts/securities and when it is not;

(ii) to emphasize the effective benefits;

[*] PhD Student, Faculty of Law, "Nicolae Titulescu" University of Bucharest (e-mail: **florinconstantinescu110@hotmail.com**).

(iii) to analyze the form of the guaranty agreement, the relevant clauses/situations that may occur;

(iv) to depict the publicity formalities.

I.3. By which modality the answer to the aforesaid objectives shall be provided ?

The main envisaged modalities to reach the objectives are:

(i) researching the relevant civil and commercial doctrine prior to the new Civil Code;

(ii) researching the relevant provisions from the new Civil Code, the commercial legislation;

(iii) researching the relevant practices in the area.

The research will be made through comparative method, logical method and historical-teleological method.

1.4. The main directions of the doctrine in the area are as follows:

1.4.1. Prior to the entering into force of the new Civil Code (01.10.2011):

In conformity with the foregoing Article 124, 1st paragraph (abrogated through Law no.71/2011 commencing with 01.10.2011) from the Law no.31/1990 on companies, further amended and completed, the holder of the usufruct right over the shares held the vote within the ordinary shareholder's meetings whilst the legal owner of the shares kept the right of vote within the extraordinary shareholders meetings.

The above-mentioned Article 124, 1st paragraph was justified by the fact that the holder of the usufruct right was interested to collect the interests produced by the shares; therefore, he had the right to vote within the general assembly that decides on the distribution of the dividends and also on the administration current issues of the companies. Also, this article was applicable to the shares issued in dematerialized form (which are considered fungible assets).[1]

1.4.1.1. The said article regards the shares (specific to the joint-stock companies which are not listed to the Stock Exchange), the securities (specific to the joint-stock companies listed to the Stock Exchange) and the shares specific to a company limited by shares, pursuant to the Article 187 from Law no.31/1990. Based on the principles of the legal interpretation the same article was not applicable to the social parts related to the limited liability companies and to the parts of interest related to the companies of persons.

1.4.1.2. With regard to the form of the usufruct agreement, the doctrine did not extensively analyze such aspect.

We highlight that the legal practice in the area was to be signed notarized deeds (authenticated by a Notary Public) aiming to be considered a writ of execution.

1.4.1.3. With regard to the publicity formalities, the usufruct agreement was enrolled to the shareholder's registry so any creditor/person who justified an interest might investigate such registry. It was not allowed by the law to enroll the usufruct agreement with the Electronic Archive of Real Movable Securities.

1.4.2. After the entering into force of the new Civil Code (01.10.2011):

1.4.2.1. In accordance with the Article 741, 1st paragraph from the new Civil Code, the right of vote related to a share, other security, to an undivided quota from the ownership right or related to any other asset belongs to the holder of the usufruct right.

Nonetheless, the legal owner is the holder of the vote that has as effect the modification of the substance of the main asset such as the share capital or the co-owned asset or the modification regarding the destination of such asset or the cessation of the company, the reorganization or the cessation of the legal entity or of an enterprise, on case by case basis (Article 714, 2nd paragraph from the new Civil Code).

1.4.2.2. Concerning the form of the usufruct agreement and the publicity formalities we reiterate the considerations mentioned with the above points 1.4.1.2.and 1.4.1.3.

2. The usufruct. Concept

2.1. Overview of the legal provisions pursuant to the former Civil Code

2.1.1. First of all, the right of ownership was defined as a right held by a person based on which this person enjoys and disposes of an asset, but within the limits as provided by the law (Article 480 from the former Civil Code).

The doctrine considered that the ownership right is the most complete real right because it comprises all the 3 attributes: the possession, the use and the disposition that may be used by the holder in the entire plenitude of these attributes, being exclusive towards any other persons' rights over the same asset[2].

The conception of the prior Civil Code was in the direction to streamline and diversify the applicability of the ownership right by enabling the third parties (other than the legal owner) to utilize one or two of the attributes of the ownership right.

Thus the dismemberments of the ownership right are these real principal and derived rights over a third party's assets, opposable to anyone, inclusively to the owner, that are established or attained through their separation or through the

[1] Stanciu D.Carpenaru et.al., *The Law Of The Companies. Commentary On Articles* (Bucharest: C.H.Beck Publishing House, 3rd edition, 2006), 375.

[2] Corneliu Barsan,Maria Gaita, Mona Maria Gaita, *Civil Law.The Real Rights* (Iasi:The European Institute, 1997), 153.

limitation of one attributes from the legal content of the ownership right.[3]

2.1.2 Following the provisions of the Article 517 from the foregoing Civil Code, the usufruct was defined as a persons' right to enjoy the asset owned by a third party as the owner himself having the duty to conserve the substance of the asset. The usufruct may regard movable or immovable assets (Article 520 from the former Civil Code). So the essence of the usufruct was the right to use an asset and to enjoy the benefits produced by the assets.

At the cessation of the usufruct by any reason, the asset must be restituted to the legal owner (Article 557 and the following from the former Civil Code).

2.1.3. The usufruct is applicable only to the assets that form the object of the private property.

Taking into consideration that the assets that form the object of the public property may be not alienated (as provided by the Article 136, 4th paragraph from the Constitution of Romania), such assets may not represent the object of the usufruct right.

2.2. Overview of the legal provisions pursuant to the new Civil Code

2.2.1. In conformity with the Article 703 from the new Civil Code, the usufruct is the right to use other persons' asset and to enjoy the benefits produced by the asset, having the obligation to conserve the substance of the asset.

Following the conception of the former legislation, the usufruct may regard the movable or the immovable goods, corporal or incorporeal, inclusively a patrimonial mass, a factual universality or an undivided quota of them, in conformity with the Article 706 from the new Civil Code.

Regarding the incorporeal assets, the novelty consists in the fact that the usufruct may be established over receivables, capital, lifelong annuity, fond of commerce or right of vote.

2.2.2. The usufruct is essentially temporary and the holder of the usufruct right is undertaken to restitute the assets at the cessation of the usufruct.

2.2.3. In lack of a contrary stipulation, the holder of the usufruct right has the exclusive use of the asset, inclusively the right to enjoy the benefits produced by the assets, based on the Article 709 from the new Civil Code.

2.2.4. The usufruct may be not transmitted *mortis causa*, but the assignment of the usufruct is allowed only by legal acts signed between alive persons.[3]

2.3. It has to be mentioned that the Law 31/1990 comprised a legal provision (Article 124, 1st paragraph) based on which the usufruct over the shares granted to the holder of the usufruct the right to vote within the ordinary shareholders meeting whilst the legal owner of the shares had the right to vote within the extraordinary shareholders meeting. This article was abrogated through Law no.71/2011 starting with 01/10/2011 the argument being that the usufruct right is distinctively regulated by the new Civil Code.

2.4. In comparison with the former Article 124,1st paragraph from the Law no. 31/1990 on companies that comprised a a limitation meaning the usufruct right was applicable only to the shares pertaining to a joint stock company and limited by shares company, the Article 741, 1st paragraph from the new Civil Code stipulates that the right of vote related to a share, other security, to an undivided quota from the ownership **right or related to any other asset belongs to the holder of the usufruct right.**

So we consider that there is an extension of the applicability of the aforesaid article meaning the right of vote may regard the social part (related to a limited liability company) a part of interest (related to the societies of persons). We have primarily in view the legal wording **(right of vote) related to any other asset that includes the social parts and the parts of interests.**

Furthermore, the usufruct right may be established over the shares, securities, regardless their form (materialized or dematerialized).

The holder of the usufruct right and the legal owner of the shares may take part both in the extraordinary general shareholders meeting and in ordinary general shareholders meeting *observing the object of the resolution that shall be taken*; this is in contrast with the former legal provision based on which the holder of the usufruct right was enabled to participate *only in the extraordinary general shareholders meeting* and the legal owner was allowed to participate *only in the ordinary general shareholders meeting.* As effect, in the light of the new Civil Code, the holder of the usufruct right may vote within the ordinary general shareholders meeting (on issues like the approval of the financial situations, appointment and dismissal of the administrators) and within the extraordinary general shareholders meeting (on issues like the change of the object of activity, relocation of the registered office etc.). The legal owner may vote within the *ordinary general shareholders meeting* (on issues like closing of some units of the company if it generates a reorganization) and within the

[3] Gabriel Boroi, Carla Alexandra Anghelescu, Bogdan Nazat, *Course Of Civil Law.The Principal Real Rights In Conformity With The New Civil Code* (Bucharest: Hamangiu Publishing House, 2013), 142.

extraordinary general shareholders meeting (on issues like merge or splitting-up of the company, reduction or rise of the share capital and on other issues that are directly linked to the substance, destination of the shares).[4]

3. The right of vote. Concept. Applications. Legal nature

3.1. Concept

The right of vote is one of the shareholders' rights pursuant to the shares held by each shareholder with the share capital.[5]

3.2. Applications

3.2.1. With regard to the joint stock companies, besides the right of vote, the shareholder have the right to take part in the general shareholders meeting, the right to information, the right to dividends and the right over the part derived from the company winding-up.[6]

Based on the Article 101 from the Law no.31/1990, any paid share entitles the shareholder to one right of vote within the general shareholders meeting except for otherwise had been stipulated within the constitutive deed of the company; the constitutive deed may limit the number of the votes for the shareholders who hold more than one share;also, the right of vote may be suspended for the shareholders who hadn't paid the due owed contributions.

3.2.2. The shares of a joint stock company are of 3 types:

a) the nominative shares that identify the holder (Article 91 from the Law no.31/1990).

A nominative share will mainly comprise the following information in this respect, based on the Article 93 3rd paragraph form the Law no.31/1990: the name, the forename, the personal identification number, the domicile related to the shareholder individual and also the identification data for a shareholder legal entity (the name, the registered office, sole registration code). Such shares may be issued in material form (on paper support) or in dematerialized from when they will be enrolled with the shareholders registry.[6]

b) the shares to bearer does not identify the bearer so the owner is the persons who effectively holds the share.

c) the preferential shares. In accordance with the Article 95 from the Law no.31/1990, a joint-stock company may issue preferential shares with priority dividend without the right of vote that grant to the owner: (i) the right to a priority dividend charged over the distributed benefit of the financial exercise, prior to any other charging; (ii) the right recognized to the shareholders holding ordinary shares, inclusively the right to attend the general meeting *except for the right of vote. In the absence of the right of vote, the establishment of the usufruct as guaranty is not possible.*

3.2.3. The companies listed on the Stock Exchange issue securities that means, in compliance with the Article 2, po.33 from the Law no. 297/2004 on the capital market: (i) the shares issued by the companies and other equivalent securities negotiated on the capital market; (ii) the bonds and other receivable titles, inclusively state bonds, negotiated on the capital market; (iii) any other currently negotiated titles which grants the right to purchase the respective securities through underwriting or exchange, enabling a settlement in cash except for the payment instruments.

3.3. Representation issues. Regarding *the joint-stock companies*, the shareholders may take part and vote within the general assembly by representation based on a power of attorney granted for the respective general assembly. The members of the Board of Administrators, the managers, the members of the Directorate and of the Supervision Council or the officers may not represent the shareholders under the sanction of the absolute nullity, if without the vote of the aforesaid persons the required majority would not have been attained (Article 125 from the Law no.31/1990).

3.3.1. Regarding the *companies listed on the Stock Exchange*, based on the Article 243, 6^1 and 6^2 paragraphs from the Law no.297/2004, the representation of the shareholders within the general shareholders meeting may be done through other persons than other shareholders, on basis of special or general empowerment; the special empowerment may be granted to any person for a sole representation within the general shareholders meeting and it comprises specific instructions to exert the right of vote; the general empowerment may be granted for a period of 3 years enabling the proxy to vote on all the issues on the agenda of any companies mentioned in the empowerment inclusively with regard to the acts of disposition,

[4] Stanciu.D.Carpenaru, Gheorghe Piperea, Sorin David, *The Law Of The Companies. Commentary On Article* (Bucharest: C.H.Beck Publishing House, 5th edition, 2015), 409-410.

[5] Stanciu D.Carpenaru, *Treatise Of Romanian Commercial Law* (Bucharest: Universul Juridic Publishing House, 4th edition, updated, 2014), 323.

[6] Stanciu D.Carpenaru, *Treatise Of Romanian Commercial Law* (Bucharest: Universul Juridic Publishing House, 4th edition, updated, 2014), 322-324.

under the condition that the empowerment to be granted by the shareholder- as a client- to an intermediary as defined by the law or to a lawyer.

3.4. Concerning the social parts belonging to the societies of persons the following aspects must be emphasized:

(i) although the parts of interests are strongly linked to the person of the holder, the assignment of the parts of interest is expressly permitted by the Articles 87 and 90 from the Law no.31/1990, if it is stipulated by the constitutive deed;

(ii) the possibility to contract a bank loan by a societies of persons may be not excluded. Consequently, the bank may require to be established a usufruct over the right of vote. So, the conclusion is that the usufruct over the right of vote related to the parts of interests may be established if it is stipulated within the constitutive deed or all the shareholders grant their unanimous consent in this respect.

3.5. With respect to the social parts belonging to the limited liability, there are the following commentaries: (i) although the social parts are strongly linked to the person of the holder, the assignment of the social parts is expressly permitted between the shareholders of the same company and also to the third parties by the Article 202 from the Law no.31/1990. For the last situation, the prerequisite is to exist a resolution of the shareholders representing ¾ from the social capital;

(ii) the possibility to contract a bank loan by a limited liability company may be not excluded.

Consequently, the bank may require to be established a usufruct over the right of vote. So, the conclusion is that the usufruct over the right of vote related to the social parts may be established based on the resolution of the general shareholders meeting, following the legal provisions in force and the constitutive deed.

3.6. Legal nature

3.6.1. The juridical doctrine prior to the entering into force of the new Civil Code did not extensively investigate the legal nature of the usufruct over the shares and also the guaranty traits of this concept if it related to a repayment undertaking.[7]

3.6.2. Some authors consider that the usufruct over a security is no longer a real right because neither the right from it is originated is not a real right.

Subsequently, the usufruct over a receivable is an ordinary right to use the receivable.[8]

3.6.3. In compliance with other opinion expressed within the current doctrine, the usufruct is a dismemberment of the ownership right. If the right of vote regards operations of administration and conservation of the asset object of the usufruct, the right of vote will belong to the holder of the usufruct; if the right of vote regards operations of disposition over the asset object of the usufruct, the right of vote will be held by the legal owner.[9]

3.6.4. Although the usufruct over the shares (prior to the former Civil Code) was not legally considered a guaranty, the same affirmation may be done in connection to the usufruct over the right of vote based on the new Civil Code.

3.6.5. Regarding the usufruct over the right of vote that secures a repayment obligation towards a creditor (mostly banks), we consider that the usufruct agreement may be notarized by a Public Notary, aiming to become a writ of execution in conformity with the Article 100 from the Law no.36/1995 on the Notaries Public and notarial activity, further amended and completed.

3.6.6. On a basis of the current legislation we may not exclude the possibility to validly sign a usufruct agreement and subsequently to conclude a movable mortgage over the usufruct over the right of vote that is writ of execution, based on the Articles 2347, 1st paragraph, 2389, letter l) and 2431 from the new Civil Code.

But this solution may be bureaucratic because of the two documents that must be signed and most likely it does not reach the requirement of celerity specific to the business milieu.

3.6.7. On the other hand, the solution to be notarized the usufruct agreement is safer and faster because:

(i) the whole content of the agreement shall be previously verified by the Notary Public from the legality standpoint;

(ii) the consent of the signatory parties shall be checked beforehand by the Notary Public;

(iii) any document notarized by a Notary Public that ascertains a certain and exigible

[7] Stanciu D.Carpenaru, *Treatise of Romanian Commercial Law* (Bucharest: All Beck Publishing House, 3rd edition, 2001), 307.

[8] Gabriel Boroi, Carla Alexandra Anghelescu, Bogdan Nazat, *Course Of Civil Law.The Principal Real Rights In Conformity With The New Civil Code* (Bucharest: Hamangiu Publishing House, 2013), 142.

[9] Corneliu Barsan, *Civil Law. The Principal Real Rights Based On The New Civil Code* (Bucharest: Hamangiu Publishing House, 2013), 280-281.

receivable is writ of execution at the maturity date of the receivable;

(iv) the date of the document is out of any doubt;

(v) the notarized agreement will be enrolled with the registry of shareholders-for priority rank issues- so any diligent lender will previously verify this registry We stress that between a guaranty enrolled with the Electronic Archive and the usufruct agreement enrolled with the shareholders registry, the first guaranty shall have priority;

(v) on a basis of the wit of execution, the creditor has the prerogatives to commence the foreclosure if an event of default shall occur.

3.6.8. Having in mind the above, there are many arguments to consider the usufruct agreement as a guaranty except for the publicity formalities within a database aiming to assure the opposability towards any third party. Thus, the legislation regarding the Electronic Archive must be amended in this respect aiming to enable the registration of the usufruct agreement with the Electronic Archive.

4. Relevant clauses/operations that must be included with the usufruct agreement

4.1. The usufruct over the right of vote shall become effective when an event of default- as stipulated by the credit agreement/legal document that ascertains the debt-shall occur. In such a case, the creditor will automatically be entitled to attend the general shareholder meeting and to effectively exert the right of vote.

4.2. The right of vote shall be exerted by the holder of the usufruct in respect to the operations of administration and conservation. The right of vote concerning the operations of disposition belongs to the legal owner of the shares. The distribution of the right of vote in other conditions that these stipulated with the Article 741, 1st and 2nd paragraphs from the new Civil Code is not opposable to the third parties, except for the case when the third parties had expressly acknowledged of these conditions (Article 741, 3rd paragraph from the new Civil Code).

4.3. Regarding the usufruct over the right of vote-as guaranty- the usufruct agreement is advisable to comprise the following clauses:

(i) the holder of the usufruct right undertakes to respect the destination of the asset (the right of vote), except for the case when a fostering of the asset value is assured or the interests of the legal owner are not prejudiced, as provided by the Article 723 from the new Civil Code. It means mean that the holder of the usufruct will exert the right of vote observing the legal provisions in force, the stipulations of the constitutive deed but also his interests as a creditor (disregarding if the interests of the legal owner may be prejudiced), in conformity with the applicable legislation. Such right may be exerted in good faith;

(ii) based on the Article 714 from the new Civil Code, the possibility to be ceded-gratuitously or onerously- the right of usufruct by the holder of the usufruct right; the holder of the usufruct is liable towards the legal owner for the obligations arisen before the assignment of the usufruct; until the notification of the assignment, the holder of the usufruct and the assignee are jointly liable towards the legal owner. After the notification of the assignment, the assignee is liable towards the legal owner in respect to the obligations arisen after the notification. In such a case, the legal provisions regarding the surety are applicable to the holder of the usufruct.

We deem that the onerous assignment of the usufruct may be justified when the creditor has a fast interest to work-out the guaranty.

(iii) based on the Article 725 from the new Civil Code, the holder of the usufruct is responsible to indemnify the legal owner for any prejudice caused by the improper use of the right of vote. This clause is applicable to the situations when the potential prejudices are not linked to the exerting of the right of vote in consideration of defending the creditor's rights;

(iv) based on the Article 726 from the new Civil Code, the holder of the usufruct may be obliged to establish a surety aiming to secure the fulfillment of its obligations. We reasonably consider that such a clause is unsuitable taking into consideration the usufruct as guaranty;

(v) in compliance with the Article 733 from the new Civil Code, the holder of the usufruct bears all the charges and the outlays ensued by the litigations regarding the use of the asset, the picking-up of the fruits and the cashing of the incomes.

We consider that such obligation may be transferred to the legal owner;

(vi) the holder of the usufruct is bound to immediately inform the legal owner in respect to any usurpation of the main asset and to any contestation regarding the ownership right under the sanction to pay indemnifications (Article 734 from the new Civil Code);

(vii) the holder of the usufruct may rent the asset object of the usufruct, based on the Article 715 from the new Civil Code We consider that such clause is unsuitable to be stipulated within the usufruct agreement (as guaranty);

(viii) based on the Article 707 from the new Civil Code, the usufruct is extended over all the accessories (i.e. dividends) of the asset that forms the object of the usufruct;

(ix) the expenses and the charges related to the ownership are incumbent to the legal owner (Article 735 from the new Civil Code).

When such costs are born by the holder of the usufruct, the legal owner is bound to reimburse such costs; when there is an onerous usufruct, the legal owner is obliged to pay the legal interest.

5. Conclusions

5.1. The main directions and the obtained results

5.1.1. The main directions approaches in this study are:

(i) presentation of the relevant differences between the foregoing legal regime regarding the usufruct over the shares and the current juridical regime concerning the usufruct over the right of vote;

(ii) analysis of the legal nature of the usufruct over the right of vote, the main applications of the usufruct over the right of vote and providing legal arguments that the usufruct over the right of vote is applicable to the social parts (specific to a limited liability company) and to the parts of interest (specific to the societies of persons);

(iii) analysis of the form of the usufruct agreement as guaranty;

(iv) the main clauses that must be inserted with the usufruct agreement as guaranty.

5.1.2. The results obtained are:

(i) the usufruct over the right of vote is applicable to a wider range of shares (shares belonging to the joint stock-companies, social parts and parts of interest);

(ii) the notarized form of the usufruct agreement as guaranty confers the quality of the writ of execution that enable the creditor to start the foreclosure. The notarized form better responses to the needs of the companies within the business activity;

(iii) there are many arguments to consider the usufruct over the right of vote as guaranty, except for the opposability towards the third parties.

Given the existing legal framework, such guaranty may be enrolled in the shareholders' register.

Although the shareholders register is legally required only for joint-stock companies and limited liability companies, there is no legal banning to exist such a registry also for the societies of persons.

Such guaranty may be not registered with the Electronic Archive so the priority rank towards the third parties is not wholly assured;

(iv) such guaranty may be used both in sophisticated transactions and in domestic transactions regardless if the creditor is a bank or a different person.

5.2. Envisaged impact of the obtained results

5.2.1. The main novelty consists in the fact that the usufruct over the right of vote may be applicable to a broader categories of companies meaning joint stock-companies, limited liability companies and societies of persons.

5.2.2. The practitioners and theoreticians in cooperation with the business environment should gather their efforts in order to strengthen the status of guaranty of the usufruct over the right of vote and to make lobby aiming to be adjusted the current legislation in respect to the priority rank issues as mentioned with the po.5.1.2. above.

5.3. In respect to the trends of the legal research in the area, the main recommendations are:

(i) to be amended the Civil Code aiming to be expressly regulated the status of the usufruct over the right of vote as a special guaranty applicable to he shares, social parts and parts of interests regardless their form of issuance (materialized or dematerialized).

Subsequently, the same law shall stipulate that the usufruct over the right of vote may be validly concluded through an act under private signature which is writ of execution when it secures a repayment undertaking;

(ii) to be amended the Civil Code with the scope to regulate that the usufruct agreement –when it is concluded as a guaranty- may be enrolled within the shareholders register and within the Electronic Archive, the last registration assuring the priority rank towards any third party (creditors).

GOVERNMENT EMERGENCY ORDINANCE NO. 44/2008 BETWEEN INNOVATION AND CHANGE

Gabriela FIERBINȚEANU[*]

Abstract

The evolution of the regulations standardizing the performance of the economic activity by the natural persons, i.e. associations of family members, is one showing the need for a continuous adaptation to the needs of the society. The proposal contained by this work is far from criticising the regulation manner of these activities, as it rather intends to identify solutions for the practical situations which are sometimes preventing or questioning the access to these forms of organization or the manner of performing the activity.

Keywords: *dedicated assets, insolvency, enterprise, self-employed person, individual enterprise, patrimonial masses.*

1. Introduction

Although at the moment the regulation in force is included in GEO (Government Emergency Ordinance) no. 44/2008 regarding the performance of the economic activities by the self-employed persons, individual enterprises and family enterprises (Official Gazette, Part I no. 328 of 25 April 2008) with its subsequent amendments, we consider it timely to review the reasons and social and economic contexts which have led to constituting the normative documents in this field, in order to be able to create a clearer perspective on the possible causes which currently require the modification of GEO no. 44/2008.After describing the economic context of the GEO (Government Emergency Ordinance) no. 44/2008, the article will point the advantages brought by this regulation and will underline some of the aspects that need to be changed.

2. Short history of the regulations in the field

Although at the moment the regulation in force is included in GEO (Government Emergency Ordinance) no. 44/2008 regarding the performance of the economic activities by the self-employed persons, individual enterprises and family enterprises[1] with its subsequent amendments, we consider it timely to review the reasons and social and economic contexts which have led to constituting the normative documents in this field, in order to be able to create a clearer perspective on the possible causes which currently require the modification of GEO no. 44/2008.

As far back as the publication of Decree Law no. 54/1990 of 05 February 1990 regarding the organization and performance of economic activities based on the free initiative, it seemed important to understand, on the one hand, the need to develop the free initiative in the small industry sectors and services, and on the other hand, the need to identify levers for increasing the extent of workforce use. Thus, at this stage, they have created the legal framework in order for the members of a family with a joint household to be organised in family associations, i.e. for authorising the natural persons to perform independent activities in the services field or for manufacturing certain products (as art. 23 and 25 of the normative document shall further show). At the same time, we cannot omit an important aspect which intervened in a normative document which had appeared after a long period of planned economic hegemony characteristic to the communist period, i.e. the one related to the taxation manner of these activities, as DL 54/1990 stipulated in art. 34 the fact that "the income tax of the family associations and the income tax of the persons authorised to perform an independent activity are established, in a differentiated manner, for each field and depending on the social utility of the activity, with a stimulating and progressive nature, aiming at highlighting the individual and collective initiative, under the conditions of providing the social justice in the field of the personal incomes". Law no. 507/2002[2] regarding the organization and performance of certain economic activities by natural persons, has extended the range of the subjects who can perform the economic activity from citizens residing in Romania to natural persons, Romanian citizens or citizens of the European Union member states and of other states belonging to the European economic area. It has also extended the range of the economic activities to "all fields, jobs and occupations, except for those established or banned by special laws", preserving the recipients of the legal dispositions - natural person or family association. An important comment appears at the

[*] Assistant reasercher, PhD, Faculty of Law, "Nicolae Titulescu" University of Bucharest (e-mail: **gabriela.fierbinteanu@gmail.com**).

[1] Official Gazette, Part I no. 328 of 25 April 2008.

[2] Official Gazette, Part I no. 582/06 August 2002.

same time as this law is adopted, namely that "the natural person that independently and on its own legs performs economic activities, as well as the natural persons that are members of family associations, without implying labour relations towards an employer, have the quality of own employee", without being able to employ persons with an individual labour contract for performing authorised activities (art. 3 of Law no. 507/2002). They have also included conditions regarding the proof of the skill required by the economic activity for which the authorization is requested, and they also clarify the bodies involved in the record keeping of the persons opting for this form of performing the economic activity, so that after obtaining the authorization from the mayors of communes, towns, municipalities, i.e. sectors of the Bucharest municipality, on the territorial range of which the natural persons reside, "the family associations and natural persons independently performing economic activities are obliged to get registered with the trade register and the territorial tax bodies" (art. 10 of Law no. 507/2002). At the time this normative document has appeared, Romania felt the need to simplify and clarify the legislative framework which could provide a solution for increasing the employment extent, considering the fact that, at that time, the workforce demand was under the supply level, and in parallel, the transition period to the market economy implied several employment cuts. Moreover, signing the association agreement of 01 February 1993 in Brussels with the European Communities and their member states (European Agreement ratified by means of Law no. 20/1993) forced Romania to grant a treatment not less favourable than the one granted to their own citizens for the operations performed by the citizens in the Community. Although, at the time Law no. 507/2002 appeared, Romania had ratified, as we have shown, the European Agreement which stipulated the need to cooperate with the Community in order to improve the fundamental aspects leading to a healthy market economy, and in 2002 the Romanian Government had also adopted the European Charter for Small and Medium Enterprises, in which they recommended, without a doubt, to reduce the complexity of the requested documents and procedures applied to the business environment, they needed the intervention of the 2003 Regular Commission's Report on Romania's progress towards accession in this process, in order for a new normative document to appear, i.e. Law no. 300/2004 regarding the authorization of the natural persons and family associations independently performing economic activities[3]. The normative document has reduced the deadlines for solving the authorization request, has instituted a direct communication procedure between the issuer of the authorization (city hall) and the trade register, has extended the notion of "family" to the 4th degree relatives (thus clarifying the range of the persons who can constitute a family association), has eliminated the competence of the delegated judge regarding the verification of the conditions provided by the law for the authorization and issuance of the registration certificate (considering the verification performed by the mayor in order to issue this authorization). Not less importantly, it has maintained the provisions regarding the quality of own employee for the natural person who independently performs economic activities, i.e. for the natural persons who are members of family associations, with the interdiction of employing persons with an individual labour contract for performing activities for which the authorization has been obtained, but has not preserved the tinge regarding the performance of the activities by the natural person on its own legs.

2.1. GEO no. 44/20084 regarding the performance of the economic activities by self-employed persons, individual enterprises and family enterprises - daring normative document

In 2008, the urgency in amending the legislative framework in the field has resulted from the need to reduce bureaucracy, avoid non-unitary interpretations occurring at the level of the local public administrations with attributions in the authorization activity, the need to simplify the authorization and registration process of those who "wish to perform an economic activity under one of its simplest forms", as shown in the preamble of GEO no. 44/2008.

The mentioned ordinance changes the paradigm regarding the recipients of the regulations in the field, and has included besides the self-employed person, also the family enterprise and the individual enterprise as forms by means of which any natural person, Romanian citizen or citizen of another member state of the European Union or European Economic Area, can perform economic activities on the Romanian territory. Anticipating the enforcement of the Civil Code, the normative document operates with the notion of enterpriser and economic enterprise, defining the latter in a manner referring to the exploitation of the enterprise, as regulated by the Civil Code in art. 3 align. 3. Moreover, as a daring provision, it defines the dedicated assets as a distinct fraction of the patrimony of the self-employed person, the holder of the individual enterprise or members of the family enterprise, separated by the general guarantee of their personal creditors.

[3] Official Gazette, Part I no. 576/29.06 2004.
[4] Official Gazette, Part I no. 328/25.04.2008.

As for the difference between the individual enterprise and the self-employed person, this could be achieved upon the emergence of the normative document starting from 2 elements, i.e. firstly from the fact that the self-employed person performs any form of economic activity allowed by the law, mainly using its workforce, while the individual enterprise represents the economic enterprise, without a juridical personality, organized by an enterprising natural person (while the enterpriser was defined by art. 2 letter e) of GEO no. 44/2008 as a natural person organising an economic enterprise), and secondly from the interdiction to employ persons, enforceable in the case of the self-employed person. Moreover, according to art. 19 of GEO no. 44/2008, the self-employed person performs its activity mainly using its workforce and professional skills, and cannot also cumulate the quality of the enterprising natural person, holder of an individual enterprise. One must also mention the fact that, according to the dispositions of the Tax Code enforceable at that time (Law no. 571/2003, with its subsequent amendments and additions), irrespective of the form of organization opted for, the due tax was for the obtained incomes, according to art. 15 of GEO no. 44/2008, while the self-employed person, the holder of the individual enterprise and the representative of the family enterprise was in charge of the single-entry bookkeeping. Although the self-employed person could not employ third parties with a labour contract, it could collaborate, in order to exert the activity for which it had been authorised, with other authorised self-employed persons, enterprisers natural persons, holders of individual enterprises or representatives of family enterprises or with other natural persons or legal entities, while this would not change their acquired legal status. (art. 16 of GEO no. 44/2008).

In order to try a justification of the assessment of the normative document in the very title of this section of the work, we shall add short comments meant to justify the option chosen. The need to easily regulate the economic activities of trading natural persons (currently, according to the Civil Code, professionals or enterprisers, as defined by art. 2 letter e) of GEO no. 44/2008) clearly results from the short review of the manners of field enactment and from looking, at the same time, beyond the wording of the law towards the economic and social realities which should lead to maintaining an alert spirit of the law. The delimitation of this type of activities from those performed by legal entities further to signing partnership deeds which lead to the emergence of structures with a juridical personality under the form of companies is necessitated by their very simplicity and the granting of a possibility for supplementing the incomes of those categories which, for several reasons, do not choose to channel their own entrepreneurial spirit towards constituting more complicated constructions. On the other hand, one must not ignore the situations in which the contractual collaboration with a self-employed person or individual enterprise is the result of a decision of the former employer who prefers such a form of remuneration of the activity to the one resulting from an individual labour contract which implies a more burdening taxation. Creating the individual enterprise has not however observed a main principle, namely the use of one's own workforce or one's own professional skills, allowing the individual enterpriser to turn into a genuine employer who does not perform an economic activity, but organizes an enterprise, at their own risk indeed, bringing it however to the level of a company due to the number of employees and multitude of activities performed, from several fields. In its attempt to "remedy" the treatment difference between a self-employed person and the individual enterprise regarding the possibility of employing third persons with an individual labour contract, the legislator eliminates this modification of juridical regime by means of Law no. 40/2013[5] (for approving Government Emergency Ordinance no. 46 of 11 May 2011 for amending and completing art. 17 of the Government Emergency Ordinance no. 44/2008 regarding the performance of the economic activities by the self-employed persons, individual enterprises and family enterprises, published in the Romanian Official Gazette, Part I, no. 350 of 19 May 2011); thus the new wording of art.17 of GEO 44/2008 becomes "the self-employed person can perform its activity according to the provisions of art. 4 letter a) or can employ, as an employer, third persons with an individual labour contract, signed according to the law". In order to summarise, at this moment, according to the definition given by art. 2 letter i) corroborated with art. 4 letter a) and the above-mentioned text, the natural person, mainly using its own workforce, can individually and independently perform, as a self-employed person, any form of economic activity allowed by the law, or can employ third persons with an individual labour contract (i.e. in developing its activity). The recitals to the draft law approving GEO no. 46/2011[6] as well as the preamble of this latter normative document are almost similar, as the motivation for the occurring modification is related to the impossibility of developing the financing contracts from non-refundable European funds by the self-employed persons, holders of these contracts, as the "business development" is endangered by the impossibility of employing any personnel. We shall not analyse this argumentation but we shall limit ourselves to wondering whether, upon the time of the

[5] Published in the Official Gazette, Part I no. 129 of 11 March 2013.
[6] available at http://www.cdep.ro/proiecte/2011/400/10/4/em580.pdf

amendment, it would not maybe have been timely to renounce one of the two forms under which the enterprising natural person can organise its activity, while exclusively maintaining its self-employed person status, the phrase "mainly using its workforce" being a very fine line, considering the fact that it is very unlikely that the self-employed person does not currently organise in fact an enterprise but only performs an activity[7] .

Moreover, the provisions referring to the need for proving the fulfilment of the professional training conditions, if by means of the special laws, it is necessary to fulfil them, are far from leading to the simplification of the formalities specific to the registration and authorisation of the operation. Under the conditions in which, according to art. 7 of GEO no. 44/2008, the obligation to request the registration with the trade register and the authorization of the operation lies, according to the same normative document, with the natural persons provided by art. 4 letter a) and letter b) and the representative of the family enterprise, prior to the commencement of the economic activity, as self-employed persons, i.e. enterprising natural persons, holders of an individual enterprise or family enterprise, we consider the control performed by the trade register regarding the fulfilment of the conditions provided by special laws to be excessive.

Last but not least, the regulation manner of the dedicated assets determines in practice various interpretations, to which we will return hereinafter, interpretations generating controversies regarding their utility.

2.2. Modification of GEO no. 44/2008 regarding the development of the economic activities by the self-employed persons, individual enterprises and family enterprises

The modification of this normative document finds its justification in several reasons among which we will only deal with a few, resulting from the need to correlate its dispositions with the provisions of the Civil Code and Insolvency Code.

As for the Civil Code, regarding the abrogation of the Commercial Code, one can note a constant preoccupation to replace the term "trader" with the term "professional". Analysing the dispositions of art. 6 and art. 8 of Law no. 71/2011 for the enforcement of Law no. 287/2009 regarding the Civil Code, we consider that, as for GEO no. 44/2008, it would be excessive to change the terminology, at a formal level at least (under the aspect of the registration obligation with the trade register)[8] from the interpretation of the above texts, being at most, as a modification of the text, in the presence of the natural person subject to the registration with the trade register.

In relation to the Civil Code, one must however adjust the temporary or occasional nature of the economic activity, as mentioned in the wording of art. 6 align. 1 of GEO no. 44/2008 to the notion of economic enterprise, as an "economic activity performed in an organised, permanent and systematic manner", as defined by art. 2 letter f) of the normative document and in the dispositions of art. 3 align. 3 of the Civil Code regarding the exploitation of the enterprise as a systematic exertion of an organised activity. It is perfectly true that an economic activity taking place temporarily without its registration and authorisation with the trade register can generate confusion, but we opine that the wording of the ordinance could separately deal with the operations taking place in a temporarily limited manner. Moreover, the wording of GEO no. 44/2008 has a different perspective in approaching the acquirement of the "trader" quality of the natural person and of the manner in which the insolvency of the self-employed person, i.e. of the individual enterpriser, is dealt with. Although the enterprising natural person, holder of the individual enterprise, is a trading natural person since the date he was registered with the trade register, according to art. 23, the regime enforceable in the case insolvency intervenes, is not differentiated in its case, as it happens in the case of the self-employed person, for whom it is inferred that, although registered with the trade register, may not have the trader quality[9] , in which case creditors shall execute their claims according to the general law (art. 20 GEO no. 44/2008). The dispositions to which we refer should also be correlated with the new legislation in the field of insolvency which considers, according to art. 38 align 2 letter f), the enforcement of the simplified procedure also to the persons performing activities specific to professionals, without having obtained the authorization requested by the law for exploiting an enterprise and without being registered in the special advertising registers, as such a situation must be sanctioned, so that it would not be perpetuated. One must add that, up to the modification of the insolvency legislation by means of Law no. 85/2014, the courts of law have considered it necessary to open the simplified insolvency procedure, starting from the wording of art. 1 align 2 which provided the enforcement of the simplified procedure also in the case of traders, natural persons, acting individually (i.e. even unregistered with the trade register). In this respect, the court has assessed that "one of the conditions requested by the law in order for somebody to be a trader is for them to act independently, at their own risk and responsibility",

[7] V.Nemeș, Drept Comercial, Ediția a doua revizuită și adăugită, Ed.Hamangiu, 2015, p 31.
[8] S.Angheni, Drept comercial.Profesioniștii- comercianți, ed.Ch.Beck, București, 2013, p.8.
[9] for details see Gh.Piperea, Introducere în dreptul contractelor profesionale, Ed.CH.Beck, București, 2011, p.27.

as the "individual" criterion differentiates the two theses of art.1 align 2 letters a) and b) of Law no. 85/2006 (see in detail civil decision no. 900 of 15 June 2015 of the Cluj Court of Appeal, Civil Section II, Contentious Administrative and Tax Matters, published in the Bulletin of the Insolvency Procedures no. 12917/20.07.2015).

As for the dedicated assets, the normative document has offered a comprehensive definition, within art. 2 letter j), showing that they represent the "entirety of assets, rights and obligations of the self-employed person, holder of the individual enterprise or members of the family enterprise, dedicated to the purpose of exerting an economic activity, constituted as a distinct fraction of the patrimony of the self-employed person, holder of the individual enterprise or members of the family enterprise, separated by the general guarantee of their personal creditors". Skipping the observation regarding the lack of dispositions mentioning the manner of constituting and declaring the dedicated assets with the trade register (in the case of the self-employed persons or individual enterprises), while the only landmark is the incorporation agreement indicated in the case of the family enterprises (according to art. 30 of GEO no. 44/2008 by means of the incorporation agreement of the enterprise, its members can stipulate the incorporation of such a patrimony), we consider that it is essential, in the case of declaring such a patrimony, to fully understand the manner of positioning the personal creditors and those whose claims have emerged in relation to the "professional" obligations of the trader, as well as the compatibility of the ordinance dispositions with those of the Civil Code. As shown in the doctrine, the dedicated assets can be regarded as a "patrimony organizing technique", a manner of limiting the holder's responsibility for the obligations assumed in developing his economic or professional activity[10]. According to the Civil Code, art. 31 align 1, the patrimony includes all rights and debts assessable in money belonging to their owner, natural person or legal entity, and can be subject, according to align 2, to division or dedicated assets in the cases and conditions provided by the law. From the analysis of the definition contained by GEO no. 44/2008, for the correlation with the dispositions of the Civil Code, we believe that, for the sake of the text accuracy, the assets must be removed from this definition, considering the fact that the patrimony exclusively implies rights (i.e. possibly, rights of the assets dedicated to the economic activity). According to the Civil Code, dedicated assets are fiduciary patrimonial masses, patrimonial masses dedicated to exerting an authorised profession, as well as other legally determined patrimonies (art. 31 align 3 of the Civil Code). As for relating to the joint guarantee of the creditors, according to art. 2324 Civil Code align 3, while maintaining the hypothesis of patrimony separation regulated by art. 31 Civil Code, "the creditors whose claims have emerged in relation to a certain division of the patrimony, authorised by the law" initially aim at the goods which are the subject of that patrimonial mass, and if these are not enough to satisfy the claims, they can aim at the other assets of the debtor. In this respect, it has been assessed by the courts of law that a debt held by the contesting creditor against the holding self-employed person must be recovered by all means of execution, exerted also on the personal patrimony of the natural person, while there is an identity between the natural person and the self-employed person, as it is about one and the same natural person, "the distinction occurring by adding the term PFA (self-employed person) to the name of the natural person only being determined by the authorisation and registration form imposed by the law, so that the natural person could perform an economic activity" (County Court decision no. 894 of 23 September 2015, Beiuș District Court, text available at http://rolii.ro/). One must very clearly mention that the text does not limit the prosecution to a certain patrimonial mass but only establishes the prosecution order. As also mentioned in the specialised literature[11] in the case of the dedicated assets regulated by GEO no. 44/2008, there is no advantage awarded to the patrimonial divisions dedicated to the exertion of an authorised profession, situation in which the creditors whose debts have emerged in relation to the respective profession cannot aim at the other assets of the debtor (art. 2324 align 4). An interesting, however objectionable interpretation of art. 20 align 1 of GEO no. 44/2008, especially if we consider the very definition of the dedicated assets contained by GEO no. 44/2008, can be found in the considerations of the Timișoara Court of Appeal when pronouncing the recourse against civil sentence no. 2894/24.10.2013 of the Arad District Court (available at http://legeaz.net/spete-drept-comercial/procedura-insolventei-jurisprudenta-faliment-2894-2013) which mentions that "after grammatically examining the disposition in this article, one finds that the legislator has not included in the content of the provision any reference to the natural person, as a distinct subject of law, but has stated that only the self-employed person is responsible for its obligations with the dedicated assets, and if this is insufficient or accepting that it has not been constituted in any way, shall also be responsible with the fraction of the patrimony which has not been dedicated to the economic activity, while it has

[11] St.D.Cărpenaru, Tratat de drept comercial român, Ed.a IV a, actualizată, Ed.Universul juridic, 2014, p 43, C.Gheorghe, Drept comercial român, Ed.C.H.Beck, București, 2013, p 94.

however been about "its" patrimony, i.e. of the self-employed person".

3. Conclusions

Draft Law no.377-2008[12] approving Government Emergency Ordinance no.44 / 2008 regarding the performance of the economic activities by the self-employed persons, individual enterprises and family enterprises represents an opportunity for the legislator to adjust the text to the changed realities and to clarify the distinction between individuals enterprises and self employed person as we pointed is needed.Simplifying administrative procedures, interconnection with Civil Code and Insolvency Code and also refreshing the text in regard of the new concept of enterprise should also be objectives to remember.

ALTERNATIVE DISPUTE RESOLUTION

Mihaela Irina IONESCU[*]

Abstract

Alternative dispute resolution (ADR) includes dispute resolution processes and techniques that act as a means for disagreeing parties to come to an agreement short of litigation. It is a collective term for the ways that parties can settle disputes, with (or without) the help of a third party.

Despite historic resistance to ADR by many popular parties and their advocates, ADR has gained widespread acceptance among both the general public and the legal profession in recent years. In fact, some courts now require some parties to resort to ADR of some type, before permitting the parties' cases to be tried.

The rising popularity of ADR can be explained by the increasing caseload of traditional courts, the perception that ADR imposes fewer costs than litigation, a preference for confidentiality, and the desire of some parties to have greater control over the selection of the individual or individuals who will decide their dispute.

Directive 2013/11/EU of the European Parliament and of the Council on alternative dispute resolution for consumer disputes and amending Regulation (EC) No 2006/2004 and Directive 2009/22/EC (hereinafter „Directive 2013/11/EU") aims to ensure a high level of consumer protection and the proper functioning of the internal market by ensuring that complaints against traders can be submitted by consumers on a voluntary basis, to entities of alternative disputes which are independent, impartial, transparent, effective, simple,quick and fair.

Directive 2013/11/EU establishes harmonized quality requirements for entities applying alternative dispute resolution procedure (hereinafter "ADR entity") to provide the same protection and the same rights of consumers in all Member States.

Besides this, the present study is trying to present broadly how are all this trasposed in the romanian legislation.

Keywords: *alternative dispute resolution, complaints, consumers, EU regulation, national legislation.*

At present, at **European Union** level, differences between Member States regarding complaints systems both in terms of sectors covered by these and quality procedures are noticed. These differences represent a barrier to the internal market and is one of the reasons why many consumers do not purchase goods and services from another Member State and do not have confidence that potential disputes with traders could be solved in an easy, quick and inexpensive manner. Given these issues, it was considered important to implement common principles in all Member States for solving consumer complaints.

In this regard, in May 2013, *Directive 2013/11/EU of the European Parliament and of the Council on alternative dispute resolution for consumer disputes and amending Regulation (EC) No 2006/2004 and Directive 2009/22/EC (Directive on consumer ADR)* and *Regulation (EU) no 524/2013 of the European Parliament and of the Council of 21 May 2013 on online dispute resolution for consumer disputes and amending Regulation (EC) No 2006/2004 and Directive 2009/22/EC (Regulation on consumer ODR)* were adopted.

*Directive 2013/11/EU of the European Parliament and of the Council on alternative dispute resolution for consumer disputes and amending Regulation (EC) No 2006/2004 and Directive 2009/22/EC (*hereinafter „Directive 2013/11/EU") aims to ensure a high level of consumer protection and the proper functioning of the internal market by ensuring that complaints against traders can be submitted by consumers on a voluntary basis, to entities of alternative disputes which are **independent, impartial, transparent, effective, simple,quick and fair**.

Directive 2013/11/EU establishes **harmonized quality requirements** for entities applying alternative dispute resolution procedure (hereinafter "ADR entity") **to provide the same protection and the same rights of consumers in all Member States**.

The Directive requires Member States to facilitate consumer access to procedures for alternative dispute resolution (hereinafter 'ADR procedures') in case of national disputes and cross-border referring to contractual obligations in contracts for sales or contracts for services in all commercial sectors. In this respect the following requirements that the ADR entities must meet are established:

- **expertise**, **independence** and **impartiality**: the natural persons in charge of ADR should possess the necessary expertise, including a general understanding of law and be independent and impartial;
- **transparency**: ADR entities should make publicly available on their websites, on a durable medium upon request, and by any other means they consider appropriate, clear and easily

[*] Lector, PhD, "Nicolae Titulescu" University of Bucharest (e-mail: **mihaelairinaionescu@anpc.ro**).

understandable information on the entity and the procedure;

- **effectiveness:** ADR procedures should be effective by fulfilling certain requirements such as the procedure to be available and easily accessible online and on paper for both parties irrespective of where they are, to be free of charge or at moderate costs for consumers, the outcome of the ADR procedure to be available to the parties within 90 calendar days of the date on which the ADR entity has received the complaint;

- **fairness:** in this respect criteria that ADR procedure must meet are established, such as: the parties have the possibility of expressing their point of view, of being provided by the ADR entity with the arguments, evidence, documents and facts put forward by the other party, any statements made and opinions given by experts, and of being able to comment on them; the parties are notified of the outcome of the ADR procedure in writing or on a durable medium, and are given a statement of the grounds on which the outcome is based;

- **liberty:** an agreement between a consumer and a trader to submit complaints to an ADR entity is not binding on the consumer if it was concluded before the dispute has materialised and if it has the effect of depriving the consumer of his right to bring an action before the courts for the settlement of the dispute.

In order to provide an effective tool for solving consumer complaints when purchasing goods and services online and that the ADR procedure to be available and easily accessible online to both parties, Regulation no. 524/2013 provides for an online dispute resolution platform (hereinafter 'ODR platform') so that consumers and professionals benefit of a single point of entry for online alternative dispute resolution through ADR entities that are connected to the platform.

From the IT perspective, the ODR platform will be an interactive website, free of charge and available in all official languages of the European Union. This platform: will provide a complaint form to be completed and submitted online by the applicant; will inform the defendant about the complaint; will identify relevant ADR entities, etc. Therefore the Directive 2013/11/EU and Regulation (EU) no. 524/2013 are two interrelated and complementary legislative instruments.

To ensure that ADR entities meet the quality requirements, the Directive provides for the designation of one or more **competent authorities**, and the appointment of a competent authority as a **contact point** for the European Commission.

Currently, in Romania, in disputes between consumers and traders, when both traders and consumers are resident in Romania, consumers may contact:

a) public authorities in charge of consumers protection, such as National Authority for Consumers' Protection, Ministry of Transport, Ministry of Health, National Authority for Management and Regulation in Communications, National Tourism Authority which solve the complaints free of charge;

b) mediators, according to Law no. 192/2006 regarding mediation and the mediation profession;

c) courts.

In case of cross-border disputes between consumers and traders, consumers may contact the European Consumer Centre. European Consumer Centres Network is a network established at EU level in order to strengthen consumer confidence, advising Europeans on consumer rights and facilitating the resolution of the problems in an amiable way.

Transposition and implementation in Romania

The Directive 2013/11/EU was transposed into national legislation by *Government Ordinance no 38/2015 regarding alternative dispute resolution between consumers and traders* (hereinafter "GO no 38/2015").

GO no 38/2015 establishes the legal framework in order to allow consumers to submit voluntarily complaints against traders to ADR entities that solve them in an independent, impartial, transparent, effective, fast and fair manner. GO no 38/2015 takes over all the quality requirements imposed by the Directive 2013/11/EU.

According to the national legislation, an ADR entity may propose a solution that will become binding on the parties if it is accepted by both parties and/or impose a solution which is binding on the parties. If the ADR entity offers both solutions, it is the consumer who chooses if the entity proposes or imposes a solution. GO no 38/2015 stipulates that ADR entities designate natural persons who meet the conditions of expertise, independence and impartiality to conduct ADR procedures.

Considering the provisions of point 24 of the recital of the Directive according to which ADR entities can function "within the framework of national consumer protection authorities of Member States where State officials are in charge of dispute resolution. State officials should be regarded as representatives of both consumers' and traders' interests.", GO no 38/2015 provides that ADR entity may be any central government authority or autonomous administrative authority with responsibilities in consumer protection field. Therefore, excepting the financial area, ADR procedures can be performed only by central authorities or autonomous administrative authorities. In this way it was meant to ensure that principles of independence and impartiality are respected, given that point 41 of the recital of the Directive provides: "ADR procedures should preferably be free of charge for the consumer. In the event that costs are applied, the ADR procedure should be accessible,

attractive and inexpensive for consumers. To that end, costs should not exceed a nominal fee."

Thus, any other entity, except public institutions, would have to obtain funds, most likely from traders to operate and impartiality and independence would be very difficult to guarantee.

Setting up ADR entities

An ADR entity will be set up within the National Authority for Consumers Protection. This entity will be impartial and independent of the market surveillance and control activities. The entity will be run by a Director and 25 employees will be implied in the procedures. The procedures carried out by this entity will ensure coverage of all the country and will also cover all the fields of activity, except if other specialised ADR entities are set up.

For the financial field, given its complexity and the impact of banking services on consumer, a Centre for Alternative Dispute Resolution in the banking system was set up. The work of this centre is coordinated by a Steering College. The Steering College is composed by a representative of National Bank of Romania, of National Authority for Consumers' Protection, of Romanian Banking Association, of a consumer association and an independent person.

Centre for Alternative Dispute Resolution in the Banking system (CSALB) is an autonomous legal entity, governmental, apolitical, non-profit, public interest legal person with a mission to organize, manage and monitor settlement through ADR procedures, disputes between consumers and traders whose activity is regulated, authorized and supervised / monitored by National Bank of Romania, as well as subsidiaries of traders carrying out activities in Romania in banking.

ADR Center main duty consists in organizing, managing and monitoring resolve disputes through ADR procedures or internationally, arising from contracts for provision of services between consumers and traders mention in Article 1. (3).

Disputes have an international character when the consumer is domiciled or habitually resident in another state in the European Union or the European Economic Area, as well as the territory of the Swiss Confederation, when concluding the contract service for the merchant of Romanian nationality, or performing activities on Romania's territory.

Consumers may submit the dispute for ADR ADR procedures administered by the Center if they prove that, previously, have tried to settle the dispute directly with the trader in question.

ADR procedures organized by CSALB runs out of court intervention and consist of a conciliator who, depending on the procedure chosen by the consumer, may propose or impose a solution on the parties. ADR procedures organized by CSALB are voluntary, independent, impartial, transparent, effective, fast and fair.

Organization and Alternative Dispute Resolution Rules are governed by the ADR procedure completed with the suggested solution on the ADR procedure and rules finalized by imposing a solution.

ADR procedure completed with suggested solution, further called conciliation procedure is optional for parties and reliance on it is established at the initiative of consumer merchant agreement formulated during trying binding settlement of the case together with the merchant directly.

The procedure does not involve its continuation through a judicial or arbitral procedure, if the parties' agreement does not register on the solution proposed by the conciliator, or achieved only a partial understanding in this regard.

Either party may at any time withdraw from the procedure.

When the parties agree to resort to conciliation organized and managed by ADR Center, by that very fact they accept the rules.

Parties must personally participate in the proceedings.

The consumer may be assisted or represented, if necessary, by a representative of the association of consumers who belongs or a lawyer whose fees support it.

The trader participate through a legal representative by a legal adviser or lawyer whose fees support it.

The procedure is free only for the consumer.

ADR procedure completed with imposing a solution is described as arbitration, organized and managed by ADR Center

ADR Center as permanent arbitration institution, operates in compliance with Government Ordinance no.38 / 2015 on alternative disputes between consumers and traders, Directive 2013/11 / EU on Alternative Dispute Resolution in consumer and amending Regulation (EC) nr.2006 / 2004 and Directive 2009/22 / EC of the civil procedure Code in force and the Regulation for the organization of the Centre for alternative Dispute Resolution in Banking and functioning of the Steering College.

The person in the list of conciliators established by ADR Center, appointed or chosen in a dispute in which the parties have opted for the ADR procedure completed with an imposed solution acquires in that dispute, an arbitrator.

ADR Center organizes dispute settlement arbitration proceedings if the parties have concluded this compromise.

If by compromise, the parties have entrusted the Centre ADR settlement of the dispute through an ADR procedure finalized by imposing a solution by itself this fact the parties have accepted the application of these Rules of Procedure.

The arbitration may be entrusted by the compromise concluded, one or more people invested

sides to hear the case and deliver a final and binding on them.

The sole arbitrator or, where appropriate, the three referees invest constitute, in the present rules, the arbitral tribunal.

Settlement of the dispute lies with the arbitral tribunal that hears in full independence and impartiality and pronounces a final and binding on the parties. The decision is enforceable under the provisions of the Civil Procedure Code.

Under the nullity of the arbitral decision, the entire arbitration procedure must ensure equal treatment of the parties, the right to defense and contradictory debates.

ADR Center, the arbitral tribunal, the Secretariat of the Center ADR procedure and its entire staff are obliged to ensure the confidentiality of arbitration. The case file is confidential and no foreign person does not have access to it without the consent of the parties and the arbitral tribunal prior approval.

Arbitral awards may be used for statistical purposes or information in cooperation work of the competent authorities under the Regulation of organization the Centre for Alternative Dispute Resolution in Banking and functioning of the Steering College and other entities ADR on legal issues arising in litigation without mention of the name / designation of the parties or data that might harm their interests.

The parties have a duty to exercise their procedural rights in good faith to cooperate with the arbitral tribunal for the development of corresponding arbitral process and its completion within the deadline.

At any stage of the dispute, the arbitral tribunal will try its solution based on agreement of the parties.

Nevertheless, any public authority or autonomous administrative authority may set up ADR entities in their field of activity.

As competent authority and contact point with the European Commission the Ministry of Economy, Trade and Businesses was designated.

Currently, measures are being taken in order to ensure that ADR entities are set up and function at the beginning of 2016.

Conclusions

Romanian legislation transposing Directive 2013/11/EU is recent, the implementation process is not completed yet, so until the effective functioning of the system of alternative dispute resolution involved are still steps to go.

In this respect it is necessary, besides the actual existence of the legal framework, to take place and a more ample information, more extensive, on this new activity, especially in the legal professions.

ISSUERS OF FINANCIAL INSTRUMENTS

Cristian GHEORGHE[*]

Abstract

The rules laid down by Romanian Capital Market Law and the regulations put in force for its implementation apply to issuers of financial instruments admitted to trading on the regulated market established in Romania. But the issuers remain companies incorporated under Company Law of 1990. Such dual regulations need increased attention in order to observe the legal status of the issuers/companies and financial instruments/shares.

Romanian legislator has chosen to implement in Capital Market Law special rules regarding the administration of the issuers of financial instruments, not only rules regarding admitting and maintaining to a regulated market. Thus issuers are, in Romanian Law perspective, special company that should comply special rule regarding board of administration and general shareholders meeting.

Keywords: *capital market, investments, issuers, regulated market, shareholders protection.*

1. Introduction

Romanian legislator has chosen to implement in Capital Market Law (no 297/2004) special rules regarding the administration of the issuers of financial instruments, not only rules regarding admitting and maintaining to a regulated market. Therefore Chapter VI of the Romanian Capital Market Law contains special provisions regarding the companies admitted to trading.

Thus issuers are, in Romanian Law perspective, special company that should comply special rule regarding administration and decisions in general shareholders meeting.

From the beginning, the Romanian Capital Market Law was designed as a comprehensive code for its field. Therefore this law encompasses not only everything about capital market but companies rules too.

As it happens in banking or assurance field, overregulation of the special purposes companies (i.e. banks or assurance companies) is expected and detailed. Adequate capital, exclusive activity object, elaborate prudential requirements and administrative supervision, all these are in place in order to protect such companies. Capital Market Law uses all these mechanisms when it comes to investments firms. In European Union these companies are the intermediaries, legal persons whose regular occupation or business is the provision of one or more investment services to third parties, the performance of such investment activities on a professional basis[1]. All these regulations find their place in Capital Market Law but the situation is different for the issuers.

The originality of the Romanian Capital Market Law stands in its option to put a genuine layer of regulation on the general rules of joint stock companies, for all listed companies. Such layer of regulation addresses sensible issues for companies traded on regulated market: shareholders' rights and equitable treatment of shareholders, clear rules for shareholders meetings and advanced framework for directors' appointment. All these regulations ensure the basis for an effective corporate governance background. In this way the Romanian Capital Market Law adheres to OECD Principles of Corporate Governance in an applied manner. Inspired of these principles the Romanian legislator enhanced the regulation of the issuers with special rules, unknown for the rest of the companies[2].

2. Special provisions. General Meetings.

In order for the General Meeting of Shareholders to be legally convened the directors should communicate the reference date which is an important issue for exercising the shareholders' rights: only the persons who are registered as shareholders at the reference date shall participate and vote in the General Meeting of Shareholders. The reference date may not be more than thirty days prior to the date of the general meeting to which it applies[3].

The general meeting shall be convened by the board of administration or executive board according to the provisions of the incorporating instrument, but the time allowed until the meeting may not be shorter than 30 days from the publication of the calling. Nevertheless this time limit shall not

[2] OECD Principles of Corporate Governance, http://www.oecd.org/daf/ca/corporategovernanceprinciples/31557724.pdf

[3] Law no. 297/2004, Art. 243 para (4). Company Law (Art. 123 para 2), prescribes that the reference date will be no more than 60 days before the date the general meeting is called for the first time.

apply for the second or any further call of the general meeting caused by the fact that the quorum necessary for the meeting called for the first time was not formed, provided that no new item was added to the agenda and at least ten days lapsed between the final call and the date of the general meeting[4].

Attendance right and proxy voting. The access of the shareholders entitled to participate in the general meeting of the shareholders is allowed by proving their identity (valid ID is requested only) in the case of natural person shareholders. In the case of legal persons (or natural person representing shareholders) the access is allowed by the power of attorney granted to the natural person representing them. Such provisions prevent the company to obstruct in any way the general meeting attendance under specific consequences: if a shareholder who meets the legal requirements is prevented from participating in the general meeting of shareholders, any person concerned has the right to request the court to annul the resolution of the general meeting of shareholders[5].

The Capital Market Law assents that shareholders may be represented in the general meeting of shareholders also by persons other than the shareholders, based on a limited or general proxy.

There are special regulations depending on the type of power of attorney. The limited proxy may be granted to any person for representation purposes in one general meeting and shall contain specific voting instructions from the issuing shareholder. Such limited proxy may be granted to the company's directors and clerks too[6].

General proxy are accepted by law in shareholders' general meetings but with specific provisions regarding the conflict of interest. Thus the shareholder may grant a valid proxy for a period which shall not exceed three years, allowing its proxy holder to vote in all aspects (even regarding acts of transfer of ownership) debated in the general meetings of shareholders (even of more companies, identified in the proxy) provided that the proxy is given by the shareholder, as client, to an investment firm or to a lawyer. Conflict of interest rule prevents the shareholders to be represented in the general meeting of shareholders, based on a general proxy, by a person who is in a situation described in any of the following cases: a) such person is a majority shareholder of the company, or another entity, controlled by that shareholder; b) such person is a director or a member of a management or supervisory body of the company, of a significant shareholder or controlled entity; c) such person is an employee or auditor of the company or of a significant shareholder or of a controlled entity; d) such person is the spouse or relative of any of the natural persons abovementioned[7].

The powers of attorney may not be transmitted. Thus the proxy holder may not be substituted. If the proxy holder is a legal person, then its powers may be exercised through any person belonging to its board of directors or executive board, or its employees.

Remote attendance (by means of electronic communication) and vote by correspondence. Romanian Capital Market Law is favorable to remote participation in general meetings and voting by mail.

Listed companies may allow their shareholders to participate in the general meeting in any form through electronic communication. Of course, such means should be implemented by companies first.

Even proxy holders may be appointed and revoked through electronic communications. If such advantages depend on company's willingness to implement them voting by mail will be compulsory for listed company. Consequently companies shall prepare procedures which shall give the shareholders the possibility to vote by mail, prior to the general meeting. If resolutions requiring a secret ballot are on the agenda, the vote by mail shall be cast in a manner that prevent disclosure to anyone but to the persons in charge with counting the secret ballots, at the moment when the other secret ballots (from the attending shareholders or by the representatives of the shareholders participating in the meeting) are also cast[8].

The vote cast personally or by proxy prevails to vote by mail. If the shareholder casting its vote by correspondence happens to participate (personally or by proxy) in the general meeting, the vote cast by correspondence shall be cancelled[9].

3. Special provisions. The increase of the share capital.

Company Law provides general rules regarding capital increase: rules regarding shareholders' resolution in the framework of the

[4] Law no. 297/2004, Art. 243 para (1). Company Law (Art. 117 para 2, Art. 118 para 2), prescribes that the second meeting may be indicated from the beginning in the call but, if the day for the second meeting is not indicated in the calling published for the first meeting, the period for the meeting may be reduced to 8 days.

[5] Law no. 297/2004, Art. 243 para (5). Such right is not expressly recognized under Company Law.

[6] Company Law forbids such operations (Art. 125 para 5). The directors of the company and its clerks may not represent the shareholders if, without their votes, the required majority would not have been met.

[7] Law no. 297/2004, Art. 243 para (6).

[8] Ibidem.

[9] Law no. 297/2004, art. 243 para (9).

extraordinary general meeting, conditions regarding quorum and bailout for approval of the motion, preemptive rights and rules for the share capital increases by in kind contribution[10].

Issuers of financial instruments traded on regulated market face a new layer of regulation represented by special provisions included in the Capital Market Law which derogate from the Company Law.

Any increase in the share capital shall be decided by the extraordinary general meeting of shareholders. Nevertheless, the administrators may decide, following the delegation of duties, the increase in the share capital[11]. Such delegation of duties shall be granted by the instruments of incorporation or the extraordinary general meeting which may authorize the increase in the share capital up to a maximum level. Such competence shall be granted to administrators up to a limit of capital level and for maximum one year (the delegation may be renewed by the general meeting for a period which may not exceed one year for each renewal).

Following the principle of symmetry, the resolutions adopted by the administrators in the exercise of the duties delegated by the extraordinary general meeting of shareholders shall have the same regime as the resolutions of the general meeting of shareholders (as regards their publicity and the possibility to be challenged in court)[12].

Capital Market Law establishes special and restrictive conditions for the share capital increases by in kind contribution and the annulment of the shareholders' preemptive right to subscribe new shares if the share capital is increased.

Capital increase by in kind contribution. In the view of the Capital Market Law the share capital increase by in kind contribution is an unusual operation for a company traded on a regulated market. Therefore the law put in force almost impossible demands: the share capital increases by in kind contribution shall be approved by the extraordinary general meeting of shareholders attended by shareholders representing at least 85% of the registered share capital and with the vote of the shareholders representing at least ¾ of the voting rights.

The contribution in kind shall be evaluated by independent experts and the number of shares allotted as a result of the in kind contribution shall be determined as a ratio between the value of the contribution, established by experts and the highest value established between: i) the market price of a share, ii) the value per share calculated based on the net asset book value and iii) the face value of the share[13]. And in the end, the in kind contributions may consist only of new and efficient assets required to conduct the company's activity.

Annulment of the shareholders' preemptive right. The annulment of the shareholders' preemptive right to subscribe new shares, if the share capital is increased, shall be decided in the extraordinary general meeting of shareholders attended by shareholders representing at least 85% of the share capital subscribed, and with the vote of the shareholders holding at least ¾ of the voting rights. Those shares disallowed to shareholders shall be offered for subscription by the public, in compliance with the provisions on public offers. The number of shares shall be determined using the same algorithm put in force for in kind contribution, respectively a ratio between the value of capital increase and the highest value established between: i) the market price of a share, ii) the value per share calculated based on the net asset book value and iii) the face value of the share[14]. The law seems unclear in this point but it should be construed as referring to the price of the shares publicly offered. That means the offer price shall not be less than either of the prices above mentioned.

4. Registration/Record date.

The shareholders which shall benefit from dividends or other rights granted by the resolutions of the general meeting of shareholders shall be established by such resolution by setting a registration date (record date). Such date shall be at least ten working days subsequent to the date of the general meeting of shareholders.

After the declaring of dividend, the general meeting of shareholders shall also establish the time limit within which it shall be paid to the shareholders. Such time limit shall not exceed six months from the date of the general meeting of shareholders declaring the dividends[15]. The Company Law has a different approach. In its view the shareholders entitled to exercise their rights in a general meeting of shareholders (access, vote) are the same with the shareholders who shall benefit from dividends or other rights which are affected by

[10] Law no 31/1990, Art. 210-221.

[11] Law no. 297/2004, Art. 236 para (1)-(2). Company Law provides that such delegation shall be granted by the instruments of incorporation for a period of time up to five years and for an increase value up to a half of the registered value of the share capital (Law no 31/1990, Art. 221[1]).

[12] Ibidem, Art. 236 para (3).

[13] Law no. 297/2004, Art. 240 para (2)-(4). Company Law states no special condition for the adoption of resolutions concerning the capital increase by in kind contribution (Law no 31/1990, Art. 215).

[14] Law no. 297/2004, Art. 240 para (1), (5). Company Law states regarding the annulment of the shareholders' preemptive right that such operation shall be decided in an assembly attended by shareholders representing at least 75% of the share capital subscribed, and with the vote of the shareholders holding at least 1/2 of the voting rights present or represented in the assembly. (Law no 31/1990, Art. 217).

[15] Law no. 297/2004, Art. 238.

the resolutions of the general meeting of shareholders[16].

5. Directors' election.

Election of directors follows an electoral voting system. The voting system put in force by the Company Law adheres to majority rule: all the directors from the board of directors are elected in the ordinary shareholders meeting with the vote of the shareholders holding at least a half plus one vote of the voting rights exercised in the meeting. Such majority rule assigns all seats of the board to a shareholder or shareholders who have obtained the majority[17].

As an alternate to majoritarian method the Capital Market Law accepts a proportional representation system by which divisions in shareholders' structure are reflected proportionately in the elected body (board of directors)[18]. The system used by the Romanian Capital Market Law is cumulative voting[19].

The members of the board of directors of the companies admitted to trading on a regulated market may be elected by cumulative vote. This method shall be mandatory at the request of any significant shareholder (which holds over 10% stake).

A cumulative voting system permits voters in an election for more than one seat council to put more than one vote on a preferred candidate (usually the cumulated votes are the shareholders' votes, attached to the shares, multiplied by the number of seats of the board). In order to work out such a system, any company where the cumulative vote method is applied shall be managed by a board of administration consisting of at least five members[20]. It is expected that voters in the minority concentrate their votes to a preferred candidate and increase their chances of obtaining representation in board of directors.

The application of the cumulative vote method is established by Financial Supervisory Authority (FSA – the Romanian supervisory body for capital market) regulation[21]. This regulation solves the weak points of the procedure: the number of elected seats and the dismissal procedure.

A shareholder or shareholders holding individually or together at least 5% of the share capital or a smaller share, if the instruments of incorporation so provide, may request at most once a year the call of a general shareholders meeting having on its agenda the election of the board of directors through the cumulative vote method[22].

The cumulated votes to which each shareholder is entitled are the votes obtained by multiplying the votes held by any shareholder, according to participation in the share capital, with the number of directors that will form the board of directors. The directors in function at the date of the general shareholders meeting shall be included in the list of candidates for the new board of directors and those one which are not reelected in the board of directors through cumulative vote are considered revoked. The application of the cumulative vote method requires the election of the entire board of directors, comprising of at least five members, in the same general shareholders meeting[23].

In exercising their cumulative votes, the shareholders may grant all the cumulated votes to a single candidate or to several candidates. The candidates who have been assigned most cumulated votes during the general shareholders meeting shall be declared elected members of the board.

6. Conclusions

The Romanian Capital Market Law (no 297/2004) was designed as a broad code for capital market. Therefore this law encompasses about everything about capital market, even special rules designed for issuers, companies traded on regulated market. The current trend in Romanian capital market rules reversed and now we observe a process of fragmentation of the Capital Market Law. Undertakings for collective investment in transferable securities (UCITS) and investment management companies are now subject of the Law No. 10/2015 approving Government Emergency Ordinance No. 32/2012 and the correspondent rules from the Capital Market Law have been repelled.

The issuers of the financial instruments are undertakings from very different fields, joint stock companies incorporated under Company Law. Strictly speaking the issuers are not subject of the Capital Market Law, but their titles are.

In this light the regulation of the listed company within the framework of the Capital Market Law is not necessary. These companies, the issuers, remain undertakings functioning following the rules laid down by the Company Law. Rules on

[16] Law no 31/1990, Art. 123.
[17] Majoritarian method is the only method accepted by Company Law (Law no 31/1990, Art. 112).

administration of the issuers and financial instruments will have the same fate as UCITS: they will be put outside the Capital Market Law.

The project of a unique Capital Market Code seems to be an illusion as FSA (Romanian Financial Supervisory Authority) prepared a draft[24] for a new law in order to segregate issuers and market operation from the Capital Market Law.

IN-DEPTH ANALYSIS OF THE HISTORICAL TERMS RELATED TO THE COMMON LAW "TRUST"

Irina GVELESIANI[*]

Abstract

"It is at least possible that the trust will in the 21st century join those other English inventions, such as football and the steam engine, which have swept the world"[1]*.The given optimistic definition of common law "trust" enables us to regard it as a unique legal instrument. However, its origin is the source of numerous debates of the scholars of the world. Scientific literature presents three theories concerning the origin of the "trust": Roman, Germanic and Islamic. Until the nineteenth century, it had been believed, that the trust had been modeled on the Roman legal institution "fideicommissum". However, by the nineteenth century, the given theory was replaced by the new assumption, which proposed, that the Salic "Salmannus" had been a predecessor of the "trust". The debates about the origin of this institution were fueled by the fact, that the English "use" (an initial form of the trust), the Roman "fideicommissum" and the Salic "Salmannus" had the same cause of emergence: they emerged as a "result of positive-law deficiencies and restrictions concerning the ownership and devolution of property"*[2] *during those times, when the land was the principle form of wealth. The given paper presents an attempt to highlight the existed theories about the origin of the "trust" and make new conclusions on the basis of in-depth terminological analysis. Synchronic and diachronic approaches initiate insights into the juridical and lingual developments.*

Keywords: *Fideicommissum, law, Salmannus, terminological analysis, trust.*

1. Introduction

The trust is usually treated as a "product" of equity, while "use" is considered as a forerunner of the trust. The latter was created in the 13th-14th centuries as a mode of the transference of property. The landholder/transferor of the property was denoted by the term "***feoffor***". He enfeoffed (transferred) "the legal estate in the land to a "***feoffee to use***" (the trustee) to hold it to the use of a "***cestui que use***" (the beneficiary). The right of the claimant was a right called a "use"[1]. The feoffees were almost always three in number. They held the land "in joint tenancy with right of survivorship. This arrangement made it very unlikely that the legal title would descend from a last surviving feoffee to that feoffee's heir and give the lord a potential wardship. It was very common for the feoffor to be the cestuy que use"[2].

It's worth mentioning, that in Common law jurisdiction ***feoffee to use*** was regarded as an absolute owner of the property (i.e. Common law did not recognize the interest of the ***cestui que use***). D. J. Seipp indicated in this respect: "Feoffees to uses had the full legal title to land, the right to sell or grant it, and the ability to sue and be sued in relation to the land… beneficiary or *cestuy que use* had no interest enforced by courts of common law and no remedy in courts of common law against feoffees who misbehaved"[3]. In 1535 the frequent employment of the "***use***" led to the enactment of the Statute of Uses, which tried to convert all equitable uses into legal estates by eliminating the ***feoffee to uses*** making the beneficiary the legal owner. Therefore, the ***feoffment to uses*** was regarded as a fiduciary relationship, which lay at the heart of the earliest attempts to divide the legal and beneficiary ownerships.

2. Content

There have been a lot of debates about the forerunners of the ***use***. Moreover, the question of its origin has raised controversy among many scholars. "It has been suggested that "Roman, Canon and Germanic laws (sources of the European *Ius-Commune* tradition) have provided elements of the law of [the English law of] trust"[4]. M. Lopio even indicated, that the English Chancellors "drew on a wealth of thirteenth- and fourteenth-century civil law authority in their development of the English trust… it was therefore not far-fetched to refer to these civil law institutions as being the "foundation" of the English trust"[5]. Till the 19th century it had been

[5] *The Oxford Handbook of comparative law*, ed. M. Reimann et al. (Oxford University Press, 2008), 1088.

strongly believed, that the Roman law (the legal institution ***fideicomissum***) had stipulated the creation of the common law "trust". It had also been assumed, that "there was a momentary contact between Roman law – medieval, not classical, Roman law – and the development of the English *use*. Englishman became familiar with an employment of the word *usus* which would make it stand for something"[6] that just was not, though looked exceedingly like *dominium* – a full ownership. In the general sense "***usus***" meant "the act of using thing"[7]. As a personal servitude, it denoted "the right to use (ius utendi) another's property, without a right to the produce (fructis) of the thing"[8]. The classical Roman "***usus***" rejected the exploitation of the property for the personal benefit. It's significant, that the Latin terms "***usuarius***" and "***usuary***" denoted a trusted person (trustee) who had the right of ***usus*** on another person's thing. S. Herman even believed "that the clerical usus could have put the English onto the idea of "feoffment to uses", later trust, because of duties of loyalty and a division of enjoyment and administration"[9]. T. Frankel made more convincing statement via indicating, that the "***use***" dated from the 9th century "and was influenced by the doctrine of *utilitas ecclesiae*"[10].

The strong belief in the Roman origin of the "***trust***" radically changed at the end of the 19th century. Moreover, the Roman theory was criticized via relying on the fact, that similarities between the **"*fideicomissum***" and "***use***" were superficial, for instance, the "use" rarely arose by means of a will, while "*fideicomissum*" was a testamentary bequest. Moreover, "for the "*fideicomissum*" the beneficiary (the fideicommissarius) was considered the real owner of the transferred property, while for the English use, the third party intermediary (the feoffee to uses) held legal title to the transferred property"[11]. It was even mentioned, that the English word "***use"*** had not derived from the Latin "***usus"***. Its appearance was connected to the Latin phrase "***ad opus***", which occurred as early as Merovingian times in France and was transmitted to England in the 9th century.

Therefore, at the end of the 19th century the origin of the "***trust***" was vividly called into question. This process was especially stipulated by the fact, that US Supreme Court judge, Justice Oliver Wendell Holmes, expressed his extremely convincing view on the given subject. Holmes stated, that the English "***trust***", like the German "***Salman"/"Treuhand***", had sprung from Germanic roots and the feoffee to uses of the early English law corresponded "point by point to the Salman of the early German law"[12]. The same idea was accepted by the well-known scholars of different centuries: T. Frankel, A.V. Venedictov, English legal historian F. Maitland, German researches R. Helmholz and R. Zimmermann (the creators of the book "*Itinera Fiduciae: Trust and Treuhand in Historical Perspective*") and others.

T. Frankel indicated, that "Salic law influenced [the] development of the use" in England. Under the sixth-century Salic law, a trusted person (***Salman*** or ***Treuhand***) could become a trustee by receiving "property from a grantor on behalf of beneficiaries. Usually grantors held on to their property until death and the Salman transferred the grantor's property after the grantor's death"[13].

A.V. Venedictov also stated that the German "***Treuhand***" and the English "***trust****"* sprung from the similar root – the Old German law. Moreover, he strongly believed, that "the reception of the Roman law in Germany impeded the development of this institution and it did not spread as widely as in England"[14]. F. Maitland made more precise description of his conception via indicating to the origin of the institution of "***use***": "the use appeared in Germanic sources in the records of the early Franks and Lombards, which was then Gallicized to "*al os*" and "*ues*" and as such made its entry into the *Domesday Book* and the Laws of William the Conqueror. From the Germanic sources the phrase was transformed into the Anglo-Saxon books of the ninth-century and evolved into the English term of use"[15]. T. Zartaloudis added some important details to this viewpoint. He believed, that: "the early use had as its primary meaning "benefit" and is said to be derived from *ad opus* (*ad opus meum, tuum, seum* meaning on my behalf, or yours, or his) which in old French became *oes, os* or *ues* and which was arguably then fused with the term "use". *Ad opus et ad usum* were, in fact, often seen as interchangeable,

written in the full formula of *ad opus et ad usum*"[16]. Domesday Book (1086) – a manuscript record of the "Great Survey" of English landholding – noted that the "lands said to have been held *ad usum* (to the use of) someone or other. These were probably lands put temporarily in the custody of others, such as when a landholder went off on a pilgrimage"[17].

During the investigation of the relationship between the "*trust*" and the "*Treuhand*"/"*Salman*"/"*Salmannus*", the greatest attention must be paid to the question of the origin and evolution of the latter.

The institution of "***Salman***" "dates back to the fifth-century legal code of the German tribe of the Salian Franks, the Lex Salica"[18]. O. W. Holmes stated in this respect: "In the Lex Salica – the law of Salian Franks - you find going back to the fifth century a very mysterious person, later named the Salmannus – the sale man – a third person who was called in to aid in completing the transfer of property in certain cases. The donor handed to him a symbolic staff which he in due season handed over in solemn form to the donee"[19].

Generally, the institution of "Salman"/"Salmannus "entailed the transfer of the transferor's property during his lifetime to a Salmannus, a person trusted to transfer the property to a designated beneficiary upon the death of the original transferor"[20]. The transaction could be done either *inter vivos* or *postmortem* i.e. after a transferor's death. It's a well-known fact, that the early Germanic law did not present testamentary transactions. Despite this fact, „***Treuhand mortis causa"*** could come into effect. In such cases a "special part of the estate, or even the entire estate, was transferred to a person or an institution in whom the transferor had confidence, under certain instructions about the final disposition of the property"[21]. Therefore, postmortem transactions authorized by the ***Salmannus*** replaced the process of inheritance. Moreover, "the use of the Salmannus permitted the transferor to adopt or appoint an heir"[22]. An adoption was named by the term "***affatomie***".

Chapter 46 of the Lex Salica gives a precise description of the process of "***affatomie*"**, which was divided into three major stages: initially, the adopter held the meeting *(mallus)*, where he "gave a stick *(festuca)* to a third person *(salmann)* (threw it into his lap). Simultaneously with the handover of the stick, the adopter expressed his wishes and handed over his property, or a part thereof, to the salmann. In the second stage, the salmann moved into the house of the adopter, that is, the property was transferred *(sessio triduana)*. He was required to stay in the house of the adopter for at least three days and receive at least three guests. The meeting certified such transfer of the property. In the closing stage, subsequently, but within twelve months, the salmann gave the stick to the heir at the meeting, in the presence of the king. As a result of the above procedure, the testator transferred his property to the adoptee"[23]. The given passage vividly reveals the details of the transaction, which considered the transference of the property to the salmann by the future testator via instructing him to pass it to third persons upon his death. Therefore, we can consider ***Salmannus*** as a person through whom an effect was given to a transfer and "hence, the anglicized 'saleman'"[24].

An in-depth study of the German law vividly depicts how the technique of "***affatomie***" gradually developed into the "***Vergabung von Todes Wegen****"* - "an inter-vivos transfer of a particular item of property in which the transferor reserved a life estate to himself"[25]. After the flow of time the scope of a transfer changed from a particular item of the ownership to a portion of an owner's entire property or the entire property itself. Moreover, "***Vergabung von Todes Wegen****"* started to consider the transference of the ownership after the owner's death. Therefore, the **Salman** had to deal with both *inter vivos* and *postmortem* transfers.

The scientific literature indicates to one more instance of the appearance of the concept of ***Salman***. In certain cases this person held the property for someone, who was temporarily away on a journey. G. P. Verbit indicated in this respect: "Someone going off on a journey might leave the property in

the hands of a Salman to be turned over to a third party in the event that the donor did not return"[26].

The diachronic study of the German law indicates, that the German documentary evidence cannot "discover a document that actually uses the term Salman before 1108 CE"[27]. Moreover, there are two major considerations about the origin of the terminological unit ***"Salman"/"Salmannus".*** According to W. Holdsworth's "A history of English law", "*Salmannus*" derived from the word "*sala*," which means "*to transfer*"[28]. R. Zimmermann urgues, that this term is etymologically related to "*sale*"[29], while I. Sandor directly indicates, that *salmann* appeared around 1108, meaning a quasi independent agent[30]. Controversial ideas are also met during the examination of the utilization the word ***Salmann.*** I. Sandor states, that it "is not found in Anglo-Saxon law"[31]. G. P. Verbit supports I. Sandor's idea and indicates, that "the term Salman has never been identified in any document originating in England"[32].

During the study of the utilization of the word "***Salman***" the greatest attention must be paid to Avini's statement. According to his words: "evidence of the use of the *Salmannus* in post mortem transfers of land in twelfth-century England provides the basis for the proposition, that the *Salmannus* developed into the feofee to uses"[33]. W. Holmes has expressed almost the same idea. He indicated, that "the English use originated in the eleventh century when during the Norman Conquest elements of teutonic Salic law were arguably imported by the Conqueror. Brown has suggested that the theory could also rely on the migrations of Germanic tribes to England more generally during the fifth century"[34].

All the above mentioned enables us to make some in-depth analysis of the relationship between ***"Salman"/ "Treuhand"*** and ***"use"/"trust".***

On the one hand, W. Holmes' theory of Germanic origin of "trust" seems quite acceptable even nowadays. "… The word "trust" is itself like a chameleon, changing its colors to fit its environment. The same comment might easily have been made about *fiducia* in Italy or France, or even the *Treuhand* in Germany"[35]. Many scholars argue, that during the expression of the assumptions about Germanic origin of "trust", W. Holmes has never offered a theory how the concept of the ***Salman*** managed to cross the Channel. He only suggested, that during the Norman Conquest the elements of teutonic Salic law were imported by the Conqueror and the frequent contacts between various parts of England and the Frankish legal system certainly provided the opportunity for borrowing the legal ideas.

On the other hand, all the scholars agree, that Normans' conquest of 1066 transformed the English language forever. For more than three hundred years French was the language of power, aristocracy and royalty. Thousands of French lexical units entered the vocabulary of the English language. There was one very significant fact - after the Norman Conquest the French language was introduced to the English court. The court proceedings started operating with three languages: French, Latin and English. "Legal expressions in all three languages were therefore used simultaneously, and it is not surprising that both Latin and French have had a lasting influence on legal English"[36]. Therefore, one can suppose that after the withdrawal of the Roman legions in the fifth century, Germanic tribes migrated to England, and the ***Salmannus*** was introduced with the Norman conquest of the eleventh century.

3. Conclusions

The given paper presents an in-depth analysis of the historical terms related to the common law „trust" and „trust-like" institutions. It deals with an innovative approach towards the investigation of juridical institutions via simultaneous presentation and research of linguistic and legal data. Therefore, the terminological- juridical analysis of the relationship between ***"Salman"/"Treuhand"*** and ***"use"/"trust"*** enables us to single out the following outcomes:

The major peculiarities of the *"**Treuhand***" apparently correspond to the main features of the "***trust":*** "a person, *Salmannus*, is charged with administering property in the interest of another person or for a designated purpose. He does not

administer the property for his personal interest. The relationship between the *Salmannus* and the beneficiary is of a fiduciary nature. Furthermore, the Treuhand serves many of the purposes of the trust"[37];

Similarly to the "***Trust***", the "***Salman***" relied on confidence;

The "***Salman***" could develop into the "***feofee to uses***" (a predecessor of "trust"), because both of them were often used for the transfer of land after a grantor's death. Moreover, in both cases grantors were entitled to use the land before their death;

The similarity of the English and German practices can be revealed via the discussion of the usage of their institutions. The "***Salman***" had different forms of usage. It was often used in cases of longer travels or for financial reasons: "Someone going off on a journey might leave the property in the hands of a *Salman* to be turned over to a third party in the event that the donor did not return or a *Salman* who was a freeman might function as owner of property for fiscal purposes, where the beneficial ownership was in a person who could not hold property"[38]. Resting the title to property in the name of ***Salman*** was especially useful during the periods of political unrest. Among these forms of the usage of the institution of "***Salman***", a special attention must be paid to the transference of the property to ***Salman*** during an owner's longer travels, because this mode of transference shows a particular resemblance with the forerunner of the common law ***"trust"*** - the institution of ***"use"/"use of land***" - which was connected with the land ownership during the times of the Crusades. When a landowner (knight) left England to fight in the Crusades, he needed an "acting administrator" for his estate. The administrator (usually, a close friend of a transferor) was obliged to run the ownership and pay feudal dues. After an owner's return all legal rights on the estate had to be transferred back to him;

The similarity of the English and German practices can also be revealed via the discussion of the historical rituals. D. T. Smith directly indicated, that according to the Salic law "the Salmannus was handed a symbolic staff by the donor, which he, in due course, and with due solemnity, handed to the done. A virtually identical ritual took place in England until modern times with respect to the transfer of copyhold, whereby a staff was handed to the steward of the manor as a first step in conveying copyhold land to another, the surrender to the steward being an expression to the use of the done or purchaser"[39];

During the discussion of the English and German practices one should take into consideration, that the "***trust"*** is proprietary in nature, while the modern "***Treuhand"*** is contractual. However, we have to rely on the assumption of old English scholars, who "characterized the trust as depositum, focusing on the contractual character of the trust"[40]. In this case we can approximate it to the concept of ***Treuhand.***

Therefore, all the above given data enable us to suppose, that the "trust" may have Germanic roots. However, the further investigations are needed for making the final conclusions.

"TREUHAND" AND "FIDUCIE" (TERMINOLOGICAL PROBLEMATICS)

Irina GVELESIANI[*]

Abstract

Language and jurisprudence are deeply interconnected. The legal terminology of any language as well as the legal system itself is a result of "a historical evolution which did not happen on its own, as if in a vacuum, but in constant interchange with other legal languages and legal systems"[1].

Contemporary jurisprudence faces a lot of new opportunities and changes. Increasing globalization breaks down all the barriers via the "dédaublement du monde". It involves the reconstruction of all spheres of life. Within the framework of globalizing changes Europe is facing the tendency "to draw up a uniform law on the basis of work by experts in comparative law and to incorporate it in a multipartite treaty"[2]*.The creation of uniform legal system presupposes the change of terminological landscape. Therefore, the comparative study of juridical terms and suppositions regarding new translational tendencies acquire the greatest urgency.*

*The give paper deals with the study of the Swiss "trust-like mechanisms". The major emphasis is put on the actual problems emerged during the translation of terminological units related to such juridical institutions as the "**Fiducie**" and "**Treuhand**".*

Keywords: *fiducie, institution, Swiss, Treuhand, trust.*

1. Introduction

"Trust as a legal model developed by English courts over centuries and later refined in several jurisdictions based on the same legal tradition has been so successful that it serves both as an inspiration, a brand-name, and a benchmark"[1]. The "trust" considers the participation of three parties (a ***trustor***, a ***trustee***, a ***beneficiary***) and requires the separation of the ownership of property between two parties - a trustee receives a legal title, while a beneficiary acquires an equitable title.

The popularization of a trust instrument has been facilitated by its unique character stipulated by the duality of ownership inherent in the common law. The given duality "stems from a basic procedural dichotomy in Anglo-American law, between the bodies of common law and equity"[2]. The same dichotomy cannot be met in the civil law jurisdictions. However, majority of contemporary civil legal systems aspire to adopt entrusting regulations in order to "take away the labels" of non-trust jurisdictions. The given aspiration has been fuelled by certain conditions:

- the globalization of the legal practice has exhibited an overall tendency of unification and harmonization of legal systems of the world countries;
- "the dominance of U.S. and English law firms has promoted the use of trusts in complex transactions including non-trust jurisdictions and fuelled a broader worldwide circulation of Anglo-American legal concepts and instruments, increasing contacts of non-trust jurisdictions with trustees and trust assets"[3];
- the mass migration of the world population has stipulated the flow of trust property to the inhabitants of the non-trust states;
- the ratification of the Hague Convention on the Law Applicable to Trusts and on their Recognition by certain countries has increased the need of reconciliation of the Anglo-American trust with the principles of the civil law;
- "all mature legal systems have catered in various ways to the same needs that have promoted and informed the development of the common law trust: division between the economic value of assets and their holding and management; complex and flexible allocation of the economic value of assets among different beneficiaries or classes of beneficiaries; customization of the powers and duties of the managers to suit the purpose of the arrangement; etc."[4].

2.1. Swiss law

Switzerland is one of those European countries, which aspires to the implementation of the common law "trust". It's worth mentioning, that "Swiss courts have been dealing with trusts since 1874 and the Swiss government authorized the settling of foreign business trusts since 1957"[5]. However, the English term "trust", which existed in Swiss legal domain conveyed quite non-English meaning. It denoted "a monopolized concern having subsidiary companies, which abandoning their individual economic existence, are fused together with the parent company to such a unity that its centralised management has a monopolistic control of the market"[6]. Besides the English word "*trust*", Swiss juridical system used such terminological units as *Treuhand, fiducia, fiducie, Fiduzia*. These lexical units denoted fiduciary relationships and depicted the existence of three state languages in Switzerland. E. Huber – the author of the paper "*Trust and "Treuhand" in Swiss law*" – directly indicated: "if we wish to speak about "trust" in Switzerland in the Anglo-American sense we translate the word into German with Treuhand, in French with Fiducie, in Italian with Fiducia… Speaking of the Treuhand we distinguish between the Treugeber (in English settler, in French fiduciant, in Italian fiduciante), the Treuhänder (in English trustee, in French fiduciaire, in Italian fiduciario) and the Begünstigter (in English beneficiary, in French beneficiaire, in Italian beneficiario)"[7]. Can we share E. Huber's viewpoint and identify the common law "*trust*" with *Treuhand, Fiducie* and *Fiducia*? The given paper makes an attempt to answer this question via making certain juridical-linguistic analysis.

2.2. Swiss Treuhand

Initially, the Swiss ***Treuhand/fiducie*** was considered as a modernization of the ancient Roman "fiducia". This Roman legal institution comprised two distinct acts: "a disposal, using the formalistic procedure of *mancipatio*, whereby the creator transfers to the fiduciary the ownership of the fiduciary property; and a distinct agreement, the *pactum fiduciae*, whereby the fiduciary undertakes to restore this property to the creator under certain conditions"[8]. It's difficult to identify the origin of the Swiss "fiducie". However, we can watch over its development after the ratification of the Hague Convention.

It's a well-known fact, that in 2007 Switzerland ratified the Hague Convention on the Law Applicable to Trusts and on their Recognition of the 1st of July, 1985. The ratification of the Hague Convention has facilitated the introduction of certain significant provisions in the SPILA and SDCBA (*Swiss Private International Law Act* and *Swiss Debt Collection and Bankruptcy Act*). "In the latter legislation, a new provision specifies that trust assets constitute a separate fund independent from the trustee's own patrimony"[9]. The existence of a separate fund indicates to the notion of a segregated patrimony. However, despite this fact, the scholars express different ideas regarding the existence of *Trust law* in Switzerland. A. E. von Overbeck believes, that "there is no institution called "trust" in Swiss law, and until recently no other institution which could meet the conditions of the Principles"[10]. D.W. Wilson and C. L. Nagai express almost the same idea: "The Anglo-American trust has not (yet) found its way into the Swiss legislation: there is currently no Swiss substantial law on trust"[11]. Many scholars believe, that the Swiss "*fiducie (Treuhand)* is the nearest cousin of the trust"[12], while Hungarian scholar I. Sandor supposes that "in the laws of Switzerland, the Treuhand (*Fiduzia*) is the unique equivalent of the trust"[13]. Moreover, I. Sandor presents more precise description of Swiss fiduciary relationships:

"In case of the Treuhand, the settler (*Fiduziant, Treugeber*) transfers the property (*Treugut*) to the trustee (*Fiduziar, Treuhänder*). The Fiduziar acquires legal title to the property and undertakes a contractual obligation to use the property for the benefit of the settler or third parties, as instructed by the settler"[14].

According to the given definition, the major participants of Swiss entrusting relationships are:

Fiduziant/Treugeber - a transferor;

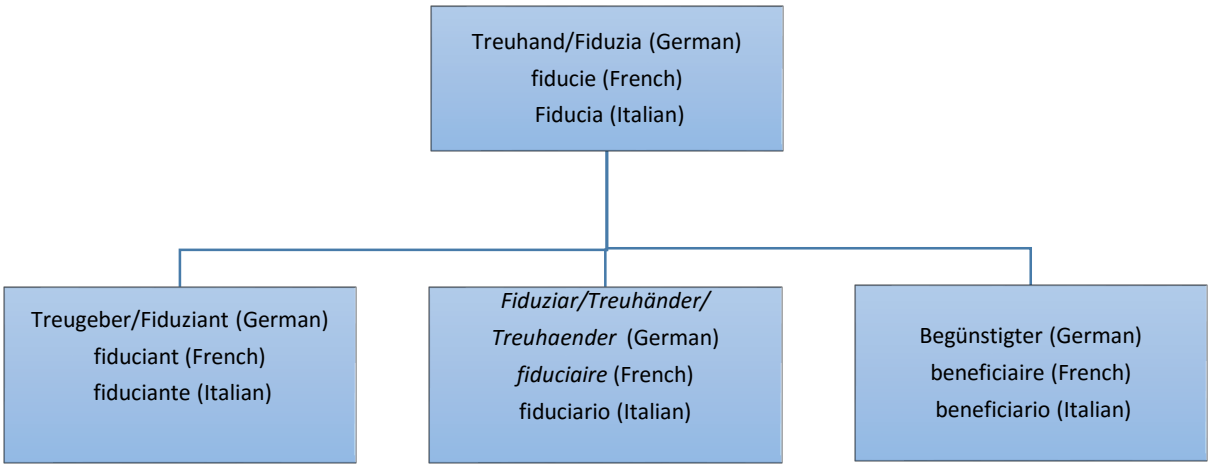
Fiduziar/ Treuhänder - a transferee;

Begünstigter – a beneficiary, who is presented by a settler or third parties.

It's worth mentioning, that H. Meyer uses the German term "*Treuhaender"* for denoting a "transferee". He states that the "*Treuhaender"* in Switzerland can never be in the same position as a trustee in England or in the United States. He is either more or less… For that reason *"Treuhaender"* should never be translated as *"trustee",* but rather as *"fiduciary"…*[15]. In certain cases, the given German terminological units can be substituted by their French equivalents, which are presented in Rapp's following definition:

"*Contrat par lequel une personne, le fiduciant, transfère un droit à une autre, le fiduciaire, qui s'oblige à en user selon les indications du fiduciant, en général à le retransférer dans certaines conditions*"[16].

Therefore, *Fiduziant/Treugeber* can be presented by the French term *fiduciant*, while *Fiduziar/Treuhänder* can be substituted by *fiduciaire*. Even the Treuhand is often designated by *fiducie* (*acte fiduciaire)* or *Fiduzia*. The given terminological equivalency can be presented in the following way:



The major disadvantage of the Swiss entrusting relationships lies in the fact, that:

- the *Treuhand* is based on the rules of mandate (mandat, Auftrag);
- in contrast to the common law trustee (transferee) the Swiss *Fiduziar/Treuhänder* acquires the full legal title on the transferred property;
- there is the lacking of the separation of the *Treuhander*'s own property;
- as a result of the *pactum fiduciae*, the *Fiduziant/Treugeber* becomes less protected and in cases of the insolvency "the beneficiary is not ranked above the other creditors"[17];
- "the fiduciant can give the fiduciary any instructions at any time, while normally the settler cannot interfere with the management or disposition of the trustee"[18].

These facts directly indicate that the Swiss entrusting relationships differ from the Anglo-American "*trust*". However, there is the possibility of the establishment of the original "*trust*" in those cases when a settler chooses the foreign law as a governing one.

2.3. Swiss foundation (fondation, Stiftung)

Some scholars believe, that the Swiss foundation (*Fondation, Stiftung*) can be regarded as an analogue of the common law "*trust*". Foundations (except ecclesiastical and family foundations) are usually registered in the "*register du commerce*". The so-called "*family foundations*" can be constituted by dedicating a patrimony to a particular family. According to Articles 355 ff. of the Swiss Civil Code:

"The family foundation which is a legal person and has the potential to continue indefinitely, allows the creation of a mass of property dedicated to the

[18] A.E. von Overbeck, "National report from Switzerland," in: *Principles of European trust law, Law of business and finance*, ed. D.J. Hayton et al. (Kluwer Law International, 1999), 110.

payment of the costs involved in educating and setting up in life the members of a family, or providing them with subsistence"[19].

The Swiss foundations are mostly used for charitable, cultural or similar purposes, for instance, they comprise the dedication of the property to such specific intentions as the "maintenance of a building, the commemoration of an event, or the establishment of a profit-sharing plan for the employees of an enterprise", etc.[20]. Therefore, foundations function almost similarly to the Anglo-American "*charitable trusts*". However, they cannot be created for the benefit of a specified person. Moreover, "the foundation cannot easily be used for beneficiaries in the manner in which this is done by trust law. Swiss law has its own brand of rule against perpetuities. *Fidéicommis de famille* may not ne constituted (Article 335, 2 CC) and *substitution fidéicommisaire* is limited to one reversionary heir (Article 488 CCS)[21].

2.4. Terminological insights

A profound study of the contemporary Swiss ***Treuhand/fiducie*** and foundation (***Fondation, Stiftung)*** enables us to treat these institutions as the modern "*trust-like devices*", which do not represent the analogues of the Anglo-American "*trust*". In this case the scholars and especially, the linguists have to deal with a serious problem raised "by the need to name and discuss in English a number of legal transactions or institutions that are redolent of trust (e.g. "fiducia", "Treuhand"), but are governed by Austrian, Italian, German, Spanish law, etc. Could these transactions be described as "trusts", even though the concepts employed to analyse them had nothing or little in common with the building blocks of the law of trusts in common law jurisdiction?"[22].

Answering this urgent question demands the investigation of terminological units related to the modern European "trust-like devices". In case of the Swiss law the major emphasis must be put on the term "***Treuhand***", which is often significantly misinterpreted, for instance, "Routledge German Dictionary of Business, Commerce, and Finance" presents the following English equivalents of the German lexical units related to the "***Treuhand***":

"Treuhand – Trust;

Treuhänder – Trustee, fiduciary;

Treugeber – settlor, transferor, trustor (AmE)"[23].

It is also significant to pay attention to the equivalences, which are presented in the contemporary multilingual dictionaries. L. D. Egbert's "Multilingual Law Dictionary" (English-French-Spanish-German) comprises the following German counterparts of the English terms denoting the legal institution of *"trust"* and participants of the entrusting relationships:

"**trust**

Kartell (m); Trust (m); Treuhandverhältnis (n); Vertrauen (n).

trustee

Vermögensverwalter (m); Treuhänder (m)"[24].

"**beneficiary**

Begünstigter (m) (aus einem Versicherungsvertrag);

Empfänger (m) einer Erbschaft (f)"[25].

The existence of almost all the above mentioned equivalents makes obscure the essence of *„**Treuhand**"* and equalizes it with the Anglo-American *"trust"*. Some scholars have thoroughly discussed this question, for instance, Sh. A. Stark directly indicated, that the term *„**Treuhand**"* has a purely German origin: "the German word "*treu*" means true and implies faithful"[26]. Despite this fact "the word *Treuhand* is not a clear term in German, it cannot be exclusively described as a trust in English either"[27]. According to J. Rehahn and A. Grimm the term *„**Treuhand**"* must be translated as *„**German trust**"*[28]. We share the given scholars' ideas and believe, that according to the Swiss legal reality, the term *„**Treuhand***" must be translated as *"**Swiss trust**"*, while the English term *"trust"* can be equalized only with the German term *"trust*", which is presented in L. D. Egbert's "Multilingual Law Dictionary". Moreover, it is recommended to

[26] Shelley A. Stark, *Hidden Treuhand: how corporations and individuals hide assets and money*, (Florida: Universal-Publishers Boca Raton, 2009), 1.

[27] Shelley A. Stark, *Hidden Treuhand: how corporations and individuals hide assets and money*, (Florida: Universal-Publishers Boca Raton, 2009), 3.

[28] Johannes Rehahn and Alexander Grimm, "Country report: Germany," *The Columbia Journal of European Law Online* 18 (2012), p. 94, accessed November 22, 2015 http://www.cjel.net/wp-content/uploads/2012/08/CJEL-Trust-Law-Final1.pdf

translate the "***Treugeber***" as the "*Swiss trustor/settlor*" and nominate the "***Begünstigter*** " as the "*Swiss beneficiary*".

The similar problems of interpretation occur in cases of the French terminological units, for instance, L. D. Egbert's "Multilingual Law Dictionary" presents the following French equivalents of the English terms denoting the legal institution "*trust*" and participants of entrusting relationships:

"trust

cartel (m); confiance (f); trust (m); fidéicommis (m)"[29];

"**beneficiary**

bénéficiaire (m)"[30].

The existence of almost all the above mentioned equivalents makes obscure the essence of "***fiducie***". However, we believe, that the equalization of the English term *"trust"* with the French word *"trust*" is the best way of the maintenance of the essence of the Anglo-American entrusting relationships. Moreover, it is preferable to denote the French term "***bénéficiaire***" with the word-combination **"***Swiss beneficiary***".**

3. Conclusions

Therefore, the juridical-economic study of the contemporary Swiss reality vividly reveals, that it has no single institution which performs all the functions performed by the common law "*trust"*. Even the "***Treuhand"*** - a prime example of fiduciary arrangements - is irreconcilable with the ***"trust",*** especially, in the following aspects:

- the lacking of the separation of the *Treuhander*'s own property;
- the acquisition of the full legal title on the transferred property by the *Fiduziar/Treuhänder*;
- the lacking of the full protection of the *Fiduziant/Treugeber* (as a result of the *pactum fiduciae*);
- the *fiduciant*'s right of giving the fiduciary any instructions at any time.

All the above mentioned directly indicates to the following prominent fact: the Swiss ***Treuhand/fiducie*** cannot be equalized with the Anglo-American "***trust"*** neither juridically, nor linguistically. Therefore, significant changes must be done in the terminological sphere in order to reflect the difference between the common law "***trust***" and Swiss "***Treuhand/fiducie***". We believe, that the term *„**Treuhand***" must be translated as *"**Swiss trust**",* while the English term *"**trust**"* can be equalized only with the German term *"trust*". Moreover, it is recommended to translate the "***Treugeber***" as the "*Swiss trustor/settlor*" and nominate the "***Begünstigter*** " as the "*Swiss beneficiary*". In case of the French terminological units the equalization of the English term *"**trust**"* with the French word *"trust*" is the best way of the maintenance of the essence of the Anglo-American entrusting relationships. It's also recommended to denote the French term "***bénéficiaire***" with the word-combination **"***Swiss beneficiary***".**

MORAL DAMAGES IN ACCIDENT INSURANCE (RCA INSURANCE) ARE THERE SUFFICIENT CRITERIA?

Anca-Iulia HÂNC[*]

Abstract

The objective of this study is a synhtetical discussion of the Romanian judicial practice regarding the moral damages in accident insurance(RCA insurance or civil liabilty for cars insurance), with a focus on the objective determination of the prejudice for the affected parts in Court decisions.This effort is motivated by the limitations of the Romanian legislation:arguably, the current judicial practice is not unitary, even within the same Court of Appeal.Judges' interpretation of the same normative acts and laws in this domain are often different,as well as imprecise.The aim of this study is therefore to identify the common points of view among the various decisions of the Corts of Appeal in Romania regarding moral damages as a result of a car accident, in the cases when cars are being insured with an RCA Policy). The study also aims to determine if different sums of money should be established according to different types of moral prejudicee.g. judicial errors, unlawful privacy of liberty etc.Finally, the study proposes that future accident insurance legislation should include more thorough and concrete enactment of the moral damages aspects.

Keywords: *Accident insurance, criteria of prejudice, determination of moral damages, Romanian and EU legislation, uneven practice ,future enactment.*

1. Introduction

The purpose of this study is to critically discuss the various court decisions that - in the absence of a unified legislation - establish different damages for the same *de facto* and *de jure* situations in accident insurance in Romania.This is why because,in my day to day practice I found various Court solutions in most similar cases,Court solutions that are not always very well motivated.The study is mostly a regard on Romanian various jurisprudence in this field of law more than a thorough scientificall view on these legal aspects.

Arguably, both the injured party and the insurance companies are confused by the various court decisions, so their claims may often be unrealistic. Furthermore,insurance companies do not meet the plaintiff's demands before getting to court (in the amiable procedure) because a court decision may establish a much lower sum of money than the one demanded by the injured parties. Moreover, the duration of a court trial can be two or even three years, thus itmay often be more profitable to 'wait and see' what the judge will decide in this matter.

There are two main types of moral insurance damages regarding the accident insurance:

- The injured parties who suffered damages - physical and /or moral- in an accident;
- The injured parties are the inheriters/the affected persons of the victim of the accident.

Arguaby, this field of law is not governed by any general and objective legislative criteria, which leads to the existence of an uneven judicial practice. As the European Union (EU) legislation merely offers general guidelines, member countries (such as Romania) are in need of developing specific legislation.

The aim of this study istherefore to explore this gap of knowledge and to proposepossible directions towards the quantification of the moral damages, based on the analysis of the current judicial practice in Romania.

2. Content

2.1. Motivation

Given the intense road traffic conditions,car accidents are a considerable problem in Romania: there are many automobiles, and drivers' behavior – such as wreckless driving or consumption of alcohol contribute to the high number of car crashes.By law, every car must have its own insurance policy that covers any risks deriving from accidents: this is called the RCA policy, which covers civil liabilty for cars.

2.2. RCA policies

RCA is a contract with a mandatory character derived from the 136/1995 law[1], signed by both the insured person and the insurer company.According to Vasile Nemes[2]:"*The two parts can not negociate the content of the contract,the rights and obligations of the parts are stricly reglemented*". The insurer company cannot be forced by law to sign the insurance policy unless it had previously obtained

[*] Lawyer, Bucharest Bar (e-mail: **hancavocat@gmail.com**).

[1] *Law No. 136/1995on insurance and reinsurance in Romania*, Official Gazette of Romania („Monitorul Oficial al României"), Part I, No. 303 of 30 December 1995, in force since 01/02/1996; last sanction 19/01/2015, in force since 27/02/2015.

[2] Nemes, Vasile, *Insurance Law* (4th edition),Hamangiu Publishers, 2012, page 290.

this right from the Financial Supervisory Authority (ASF).

The insured person must also sign this insurance policy but can sign it at any insurance company that was authorised by ASF-as specified by Irina Sferdian[3] in „*Insurance.Special regard upon the insurance contract form the Civil code point of view*". Furthermore,the level of the insurance premium is different: the *bonus-malus* clause,the seriousity and the rapidity of covering damages can be the reasons why a certain insurance company may be preferred.

As previously shown, there are two types of car accidents:

- the ones in which both the driver and/or the passengers of the car suffer injuries;
- the ones in which the driver and/or the passengers die.

An important observation arises: this study solely refersto risks covered by a *valid policy*; asshown by Bradgate and Savage[4], the insured must establishthey have suffered a loss caused by the risks covered by the policy,in order to make any claims.

The insurance policy covers a variety of risks, however the limits within which the insurance companies must pay damages after such an unfortunate event are very flexible and often ambiguous. The main issue, both for the injured parties and for the insurance companies, is thus to be realistic: the two partiesvery rarely (if ever) reach an agreement before a court decision. Thus,it is the judge's mission to rule and establish the proper amount of money to compensate the trauma and results of the car accident for the injuried parties.

Moreover, these sums of money must not act as injust punitive measures against the insurance company, as specified by the Romanian High Court of Cassation and Justice's Decision No, 1179/2011[5].This decision is of great importance - although not generally binding- because it stipulates that, when moral damages are concerned, neither the national or ECHR framework operate with pre-established criteria, but instead decisions should be made in equity, by subjectively appreciating the different circumstances of every case.

2.3 Specific legislation and authorities

The specific legislation in this domain can be found in the 136/1995Law[6] regarding insurances; the articles 49 and 50 specify that „the insurance company offers compensations within the insurance contract for the prejudicies done by the insured persons to third parties that are injured in car crashes". Furthermore,The High Court of Cassation and Justice,in its nr. 1/2005[7]Rule statuates that the insurance companies must be summoned in trial only as insurer because the legal relationship between these companies and the insured ones are on the basis of solidarity.Thus,the persons injured in the car crashes can claim compensations from the persons that are responsible for the crash and also form the RCA insurance company.

Recently,the High Court of Cassation and Justice - via Decision 1/2016[8]regarding the RCA insurance policies in the case of car accidents- stated that the insurance company is a civil responsible part in the trial and bears the obligation to compensate the prejudice alone, within the limits of the insurance contract and the legal dispozitions regarding the RCA.

Furthermore, the relevant article from the Civil Code ruling (article 1391[9]) stipulates that if the integrity of a person is damaged, a sum of money can be offered.This sum of money can be offered for the inheritants of the deceased person and for any person that could prove that a certain prejudice exists.

However, although under Romanian legislation it is mandatory for all cars to be insured, it is not uncommon for cars that are not insured to be subject of accidentsin which persons are injured or deceased. In such cases, according to nr. 3/2010 decision of the High Court of Cassation and Justice [10], given as appeal on a certain point of law matter, The Street Victim Protection Fund will be a part in such civil /penal cases, instead of the insurance company.

2.4. Financial Supervisory Authority (FSA) and EU regulations

The limits of the insurance are established anually by the norms of the Financial Supervisory

Authority (ASF) which was established as an autonomous, specialized, with legal status, independent, self-financed administrative authority, exercising its duties by taking over and reorganizing all duties and powers of the National Securities Commission (CNVM), the Insurance Supervisory Commission (CSA) and the Private Pension System Supervisory Commission (CSSPP).

The ASF is the national authority competent to enforce and monitor the observation of the directly applicable regulatory acts issued by the European Union, in the fields provided by this regulation, and for the transposition into the national legislation of the provisions issued by the EU Council, EU Parliament, European Commission and by other European authorities.Annually,the ASF gives orders(norms) with rules regarding the provisions for the RCA insurance policy as well as its minimal and maximal limits.

For instance, the 2016 upper limits within which the insurance companies pay damages are:1.000.000 euro for property damages and 5.000.000 euros for personal injuries and deceased persons (for an accident involving one car, no matter the number of the injured/deceased persons)[11].This is the only specific regulation that the judges have, regarding such cases.

In the absence of more specific guidelines, some court decisions give even 1.000.000 euros for one person (severelly injured in a car crash).Other courts consider 5.000.000 euros as a maximal sum of money and decide that for a person who suffered the same number of health care days, the sum of 100.000 lei(aproximatively 22.500 euros) is adequate. Therefore, one cannot help wondering which decision is most justified and what exactly constitutes good practice.

2.5. Examples of moral damages

Examples gathered through the author's experience as a practicing lawyer suggested the decision making process of settling moral damages is usually not straightforward. A number of uneven judicial practice cases were observed. Specifically, in thecase of the deceased persons, some courts gave low sums of money and others, millions of euros for the inheritans.The criteria that justified these court decisions often included: the age of the deceased;the psychological impact upon the inheritans' future life;the relations between the deceased and other persons beyond the inheritans themselves. However, in a number of cases experienced by the author in her professional activity, court decisions were ambiguousin motivating why a certain amount of money was given to the relatives of the deceased.

As often shown by theBucharest Court of Appeal regarding cases when the plaintiffs specified they were affected by the decease of their relative (e.g. son or nephew), this was rarely supported by psychological affective evaluations; documentation also often omitted documents that would prove the alteration of the financial resources, suggesting a future imbalance between the current plaintiffs' life style and the one following the unfortunate event, or the alteration of the professional standards of the plaintiffs. Court decisions thus stipulate that it will not simply approve what the plaintiffs are *saying* – the moral prejudice can not be proved but only ascertained. Following its judicial control role,the Court requested that the plaintiffs indicate evaluation criteria supported by the appropriate evidence included in the documentation; as shown before, thesecriteria are not prescribed by the law, thus a considerable degree of variation might follow.In order to decide in this matter the Court must compare between similar cases and the solutions from those cases.

In this context the „Guide for resolving moral damage"[12]may possibly be a useful resource. Yet,the High Court of Cassation and Justice from Romaniaoften suggests that this Guide is limited only for 'amiable litigation' when the two parts wish to settle the dispute outside the court[13].

Within the court,the judge must apply the law.This is why the High Court of Cassation and Justice established that when ruling again, the judge must obey the legal framework regarding moral claims,the national and conventional law principles that impose the whole reparation of moral prejudice represented by the negativeconsequences (both physical and moral)taking into account the importance of damaged values,when they were affected.

Dorina Zeca[14] cites an important decision of the Bucharest Court of Appeal (Dec 110/2013 unpublished), whichstipulated that in establishing the adequate amountto be paid in moral damage cases, the court may take into consideration the amount given by juridical practice in similar cases.The judge may take into account the continuos creation of the juridical practice: when determining theaverage sum of money for similar cases,the principle of *equality of partiesbefore the law* applies, as well as the *non discrimination principle*which also represents an equitable and equidistant

parameter.This parameter could be considered incontestable.

According to Article 1 from Law No. 136/1995[15],the prejudice is the negative effect suffered by the injured person as a result of a production of a risk covered by the public liability contract.

2.6. Plaintiffs' motivations and claims

In most cases, the plaintiffs are distraught when one or more members of their family (e.g. husband,daughter,father,sister etc.) die in an accident.Based on these feeling of loss, the plaintiffsoften believe that the insurance company should be obliged by the judge to a pay them a large sume of money to 'compensate' for these negative feelings.However, as shown before, in many cases the plaintiffs' documentationfolder includes no evidence to indicate that the relationship with the deceased relativeswasparticularly strong or their standard of living hadbeen very high before the unfortunate event.

Another point that has different interpretations in Courts decisions refers to guilt. For instance, when the husband drives a car and causes an accident by wreckless driving (e.g. he falls asleep), and the infant dies being kept in his moher's lap (instead of a baby chair),some judges consider that the parents(or mother) areentitled to a substantial sum of money as moral damage.Yet, recently the High Court of Romania[16]stipulated that the husband's (or wife's) right for damages in reation to the infant's death (or the death of other persons raised by the driver of the car, at faultfor the accident)should be limited to their own injuries as direct victims of the car accident.

2.7. Difficulties in evaluating moral damages

Nevertheless,guilt is a serios criteria for the judges in establishing the sums of money as moral damages. There are multiple scenarios that involve guilt and the subsequent ethical resonings – for plaintiffs, insurance companies and judges alike – are often complicated. For instance, in the case of passengers who accept to be driven by a clearly inebriated person, and who subsequently crashes the car, a variety of questions arise:

- Is the passenger at fault for not stopping the driver from drinking?
- Can the passenger claim substantial damages if he or she is injured in the accident?
- What if the passenger is a minor?

In such cases, some courts argue that the insurance company must pay whatever sum was asked for – even if some of the parties involved could have been moreresponsible and, in fact, prevented the accident. Yet, such a decision may contradict the overarching principle that everyone must obey the law. Furthermore, one may wonder if it is fair to give different sums of money to different persons taking into account that their life styles are different,that some live in the country side and other in a capital (thus substantially different living costs)although they both loose a close relative. In the absence of a clear and objective legal framework, court decisions can – and, often, do – embrace very different ethical standpoints and the legal and financial outcomes may often seem arbitrary.

Some may argue it should notbe expected fromthe insurance companies to pay large sums of money only because the plaintiff *declares*a close relationship with the deceased one: perhaps, the actual relations were in fact very tense. In such cases – which are often hard to prove or disprove – perhaps it is unethical to draw major financial benefits just for being related to a person deceased in a car accident. The courts' decisions are very different in their rulling and legislative clear criteria should be enforced by appropriate laws in the future.

Let us now suppose a different scenario: a car crash with one deceased person. Their spouse and one of their sonsclaim and obtain sums of money(as moral damage) under a final court decision. After a while, two more of the couple'schildren start a trial against the insurance company, at a different court, obtaining much larger sums of money. One may wonder how will the first decision influence or inform the second court rulling - does and should it have *res judicata*?

This refers to Article 28 from the Criminal Procedure Code[17] that stipulates that the definitive decision of the crimnal court is *res judicata* before the civil court that judge the civil action in the matter of the existence of the criminal deed,and the person who is responsible for it.If by any chance both the first court sentence and the final decision (usually from the Court of Appeal) are not thouroughly motivated,the case might be brought to the High Court of Cassation and Justice. If both rullings are superficial,and the relevant legislation is neither specific nor clear, there may be sufficient legal reasoning to attack those decisions because they were given „with the violation or wrongful application of the law", as stated in the New Code for Civil Procedure[18].

Another issue that may be of interest is the comparison of moral damages, specifically how can

[16] High Court of Cassation and Justice – Panel jurisdiction to hear the appeal on points of law, Decision 23/2015 on interpretation of Article 50 paragraph 3 of Law No. 136/1995, public session of 26/10/2015 (unpublished).

[17] Law No. 255/2013 for the implementation of Law no. 135/2010 on the Criminal Procedure Code and amending and completing certain normative acts with criminal procedure dispositions, Official Gazette of Romania, Part I, No. 515/2013;

[18] Moroșanu, Vasile, Moroșanu, Raul and Moroșanu, Petre, The New Code for Civil Procedure: Law No. 134/2010 republished in Official Gazette of Romania, No. 545/2012, Bucharest: Moroșan and Pedro Publishers, 2012, page 193.

they be measured,quantified,taken into account etc. It is often hard to tell what is more important for a person's wellbeing and how can these moral damages compensate a loss,an injury,a personal restriction of private life or rights. Considering all of these delicate aspects of life, a crucial role can (and*should*) be played by the judicial system,by the courts in their rullings.

The wrongful arrest of a person; the restricion of liberty; the duration of these measures, the detention conditions; the stopping of mail in prison, the separation from one's family; the lengh of the criminal case in court - all of these may be elements that produce physical and mental trauma, which determin a moral prejudice that must be repaired.The purpose of moral damages repair beingto obtain a moral satisfaction of the same order, in a particular example[19], the High Court statuated that a sum (e.g. 55.000 euro) was capable to act as a correct satisfaction for the wrongfull arrest for 8 months and a half, and to offer an equitabile satisfaction for the plaintiff taking into account the principle of proportionality between the judicial error and its consequences.The same ideea is stressed by another High Court decision[20].

Thus,the ECHR jurisprudency doesn't offer a specific rule in the determination of these moral damages.The principle that can be extracted from its jurisprundecy is the statuation in equity on moral damages regarding the particular differences of each case.Also,the sum of money must be reasonable,equitable and proportioned with the plaintiffs prejudice as a result of the arrest measures that were imposed for him. Still, this leaves many room for interpretation and unfair judicial practice.

4. Conclusions

Unsurprinsingly, it may be very difficult to establish objective criteria in determination of moral damages. As stated before, the relevant legislation doesn't contain any strict standards.Furthermore, the specific insurance norms given by the Financial Supervisory Authority (ASF) are also lacunary: Article 49 paragraph 1 point f and paragraph 2 point d from the 14/2011 ASF Norm both say that the moral damages will be paid: "according with the legislation and the jurisprudency from Romania"[21].

In the absence of coherent criteria regarding moral damages compensations, Romanian courts are forced to make decisionssupported by different assumptions and motivations. The compensation of moral damages through sums of money rises the difficult problem of the modality and the criteria of appreciation of moral prejudicies.In apreciation of the importance of the moral prejudice, one must envisage the repercussions of the moral prejudice on the general state of mind, the possibilites of social and professionalachievments etc. As no objective criteriaof determination of prejudice are provided by the current law, the judges ultimately have the power to appreciate these compensations taking into account the specific datas of each case - the moral damages are determined in appreciation.

The judges must consider the negative physical and psychological consequences,the importance of the damaged values and the measure in which these values were damaged.All these criteria are subordinated to reasonable and equitable standards because the sums of money resulted from moral damages must not be a burden for the insurance company.

The European jurispudence established that the equlibrium between the injured parties and what the insurance companies can and will pay, should be *de lege ferenda* incorporated in some agreements with maximal sums of money which can be paid regarding different types of injuries/damages.This is how,on one hand the insurance companies can determine the level of the insurance premiumsmore accurately, and, on the other, the injured persons can ask for a resonable sum of money that should compensate their loss.

Future work on this topic could includea unique guide for all insurance companies from Romania, whichwould be useful for the courts in their appreciaion of moral damages as no strict and objective criteria exist now.

THE DIRECTIVE 85/374/EEC ON DEFECTIVE PRODUCTS: ITS INTERPRETATION BY THE EUROPEAN COURT OF JUSTICE

Inmaculada HERBOSA MARTÍNEZ*

Abstract

This paper focuses on the interpretation of the European Court of Justice concerning substantive aspects of the Directive 85/374/ECC of July25, 1985, on liability for defective products. Therefore, this work will deal with the interpretation of some aspects regarding the essence of products liability: The concept of defect and the extent of damage covered by this liability. In addition, a number of issues needing of interpretation are analysed, such as: The meaning of putting a product into circulation, the right to information of the consumer in order to prove the causation of damage, and finally the problems that arise in cases where the producer is exempt from liability.

Keywords: *Liability, product liability, strict liability, producer liability, defective products.*

1. Introduction. Principle of complete harmonization

As it is known, products liability is governed by the Directive 85/374/EEC of July 25, 1985, on the approximation of the laws, regulations, and administrative provisions of the Member States concerning liability for defective product. In essence, this Directive concerns liability of the producer for the damage caused by defective products. It imposes "strict liability"[1], without fault, on the liable subject the producer, where a defective product causes injuries to a person or damage to property.

It is settled case-law that Directive 85/374 seeks to achieve, in the matters regulated by it, completed harmonization of the laws, regulations and administrative provisions of the Member States[2]. To this respect, the European Court of Justice (ECJ) has held that reference in Article 13 to the rights which an injured person may rely on under the rules of the law of contractual or non-contractual liability cannot be interpreted as giving the Member States the possibility of maintaining a general system of product liability different from that provided for in the Directive[3]. Differently, it must be interpreted as meaning that the system of producer liability put in place by the Directive does not preclude the application of other systems of contractual or non-contractual liability based on other grounds, such as fault or a warranty in respect of latent defects, or the application[4]. Likewise the reference in Article 13 to the rights conferred to an injured person under a "special liability system" existing at the time when the Directive was notified must be construed, as referring to a specific scheme limited to a given sector of production[5].

Nevertheless, as is apparent from the 18th recital in the preamble, it is also settled case-law that it does not seek exhaustively to harmonize the field of liability for defective products beyond those matters[6]. In accordance with this statement, has ruled that the Under this principle, the ECJ has ruled that Directive 85/37 brings about complete harmonization only so far as the producer's liability and damages covered by the Directive, among other aspects, are concerned [7].

* Professor PhD, Deusto University, (e-mail: **inmaculada.herbosa@deusto.es**).

[1] As it noted by the ECJ, that is expressly stated in the second recital in the preamble to the Directive. It is also apparent from the enumeration of the matters to be proved by the injured person in article 4 and from the cases in which the producer's liability is excluded in article 7 (see Case C 402/03 *Skov Æg v Bilka Lavprisvarehus A/S and Bilka Lavprisvarehus A/S v Jette Mikkelsen and Michael Due Nielsen* [2006], paragraph 19).

[2] See Case C 52/00 *Commission v France* [2002], paragraph 24; Case C 154/00 *Commission v Greece* [2002], paragraph 20; Case C 183/00 María *Victoria González Sánchez v Medicina Asturiana SA* [2002], paragraphs 24-29 and *Skov and Bilka*, paragraph 23. Concerning the intention to harmonize completely at Community level article 11 of the Directive, see Case 358/08, *Aventis Pasteur SA v OB* [2009], paragraph 37.

2. Interpretation concerning the elements that determine liability product

After the promulgation of the Directive 85/374, the ECJ has ruled on several issues concerning its interpretation. Some of them, in recent days, concerning the scope of the Directive, such as the class of liable person, concept of defect and the damage covered by it.

2.1. Concept of liable person

Article 1 of this Directive imposes the defective product liability on the producer of the product in question, as it has been defined in Article 3. The reasons why it appeared appropriate to hold the producer liable have been summarized by the ECJ. So, it is recalled that the choice of allocating liability to producers in the legal system established by the Directive was made after weighing up the parts played by the various economic operators involved in the production and distribution process. To this respect, it was considered that the fact of imposing liability on the supplier, although would make it simpler for an injured person to bring proceedings, first, there would oblige those subjects to insure such liability, resulting in products significantly more expensive. Second, it would lead to a multiplicity of actions brought by the suppliers, back up the chain as far as the producer. All, while in the great majority of cases the supplier does no influence the quality of the products it sells[8].

Since this Directive, as it has been said before, seeks a complete harmonization in the matters covered by it, the determination in Article 1 and 3 of the class of persons which can be considered liable must be considered as exhaustive[9]. Therefore, in *Skov and Milka* the ECJ holds that the Directive precludes a national rule which transfer to the supplier the liability imposed by its regulation on the producer, beyond the cases listed exhaustively in Article 3(3) [10]. Reversely, in the same judgment it is recalled that the Directive allows a national rule under which the supplier is answerable for the fault-based liability of the producer for a defective product, since Article 13 of the Directive does not preclude the application of other systems of contractual or non-contractual liability based on other grounds, such as fault[11].

Likewise, since the Directive brings about complete harmonization only so far as the producer's liability for defective product is concern, Member States are allowed to establish a system of strict liability for suppliers different from that laid down under the Directive, only on condition that it does not adversely affect the system established by the latest[12].

It follows that the liability regulated by the Directive only may be imposed on the producer, as is defined in Article 3 (1): The manufacturer of a finished product, the producer of any raw material or the manufacturer of a component part. And it is only in the cases exhaustively listed in this Article 3 that other persons can be considered as a producer: Any person who, by putting his name, trade mark or other distinguishing feature on the product presents himself as its producer (Article 3(1), any person who imports into the Community (Article 3 (2) and, where the producer or the importer cannot be identified, the supplier who does not inform the injured person of the identity of the producer or of the person who supplied him with the product (Article (3)[13].

In the context of determining the liable person under the Directive, the question of the substitution of the defendant when this is not the producer becomes significant. This question involved two separate references to ECJ as to the same case in the main proceedings. To this respect, in *O'Byrne,* the ECJ rules that it is for national law to determine the conditions in accordance with which one party may be substituted for another when an action is brought against a company mistakenly considered to be the producer. However, in light of considerations made above, the national court which examines the conditions governing such a substitution "must ensure that due regards is had to the personal scope of the directive, as established by Article 1 and 3 thereof"[14]. It follows that the subject who substitutes the defendant must be a producer as defined by this Article.

In *Aventis Pasteur*, as to the same case where the victim mistakenly brought an action against a defendant who is not the producer, the ECJ, having regard to the fact that the defendant is the supplier of the defective product, recalls that where the producer cannot be identified, the supplier of the product is treated as the producer, unless he informs the injured person, within a reasonable time, of the identity of the producer or of his own supplier according to Article 3 (3)[15].

As was pointed out by this Court, this latest provision should be understood as referring to the

situation in which, taking into account the specific circumstances of the case, the victim "could not reasonably have identified the producer of that product before exercising his rights against its supplier". To this respect, it was stated that the mere fact that the supplier of a product denies being its producer does not suffice for that supplier to be treated as having informed the injured person of the identity of the producer or its own supplier. On the other hand, the condition relating to the supply of such information within "a reasonable time" involves that the supplier informs the injured person, "on its own initiative and promptly, of the facts referred to above. In any case, it is for national court to determine if the supplier fulfills these requirements[16].

2.2. Concept of defect

The definition of defect is given by Article 6 of the Directive, according to which a product is defective "when it does not provide the safety which a person is entitled to expect". With this purpose, all circumstances must be taken into account, including: (a) The presentation of the product (b) its reasonably expected use; and (c) the time when the product was put into circulation.

Recently, the ECJ has ruled on the circumstances under which a product can be considered as defective in Joined Cases *Boston Scientific Medizintechnik GmbH v AOK Sachsen-Anhalt and others*[17]. The question referred to the court was, in essence, whether Article 6(1) allows to classify as defective certain products, belonging to the same group or forming part of the same production series and having all of them a potential defect, without any need to establish that the product in question has such a defect. In this concrete judgment, the Court rules on two related cases concerning implanted medical devices, such a as a pacemaker and a cardioverter defibrillator. As we will see, the specific nature of the defective products, medical devices implanted in the human body, was relevant for its ruling.

In deciding this question, the ECJ considered the concept of defect by reference to the Directive itself and, therefore, gave guidance on the parameters to consider a product as defective. The Court, making reference to definition of defective product (Article 6 of the Directive) and to the sixth recital of the preamble, states that the effect of that recital was that the "assessment must be carried out having regard to the reasonable expectations of the public at large". This expectations, according the Court, must be assed taking into account a number of factors, inter alia, "the intended purpose, the objective characteristics and properties of the product in question and the specific requirements of the group of users for whom the product is intended".

For products such as those at issue in the main proceedings, implanted medical devices, the ECJ noted that, given its function and the particularly vulnerable situations of patients using them, the safety requirements which those patients were entitled to expect were "particularly high". Moreover, taking into account of these factors, the Court understood that in the cases at issue, where it is found that such products belonging to the same group or forming part of the same production series have a potential defect, it is possible to classify all products in that group or production series as defective, without the need to show that the any specific product was defective.

As it has been said above, in adopting this decision the Court seems to have taken into account the specific nature of these products, implantable medical devices, and the specific risks arising from them. However, the Court does not limit its decision to these particular products. Therefore, **the same solution can be applied, under the same circumstances, to other products, other than implanted medical devices.**

2.3. Recoverable damages

As it is noted by the ECJ, unlike the terms "product", "producer" and "'defective product'", for which the Directive provides express definitions (Article 2, 3 and 6 respectively), the term "'damage'" is not defined in the Directive. Neither Article 9 nor Article 1 of the Directive, to which Article 9 refers, contains any explicit definition of the term 'damage'[18].

Therefore, Article 9 only indicates the various heads of damage covered by the Directive. Under this Article, those damages are limited to:

Damage caused by death or by personal injuries;

Damage to, or destruction of, any property other than the defective product itself, with a lower threshold of €500[19], provided that the property is ordinarily intended for private use or consumption, and was used by the injured person mainly for his or her private use or consumption.

In *Henning Veedfald v Århus Amtskommune*, given the difficulty in specifying the nature of the damage in the case at issue, the national court referred the question whether the Community Law imposes any requirement as to define the

[16] *See Aventis Pasteur***,** paragraphs 55-59.

[17] See Joined Cases C-503/13 and C-504/13, *Boston Scientific Medizintechnik GmbH v AOK Sachsen-Anhalt and others* [2015].

[18] See Case 203/99, *Henning Veedfald v Århus Amtskommune* [2001], paragraph 25.

[19] According to the principle of full harmonization imposed by the Directive 85/374, Member States cannot decide against the minimum threshold of €500 (see Commission *v France* [2002] and *Commission v Greece* [2002].

expressions '"damage caused by death or by personal injurie" and "'damage to, or destruction of, any item of property other than the defective product itself" provided for in Article 9 of the Directive[20].

The Court held that it is for Member States to determine the precise content of those two heads of damage. Nevertheless, full and proper compensation for persons injured by a defective product must be available for both kind of damages referred in the preceding paragraph, since it is settled case law that application of national rules may not impair the effectiveness of the Directive[21]. In essence, that means that it is for Member States to define these two heads of damages in order to determine if in a particular case there a damage is resulting from death or personal injury or damage to property. But a Member State may not restrict the material damages which are recoverable under these two heads of damages in accordance with Article 9 of the Directive[22].

In recent days, the ECJ has provided guidance on the damages which constitutes "damage caused by death of by personal injuries" according to Article 9 of the Directive. The particular question referred to the Court was whether the costs of an operation to remove and replace the defective medical device, in the specific circumstances of the joined cases *Boston Scientific* above mentioned. The ECJ has adopted a broad interpretation of the concept of this head of damage, stating that it relates "all that is necessary to eliminate harmful consequences and to restore the level of safety which a person is entitled to expect". This interpretation is based both on the objective of protecting consumer health and safety pursued by this Directive in accordance with the first and sixth recitals of the Preamble, and the causal relationship between the defect and the damage suffered.

It means that costs for replacing defective medical devices only constitute damage caused by personal injuries covered by the Directive as long as the replacement is necessary to restore the safety the injured person is entitled to expect. In other case, the compensation for this head of damage will cover only those costs which are necessary to overcome the defect. In any case, it is for national courts to determine what measure is necessary in a particular case, "bearing in mind the abnormal risk of damage to which it subjects the patients concerned".

Therefore, in the concrete cases at issue, as to the defective pacemaker, the Court finds that the costs for the replacement of such device, including the costs of the surgical operations, constitute damage caused by personal injuries covered by the Directive. But this Court holds that finding may be different in the case of the defective cardioverter defibrillators, since it was apparent that the magnetic switch of those medical devices should simply be deactivated. In any case, as it was said above, it is for national court to decide if deactivation of the magnetic switch is sufficient for the purpose of overcoming the defect.

Finally, as it has been said above, since the Directive 85/374 does not seek to harmonize products liability beyond the matters regulated by it, the harmonization does not cover compensation for damage excluded from its scope. That is the case, *inter alia*, of compensation for damage to an item of property intended for professional use and employed for that purpose. In *Société Moteurs Leroy Somer v Société Dalkia France and Others*, the national court asks, in essence, if this Directive precludes the interpretation of domestic law according to which the injured person can seek compensation for this type of damage under a system of strict liability corresponding to that established by its regulation [23]. After stating that compensation for this type of damage is not one of the matters regulated by this Directive and therefore is not covered by its scope, the Court held that nothing in its wording leads to the conclusion that Community Law deprive Member States of the power to provide a system of liability which corresponds to that established by that Directive[24].

3. Other issues needed of interpretation

Beyond those elements which determine the scope of the Directive 85/374, there are other provisions interpreted by the ECJ which complete a general approach in respect of product liability across the EU.

3.1. Limitation in time of the right of compensation

Article 11 of the Directive states that Member States must provide in their legislation that the

[20] See *Henning Veedfald*, paragraph 11. In this case, the damage consisted of the loss of a kidney that had been removed from a donor for transplantation. The kidney was prepared by the hospital through flushing with a perfusion fluid designed for that purpose. This fluid proved to be defective, making the kidney unusable for any transplant.

[21] See *Henning Veedfald*, paragraph 27.

[22] See Henning *Veedfald*, paragraps 28-29.

[23] See *Société Moteurs Leroy Somer*, paragraph 14. In the case at issue, a generator installed in a hospital in Lyon caught fire due to the fact that the alternator manufactured and put into circulation by "Moteurs Leroy Somer" overheated. Dalkia France, which was responsible for the maintenance of this installation, and its insurer, paid compensation for the material damage caused to hospital by that accident and then brought an action against Moteurs Leroy Somer, to obtain reimbursement of the payment made by them.

[24] See *Société Moteurs Leroy Somer*, paragraphs 27-31.

rights conferred under its regulation shall be extinguished after a period of 10 years from the date on which the producer put into the circulation the defective product. This 10 years period only can be interrupted when he injured person has instituted proceedings against the producer. To this respect, the 10th recital in the preamble to the Directive states that "a uniform period of limitation for the bringing of action for compensation is in the interests both of the injured person and of the producer".

As it is noted by the ECJ, the purpose of this Article is to place a time-limit on the rights conferred by the Directive on the victim and, it is apparent from its Preamble, to satisfy the requirements of legal certainty in the interests of the parties involved. Therefore, as we will see later when examining the putting into the circulation of the product as the starting date of that period, the establishment of the time-limits within which the action for compensation must be brought must satisfy objective criteria[25].

According to the ECJ, this harmonization contributes, first, to the general aim expressed in the preamble of the Directive, consisting of putting an end to the divergences between Member States which entail differences in the degree of protection of consumers. Second, seeks to limit the liability of the producer to a reasonable length of time, taking into account a number of factors, such as, the gradual aging of products, the increasing strictness of safety standards and the constant progressions in the state of science and technology. In addition, bringing up the opinion of the Advocate General, the Court invokes the need not to restrict technical progress and to maintain the possibility of insuring against risks connected with this specific liability, given the burden this liability represents for the producer[26].

In a context in which the action laid down by the Directive must be brought within the 10-year period, the issue related to the substitution of one defendant for another after the expiration of that period becomes relevant. In *Aventis Pasteur* the question referred by the national court was whether the Directive allowed this substitution although the person named as a defendant in the first place did not fall within the scope of the Directive. Bearing in mind the *rationale* for limiting in time the right of compensation, the ECJ hold that Article 11 precludes the application of a rule of national law, which allows the substitution of one defendant for another during proceedings, in a way which "a producer", as defined by the Directive, is sued after the expiry of the period prescribed by that Article[27].

According to the court, an outcome to the contrary would involve, first, to accept that this period could be interrupted for a reason other than the institution of proceedings against the producer as it is prescribed by Article 11. And, second, a lengthening of the limitation period with regard to such a producer. The latter would be inconsistent with the harmonization intended by the Directive and with the legal certainty this Article seeks to grant this subject in the context of the liability established by that Directive. To this respect, the Court recalls the important of the principle of legal certainty in rules that entail financial *consequences*, in order that those concerned may know precisely the extent of their obligations[28].

In addition, the ECJ gave clarifications to guide the referring court in giving judgment in the main proceedings of reference where the person named as a defendant before the expiration of the 10 years period was a wholly-owned subsidiary of the producer. To this respect, this Court appoints that it is for the national court to assess whether the product was put into circulation by the producer. So, where the national court notes that fact, first, that Article 11 does not preclude national court from holding that the parent company, "producer" as defined by the Directive, can be substituted for that subsidiary. Second, having regard to the same fact, that the supplier of the product can be treated as the producer, in particular for the purposes of Article 11, where the latest cannot be identified, unless he informs the injured person, within a reasonable time, of the identity of the producer of his own supplier in accordance with Article 3(3) [29]. Where the conditions provided for in this provision are met, the supplier should treated as a "producer" and, therefore, the proceedings instituted against him will interrupted the limitation period laid down in Article 11[30].

3. 2. Meaning of "putting the product into circulation"

The Directive does not define the concept of 'put into circulation', which is referred to in several provisions of the Directive 85/374. Primarily, in Article 7(a) dealing with the circumstances where the producer will be exempt from liability and Article 11, which places a time-limit on the exercise of the rights conferred by this Directive on the injured person. Secondarily, this term is also used in other provisions: In Article 6.1 (c) dealing with the circumstances to assess the safety

[25] See *O'Byrne,* paragraph 26.
[26] See *Aventis Pasteur*, paragraphs 40-43.
[27] See Aventis Pasteur, paragraphs 43-44
[28] See Aventis Pasteur, paragraphs 45-47.
[29] See Aventis Pasteur, paragraphs 50-54.
[30] See. Aventis Pasteur, paragraph 60. As to the conditions for the application of article 3 (3), see 1.1. Concept of liable persons.

expectations of the products to be considered defective and in Article 17, as the reference date for determining the temporal scope of application of the Directive.

As to the concept of "putting into circulation" referred to in Article 7 of the Directive, in *Henning Veedfald* the ECJ has held that the producer may himself exempt from liability because the product has not been put into circulation, primarily, in cases "in which a person other than the producer has caused the product to leave the process of manufacture". In accordance with this approach, the Court considered that this exception also covers the use of a product contrary to the producer's intention (where the manufacturing process is not yet complete) and use for private purposes. In this context, regarding the concept referred in the Article 7, the Court considered that the cases exhaustively listed by this Article, by which the producer may exempt himself from liability, "are to be interpreted strictly" in order to protect the interests of the victims[31].

In the case at issue, the producer of the defective product , a hospital, produces and uses the product in the course of provinding a medical service. Bearing in mind this situation, the Court held that a defective product is put into circulation when "it is used during the provision of a specific medical service" , although the product did not leave the sphere of control of the service provider [32]. This case is different from that on which a service provider, in the course of providing a service, uses defective equipment or product of which it is not the producer. [33] In the latter case, as it is apparent from ECJ case law, damage to the recipient of the services does not fall within the scope of the Directive 85/374. Therefore this Directive does not prevent a Member State from applying rules which impose strict liability on a service provider, provided that it does not adversely affect the system established by Directive 85/374[34].

The concept of "putting into circulation" referred to in Article 11 was interpreted in *O'Byrne v. Sanofi Pasteur*. In this context, taking into account the purpose and the aim of this Article explained above, the Court held that a product is put into circulation "when it leaves the production process operated by the producer and enters a marketing process in the form in which it is offered to the public in order to be used or consumed". The ECJ considered that, generally, it is not important in that regard that the product is sold directly by the producer to the user or to the consumer or that the sale is carried out as part of a distribution process involving one or more operators, as Article 3 (3) of the Directive makes apparent [35].

It must be noticed that in the case of reference in the main proceeding, one of the links in the distribution chain was closely connected to the producer, since the distributor of the defective product was a wholly-owned subsidiary of the latter[36]. To this respect, the Could considered that it is necessary to determine whether the subsidiary entity was in reality involved in the manufacturing process of the product or it acts simply as a distributor of depository for the product manufactured by the parent company. In any case, it is for the national courts to establish this aspect, having regard to the circumstances of each case and the factual situation of the matter before them[37].

3.3. Exemption of liability

Since the Directive imposes a system of "strict liability" on the producer, this subject cannot avoid that liability by the mere fact of proving he has acted without fault. Nevertheless, in accordance with the principle of a fair apportionment of risk between the injured person and the producer laid down in the seventh recital in the preamble, Article 7 sets out a number of facts exonerating him from liability[38].

The case law of the ECJ has interpreted some of these circumstances, in addition to that which allows the producer to be exempt from liability when he did not put the product into circulation, analyzed before. So, this Court has ruled on the exonerating circumstances laid down in Article 7, paragraphs (c) and (e).

Article 7 (c) of the Directive exempts the producer from liability when the producer proves

[31] Cf. *Henning Veedfald*, paragraphs 24 and 25.

[32] In this case, as it was mentioned before, a kidney, previously removed from the donor from transplantation was, rendered unsable for any transplant due to that kidney was prepared through "flushing" with a fluid designed by the hospital for this purpose with proved defective. The defendant hospital denied liability on the grounds that the product had not been put into circulation.

[33] See *Centre hospitalier universitaire de Besançon.* In the case at issue in the main proceedings, a patient suffered burns during surgery carried out in public hospital. The burns were caused by a defect in the temperature-control mechanism of a heated mattress on which he had been laid. The defendant claimed that the Directive 85/374 prevented application of the principle deriving from the case-law, whereby a public hospital is liable even without fault for damage caused to users as a result of the failure of products or equipment used in connection with their treatment.

[34] See *Centre hospitalier universitaire de Besançon,* paragraphs 27, 30 and 39.

[35] See *O'Byrne v. Sanofi Pasteur,* paragraphs 26 and 27. See also paragraph 32.

[36] In the case of reference, the producer of the defective product, an antihaemophilus vaccine, had sent it to a distributor, which was a wholly-owned subsidiary of the producer. Then, the vaccine was sold by this distributor to the Department of Health of United Kingdom and delivered directly to a hospital nominated by the Department of Health.

[37] See *O'Byrne v. Sanofi Pasteur,* paragraphs 29 and 30.

[38] See Case C 300/95, *Commission of the European Communities v. United Kingdom of Great Britain and Northern Ireland* [1997], paragraph 24.

that "the product was neither manufactured by him for sale or any form of distribution for economic purpose nor manufactured or distributed by him in the course of his business". As to the exemption from liability where an activity has no economic or business purpose, the ECJ has ruled that it does not extend to the case of a defective product which has been manufactured and used in the course of a providing a service (in the case of reference, a medical service) which is entirely financed from public funds and for which the user is not required to pay any consideration. To this respect, this Court appoints that this activity "is not a charitable one" which could therefore be covered by the exemption from liability provided for in this provision[39].

On the other hand, Article 7 (e), in connection with Article 15.1 (b), allows Member States to decide whether in its legislation the producer can be exempt from liability when "the state of scientific and technical knowledge at the time when he put the product into circulation was not such as to enable the existence of the defect to be discovered" (the so called, "development risks"). The ECJ makes several observations as to the wording of this provision. The Court states, first, that this Article does not refer to the practices and safety standards in use in the industrial sector in which the producer is operating, but "at the state of scientific and technical knowledge, including the most advanced level of such knowledge at the time when the product in question was put into circulation". Second, that it does not contemplate the subjective knowledge of a producer but "the objective state of knowledge of which the producer is presumed to have been informed". Finally, it is considered implicit that the relevant knowledge must have been accessible at the time when the product in question was put into circulation[40].

3.4. Proof concerning the causation of damage

As it is known, Article 4 of the Directive places the burden of proof on the victim or injured party as to the damage, the defect, and the causal relationship between these two elements.

Although the Directive does not define the standard of proof and how evidence is gathered, some Member States have imposed on the producer the obligation to provide useful documentation and information related to the defective product to the victim. The question is if the principle of complete harmonization brought by the Directive would prevent Member States from adopting this provision.

According to the ECJ, it should be noted that, as a matter of principle, the consumer's right to obtain information on the adverse effects of a product provided for by national legislation is excluded from the scope of the Directive 85/374 and, therefore, it would not affected by the principle of complete harmonization of the matters covered by it. But, as it is noted by this Court, in reaching a decision, it would be necessary to ascertain if this provision would be capable of undermining the allocation of the burden of proof as delimited in Article 4. To this regard, the Court holds that it does not bring about a reversal of the proof as delimited by the Directive and does not introduce any change in the circumstances listed in Article 7 under which the producer can be exempt from liability. It follows that the Directive does not preclude national legislation under which the consumer has a right to require the producer to provide him with such an information41.

In the case at issue, the Court avoids the question referred by the national court for preliminary ruling concerning the interpretation of Article 13 of the Directive, as that question becomes irrelevant once found that the right to information is outside the scope of it.

4. Conclusions

Ever since the Directive 85/374 concerning liability for defective products was adopted, the ECJ has been called on to deliver a number of judgments on its interpretation. ECJ case law provides a catalogue of cases on product liability, a number of them in recent days in the field of medicine (pharmaceutical products and medical devices). Certainly, the case law of this Court does not put an end to all the questions arising from the application of the Directive but it decisively contributes to clarifying and elaborating the basic principles of product liability across the European Union.

CONTROVERSIAL LAW ISSUES IN THE ENFORCEMENT OF THE NEW LEGAL PROVISIONS IN FAMILY LAW

Dan LUPAȘCU[*]

Abstract

The relatively short period of the new Romainian Civil Code implementation highlights the existence of some controversial law issues regarding the legal provisions contained in Book II, entitled "About family".

Apart from the theoretical disputes, there are also court decisions that contain different solutions in the enforcement of the same legal provisions.

Controversy exists not only in relation to the newly introduced institutions in our legal landscape, but also regarding the ones taken over from the old regulation, institutions that have undergone some changes.

The examples are most varied and they do not bypass almost any matter. Thus, we signal the presence of different interpretations of regulations regarding: engagement, marriage, divorce, parentage, adoption, the legal duty to maintain, the parental authority, etc.

The present study highlights such controversy's by presenting the views expressed and the arguments invoked in their support and also some propositions of Ferenda Law.

Keywords: *Romainian Civil Code, controversial law issues, engagement, divorce, filiation.*

1. Introduction

Conducted during a relatively short time period, the considerable effort of *"modernizing"* romanian legislation and aligning with the international regulatory developments is somewhat *"shadowed"* by the existence of some legislative solutions susceptible of different interpretations or by the absence of provision.

Thus, reffering only to the provisions of the Civil Code regarding family relationships, we find that there are numerous discrepancies in the speciality literature and/or judicial practice. Their existence can be easily noticed from the critical content analysis in terms of legal logic of the various regulations. At the same time, in the process of law enforcement, in many cases, the guardianship courts have ruled differently over the same law issues. In fine, the specialized literature of almost 5 years of implementing the Civil Code revealed different views over the same law issues.

And we could say that this is just the beginning…

The present study highlights only a part of these controversies in matters, such as: engagement, nullity and dissolution of marriage, filiation and legal duty to maintain. Their presentation shows not only theoretical interest, but also significant practical consquences, because from the meaning of a legal provision depends the outcome of a specific case, or in the event of a litigation, or in any other assumptions of enforcing a legal rule.

In the contents of the material are criticaly filtered expressed opinions, arguments invoked in their support and also, solutions that we share.

Likewise, regarding certain aspects, there are formulated *law ferenda* proposals designed to lead to the elimination of gaps or, where appropriate, equivocal formulations and the adoption of some clear legislative solutions, that are able to meet the requirements imposed by the specific family relations and the principles that govern this field.

2. Content

2.1. Controversies on the legal nature of engament, engagement effects and legal nature of the liability in the event engagement breakage

Legal institution having a considerable age (being mentioned in the Old Testament – where it was designated through the Hebrew term *"aras"* – present in the Roman law, Byzantine law, etc.), in essence, engagement represents the solemn covenant of two persons of the opposite sex to marry each other in the future.

Also regulated by the old statues, but omitted by the Romanian Civil Code of 1864, engagement was reintroduced in our law through the new Civil Code, a legislative intervention that has sparked conflicting reactions among specialists in family law. The analysis of this institution also generated ample discussions in doctrine. For example, regarding its legal nature, some authors qualify engagement as a legal act[1], a convention[2], others are

[*] PhD, Faculty of Law, "Nicolae Titulescu" University of Bucharest (e-mail: **prof.danlupascu@gmail.com**).

[1] E. Florian-Considerații asupra logodnei reglementată de noul Cod civil,Curierul judiciar nr.11/2009, p.632; C.C.Hageanu-Dreptul familiei și actele de stare civilă, Ed. Hamangiu,București, 2012, p.15.

[2] I.D. Romoșan-Dreptul familiei, Ed. Universul Juridic, București, 2012, p.30.

letting to believe that it would be about such an act[3], while another author believes that engagement is a *"simple legal fact"*[4].

As far as we are concerned, we maintain our opinion[5] of being in the presence of a legal act, more precisely a legal *sui generis* family law act, a qualification that results primarily from the legal definition of engagement, definition contained by art. 266 paragraph 1 Civil Code. Secondly, the membership of engagement in the category of legal acts is deducted from the implementation of the sanction of nullity in the case of failure to comply with the basis conditions. Thirdly, the fact that the legislator prohibits the insertion of a Criminal law clause leads to a *a contrario* interpretation according to which any other clauses, that are compatible with this institution, are allowed. Finally, it should be noted that engagement does not fall within the legal category of juridical deeds regulated by the Civil Code.

Another controversy was generated by the fact that the law does not indicate the effects of engagement, but confines only to regulate the patrimonial consequences of breaking the engagement. From here it leads to the conclusion that engagement does not give rise to any statute for the engaged persons, thus the analogy with the institution of marriage is not permitted, only the appearance of some *"pseudo-effects at the breaking of the engagement"*. So, basically engagement is a legal act deprived of legal effects[6], the only ones being born at the moment of her tempestuous breakage[7].

We do not share this opinion and we also consider that it is unacceptable that the legislator should be concerned by an institution that lacks any legal effects. If some effects were not expressly provided then it does not mean that they are nonexisting. Also, sanctioning the abusive breaking of engagement or of the culpable determination of the other fiancé to break the engagement presupposes personal relationships conducted in good faith and loyalty between the two fiancés. Even though it does not give rise to a marital action – in order not to affect the matrimonial freedom – engagement generates the juridical condition of engaged persons, thus arising moral as well as legal consequences.

The relations between fiancés fall within the definition of private life, and they are enjoying the legal protection offered, a fact also confirmed by a decision of the former European Commission[8]. From the circumstance that the law penalizes improper conduct of breakage or the determination of the engagement breakage, it is inferred that between the fiancés there are a number of personal rights and duties, similar in principle to those of marriage. Without equalizing the two legal institutions, we can not ignore that both of them are based on the friendship and affection between a man and a woman. That's why we believe that it is not exaggerated to support the existence of some mutual obligations (respect, loyalty, moral support). At the same time, fiancés may agree to live and eventually to take care of the household together, a situation in which engagement can overlap over the state of concubinage.

If children were born from the relationship of the engaged couple, then the couple cohabitation in the legal time period of the conception makes the presumption of filiation against the alleged father applicable. Fiances can choose the matrimonial regime (such an agreement shall take effect from the date of marriage), they can exchange gifts or they can receive them from third parties, they may agree to provide material support for each other, they can aquire assets under common ownership etc.

Reaching a conclusion over these issues, we support that engagement produces both patrimonial and non-property effects, whose legal consequences extent is determined by taking into consideration of the actual content of the agreement between the sides.

In order to remove any doubt about the effects of engagement, we propose the completion of the statutory provisions as specified above.

The legal nature of the liability in the event of a breakage of engagement is not safe from criticism either, under debate being the contractual liability and the tort liability. Under the empire of the current Civil Code, the dominant view is the incidence of liability in tort[9]. In our case, we will remind that in the case of contractual liability, the breached obligation is a concrete one, from those established through contract. So, as we mentioned above, engagement is not a contract, in the common law meaning of the term, but a *suis generis* family law juridical act.

The promise of marriage can not be executed in kind, through the coercive force of the state. Therefore, the contractual nature of the liability is excluded. In the case of tort liability, the breached obligation is a legal obligation, with a general nature that we all share, consisting in the violation of a conduct rule which the law or the local custom imposes or by an infringement brought to the legitimate rights and interests of others. In the matters of engagement we can not speak of a

violation of a general obligation or a rights infringement or also legitimate interests in the sense mentioned above. Moreover, the person has the right to break off her engagement, without being obliged to marry. The pecuniary sanction only intervenes under the assumption of the abusive exercise of this right, which draws incidence in article 15 conjuncted with art.1353 Civil Code.

Therefore, we are reluctant to qualify as pure tort such a liability, thus sustaining the thesis of liability for the abusive exercise of a recognized legal right.

2.2. Controversies concerning nullity and dissolution of marriage

Towards the fact that the provisions of art.13 para.1 in the Civil Code were not taken over from the Family Code it has been sustained that the failing to display the marriage statement is no longer sanctioned with nullity[10]. It is true that breaching the provisions of art.283 Civil Code is not mentioned among the cases of absolute or relative nullity of marriage, however it must not be ignored that these cases relate to the express nullities, and , outside them, there are virtual non entities, the provisions of the art.1253 Civil Code being applied by analogy.

In our opinion the breach of advertising marriage, regardless of whether it takes the form of denying public access at the celebration of the marriage or not displaying the marriage declaration, attracts the absolute nullity sanction of that clandestine marriage. In support of this opinion we invoke, firstly, the provisions of Article 1, paragraph 1 of the Convention relating consent to marriage, minimum age for marriage and registration of marriages, ratified by Romania by Law no. 116 / 1992, according to which: *"No marriage shall be legally entered into without the full and free consent of both parties, such consent to be expressed by them in person after due publicity and in the presence of the authority competent to solemnize the marriage and of witnesses, as prescribed by law."* Secondly, the mandatory wording of the provisions of Civil Code art. 283 maintains the solution of applying the absolute nullity so that the purpose of the violated legal provision to be achieved.

De lege ferenda we propose the completion with this nullity case of the provisions in Article 293, paragraph 1 Civil Code.

Regarding the possibility of granting compensation pursuant to Article 388 Civil Code, in the case of putative marriage, there are two orientations shaped in the specialty literature. Thus, some authors[11] consider that both spouses are subject to the provisions of divorce in regards of patrimonial relations, including the right to damages, regardless of whether both or only one of them was of good faith at the conclusion of marriage. In what concerns us, we share the view that *"both compensatory benefit or the right to damages are specific effects of divorce"*[12], a situation where you can not apply the provisions of art. 388 Civil Code. The husband of good faith can only claim damages under the common law (of civil liability under tort)[13].

In the matter of culpable divorce for solid grounds, if the claimant spouse dies during the process, art.380 para. 1 Civil Code provides for the possibility of the spouses heirs to continue divorce proceedings. The meaning of the *"heirs"* notion in this law text is the subject of a doctrinal dispute. Specifically, an opinion[14] claims that, in the event of vacant succession, the divorce proceedings can be continued by the village, town or, where appropriate, the municipality on whose territorial area the goods were located at the opening date of the inheritance. We do not share this point of view, believing that the territorial administrative unit is not entitled as the legal heir and can not continue the divorce proceedings[15]. We base our view on a text argument. Thus, art. 963 para. (1) and (2) Civil Code limitingly mentions the categories of legal heirs and the next paragraph provides that, in the absence of legal or testamentary heirs, patrimony of the deceased is transmitted to the administrative-territorial unit.

Given the special practical consequences, we believe that legislative intervention is required in this regard.

2.3. Controversy regarding filiation

The fact that the condition in the contents of Article 53 paragraph 2 of the Family Code has not been taken over in the Civil Code – respectively child birth which took place before the mother remarried, has led to different interpretations concerning the solution of the paternity dispute. Opinions are to the effect that art. 414 para 1 Civil Code is unclear, allowing different interpretations[16], for example that it should enforce *"the priority presumption established by the law or by court"*[17], *"that the problem of double paternity will be settled through legal action in the denying paternity*

[10] M. Avram-Drept civil.Familia, op.cit., p.91-92; C.C.Hageanu-Dreptul familiei..., op.cit., p.39.

[12] M.Avram - Drept civil.Familia, op.cit., p.105.
[13] This solution is also sustained in the french doctrine. See, for example: F.Debove,R.Salomon,T.Janville-Droit de la famille,8 e edition, Ed.Vuibert,Paris, 2012, p.153.
[14] M.Avram-Drept civil.Familia, op.cit., p.133.
[15] In the same meaning: M.Tăbârcă, Drept procesual civil, vol.II, Ed.Universul Juridic, 2012, p.669.
[16] S.Guțan-Reproducerea umană asistată medical și filiația, Ed.Hamangiu,2011, p.69.
[17] C.C.Hageanu-Dreptul familiei..., op.cit., p.193.

action"[18], endeavor whereof has been observed, with good reason, that *"it can be foiled by invoking the lack of interest exception*". Case in which, the court or adversary can appreciate that not the attacked presumption is operant, but the other one"[19]. By comparing the provisions of art. 53 para. 1 Family Code (according to: *"A child born during the marriage has as a father the husband of his mother"*) with those of the art. 414 para. 1 Civil Code (according to*:"A child born or conceived during the marriage has as a father the husband of his mother"*), we remark the content difference, namely that the new regulation aims also on conception, not only child birth. Furthermore the conception is placed in the text after birth, which means, in our opinion, on the one hand that it has been desired to also cover the hypothesis of the child's conception before marriage, and on the other hand to enforce an order of preference thus consecrating the solution for the paternity conflict. Therefore, we are not in the presence of a evolutionary legislative change.

An intervention from the legislator would be welcomed to end this dispute in the sense of the full takeover of the old reglementation.

2.4. Controversy regarding the legal duty to maintain

The Article 527 para.2 Civil Code, in accordance with the expressed oppinions found in the specialty literature and with the judicial solutions pronounced in the application of the Family Code, foresaw that the determination of the debtors means of maintenance will be taken into account not only by his income and assets, but also by the possibilities of achieving them.

Therefore, the one who has no income or assets, but it is able to work, can be compelled to the legal duty to maintain, the connecting factor being the minimum wage of the national economy. In the hypothesis in which the debtor resides abroad and has no income even though he is fit to work (in practice were different solutions pronounced). Thereby some courts have established the alimony by taking into account the national minimum wage in the country concerned[20], while others have taken into account the minimum wage of the national economy of Romania[21]. At the first glance, it could be argued that the superior interest of the child demands the alimony that would ensure a higher amount of mainteinance, thus implying a comparison of official data set by the laws in those respective states. Only that this higher interest has a complex content, a content that involves the child should have parents who are enjoying a good reputation in terms of criminal law.

That is why we believe that the solution must be determined concretely, on a case by case basis, also taking into consideration all the relevant elements (the nature of the abroad stay, the time period, the concrete possibilities for earning legal incomes in that country, etc.).

A legislative clarification of this law issue or utilising a unification mechanism of judicial practice from the ones stated in the Civil Procedure Code would also be welcomed in this case.

3. Conclusions

The present material captures some of the doctrinal and jurisprudential divergences that are appearing from the application of the new legal provisions in the family law field.

The approach is complex, being made not only from a theoretical perspective, but also from a largely applicative one. As consequence, the purpose pursued and the result obtained are not only about fully and correctly discerning the complete meaning of the analyzed legislation, but also to avoid the wrong solutions in the process of applying them.

The diversity and polyvalence of regulations, the unique character of the legal rules, the problem of adherence to the national realities of legal provisions inspired by other legal systems, but mostly the question of the adequacy of the current law to the rapidly transforming social needs undoubtedly requires broadening and deepening scientific research.

HARMONIZATION OF THE CONSUMER CONTRACT DISPOSITIONS WITH THE GENERAL CONTRACT RULES

Alexandru MATEESCU*

Abstract

This work contains and mainly tackles the contract of consumption, its differences and similitudes to a general contract, manners of applying it, and the way in which the former can be better coordinated and correlated to the general contracting terms, established by the civil law. Along the years, the consumption contract has undergone several addenda and it has come to represent an instrument of both refference and regulation for the socio-economical relations between two parties who have a commercial agreement. The general law frame has had a great influence in the development of the consumption contract, as well as on its applicability conditions and its manner of deployment. Through the development of the judicial law concerning the contract of concumption, this type of agreement has influenced, through its human and social nature, both the general contract, and the specific frame it relates to.

The relationship between the two types of contract is one of interdependence, which is determined by the need of judicial regulation in the Romanian and European economy. The ceaselees development of interhuman relations pushes society towards maintaining a continuous study of the advancement of specific legislation and judicial regulation.

The main purpose of this work is analyzing the general judicial frame and the way in which the differences between the general contract and the consumption one may represent a benefic and mutual influence on protecting the citizens' rights, which in the case of the consumption contract encompasses the protection of consumers' rights. Also, it will analyze the aspects that determine the manner of application and the the differences that can be surmounted in order to achieve a better cohesion between these types of contracts.

Keywords: *consumption contract, contract, consumer, european legislation, civil law.*

1. General aspects of contracts

By definition, a contract represents a written agreement, concluded through the free will of two or more parties. Its main purpose is to apply and to carry out an action that had been conjunctly established by the involved parties. According to the civil law, the contract represents a legal form by means of which two or more parties determine a general frame to accomplish certain objectives and desiderata they have previously concluded on. Through its nature, a contract requires the free will of its subscribers, as well as their full awareness and comprehension of the terms, obligation, benefits and repercussions enssuing from their adherence to this interpersonal judicial regulation form.

1.1. Types of contracts

Contracts may have a simple nature, also known as consensual, which only requires the parties' acceptance, which is a solmn form that requires respecting a certain manner and legal form to carry out the contract, as well as a real form that implies the need of the object of the contract for a physical realization of the mentioned agreement.

A conract is a legal manner through which an entity relates to the legal frame in the society where it carries on its daily activity. This instrument represents a legal form which is the entity's choice as a way to protect, by means of rights ensurance law, its goods and dignity.

A contract is an instrument of will, it is an agreement and it requires the complete consciousness of all the involved parties. Under all its legal forms, comprised by the law, all the consequences that result from the application and completion of this contract are to be accepted and obeyed by all involved parties. [1]

1.2. The consumption contract as an instrument of comercial and judicial regulation

As a counterbalance to the general contract, the consumption contract shows a nature that specializes in the economical and commercial side of a company. The contract has as a main objective the protection and regulation of certain economical principles that intervene between the contracting parties in such situations. The argument and detailed analysis of the condistion in which the agreement is applicable becomes extended. This is the way in which the law intervenes in supporting, supervising and ensuring the completion of the voluntary agreement between the parties, in a manner that is reasonable for all those involved. The law guarantees free access to information and a full understanding of the contract, in order to avoid certain abusive forms that might impair one of the parties, as well as for ensuring a balance of the contract and equality between the parties.

Through its detailed nature, the contract of consumption exerts a pressure in changing the general contracting terms, which leads to the introduction of new terms and regulations, at a

* PhD Student, Faculty of Law, "Nicolae Titulescu" University of Bucharest (e-mail: **mateescu_alexander@yahoo.com**).

general level. This is a desirable aspect, but it is hard to apply, due to the general nature of the contract, which has been conceived mainly as a manner of legal regulation, and not as a specific instrument for determining economic relations between certain parties. In-depth analysis of legal relations between parties presents certain difficulties in relating the general civil frame to the specific one, which is oriented towards commercial relationships. Such commercial relations may sometimes present a view that is somehow against the general terms of civil law. Any particularization of the legal relations between two or more parties presents a dilemma not only regarding implementation and application, but also in grading the way in which they interact with the legislator.

The specific clauses and provisions of the consumption contract, which are ment to pretect citizens against a potential abuse, cannot be automatically applied to the civil contracts, but the way in which such provisions help and lead to avoiding certain abuses on any party is notable. Inevitably, one of the parties will have acces to fewer resources in defending its own interests. According to the theory of the contract balance, this is the reason why many of the consumption contract provisions can be seen as an example of protecting a weaker part involved in a contract and of ensuring a climate of balance and equity. [2]

2. Differences, similarities and the relation between the general and consumption contracts

Through its nature, the general contract presents a wide frame, defined by the law, which tackles the totality of civil agreements between two or more elements. By contrast, the consumption contract deals with the commercial aspect and it attempts to ensure an as equitable and correct climate as possible. The comsumption contract mainly addresses the rehabilitation of a balance of forces between the parties. This is a balance that, for many reasons, one of them would not have the power to support, and protect its own rights with the same resources that the other party involved in such a contract would.

2.1. Differences and critics about the influence on the general contract frame

Based on these very differences, many points of view assert that the two types of contracts represent two separate instruments, which are completely different and are to be tackeld as such. The consumption contract is supposed to represent a special case and it cannot be integrated in a comparative study, together with the general contract and the way in which it relates to the latter.

The circumstances to which the concumption contract is submitted, the references it makes to different provisions and its manner of implementation in the comsummer's protection are aspects that cannot be included and compared to the general contract terms.

Many of the specific norm for consumption conracts present nothing more but an economic aspect that is specific to and applicable only for those contract that have a aommercial character. Some of these aspects are regarded as limitations for the civil law and they cannot be completely passed to a general level, as they have an explicit predisposition for they are of consumerism.

Some of the critic and concerned views come to presents the ways in which some supraregulations stand against free initiative and fringe the parties' rights in the contract conclusion procedure. Formalizing some regulations that only make it harder for an tie the contracting parties to preconceived situations in which they can do nothing but accept them, and they cannot negotiate for themselves the best solutions for each party. By taking such a formalization of some norms of right to a general level, we increase the risk of fringing the citizens' rights regarding the form of agreement they choose and that they can assume, in relation to other parties they eant to conclude a contract with. [3]

This approach is highly criticized as it is considered to be an obstacle for the contracting parties to decide on certain provisions individually, as well as on some provisions they may want to use or not. In such cases, many of the specific aspects become mandatory for those involved in the contract, as they do not have a voluntary and assumed character. The contract is, by definition, an instrument ment to ensure balance, equity and correctness, but in this case its power over the parties becomes unbalanced.

From a legal point of view, the critics focus on the prefabricated and static form of the contract, so that it blocks the liberty of the parties to establish the best requests and benefits, according to their own interests. Some provisions come against the liberty of decision.

2.2. Similarities and benefic influences on the general contract

Even by taking into account the major differences that occur between the two types of contract, one can say that the majority of changes that were brought on the general contracting frame arose from the influence of the consumption contract. The majority of the addenda are maily of an ecomic nature and the involuntarily influence the entirety of the general provisions and the way in which the law relates to them. The socian and human relations between people, institutions and entities present an unequalled influence on the Romanian and European legal frame.

As seen, the majority of influences in the economic are come to represent both problems and

solutions, not only for the commercial or consumption contracts, but also for general agreements.

By the adjustment of the civil law, one can note that the influence is becoming bidirectional and we cannot completely limit it to only one area of the law. The intertwining of legal provisons comprises the etire legal spectre and they begin to represent actual legal norms. Evem if the consumption contract is based on protetcing the consumer's rights; it becomes overgeneralised and transposed to a wider frame as the protection the citizens' rights regarding the regulations of general contracts. The majority of changes are made based on the commercial cases and experience. This is the one area where one can find, more often tha not, differences in interpretation and regulation, which are insufficiently defined, in order to present a lack of ambiguity in deploying the existing legal norms.

The consumption contract's principles do not imply only protecting one of the parties, but it tries to determine all those involved to agree on some conditions, in order for all of them to be able to comply with their contractual obligations. This is a norm and way of thinking that is brought about, or at least encouraged to be applied in other types of agreement as well. The specificity of consumnption contracts is presented through the provisions it is trying to fight against and the insuring measures it is trying to impose on the general contract, in order to ensure a balanced and honest deployment af an agreement between two or more parties.

As many of the general contracts represent reference footage for the consumption contracts, it can be said that the latter aplly all the principles of the former. Under certain precise circumstances, the rules and regulations of the general contract will completely be applied to the consumption contracts. [4]

3. European and national legal space

As a result of Romania's adherence to the European Union, the issue of regulating general and consumption contract has become a national problem, at a European level, and, at the same time, and European problem which needs to be adjusted and harmonized with the national regulations. A fair adjustment and a unitary regulation represent an objective of coherence, so that the national law must not be altered, or loose its internal character and specific. The European provisions have a tendency to ensure the European citizen concerning the process of justice and the legal manner in which his interests are represented and protected.

As one cannot avoid different lacks in legislation, and many unclarified situations may occur, which may represent the inexistence of one regulation concerning a fair solution, the application of a European law is utterly necessary, and this needs some adjustments regarding its members. The socio-economic frame is in a continuous change, which triggers the need for perpetual adjustment of the specific legislation. The European law comes to cover any gaps that may exist in any national law of its members. [5]

3.1. General national frame

At present, the national legislation makes a very clear difference in defining the general and consumption contracts. The consumption contract is is to obey some specific norms, which are not valid at a general level, so far. The form of the contract, that between a consumer and a professional, the one-sided cancellation and the consequences, the contracting parties' obligations and the specific rules concerning any abusive clause that may be imposed on the consumer are constitutive parts of such a contract. The internal legislation makes a clear difference between the two types of contract, but there is no concrete boundary, as there is in some other European cpuntries. For example, in France, the contract regulations are made by means of the civil law, while the consumption contract belongs exclusively to the economic area and is mainly present by means of commercial contracts and reports. This difference is ment to keep a distance between judicial relations, and those that may include any possible economic interests. [6]

Nowadays, in Romania, the legislation is undergoing some times of change and adjustment reporting to the European law, as well as to the internal frame, as it has not yet decided whoch approach to take, regarding contracts and the differentiation between them. At present, difficulties are also caused by the possible implementation and practicality of these changes in the national legislation. These changes may cause some issues in the system, and this may ultimately reduce the effectiveness of applying such a harmonization of judicial legislation.

The differences and anbiguities of Romanian legislation also occur when it comes to the role of the consumption contract. In the specific frame, this contract is considered to be fundamental interment for protecting the rights and interest of the consumership. It can be said that the contract of consumption also defends the citizens, in certain circumstances and in any cases when his interest determine him to conclude a commercial agreement. At the same time, according to the national law, the fundamental rights are to be protected by means of the civil law and, subsequently, by means of the general contract. Thus we can allege that the economic and commercial interests are protected by means of specific contracting instruments, but the contractual law regulation defends the rights and liberties of the citizenship in any legal agreements the latter may conclude. In this case, the

consumption contract is the mere defendant of services and goods a cosummer may be entitled to by contract. [7]

3.2. The European judicial frame

The European legislation in this area mainly tackles the manner of application and deployment of the European directives regarding the consumer's rights, especially 97 / 7 / CEE and 2011 / 83 / CEE. The purpose of the European directives is to ensure the legal frame upon which the member states are to adjust and improve their own internal legislations.

This frame has to offer a climate of transparency for the European citizens ti rest assured that their rights are guaranteed and protected. The application of law regulations regarding the consumers' rights has a lengthening effect on the general contracting frame. This effect consists of offering an intensified reglementation and to ensure an appropriate procedure whenever the gaps in the legislation may lead to ambiguities that can be exploited to the disadvantage of the citizen and his intesrests. [8]

Common practice admits that not all the provisions must be harmonized to the general contarcting frame. By their judicial nature and the differences between the two concepts, we cannot suppose that the two cases are based on the same situations. Even so, the pressure and influence exercised by the European law brings addenda to the national legislations, especially in those areas that were not yet determined and regulated by the national legislations.

The European law also seems to be a liant between the citizens and the member states and it embodies a period of adaptation to the sosio-economic European space, by which the member states are encouraged to find their own solutions and methods of adjusting to the European climate. The civil frame of the European Union regulates and esures the principal rights of its citizens. Besides this, the most frequent issues that occur between citizens and the member states are of a commercial and economic nature. [9]

The manner of gradual deployment in the form of recommendations has as a main purpose the preparation of the member states for any future adjustments. It can be said that the actual legislaition encourages a harmonization of the rights ment to protect the consumer, as an example for the legal provisions regarding any civil contracts. One of the priorities of the European Union is the protection of the civic rights and liberties of all of its citizens. [10]

4. Future perspective

One can say that the future of Romanian legislation, as well as the European law, with its addenda and completions, regarding the consumption contract, will be directly influences by the general forms provided by the civil law. The evolution and development of commercial relations will offer us a completely new series of cases, where the actual regulations will not be able to deal with the many different economic domains the citizens will take on. It can already be noted that the contract for utilities and the on-line commerce bring uo new situations, which have not yet been regulated, and which are still weakly exemplified and determined. These are sutautions in which the cosumer's rights can be broken, but issues may also occur in the case of general contracts, cases when the citizen may be prevented from acting and making full use of his liberties and contracting rights.

In the future, we'll present a clear analysis of the distinction between contracts and consumption contracts, based on the Romanian law, and the approach will be chosen as to make a distinction between the two, or to lead to a better understanding. The consumer's protection, which is provided by the consumtion contract, may be seen as both an example and a manner of deployment and protection of certain rights of a commercial and financial nature.

At the same time, one cannot say that this consumption contract does not have any impact on other social, juman and judicial aspects. More often tha not this type of contract has a major impct on the moral and economic dignity of one person. Taking this into account, one can conclude that such a contract, with such repercussion at both individual and collective levels is an example that should be taken into consideration for the wider specter of general contracts. Many of the consumption contracts' provisions can be declared as ensuring emasures for protecting the citizens' rights, not only economically, but also from a moral and judicial point of view.

One appropriate solution for the future might be the adjustment and improving of European law, based on the existing provisions regarding the consumers' right, from the actual civil law. This way, all future recommendations and European directives can be easily adapted and applied inside the national legislations.

At the same sime, a more explicit European law, regarding the area of general contracts, could bring and additional boost to the member states' will of synchronizing and harmonizing their national laws.

As a final conclusion, we can say that, sooner or later, the continuous development of the European socio-economic climate will lead to a tighter coordination relation between the European law, the legal form of contracts, and the specific provisions regarding the protection of consumers' rights and the consumption contracts. One cannot yet sau which are the details that will be requested by the law-giver, but we can say that the legal form is boung to undergo substantial changes based on the ones that have occurred in the general European

climate. These changes will be brought by the social, economic and judicial demands that exist inside the European community and the European nations.

ADAPTATION OF CONTRACT IN CASE OF VICE OF CONSENT BY ERROR. APPLICATION BEFORE THE COURT OF ARTICLE 1213 CIV. C.

Emilian-Constantin MEIU*

Abstract

We propose further brief analysis of the substantive conditions that should be met in order to be covered by the contract adaptation regulated by the Romanian Civil Code art. 1213 Civ. C. By virtue of the novelty of this institution in the Romanian legislation could be some practical difficulties before the court that we briefly consider in our work and propose possible solutions.

Keywords: *error, nullity, contract adaptation, consent.*

1. Introduction

In regulating the error as vice of consent the Civil Code introduced by art. 1213 a new institution, namely adaptation of contract, as an alternative for voidability.

Usually, violation of a condition provided by law for the validity of the document is sanctioned by nullity. But nullity, although limited the application of the principle of contractual freedom, it must be exceptional, so it shall not work unless the law provides another remedy to cover the deficiencies underlying the regulated condition that is not observed by the parties. Also, in case that the nullity protects a private interest, the protected person may cover it.[1]

Contract adaptation provided by art. 1213 of Civil Code seems to have its origins in the Italian Civil Code[2], but is very similar with the suitable regulation of the UNIDROIT[3] Principles. The new institution is part of the modern orientation expressed by the phrase *favor contractus*, according to which nullity shall not operate to the extent that there is the legitimate interest of one of the parties under the contract as it was understood by the mistaken party[4].

The contract adaptation in case of error occurs by exercising a right of potestative of errans' contractual party to deliver the declaration of performance of the contract or to simply execute the contract as it was understood by the errans. The mechanism of this institution does not involve a process of renegotiation of the contract, but rather, that the contractual party adheres to how the errans has represented the contractual relationship at the time of its conclusion, in order to protect the free consent form.[5]

Given the novelty of the institution of contract adaptation governed by art. 1213 of the Civil Code, we propose below a detailed examination of how the adaptation of the contract may operate, focusing on the procedural means by which the court hearing an action for annulment for error could follow the will of the defendant to adapt the contract as it was understood by the party who is entitled to invoke the nullity.

2. Content

From the regulation provided by art. 1213 Civil Code results that to adapt the contract in case of error vice of consent is required to meet the following conditions:

a) to be fullfiled the conditions of error vice of consent for one of the party. There is no requirement that the error must be common[6]. Regarding the conditions of error as vice of consent, these are the following: the error must be essential; the error must

[2] "Art. 1432, Mantenimento del contratto rettificato, La parte in errore non può domandare l'annullamento del contratto se, prima che ad essa possa derivarne pregiudizio, l'altra offre di eseguirlo in modo conforme al contenuto e alle modalità del contratto che quella intendeva concludere."

[3] "Article 3.2.10 (Loss of right to avoid) (1) If a party is entitled to avoid the contract for mistake but the other party declares itself willing to perform or performs the contract as it was understood by the party entitled to avoidance, the contract is considered to have been concluded as the latter party understood it. The other party must make such a declaration or render such performance promptly after having been informed of the manner in which the party entitled to avoidance had understood the contract and before that party has reasonably acted in reliance on a notice of avoidance. (2) After such a declaration or performance the right to avoidance is lost and any earlier notice of avoidance is ineffective."

[5] C. Zamșa, în Noul Cod Civil.Comentariu pe articole, Fl.A. Baias, E. Chelaru, R. Constantinovici, I. Macovei (coordonatori), Ediția a II-a, Ed. C.H. Beck, 2014, p. 1281.

[6] Idem.

be excusable; the element on which bears the false representation to have been decisive for the conclusion of the legal document, so if it had known the reality the party would not have contracted; for the onerous bilateral or plurilateral legal documents, it is necessary that the contractual party to have known or should have known that the misrepresented item was crucial for the conclusion of the respective civil act[7].

The question is what happens if one of these conditions is not met or is not considered met by the contracting party that even so understand to declare that it agrees to perform the contract as it was understood by the mistaken party. According to grammatical interpretation of the expression of art. 1213 Civil Code. "If a party is entitled to invoke voidability of contract for error" results that in order to follow the request of the defendant contractor of errans, to the adaptation of contract, the court must prior consider whether the requirements consent vice error are met. It would follow that the court shall examine in substance the action for annulment and thus to administer the necessary evidence, and finally to establish the conditions to take note of the adaptation of the contract in the sense that it was understood by the errans[8].

It must also be established which shall be the solution of the court if the evidence applied results that there are not satisfied the rules in order that the error be vice of consent. It shall reject as unfounded the action for annulment and it shall find out that there are not met the requirements to ascertain adaptation of the contract under art. 1213 Civil Code? We are inclined to this solution, and if the defendant intends to execute the parties may eventually sign a new contract.

Besides logical and grammatical interpretation, a justification for analyzing the error conditions as vice consent is that by adapting the contract is aimed at maintaining a vitiated consent agreement affected by error and not a contract modification unaffected by this vice consent.

b) The contract has not been executed yet. This condition appears to result from the first paragraph of Article 1213 Civil Code. But it is not explicitly mentioned. Thus, in the event that one party has understood that it has completed a sale of a property with usufruct life contingency, and the other party a maintenance contract, if the Party shall notify the contractor of error in which it is, it may give its consent to adapt contract.

It is essential for this condition that the mistaken party has not accepted its contractual partner's execution. The mere fulfillment of contractual obligations does not prevent the adaptation of the contract. The final moment of this view is that in which the errans accepts the contractual obligations of the contractual party. In the given example above contractual execution time of acceptance of the contractual party would be the payment of the price that is subject to the sale[9]. After that, it would be a new contract accompanied by any resolution or termination of the first.

We also believe that in order to perform the contract adaptation is necessary only that the counterparty of the errans not to have executed its contractual obligations. The errans can execute at any time its own benefit while it is assumed to have vitiated consent and performs the contract as it was understood, so in the form that it could be adapted.

It was stated in the doctrine[10], that failure to execute the contract, involves the necessity of lack of any damage caused by spontaneous errans' error. Does it refer to damage caused to it's contractual partner or to errans or both? If it comes to a damage caused to the errans contractual party, it can declare that it doesn`t want the adaptation. Instead if we discuss about the damage suffered by the errans, the situation is different. Our Code does not provide such a condition, although it appears in similar institutions existing in the Italian and the Dutch[11]

---

[7] For a detailed analysis of these conditions please see Gabriel Boroi, Carla Alexandra Anghelescu, Curs de drept civil. Partea generală, Editura Hamangiu, Bucureşti, 2012, p. 147.

[8] But what happens if the adaptation of the contract under Art. 1213 Civil Code occurs without court intervention, if the contracting party of the errans is notified by the latter and not later than 3 months it says it agrees with contract execution or executed without delay, as it was understood by the mistaken party? If the requirements for error as vice of consent are not met it shall not intervene the adaptment of the contract, but possibly it might be concluded a new contract or could be a novation by change of object, of course, subject to the conditions provided by law for signing of a new contract or for novation.

[9] But even if it receives the price, if it is much lower than the price of the property, it is alleged that the errans accepts it only on the basis that the difference shall be covered by the maintenance provided by the contractor. In such situation, the errans receives the price much lower than the value of the property, just because it is convinced that it signed a mainenance contract and not a sale contract. For a detailed delimitation of the maintenance contract to the sale contract please see Fr. Deak, Tratat de drept civil. Contracte speciale. Ediția a III-a, Ed. Universul Juridic, București, 2001, p. 536.

[11] The Dutch Civil Code: "Article 6:228 Fundamental mistake

1. An agreement which has been entered into under the influence of a mistake with regard to the facts or legal rights and which would not have been concluded by the mistaken party if he would have had a correct view of the situation, is voidable:

a. if the mistake is caused by information given by the opposite party, unless this party could assume that the agreement would be concluded even without this information;

b. if the opposite party, in view of what he knew or ought to have known about this mistake, should have informed the mistaken party about his error;

c. if the opposite party, at the moment on which the agreement was entered into, had the same incorrect assumption as the mistaken party, unless he could have believed that the mistaken party, if this party had known the mistake, still would have entered into the agreement.

Civil Code. We may consider implicit that requirement? It is also the question of how shall proceed the court within the action for annulment the defendant declares that he is willing to execute the contract as it was understood by the errans instead the latter declares that the execution would not be useful as it is too late to prevent occurrence of the damage or the damage has already occurred.

May the court continue the trial of the action for annulment or it is obliged to take account of the defendant agreement regardless of the existence or imminent damage in errans` patrimony and ascertain adaptation of the contract, and errans would be directed against the other contracting party with an action for damages?

In this respect, in the Italian[12] doctrine it was shown that if the elapsed time or the circumstances caused the mistaken party a damage, not necessarily patrimonial, in the presence of which it can be assumed that the party would not be interested in adapting the contract, it can not be held .

We believe that in the absence of such a provision in the regulation of Romanian Civil Code, the court may not refuse to declare adaptation of the contract fot this reason that the time elapsed between the moment of signing the contract and agreement of the errans co-contractor occurred a damage or the circumstances have changed such that the mistaken party would not be able to gain from the signing of the contract the benefits that it would be gained if the contract had been signed from the beginning as it was understood by the errans.

In this regard, the only condition that the court is obliged to review is that the agreement on adaptation to have occurred within the three months stipulated in art.1213 par. (2) Civil Code, the co-contractor`s agreement of errans having a potestative character.

c) A final condition for adapting the contract is provided by par. (2) art. 1213. The errans is obliged to inform the contractual partner about the way he understood the contract. Depending on how it is carried the notification we may have two situations: informing takes place before bringing an action for annulment or informing by even the notice of the writ of summons.

From this moment the law provides a respite of 3 months in which the contracting party has the option either to declare that he agrees with the execution of the contract actually in the way that it was understood by the mistaken party. Where the notification occurs through notice of the writ of summons it also occurs the additional default condition that within 3 months it won`t be resolved the action for annulment. If the action for annulment was resolved, then the contract adaptation can no longer take place.

If the conditions listed above are accomplished, the contract adaptation shall result in considering the contract as being signed retrospectively as it was understood by the mistaken party. On the other hand, the errans' right to obtain the cancellation of the contract is extinguished by adapting the contract, as required by art. 1213 par. (3) Civil Code.

We shall further analyze how the court shall proceed to adapt the contract and possible practical problems which may arise in implementing judicial mechanism to adapt the contract provided by art. 1213 Civil Code.

If there is already an action for annulment of the contract for error and the agreement comes after communication to contractor within no more than three months, there may be two situations: the opposing party agrees with execution or executes without delay the contract as it was understood by the mistaken party. According to par. (3) art. 1213 Civil Code. in both cases the right to obtain the cancellation is extinguished.

From a procedural standpoint, when we are dealing with the effective execution of the contract in the form understood by the errans, the court shall regard the opposing party to submit evidence of obligation fulfillment (eg payment receipt price, the official report of hand over- take over.).

In case of the mere execution, it could take place even during the hearing, in which case it shall be recorded in the minutes of the hearing or outside

2. A nullification on the ground of a fundamental mistake cannot be based on a mistake which is exclusively related to a fact that, at the moment on which the agreement was entered into, still had to happen (fact in future) or that should remain for account of the mistaken party in view of the nature of the agreement, the general principles of society (common opinion) or the circumstances of the case.

Article 6:229 Agreement based on a non-existent legal relationship

An agreement which necessarily implicates to elaborate on an already existing legal relationship between parties, is voidable if this legal relationship does not exist, unless the nature of the agreement, the general principles of society (common opinion) or the circumstances of the case imply that the non-existence of that legal relationship should remain for account of the person who appeals to its non-existence.

Article 6:230 Right of nullification ends when the disadvantageous effects of the voidable agreement are removed

- 1. The right to nullify a voidable agreement on the basis of Article 6:228 or 6:229 ceases to exist when the opposite party timely makes a proposal to change the effects of the voidable agreement in such a way that the loss, which otherwise would be suffered by the party with the right of nullification, is sufficiently removed.

- 2. Upon the request of one of the parties, the court may furthermore, instead of nullifying the voidable agreement, change its effects in order to remove the loss which otherwise would be suffered by the party with the right of nullification."

Italian Civil Code: "Art. 1432 Mantenimento del contratto rettificato, La parte in errore non può domandare l'annullamento del contratto se, prima che ad essa possa derivarne pregiudizio, l'altra offre di eseguirlo in modo conforme al contenuto e alle modalità del contratto che quella intendeva concludere."

[12] Cesare Ruperto, La giurisprudenza sul codice civile.Coordinata con la dottrina. Libro IV - (artt. 1754-1822) Delle obbligazioni, Milano, Dott. A. Giuffre Editore, 2012, p. 116.

the procedural framework, when the defendant from the action for annulment shall have to submit the document evidencing the agreement[13].

In both cases described above, whether when obtaining the consent or when it is proven the effective execution of the contract as it was understood by mistaken party, the court shall have to ascertain the extinguishes right to request cancellation of the contract for error under art. 1213 par. (3) Civil Code.

Another problem is knowing when there are producing the effects of adaptation of the contract under Art. 1213 Civil Code: retroactively from the date of signing or rather from the date on which the contractor performs or states that it agrees to perform the contract as it was understood by the mistaken party? By the wording of the last sentence in par. (1) of the text of the law cited above, results that the effects of adaptation are retroactive, since the text speaks of the contract, which is deemed to have been concluded as it was understood by the mistaken party. So there is no reference to a subsequent legal act, but to the initial contract that is changed by potestative agreement of the contracting party in the form understood by the errans.

Another important aspect is the mentions that the court must make in the recitals and in dispositive fact regarding the adaptation of the contract? Since the adaptation of the contract takes place before the court it is mandatory to examine the institution conditions of art. 1213 as it was listed in the preceding, and then in the dispositive fact to ascertain the adaptation of the contract in the sense that it was understood by the mistaken party.[14]

3. Conclusions

The case of adapting the contract provided by art. 1213 Civil Code. is different from other situations of adapting the contract, in that the court only notes the potestative right of the opposing party to that who fell into error to execute or declare that executes the contract as it was understood by the errans.

For example, in case of lesion, according to art. 1222 par. (1) Civil Code. the adaptation may be undertaken by the party whose consent was vitiated by reducing its obligations to the amount of damages to which it was entitled or according to par. (3) the court may uphold the contract if the other party provides equitably, a reduction of its own claims or, where applicable an increase in its obligations. Also, in case of unpredictability, court may, pursuant to art. 1271 par. (2) Civil Code, dispose the contract adaptation if execution has become excessively onerous because of an exceptional change of circumstances which would obviously unjust the debtor to comply with the duty. According to para. (3) thereof, in order to be adapted the contract it must be cumulatively met a number of conditions.

When during a litigation occurs adaptation of the contract for error it requires that the court must verify certain conditions: to be executed the conditions of error vice of consent for one of the party; the contract not to have been executed yet;

Compliance with the protocol of information/ acceptance provided by par. (2) of art. 1213, manely that within 3 months of receipt of writ of summons the contractual party declare that it agrees to contract execution or execute effectively the contract in the manner in which it was understood by the mistaken party. If these conditions are met, the court shall ascertain the contract adaptation and the right to request cancellation of the contract for error has been extinguished.

[13] In case that the consent was verbal out of the litigation framework, this consent shall be reiterated before the court and recorded during the minutes of hearing.

[14] For example to ascertain that it operated the adaptment of the contract signed between the parties in the sense that it is a maintenance contract and not a sale contract.

THE LEGAL REGIME OF THE UNILATERAL PROMISE REGARDING THE SALE CONTRACT

Livia MOCANU[*]

Abstract

The conclusion of a sale contract is often preceded by several agreements or temporary contracts taking several forms in the Romanian contemporary law, such as: the preference pact, the option pact, the unilateral and bilateral promise of sale. The current study regards the unilateral promise of sale/purchase which will be analyzed in the context of its legal acknowledgement by means of the Civil Code. The originality of this institution resides in its constitution elements, evolution and purpose, all of them composing an autonomous mechanism, completely different from the sale contract and the other contract meant to shape the latter.

Keywords: *unilateral promise of sale, bilateral promise of sale, option pact, promissor, beneficiary.*

1. Introduction

The field subject to analysis in the present work regards the unilateral promise of sale/purchase, an institution clearly regulated by the provisions of the new Romanian Civil Code. The importance of this institution has been pointed out by both the legal literature and practice and has gone through a progressive transformation, from a contract with no name, subject to a regime fiercely debated in the legal literature, to an autonomous contract, already having a legal regime and effects clearly regulated by the lawmaker. The unilateral promise regarding a sale contract is among the contracts preparing the final ultimate sale, which most of the times is not concluded instantaneously or almost instantaneously, being often preceded by several provisory agreements or contracts. The economic and legal realities have led to the multiplication and diversification of these acts preceding the sale contract, a fact which caused the lawmaker to step in, as a process which is absolutely necessary for establishing the legal regime of the pre-contracts in the sales field.

In terms of the legal institution subject to analysis, the present study shall determine the original elements of the unilateral promise to sell/purchase, comprising its definition, delimitation and purpose. In order to underline precisely the autonomy of this institution, we shall proceed to delimiting it from both some pre-contractual mechanisms with enforcement in the sales field, like the offer to enter a contract, the preference pact, the option pact and the bilateral promise of sale, and from the sale contract or a variety of the latter, namely the sale based on tasting.

The objectives mentioned above shall be accomplished by analyzing the legal provisions in the field, in order to render the changes and the novelty elements brought to the institution subject to analysis by the entry in force of the new Civil Code. The presentation of this contractual mechanism shall be based also on the specialized literature and legal practice – admittedly more reduced in the absence of a legislative acknowledgement (until the entry in force of the Civil Code). Nonetheless, the unilateral promise regarding the sale contract has already drawn the attention of the specialists, due to the issues which it raises when interpreting the legal norms applying to it.

2. Presentation

2.1. Definition

Traditionally, the birth of a contract was the result of the spontaneous instantaneous encounter between an offer and its acceptance. According to article 1182 paragraph (1) of the Civil Code, "A contract is concluded together with its negotiation by the parties or the acceptance without reservation of the offer to enter that contract". The text of the current Civil Code expresses in its turn the idea according to which the conclusion of a contract can take place spontaneously, without determining any potential pre-contractual phase, or in a complex manner, marked by negotiations, due to the object of the contract or the interests of the parties. As specialized literature also points out, in these situations "…the more complex is the object of the future contract, the bigger is the intensity of the negotiations preceding it"[1].

Precisely in the context of the constant evolution and change of the legal-economic reality, several pre-contractual agreements aiming to prepare the final contract emerged. When it comes

[*] Reader Ph.D, "Valahia" University from Târgoviște, Faculty of Law and Administrative Sciences (e-mail: **mocanulivia@yahoo. com**).

[1] V. Pop, *Contractul,* p. 203 and the following, apud Liviu Pop, Ionuț – Florian Popa, Stelian Ioan Vidu, *Curs de drept civil.Obligațiile,* Universul Juridic Publ. House, Bucharest, 2015, p. 53.

particularly to the conclusion of some contracts between professionals, the parties resort to broad negotiations regarding the elements of the definitive contract, which take the form of some complex procedures involving previous agreements between the parties[2].

The existence of several phases in the process for concluding a contract has led to the theory of the progressive constitution of contracts[3]. Either that they regard the constitution of the consent, or the object of the future contract, pre-contractual operations are based on contractual freedom and good faith[4], the parties approving the clauses of the operations in agreement with their interests and the concrete circumstances in which they are[5].

As for the unilateral promise to enter a contract, although it can be encountered in several categories of contracts, it is more of the times present in the sales field, having a well-defined role, in terms of both the gradual constitution of the consent and the progressive elaboration of the object of the final contract. Irrespective of the form which it takes, the unilateral promise to enter a contract has been defined by the legal literature as the convention by means of which one of the parties – called *promissory party* – takes in respect of the other party – called *beneficiary* – the duty to conclude in the future, upon his request, a certain contract, whose essential content is for the moment determined by the promise to enter a contract[6]. From the perspective of the validity conditions, it is necessary for the unilateral promise to enter the contract to contain all the essential elements of the promised contract.

When it comes to the unilateral promise of sale/purchase, we are speaking of a contract by means of which a person called *promissory party* takes in regard to another person called *beneficiary* the duty to sell/purchase a certain asset, at a determined/determinable price, within a certain term, while the beneficiary of the promise has the freedom to choose whether he wants to sell/purchase the asset[7]. The exclusive promise of sale (or only of purchase) is a unilateral contract, as it creates duties belonging only to one of the parties - the promissory party. As a result of the conclusion of a unilateral promise, together with the duty taken by the promissory party, the right to express an option emerges in the patrimony of the beneficiary, as a result of which he can choose to accept or deny buying the asset promised by his debtor[8].

As it results from the definition above, the unilateral promise of sale/purchase is based on an agreement of wills which determines the offer of the promissory party and his firm commitment to conclude a contract, while the consent of the beneficiary only refers to expressing his choice of selling/purchasing. The most encountered in practice is the unilateral promise of sale, which is typical to real estate sales, which have considerably developed since the beginning of the 20th century.

Before the entry in force of the new Civil Code[9], the institution of the unilateral promise of sale has been acknowledged and recognized by both the legal literature and practice, but there has not been any clear regulation of it. Although a legal regulation was missing, the conclusion of the pre-contract was deducted from the principle of contractual freedom[10],whereas the decision ruled to have the role of a sale purchase act was legally based on the provisions of articles of 1073 and 1077 of the 1864 Civil Code[11].Moreover, through article 5 paragraph (2) of Title X of Law No. 247/2005 on the reform in the field of property and justice, but also some secondary measures[12], the lawmaker clearly acknowledged the possibility of courts to give a sentence having the role of sale-purchase act, if one of the parties did not use the pre-contract. We would also like to mention the regulations with a special character referring to the leasing contract and operations included in the G.O. No. 51/1997 on the leasing operations and firms[13]. Article 16 of the Ordinance above basically presents the sanction applied when the promissory party does not respect the right of the dweller/user of buying or not the asset, clearly underlining that courts have the possibility to give a sentence which can replace the sale-purchase contract.

The unilateral promise of sale is currently subject to a regulated legal regime, which the current

2.2. Differences from other similar institutions

Taking into account the consent of the parties and the similarity degree between pre-contractual conventions with the contract itself which will be concluded, the unilateral promise of sale presents similarities and differences withother similar legal institutions, as it will be shown below.

2.2.1. The difference from the offer to enter a contract

The offer, regulated by articles 1187-1195 of the Civil Code, is defined as a unilateral statement of will, addressed by one person to another, by means of which the first expresses his intention to consider himself bound, if the other party accepts[14].According to article 1188 of the Civil Code, in order to produce the desired effects, the offer to enter a contract must meet three conditions:

- it must contain a proposal to conclude a contract
- it must represent the manifestation of the will to conclude the contract
- it must contain the conditions desired for concluding the contract.

The legal requirements mentioned above characterize the offer to enter a contract as a firm proposal to conclude a determined contract, in certain conditions, which are also determined. It represents a unilateral legal act, by means of which the issuer announces his will to enter a contract to third parties, but also the essential conditions of the contract. In fact, the Civil Code in force pays a particular attention to the unilateral legal act, which is a source of civil obligations, and dedicates a quite thorough regulation to the phase when the contract is constituted.

According to law, the proposal to enter a contract does not give rise to a contract as long as it is not accepted, since it can be revoked up to that point. It is the unilateral statement of its author's will which represents the base of the compulsory character of the offer to enter a contract.

While the offer to enter a contract constitutes a unilateral manifestation of will, the unilateral promise of sale is an agreement of wills, a genuine contract aiming to the firm commitment of the promissory party to sale/purchase an asset, in the conditions clearly established herein. It is why the offer must not be mistaken with the promise to enter a contract, which is a contract itself, as it results from the agreement of wills, from the encounter of the promise and the acceptance of the beneficiary. Being a contract, the unilateral promise of sale/purchase is not subject to unilateral revocation, while the non-observance of the promise shall trigger a contractual liability[15].

2.2.2. The difference from the preference pact

The preference pact is also a variety of preparatory contract, defined as the promise which the owner of an asset makes that, if he decides to sell that asset, he shall give priority to a certain person (beneficiary) when making the offer to enter the contract, at the same price[16].This contractual mechanism is regulated in the sales field: the convention which gives raise to the pre-emption right referred to by article 1730 and the following of the Civil Code is particularly a preference pact, having a sale contract as object. In the context of the preference pact, the promissory party – seller (or buyer) does not make the promise to enter a contract but only that, if he shall decide to enter the contract, he shall prefer the beneficiary. Consequently, when a preference pact is concluded, the promissory party does not issue a consent regarding the conclusion of the future contract, while the beneficiary is only the owner of *a priority right* in front of third interested parties, and not of an option right, as it happens with the option pact.

The preference pact represents a valid promise, as it is affected only by a simple potestative condition which does not only depend on the will of the promissory party, but also on external circumstances, which would determine him to conclude the sale[17]. Precisely on the base of the arguments above, most of the legal literature has considered the preference pact as a variety of the unilateral promise which, due to its features, has a narrow application, only in the field of the sales and renting contracts[18].Another singular opinion states that the preference pact is different from the unilateral promise to sale, by being a particular convention, which affects the eventuality of an asset to be sold, subordinated to the beneficiary's option[19]. Taking into account all the differences which exist between the two pre-contractual institutions, we

agree to the majority, according to which the role of the unilateral promise of sale in preparing a final contract is superior, while the preference pact is used rather in particular circumstances[20].

2.2.3. The distinction from the option pact

Specialized literature defines the option pact as a contract by means of which a person, called promissory party, promises to another, called beneficiary, to sell (or to purchase) an asset for a certain price (determined or determinable), if the beneficiary decides to buy (or to sell) within a certain term[21].

The option pact is a new institution, clearly defined in the general party of duties, particularly at article 1278 paragraph (1) of the Civil Code, which must be corroborated with the provisions of article 1668 in the sales field. Just like the unilateral promise, the option pact must contain all the essential elements of the contract which the parties aim to conclude. This makes so that the conclusion of the final contract is done by the simple acceptance of the beneficiary of the option.

In the sales field, the option pact is the legal act by means of which a party promises to the acquirer to maintain an irrevocable sale offer put at his disposal. The option pact is a contract, since the parties agree that it is compulsory for each to express his will and the conditions in which the acceptance must be done. From the perspective of the effects which it produces, the option pact is in principle a unilateral contract, which gives rise to obligations only for the promissory party, while the beneficiary has no obligation. Concretely speaking, the promissory party must not conclude with third parties a contract with an identical object than the one in the pact. In the sales field, the option pact generates a genuine impossibility of legal alienation, deducted as taking place within the option term [article 627 paragraph (4) of the Civil Code]. By exception, the option pact is a bilateral contract if the beneficiary offers a certain performance – the payment of an amount of money – in the exchange of the offer maintenance (*immobilization indemnity*)[22].

As seen before, the option pact has the features of a variety of a unilateral promise of sale; yet, the two pre-contractual institutions evince differences in terms of their legal regime, as long as the option pact is qualified as giving rise to a potestative right, whereas the unilateral promise of sale gives rise to a debt right[23].Thus, the unilateral promise of sale, since it does not have the effect of transferring a property right towards the beneficiary, nor the creation of an obligation to give, generates a personal right in the patrimony of the beneficiary, which is a debt one, and not a real right. It is a particular debt right, different from other debt rights, because it is exerted upon a determined asset from the patrimony of the debtor, namely the promised asset, upon which the beneficiary has a certain exclusivity. From this perspective, it has been stated the opinion that "the right coming from a unilateral promise of sale is in reality a real estate debt right"[24].

On the other hand, with the conclusion of an option pact, the beneficiary is interested in the promissory party, although remaining the owner of the asset, not using the promised asset within a certain period of time. This situation generates a potestative right[25] – neither real, nor a debt one – aiming to allow the conclusion of the future sale contract by means of a unilateral manifestation of will. The option pact generates an option right which is a specific one, preventing the promissory party to give up on his promise, and leaving all the freedom to the beneficiary in terms of his choice.

2.2.4. The distinction from the bilateral promise of sale-purchase

According to legal literature, the bilateral promise of sale, also called pre-contract or sale pre-contract, is the convention by means of which both parties firmly commit to conclude a sale contract in the future, whose essential elements they have already agreed[26].Unlike the unilateral promise of sale-purchase, in respect of which only the promissory party promises to sell or to purchase, when it comes to the bilateral promise, both partiespromise to conclude a certain sale contract in the future. This time, the obligation to do, consisting in the conclusion of a contract in the future, is taken by both parties. It is a firm mutual obligation, while the pre-contract contains all the essential elements of the future contract, including the conclusion date. When one of the parties of the pre-contract of sale-purchase refuses without a good reason to conclude the promised contract, the other party can demand

[20] For more details, see Ioana Ionescu, *quoted works*, pp. 129-133.

[22] For more details regarding the immobilization indemnity, see Ioana Ionescu, *quoted works*, pp. 164 – 169.
[23] Regarding the distinctions between the two institutions, see Paul Vasilescu, *Drept civil. Obligații, în reglementarea noului Cod civil,* Hamangiu Publ. House, Bucharest, 2012, pp. 283 – 284, Bogdan Dumitrache, *Pactul de opțiune, între deziderat și soluție disponibilă pentru practicieni,* in the proceedings*Liber Amicorum Liviu Pop. Reforma dreptului privat român în contextul federalismului juridic European,* Editors Dan Andrei Popescu, Ionuț-Florin Popa, Universul Juridic Publ. House, Bucharest, 2015, p.221 – 222.
[24] Ioana Ionescu, *quoted works*, p. 157.
[25] Regarding its definition, see Valeriu Stoica, *Drept civil. Drepturile reale principale,* 2 edition, C.H.Beck Publ. House, Bucharest, 2013, pp. 48 – 50.
[26] Ioana Ionescu, *quoted works*, p. 133.

for a decision to be ruled and replace the contract, if all the other validity conditions are met[27].

The duties of the parties resulting from the bilateral promise of sale-purchase are mutual and interdependent, as even if the promise does not have the value of a sale act, it generates for the parties the obligation to comply with all the duties necessary for concluding the promised contract. The content of the unilateral promise of sale is missing the two essential and necessary clauses for any bilateral promise, namely the one referring to the mutual character of the promise to conclude the contract in the future and the one according to which each of the parties must commit to the duty to do something. When it comes to the unilateral promise, the beneficiary does not commit himself to buying something in the future, nor does he take any legal duty, having he freedom to decide by the date agreed with the promissory party whether he will buy the promised asset. Hence, if the beneficiary of the unilateral promise does not promise to buy, but reserves his right to decide whether we will do this, the promissory acquirer of the bilateral promise takes upon himself the firm duty to buy the asset in the future, exactly in the conditions established by the pre-contract.

The similarity between the two institutions in question is that both the bilateral promise of sale-purchase and the unilateral one represent contracts, basically pre-contracts, which give rise to some debt rights. The frequency of the bilateral promise of sale-purchase in practice has led to it being named a *pre-contract of sale-purchase*. Before the entry in force of the Civil Code, both institutions were contracts without a name, lacking a legal name and a particular regulation. Taking the definitions from the legal literature and the acknowledgement within the legal practice, the current Civil Code regulates the promise to enter a contract, the promise to sell and the promise to buy, as well as the possibility for a court to give a sentence replacing the contract – articles 1279 and 1669 of the Civil Code.

Just like the unilateral promise of sale-purchase, the bilateral one has, as a rule, a consensual character, even when the promised contract is subject to some formal requirements for it to be valid. From this aspect, the Civil Code makes no mention neither in its general part – article 1279 – not in its special one – article 1669, as it can be encountered at article 1278 regarding the option pact.

2.2.5. The distinction from the sale-purchase contract

The unilateral promise and the sale contract are different both in terms of their validity conditions and the legal effects which they produce.

As mentioned before, the unilateral promise comprises all the essential elements for the conclusion of a final contract: the capacity to enter a contract, the consent, the object and the cause. From these, some elements are completely different from those a sale contract, which will eventually follow afterwards, while others will be common for both contracts.

Regarding the differences between the two institutions, we are speaking of the capacity to enter a contract. When it comes of the unilateral promise of sale, the beneficiary must have the capacity to make provisions when the option is expressed and not when it is contracted, while the capacity of the buyer is analyzed at the conclusion of the sale contract. Moreover, the cause of the obligations of the contracting parties is different, as the ground of the advantage agreed upon by the promissory party consists in receiving a immobilization indemnity or another performance assessed as equivalent and satisfactory for him.

The capacity to enter a contract also represents a common element of the two contracts, as the promissory party must have the full capacity to make provisions for the promised asset, from the moment the unilateral promise of sale is concluded. Moreover, from the moment a unilateral promise of sale is concluded, the object, work and price must be determined or determinable.

All the clauses of the final contract must be found within the content of the unilateral promise, since they were taken into account by the promissory party when giving his consent, so that any modification of the conditions initially established necessarily triggers a new manifestation of will from his part, while the sale contract cannot be concluded only as a result of the acceptance of the beneficiary.

Moreover, the two legal acts are also different when it comes to their objects. While the unilateral promise of sale is aimed at establishing the offer, the sale contract is aimed at the property transfer[28].Thus, the promissory party promises to maintain his offer and to conclude the sale contract with the beneficiary in the future, while the seller, with the conclusion of the sale contract, has the obligation to send the property upon the asset. The obligation of the promissory party emerging from the unilateral promise is different from that of the seller, so that the right emerging from this contract is a distinct one – the option right – totally different from the one created by the sale contract.

In its turn, the beneficiary of the unilateral promise of sale does not take the obligation to buy and not even the obligation to conclude a sale contract in the future, but only reserves his right to

[27] Alina Gabriela Țambulea, *quoted works*, p. 41 and the following.

[28] The transfer of the property right regards only the nature of the sale contract, as the sale can also transfer another right, like: another real right, a debt right, an intellectual property right or succession rights.

take a decision within a certain term whether he will buy the asset promised by the promissory party.

Since the unilateral promise of sale is not a convention of property transfer, it can be deducted that, only when it comes to the sale contract, the effects typical to the property transfer shall take place.

The essential distinction between the two legal acts consists in the fact that the unilateral promise of sale is missing an important element, which is the consent of the beneficiary to buy, who has precisely the possibility to decide in the future whether he will conclude the contract.

2.2.6. The distinction from the sale based on tasting

The text of article 1682 of the Civil Code regulates the sale based on tasting, maintaining the rule according to which, in this case, the sale contract is considered concluded only in the existence of the clear consent of the buyer, meaning that the asset is according to his taste. Specialized literature considers that this variety of sale contract is rather similar to a unilateral promise of sale, given that the future of the sale based on tasting exclusively depends on the fact that the potential buyer found the asset according to his taste after tasting it. In this case, he can also refuse the asset on the simple reason that he does not like it. The sale contract exists only when the buyer declares that the asset is according to his tastes; we cannot speak here of a sale under the suspensive condition, as it happens with the sale based on sampling[29].

2.3. The effects of the unilateral promise of sale

2.3.1. The effects until the option is exerted

2.3.1.1. The rights and duties of the promissory party until the option ends

The unilateral promise of sale provides to the promissory party the duty to do, namely that of maintaining his sale offer throughout the entire term of the option right. In all this time, the beneficiary becomes the creditor of the option right related to the conclusion of the promised contract. The duty to maintain his consent at the sale also triggers for the promissory party a duty of not to do, consisting in his duty of not taking back his promise within the option term and of not selling the promised asset to a third party.

Consequently, the main duty of the promissory party consists in maintain his consent at the sale moment, at the disposal of the beneficiary, refraining from any behavior which could compromise the moment when the option ends.

From the perspective above, it should be noticed a progress made by the current Civil Code which, in order to provide a special protection to the contract in question and to save the beneficiary from a potential conflict with a third acquirer, provides for the duty to make public the unilateral promise of sale, unlike the former regulations which only provided for the possibility to mark it in the real estate book.

If during the option term the promissory party communicates to the beneficiary that he withdraws his sale offer and, with this, his consent as well at the final sale, this manifestation would not be deprived of legal effects. For this matter, we refer to the provisions of article 1669 of the Civil Code, according to which, when the promissory party who concluded a unilateral promise of sale refuses without any reason to conclude the promised contract, the other party – the beneficiary – can ask for a decision to be ruled, which can replace the contract, if all the other validity conditions are met. These provisions are completed by those of article 1278 of the Civil Code and by those of article 1191 paragraph (2) of the Civil Code, all of them expressing the autonomous character of the unilateral promise to sale which, by being first of all a contract, contains an offer which cannot be retracted in a unilateral manner. As a consequence, any revocation of the offer by the promissory party does not have efficiency, while the expression at term of the option by the beneficiary constitutes the sale contract, despite all the opposition of the promissory party.

There is also the possibility for the promissory party to alienate the promised asset, before the option term expires. In this case, by not having any real right on the promised asset, opposable *erga omnes*, the beneficiary cannot claim the asset from the third party acquiring itand cannot demand either, except for certain conditions, the annulment of the contract concluded between the promissory party and the third party. In principle, the third acquirer becomes the owner of the asset and is protected by any action taken by the beneficiary, except for the case when he concluded the contract with the promissory party in bad faith, by knowing of the existence of the unilateral promise to sell the asset and hence transgressing the alienation interdiction, but also the case when he got the asset for free. In this situation, since he can no longer comply with his duty in kind, the promissory party can be forced to pay compensation damage, according to the provisions of article 1530 of the Civil Code, since he caused a prejudice to the beneficiary.

When the promissory party alienates the promised asset, the beneficiary can demand the annulment of the sale concluded between the promissory party with the third party or he can file

[29] Ioana Ionescu, *quoted works*, pp. 139 – 140.

an application for declaring the lack of validity this sale[30].

Before the option term expires, the promissory party can also conclude other legal acts, having the promised asset as object and potentially causing a prejudice to the beneficiary. As it happens with the sale of the promised asset to a third party, the promissory party might just as well exchange or donate the asset, conclude any other convention having the effect of a property right transfer or constitute a mortgage; in the last case, the expression of the option made by the beneficiary remains possible, while the property right sent when the option is expressed is reduced only from an economical point of view.

The term for exerting the option is established by the parties; in the contrary case, the promissory party can address the court for establishing an acceptance term, which will rule in the form of a presidential ordinance, summoning the parties. This course of action is in agreement with the provisions of article 1278 paragraph (2) of the Civil Code.

Until the sale is concluded, the promissory party remains the owner of the promised asset; he maintains its use and has the right of free administration upon it. As a result, the asset can be rented, except for the case in which such action is clearly forbidden for the promissory party.

Moreover, the asset remains in the risk and peril of the promissory party, so that its loss or destruction triggers the nullity of the promise.

3.1.2. The rights and duties of the beneficiary before his option right ends

As it results from the legal regulations, the beneficiary of the unilateral promise does not have a corresponding duty as the one of the promissory party - to maintain his sale offer. Therefore, the beneficiary does not promise to buy the asset in the future; he maintains unaltered his contractual freedom to make a choice, in a positive or negative manner, when his option term ends. Even in the exceptional case in which the beneficiary takes upon himself the duty to pay a certain amount of money as a price for the option, the unilateral promise acquires a synallagmatic character, without becoming nonetheless a bilateral promise of sale. The promissory party can demand the payment of a certain amount of money as long as the beneficiary enjoys the advantage of the asset's immobilization, an amount of money which rests completely in the possession of the promissory party, even if the sale does not take place. Specialized literature considers that the beneficiary could ask for a partial restitution of the indemnity, if this is established in relation to the actual period during which the asset is immobilized, while its value should be reduced if the beneficiary gave up in advance to his option right[31].

As seen before, when a unilateral promise of sale is concluded, the beneficiary does not give his consent to buy. He has an option right which must be exerted within a certain term. If the promise is accepted within the option term, the sale ends in that specific moment[32], except for the cases in which the nature of the asset representing the object of the promise imposes the compliance with the authentic form for the validity of the contract.

The option right enjoyed by the beneficiary is a subjective right, subject to the statute of limitations, having a restricted existence and a legal prerogative meant to change the situation emerged with the convention of the parties[33].

If the beneficiary will decide to purchase the asset but the promissory party will refuse the sale, also transgressing his obligation taken, the contract shall not take place, while the beneficiary will be entitled to compensation damage, according to the rules applying to the duty to do.

2.3.1.2. The effects of the promise when the option ends

The end of the option represents the manifestation of the beneficiary's will, made within the option term, to buy the asset. As an effect of the end of the option, the unilateral promise of sale produces full effects; the non-retractable will of the promissory party to sell meets the will of the beneficiary to buy, constituting the valid sale contract. The end of the option represents the consent for the sale contract, having the effect of perfecting the projected sale. As a consequence, when the beneficiary expresses his option, the property right transfer upon the promised asset takes place, except for the situations in which the parties postpone the transfer until a subsequent moment. In most of the cases, this situation is determined by the need to comply with the formalities required by law as a condition itself for concluding the contract; yet, an incomplete payment of the price can also lead to the postponement of the property right transfer, the promissory party being directly interested in receiving the price at the value established by the parties convention.

For a contract to be validly concluded, when the option ends, the beneficiary needs to have full power of exercise, but not also the promissory party, who had the capacity to make provisions when the promise was made, date at which he also agreed to the sale.

[30] For more details, see Ioana Ionescu, *quoted works*, pp. 179 – 188.
[31] Ioana Ionescu, *quoted works*, p. 190.
[32] D. Chirică,*Contracte speciale civile şi comerciale. Vânzarea. I,*Rosetti Publ. House, Bucharest, 2005, p.20
[33] Ioana Ionescu, *quoted works*, p. 191.

The projected sale shall be concluded only if the option is expressed within the option term established within the unilateral promise of sale; the expiry of this term shall impose a new agreement to the parties for this matter.

The end of the option must be pure and simple, not affected by other manners, capable to express a firm and precise will to conclude the sale exactly in the terms and conditions provided for by the promise.

The option can be ended personally by the beneficiary or by his legal representative, after which it shall be notified to the promissory party, or to his legal representative, according to the case.

Having a consensual character, the end of the option is not conditioned by a particular form, except for the cases in which the parties established otherwise or the law imposes such a requirement for the validity of the contract. Consequently, the acceptance of the promise can be both clear and tacit, resulting from certain acts which clearly express the manifestation of will, for purchasing the asset. In this case are applied as well the provisions of article 1196 paragraph (2) of the Civil Code, according to which: "The silence or inaction of the receiver does not mean acceptance unless when it results from the law, from the parties agreement, from the practices established between these, from customs or from other circumstances".

The tacit acceptance does not produce effects when the law demands a written form for the final contract, as it results from the provisions of article 1668 corroborated with art. 1278 paragraph (5) of the Civil Code, which impose for the acceptance statement to be concluded in the form provided for by law for the contract projected to be concluded.

Moreover, if according to law the authentic form *ad validitatem* is required for the valid alienation of the promised asset (as it happens with fields and constructions), article 1278 paragraph (5) of the Civil Code clearly stipulates that both the option pact and the acceptance statement must be concluded in the form requested by law for the final contract. Consequently, in these situations the end of the option must take a solemn form, meaning the authentic one.

When the consent of the parties is not given in the form requested by law for the validity of the projected contract, is applied the rule regarding the conversion of the legal act and, in the absence of a contrary stipulation, the ending of the option by the beneficiary will not have the conclusion of the sale as effect, but will represent, together with the manifestation of will by the promissory party, a bilateral promise of sale. In fact, the legal literature preceding the new Civil Code, treated conversion as a legal rule, which removed the enforcement of the principle *quod nullum est, nulum producit efectum*[34].

3. Conclusions

Initially acknowledged only by the legal literature and practice, the unilateral promise of sale/purchase is recently acknowledged also in the legislative field. It appears as a result of an agreement of wills, but must not be mistaken with the actual sale. The unilateral promise of sale/purchase is a unilateral contract, an autonomous institution, with a power recognized by the lawmaker as being the same as the bilateral promise, since both can be subject to forced execution in identical conditions. The current scientific work has been elaborated in principal on the basis of the new legislative texts which define an original institution, totally different from the sale contract and other contractual techniques meant to shape it. The current work does not go through all the theoretical and practical aspects regarding the unilateral promise in the field of sales contract, but we have tried to present a couple of novelty elements which the Civil Code provides to this institution.

Taking into account the legislative provisions, but also the opinions stated in the legal literature, we can conclude that the unilateral promise of sale/purchase represents a genuine contractual technique which favors the circulation of assets and economic activity.

BRIEF CONSIDERATIONS REGARDING THE PROPERTY TRANSFERRING OR ENGENDERING OF OBLIGATIONS CHARACTER OF THE SALES CONTRACT

Vlad-Victor OCHEA*

Abstract

I herein want to emphasize the main aspects regarding the property/real estate transferring or engendering of obligations character of the sales contract governed by the Romanian Civil Code of 2009.

Keywords: *Sales contract, Real estate, Property, Real Estate Register.*

1. Introduction

Art. 1650 par. 1 of the Romanian Civil Code (hereinafter referred to as the Civil Code) defines the sale contract as being *the contract whereby the Seller conveys or, as the case may be, undertakes to convey to the Buyer the property of a good in exchange of a price which the buyer undertakes to pay*. The definition provided by the Legislator may generate confusion in connection to the property transferring or, on the contrary, engendering of obligations character of the sales contract. The correlation of this legal text with other legal provision, as well as the observation of some novelty aspects in the sales matter are likely to clarify the perspective of Legislator as far as the definition of the Sales Contract goes.

2. Content

Apart from art. 1650 par. 1 of the Civil Code, we must also consider art. 1672 which, unlike the previous art. 1313 of the 1864 Civil Code from, includes, among the Seller's obligations, the obligation to convey the property of a good or, as the case may be, the sold right. Article 1674 of the Civil Code apparently comes in contradiction to Art. 1672 of the Civil Code which, similar to art. 1295 par. 1 of the 1864 Civil Code, provides that, *except of the cases expressly provided by law or if from the Parties' will does not result the contrary, the property transmits to the Buyer at the time of conclusion of the contract, even if the good was not given or the price was not paid yet*. The Seller's obligation of transmitting the property of the good or, as the case may be, of the sold right arises only in certain cases, explicitly or implicitly determined by law or by the Parties' agreement, namely in some cases when the property does not transmit de jure, and the Sales Contract is an engendering of obligation contract. In all other cases, the Sales contract characteristic as being a property transferring contract prevails. Such a conclusion is also entitled by the provisions of art. 1273 of the Civil Code which, in the first paragraph, provides that *the real estate rights are established and transmitted by the Parties' agreement, even if the goods were not given, if the Parties agreed on some specific goods or, if the goods were individualized, on some gender goods*. According to par. 3 of the above-mentioned article, *the legal provisions in the real estate matter and also the special provisions regarding the transfer of some categories of movable goods remain applicable*.

Art. 1650 par. 1 second thesis of the Civil Code – *the Seller* (…) *undertakes to convey to the Buyer* (…) – must be linked with art. 1674 first thesis which clearly shows that, in some cases, provided by law or agreed upon by the Parties, the property is not a direct effect of the Sales contract, but an obligation undertaken by the Seller which follows, even if for a moment, the moment of the conclusion of the contract.

Art. 1650 par. 1 second thesis of the Civil Code does not comprise the Option Agreement and the Promise to Sell or the Promise to Buy. The Option Agreement provided by art. 1278 and 1668 of the Civil Code, turns into a genuine Sales Agreement at the time of exercising the option by the Beneficiary (the future Buyer), the latter being the owner of a potestative right. Once the option is exercised, the beneficiary's will meets the Promissory's will – which is an irrevocable offer– and thus the Sales Contract is concluded and it has a transferring of property character.

The Promise to Sell determines in the Beneficiary's patrimony a right of claim (personal right) as an equivalent of the Promissory's obligation (Seller) to conclude the contract, as an assortment of the compliance obligation (*facere*). Once this obligation is performed, the Sales Contract will be concluded which, in principle, has a transferring of property or constitutive of rights character.

* PhD Candidate, Faculty of Law, "Nicolae Titulescu" University of Bucharest (e-mail: **vlad.ochea@gmail.com**).

The Seller's obligation of transferring the property of the good or, as the case may be, of the sold right has the nature of a *dare* obligation, which is performed via the performance of a compliance obligation (*facere* obligation). The existence of *dare* obligation cannot be denied, being remembered both by the Legislator from 1864 and the Legislator from 2009. Some legal texts highlighted in the Fifth Book ¬¬– About Obligations, Fifth Title – The Performance of Obligations, Chapter I – The Payment, Third Section – The Conditions of Payment and also the circumstances provided by the Civil Code in which the property/real estate right or any other right does not convey from the Seller to the Buyer at the exact time of concluding the contract outline the substance and the manner of the performance of *dare* obligation. The goal of the performance of *dare* obligation is the transfer of the property/real estate right. This is not a Roman legacy, but originated in the Glossators Era. In the Roman law system, *dare* obligation was not included in the scheme of consensual sale. Its recognition as a a different concept from *dare* obligation was made through its goal, namely to convey the property of a good. In essence, the transferring of the property was made through *mancipatio*, *in jure cessio* or *traditio*, those representing the manifestation of *dare* obligation, which became effective through some compliance obligations (*facere* obligations).

The obligation is a bond by virtue of which the debtor is obligated to procure a benefit to the creditor, and the creditor has the right to obtain the due benefit (art. 1164 of the Civil Code). The object of the contract is the legal operation, such as selling, renting, lending and others alike, agreed by the parties, as results from the contractual rights and obligations (art. 1225 par. 1). The object of the obligation is the benefit to which the debtor undertakes. The above-mentioned legal provisions do not offer a clue regarding on which elements could be phrased a definition of *dare* obligation. Art. 1483 and 1488 of the Civil Code illustrate the object of *dare* obligation. Thus, the obligation to convey the property implies both the obligation to deliver the good and the obligation to preserve it until delivery, and the obligation to pay an amount of money is performed by handing over the nominal amount to the creditor. The payment has also the nature of a *dare* obligation, since the obligation to pay an amount of money is nothing but the transfer of the property on some fungible goods.

As we previously stated, the obligation to convey the property – *dare* obligation – is performed via a compliance obligation (*facere* obligation). In case of failure to perform by the Seller, the buyer may ask for the enforcement of the obligation, on the grounds of art. 1528 of the Civil Code, dedicated to the enforcement of the compliance obligation (*facere* obligation). The Civil Code is considering just the enforcement of compliance and non-compliance obligations (*facere* and *non facere*). I believe that the explanation of this lays in the performance mechanism of *dare* obligation, which finds its purpose only through another instrument, namely the compliance obligation (*facere*). There is another version according to which there is no *dare* obligation but, according to their object, there are two types of obligations: compliance and non-compliance (*facere* and *non facere*), and the obligation of transferring the property is only an assortment of *dare* obligation, which can be subject to the enforcement procedure, as it does not violate debtor's liberty. Taking into consideration the legal provisions that govern the Sales Contrat, as well as some legal provisions which outline the general legal regime of obligations, previously-quoted, this version seems difficult to accept.

Further, I will exhibit those cases in which the sales contract is a contract which engenders obligations, emphasizing how the transferring of the property operates.

1. The sale of immovable goods (Real Estate)

After the completion of cadastre for each administrative unit and opening on request or ex officio the land books, there will become applicable, among others, the provisions of art. 885 of the Civil Code, which establish the constitutive or transferring of rights effect of the registration in the Real Estate Register: under the reserve of some contrary legal provisions, real estate rights registered in the Real Estate Register are gained, both between the parties and to the third parties, only through the registration in the Real Estate Register, on the basis of the fact or the act which entitles the registration. The main legal provision in this matter is represented by art. 877 of the Civil Code, according to which the real estate rights registered in the Real Estate Register are rights subject to the registration in the Real Estate Register. They are acquired, modified and extinguished only with the compliance of the rules of the Real Estate Register.

Art. 876 par. 3 of the Civil Code defines the real estate as being one or more joined pieces of land, whatever category of use, with or without constructions, owned by the same person, placed on the territory of an administrative unit and which are identified through a unique cadastral number.

From the correlation of both art. 885 and 1676 of the Civil Code, according to which in the sales of real estate, the transferring of property from the Seller to the Buyer is subject to the Real Estate Register legal provisions, it follows that the transfer of real estate does not automatically operate at the time of the conclusion of the contract, but subsequently, through the registration of the gained right by the Buyer in the Real Estate. Thus, the Sales Contract becomes an engendering of obligations one and the Seller has the obligation provided by art.

1672 par. 1 of the Civil Code, namely to transfer the property of the good or, as the case may be, the sold right. This is *dare* obligation which is performed through a compliance obligation (*facere*). After art. 1673 par. 1 of the Civil Code provides that the Seller is obliged to transfer to the Buyer the property of the sold good, art. 1677 provides that the Seller is obliged to erase from the Real Estate Register, at his expenses, the registered rights on the sold good, if those rights are extinguished. Art. 1483 establishes that the obligation of transferring the property also implies the obligation to deliver the good and to preserve it until its delivery. As far as real estate rights registered in the Real Estate go, the obligation of transferring the property implies the obligation to deliver all the necessary inscriptions and documents in order to perform the registration. The Seller's obligation, provided by art. 1677 of the Civil Code is a first step towards achieving the goal of transferring the property, as only after the fulfilment of this obligation the Buyer can register his right. The fulfilment of the Real Estate Register formalities are a compliance obligation (*facere*).

The law provides to the Buyer the right to sue the Seller, if the latter does not perform his obligation of delivering all the necessary inscriptions and documents in order to perform the registration. Thus, according to art. 896 par. 1 of the Civil Code, when the person obliged to transfer, establish or modify in the benefit of another person a real estate right does not fulfill the necessary obligation in order to perform the Real Estate registration, the court can be asked to order the registration; this right is subject to a statute of limitation by law. In this respect, the request of the registration will be submitted to the district office in whose jurisdiction is situated the Real Estate.

Art. 888 of the Civil Code provides as a condition for registration an authenticated document by a public notary which proves the Seller's will to conclude the Sales Contract and also to transfer the Real Estate to the Buyer.

Until the time of registration with the Real Estate Register, the buyer has a jus ad rem, which further becomes jus in re – the Real Estate right. Although this metamorphosis seems curious, it represents the goal of the *dare* obligation, which is a legal fiction. From the conclusion of the contract until the time of registration with Real Estate Register, the Buyer's right is temporarily under protection, because, after the registration certificate is issued, the Real Estate Register is "frozen" for 10 days.

The correlative right of *dare* obligation is jus ad rem. According to the famous French jurist of the XVIII century Robert Joseph Pothier, *le jus in re, dont le droit de dominium est une des principales espèces, est un droit que nous avons dans une chose; le jus ad rem est un droit de créance personnelle que nous avons contre une personne qui s'est obligée à nous donner une chose, pour la contraindre à nous donner cette chose, dans laquelle nous n'avons encore aucun droit jusqu'a ce qu'il nous l'ait donnée. Le jus in re suit la chose, en quelques mains qu'elle passe, et il donne à celui qui a ce droit, lorsque la chose n'est pas par-devers lui, une action pour réclamer la chose, ou le droit qu'il a dans le chose, contre tous ceux qui se trouvent la posséder. Au contraire, le jus ad rem, qui e un droit de créance personnelle, suit la personne qui a contracté l'obligation de donner la chose. Il ne donne d'action que contre la personne qui a contracté l'obligation de la donner, et contre ses héritiers ou autres successeurs universels qui on succédé à son obligation: il n'en donne aucune contre des tiers qui posséderoient la chose qu'on s'est obligé de nous donner*[1].

Given that the transfer of real estate is not achieved through *traditio*, the content of *dare* and, accordingly, of jus ad rem, is different compared to the one portrayed by Pothier. As noted above, the Seller is obliged to hand over the documents necessary for the registration in Real Estate Register.

The observations that I have previously made are subject to *condicio a qua*, namely the ending of the cadastre works in each administrative unit and opening, on request or ex officio, of land books. For the time being, the registration with the Real Estate Register is the same as the previous regulation, having the purpose of enforceability against the third parties, according to art. 56 par. 2 of the Law no. 71/2011 for the implementation of the Law no. 287/2009 regarding the Civil Code. However, this does not necessarily mean that the Sales Contract of immovable property does not have an engendering of obligations character. The characteristic of the Sales Contract as being a transferring of property contract or, on the contrary, an engendering of obligations contract, requires a broader interpretation. Although, between the Parties, as an effect of the conclusion of the contract, the right enters into the Buyer's patrimony, however the Buyer does not have a genuine Real Estate right yet. The striking feature of the Real Estate right is to be a right opposable erga omnes. In the eyes of third parties, until the registration with the Real Estate, there is not an utter right, inasmuch as the right cannot be opposed to third parties. Only upon the registration will the Buyer acquires a *jus in re*. Until then, the Buyer has a *jus ad rem* in relation to third parties and a Real Estate right in relation to the Seller.

[1] Șerban Mircioiu, Transferul dreptului de proprietate prin vânzare. Studiu de drept comparat (Bucharest: Universul Juridic, 2014), 168-169 apud Robert Joseph Pothier, Oeuvres complètes de Pothier, Tome 8, nouvelle édition (Paris: Thomine et Fortic Libraires, 1821) 89-90.

2. *Dies a quo* sales contract. *Condicio a qua* sales contract

The sales contract preserves its real estate/property transferring character, even if the parties have postponed the transfer of real estate/property by agreeing upon a *dies a quo* or a *condicio a qua*. This shall apply only if the sold good is not real estate or the sales contract does not engender the obligation to transfer real estate or property. A type of *dies a quo* sales contract is that which contains a title retentions clause, regulated by art. 1684 and 1755-1757 of the Civil Code. A type of *condicio a qua* sales contract is the trial sales contract, regulated by art. 1681 of the Civil Code.

3. Alternate sales contract

Art. 1461 par. (1) of the Civil Code provides that an obligation is alternative when its object consists of two main services and the performance of one releases the debtor of the whole obligation. If the seller undertakes the obligation to transfer the real or, as the case may be, the personal property of one of the two goods that constitute the object of the obligation, the contract has an engendering of obligations character, because the transfer of the real or, as the case may be, the personal property shall occur when the seller makes his choice between the two goods [art. 1462 par. (2)].

4. Sale of future goods

Art. 1658 of the Civil Code provides that, if the object of the sale consists of a future good, the buyer shall acquire the real or, as the case may be, the personal property when the good has been manufactured. With respect to buildings, real estate register provisions shall apply. In case of sale of goods belonging to a limited gender that does not exist at the date on which the contract is concluded, the buyer shall acquire the personal property when the seller will individualise the goods. When the good or, as the case may be, the limited gender is not manufactured, the contract is null due to the lack of its object. However, if it's the seller's fault that the good or, as the case may be, the limited gender is not manufactured, he shall be obliged to pay damages. In the meaning of this article, the good is considered to be manufactured when it can be used according to the destination in respect to which the contract was concluded.

The transfer of real or, as the case may be, the personal property is postponed until the good is manufactured. Thus, this type of sales contract has an engendering of obligations character.

In order to register the real property in building, the buyer has to exhibit the certificate of completion which proves that the manufacturing of the good is complete.

The transfer of real or, as the case may be, the personal property is postponed until the good is manufactured. Thus, this type of sales contract has an engendering of obligations character.

5. Sale of another person real estate or, as the case may be, property

One of the novelties brought about by the Civil Code is the regulation of the sale of another person real estate or, as the case may be, property. Although subject to controversy under the former Civil Code, I am of the opinion that such a contract could be concluded prior to the entry into force of the New Civil Code on October, 1st, 2011.

According to art. 1230 of the Civil Code, if the law does not provide otherwise, goods belonging to a third party can constitute the object of the performance of a contract and the debtor is obliged to procure it and to transfer it to the creditor or, as the case may be, to obtain the permission from the third party. In case of non-performance of this obligation, the debtor shall be held liable for the damages thus caused.

According to art. 1683 of the Civil Code, if, on the date of conclusion of a contract regarding an individualised good, this good belongs to a third party, the contract is valid and the seller is obliged to ensure that the transfer of real or, as the case may be, personal property, from the third party to the buyer is made. The obligation of the seller shall be performed either by the acquisition of the good, or by the ratification of the sales contract by the third party, or by any other direct or indirect means which transfer to the buyer the real or, as the case may be, personal property in the good. The real or, as the case may be, personal property transfer shall operate de jure, if the law does not provide or the parties do not agree otherwise. If the seller does not ensure that the transfer of real or, as the case may be, personal property is made, the buyer is entitled to claim the avoidance of the contract and, as the case may be, damages.

If the seller would be the owner of the personal property which consists of a individualised good, the personal property would be transferred upon the conclusion of the contract. The sale of another person real or, as the case may be, personal property engenders for the seller the obligation to transfer the real/personal property. The seller is the debtor o a *dare* obligation and he shall perform it via a *facere* obligation. His performance could consist either in entering into a contract with the third party who is the owner of the good, or in convincing the third party to ratify the contract entered into by him and the buyer. There is a connection between the sale of another person property and the promise of another person deed. The expression used in art. 1683 par. (3) of the Civil Code "the real or, as the case may be, personal property transfer shall operate de jure" does not lead to the conclusion that the sale of another person real or, as the case may be, personal property is not an engendering of obligations contract.

6. Sale of gender goods

According to art. 1678 of the Civil Code, when the object of the sales contract consists of goods from a limited gender, the personal property shall be transferred to the buyer upon the date of the individualisation of those goods by delivering, counting, weighing, measuring them or by any other means agreed upon or imposed by the nature of the good.

If the individualisation is done by delivering the goods, the personal property shall be transferred by *traditio*, like in Roman Law. The performance of the obligation to deliver the goods is the vehicle that transports the personal property from the patrimony of the seller to that of the buyer. In other cases, the obligations to transfer the personal property and to deliver the goods are separate, but the former is performed through the same *facere* obligation which takes the form of counting, weighing, measuring them or by any other means agreed upon or imposed by the nature of the good. The choice of the goods that will be delivered to the buyer belongs to the seller, but the obligation to transfer the personal property will be performed only when and if at least medium quality goods are delivered. (art. 1486 of the Civil Code).

3. Conclusions

Having as main inspiration source the French Civil Code, the Legislator from 1864 assumed the characteristic of transferring the property of the Sales Contract, with some exceptions defined by the nature of the sold goods.

According to art. 644 of the 1864 Civil Code *property is achieved and transferred by means of inheritance, bequest, contract and traditio*. According to art. 557 par. 1 and 4 of the Civil Code, *the property may be achieved, according to the law, by means of contract, inheritance, bequest, accession, acquisitive prescription, the effect of possession in good faith in movable goods and fruit, by occupation, traditio and by court decision, when it is characterized by the transferring of property effect by itself*. With the exception of the cases expressly provided by law, as respects the immovable goods, the property achieves by means of the registration in the land book, in compliance with the legal provision provided by art. 888. The current regulation establishes, with the value of principle, the character of transferring of property of the contracts while preserving *traditio* as a manner of achieving property, with special application in the gender goods matter.

The Real Estate alternated in the Romanian law system, as a consequence of the genesis of the Romanian state, with the exception of the Decree no.115/1938, aimed only at the opposability against third parties of the transferring of property achieved at the time of the conclusion of the contract. Thus, in the Old Kingdom was applied the personal publicity system of Real Estate, with French origins, whilst in Banat, Crișana, Maramureș and Bucovina was applied, even after War World I, the real publicity system of Real Estate Register , with Austrian origins.

Noting the shortcomings of the system established by Law no. 7/1996 regarding the cadastre and the land book publicity and taking into consideration the significance of the immovable goods in the civil circuit, the Legislator from 2009 stated the transferring of property or constitutive of right effect of the Real Estate registration, which will influence the Sales Contract, as it will become an engendering of obligations one.

With respect to movable goods, with the exception of gender goods, the Buyer acquires the right over the good once the contract has been concluded, which means that, in relation to this category of goods, the Legislator considered that possession is the most suitable form of publicity.

The transfer of Real Estate by means of the Sales Contract resembles with the Austrian legal system, follower of the titulus and modus theory, by the virtue of which the transfer of the Real Estate is split, similar to the ancient Roman consensual Sales Contract, in two acts: a personal act and a real act, meant to achieve the transfer of the Real Estate (the contract and the delivery).

The legal provisions analysed herein are not an absolute novelty as they are not completely unknown to the Romanian legal system, the Sales Contract characterized by the engendering of obligation character being, as many other legal concepts, a Roman legacy, even if the peculiarities of the legal mechanism and reasons why the sale had and has, in some cases, engendering of obligation effect, differ.

In spite of the difference between the movable and immovable goods, I salute the option of the Legislator, declaring myself a supporter of the engendering of obligations character of the Sales Contract and I hope that the effects of the registration in the Real Estate Register will be fully effective as soon as possible.

LEGAL CONSEQUENCES OF MERGERS AND ACQUISITIONS

Amelia-Raluca ONIȘOR*

Abstract

The research analyses the legal effects of mergers and acquisitions from the Romanian Company Law perspective, underlining certain general principles, the procedure of annulment of such a legal transformation of companies and the protection of the employees of companies participating in the merger according to the Law no. 67/2006.

These consequences of mergers and acquisions are to be seen in the broader light of the most important purpose of this legal instrument, maximizing financial and organizational efficiencies, thus legal certainty is a desirable goal to be assumed by any merger regulation.

Keywords: *mergers, acquisitions, legal consequences of mergers, nullity.*

1. Effects of merger and acquisitions for the participating companies

1.1 General principles

Mergers and acquisitions is a legal transaction involving the change of society pact, a way of external reorganizing of the companies, to bring together assets and activities[1].

With the completion of this operation, certain legal effects which accompany these types of statutory changes are produced.

The main legal consequence of such operations is determined by dissolution without liquidation of the company which ceases to exist. The other legal effects of mergers, expressly provided by article 250 paragraph (1) letter a)-c) of Law no. 31/1990, are ensuing and concern:

i) universal transmission or with universal title of the society's assets dissolved by the company or beneficiary companies;

Referring to the universal transmission of assets, it must be emphasized that the rights and obligations belonging to companies which dissolve, are transmitted in the conditions and safeguards accompanying them at the time of the operation. Although the transmission is done on a contractual basis, pursuant to the judgment adopting the merger, it has also a legal nature, by its express consecration in the provisions of article 238 paragraph (1) of Law no. 31/1990.

The fact that the assets transmission is universal and operates de jure, it determines that the transfer of rights and contractual obligations of the company dissolved in favor of the acquiring or new company formed, to be imposed automatically to contractors, without any formality. Enforceability of the principle of merger to the latter, third parties of the legal operation of reorganization is due to the publicity formalities required by law for the merger procedure.

Of course, if any trademarks, patent or other intellectual property rights, it is also necessary to fulfill the formalities laid down by the special legislation, such as those inserted in the provisions of Law no. 84/1998 on trademarks and geographical indications. In the case of immovable property, it must be followed the procedure for registration in the land register on the basis of the reorganization document concluded in authentic form, in accordance with the provisions of article 242 paragraph (3) of the Civil Code.

At the same time, the universal transfer of assets will be carried out in accordance with the distribution rules set out in the merger and acquisition project, according to article 250 paragraph (1) letter a) of Law no. 31/1990.

Universal character and universal title of transmission of assets requires, on the one hand, that all the rights belonged to the company being acquired or merging companies to be transmitted through merger, and, on the other hand, to be transmitted also the obligations of the company or companies who cease to exist.

Thus, standing to bring proceedings – locus standi – or standing to be sued in a dispute started by or against the company which ceases to exist after the merger will be made by the beneficiary company or companies. According to article 38 of the Civil Procedure Code, it is operating a transmission of the standing to pursue the proceedings.

Similarly, for disputes triggered after the date on which the merger takes effect, active or passive procedural legitimacy belongs to the beneficiary company. In this regard, the beneficiary company may sue the managers of the acquired company for damages, may initiate enforcement relying on an enforcement order to the company absorbed.

* PhD candidate, Faculty of Law, "Nicolae Titulescu" University of Bucharest (e-mail: **amelia.busca@gmail.com**).

[1] See Ioan Schiau, Titus Prescure, *Legea Societăților comerciale nr. 31/1990. Analize și comentarii pe articole*, Ed. Hamangiu, 2007, p. 687. [*The Law of Companies no. 31/1990. Analyzes and comments on articles*], Hamangiu, 2007, p. 687.

The merger can not be a reason per se for cancellation or rescission of contracts, they being imposed between the parties laid down by law, an interpretation contrary eluding itself the main purpose of the regulation of such legal-technical operations, simplification of the operation of universal transmission of assets. The rescission or termination has the nature of a penalty for non-fulfillment of a contractual obligation, or, patrimonial devolution is not a such non-execution.

Târgu Mureș Court of Appeal stated in a decision of this case[2], that the effect of the merger by absorption is the one of universal transmission of assets, the legal beneficiary acquiring both the patrimonial rights and obligations belonging to the absorbed company in the case judged. It thus concluded that the existence of an enforcement which could be successfully opposed to the absorbed company makes that the procedure about getting a new title to the absorbed company for the same claim to be uninteresting[3].

From the date from which the merger produces effects on third parties, i.e. from the date of advertising procedures, the company acquires the quality of universal cause, benefiting, inter alia, of the rights in favor of the company that is reorganizing the judgment[4].

As decided by the High Cassation and Justice - Civil Division I, in the decision no. 5141 / November 08th 2013[5], the effects of the judgments in cases where the dissolved company had a party concept, are extended from the date of the merger - date of establishment of the new company, the latter acting as universal successor of the company being divided, just as it would have participated in the proceedings, the successor being obliged to comply with the judgment entered in res judicata.

In the absence of a stipulation in the contract, an absorbent company is entitled to a clause of guaranteeing a debt referred for a company being absorbed[6].

As regarding the rights of the third parties, the new company or the absorbing company is required to comply the company's obligations that are reorganizing, regardless of the agreed decision to adopt the merger[7].

Following universal transmission of the assets that accompanies the merger operation, creditors may be harmed only economically, not legally, the value of the assets that were the object of their universal pledge being able to be reduced, possibly by attaching them to a new patrimony. However, creditors have the right to object, in the conditions provided by article 243 of Law no. 31/1990.

Regarding the effect of dissolution without liquidation of the absorbed companies or companies that merge, which reach at least one of the participating entities in the merger, it causes loss of legal personality at the time the merger takes legal consequences.

Regarding contracts of companies which are abolished, as was pointed out earlier, these change in the subjective aspect, due to the intervention of legal subrogation of the absorbing company or new company, in the rights of the company/companies abolished as a result of the merger.

By Decision no. 77 / A of October 10th 2013, Târgu Mureș Court of Appeal Civil section II, of administrative and fiscal departament, cited by the High Court of Cassation and Justice, Civil Division II, in Decision no. 2327 / 19.6.2014, in case no. 3/1371/2011, it was considered that the conditions under which the merger interfered with the defendant company, the latter took only the outstanding contract with written clauses thereof, not bound to comply or continue various commercial habits established by the terminated company after the merger[8].

It should be noted that the aforementioned subrogation occurs without further formalities than those provided for the validity and enforceability of the merger.

However, the concession contracts, that are intuitu personae, can not be transferred without the consent of the grantor, given the prohibition in article 28 paragraph (6) of Law no. 219/1998.

Furthermore, employment contracts concluded by the absorbed company or the abolished one, as a result of the merger shall be forwarded by law to the beneficiary company.

Following the universal transmission, augmentation of capital occurs regarding the absorbent company with the regime of a contribution in kind.

ii) award of shares or of shares in the company or the beneficiary companies to the associates of the company which is dissolved;

---

[2] Decision no. 363/R/11.05.2006, on website : http://portal.just.ro/43/Lists/Jurisprudenta/DispForm.aspx?ID=90.

[3] The court noted that "by the universal transmission effect, the plaintiff must use the procedural means provided by law to enforce the judgment given and not to take steps to order a new enforceable title".

[4] In this regard, the Supreme Court ruled in France by commercial decision of October 21st 2008, published in *Bulletin d'information de la Cour de Cassation* (hereinafter "BICC") no. 697 of March 01st 2009. The conclusions are valid in the Romanian commercial law, due to the similarity regulations.

The legislator regulates the situation of mutual holdings of securities between the participating companies in the merger.

According to article 250 paragraph (2) of the Law, the shares in the absorbent company can be exchanged for shares issued by the company being absorbed and are held either by the absorbent company itself or through a person acting in its own behalf but on behalf of the company or by the company being absorbed itself or through a person acting in its own behalf but on the company behalf.

iii) the absorbed company ceases to exist since its removal from the commercial register.

This extinctive effect is, in fact, an essential feature of the merger, with repercussions on the validity of the operation. Thus, there are not part of the reorganization of merger type the disposals and exchanges of securities, shares, in which case their issuing company continues to protect its autonomy and its legal status.

Dissolution caused by merger is not followed by liquidation, it becomes useless by the transmission with universal assets character of the company or companies being absorbed / that merge. Therefore, the principle of survival of legal personality for liquidation is not applicable to this method of reorganization.

1.2. Date on which the merger is effective

Law number 31/1990 establishes different dates to produce merger effects, depending on the specifics of each operation.

According to article 249 letter a) of the Act, the effects of the merger are occurring after the date of registration in the trade register of the new company or the last of them.

In case of merger by absorption, the general rule provided for by article 249 letter b) of the Act shows that the effects are produced from the registration decision of the last general meeting which approved the operation.

The legislator established, as an exception to the general principle previously pointed out, the situation in which the parties agree that the operation takes effect on a specific date, stating that it can not be after the conclusion of the current financial year of the absorbent company or beneficiary companies or earlier conclusion of the last financial year of the company or companies that transfer their assets.

1.3. Effects of the merger towards third parties

As a general rule, contractual rights and obligations belonging to the company which will be forwarded to dissolve are transmitted to the absorbent company or the newly created company. The latter is part of a contract, without other contractors to object, as a result of the universal transmission of the assets.

However, some contracts do not follow this regime. It is about the conventions intuitu personae, at the conclusion of which the consideration of the contractor is determined. Because these contracts are submitted to new company or absorbent company, it is required the prior consent of the contracting party[9].

1.4.Protection of employees of companies participating in the merger

According to article 243 paragraph (9) of Law no. 31/1990, the opposition institution to the merger recognized to social creditors and governed by the provisions of article 243 paragraph (1) - (8) of the same law does not apply to wage claims arising from the individual employment contracts or applicable collective agreements, which satisfy the conditions of paragraph (1), whose protection is made according to the Law no. 67/2006 on the protection of employees' rights in case of transfer of the enterprise, unit or parts thereof, and according to other applicable laws.

For the purposes of the constitutionality of the above provisions was ruled the Constitutional Court Decision no. 404/2012 relating to dismiss the objection of unconstitutionality of article I point 4 of Government Emergency Ordinance no. 90/2010 amending and supplementing Law no. 31/1990[10].

The court was notified of the objection of unconstitutionality of article I point 4 of Government Emergency Ordinance no. 90/2010 amending and supplementing Law no. 31/1990, exception made by a union in a case covering the outcome of the opposition against a merger ruling thereon.

In motivating the exception of unconstitutionality, its author argued that the legal provisions criticized affect free access to justice for employees who see themselves deprived of the appeal of the opposition to the merger / division given that they are holders of firm, liquid debts, but not due. According to the author of the objection, removal of employees from among those persons who can raise objections was made on the basis of discriminatory criteria.

The Court held that protection of employees is carried out according to the provisions of Law no. 67/2006 on the protection of employees' rights in case of transfer of the enterprise, unit or parts thereof. The provisions of article 5 of Law no. 67/2006 provide imperatively that the rights and obligations of the assignor arising from individual labor contracts and applicable collective labor

[9] See in this respect, on the character *intuit personae* of an exclusive concession contract or of a commercial agency contract, Cour d'appel de Paris, November 2nd 1982, *Bulletin repide de droit des affaires (Éditions Francis Lefebvre*) February 15th 1983, p. 12; and the Cour de cassation, chambre commerciale, October 29th 2002, Bulletin Joly Societies, 2003, p. 192.

[10] Published on the internet at https://www.ccr.ro/ccrSearch/MainSearch/SearchForm.aspx

contract existing at the time of the transfer; will be transferred entirely to the transferee, it having also the obligation to comply with the applicable collective labor contract. Thus, the new legal entity is obliged to provide all rights to salary and other that employees had prior to the time of the merger.

Thus, the Law 67/2006 on the protection of employees' rights in case of transfer of the enterprise, unit or parts thereof has transposed into national law Directive 2001/23 / EC[11].

Prior to adoption of this particular normative framework, were introduced Articles 173 and 174 of the Labor Code - Law no. 53/2003, norms that are the common law on the matter. These provide that employees enjoy protection of their rights where a transfer of enterprise, unit or parts thereof, to another employer, by law, that the rights and obligations of the transferor arising from a contract or relationship employment existing on the transfer date will be entirely transferred to the transferee and the transfer of the enterprise, unit or parts thereof can not constitute grounds for collective or individual dismissal of employees by the transferor or the transferee. At the same time, it is recognized a right to earlier information and consultation of the transfer, of the trade union or, where applicable, of the employees representatives on the implications of legal, economic and social consequences for employees resulting from the transfer of ownership and the related obligation borne by the transferor and transferee.

Law no. 67/2006 transposing the Council Directive 2001/23 / EC on the approximation of the laws of the Member States relating to the safeguarding of employees in the event of transfers of enterprises, units or parts of enterprises or units[12].

Regulating a detailed procedure, special rules - Law no. 67 / 2006 – define at article 4 letter d) the notion of transfer, as the passage of property owned by the transferor to the transferee of an enterprise, unit or parts thereof, aimed at continuing the principal or secondary activity, whether intended or not making a profit.

Thus, article 5 of Law no. 67/2006 provides that the transferor's rights and obligations arising from individual labor contracts and the applicable collective contract, existing on the transfer date, will be fully transferred to the transferee.

Prior to the transfer, the transferor has to notify the assignee of all rights and obligations to be transferred to it.

Failure to notify will not affect the transfer of these rights and obligations to the transferee and the rights of employees. [Article 6 of the Act]

The most important provision of the law is related to the fact that transfer of the business, unit or parts thereof can not constitute grounds for collective or individual employees' dismissal by the transferor or the transferee, provided by article 7 of Law no. 67/2006.

In addition, if the transfer involves a substantial change in working conditions to the detriment of the employee, the employer is responsible for termination of the individual employment contract. [Article 8]

The transferee has the obligation to observe the collective agreement applicable to the transfer date until the date of termination or expiry. By agreement between the transferor and representatives of employees, collective agreement clauses valid at the time of transfer can be renegotiated, but not earlier than one year from the date of transfer.

Where, following the transfer, the enterprise, unit or parts thereof do not preserve its autonomy and the collective agreement applicable to the transferee is more favorable to employees transferred will apply more favorable collective agreement. [Article 9]

Where, following the transfer, the enterprise, unit or part thereof retains its autonomy, the representatives of the employees affected by the transfer maintain their status, powers and function of whether the conditions for representation are complied under the law. If legal representation conditions are not met, the transferred employees choose their representatives by law.

If the transfer of the enterprise, unit or parts thereof does not preserve its autonomy, the transferred employees will be represented by their express agreement by representatives of the employees of the transferee's company, until the establishment or inauguration of new representatives, under the law. [Article 10]

According to article 11 if the transferor or transferee envisages measures on its own employees, will consult with the employees' representatives in order to reach agreement with at least 30 days before the date of transfer.

Article 12 paragraph (1) of the Act provides that the transferor and the transferee shall inform in writing the employees' representatives themselves or, if they are not constituted or appointed on their employees, with at least 30 days before the date of transfer, on the date of transfer or proposed date of transfer, the reasons for the transfer, the legal, economic and social implications of the transfer for employees, the measures envisaged in relation to the employees and the conditions of work and employment.

Paragraph (2) of the same legal text, states that the information obligation under paragraph (1), shall apply regardless of whether the decisions resulted

[11] Directive 2001/23 / EC of March 12th 2001 on the approximation of laws of the Member States relating to the safeguarding of employees in the event of transfers of enterprises, units or parts of enterprises or units, published in Official Journal L 082/16, 05 /volume 06, p. 20.

[12] Published in the Official Journal L 82 of March 22nd 2001.

from the transfer are taken by the transferee or by an enterprise exercising control over it.

2. Nullity of the merger of companies on the commercial activity

2.1. Legal nature of the merger nullity

Merger nullity is both a cause of inefficiency and a sanction lacking the transaction of the contrary effects of legal rules enacted to achieve the reorganization process to companies / company involved. Thus, it intervenes only when it conflicts legal rules governing the conditions of validity, of background or shape of the operation.

From the legal regulation of the merger nullity, namely the provisions of article 251 paragraph (1) of Law no. 31/1991, it is deduced the legal nature of the nullity of the operation said. Thus, the legal text expressly provides that the nullity of a merger to be declared only by court order, expressly excluding the possibility of amicable nullity in this matter.

Reported to the nature of the interest protected by the legal provisions violated in pursuit of completing the merger, its nullity can be absolute or relative. The law itself refers to the provisions of article 251 paragraph (3), to the absolute or relative grounds for nullity, namely the nullification proceedings and of declaration of the merger nullity.

The same text establishes the prescriptive nature of the nullity, so it can not be relied upon expiry of 6 months from the date on which the merger or division became effective.

It is noted, however, that the premises for nullity or annulment of operation are strictly provided by the law and the sanction cannot be extended to other legal situations.

2.2.The grounds of the merger nullity

According to article 251, paragraph (2) of the Act, the two grounds of nullity, strictly established, are: the lack of judicial control in accordance with legal regulations and absolute or relative nullity of one of the general meeting which voted the merger project.

In this regard, the commercial sentence no. 7702 of June 24th 2010 in case no. 50861/3/2009 of Bucharest Tribunal, irrevocable by decision no. 3601/2011 of the High Court of Cassation and Justice, Civil Division II[13], the court held that there can be retained grounds for nullity of the merger decision of general meeting on the conduct of the merger in two stages, "because on the date of preparation and publication of the merger project Law no. 31/1990 was no longer compulsory to conduct two-step merger, article 239 of the Act does not contain no penalty for the lack of judgment in principle on the merger or division, and the merger nullity can be declared only in accordance with article 251 of the same law.

Thus, the reason for nullity of the judgment of the general meeting alleging infringement of the provisions of article 134 of Law no. 31/1990 was rejected by the court, given that it is not found in the grounds for nullity mentioned in article 251 of mentioned regulation.

A) Lack of judicial / administrative control

Regarding the first question of nullity, the text provides that the legal nullity may intervene in the merger which was not subject to judicial control in accordance with article 37 of the same law.

Thus, according to article 37, paragraph (1) of the Act, the control of the legality of acts or facts which, by law, are registered in the trade register, is exercised by justice by a delegated judge.

It should be noted that through article 1 of Government Emergency Ordinance no. 116/2009 for establishing measures on trade registration activity[14], notwithstanding the Law no. 31/1990, it was provided that has jurisdiction to hear applications for registration in the trade register and, where appropriate, other applications under the jurisdiction of the judge delegated to the regulation of trade registration conducted by commercial registrars, for the director of the trade register office attached to the court and / or the person or persons designated by the Director General of the National Office of the Trade Register.

This legislative amendment was based on the desire to remedy with celerity the blockage existing at the trade registry offices.

Consequently, the control of legality performed to record changes of the articles of association with the trade register, just like any other registration, is carried out by the Director of the Trade Register attached to the tribunal and / or the person or persons designated by the Director General of the National Office of the Trade Register and not by the delegated judge.

Specifically, after drafting the merger project and signing it by representatives of participating companies, it is submitted to the Trade Register Office where is registered each company, together with a statement of the company which ceases to exist after the merger or division on how was decided to extinguish its liabilities, and a statement regarding the manner of publication of the merger project or division (article 242, paragraph (1) of Law no. 31/1990)

[13] *In extenso*, on the Internet at: http://www.scj.ro/1093/Detalii-jurisprudenta?customQuery%5B0%5D.Key=id&customQuery%5B0%5D.Value=78160

[14] Approved by Law no. 84/2010.

The law provides that the merger or division, will be targeted by the delegated judge, for publication in the Official Gazette of Romania, Part IV, at the expense of parties, in whole or in excerpt, according to the judge's delegation or demand of the parties, with at least 30 days prior to the dates of extraordinary general meetings in which are to decide, pursuant to article 113 letter h) on the merger. (Article 242 paragraph (2) of Law no. 31/1990)

To simplify the procedures and to reduce the administrative costs, the legislator has given companies the possibility, if they have their own web page, to be able to replace the publication in the Official Gazette of Romania, Part IV, provided in the paragraph (2) with the publication made through its own website, for a continuous period of at least one month before the extraordinary general meeting which is to decide on the merger / division, period ending not earlier than the end of that general final meeting. (Article 242 paragraph (2^1) of Law no. 31/1990)

Therefore, the lack of performance of a judicial / administrative control targeting the merger project for publication in the Official Gazette or on its own web page, is ground of nullity of the merger operation as a whole.

Clearly, because is the question itself is the nullity operation, it is necessary to invoke such irregularity to be achieved the completion of the merger process, of course, within the period prescribed in Article 251 paragraph (3) of Law no. 31/1990.

B) The situation in which the judgment of one of the general meeting which voted the merger project is void or voidable

Without distinction on grounds of public policy or private character of the rule disregarded the adoption of the ruling of the General Assembly which voted the merger project, such an irregularity per se justifies a declaration of nullity in the merger process.

It should be noted that if earlier completion of the process fusion, absolute nullity or, where applicable, relative to this legal act drew the imprescriptible character or prescriptible of the action in finding the nullity or annulment of the judgment, from the date on which the merger becomes effective regardless of the nature of the interest protected by the infringed rule, the invocation of the merger nullity for this reason is prescriptible within 6 months provided for in article 251 paragraph (3) of Law no. 31/1990[15].

2.3. The procedure of nullity declaration

As noted above, the nullity of the merger has a judicial character and the right of action is prescribed under article 251, paragraph (3) of Law no. 31/1990, within 6 months from the date on which the merger or division has become effective pursuant to article 249, or if the situation has been rectified.

The date on which commences the prescription term - dies a quo - is, in case of the formation of one or more new companies, specifically in the case of the merger, from the date of registration in the trade register of the new company or the last of them, and in case of merger by absorption, from the recording date of the last judgment of the general meeting which approved the operation, except that, by agreement, it is stipulated that the operation will take effect on another date. In the latter situation, the conventional chosen date may not be later to the end of the current financial year of the absorbent company or beneficiary companies, nor the later to the end of the last financial year of the company or companies that transfer their assets.

During this time is essentially legal, and the calculation of this period is done according to the general rules contained in the provisions of article 2552 of the Civil Code. Thus, it shall expire on the corresponding day of the last month, and if the last month has no corresponding day to the one in which the term began to flow, the term shall expire on the last day of this month.

Thus, by Decision no. 178 of April 10th 2009 pronounced in case no. 2718/87/2008, Bucharest Court of Appeals - Commercial Section VI[16], it was noted that under article 251, paragraph 3 of Law no. 31/1990, the cancellation procedures and declaration of merger nullity or division may not be initiated after the expiration of six months from the date on which the merger or division became effective under article 249, or if the situation has been rectified. Also, according to article 249, letter b of the Law no. 31/1990, republished, the merger takes effect from the date of registration of the last general ruling that approved the operation.

The Court found that the date specified in article 249 letter b) of the Act was to September 26th 2007, when it held general meetings of both companies, so the company that is being absorbed and the absorbent company, meetings that approved the merger, noting that there were no oppositions to the merger project.

[15] For details, see Cristian Gheorghe, *Drept comercial român*, Ed. C.H. Beck, Bucureşti, 2013, p. 518-520. [*Romanian Commercial Law*], Ed. C.H. Beck, Bucharest, 2013, p. 518 – 520. The author argues that the action for annulment of the general meeting judgment which approved the merger project, brought after the consolidation operation, "is absorbed by the action in the operation nullity, existing only inside and with its justification" (*opus citatum, p. 520*).

[16] Available on the Internet, at the address: http://portal.just.ro/2/Lists/Jurisprudenta/DispForm.aspx?ID=427

Given that from this date passed more than six months, the request of declaration of nullity of the merger by D.G.F.P.J.T. was recorded before Teleorman Court on October 20th 2008, the Court accepted this lateness exception formulation request and rejected the request as being out of time.

Being a period of extinctive prescription, it is subject to the institution of suspension[17], interruption[18] and restoring the prescription period[19], given that the law provides otherwise. Of course, common law causes of suspension, interruption and restoration in term provided for by article 2532, article 2537, respectively article 2522 of the Civil Code have not fully implemented the mergers situation, given the specific of this operation and the topics that may invoke the nullity of this operation.

An action for annulment / nullity may be exercised by the associates of the companies participating in the merger, stating that, on the invocation of the relative nullity of decisions of the general meetings, must take into account the provisions of article 132, paragraph (2) of Law no. 31/1990. More specifically, they exclusively act as shareholders who have not taken part in the general meeting or voted against and asked to insert it in the minutes of the meeting.

It should also be noted that, from the regime of absolute nullity, any person may request the its declaration judicially, but must be proven he essential condition for setting in motion the civil action, namely the interest, practically benefit pursued by the plaintiff, who must be legitimate, vested and present, personal and determined according to article 32, paragraph (1) d) of the New Code of Civil Procedure.

In this regard, it was ruled also the High Court of Cassation and Justice, Civil Division II, by decision no. 2580 / June 27th 2013, in case no. 1508/1259/2011*[20]. Thus, in line with those adopted by the appeal court, it was noted that "the plaintiff has locus standi because it relied on a ground of absolute nullity, which can be invoked by third parties to the merger agreement," but it did not justified "a practical interest in invoking this absolute nullity".

The court vested with such action shall grant the companies involved in the merger process a deadline for rectification, in cases where the nullity is likely to be remedied. [Article 251, paragraph (4)]

Of course, the assessment on the possibility of rectification belongs to the court.

The provisions of article 251, paragraph (3) from the last thesis of the law take into account the possibility that the companies involved to rectify the irregularity prior to referral to the court. According to the law, cancellation procedures and merger or division nullity declaration may not be initiated if the situation has been rectified.

In the legal doctrine[21], it was stated that legal provisions do not refer to a real inadmissibility of the action, the court being forced to determine whether the grounds for nullity and fixing them until the notification date of the court.

We agree with this view, arguing that, indeed, the law does not stipulate a plea of inadmissibility, the analysis of existence at the time of the action, a plea of nullity of the operation is done either in terms of the merits of the action, either the existence of the interest demanded by law to promote the action based on concrete facts before it.

Regarding the mandatory procedure prescribed by law, must be evoked the conclusions of the High Court of Cassation and Justice, in the Commercial Decision no. 153 of January 18th 2011[22], which showed that in the procedural framework governed by the provisions of article 364 of the Civil Procedure Code, criticisms must concern the arbitration decision and the judgment of the court in an action for annulment and not for reasons which may be invoked in accordance with the rules established by another law.

Thus, continued High Court's reasoning, the exception of nullity judgment of the extraordinary general meeting of shareholders and of the merger company can be analyzed only after the procedural rules laid down by the mandatory provisions contained in article 132, article 250 and article 251 of Law no. 31/1990 and can not be valued on incidental way.

As required by article 251, paragraph (5) of the law, "[the final declaration of nullity decision of a merger or division will be forwarded ex officio by the court to the registry offices at the headquarters of

[17] Suspension of the prescription term is "that change of the course of the prescription that lies in stopping rightfully the flow of the prescription term during limiting situations provided by law that put it in the impossibility to act on the holder of the right to act". See, în acest sens, Gabriel Boroi, Liviu Stănciulescu, *Instituții de drept civil în reglementarea noului Cod Civil*, editura Hamangiu, București, 2012, p. 310 și următoarele. [*Institution of civil law in the regulation of the new Civil Code*], editura Hamangiu, Bucharest, 2012, p.310 și următoarele.

[18] Interruption of prescription term is to change its course consisting of removal of the prescription period elapsed prior occurrence of an interruption and the start of another prescription. *Ibidem*, p. 314 et seq.

[19] Restoring the term is a benefit granted by law to the right holder to action which, for good reasons, could not trigger the action within the prescription period, so that the body of jurisdiction is entitled to deal in substance the complaint in court, although it was brought after the expiry of the prescription period. *Ibidem*, p. 319-322.

[20] Published on the Internet, at the address, http://www.scj.ro/1093/Detalii-jurisprudenta?customQuery%5B0%5D.Key=id&customQuery%5B0%5D.Value=113441

[21] Cristian Gheorge, *opus citatum*, p. 522.

[22] Available on the Internet, at the address: http://www.scj.ro/1093/Detalii-jurisprudenta?customQuery%5B0%5D.Key=id&customQuery%5B0%5D.Value=82969

trade companies involved in the merger or division concerned"].

2.4. Effects of merger nullity

The legal consequences of the sanction of nullity of a civil legal act are governed, traditionally, by the three principles of the common law of such sanctions: retroactive effects of nullity, reinstatement in the previous situation – restitutio in integrum, the cancellation of both the operation and subsequent legal acts - resolute iure dantis, resolvitur ius accipientis.

In the matter of merger nullity, these principles known, however, justified limitations on the specific operation, the need to protect the interests of third parties in good faith, and for ensuring legal certainty.

Thus, first, article 251, paragraph (6) of Law no. 31/1990 provides that "[the final decision of declaration of nullity of a merger [...] shall not affect the validity of obligations incurred by itself in the benefit of the absorbent or beneficiary company engaged after the merger or division became effective under article 249, and before the ruling of nullity to be published."

As a result of the principle of restoring the previous situation, the company or companies that have ceased to exist by merger, regain legal status, are canceled the legal effects of removal from the trade register and are excluded amendments of articles of association of the benefiting companies.

However, according to article 251, paragraph (7) of the Act, if the nullity declaration of a merger, the companies involved in the merger shall be jointly liable for the obligations of the absorbent company after the merger or division became effective, pursuant to article 249, and before the ruling of nullity to be published.

Conclusions

This paper aims to examine the effects of the merger on the companies' business, and the nullity of such an operation from a dual perspective, theoretical and practical.

Although Romanian law covers a broad regulatory issue mentioned, the regulations are imperfect.

Thus, as a *de lege ferenda* proposal, we believe that it would be necessary to clarify and define the causes of suspension, interruption and restoration of the time limit on the period of extinctive prescription provided in article 251, paragraph (3) of Law no. 31/1990. Common law cases are not adapted to the operation, nor reported to topics that can engage in a procedure of annulment or declaration of nullity of the merger. However, keeping in view the wishes of legal certainty, predictability and creating an attractive tool for companies that want to reorganize, those cases that determine, ultimately, the timing of the procedure referring to the merger should be restrictively provided by law.

THE RIGHT TO A FAIR TRIAL IN THE DYNAMIC INTERPRETATION OF THE EUROPEAN COURT OF HUMAN RIGHTS

Alexandra PANAIT [*]

Abstract

The European Court of Human Rights has constantly highlighted the importance of Article 6 of the Convention and by a dynamic interpretation, the jurisprudence of the Strasbourg Court has gradually enriched the content and the practical impact of the treaty text, recognizing various additional guarantees compared to those expressly provided for by the Convention, such as certain specific applications of the equity principle and the national court's obligations of loyalty and compliance with the Convention, which represent essential elements of the general concept of a fair trial.

Keywords: *CEDH, fair trial, jurisprudence, article 6.*

1. Introduction

According to the International and European procedural law, the guarantee of a fair trial is considered a fundamental right.

However, the concept of this fundamental right is still controversial. Leading specialists in the domanine developed three criteria for the protection of fundamental rights: the protection against the executive and legislative power, the protection by the law, by the Constitution and by international or supranational law and the protection by the intervention of ordinary courts, constitutional courts and international courts.

For determined the application field of the guarantee of a fair trial, it is necessary to establish the content of that procedural guarantee of Article 6 of the European Convention on Human Rights. In this context, the question is to know what guarantees good organization and functioning of justice in the context of litigations.

Among each decision, the European Court of Human Rights has highlighted the importance of Article 6 of the Convention, which enshrines the fundamental guarantees of procedure, aiming to strengthen the internal and international mechanisms for safeguarding the rights and freedoms provided in the benefit of litigants.

In a dynamic and purposive interpretation, the case law of the Strasbourg Court has gradually developed the content and the practical impact of the treaty text, recognizing various additional guarantees compared to those expressly provided by the Convention.

Thus, the European Court has established some particular applications of the requirement of equity defined by Article 6 of the Convention, enforcing essential elements of the general concept of a fair trial.

Also, the European Court established the existence of a limited procedural and institutional autonomy in the benefit of Member States, by devoting a positive obligation of loyalty and compliance for the national courts in the application of procedural guarantees provided by the Convention.

1.1. Particular applications of the requirement of equity

The jurisprudence of the European Court of Human Rights has recognized the existence of a more complex content of the right to a fair trial, developing in particular the importance of respecting the right to enforcement of court decisions, the particular implications of the language of proceedings and the right to appear in person to protect the rights of defense or the role of the mass media regrading the fairness of the proceedings.

Regarding the right to the execution of court decision, according to the Strasbourg Court "the execution of a judgment or a decision by any court whatsoever, should be considered as part the trial, under the protection of Article 6 "," would not be understood by Article 6 paragraph 1 should describe in detail procedural guarantees - equity, public and celerity - granted to the parties and does not protect the setting implement the judicial decision."[1]

In the same case - Hornsby v / Greece, the Court indicated that the right to a fair trial "would be illusory if the internal legal order of a Member State allowed a final judicial decision to remain inoperative to the detriment of a party ".

Accordingly, taking into consideration the purpose and spirit of the European Convention, the principle of the supremacy of law requires the execution of court decisions, taking into consideration also the important implications of this procedural step for the right to respect of the property of individuals.

[*] PhD Candidate, Faculty of Law, "Nicolae Titulescu" University of Bucharest (e-mail: **alecsa.panait@yahoo.com**).

[1] Hornsby v/ Greece, nr. 18357/91, from 19.03.1997.

However, the implementation of court decisions by state authorities is conditioned to that the decision is final and mandatory. So as a principle, the only decisions that must be executed are those that are not subject to any supervision by higher courts which would have the jurisdiction to review them.[2]

Regarding the right to the execution of court decisions and the right to free access to remedies, a debate has been created regarding the compatibility of certain domestic laws with the principles mentioned above, concerning the rules which prohibit the exercise of the right of appeal against a judicial decision if the applicant does not justify having performed or having deposited on consignment the amount of money regarding which he has been declared debtor.

Indeed, the Strasbourg Court indicated that these internal rules can be considered compatible with the European Convention, taking into consideration the legitimate aims pursued by that legislation, including the protection of creditors, avoiding dilatory appeals or the necessity to strengthen the authority of judges.[3]

To fulfill the requirements imposed by the Convention, the Court stated that some positive obligations are imputable to the Member States to perform an adequate execution of a final and mandatory court decision. For example, the Court held the responsibility of the Italian State, in a case involving the expulsion of some tenants, for violation of the right to a fair trial by an extended absence from the state authorities in the execution of 'a Judgement.[4]

Although the primary responsibility for the breach of a court decision belongs to a private person, the Court gave a horizontal effect to the decision, thus retaining the default of the Member States.

Other essential elements of the general concept of a fair trial such as those provided in the benefit of the accused have been extended by case law of the European Court civil trial, as the right to a fair trial.

Regarding the language of the proceedings, the right to linguistic freedom in justice was not expressly provided for in the Convention. Some rules are embodied only by Article 6 paragraph 3 paragraphs a and e in favor of those accused of criminal offenses.

However, the case law of the European Court considered, in some cases, taking into account the specific circumstances of each case, that the language used in the procedure and related procedures may be taken into account in the assessment of character fair or not of the trial as a whole.

In civil matters, the case law recognizes the right to an interpreter in exceptional cases and under strict conditions. For example, a person who receives a citation in a language that does not understand, must have the necessary time to obtain a translation and can not claim to be a victim of a violation of the fairness of the proceedings. Also, the obligation under domestic legislation to draft a writ of summons in a certain language is not an obstacle to the free access to justice, even if the defendant ignores the respective language.

Similarly, if during the civil trial, if the defendant ignores the language of the proceedings, but he is assisted by a lawyer who understands the language being used and if the personal participation of the defendant is not required, this process respects the established requirements of fairness the Convention.

For the same reasons of existence provided in the benefit of the accused, the Court has sometimes admitted the existence of a right to linguistic freedom also in favor of the plaintiff in a criminal trial, as a requirement of a fair trial.

Another fundamental element of the right to a fair trial is the right to appear in person in the context of judicial proceedings. In civil cases, the warranty is not expressly required by the Convention.

However, taking into consideration the specific circumstances of each case, the case law of the Strasbourg Court recognized in some categories of cases, that the right to a fair trial implies the right of the defendant to appear in person in the trial. So when the judge considers that the personal appearance of the defendant is necessary for the proper conduct of the trial, the national authority must take all appropriate and necessary measures to ensure that the person concerned has a real opportunity to appear before the judge.

Article 6 of the Convention does not provide specific forms or arrangements to ensure the personal appearance of the defendant, but the treaty text imposes Member States the obligation to provide the framework for the establishment of the truth and to protect the right of defense of all parties of a trial.

However, even for a person accused of a crime, this guarantee is not absolute. For example, the right to appear in person is not required if the defendant is represented by counsel or has had a real opportunity to present themselves before the court. Also, taking into account the complexity and technical specificity of a certain case, the written nature of the procedure can be justified. Similarly, a court may have the jurisdiction only to rule on matters of law or to examine an existing file, so the ruling can take place without the presence of the parties. Of course, a

[2] Ouzounis and others *v.l* Greece, nr. 49144/99, from 18.04.2002.
[3] Pages v. / France, nr. 50343/99, from 25.09.2003.
[4] Scollo v./ Italy , nr. 19133/91, from 19.03.1997.

person whose absence is attributable to his fault can not claim to be a victim of a violayion of procedural fairness.

In accordance with the established case law of the European Court, foe the cases in which the litigant's personal conduct has a direct contribution to the formation of the opinion of the judge, the right to a fair trial necessarily implies right to appear in person before the judge handling the case.

A more delicate aspect concerning the right to a fair trial provided by Article 6 of the Convention is represented by the impact of mass media on the trial. Often, case law has considered that certain statements issued by the judicial authorities investigating the case, are violating the confidentiality of records and had adverse consequences with regard to the fairness of the proceedings, affecting also the litigants.

Also, major media campaigns, often with a violent nature, are able to affect the independence and impartiality of the judges through media pressure, affecting also the more general right of the parties to a fair trial.

However, Member States must balance the procedural requirements resulting from the Convention and the public's right to be informed of court proceedings and the curiosity of citizens about the conduct of litigations.

2. The duty of loyalty and compliance with the Convention of the national courts

The jurisprudence of the European Court established a framework of procedural and institutional autonomy of Member States, believing that a positive duty of loyalty and compliance must exist for the national court which is responsible for hearing a particular case, regarding the application of procedural guarantees provided by the Convention.

The obligations of the national courts with regards to the fairness of the proceedings includes the duty to provide adequate reasoning of the judgments, the obligations to establish penalties commensurate with the gravity of the fault of the defendant and the loyal attitude to the defense of the parties.

Regarding the motivation of judgments, according to the case law of the Strasbourg Court, as in a civil trial, as in a criminal trial, the right to a fair trial requires that judgments are motivated with sufficient clarity to allow the defendant to verify if all claims and applications were reviewed by the judge.

The individual must also be able to assess if there are chances for a remedy, examining issues of law and facts on which the judge based his decision. This requirement of an adequate motivation helps to achieving transparency of justice, a fundamental element of the right to a fair trial.

However, the obligation to motivate the judgments is required only in the assumptions that the treaty text is applicable, especially in the case of a dispute over civil rights or obligations or in the case of a criminal charge.

The right of every individual to receive a reasoned decision is not absolute. According to the jurisprudence of the Court, a decision given in a summary manner may be sufficient; the judge is free to respond only to relevant applications that are likely to influence the final outcome of the case, without being required to analyse the conclusions without relevance in the case.[5]

So this rule is subject to a relative appreciation, some space for interpretation is left to the national court which takes into account the specific circumstances and merits of each case. For example, the Convention does not prohibit judges to base their motivation on arguments proposed by either party to the dispute. Also, individuals do not have the right to require the judge to motivate each arguments or means that have been rejected.

When it comes to statements whose meaning is not clear to the defendants, the Court stated that the requirement to motivate has a special significance. For example, in a case concerning a registration procedure of lawyers, the incident has subordinated the respective legislation to the existence of "exceptional circumstances" and the Court found that it is of "serious difficulty" as to determining the meaning of this requirement. Considering that the legislation does not provide any explanations of the meaning of terms, this requires the judge to provide adequate reasoning for the decision by which the request of the defendant was rejected.[6]

However, the Court made a distinction between a lack of motivation and an error of reasoning, concerning which the judge of Strasbourg is not competent to censure a mistake of jugement of facts or law, with the exception of the situation in which this error is likely to violate the rights and freedoms guaranteed by the Convention.

Regarding some degree of proportionality of sanctions established by the national court, is has been decided that the right to a fair trial guaranteed by Article 6 of the Convention requires national judges the obligation to modulate the sanctions that they decide according to the criminal behavior of the defendant.

Some judges have gone beyond this principle, establishing a just proportion between the incident, sanction and the behavior of the convicted person,

[5] HiroBalani v. /Spain, nr. 18064/91, from 09.12.1994.
[6] Malige v. / France, nr. 68/1997/852/1059, from 23.09.1998.

even in the presence of legislation which does not include such possibility.

On the other hand, some judges would not interpret texts in an extensive manner, considering that in cases where the legislature has chosen to establish a system of automatic sanctions, a review of proportionality has already occurred.

In deciding such a debate, the case law of the European Court decided, in a case concerning a traffic violation, an ancillary penalty resulting from an automatic way of conviction can not be considered disproportionate because "the Act provided some degree of modulation depending on the gravity of the offense committed by the accused."

Another obligation of the national court in the implementation and consistent interpretation of the Convention is the existence of a loyal attitude from his parte against the rights of defense of the parties. The jurisprudence of the Court has already accepted that a careless and unprofessional attitude of the defendant's lawyer is likely to affect his right of having heard equitably by the court.

However, the Convention specifically provides the right to be assisted or represented by a lawyer only in the benefit of a person accused of having committed a criminal offense. But nothing in the treaty text recognizes for the parties to a civil trial the right to have the assistance of a defendant of his choice.

Taking into account the spirit and aim of the Convention, the European institutions have implicitly admitted that the national courts have an obligation to take appropriate measures for the proper administration of justice, guaranteeing litigants the right to a fair trial.

For example, according to a case law of the Strasbourg Court, the fact that a court rejects a party to the dispute either assisted or represented by a defendant of his choice, may constitute a violation of the right to fair trial guarantees the Convention.

However, taking into account the importance for the parties, the European Court considers that in the civil cases that do not have a complex character, prohibiting the parties of the dispute to be represented or assisted, is not in itself a violation of Article 6 of the Convention.

Also, the European Court accepts compliance to standard text of national law that imposes the obligation on individual specialized assistance in the framework of a certain phase of the procedure, to the requirements of proper administration of justice.

Finally, national jurisprudence often goes beyond the requirements of the Convention, considering that the right of any party to be assisted or represented by a lawyer is a necessary corollary of the benefit of the rights of defense.

3. Conclusions

The European Convention on Human Rights not only proclaims the rights and freedoms for the benefit of individuals, but also establishes practical ways of the enforcement by Member States authorities. Also, the treaty text contains several provisions establishing safeguard duties and functional guarantees of substantial rights and freedoms.

Turnovers of jurisprudence consisting in particular in the development of original and authentic meaning of treaty provisions, have enriched significantly the scope and content of the procedural safeguards any individual can rely on in front of the national courts.

Consequently, taking into consideration "the prominent place the right to a fair trial held in a democratic society" and that "the Convention is intended to guarantee not theoretical or illusory, but practical and effective rights" the use of procedural safeguards in the context of litigation has become widespread, the European Convention on human rights is considered a source of law and an effective instrument that can be invoked by individuals.

IDENTIFYING BEST PRACTICES IN INSURANCE

Răducu Marian PETRESCU*

Abstract

This work aims to identify and develop best practices in the insurance field. We must mention from the beginning that best practices are not compulsory or mandatory rules of law, they cannot and do not want to be placed above the legal provisions in force, they only complement the law. Moreover, we intend to look into the implementation of the Solvency II Directive from the point of view of best practices in insurance.

In this research, the main method of study was the theoretical qualitative research (especially document analysis), with the purpose to identify and theoretically develop the information on best practices in the insurance field.

The main results of the research consist in the identification of general best practices in performing the activity (such as communication/consultation with the interested parties, the consistency as regards contractual/non-contractual relations, the effectiveness and efficiency, transparency and honesty, fair treatment of customers etc.) which have been presented in short and which could be implemented by any company that seeks to achieve superior performances, including the insurance companies. The work also includes some important best practices, described in detail, in a sensitive area such as the insurance field (best practices in relation to the management of personal information, the management and settlement of disputes by insurance companies or intermediaries in the field of insurance etc.).

Keywords: *insurance, best practices, Solvency II, Relevant JEL code: G22 Insurance, Insurance Companies.*

I. Introduction

Implementing good practices in various fields has always represented a concern for those activities/businesses/companies who wanted to grow and deliver more to their business partners or customers. Best practices aim to improve relations between companies and customers, as well to obtain higher performances, by offering a fair, transparent, efficient and friendly behavior.

II. Contents

2.1. Best practices of entities operating in insurance

2.1.1. General best practices in carrying out the activity

Implementing best practices in insurance, as well as in any other field of activity, certainly contributes to the stability and development of this sector. It can only be beneficial for entities (insurers, reinsurers, insurance brokers, etc.) to comply with best practice rules that take into consideration the interests of those contracting an insurance, regardless if it's a life insurance or a general one. Best practices are necessary in order to ensure that customers are treated fairly, both before and after the conclusion of a contract, up to the point where all the obligations laid down have been fulfilled. Of these practices, we will mention the following, some of which are identified by some specialists:

a) communication, consisting in transmitting the information of interest to concerned persons, especially to customers, on a regular basis;

b) consultation with interested parties;

c) consistency as regards contractual/non-contractual relations with interested parties;

d) flexibility regarding the instruments used and the adopted strategies in the case of changes;

e) independence (autonomy, without unjustified political influences);

f) effectiveness and efficiency;

g) liability, as business owners and interested parties must comply with clearly defined processes, providing justifications for the decisions taken;

h) transparency and honesty[1];

i) promoting the products and services in a clear, fair manner, that is not misleading. In the event that, subsequently, an insurer or intermediary becomes aware of the fact that the information supplied is not accurate and clear or it is misleading, the insurer or intermediary should withdraw their information, and notify in the shortest possible time any person who relies on the respective information;

j) fair resolution of customer complaints;

k) manage customers' reasonable expectations;

l) lack of conflicts of interests if the customers receive recommendations before the conclusion of an insurance contract. In their relations, either among themselves or with customers, the insurers and intermediaries may encounter conflicts of interest. Conflicts of interest may appear if a party has professional competition and personal interests. This may include requesting and accepting incentives (money, their equivalent, commissions, goods etc.) for the purpose of adopting a certain

* PhD, Faculty of Law, "Nicolae Titulescu", University of Bucharest (e-mail: **rmpetrescu@yahoo.com**).

[1] Sanford Berg, "Developments in Best-Practice Regulation: Principles, Processes, and Performance", 2000; taken from: http://warrington.ufl.edu/centers/purc/purcdocs/papers/0005_Berg_Developments_in_Best-Practice.pdf accessed in August 2015.

conduct. If some intermediaries representing the interests of customers receive incentives from insurers, this could lead to a conflict of interests which might affect the independent character of the consultancy offered by them;

m) provision of services/new products which take into account the clients' interests, which is a sign of compliance with best practices. If the provided services or products are the same, although the customer requirement is different, this is an indication of failure in using best practices[2].

Fair treatment of customers is a very important aspect in insurance. The insurers and intermediaries in the field of insurance have the task of acting with skill and diligence when dealing with customers. The concept of competence and diligence implies that insurers and intermediaries should fulfill their duties in a reasonable way, with prudence and on the basis of adequate policies and procedures which shall pursue this result. Moreover, the insurers and intermediaries must assume and implement appropriate measures in order to ensure that employees and their agents meet high standards of ethics and integrity. The policies and procedures that ensure fair treatment of customers are particularly important, especially in the case of retail customers since there is an asymmetry in information which tends to exist between the insurer or intermediary and these clients[3].

At the same time, it is very important that all processes in which clients interact directly with insurance companies or intermediaries in the field of insurance (issuing of insurance policies, the collection of insurance premiums, settlement of disputes, renewal of contracts of insurance) be coordinated in a uniform manner, while aiming at their simplification and standardization. The operational activity of companies should be monitored and assessed on the basis of specific performance indicators, and necessary resources for the conduct of these processes must be optimally managed and allocated. The aim is, therefore, to provide quality services to customers, as well as innovative solutions, adapted to their needs.

2.1.2. Best practices in relation to the management of sensitive/personal information

In general, personal information refers to such information that a person or entity collects, holds, uses, or communicates to third parties in the course of its activities. In the insurance business, information security is, of course, important, because concluding insurance policies involves a significant amount of financial, medical and personal information, (including credit card information) to be collected. Protection of personal and financial data is one of the key responsibilities of the financial services industry, regardless of the form in which they are made accessible (written/electronic)[4].

Considering the amount of sensitive and confidential information that has to be managed, the insurers and intermediaries in insurance should ensure that they comply with the best practices in this field, while certain measures need to be taken, such as:

- development of policies and procedures for the privacy protection, in order to ensure compliance with the legal provisions in force and best practices;
- training the employees, at all levels of the organization, in order to promote the importance of requirements for privacy protection;
- implementing internal control mechanisms that meet the objectives of privacy protection;
- implementing appropriate technologies in order to ensure the confidentiality of the financial, medical and personal information of insured persons;
- implementing policies and procedures related to the security of data in order to be able to report, in good time, security infringements to responsible persons, affected customers and the supervisory authorities[5].

2.1.3. Best practices in the management of insurance company websites

The European Insurance and Occupational Pensions Authority (EIOPA) considers that best practices may be applied even in the case of websites of insurance companies. Therefore, the EIOPA recommendation is that these websites provide and/or display:

- information on the main characteristics of the products;
- uniform and suitable information regarding the complexity of the products;
- information in a clear and accessible language, avoiding jargon and technical useless terms as much as possible;
- information regarding the details of all of fees and charges;
- clear information concerning what is covered for each of the offered products.

[4] International Association of Insurance Supervisors (IAIS), "Insurance core principles, Standards, Guidance and Assessment Methodology", 1 October 2011; taken from: http://iaisweb.org/modules/icp/assets/files/Insurance_Core_Principles__Standards__Guidance_and_Assessment_Methodology__October_2011__revised_October_2013_.pdf.pdf accessed in August 2015.

[5] *Ibidem.*

- up-to-date information[6].

2.1.4. Best practices in knowing the customers correctly

Confirmation of the fact that the information supplied by the customers are accurate represents very important good practice. Providing wrong information and stolen identities are aspects that have led to fraud in the past. The insurance companies will have to take several measures to ensure that customers are in fact the persons they say they are. This will require the best practices, such as appropriate documentation and obtaining more information[7].

2.1.5. Best practices in the management and settlement of disputes by insurance companies/intermediaries in the insurance business

In the case of solving disputes filed by holders of insurance policies, EIOPA has developed guidelines applicable to competent authorities in the Member States of the EU which shall make every reasonable effort to respect them. According to these guidelines, the competent authorities should ensure that insurance companies and intermediaries in the insurance business:

- establish a policy for solving the disputes. This policy should be defined and approved by the higher managing board of the insurance companies/intermediaries in the insurance business, which should also be responsible for implementing and monitoring its compliance;
- have a function for managing disputes, which allows to settle disputes in an unbiased manner, as well as to identify and minimize potential conflicts of interest;
- register disputes internally, according to national requirements concerning time limits and in an appropriate manner;
- provide information regarding disputes and their settlement to national competent authorities;
- continuously analyze data concerning the settlement of complaints in order to ensure that they identify and deal with any recurring or systemic problems, as well as potential legal and operational risks, for example, by: (i) analyzing cases of individual disputes with the purpose of identifying fundamental common causes of types of claims; (ii) analyzing the measure in which these root causes may also affect other processes or products, including processes and products which are not directly related to the object of the dispute; and (iii) correcting these root causes, where this is reasonably practicable;
- provide information in writing regarding the settlement procedures;
- publish the details of the dispute settlement procedures (e.g.: how to submit a complaint, the type of information to be provided by the applicant, the procedures followed for reaching a settlement) in an easily accessible manner, for example, in brochures, leaflets, or other contractual documents displayed on its own website:
- shall keep the applicant informed regarding the stage of the examination of the complaint;
- collect and analyze all the relevant evidence and information regarding the dispute;
- respond without unjustified delay or, at least, within the time limits laid down at national level;
- provide a detailed explanation of the position of the insurance company regarding the dispute when a final decision is adopted which does not fully fulfill the applicant's request and shall present to the applicant an alternative method of settlement of the conflict, the existence of competent national authorities etc.[8] [9].

2.1.6. Best practices regarding corporate management

Corporate management identifies mechanisms by which a company is run and controlled or, in another definition, corporate management represents the sum of implemented systems and processes in order to run and control a company with the purpose of increasing its performance and value[10].

At the European level, it is considered that the mechanisms of corporate management of an insurer must:

- promote the development and implementation of policies that clearly define and support the objectives of the insurer;
- define the roles and responsibilities of the persons involved in the management and supervision of the insurer by clearly establishing who has legal obligations and powers to act in the name of the insurer, and under what circumstances;
- provide the corrective measures to be taken in the event of non-compliance with their competencies and duties;
- provide effective systems of risk management and internal control, including effective compliance functions, for actuaries and internal audit. These

systems and functions must be appropriate to the nature, the extent and complexity of the activities and risks of the insurer and should be adapted as the insurer's business, as well as internal and external circumstances, change. Moreover, an insurer's system of risk management must include all strategies, policies, processes and controls for the identification, assessment, monitoring, management and risk reporting to which the insurer may be exposed as legal person and as a group[11].

Corporate management is often referred to as a system of "checks and balances". This means that an insurer must be flexible and receptive to developments affecting its operations, and at the same time the insurer must be transparent and maintain control in such a way as to ensure that the powers have not been unduly concentrated in a specific location and that they are used in the interest of the insurer[12].

2.2. Implementing best practices in the insurance business introduced by Solvency II Directive

The Solvency II system radically changes the surveillance act philosophy in the insurance business by introducing a system based on the assessment of risks to which insurance and/or re-insurance companies are exposed. Solvency II Directive, which is to be applied as of 1 January 2016, introduces a number of principles and good practices aimed at ensuring economic stability in the insurance industry and providing a degree of predictability of the evolution of each insurer. The new system will ensure a harmonized approach of supervision across the European Union, which will help provide a level of action for all insurers and re-insurers, and it will provide common protection for all consumers, regardless of their legal form, size or location. Solvency II will harmonize regulations on solvency throughout the European Union, which shall lead to the creation of a single market with potential benefits to customers by increasing competition, transparency and flexibility.

The specificity of Solvency II is that, in addition to the set of principles which constitute the level 1 of EU law, most of the secondary legislation will be developed at the European level, by the European Commission, and best practices will be promoted by the European authority in the field, the European Insurance and Occupational Pensions Authority, by issuing guidelines. With regard to the insurance market in Romania, the Financial Supervisory Authority has the objective of initiating the transposition of the Solvency II Directive into national law and preparing the insurance market for the implementation Solvency II standards.

III. Conclusions

By analyzing the insurance field, we came to the conclusion that the stability and the development of this sector depends on how much the entities developing such activities comply with good practices that serve the interests of those who contract an insurance. As it can be seen from all that we have shown above, best practices in the insurance field aim to build a fair relationship between an insurer/intermediary in insurance and existing or potential customers. Understanding customers' needs, proper management, offering the best service, permanent consultation and increasing transparency will obviously result in raising professional standards and, by default, a growing business.

Recently, the implementation of a system of best practices in companies has had an important evolution. Best practices have become essential key-points for business success. As soon as they become more aware of this, companies will continue to overcome any difficulties by ensuring compliance with best practices.

THE EFFICACY OF THE ARBITRATION CLAUSE IN A SIMULATED ACT

Tudor Vlad RĂDULESCU*

Abstract

The article focuses on the effects that an arbitration clause can still produce when it is contained in a simulated operation, whether it is in the apparent act or in the secret one, depending on the forms of simulation.

Keywords: *simulation, arbitration clause, relativity of contracts, overt act, ccovert agreement.*

1. Introduction

The material aims to address the issue of compatibility between the arbitration clause and the operation of simulation. More specifically, to answer two problems that could arise if the parties, chosing to hide the true legal relationship between them, have concluded a secret act, known only by them, and a public act, ostensible, enforceable against third parties, where they chose to introduce an arbitration clause.

Thus, the two problems can be summarized as follows: 1. the action for declaration of the simulation will be the jurisdiction of the courts or of an arbitral tribunal? and 2. if disputes are in relation to the performance of the obligations arising from the covert contract, the one taking effect between the parties, the competence will belong to the courts or to the arbitral tribunal?

The above problems may arise, as we have shown, where the parties have included the arbitration clause only in the content of the public act, and not in the secret one, and shall be established to what extent this clause will be more effective, or, in in other words, what is the relation between the arbitration clause and the avert contract between the parties: of independence or dependence?

To provide an answer to these problems, we will do a review of the two institutions meeting at issue: **the simulation**, exception to the enforceability of documents to third parties, but especially viewed from the perspective of relativity and enforceability if the effects of contracts between the parties, and the arbitration agreement, disguised under the mantle of **arbitration clause**, first seen individually, and then we will review to what extent the second one can somehow influence the action for declaration of the simulation or general or material jurisdiction where there occur issues in the execution of rights and obligations arising between the parties.

2. Some consideration regarding the legal operation of simulation

Without trying, in these lines, to formulate a new theory on simulation, or to fully resume the existing one, we only intend to draw some determining elements of this operation in order to create an overview of the issue, which is the subject of the article.

Thus, the simulation could be defined[1] as the legal operation whithin which, through a public legal act, but apparent, is created a new legal situation than the one established by a hidden legal act, secret, but real, called inappropriate and secret[2].

To understand the definition given above, we consider necessary to explain certain terms used in explaining the concept.

The secret act is the one expressing the real intention of the parties and establishes the true legal relationship between them; to be valid, the secret act shall meet only the substantive and validity requirements of the civil legal act, and not the formal ones, as evidenced by the interpretation *per a contrario* of the dispositions of art. 1289 para.2 Civil Code.[3]

The public act is the one creating the appearance and that is concluded for this purpose, i.e. to hide reality under its lying mantle; its existence is essential to the existence of the simulation[4]. As concerns this act, it is necessary to be fulfilled both the substantive conditions (capacity, consent, object and cause) and the formal ones,

* Tudor Vlad Rădulescu, PhD Student, Faculty of Law, "Nicolae Titulescu" University of Bucharest (e-mail: **tradulescu@yahoo.com**).

[1] For further definitions of this legal transaction, proposed by doctrine and jurisprudence, particularly the ones previous to the current Romanian civil code, see F.A.Baias, *Simulaţia. Studiu de doctrină şi de jurisprudenţă*, Editura Rosetti, Bucureşti, 2003, p. 46-49.

[2] G. Boroi, L. Stănciulescu, *Instituţii de drept civil în reglementarea noului Cod civil*, Editura Hamangiu, Bucureşti, 2012, p. 172.

[3] Was also expressed the opinion as meaning that the secret act, however, should also fulfill the formal conditions required by law if the simulation is achieved by interposing persons or mandate without representation, cases in which the parties of the public act are not the same with the ones of the secret act; see F.A. Baias în F.A.Baias, E. Chelaru, R. Constantinovici, I. Macovei, *Noul cod civil. Comentariu pe articole*, ediţia a II-a, Editura CH BECK, Bucureşti, 2014, p. 1438.

[4] F. Baias, *op.cit.*, p. 55.

required by law. Moreover, when the secret act is a document for the validity of which the law requires compliance with a specific formal requirement (eg, donation), although this act will not take the form of the authentic document, however, for the validity of simulation, as a legal operation, the public act shall be concluded in that form, even if the law does not require, for its valid conclusion, the compliance of a certain formal condition[5] so that the secret act "borrows" the form from the public act.

2.1. The conditions of validity of the simulation

To be valid as legal operation, the simulation must meet, in an opinion, a series of conditions, that we recall hereunder: **(1)** there is a secret act; **(2)** there is a public act; **(3)** the secret act must is completed concurrently, or possibly before the conclusion of the apparent one and **(4)** both legal acts are entered into by the same parties[6].

According to another opinion[7], embraced also at the level of the latest jurisprudence of the High Court of Cassation and Justice[8], in addition to the two acts, is also necessary **(5)** the existence of the overt act, namely the intention of the parties that the legal operation produces all the legal effects specific to the simulation, *animus simulandi*, which differs from the discrepancy that may spontaneously occur between the declared will and the real intention, which will be settled through the interpretation of the contract[9].

2.2. Forms of simulation

From the point of view of the form in which can appear simulation, this legal operation can be done fictitiously, by disguise (total or partial) and by interposition of persons; legal literature[10] has made a distinction between *absolute* simulation and *relative* simulation, the latter classiffying itself in *objective simulation* (when are hidden objective elements of the act, such as the nature of the contract, its object or cause) and *subjective simulation* (in case of simulation by interposition of persons).

In its first form, of the fictitious act, the simulation means the existence of only two of its three elements, respectively the public act and the covert agreement. Thus, the parties conclude an apparent act that is nevertheless devoid of any effects through the covert agreement, the participants in the simulation remaining in the state preceding the conclusion of the public act; between the parties are not born any new rights and obligations, except those strictly determined by the will to simulate (e.g. the obligation to consent to the dissolution of the apparent act within a certain period, the right of the one who consented to simulation to receive a certain remuneration, etc.)[11]. In short, through the fictitious act, the parties „dissimulate" to conclude a legal act (aiming, most of the times, at defrauding the interests of certain categories of participants in the legal relations - creditors), in reality the act being non-existent.

The disguise, the second way to hide the reality can be total or partial, depending on the element on which the parties conclude the covert agreement. Hiding the nature of the contract representing the real intention of the parties makes the disguise to be complete, while concealing only certain elements of the secret contract will be just a partial disguise l (i.e., hiding the real price, hiding the actual date on which was concluded the secret act, hiding the way the obligation is to be executed, etc.).

Finally, simulation through the interposition of persons implies the conclusion of the public act between certain parties, while in the secret act (but also in the covert agreement) takes part a third person, who will be the real beneficiary ofthe public act, so in the patrimony of whom will be produced the legal effects of the concluded act.

2.3. Effects of simulation

In terms of the effects produced, Romanian legislature of 2009 remained faithful to the principle of neutrality of simulation, art. 1289 paragraph 1 Civil Code providing that the secret act shall take effect only between the parties and, if the nature of the contract or the stipulation of the parties does not show to the contrary, towards the universal successors and with universal title. So, simulation, as a rule, is not sanctioned, than when is pursued an unlawful cause, the secret producing effects between its parties but also to persons treated as parties, to third parties in good faith, being enfroceable onlu the public apparent act.

If one party refuses to perform its obligations arising from the secret contract, the other party may ask the court to find the simulation, and then to enforce the performance or to resort to any other remedy provided by law for non-performance

[5] Similarly, see G. Boroi, L. Stănciulescu, *op.cit.*, p. 176; contrarily, see P.Vasilescu, *Drept civil. Obligaţii*, Editura Hamangiu, 2012, p. 493.

[6] C. Stătescu, C. Bîrsan, *Drept civil. Teoria generală a obligaţiilor*, Editura Hamangiu, Bucureşti, 2008, p. 78; we consider that this condition must be fulfilled only if the simulation takes the form of the fictitious act and disguise, not in the case of simulation by interposing persons.

[7] L. Pop, I.F.Popa, S.I.Vidu, *Tratat elementar de drept civil. Obligaţiile*, Editura Universul Juridic, Bucureşti, 2012, p. 223; F.A.Baias, *Simulaţia*, p. 67 şi urm.

[8] ICCJ, secţia I civilă, dec. nr.5782 din 12.12.2013, pe www.scj.ro.

[9] L.Pop, I.F.Popa, S.I.Vidu, *op.cit.*, p. 223.

[10] F.A.Baias, *Simulaţia,* p. 97 ş.u.; L. Pop, *Tratat de drept civil. Obligaţiile. Volumul II: Contractul*, Editura Universul Juridic, Bucureşti, 2009, p.619; P. Vasilescu, *op.cit.* , p. 490.

[11] F.A.Baias, *Simulaţia,* p. 99.

(exception of non-performance, enforcement in nature, rescission or termination, etc.)[12]

It is not the object of this study to treat in detail the effects produced by this legal operation, since the issue to be reached concerns only the parties of the simulation, not the third parties, either successors with particular title, or unsecured creditors, which is why regarding the effects produced, we limit ourselves to the observation made in the previous paragraph.

3. Arbitration – alternative means of dispute settlement. The arbitration clause

The code of Civil Procedure entered into force on 15.02.2013 defines, for the first time, the institution of arbitration, stating that it is an alternative jurisdiction having private nature (art. 541 para. 1 Civil Procedure Code). So arbitration is a means of settling disputes by decisions rendered by a third party that are binding on the parties[13].

Arbitration is a legal institution with a dual legal nature, both contractual and judicial. The legal basis of arbitration is the arbitration agreement, under its two forms– compromise and arbitration clause[14]. So, as has been stated in the literature[15], the term of arbitration agreement was created only to simplify the legal language, as long as an arbitration agreement stricto senso never exists. This is in fact the meaning of art. 549 para. 1 Civil Procedure Code, according to which the arbitration agreement may be concluded either as an arbitration clause in the main contract or established in a separate agreement, to which refers the main contract, either in the form of compromise.

Compromise and arbitration clause have different forms, but their purpose is the same: represent the common will of the parties to resort to arbitration proceedings for the settlement of the dispute between them. Both shall be concluded in writing, under the penalty of absolute nullity, thus being formal acts, without importance, as the document is an authentic one or under private signature. The solemnity of the arbitration agreement consists in its contents, in addition to the written form, as will be explained below.

By compromise, the parties agree that a dispute arising between them shall be settled by arbitration, the provisions of art. 551 para. 1 Civil Procedure Code concluding that, under the penalty of nullity, the parties shall show the object of the dispute and the names of the arbitrators or the manner of appointing them in case of ad-hoc arbitration.

The arbitration clause is the clause inserted in the main contract or in another contract to which the main contract refers whereby the parties establish that disputes arising from the contract where it is stipulated or in connection with it, are settled by arbitration (art. 550 para. 1 Civil Procedure Code). So, the arbitration clause concerns, unlike the compromise, *future disputes*, yet unborn, but which may arise in connection with the contract containing that clause.

According to art. 550 para. 2 Civil Procedure Code, the validity of the arbitration clause is independent of the validity of the contract where it was entered, text giving expression to the principle of autonomy of will of the arbitration clause related to the contract in which it is inserted. Thus, we can say that we are dealing with a "contract into a contract", the main agreement seeming to aliase, as if we were in the presence of two separate contracts, one etsablishing the mutual material rights and obligations of the parties, and another one agreeing on the method of settling the disputes relating to those rights and obligations[16].

Thus, it was observed in practice that the validity of the arbitration clause is not affected by the invalidity of the contract in which it has been entered, the less it will be affected if the parties, through their will, have terminated the contract in which it was provided[17].

A provision similar to the one in the Civil Procedure Code, however general, we also find in the Civil Code, which, in the section on termination, states that it has no effect on the clauses related to dispute settlement or on those intended to take effect even in case of termination. Or, among clauses peratining to dispute settlement there are, most often, the arbitration clauses.

Finally, again with reference to the arbitration clause, the Civil Procedure Code, under art. 550 para. 3 sets out a special rule for the interpretation of this clause, stating that, in case of doubt, it should be interpreted as meaning that it applies to all disagreements arising from the contract or legal relationship to which it refers. This rule of interpretation is an application of the interpretation provided by art. 1268, para. 5 Civil Code, according to which the clauses intended to exemplify or to remove any doubt on the application of the contract to a particular case, do not restrict its application in other cases that have not been expressly provided.

4. The effect of the arbitration clause on the legal operation of simulation

Typically, the arbitration clause contained in contracts has a standard content, which tends to cover all disputes that may arise between the parties regarding the concluded contract.

In this regard, The Romanian Chamber of Commerce and Industry made a recommendation on the content of the arbitration clause in commercial contracts, meaning that *Any dispute arising from or in relation to this contract, including the conclusion, performance or termination thereof shall be settled through the arbitration of the Court of Internaţional Commercial Arbitration attached to the Chamber of Commerce and Industry of Romania, according to the Rules of Arbitration of the International Commercial Arbitration Court, in force, published in the Official Gazette of Romani, part I."* [18]

After reviewing some general issues regarding simulation and arbitration clause, we will try to provide answers to the questions which were the starting point of this article and that we resume hereunder:

the action for declaration of the simulation shall be the jurisdiction of the courts or of an arbitral tribunal?

and

if disputes arise in relation to the performance of the obligations arising from the secret contract, the one taking effect between the parties, their settlement competence will belong to courts or to the arbitral tribunal where the arbitration clause exists solely in the public act?

The answer to the first question can be given starting from the provisions of art. 550 para. 3 Civil Procedure Code, to which we referred above, which we consider closely related to the purpose of the action for declaration of the simulation.

Most of the time, the action for declaration of the simulation is an action-means, which is only the necessary step to reach the true contractual reality, then aiming at demanding its abolition or the performance of the obligations it has generated[19]. The action for declaration of the simulation does not aim so much at denouncing the simulation but something concrete in relation to the acts forming the simulation mechanism (simulators may pursue the enforcement or annulment of the hidden and third parties may claim being defrauded of their interests through the suspect hidden act)[20].

In these circumstances, the action for declaration of the simulation, from the point of view of the parties, may pursue, as its purpose, either to terminate the hidden contract (its cancellation, rescission or terminatio) or performance of the contractual obligations, as they have already been drawn up in the act representing the real intention of the parties. We cannot agree with the view according to which the action for declaration of the simulation is a fullu-fledged action, even if the arguments in support of this theory, from a theoretical point of view, are at least attractive, from a very simple reason, procedurally speaking: the interest.

According to art. 32 para. 1 Civil Procedure Code, the conditions governing the civil action are as follows: capacity to stand trial, standing, formulating a claim and the interest.

This latter requirement, on the interest, was defined as being the practical use pursued by the one who initiated the civil action[21], and, in order to be valid, must meet the following requirements: be determined legitimate, personal, **vested and present** (art. 33 Civil Procedure Code).

Thus, we wonder, what could be the vested and present interest of the parties to bring an action for declaration of the simulation, without a real reason, which would expose them to a prejudice if they did not resort, that time, to action (and which can relate either on the abolition of the secret act or on the obligations arising herefrom). We believe that an action for declaration of the simulation, made by one party, with a single head of claim, without invoking other claims, shall be dismissed by the court as devoid of interest. We consider that the real issue of autonomy of action for declaration of the simulation could arise if the claimant in such a request were a third party and not one of the parties, that knows very well what was the real intention and in what consisted the covert agreement, situation that yet is not covered by this study.

For these reasons, we consider that the action for declaration of the simulation, made by one party is an action that serves either as the abolition or the performance of the secret contract, in which case it would fall under an eventual arbitration clause made either in the manner recommended by the Chamber of Commerce of Romania, or in the more general way "any disputes arising in connection with this agreement shall be settled by arbitration".

As to the second issue raised, it can be summarized as follows: if the parties had agreed on an arbitration clause only in the apparent (overt) act, the legal operation of the simulation will also extend on the competence on settling any dispute concerning either enforcement or abolition of secret act, as meaning that the arbitration clause will no longer be effective?

We believe that the response relates to the legal nature of the arbitration clause, namely to its principle of autonomy to the main contract, but also

[18] www.arbitration.ccir.ro/clauzarb.htm, consulted on 19.03.2016.
[19] P. Vasilescu, *op.cit*, p. 500; for contrary opinion, see F.A.Baias, *Simulaţia,* p. 208-209, L. Pop, *Contractul,* p. 638.
[20] P. Vasilescu, *idem.*
[21] G. Boroi, M.Stancu, *Drept procesual civil*, editura Hamangiu, Bucureşti, 2015, p. 36.

to the content of the covert agreement, as a key element of the simulation.

Thus, as long as the covert agreement relates only to the elements of substantive law (i.e. the true rights and obligations of the parties that arise from the secret act), we believe that the provisions of the secret act will be completed with the ones of the public act, apparently, concerning to the jurisdiction for settling any disputes that will arise in the contract. This reasoning is all the more evident when simulation by disguise and interposition of persons, by which the parties seek, in reality, to hide certain elements of the secret act from third parties (nature of the contract, the true beneficiary of the rights, etc.), and in no way what will be the competent institution to settle its disputes.

A problem could arise in case of absolute simulation, through fictitious act, when the public act is devoid of content, is only a form without substance, the covert agreement of the parties ruling as meaning the lack of will expressed in the apparent act. In this situation, the court or the arbitral tribunal hearing the request for the performance of provisions of the secret act, should, in principle, ascertain the extent of the covert agreement, namely whether it took into account the public act in its entirety, including the clause conferring general jurisdiction or only the specific effects of the public contract signed. If such a research is not carried out, or if the court cannot conclude one way or another, we consider that the arbitration clause is integral with the other terms of the apparent (overt) act, notwithstanding the rule established by Art. 550 para. 2 Civil Procedure Code, the parties aiming by its introduction in the contract, at creating conditions to remove any doubt on the authenticity, veracity and efficiency of that agreement.

5. Conclusions

As a conclusion, we can say that in what concerns simulation, the effectiveness of the arbitration clause will always depend on the research of the covert agreement, the key element of this legal operation, which represents the real intention of the parties. We should not lose sight of the autonomy enjoyed by the arbitration clause within a contract, but this rule must be adapted to the special conditions of simulation and to the aims pursued by the parties.

THE IMPLICATIONS OF THE POLITICS AND OF THE EDUCATIONAL LAW IN THE DEVELOPMENT OF THE ROMANIAN SOCIETY

Andreea RÎPEANU*

Abstract

The evolution of policy and law school over time. Education, school education constituted and we, as elsewhere, an object of research and appreciation. Numerous pens, school people and great scholars were carefully bent on such a topic with implications for the development of society of all time. In the broadest sense of the word, education is a phenomenon that includes the company's genesis, evolving into the most closely related to it. Therefore, we can say that various forms, learning occurs with human society, the opportunities and aspirations that can not be broken.

Keywords: teacher, education, school, *professional organizations, society*.

1. The evolution of the politics and of the educational law in time.

The education, school and teaching have formed for us, as for everyone else, a research and valuation object. A number of pens, school people and great scholars have carefully oriented to such a subject with implications in all-time society development.[1]

In the widest sense of the word, education is a[2] phenomenon included in the society's genesis, evolving in the closest connection with it. This is why we can say that, under various forms, education appears once with the human society, from which possibilities and aspirations it cannot be broken.[3]

Education starts since the time of the *primitive commune*, by oral transmission, from generation to generation, of knowledge and techniques related to food procurement, hunting, fishing, agriculture and animal breeding, living and coating, ornaments and tools of defense against enemies, which means that the human progress is closely related with the surrounding environment.

Therefore, the education in our country, sensitive since its beginning, in the ideological and cultural processes and developments, will bear the general stamp of the time, the one of an important instrument in the consolidation and development of the society, satisfying its imperatives and exigencies[4].

Since the constitution of the Romanian feudal nations (14th - 16th century), there was a preoccupation for school development. *Clerics* and other literates were needed for the political - administrative institutions.

Supporter of the feudal state, the church has played an important role in the development of the culture from that time, and also in the development of education and teaching. It is explainable that the first schools will be organized near monasteries, episcopacies, cathedrals. The priests and monks, fulfilling the mission of teachers, have learnt the children to write, read, make calculations and memorize prayers.

Starting with the 14th century, the churches and monasteries will become the most significant centers of scholar activity, the most favorable environments for the development of the culture in that time[5].

In monastery schools, there were teachers, instructors, professors, named at that time *năstavnici* and *grămătici*[6], as also assistant instructors, named *vătaji*. Their mentioning in a number of documents shows a certain teaching activity[7].

[2] Precent where we can deduct a manner of acting, thinking; training, study, discipleship; the field and the activity of training and education (in schools), according to the *Explanatory Dictionary of Romanian Language*, Editura Universul enciclopedic, Bucureşti, 1998, p.542.

[3] Gheorghe Iscru, *Contribuţii privind învăţământul la sate în Ţara Românească până la jumătatea sec. al XIX-lea*, Editura Didactică şi Pedagogică, Bucureşti, 1975, p.11.

[4] Ştefan Pascu, *Istoria învăţământului din România*, Vol.I, Editura Didactică şi Pedagogică, Bucureşti, 1983, p.76.

[5] Proofs on the existence of monastery schools in that times also offer some iconographic representations. For example, on one of the walls of the church *Sf. Nicolae Domnesc* from Curtea de Argeş, in a composition, are depicted three schoolchildren with their teacher, during the training, Ştefan Pascu, *Istoria învăţământului din România*, Vol.I, Editura Didactică şi Pedagogică, Bucureşti, 1983, p.77.

[6] The term *grămătic* (greek.-gramatikos and lat.-gramaticus) assigned, on origin, the elementary school teachger for learning to write and read, Ştefan Bârsănescu, *Pagini nescrise din istoria culturii româneşti (sec.X-XVI)*, Editura Academiei, Bucureşti, 1971, p.140.

[7] Hence, in the *March 1415 charter*, issued by Mircea cel Bătrân, the năstavnic Sofronie is mentioned, also reminded in a document from 1467. Also, *the document from 3 April 1480*. refers to the nastavnic from Tismana monastery. In a *document from Moldova*, from the 15th

In the monastery school, education was generally basic. The teachers were teaching the young who were preparing for cure or for copying religious texts, to become copyists, clerks, gramatici.[8]

In the 17th century, although the educational forms are maintained, the Romanian education comes out from its patriarchal meanings, targeting higher purposes We find teachers, writers, clerks, in villages, like Toader from Stoiceştii Focşanilor, Gheorghe from Odobeşti, etc..

The word **school**[9] appears for the first time in our old literature in the work *Octoihul românesc* (1570) written by Diaconul Coresi: *aşişderea în şcoală meşterii şi dascălii să înveţe mai vârtos româneşte (en. School masters and teachers should learn Romanian with more dedication)*[10].

In his work, *Statutele şcolii din Şchei*, Johannes Honterus (1498-1549), famous educator who opened new paths for education and culture, referring to the *attempts to remedy a set-back of the education*[11], ***the lack of qualified teachers and inappropriate retribution of the existing ones***, was arguing that: *...the employment of teaching personnel fell upon the secular authorities, who, together with the clerical counterparts, will have both the obligation to remunerate and to control the teachers' activity. ...Each commune would have to ensure the required material conditions for the teachers..*

Nicolaus Olahus (1493-1568) has supported and renovated education and teaching, being the first organizer of the primary and higher education from Transilvania.

In this respect, in 1560, in the Tyrnavia Synod, he decides the employment of one teacher for children's education near every urban or rural congregation (therefore setting the foundation of primary education), democratic initiative, if we consider that the school was, until then, a privilege of the nobility.

For a good performance of the higher education (meant for training clerics), he ordered the creation, for teachers, aside a substantial salary, of a stăipt, meant to defend them from the abuses of the nobility.

Olahus believed so much in the role of education that, by his will (1562), he left a part of his assets to the schools founded by him.[12]

In Moldova, Vasile Lupu (1634-1653), a lover of culture, granted special attention to the role that the professor had in the school.[13]

In the last quarter of the 18th century, the Lordly Academy form Bucharest, higher education institution, was inaugurated.

In 1707, Brancoveanu reorganizes the Lordly Academy, by the act entitled *Rânduiala dascălilor*[14], whereby he sets the number of professors, the disciplines that every professor was to teach, the schedule etc.

Also, Brancoveanu makes efforts to ensure sufficient income for the payment of the teachers and the school, typography and librari for the development of the educational process.

To train the necessary teachers for the Academy, Brancoveanu granted scholarships to one of the graduates from Bucharest, to continue the studied in Italy.

Also in the 17th century, it is talked about the *family teachers* who teach Greek, Slavonian, Latin and Romanian, literature, history, art etc.

---

century, it is talked about a grămătic from Neamt monastery. Some *muntenian documents* say about Radu, the grămătic from Tismana, or Stan, the grămătic from Ramnic, etc. The Moldavian chronicler Macarius (sixteenth century) recalls that Theoctistus II, before being Bishop of Moldavia, in the middle of the sixteenth century, when he was abbot of the monastery Neamt, hav served as năstavnic and teacher, in Ştefan Bârsănescu, *Pagini nescrise din istoria culturii româneşti*, Editura Academiei, Bucureşti, 1971, p.130.

The documents also certify the existence of other monastery schools. For the 18 clerks, gramatici and chancellors documentarily certified in Teleorman, it is possible for a sloveni school to have existed in Măniceşti or near Ţigănia-Drăghiceşti monastery, near Ruşii-de-Vede, in A. Manolache, Gh. Pârnuţă, *Contribuţii la istoria culturii şi învăţământului în Teleorman*, Bucureşti, 1979, p.47.

[8] Teaching in Slavonian (and probably in Romania) the writing, reading, church songs, were making exercises to draw the lordly initials and monograms, to know and practice the ritual of the religious service. Also, the teachers were teaching the interpretation of religious dogma, texts with phylosophical contents, religious code of laws. It was also teached Greek, chronology, astronomy (particularly in the perspectivel of understanding the religious calendar), rhetoric, music, elementary notions of arithmetics necessary to account the monastery revenue. Among all these disciplines, the first education object was the Slavonian grammar, in Ştefan Bârsănescu, *Pagini nescrise din istoria culturii româneşti*, Editura Academiei, Bucureşti, 1971, p.212.

[9] The first Romanian school known as – *The School from Şcheii Braşovului* - was constituted in 1459 (from wood) and in 1597 (from stone), as Sextil Puşcariu, brasovean literate, sais. The teachers teach in this school reading, writing, religious songs, Ştefan Pascu, *Istoria învăţământului din România*, Vol.I, Editura Didactică şi Pedagogică, Bucureşti, 1983, p.114.

[10] Ştefan Pascu, *Istoria învăţământului din România*, Vol.I, Editura Didactică şi Pedagogică, Bucureşti, 1983, p.109.

[11] Making reference to the education from Transilvania, criticizing the bad condition thereof, was assuring that efforts have been made for the desirious-learning youth to have, in the cities, a sufficient number of teachers and professors, and for the latter to be remunerated, so as no scholar to be without education due to his/ her poverty ..., Johannes Honterus, *Statutele Şcolii din Braşov*.

[12] Ştefan Pascu, *Istoria învăţământului din România*, Vol.I, Editura Didactică şi Pedagogică, Bucureşti, 1983, p.129.

[13] The school founded by him, the Higher Grade College from Iasi, needed famous teachers. Hence, seeing the lack of good teachers in Moldavia, he brought good and zealous teachers from Kiev, A. D. Xenopol, *Istoria românilor din Dacia Traiană*, VII, Iaşi, 1898, p.60.

[14] The first teacher was teaching seven disciplines: logic, rhetoric, physics, about sky, birth and death, about soul and metaphysics. The second teacher was translating various works of the Greek clasicism authors (*Isocrate's lectures, \Demostene' lectures*). the third teacher would have to translate the *Thoughts* of Chrisoloras and Caton, Fochilide and Pitagora, Esop, Homer. In adition, the grammar of Lascaris should have been tought, but the students should have been explained, in Eudoxiu Hurmuzachi, Nicolae Iorga, *Documente privitoare la istoria românilor*, vol.XIV, Bucureşti, 1915, p.392-394.

The 18th century is characterized by the development of a modern education. The content of education, generally, is no longer predominantly religious, and the teachers and their disciples were mostly secular.

For the first time, the idea *of educational system* appears in the Charter of Alexandru Ipsilanti from 1776, the most comprehensive act of school legislation from that time in Romania[15].

The state manifests a higher and higher preoccupation for school, for the necessary funds, to select the professors, for an effective control on the performance of the instructive - educative process.

All these measures can be considered the first *measures of school policy* met in the Romanian Countries.[16]

School development will keep pace with society development, serving in particular to the interests of the dominant class.

By the *1814 Charter*, dedicated to the organization of the Bucharest school, the lord of the Romanian Country, Ion Caragea, introduces the concept of *responsibility of the officials* in ensuring the conditions for the good performance of the instructive - educative process. *Instruction preservation* was primarily ensured by providing budget funds allocated regularly.[17]

Nicolae Mavrocordat (1711-1716) provided for the payment of such amounts from the lordly revenue.

Also to this respect, Grigore Ghica, considering the schools as the *fountain supplying the extracurricular crowd with the wealth of education and wisdom* [18] and being aware of the fact that for such institutions to operate, necessary funds were needed, by the *1743 Charter* he introduced the payment of 1-coin tax for each priest[19].

The fluctuation of measures on the necessary funds to maintain the schools was due to the instability of the Fanariot lords, switched by the Turkish between the two Princedoms.

It is to retain their preoccupation in this matter. The payment of the teachers' wages, although with high differences[20], but made with priority against other working people, certifies the role of the school in state and the consideration that the teachers begun to enjoy[21].

School development was closely related to the existence of an institution aiming at controlling teachers' activity and recording the progress made by the scholars[22].

With regard to Transilvania, the first school law on the elementary education, was drafted in 1774, sanctioned by Maria Tereza, under the name of *directive rules for the improvement of education from elementary or Serbian and Romanian non-united trivial schools*. The modernist highlights come out from the following passage, particularly significant: *... for the training of the young to the made under good conditions, capable teachers were needed, therefore it was provided not to employ and not to entrust the position of a teacher to anyone if such person was not appropriately certified by a detailed exam, which to show that he or she is prepared to teach students... .*

By the *1776 School Patent* (Schul-Patent)[23] some specifications are made in connnection with the preparation, employment and duties of the teachers; with regard to their payment, it was stipulated that this will be regulated by the contract made between the communal authorities and the respective teacher.

A special place in the school legislation was taken by *Ratio educationes* (1777) and *Ratio*

[15] The educational system was conceived in 4 steps:
- the beginner cycle (3 years), where grammar was teached;
- the advanced cycle (3 years), where Greek and Latin was teached;
- the 3-year cycle, where rhetoric, poetic, the Aristotel moral, Italian and French was teached;
- the upper grade, where arithmetics, geometry, history, geography, Aristotle phylosophy, astronomy were teached.

The elementary education was tought in schools of Slavonian and Romanian language, founded within the county capitals.
Middle schools (with two grades) were operating in Bucharest, Craiova and Buzau.
The higher education was ensured by the Lordly Academy, in Ştefan Pascu, *Istoria învăţământului din România*, Vol.I, Editura Didactică şi Pedagogică, Bucureşti, 1983, p.233.

[16] Ştefan Bârsănescu, *Istoria pedagogiei româneşti*, Bucureşti, 1941, p.47.

[17] Ştefan Pascu, *Istoria învăţământului din România*, Vol.I, Editura Didactică şi Pedagogică, Bucureşti, 1983, p.230-231.

[18] V.A. Urechia, *Istoria şcoalelor de la 1800-1864*, I-IV, Bucureşti, 1892, p.17-18.

[19] PReviously, Constantin Mavrocordat decommissioned, by the *1734 Charter*, the school tax charged from priests, deciding for the teachers to be paid from the treasury funds, in A. D. Xenopol, *Epoca fanariotă, 1711-1821*, Iaşi, 1892, p.618-619.

[20] By the *1766 School reorganization charter*, issued by Grigore Alexandru Ghica (Moldova), a large differentiation was created with regard to the wage for teachers. Hence, the Greek teacher in Galati was receiving 250 Lei, the Romanian teacher from Iasi 120 lei, the same amount was receiving the Greek teacher from Botosani and 60 lei each for the Romanian teachers in the lands, in V.A. Urechia, *Istoria şcoalelor de la 1800-1864*, I-IV, Bucureşti, 1892, p.52. The differentiation was even higher when comparing the payment of these teachers with the one of the Greek teachers from the Iasi Academy. Thus, the higher teacher was receiving 1500 lei and the first teacher of Greek grammar was receiving 600 lei, in Radu Iacob, *Istoria vicariatului Haţegului*, Lugoj, 1913, p.293.

[21] This fact explains the *1801 Resolution* of Alexandru Moruzi, lord in the Romanian Country, whereby it was ordered for the Facoianu High Stward to pay the teachers first.

[22] Hence, Grigore Ghica in the *1743 Charter* was arguing about the control of the teaching activity and the results thereof: *... and to check the schools, the teachers, twice per year, what kind of dedication they have...* in Ştefan Pascu, *Istoria învăţământului din România*, Vol.I, Editura Didactică şi Pedagogică, Bucureşti, 1983, p.232.

[23] whereby it was regulated the orthodox elementary education from Banat, which continued to remain under the control of the church and civil authorities.

educations publicae (1806) which dealt with all the issues of the education[24].

But, irrespective of the corner of the country where they performed, a thing is certain: *...although highly oppressed*[25], *one should underline the devotion that the teachers had, they did not stop to bring efforts in training the students*[26].

From the second half of the 18th century, it is noticed the preocupcation for stability and continuity in education. To this respect, the teachers who demonstrated competence and endeavor in education were appointed *irreplaceable teachers* (inamovibili)[27].

A step forward in school organization was made by the *School regulations*, applied in 1833 in the Romanian Country and 1835 in Moldavia, whereby the orientation and the basic principles of education were set: *...good education is the primary concern of a nation*. A valuable idea of the *Regulations* was with regard to the proclamation of the priority of merit and talent of the teachers[28], who were **having**, on their turn, **the obligation to improve continuously**.

School regulations are appreciated as the first school laws, in the modern sense of the word, including similar provisions along the 258/234 articles.

Hence, **the teacher** – central figure *of the Regulations*- was proposed in position, by the *Eforia şcoalelor*, consolidated by the lord and it remained inamovible, except for serious cases.

The duties of the teachers were numerous and not easy: they should have direct the scholars towards the holy, respect for codices and control, love for a good trim and love for country and to transform them in honest and working people before making them educated, etc..[29]

In Transilvania and Banat, *the 1854 school law* brings important changes in connection to the teachers. Therefore, the teachers were divided in three categories: ordinary[30], secondary[31], assistants[32], the payments being made depending on the group where the teacher was falling.[33]

After the defeat of the 1848 Revolution, the schools were closed for more than two years, all the teachers were decommissioned, a lot of them being imprisoned of pursued.

The new school legislation made of: *The new study curriculum from the Romanian Country* (1850) and *The settlement for the reorganization of public teaching in the Principality of Moldavia* (1851) were providing that the professors will teach in a system of schools according to the nation's demands, with the needs of the various classes of people and with a national character. Also, it was decided to increase the expenses for education, to ensure at least one part of the material basis, one of the primary conditions to develop the all-grade education, neglected after 1848.

The formation of the Romanian national unitary state in 1859 has opened new perspectives for education.

Thus, by the *Law of public instruction* from 1864, it was created an appropriate framework for the operation and development of school (it was constituted an education system with three levels: elementary, middle, higher), institution that acquired the appropriate statute for the role and tasks incumbent to it in the social life of the Romanian state.

The law of public instruction proclaimed two modern principles on the popular instruction (elementary education): gratuity and obligation, Romania becoming one of the first countries from the world with taking such measures[34].

---

[24] and namely: the structure and objectives of education, education plans, selection of teachers and professors, principals, inspectors, their duties, origin of funds, ... in Ştefan Pascu, *Istoria învăţământului din România*, Vol.I, Editura Didactică şi Pedagogică, Bucureşti, 1983, p.241.

[25] as asserted in a *1813 anaphora*.

[26] To this respect, the budgets with the remuneration of the teachers from the Academy with teaching in Greek from Sf. Sava prove even more their work in sacrifice. The first teacher from Sf. Gheorghe-Vechi was remunerated 4 times less than the one from Sf. Sava.

In 1775, in order to help them, the teachers from the Greek and Hellenic school from Slatina were granted exemptions in the years 1775 and 1797.

Also, for the effort made in *educating children*, the teacher Chiru from the Râmnicul-Vâlcea school was exempted by Al. C. Moruzi, from all *the burdens* after 1798, in Ştefan Pascu, *Istoria învăţământului din România*, Vol.I, Editura Didactică şi Pedagogică, Bucureşti, 1983, p.246.

[27] The same was with the teacher Chiriţă from the School Sf. Gheorghe-Vechi from Bucharest, in Ştefan Pascu, *Istoria învăţământului din România*, Vol.I, Editura Didactică şi Pedagogică, Bucureşti, 1983, p.335.

[28] Ion Popescu-Teiuşanu, *Legislaţia şcolară feudală în Ţările Române*, in *Contribuţii la istoria învăţământului românesc*, Editura Didactică şi Pedagogică, Bucureşti, 1970, p.68.

[29] Anghel Manolache, Gheorghe Pârnuţă (coordinators), *Istoria învăţământului din România* (1821-1918), vol.II, Editura Didactică şi Pedagogică, R.A.-Bucureşti, 1993, p.16.

[30] Professors who graduated a higher education institute and having passed a teaching qualification exam.

[31] Professors teaching technical objects or without a qualification exam.

[32] Temporarily employed professors.

[33] Anghel Manolache, Gheorghe Pârnuţă (coordinators), *Istoria învăţământului din România* (1821-1918), vol.II, Editura Didactică şi Pedagogică, R.A.-Bucureşti, 1993, p.159.

[34] In 1864, school obligation was only included in the laws of a few countries from Europe: The Scandinavian Countries and Prussia and only in two states from S.U.A.-Massachusetts (1852) and New York (1853). In Italy, although proclaimed in 1859, school obligation was only achieved later, in 1877. In France, towards which schools the Romanians directed their aspirations, the obligation for elementary training was only acknowledged by the *Law of 28 March 1882* (Jules Ferry). England never had a law that would acknowledge the school incumbency, only in 1870, in Scotland in 1872. Switzerland acknowledges on its turn the incumbency of education by the *Federal Constitution* from 1874. Among the neighbour countries, Bulgaria recorded this principle in 1879, and Serbia in 1882. In Transilvania, Romanian land, the Austrian comination - pursuing propaganda purposes and the consolidation of the absolutist power, introduced school incumbency in 1857. The measure was reinforced after the creation of the Austrian-Hungarian dualism, by the Law XXXVIII/1868.

With regard to the professional training of the teachers, differences were between the rural and urban life.[35].

Also, by this law it was opened the road for democratic education, because one of the highest ideological positions of this law was the recognition of a full equality of the girls with boys in matter of education.

After the *1864 Law on public instruction*[36], it is intensified the activity to find forms to train the teachers, appropriate to the school development objectives and for the mission to be fulfilled.[37]. In this respect, in 1901 any difference is removed between the training of teachers and elementary teachers, creating a normal *unique* school.

At the end of the century, *The law f public instruction, 1864* was replaced with *The law on primary education and normal-primary education* from 1893 (The Take Ionescu Law). Although modern[38], it is particularly characterized by the difference made between the urban and rural education.

The law on primary and normal-primary education from 1896[39] (Poni Law) highlights even more the part that falls on the state in the material support ensured to schools.

The law on secondary and higher education from 1898 was the fruit of an ample consultation of the teaching body and of the activities of a commission managed directly by Spiru-Haret, the minister of public instruction at that time, and it provided among others that[40] a teaching seminary will be organized near each university, meant to prepare the teaching personnel for secondary education.[41]

The law on higher education from 1912 (C.C. Arion) provided for the increase oif the university autonomy and it specified the rights of the management bodies, the organization of faculties, managed based on their own regulations, which were previously approved by the Parliament etc. .

From 1912 and until 1918[42] no significant school law drafts were recorded.

In Transilvania, *the law on education* from 1868 made the foundation for the people's education organization (until 1918), which stood under the supreme state control. [43] The teachers had the right to organize in corporations (associations). Also, the law provided the control bodies of education and the scope of their duties. In connection with the training of teachers, it was provided the formation of *Preparandii*[44] with a teaching period of 3 years. The law stipulated, aside these Preparandii, an elementary school, as application school.[45]

On its turn, *The law from1893* was regulating the salaries of the teachers, in the meaning that, if in the church commune, due to poverty - determined by the state bodies - cannot ensure the legal wage of the

---

With regard to the gratuity of elementary education, this was acknowledged generally once with proclaiming incumbency. The first states that granted gratuity were Italy, Norway, Switzerland, USA, Austria, Denmark, Prussia, England, in Constantin C. Giurescu, *Istoria învăţământului din România*, Editura Didactică şi Pedagogică, Bucureşti, 1971, p.118.

[35] If for cities, the teachers were trained in an urban elementary school, transformed in a primary special school, for villages, it was provided that any person who justifies the promotion of the course equivalent to the rural primary school could be a teacher. Twice per year, the training was organized on commune centers, where a short course of teaching was held.

The lack of precise provisions for the training of teachers, in a stage when the primary school was fixed with major objectives and the generalization of the first level of the education system was introduced, constitutes one of the boundaries of this law.

The professors for the urban area education were trained in normal higher schools provided in Bucharest and Iasi. The introduction of this provision in the law underlines that in order to increase efficiency of the middle education, a professional higher education was needed. IT was in fact a step forwards with regard to the teaching training of the teachers, in transforming them in youth educators.

Also, the teaching body of the universities was to be recruited among the personalities from that field, good specialists, in Anghel Manolache, Gheorghe Pârnuţă (coordinators), *Istoria învăţământului din România* (1821-1918), vol.II, Editura Didactică şi Pedagogică, R.A.-Bucureşti, 1993, p.223-225.

[36] With regard to the training of teachers for the middle education, the provisions of the 1864 law will only be applied starting with 1880.

[37] The school people criticized the idea to leave education and training on the priests. Constanţa Dunca was writing in this regard: *If you don't want for Romania to be lost, do not give the future generation on the hands of priests*; shee saw the solution of this issue in the formation of a high number of normal schools, article written in the magazine *Amicul familiei*, year II, 1864, no. 1 (15 March).

[38] In the meaning that it had teaching orientations towards practical activities (the introduction of labour, with the construction of workshops). School incumbency is established for the ages between 7 and 14 years. In the first chapter it was argued about the fines that the parents who failed to enroll their children in the schools would have to bear and it was provided that the obligation will be primarily applied to boys. Primary education was divided in: village schools, lower primary schools, higher primary schools and supplementary and repetition primary courses. The duration of courses in the normal teacher schools was established to 5 years, the same for normal elementary teacher schools, in *Istoria învăţământului din România* (1821-1918), vol.II, Editura Didactică şi Pedagogică, R.A.-Bucureşti, 1993, p.344.

[39] It was modified in the next decade: in 1897, 1903, 1908, 1909. The amendment from 1897 introduced the organization of the 5 rural classes on divisions.

[40] It included 114 articles, divided in 5 chapters. In the 2nd section, the conditions for appointment of principles were provided.

[41] Marin Niculescu, *Spiru-Haret, pedagog naţional*, Bucureşti, 1932, p.121.

[42] In 1918, within the project *Education for the villages*, Simion Mehedinţi drafted a legislation made of: *Legea Eforiilor şcolare and Legea pentru şcoala pregătitoare şi seminariile moderne*.

[43] Whi have had an important contribution in the development of elementary school from Transilvania and Banat, have fulfilled a multiple social functionality: they trained the youth, formed and developed national conscience of the young generations, made a science distribution activity, etc., in *Istoria învăţământului din România* (1821-1918), vol.II, Editura Didactică şi Pedagogică, R.A.-Bucureşti, 1993, p.308.

[44] E.g.: Preparandia from Arad, Preparandia from Oradea, Preparandia from Sibiu, Preparandia from Năsăud, Preparandia from Gherla, etc.

[45] Following the application of the *Law on education 1868* the number of elementary schools increase, the competence of the teachers was improved, the level of the elementary education increase, teaching associations were formed.

teacher, he can call for the *state aid*, but in this case, the state will be entitled to intervene more deeply in the administration and operation of the school.[46]

2. Professional organizations of the teachers.

There is no teacher in Romania - irrespective of the grade - not acknowledging that the Romanian school from 1859 and particularly in 1866, not yet has a well-delimited direction, a purpose, an ideal, towards which to direct the public concerns.[47]

The gradual procurement of the feeling of professional solidarity, the association in professional organizations of the teaching staff, become possible in the social-historical context of evolution on multiple plans that the Romanian society sees especially after the Law of public instruction from 1864.

As a preliminary form, the teaching conferences repesented the framework for periodical meeting where the feeling that the meeting of educators is required was formed.

In 1877, it was formed the The society of institutors from Bucharest which had among its objectives the widening of the scope of cultural and teaching knowledge for a professional improvement.[48]

In 1878, by the initiative of several teachers from Bucharest, was constituted the Society of the Teaching Staff from Romania, with the following purposes: lighting heads of families, the state body, all Romanians, about capital importance of education; closening relations between teachers of any grade and their grouping on the basis of solidarity, in an intelligent body; defending the rights and stimulation of the teaching staff activity; improving the organization, staff and indispensable material of a solid instruction.[49]

The Society develops its activity by organizing in Bucharest the First Congress of the Teaching Staff from Romania in 1884[50]. 14 more congresses followed.

In 1894, the Association of Buzau teachers and The Putna County Association are formed.

In 1902 it is formed the Association of teachers from Romania aiming at creating a pension and aid center, to support all their members.

In 1910, the Association affiliates to the International federation of the teacher associations and sends a delegation to the 2nd Congress of the Federation (Paris, July 1910).

In 1916 it is constituted the General association of the members of the Romanian primary teaching staff.[51]

All these professional associations (and more others) aimed at improving the statute of the teaching staff and the educational process.

The congresses of the teaching body represented real insights on the school situation at that time and also, horizon openings with regard to the united action of the teachers to contribute to the escalation of the prestige of their profession, in school, thinking and teaching practice progress.

3. Conclusions. There is no teacher in Romania - irrespective of the grade - not acknowledging that the Romanian school from 1859 and particularly in 1866, not yet has a well-delimited direction, a purpose, an ideal, towards which to direct the public concerns.[52]

Therefore, the education in our country, sensitive since its beginning, in the ideological and cultural processes and developments, will bear the general stamp of the time, the one of an important instrument in the consolidation and development of the society, satisfying its imperatives and exigencies[53].

THE INFLUENCE OF RELIGION ON THE ROMAN LEGAL SYSTEM

Andreea RÎPEANU[*]

Abstract

The origins of the science of Roman law are closely related to traditional religious practices. In the old era, it was reduced to knowing forms, kept secret by pontiffs, like religious rites. It is in fact the consequence of the confusion existent between ius, honestum and fas. Therefore, both the juridical consultations, and the religious ones were strictly provided individually and confidentially, considering the secret contents thereof, with a view to maintain the influence of a closed caste over population. All this period, when it was perpetuated a tradition taken over from prestate period, lasted until the year 301 before Christ, under the name of sacred or religious jurisprudence.

Keywords: *law, religion, pontiffs, legal science, sacral law*.

Introduction

The origins of the science of Roman law are closely related to traditional religious practices. In the old era, it was reduced to knowing forms, kept secret by pontiffs, like religious rites. It is in fact the consequence of the confusion existent between *ius*, *honestum* and *fas*. Therefore, both the juridical consultations, and the religious ones were strictly provided individually and confidentially, considering the secret contents thereof, with a view to maintain the influence of a closed caste over population. All this period, when it was perpetuated a tradition taken over from prestate period, lasted until the year 301 before Christ, under the name of sacred or religious jurisprudence.[1]

The justification of punishment and mainly of capital execution is encountered, at least initially, in religion, in providing the victim to the God offended by fact and whose revenge could fall thus over the entire community.[2] Even the notion of *sanctio*, by which the punishment was determined for the breach of a law is obviously related to *sanctus*, *sacer* and *sacratio*.[3]

Law and religion

For several centuries, the pontiffs have known the pomp days[4] and the solemn formulas that the parties in dispute were compelled to pronounce. The pomp days and formulas were revealed and displayed in forum by Gnaeus Flavius, the freedman of Appius Claudius Caeccus in 301 before Christ.[5] The pontiffs held the monopole of law, being the sole who knew and could provide explanations related to the trial. The first priest of the state was the king, until the foundation of republic.[6] The Romans didn't know later either the distinction existent today between state and church, aspects of religion, of sacred, rites and practices appearing in all aspects of Roman life, including in law and criminal law.

As for religion, Roma did not adopt an expansionist model, but there was rather an absorption of religious elements specific to other Mediterranean civilisations, however we must outline the importance of the cult financed by public resources – *sacra publica*.[7] The religious practices could be encountered in every aspect of daily life. The banquets, the meetings of senate, the parades and the wars were usually preceded by sacrifices. Many of such practices survived as well the period after the adoption of Christianity, as state religion. The sacrifices were forbidden starting with 1 January 439, when it was enforced *Codex Theodosianus*.[8] The religions was present in all aspects of social life, it was not limited to temples and feasts.[9] There was however a clear difference between res sacrae and res publicae. In this respect, it was asserted in recent studies, that both religious practices of Romans, and the juridical ones, wouldn't be so different as

previously thought, but much more dynamic, evidence of Roman specific conservationism. Therefore, the feasts with religious character were still organised in the town of Alba Longa, although it hadn't been for long time an important urban centre.[10]

For the lack of faith, it seems that there weren't juridical consequences, according to the former laws. There is however the possibility the state expressly demands a manifestation of faith, on certain occasions. In this respect, after the death of Cesar, when he was turned into a God (endowed with divine power), it was ordered to every citizen, under the death punishment, to celebrate the anniversary of birth of the dictator.[11] There was, mainly during the period of Republic, a religious freedom, but this does not mean that there is no strict supervision of cults.

In order to understand Roman religious one shouldn't ignore the two legends: of foundation of Rome and of first kings. The dam sent by Marte to nurse the two twins prefigure the warrior vocation of Romans. Pursuant to the defeat of Albans, Romulus and Remus decided to found a town on such places, where encountered and raised.[12] Wanting to find out the desire of law in this respect, Romulus selected Palatine and Remus the choline of Aventin. The fatidic signs appeared firstly to Remus, in the form of six eagles. Romulus was shown twice more eagles.[13] However, both Remus and Romulus were acclaimed as kings by its own camp, *this being the reason of much trouble, turning into a bloody fight, in tumble, seriously injured by his brother, Remus fell breathless*.

The second legend, presented by Titus Livius, recounts us the fact that Remus jumped over the new walls built up by Romulus, but without any bad intention. However. Romulus, taking the gesture in serious, killed him saying: *all those who dare to jump over the walls built by me to die like this*.[14]

The nature of these myths is symbolic for subsequent development of Roman spirituality and moral. Pursuant to such bloody sacrifice, the first offered to divinity of Rome, the people will always keep in mind a memory not rather pleasant. More than 700 de years, pursuant to the foundation of Rome (753), Horaţiu will still consider it an originary sin, the consequences thereof being able to cause the perdition of Borough, determining its sons to murder each other.[15] Similarly, *during every critical moment of its history, Rome will be disquieted, thinking that it feels the pressure of a blast. As on its birth, it didn't taste peace neither with men nor with Gods. This religious anxiety will put a pressure on his destiny. It is easy, too easy to oppose it to an apparent good consciousness of Greek boroughs. However, Athena had known crimes as well: on the origin of the power of Tezeu is the suicide of Egeu*.[16]

It was said that the legends of founding Rome would have on origin indo-European myths, mythological inheritance which, camouflaged in the oldest history of borough, represents by itself a religious creation susceptible to reveal us the structure specific to Roman religion.[17]

Initially, there was in Rome, as in other states of antic world, a confusion between law (*ius*) and religion (*fas*). Consequently, the priests were considered the maintainers and interpreters of divine will. The early legal practice was intensely maintained by pontiffs, from this college being elected as well the superior magistrates. The formula relied on a ritual practice involving accurate reproduction of some words deemed correct. The formulas were reserved to pontiffs, an elitist group of initiated people holding monopole over this knowledge. *Pontifices* were the only one able to draft testaments, contracts and who could provide evidence in trials. Under the direction of *pontifex maximus*, *comittia curiata* determines the sacred law and pontifical college, controlled state religion and ritual training. Starting with 3rd century before Christ, the place of pontiffs is taken by a class of legal advisors providing legal consultations in private law, including, both the field of contract, and that of crime.

In a society where guarding sacred goods of borough is deemed public duty and the recognition of sacrificers was an obligation, but which extended as well the application of domestic discipline over free citizen, when state religion was interested in doing this, the accomplishment of religious obligations was primitively rigoursly imposed, as well as sanctioned by criminal law. The one who, without being authorised in this respect, reveals the contents of the book of secret oracles, which may be consulted only based on a state order, risks capital punishment.[18] The guard of public sanctuaries was generally incumbent upon magistrates. When, exceptionally, other individuals

were appointed as well, who neglected their duties, a capital crime was committed.[19] There is no technical term to describe the sacrileges committed against Roman religion. The expression of Tertullian, *crimen laesae romanae religionis* is accurate, but it is not used frequently. At the same time, the notion of *sacrilegium* although frequently used, is not accurate, as it designates, at least on origin, the theft from a temple.

Although, the cult of other Gods, than those of Rome or those adopted by state is not deemed a delict, certain forms of foreign religion were morally and politically disapproved. Thus, during the Republic and Empire frequently were taken measures against the Egyptian cult, perceived as being too shocking for occidentals.[20] The repression consists in police measures, such as: it was forbidden public exercise of such practices; the altars and chapels were removed; the foreigners were applied measures of coercion etc.[21] According to Septimiu Sever, the king had, besides the duty to honour the gods of old rite that of disapproving and punishing any alienation from the old rite.[22] Consequently, the legal works consider capital crime the introduction of new divinities and related ritual practices.[23]

The notion of *iniuria* (injustice) of private law was applied more for the state, than for gods. The profanation of a temple or the trouble of development of a religious act has as consequence a criminal action ended with a condemnation. It is ignored the possibility of the existence of particular legal disposals in this respect. Anyway, if such disposals existed, they targeted exclusively the offence of state. Roman criminal law did not include any disposals for the offence committed against a divinity by words or writs.

On Romans, as the ideal was represented by the regularity of annual cycle in the ordered development of seasons, any anomaly represented a crisis situation in the relation with gods.[24] Therefore, the accurate signification of miracles must be deciphered by priests. The magic power of divining the future belonged only to magistrates and military heads; it consisted in the interpretation of forecasts.

The domestic cult, remained unchanged for 12 centuries of Roman history, during the entire period of paganism was led by *pater familias*.[25] On its turn, the public cult was under the control of state. During the royalty period, the king held the first rank in sacerdotal hierarchy, being considered *rex sacrorum* (king of sacred).[26] It is known the fact that in the home of King three categories of writs were practiced, dedicated to Jupiter, Iunonei, Ianus, Marte and Ops Consina (goddess of agrarian abundance).

It was rightfully asserted[27], that rituals predominate not only in religious life of Romans, but also in politico-institutional life, marking deeply the entire mental of Roman people.

The cult of Dionis[28] was known in the entire Mediterranean world, including in Rome. Pursuant to the extension of Roman domination in Greece, the esoteric (secret) associations were spread in the entire peninsula, mainly in Campania.[29]

Consequently, in 186 before Christ was adopted a *Senatusconsult of Bacchanalibus* which had as scope the suppression of the cult of Dionis.[30] In this respect, it was foreseen that noone, in the company of more than four individuals, men or women (two men and three women), will participate to sacred rites, but with the approval of praetor and Senate. The manner of investigating the case and of punishment are presented to us by Titus Livius. However, the recounting must be performed under the reserve that, despite its erudition, similar to its ancestors, he does not consider history a science, therefore, he does not feel forced to always consider the historical truth. *Ab urbe condita* contains in fact three kinds of texts (of analysis, rhetoric and literary). The accuracy of text depends however on the source of inspiration; similarly for the transmission of details.[31] The certification of this law[32] is due to the discovery of an inscription in 1640 at Tiriolo. The Consul Spirus Postumius Albinus performed an investigation (*quaestio*) related to conspiracy (*coniuratio*) appeared related to practicing the cult of Dionis.

The supporters of the cult (around 7000) were accused of several crimes, among which: practicing ritual orgies, organisation of crimes for own

enriching, forgery of documents etc. The text was analysed by several researchers, who emphasized the similarities with the persecution of Christians later on. There are some debates related to the nature of text and on the reasoning for which the practitioners of cult were punished. Thus, on the one hand, it is stated that, considering that religion was a state monopole, the particulars couldn't be allowed to organise such a cult and also, that it is manifested an opposition towards the influence of Greek culture, and on the other hand, it was asked the question whether in 186 before Christ existed indeed a criminal organisation using a bacchic cult to hide the activity. This cult was frequently associated[33] with orgy, crime and robbery or falsification.

When a conspiracy was discovered, the procedure consists in delegating a magistrate that leads an investigation, followed by the execution of leaders. It provides as well the neutrality of the group, as well as the rewarding of informers. The conspirators were judged by extraordinary courts. The foreigners were judges as well, since conspiracy was considered a crime against state. Although there were some doubts related to the accuracy of data provided, it is clear that Aebutius and Hispala were the informers of consul Postumius.[34] The consul took them in custody to protect them and presented the case to Senate. Although some of the supporters of the cult committed suicide, the majority were caught, judged and executed or enchained;[35] the same for the leaders of the cult. On their turn, the altars were destroyed.

Conclusions

We believe that the asperity of punishments and the manner how this case was settled, must not be related to excessive intolerance of Romans opposite to religious cults, but rather to the prevention of a conspiracy. The severity and ampleness of investigation, carried out within five years prove the political nature of trial. The danger was determined by the existence of a potential complot against state and not by practicing a cult, since, as Ovidiu asserts, *Rome was the most dignified place of meeting of all gods*. The foreign cults were accepted and acknowledged at Rome by formal integration in official cults. Therefore, we must consider the social, political and military context after the second Punic war, when the security of state should be protected against any form of conspiracy.

Taking advantage of this situation, the senate used the legislation to control foreign influence, mainly that of Greek culture, control manifested several times, just to suppress the religious influences. In this respect, in 173 before Christ two epicurean philosophers were exiled; and in 155 before Christ the philosopher Carneades was exiled as well, on initiative of Cato cel Bătrân.

Despite all these, some bacchic practices survived in Rome, being tolerated by state to a certain extent.

CAUSA AND CONSIDERATION – A COMPARATIVE OVERVIEW

Dimitar STOYANOV[*]

Abstract

The article examines the Roman origin and historical development of "causa" as an essential requirement of the contracts, as well as its adoption in the majority of the national legislations belonging to the French legal family. Moreover, the article analyzes what has become to be known as the functional equivalent of causa in the English law – the doctrine of consideration and examines the correlation between them. In the end, the latest tendencies in codifying the European civil law with respect to causa and consideration are being critically discussed.

Keywords: *causa, consideration, mixed legal systems, comparative law, European private law.*

1. Introduction

There is hardly any major national legislation that does not contain any rules on contracts and their formation. Being looked upon as the most important consequence of the autonomy of the will, contracts serve as the founding stone of modern socio-economic life. Yet, the unrestricted application of this philosophical doctrine, as profound as it might be, could lead to results which cannot be considered appropriate, since virtually every promise would be treated as legally binding. Throughout the development of transactions, scholars and legislators have sought to establish numerous legal criteria to determine whether an expression of will is itself capable of producing the designated legal effect. These efforts were intended not only to protect the legal interests of the contracting parties by providing an obstacle to their desire or promise, but also to protect the interests of the whole society by promoting legal security in transactions.

The most notable examples of such criteria can be found in the necessity to observe a specific form or to hand over the goods (‘traditio’) in order to consider oneself bound by a contract. Thus, by providing additional requirements to the process of expressing one’s will a clear distinction between enforceable promises and simple arrangements could easily be established. However, this model of extreme formalism that dominated the rules of almost every ancient society (the most notable example being the law in Ancient Rome) suffered gradual weakening after the collapse of the Roman Empire. The canonist lawyers were seeking to strike a balance between the classical Roman texts and the new socio-economic situation in Europe, putting consensual contracts in a rather favourable position compared to the formal ones. Their interpretation of Roman texts influenced the future development of private law. Several centuries later, with the new era of Enlightenment, the autonomy of the will was established as the founding stone of modern contract law. Still, continental lawyers from that period had to answer the question how to distinguish between enforceable promises and accidental agreements when additional requirements were considered to be an exception rather than a rule. The need to establish new abstract criteria to be used as an essential element of the validity of contracts and as indicia of seriousness brought the modern theory of causa to life.

However, Roman law did not play a significant part in moulding modern private law everywhere in Europe. This is the reason why English common law did not adopt the concept of causa, but rather developed its own methods to determine which promises could be enforceable and the ultimate result of this process, lasting for centuries, became known as the doctrine of consideration.

The similarity of the two concepts is beyond doubt. They share some common features, yet there is a considerable difference in terms of notion, scope of application and legal consequences between them, which prevents the statement that the former is a complete functional equivalent of the latter.

Moreover, there is a third group of national legislations where neither causa nor consideration is acknowledged as a vital element of the contracts. It is sufficient for an agreement to be both valid and enforceable when there is mutual consent of the parties upon its primary points.

The main aim of this article is to analyse these three types of legal approach to the question how to distinguish between a simple agreement and a valid contract by presenting the theory of causa and the doctrine of consideration in a comparative perspective, trace its origin, present and future tendencies.

[*] Assistant at Civil Law in the New Bulgarian University, Sofia, PhD (e-mail: **dimitarstoyanov2011@gmail.com**).

2. Origin of the causa

As far as the origin of causa is concerned, many authors state is that it is a totally un-Roman concept[1], that no general theory of causa could be deduced from the Roman texts[2] and even that having such an abstract principle was impossible for the Romans because of the primitivism of their legal system that excluded any possibility of dealing with abstractions[3]. Although the presence of causa as a concept in Roman private law is admitted by a few scholars, they point out that it was used in various senses, differing immensely from the modern notion of causa[4]. The vast majority of the authors agree upon the fact that the earliest ideas of causa emerged as the result of the canonists' interpretations; a sophisticated medieval attempt to generalise various figures belonging to Roman private law[5]. St. Thomas Aquinas developed the idea that every effect is dependent upon its reason (causa) and causa is something without which a thing cannot exist. If everything is based on a causa, he said, this should apply to contracts as well. Influenced by St. Thomas Acquinas, the glossator Baldus, while interpreting the Roman contract of stipulation, stated that all contracts have a causa – the "nominate" carry it within themselves, while the abstract (such as the stipulation) receive it from outside[6]. Other scholars assume that the origin of causa can be found several centuries later, when the famous French scholar Jean Domat[7] put together a blend of Roman law and natural reason, the result of which was the theory of causa. Domat stated that in unilateral contracts, such as loan of money, causa lies in the fact that the creditor performed his obligation at the time of the conclusion of the contract and provided the money. Following that logical pattern, he continued with bilateral onerous contracts[8] where he assumed that the engagement of one of parties is the reason (causa) of the engagement of the other party. As far as gratuitous contracts were concerned, Domat identified the causa with the motive, the intention to make a gift. This theory was incorporated by another prominent French scholar – Robert Pothier (1699-1772) in his famous work „*Traite des obligations selon les regles tant du for de la conscience, que du for extérieur*, Tome 1, Debure l'aîné, 1761, in the chapter "*Defaut de cause dans le contrat*" and ultimately found its place among the other essential elements of the validity of contracts in the process of drafting the French Civil Code from 1804[9].

The merits of this theory are beyond doubt, but to my view one aspect of the origin of causa remains overlooked. Scholars' primary efforts are pointed at analyzing the interpretations of Roman law found in the works of glossators and natural lawyers, whereas traditionally little attention is being paid to the original Roman texts. In my opinion, Roman private law did contain all the vital elements that shaped the concept of causa.

Roman law of contracts has always been dominated by a strong formalism and pre-defined, "closed" types of contract. This meant that no agreement could be enforced unless it belonged to some of these types. An abundantly clear rule was that a nude pact does not constitute an action – *ex nudo pacto non oritur actio*[10]. By the time of Justinian's Corpus Iuris Civilis, contracts could be separated into three large groups – real, formal (verbal and litteral) and consensual[11]. Whenever the requirements for each those types were fulfilled, an action could be brought to enforce the obligation.

In addition to this closed system, another difficulty of tracing the roots of causa in Roman contract law should be considered as well. Causa as a notion was known to Romans, but it had various meanings[12], one of which was 'causa civilis'. Despite being used only once in the Digest (D. 15.1.49.2) its importance was pointed out by scholars since 'causa civilis' meant the reason for the

[6] See Zimmermann, R., The Law of Obligations, op.cit., p. 551.

[7] Jean Domat (1625-1696), lawyer and philosopher, representative of the Natural law school, author of "Les Loix civiles dans l'eur ordre naturel". It is interesting to point out that Prof. Zimmermann, being a staunch supporter of the canonist origin of the rule himself, does not refer to Domat in any way related to the causa. This peculiarity might be explained with the fact that in his works Domat claimed that his main aim is "to undertake the digesting of the Roman laws into their true and natural order, hoping thereby to render the study of them easier, more useful and more agreeable". What he in fact did was to develop a modern legal system, based on natural reason, upon the Corpus Iuris Civilis. See Peterson, S., The Evolution of "causa" in the Contractual Obligations of the Civil Law, op. Cit., p. 43.

[8] Rather than using the "closed" formalistic system of contracts in the Roman private law, Domat referred to them simply as "do ut des", "do ut facias" and "facio ut facias", thus acknowledging their application in every commercial relationship, both nominate and innominate.

[9] Keyes, W. N., "Causa and Consideration in California – A Re-Appraisal" *California Law Review* 47 (1959): 77.

[10] About the difference between contracts and pacts see for example Birks, P., *The Roman Law of Obligations*, Oxford University Press, 2014, 22 et seq.

[11] See D. 3.89.: *Et prius videamus de his quae ex contractu nascitur. Harum autem quattor genera sunt: aut enim re contrahitur obligatio aut verbis aut litteris aut consensu. „Let us now inquire into those (obligations), that arise from a contract. There are four kinds: contractual obligations, that arise either through re (handing over the good), by words (verbal), by writing (litteral) or through (reaching a) consensus.*"

[12] Some of them have nothing to do with the modern theory of causa and did not influence its origin, for example, pictatis causa in Roman family law or falsa causa in Roman law of testaments.

enforcement of contracts[13]. In the case of formal contracts, 'causa civilis' consisted in the observance of the prescribed legal formalities. As far as consensual contracts were concerned it was the consent of the contracting parties, meaning the exchange of mutual promises[14]. The causa civilis of real contracts could be found in the exchange of a thing. Along with them, however, by the time of compiling the Digest Roman private law was no stranger to a special kind of contracts, called innominate[15]. They were stated under the general formulae do ut des, do ut facias, facio ut des and facio ut facias. There is a specific text in the Digest dedicated to them - D. 2.14.7.1-2: "*Those agreements, who do not create an action do not retain their common name; instead they are consumed by the names of the other contracts: sale, hire, society, loan, deposit and other similar ones. But when they cannot be attached to those contracts, if there is a ground (causa), as Aristo decisively responded to Cels's question, an obligation arises, when I give you a thing, so that you would give me one, or so that you would do something: that is a contract and a civil obligation arises from it*"[16].

It is clear that innominate contracts were treated as real, that there had to be a performance by one of the parties. Its significance could be found in two aspects. First, giving the thing was the causa civilis that gave rise to the enforceability of the contract with an action[17]. The second aspect, however, can be derived from the interpretation of the text. If one of the parties gave the thing this was actually a pre-performance, conducted in order to receive a counter-performance – be it a thing or an operation provided by the other party. Since the Digest explicitly acknowledge the emergence of a contract ("synallagma"), the fulfilment of the first performance serves as the basis of the new contract, as a reason ("causa") for its existence and justifies the counter-performance, thus ultimately bringing a new contract into existence. Probably this interpretation has influenced Domat, since his concept of causa in bilateral onerous contracts resembles the provisions of D. 2.14.7.1-2 to a great extent.

The modern theory of causa can be traced back to Roman law in another aspect as well. Scholars point out that it had special significance as far as formal contracts were concerned[18]. The stipulation in the early stages of its development was an abstract formal contract independent from the various economic circumstances that would lead people to concluding it – a duty to pay was created despite the fact that the underlying reason for it failed. This considerable independence between the declared will and the actual circumstances suffered gradual weakening and two examples are able to attest to this process. First, the parties could impart special importance to the underlying purpose for entering into a stipulation. Thus, the external economic relationship could play the role of a condition of the validity of the stipulation[19]. The second case can be found in the Digest – D. 44.4.2.3 – *If anyone stipulates with another without any causa, and then institutes proceedings by virtue of this agreement, an exception on the ground of fraud can properly be pleaded against him*[20].The party who stipulated could paralyze the effect of the formal stipulation by using an exceptio doli, an exception which enabled him to escape liability by proving that the duty assumed either had no causa or was based upon an illicit causa[21].

As far as the first case is concerned, there are some differences between it and the result of the canonists' interpretation. First of all, the Romans limited this rule only to the case of a stipulation, whereas Baldus applied it to all contracts. Second, the external economic relationship could become the causa of a stipulation only by consent of both contracting parties. The canonists included causa to the essential elements of the contract *ipso iure*. Yet the legal consequences do not differ dramatically.

[13] See Lorenzen, E., Causa and Consideration in the Law of Contracts, op. cit., p. 625. Yet, there are some scholars who believe that causa civilis and modern causa are one and the same phenomenon, but it is an isolated point of view, such as Daruwala, P., The Doctrine of Consideration, op. cit., p. 364-365. Concerning the text (15.1.49.2) of the Digest, it would seem more precise to speak about obligations than contracts, since the text excluded the possibility of enforcing a stipulation when there is no reason (causa) for it - on the mere statement of debt without actually having borrowed the money.

[14] This type of contracts would ultimately become the founding stone of modern contract theory, but in Roman private law there were only four consensual contracts – sale, hire, society and mandate. See Birks, P., The Roman Law of Obligations, op. cit., p. 53 et seq.

[15] See Zimmermann, R., The Law of Obligations, op. cit., p. 549. Innominate contracts were never called "innominate" in the times of classical Roman law. This notion is believed to have emerged in the works of scholars of the Eastern Roman empire. What is important to stress out, however, is that this legal figure can be found in the Digest, meaning it was already known in the middle of the 6th century AD thus allowing us to use it and make conclusions about causa.

[16] *Quae conventions pariunt actions, in sou nomine non stant, sed transeunt in proprium nomen contractus: ut emptio venditio, locatio conductio, societas, commodatum, depositum et ceteri similes contractus. Sed et si in alium contractum res non transeat, subsit tamen causa, eleganter Aristo Celso respondit esse obligationem, ut puta dedi tibi rem ut mihi aliam dares, dedi ut aliquid facias: hoc synallagma esse et hinc nasci civilem obligationem.*

[17] This is explicitly indicated several lines below – D. 2. 14.7.2 - ... igitur nuda pactio obligationem non parit, sed parit exceptionem – *A nude agreement does not constitute an obligation, it only produces an exception (defense).*

[18] See Buckland, W., *Elementary Principles of the Roman Private Law*, (Cambridge University Press, 1912), 232.

[19] See Girard, P., *Geschichte und System des römischen Rechts*, II Teil, (Berlin, 1908), 495.

[20] *Si quis sine causa ab aliquot fuerit stipulates, deinde ex ea stipulation experiatur, exceptio utique doli mali ei nocebit*.

[21] See Lorenzen, E., Causa and Consideration in the Law of Contracts, op.cit., p. 628; Girard, P, Geschichte und System des römischen Rechts, op.cit., p. 496.

Whenever there was no external relationship to support the stipulation the debtor could simply deny payment, just like in modern times, when causa is absent. To my view, the possibility of making the validity of the stipulation depend upon the existence of an external economic relationship is what probably has lead the glossator Baldus to conclude that abstract contracts receive their causa from the outside while the others carry it within themselves.

Elements of causa may be found in the exceptio doli as well. The exceptio doli was an "abstract" exception, since its application was allowed in every case, regardless of its individual circumstances. Yet, the burden of proof that the duty was assumed without any reason or it was based on an illicit reason was set upon the debtor, according to the common principle in Roman evidence law "*reus in excipiendo fit actor*" – as far as exceptions are concerned, the defendant is in the position of the plaintiff[22]. Only one step is needed to draw the conclusion that a reason is present in every obligation until proved otherwise. This reputable presumption is today one of typical elements of causa and can be found in a number of national legislations.

The last element of the modern theory of causa can be found in the rules about unjustified enrichment in Roman law (D. 12.4-7). Whenever a promise or money has been given to the other party, but there was no reason for this, a *condictio sine causa* could be used to recover what has been promised. In the same text we can find the *condictio ex turpem causam* for recovery of what is promised for an illicit purpose or motive where the promisor was in fact innocent[23]. In modern times, the lack of causa or the presence of an illicit causa leads to the nullity of the contract.

This historical overview proves that the Romans did not develop a comprehensive theory of causa just because the predefined contract system excluded the necessity of introducing another abstract criterion to determine whether an agreement was deemed to be legally enforceable or not. At the same time one can find all the essential elements of causa in Roman contract law – the need for an economic reason to support the legal obligation that can even become an element of its validity (derived from the stipulation); the necessity for every transaction to be supported by some existing and permissible reason and finally a predecessor of the presumption that every obligation has a causa, until proven otherwise. This could lead to the only possible conclusion that as far as the causa is concerned, Romans had a notion of causa and despite the fact that they did not consider it an essential element of the validity of all their contracts, in practise they often applied its principles[24].

3. National legislations that acknowledge the legal function of causa as an essential element of the validity of contracts

The question who is the genuine creator of the concept of causa is naturally very important, but it should be considered that both the canonists and Domat have laid down only some of its most important features. The first time a modern theory of causa in its whole came to existence was in the year 1804. The earliest civil law codification to adopt the principle of causa was the French Civil Code from 1804. Causa is regulated as one of the four essential requisites for the validity of agreements, as shown in art. 1108[25] with some quite familiar ideas that are known to us since Roman time – the prohibition of an obligation that has no causa or has a false or unlawful causa (art. 1131 and 1133) and a reputable presumption of causa (art. 1132).

At the same time Domat's work has influenced the legal doctrine in its attempts to explain the concept of causa. Modern French scholars traditionally define causa as the typical legal purpose, a ground for existence of the undertaking signed by both parties to the contract[26]. There is a distinction between the objective causa and the subjective causa. Objective causa (*cause objective, cause abstraite*) is the logical result of Domat's theory but further developed. In this sense, in bilateral contracts causa consists of the aim of the buyer to acquire title to the thing and of the aim of the seller – to receive the money in exchange for transferring the property. Thus, in synallagmatic contracts the benefit offered by each of the contracting parties serves as the cause for the obligation of the other party. The motives that have guided the parties into concluding the contract are irrelevant. Scholars admit the existence of a second approach to causa – in its subjective form (*cause subjective, cause concrete*). Traditionally, it is being defined as the typical, deciding motive for the parties for entering into this type of contracts, their

[22] See Lieberwirth, R., *Latein im Recht*, (Berlin: Staatsverlag der DDR, 1988), 263.

[23] Buckland, W., McNair, A., Roman Law and Common Law, op. cit., p. 223.

[24] See Lorenzen, E., Causa and Consideration in the Law of Contracts, op.cit., p. 630.

[25] "Four requisites are essential for the validity of an agreement: The consent of the party who binds himself; His capacity to contract, a definite object which forms the subject-matter of the undertaking; a lawful cause in the obligation."

[26] See *Principles, Definitions and Model Rules of European Private Law, prepared by the Study Group on a European Civil Code and the Research Group on EC Private Law*, ed. by Christian von Bar, Eric Clive and Hans Schulte-Nölke, (Munich: Sellier European Law Publishers, 2009), 292.

subjective intentions and the specific reasons for concluding the contract[27].

The significance of causa can be found in a number of cases. First, it establishes that the reciprocal obligations of the contracting parties arising from bilateral contracts are strictly interdependent. Where one of these obligations is not executed, whatever reason might have lead to this, the other obligation has no causa and therefore the party can resist payment. If there was no concept of causa and the obligations of the parties were independent, payment would still be due and the only opportunity to recover it would have been the claim for unjustified enrichment. But the concept of causa ensures that whenever one of the parties fails to perform the other party could simply demand annulment of the contract, thus making contract law more secure and the arisen disputes easier and quicker to resolve[28].

The second feature of causa is that it restricts the courts' unlimited control upon the agreement between the parties[29]. Enacted in 1804, the French Civil Code is a legal embodiment of the major philosophical ideas of that period and was influenced in particular by the idea of individualism. Since autonomy of the will was established as the leading concept in the law of contracts, 19th century French scholars were convinced that the judge should be allowed to intervene in the contractual relationships as little as possible. As a result the control that could be imposed was limited to the objective verification whether a contractual counter-performance actually exists, whether it is one normally expected in the particular type of contract and whether it is not unlawful or false. Inquiries into the motives or other psychological factors that urged the parties into a contract were generally not admitted by the courts.

Although the modern theory of causa was laid down at the beginning of the 19th century, this does not mean it reached a standstill. On the contrary, the concept of causa has developed further, particularly by following some decisions of the French Cassation court and the efforts of legal scholars. Modern French legal doctrine has acknowledged two primary tendencies in the development of the doctrine of causa – its 'concretisation' and 'subjecitivisation'[30].

Throughout the last decades, the concept of causa has become more concrete, in the sense that it does not simply refer to a contractual counter-performance of any nature, but to a "real" contractual counter-performance, which includes taking into consideration the real, genuine interest it represents. A number of judgements of the French Court of cassation reveal a new approach in the assessment of causa – not from a formal point of view (since it might be not apparent at first glance), but from the point of view of the concrete, genuine interest, represented by the performance to the other contracting party, even when the terms of the exchange are apparent[31]. The process of "concretisation" of the causa has lead to a major change in French case law. In the past, where a counter-performance does not exist or is not immediately apparent from the contractual structure both unilateral and bilateral contracts were declared void for lack of causa. Today courts tend to undertake a search for the real interest pursued by the party who appears to impoverish itself. They go beyond the contractual structure and analyse the benefit or some other thing that has been previously received and is capable of sustaining an obligation[32]. If the benefit is still unclear, courts continue their attempt in establishing whether the contracting party nevertheless has an interest in the contract, since it may be provided through another contract or by a third party.

The second current development may be described as a "subjectivisation" of causa. It means that courts analyze the obligation and aim at establishing the causa of each of the contracting parties' obligations, without limiting themselves to the pre-established type of the contractual counter-performance[33]. Traditionally, causa is defined as the typical aim, associated with the certain type of contract and pursued by the parties. In the process of applying the principles of causa, courts proclaim the annulment of a contract that does not contain the interest which is normally expected to be present at this particular type of contracts. Thus courts determine the essential elements of a contract - the minimum inviolable prerequisites for its existence. Since this could lead to a number of contracts being proclaimed void on the ground that an apparent causa is lacking, the notion of causa was enriched by a new aspect. Courts are prepared to refine the control and to hold valid an agreement, provided that a real economic context is present. The search for the 'atypical' cause can be found in a rather recent decision of the French Cassation Court[34]. As a clause in a purchase contract of a hotel room by a family

couple, the hotel set up a joint venture whose object was to share the fruits and costs of the hotel restaurant and would be managed by another company. The Court pronounced the purchase contract void, since the hotel assured the couple that they will never have to bear the losses of the hotel, yet on the ground of this clause the family couple would stand surety to the hotel. The absence of causa was proclaimed because of the impossibility of realising a profit, 'a specific goal of viability, expressly coupled with the purchase'[35]. This decision has been subject to eloquent critics. They raised the question about legal certainty in contract law, since every party dissatisfied by the absence of profit could purport to obtain nullity of the contract. Several scholars, however, justified this approach, since the contract should demonstrate by plain terms that the two parties knew of a particular goal pursued and have admitted it from the outset into their relations. Even if the is not the traditional one, associated with this particular type of contracts, the contract will still be held valid. On the contrary, where one cannot derive the goal from the contractual structure, or where it has been included without the express volition of both parties, the contract has no cause and this leads to its nullity[36].

On the face of it, the depth of the French courts' inquiry may seem quite intensive and unprecedented especially when one considers the reason why causa was actually brought to life – to ensure that courts will intervene as little as possible in the contractual relations. French legal doctrine even referred to these undergoing processes as an "exteriorisation" of the causa[37]. To my view, this process is actually a function of the autonomy of the will. Allowing courts to try and determine whether one of the parties has interest despite the lack of a visible counter-performance ultimately leads to decreasing the number of contracts declared void for the lack of causa, which can actually be perceived as a true manifestation of the main principle in the contract law – the autonomy of the will.

The provisions about causa in the French Civil Code have served as a role model for several other national legislations belonging to the Romanistic legal family. Causa is considered an essential element of the validity of contracts according to the provision of art. 1274 of the Spanish Civil Code. What is interesting to point out is that the Spanish legislator has adopted Domat's theory of causa and not its modern notion[38]. The "Spanish approach" of defining causa as a requisite of the validity of contracts is its original meaning, has influenced the Civil Code of the Philippines[39]. The modern French notion of causa can be found in the national legislations of Belgium, Luxembourg[40], Italy[41], Romania[42], Bulgaria[43] and Slovenia[44]. In the same meaning the requirement of causa can be found in some legislations not belonging to the EU: in Quebec[45], the States of Louisiana[46], California[47] and Montana[48] and in the United Arab Emirates[49]. The subjective meaning of causa (as the deciding motive that has lead a party to commit itself) is adopted by the national legislations of Chile[50] and Colombia[51]. This comparative overview clearly shows that the concept of causa is ever-evolving and it is constantly modified to suit the exercise of control over contractual obligations in the best way possible.

[35] Ibid. p. 89.

[36] Ibid. p. 89

[37] Ibid., p. 80.

[38] See art. 1274 of the Spanish Civil Code: "In onerous contracts the causa is understood to be, for each contracting party, the prestation or promise of a thing or service by the other; in remuneratory ones, the service or benefit which is remunerated; and in contracts of pure beneficence, the mere liberality of the benefactor".

[39] See art.1350 of the Civil Code of the Philippines that follows closely the provision of the art. 1274 of the Spanish Civil Code.

[40] See art. 1108 and art.1131-1133 of the Belgian Civil Code and the Luxembourg Civil Code. As a whole, both Civil Codes follow very closely the provisions of the French Civil Code.

[41] See art.1325 and art.1343-1345 of the Italian Civil Code. The provisions about causa are the same as in the French Civil Code.

[42] See art. 1235-1239 of the Romanian Civil Code. It is interesting to point out that the definition of causa in the new Romanian Civil Code of 2014 seems to have been influenced by the respective provision of art. 1410 of the Quebec Civil Code.

[43] See art. 26, (2) of the Bulgarian Law of Obligations and Contracts: "Contracts that … have no causa are void. The existence of a causa is presumed until otherwise proven."

[44] See art. 39 of the Slovenian Law of Obligations: "Every contractual obligation must have a permissible causa (ground). The causa shall be deemed impermissible if it contravenes the constitution, compulsory regulations or moral principles. (3) It shall be presumed that an obligation has a causa, even if such is not expressed.(4) If there is no causa or the causa is impermissible the contract shall be void."

[45] See s.1410 of the Civil Code of Quebec: "The cause of a contract is the reason that determines each of the parties to enter into the contract. The cause need not be expressed."

[46] See S. 1967 of the Civil Code of Louisiana: "Cause is the reason why a party obligates himself."

[47] See art. 1550 of the California Civil Code, where the requirement for a "sufficient cause" is explicitly provided.

[48] See S. 28-2-102 of the Montana Code, that resembles the provision of art. 1108 of the French civil Code.

[49] See S. 129 (c) of the UAE Civil Code: "The necessary elements for making of a contract are: agreement, subject matter and a lawful purpose for the obligations". To my view, there is no reason to consider that "a lawful purpose" has any other meaning than a lawful causa.

[50] See art. 1467 of the Civil Code of Chile, where the following definition is present: "By causa it is meant the motive that induces the act or contract".

[51] See art. 1524 of the Civil Code of Colombia, whose provision is the same as in art. 1467 of the Chilean Civil Code.

4. National legislations that have adopted the doctrine of consideration

In contrast to the causa as a requisite of contracts that can be discovered in the national legislations of countries belonging to both civil and common law, the doctrine of consideration is a typical feature of common law legislations only. The doctrine of consideration can be found in the legislation of the United Kingdom, the United States of America, Australia and Cyprus as well as in some mixed jurisdictions, such as the Republic of South Africa. The main focus of this article will be placed upon clarifying this doctrine in English law, where consideration emerged and developed.

Differing from the legal systems on the Continent, English law was not based on the blend of Roman law and Canonist law, but rather developed its own institutes[52]. Yet, it faced the same problem about enforceability of promises.

In the early stages of its development (around the middle of the 13th century AD), English law had not developed the doctrine of consideration as a universal requisite, applicable to all contracts. Promises to do or to give something had to be set out in a written form, called deed. Whenever there was a breach of a promise, a special action, called covenant was granted to the plaintiff. A requirement that the covenant must be written and issued under the seal of the covenantor was introduced in the 14th century. In the course of time, the action of covenant gradually limited its legal consequences to the recovery of damages for breach of a sealed promise and was finally supplanted by another action (assumpsit)[53]. In the course of the 16th century, the action of assumpsit became the common legal means for the protection of a party against default by the other party, including the enforceability of promises. The legal effects of the action of assumpsit led the jurisprudence to the conclusion that since creditors enjoy such a convenient way of protecting themselves against a misconduct, carried out by the other party, not every given promise, whatever its nature deserves legal protection[54]. In particular, it was assumed that the action of assumpsit shall not be used to enforce a gratuitous promise and only promises with a bargain, i.e. with a counter-performance will be worthy of protection[55].

The assumed policy of the jurisprudence to limit the cases where one can claim enforceability of a promise was just one of the premises of the doctrine of consideration. The second one could be found in a stunningly familiar issue that tormented the minds of civil law scholars as well – the need to reduce the role of formalism without sacrificing security of transactions. Both premises make it probable that in the 17th century judges inquired into the contractual bond, searching for a reason for the promise being binding[56].

The process of forming the doctrine of consideration did not remain unchallenged. In the 18th century an attempt to redefine the notion of consideration had been carried out by Lord Mansfield, Chief Justice of the King's Bench. He refused to recognize it as a vital criterion of a contract and treated it merely as evidence of the parties' intention to be bound[57]. If this intention could be ascertained in any other way (writing or witnesses) consideration was unnecessary[58]. His second conclusion was considered even more disturbing. Lord Mansfield eventually accepted consideration as essential to English contracts, but defined it as a moral obligation[59]. It took almost another sixty years for English case law to overcome Lord Mansfield's approach. In *Eastwood v Kenyon*, the concept of consideration as a moral obligation was condemned. The judges pointed out that the acceptance of a moral duty as the sole test of an actionable promise collides with English law that requires some factor additional to the defendant's promise so that it would become legally binding and this was the doctrine of consideration[60]. The logical consequence of the *Eastwood v Kenyon* case was that consideration was no longer looked upon as a rule of evidence or a moral obligation. Throughout the 19th century, various attempts to define consideration have been undertaken in case law. It has been established that a plaintiff can prove the presence of

[52] There is a statement that the theories of consideration derived from canon law, since the chancellors who adopted them were former ecclesiastics. This would mean that causa and consideration share the same historical roots. See Willis, H.E., What is Consideration in Anglo-American Law, *University of Pennsylvania Law Review*, 72 (1924): 249. The majority of scholars believe, however, that the doctrine of consideration was developed independent of outer influence, See Beatson, J., Burrows, A., Cartwright, J., *Anson's Law of Contracts*, 29th ed., (Oxford University Press, 2010), 91 et seq.

[53] Willis, H. E., What is Consideration in Anglo-American Law, op.cit., p. 251 et seq.

[54] Simpson, A., *A History of the Common Law of Contract: The Rise of the Action of Assumpsit*, (Oxford University Press, 1975), 199 et seq.

[55] Cheshire, Fifoot and Furmston's *Law of Contract*, 12th edition, (London, Dublin, Edinburgh: Butterworths 1991), 71.

[56] Some scholars regard this perception of consideration as being as close to the theory of causa as possible, since the meaning of "consideration" altered much in the next century, See Cheshire, Fifoot and Furmston's *Law of Contract*, op.cit., p. 71.

[57] *Pillans v Van Mierop* (1765) KB 3 Bur. 1663. Lord Mansfield added that "the ancient notion of consideration was for the sake of evidence only; for when it is reduced into writing, as in covenants, specialties, bonds, etc., there was no objection to the want of consideration". See Lorenzen, Causa and Consideration in the Law of Contracts, op.cit., p. 637.

[58] *Rann v Hughes* (1778), 7 Term Rep. 350. See McCauliff, C., A Historical Approach to the Contractual Ties that Bind Parties Together, 71 *Fordham Law Review* (2002): 850 et seq.

[59] "Where a man is under a moral obligation, which no Court of law or equity can enforce, and promises, the honesty of the thing is a consideration ... The ties of conscience upon an upright mind are a sufficient consideration" *Hawkes v Sanders* (1782), 1 Cowp 289.

[60] *Eastwood v Kenyon* (1840) 11 AD & EL 438.

consideration in one of two ways. He might either prove that he had given the defendant a benefit in return for his promise or that he himself had incurred a detriment for which the promise was to compensate[61].

This approach had been accepted and further developed in the beginning of the 20th century. English case law attempted to define consideration using the contract of purchase and sale – "An act or forbearance of one party, or the promise thereof, is the price for which the promise of the other is bought, and the promise thus given for value is enforceable"[62]. Despite the fact that defining consideration seems straightforward and simple, scholars do not think of it as a single principle, but rather as a doctrine that has evolved throughout the centuries. That is why three further sub-principles have been introduced to facilitate its application[63].

According to the first sub-principle, consideration should either be executory or executed, but not past. Consideration may be *executory* when a promise is made in return of a counter-promise by the other party and *executed* when it is made in return for the performance of an act[64]. Whenever the plaintiff purports to enforce a transaction, he must be able to prove that his promise (or act) together with the defendant's promise, constitute one single transaction and there is interdependence between them[65].

However, where the defendant has made a further promise, subsequent to and independent of the underlying transaction between the parties, it should be regarded as a sign of gratitude for past favours or a gift, and no contract can arise[66], since there is a "past consideration". Since it confers no benefit on the promisor and involves no detriment to the promise in return for the promise, the general rule is that past consideration is equal to no consideration[67].

The second sub-principle that has been accepted in the case law and among scholars is that consideration must move from the promisee[68]. This means that a promise can be enforced whenever the promisee has paid for it and there is a bargain. In the cases where the promise was not made by deed and the promisee did not provide consideration, no enforcement is allowed. At the same time this element means that even when the promise is supported by consideration provided by the promisee, consideration must move from the claimant, i.e. the person seeking to enforce the contract must have provided the consideration himself[69]. However, the application this principle should lead to the conclusion that a promisee cannot enforce a promise made to him where the consideration for the promise has been provided by someone else[70].

The third sub-principle lies in the requirement that consideration must be real, must be "something which is of some value in the eye of the law"[71]. That's why case law consistently declined to accept as consideration the case where a party refrains "from a course of action which he has never intended

---

[61] "A valuable consideration in the sense of the law may consist in either some right, interest, profit or benefit accruing to one party, or some forbearance, detriment, loss or responsibility given, suffered or undertaken by the other" – *Currie v Misa* (1875) LR 10 Exch 153; "Consideration means something which is of value in the eye of the law, moving from the plaintiff: it may be some detriment to the plaintiff or some benefit to the defendant" – *Thomas v Thomas* (1842) 2 QB 851.

[62] This definition emerged originally in the English case law – see *Dunlop v Selfridge* (1915). This particular case is sometimes being referred to as the most significant case for the consideration doctrine. See Beatson, J., Burrows, A., Cartwright, J., *Anson's Law of Contract*, op.cit., p. 92.

[63] Richards, P., *Law of Contract*, 9th ed., (London: Pearson Longman, 2009), 58 et seq.

[64] Cheshire, Fifoot and Furmston's Law of Contract, op.cit., p. 74; Beatson, J., Burrows, A., Cartwright, J., Anson's Law of Contract, op.cit., p. 95.

[65] *Wigan v English and Scottish Law Life Assurance Association* (1909) 1 Ch 291.

[66] Cheshire, Fifoot and Furmston's *Law of Contract*, op.cit., p. 74.

[67] There are, however, some exceptions to this rule. A past consideration would be able to support a promise if the consideration was given at a previous request of the promisor. The Judicial Committee of the Privy Council has summarized the conditions under which this exception applies in *Pau On v Lau Yiu Long* (1980) AC 614 – "An act done before the giving of a promise to make a payment or to confer some other benefit can sometimes be consideration for the promise. The act must have been done at the promisor's request, the parties must have understood that the act was to be remunerated either by a payment or the conferment of some other benefit, and payment, or the conferment of a benefit, must have been legally enforceable had it been promised in advance." Further exceptions to the rule "past consideration is no consideration" can be found in the existence of an antecedent debt (*Wigan v English and Scottish Law Life Assurance Association* 1909 1 Ch 291) and in the case of negotiable instruments (s. 27 (1) of the Bills of Exchange Act 1882). See Beatson, J., Burrows, A., Cartwright, J., *Anson's Law of Contracts*, op.cit., p. 97. Some scholars assume that a moral obligation is equal to no consideration. The notion of "moral obligation" is used in a different, narrower sense in comparison to Lord Mansfield's definition of the consideration as a moral obligation. Scholars believe that an obligation should be considered moral whenever there is an impossibility to enforce it due to some specific legal defect. English case law has refused to consider binding the promise given by a discharged banker to pay his debts in full incurred before his discharge if this promise is not supported by "fresh consideration" – *Jakeman v Cook* (1878) 4 Ex.D. 26. See Treitel, G., *The Law of Contract*, 11th ed., (London: Sweet & Maxwell 2003), 80.

[68] Cheshire, Fifoot and Furmston's *Law of Contract*, op.cit., p. 77; Richards, P., *Law of Contract*, op.cit., p. 61.; Treitel, G., *The Law of Contract*, op.cit., p. 81.

[69] See Beatson, J., Burrows, A., Cartwright, J., *Anson's Law of Contracts*, op.cit., p. 98.

[70] It should be noted that English courts hesitate about this logical consequence. Australian courts, however, apply this requirement without doubt. See Coulls v Bagot's Executor and Trustee Co Ltd (1967) ALR 385, where the judges have accepted that "a person not a party to a contract may not himself sue upon it so as directly to enforce its obligations ".

[71] Treitel, G., *The Law of Contract*, op.cit., p. 83; Richards, P., *Law of Contract*, op.cit., p. 62.

to pursue"[72]. Furthermore, whenever there is impossibility, physical or legal, at the time of formation of the contract, consideration is held unreal[73]. Case law requires the impossibility to be obvious, meaning that "according to the state of knowledge of the day, so absurd that the parties could not be supposed to have so contracted"[74]. There is no consideration in the case when a promise is too vague or insubstantial to be enforced as well. Whenever a promise leaves the performance exclusively in the discretion of the promisor the consideration is deemed to be illusory[75].

It has been established that courts will inquire into consideration to prove that it is real, but the question about its adequacy should remain outside their scope[76]. Courts will not seek to measure the comparative value of both promises, since the adequacy of consideration is to be considered by the contracting parties at the time of making the agreement. The parties are presumed to be capable of pursuing their own interests and reaching a desired equilibrium in commercial transactions[77]. That's why courts cannot denounce an agreement just because it seems to be unfair. On the contrary, they have been prepared to find a binding contract in cases where consideration is virtually non-existent. Four centuries ago it has been assumed that "when a thing is to be done by the plaintiff, be it never so small, this is a sufficient consideration to ground an action[78] and this rejection of performing a quantitative check is meticulously applied by courts[79]. However, some exceptions where consideration is held to be 'insufficient' have been introduced[80].

5. The correlation between causa and consideration

As it has appeared, both the theory of causa and the doctrine of consideration are brought to life to serve as an "indicia of seriousness"[81] in an attempt to distinguish between a simple arrangement and a contract. This circumstance naturally leads to the question about the correlation between causa and consideration. At first glance there is a distinctive similarity not only in the function of both figures as "indicia of seriousness". Another common feature between them may be found in the reason why they were developed. Both causa and consideration have emerged as a result of the necessity to facilitate the exclusion of formalism that dominated the contractual relationships in both Roman private law and early English law. In modern times, formalism is considered an exception rather than a rule, since the need to observe a specific form is now usually substituted by the requirement of a causa or consideration in order to consider a contract valid and binding.

These similarities of both concepts did not remain unnoticed by judges and scholars. Case law shows that there was a considerable period of time in English law where consideration and causa were used interchangeably. In the *Calthorpe's case* consideration is defined as a "cause or meritorious occasion, requiring a mutual recompense, in fact or in law"[82]. Despite the fact that in its further development English case law abandoned the approach of defining the doctrine of consideration using causa, this proved to be a very robust idea. The question about the correlation between causa and consideration influenced the development of the enforceability of promises in the mixed legal systems.

The first Civil code of Louisiana, enacted in 1825, as well the next one, enacted in 1890, contained a definition of causa. It was assumed that "Cause is consideration or motive. By the cause of the contract in this section is meant the consideration or motive for making it"[83]. Scholars admit that until the end of the 19th century due to the strong civil law influence the common law doctrine of consideration, although specifically indicated in the provisions of

[72] *Arrale v Costain Civil Engineering Ltd* (1976)

[76] Cheshire, Fifoot and Furmston's *Law of Contract,* op.cit., p. 81.
[77] *McEcoy v Belfast Banking Co Ltd (1935)* AC 24.
[78] *Sturlyn v Albany* (1587) Cro Eliz 67.
[79] In modern times this principle became known as the "peppercorn theory". In *Chappel & Co Ltd v Nestle Co Ltd* it was assumed that it is irrelevant whether the consideration is of some value to the other party: "A contracting party can stipulate for what consideration he chooses. A peppercorn does not cease to be good consideration if it is established that the promisee does not like pepper and will throw away the corn".
[80] Scholars agree that whenever there is a public duty imposed upon the plaintiff by law, any promise to carry it out is a promise without consideration. A further exception lies in the case where the plaintiff is bound by an existing contractual duty to the defendant. See Cheshire, Fifoot and Furmston's *Law of Contract*, p. 89 et seq.
[81] Zweigert, K., Kötz, H., *Introduction to Comparative Law*, 2nd Revised Edition, translated from German by Tony Weir, (Oxford: Clarendon Press, 1992), 417 et seq. See also Kötz, H., *Europäisches Vertragrecht, Bd.1 Abschluss, Gültigkeit und Inhalt des Vertrages, die Beteiligung Dritter am Vertrag*, (Tübingen: Mohr Siebeck, 1996) 77 et seq.
[82] This decision dates back to the year 1574. See Lorenzen, E., Causa and Consideration in the Law of Contracts, op.cit., p. 636. Other scholars also admit that in the 16th and 17th century consideration probably meant the reason for the promise being binding, fulfilling something like the role of causa in continental systems, See Cheshire, Fifoot, Furmston's Law of Contract, op.cit., p. 71.
[83] See art. 1890 of the Louisiana Civil Code 1825 and art. 1896 of the Louisiana Civil Code of the year 1890.

the Civil Code was not applied, because cause meant consideration[84].

To my view, this is only partially true. Scholars' primary aims are pointed at clarifying that under this definition consideration is not equal to motive[85] and omit an important aspect. A historical interpretation of this definition leads us to the conclusion that in 1825, when the first Civil Code of Louisiana was enacted, the notion of causa could have had no other meaning than the one manifested by J. Domat and R. Pothier – in unilateral contracts causa lies in the fact that the creditor performed his obligation at the time of the conclusion of the contract, in bilateral onerous contracts the engagement of one party is the reason for the engagement of the other party and in gratuitous contracts motive serves as causa. If a parallel can be drawn, causa in unilateral contracts and executed consideration seem to be quite alike, since both require something to be done or given. Causa in bilateral contracts and executory consideration are, on the other hand, quite different, but share the same function of establishing the difference between enforceable and unenforceable promises. As far as gratuitous contracts are concerned, they must be made by 'deed' in English law to become enforceable. The Louisianian legislator has included the motive in the definition of causa, since the existence of a motive justifies the existence of a gratuitous promise and substitutes the need for a causa. Following that logical pattern, we might conclude that the scope of causa is broader than the doctrine of consideration and that's why causa encompasses both consideration and the liberative motive, as set out in the definition of art. 1890 of 1825 Louisianian Civil Code. As we have seen, it is the causa, not the doctrine of consideration that is used as a universal requisite of the validity of contracts in present-day Louisiana.

In the Republic of South Africa, the question about the correlation between causa and consideration emerged in the beginning of the 20th century. The provision of art. 1371 of the repealed Netherlands Civil Code provided the requirement for a causa in every contract and consequently it was introduced into the legal system of Transvaal by the Dutch settlers as well. Yet, in 1904 a member of the Supreme Court stated that "the causa of Roman-Dutch law has become for all practical purposes equivalent to the valuable consideration of the Common Law"[86]. Despite the fact that this idea was not acknowledged by later South African case law, it was accepted by the majority of the scholars of that time[87].

The idea that causa and consideration are similar, but not the same worked its way into the case law of other mixed legal systems. In the Philippines causa and consideration were originally used as synonyms[88]. Later on, it was established that although somewhat different, both concepts work out equivalent effects in jurisprudence. The common law consideration was held narrower than the civil law causa, since consideration consists of some benefit to the promisor or a detriment to the promisee, whereas causa is the essential reason for the contract[89].

Modern scholars are inclined to accept that causa and executory consideration are similar[90], but others point out that it can be accepted only if causa is being used in its objective sense[91]. To my view, this statement is true, but several other circumstances should not be overlooked.

First, causa is an element necessary for more than just the plain formation of all contracts in civil law. It is used to invalidate unlawful or immoral transactions and justifies the consequences that follow from an excusable failure to perform one of the obligations on a bilateral contract. It can be said that causa accompanies the contract from its formation until its discharge. On the contrary, the doctrine of consideration imposes a standard solely for the formation of an onerous contract, since a gratuitous promise must be performed in the form of a 'deed' to be enforceable. Afterwards, there are several other legal figures, known to English law that are used to perform control over unlawful or immoral transactions or the excusable failure to perform, such as illegality, mistake and frustration. This means that consideration itself cannot carry out the functions of causa[92]. Thus a contract, supported by consideration, could be declared void from the outset for lack of causa or unlawful causa. That is why it can be assumed that the notion of causa and its scope of application are considerably wider than the doctrine of consideration.

At the same time in English law nominal consideration is sufficient to sustain a contract, whereas in civil law causa will not be applicable in this case. Civil law legislations usually have adopted

the Roman concept of *laesio enormis*, allowing the party to bring up an action and invalidate a contract where the price of the counter-performance is considerably lower than the price of his own performance. English law does not require consideration to be adequate. Although it has developed exceptions to ensure that the lack of adequacy is not due to fraud, mistake or irrational generosity[93], courts will not pronounce the invalidity of contract solely on this behalf. In this sense, as strange as it may seem on face of it, consideration is wider than the notion of causa.

If a conclusion may be drawn, it seems that the 'objective causa' can be considered the functional equivalent of executed consideration, since they stand as close as possible to each other. Apart from that, causa and consideration differ greatly in terms of elements, scope and legal consequences. What they share in common is a similar historical path and the function to establish which promises should be considered binding.

6. The need for coherence. The abandonment of causa in France.

Surprisingly, the concept of causa and the doctrine of consideration share another common feature. Both have been subject to criticism that has doubted their utility and even called for their abandonment[94]. Moreover, many national legislations, such as Germany[95], the Netherlands, Scotland[96] Greece, Portugal[97], Slovakia, the Czech Republic[98], Lithuania[99], Estonia[100] and Hungary do not acknowledge causa or consideration as necessary elements of the formation and validity of a contract. Thus the existence of two parties who have agreed upon concluding a contract is deemed enough. This has been accepted in the civil Codes of various national legislations outside the EU, such as Switzerland[101], Israel[102], Ethiopia, Armenia, Brazil, South Korea[103] and Russia.

Following the rapid development of international civil and commercial relationships both inside and outside the EU, the existence of three differing types of legal approach to the question whether an agreement is actually a valid contract could cause a number of complications and undermines the certainty of circulation. That is why several attempts to overcome this challenge have been undertaken on a supranational level. Of course, they differ considerably, but they all share one common feature – the need for a causa or consideration is abandoned and a contact is concluded, modified and terminated by the mere agreement of the parties, without any further requirement.

One of the oldest attempts to unify the requisites of the contract was set out in 1927, by a Draft of a French-Italian Code of Obligations. It never entered into force, due to the outbreak of World War II, but its provisions served as an eloquent proof that causa and consideration may not be included into the issue of formation and validity of contracts[104]. This principle was adopted several decades later with the UN Convention on Contracts for the International Sale of Goods (CISG) coming into force in 1980. Its article 11 provides that "A contract of sale need not be concluded in or evidenced by writing and is not subject to any other requirement as to form. It may be proved by any means, including witnesses".The provision of art. 1.2 of the UNIDROIT Principles (latest revision of 2010) is virtually the same[105].

The approach of simplifying the requirements to consider a contract valid and binding has inevitably influenced EU law as well. The ongoing attempts to create a unified European private law have resulted in introducing several "soft law" codifications, such as the Principles of European Private LAW (PECL) and the Draft Common Frame of Reference (DCFR)[106]. The provision of art. 2:101, (1) PECL sets out a quite liberal and simplified

approach. It excludes the formal requirements for the conclusion of a contract in such a way that a contract is concluded if the parties intend to be legally bound and reach a sufficient agreement *without any further requirement.*This implies that the contract can be concluded without the presence of causa or consideration[107].

The Study Group on a European Civil Code closely follows the approach of providing minimal substantive restrictions in the provision of art. 4:101, Book II of the DCFR[108]. The absence of a causa or consideration is considered to promote efficiency by making it easier for parties to achieve the desired legal results in a faster and more convenient way. At the same time the level of legal protection has not lowered since the contract could be proclaimed invalid of some defect of consent or illegality[109].

It is obvious that the undergoing abandonment of causa and consideration as a requirement of the formation of a contract is not merely a whim, but a consistent supranational policy that has emerged nearly a century ago. That is the reason why one cannot be surprised to see that the French legislator has undertaken a major reform of the law of obligations to harmonize it according to the latest tendencies in European private law. According to the "Ordonnance n° 2016-131 du 10 février 2016 portant réforme du droit des contrats, du régime général et de la preuve des obligations" which will enter into force on 01.10.2016, the French Civil Code abandons the concept of causa, so that a contract will be valid if the parties have capacity to contract, have given their consent and there is an object (see the new version of art. 1128, which will enter into force on 01.10.2016).

The abandonment of the concept of causa, happening in the very national legislation, where it was enacted for the first time, may seem really confusing at first glimpse. However, one should bear in mind that this is merely a reflection of the common European policy of adapting the law of contracts to the new circumstances. It seems that the theory of causa in civil law and the doctrine of consideration have finally performed their main task – to accelerate the fall of formalism and help establishing a new contract law, based on the autonomy of the will and consensualism. This is actually the main aim of every supranational attempt to harmonize contract law. The new concept is that the contract will have its foundations in the objectively expressed will of the parties to be legally bound without the need for a causa, since the presence of the autonomy of the will is itself considered enough to guarantee the validity of a contractual relationship. On the other hand, the regulatory functions of causa upon the post-formation phase of the contract have been overtaken by a set of profound rules that invalidate any contractual relationship whenever there is a defect of consent or illegality110 and other special rules. In this sense, causa is not useless, it has been made useless by providing an abundant number of provisions that have substituted it and are set to perform quite similar functions.

7. Conclusion

It seems that the theory of causa in civil law and the doctrine of consideration have a last thing in common – that neither of them will probably find its place in a future European codification of private law. Nevertheless, one should consider that causa and consideration have succeeded in establishing the autonomy of the will as the founding principle of contract law. Throughout the centuries they have influenced its development up to the point where they are no longer needed. To my view the concept of causa will suffer a gradual abandonment, just like it happened to formalism, since this is the present tendency in European contract law.

A HISTORICAL PERSPECTIVE ON THE SPECIAL AVAILABLE PORTION OF THE SURVIVING SPOUSE PROVIDED BY THE ROMANIAN CIVIL CODE

Silviu-Dorin ŞCHIOPU[*]

Abstract

Nowadays, the article 1090 of the New Civil Code regulates the special available portion of the surviving spouse, a legal institution that has passed the test of time. Although the 2004 draft of the new Civil code failed to mention it, the Amending Commission (re)introduced the special available portion of the surviving spouse in competition with the children resulted from a previous relationship of the deceased spouse.

For a better understanding of the legitimacy and perennity of this institution, this short overview attempts, on the one hand, to highlight certain historical aspects that defined its evolution and present-day configuration, and, on the other hand, to examine the relation between the special available portion of the surviving spouse and the succession by representation of the deceased's descendants.

Keywords: *Romanian Civil Code, estate, inheritance, special available portion of the surviving spouse, donations and bequests, succession by representation.*

1. Introduction

At first glance, the regulation regarding the special available portion of the surviving spouse would have a novelty character, given the fact that the initial draft of the (new) Civil Code[1] did not contain these stipulations. Nevertheless, the special available portion of the surviving spouse is not a legislative novelty brought by the 2009 Civil Code[2], taking into consideration that it existed in the previous regulation.

Consequently, the current article is supposed to capture the historical evolution of the regulations regarding the above mentioned portion, but also to try solving some ambiguous aspects resulted from the different terminologies and from the different terms used throughout time, to practically outline, in the end, the same category of heirs. Also it tries to highlight the importance of the regulation regarding the special available portion of the surviving spouse both in terms of its existence throughout time, but also in terms of the necessity to realise a fair and equitable succession partition, regardless the number of heirs who are entitled to receive the deceased's inheritance.

What is more, from the arguments in this article, there could be identified the right methods to interpret the norm, starting from the premises taken into consideration at the moment of its editing, but without losing sight of the fact that no surviving spouse should undergo an unjustified limitation of the special available portion by extensively interpreting the rule of law.

Wishing to offer a stable foundation to the current study and to accurately delineate the frame of the norm envisaged for analysis, it starts from historical reasons, their beginning being placed in the late Roman era. After a brief presentation of the historical stages that defined its evolution, it is analysed the content of the current disposition of the article 1090 from the 2009 Civil Code.

Based on this analysis, made both in terms of the purpose intended by the legislator in the edict of the norm, but also in grammatical terms, being reported certain ambiguities of expression, which could generate difficulties in their application, it was intended to find the right solution in interpreting it.

After the entering into force of the 2009 Civil Code, it seems that there were no studies to express an argumented opinion by reference to the relation between the special available portion of the surviving spouse and the succession by representation of the deceased's descendants, in such a situation being imposed the necessity of the existence of a scientific approach that would highlight some of the cases that could arise and could be enclosed in the above mentioned norm, in a motivated and logical way, able to highlight the correlation between the purpose of the norm and its applicability.

2. Historical aspects that defined the evolution of the special available portion of the surviving spouse

1.1. **Late** Roman Law

During the Principate, as a result of the noticeable and alarming decrease of the population, Augustus encouraged subsequent marriages, but during the Dominate, under the influence of Christianity[3] the legislator dealt with the overgrown ease with which the spouses favoured each other and thus sacrificed the interests of the children resulted from a previous marriage. In these conditions, on the one hand, the Church did not forbid the remarriage, and, on the other hand, the legislation did not encourage it, but somehow tried to prevent it[4].

The first step was in the year 382, when a constitution was drafted by which the widow who had children from a previous marriage was prohibited to dispose of the liberalities received from the first husband for the benefit of a stranger or of the children resulted from the second marriage, her having only the usufruct. Later, in 439, this provision was extended to widowers.[5]

The second step was in the year 469, when it was decided that the person who had children resulted from the first marriage could not give, through liberalities, to the new spouse more than the child had received by will or donation; this child's part could not have been inferior to his or her reserved portion. Later, in 486, this provision was extended to any subsequent marriage.[6]

Thus, as a result of the last two constitutions appeared, in the Roman law, what is called today the special available portion of the surviving spouse.

2.2. Edict of the Second Marriage (1560)

The above mentioned legislation was received in the old French law applied to the southern French regions of written law, mainly influenced by the Roman law, while the northern ones were dominated by the Frank customary law[7].

The regulation of the special available portion of the surviving spouse was extended to the regions of the northern France by Francis II through the *Edit des seconds noces* (Edict of the Second Marriage). Its writer, the Chancellor of l'Hôpital, mentions in the preamble that the widows do not know that they are rather sought for their wealth than for their person, forgetting their natural obligation towards their children, to whom they should be both mother and father. This normative act represents a reaction of the legislator to a famous scandal of the era: Anne d'Aligre, an old widow with seven children, remarried the younger Georges de Clermont, the latter receiving an enormous donation from his new wife[8].

The dispositions of the edict related to the special available portion of the surviving spouse passed in 1580 in the second edition of the Paris Custom, becoming article 279, and at the end of the 18th century this article was also extended to men[9].

2.3. Napoleon's Civil Code (The French Civil Code of 1804)

The special available portion of the surviving spouse appears within the preparing works of the French Civil Code in the third project presented by Jean-Jacques-Régis de Cambacérès in July 1796[10].

Later, in the project presented by Jean-Ignace Jacqueminot in 1798 to the legislation commitee, named by Council of the 500, the article 156 stipulated that „the man or the woman who remarries, having *children or descendants* from a previous marriage can only give the recent spouse a part equal to the *part of the* legitimate *child* who received the least, *and only in usufruct*."

This article was adopted by the Civil Code project editing commission appointed by Napoleon in 1800, becoming article 161. After consulting the courts of appeal, in 1801, the one from Paris presented the following remark: „This disposition seems too harsh; there were taken from the Roman laws the wisdom and equity of the Edict of the Second Marriage […] the conjugal love being equalled to the paternal one. But one should not be put beneath the other, and it is not fair that when the child has his or her own part in property, the spouse has his own in usufruct."[11]

[11] *Idem,* 77.

During the year 1803, the new project was discussed within the State Council. In what concerns the special available portion of the surviving spouse, previous to the debates, no innovation intervened but the fact that art. 161 became art. 176.

Within the meeting from 18th March 1803, at the end of it, art. 176 came into discussion. The report records five speeches[12]: (1) Mr. Regnaud observed that this article changed the existent legislation[13]. (2) Mr. Treilhard said that the second part of this article would not be useful unless the goods whose disposition was forbidden would be reserved to the children from the previous marriage. Following this comment, the idea "*and only in usufruct*" was suppressed. (3) Mr. Regnaud observed that the first part of the article, by putting obstacles in the way of subsequent marriages, tended to determine the maintenance of the concubinage between persons who otherwise could not favour each other. (4) Mr. Cambacérès said that the interest of the children from the previous marriage determined the legislator to make a distinction between the two marriages, that it was enough to leave to the person that was remarrying the right to dispose over a child's part, but that he or she could be allowed to give it as a full ownership to the other spouse. (5) Mr. Berlier observed that, by giving the new spouse the right to receive a child's part, even in property, which was reasonable, might have been convenient to slightly modify this norm; because if there was only one or two children from the first marriage, and none from the second, the new spouse could take a half or a third from the heritage, if he was in competition with them. Thus, it would be fair to establish besides this main norm related to the child's part, an exception establishing that this could not exceed, in what concerns the new husband, a certain portion of the inheritance, for example a quarter. Thus, the limit of ¼ represents an innovation of the French Civil Code intended to strengthen the protection of the children from the previous marriage.

The article establishing the special available portion of the surviving spouse was adopted with the amendments proposed by the Consul Cambacérès and Mr. Berlier, six days later, becoming art. 1098, once the project was converted into a law. In its final form, art. 1098 from the French Civil Code provided that „The man or the woman, who, having *children* from a previous marriage, contracts a second marriage or a subsequent marriage will be able to give the new spouse only a portion equal to the *part of the* legitimate *child* who took the least and, by no means, these donations cannot exceed a quarter of the goods".

As the children's faith motivated the appearance of this legal institution, the term "*child*" used throughout art. 1098 of the French Civil Code deserves a special attention. This included not only the first degree descendants, but also the ones of subsequent degree, meaning the grandchildren and great-grandchildren of the deceased.

As we have already seen in the Jacqueminot project, the first part of art. 156 was referring to "*children or descendants*", while the second part was referring to "*the child's part*". The French legislator did not mention in the final draft the structure "*or descendants*", that going without saying that a child's previous death could not fail to offer his or her descendants the protection established by the special available portion of the surviving spouse.

We have to remark that the mention to the term *child* from the *second part of the art. 1098* from the French Civil Code cannot include the descendants, thus "*the child's part*" does not mean the part of the descendent of the subsequent degree (grandchild, great-grandchild). Otherwise, the surviving spouse would have had his or her special available portion exceedingly diminished as a result of its reference not to a child's part, but to a descendant's part when one of the children was previously deceased, but he or she had left children behind, each grandchild receiving a part from a child's part.

The grandchildren came to the inheritance of the ascendant on the basis of art. 739-740 from the French Civil Code (which corresponds to art. 664-665 from the Romanian Civil Code adopted in 1864, later abrogated) and art. 914 of the same code (art. 842 Civil Code 1864) regarding the available portion expressly stated that "*however, they are only taken into consideration for the child they represent*", so the number of grandchildren who came to the inheritance by representation did not influence the part of the surviving spouse as a result of the application of the norm regarding the special available portion[14].

By not referring the special available portion of the surviving spouse to the part of the subsequent degree descendant, it was possible to find ourselves in the situation in which a descendant of the donor could get less inheritance than the surviving spouse. In the event that one of the children was previously deceased but he or she had children, each grandchild would have received a part from the child's part, which meant less than the surviving spouse[15].

2.4. Alexandru Ioan Cuza's Civil Code (The Romanian Civil Code of 1864)

In what concerns the inheritance, the Romanian legislator from 1864, took up, with some exceptions, ad litteram, the text of the French Civil Code[16], and thus, art. 1098 became art. 939 of the Romanian Civil Code.

According to art. 939 of the 1864 Civil Code: "The man and the woman having *children* from another marriage, will be able to give the new spouse only a portion equal with the legitimate *part of the child* who received the least, and, under no circumstances, the donation should not exceed the quarter of the goods." [17]

The explanations based on the term "child" used throughout the article 1098 of the French Civil Code are thus valid also for the article 939 of the Civil Code from 1864. The same, by "*the part of the child*" it is not intended the part of the subsequent degree descendant.

In the same sense, it was also opined in the Romanian doctrine from the beginning of the last century[18], even though the Romanian legislator from 1864 did not take up the stipulation from art. 914 from the French Civil Code related to the available portion in art. 842, mentioned above[19].

This specification can be found in Carol II's Civil Code (adopted in 1940, but never entered into force), which, in the section dedicated to the available portion, in art. 1064 stipulated that the children who came by representation "are taken into consideration only for the one that they represent in the deceased's inheritance"[20].

Summarizing the above mentioned, as an intermediate conclusion, we could say that in the term "children", mentioned in the first part of the law, there were also included his or her descendants both in art. 1098 from the French Civil Code, as well as in its correspondent, art. 939 from the 1864 Romanian Civil Code.

Also, the child's part compared to the special available portion of the surviving spouse was the child's part – the first degree descendant – who inherited the least, not the part of a subsequent degree descendant who would have come to the inheritance by representation, the children's descendants being taken into consideration only for the stem they represented.

Thus, the special available portion of the surviving spouse was determined in relation to the stems by which the inheritance was divided, which meant in relation to the stem that had received the least, not in relation to the descendants (the branches) that the surviving spouse was actually competing with.

3. Present-day configuration of the special available portion of the surviving spouse in the Romanian Civil Code

Nowadays, the article 1090 of the New Civil Code regulates the special available portion of the surviving spouse, a legal institution that as we saw above has passed the test of time.

Although the 2004 draft of the new Civil code failed to mention it, the Amending Commission (re)introduced the special available portion of the surviving spouse in competition with the children resulted from a previous relationship of the deceased spouse through art. 829^2, which, by renumbering, became art. 1090 of the Civil Code.

According to the first paragraph of the article 1090 from the Civil Code: "The unreportable liberalities granted to the surviving spouse, who comes to the inheritance in competition with *other descendants than the ones they have in common*, cannot exceed a quarter of the inheritance or *the part of the descendant* who received the least."

In motivating the (re)introduction of the special available portion of the surviving spouse the Amending Commission[21] limited its action to mentioning that "Art. 829^2 regulates the special available portion of the surviving spouse, which, nowadays, can be found in art. 939 of the 1864 Romanian Civil Code.

This institution, whose purpose is to protect the children (or other descendants) from the previous marriage of the deceased in competition with the surviving spouse, as a result of the transformation of the reserved portion calculation system, the ordinary available portion that would be on the benefit of the latest spouse would be too large in the absence of a

C. however the norm that the descendants of a child are only taken into consideration for this child applies with no difficulties", Constantin Nacu, *Comparaţiune între Codul civil român şi Codul Napoleon (Comparison between the Romanian Civil code and Napoleon's Code)* (Bucharest: Leon Alcalay, n.d.), 377.

[20] Ministerul Justiţiei, *Codul civil Carol al II-lea – ediţie oficială (Carol II's Civil Code - official edition)* (Bucharest: Monitorul Oficial şi Imprimeriile Statului, 1940), 210.

[21] This document was available at this address: http://www.just.ro/.

special limit. In editing this text, there were taken into consideration all the criticisms of the doctrine related to the current article 939 of the Romanian Civil Code from 1864."

Although the last part of the text stipulates that the members of the commission would have had in mind all the complaints of the doctrine related to the form of the regulation of the special available portion of the surviving spouse, however, the justification to maintain this institution, namely that "the ordinary available portion that would be on the benefit of the latest spouse would be too large in the absence of a special limit", is reproduced *ad litteram* after a *de lege ferenda* proposal of the professor Francisc Deak[22].

Comparing the version from 1864 to the present one, we notice that the legislator has replaced the structure "*children from another marriage*" with the structure "*other descendants than the ones they have in common*", modification that is fully justified since, in the doctrine, it was unanimously admitted that the meaning of children should not be restricted to the first degree descendants, but it should refer also to the ones of subsequent degrees[23].

However, what strikes is the replacement of the structure "*child* who received the least" with the structure "*descendant* who received the least". This transformation cannot be considered one with implications only on the form of art. 939 of the Romanian Civil Code from 1864, although from the motivation mentioned above it seems to result that there were no changes in what concerns the substance of the special available portion of the surviving spouse. In addition, we could not identify, in the doctrine, any *de lege ferenda* proposal that would have had as purpose the restriction of the special available portion in the hypothesis of the competition between the surviving spouse and at least two descendants who come to the inheritance by representation of the same child of the deceased.

If we were to interpret *ad litteram* the art. 1090 of the new Civil Code, we would find ourselves in the situation in which the surviving spouse, in competition with the descendants of the deceased's children, would be in the position to beneficiate from a special available portion a lot smaller than the one stipulated in the Civil Code from 1864, because, according to the new provision, his or her special available portion would be calculated not in relation to the stem (child) that received the least, but in relation to any descendant's part who received the least.

As we have mentioned above, the part of a grandchild who comes to the inheritance by representation together with his or her brothers/sisters is a part of a child's part (in this case, the grandchild's part is a fraction of the part of the stem the grandchild represents), which, implicitly, leads to the reduction of the special available portion of the surviving spouse, as opposed to the case in which the surviving spouse would be in competition with only one grandchild who comes by representation (in this case, the grandchild's part is equal with the part of the represented stem).

This innovation of our legislator is reflected in doctrine by two opinion trends. One of the opinions claims that "the term «the part of the descendant who received the least» designates the reserved portion of each descendant, calculated according to the dispositions of art 1088 NCC"[24], which implies referring the special available portion of the surviving spouse to the reserved portion of whichever descendant received the least, so not only the reserved portion of the child who would have taken the least, but including the reserved portion of the grandchild who would not come alone by representation on the same stem and would receive less than any other children or grandchildren of the deceased.

The other opinion claims that "the part of the descendant who received the least" should have sounded like this: «the part of the child who received the least from the inheritance»"[25]. Therefore, the descendant means only the child (the stem) and not the ones who come to the inheritance by his or her representation (the branch). If under the influence of the 1864 Civil Code the doctrine enlarged the concept of "child" from the first part of the article, to include the subsequent degree descendants, this time, the same doctrine replaces, in the second part, the term descendant with the one of child, although they are not equivalent, but they have different coverage.

A plausible explanation of this innovation is that the members of the Amending Commission extended the meaning of the term "children from another marriage" (descendants of any degree) also to the second part of the article which mentions "the legitimate part of the child who received the least" (first degree descendants) by mistake. The commission, after deciding that it would be more appropriated that instead of "children from another marriage" the new structure should be "other descendants than the ones they have in common", probably did not notice that the term "child" did not

have a unitary meaning in art. 939 of the Civil Code from 1864, but it had a wider meaning in the first part and a more restricted meaning in the second, and replaced the term "child" with that of "descendant" even in the second part of art. 1090 of the new Civil Code.

4. **The relation between the special available portion of the surviving spouse and the succession by representation of the deceased's descendants in the** Romanian Civil Code

As we saw above, by interpreting *ad litteram* the art. 1090 of the Civil Code, we could find ourselves in the situation in which the surviving spouse, in competition with the descendants of the deceased's children, would risk to beneficiate from a special available portion a lot smaller than the one stipulated in the Civil Code from 1864.

However, we must bear in mind that the grandchildren and great-grandchildren usually come to the inheritance by right of representation regulated in the art. 965 of the Civil Code. According to the latter article, a legal heir of a more distant degree of kinship, for instance the child of the deceased's child (second degree descendant), will collect the portion of the estate that would have been due in our example to the deceased's child (first degree descendant) if he or she had not been unworthy toward the deceased or deceased at the date of the opening of the inheritance.

On the one hand, the representation is a legal institution devised by the legislator "to neutralise the effects of abnormal events that occurred within a family (death of children before their parents, perpetration of serous offenses punishable by unworthiness etc.), so that, from the legal view point, none of the innocents be affected"[26] and, on the other hand, the descendants who come by right of representation should collect only the portion of the inheritance that would have been due to the represented legal heir if he or she had not been deceased or unworthy toward the deceased. Furthermore, due to the proximity of the degree of kinship[27], in the absence of the representation, the abnormal chorology of deaths or the unworthiness, would have removed the descendants of a more distant degree of kinship.

Thus, the subsequent degree descendants (for instance the grandchildren of the deceased) should receive and divide among them *no more* than would have received their parent (the child of the deceased) had he or she been alive or worthy at the date of the opening of the inheritance, regardless of the fact that they come to the inheritance together with or without the surviving spouse.

The expression "*descendant who received the least*" should be interpreted as the *child* – the first degree descendant – who inherited the least or would have inherited the least had he or she not been deceased or unworthy toward the deceased, but he or she had left children behind, at the date of the opening of the inheritance.

Consequently, despite the Romanian legislator's poor editing of the regulation regarding the special available portion of the surviving spouse, no surviving spouse should undergo an unjustified limitation of his or her special available portion by extensively interpreting the term descendants in the second part of the art. 1090 from the new Civil Code. As we already mentioned, the special available portion of the surviving spouse should be determined in relation to the stems (children) by which the inheritance is divided, which means in relation to the stem that had received the least, not in relation to the descendants (branches) that the surviving spouse is actually competing with.

5. Conclusions

As the aim pursued by the legislator through the regulation of the special available portion of the surviving spouse was that of re-establishing an equity situation, the norm having a protection purpose for the children of the deceased, we have to express our objections towards its poor editing. As a result of the replacement of the term "child" with that of "descendant" in the second part of the article 939 of the Civil Code from 1864 (art. 1090 from the new Civil Code) it could practically reach an unjustified restriction of the surviving spouse's rights.

It would be unfair that determining the special available portion of the surviving spouse should depend on the survival of those children of the deceased, who had more than one child. So, it would be inequitable that the surviving spouse, in competition with the children of the deceased should beneficiate of a bigger special available portion, but in competition with grandchildren should have a smaller available portion.

At the moment, it cannot be said that the new legal dispositions related to the special available portion of the surviving spouse would have beneficiated of a lengthy and repetitive application, to create a specific uniform practice in order to facilitate their understanding. As a result, we consider being necessary that at the enforcing of the norm from the article 1090 from the Civil Code to be taken into consideration the fact that, through a unitary interpretation of the term "descendants"

[26] Radu-Romeo Popescu, „Efectul particular al reprezentării succesorale în noul cod Civil (The Particular Effect of Inheritance by Right of Representation in the New Civil Code)", in *In honorem Corneliu Bîrsan*, ed. Adriana Almăşan (Bucharest: Hamangiu, 2013), 231.

extensively, it might reach the unjustified reduction of the special available portion of surviving spouse. Consequently, the purpose of the norm, that of (re)establishing an equity situation among the different categories of heirs, would be evaded, and that could be seen as a penalty in what concerns the surviving spouse.

STATUTORY CANCELLATION OF THE LEASING CONTRACT - CONDITIONS AND EFFECTS

Raluca Antoanetta TOMESCU[*]

Abstract

The leasing contract termination by cancellation may have both a conventional (commissioria lex) and a legal nature. The legislature has stipulated in the leasing operations governing rules a number of cases in which the parties are entitled to request the contract cancellation but, these not being limiting, in the contract can also be inserted other clauses, according to the parties' interests, which will result in the contractual relationship termination by cancellation. The contract cancellation will take effect only for the future (ex nunc), so the analysis of the conditions under which the cancellation can be declared and the effects this decision will produce, are of special importance in view of carrying out the leasing operations.

Keywords: *leasing contract, cancellation, sponsor, user.*

The business world's economic activities development and evolution have imposed the development of some techniques and concepts which led to the emergence of new commercial contracts. So we are witnessing a continuous multiplication and diversification of the commercial contracts that the individuals and/or entities conclude between them.

The leasing contract, along with the contractor/construction – assembly contract, franchise and factoring contract, international tourism contract, is part of the international complex contracts group. From the legal realities of the international trade, the leasing proved to be the most important means of financing investments in goods and services. Taken from the western practice and treated with the specific superficiality, the leasing contract still managed as in Romania during 2005-2010, to impose through an expansion worth taken into account, only as ambiguous, poorly substantiated and unclear law to leave room to countless abuses, which led in the coming years to the multiplication – otherwise justified – of the big number of lawsuits pending in courts.

In essence, through a leasing contract, an individual or an entity resorts to a specialized institution for full financing, for the procurement of a movable or immovable asset, afterwards though the payment of some royalties to benefit from his right to use it, with the option that, upon the termination of the leasing contract, subject to the compliance of all the contractual obligations, he will become the owner of the asset. Until the payment of all the contractual obligations, the sponsor company will remain the owner of the asset.

The leasing contract is a bilateral legal act, for consideration, with patrimonial content, consensual, synallagmatic and commutative, with successive execution. By the Government Ordinance 51/1997, the leasing contract has become a typical contract (named).[1]

The cancellation is the most drastic sanction that could arise in the synallagmatic contracts with successive performance, for the culpable noncompliance by one of the parties, with the obligations under the contract. This right rests only on party which has carried out its contractual obligations, subject to the enforcement[2] cancellation (article 1549 of the Civil Code) and will take effect only in the future (ex nunc), resulting in the contract dissolution from the date of its declaration.

By the legislation standards, (only) to the sponsor is being recognized, by the legislature, through an enumeration that wishes not to be exhaustive, the right to cancel the leasing contract, in the following cases:

a) **If the user refuses to receive the asset at the deadline agreed with the supplier or stipulated in the leasing contract** (article 14 paragraph 1)[3].

Of course the sponsor will benefit from this right only if the refusal came from the user is not justified. The user has, therefore, by the arrangement with the supplier or by the terms of the leasing contract, the obligation to receive the asset on a determined date, if the asset meets quantitatively and qualitatively. If they fail to meet this obligation, the

[1] Dorin Clocotic, Gheorghiu Ghe., Operatiunile de leasing, Publishing House Lumina Lex 2000, page 57.

[2] Article 1549 - Law to resolution or cancellation: "(1) *If not requiring the contractual obligations enforcement, the creditor is entitled to the contract rescission or, where appropriate, termination, as well as damages, if entitled*".

[3] "ARTICLE 14 - (1) *If the tenant / user refuses to receive the asset at the deadline agreed with the supplier and/or in the leasing contract (...), the owner / sponsor has the right to cancel the leasing contract with damages*".

sponsor may, under the law, declare the cancellation of the leasing contract and also seek damages from them according to the common law[4]. The sponsor, however, can opt out of this right and can require the contract execution by the user, forcing him to the reimbursement of the costs incurred with the storage and upkeep of the asset over the period stipulated in the contract[5].

I believe that the user too should have benefited from the cancellation right with damages if the asset is not delivered in the period agreed upon or does not correspond ethnically or qualitatively. The user thus', even if he does not enter into possession of the asset in the period agreed upon, by the convention concluded with the sponsor, will be required to pay leasing rates for an asset not in his possession. Moreover, according to the ordinance, by the advance payment, which generally is not negligible, he will block an amount of money in the sponsor's account. Of course this would be more difficult to achieve in practice, because the cancellation may be declared in relation to the sponsor, and the damages payment in report to the supplier. Precisely for these reasons the legislator, notwithstanding the principle of contracts' relativity, has provided the user's right of direct action on the supplier (article 12 of the Government Ordinance 51/1997), the sponsor being expressly exonerated from any liability (article 14, paragraph 2 of the Government Ordinance 51/1997);

b) **If the user fails to fulfill its leasing rate payment obligation for two consecutive months.** (article 15 of the Government Ordinance 51/1997)[6].

It is possible that, for various reasons, the one that uses the asset (the user), property of the leasing company, during the contract, cannot pay the leasing installments, according to the planned staging determined at the time of signing the contract. In these circumstances, most often the sanction of the leasing contract cancelling occurs, which has an immediate effect the sponsor's right to repossess the asset, and to head against the debtor for the damages' recovery. Only the fulfillment of the pecuniary obligations, to which the user was obliged by the leasing contract, in the amount negotiated and on the set deadlines, will allow him to benefit from the use of the asset. If the user does not respect this obligation, the law allows the sponsor to declare the cancellation of the leasing contract (article 15, Government Ordinance 51/1997). The declaration of the leasing contract cancellation by the sponsor, for non-payment of the due installments by the user, will oblige the debtor to the return of the asset and the payment of the due installments. The legislature, to defend the interests of the creditor, granted to the leasing contract the enforceable benefit (article 8, Government Ordinance 51/1997[7]).

Therefore, we retain that upon the leasing contract cancellation for non-payment, the parties will have the following duties:

- The user will have to return the asset, naturally because he is not the owner of the leased asset, but only a regulator of the right to use, the asset will have to be returned to its rightful owner;
- The user is required to pay the amounts due until the cancellation date, amounts actually representing the asset's use value and that the user owes to the sponsor until the contract termination, by default the termination of the right to use, by virtue of the leasing contract cancellation. This fact represents a certain, liquid and due claim.

I think that, clearly, the Ordinance text does not refer in any case to the sponsor's right to enforce, after the cancellation statement date, through the enforceability power of the leasing contract, the return of the asset or recovery of the claim, as we commonly find in the leasing companies' practice. The confusion appears, willingly or not, from the broad and erroneous interpretation of the law text, because the ordinance makes strict reference to the amounts owed, until the date of cancellation, which also results in the obligation of the asset's restitution, amounts that were negotiated and inserted in the contract signed by the parties and representing a use the user benefited from until the contract cancellation date. Through a dubious interpretation, in my opinion, the sponsor shall prevail, after the contract cancellation, of the benefit conferred to the leasing contract by article 8 of the Government Ordinance 51/2006, that of writ of execution[8].

Although in the law we meet countless cases where the courts have declared enforceable cancelled leasing contracts, I believe that in legal terms it is virtually impossible. By cancellation, the creditor waives the benefit conferred by the leasing contract enforceability power, since it practically does not exist anymore, by cancellation of the contract, not producing effects for the future

[4] Stanciu Carpenaru, Tratat de Drept Comercial Român, Publishing House Universul Juridic 2014, page 598.

[5] Gabriel Tita-Nicolescu, Leasing, Publishing House C. H. Beck , Bucharest 2006, page 229.

[6] ARTICLE 15 - *If the contract provides otherwise, if the tenant / user does not perform the obligation to pay the full the leasing rate for two consecutive months, calculated from the due date specified in the leasing contract, the owner / sponsor has the right to cancel the leasing contract, and the tenant / user is obliged to return the asset and pay all the amounts due, until the return date under the leasing contract.*"

[7] "Article 8. – *The leasing contracts, as well as the real and personal guarantees, set up to guarantee the obligations under the leasing contract, are writs of execution*."

[8] "*The contract, being canceled, the issue arises whether the debtor still owes to the creditor the due monthly installments until the date of cancellation, as requested. The court considers that no, since a request to that effect by the creditor is equivalent to a contract performance given that the creditor itself chose to abolish it. Therefore, if the creditor has chosen to abolish the Convention, it can only require from the debtor damages, damages that must, of course, be proved."* Civil Sentence no. 1332/07 April 2010 pronounced by the Court Vaslui in the archive no. 1610/333/2010.

anymore, from the date on which it was declared[9]. So if the user refuses to voluntarily hand over the asset or to pay the due and unpaid installments accrued until the cancellation date, the sponsor will only have available the common law. The sponsor, however, may waive its right to demand the contract cancellation; he may require the contract performance by the user, also forcing him to pay damages for the late performance of his obligations, over the period stipulated in the contract, taking advantage of the enforcement benefit conferred by the leasing contract law. So if the sponsor will choose to keep the contract, he will benefit from its power of enforcement, the asset will remain in the user's possession and the sponsor will be able to execute according to the title held the entire value of the leasing contract, less the residual value, I consider, because until its payment the user has the option right on the purpose the leasing contract will take[10].

c) **If the user is in a state of statutory reorganization and/or bankruptcy** (article 14 paragraph (1) thesis II)[11]. So if, during the execution of the leasing contract, the user is in a state of reorganization or bankruptcy, the sponsor has a right of option between declaring the contract cancellation with damages, registering in the list of creditors or demanding the asset from the debtor[12].

If the sponsor will opt for the contract's cancellation, as provided by the Law 85/2014, article 123, paragraph 1[13], he will have to notify the legal administrator / legal liquidator, in the first 3 months after the initiation, with the intention to terminate the contract. The legal administrator / legal liquidator has the right, within 30 days of receiving the notification, to oppose the leasing contract cancellation, if he decides that the assets covered by the leasing contract are required from the debtor to continue and recover his activity. If he does not send a reply within the period stipulated in the law, the contract is considered terminated, its execution unable to be requested anymore. According to the insolvency regulatory rules, in the event that the leasing contract will be cancelled at the donor's will, he has the possibility to choose between:

- The transfer of ownership to the user, acquiring a legal mortgage on that asset of equal rank with the leasing operation. It will also be registered in the list of creditors with the invoiced amounts and unpaid by the debtor (including their accessories), and with the remaining amount to be paid under the contract, but that will not exceed the market value of the asset determined by an independent assessor.
- The recovery of asset and the registration in the list of creditors with the value of the due invoiced rates value and unpaid by the debtor at the opening of the procedure (including their accessories), and with the remaining amounts to be collected from the leasing contract, from which the market value of the recovered asset will be decreased. The asset value will be determined by an independent assessor.

The new law of insolvency entitles the legal administrator / legal liquidator to unilaterally terminate any leasing contract, if this is in the interest of maximizing the debtor's estate (Law 85/2014, article 123, paragraph 12) or to request the sponsor to maintain the contract, undertaking to specify quarterly in the activity reports if the debtor has the funds necessary to cover the claims arising from the contract execution.

Thus, I conclude that, although by the provisions of the ordinance, only the sponsor has the right to cancel the leasing contract, in conjunction with the provisions of the Civil Code (article 1549) and with the provisions of the Law on insolvency prevention procedures and on insolvency procedures, remains to be appreciated the legislature intention that, by related laws, restores the contract equilibrium. Thus', we retain that, by opting for cancellation, the creditor practically abolishes the enforcement that is the leasing contract, having only available the common law.

Because of the unusual and highly complex character of the leasing contract, and the lack of a clear legislation in this field, the leasing characters are subject to numerous personal interpretations,

[9] The same solution has been retained in the specialized legal literature. Thus, in the work of the industrial, commercial and real estate leasing developed in the Enterprises Law Centre of the University of Lausanne is considered as in case of leasing rates non-payments by the user, the sponsor can choose one of the following options: 1) to request the contract enforcement, demanding payment of the unpaid lease leasing rates; 2) to maintain the contract in force, giving up further claims and demanding damages; in this case he resumes the asset and puts it on sale, requesting from the user the unpaid rates value, with penalties plus the not due rates, from which decreases the net value resulted from the sale of the asset; 3) the cancellation of the contract with damages. Gabriel Tita-Niculescu - Leasing, Publishing House C. H. Beck, 2006, page 208.

[10] Tomescu Raluca, Conditii şi efecte ale pactului comisoriu in contractul de leasing, Perspectives of Business Law Journal, Volume 4, Issue 1, 2015.

[11] Article 14. - *(1) if the tenant / user (...) is in a state of reorganization and/or bankruptcy, the owner / sponsor has the right to cancel the leasing contract with damages.*

[12] Piperea Gheorghe, Drept Comercial - Volume II, Publishing House C. H. Beck, Bucharest 2009, page 115.

[13] Article 123 - "*The legal administrator / legal liquidator must respond, within 30 days of receipt, to the contractor notification, formulated in the first 3 months after the initiation, by which he is required to terminate the contract; in the absence of such a response, the legal administrator / legal liquidator may no longer demand the contract execution, being considered terminated. The contract is considered terminated:*

a) on the expiration of a period of 30 days from the contractual request receipt on the contract termination, if the legal administrator / legal liquidator does not respond;

b) on the date of the termination notification by the legal administrator / legal liquidator".

thus generating a large number of litigations. It is quasi known, or if not, can be verified with a minimum diligence, that the most common disputes arising in the legal practice, in the field of leasing, are generated by the leasing contract cancellation for non-payments. So I considered it appropriate to stop on this issue so controversial lately with the purpose of consolidating the leasing concept and developing a theoretical and methodological knowledge and understanding frame of it.

Perhaps because of the thorough ignorance of the international private law legislation, and also perhaps because of the support some leasing companies enjoyed before the Romanian legislature, I believe that currently the entire Romanian leasing legislation should be reviewed.

CONSIDERATIONS REGARDING THE SUSPENSION OF THE ENFORCEMENT

Nicolae-Horia ŢIŢ*

Abstract

The enforcement procedure is conducted from the time the enforcement body is seized by the enforcement officer, in order to comply with the provisions of the enforcement order, until the completion of the claim, with its accessoriesthereto, and the recovery of the costs of enforcement. The procedure involves a succession of acts, carried mostly by the enforcement officer. The continuity of the procedure may be affected by certain incidents leading to his timing. Among them, the situations ofenforcement suspension are generally determined by reference to their causes, respectively to the provisions of the law (in relation to specific acts or legal facts that occurred during the enforcement), the will of the creditor or the disposal of the court, at the request of the interested party. The analysis of the causes of suspension is important, in order to establish how they operate in concrete, as well for determining the effects that they produce.

Keywords: *Enforcement, suspension, bail, opposition to enforcement.*

1. Introduction

The suspension of enforcement is one issue that concerns both practitioners, theorists of law, particularly in regard to the regulations included in the new Civil Procedure Code (CPC). Like any procedural matter, the enforcement, perceived as a branch of civil procedural law, analysis the conditions and the terms in which procedural acts must be fulfilled during a procedural activity. Defining the enforcement as an procedural activity through which are achieved the provisions of theenforcement title and transporting these features upon the scholar method which is specific to civil procedural law, we conclude that, in the research onenforcement procedure, we must focus on the formal elements of the acts executed by the parties, on the enforcement bodies, on the enforcement court and on other participants, in order to determine their specific characters and to identify the effects they produce. The suspension of enforcement is an institution with multiple valences, as it can be determined by different reasons. In other words, the suspension has different sources, which prints different characteristics: in some cases, the suspension operates *ope legis*, in others, it is the result of the will of the parties or of one party, and in other cases it has a judicious character, being pronounced by the judge at the request of the interested party or parties, as a result of a analysis involving both formal and substantialcriteria. Therefore, examining the issue of suspension of enforcement is important for at least two perspectives: a practical matter, given the effects that the suspension produces in regard to performingthe enforcement, being necessary to establish the conditions in which it operates and in particular the extent of the effects it produces; in terms of theory, as an institution of procedural civil law which requires conceptualization and classifications expressed in such manner that the knowledge would be easier to achieve.

Given the foregoing facts, we aim in this study to accomplish a brief analysis, but as complete and effective as possible, of the types of enforcement suspension, based on their classification in cases of *ope legis* suspension (legal), voluntary and judicial (optional). We intend to establish, firstly, their applicability in relation to the procedural rules applicable tothe procedural activity of enforcement and to determine the characteristics of each type of suspension separately. Nevertheless, we intend to evaluate a series of doctrinal and jurisprudential views in relation to the suspension of enforcement, bringing arguments in support of some of them and making, where casual, *de lege ferenda* proposals. Therefore, we shall make a brief presentation of the institutions presented and we shall seek to individualize the criteria of classification which makes possible understanding and analyzing the issues that we consider relevant in respect to each case of enforcement suspension.

The suspension of enforcement is one issue addressed consistently and carefully in the doctrine elaborated under both the previous Civil Procedure Code and the new Civil Procedure Code. Matters relating to the suspension of enforcement were analyzed and discussed both in courses or thesis, as well as in monographies dedicated, especially, to the opposition to enforcement or in articles written in regard to the issue of suspension. The authors` attention was concentrated mainly on the issue of judicial suspension of enforcement (optionalsuspension), taking into account the procedural characteristics of this category of suspension. Also, as we shall point out in the article,

* Lecturer, PhD, Faculty of Law, "Alexandru Ioan Cuza" University of Iași (e-mail: **horia.tit@gmail.com**).

two currents of opinion that have been outlined concerning the extent of the effects of admittingthe application ofenforcement suspension,respectively if it has effects until the settlement of the suspension infirst instanceor until the opposition to enforcement is finally settled.

2. Ope legis suspension of enforcement

The law provides certain situations in which the enforcement can not continue because of the occurrence of certain impediments or incidents during the enforcement or of the need to perform acts of enforcement in compliance with the terms and conditions provided by the law. Thus, we identify two broad categories of causes for legal suspension of enforcement: those concerning the need to grant the debtor a period of time in order to achieve or willingly execute the obligation provided in the enforcement title and those which regard the occurrence of unforeseen situations which make the enforcement impossible to continue at least until other formalities would be fulfilled in this respect. Also, must betaken into consideration certain situations in which the law provides suspension cases to protect the debtor, namely to ensure hismeans of living or a decent living.

Thus, a first case of legal suspension of enforcement could be considered the one which regards the fulfillment ofenforcement acts until the date set by the law in which the ordered debtor must execute its obligation (art. 668 CPC). The term prescribed by the law in this respect is prohibitive (delaying) for the creditor and for the enforcement officer, meaning that until its fulfillment,acts of enforcement on the debtor's assetscould not be carried out. However, proceeding formalities can be brought out [e.g., in the procedure for enforcement of real estate, the enforcement officer may issue situation -minutes according to art. 829 par. (1) CPC and before the expiry of the 15 days term provided by art. 820 C.proc.civ, because it only determines the initiation of the sale, according to art. 835 CPC, not the pre-sale formalities]. The violation of the prohibition of carrying out enforcement activities within the period set by the law and which starts to run from the notification to the debtor, attracts their unconditional nullity (art. 176 point 6 CPC), which does not intervene *ope legis*, but only at the request of interested party [art. 185 par. (2) CPC], the procedural means provided by the law in this respect being the opposition to enforcement.

A similar situation is that of suspension of enforcement, for a period of six months, if the debtor is anpublic institution or authority and the enforcement can not start or continue due to the lack of funds (art. 2 and art. 3 of Ordinance no. 22/2002 on the payment obligations of public institutions, established by enforcement titles). The 6-month period begins on the date that the debtor has received notice to pay which is submitted by the competent body ofenforcement, at the request of the creditor [art. 2, second sentence of O.G. no. 22/2002]. In case the public institutions do not fulfill their obligation to pay within this period, the creditor may request an enforcement under the Code of Civil Procedure and / or under other applicable legal provisions. The 6-month is a legal term and has prohibitive (delaying) nature [art. 185 par. (2) CPC], meaning that until its expiry it is forbidden to carry out acts of enforcement on the assets of the debtor – public institution or authority. However, the creditor and the debtor may agree on another period than the 6 months term, as well as on some other obligations set bythe enforcement title(art. 5 of O.G. no. 22/2002). The 6-month term has effects only if the obligation can not be accomplished due to lack of funds. Where, for good reasons, the debtor institution can not fulfill its obligation within the six months required by law, it may request the court to grant, under the law, a period of grace and / or to set deadlines for payment by installments of this obligation [art. 6 para. (1) O.G. no. 22/2002]. In cases where the payment obligation is determined by final judgment, the debtor institution can apply for an additional grace period or for a payment by installment to the court which has pronounced the judgment [art. 6 para. (2) O.G. no. 22/2002]. If the payment obligation is determined by an enforcement title, other than a judgment, the application shall be settled by the competent enforcement court [art. 6 para. (3) O.G. no. 22/2002][1].

Another case of legal suspension regards the enforcement procedures of money provided by court judgmentscovering the grant of rights of salary nature set for the public sector employees, which became effective until December 31, 2011 [art. 1 para. (2) O.U.G. no. 71/2009 on the payment of money provided in enforcement titles regarding rights of salary nature ofpublic sector employees], until the terms of para. (1) art. 1 of the same law are fulfilled.

The Code of Civil Procedure regulates the following situations of legal suspension of enforcement occurred as a result of incidents during enforcement: the suspension enforcement until the appointment of representatives or legal guardian of the debtor`s heirs, if among them there are minors or persons under interdiction, or, where appropriate, until is appointed a special guardian under art. 688 par. (3) CPC;the suspension of enforcement for a period of 10 days from the date the debtor's successors accepting the successionwere informed on the continuation ofenforcement, where the death

[1] N.-H. Țiț, *Executarea silită, partea generală*, București: Hamangiu, 2016, pp. 260-261.

occurred after the commencement of the enforcement (art. 689 CPC);the suspension of issuing/distributingthe priceof the sale of the debtor's pursued assets, if the debtor or a third party guarantor submitted the money with special destination and proves that filed, within the legal term,an opposition to enforcement and it is opposing to the issue/distribution of money [art. 721 par. (4) CPC]; suspension of pursed movable goods, if the debtor is filing with special destination and makes opposition to enforcement [art. 751 par. (1) pt. 2 CPC]; suspension of the pursuitmortgagedreal estate which is subsequently alienated, if the acquirer, which is personally obliged for the mortgage, opposesto the sale of the mortgaged property if other assets remained mortgaged in the possession of the principal debtor [art. 817 par. (2) CPC]; suspension of pursued real estate property regarding which the seller has, under the law, legal mortgage and the right to request or declare rescission for failure to pay the price, if he has declared action in rescission during the enforcement or declares unilateral rescission or when the action in rescission for nonpayment of the price was brought prior the commencement of the forced pursuit, provided that it was noted in the land evidences [art. 841 par. (4) and (5) CPC]; suspension of payment of the claim or part of the contested claim, in case of anopposition against the proposed distribution [art. 876 par. (3) CPC]. Additional to these situations governed by the Code of Civil Procedure, we mention the case of suspension ofenforcement against the professionaldebtor's estate in case of opening of insolvency proceedings [art. 75 para. (1) of Law no. 85/2014 on prevention procedures of insolvency and insolvency][2].

The third category of situations is represented by cases of suspension which are based on the protection of the debtor, in order to grant his income for ensuring his and his family's needs, namely to ensure a home during the winter months. Thus, the Code of Civil Procedure provides the suspension of enforcement throughout garnishment, if it is imposed on amounts related to future salary rights, suspension operating for a period of three months from the establishment of garnishment [art. 781 par. (5) c) CPC]. If upon the same account are set up more garnishments, the period of three months in which payments offuture salary rights are made is calculated only once, from the time of establishing the first garnishment [art. 781 par. (5) c) the second sentence CPC]. Regarding the other case, the law provides that direct real estate enforcement (evacuation) is suspended on buildings used as home, between December 1st to March 1st [art. 896 par. (1) first sentence CPC]. However, evacuation could be carried out during this period if the creditor proves that, according to the housing legal provisions, he and his family have not an adequate home or that the debtor and his family have another suitable home where they could move immediately [art. 896 par. (1) second sentence], as well as the case in which the evacuees occupied abusively, *de facto*, without any title, the real estateor in regard to whom the evacuation has been ordered because they endanger the relations of coexistence or disturb seriously the public peace.

3. The voluntary suspension of enforcement

The voluntary suspension of enforcement intervenesat the request of the creditor [art. 701 par. (2) CPC]. As an expression of the principle of availability, the creditor may require suspension at any time, this measure being ordered by the enforcement officer throughdismissal. The enforcement officer could not refuse to take note of the suspension, as the text of the law does not confer his a right to assessment of the opportunity of the suspension, reported to the time that it occurred in the stage of enforcement or on other facts[3]. However, the suspension of the creditor's request can not affect the rights of others in the enforcement proceedings in relation to the provisions of art. 625 par. 1 C.proc. civ., on the principle of legality of enforcement. According to it, the enforcement is fulfilled in compliance with the law, the rights of other parties and other interested persons. For example, in the tender procedure regarding real estate, once theauction has been opened, the creditor can no longer require the suspension because it would affect the rights of tenderers who have paid the participation guarantee and submitted tenders in this regard (art. 844 par. 1 final sentence CPC). The suspension after this point would appear as an abuse of the right to dispose of enforcement activities (art. 12 par. 1 C. proc.civ.), for which, under his active role, the enforcement officer shall proceed with the auction and the creditor may file an opposition to enforcement[4].

Even if the provisions of art. 701 par. 2 Civil Procedural Coderefer to the creditor`s request, it is not a request that he must motivate and upon which the enforcement officer must decide, analyzing the reasons given, buta manifestation of the will of the creditor, in regard to which the enforcement officer

[2] For details, see A. Tabacu, *Scurte consideraţii asupra actelor de executare silită în contextul insolvenţei debitorului*, în Romanian Review of Compulsory Execution, no. 2/2014, pp. 79-89.

[3] E. Hurubă, în I. Leș (coord.), *Tratat de drept procesual civil. Vol. II, Căile de atac, procedurile speciale, executarea silită, procesul civil internațional*, București, Universul Juridic, București, 2012, p. 568.

[4] V. Bozeșan, *Suspendarea executării silite la cererea creditorului. Probleme și ipoteze practice*, disponibil la adresa http://www.juridice.ro/432511/suspendarea-executarii-silite-la-cererea-creditorului-probleme-si-ipoteze-practice.html (visited at 12.03.2016).

is obliged to take act thorough dismissal. By the dismissal of suspension, the enforcement officer will point out to the creditor, that if he do not request the resumption of enforcement within six months, obsolescence would operate. During voluntary suspension of enforcement,the obsolescence term runs, so that at the expiry of 6 months from the date of the dismissal`scommunicationto the creditor, the obsolescence operates *ope legis*[5]. The term of obsolescence does not run if the creditor was not notified, in writing, that inorder to continue the enforcement, it is necessary to file a request in this regard.

In regard to the formulation of the legal text analyzed (art. 701 par. 2 CPC), the declaration of intent in the sense of suspending the enforcement must be express and expressed in writing, through a request addressed to the enforcement officer, without being required, as noted above, that the request is motivated. Occurring at the creditor's request, voluntary suspension could not have tacit nature, meaning that it could not be deduced from certain acts of the creditor or from his failure to perform them[6]. If the creditor does not bring out an act or a necessary enforcement proceeding, which has been requested in writing by the enforcement officer, the obsolescence term starts to run, but it does not equates to a tacit manifestation of willingness of the creditor in the sense of suspending the trial.

In case there are several creditors pursuing the assets (whether as a result of procedural co-participation, whether as a result of the joinder of multiple enforcements), but only one or some of these request the suspension, theenforcement will continue in terms of the other creditors`enforcement titles. Nevertheless, if multiple requests of intervention were made by other creditors who hold an enforcement title, and the creditor pursuing the assets requests the suspension, the enforcement will continue under the title of interveners, based on the provisions of art. 695 par. 1 C. proc. civ[7].

4. Optional (judicial) suspension of enforcement

The optional (judicial) suspension of enforcement may be requested by the debtor or by the interested person until de opposition of enforcement is settled, of another application of enforcement (including an action of common law which would tend to abolish the enforcement title), until the settlement of an appeal against the judgment which it to be enforceable, respectively until the recusal request of the enforcement officer is resolved. Also, the optional suspension of pursuing real estate may be requested by the debtor under the terms that the enforcement court grants him with the possibility of fully paying the debt, including interest and costs of enforcementfrom the net income of his real estate, even unpursued, or from other income, for 6 months [art. 824 par. (1) CPC].

According to art. 719 par. (1) CPC, the competent court, at the request of the interested party, may suspend the enforcement, for good reasons, until the settlement of the opposition to enforcement or of other application on enforcement[8]. The suspension may be ordered, therefore, in a variety of procedural situations, not only within the settlement of the opposition on enforcement [for example in the event of a request for intervention under art. 692 par. (3) or art. 692 par. (6) CPC or if an action of common law is brought and if it tends to abolish the title of enforcement, according to art. 638 par. (2) CPC], the provisions of art. 719representing the common law, where applicable, either for establishing the bail which the person requesting the must pay, or to establish procedural rules for handling the application for suspension.

The request for suspension of enforcement may be filed along with the opposition to enforcement or as a separate application [art. 719 par. (1) C.proc.civ final thesis], but, in all cases, it has the character of an incidental application [art. 30 para. (6) CPC], meaning that it can never be formulated as a mainapplication[9]. If the request for suspension isfiled as a main application, no pending before the competent court an opposition to enforcement, the application must be dismissed as inadmissible[10], because, in all cases, the effects of the request for suspension are temporary, producing effects until the settlement of the opposition to enforcement, as we shall point out later. The request for suspension must be motivated, not being enough the simplereference to the grounds of the enforcement`s opposition because the suspension measure is based on reasons regarding the harm of the applicant`s right if the enforcement would continue until the settlement of the opposition. Moreover, if in the request for suspension would be invoked the same reasons as those underlying the opposition, the judge would be incompatible with settling the suspension, according to art. 42 para. (1)

---

[8] Regarding this type of optional suspension, see O. Popescu, C. Dobre, *Suspendarea executării silite în condițiile art. 718 C. pr. civ*., in Romanian Review of Compulsory Execution, no. 1/2014, pp. 94-108.

[9] N.-H. Țiț, *op. cit.*, p. 263.

[10] E. Oprina, I. Gârbuleț, *Tratat...*, p. 500-501.

pt. 1 CPC Or, as we shall point out later, the request for suspension shall be settled by the same panel that settles the enforcement opposition, aspect considered by the legislatoralso in regard the fact that the judgment which the court would pronounceconcerningthe suspension is different from the one which implies settling the substantive enforcement opposition: in the suspension, the judge will only make an analysis of the appearance of law and it may take into account facts regarding the effects that the continuation ofchallengedenforcement would have on the heritage or even on the personal situation of the applicant, but also the interests of the creditor or the situation the pursuedassets.

Given his character essentially incidental, the application for suspending theenforcement will always be settled by the court which settles the opposition to enforcement (as determined by the rules laid down in art. 714 CPC), according to art. 123 par. (1) CPC Regarding the panel that resolves the suspension request, this is the same that settles the opposition to enforcement both when requesting the suspension until the settlement of the opposition to enforcement and when it is requested the temporary suspension of enforcement[11].

The application for suspension of enforcement must meet the formal requirements of art. 148 et seq. CPC on requests addressed to the court. The application shall be stamped with 50 lei, according to art. 10 para. (1) b) the O.U.G. no. 80/2013. As extrinsic requirement specific to this procedure, the law requires the applicant requesting the suspension to pay a bail, determined by the value of the opposition`s object[12]. The determination of the value of the bailis made in relation to the value of the enforcement opposition and not necessarily by reference to the value of the enforcement itselfor the amount to the claim enforced. Therefore, it will consider what is requested thorough the opposition to enforcement, if it refers to the enforcement itself or to an asset, if it concerns a procedural act which has been fulfilled or the enforcement officer`s refusal of fulfilling according to the law.

The bail should not be confused with the judicial stamp tax, so that the applicant`s obligation to payit is not subject to the legal provisions on exemption or granting of privileges on payment the juridical stamp tax or the granting of legal aid [art. 6 letter d) the O.U.G. no. 51/2008 on legal aid in civil matters relate exclusively to judicial stamp taxes and not to bail]. This is because if the request for suspension is admitted, the bail would remain unavailable until the settlement of the opposition to enforcement and if it is rejected, the bail will be used to cover the damage caused by the delay in enforcement or the claim from theenforcement title (but not the costs of enforcement). If the request for suspension is rejected, the court automatically refunds the bail (art. 1064 par. 4 CPC)[13].

The law provides certain situations whenthe bail is not mandatory, but the suspension of enforcement is mandatory. According to art. 719 par. (4) CPC these are: the judgment or the document which is enforced is not, by law, enforceable[14]; the document which is enforced was declared false by a judgment given in the first instance; the debtor proves through an authentic document that he has obtained from the creditor a postponement or, where appropriate, has receive a payment deadline. Besides these situations, no bail is required if enforcement costs are disputed, according to art. 670 par. (4) final thesisCPC Also, bail is not required if the suspension application is submitted by a public institution or authority under art. 7 of O.G. no. 22/2002.

A special case is regulated by art. 1045 CPC in the special procedure of evacuation from buildings used or occupied without right. In this case, as a general rule, the enforcement of the judgmentcan not be suspended. Exceptionally, in case of evacuation for nonpayment of rent or lease, the court may suspend the enforcement in settling the opposition to enforcement or in the appeal exercised by the defendant, only if he submits in cash to the creditor, the rent or lease to which he had been forced to, the amount established to ensure rent or lease rates due to the request for suspension, as well as the rent or lease rates which would become due during the trial. The suspension shall cease*ope legis* if, at the deadline until which the rent or the lease had been covered, the debtor does not file and does not submit the amount to be established by the enforcement court to cover the new rates.

The request for suspension is stamped with a judicial stamp tax of 50 lei, according to art. 10 para. (1) b) the O.U.G. no. 80/2013. The stamp tax must

[11]Although, if the request of suspension is admitted on the ground of art. 719 alin. (4) pct. 1 CPC, the judge becomes inconpatible to substantively settled the opposition to enforcement, according to art. 42 alin. (1) pct. 1 CPC.

[12]According to art. 719 alin. (2) CPC, the bai is determined taking into account the follwing valorical limits:

– 10%, if the value is not more than 10.000 lei;

– 1.000 lei plus 5% for what exceeds10.000 lei;

– 5.500 lei plus 1% for what exceeds 100.000 lei;

– 14.500 lei plus 0,1% for what exceeds 1.000.000 lei.

If the object of the opposition cannot be evaluated pecuniary, the bail is 1.000 lei, except the cases in which thalaw provides other wise [art. 719 alin. (3) CPC].

[13] N.-H. Țiț, *op. cit.*, pp. 264-265.

[14] In this case, the judge becomes incompatible to solve the opposition to enforcement, according to art. 42 par. (1) CPC. For details, see N.-H. Țiț, *Considerations with Respect to the Jurisdiction and the Structure of the Court invested with the Application of Suspending the Legal Enforcement in the New Code of Civil Procedure*, în AGORA International Journal of Juridical Sciences, Vol. 7, No. 3/2013, pp. 186-191.

be paid in all cases requiring suspension, including in those covered by art. 719 par. (4) CPC, because in these cases the law provides that bail is not necessary and do not provide an exemption from stamp tax payment.

The request for suspension shall be always settled in adversarial proceedings, summoning the parties, in a short term, even before the deadline set for settling the opposition. The dismissal which solves the suspension request is subject only to appeal separately to the dismissal that settled the opposition to enforcement. The term for appeal is 5 days and it runs from the pronouncement for the present party, namely from the communication for the absent party [art. 719 par. (6) CPC]. In case the request for the suspension is admitted, the decision is communicated automatically, immediately to the enforcement officer, so he would not carry out other acts of enforcement.

Regarding the effects that are produce by the dismissal of admitting the application of suspension, art. 719 CPC is equivocal, stating only that the competent court may order suspension of enforcement until settling the opposition to enforcement. The question is whether the text refers to settling the opposition to enforcement in first instance or settling the opposition to enforcement thorough a final settlement. The problem arises when the application for suspension of enforcement is admitted, but afterwards the first court rejects the opposition to enforcement. In one opinion, the suspension will have effects in this case, pending the final settlement of the opposition[15]. In other words, even if the opposition has been rejected in the first instance, the debtor would still benefit from the effects of the suspension of enforcement pending the resolution of the appeal filed against the judgment dismissing the opposition to enforcement.

In another opinion, with which we agree, the suspension takes effect only until settling the opposition in first instance, since the court`s dismissal rejecting the opposition is enforceable [art. 651 par. (4) C.proc.civ][16]. To benefit for the effect of suspension until the final settlement of the opposition, meaning even during the appeal, the interested party will have to submit an application of suspension of the provisional dismissal of rejecting the opposition to enforcement, under art. 450 CPC[17]In caseof admitting the request for suspension, and subsequently, the opposition by the first instance, the enforcement cannot be continued until the final resolution of the opposition, due to the enforceable nature of the judgment of admitting the opposition. If this solution is final, the enforcement acts performed on the day of resolving the request for suspension, even provisional, are abolished by the effect of the law as a result of admitting the request for suspension and the enforcement opposition [art. 701 par. (4) CPC].

If the pursued assets are subject of destruction, deterioration, alteration or impairment, by dismissal, the competent court may order only the distribution of theprice obtained from valorizing thesegoods [art. 719 par. (5) CPC].

The suspension of enforcement does not affect the obligations of the third partywithheld in the garnishment regarding the amounts and the assets garnished. Therefor, according to art. 784 par. (1) CPC, once the notification of garnishment is communicated to the third party withheldall amounts are frozen and the assets garnished. From garnishment until full payment of the obligations under the enforcement title, including during the suspension of the enforcement through garnishment, the third party withheld will not make any further payments or other transactions that would diminish the goods seized, unless the law provides otherwise. In other words, the suspension of enforcement does not affect the amounts and assets seized and submitted to the enforcement officer, nor those seized, but still not submitted to theenforcement officer, the latter remaining frozen until the end of the suspension. Regarding the sums and assets owed to the debtor by third party withheld after suspension, they are not frozen and can be issued to the debtor because subsequently to the suspension of enforcement cannot be performed any act of enforcement in order to achieve the debt. Therefore, are suspended not only the submitted amounts or the property owed to the debtor by third party withheld to the enforcement officer, but even their unavailability, with the consequence that they should be released to the debtor[18].

The law provides the possibility of filling a request of temporarily suspension of enforcement[19], which is effective only until the settlement of the suspension made in the enforcement opposition [art. 719 par. (7) CPC][20]. In order to file such an application, the appellant must demonstrate an urgent situation (implying that he mustinvoke and prove special grounds, distinct from those on which the opposition to enforcement is based on) and he must pay the bail established according to art. 719

[19] For the evolution of the legislation regarding the provisional suspension, see Șt. I. Lucaciuc, *Contestația la executare în reglementarea noului Cod de procedură civilă*, București: Hamangiu, 2014, pp. 318-321.

[20] Regarding the period of the provisional suspension, see E. Oprina, I. Gârbuleț, *op. cit.*, pp. 499-500.

par. (2) or (3) C.proc.civ[21]. Also, to request temporary suspension of enforcement, it is necessary that the interested partyfiles a request for suspension in the enforcement opposition, according to art. 719 par. (1) CPC, as it is not possible to formulate main requests of suspension, without any enforcement opposition pending or other application regarding the enforcement or the validity of the enforcement title[22]. The request for provisional suspension shall be settled by the panel entrusted with settling the opposition to enforcement in a summary procedure, without summoning the parties, in the council chamber, thorough dismissal which is not subject to any appeal. Regardless of the decision on the demand for provisional suspension, the paid bail remains unavailable and will be deducted from the bail payable for processing the application for suspension of enforcement filed according to art. 719 par. (1) CPC.

The law provides special situations of optional (judicial) suspension of the enforcement regarding judgments subject to appeal. We refer to the suspension of the judgment settledin first instance, which is provisionally enforceable by the court of appeal, pending the resolution of the appeal (art. 450 CPC);the suspension of enforcement of the judgment given in the appeal pending the resolution of the recourse (art. 484 para. 2-7 CPC);the suspension of the final judgmentscontested with dispute in annulment (art. 507 CPC) or revision (art. 512 CPC).

Nevertheless, the optional suspension of enforcement is provided by the law in the event of a recusal request ofthe enforcement officer [art. 653 par. (2) CPC][23]. Thus, a recusal request does not suspend the enforcement *ope legis*, the enforcement court may dispose justifiably the suspension pending the resolution of the recusal request. The suspension will be decided by dismissal that is not subject to appeal. In the absence of any provision providing the contrary, the application for suspension until the settlement of the recusal will be settled by summoning the parties. The law requires paying in advance a bail with a fixed value of 1,000 lei, and if the amount of the claim under the enforceable title does not exceed 1,000 lei, the bail will be 10% of the claim amount. Since the text of the law provides that the bail is paid in advance, its proof shouldbe submitted along with the application for suspending the enforcement. The application shall be stamped with a stamp tax of 50 lei, according to art. 10 para. (1) b) the O.U.G. no. 80/2013, the text of the law being applicable to any request for suspension regardless its basis or the procedural framework in which it would be filled. The paid bail will be refunded in accordance to art. 1064 CPC, the special provisions of art. 720 par. (6) CPC being inapplicable in case a request for recusal of an enforcement officer.

Therefore, if the application for suspension of enforcement pending the resolution of the recusal application is rejected, the court will automatically refund the bail, according to art. 1064 par. (3) CPC Also, the bail will be refunded *ex officio* through the dismissal of admitting the application for recusal, given that it is not subject to appeal. If the request for suspension is admitted, but the recusal request is rejected, the bail will be refunded only if the affected party by the suspension measure does not make any request for payment of damagesin 30 days from the date when the dismissal of rejecting the recusal request has remained final [the dismissal in first instance is subject to appeal within 5 days from the notification under art. 10 para. (4) of Law no. 188/2000], respectively if he expressly states that he does not seekto oblige the person who has submitted it to pay the damages caused by suspension pending the resolution of the request for recusal [art. 1064 par. (2) CPC].

Another case of voluntary suspension of judgment is regulated by art. 824 CPC in regard to real estate pursuit. According to the text of law, within 10 days from the communication of the dismissal of granting the proceedings, the debtor may request to the enforcement court toaccept that the entire payment of the debt, including interest and costs of enforcement, to be make from the net income of his real estate, even unpursued, or other income, during 6 months. The application is settled by summoning the parties, in the council chamber, through final judgment. In case the request of the debtor is admitted, the court would suspend the pursuit of real estate, the dismissal being communicatedto the enforcement officer [art. 824 par. (2) CPC]. The suspension of the pursuit willbe communicated by the care of the enforcement officerto the tenants and the lease-holders or other debtors who, from the communication date, will submit all amounts due in the future at the unity prescribed by the law and will file the receipt to the enforcement officer, the affected income serving exclusively to cover the pursuer creditor`s claim [art. 824 par. (3) and (4) CPC]. Unlike other forms of voluntary suspension, the one under art. 824 CPC can be established for a fixed term according to law, of 6 months, following the enforcement to continue *ex officio* if at the end of that period have not been fully covered the main claim, the accessoriesand the enforcement expenses. For good reasons, the creditor may request the court to resume the pursuit

[21] Nevertheless, the party has to pay the judicial stamp tax of 50 lei, accordingto art. 10 alin. (1) lit. b) of O.U.G. nr. 80/2013, different form the stamp tax due to the request of enforcement suspension until settling the opposition to enforcement.

[22] E. Oprina, I. Gârbuleț, *op. cit.*, p. 500.

[23] N.-H. Țiț, *op. cit.*, pp. 268-269.

before the expiry of the six months term, the demand for resumption of enforcement beingsettled in the same manner as the request for suspension [art. 824 par. (5) CPC][24].

Regardless the situation of suspension of enforcement, after its cessation, the enforcement officer, at the request of the interested party shall order the continuation of the enforcement, as far as the acts of enforcement orthe enforcement itself had not been abolished by the court or it has not ceased as an effect of the law [art. 701 par. (5) CPC]. The continuation of theenforcement after the judicial suspension will not be, therefore, ex officio, but only on request, as a disposal act of the creditor. In the absence of such a request, the enforcement officer will ask the creditor, in writing, to clarify whether he persists in enforcement, form the communication of the request runs the term of obsolescence, according to art. 697 par. (1) CPC[25] Exceptionally, in case of the suspension of real estate pursuit under article 824 CPC, since it is decided by the court for a period set by the law (6 months), at the expiry of the term, the enforcement officer continues the pursuit ex officio, if the debt is not entirely paid, as well as the interest and the costs of enforcement. If the enforcement has been resumed after suspension, a new notice to the debtor is not necessary, but only in case of renewal after obsolescence, according to art. 699 par. (2) C.proc.civ[26]. Taking into consideration that the text of law provides that the enforcement officer will continue the enforcement at the request of the interested party, means that such a request can be filed not only by the creditor, but also by other people, such as a creditor intervener who has an enforcement title, given that he may require to carry out acts of enforcement, according to art. 695 par. (1) C.proc.civ final thesis[27]. However, in what concerns the voluntary suspension of the enforcement at the creditor's request, we consider that only he could file such a request, otherwise the possibility conferred by law would be purposeless.

4. Conclusions

The analysis of the situations of suspension of enforcement is of particular importance in the context of civil enforcement law, especially given the effects that this incident during the enforcement procedure has in practice. This is the raison why, on the regulation included in the Civil Procedure Code were made many interpretations and comments. From a theoretical perspective, it is necessary to correct classify the suspension situations, in order to identify the characteristic elements of each case. From a practical perspective, the distinction is necessary both to assess situations in which suspension operates and the reasons why it is ordered, but also to properly identify the effects it produces in relation to the acts of enforcement or other incidents related to enforcement, such as the postponement or obsolescence. In conclusion, the correct determination of the procedural characteristics of each type of suspension is important both theoretically and practically and certain differences of interpretation can be eliminated and wrong tendencies in implementing the legal texts can be corrected.

LATEST AMENDMENTS TO LAW NO 62/2011 ON SOCIAL DIALOGUE ENACTED BY LAW NO 1/2016

Aurelian Gabriel ULUITU[*]

Abstract

Law no 62/2011 regarding the social dialogue is the most important regulation of the collective labor relations. Since 2011, when it was adopted, Law no 62/2011 was modified several times, the last legislative intervention being done by Law no 1/2016. The main modification are regarding the following aspects: method of payment by the trade union's members of their monthly subscription; new rules regarding the possibility of the trade union or employer to affiliate at a higher level organization; the rules regarding the employers and employer's representatives in the collective bargaining.

Keywords: *social dialogue, social partners, collective bargaining, dues paid by union members, representativeness of the trade unions.*

I. Introduction

1. It is indeed salutary that the lawmaker is permanently concerned to identify and legislate the regulatory solutions necessary for improving the manifestation of social dialogue. Traditionally, the social dialogue institution is defined as the voluntary process through which the social partners not only inform and consult one another, but also negotiate in order to establish agreements on issues of common interest[1].

On numerous occasions, legal doctrine has emphasized the role and functions of social dialogue in any democratic society based on a market economy, this institution being qualified as a prerequisite, an axiom of economic and social development[2]. From another perspective, it is stated that social dialogue at national level requires a forum of discussions and negotiations that go beyond issues relating to employment; social dialogue is also manifested in connection with professional relations and social protection, as only in this way the effects of globalization on macroeconomic and social policies[3] can be analyzed, assessed, acquired, or where appropriate, counteracted.

2. Based on this theoretical background, which gives special value to the institution of social dialogue in its effort to mitigate the often divergent positions manifested by the social partners, the Labour Code – Law no. 53/2003[4], stipulates in art. 211 that procedures for consultation and permanent dialogue between social partners are legally regulated so that stability and social peace could be fostered.

The legislative framework the Code refers to currently comprises the following normative acts:

- Law no. 62/2011 on social dialogue[5];
- Law no. 67/2006 on the protection of employees' rights in the event of transferring undertakings, businesses or parts thereof[6];
- Law no. 467/2006 on establishing a general framework for informing and consulting employees[7].

In the future, the lawmaker is to intervene in order to group in a single normative act – *the Labour Code* – all aspects referring to how (individual or collective, respectively) employment relationships, including those relating to social dialogue, start, manifest or terminate.

Directive 2002/14/EC of the European Parliament and of the Council of 11 March 2002 establishing a general framework for informing and consulting employees in the European Community, published in *The Official Journal of the European Communities* (OJEC), no. L 820/ 23 March 2002, is transposed into Romanian legislation, via this normative act.

II. 1. The legal instruments specific to social dialogue are mainly regulated by law no. 62/2011. This normative act was adopted in the context of the legislative changes that marked the economic crisis in Romania (2009-2013). This legal document represented a significant setback in terms of union activity and collective bargaining (especially by suppressing both the level of negotiation and the possibility of concluding the single collective bargaining agreement at national level).

The memorandum of reasons itself points to the following:

- "The way that social relations between employers, on the one hand, and employees, on the other hand, were regulated by Law no. 62/2011 on social dialogue, republished, as subsequently amended and supplemented, practically dismissed the possibility to exercise the fundamental right to collective bargaining for the overwhelming majority of employees in Romania, which contradicts the Constitution of Romania (...)[8]";
- "A drop of almost 40% in the number of collective agreements concluded in a year at business level represents a decrease of paramount importance, demonstrating that the national legislation does not encourage the development of collective bargaining, quite the contrary. There will be major consequences if this situation is postponed indefinitely instead of being remedied as soon as possible.[9]"

Ever since drafting the bill for Law no. 62/2011, in a document entitled 'Memorandum of ILO technical comments on the draft Labour Code and the bill on social dialogue in Romania", the International Labour Office expressed the following view: "Regarding the criteria of representativeness which must be fulfilled for collective bargaining to take place at business level, which for the most part are not consistent with the ratified Conventions no. 98, no. 154, no. 135, according to the current bill, namely art. 132, representativeness threshold increases to 50% + 1 for collective bargaining at business level. This would mean that unions at business level could engage in collective bargaining only if they represent at least 50% + 1 of the employees. In accordance with art. 128 para. (2) and art. 135 para. (4) minority unions that do not meet this threshold shall be able to engage in collective bargaining, only if the members of their federation participated, provided that their business union represents 30 percent of the employees and their federation is acknowledged as representative within the respective field of trade. When unions do not meet these cumulative criteria, neither at business level and nor at the level of their field of trade, collective bargaining will take place only with the elected representatives of the employees, for whom no criterion of representativeness is established. ILO anticipates that it may be difficult to achieve these new thresholds and, therefore, it will mean that, in reality, collective bargaining will take place especially with workers' representatives, thereby undermining unions established in the business. This situation would neither allow the promotion of collective bargaining within the meaning of art. 4 of the Convention no. 98 and nor would it be consistent with the Convention relating to employees' representatives, no. 135/1971 or with the Convention on collective bargaining no. 154/1981, both ratified by Romania, which contain explicit provisions guaranteeing that, when in the same business there are both union representatives and elected representatives, appropriate measures should be taken so as to ensure that the existence of elected representatives is not used to undermine the position of the existing trade unions"[10].

2. The legal doctrine signalled both loopholes and ambiguous solutions that Law no. 62/2011 has instituted. Actually, the lawmaker's intervention was and is still necessary to establish rational normative solutions, to ensure a balance between the parties involved in employment agreements. A first step in this regard is the adoption of Law no. 1/2016 amending Law no. 62/2011.

In the current study, we will comparatively present the rules which were amended, the new rules introduced by the lawmaker, we will try to explain the rationale behind the normative act and to determine the future effects of applying the new solutions.

III. Specifically, amendments and supplements to Law no. 62/2011 refer to the following:

1. Prior to Law no. 1/2016's coming into force, art. 1 (r) defined the sectors of activity (higher maximum level that a collective bargaining agreement can be negotiated and concluded) as sectors of the national economy grouping domains defined in the Romanian Code on the National Classification of Economic Activities (NACE). The activity sectors are established by Government decision, after consulting the social partners.

The normative act which specifically established the sectors of activity was the Government Decision no. 1260/2011 on the sectors of activity established under Law no. 62/2011[11].

---

[8] According to art. 41, para. (5) in the Constitution of Romania, the right to collective labour bargaining and the binding force of collective agreements are guaranteed.

[9] Under these circumstances, it is interesting to point out that the bill was filed with the Chamber of Deputies as early as 2013.

[10] See Memorandum of reasons for the bill ammending and supplementing Law no. 62/2011 on social dialogue, http://www.cdep.ro/proiecte/2013/400/60/0/em788.pdf.

[11] Published in *The Official Gazette of Romania*, Part I, no. 933/29.12.2011.

Currently, the sectors of activity are defined as the sectors of the national economy which are established by the National Tripartite Council, and they are approved by Government decision.

The amendment was meant to change the way in which the sectors of activity are established, by involving the National Tripartite Council in this process. This institution – the result of the formalized social dialogue – is an advisory body to the social partners at national level. It is composed of (in accordance with art. 76 of Law no. 62/2011):

− presidents of nationally representative confederations of employers and unions;

− government representatives, appointed by the Prime Minister's decision, at least at the level of secretary of state, from each ministry, as well as from other public sector bodies, as agreed with the social partners;

− the representative of the National Bank of Romania, the chairman of the Economic and Social Council and other members agreed with the social partners.

The National Tripartite Council is chaired by the Prime Minister, and its deputy is the Minister of Labour, Family and Social Protection.

The main tasks of the National Tripartite Council are:

− providing consultation framework for setting the minimum wage guaranteed for payment;

− discussing and analyzing projects for programs and strategies, developed at government level;

− developing and supporting the implementation of strategies, programs, methodologies and standards in the field of social dialogue;

− resolving social and economic disputes through tripartite dialogue;

− negotiating and signing agreements and social pacts, as well as other arrangements at national level and monitoring their implementation;

− analyzing and, where appropriate, approving requests for extending the application of collective bargaining agreements at sectoral level for all the companies in the respective activity sector.

Besides these tasks, the National Tripartite Council is also supposed to establish the activity sectors, which is meant to ensure a better delimitation of these negotiation levels, based on the needs of the social partners who are directly concerned.

2. Art. 24 read as follows: "Dues paid by union members are deductible provided they do not exceed 1% of their gross income, according to the Tax Code".

Currently, art. 24 reads: "(1) At the request of and in agreement with the trade union members, employers will withhold union dues on the union members' monthly payrolls and they will transfer union dues to the union account. (2) Dues paid by union members are deductible, provided they do not exceed 1% of their gross income, according to the Tax Code".

Dues paid by union members represent the main means of financing the activities of trade unions. For this reason, the collection of union dues directly by the employer by withholding and transferring the respective amounts is an advantage for trade unions since, when the employer pays the employees' wages, the trade union will get the union dues paid by their members. In this way, trade unions will no longer need to dedicate a part of their activity to collecting union dues from their members, which might prove a difficult process, as it involves allotting important human and material resources.

3. a) In order to regulate the association forms for trade unions, art. 41 of Law no. 62/2011 was supplemented with a new paragraph numbered (5), reading as follows: "A union may be affiliated to only one trade union federation, at national level. Also, a trade union federation may be affiliated to only one trade union confederation, at national level."

In this manner, a frequent problem in the activity of trade unions – in the past, many of these organizations opted for dual affiliation – was solved. Such an option is no longer possible, as only one affiliation for both unions and union federations is now permitted.

If a trade union affiliated to a trade union federation, or a union federation affiliated to a trade union confederation opts for a new affiliation, to another federation or confederation, it is considered that, by this manifestation of will, the former affiliation to the previous federation or confederation will cease *ipso jure*.

b) The solution was symmetrically regulated for employers' organizations: under the newly introduced paragraph (4^1) of art. 55 of the Law, "an employer may be affiliated to only one employers' federation, at national level. Moreover, an employers' federation may be affiliated to only one high ranking employers' confederation."

4. The main modification made by Law no. 1/2016 refers to the representation of parties in negotiating and concluding the collective bargaining agreement. In this point of law, art. 134 of Law no. 62/2011 read as follows:

"The parties of the collective bargaining agreement are the employers and the employees, who are represented in the negotiations as follows:

A. on behalf of the employers:

a) at business level, by its management body, established by law, articles of association or functional regulations, as applicable;

b) at business group level, by employers who have the same main object of activity, according to NACE code, being set up voluntarily or under the law;

c) at the level of the sector of activity, by the employers' organizations, legally constituted and representative under this law.

B. on behalf of the employees:

a) at business level, by the trade union, legally constituted and representative under this law, or by the representatives of the employees, as applicable;

b) at business group level, by trade union organizations, legally constituted and representative at the level of the businesses, members to the group;

c) at the level of the sector of activity, by trade union organizations, legally constituted and representative under this law. "

Currently, art. 134 reads:

"The parties of the collective bargaining agreement are the employer or the employers' association and the employees, by trade union organizations, represented as follows:

1. The employer or employers' organizations:

a) at business level, by its managing body, established by law, articles of association or functional regulations, as applicable;

b) at the level of sector of activity and business groups, by employers' organizations, legally constituted and representative under the law;

c) at the level of budgetary institutions, public authorities and institutions which have authority over or coordinate other legal persons employing workforce, by the manager of the institution, the managers of the public authorities and institutions respectively, as applicable, or by managers of public institutions and authorities, where appropriate, or by *de jure* deputies thereof;

d) at the level of the sector of budgetary activity, by the legal representative of the competent central public authority.

2. Employees:

a) at business level, by legally constituted and representative unions. If the union is not representative, representation is made by the federation to which the union is affiliated, if the federation is representative for the sector to which the business belongs; in situations where there are no unions by the elected representatives of the employees;

b) at the level of the business groups and the sectors of activity, by trade union organizations, legally constituted and representative under the law;

c) at the level of budgetary institutions, public authorities and institutions which have authority over or coordinate other legal persons employing workforce, by the trade union organizations, representative under the law."

The amendments are mainly aimed at the following aspects:

a) In the case of employers:

- the normative solution concerning the representation of employers at the level of both the business group and the sectors of activity is correlated with the current solution for establishing the sectors of activity (which no longer necessarily relates to the same main object of activity, according to NACE code);
- for the first time, the manner of representation of employers who have the status of budgetary institution or public authority or institution, which has authority over or coordinates other legal persons employing workforce, was expressly regulated (the representation function being assigned to the manager of the institution, the managers of public authorities and institutions respectively, as applicable, or *de jure* deputies thereof);
- moreover, for the first time, the manner of representation of employers belonging to the level of the sector of budgetary activity was expressly established (the representation function being assigned to the legal representative of the competent central public authority).

b) In the case of employees:

- the rule referring to the uniqueness of the trade union representativeness at the level of the employer was repealed; currently, the legal text refers to "representative trade unions" (the plural is used), a circumstance that is likely to allow the existence of two or more representative unions with the same employer;
- as far as the representativeness of the union constituted at the employer's level, at present this status can be obtained just as previously, by meeting the condition of the minimum number of members (at least 50% + 1 of the total number of employees of the respective employer); however, under the current wording, art. 134 para. B(a) states that unless the union is representative, representation is made by the federation to which the union is affiliated, if the federation is the representative at the level of the sector the business belongs to. Thus, the text seems to introduce a *sui generis* form of representativeness, by means of the loan which the union takes out under these circumstances from the federation to which it is affiliated;
- at the level of budgetary institutions and public authorities and institutions, which have authority over or coordinate other legal persons employing workforce, the employees' representation is made by trade union organizations representative under the law.

Unfortunately, the lawmaker has not solved *de plano* the issue of representativeness (as, indeed, it was stated in the memorandum of reasons accompanying the bill), keeping the solution provided by art. 51 (1) (C) (c) of Law no. 62/2011, referring to the necessity of the representative union to have at least half plus one of the employees of the business as members.

5. For certain special categories of employers, art. 138^1 of Law no. 62/2011, newly introduced by Law no. 1/2016 provides the following solutions:

− collective bargaining agreements are also negotiated at the level of autonomous administrations, state-owned companies, assimilated as business groups, as well as at the level of public authorities and institutions, which have authority over or coordinate other legal persons employing workforce. In the case of public authorities and institutions, which have authority over or coordinate other legal persons employing workforce, the collective bargaining agreement is concluded between the manager of the public authority or institution and the unions legally constituted and representative, under the law;

− in the collective bargaining agreements concluded at the level of the sector of activity, for the employees belonging to the budgetary sector, the parties will expressly establish the ways of negotiating the collective bargaining agreements at the level of public authorities and institutions, which have authority over or coordinate other legal persons employing workforce, authorities/institutions being under coordination or subordination with central public authorities.

IV. Conclusion

It is obvious that the legislative intervention enacted by Law no. 1/2016 does not solve the fundamental problems that Law no. 62/2011 generated in the regulatory field of social dialogue. Major shortcomings, ambiguities, contradictions, which hinder the enforcement of the law, still remain and duly occur.

Nevertheless, we consider that the adoption of Law no. 1/2016 represents a first step towards normalizing the regulation of the institution of social dialogue, so necessary for fostering social peace between the parties involved in employment relationships.

MODERNIZING THE PRIVATE LAW. SOME KEY ISSUES IN THE RECENT DRAFT OF THE SPANISH COMMERCIAL CODE

Dan VELICU[*]

Abstract

The last decades were dominated by the idea that an authentic process to modernize the private law means generally the unification of it by renouncing the distinction between civil and commercial law. A few European countries and some American states or provinces followed this path of the unification.

However, beyond the will to change and improve the system one may reflect if this kind of modernization is actually really proper.

Of course, there are lots of reasons for unification and reasons against it. Is there a possible and real alternative to this wave of unification?

The draft of the Spanish commercial code could be a beginning point in order to settle this controversy.

For the first time, the lawmakers are trying to replace the actual code with a new modernized one without renouncing the above mentioned distinction.

Without claiming that we have entirely analyzed the topic, we propose a brief critical presentation of the major key issue of the draft.

Keywords: *commercial code, Spanish law, codification, entrepreneurship, specific contracts.*

1. Introduction

On 30 May 2014, the Council of Ministers of Spain approved the Commercial Code draft as it was proposed by the ministers of Justice and Economy.

The *anteproyecto* have been prepaired since 2006 by the General Codification Committee and has suffered some alterations, containing at that moment about 1,726 articles.

Its authors compiled and updated commercial laws in force today, and regulated other matters that lacked legal regulation up to now, beeing obvious that the Commercial Code from 1885 is not very up to our day.

As we may intuit the draft contains more institutions and rules as compared to the actual code and many of them were in fact improved and transfered from the special laws or were elaborated for the first time.

As time and space don't permit us to make an exhaustive analysis, we shall try to extract and comment on short some of the main institutions that are relevant, in our opinion, as modenization factors of the future Spanish commercial code.

That's why we have choose in the frame of a preliminary analysis the criteria of commerciality, the concept of entrepreneur and as a consequence the enterprise, the introduction of the concept of hardship – related to the well-known *theorie de la imprevision* – and, finally the regulation of some new specific contracts.

2. The criteria of commerciality

The actual *anteproyecto* maintains the same two criteria of commerciality of the actual Code[1].

Therefore, it maintains the principle that the commercial transactions are governed by the commercial code whether carried out by people having or not having the status of merchant[2].

What seems to be an innovative element consists in offering priority to the subjective criterion.

In that sense, the article 001-2 – which is entitled *Ámbito subjetivo* – states that the provisions of the code are generally applicable to all persons called "operadores del mercado".

Who are these "operadores del mercado"?

First of all, as the text clearly points, these are – as we may intuit – "los empresarios" in short, the entrepreneurs.

So, at this point, we have to retain that the traditional concept of "merchant" was substituted with the more economic one, that of the entrepreneur.

Secondly, "operadores del mercado" are also "las personas físicas que ejerzan profesionalmente y en nombre propio una actividad intelectual, sea científica, liberal o artística, de producción de bienes o de prestación de servicios para el mercado".

[1] See the articles 631 and 632 as traditional model in the Napoleonic *Code de commerce*, (Paris: Didot, 1807), 158. See also in the frame of the French doctrine George Ripert and René Roblot, *Traité elementaire de droit commercial*, I, (Paris: Librairie Generale de Droit, 1974), 32-33.

[2] Regarding the status of merchant see the actual article L121-1 of the French commercial code: Sont commerçants ceux qui exercent des actes de commerce et en font leur profession habituelle. See also René Rodière and Roger Houin, *Droit commercial*, I, (Paris: Dalloz, 1970), 51.

Practically, the rule includes in this large socio-professional sector every person who provides various products or services to the public.

Thirdly, in the same way, we have to add to both categories the non-lucrative organizations defined as "personas jurídicas que, aun no siendo empresarios y con independencia de su naturaleza y objeto, ejerzan alguna de las actividades expresadas en este artículo" together with the actors without juridical personality implied in the above mentioned activities on the market or "los entes no dotados de personalidad jurídica cuando por medio de ellos se ejerza alguna de esas actividades".

Regarding the concept of the "empresarios" the article in analysis defines these primarily as "personas físicas que ejerzan o en cuyo nombre se ejerza profesionalmente una actividad económica organizada de producción o cambio de bienes o de prestación de servicios para el mercado, incluidas las actividades agrarias y las artesanales".

Therefore, an entrepreneur could be considered any individual who works or in whose name somebody is professionally engaged in an organized economic activity regarding the production or change of goods or provision of services **offered on the market, including agricultural and artisanal activities**.

Obviously, all the juridical persons having one or more of the above mentioned activities as the commercial societies, no matter their activity, will be considered entrepreneurs.

Finally, as an exception, all societies which are not created according to the Spanish law, but are acting in Spain, in the same way, will be considered also entrepreneurs.

The objective criterion was retained by the article 001-3 entitled *Ámbito objetivo*.

According to this there are three hypothesis when the commercial relation is ruled by the commercial code even if that is carried out by people not having the status of "operador del mercado".

The first hypothesis takes into account all the acts and contracts which involves an "operador del mercado", when the content of the act or fact supposes one of the above mentioned activities.

The second hypothesis regards the acts and contracts which are considered by the code as commercial because of their substance while the third hypothesis placed under the commercial law the acts related to the competition law.

However, all this rational mechanism in order to identify the applicable law is limited when the act or fact involves a person as consumer and the consumers' legislation will have priority on the commercial code.

Regarding the relation between the civil law and the commercial code the authors of the *anteproyecto* have maintained the traditional principles that the rules of the commercial code have suppletory function and the commercial code will be completed if necessary with the commercial customs.

3. The entrepreneur and the enterprise

Another concept to take into analysis is that of entrepreneurship. It is known that in the frame of modern civil codes the replacing of the traditional concept of "merchant" by the economic concept of "entrepreneur"[3] was followed by the introduction also of the key concept of the "enterprise"[4].

On this way, the article 131-1 of the draft states that "la empresa es el conjunto de elementos personales, materiales e inmateriales organizados por el empresario para el ejercicio de una actividad económica de producción de bienes o prestación de servicios para el mercado".

In other words, the "enterprise" supposes a set of elements – personal, tangible and intangible – organized by the entrepreneur in order to develop an economic activity which consists in producing goods or services destinated to the market.

Practically, in a redundant way, the authors of the draft considered the "enterprise" as the organization of the manpower and the means of production.

The following text, the article131-2 points that not only the goods as means of production or the inherent right on them but also the juridical relations or facts of the entrepreneur and the goodwill are part of the "enterprise": "Integran la empresa los bienes y derechos afectos a la actividad empresarial, las relaciones jurídicas y de hecho establecidas por el empresario para el desarrollo de dicha actividad y el fondo de comercio resultante de la organización de los elementos anteriores".

The article 131-3 defines the place of business or *establecimiento mercantil* which is formed by properties and facilities used by the entrepreneur.

Of course, the draft points also a normal distinction between the principal place of business and all other forms of representation (branch offices). According to the article 131-3 – *Establecimiento principal y sucursal* – "se considera establecimiento mercantil principal el lugar donde el empresario ejerce la dirección efectiva de su actividad económica, y centraliza la gestión administrativa". The same paragraph defines branch office as "el establecimiento secundario dotado por el empresario de representación permanente y de autonomía de gestión a través del cual se desarrollan total o parcialmente las actividades de la Empresa".

[3] See article 2082 of the Italian civil code.

[4] See Gustavo Minervini, *L'imprenditore. Fattispecie e statuti*, passim; Massimo Montanari, *Diritto Commerciale*, I, (Milan: Giuffrè, 2001), 7-40. Also the Italian supreme court explied recently the concept of entrepreneur. See decision no. 16612/19.06.2006 published in *La giurisprudenza sul Codice civile coordinata con la dottrina*, (Milan: Giuffrè, 2012) 21.

Obviously, the entrepreneur will assume all responsibility for the action of his employees deployed in anyone of his establishments (para. 2) and the headquarters as the branch offices have to be mentioned in the *Registro mercantil*.

4. The concept of hardship and its principal efects

As it is known the concept of hardship in common law or the theory of imprevision in the continental private law seems to take advantage on the principle *pacta sunt servanda* even if there are national systems - like the French one - which are refusing in accepting it.

The necessities and the volatility of the commercial relations on long terms determined the lawyers to reflect on the vivacity of the the clause known even in the public law of the Medieval Age as *rebus sic stantibus*[5].

The theory was received by the Italian civil code of 1942[6] and spread after the World War II also in Germany under the profile of the *Wegfall der Geschäftsgrundlage* and also in other countries or in the international commercial relations. Even the Convention on the International Sale of Goods (CSIG) didn't received it in 1980, the UNIDROIT principles 2003 version received it in the content of the article 6.2.2.

The Spanish courts received it but in a very restricted manner[7].

In the context of the last wave of globalization seems normal that the theory be received even in the comercial relations between national subjects.

As a consequence, there is no surprise that the authors of the draft received the theory and inserted in the chapter VI – *De la extinción y excesiva onerosidad* – rules regarding the effects of the hardship state.

According to the article 416-2. *Excesiva onerosidad del contrato* the person who suffered an event qualified as hardship has the traditional option between modifing the contract – if the counterpart agrees – or to provoke the extinction of the contract without any damages.

The first paragraph defines clearly the efects: En caso de excesiva onerosidad sobrevenida, la parte perjudicada no podrá suspender el cumplimiento de las obligaciones asumidas, pero **tendrá derecho a solicitar sin demora la renegociación del contrato, acreditando las razones en que se funde.**

Si no se alcanzara un acuerdo entre las partes dentro de un plazo razonable, cualquiera de ellas **podrá exigir la adaptación del contrato para restablecer el equilibrio de las prestaciones o la extinción del mismo** en una fecha determinada en los términos que al efecto señale.

The second paragraph defines the contexto or the state of hardship if we use the English legal concept: "Se considera que existe onerosidad sobrevenida cuando, **con posterioridad a la perfección del contrato**, ocurran o sean conocidos **sucesos que alteren fundamentalmente el equilibrio de las prestaciones, siempre que esos sucesos no hubieran podido preverse por la parte** a la que perjudiquen, escapen al control de la misma y ésta no hubiera asumido el riesgo de tales sucesos".

5. The option to terminate the contract as an exception case

Beyond the hipothesis of the act of God (or *force majeure*) or hardship the draft states another possibility to terminate the agreement without damages if there is an obvious risk that one party not fulfill its main obligation.

In the terms of article 417-1. *Conducta ante el temor fundado de incumplimiento*, "cuando exista un riesgo notorio de incumplimiento esencial del contrato por una de las partes y ésta no cumpla ni preste garantía adecuada de su cumplimiento, la otra parte podrá resolver el contrato".

6. New specific contracts

In the field of the specific contracts regulation, at first sight, three innovations seem to be relevant for a comparative scientific research.

First of all, some contracts which were traditionally considered as civil contracts were replaced in the frame of the draft.

A visible example is the contract for work on goods either the building contract.

The concept is promoted by the article 521 which states as follows: "Por el contrato mercantil de obra por empresa el contratista, que deberá ser un empresario o alguno de los sujetos contemplados en el artículo 001-2 de este Código, se obliga frente al comitente a ejecutar una obra determinada a cambio de la prestación convenida o, en su defecto, de la que resulte de los usos" (para.1).

The second paragraph explains that the "obra" – or work litteraly – means "la construcción,

[5] See in this sense the pioneer work of Giuseppe, Osti, "La cosi detta clausola rebus sic stantibus", *Rivista del diritto civile*, 4, (1912): 1-50, Candil, *La clausula rebus sic stantibus*, (Madrid, 1946) passim. To make distinction to other institutions see Manuel García Caracuel, *La alteración sobrevenida de las circunstancias contractuales,* 282.

[6] See article 1467.

[7] See Susana Quicios Molina, "La ineficacia contractual", in *Tratado de los contratos*, ed. Rodrigo Bercovitz Rodríguez-Cano et al. (Valencia: Tirant lo Blanch, 2009), 1376. The author gives as examples the several decisions of the supreme court: that of 15.11.2000 (Repertorio jurisprudencial Aranzadi, 9214) and that of 10.02.1997 (Repertorio jurisprudencial Aranzadi, 665).

reparación o transformación de una cosa, así como la consecución, por cualquier medio o actividad, de otro resultado convenido por las partes", that is to say the construction, repairement or conversion of one thing, and the achievement, by any means or activity, other outcome agreed by the parties.

We have to observe that, on one hand, in order to aplly the special rules, the contractor must have the status of the entrepreneur, and on the other hand, the definition does not suppose as compensation the payment of money.

In the same direction, the article 531 para. 1 defines the agreement in order to provide services as a contract which supposses that "el prestador, que deberá ser un empresario o alguno de los sujetos contemplados en el artículo 001-2 de este Código, se compromete a realizar, a cambio de una contraprestación en dinero, una determinada actividad destinada a satisfacer necesidades de la otra, el ordenante".

Secondly, the draft, as I have mentioned above, regulates new specific contracts.

As it is obvious, some of these contracts are in fact contracts world wide known as the license contract, the discount bank contract or the factoring.

On short, according to the article 536 para. 1, "por el contrato de licencia, el titular de un derecho sobre un bien inmaterial, denominado licenciante, autoriza a un tercero, denominado licenciatario, para utilizarlo o explotarlo durante un tiempo determinado a cambio de un precio, manteniendo el licenciante la titularidad del derecho".

The discount banking contract is regulated by the article 577 para. 4 as follows: "Por el contrato de descuento un empresario, el descontante, abona el importe de un crédito dinerario no vencido al operador de mercado titular del mismo, el descontatario, a cambio de los intereses y comisiones pactados y de la cesión salvo buen fin del crédito descontado".

We must emphasis that it is a very important choice to regulate the discount banking contract in order to make distinction to the traditional credit transfer but also the fact that the definition has retained the well known clause "salvo buen fin". This clause has as purpose the protection of the party who receive the credit – the transferee – when at the date of payment the debtor doesn't pay the money or is insolvent[8]. In that very case the receiver of the credit will have the right to ask the return of the money – and in our opinion with interest – from the initial creditor.

Unfortunately, as we have point in other occasion[9], the actual Romanian civil code failed to regulate such an important banking contract despite the extension of the special chapter which covers the banking contracts.

Finally, the article 577 para.10 defines the factoring agreement as a contract through which un "operador de mercado", "el proveedor, se obliga a ceder uno o varios créditos de los que sea o pueda ser titular en el futuro, a un empresario el factor, que, a cambio de los intereses y comisiones que se pacten, asume respecto de los créditos cedidos, la gestión de su cobro de los créditos, pudiendo también asumir las obligaciones siguientes:

a) Financiar al proveedor.

b) Asumir el riesgo de insolvencia de los deudores".

More, according to the rule the factor could assume more obligations: "Asimismo el factor podrá asumir otras obligaciones tales como la llevanza de la contabilidad, realizar estudios de mercado o investigar y seleccionar la clientela".

Another innovative choice consists in regulating the so called financial contracts or "los contratos financieros".

The article 571 para. 1 states that these have as material object an amount of money and as purpose the financing another person, in direct or indirect way, with a financial compensation: "Son contratos financieros aquéllos por los que, teniendo por objeto una cantidad o suma de dinero de curso legal, en adelante suma monetaria, una o ambas partes conceden o facilitan a la otra directa o indirectamente financiación monetaria en la forma, plazo o términos que estipulen, a cambio de un precio".

Relevant for the modernization processus can be considered the regulation of some contracts related to the improvement of the technology.

On one hand, art. 532-2 regulates the contract that supposes providing means of electronic communications. According to article mentioned above "por el contrato mercantil de servicio de comunicación electrónica el prestador, a cambio de una remuneración, se obliga frente al cliente a suministrarle el acceso a la red pública de comunicaciones electrónicas para la transmisión de datos o información".

On the other hand, according to the article 532-12 "por el contrato de alojamiento de datos el prestador, a cambio del pago de una remuneración, se obliga frente al cliente a poner a su disposición una determinada capacidad de almacenamiento en un sistema de información bajo su control, a conservar los datos o la información almacenados,

[8] See Fatima Lois Bastida, El contrato de descuento, 692. See also Joaquin Garrigues, Contratos bancarios, p.285-6 and Garcia-Pita y Lastres, El Contrato bancario de descuento, Contratos bancarios, (Madrid, 1992) 727,735.

[9] See Dan Velicu, "Los contratos bancarios en el nuevo Código Civil rumano. Un análisis crítico de la reciente reforma" in *Revista Electrónica de Derecho de la Universidad de La Rioja* (11, 2013), 147.

así como, en su caso, a permitir el acceso de terceros a los mismos en las condiciones pactadas en el contrato o, en su defecto, conforme a lo previsto en el presente Código o en disposiciones especiales".

Finally, the draft retains also the definition of the "contrato de publicidad", which supposes that "un anunciante encarga a una agencia de publicidad, mediante una contraprestación, la ejecución de publicidad y la creación, preparación o programación de la misma".

3. Conclusions

It is obvious as we have anticipated that a complete and matured analysis of draft is impossible taking into account the time or the space we dispose and also the length of the draft.

On short, we have tried to mention only some key concept which can be very useful in every debate on the modernization or the reform of the commercial legislation.

The Spanish draft is, in our opinion, a good example which proves that it is possible to reform or modernize the commercial code without renouncing to the dualistic character of the private law.

As a preliminary observation, we consider that the draft offers a more coherent system and vision in comparison with the Romanian reform, conclusion that doesn't mean the draft has to be considered perfect as never a code was and never will be.

ROLE OF THE INSOLVENCY ADMINISTRATOR AND OF THE OFFICIAL RECEIVER IN THE DYNAMICS OF THE CONTRACTS OF DEBTOR IN INSOLVENCY, IN THE REGULATION OF THE INSOLVENCY CODE

Eugenia VOICHECI[*]

Abstract

On 25 June 2014, the Law no.85/2014 was published in the Official Gazette, that sets forth the rules in the field of preventing insolvency and in the insolvency field itself.

A special attention needs to be paid on to the insolvency administrator and the official receiver, deemed by the doctrine in the former doctrine and in the former regulation, as participants in the insolvency procedure participants in the insolvency procedure.

This study does not aim to make an exhaustive inventory of the tasks of the duties of the two participants in the insolvency procedure.

This study starts from the premises that the insolvency procedure targets the covering of the debtor liabilities, by granting, where possible, the chance of redressing its activity.

It starts from an evident ascertainment: namely that, on the date of initiating the insolvency procedure, the debtor's activity is not interrupted ex abrupto and finally, that it may continue during the observation time, during the reorganization period and even after falling bankrupt.

Or, an ongoing activity implies the development of some previously concluded contracts, their denunciation and even the conclusion of some new contracts. Therefore, during the procedure, such dynamics of the debtor contracts is vitally important.

In the doctrine focused on the former regulation, the two participants in the procedure were deemed as "justice attorneys", and in this recent doctrine they were appreciated as "justice representatives".

This study proposes also another approach of the quality of representative of both participants in the procedure, an approach that would emphasize the legal relationships between the insolvency administrator and the official receiver, on one hand and the debtor in insolvency, on the other hand.

On other words, the study wants to emphasize where the insolvency administrator and official receiver, depending on the incumbent legal tasks, in relationship with the debtor.

Keywords: *Insolvency Code, debtor, opening the insolvency procedure, insolvency administrator and official receiver, contracts.*

Introduction

The study proposes an incursion in the matter of insolvency, as it is defined by the Law no. 85/2014 concerning the insolvency prevention procedures and the insolvency, regarded from a constructive perspective, respectively from the point of view of the contracts that ceases, continues to develop or is concluded during these procedures.

The importance of the study resides in the analysis of the role of the two practitioners in insolvency in the contracts' dynamics, as well as of the way in which their position is towards the debtor, the creditors, towards the third parties in the procedure, as well as towards the syndic judge, such a specific research being somehow faulty at this time in the specialty doctrine.

The analysis will consider an examination of the duties of each practitioner in insolvency, depending on the stages of the procedure, an examination of the institution of representation in the contractual and procedural matter, of the institution of the consent and of the company's will, as well as an examination of the authority relationship between the participants in the procedure in the contracts' dynamics.

This study topic is not found as being and examination subject in the specialty literature. It is unquestionable that both in the conditions of the Law no. 64/1995, and in the conditions of the Law no. 85/2014, the doctrine was concerned in details to emphasize the rile of the insolvency administrator and of the official receiver in the insolvency procedure, a particular and quasi-unanimous emphasis being put on the inventory of the legal tasks that fall upon them.

It must be underlines, under such aspect, the weight of the works representing comments on articles or annotations to the Insolvency Code[1].

To an equal extent, there are studies that deal with the matter of the participants in the insolvency procedure and that focuses mainly also on the inventory of the duties of both participants in the insolvency procedure[2], as there are individual studies relating to the liability of the participants in the insolvency procedure.[3]

There are not, however, as far as we know, studies that would concentrate over the matter which we approach and that would emphasize particularly the role of the insolvency administrator and of the official receiver in the current contractual nexus in the insolvency procedure, raising multiple and particularly complex problems in this critical period of the debtor and that presents interest both for the debtor that tend to rehabilitate and to obtain the reinsertion in the economic circuit, and for the creditors motivated by the acute imperative of covering the unpaid debts.

The study will attempt to underline to what extent the practitioners in the insolvency designated in the procedure may be deemed representative of debtor, of creditors or justice attorneys as well as the multivalence of their activity in the procedure, as it will try to emphasize the degree of autonomy of their activity in the fulfilment of the legal provisions or as established by the syndic judge.

The content itself

General considerations over the insolvency prevention procedures and over the insolvency, over the bodies that apply the procedure and over the participants in the procedure.

The Law no. 85/2014 regulates the insolvency prevention procedures and the insolvency applicable to debtors mentioned in the art. 3 of the Law, corroborated with the art. 3 para. 2 Civil Code.

Insolvency prevention procedures are regulated in the Title I of the Law and are applicable to debtors that are found in financial difficulty, as it is defined by the art. 5 point 27 of the Law no. 85/2014. Art. 6 of the Law no. 85/2014 do not provide, as a condition for the enforcement of these procedures, the existence of the debtors' insolvency state.

The insolvency prevention procedures are the ad-hoc mandate and the arrangement with creditors.

According to the provisions of the art. 10 para. 1 and of the art. 23 para. 1 of the Law no. 85/2014, the ad-hoc attorney and the administrator appointed by the arrangement with creditors are proposed by the debtor and appointed by the Court President, respectively by the syndic judge, between the practitioners in insolvency certified according to the law. These legal provisions are fully compliant with the provisions of the art. 1 of GEO no. 86/2006, providing that the insolvency procedures, voluntary winding up procedures, as well as the insolvency prevention procedures provided by the law, including the financial supervision measures or special administration measures, are led by compatible practitioners in insolvency.

The insolvency procedure applies to debtors in insolvency, as it is defined in the art. 5 point. 29 of the Law no. 85/2014 and is regulated by the Title II of the same regulating act.

Law no. 85/2014 refers to the bodies that apply the procedure and to participants in the procedure in the Title II – Chapter I – Section II, without defining them, limiting to listing them and stating over their role, rights and duties in different stages of the procedures.

A part of the doctrine's opinions[4] were expressed in the meaning that the bodies enforcing the procedures are the courthouses, syndic judge, insolvency administrator and the official receiver. This appraisal is in accordance with the provisions of the art. 40 para. 1 of the Law no. 85/2014.

Other authors deemed[5], expressly or implicitly, that the bodies enforcing the procedure are part of the generic category of participants in the procedure, their relationship being from species to gender.

We appreciate as grounded the first opinion. Although the legal text quoted above don't make a firm distinction between the bodies enforcing the procedure and the participants in the procedure, none of them include the bodies enforcing the procedure in the category of participants in the procedure, but on the contrary, a clear dichotomy operate between the two categories.

In addition, it is ascertained that the provisions of the art. 40 para. 1 of the Law no. 85/2014 lists distinctly the bodies that enforce the procedure, while the title of the Section II represents a juxtaposition of the two categories, without making reference to "other participants in the procedure", as it is retained by the doctrine, an expression that

would bind us to include the bodies enforcing the procedure in the category of the participants in the procedure.

An additional argument for supporting this orientation is grounded on the provisions of the art. 180 of the Law no. 85/2014, that, providing the discharge of any duties and obligations at the closing of the procedure for the syndic judge, the practitioners in insolvency and the assisting persons, marks undoubtedly the difference between the bodies enforcing the procedure and the participants in the procedure.

In conclusion, we appreciate that the Title II – Chapter I – Section II of the Law no. 85/2014 sets forth a clear difference between the *bodies enforcing a procedure* – that are the legal courts (court of law, syndic judge and the court of appeal), the insolvency administrator and the official receiver – and the *participants in the procedure* – that are the debtor through the special administrator and the creditors by the creditors meeting and the creditors meeting.

Insolvency administrator and official receiver –common general considerations

Provisions of the art. 1 of the GEO no 86/2006 concerning the organization of the activity of the practitioners in insolvency provide that the insolvency procedures, voluntary winding-up procedures, as well as the insolvency prevention procedures provided by the law, including the financial supervision measures or the special administration measures, are led by compatible practitioners in insolvency.

As a first remark over the mentioned legal text, we appreciate that the provision related to ”the management” of the procedure is, at least as concerns the insolvency procedure, not correlated in the text of the articles 2 and 3 of the Ordinance, where it is not provided that the insolvency administrator and official receiver lead to the procedure, but that they exercise tasks provided by the law or established by the courthouse, respectively *leads the debtor's activity* (s.n.) and exercises the activities provided by the law or those established by the legal court.

Law no. 85/2014 does not define the insolvency administrator and the official receiver. In addition, the provisions of this regulatory act makes reference to the official receiver (s.n.), while the art. 3 of GEO no. 86/2006 make reference to the receiver (terminology in accordance with the one used nowadays, in the Law no. 85/2006). Taking into account the principle of the law's supremacy, as well as that the Law no. 85/2014 represent the common law in the matter of insolvency and is subsequent to GEO no. 86/2006, we appreciate that the correct phrasing in terminological terms, is that of *official receiver*, that will be found in this entire study.

As it was also shown before, the Law no. 85/2014 does not have its own definitions for the insolvency administrator and nor for official receiver, the two practitioners in insolvency being defined, in exchange, by GEO no. 86/2006.

According to the provisions art. 2 of the GEO no. 86/2006, the insolvency administrator is the compatible practitioner in insolvency, authorized under the law, designated to exercise the duties provided by the law or established by the legal court, in the insolvency procedure, in the observation period and during the reorganization procedure.

Art. 3 of the GEO no. 86/2006 defines the receiver (hereinafter referred to as official receiver for the considerations mentioned above) as the compatible practitioner in insolvency, authorized by the law, designated to lead the activity of the debtor in the bankruptcy procedure, both in the general procedure, and in the simplified procedure, and to exercise the tasks provided by the law or those established by the legal court.

The legal text mentioned emphasized the two conditions which the practitioner in insolvency must fulfil mandatorily and indispensably, in order to be able to develop activity in one of the two mentioned qualities, conditions that, if analysed logically, refer to the authorization according to the law and to compatibility.

Law no. 85/2014 does not refer to any of the two conditions, and in the law silence, we deem that, as show also in the doctrine[6], that they must be checked according to the provisions of GEO no. 86/2006.

Thus, we deem that the fulfilment of the requirement of ”authorization according to the law” must be checked in relation with the provisions of the art. 30-35 of GEO no. 86/2006. Accordingly, we appreciate that the authorization must be made in accordance with the Statutes concerning the organization and exercising of the profession of practitioner in insolvency, issued by the National Union of Practitioners in Insolvency from Romania, entity that is a public utility legal person, autonomous and without lucrative purposes, with duties provided by the art. 46-48 of the Ordinance and that has self-regulating competence.

Similarly, we appreciate that the requirement of the compatibility of the practitioner in insolvency must be observed in relation with the provisions of the art. 27-28 of GEO no. 86/2006, that provide both cases of incompatibility themselves and interdictions of exercising the profession in certain situations and in front of certain courts.

It must be underlines the fact that, although the art. 2 and art. 3 of GEO no. 86/2006 refer to the

[6] Sărăcuț, Mihaela, op. cit., pag. 52-54.

duties established by the court of law, at least in the insolvency procedure, these legal provisions must be construed as making reference to the syndic judge, in consideration of the provisions of the art. 44 of the Law no. 85/2014, that provide that the distribution of causes, having as subject the procedure provided by this title (s.n. Title II Insolvency Procedure), to the judge designated as syndic judge is made randomly in a computerized system…[7]

Finally, as concerns the same legal texts examined previously, it is required also note that they contain a phrasing that is somehow inadequate, in connection with the obligation incumbent to each one of the two practitioners in insolvency. In real facts, both the insolvency administrator, and the official receiver must exercise also the tasks provided by the law, and those established by the syndic judge, they not being entitled to choose between the two types of tasks, that are, in this way, mandatory in equal extent. This aspect result from the interpretation of the provisions of the art. 58 para. 1 and 2, and of the provisions of the art. 63 of the Law no. 85/2014, legal provisions that don't confer to the practitioner in insolvency the right to choose between the duties established according to their legal and jurisdictional nature.

From this point of view, we appreciate that the text of the art. 2 and of the art.3 of GEO no. 86/2006 had to consecrate the obligation of the practitioner in insolvency to exercise their tasks provided by the law and (not **OR**) those established by the syndic judge.

The relationships between the insolvency administrator and the official receiver – on one hand– and the syndic judge, debtor and creditors – on the other hand.

In the fulfilment of the position and of the role for which they were designated, the insolvency administrator and the official receiver develops a specific and autonomous activity but which does not escape to the control exercised by the syndic judge and by the participants in the procedure.

Specific activity

This activity is circumscribed to the tasks conferred *in terminis* by the law – the art. 58 of the Law no. 85/2014 for the insolvency administrator and the art. 64 of the same regulatory act for the official receiver -, as well as to those established by the syndic judge.

Art. 58 para. 2 of the Law no. 85/2014 entitles the syndic judge to establish in duty of the insolvency administrator and other tasks besides those provided for by the para.1 of the same article, but excludes those from the sphere of these additional tasks those provided for the exclusive competence of the syndic judge, tasks provided by the art. 45 of the Law, which leads to the conclusion that the law ruler did not understand to delegate in favour of the insolvency administrator, even if they deem it to be a body enforcing the procedure, prerogatives of the ultimately judicial activity.

It is ascertained that the provisions of the art. 64 letter l of the same regulatory act, concerning the right of the syndic judge to establish also in the duty of the official receiver any other tasks that provided at the letters a-k ale of the same article, are no more excepted from the art. 58 para. 2 of the final thesis, that was referred to as previously.

We appreciate, however, that the interdiction of delegation to the official receiver of some strictly jurisdictional tasks is fully applicable also in case of this practitioner in insolvency for reason identity, Law no. 85/2014 not conferring to such practitioner a different status, but only tasks different from those of the insolvency administrator; consequently, it is applicable the legal principle of *ubi ratio, ibi semper solutio.*

The fulfilment of the legal tasks and of those set forth by the syndic judge must be made by the practitioners in insolvency in compliance with the following principles: the tasks must be achieved in compliance with the law, for the purpose for which the insolvency procedure was regulated, under managerial and optimal opportunity conditions, and considering the type of procedure that is developed.

There relevant under the aspect of conformity of the tasks with the law, the provisions of the art. 4 of the Law no. 85/2014, setting forth principles on which the insolvency procedure is based, these principles being imperiously necessary to be observed by the bodies enforcing the procedure and fully opposable to the participants in the procedure.

In addition, the provisions art. 182 of the Law no. 85/2014 are also relevant, regulating the matter of liability of the insolvency administrator and of the official receiver for exerting their duties with bad faith or with serious negligence, the two forms of guiltiness being related to the violations of the material or procedural law norms or to the faulty fulfilment of a legal obligation, that case the harming of a legitimate interest (para.1).

The same article provides in the second paragraph also the possibility of engaging the civil, penal, administrative or disciplinary liability of the insolvency administrator or of the official receiver for the acts performed during the procedure according to the common law regulations.

The conclusion that may be drawn by force of evidence is that, in the fulfilment of tasks that are conferred to them, the insolvency administrator and the official receiver must fully observe this law.

[7] For developments see Sărăcuț, Mihaela, quoted work, pages 34-35.

In the same way must be construed also the provisions of the art. 45 para. 2 thesis I of the Law no. 85/2014, providing that the tasks of the syndic judge are limited to the court control of the activity of the insolvency administrator and/or of the official receiver, which implies a control of legality, not of the opportunity of the measures adopted by these practitioners in insolvency.

Art. 45 para. 2 thesis II of the Law no. 85/2014 brings into first plan the managerial side of the activity of the two practitioners in insolvency, consisting of the decisions of opportunity which they adopt in connection with the activity of the insolvent debtor, the law text providing also here a type of control, this time coming from the creditors, through their bodies.

It must be underlines the fact that the activity which the insolvency administrator and the official receiver performs must be subsumed *ab initio and in* necessarily for the purpose for which the insolvency procedure was set up, as it is set forth in the art. 2 of the Law no. 85/2014: setting-up of collective procedures for covering debtor liabilities, by granting where possible, of a chance of redressing of its activity.

From the examination of the legal text involved, two ideas are depicted that constitute the same many imperatives for the activity of the two actors, whose activity we deal in this study: exercising the tasks which are incumbent thereto, must create the conditions of development of a collective procedure, to follow with priority the covering of the debtor liabilities, and to grant to the later, when the situation is favourable, the chance of redressing the activity, with the consequence of its reintroduction in the economic, commercial circuit.

In this context, the activity of these two practitioners in insolvency seems to have a difference nuance. Thus, if the purpose of exercising the incumbent tasks is the same– setting up of a collective procedure for covering the liabilities of the debtor in insolvency -, the insolvency administrator must observe also an additional imperative – granting of a change of redressing of the debtor's activity, when the analysis of its activity and of its patrimonial and financial state make possible such redressing.

That is why we appreciated that the fulfilment of the tasks incumbent to the two practitioners in insolvency must take into account also the type of procedure in which the debtor is and in which must be equally protected, of the situation allows it, both the creditors' interests, by covering the debtor's liabilities, and those of the debtor, when it is able to redress.

Autonomous activity, but not non – censorable

The insolvency administrator and the official receiver are free to appreciate the way in which they follow to develop their activity in the procedure, as they also have the initiative of the undertaken enterprises, depending on the assessment which they make in legal, economic and financial terms to the debtor's activity and to its patrimonial standing. Also, it may be asserted with fair grounds, that the activity of the practitioners in insolvency within the procedure is an autonomous one, that may be imposed but, which, following the exercised control a control mainly *a posteriori*), may be infirmed, therefore corrected.

It may be ascertained that the provisions of the art. 45 para. 2 of the Law no. 85/2014 contain the norm of principle, according to which the syndic judge exerts the legal control (n.n. of the legality of acts) of the activity of the insolvency administrator and of the official receiver, and the control of the managerial activity (n.n. opportunity control) is achieved by the creditors, by their bodies.

Also with value of norm of principle, it must be outlines also the provision of the art. 45 para. 1 letter j and m of the Law, that, interprets *per a contrario*, but also in corroboration with other legal provisions (*exempli gratia* art. 59 para.5, art. 111, art. 113 etc. of the Law), sets forth that the debtor, creditors or other interested persons may challenge the taken measures, as well as the reports drawn out by the insolvency administrator and by the official receiver.

Similarly, it must be shown also that the proposals formulated by the insolvency administrator or by official receiver of the starting by the debtor in procedure of the bankruptcy are not effect producing by themselves. According to the provisions of the art. 92 para. 3 and 4, that also the provisions of the art. 97 para. 4 and art. 98 of the Law no. 85/2014, these proposals are subject to the parties' debate, respectively to the approval by the creditors' meeting, and their validity is made by meeting passed by the syndic judge (art. 92 para. 5 and art. 98 para. 3 of the same regulatory act).

The control is not however unequivocally; at their turn, the insolvency administrator and the official receiver may request the censorship for reasons of illegality of the decisions of the creditors' meeting, through actions for annulment, under the conditions of the art. 48 para. 7 of the Law no. 85/2014, save the decisions by which they were appointed.

Equally, we appreciate that at least the insolvency administrator may censor those acts and operations undertaken by the debtor who was not taken off the management right – through the special administrator – by violating or exceeding the limits of the art. 84 and 85 para. 1 and 2 of the Law no. 85/2014, through actions for annulment, under the conditions of the art. 45 para. 1 letter i final thesis of the Law.

In conclusion, we deem that in the insolvency procedure there is a bi-univocal control of the actions undertaken by the bodies enforcing the procedure and of those of the participants in the procedure, with the mention that the decisions passed by the syndic judge may be strictly appealed by the legitimate procedural active persons, under the conditions and with the limits provided by the law for the judicial control.

Role of the insolvency administrator and of the official receiver in the dynamics of the contracts concluded by the debtor

The aforementioned presentation, although apparently ample developed, was deemed as necessary precisely in order to determine the position of the two practitioners in insolvency in procedure, of their role in this procedure and of the relationships in which they stand in relation with the courts of law and with the participants in the procedure.

The examining of the role which they play in the complex network of contracts concluded by the debtor in insolvency proves to be a challenge and implies a laborious action, that emphasize not only the multitude of contracts concluded before opening the procedure but also those that arise, develop and denounced during the procedure, as the capacity or on the contrary, a true incapacity of the debtor to manage them may outline.

It is of interest as well, the position in which the practitioner in insolvency stands in this dynamics of the contracts, respectively its capacity of representative of the debtor or of the creditor as well as the purpose aimed by him in his action to conclude, develop or denounce certain contracts.

A first relevant issue for choosing this topic consist in the multitude and variety of contracts that may be developed in the insolvency procedure.

As a first note, it must be underlined also the fact that the Law no. 85/2014 does not contain an inventory, not even illustrative, but the less exhaustive of the contracts of the debtor in insolvency.

A second note aims to the fact that a careful examination of the art. 5 of the Law no. 85/2014 outlines the multitude of contracts for which the law ruler felt the need of some definitions.

It is required to specify that the law ruler treated the contractual issue to which we refer exclusive for the situation in which a law subject, named debtor and being part of the categories especially provided in the art.3 of the law, is in state of financial difficulty, as it is defined by the art.5 pct.27 of the Law, or in insolvency, as it is defined by the art.5 point 29 of the same regulatory act.

By examining the Law no.85/2014 it may be concluded that the law mentions and in certain cases defines a series of contracts specific to the procedure, a part provided by special laws or by the common law, part proper for the insolvency prevention procedures.

From the first category, we remind the compensation agreement (netting), qualified financial contracts, bilateral compensation contract, service agreements, raw materials, materials or utilities contracts, guarantor agreement, other contracts concluded by the debtor (sale, leasing, labour contracts, service agreements, consignation agreements, etc.).

The second category also comprise the contracts specific for the insolvency prevention procedures.

For instance, specific for the procedure of ad-hoc mandate is the "understanding" (art.13 para.2) which the ad-hoc attorney proposed by the debtor and appointed by the president of the court, must be made between the debtor and one or more creditors of the later, in order to exceed the state of financial difficulty, of safeguarding the debtor, of keeping the jobs and covering the debts over the debtor. If the "understanding" is concluded, the ad-hoc mandate ends.

Analysing the art.13 para.3 of the Law no.85/2014 it may be concluded that the "understanding" made by the ad-hoc attorney has the vocation of representing in reality, a complex convention, similar to a redressing plan, as long as it is based on the proposals of the ad-hoc mandate in connection with remissions, spreading in instalments, or partial duty reduction, with the continuation or cessation of some ongoing contracts, with staff reduction or with any other measures deemed as necessary.

In the same way, specific to the other procedures of preventing insolvency is the conclusion of an arrangement with creditors, on the basis of the offer submitted and notified by the temporary administrator appointed under the arrangement with the creditors, approved by the creditors representing at least 75% of the value of the debts accepted and unchallenged and homologated by the syndic judge.

This arrangement with creditors having a status and value of contract results from the circumstances that the meeting of creditors may request taking of a specific penalty – termination - in case of failure of the debtor to observe the undertaken obligations, as well as from the analysis of the provisions of the art.36 of the law, referring *in terminis* to " the term provided for in contract".

The particular variety of the types of contracts provided by the Insolvency Code cannot have but one meaning: contracts are the economic instrument and the legal means indispensable both to redressing of debtors found in financial difficulty or in

insolvency, and also their winding up, that is why also this detailed regulation of contracts.

It is no less relevant that although the Law no. 85/2014 dos not clearly define the debtor subject to the insolvency procedure, as it was made by the Law no. 85/2006, from the corroborated analysis of the provisions at. 38, art. 52, art. 53, art. 54, art. 55, art. 67 para. 1 letter i – n, art. 68 etc. it results that there may be subject to the insolvency procedure the professionals who are freelancers or legal entities that must register in an advertising system, most of them being trading professionals. From here as well the variety and complexity of the contracts that must be managed in the procedure, being obvious that the trading activity is basically focused on contractual legal relations.

The approach of the issue of the contracts of the debtor in insolvency implies their grouping in two large categories depending on the time of opening the insolvency procedure: contracts concluded before opening the insolvency procedure and contracts concluded after that moment.

As concerns the contracts concluded before opening the insolvency procedure, it must be noticed that it is not taken into question the quality of representative or of supervising body of the practitioner in insolvency, such contracts being concluded by the debtor by statutory representative.

In this case, it must be considered also that the insolvency administrator or the official receiver may decide, in case that the debtor was not taken off the management right, if it maintains one or more contracts, of it /they may continue in the same terms, if the amendments of some clauses is required, may supervise the execution, but also may decide their assignment, or it may decide if the termination of denunciation is required.

With reference to the contracts concluded in the same period the practitioner in insolvency is entitle to submit actions for annulment under the conditions of the art. 117-122 of the Law no. 85/2014.

As concerns the contracts concluded after opening the insolvency procedure, it must be underlined that they may be concluded by the debtor through the special administrator, under the conditions of the art. 87 para.1 letter a of the Law no. 85/2014, if the debtor was not taken off the management right, by the debtor through the insolvency administrator, under the conditions of the art. 87 para. 1 letter b of the Law if the debtor's management right was taken off and by the debtor through the official receiver, in the bankruptcy procedure, when the debtor is mandatorily take off the management right.

Against the legal acts concluded by the debtor after opening the procedure, by the violation of the legal interdictions, the insolvency administrator and the official receiver may formulate an action for annulment, as it results from the interpretation *per a contrario* of the provisions of the art. 45 para. 1 letter i final thesis of the Law no. 85/2014.

We deem that understanding of the role of the practitioner in insolvency in relation with the competences that are granted thereto in the management of the contracts of the debtor must be approached in considering the quality of the representative of the debtor, which the law confers thereto, and on the other hand, in considering each operation undertaken in connection with these contracts.

Quality of representative of the insolvency administrator and of the official receiver

Preliminary, and of special importance, it is due to underline the fact that in the contents of the Law no. 85/2014 the law ruler speaks about the quality of the practitioners in insolvency of the debtor's representatives and never as creditors' representative.

The law does not make the difference– and nor we think that it would be necessary– between the procedural and material plans, and that is because the Law no. 85/2014 concerning insolvency prevention procedures and insolvency itself is, in its essence, a law of procedure.

In this study it is of interest only the quality of representative of the debtor acquired after the opening of the procedure, because before this time, it is absolutely clear that the representation cannot be but the statutory one.

In the suit proceedings, the attention is drawn by an unfortunate provision being ambiguous: according to the art. 41 para. 5 of the Law no. 85/2014, in litigations that were promoted based on the common law, after opening the insolvency procedure the summoning of the debtor is made at his registered seat and at the registered seat of the insolvency administrator/official receiver, without mentioning who is the representative through which the summoning takes place as procedural act. The legal text presents a significant minus compared to the former regulation contained in the art. 87 point 5 of the Code of civil procedure since 1865, that provided that the persons subject to the procedure are summoned through the administrator or as applicable through the official receiver, thus conferring to the practitioner in insolvency the quality of representative in the suit.

From the corroboration of the provisions of the art. 56 and art. 57 from the Law no. 85/2014 it results that, in case that, after opening the procedure, the debtor does not have his management right taken off, he has the quality of representative of the debtor, since the date of appointing of the special administrator in this situation ending the mandate of the statutory directors (art. 54 thesis II of the Law). Under the same issue, we have to underline that,

although the pre-quoted article makes general reference to the mandate of the statutory directors, it is relevant in the meaning of the analysis that it is taken into account inclusive the representation mandate granted to the statutory director/directors.

In relation to the provisions of Article 56(2) of the Law no. 85/2014, it is beyond any doubt that the insolvency administrator and official receiver have the capacity of representative of the debtor after the latter was withdrawn the right of administration.

The issue related to the involvement of the debtor in the management of the contracts concluded before the start of the procedure and not terminated after this moment, as well as to those concluded after the start of the procedure can be settled as the representation of this contracting party, namely they are managed and concluded by the special administrator when the right of administration was not withdrawn, and by the insolvency administrator, respectively by the official receiver when this right was withdrawn.

The issue is only apparently settled.

We emphasize, in the first place, that the issue of representation by special administrator is present only during the period of time during which the debtor benefits of the right to manage its activity, so that it is about only the competencies of the special administrator and those of the insolvency administrator, in the case of appointment of an official receiver, ceasing the mandate of the special administrator as the representative of the debtor.

By continuing the analysis, we must emphasize that the mandate of the special administrator is defined by Article 56(1)(d) of the Law no. 85/2014, providing that this representative of the debtor manages the debtor's activity under the supervision of an insolvency administrator, after confirming the plan, only if the debtor was not withdrawn the right of administration.

During the supervision period, pursuant to Article 87 of the Law no. 85/2014, the debtor, by the special administrator, may continue the performance of current activity and to make payments under the supervision of the insolvency administrator, if the debtor submitted a reorganization request and was not withdrawn the right of administration, and under the management of the insolvency administrator, if the was it was withdrawn the right of administration.

The analysis of the two legal texts identifies the fact that the right of representation granted to the special administrator is not pure and simple, but conditional on the surveillance performed by the insolvency administrator.

Current activities are defined by Article 5(1)(2) of the Law no. 85/2014, and the surveillance activity performed by the insolvency administrator is defined by section 66 of the same paragraph of the same article. This latter operation, as configured, involves that the insolvency administrator, after permanently analysing the debtor's activity, gives its approval related to the measures involving the debtor from patrimonial point of view, as well as those aimed to lead to its restructuring/reorganization.

The law does not provide *in terminis*, but the analysis of the abovementioned legal provisions leads to the firm conclusion that this is about an approval limiting the decision-making powers of the special administrator and rending useless its representation power, conditioning it on the approval of the insolvency administrator.

Fate of the insolvent debtor's contracts

As it was shown above, the insolvency administrator and official receiver have a right to life and death related to the contracts concluded by the debtor before the start of the insolvency procedure.

Pursuant to Article 123 and Article 129 of the Law no. 85/2014, the practitioners in insolvency appointed in the procedure can terminate contracts in progress.

Pursuant to Article 130 of the same law, they can request the liquidation of the debtor's rights being partner in an agricultural company, unlimited company, limited partnership, limited liability company or shareholder in a joint-stock company.

Pursuant to Article 123(5) of the Law, the insolvency administrator can, with the agreement of the co-contractors, change the clauses of the contracts concluded by the debtor.

Article 123(10) of the Law gives to the insolvency administrator the right to transfer, under certain conditions, contracts in progress concluded by the debtor to third parties.

Article 128 also gives to both practitioners in insolvency the right to refuse to fulfil certain obligations undertaken under contracts.

Even if there are no express provisions for this purpose, we consider that the insolvency administrator and official receiver have the right, at least in connection with the capitalization of the debtor's assets (as sale), to conclude contracts with third parties.

The only limitations of the quasi discretionary right to manage of the practitioners in insolvency, as representatives of the debtor, are those provided by Article 89(4) and (5) of the Law no. 85/2014, aiming the special case of certain types of contracts (qualified financial contracts, netting agreement, operations with qualified financial instruments).

Representation or… much less?

Analysing the provisions of Article 54 and Article 55 of the Law no. 85/2014 providing the cessation of the statutory directors' mandates and the suspension of the activity of the general assembly of partners/shareholders/members of the debtor entity, we deem that, in this case, it is not about a temporary or final transfer of the statutory powers of representation to the insolvency administrator or

official receiver, but a true transfer of the deliberative and executive attributes, after a true annihilation of the company's will, the legal entity's agreement, in the favour of the practitioner in insolvency.

This transfer is temporary or final, as the debtor in insolvency succeeds to finalize the reorganization plan and to re-enter the economic flow or ends in bankruptcy.

Conclusions

In this paper, we have tried to identify the role, functions and characteristics of the insolvency administrator's activities and those of the official receiver in insolvency procedure.

We have also aimed to identify the way in which the bodies applying the procedure perform their activity in relation to the other bodies applying the procedure and participating in the procedure, focusing on the obligation to perform an activity in accordance with the law, the purpose and principles of the insolvency procedure. From this point of view, we believe that, in relation to the legal responsibilities they are given, the principles they have to comply with and the responsibilities set out by the syndic judge, the two practitioners in insolvency can be deemed "representatives" or "agents" of justice.

We have argued the capacity of representative of the debtor of the insolvency administrator and the official receiver, listing the powers they are given from procedural point of view, but also the roles they play in the management of the contracts concluded by the debtor.

We end by concluding that these practitioners in insolvency are clearly true representatives of the debtor in the insolvency procedure, not having this capacity in relation to the creditors, who are represented by their own bodies.

We also believe that the practitioners in insolvency assure a balance of the interests of all parties involved in the insolvency procedure, which they have to implement in accordance with the spirit and letter of the law.

We believe that the analysed issues must be deepened, and the stated purpose if this paper is to start a debate on these issues.

THE LEGAL PROTECTION OF REFUGEE: WESTERN BALKANS

Elena ANDREEVSKA*

Abstract

States have been granting protection to individuals and groups fleeing persecution for centuries; however, the modern refugee regime is largely the product of the second half of the twentieth century. Like international human rights law, modern refugee law has its origins in the aftermath of World War II as well as the refugee crises of the interwar years that preceded it.

The refugee in international law occupies a large space characterized, on the one hand, by the principle of State sovereignty and, on the other hand, by competing humanitarian principles deriving from general international law and from treaty. The study of refugee protections invites a look not only at States' obligations with regard to admission and treatment after entry, but also at the potential responsibility in international law of the State whose conduct or omissions cause an outflow. The community of nations is responsible in a general sense for finding solutions and in providing international protection to refugee. This special mandate was entrusted to UNHCR.

At the start of the 21st century, protecting refugees means maintaining solidarity with the world's most threatened, while finding answers to the challenges confronting the international system that was created to do just that.

The aim of this article is to describe the foundations and the framework of international refugee law, to define refugees and protection of refugees; as well as to provides a brief analysis of the changing migration and asylum dynamics in the region and outlines some of the main challenges arising in this context..

Keywords: *Legal Protections; Refugee; Freedom of Movement; Western Balkan; Managing Borders.*

1. Introduction

The term "refugee" is a term of art, that is, a term with a content verifiable according to principle of general international law. In ordinary usage, it has a broader, looser meaning, signifying someone in flight, who seeks to escape conditions or personal circumstances found to be intolerable. The destination is not relevant; the flight is to freedom, to safety.[1] Implicit in the ordinary meaning of the word "refugee" lies an assumption that the person concerned is worthy of being, and ought to be, assisted , and, if necessary, protected from the causes and consequences of flight.

Refugees have existed as long as history, but an awareness of the responsibility of the international community to provide protection and find solutions for refugees dates only from the time of the League of Nations and the election of Fridtjof Nansen as the first High Commissioner for Russian refugees in 1921.[2] The League of Nations defined refugees by categories, specifically in relation to their country of origin.[3]

A further international legal instrument of that period is the resolution which the Intergovernmental Committee on Refugees (IGCR) adopted in Evian on 14 July 1938 to define its functions.[4] Its primary objective,"facilitating involuntary emigration from Germany (including Austria)".[5] A major review at the Bermuda Conference in April 1943 expanded the mandate to include "all persons, wherever they may be, who, as a resultant of events in Europe, have had to leave, or may have to leave, their country of residence because of the danger to their lives or liberties on account of their race, religion or political beliefs".[6]

* Professor, PhD, Faculty of Public Administration and Political Science, SEE-University, Tetovo (e-mail: **e.andreevska@seeu.edu.mk**).

[1] The reasons for flight may be many; flight from oppression, from a threat to life or liberty, from prosecution, from deprivation, flight from war or civil conflict, from natural disasters, flood, food crisis.

[2] The International *Nansen Office for Refugees* was created by the *League of Nations Resolution* of 30 September 1930 began active operations on April 1931. See League of Nations, *Treaty Series*, Vol. LXXXIX, No. 2005.

[3] Nansen's mandate was subsequently extended to other groups of refugees, including Armenians in 1924, as well as Assyrian, Assyro-Chaldean, and Turkish Refugees in 1928. During the League of Nations period (1921-1946) several institutions were created to perform some or all of the tasks of the High Commissioner for Refugees: the Nansen International Office for Refugees (1931-1938), the Office of the High Commissioner for Refugees coming from Germany (1933-1938), the Office of the High Commissioner of the League of Nations for Refugees (1939-1946) and the Intergovernmental Committee on Refugees (1938-1947). By adhering to the Convention relating to the International Status of Refugees, of 28 October 1933, States Parties for the first time undertook real obligations on behalf of Russian, Armenian and assimilated refugees. See League of Nations, *Treaty Series*, Vol. CLIX, No. 3663. Assimilated refugees were Assyrians, Assyro-Chaldeans, Syrians, Kurds and a small number of Turks.

[4] League of Nations, *Official Journal*, XIXth Year, Nos 8-9, August-September 1938, pp. 676 and 677; C. 244 M. 143.1938 XII, annex. In February 1939 the Member States of the IGCR appointed as Director the newly appointed High Commissioner for Refugees, whose headquarters were likewise in London. The IGCR ended its activities on 30 June 1947, six months after the Office of the High Commissioner closed. During that time the IGCR also protected the "Nansen refugees".

[6] See UN doc. A/C.3/5, annexed to GAOR, Third Committee, 1 st. Sess., 1 st Part, 1946, Summary Records: UN doc. A/C.3?SR.1-11. UNRRA.

Up until 1950 the League of Nations, and thereafter the UN, established and dismantled several international institutions devoted to refugees in Europe. The International Refugee Organization (IRO) was the last to precede the United Nation High Commissioner for Refugees (UNHCR). The IRO was created in 1947 to deal with the problem of refugees in Europe in the aftermath of the Second World War and was to be terminated by June 30, 1950.[7]

The Office of the UNHCR succeeded the IRO as the principal UN agency concerned with refugees, taking account of the impact of developments within the UN, such as article 14(1) of the Universal Declaration of Human Rights,[8] and the 1967 Declaration on Territorial Asylum.[9] The bases for an international legal concept of the refugee are thus to be found in treaties, State and United Nation practice, and in the Statute of the UNHCR.[10]

In the 1980s and '90s, substantial changes came about in the environment in which international refugee protection was to be realized. The number of refugees grew exponentially— no longer as a product of colonialism but due to the steep rise in internal interethnic conflicts in the newly independent states.[11] And the refugee population steadily increased from a few million in the mid-1970s to some ten million by the late 1980s. In 1995 the number of persons needing assistance rocketed to around twenty-five million.

The field of UNHCR competence, and thus the field of its responsibilities, has broadened considerably since the Office was established. Briefly, the movement has been from the Statute through good offices and assistance, to protection and solutions. The class of beneficiaries has moved from those defined in the Statute, through those outside competence assisted on good offices basis, those defined in relevant resolutions of the General Assembly and directives of the Executive Committee, arriving finally at the generic class of refuges, displaced and other persons of concern to UNHCR. [12]

Finally, Migration dynamics in the Western Balkans[13] have undergone fundamental changes during the past years. Countries in the region still have to cope with the consequences of large-scale displacement of the 1991-95 conflicts. Social and economic challenges continue to trigger the movement of nationals from the Western Balkan countries within and from the region. However, the gradual political stabilization has transformed the Western Balkans into a region of transit and increasingly also destination of migrants and refugees from outside the region, including vulnerable groups such as victims of trafficking, unaccompanied and separated children or women at risk.[14]

2. The Legal Framework of the International Refugee Protection System

The refugee in international law occupies a large space characterized, on the one hand, by the principle of State sovereignty and the related principles of territorial supremacy and self-preservation; and, on the other hand, by competing humanitarian principles deriving from general international law and from treaty.[15]

The controlling international convention on refugee law is the 1951 Convention relating to the Status of Refugees (1951 Convention)[16] and its 1967 Optional Protocol relating to the Status of Refugees

[7] The Constitution of the IRO continued to practice of earlier instruments, and specified certain categories to be assisted. The IRO was also competent to assist 'displaced parsons', including those deported or expelled from their own countries, some of whom had been sent to undertake forced labor. See Journal of Law & Policy [Vol. 5:129), The Evolution of the International Refugee Protection, Regime Erika Feller, pp. 129-30, available at: http://law.wustl.edu/harris/documents/p129_Feller.pdf

[8] "Everyone has the right to seek and to enjoy in other countries asylum from persecution". The Declaration was proclaimed by the United Nations General Assembly in Paris on 10 December 1948 General Assembly resolution 217 A. Subsequent regional human rights instruments have elaborated on this right, guaranteeing the "right to seek and be granted asylum in a foreign territory, in accordance with the legislation of the state and international conventions." American Convention on Human Rights, art. 22(7); African [Banjul] Charter on Human and Peoples' Rights, art. 12(3), OAU Doc. CAB/LEG/67/3 rev. 5, 21 I.L.M. 58 (1982).

[9] Adopted at the 1631st plenary meeting, 14 Dec. 1967; In: Resolutions adopted by the General Assembly during its 22nd session. Volume I, 19 September-19 December 1967. - A/6716. - p. 81. - (GAOR, 22nd sess., Suppl. no. 16)

[10] UNGA res.(V), annexed, pares. 1,2.

[11] The conflicts were fuelled by superpower rivalry and aggravated by socioeconomic problems in developing countries. Solutions to refugee problems became even more elusive— whether in Afghanistan, in the Horn of Africa, or in Southern Africa. To give some examples, 2.5 million people were displaced or fled to Iran from Northern Iraq in 1991; in former Yugoslavia the number of refugees, displaced and others assisted by UNHCR, exceeded four million; and the Great Lakes crisis of 1994 forced three million people to flee their countries.

[12] See Guy S. Goodwin – Gill, *The Refugee in International Law* (Clarendon Press, 1996),15; UNGA res. 36/148, 16 Dec. 1981; UN doc. A/41/324 (May 1986). Despite the protest of individual governments, the international community at larger has not hitherto demurred when UNHCR has exercised its protection and assistance functions in cases of large-scale movements of asylum seekers.

[13] For the purpose of this paper, the Western Balkans includes Albania, Bosnia and Herzegovina, Croatia, Kosovo (UNSCR Resolution 1244/99), Montenegro, Serbia and the Republic of Macedonia.

[14] See the concept note on Refugee Protection and International Migration in the Western Balkans: Suggestions for a Comprehensive Regional Approach, September 2013, available at: http://www.unhcr.org/531d88ee9.html

[15] Refugee law nevertheless remains an incomplete legal regime of protection, imperfectly covering what ought to be a situation of exception. It is incomplete so far as refugees and asylum seekers may still be denied even temporary refuge or temporary protection, safe return to their homes, or compensation. See UN doc. E/CN.4/1503, para. 9.

[16] United Nations General Assembly resolution 429(V) of 14 December 1950, available at http://www.unhcr.org/refworld/docid/3b00f08a27.html., has lost much of its significance.

(1967 Optional Protocol).[17] The 1951 Convention establishes the definition of a refugee as well as the principle of non - refulgent[18] and the rights afforded to those granted refugee status.[19]

The 1967 Refugee Protocol is independent of, though integrally related to, the 1951 Convention. The Protocol lifts the time and geographic limits found in the Convention's refugee definition. Together, the Refugee Convention and Protocol cover three main subjects:

The basic refugee definition, along with terms for cessation of, and exclusion from, refugee status;

The legal status of refugees in their country of asylum, their rights and obligations, including the right to be protected against forcible return, or refulgent, to a territory where their lives or freedom would be threatened; and

States' obligations, including cooperating with UNHCR in the exercise of its functions and facilitating its duty of supervising the application of the Convention.[20]

Convention refugees are thus identifiable by their possession of for elemental characteristics: (1) they are outside their country of origin; (2) they are unable or unwilling to avail themselves of the protection of that country, or to return there; (3) such inability or unwillingness is attributable to a well-founded fear of being persecuted; and (4) the persecution feared is based on reasons of race, religion, nationality, membership of a particular social group, or political opinion.[21]

The States which acceded to or ratified the 1951 Convention agreed that the term 'refugee' should apply, first to any person considered a refugee under earlier international agreements; and, secondly, to any person who, broadly speaking, qualifies as a refugee under UNHCR Statute.[22] Despite differences at the national and regional levels, the overarching goal of the modern refugee regime is to provide protection to individuals forced to flee their homes because their countries are unwilling or unable to protect them.[23]

The 1951 Convention and the 1967 Protocol remain the principal international instruments benefiting refugees, and their definition has been expressly adopted in a variety of regional arrangements aimed at further improving the situation of recognized refugees. It forms the basis for article I of the 1969 OAU Convention on Refugee Problems in Africa.[24]

Moreover, the refugee crisis in Central America during the 1980s led in due course to one of the most encompassing approaches to the refugee question. The 1984 Cartagena Declaration[25]proposed a significant broadening, analogous to that of the OAU Convention.[26]

---

[17] The Convention enabled States to make a declaration when becoming party, according to which the words "events occurring before 1 January 1951" are understood to mean "events occurring in Europe" prior to that date. This geographical limitation has been maintained by a very limited number of States, and with the adoption of the 1967 Protocol , has lost much of its significance. The Protocol of 1967 is attached to United Nations General Assembly resolution 2198 (XXI) of 16 December 1967, available at http://www.unhcr.org/refworld/docid/3b00f1cc50.html

[18] The principle of non-refoulement prescribes, broadly, that no refugee should be returned to any country where he or she is likely to face persecution or torture. The possible application of non-refulgent or an analogous principle of refuge to those outside the 1951 Convention/1967 Protocol is also considered, as is the relationship between non-refulgent and asylum.

[19] Although the 1951 Convention definition remains the dominant definition. The regional human rights treaties have since modified the definition of a refugee in response to displacement crises not covered by the 1951 Convention.

[20] By acceding to the Protocol, States agree to apply most of the articles of the Refugee Convention (Articles 2 through 34) to all persons covered by the Protocol's refugee definition. Yet the vast majority of States have preferred to accede to both the Convention and the Protocol. In doing so, States reaffirm that both treaties are central to the international refugee protection system.

[21] "The Executive Committee reaffirms that the 1951 Convention relating to the Status of Refugees and the 1967 Protocol remain the foundation of the international refugee regime." See UNHCR Executive Committee Conclusion N° 87(f), 1999.

[22] Art. 1A(2) of the Convention. The 1951 Convention does not define how States Parties are to determine whether an individual meets the definition of a refugee. Instead, the establishment of asylum proceedings and refugee status determinations are left to each State Party to develop. This has resulted in disparities among different States as governments craft asylum laws based on their different resources, national security concerns, and histories with forced migration movements.

[23] Governments normally guarantee the basic human rights and physical security of their citizens. But when people become refugees this safety net disappears. Refugees fleeing war or persecution are often in a very vulnerable situation. They have no protection from their own state - indeed it is often their own government that is threatening to persecute them. If other countries do not let them in, and do not protect and help them once they are in, then they may be condemning them to an intolerable situation where their basic rights, security and, in some cases their lives, are in danger.

[24] Adopted by the Assembly of Heads of State and Government at its Sixth Ordinary Session. See Text United Nations, Treaty Series, No. 14691, entry into force 20 June 1974 in accordance with Article XI, Addis-Ababa, 10 September 1969. While incorporating the existing 1951 Convention refugee definition, the OAU Convention added a paragraph specifying that the term "refugee" shall also apply to every person who, owing to external aggression, occupation, foreign domination, or events seriously disturbing public order in either part or the whole of his country of origin or nationality, is compelled to leave his place of habitual residence in order to seek refuge in another place outside his country of origin or nationality. In other words, the notion of "refugee" was broadened beyond victims of generalized conflict and violence. The OAU Convention was also a significant advance from the 1951 Convention in its recognition of the security implications of refugee flows, in its more specific focus on solutions— particularly on voluntary repatriation, in contrast to the integration bias of the 1951 Convention— and through its promotion of a burden-sharing approach to refugee assistance and protection.

[25] See Regional Refugee Instruments & Related, *Cartagena Declaration on Refugees, Colloquium on the International Protection of Refugees in Central America, Mexico and Panama*, 22 November 1984, available at: http://www.refworld.org/docid/3ae6b36ec.html

[26] The Cartagena Declaration on Refugees bases its principles on the "commitments with regards to refugees" defined in the Contadora Act on Peace and Cooperation (which are based on the 1951 UN Refugee Convention and the 1967 Protocol).It was formulated in September 1984 and includes a range of detailed commitments to peace, democratization, regional security and economic co-operation. It also provided for

A key step in establishing the governance – and governability – of refugee is the establishment of national law based on and in compliance with international law. This is usually accomplished through ratification by states of relevant international human rights instruments and international labor standards, followed by their effective implementation.

The 1951 Convention also protects other rights of refugees, such as the rights to education, access to justice, employment and other fundamental freedoms and privileges similarly enshrined in international and regional human rights treaties. In their enjoyment of some rights, such as access to the courts, refugees are to be afforded the same treatment as nationals while with others, such as wage-earning employment and property rights, refugees are to be afforded the same treatment as foreign nationals.[27]

Despite these rights being protected in the 1951 Convention and under human rights treaties, refugees in various countries do not enjoy full or equal legal protection of fundamental privileges. Ethiopia, for example, made reservations to Articles 22 (public education) and Article 17, treating these articles as recommendations rather than obligations.[28] Although not a party to the 1951 Convention, Lebanon is host to a large population of refugees, predominately Palestinians. Restrictive labor and property laws in Lebanon prevent Palestinians from practicing professions requiring syndicate membership, such as law, medicine, and engineering, and from registering property. [29]

The adjudication of asylum claims is reserved to individual States. Although some States, namely those that comprise the Council of Europe, have made an effort to adopt a uniform asylum system, international and regional bodies lack the jurisdiction to adjudicate individual asylum claims.[30] International and regional bodies do, however, adjudicate claims asserting violations of the human rights of refugees and asylum seekers.

Furthermore, the municipal law practice of non-extradition of political offenders is one antecedent to current principles protecting refugees from return to a State in which they may face persecution. In some countries, the principle of asylum for refugees is expressly acknowledged in the constitution.[31] in others, ratification of the 1951 Convention and the 1967 Protocol has direct effect in local law, while in still other cases, ratifying States my follow up their acceptance of international obligations with the enactment of specific refugee legislation or the adoption of appropriate administrative procedure.[32]

Finally, refugees within the mandate of UNHCR, and therefore eligible for protection and assistance by the international community, include not only those who can, on a case-by-case basis, be determined to have a well-founded fear of persecution on certain grounds (so-called 'statutory refugees'), but also other large groups of persons who can be determined or presumed to be without, or unable to avail themselves of, the protection of the government of their State of origin.[33] The agency does this in several ways: it ensures the basic human rights of uprooted or stateless people in their countries of asylum or habitual residence end that refugees will not be returned involuntarily to a country where they could face persecution. Longer

regional committees to evaluate and verify compliance with these commitments. See more at: http://www.refugeelegalaidinformation.org/cartagena-declaration-refugees#sthash.eIijr0C9.dpuf. Also see Council Directive 2004/83/EC of 29 April 2004 on minimum standards for the qualification and status of third country nationals or stateless persons as refugees or as persons who otherwise need international protection and the content of the protection granted (commonly known as the Qualification Directive).

[31] See UN doc. ST/GENEVA/LIB/SER.B/Ref.9, 68-74.

[32] The Preamble to the Constitution of France acknowledges the principle of asylum, while a 1952 law declares that refugees within the competence of the Office shall include those within the mandate of UNHCR, as well as those within article 1 of the 1951 Convention. Canada also adopted the Convention definition in the 1976 Immigration Act (*Canada: Immigration Act, 1976-77, c. 52, s. 1, 1976*, available at: http://www.reworld.org/docid/3ae6b5c60.html. The Federal Republic of Germany has both constitutional and enacted law provisions benefiting refugees, both of which were amended in 1992/93. In other countries, the admission of refugees and special groups is often decided by the government in the exercise of broad discretionary powers. There are a number of States who host large refugee populations but who are either not a party to the 1951 Convention and 1967 Optional Protocol or who do not have laws or policies in place to address asylum claims. These States include a large number of countries in the Middle East and Asia with significant refugee populations, including Egypt, Jordan, Syria, India, Malaysia, Lebanon, and Pakistan. *See* U.N. Treaty Collection, Ch. V Refugees & Stateless Persons (listing countries that are party to the 1951 Convention); *see* also, UNHCR, Country Operations Plans (explaining the legal framework of countries where UNHCR operates), available at: http://www.unhcr.org/pages/49e456f96.html. In such cases, refugee status determinations are carried out by field offices of the UNHCR.

[33] Now often referred to as 'displaced persons' or 'persons of concern.

term, the organization helps refugees find appropriate durable solutions to their plight, by repatriating voluntarily to their homeland, integrating in countries of asylum or resettling in third countries.[34]

3. International Migration: The Western Balkans

International migration is the movement of people across borders to reside permanently or temporarily in a country other than their country of birth or citizenship.[35] The United Nations (UN) estimates that in 2013 some 232 million people were living outside their country of birth or citizenship for more than one year. This represents just over three per cent of the world's population and would rank such migrants, if living within the same territory, as the world's fifth largest country. While the number of international migrants has grown steadily, that three per cent proportion of world population has remained stable over the past 40 years.[36]

In current rates of international migration continue, the number of international migrations worldwide could reach 405 million by 2050.[37] While South-North movement patterns previously dominated the migration landscape, today international migrants move in equal share from developing to developed countries and between developing countries.[38] Migration is also no longer only unidirectional and permanent; it is increasingly multiphase and multidirectional, often occurring on temporary or circular basis.[39]

Migration today is motivated by a range of economic, political and social factors. Migrants may leave their country of origin because of conflict, widespread violations of human rights or other reasons threatening life or safety. The UN global estimates of international migrants count those living outside their country of birth or citizenship for more than one year. While this estimate includes migrant workers, migrants in an irregular situation and refugees, it does not account for the millions of persons worldwide who migrate on a short-term temporary or seasonal basis to and from another, usually neighboring country for a few weeks or months each year. However, many of these persons are included in legal definitions of "migrant workers".[40] ICRMW is very clear that states have the right to control their borders**,** including the establishment of criteria governing admission of migrant workers and members of their families. [41]

With international migration increasing in scope, scale and complexity, more countries are now simultaneously countries of origin, transit, and destination for migration. New forms of partnership and cooperation have emerged to govern migration, including in the context of South-South cooperation[42] and engaging private as well as non-governmental actors.

In the context of globalization, migration brings both development opportunities and challenges. While many migrants are able to move, live and work in safety and dignity, others are compelled to move as a result of poverty, lack of decent work, and environmental degradation. Human rights violations, including generalized violence, armed conflict, and persecution too often result in forced migration. Closing the gap between humanitarian and development aid by ensuring a more effective transition in the context of the return

---

[34] In many countries, UNHCR staff work alongside other partners in a variety of locations ranging from capital cities to remote camps and border areas. They attempt to promote or provide legal and physical protection, and minimize the threat of violence - including sexual assault - which many refugees are subject to, even in countries of asylum. They also seek to provide at least a minimum of shelter, food, water and medical care in the immediate aftermath of any refugee exodus, while taking into account the specific needs of women, children, the elderly and the disabled.

[35] **Migration** - The movement of a person or a group of persons, either across an international border, or within a State. It is a population movement, encompassing any kind of movement of people, whatever its length, composition and causes; it includes migration of refugees, displaced persons, economic migrants, and persons moving for other purposes, including family reunification.

[39] Ibid, Supra 36.

[40] See Article 2(1) and 5 of the UN International Convention on the Protection of the Rights of All Migrant Workers and Members of their Families (ICRMW)**,** United Nations, *Treaty Series*, vol. 2220, p. 3; Doc. A/RES/45/158, entry into force on 1 July 2003.

[41] This balance is reflected in Article 79 of ICRMW: "*Nothing in the present Convention shall affect the right of each State Party to establish the criteria governing admission of migrant workers and members of their families. Concerning other matters related to their legal situation and treatment as migrant workers and members of their families, States Parties shall be subject to the limitations set forth in the present Convention".* Under Article 34 of ICRMW, migrants also have a duty to comply with the laws and regulations of the states of transit and destination as well as respect the cultural identity of the inhabitants of the states of transit and destination.

[42] South-South cooperation is a broad framework for collaboration among countries of the South in the political, economic, social, cultural, environmental and technical domains. Involving two or more developing countries, it can take place on a bilateral, regional, sub regional or interregional basis. See UN Office for South-South Cooperation: http://ssc.undp.org/content/ssc.html

of refugees and Internally Displaced Persons and their reintegration in places of origin could help reduce the incidence of forced or involuntary migration.

In the absence of sufficient regular migration opportunities, migrants resort to irregular migration channels which place them at risk during transit and upon arrival in countries of destination. Many migrants, particularly those who are in an irregular situation and those working in precarious sectors, encounter human rights violations, labor exploitation including poor working conditions and low wages, trafficking and sexual abuse, violence, lack of social protection, discrimination and xenophobia. Thus, for too many migrants, their human development aspirations and potential remain unfulfilled, and their important contributions to the host society go unrecognized. Regardless of status, migrants, and in particular those who are most vulnerable, therefore require equal and specific inclusion in the development agenda at global, regional and national levels. [43]

Migration dynamics in the Western Balkans[44]have undergone fundamental changes during the past years.[45] However, the gradual political stabilization has transformed the Western Balkans into a region of transit and increasingly also destination of migrants and refugees from outside the region, including vulnerable groups such as victims of trafficking, unaccompanied and separated children or women at risk.[46] In 2012 the asylum applications from the Western Balkan region in the EU27+ (including Switzerland and Norway) amounted to more than 30,000 which constituted almost 9% of all asylum applications.[47] The recognition rates are low[48]and rejected asylum-seekers are returned to their countries of origin under readmission agreements the EU and its Member States concluded with the countries in the Western Balkans.

Largely owing to its strategic geopolitical location, the Western Balkans has become an important hotspot on one of the main migration routes to the EU. An increasing number of refugees and migrants from outside the region, in particular Afghanistan, Pakistan, Palestine, Syria, Somalia and North Africa, are arriving from Turkey and/or Greece and transiting the region using what is known as "the Western Balkan route." Many lodge asylum claims in one or more of the Western Balkans countries, but often depart before having their asylum claims processed and their protection needs determined.[49]

All countries in the region have adopted relevant legislation for regulating entry and stay of aliens[50], as well as are parties to the 1951 Convention relating to the Status of Refugees and its 1967 Protocol[51]. Also, they have established national migration management system and national asylum systems. However, shortcomings in the implementation of the legislation and gaps in institutional capacity do not always guarantee that asylum-seekers can access fair and efficient asylum procedures and enjoy the basic standards of treatment. [52] Moreover, Readmission agreements concluded between the EU and Western Balkans countries do not cover only nationals, but also allow for the return of third country nationals who had transited through the Western Balkans to an EU Member State. With regard to the latter, there is no system in place to ensure that returned asylum-seekers whose claims have not been examined on substance in the returning country are protected

[43] See *A life of dignity for all: accelerating progress towards the Millennium Development Goals and advancing the United Nations development agenda beyond 2015*, Report of the Secretary General, UN doc. A/68/202 (26 July 2013), e.g. pares. 93 and 111.

[44] The Western Balkans includes Albania, Bosnia and Herzegovina, Croatia, (UNSCR Resolution 1244/99), Montenegro, Serbia and Republic of Macedonia.

[45] Countries in the region still have to cope with the consequences of large-scale displacement of the 1991-95 conflicts. Social and economic challenges continue to trigger the movement of nationals from the Western Balkan countries within and from the region.

[46] Predominant drivers of migration from the region are poverty, low living standards, unemployment and social exclusion. The liberalization of visa policies in the context of the EU accession process has reportedly been an important contributing factor facilitating legal movements.

[47] The former Yugoslav Republic of Macedonia and Serbia continue to be the main countries of origin. In October 2012 the number of Serbian and Macedonian citizens submitting asylum claims reached almost 6,000 in one month. With almost 15,000 asylum applications lodged in 2012 Serbian nationals remain one of the highest ranked nationalities of asylum applicants in the EU. Source: Euro stat, Asylum Applications in EU27+ from Southeast Europe, 2008-12. 7 February 2013.

[48] See Western Balkans Annual Risk Analysis 2013, Front ex. Available at http://frontex.europa.eu/assets/Publications/Risk_Analysis/WB_ARA_2013.pdf

[49] See UNHCR, Asylum Levels and Trends in Industrialized Countries, 2011, available at http://www.unhcr.org/4e9beaa19.html. The recent accession of Croatia to the EU has made it an EU Member State with the longest external land border. This may impact the nature and scale of the migration flows passing through the region, including by leading to an increase in the number of irregular migrants trying to enter the EU through Croatia and of those readmitted from Croatia under the existing readmission agreements. The future accession of Romania and Bulgaria to the Schengen zone as well as changes in the socio-political development in Northern Africa, Central Asia and the Middle East are likely to also affect migratory flows in the region.

[50] Laws on foreigners, legislation on border control etc.

[51] Except for Kosovo. See UNSCR 1244/99

[52] For example, recognition rates are extremely low despite the fact that many extra-regional asylum-seekers come from refugee-producing countries. In 2012 the recognition rate; in Montenegro 0.12%; in Serbia less than 1% and 0% in the Macedonia. In Croatia the total refugee recognition rate was 16.75%. See UNHCR data, available at: http://www.unhcr.org/pages/4a013eb06.html

against refulgent and can access the asylum procedures in the country of return.

It should be noted that Countries of the region have developed a number of good practices at national and regional level which can serve as a basis for further initiatives. These include for instance the creation of the Balkans Asylum Network (BAN) to facilitate regional cooperation and build the capacity of non-governmental organizations active in the field of asylum and migration, the implementation of the border monitoring project in Croatia (2008-present), the establishment of migrant service centers in the Western Balkan countries (62 are currently operational in the region), the elaboration of standard operating procedures for identification and referral of victims of trafficking in Albania, or the monitoring of arrivals of returned migrants at the Pristina airport in Kosovo. Initiatives aimed at regional cooperation and exchange of information on migration issues among law enforcement actors are also undertaken by the Southeast European Law 6 Enforcement Centre (SELEC), the International Law Enforcement Cooperation Unit (ILECU) or under the framework of Police Cooperation Convention for Southeast Europe (PCC). Of particular note is the Migration, Asylum, Refugees Regional Initiative (MARRI) which was created under the former Stability Pact for South Eastern Europe to promote dialogue and closer regional cooperation on migration and asylum related issues among the Western Balkan countries. [53]

The challenges described above will require new and cooperative approaches building on the region's humanitarian tradition and existing good practices. Against this background, this UNHCR/IOM initiative will assist States in the Western Balkans in establishing and operationalizing a protection-sensitive migration and asylum management system that meets the legitimate concerns of States to protect their borders and territories, reach their migration management objectives and fulfil their obligations under international human rights and refugee law.[54] The initiative will focus on those areas where more coordinated and joint action at both national and regional levels can contribute to resolving the region's particular challenges. These areas include: Protection-sensitive entry systems; Enhancing mechanisms for information sharing; Improvement of reception arrangements; Recognizing refugees; Solutions for refugees; Identifying and providing assistance to persons with specific needs and vulnerable migrants; and Providing assisted voluntary return and reintegration.[55]

4. Conclusion

Taking stock of where we came from, UNHCR's perception is that refugee protection stands at a crossroads. Its most important tool— the 1951 Convention— sets out a basic framework that remains directly relevant to many, but not to all, displacement situations.[56] Furthermore, alliances on protection are shifting.

The Convention has a legal, political and ethical significance that goes well beyond its specific terms: legal in that it provides the basic standards on which principled action can be founded; political in that it provides a truly universal framework within which states can cooperate and share the burden resulting from forced displacement; and ethical in that it is a unique declaration by the 140 States Parties of their commitment to uphold and protect the rights of some of the world's most vulnerable and disadvantaged.

Assertions that the Convention is no longer relevant are belied by encouraging recent developments. At the Inter-Parliamentary Union meeting in Amman in May 2000,[57] 648 parliamentarians from 124 countries around the world reaffirmed the centrality of the Convention to asylum systems today; EU leaders meeting in Tampere, Finland,[58] followed suit as have the 56 government members of the UNHCR's Executive Committee. States continue to accede to the Convention and State Parties continue to promote accession.

There is no doubt that the Convention regime has gaps. We have to be able to admit this without blaming the Convention for problems to which it was never designed to respond. Recently critics have alleged that the Convention is outdated, unworkable, irrelevant and inflexible, a complicating factor in today's migration environment. Several states have deemed it an instrument unresponsive both to the interests of states and to the real needs on the ground. The Convention was never conceived only as an instrument for permanent settlement, much less for migration control. The Convention, together with its 1967 Protocol, was drafted to become the global,

multilateral, standard-setting agreement on how to protect individuals in need of protection. [59]

Primary responsibility for protecting refugees and all persons within their own country rests with the national authorities of the country. National responsibility is a core concept of any response to refugees It is a fundamental operating principle of the international community and is routinely emphasized by governments themselves, as a function of their sovereignty.[60]

The international obligation not to return refugees to danger is absolute, and applies to all countries regardless of their level of economic development. Meeting the life-saving needs of refugees, setting up fair and efficient asylum procedures, helping refugees return home or integrate in host communities all have a financial cost, met by receiving States, as well as by the international community in a spirit of international solidarity.

The right to seek and enjoy asylum enshrined in the Universal Declaration of Human Rights, and reflected in the 1951 Refugee Convention provides the legal basis for protecting people fleeing persecution, conflict and violence related to their race, religion, nationality, social group or political opinion.

In UNHCR's view, constructive and visionary immigration policies could result in an easing, or at least a balancing, of the pressure on asylum systems. There would be a positive switch in approach to managing migration through migration tools and managing the asylum system through asylum tools. Where there are linkages, and trafficking and human smuggling is a case in point, special additional approaches are called for.

In 2015, UNHCR issued Guidelines on International Protection[61], in conjunction with Article 35 of the 1951 Convention relating to the Status of Refugees and Article II of its 1967 Protocol, to help clarify why the Convention applies to people fleeing conflict and violence in such situations. These Guidelines complement the UNHCR Handbook on Procedures and Criteria for Determining Refugee Status under the 1951 Convention and the 1967 Protocol relating to the Status of Refugees (1979, reissued, Geneva, 2011) and the other Guidelines on International Protection.[62]

In UNHCR's view, constructive and visionary immigration policies could result in an easing, or at least a balancing, of the pressure on asylum systems. There would be a positive switch in approach to managing migration through migration tools and managing the asylum system through asylum tools. Where there are linkages, and trafficking and human smuggling is a case in point, special additional approaches are called for.

Today's conflicts are often driven by racial, ethnic, religious and/or political divisions. In the Central African Republic, South Sudan and the Syrian Arab Republic (Syria), and more recently in Iraq, what may appear at first glance to be indiscriminate violence often targets particular populations on the basis of their perceived support for one of the parties to the conflict.

Therefore, the UNHCR initiative will focus predominantly on the common needs and challenges of the countries in the Western Balkans including Croatia which became the first country in the region to join the EU. Practical cooperation with other countries along the migratory route (such as Austria, Italy, Slovenia, Hungary, Romania, Greece and Turkey, etc.) will be sought as well.

In order to assist States in the region in achieving the objectives outlined above, the joint initiative will seek to develop a sustainable, comprehensive and cooperative framework for concrete action in the area of refugee protection and migration management, at national and regional levels.

On the basis of priority areas identified above, UNHCR, with input from other relevant stakeholders, will work with the Governments in the region towards development of a comprehensive roadmap/framework for action, outlining short and long-term objectives for the region, including concrete proposals for activities at both national and regional levels.

As a final point, the humanitarian situation of migrants along Western Balkans route calls for urgent action using all available EU and national means to alleviate it. To this end, the European Council considers it necessary to now put in place the capacity for the EU to provide humanitarian assistance internally, in cooperation with organizations such as the UNHCR, to support countries facing large number of refugees and

[59] The Convention at 50: the way ahead for refugee protection by Erika Feller, available at: file:///C:/Users/Dell-PA-D/Downloads/02%20(1).pdf

[60] Yet, it is sometimes the very governments responsible for protecting and assisting their internally displaced populations that are unable or even unwilling to do so and, in some cases, they may even be directly involved in forcibly uprooting civilians. Even then, however, the role of international actors is to reinforce, not replace, national responsibility. This requires a two-pronged approach to encourage States and other authorities to meet their protection obligations under international law while also supporting the development of national and local capacities to fulfill these protection responsibilities.

[61] See UNHCR, Guidelines on International Protection No. 11: Prima Facie Recognition of Refugee Status, HCR/GIP/15/11, 24 June 2015.

[62] These Guidelines, having benefited from broad consultation, are intended to provide legal interpretative guidance for governments, legal practitioners, decision-makers, as well as UNHCR staff carrying out refugee status determination under its mandate and/or advising governments on the application of a prima facie approach. STABILITY AND CONSTITUTIONAL REFORM NORMATIVE CONTENTS OF CONSTITUTION

Marius ANDREESCU[*]

Abstract

The modification of the fundamental law of a state represents a very special political and juridical act with major significances and implications in the political social system as in the state's one, but also at each individual level. That's why such an approach needs to be well justified, to answer to some juridical and political social needs well defined, but mainly to correspond to the principles and rules specific to a constitutional and state's democratic system providing to the state the stability and functionality it needs.

In this study we analyze the necessity of such a constitutional reform in Romania, and also some provisions from the report of the Presidential Commission for the analysis of the political and constitutional regime in our country. We formulate our opinions in relation to the justifying some constitutional regulations. In this context, we consider that there are arguments for the maintaining of the bicameral parliamentary system and an eventual revising of the fundamental law needs to consider the measures needed to guarantee the political and constitutional institutions specific to the lawful state.

Keywords: *Revising of the Constitution, limits of the constitutional revising, bicameral system, power excess, guaranteeing of the fundamental liberties, constitutional norms.*

I. Introduction

One of the most controversial and important juridical problems is represented by the relationship between the stability and innovation in law. The stability of the juridical norms is undoubtedly a necessity for the predictability of the conduct of the law topics, for the security and good functioning of the economical and juridical relationships and also to give substance to the principles of supremacy of law and constitution.

On the other hand it is necessary to adapt the juridical norm and in general the law to the social and economical phenomenon that succeed with such rapidity. Also the internal juridical norm must answer to the standards imposed by the international juridical norms in a world in which the 'globalization" and "integration" become more conspicuous and with consequences far more important in the juridical plan also. It is necessary that permanently the law maker be concerned to eliminate in everything that it is "obsolete in law", all that do not correspond to the realities.

The report between stability and innovation in law constitutes a complex and difficult problem that needs to be approached with full attention having into consideration a wide range of factors that can determine a position favorable or unfavourable to legislative modification[1].

One of the criterions that help in solving this problem is the principle of proportionality. Between the juridical norm, the work of interpretation and its applying, and on the other hand the social reality in all its phenomenal complexity must be realized with an adequate report, in other words the law must be a factor of stability and dynamism of the state and society, to correspond to the scope to satisfy in the best way the requirements of the public interest but also to allow and guarantee to the individual the possibility of a free and predictable character, to accomplish oneself within the social context. Therefore, the law included in its normative dimension in order to be sustainable and to represent a factor of stability, but also of progress, must be adequate to the social realities and also to the scopes for which a juridical norm is adapted, or according to the case to be interpreted and applied. This is not a new observation. Many centuries ago Solon being asked to elaborate a constitution he asked the leaders of his city the question:" Tell me for how long and for which people" then later, the same wise philosopher asserted that he didn't give to the city a constitution perfect but rather one that was adequate to the time and place.

II. Paper content

On the other hand a constitution is not and cannot be eternal or immutable. Yet from the very appearance of the constitutional phenomenon, the fundamental laws were conceived as subjected to the changes imposed inevitably with the passing of time and dynamics of state, economical, political and social realities. This idea was consecrated by the French Constitution on 1971 according to which "A people has always the right to review, to reform and modify its Constitution, and in the contemporary period included the "International Pact with regard

to the economical, social and cultural rights" as well as the one regarding the civil and political rights adopted by U.N.O. in 1966 - item 1 - is stipulating:"All nations have the right to dispose of themselves. By virtue of that right they freely determine their legal status.

The renowned professor Constantin G. Rarincescu stated on this meaning:" A constitution yet is meant to regulate in future for a longer or a shorter time period, the political life of a nation, is not destined to be immobile, or perpetuum eternal, but on the other hand a constitution in the passing of time can show its imperfections, and no human work is being perfect, imperfections to whose some modifications are being imposed, on the other side a constitution needs to be in trend with the social necessities and with the new political concepts, that can change more frequently within a state or a society". [2] Underlying the same idea the professor Tudor Drăganu stated: "The constitution cannot be conceived as a perennial monument destined to outstand to the viccisitudes of the centuries, not even to the ones of the decades. Like all other juridical regulations, the constitution reflects the economical, social and political conditions existing in a society at a certain time of history and aims for creating the organizational structures and forms the most adequate to its later development. The human society is in a continuous changing. What it is valid today tomorrow can become superannuated. On the other side, one of the characteristics of the juridical regulations consists in the fact that they prefigure certain routes meant for chanelling the society's development in one or another direction. These directions as well as the modalities to accomplish the targeted scopes may prove to be, in their confronting with the realities, inadequate. Exactly for this very reason, the constitutions as all other regulations, cannot remain immutable but must adapt to the social dynamics"[3].

In the light of those considerents we appreciate that relationship between the stability and the constitutional revising needs to be interpreted and solved by the requirements of principle of proportionality[4]. The fundamental law is viable as long as it is adequated to the realities of the state and to a certain society at a determined historical time. Much more – states professor Ioan Muraru – "a constitution is viable and efficient if it achieves the balance between the citizens (society) and the public authorities (state) on one side, then between the public authorities and certainly between the citizens. Important is also that the constitutional regulations realize that the public authorities are in the service of citizens, ensuring the individual's protection against the state's arbitrary attacks contrary to one's liberties"[5].In situations in which such a report of proportionality no longer exists, due to the imperfections of the constitution or due to the inadequacy of the constitutional regulations to the new state and social realities, it appears the juridical and political necessity for constitutional revising.

Nevertheless in the relationships between the stability and constitutional revising, unlike the general relationship stability – innovation in law the two terms have the same logical and juridical value. It is about a contrariety relationship (and not a contradiction one) in which the constitution's stability is the dominant term. This situation is justified by the fact that the stability is a requirement essential for the guaranteeing of the principle of constitution supremacy with all its consequences. Only through the primacy of the stability against the constitution's revising initiative one can exercise its role to provide the stability, equilibrium and dynamics of the social system's components, of the stronger and stronger assertion of the principles of the lawful state. The supremacy of the constitution bestowed by its stability represents a guarantee against the arbitrary and discretionary power of the state's authorities, by the pre-established and predictable constitutional rules that regulate the organization, functioning and tasks of the state authorities. That's why before putting the problem of constitution's revising, important is that the state's authorities achieve the interpretation and correct applying of the constitutional normative dispositions in their letter and spirit. The work of interpretation of the constitutional texts done by the constitutional courts of law but also by the other authorities of the state with the respecting of the competences granted by the law, is likely to reveal the meanings and significances of the principles for regulating the Constitution and thus to contribute to the process for the suitability of these norms to the social, political and state reality whose dynamics need not be neglected. The justification of the interpretation is to be found in the necessity to apply a general constitutional text to a situation in fact which in factum is a concrete one"[6].

The decision to trigger the procedure for revising a country's Constitution is undoubtedly a political one, but at the same time it needs to be juridically fundamented and to correspond to a historical need, of the social system stately organized from the perspective of its later evolution. Therefore, the act for revising the fundamental law needs not be subordinated to the political interests of the moment,

[6] Ioan Muraru, and al., *Interpretarea Constituţiei* (Bucharest: Lumina Lex, 2002), 14.

no matter how nice they will be presented, but in the social general interest, well defined and possible to be juridically expressed. Professor Antonie Iorgovan specifies on full grounds:" in the matter of Constitution's revising, we dare say that where there is a normal political life, proof is given of restraining prudence, the imperfections of the texts when confronting with life, with later realities, are corrected by the interpretations of the Constitutional Courts, respectively throughout the parliamentary usance and customs, for which reason in the Western literature one does not speak only about the Constitution, but about the block of constitutionality" [7].

The answer to the question if in this historical moment is justified the triggering of the political and juridical procedures for the modifying of the fundamental law of Romania can be stressed out in respect with the reasons and purpose targeted. The revising of Constitution cannot have as finality the satisfying of the political interests of the persons holding the power for a moment, in the direction of reinforcing of the discretionary power of the Executive, with the inacceptable consequence of harming certain democratical constitutional values and principles, mainly of the political and institutional pluralism, of the principle of separation of powers in the state, of the principle of legislative supremacy of the Parliament.

On the other hand, such as the two decades lasting history of democratical life in Romania has shown, by the decisions taken for many times, were distorted the constitutional principles and rules by the interpretations contrary to the democratical spirit of the fundamental law, or worse, they didn't observe the constitutional dispositions because of the political purposes and their support in some conjunctural interests. The consequences were and are obvious: the restraining or violation of some fundamental rights and liberties, generating some political tensions, the nonobservance of the constitutional role of the state's institution, in a single word, due to political actions, some dressed in juridical clothes, contrary to the constitutionalism that needs to characterize the lawfull state in Romania. In such conditions, an eventual approach of the revising of the fundamental law should be centered on the need to strengthen and enhance the constitutional guarantees for respecting the requirements and values of the lawfull state, in order to avoid the power excess specific to the politician subordinated exclusively to a group interests, many time conjunctural and contrary to the Romanian people, which in accordance to Constituion item 2 paragraph (1) of the one who is the holder of the national sovereignity.

In our opinion, the preoccupation of the political class and state's authorities in the current period, in relation to the actual contents of the fundamental law, should be oriented not so for the modification of the Constitution, but especially into the direction of interpreting and correct applying and towards the respecting of the democratical finality of the constitutional institutions. In order to strengthen the lawfull state in Romania, it is necessary that the political formations, mostly those that hold the power, all authorities of the state to act or to exercise its duties within the limits of a *loyal constitutional behavior* that involve the respecting of the meaning and demoratical significances of the Constitution.

Currently, the political and juridical reality in Romania is confronting with an extensive political approach for the revising of the fundamental Law, substantied throughout the results of the referendum organized on 2009 having as objective the reducing of the number of parliamentarians and with the passing to a unicameral parliamentary system, in the "Report of the Presidential Commission for the Analysis of the Political and Constitutional regime in Romania" [8] that was published on April 28th 2010, the initiative of the President of Romania for revising the fundamental law at the Government proposal and the decision no. 799/17.06.2011 of the Constitutional Court targeting the law draft for Romania's Constitution revising[9].

This is up to now the only political initiative that has been materialized in a legislative draft for revising the fundamental law that was submitted to the Parliament. In the present social and political context other proposals, ideas for the modifying of the Constitution are being expoxed by the governing ones yet without being materialized in a new legislative initiative.

Our scientific approach has into consideration, from a critical perspective, mostly the political initiative for the Constitution revising that has already the form of a legislative project, though it is not on the Parliament 's roll for debating. We wish at the same time to underline few important themes which in our opinion need a more serious consideration, included in regard to the normative contents of the Constitution. In this epoch of political class' intense preoccupations for the modifying of the fundamental law it is important to reflect in the light of the political exigencies of the constitutional law, upon the normative content of the Constitution. The establishing based on some scientific criterions to what exactly needs to contain the fundamental law of a state, is essential to avoid that throughout political enthusiasm be ignored the basic aspects regarding the specific of the normative contents of

[7] Antonie Iorgovan, "Revizuirea Constituţiei şi bicameralismul", *Public Law Journal* 1(2001): 23.
[8] Published by C.H. Beck Publishing House, Bucharest, 2009.
[9] M.Of. no. 440/23.06.2011.

the Constitution that explains thus last one's supremacy.

The proposals for the Constitution's revising have as an obvious finality the passing of Romania's constitution system from bicameral to unicameral and the strengthening of the executive power, mostly of the presidential institution.

The doctrine in specialty underlines the fact that in the unitary states, such as Romania, both the unicameral system, as the bicameral system have advantages and disadvantages [10]. There is no ideal constitutional solution on this meaning. Important is the fact that the Parliament's structure which the Constitution consecrates be adequate to the social, political and economical realities of a country, be functional and to integrate harmoniously within the system of authorities of the state with the observance of the principle of constitutional democracy principles and of the lawfull state. Nevertheless, prestigious authors such as professor Herbert Schambeck remark the importance of the parliamentary system: "From the second chamber of this type, it is expected to emanate *auctoritas*, which in a specific way grants personal fame, in plus to *potestas* or the political power. The second Chamber or the superior chamber has always existed in the area of tensions between the tradition inherited and the present political reality. It represents a part of the basic constitutional organization and a political reality of the state"[11].

Coming back to the essence of the problem, besides other authors[12], we appreciate that in Romania, the bicameralism is adequate to the state and social system at this historical moment, corresponding better to the necessity to achieve not only the efficiency of the parliamentary legislative procedures but also the "norming ponderation" and quality of the legislative act. The bicameralism is a necessity for Romania because the Parliament represents a valid counterpondering against the Executive, in the context of the exigencies and balance of the powers in a democratic state. With good reason the regretted professor Antonie Iorgovan underlined: " It would have been a very high political risk, in that post revolutionary tension, that in Romania to have designed a unicameral Parliament and such a risk exists still at present, considering that one cannot speak about a political life settled on natural pathes of the democratical doctrines accepted in Occident (the social-democratic doctrine, the democratic-Christian doctrine, liberal doctrines and ecologist doctrines)"[13]. The unicameralism in a semi-presidential constitutional system such as the one of Romania, in which the powers of the head of the state and in general those of the Executive are significant, having into consideration the excesive politicianism of the moment, would have as a consequence the severe deterioration of the institutional balance between the Legislative and Executive, with consequence the increase of the discretionary power of the Executive and the minimizing of the role of Parliament as a supreme representative organism of the Romanian people, as a unique law maker authority of the country, such as the provisions of item 61 paragraph (1) of the Constitution foresee.

The transition to a unicameral Parliament needs not be treated simplistic such as unfortunately comes out from the contents of the Law draft regarding the revising of Constitution elaborated by the Government, it rather needs a general modification of the Romanian constitutional system, a reconfiguring of the role and duties of the state authorities so that the balance between the Legislative and Executive be maintained and not create the possibility of an evolution towards an exaggerated preponderance of the institution of the head of the state in respect to the Parliament.

We underline the fact that all states with a unitary structure of Europe that have a unicameral Parliament have at the same time a constitutional system of parliamentary type in which the duties of the head of the state regarding the governing are being reduced. We do not wish to do a thorough analysis of this constitutional problem, we stress only the conclusion that the unicameralism may have be political and constitutionally justified in Romania and adequate to the democracy values in a lawfull state only if the legitimacy and the role of Romania's President as a constitutional institution, will be fundamentally be changed. The election of the President needs to be by the Parliament. At the same time in case of a unicameral structure of the Parliament it is necessary to reduce significantly the responsibilities of the President in respect to the Executive and the governing ones. In such a reconfiguring of the institutions of the state needs to be increased the role and duties of the Constitutional Court and those of the Justice, these ones being guarantees of the supremacy of the law and Constitution and for avoiding the power excess coming from the other authorities of the state. In one word, in our opinion the unicameralism cannot be associated in Romania other than with the existence of a constitutional system of parliamentary type.

[10] For development see Ioan Muraru and Mihai Constantinescu, *Drept parlamentar românesc* (Bucharest: All Beck, 2005), 72-79.

[11] Herbert Schambeck, „Reflections on the Importance of the Bicameral Parliamentary System", *Public Law Review* 1(2010):3.

[12] Ioan Muraru, Mihai Constantinescu, quotted works., pp. 2-37; Antonie Iorgovan, quotted works., pp. 3-7; Florian Vasilescu, „Questions about Bicameralism", Romanian Public Law Review 3(2010): 28-51; Ioan Alexandru, "Reflections regarding the bicameralism and asymmetry of the distribution of competences" *Public Law Review* 3(2010): 51-60.

[13] Antonie Iorgovan, quotted works., pp. 18-19.

The legislative proposal for the Constitution revising is of a nature to create a disproportion between the Parliament and Executive by the fact that the unicameral structure of the Parliament does not represent a guarantee sufficient to make an efficient counterponderance in respect to the Executive, mainly as the responsabilities of the President are obviously enhanced. The dispute between unicameralism and bicameralism with applying to the conditions of Romania is well characterized by the regretted professor Antonie Iorgovan: „...any bicameral or unicameral parliamentary system can lead into severe disfunctionalities such as professor Tudor Drăganu states, no matter how successful may be the constitutional solutions, if in the parliamentary practice evidence is given of politicianism, demagogy and lack of responsibility"[14].

Does the present Parliamentary system of Romania correspond to the exigencies of the democratic traditions of bicameralism and is it really adequate to the fulfilling of the role and functions of the Parliament? Professor Tudor Drăganu, in a flawless argumenting logic, in an extensive study answered to this question:"The revised Constitution establishes a system that claims to be bicameral but it functions currently like a unicameral system, condemned being to violate by certain of its aspect the most elementary principles of the parliamentary regime and which contains in itself the danger of producing in future of severe disfunctionalities in accomplishing the legislative activity"[15].The illustrious professor had into consideration that the law for the Constitution's revising does not contain references with regard to the number of deputies and senators it sets the matter of legitimacy of substance of the two chambers, because their members are appointed by the same election body and by the same type of system and election ballot; the responsibilities of the chambers in legislative matter are not sufficiently well differentiated; the exercising of the right to the legislative initiative of the senators and deputies, such as regulated, generates constitutional contradictions.

Together with other authors[16], we state that in the perspective of a future constitutional revising, to regulate the differentiation between the two chambers also by special types of representation. The law compared offers sufficient examples of this kind (Spain, Italy, France) and even the election law of Romania on March 27th 1926 offers a landmark on this meaning. The Senate may represent the interests of the local collectivities. Thus, the senators may be elected from an electoral college made of the local councils' chosen members. Interesting to underline is the fact that in the Constitution draft on 1991 the Senate was designed as a representant of the local collectivities, grouped on the country's counties and Bucharest municipality.

It is reasonable the critic of Professor Tudor Drăganu according to which the current constitutional regulation does not achieve a functional differentiation between the two chambers. This aspect was also noticed by the Constitutional Court that, referring to the parliamentary legislative procedure introduced in the draft for the Constitution revising, stressed: "The examining in cascade of the law drafts, in a chamber in the first lecture, and in the other one in the second lecture transforms the bicameral Parliament in a unicameral one"[17]. Therefore a new initiative for the modification of the fundamental law should have into consideration this aspect also and should achieve a real functional differentiation of the two chambers.

The Constitution is a law, but in the same time through it juridical force and its contents it distinguishes itself from any other laws. At the same time, the supremacy of the fundamental law grants to this one the quality of a main formal spring for all other law branches. Consequently, there are specific features of the normative contents of the Constitution in respect to the other normative acts, included compared to the existing codes. The normative specific of the Constitution makes an important criterion for explaining scientifically this one's supremacy and the structurant role of the fundamental law, not only by the system of law but also for the entire social, political and economical system of a state. Thus such as it is mentioned in the literature in specialty, the supremacy of the Constitution is a quality of the last one expressed throughout the supreme juridical force but also through its normative contents. As a first observation we specify that the norms forming the content of a constitution have the features of the constitutional law which I analyzed above. This observation is not enough to determine the normative content of the fundamental law because the sphere of the constitutional law norms is wider, including other formal sources specific to this branch of law.

The constitutional contemporary reality that is stressing also the diversity of the normative content removes the idea of general uniform standards valid for the contemporary constitutions. In this regard it is enough to remember that there are some states and constitutions whose provisions are inspired by the religious precepts. The diversity in the normative content is a consequence of the fact that the

[17] Decision no. 148/16.04.2003 (M.Of. no. 317/12.05.2003).

fundamental law of a state is determined in view of the aspect of the content of the social, political and economical realities, by the characters and attributes of the respective state historically expressed and in the same time by the will of the constituent law maker, in essence the political will, at a certain historical moment.

Besides other authors, we consider that the scientifical definition of the constitution is the main criterion for the identifying of the normative content. Such a criterion provides the generality necessary to give a scientific character to the scientific elaborations in the matter and at the same time it explains the existence of the differences between the fundamental laws of the contemporary states. The space allocated to this study, does not allow an extensive analysis of the definitions proposed in the literature in speciality. For the purpose of this scientific approach we bear in mind the essence of any attempt to define the fundamental law, namely "The constitution is the political and juridical fundamental foundation of any state"[18].

In juridical acceptation, the fundamental law is the act through which it is determined the statute of the power and at the same time all the juridical rules, having as regulating objective the establishment of exercising and maintaining of the power, as well as the regulation of the basis of the power, of the bases for power organizing. The juridical concept on the constitution can be expressed in two different meanings, respectively in the material meaning and in the formal one.

In the "material" acceptation, the constitution contains all the law rules, no matter of their nature and form, having as regulating objective the organizing and functioning of state power, the relations between the state's organs and society. Therefore they are part of the constitution body not only the so called constitutional regulations but also the norms contained in the ordinary laws and normative acts of the executive powers if through these are being regulated the social relations specific to state power. In such a conception has preeminence the regulating objective of the constitutional norm and not its form of expression. The theory above stated was accepted by the Constitutional Council of France which elaborated the concept of "the constitutionality block".

In the formal acceptation, the constitution is all the law rules, no matter of their regulating objective, elaborated in a form different from other normative acts, by a state authority namely established (the constituent assembly) following a specific procedure, derogatory from the usual legislative procedure. This way of defining the constitution starts from the correct idea that a certain "procedure" defines a juridical form or a normative category. Consequemtly the categories of normative acts can be differentiated by the adopting procedures.

Analyzed separately, the formal acceptation and respectively the material one cannot be a criterion enough to identify the normative content of the fundamental law. The accepting of the formal criterion has as a consequence the fact that the law fundamental may regulate any kind of social relations, no matter of their importance or regulating objective. [19] The material criterion is also unilateral because it excludes the procedural elements, necessary for a scientific characterization of the fundamental law.

The scientific approach regarding the identifying of the normative content of the constitution needs to have into consideration cumulated both the formal acceptation as the material one to which adds the political dimension to which we referred to above. Therefore, we consider that three critera can be identified in view to establish the normative contents of a constitution:

The establishing of the normative content of the constitution is fulfilled depending on the specific, importance and value of the regulated social relations. We concur to the opinion stated by the literature in speciality according to which, unlike other normative act categories, the norms contained in the constitution must regulate the fundamental social relations that are essential for the establishment, maintaining and exercising of the power, but also those referring to the bases of the power, respectively the power organizing bases. There are three such categories of social relations, that can form the regulating objective of the norms contained in the constitution that allow their identification such as follows:

The constitutional norms, some having values of principle, having a determining role in the establishing and functioning of the governing organs and in the establishing of the form of the state, respectively of its characters and attributes;

the norms for the consecration and guaranteeing of the fundamental righs and liberties and those that regulate the citizens' fundamental duties;

constitutional dispositions that have no direct connection with the governing process and regulate the bases for power organizing (sovereignity, territory, population) and the bases of the power (economy, social and cultural aspects etc).

The form for adopting the constitution or of the constitutional laws have a solemn character and are achieved according to a procedure derogatory from the usual legislative procedure and by a state authority specially established or by the Parliament, that acts as a constituent power and not as a usual legislative power;

[18] Ion Deleanu, quotted works p.88.

[19] For example the Switzerland Constitution by item. 25 bis establishes rules for cattle cutting.

III. Conclusions

It is important to underline the constitutional dynamism. The fundamental law is a dynamic and opened act, in a continuous crystallization process. The constitutionality status is achieved in a continuous and complex process for interpreting and applying by state's authorities of the texts contained in the body of the constitution. A special role in this wide process of interpretation and concrete fulfilling of the constitutional provisions is in the charge of the constitutional authorities. The activity for interpreting the fundamental law texts is justified because in the normative content of the constitution there are categories and concepts whose sphere cannot be defined by the constituent law maker. Thus, the constitutional norms cannot and must not offer definitions. For example in Romania's constitution there are such concepts that are defining by interpretation way and have formed the objective of analysis of the Constitutional Court: " spirit of tolerance and mutual respect" (item 29, paragraph 3); "identity" (item 30, paragraph 3); "private life" (item 30, paragraph 6), " the principles of the lawfull state" (item 48 paragraph 2); "public utility" (item 44, paragraph 3); "public and moral proportionality" (item 116, paragraph 4).

The normative contents of the constitution must be understood and determined with having into consideration the teleological criterion emphasized in the above stated definition. Namely the fundamental law's structuring role for the entire social, political and state system, guarantor of the fundamental rights and liberties.Noticing a political and juridical reality yet present, G. Bourdeau stated:" The written constitution is the work of the theoreticiens preoccupied more by the elegance and juridical balance of the mechanism they construct, than by its political efficiency [20]" Such a finding, we consider valid also for the Constitution, respectively the contemporary Romanian constitutionalism.

The fair determination of the normative contents of a constitution is expressed by its political and juridical efficiency. The fundamental law must achieve the social dynamic balance but also the stability and institutional harmony, the efficient guaranteeing of the fundamental rights, in essence the requirements of a real constitutional democracy based on the values of the state, of the institutional and social balance and of the proportionality[21]. Ion Deleanu noticed very well that: "the success of the constitution and constitutionalism is always a political one as far as it is the result of a transaction, of a relationship between what the constitution offers in a formalizing and objectiving term of the political matters and what the political actors ask or search for at a certain time in order to fulfill their own objectives. THE LIMITS OF STATE POWER IN A DEMOCRATIC SOCIETY

Marius ANDREESCU*

Abstract

The coding is not only the expression of the political will of the law maker, it firstly is a complex juridical technique for the choosing and systematization of the normative content necessary and adequate to certain social, political, economic, institutional realities. Since Constitution is a law, yet it nevertheless distinguishes itself from the law, the problem is to establish which juridical norms it contains. The solving of this problem needs to consider the specific of the fundamental law and also of the requirements of the coding theory. The determining with all scientific stringency of the normative content of the Constitution is indispensible both for the removal of any inaccuracy in delimiting the differences from the law, for the stability and predictability of the fundamental law and last, but not the least, for the reality and effectiveness of its supremacy.

In our study we realize an analysis based on compared criterions of the techniques and exigencies for the choosing and systematization of the constitutional norms with reference to their specific, to the practice of other states and within a historical context. The analysis is aiming to the actual proposals for the revising of the Constitution.

Keywords: *Constitutional norms, constitutional norm establishing criterions, technical - juridical structure, supremacy of Constitution, normative content.*

I Introduction

From the beginning up to the present the human society is marked by two constants that have ontological value: *the struggle for power* and on the other hand *the fight against the power*, both in situations where it is illegitimate because it takes the form of dictatorship or tyranny, also in the versions of apparent legitimacy, especially in democratic societies, such as for example the legitimate political activity of the opposition to come to power or the actions of civil society and individuals against abuse of power.

These ontological constants of any human society are inevitable no matter of the social form of organization or characteristics of political regimes, including in democratic societies because the existential and functioning essence of any social system is the expression of the contradictory difference between governors and the governed, between society as a whole and on the other hand, the man in his concrete and personality, between the normative order and moral values, between law and liberty, between public interest and private interest and of course between the vocation of human intangible fundamental rights, and on the other hand the public interest of the state to condition, limit and restrict their exercise.

These contradictions, if they remain in their absolute form, by antagonist excellence can be destructive to an organized state society, as history has shown. History shows the political and legal solutions which, especially in the modern period, were devoted to avoid dictatorial forms of power exercising. Here are some of them established since the first written constitution in the world - the US Constitution, adopted in 1787 - Declaration (French) of human and citizen rights on 1789, up to the internal and international contemporary political and legal instruments: supremacy of the Law and Constitution, separation and balance of powers within the state, proclamation and guarantee of the fundamental rights and freedoms, constitutional and judicial control.

Incontestable these principles in fact and the features of the lawful right materialized and guaranteed constitutionally define the contemporary democratic societies and virtually eliminates totalitarian, dictatorial forms of state power.

However the differences and contradictions mentioned above, because they are ontological constants of society, they exist in any democratic society. In addition there is a subtle situation, namely the difference between the legality of state decisions and on the other hand the state legitimacy. These realities may cause or encourage excess of the power of authorities in societies built upon the principles of modern constitutionalism.

In this context remains a problem of essence, not only theoretical but also practical to determine the limits of state power in a democratic society in concrete in România and to find solutions in cases of excessive form of manifestation of state authority.

II. Paper content

The doctrine, in its majority reveals an insurmountable contradiction that exists between the

* Judge-Curtea de Apel Pitești, University Lecturer Doctor-Faculty of Law and Administrative Sciences, University of Pitești (e-mail: **andreescu_marius@yahoo.com**).

democratic political regimes and, on the other hand those considered to be dictatorial, or simply between dictatorship and democracy.

Dictatorship means centralization and concentration of power, denial of pluralism in all its forms, absolute or discretionary power of the governors, coercion and excessive limitations of individual liberties, rigid separation of the governors from the governed, inexistence or formal existence of constitutional guarantees of human rights, inexistence or fictitious, formal character of principles essential to the state organization of society, such as principle of supremacy of law and constitution. For a synthetic manner of speech, dictatorship represents the annulment, dissolution or in the best case, the minimizing of the individuality of the singular, of diversity and affirmation of unity as abstract and constraining generality.

Unlike this, democracy is associated with the idea of a lawful state, focused on the principle becoming real and applicable of the supremacy of law and constitution. The centralization and concentration of power is replaced, as a modality of organizing of state powers, with the principle for their separation and balance. Pluralism in all its forms is institutionalized and guaranteed. The individual freedoms are also consecrated and guaranteed, while their exercise is governed by the rule according to which: the limit of any individual freedom is the need to respect others' similar freedoms. The legitimacy of state power involves the distinction between the being or essence of power and on the other hand, its exercise. In a democratic regime is not necessary to demonstrate the legitimacy of power as such because the axiom according to which " the holder of power is the people or nation" does not require demonstration, being a prerequisite for the entire political and legal construction of the state organized society Instead, any democratic government must find ways through which the exercising of power, in other words, the phenomenality of power be legitimate and lawful. Such a legitimacy is achieved when between essence (power in itself owned by the people) and forms of exercising (the phenomenon of power) there are no irreconcilable contradictions. The legitimacy of the exercise of power in case of democratic political regimes means reflecting the essence of power in its phenomenality, respectively in the organizing and exercising manner. Therefore, in case of democracy there is always a conceptual distinction, and a real one between the legitimacy of the essence of power that requires no demonstration, this results as such by the mere proclamation of the principle that the power has as its holder the people and on the other hand, the phenomenal legitimacy of organizing and exercising of power, that is not a "given" but a construction, firstly constitutional, realized in the concrete forms of institutional organization and exercising of state power. The legitimacy of the organizing and exercising of power is outside the power's phenomenality, in the meaning that the phenomenality is not the source of its legitimacy, but this is constructed in a relation whose content is the correspondence between the essence of power and the manifestation forms.

The power, in its essence, can be considered a "thing in itself", in the Kantian sense, because the full knowledge of the essence will never be possible. Reality of the state power considered in the relationship between essence and phenomenon reveals another aspect: the phenomenality of power can never fully correspond to the essence of power. The object of knowledge for the legal or political science is the phenomenon of power and not its essence. Therefore, the legitimacy of power phenomenal manifestation represents an ideal of which, the concrete forms of organization and exercising of power, get closer without ever touching it.

The legitimacy of power's phenomenality lies among others in achieving the principle of representation. This principle highlights very well the distinction between the being or essence of power and on the other hand the phenomenon of power. The holder of power cannot exercise it directly, only in exceptional circumstances. The essence is not the manifestation of power. The exercise of power reflects the being of power without containing it. Thus, the state institutions exercise the power without holding it, therefore, they need a recognition of the legitimacy of the acts of power, actually conferred mainly by applying the principle of representation.

The power and its phenomenality are undoubtedly at the heart of democracy. If the phenomenal legitimacy of power is an ideal of which the concrete forms of institutional embodiment through the principle of representation can get closer, results thus that democracy in its essence is still an ideal related to which the social and political reality is constructed and manifested, without letting the democratic ideal to coincide with the social and political reality. It is relevant in this regard the statement of Professor Ion Deleanu: "Democracy is a form of moral perfection. It dimensions the organization and operation of a power to humanize it and also the way of life of citizens to shape it."

It is necessary to distinguish between the *ideal democracy* that is a purely speculative construction based on the possible coincidence between the essence and the phenomenality of power, but also an ethical imperative that should mean the unity of will between the individual and society, and on the other hand, the *real democracy*, characterized through the contradictory dichotomy between the essence and the phenomenality of power, between the individual and society. Real democracy takes concrete forms,

multiple manifestations (such as the form of "parliamentary or representative democracy "), is not an immutable given, but is in a continuous evolutionary process, in considering the historical progress as a finality, never possible to be achieved, the ideal democracy. The science of law has as a study topic the real democracy, or more precisely its forms of manifestation and for its implementation. Paradoxically, however, the legitimacy of any form of real democracy is conferred by the values and principles of ideal democracy, the latter forming mainly the studying topic for metaphysics.

Unlike dictatorship, democracy involves the rehabilitation of the individual, of the particular that is no longer absorbed and dissolved into the social abstract general or of the concentrated power. In democracy the individual has ontological value and manifests into existential coexistence with the social general. In other words, the individual has the meaning and power of the general, the latter being legitimate, precisely because it recognizes to the individual the existential and ontological dimension. The power, even in its concrete manifestations is the expression of the general as such, reflected for example in the notion of "public interest". In a democratic society the legitimacy of the act of power lies not in reflecting own generality (of public interest) but in respecting the individuality of diversity in all forms specific to existential pluralism. In constitutional terms, this evokes the relation between "majority and opposition".

The issue of democracy cannot be reduced to the phenomenon of power as it seems to result from the constitutional definition of democracy that we find in Article 2 of the Constitution of French Republic: "government of the people by the people and for the people". The essence of democracy, in our opinion, is the forms and content of the concrete relation between society and individual. The relation expresses a unilateral contradiction because the society can contradict the individual (particularity and diversity), which is proper to dictatorship, but the individual does not contradict the society, situation particular to democracy. Furthermore, the dialectic report between the individual and society specific to democracy is an affirmative one, not containing a negation, such as Hegel argued. It is proper to democracy so that society asserts the individual (individuality and diversity), not to deny, therefore, to consecrate and guarantee the individuality and diversity. Any further analysis of the phenomenon of democracy involves references to the concepts of civilization and culture, the relationship between civilization, society and the individual.

In our opinion between dictatorship and democracy is obviously a contradiction, but one-sided: dictatorship is inconsistent and excludes democracy, yet democracy does not exclude the forms of dictatorship. The space and scope of this study do not allow further analysis of this interesting problem. However we mention that in doctrine are made referrals to forms of dictatorship that can characterize any democratic regime: parliamentary dictatorship, dictatorship of masses or the dictatorship of the majority. In all these situations the democratic reality, contradictions highlighted above become negative (majority excluded or ignoring the minority). Consequently, it gets to the exercising of authority in discretionary forms, which obviously contradicts the essential values of ideal democracy.

John Stuart Mill, in his works "Civilization," published in 1836 believes that civilization is contrary to the nature status or barbarism. A nation is civilized when the social conditions in which lives gives sufficient safety guarantees, so that social peace be a reality. Among consequences of higher civilization the most striking one, is the philosopher's opinion that the power tends to move from individuals and small communities to the masses. The importance of masses increases when that of individuals decreases. With the decreasing of individual's role, decreases the power of individual beliefs and the public opinion acquires supremacy. In this ideational context Stuart Mill pointed out that "the drawbacks of democracy lie precisely in this tyranny exercised by the masses, the majority of public opinion. Therefore, the political organization of representative governing must contain all guarantees for the individual against the tyranny of the masses. Among other measures, Stuart Mill suggested the representation of opinions minority in the Parliament.

The great philosopher findings are, in our opinion, fully valid also for the contemporary forms of real democracy or representative. That's why the realization of the principle of representation in any of the types of electoral system should allow as much as possible, the reduction or even elimination of the forms of dictatorship in a real democracy through enhancement of individualities, of the political minorities or otherwise. In this way, the progress of a democratic society becomes a balanced one based on a unilateral affirmative contradiction in which the masses affirm and do not deny individual, and the majority affirm the minorities. Thus, the *famous parliamentary principle "the minorities express and the majority decides"* should become*: legitimacy of the decision is given by the representativeness and power to express of minorities.*

Legality, as a feature that must characterize the legal acts of public authorities, has as central element the concept of "law". Andre Hauriou defined the law as a written general rule established by the public powers after deliberation, entailing direct or indirect

acceptance of the governors[1]. Ion Deleanu defines just the "document that contains general and mandatory rules sanctioned through the coercive force of the state, when its application is not done out of conviction and is prone to produce application whenever arise the conditions foreseen in its hypothesis[2]."

In a broader meaning, the concept of law includes all legal acts that contain legal norms. The law in its restricted sense is the legal act of parliament drawn up in accordance with the constitution, according to an established procedure and which regulates the most important and general social rules. A special place in the legal system administered has the constitution defined as fundamental law, located on the top of legislative system, which includes legal rules of a higher legal force, which regulates fundamental and essential social relations, especially those concerning the establishment and exercising of state power.

The state of legality in the work of public authorities is based on the concepts of supremacy of the constitution and supremacy of law. The supremacy of constitution is a quality of the fundamental law that basically expresses its supreme legal force in the legal system. An important consequence of fundamental law supremacy is the compliance of entire law with the constitutional norms[3]. The notion of juridical supremacy of law is defined as "its feature that finds expression in the fact that the norms it establishes must not meet either of other norms, apart from the constitutional ones and the other legal acts issued by state bodies are subordinated to it in terms of their legal effectiveness[4]".Therefore, the supremacy of law in the sense above is subsequent to the principle of supremacy of constitution. Important is that the legality, as a feature of the legal acts of state authorities involves the observance of the principle of supremacy of the constitution and law. The observance of these two principles is a fundamental constitutional obligation consecrated by the provisions of article 1 paragraph 5 of the Constitution. Failure to observe this obligation attracts the appropriate sanction of unconstitutionality or illegality of legal documents.

The legality of the legal acts of public authorities involves the following requirements: legal document to be issued in compliance with the competence prescribed by law; legal act to be issued in accordance with the procedure prescribed by law; legal act to respect the rules of law as superior legal force.

The "Legitimacy" is a complex category with multiple meanings and which is the topic for research for the general theory of law, philosophy of law, sociology and other disciplines. There are multiple meanings of this concept. We mention a few: legitimacy of power; the legitimacy of the political regime; legitimacy of governance; the legitimacy of the political system, etc. Referring to this concept Jean Leca said: "The term legitimacy designates the quality which enables the holder to a power to order or prohibit the ability to be heard without resorting to physical violence explicit or, what is meaning the same thing, an option recognized as normal to successfully use coercion if necessary[5]".The concept of legitimacy can be applied in case of legal acts issued by public authorities being related to the" margin of appreciation" recognized to them in the exercise of their prerogatives.

The application and observance of the principle of legality in the work of state authorities is a complex issue, because the exercise of state functions assumes the discretionary powers with which state bodies are invested or otherwise said, the right for appreciation of authorities regarding the moment of adoption and the contents of the measures ordered. What is important to note is that discretionary power cannot be opposed to the principle of legality, as a dimension of the lawful state.

In our opinion, the legality represents a particular aspect of the legitimacy of the public authorities' legal acts. Thus, a legitimate legal act is a lawful legal act, issued within the margin of appreciation recognized by the public authorities, which does not generate discriminations, unjustified privileges or restrictions of the subjective rights and is appropriate to the situation in fact that determines its legal purpose. The legitimacy distinguishes between the discretionary power recognized by the state authorities, and on the other hand, the excess of power.

Not all legal documents which satisfy the legality conditions are legitimate. A legal act that complies with the formal legality, but is generating discriminations or privileges or unduly restricts the exercising of some subjective rights, or is not appropriate to the situation in fact, or to the purpose pursued by the law, is an illegitimate legal act. The legitimacy, as a feature of the legal acts of public administration authorities must be understood and applied in relation to the principle of supremacy of the Constitution.

Antonie Iorgovan says that a problem of the essence of the lawful state is to answer the question: "where ends the discretionary power and where starts the abuse of law, where ends the legal behavior of administration, materialized through its right of appreciation and where it begins the infringement of a subjective right or a legitimate interest of the citizen? [6] "

Addressing the same issue, Leon Duguit in 1900 is doing an interesting distinction between the "normal powers and the exceptional powers" conferred by the Constitution and laws to the administration, and on the other hand the situations where state authorities act outside the legal framework. The latest situations, are divided by the author into three categories: 1) the excess of power (when the state authorities go beyond the legal powers); 2) misappropriation of power (when the state authority accomplishes an act which falls within its jurisdiction following another purpose, other than the one prescribed by law); 3) the abuse of power (when the state authorities act outside their powers, but through acts that have no legal character) [7].

Therefore, the application and observance of the principle of legality in the work of state authorities is a complex issue because the performance of the state's functions assumes the discretionary power with which the state bodies are invested, in other words "the right of appreciation" of the authorities regarding the moment of adoption and the contents of the measures ordered. What is important to highlight is that discretionary power cannot be opposed to the principle of legality, as a dimension of the lawful state.

In the administrative doctrine, that is primarily studying the issue of discretionary power, it was emphasized that the opportunity of administrative acts may not hinder their legality, and the conditions of legality can be divided into: general conditions of legality and specific conditions of legality on expediency[8]. Consequently, the legality is the corollary of validity conditions, and the opportunity is a requirement (size) of legality[9]. However, the right of appreciation is not recognized by the state authorities in exercising all the prerogatives they have. One needs to remember the difference between the *competence* of state authorities that exist when the law imposes on them a certain strict behavioral decision, on the other hand the *discretionary power*, in which situation the state authorities may choose the means for achieving a legitimate aim or in general, when the state body can choose between several decisions, within the law and its jurisdiction limits. We will remember the definition proposed in the literature to the discretionary powers: "there is a margin of freedom at the discretion of the authorities, so in order to achieve the purpose indicated by the law maker to have the possibility of use any means of action within its jurisdiction. [10]"

Although the problematic of the discretionary power is studied mainly in the administrative law, the right of appreciation in exercising some prerogatives represents a reality that is encountered in the work of all state authorities. [11] The Parliament, as the supreme representative body and the sole legislative authority, has the broadest limits to manifest discretionary power, which identifies itself through the characterization of the legislative act. Since the period between the two world wars I.V. Gruia pointed out: "The need to legislate in a particular matter, the choosing of enactment timing, the choosing of the timing for implementation of the law by fixing by the legislator of the date of application of the law, revising of previous legislation, which may not restrict and compel the activity of future Parliament, limitations of the social activities from the free and uncontrolled way of carrying out and their subjecting to law rules and sanctions, the contents of the legislative act etc, prove the sovereign and discretionary appreciation of the legislative body's function." [12]

That is the case today, because every Parliament has the freedom to exercise its powers almost unlimited. The legal limit of this freedom is shaped only by the constitutional principles applicable to the legislative activity and the mechanism for controlling the constitutionality of laws.

The discretionary power exists also in court's activity. The judge is required to decide only when it is noticed, within the referral's limits. Beyond that is manifested *the sovereign right of assessment* of the facts, the right to interpret the law, the right to set a minimum or a maximum punishment, to grant or not extenuating circumstances to determine the amount of compensation etc. The exercise of these powers means nothing else but discretionary power.

Exceeding the limits of the discretionary powers means breaching of the principle of legality

[10] Dana Apostol Tofan, *quoted works,* 22.

[11] In doctrine, Jellinek and Fleiner claimed the thesis according to which the discretionary power is not specific only to the administrative function, but it appears in the activity of other functions of the state, under the form of a liberty of appreciation on the contents, on the opportunity and covering of the juridical act. (see Dana Apostol Tofan, *quoted works*, 26).

[12] I.V.Gruia, "Puterea discreţionară în funcţiunile Statului", *Weekly Pandectales* (1934): 489.

or what in legislation, doctrine and jurisprudence is called to be "abuse of power". The excess of power in the activity of state bodies is equivalent to the abuse of rights, as it means the exercising of some legal competences without any reasonable motivation or without any appropriate relation between the imposed measure, situation in fact and the legitimate aim pursued.

The problematic of the excess of power forms mainly the subject of the law doctrine and administrative jurisprudence. Thus, the jurisprudence of the administrative prosecution courts in other countries delimited the freedom of decision of the administration from the excess of power. French State Council uses the concept of "appreciation manifest error" to describe situations where the administration exceeds, by legal acts adopted, the discretionary power. German administrative courts can annul the administrative acts for abuse of power or "wrong use of power". In such cases the legal acts of the administration have the appearance of legality, since they are adopted within the scope prescribed by law, but the excess of power consists in the fact that the administrative acts are contrary to the purpose of the law.

The Romanian [13]Administrative Litigation Law uses the concept of "abuse of power of the administrative authorities", which it defines as "the exercise of the appreciation right belonging to public authorities, through the violation of the fundamental rights and freedoms of citizens consecrated in the constitution or by the law" (Article 2, paragraph 1, letter m). For the first time the Romanian legislator uses and defines the concept of abuse of power and also recognizes the competence of the administrative prosecution courts to sanction the exceeding of the limits of the discretionary powers through administrative acts.

The exceptional situations represent a particular case in which the state authorities, and especially administrative ones, may exercise their discretionary power, with existence of the obvious dangers of power excess.

In the doctrine there is no unanimous agreement on the legal significance of the exceptional situations. Thus, in the older French doctrine, the discretionary power is considered to be the liberty of decision of the administration within the law permitted framework, and the opportunity evokes an action in fact of the public administration, under exceptional circumstances, action not necessary (therefore advisable) but contrary to the law[14]. Jean Rivero believes that through exceptional circumstances means certain factual circumstances that have a double effect: suspending of the application of the ordinary legal system and triggering of the application of a particular law to which the judge defines the requirements. Another author identifies three specific elements for exceptional situations: 1) the existence of some abnormal and exorbitant situations or serious and unforeseen events; 2) inability or difficulty to act in accordance with the natural regulations; 3) the need to intervene quickly to protect a considerable interest, gravely threatened[15].

The excess of power can manifest itself in these circumstances at least by three aspects: a) an appreciation of a factual situation as being an exceptional case, although it has not this meaning (lack of a reasonable and objective motivation); b) the measures taken by the competent state authorities, by the virtue of the discretionary powers, exceed what is necessary for the protection of the public interest seriously threatened; c) if these measures restrict excessively, unjustified the exercise of the rights and freedoms constitutionally recognized.

The existence of an economic, social, political or constitutional - crisis does not justify the abuse of power. In this respect Professor Tudor Drăganu said: "the idea of the lawful state requires that they (the exceptional circumstances) to find adequate regulations in the constitution texts, whenever they have a rigid character. Such constitutional regulation is needed to determine the limits of the areas of social relations, in which the transfer of competence from the Parliament to the government may take place, to highlight the temporary character, by setting deadlines for application and by specifying the purposes in view of which it is carried out.[16]"

Of course, the excess of power is not only a phenomenon manifesting itself in the practice of the executive bodies, it can also be found in the work of Parliament or of the courts.

We appreciate that discretionary power recognized by the state authorities is exceeded, and the measures ordered represent an abuse of power, wherever the following situations occur:

1. The measures decided do not pursue a legitimate aim;

2. The decisions of public authorities are not adequate to the factual situations or the legitimate aim pursued, as they go beyond what is necessary to achieve that purpose;

3. There is no rational justification of the measures imposed, including the situations in which is established a different legal treatment for identical situations, or an identical legal treatment for different situations;

---

4. Through the measures ordered the state authorities restrict the exercise of fundamental rights and freedoms, without any rational justification to represent, in particular the existence of an appropriate relation between these measures, the situation in fact and the legitimate aim pursued.

In the final part of this study we will refer to some issues that we believe that need to be considered in a future proceeding for revising the Constitution.

As shown above in regard to the excessive politicianism and the power discretionary manifestations of the executive contrary to the spirit and even the letter of the Constitution, with the consequence of violation of fundamental rights and freedoms, manifested throughout the last two democracy decades in Romania, we consider that the scientific approach and not only in reviewing matters of the basic law should be directed to find solutions to guarantee the values of the lawful state, to limit the violation of the constitutional provisions in view of some particular interests and to avoid the excess of power by state authorities.

The provisions of art. 114, paragraph 1 of the current drafting state: "The Government may assume responsibility before the Chamber of Deputies and the Senate in joint session on a program of general policy statement or a bill."

The engagement of Government liability has a political nature and is a procedural instrument which avoids the phenomenon of *"dissociation of majorities*"[17] where the Parliament could not meet the required majority to adopt a certain action initiated by the Government. To determine the Legislative forum to adopt the measure, the government through the accountability procedure, conditions to continue its work requiring a vote of confidence. This constitutional process ensures that the majority required for the government dismissal, in case of submitting a motion of censure to dismiss to coincide with that for rejecting the law, program or political statement of which the government binds its existence.

The adapting of the laws as a result of the political liability engagement of the Government has as an important consequence the absence of any discussions or parliamentary deliberations on the bill. If the government is supported by a comfortable majority in the Parliament, through this procedure one can achieve the adoption of the laws by "bypassing the Parliament", which can have negative consequences on the principle of separation of powers in the State, but also in regard to the role of Parliament, as defined of Article 61 of the Constitution.

Consequently, the use of this constitutional procedure by government for adopting a law must be exceptional, justified by a political situation and a social imperative, well defined.

This particularly important aspect for respecting the democratic principles of the lawful state by the Government was well highlighted by the Constitutional Court of Romania: "To this simplified form of regulation one must reach *in Extremus*, when the adopting of bill in the ordinary procedure or emergency procedure is no longer possible or when the Parliament's political structure does not allow the adopting of the bill in the current or emergency procedure.[18]" The political practice of the Government in recent years is contrary to these rules and principles. The Executive frequently used the assuming of responsibility not only for a single law, but for packages of laws without a justification in the sense shown by the Constitutional Court.

The politicianism of the government clearly expressed by the high frequency of assuming such a constitutional decision seriously harms the principle of political pluralism which is an important value of the lawful system as consecrated in the provisions of article 1, par. (3) of the Constitution but also of the principle of parliamentary law that shows that "the opposition expresses and the majority decides"[19]. "To deny the right of the opposition to speak is synonymous with the denial of political pluralism which, according to Article 1, paragraph (3) of the Constitution is a supreme value and is guaranteed ... the principle the 'majority decides, opposition expresses "implying that in the entire organization and functioning of the Parliament's Chambers to ensure, on one hand that the majority is not obstructed, especially in the conduct of the parliamentary procedure and, on the other hand the majority to decide only after the opposition has voiced"[20]. The censorship of the Constitutional Court has not proved to be sufficient and effective to determine the Government to respect these values of the lawful state.

In the context of these arguments we support the proposal to revise these constitutional provisions that limit the right of the Government to use its liability for a single bill in a parliamentary session. However, in our opinion there is no justification to exclude from the limitation of Government's liability, situations aiming the government draft law on state budget and state social insurances.

2. All post-December governments have massively used the practice of Emergency ordinances, fact widely criticized in the literature.

The conditions and prohibitions established by revising law in 2003 on the constitutional regime of

[17] Gheorghe Iancu, *Drept constituţional şi instituţii publice* (Bucharest: All Beck, 2010), 482.

[20] Ioan Muraru, Mihai Constatinescu, quoted works, 56.

emergency ordinances, in practice proved to be insufficient to limit this practice of the Executive and the control of the Constitutional Court also proved insufficient and even ineffective. The consequence of such a practice is the violation of the Parliament's role as "the sole legislative authority of the country" (art. 61 of the Constitution) and creating of an imbalance between the executive and legislature by emphasizing the discretionary power of the Government, which most often turned into the abuse of power.

We propose in the perspective of a new revision of the Basic Law, that art. 115 par. 6 of the Constitution be amended so as to prohibit the adopting of emergency ordinances in the field of organic laws. In this way is protected an important area of social relationships as the constitutional legislature considers essential for the social and state system, the excess power of the executive through the practice of issuing emergency ordinance.

3. In our opinion is necessary that the Constitutional Court's role as guarantor of the Basic Law to be amplified by new responsibilities in order to limit the excess of power by the state's authorities. We disagree with the assertions in the literature that a possible improvement of constitutional justice could be achieved by reducing the powers of the constitutional court[21]. It is true the Constitutional Court ruled some questionable decisions regarding their compliance with the limits of exercising their duties according to Constitution, by assuming the role of a positive legislator[22]. Reducing the powers of the constitutional court for this reason is not a solution as a legal basis. Of course reducing the powers of the state authority has the consequence of eliminating the risk of improper exercise of those powers. This is not a way of doing things in a lawful state, but it should be done by seeking legal solutions to achieve better conditions of the tasks which prove to be necessary to the state and social system.

To the powers of the Constitutional Court may be included the one to rule on the constitutionality of administrative acts, exempted from the review of legality by the administrative courts. This category of administrative acts, to which refers Article 126 paragraph 6 of the Constitution and the provisions of Law no. 544/2004 of administrative litigation, are particularly important for the whole social system and state. Therefore it is necessary a constitutional scrutiny because in its absence, the discretionary power of the issuing authority is unlimited with the consequent possibility of restricting the excessive exercise of fundamental freedoms and rights or of breaching the important constitutional values.

For the same reasons our constitutional court should be able to control in terms of constitutionality also the Presidential decrees establishing the referendum procedure.

The High Court of Cassation and Justice has the power to take decisions in an appeal on points of law that are binding on the courts. In the absence of any control of legality or constitutionality, the practice has shown that in many cases the Supreme Court has exceeded its power to interpret the law, and such decisions amended or completed acts behaving as a genuine legislature thus violating the principle of separation of powers in the state[23].

In these circumstances, in order to avoid the excessive power of the Supreme Court, we consider it necessary to assign the Constitutional Court the power to decide on the constitutionality of the decisions of High Court of Cassation and Justice adopted in the procedure of appeal on points of law.

III Conclusions

Proportionality is a fundamental principle of law consecrated explicitly to the constitutional, legislation and international legal instruments regulations. It is based on the values of the rational right of justice and equity and expresses the existence of a balanced or appropriate relation between actions, situations, events, being a criterion for limiting the measures ordered by the authorities to what is necessary to achieve a legitimate aim, thus being guaranteed the fundamental rights and avoided the excess of power by the state's authorities. Proportionality is a fundamental principle of EU law being expressly consecrated by article 5 of the Treaty on European Union[24].

We consider that this principle's express regulation in the content of the provisions of Article 53 of the Constitution, with application in the restriction of certain rights, is not enough to highlight the full significance and importance of the principle of the lawful state.

It is useful that to article 1 of the Constitution to add a new paragraph stating that *"The exercising of state power must be proportionate and non-discriminatory"*. This new constitutional regulation would be a veritable constitutional obligation for all state authorities to conduct their duties in a way that the measures adopted to enroll within the discretionary power recognized by law. At the same

time it creates the possibility for the Constitutional Court to sanction by means of the constitutional reviewing control of the laws and ordinances, the excess of power in the work of Parliament and Government, using as criteria the principle of proportionality.

Of course, the existence of an institutional state viable, efficient qualitatively, well structured and harmonized, including under the aspect of moral and professional quality of the civil servants and magistrates dignitaries is obviously an ontological factor to eliminate or at least diminish the excess of power of state's authorities in all its forms, especially we would emphasize on the situation in which the measures decided by the political and legal manifestations will take the *form of legality* but are in obvious contradiction with the requirements of *the principle of legitimacy.*

Strengthening the judiciary power, the control of the courts and control of constitutionality, particularly, mainly in situations where being questioned the violation of human rights or of the principles of lawful state, particularly the separation and balance of powers, can be a viable solution to ensure not only the legality of the measures taken by the state authorities, but also of their legitimacy.

GENERAL PRINCIPLES OF LAW

Elena ANGHEL[*]

Abstract

According to Professor Djuvara "law can be a science, and legal knowledge can also become science when, referring to a number as large as possible of acts of those covered by law, sorts and connects them by their essential characters upon legal concepts or principles which are universally valid, just like the laws of nature".

The general principles of law take a privileged place in the positive legal order and represent the foundation of any legal construction. The essence of the legal principles resides in their generality. In respect of the term "general", Franck Moderne raised the question on the degree of generality used in order to define a principle as being general – at the level of an institution, of a branch of the law or at the level of the entire legal order.

The purpose of this study is to find out the characteristics of law principles. In our opinion, four characteristics can be mentioned.

Keywords: *principle, general, experience, values, universal.*

1. Introduction

In its great historical spatial diversity, despite the natural differences, the law has a permanent nature, represented by a bunch of constants. Not only principles, but institutions are conserved, according to the continuity of social life; the state does not create law, but establishes a law, the positive law"[1].

The general principles of law take a privileged place in the positive legal order and represent the foundation of any legal construction. The essence of the legal principles resides in their generality.

The purpose of this study is to find out the characteristics of law principles. In our opinion, four characteristics can be mentioned.

2. Content

2.1. The generality of law principles

Mircea Djuvara pointed out that „in the filed of the science, the scientific progress consists of generalization. The scientific method consists of the knowledge of as many actual cases as possible and of their concentration in unitary laws by means of their essential similarities. The law of gravitation was a huge progress due to the fact it succeeded in combining a huge number of phenomena"[2].

In its entirety, the science of the law tends to generalization: the law is the result of judgment and the judgment consists of generalization; positive law has a general application; the rule of law is general and impersonal. According to Djuvara, the rule of law was always created by individual cases, by means of their comparison, a higher and higher level of generality being developed. In this respect, the author refers to the Greek primitive organization period, described by Homer, when the resolution ordered by the king, in case of a dispute, called „Themistes", was repeated in all similar cases so that, due to his will of reaching the same settlement, the idea of a general rule emerged over time[3]. Nowadays, statist law provides such general regulations that they can embrace the whole activity of a society. The Napoleonic Code has the great merit of having worded „precisely and clearly so general regulations that they could regulate almost all social life of its time"[4]. Djuvara concludes that, in the field of the law, generalization is necessarily required by the „logical postulate which rules the entire legal thinking, namely the rational idea of justice"[5].

Therefore, the generality is a defining element of the law system. But, within the law framework, „the legal construction of principles is the ultimate expression of refined abstraction"[6]. The generality is related to the law principles essence, is the „the core of the definition", according to Bergel.

Gheorghe Mihai notes that the principles of the law are called both general and fundamental, without the distinction between these two terms being explained. In his opinion, „fundamental" is the attribute of something that has the capacity to substantiate, and „general", in current sense, concerns „what is valid for a whole class of objects,

[6] *Idem*, pag. 312.

what belongs to the entire class". Therefore, the principle is „the simplest and the most general sentence of which we can infer a totality of knowledge or precepts" and which substantiates, as an essential judgment, this entirety"[7].

Furthermore, the author insists on the fact that we should not confuse the generality of a principle with its extension. The principle, as a main idea, is only one, the founder of the law, the rest being „founded founders, not principles"[8]. For example, the principle of the freedom to adduce the evidence is an extension of the principle of freedom. Therefore, principles are not ranked according to the degree of generality, all of them being „the most general sentences". According to the author, if we refer to principles which are specific to certain areas of the law, we should call them „rules of method", mandatory rules, and not guidelines.

Most authors express a contrary opinion, meaning that in their opinion, principles have a different degree of generality. Therefore, Sofia Popescu shows that the general principles of law are different in terms of the degree of generality[9]: some of them have full applicability, being valid for the entire law system, while others are applicable only to private law or public law or to a certain branch of the law. While branch legal disciplines organize branch principles, the general theory of law concerns the most general principles. By setting aside the whole positive law, the general theory of law, by means of synthesis, can approach to universality.

In what concerns the principles of international law[10], Grigore Geamănu distinguishes, according to their generality, between fundamental principles and other principles of international law. The fundamental principles „represent a full generalization of the international rules of law", by being part of that bundle of rules which is the essential and specific part of this law[11]. The other principles of international law have a lower degree of generality, according to the author.

Furthermore, Franck Moderne wonders what degree of generality would be needed in order to classify a principle as being general, the generality being perceived, as Norberto Bobbio shown, at the level of an institution, of a branch of the law or at the level of the entire legal order[12].

Philippe Jestaz is reserved in expressing a clear point of view, both in what concerns the definition of general principle concept which has so many meanings that, according to the author, we need to resort to our intuition, and in what concerns the generality of the principles of law[13]. In his opinion, the principles of law have three characteristics: permanent, general and unanswerable. The general characteristic consists of the fact that the principle crosses several institutions or branches of law; for example, the principle which good faith is presumed on finds its applicability in various fields. Any rule of law entails in its structure a presumed fact (for example, any married woman gives birth to a child) and a consequence of this fact (the child's father is the husband of the mother). However, a principle consists of a multitude of presumed facts, so that we are not aware of the consequences of the fact unless we resort to certain rules of law. Jestaz concludes that the generality of a principle is a very relative concept, due to the fact that there is no standard to establish the degree of generality where a regulation becomes principle.

The generality of the general principles of law is „maximum", therefore they cannot be placed at the same level with the rules of law. We share the opinion of Jean - Louis Bergel, according to which the aforementioned expression, although pleonastic, is the most appropriate, due to the fact that it outlines the specific generality of these principles and distinguishes them, in this regard, from the rules of law. Therefore, a rule of law is general because it is applicable to an indefinite number of acts and facts, however, in relation to some of them, it can have a special characteristic. On the contrary, a principle is general „in what concerns an indefinite series of applications"[14]. In order to reinforce this statement, professor J. Boulanger exemplifies: the provision of the Civil Code according to which the conceived child is entitled to receive inheritance, is only a rule of law on inheritable devolution, while *infans conceptus pro nato habetur quotiens de commodis eius agitur* (the conceived child is considered born whenever his interests are concerned) is a genuine rule of law, by being applied in all situations which relate to the beginning of personality development. Therefore, Bergel concludes that the principles govern the positive law, by drawing the limits of the

branches of law, while the rules of law are only applications of or exceptions from these principles.

Gh. Mihai provides a response to this statement, namely, by being the most general sentence, the principle does not admit exceptions, even more if we talk about a basic principle; rules involve exceptions, however, „if a principle is declared as such, the exceptions abolish its capacity of principle"**[15]**. The author criticizes those definitions which distinguish between the principles and the rules of law, by arguing that the first are abstract and general, and the letter would be actual and particular: „by taking over the abstract and general characteristics from the filed of the regulations and moving them into the filed of the principles, means that all regulations are converted into principles or that all principles are converted into regulations"**[16]**.

According to Gh. Mihai, the distinction between principles and regulations is performed by means of justification: „the principle is the conceptual and axiological horizon of the regulations, the regulations are valid constructions of this horizon"**[17]**. The differences between the principles of law and the rules of law shall be discussed in another chapter.

2.2. The principles of law are the outcome of the experience

By defining the principles as the most general ideas which arise from judgment and which substantiate law, we should not understand that they could be designed outside social facts. They have to support the totality of rules of positive law and to find their justification within social life. Therefore, we point out that the principles are not the outcome of a simple speculation, but on the contrary they are created by means of the experience.

Mircea Djuvara wrote that, setting aside the experience in the field of the law is nonsense, by being impossible to create law only by means of rational deductions. „The knowledge of the legal phenomenon should start from the practice developed from actual cases. In order for the truth to be achieved, the legal science should start from the actual to the abstract and not the other way". Here is the how the instruments of law are created according to the author: the law starts by ascertaining the things of the society, it always starts from the examination of particular cases, which applies legal and rational assessments to, by means of the legal consciousness of the society. Following the assessment of these actual social relationships, by means of induction, higher and higher levels of generalization are reached. Out of these general laws, legal consciousness achieves more precise forms of positive law, which are deemed outcomes of the legal techniques. The principles of law emerge from the legal text established as such, whereas „the legal experts seek the logical ground of each provision". The principles represent the higher level of abstraction, but they have no meaning outside the actual social facts: these principles „have no value, unless they are in relation to the initial particular cases they emerge from"[18]. Therefore, „all the principles of law are the outcome of continuous and necessary observations of the necessary needs of the society and these principles are not only the outcome of abstract speculation".

The philosophy of law recorded different guidelines in the construction of the principles of law. Therefore, Paul Roubier distinguishes three important categories of thinking: formalist school (positivists), idealist school (iusnaturalists) and realist school, which gathers under this name, historical and sociological doctrines[19]. Positivists thought that any rule of law is an expression of the king's power; the rule is mandatory for the individuals, regardless if it is applied, therefore, the effectiveness of the rule is not important according to this theory.

Iusnaturalists substantiated law on a bundle of natural and permanent principles, the systems of positive law emerge from. These principles emerge from the nature of things, they are ordered by the judgment, by remaining the same, regardless time and space. „The lawfulness of the rule emerges from its compliance with an intangible pattern (natural or rational order)", therefore the lawmaker is also bound to comply with it, according to Roubier.

By expressing doubt against the transcendental nature of law and by disclaiming the ideas of natural law, realist school sought the ground of the law in the life experience of people: the law is a spontaneous outcome of social life and every rule emerges from experience. Realists tried to point out the influences of the past, of the traditions, by being concerned not about the natural human being, but about the real human being, not about the alleged permanent principles, but by laws emerged from the spirit of the people.

By being against the codification of law, German historical school substantiated law on experience. Savigny, the prominent representative of this theory, believes that the law is the work of nature, so that it does not have to be created, but it is self-created as a natural phenomenon, such as religion or language. The law is the outcome of a

[18] Mircea Djuvara, *op. cit.*, pag. 245 and the following.
[19] Paul Roubier, *op. cit.*, pag. 55.

collective action, it is developed at the same time with the spirit of the people and reflects its entire history; therefore, it cannot find its expression in law, but in tradition. The tradition watches over the conservation of the law, by representing the inheritance transmitted sequentially from a generation to another.

The sociological school, represented by Durkheim, developed the ideas of Auguste Comte, whose research followed the method of observation of facts and the role of the experience. Durkheim believes that the law is the result of the intervention of the society in its own interest, namely in order to improve life conditions of social body. The social interest is what prevails: the law emerges from the society and not from the individual.

Free Law School was established by François Gény, as a fight against the theories which believed that the legislation is the sole source of the law. The arguments against these theories were the following: the law is a spontaneous outcome of the society; the formal sources of law are only procedures for the ascertainment of the law, in fact, the law precedes them, due to the fact the law is the outcome of social powers, it does not emerge from the state, but from the society. According to Roubier, the rules of law system substantiated on formal sources, has, to some extent, a virtual characteristic, an absolute overlap between the law of the sources and the actually practiced law, being impossible. The validity of formal sources of law depends on their compliance with the real sources[20].

According to professor Benoît Jeanneau, most of the general principles of law, are the result of the wording of latent rules emerging from social life, rules emerged from the repetition of fragmentary text, which at one point in time, the judge promoted them as more or less general principles[21].

We note that this theory is shared by Mircea Djuvara. According to the author's opinion, the law actually practiced within a country is not necessarily and absolutely in accordance with the law drawn up by its sources. There is a „positive latent law" beyond the construction of the positive law: it is the own law of the society, consisting of a series of social practices which, without being guaranteed by the state authority, have a long practical efficiency within society life.

However, every legal system expresses the community life experience of that space, an experience which varies depending on ideologies, traditions and religious symbols. Sometimes, this positive law has such strong roots in the consciousness of the society that the respective legal system remains immovable under the power of tradition; this is the case of Muslim system, which still tries to break away from the clutches of tradition, by slowly progressing under the influence of Western law principles.

There is no place where the law can afford to ignore the experience that its history has gained for centuries. Legislative experience „is not the experience of the legal normality, which is established in rules, but of its clear disclosure, as unambiguous as possible and especially, as public as possible. According to Gheorghe Mihai, this experience could be a logical historical finishing of human normative experience, or in other words, it would be the formalized prescriptive living".[22] In our opinion, the principles of law emerge from this clear disclosure and serve as a basis for positive law.

2.3. The principles of law are axiologically established

The law system cannot be reduced to a set of axiomatic rules of law, as Kelsen believed, but it necessarily entails value judgments. „The importance lies in the social value of the result and not in the logical beauty of laws. If law is faulty, misfit, anti-economic or even unfair, a perfectly logical judgment will only serve to increase the flaw of the premise, of the initial rule"**[23]**.

According to Ion Craiovan, the law is „generated, structured and directed towards the inseparable connection with the constellation of values of the historical time in which it is developed and in certain conditions the law itself accedes to the statute of value"**[24]**. The author conceives the culture as a merger between the knowledge and the value. The knowledge is not sufficient in order to grant an unitary view to the act of culture, therefore the value appears as a "fulfillment of the knowledge" in relation to human beings, their aspirations and needs.

The law always starts from the social actions, but it also means legal consciousness, ideals and social values. Gheorghe Mihai deeply outlines that people do not coexist, people live together**[25]**. The coexistence is specific to the herds, packs or hordes; but the human community means collaboration, cooperation, unity which implies the value awareness. The individuals, as free beings endowed with sense and consciousness, choose their behaviors, measure their actions, relate to behavior standards and assess the consequences of their actions. „The actual law is not everlasting outside these values and these values are always typically

expressed in the statements of the principles of a law system".

The principles of the law are the expression of the values promoted and defended by means of the law. Such great is the importance of the values, that they classify any positive law from the axiological point of view. However, the people do not cohabit only legally, but also morally, politically and religiously. The law does not exhaust the wealth of the horizon of the values: besides the independent legal values which build the rules of law, there are also other values, namely non-legal values (equity, welfare, utility, dignity, truth) which are necessary for the human coexistence and which the law takes over, legalizes, promotes and defends by means of its rules.

The law, as a dimension of the society, is not limited to the totality of the legal regulations in force; the values are those which give meaning to the rigid normative feature. The basis of the law is praxio-axiological[26]. The bases of positive law consist of principles, values, ideals, which have accompanied the society since the beginning of its existence. By being guided by the ideals, the law is a social control mean for the individual: human beings comply with the rules of law due to the fact they grant them cultural normative models, which they acknowledge as being necessary for them and they follow them. The law is valued; it sums up the standards of conduct emerging from the consciousness of value of the society. By means of these ideals, the law falls under the scope of „must be". According to Mircea Djuvara, the ascertainment of the ideal of a society must be the beginning of any law scientific research.

Therefore, the development of the law falls under the scope of the values and principles. The values belong to the given of the law, they are always social. The principles are value bearers. As the principles are the bases of the positive law, the values are crystallized, enshrined and protect by rules of law. The values impact the legal order both in the process of law creation, due to the fact the lawmaker creates the rules of law in this axiological space, and in the process of law fulfillment, thus the values being promoted by effective legal means[27].

In the application of the law, the enshrined values become references for the personality of the individual who, endowed with responsibility, will guide and assess the conduct according to their standards. Therefore, „the normative legal universe is built on principles and is humanized by the work of the values"[28]. The law is mandatory within the relations between the individuals not as a necessary result of the coercive power of the state, but as the adherence of the members of the society to its regulations. The individuals willingly comply with the rules of positive law in so far they give expression of the values emerging from the legal consciousness of the society. Therefore, the law has to be accepted by the members of the society, in terms of values and regulation, exactly in this order, due to the fact that the principles and accordingly, the values these principles assimilate, represent the bases of the objective law, have logical precedence against the regulations of the positive law. Therefore, the axiological dimensions of the principles also impact the rules of positive law.

According to Gheorghe Mihai, the value „is not given, as the properties of the things, it is not based on the real world, but on the ideal world, of the pure validity"[29]. However, although the individuals are similar by means of the values they receive, they are still different by means of their valorization, due to the fact that „each and every value is valued by means of the actions".

If the law were not related to values, the law would be an artificial structure of rules without scopes. The individual acts in a regulated framework; as the values are expressed by rules of law, the individuals value them by means of their actions. For human beings, the value is the reference of the responsibility: they assume the values that the law crystallizes in its rules of law and act according to their consciousness. Gheorghe Mihai distinguishes between moral assumption and legal assumption of social values, therefore: the moral assumption of the value is „universal and absolute and no speculative derogation of it impacts its substance", while the legal assumption of the same value is „neither universal, nor absolute, as long as the same lawmaker falls in contraction in the same respect"[30].

2.4. Certain principles of law benefit from universality

In antiquity, Cicero expresses his belief in an universal law and according to him „it is not one thing in Rome, and other at Athens; one thing today and another tomorrow, but in all times and nations this universal law must forever reign, eternal and imperishable"[31]. Iusnaturalists strongly supported the transcendental nature of law, from a dual perspective: there is natural law, consisting of the

totality of natural, permanent principles, which are dictated by the judgment, being the same regardless of time and space; the positive law emerges from these eternal principles and by being the work of a lawmaker, it can only be changeable and imperfect.

If by 18 century, it was considered that the law was universal and unchangeable, being developed by human judgment out of the nature of things, Montesquieu revolutionized this thinking, by proving that law is the result of development factors. A great number of theories were developed against metaphysical foundation of law, by disclaiming the ideas of natural law. The historicism denied the universality of principles, by claiming that a historical *a priori*, which emerges from the spirit of the nature corresponds to each period and people. For the positivists, the law is the work of the lawmaker, for the sociologists is the result of facts.

According to Alexandru Văllimărescu „in order to avoid the free will of the lawmaker, we have to admit the existence of an *a priori* law, developed by human judgment which is also incumbent on the lawmaker"[32]. It is important to admit the existence of certain principles which are binding on everybody, to find an „outside rule", regardless if we call it natural law, rational or objective law, *donné* or *règle du droit*. The author explains that „the postulation of the existence of an absolute principle, which depends neither on the contingency of fact nor on the free will of the people who hold the great power", is essential.

Nowadays, we witness to some extent, the revival of the natural law. The principles of law represent the universal bases of the legal field, due to the fact they can be found in the depth of each positive law system. As of 1920, „the general principles of law recognized by civilized nations" were proclaimed in art. 38 of the Statute of the International Court of Justice, by being expressly recognized as a source of public international law. The current international view reinstates the universality of these principles, the establishment of mechanisms appropriate in order to ensure the globally protection of the inherent rights, natural for individuals, being in the center of the concerns of all states. In our opinion the institution of the Ombudsman is an extremely important institution of the European scene considering the role played by it in protecting the rights and interests of the European citizens[33] As they „express a sole truth which is mandatory for the judgment", these principles which substantiate law are transferred from a legal system to another, from the internal legal order to the international legal order and vice versa.

Under the integration into an united Europe, it is easy to note the tendency of the law towards universality. The predictions of Nicolae Titulescu – „starting from national, passing to regional, heading towards universal" were fulfilled. The European Union is opened to all European states which undertake to jointly promote universal values such as, humanism, human dignity, freedom, equality, solidarity, tolerance. The violation of the principle of equality and non-discrimination exists when a different treatment is applied to equal cases without any objective and reasonable grounds, or if there is a disproportion between the scope aimed by means of the unequal treatment and the used means[34]. The building of the European construction entails a blending of different legal orders, without impacting the foundation of member states national identity, and the reconfiguration of national, European and international relations. Such a difficult process would not be possible if the sense of European identity would not be expressed by means of universal principles and values, which breathe life into this continent[35]. It is important to keep in mind that in the European Union, the European Court of Justice "develops the general principles of law, which can be considered to be judge-made law – almost quasi-legislative"[36].

Giorgio del Vecchio pointed out that we should not understand that the general principles of law belong to a certain positive law system. The statement according to which the general principles of law are valid for only one people and that there are as many general principles as particular systems, would be contrary to the universal belief in *ratio juris*, which dates from Roman times and which is still valid today[37].

The objective law benefits form universality, due to the fact it is based on principles. The principles, in terms of ontology, give meaning to the law from the beginning of the society, namely before being discovered and worded by the law science. They substantiate law from the axiological perspective and guide the lawmaker in the construction of positive law.

3. Conclusions

In its great historical spatial diversity, despite the natural differences, the law has a permanent nature, represented by a bunch of constants. Positive law „does not exhaust the extension of the Law, and does not rebuild its foundations. Not only principles, but institutions are conserved, according to the continuity of social life; the state does not create law, but establishes a law, the positive law"[38]. Philippe Jestaz assigns a permanent feature to the principles of law, by showing that „they crossed centuries and survived numerous legislative convulsions"[39].

The assessment of legal principles, as found in the Western and Arab-Muslim legal systems, reveals their universal value, the fact that they „are identical or quasi-identical in Romanian law, in, Islamic Sharia and in the modern European legal systems"[40]. These principles are and shall remain universal as they crystallize eternal values for human beings of all time and places, independently of the social realities which delimitate their legal status of persons in law.

According to professor Djuvara, „the law can be a science, and the legal knowledge is converted in science when, by covering a large number of the documents contemplating law, sorts and connects them according to their essential characters by concepts or *universal legal principles*, just like the laws of nature"[41].

THE NOTIONS OF „GIVEN" AND „CONSTRUCTED" IN THE FIELD OF THE LAW

Elena ANGHEL*

Abstract

Montesquieu drew attention on the fact that "the laws that seem opposed are in some cases based on the same spirit". In this context, we will attempt to answer the following question: can the lawmaker create ("originate") the law by simply establishing norms in the form and upon the procedure required by laws or, on the contrary, besides these "exterior marks", is the lawmaker conditioned by some merits, contents criteria the efficiency and validity of legal norms depend on?[1]

The scientific research pursues at detecting that process of transition from "given" aspects to "constructed" aspects, from what it is to what it could be, from indicative to imperative. Social effectiveness of law depends on the degree of compliance between "given" and "constructed".

Keywords: *given, constructed, sources, norms, lawmaker.*

1. Introduction

The system of rules of law is the result of the interpretation of a certain lawmaker of the social relationships and of the appreciation of these interpretations according to own criteria[2]. The rule of law is the internal form of the law and its wording is the external form of the law. The rule of law does not come out of thin air, but it has a social background. This social background is the „given" notion of the law which entails the „constructed" notion of the law.

According to Hegel, there are two kinds of laws: laws of nature and laws of right. The laws of nature are independent and are valid as such; we just need to learn to know them, because they actually exist and are accurate, our ideas being the only ones which may be wrong. Instead, the laws of right are not absolute, they are established and originate from people so that „the thought of right is not something that we can own from the very beginning, but the right thinking is the knowledge and acknowledgment of the thing and this is why our knowledge must be scientific"[3].

The knowledge of the laws of right must originate from the social reality (this condition being necessary even in case of legal transplants[4]), due to the fact the law cannot avoid the complexity of the social system. The actual social life of each community is subordinated to two factors: space and time. In what concerns law and space, Montesquieu urged us not to separate the laws from the circumstances in which they were created, while pointing out that „the laws which seem to be opposed are sometimes based on the same spirit". The law is not an invention, but a *creation*, and the creation belongs to the spirit.

In terms of the situation in time, it is understandable that the legal phenomenon cannot be penetrated in its entirety only through a systemic approach, purely technical, but it has to be viewed from the perspective of the social-historical traditions. Without the values left behind by the history, the law would be an artificial construction. In order to decode the bases of the creation in the field of the law, the review of the historical conditions and of the whole social background where the law emerged and was developed, is needed.

2. Content

The beginnings of the society legal life were connected to the religious phenomenon, the law being perceived as a divine phenomenon. For instance, "law was considered by the Sumerians and Babylonians as being divine. Sumerians even had a goddess of law, Nanse, and at the Babylonians, the law was guaranteed by the deity of Heaven and Earth, Shamash"[5]. It was believed that the human's creative intervention in the material world can only be superficial, because the human being cannot cause essential modifications in the order of the matter by means of the externalized will[6]. The human beings live on the hope that they are „at the

helm of the society" and that the law is the result of their will. The universal vector the society is led by is the will of God, and the social human creative activity is the „pale copy of the great Creation".

The iusnaturalism removed the law from the field of the religion and placed it into the field of the human judgment. The natural law doctrine thoroughly researched the bases of the creation in the field of the law, an issue assessed from a dualistic perspective, namely the perspective of the natural law and of the positive law.

The Modernism placed the human being in the center of all legal concerns, any law system being intended to protect the fundamental human rights. Another feature of the modern society is rationalization, due to the increasing number of legal experts. The creation in the field of the law was also imagined as a duty of a rational lawmaker, a fiction by which the doctrine sought to prove the idea of rationality of the law.

Luc J. Wintgens, professor of the European Academy of Legal Theory of Brussels, believes that, as of the 17th century and until the 19th century, the legal modern thinking was dominated by legalism, which conceived the normative conduct only as a need to comply with the rules, regardless their origin; „the law is designated as being given, just there"[7].

According to Ioan Vida, nowadays we witness the collapse of modernism and the emergence of a new way of perceiving society: *postmodernism*. The modernist model of the legislative decision, based on simplicity and on the exclusive resort to the given of the law, is outdated. The new paradigm is the transition from the simple decision within the legal regulation process, to the complex legal decision, based on the multidimensional legislative approach and on the need to direct the normative process to the European standards[8].

All thinkers were concerned by the issue on the metaphysical development of the law: **is the law a result of the social phenomena, being variable in time and space as the phenomena are or, does the law hide behind it a bunch of absolute and universal principles which human judgment discovers?** Nowadays, this issue still raises concerns, this is why many people acknowledge the tendency to the revival of the natural law.

The law is a social reality constructed under given historical and social circumstances. There is also an *a priori law*, developed by the human judgment, which is mandatory for the lawmaker. This *a priori law* was called by Mircea Djuvara rational law, consisting of certain principles which are logically prior to the positive law which is based on them.

François Gény is the one who introduced the notions of „*given*" and „*constructed*" in the assessment of law creation process. By means of his scientific approaches, Gény wanted to end the „fetishism of written law" and faith in its sufficiency, estimating that it is incomplete and that „no matter how sharp the human being mind is, it is not able to cover the whole image of the world living in"[9]. Therefore, the lawmaker is bound to investigate the given in order to fulfill the constructed.

By assessing the relation between the science and the technique of the law, Gény distinguished between the „given" which arises from the nature of things, having emerged before the legal phenomenon and the „constructed" represented by the work of the lawmaker. If the given of the law entails a certain continuity and is mandatory for our judgment, the constructed is represented by those artificial and variable elements, the effectiveness of which is ensured by human will.

The given of the law is that reality outside the positive law, which grants it the substantiality necessary in order to exist. The given must „express the rule of law as it emerges from the nature of things and as far as possible, in the raw state".

According to Gény, the given consists of four constitutive elements:

real given, represented by the total conditions emerging from the nature of things and which are mandatory for any will (both natural conditions, and the conditions concerning the anatomical and psychological constructions of human beings, their moral aspirations);

historic given, accompanying the evolution of mankind, by providing a series of precepts born of experiences (for example, those on private property);

rational given, the total rules that the judgment orders, being mainly about the content of the natural law;

ideal given, which concentrates all aspirations, feelings, beliefs of mankind in what concerns the progress of positive law, the ultimate goal of the law.

Only the overall interpretation of these four elements can lead us to understand the essence of the law. According to François Gény, the development of the law entails a thorough observation of social facts and the knowledge of the legal experiences lived by different peoples in different eras. The law cannot be explained outside its historical reality because it is not created by sudden leaps, but step by step. The genesis of the law is an integral part of the historical process, of the historical development of the society itself. But the law is not a pure

[9] *Apud* Philippe Malaurie, *Antologia gândirii,* pag. 316.

explanatory discipline but has essentially a regulatory nature. The law is not limited to the description of the legal reality, by indicative sentences; it cannot emerge only from the facts, from what it is; *the law speaks to imperative*, it is based on value judgments and its appreciations start from an ideal.

The development phase of the law is followed by the legislative technique. The construction of law must be the essential part of law creation process. If the knowledge of the law is dominated by the rational element, the technical development is a work created artificially. „This form remains essentially a construction, largely artificial, of the law, rather an action work than an understanding one, where the will of the law expert can move freely".

According to Gény, the given of the law belongs to the science, and the constructed belongs to the legal technique. This opinion is contradicted by Paul Roubier, who shows that the legal technique is a set of processes which relate to the external form of the rule of law; but, the construction of the rule impacts its internal content, which is a matter of legal and not of technical policy[10].

According to Paul Roubier, the knowledge of the law content entails the understanding of the creation of rules of law. The establishment of a rule of law must always start from the knowledge of social life needs, according to which the rule is enacted, and then, according to them, the organization of legal relationships is proceeded with. If the first approach is scientific, the second belongs to the art of law. The society is under a continuous development and the law is permanently renewed. It is not enough for the human beings to know how things are, but they will always seek to discover how things should be. The human being relates all the time to an ideal and this ideal cannot be reached by means of scientific methods but only by means of value judgments. This is why the law is an art, directed towards the reaching of an ideal: *the ideal of justice*.

„The laws of physics which do not allow exceptions, which enable predictions and retrodictions and can be expressed in mathematical language, do not belong to the field of the law", due to the fact that the history of the society is „a permanent assessment of the communities in what concerns the possibilities to organize efficiently their coexistence and cooperation structures, where the law is imminent"[11].

Paul Roubier lays at the basis of the law structure two givens: the experience and the ideal of justice, which turn the social order into a superior moral order. Justice „is undoubtedly a constant given of our spirit, but it is likely to embed different forms, depending on the society". The ideal of justice is not the same for all peoples and is not the same in different historic moments.

The ideal of justice is the actual (material) source of the positive law. In the absence of such an ideal, positive law would be a simple construction of power. Even if this ideal is impossible to be achieved, the law needs to aim it, due to the fact that each and every legal institution is judged in the light of this ideal.

Roubier criticizes the excessive formalism emerging from the pure theory of the law expressed by Hans Kelsen, which builds the rule of law strictly on its external appearance, by removing from its content any moral or political element. We will not be able to understand the law if we stick to the study of the rules of positive law. In his opinion, Kelsen's theory is primarily contradicted by the case law. How can an interpretation, which is in accordance with the opinion of the lawmaker, be useful, if it is in total disagreement with the legal practice? The rule of law is outdated if it cannot be adapted to the needs of social life. Kelsen's theory disregarded the fact that the legal phenomenon is constantly subject to improvement. By denying the dynamic nature of the law, the pure theory restrained the givens of the law, by annihilating its possibility to meet legal reality[12].

Therefore, the legal creation work covers two stages: the acknowledgement of those givens of the social life and the construction of the rule of law based on them[13]. According to Roubier, three groups of factors have to be taken into account: religious and moral factors (*traditions*), political and social factors (*ideologies*) and economic factors (*interests*). By assessing the foundation of the rule of law, the author shows that, if the lawmaker creates the rule of law without taking into account all the givens of the social order, the lawmaker performs an useless work.

The distinction between what is given and what is constructed was assessed by distinguished professors Traian Ionaşcu and Eugen A. Barasch, in a study dedicated to the fundamental and applied research, as they combine on the land of the law[14]. They pointed out that although the distinction between the scientific and technical field is not approached in the Marxist legal literature, such an approach can be noted. If the substance of the law is

rooted in the material existence conditions of a given collectivity, then the role of the technical field is to include this substance in the rule of law. The scientific field will indicate the scopes and the technical field would propose the most appropriate procedures in order for the substantive requirements of social life to become rules of law. „Effective things cannot be achieved unless we start from what is given. The scopes do not have significance, unless they are adapted to the means. From the social point of view, problems do not have meaning, unless they are likely to be solved".

According to another opinion[15], the given of the law is represented by „the directive, the standard of justice, the rational necessity which creates the objective validity of a legal system". This given is informal, is a fluid, non-crystallized state, therefore the lawmaker is bound to use certain techniques in order to create a formal reality. The transition from the given of the law to the constructed law is performed by means of the legal technique, by being itself impregnated with value considerations.

Contrary to Savigny's theory according to which the law does not need to be created, but it is self-created, as a natural phenomenon, the work of law development is the result of conscious human actions. However, the German historical school had the great merit of showing that the law is the result of social, historical and moral factors and that lawmakers cannot create it arbitrarily by means of their simple will. The lawmaker must take into account certain requirements of social life, because behind all formal law sources, real sources, called by G. Ripert „the creative forces of law", are laid. Essentially, the natural environment, social environment and human factor represent the bases of positive law, by jointly contributing to the development of the legal phenomenon.

The natural environment impacts the law by means of all its components: geographic framework (topography, climate, water, air), biological, physiological, demographic factors. The location of human being in stable communities and coexistence depended on landforms and the nature of soil necessary for agriculture, the climate influenced food production, mood and body development; nowadays, demographic factor exerts a great influence on the legal regulations, by calling for legislative measures on population growth limitation or on the contrary, on birth rates stimulation.

The structure of the social environment consists of several components: economics, politics, culture, moral, traditions. Due to the fact that each of us is the product of the social environment living in, the understanding of the legal phenomenon requires the knowledge of the influences of this law configuration factor. Sofia Popescu describes the influence of culture and traditions on the legal phenomenon, by writing that the law is not a simple regulatory texture, it cannot be reduced to a set of legal force endowment modalities, but it is a complex cultural entity incorporating human culture and which organizes a great number of traditions[16].

According to Mircea Djuvara, from the sociological point of view, nowadays, all peoples are the result of different races mixtures. Even though, physically speaking, we cannot establish continuity by means of heredity, psychologically and mentally speaking, it can be noted that current nations have the same mental features, as two thousand years ago. But the influence of the social environment is so great that, despite the strong persistence of mentalities, if races mixed, as inevitably happens, they lose their specific mentality in order to adapt to the mentality of the people they get lost in.

In what concerns the influence that the human factor has on the legal phenomenon, the precedence of human being or of the society was always questioned. Under the assumption that the individual is not self-sufficient, Aristotle showed that the society preceded the individual; after having been established, the society created the individual. The opinion of Gény is at the opposite end, in his opinion the individual being the basis of the society.

The human being is the central area of interest of the lawmaker. The law is constantly related to the presence of the individual within the society, due to the fact the scope of the individual is social coexistence. However, unlike the moral, the law considers human action in a system of given relations. The law does not concern thoughts, inner life or individual's intentions. It was claimed that the law lacks of faith in human perfectibility, as it does not concern the actual human beings, with their aspirations, but concerns only the individuals involved in a system of relation, the abstract, standardized individuals, who are bound to fulfill their obligations. There were cases when human settlement in communions was missed by the laws, the individual being abandoned in „the narrow circle of its own singularity"[17].

The law has to be based on the existential understanding of the individual as a human being, who is often sacrificed in favor of certain figures: person in law, person in state. Moreover, in Romanian, *persoană* (person) meant the mask behind which the actor was hiding on the stage when interpreting a role. By means of analogy, the Romanian took over the concept and used it in the

field of the law, by suggesting the roles the individual assumes when creating legal relations.

Nowadays, the European citizen, namely the person, not the human being, is at the center of the community concerns. The Constitutional Treaty[18] provides that „Every person holding the nationality of a Member State shall be a citizen of the Union. Citizenship of the Union shall complement and not replace national citizenship". In our opinion the institution of the Ombudsman is an extremely important institution of the European scene considering the role played by it in protecting the rights and interests of the European citizens[19]. „Variables of places and time which cannot be easily estimated are interceded between the abstract human being of his fundamental rights and the worldly human being"[20].

3. Conclusions

Therefore, the law has real and formal sources. *The real sources of the law*, consisting of all the components of the given do not have a regulatory nature, but only determine will to adopt a certain regulation; these sources stay outside the legal system, by having an influence on law construction work. But, up to the extent certain ideals are taken over from the given of the law and expressly provided by the rules of law, as in case of the democratic traditions of the Romanian people and the ideals of the Revolution of 1989, established by the Constitution of Romania, revised in 2003, the real sources turn into mandatory rules of law and become *formal sources* of law. The constitutional architecture puts on a place of honor the principle of the separation and balance of powers[21].

The research of the basis of legal regulations and of the aims pursued by them is the essential task of legal science. But scientific research, either fundamental or applied, is developed in consideration of practice. The research is knowledge, the practice is action, entails finding solutions to meet the relevant theory needs[22].

By establishing what it is, the scientific research is liable to establish what it could be and it must be. The essentially regulatory nature places the science of the law in the field of the „must be" and subordinates it to the scope of the law, unlike sociology, which is an explanatory science, dominated by the causality and necessity law. The law is not a simple „social engineering", but it takes into account a social order directed towards the fulfillment of scopes.

Every positive law has its scopes, which the law enhances differently „by legally classifying them, in relation to time and people; the Nazi, Saudi Arabian or Japanese social order do not have the same meaning"[23]. The scientific research aims to describe the process of transition form the „given" to the „constructed", from what it is to what it must be, form the indicative to the imperative. The social effectiveness of the law depends on the correlation level between the given and the constructed.

A PLEADING IN FAVOUR OF THE CONSTITUTIONAL COURT

Valentina BĂRBĂŢEANU[*]

Abstract

Most of the European countries have chosen the centralized system of constitutional review, performed by a unique authority empowered with the competence of removing from the normative ensemble those legal provisions that do not comply with the principles and rules comprised in the Basic Law. This „European model" has proved to be more appropriate than the so-called „American model" in what concerns the compatibility with the European jurisdictional mechanism. Romania has adopted the same European trend and the Constitutional Court has become a very important actor in the Romanian legal landscape. From the very beginning of its activity, it has influenced in a great measure the national normative system. It has been sometimes criticized and accused that it interferes in an excessive way in the legislative process. Due to its competence to regulate the juridical conflicts between the public authorities and its possibility to repeal laws before their promulgation, it has been many times in the centre of heavy attacks, mostly from different political forces, often driven through mass media. Nevertheless, despite of its detractors, the Constitutional Court has proven, over the years, its ability to develop the Romanian normative system. The present paper intends to display the most significant contribution of the Romanian Constitutional Court in improving various legal regulations. In the same time and much more important, using concrete examples from the Court's case-law, the paper also intends to demonstrate that the Constitutional Court of Romania has been a major factor of improving peoples' life, removing unconstitutional obstacles set in front of the unimpeded exercise of their fundamental rights and freedoms.

Keywords: *constitutional review, constitutional court, effects of decisions, human rights, legistative process.*

1. Introduction

Unprecedented authority within the Romanian landscape, the Constitutional Court has been established by the new and democratic Romanian Basic Law adopted in 1991 as an expression of the ideals of freedom of the Romanian people. During its 24 years of existence[1], the Court had a very intense and diverse activity, in accordance with its legal powers, on various areas of social, political and economic. Its decisions had different echoes in the legal environment. Some of them have been embraced with a lot of enthusiasm, while others have been, on the contrary, received with disapproval, reproaches and criticism. Most of the subjective reactions have regarded certain decisions loaded with political significance, exploited by the press in mediatical purposes and sometimes turned into media events. However, there have been left in the shadow decisions that had a great favourable impact over an important number of citizens. Due to these decisions, have been repelled from the legislation provisions of law restricting the exercise of fundamental rights or decreasing to annihilation the guarantees they were to enjoy. The Court has also eliminated discriminations between categories of people in the same legal situation and it has re-established the balance usually by raising disadvantaged category to the same standard of protection enjoyed by the other category to which the comparison was analyzed and obtaining, in the end, an equivalent legal regime applicable for all the persons entitled to.

This study aims to reveal the importance of the constitutional review performed by the Constitutional Court and to highlight the positive impact that its work has in the Romanian society. The paper shall also tries to illustrate the way that the solutions given by the Constitutional Court manage to improve the quality of life of citizens by ensuring the compliance with the requirements imposed at the constitutional level in what concerns especially the human rights guarantees. The present study intends to prove that even if the constitutional review consists in an abstract and theoretical comparison between the norm subject to verification and the constitutional referential text, nevertheless, the Constitutional Court always keeps in mind the practical finality of its decisions, being aware of the direct impact direct on the Romanian legal landscape. The study will present illustrative decisions of the Constitutional Court good influence on the ensemble of the society. Displaying such decisions is the way in which I will try to highlight the complexity of its activity and the vastness of the areas in which its decisions bring favourable consequences. In what concerns the stage of the knowledge in this field, it has to be mentioned that the constitutional review is, in general, a frequently discussed theme, but the emphasis of its positive influence has preoccupied the legal scientists in the same measure. Within the European Commission for Democracy Through Law (Venice Commission,

[1] The Constitutional Court has been consecrated by the Basic Law adopted in 1991, but it has started its activity in 1992, following the entrance into force of the Law no.47 of 1992 regarding its organization and functioning. The Court has rendered its first decision on the 30th of June 1992.

authority that monitor the constitutional jurisdiction of the states that are members of Council of Europe, there have been drafted various researches regarding the impact of the constitutional authorities activity on the society's life, but not from the perspective that the present paper intends to depict.

2. The emergence and necessity of the constitutional review

The emergence of the constitution in the world occurred in the context of revolutionary efforts and theories with particular relevance, like the separation of powers, rule of law, representativity and the natural rights of humans[2]. The idea of a Basic Law involved its supremacy as a feature that gives expression to its super-ordinated position not only in the legal system, but in the entire socio-political system. This is an unquestionable legal reality that needed to be ensured and guaranteed. In this context, the constitutional judicial authorities appeared and imposed themselves as true grantors of the supremacy of the constitution.

The general rule in a modern, democratic state is that a law should be issued by competent state authority, within its competence, in compliance with the normative legal acts situated above in the normative hierarchy. Due to the supremacy of the Constitution, the necessity of a check of the compliance of the law with the Basic Law became obvious. In order to achieve this goal, the legal scientists have imagined and created the concept of "constitutional review".

From a historical perspective, acceptance of constitutional review represented a dramatic change of optics, thus achieving desecration of the law, whose infallibility - dogma enshrined by Rousseau – had been imposed since the French Revolution of 1789 and was respected over the entire nineteenth century and early twentieth century, being very difficult to remove[3]. In the same way has also been exceeded the parliamentarism theory, according to which the legislator supremacy over the other branches of government has ruled out for a long time any form of judicial review of the constitutionality of legislation[4]. Abandoning the idea of a mythical sovereignty of the Parliament and of the intangibility of the law occurred in Europe after the Second World War. The first states to overcome this stage were Germany and Italy. And this is not a surprise, if we take into consideration the fact that their tragic historical experience has shown that decisions taken by popular majorities do not always constitute a sufficient guarantee for the realization of constitutional democracy if they are not accompanied by regulations meant to judicially limit the omnipotence legislature and if the law cannot be subject to an independent scrutiny in what concerns its compliance with the Constitution[5].

3. Constitutional review models

Worldwide, the constitutional review is currently provided mainly through two major types of constitutional jurisdiction: a diffuse review and a centralized one. They are basically specific to the two great systems of law that dominate the legal world, namely *common law* and the *civil law*, characteristic to the Anglo-Saxon law and the Roman-Germanic system of law.

Thus, it is, on the one hand, the so-called "American model", developed in the United States and subsequently adopted by the Anglo-Saxon countries (Australia, Canada, India, except Britain), but also by countries such as Denmark, Greece, Norway, Sweden and even Japan[6]. Its distinctive note is that the power to review the constitutionality of normative acts incumbe on all courts, regardless of their location in the hierarchy of the state's jurisdiction.

The essence of the logic underlying this so-called "judicial review" lies in the fact that when two laws are in conflict, the court has the right and, in the same time, the duty to determine which one is applicable. If the two laws have different legal force, one of which being the Constitution itself, the latter will be preferred, according to the principle *lex superior derogat legi inferiori*[7].

On the other hand, there is the "European model" characterized by the existence of a specialized jurisdiction, separate and distinct from

any other public authority. Hans Kelsen was the one who developed the concept[8].

The idea of establishing a unique authority, called, as appropriate, constitutional court, constitutional court of arbitration[9] or the constitutional council[10], endowed with the ability to centralize the entire constitutional review and to render generally binding decisions regarding the validity of a normative act was considered a viable solution, which has expanded over time all over the European continent, including Romania, and has been also adopted by some countries in South America, Asia and Africa

Both models of constitutional review have, of course, advantages and disadvantages, but each is adapted to the legal ideology dominant in the areas where it was implemented, so each meets the need of those societies. That's why both deserve to be analyzed and presented with their essential characteristics. It also helps us understand why in the particular case of Romania the centralized constitutional review is preferable to the diffuse one.

3.1. The American model of constitutional review

The constitutional review of the laws arose in the United States in response to the need to find an effective way of solving the conflicts between the Federal Constitution and the constitutions of the member states and between the federal laws and laws of the member states of the federation[11].

In the United States, the system of judicial review of the constitutionality (judicial review) was imposed and was transformed over time as a praetorian creation, since the American Constitution does not provide for such a power.

The doctrine of constitutional law is unanimous in placing the origins of this kind of review[12] in 1803 when the Supreme Court of Justice has solved the case *Madison v. Marbury*[13],

Following the current classifications, doctrine[14] has concluded that the so-called American model of constitutional review of laws is a diffuse control, characterized by de-centralization and that can be performed by any court within the judicial system. These courts solutions can be delivered, subject to censorship, to a supreme court which has, among others, task of unifying the case-law.

Courts decisions take effect only *inter partes litigantes*, declaring the unconstitutionality of a law with relative authority of *res judicata*, meaning that they are limited to those individual cases. Only Supreme Court's decisions on the constitutionality of laws, although not result in their cancellation, manage, however, to prevent their application in all member states of the American Federation, given that lower courts must respect the decisions of the Supreme Court Federal according to the rule of the binding precedents[15] that states that its decisions have absolute authority[16].

It's been noted that "the great contribution made to the American constitutional law is to entrust the interpretation and application of the Basic Law to the ordinary judiciary" and it became, over the time, so important that the constitutional law began to consist strictly in studying judicial interpretations of the Constitution[17]. Its famous the remark that "Constitution is what judges say it is"[18]. Federal states' courts' rulings and, especially, the United States Supreme Court's rulings create what is called case-law. As a result, it is considered that, at present, the federal constitutional law and the Constitution includes 22 amendments thereto, as well as constitutional conventions, and federal sentences.[19]

The North American constitutional review was perceived and adapted also by countries on the South American continent. The American system of diffuse control was maintained only in Argentina in its pure form. In contrast, in countries like Brazil, Mexico, Uruguay, Paraguay, Venezuela, Nicaragua and the Dominican Republic it has been adopted a mixed system of control, by combining the diffuse and the concentrated control[20].

[8] Hans Kelsen was te one that, based on the Austrian Basic Law of 1920, has brought the most significant contribution at the foundation of the Constitutional Court of Austria. He has also been a member of the nw stablished Court, between 1920 and 1929.

[9] Characteristic to Belgium, up until it has been transformed, in 2007, in constitutional court.

3.2. The European model of constitutional justice

In Europe, the idea of the superiority of the Constitution has been introduced throughout the American branch, being popularized through the writings of Alexis de Tocqueville[21]. The European model of constitutional review was outlined for the first time by Georg Jellinek, who, in 1885, published "A Constitutional Court for Austria", sketching the idea of controlling the constitutionality of laws by a distinct and specialized court, separate from any other state authorities. His idea was supported by the ascending of the rule of law era, which requires both individuals and state authorities to respect the rules on which the society is based. Hans Kelsen is the one who has completed the nascent theory of Jellinek, defining and explaining the new concept of review of constitutionality. The essence of his theory was illustrated by the image of the pyramid of the legal system, dominated by the Basic Law, *das Grundnorm*. The model he promoted countered the main drawback of the American model, consisting in the relative value of the US courts' judgments, which have only *inter partes litigantes* effects. In his famous work, *„La garantie juridictionnelle de la Constitution"* (1928), the Austrian scientist argues that the legal system's integrity can be ensured only if the supremacy of the Constitution is guaranteed through an authority similar to a court.

The creation of a constitutional court that would centralize the review of constitutionality had, in Kelsen's view, the advantage of avoiding divergent constitutional interpretations that the American system can generate. To this end, decisions finding an unconstitutionality passed by a unique constitutional court have the effect of nullifying the validity of the law not only in specific, individual cases, but in all cases where that law is applicable[22].

Establishment of a unique Constitutional Court that renders generally binding decisions, with the consequence of elimination from the normative system of the law stated as unconstitutional, has been adopted by most European countries whose legal systems are built on Roman-Germanic legal system.

The suggested model has imposed in the European space due to the fact that it managed to avoid two American model's features that were completely incompatible with the specificity of the states whose legal system belongs to the Roman-Germanic family of law. Firstly, it is about the risk that different courts would issue different solutions, even divergent, on the same provision of law, given the fact that in the Roman-Germanic system the judicial precedent does not represent a source of law that the lower courts should be obliged to follow. The second problem avoided thanks to the model kelsenian regards the fact that decisions on the constitutionality of a normative act have only effects *inter partes litigantes* in the American system. This means that even if a legal provision was declared unconstitutional by a specific instance, in a particular process, the same provision of law may be applied subsequently freely in any other case.

The Kelsenian traditional model of constitutional justice necessarily involves a jurisdictional authority that is distinct and separate from the ordinary courts' system, with a different composition and functioning using a special procedure. It has the power to verify the compliance with the Constitution of the laws passed by the Parliament and repeal them if it finds that there is a discrepancy between the legislative texts and the Supreme Law.

The renowned professor Louis Favoreu offered to this type of authority an enlightening definition: "a constitutional court is a jurisdiction created especially and exclusively to settle constitutional disputes, outside the ordinary judicial apparatus and independent of any other public powers"[23].

Moreover, it was noticed that the consequences of the totalitarian regimes that marked the history of Europe in the first half of the twentieth century created the premises of a more acute awareness in what concerns the need for an appropriate means of control over the acts and actions of representative bodies - including parliamentary assemblies and their legislative work - to ensure the rights enshrined in the Basic Laws[24].

However, there were also views hostile to the establishment of constitutional justice, be coming - as in Italy - from members of the pro-fascist or communist political formations[25], be determined by the existence of traditions relating to the exercise of constitutional review by courts as part of the judicial authority, as in the case of Romania.

The reasoning for adoption of such a centralized review, different from the American diffuse type of review, has got its foundation in

[25] According to Alessandro Pizzorusso, Palmiro Togliatti, one of the communist leaders in the 50', was describing the Constitutional Court as some kind of juridical and political *monstrum* (see Alessandro Pizzorusso, „Présentation de la Cour constitutionnelle italienne", in *Les Cahiers du Conseil constitutionnel* nr.6/1999, p.24.

several theoretical and practical considerations[26]. Thus, it has been taken into account the absence of the rule of binding precedent in the legal Roman-Germanic system, dominant in Europe, which would not permit the correct implementation of the American model. That is because it would have generated contradictory interpretation of the Constitution by the courts, which would have led to the destabilizing the constitutional order and severely harm the principle of legal certainty, which is a principle of special importance in countries of civil law tradition.

There has been also considered the discussion about the so-called "democratic objection ", which casts doubt over the right of judges that form any court to annul a law, which is the product of a democratic legislator, carrying the legitimacy and representativeness endorsed by the people. On the contrary, from this point of view, the judges are not designated based on a popular vote. Seen from this angle, the option for the centralized review, exercised by a specialized court whose members are selected in a relatively democratic way[27], avoids the risks that a brutal transplanting of the American model would have produced in the European system[28]. It was said, however, that the European model is a way to review the constitutionality of laws ultimately deriving also from the American model, but in a certain style, appropriate to the requirements of the family of Continental law[29].

So in most European countries, the authorities of constitutional review are not part of the judiciary, in the strict sense.

Their position in the constitutional edifice of the state is distinct from the ordinary or administrative courts. In most cases, they are *sui generis* courts, located, within the state's organization, outside the other three traditional powers - legislative, executive and judicial. Only in isolated cases they are part of the judicial authority, Germany being one of the most illustrative examples[30].

4. Constitutional review in Romania – General and historical benchmarks

Originar Constituent power in Romania has opted, in 1991, for the European model of verifying the constitutionality of laws and it has organized by the Basic Law adopted on that date, an effective way of monitoring the compliance with supremacy of the Constitution. This task was entrusted to the Constitutional Court, authority placed outside the judicial system and, in the same time, distinct and independent from any other public authority[31].

Constitutional Court's Law[32] establishes, in Article 1, the exclusive nature of constitutional jurisdiction, meaning that it is the sole authority of constitutional jurisdiction in Romania, which ensures the supremacy of the Constitution[33].

According to Article 147 paragraph (4) of the Constitution, revised in 2003, decisions shall be published in the Official Gazette of Romania and, following its publication, they are generally binding. The constitutional text states further that they take effect only for the future.

As a result of generally binding decisions of the Constitutional Court, issued under Article 146 d) of the Constitution, whereby the unconstitutionality of a law or Government ordinance was found unconstitutional cannot be applied any longer, ceasing its legal effects for the future.

In order to emphasize the strength of its decisions, the Court held that no other public authority may challenge the considerations of principle resulting from the jurisprudence of the Constitutional Court and all will be required to properly apply, given that compliance with decisions of the Constitutional Court is an essential component of rule of law principle[34].

[33] In the legal doctrine were formulated opinions supporting the introduction in Romania of a constitutional review of American type exercised by the judiciary and not by "an authority deeply politicized" (Ioan Alexandru, „Obiectivele şi scopul revizuirii Constituţiei: consolidarea democraţiei", în *Revista de Drept Public* nr.1/2013, p.63).

[34] Decision no.1039/5.12. 2012, M.Of., Part I, no.61/29.01.2013.

Decisions on finding unconstitutional a law or an ordinance have to be followed by a reaction of the legislature. This means that the Parliament or, where the case be, the Government have to intervene and modify or repeal the normative act declared as unconstitutional. If such action is not taken or delays, the Constitutional Court's decision shall take effect, according to Article 147 paragraph (1) of the Constitution. According to the constitutional text, the provisions of laws and ordinances in force, as well as the regulations declared unconstitutional, cease their legal effects within 45 days starting from the publication of the decision of the Constitutional Court if, in the meantime, the Parliament or the Government shall not bring in line the unconstitutional provisions with the Basic Law. During this period, the provisions declared unconstitutional are suspended as of right.

Reaching this final legislative solution was a difficult task for the Constituent power. During the debates that took place over the project of the new, democratic Romanian Constitution, have been launched many ideas referring to the way the constitutional justice should be configured. These debates could be summarized into four main ideas, namely: a) elimination of the institution, without any other option; b) elimination of the institution and entrusting the review of constitutionality to the ordinary courts; c) entrusting the control of the constitutionality to a commission; d) acceptance of the constitutionality of laws exercised by a distinct authority council, constitutional court or tribunal. Following stormy, contradictory discussions, finally, the Constituent Assembly approved the proposal as Title V to be labeled "Constitutional Court". It's been said that entrusting the constitutionality of laws to the Supreme Court of Justice would have result in the transformation of the judicial body into a political one.

The current Constitutional Court of Romania is the result of the conjunction of the advantages chosen on the basis of the experience of other countries with traditions in the constitutional matter and it has the prospect of an organizational and functional integration, in an efficient and sustainable manner, in the European legal structures, according to the covenants, treaties and conventions to which Romania is a party. Connection to the European institutions clearly derives from the rules concerning the designation of judges and the way the role and the functions of the Constitutional Court are provided.

5. The role of constitutional courts in the democratic states

These authorities reveals their role in defending democratic values guaranteed by the Constitution, acting as a "civilizing factor"[35], and also contribute to higher levels of protection offered by the legal provisions to the fundamental human rights and freedoms

The supremacy of the constitutional norms is the central idea on which the constitutional review mechanism is set. Recognising the prevalence of the Basic Law on all legislation is a huge step towards a genuine democracy[36].

There are two major categories of constitutional review that can be found in most states that have a similar type of control. It is, firstly, the preventive constitutional review, which is also called *a priori* review and regards the laws before they come into force. Such preventive control is exercised by most of the constitutional authorities[37]. The consequence of this *a priori* constitutional review consists in the fact that the normative act declared contrary to the Basic Law will not enter into force, thus avoiding the introduction of unconstitutional legal provisions into the legal system.

There is also a repressive constitutional review, targeting the normative acts that are already in force. It can be both abstract and concrete. This distinction is linked to the origin of the question of constitutionality. Thus, we talk about an abstract review where the compliance with the Constitution has been questioned in the absence of an actual conflict, usually by a political subject, as Members of Parliament, the Head of State or Government, or another high authority as the attorney general, the president of the Supreme Court or the Ombudsman. On the contrary, the so-called concrete constitutional review has its roots in a proceeding before a court. A question of constitutionality (referred, in the Romanian legal system, exception of unconstitutionality) can be raised when the interests of justice so require.

The right to petition the Constitutional Court is conferred to the parties in a judicial trial as an expression of the right of access to a court and the right to a fair trial, but also as a proof of principle of the rule of law. This is because the purpose which is intended to be achieved is a final judicial decision rendered on the basis of legal regulations whose constitutionality is beyond any doubt and, in the same time, the elimination of all legal provisions that

[35] Ioan Muraru, „Există un garant al supremației Constituției române?", in *Revista română de drept privat* nr.1/2011, p.131.

[36] Theoretical and historical details on the development of the concept of constitutional supremacy and the mechanisms of ensuring it were detailed by Professor Ioan Deleanu, in *Instituții și proceduri constituționale în dreptul român și în dreptul comparat*, Editura C.H. Beck, București, 2006, p.227-257.

[37] Until the constitutional amendment of 2008, the French Constitutional Council was often considered representative for this type of control, given that it only checked the constitutionality of laws before their promulgation by the President of the French Republic.

contradict texts or principles enshrined in the Constitution[38].

In addition to reviewing the constitutionality of legislation, constitutional justice authorities are responsible for exercising a range of powers which highlight the important role they play in ensuring the supremacy of the Constitution. Many constitutional courts are called upon to resolve legal disputes of a constitutional nature between public authorities. Such a task is particularly significant in the case of the federal and regional states[39]. There are also states that have granted constitutional court jurisdiction to resolve disputes between central and local or regional authorities[40]. In Romania, this power is limited to conflicts arising between central authorities[41]. Inspired by the experience of other countries in the problems caused by this type of conflict, the constituent power has amended the Romanian Basic Law in 2003 and enlarged the powers of the Constitutional Court. Since then, the authority of constitutional justice in Romania was asked to resolve such conflicts in some of the most difficult moments of social and political life. It has been said from this perspective that this task often requires involvement in sensitive areas, in conflicts hard to be refereed and deals with egos difficult to satisfy[42].

The paper will further on illustrate some of the relevant decisions of the Constitutional Court that prove its good influence over the ensemble of the society.

6. The positive effects on the legislative system of the *a priori* constitutional review performed by the Constitutional Court of Romania

The effects of decisions rendered by the Constitutional Court that find the unconstitutionality of a law adopted, but not yet promulgated by the President are regulated in Article 147 paragraph (2) of the Constitution which requires Parliament to put the law in line with the decision of the Court. The weird formulation of the fore mentioned constitutional text has to be remarked. It states that Parliament must reconcile the law with those stated by the Constitutional Court and not with the Constitution. This can be seen as a way the constituent legislator understood to emphasize the importance of constitutional review performed by the Constitutional Court[43].

In the form before the amendment of the Constitution, the text allowed the Parliament to ignore the Court's findings and to pass the law in the same form, with a majority of at least two thirds of the members of each Chambers. However, most times, even before this moment, Parliament took into account the Constitutional Court's solutions and corrected the vices of unconstitutionality and sent the law to the President of Romania for promulgation only after that. Therefore, the corrective purpose pursued when performing the a priori review has been reached. In this manner, the Court prevents the entry into force of certain provisions contrary to the Constitution, removing the risk of introducing such provisions in the active fund of legislation.

Thus, for instance, performing the a priori review with regard to the law on war veterans and certain rights of the invalids and war widows, the Court upheld the complaint and found, regarding the recognition of war veteran quality for those residents of the Romanian provinces temporarily occupied during 1940-1945 who were compulsorily incorporated in the Hungarian army, that it was unconstitutional the imposed condition according to which they should have not fought against the Romanian army. In this regard, the Court held that the persons concerned have been compulsory incorporated in the Hungarian army since they were living in a temporarily occupied territory under the Vienna dictatorship Treaty of 1940, which currently is null and void.

In this situation, the Romanian state was unable at that time to dispose enlisting or mobilizing them, and if, today, these historic circumstances would represent an obstacle for those people in obtaining a deserved benefit for their prejudices and disabilities, it would mean that it would be recognize the legal effects of an act which is null and void. Therefore, the Court concluded that the exemption of the fore mentioned persons constitutes discrimination, since nobody can be held responsible for an unenforceable obligation. However, the Court also found that some provisions of the law were unconstitutional regarding the definition of 'war

[38] Valentina Bărbăţeanu, "Aspecte particulare referitoare la reiterarea excepţiei de neconstituţionalitate", în *Buletinul Curţii Constituţionale* nr.2/2011, p.103.

[39] This was the case in Austria (Article 138 of the Basic Law), Germany (Article 93(1)(1)(4) and (4)(b) of the Basic Law) or Italy (Article 37 of the Law no. 87 of 11th of March 1953).

[40] This is the case of the Constitutional Court of Bulgaria (Article 149(1)(3) of the Basic Law), of Czech Republic (art.87(1)(c) of the Basic Law) or Hungary (Article 1(f) of the Court's Law).

[41] Article 147 lit.e) of the Romanian Basic Law establish the Constitutional Court's jurisdiction to resolve legal disputes of a constitutional nature between public authorities, at the request of the President of Romania, President of one of the Parliament's chambers, the Prime Minister or the President of the Superior Council of Magistracy.

[42] See, in this regard, Mihai Constantinescu, Ioan Muraru, *op.cit.*, p.323.

[43] The solution chosen by the constituent legislator has been criticized in legal doctrine, because, in fact, the text found to be unconstitutional should be put in accordance with the Constitution and not with the Court's decision. See, in this regard, Ion Deleanu, *Instituţii şi proceduri constituţionale,* footnote no.1, p.895.

veteran', considering that the Parliament should correlate them, in order to ensure observance of the principle of equality of citizens.

The law was brought into line with those stipulated by the decision of the Constitutional Court and became after promulgation Law no.44 of 1994. The cited provisions of Article 2, letter b) were drafted in a manner that ensures equal legal treatment, stating that veterans are also considered those persons who participated in the first or second world war and were inhabitants of Romanian provinces temporarily occupied during 1940-1945, who were incorporated or compulsorily mobilized and fought in the other states' armies, if they have retained or regained Romanian citizenship and residence in Romania.

The beneficial role of the Constitutional Court was indirectly materialized, due to the fact that the law examined was changed and a was inserted a new provision thanks to which that avoid the creation of a discriminatory situation within the same categories of people, namely the War Veterans.

7. Decisions rendered by the Constitutional Court of Romania in the *a posteriori* review of constitutionality which had beneficial consequences on improving peoples' life

It is an undeniable reality that the Romanian legal system was strongly transformed following the finding by the Constitutional Court of inconsistency between the provisions and principles of the Basic Law and various laws or ordinances - or just certain provisions thereof - followed by fulfilment by Parliament or, where appropriate, the Government the obligation to draw up amendments to the normative content of the latter and bring the criticized texts in accordance with the requirements imposed by the Constitution.

The study will present further the way some normative acts were amended as a result of the decisions rendered by the Constitutional Court in the *a posteriori* review of constitutionality. This is aimed to demonstrate the contribution of the constitutional court to improving overall legislative ensemble and in special of those norms that have a good influence on everyday life and also on those that govern important institutions in society and are indispensable in ensuring the proper functioning of justice and the effectiveness of the rule of law principle, in a democratic and social Romanian state, so characterized in the very first article of the Basic Law.

7.1. In what concerns the protection of fundamental rights during the criminal proceedings

7.1.1. Personal liberty, guaranteed by Article 23 of the Basic Law, has been one of the areas of particular importance, referring to which, especially in the early years after the fall of the communist regime, the Constitutional Court was asked to clarify and establish standards to be met in order to ensure that, under the rules of criminal proceedings, there won't be any harm of the intangible values vital in a constitutional democracy, inextricably linked to the human being.

Thus, the Court held[44] that the deprivation of freedom is a serious act regardless the phase of the judicial trial where it occurs. Therefore, it should not apply a different treatment depending on the fact that the criminal process is in the pre-trial proceedings or it is in the trial phase, in front of a judge. This is the essence of the provisions of article 23 of the Constitution, which regulate the conditions under which it may be order the arrest of a person, without distinguishing between a certain stage of the trial. Therefore, constitutional provisions guaranteeing individual freedom have to be observed whenever the freedom of a person is at stake, as any custody measure seriously affects the personal liberty.

7.1.2.The court ruled[45] that the principle of State liability for damages caused by judicial errors in criminal cases should be applied to all victims of such errors. As such, the Court noted that the legislature does not have the power to restrict the State's responsibility only to some judicial errors. It has extended the scope of the legal criticized text, stating that the victims are entitled to compensation not only if it has been established by final judgment that the person has not committed the act alleged or that the offense does not exist, but also if after a retrial, was discharged of accusation for any of the reasons set out in the Code of criminal procedure.

Thanks to these decisions, the ordinary courts could consider the possibility of granting compensation for miscarriages of justice also to other persons than those provided by legal texts that were subject to constitutional review.

In the labour law field, the Court found[46] that restricting the possibility for teachers to perform tasks to other higher education institutions infringed the right to work enshrined at the constitutional and international level. The legal criticized text[47] provided that a teacher having the basic job in an educational public or private institution could teach by association in different other institutions of higher

[44] Decision no.60/25.05.1994, M.Of., Part I no.57/28.03.1995, Decision no.279 /01.07.1997, M.Of., Part I no.50/04.02.1998, Decision no.60/25.05.1994, final through Decision no.20/15.02.1995, M.Of., Part I no.5728.03.1995, Decision no.546/04.12.1997, M.Of., Part I no.98/02.03.1998, Decision no.924.01.2000, M.Of., Part I no.221/19.05.2000, Decision no.10/24.01.2000, M.Of., Part I no.213/16.05.2000.

[45] Decision no.45/10.03.1998, M.Of., Part I no.182/18.03.1998.

[46] Decizia no.114/15.11.1994, M.Of., Part I no.354/21.12.1994.

[47] Article 32 paragraph (1) of the Law no.88/1993 on higher education accreditation and recognition of diplomas.

education up to a maximum equivalent of a teaching loads determined in accordance with legal provisions.

The Court noted that the restriction led to discrimination between teachers and the rest of the employees for whom the right to work is not limited by law, contrary to the provisions of Article 16 of the Constitution which proclaims that citizens are equal before law and public authorities, without any privilege or discrimination.

Similarly, the Court held[48] that limiting teachers' activity at mostly two didactic loads[49] infringes the constitutional provisions of Article 38 paragraph (1) of the Constitution, which establishes that the right to work and choosing profession and the place of work cannot be restricted. The Court also took into account, in this respect, Article 6 paragraph 1 of the International Covenant on Economic, Social and Cultural Rights[50], according to which "The States Parties to the present Covenant recognize the right to work, which includes the right of everyone to the opportunity to gain his living by work which he freely chooses or accepts, and will take appropriate steps to safeguard this right". The Court held, *inter alia*, that limitation of teachers' right to work would not provide a higher quality education, since the professional qualification of the teacher, his or her teaching experience and the seriousness with which every teacher achieves its mission define the performance framework of the university professor, not the number of working loads conferred.

7.1.3. Romanian Constitutional Court found contrary to the Constitution[51] the text[52] which recognized the benefit of certain rights previously earned but whose effects took place later. The Court noticed that there is a discrimination in what concerns the recognition of the benefit of those rights only for people who are still in active jobs or activities characterized by difficult conditions, not in favour also for those who previously worked in the same conditions but they ceased their employment through retirement or other reasons before the entry into force of the normative act that provided those rights. The Court emphasized that the text was unconstitutional not because it recognized the benefit of those rights, but because it recognized them only for certain categories of citizens, and not for the others who really were in the same situation.

7.1.4. In a similar manner, the Court stated[53] that it does not challenge the legitimacy of the bonus offered to the staff in the primary education for simultaneous teaching, but the constitutional legitimacy of granting this bonus only to this category of teachers. The Court held that the normative text subject to the constitutional review created a difference in what concerns the legal treatment between teachers in primary and secondary schools, meaning that more benefits ware granted only to the first simultaneous teaching staff. Or, both categories of professors teach simultaneously under the same nervous consumption, neuropsychological overuse and psychological effort. In those circumstances, the Court held that although both categories of staff provide teaching activity under simultaneous system, legal treatment on rewarding this mental effort is different. The Court stated that the differentiation depending on the level of education, primary or secondary, does not represent an objective criterion justifying the differentiated legal treatment applied.

The Court found that the legislature has chosen an incorrect criterion in granting this bonus, which created a situation of discrimination towards teachers in secondary education that provides simultaneous teaching. As such, it upheld the objection of unconstitutionality and found that the wording *'primary education'* comprised in some legal provisions on the remuneration of teachers and auxiliary staff in education is unconstitutional. On the same occasion, the Court felt the need to bring some clarification about the effects of the decision, stressing that the public authorities involved, including the courts, are called upon to carry out an interpretation and application of this law in accordance with the effects of the Court's decision regarding the bonus of simultaneous teaching under Law no.63 of 2011, from the date of publication of the decision, entitled teachers will benefit from the future payment of the bonus of simultaneous teaching. Thus the Court has ensured that discriminatory situation will not produce negative consequences, even if the Parliament would not intervene to remove inequality found by the Court.

7.2. The role played by the Constitutional Court in reconfiguring the relationship between the state's public property and private property following the communist regime and in increasing the guarantees granted by the new democratic Basic Law to the private property

7.2.1. The Constitutional Court was called to decide over the constitutionality of the provisions of Article 8 paragraph 3 of Decree Law no.118 of 1990 on granting specific rights to the persons persecuted

[48] Decision no.30/10.02.1998, M.Of., Part I, no.113/16.03.1998.

[49] Provisions of Article 93 par.(4) of Law no.128 of 1997 on teaching staff, M.Of., Part I, no.158/16.07.1997, currently revoked by Article 361 of the National Education Law no.1 of 2011, M.Of., Part I, no.18/10.01. 2011.

[50] Ratified by Romania by Decree no.212 of 1974, published in the Oficial Bulletin of Socialist Republic of Romania no.146/20.11.1974.

[51] Decision nr.87/01.06.1999, M.Of., Part I, no.352/26.07.1999.

[52] Article 2 par.1 of Law-Decree no.68 of 1990 for the removal of inequities in staff salaries, M.Of., Part I, no.24/09.02.1990.

[53] Decision no.1615/20.12.2011, M.Of., Part I, no.99/08.02.2012.

for political reasons by the dictatorship with effect from 6 March 1945 and to those deported abroad or in prison. The Court found[54] that there was no objective and reasonable justification for setting a deadline for submission of applications by the rights holders, while for applications from spouses of the deceased and those submitted by Romanian citizens living abroad was not set any deadline.

7.2.2.By another decision[55] the Court found the unconstitutionality of the provisions of Article 1 paragraph 2 of Law No.9 of 1998 on compensation offered to the Romanian citizens for the assets passed into the Bulgarian State ownership after applying the Bulgarian Treaty between Romania and Bulgaria, signed at Craiova on the 7th of September 1940. It noticed that the fore mentioned legal provisions are contrary to Article 42 of the Constitution that guarantees the right to inheritance, to the extent that limits the scope of persons entitled to indemnification only to former owners and their legal heirs, excluding the testamentary heirs. In deciding so, the Court observed that Article 42 of the Constitution does not make any distinction between legal and testamentary inheritance.

The Court also held that the petition of unconstitutionality was based on the infringement of the principle of equality enshrined in the provisions of Article 16 of the Constitution whose meaning is that the application of differentiated legal treatment was justified only by the existence of different situations. In the light of the situation analyzed in the case, the quality of legal or testamentary heir do not place them in different situations, such as to require the establishment of a differentiated legal treatment

7.3. In the field of regulations regarding certain professions and various other fields

7.3.1. A decision that resulted in the extension of the benefit of social measures also on other categories of people than those for which it was originally dedicated to was the one in which the Court upheld the objection of unconstitutionality of the provisions of Article 15 of Law No. 80 of 1995 regarding the military employees[56], which provided that only women active military personnel are entitled to maternity leave and childcare leave, and excluded the men military personnel from such a benefit. The Constitutional Court decided that the complete elimination of certain categories of persons from the benefit of a form of insurance provided by law for all categories of insured persons violates the principle of equality. In this regard, the Court held that, despite their special status, military personnel in activity is no different from other categories of social insurance policy holders, so the establishment of a different legal treatment, which deprives them of the benefit of a form of social insurance provided by law for all insured persons is discriminatory due to the fact that the criticized legal text recognize the right to parental leave only for women in active military personnel, to the exclusion of the other parent, all military setting.

7.3.2. The Court admitted the exception of unconstitutionality of the provisions that repealed the text comprised in Law no.146 of 1997 according to which actions and claims that aimed to obtain moral compensation for damages perpetrated to the honour, dignity or reputation of individuals were exempt from judicial tax[57].

The regulation represented a legal defence of the fore mentioned attributes of the human personality - provided in Article 1 paragraph (3) of the Constitution as the supreme values in a state governed by the rule of law. Thus was ensured the access to justice, without imposing the condition of payment of judicial stamp duty to the persons aggrieved by uttering insults, slanders or disparagement committed in any way, directly or indirect, by any means of mass communication.

7.4. The Constitutional Court rendered some useful decisions in the field of social security law

7.4.1. One of the decisions with the strongest positive impact on a large number o people was Decision no.872 of the 25th of June 2010 that stated that the intention to diminish by 15% the amount of pensions in the context of measures to ensure budget balance due to the economic crisis was contrary to the Constitution. The Court noted that the right to obtain the pension for retirement has been pre-constituted, far back as the active life of the individual who has been required by law to contribute to the state social insurance budget based on a percentage of revenue levels. The state has got the correlative obligation to pay the individual, in his or her passive life, a pension whose amount is governed by the principle of contribution. The purpose of the pension is to compensate during the passive period of the life the insured contributions made by the individual to the state's budget of social security under the principle of contribution and to ensure the livelihood of those who have acquired this right under the law, depending on the contributory period, retirement age etc.

Amounts of money paid as a contribution to social security entitle the person who earned any incomes and has paid its contribution to the state's social insurance budget to benefit from a pension that reflects the income received during the active period of life. Pension amount established according

[54] Decision no.148/08.05.2001, M.Of., Part I, no.592/20.09.2001.
[55] Decision no.312/19.11.2002, M.Of., Part I, no.81/07.02.2003.
[56] Decision no.90/10.02.2005, M.Of., Part I, no.245/24.03.2005.
[57] Decision no.778/12.05.2009, M.Of. no.465/06.07.2009.

to the principle of contribution, is a consolidated right, so reducing it cannot be accepted even temporarily.

The Court also found that provisions which decrease by 15% allowances for the companions of the people who have been retired because of serious disability degree and establishment of a pension point lower than the existing one are also contrary to the Constitution, because the state does not fulfill its constitutional obligation to take adequate social protection.

7.4.2. The Court declared unconstitutional the legal provisions that provided that the state allowance was given only to those children attending the form of general compulsory state education[58]. The Court noted that the Ministry of Education had not approved the payment of state allowance for children attending private schools since those schools were not included in the records of the National Commission for Evaluation and Accreditation of Pre-university Education. The Court noted that the of the child to get the allowance is granted under the provisions of Article 49 paragraph 2 of the Constitution, which does not provides, in defining the subjects of the right to state allowance, any other condition beside the one that the beneficiaries have to be children.

The Court held that the consecration of children's right to special protection in the form of allowances granted by the State without any discrimination corresponds to the general principles underlying the Romanian State, provided for in Article 1 paragraph (2) of the Constitution, and the provisions on protection of children contained in the Universal Declaration of Human Rights, the Convention for the Protection of Human Rights and Fundamental Freedoms and other pacts and treaties to which Romania is a party.

8. Conclusions

The analysis carried out in the pages of this paper highlights the complex role that the Constitutional Court currently fulfils in the process of creating and enriching the legislative system. Its powers, as they were detailed and developed in practice manage to significantly influence the whole legislation.

The overall conclusion would be that the constitutional case-law has, undoubtedly, a visibly positive effect not only on normative regulations and the legal system in general, but also on the lives of every citizen, through the multitude of ways in which it can intervene and modulate and harmonize rules and legal provisions with the values and principles comprised in the Basic Law.

Based on an the analysis of the relevant case-law of the Constitutional Court of Romania, this study is geared towards highlighting not only its potential to strengthen the guarantees provided for the full enjoyment of the fundamental human rights and freedom, but also its ability to improve citizens' standard of life.

It was stated in the doctrine that constitutional review performed by specialized authorities is a creative activity. That is because the constitutional judges have got a much greater flexibility than the judges from the ordinary courts in what concerns the possibility to enrich the meaning of the law by the means of interpretation, released from the constraints imposed by the rigid application of law[59].

Indeed, the evolution of the concept of authorities of constitutional review towards revealing their role and the impact on the juridical life of the state of the solutions they pronounce led to their transformation from "negative legislators", as they were initially characterized by Hans Kelsen, into "positive legislators" or, at least, "co-legislators"[60]. In fact, the Romanian Constitutional Court held that its position of guarantor of the supremacy of the Constitution obliges it to take an active attitude[61].

From the case-law of the Constitutional Court of Romania, as shown in the present paper, follows another useful according to which the constitutional review performed by the Constitutional Court plays both a preventive and stimulating role in the normative drafting process.

The fact that the primary regulation (laws, as acts of Parliament, and government ordinances, simple or of emergency) may be subject to censorship of the Constitutional Court, is undeniably a factor of accountability of the legislature, which is forced to adopt regulations that, in the event of checking their constitutionality, prove to be consistent with the rules and principles comprised in the Basic Law.

The prospect of sanctioning infringements of constitutional requirements, either in terms of the form or content of the regulation manages to keep the legislature aware of the risk of gradual loss of credibility generated by drafting of laws declared unconstitutional by the Constitutional Court. Consecutively, the constitutional review urges the legislature to increase the quality of its creative activity and stimulates enactment of rules drafted in accordance with the Basic Law. In this way, the solutions pronounced by the Constitutional Court

tend to impregnate all branches of law with the values and principles enshrined in the Constitution[62].

When rendering unconstitutional a law before promulgation thereof, Parliament is bound, according to Article 147 para. (2) of the Basic Law, to redraft the law, or provisions thereof, in a manner consistent with the finding of the Court.

The solutions of the Constitutional Court have effect both on the provisions of existing legislation as a whole and also on future regulations. In this regard, the scholars stressed the influence that the case-law of the Constitutional Court has on the future rulemaking process[63], given the fact that decisions on the constitutionality of existing rules have a certain impact even on the content of legal provisions that have not been yet developed.

CONSIDERATIONS REGARDING THE INFLUENCE OF LEGAL COMMUNICATION FROM THE PERSPECTIVE OF NATURAL LAW

Claudiu Ramon D. BUTCULESCU*

Abstract

This article addresses the issue of legal communication within natural law. Law has an important role, in relation to civilization and legal culture and one of the means through which law influences both culture and civilization is legal communication. The patterns of legal communication should be analyzed from the perspective of all important schools of legal thought: natural law, legal positivism, historical school of law etc. In this paper, the perception of law, through legal communication, within natural law is discussed and analyzed, from the principles and statements of Aristotle to the writings of St. Bernard of Clairvaux, St. Thomas Aquinas and later to the theories of Hugo Grotius. This study also aims to prove that the difference between legal communication within the major schools of legal thought does not regard the essence of communication or the various principles of law, but merely the perception of law, which varies from one school of thought to another.

Keywords: *legal communication, natural law, legal semiotics, communication patterns, legal culture.*

1. Introduction

The principles of natural law have been studied thoroughly, throughout the entire history of law.

From the first philosophers of ancient Greece, like Aristotle and Plato, to the fathers of Christian philosophy such as Saint Augustine or Saint Thomas Aquinas, and to modern thinkers like Niklas Luhmann.

The communication of law was also studied, by prestigious scholars like Jurgen Habermas[1], Niklas Luhmann[2] and Marc van Hoecke[3]. In Romanian literature regarding legal theory, the problem of legal communication was tackled by Maria Nastase Georgescu and also Anita Naschitz[4].

The communication of law may be analyzed, on a more specific basis, with regard to the principal schools of legal thought, namely the doctrine of natural law, legal positivism, the historical school of law and the organic theory of law.

The doctrine of natural law was the first to be established, within legal philosophy, and also is the first to mention streams of legal communication between various senders and receivers. The communication model that may be applied to legal communication is the constructivist model, which is a variation of the transactional model. For this model, the meaning of information is essential. In other words, the participants to the communication process have to establish the meaning of information, either through negotiation or through management. Therefore, as it was shown in the specialized literature, it's the person that hears the speech, not the speaker, that establishes the meaning of the information[5].

2. Content

2.1. Legal communication related to the sources of law

The evolution of the law can be, without a doubt, differentiated according to its main divisions, all the more so as the law is thought of as a normative order distinct from natural order itself[6]. Thus, if private law is based on immutable principles and founded on universal principles as holistic equilibrium and subrogation, public law, is a sub-system of law based on defensive principles, which appeared at the same time with the advent of the first humans which evolved together with our society and shall cease to exist at the time with the human society[7]. The law has emerged as a result of essential requirements of human society, its existence being a condition *sine qua non* for the development of the community. In other words, the legal rules are closely related in their evolution to certain social and

juridical phenomena, which have led to various theories, like natural law, the historical school of law, the organic theory of law or legal positivism. The communication of law is realized in a two-way stream: firstly, as a stream of material communication, coming from the society to the state authorities, using the material or substantial sources of law and secondly, the synthesized legal information, streaming back from the legal authorities to the people, through formal sources of the law. The material sources of law have been defined in Romanian doctrine as social sources, that include law configuration factors, human reasoning, legal conscience et.al.[8] On the other hand, formal sources of law have been envisioned as forms through which law is expressed, by which the regulatory content of a norm becomes a mandatory rule of conduct[9].

As shown below, the law has an important role in its relations with civilization and culture, especially from the perspective of legal communication. Moreover, a more thorough analysis of the legal communication may significantly contribute to a better understanding of the relations developed within the system of law. To this end, it is necessary, in terms of scholarly research, to explain a few introductory concepts of the doctrine of natural law, and how this doctrine envisioned law as a communication tool. In this regard, we appreciate that within natural law, the role of law in the legal system, from the perspective of communication has been analyzed and appreciated in a specific way. In order to correctly assert the perception of legal norms, through legal communication, it is necessary to analyze the influence of law from the point of view of legislative communication within the main schools of law: natural law school, the historical school of law and legal positivism. While the analysis of legal communication from the perspective of legal positivism[10] has already been analyzed in another article, this paper address the issues of legal communication within natural law. Incidentally, the subjective perception of the law may constitute an important starting point in analyzing legal communication, seen through the perspective of law schools. Undoubtedly, each of these schools of thought, include, even if not directly, elements of legal communication. Starting with the principles laid down by natural right and continuing with the ones stated by legal positivism, all come into contact, more or less with the concept and effects of legal communication.

2.2. Legal communication analyzed from the perspective of natural law

Within the concepts natural law school, the first approach in consideration of law as a communication tool was that of Aristotle, who put into opposition the natural justice to earthly justice. He preached the idea of invariability in natural justice, in contrast to the variable and degradable nature of legal justice, which through concrete application, leaves the upper sphere of neutrality and becomes biased. This concept was especially addressed in one of his famous works - *Rhetoric*. In fact, some basic concepts regarding communication where laid within this work of Aristotle[11]. Interesting in Aristotelian theory is the fact that he does not criticize the perennial nature of the fundamental principles, but the human ability to perceive them justly. Thus, we may bring into discussion a possible communication of the law, which, however, is incorrectly perceived by the human community, as the message gets deteriorated. By applying the above-referred mentions to the model of communication, it is reasonable to believe that this theory can be applied successfully to the constructivist model of legal communication, in which the message may be not properly received, due to faulty perception, while the source does not show any signs of deterioration. An example of erroneous perception of natural laws may be found in antiquity, in the work of Aeschylus, called The Eumenides. As an effect of matricide, Orestes murder becomes the subject of a conflictual relation, involving punishment, according to natural law and should be punished by the Erinyes. Still, Orestes has acted as a result of the dire predictions made by Apollo, implying that natural law does not apply without exception. But this inflexibility is precisely what constitutes the essence of natural law, that applies regardless of time, space or person, as an expression of its universal character. If Orestes would not have followed the prediction of Apollo, that would mean that the aforementioned god's prophecy was not infallible, so the prophecy of divine origin could not be perfect. Following a logical reasoning, we may consider that divine law is not perfect. However, we can consider interpretations that may serve as a work around this apparent paradox. Thus, a possible explanation could be the following: Orestes did not violate the natural law, and the conflict was born as a result of erroneous perception by the Erinyes, with regard to natural justice. Also in ancient times, a similar form of communication is discernible in the works of

Ariston of Chios, who proposes the existence of two categories of rules: firstly, the rules that are imperfect, because there will always be exceptions, which may not be limited to these rules and secondly, principles, which constitute the universal rules[12]. Natural law school proposed the idea of an immutable law, which is communicated to the human society, which in turn applies it inefficiently, because it is incompletely or erroneously perceived. However, we should take into account Luhmann's theories, which spoke of meaning and acceptance in legal communication[13]. Therefore, one should analyze to what extent the rules of natural law are applied incorrectly because they are perceived incorrectly or because they are not accepted by the recipient. To this purport, in a subsequent period, *St. Ambrose (337-397 A.D.)* considered that the ten commandments were stated and communicated to Moses because mankind has ceased to observe and respect the natural law. It is interesting to observe that within the relationship between the society and the earthly authorities there is a third important party, which presents itself as a source of natural law, namely the deities. It is not the society that communicates the law, but the deity, who is the one that transmits natural laws, only to be applied by people to the people. Of course, the question arises as whether at a perceptive level, we can envision a direct source of law or just an interpretation of certain perennial principles, adapted to the limited human knowledge. Without a doubt, the natural law is made known to recipients directly, as it is seen in the Decalogue. However, there are also indirect meanings within the rules, proof being the very fact that Moses is commanded in the first commandment: "Thou shalt have no other gods before Me" and as Mircea Eliade remarked[14], this commandment does not preclude, ab initio, the existence of other deities but only imposes a ban, or better said, a mandatory prohibition. In this view, it is the responsibility of the people not to worship idols, and if they do not comply with this obligation, certain liability shall be imposed on them, characterized by penalties and punishments. The difference between responsibility and liability was analyzed at length in the works specialized in matters of the general theory of laws[15]. Interestingly, such communication is not circular in nature, but rather rectilinear. The material sources of law are not the needs of society, but the universal laws, which are communicate by deities, through sacred, albeit earthly authorities. Of course, in those times, the authorities commonly had religious attributes. Another example regarding the communication of law, we find, at a microsystemic level in the works of *St. Bernard (1090-1153 A.D.)* (*Bernard of Clairvaux*) who speaks about natural law, considering that on the basis of the latter, individuals must act in relation to other people as they would want others to act towards them[16]. At the same time, other representatives[17] of the natural law in medieval times indicated perception as a singular means of ensuring effective communication. In order to assess properly the effects of law, we should first define the scope of their action. To do this, it is necessary to resort to psychological instruments, more specifically to the concept of perception. The effects may be multiple, but in the context of this paper we should put into question those effects which may be levied and felt by the recipients of legal norms. These norms should be perceived and understood. For the compliance or refusal of the recipients to exist, as referenced by N. Luhmann, the rules must first be perceived. Also, the effects of these rules should be perceived distinctly by the recipients, respectively by the members of the community. Thus, there must be a distinction between the effects of legal communication, in its wholeness and effects of legal communication in relation to the perception of the recipients. The entire legal system is built on the basis of a referential system; on which we can assign symbols or meanings to our own perceptions. As shown above, William of Auxerre *(-1233 A.D.)*, believed that natural law is known through direct perception of divinity. Contrary to this idea, *Thomas Aquinas* and *Albertus Magnus (1193-1280 A.D.)*, believed that natural law is perceived by humans with the aid of reason.

3. Conclusions

The idea of legal communication can also be found in contractualism theories, as described in the works of Grotius, subsequently developed by Pufendorf and Thomasius. If there is even an empirical notion of social contract, then there must be a prior stream of communication. Thus, the social contract could be considered the effect of the communication right in the sense of acceptance of mandatory rules. Also, Christian Wolff, a disciple of Leibniz believed that justice and morality are projections of natural law (universal). Unlike Pufendorf or Thomasius, Wolff believed that these universal precepts are accessible without human revelation. Another example of communication of law we find in the works of Jean Jacques Burlamaqui, which differentiates between natural

law and jurisprudence. Through natural law, he envisioned the law imposed by God to men, which may be perceived and understood with the aid of reason. Natural jurisprudence was considered the art of gaining knowledge regarding the laws of nature, explaining them and their application to human actions18.

The role of law as a tool of communication within the school natural law obviously stems from the perspective of how law is envisioned in this doctrine. In principle, the human society does not carry out a material communication of law, because, according to this current of thought, the principles of law are perennial and immutable, and preexisting the society itself. So, communication has rectilinear form, and through this form of communication, abstract and perennial principles are adapted to daily realities. This assumption is not necessarily against the concrete reality, but the aprioristic structures confer an inflexible character to this type of communication. However, another interpretation could be that there are, on a priori basis, certain universal principles, without mandatory legal content, which govern the society, and the society, by adapting to these general rules, carries out a substantive communication to the state authorities, to be able to be supported in its development. If we continue on this reasoning, it seems that communication is rectilinear only in the beginning, afterwards developing a circular character. This articles addresses certain issues regarding the legal communication from the perspective of natural law, by explaining briefly some propaedeutic aspects related to natural law, legal communication and legal cultures.

ORDER OF LAW AND LEGALITY - GUARANTEES OF CONSTITUTIONAL DEMOCRACY

Emilian CIONGARU[*]

Abstract

The principle of legality is a principle of social and State life consisting in the compliance with the legal norms by all participants in social relations. In any rule of law, enforcement of legality requires the duty of every citizen to follow the general provisions of the law. The principle of legality is a universal principle that requires all subjects of legal relations to comply with the law in their work. Due to the fundamental importance of laws, and mainly of the Constitution, legality is considered a principle of constitutional democracy. The order of law is another legal category close as concept to legality. It is an essential element in society's life. The order of law is obtained when the principle of legality prevails, that is, when all people comply with the law. The order of law is a status of social relations governed by legal rules that correspond to the requirements of laws and other normative acts. The concepts of legality and order of law are close and interdependent. The order of law can not exist without legality, and legality weakens if there are flaws in the order of law.

Keywords: *order of law, legality, constitutional democracy, normative acts.*

1. Introduction

The classic notion of the Constitution is rooted in the doctrine of social contract or social pact supported and assisted by new social class - the bourgeoisie, since the sixteenth century, at first timidly and replete with military failures and ending as the dominant political theory of the eighteenth century – *Age of Enlightenment*. The Constitution is, from a legal point of view, a law superior to all other laws. Both the organic and ordinary laws must correspond to the letter and spirit of the Constitution. The obligation to observe it belongs to all, including the power bodies.

Constitutions embody the fundamental principles of economic, political, social, moral and legal life of a State, a society.

The fundamental principles laid down in constitutions are generally consistent with the fundamental values that the State, the society, promotes and defends.

The German philosopher Hegel in his famous work *Principles of the Philosophy of Law* says that people should have for their constitution the feeling of their right and the state of affairs at the present time passing through. He believes that every people have their own constitution which suits them and that they deserve. [1]

To establish the concept, the notion of constitution, there are required some clarification, namely:

firstly, that the constitution and the law can not be equated;

secondly, in historical order, the law comes first, the constitution appearing later;

thirdly, the constitution appears as a historical category, excelling in the evolution of the legal system;

finally, the constitution expresses a new political, social and legal ideology.

2. Order of law, social order, legal order – concepts

Any society is interested in maintaining order, balance, structures and forms of organization and management, to ensure the functioning of all institutions, the normal development of the actions of individuals and groups. The *norms and penalties* that ensure the orientation of human behaviors are central to the notion of *social order*.

Social norms are social requirements expressed in norms of what is possible and payable. They regulate the variety of social, political, economic, moral relations, ensuring the conduct of activities in all areas.

The different categories of norms[2] in place in society give rise to specific types of social order. This explains the fact that within the same society operate an economic order, a moral order, a legal order, etc. Within each society, between these distinctive normative orders, there is a complete compatibility. Their synthesis is what we generically call the *social order*. In this broader framework of social order, any human society develops a *legal order*.

[2] Andre Jean Arnaud, *Dicţionnaire encyclopedique de theorie et de sociologie du droit,* (La Librairie générale de droit et de jurisprudence, Paris,1993) pp.94-98.

By *legal order* or *order of law* one can understand *all the legal norms with the legal relationships arising under them*. The legal order is based and operates on the norms of law[3] established in the society. It is the core of social order, the fundamental condition of social equilibrium, the guarantee of essential rights of members of society and normal functioning of institutions. The legal order is an organic whole, a full legal reality that corresponds to a particular collectivity.

The *legal order is a coercive order*, based on public norms to guide and control individual and group behaviours, to ensure the cohesion and stability of society.

The *legal order* generates and reinforces the *order of law*, noting, however, that this order of law includes the scope for institutional-functional setting of *power*, the exercise of full and unimpeded thereof, self-limiting only by observing the private life of the person, sphere in which it is manifested as being in the field of freedom. No less true, by a relationship this time weaker in terms of bi-univocacy, the order of law is intended to strengthen institutional mechanisms and procedures by which de legal order is produced and self-reproduced, therefore, again in a kelsenian sense, a new legal field *growing positive*, finding its validity by an operation of inferation of the basic norm - *the constitution* - but also, at the same time, by arranging some reproductive procedures, validated by reference to this fundamental norm.

From a conceptual point of view, the *legal order* should not be confused with the *order of law*, as they are distinct in scope and content. The *order of law* implies, more or less visibly, the manifestation of the State as a political organization of society, involving the permanent activation of institutional means to exercise coercion, both in private and public area of activities of the person and involves permanent reference to legal order, existence that determines the being of the *order of law*. The relation between the *order of law* and the *legal order* is not a perfect bi-univocity, but assumes a certain position of determination from the part of the *legal order*.

The *order of law* is the awareness of people, either individually or collectively considered, of the prescriptive content of the command given by the authors that produce legal norms, the awareness of the fact that ignoring this *sollen*-sentence or deviation from this falls under the coercive power of bodies established with substantive jurisdiction to exercise certain coercive attributes, therefore competences by establishing norms meant to exercise control and domination of state power over the individual. Said another way, *the order of law* may be affirmed as *limitation in actu* of the free will of the individual. The person's behaviour is expressed into acts and facts only according to what the State requires, as a way of political organization, by its will, or at least only such expression is or would be correct in relation to the legislator's command, otherwise, by logical consistency, being followed by a legal sanction.

The *order of law* is a function-concept that has the role of ensuring the achievement of a/some general and sectoral policies to reduce, generally, inevitable social entropy. What the *order of law* is reflecting is the functional entwining of order (positive or negative) expressed by the law-making authority with the means/ways of an anytime and immediate, in general rule, coercive interventions of the State through its function-bodies, to ensure and preserve the balance between freedom and civic and political obedience, the State, as a political organization, considering that such a balance is beneficial to its security and citizens' security, that such a balance is a way of manifesting as subject producer of order in international relations[4], that, especially, such a balance is correspondent to certain standards of internal and external public morality. By its content, the concept of *public order* does not empower or allow or provide for an exemption, but actually *imposes* a *must*, mediating the coercive relationship between the State and the individual, especially as regards repressive-type impunity, by means of a system of courts or administrative authorities having well-prescribed roles using procedures of competence.

The concept of *legal order* is not an attribute only of domestic law, whereas any legal order, any order of law, any national public order is inter-positioned to such other orders in the field of existence of an international society and increasingly internationalized as effect of a nearly complete globalization. As such, symmetrically to a domestic legal law, the doctrine argued that there is *an international general judicial order*[5], with certain particular features given by the very nature of public international law, by its specific creation as normative field as the totality of legal norms.

The legal order is a term synonymous with the normative order[6] but claiming the reality that every State is or represents an order of law, such an attribute is, however, relatively, because under certain socio-political determinations, the order of

[6] Ion Craiovan, *Philosophy of Law or the Law as Philosophy*, (Universul Juridic, Bucharest, 2010), pp.36-39.

law can be overthrown, replaced, sometimes brutally, with another order of law, without the State to cease its existence as a political organization of that given society[7]; at most, one can appreciate an involutive stage that would be placed upon the State in question following a change in its order of law, this order being understood as a public order[8].

Legal orders are far from being opposed one to each other, entirely and trait to trait. Most often, if not always, they are opposed and come close one to each other at the same time. The observation is accurate for the legal orders of the same legal system, as to the legal orders belonging to different legal systems. The most important is to know what are the elements by which the legal orders are similar or opposed to each other, because, ultimately, on these elements will depend their typological relatedness and the classification of two or more legal orders in one and the same legal system or different legal systems.

The normative layer of which the legal order system is composed consists of legal norms defined as general and binding norms of conduct set by law or use. They have a decisive role in ensuring the order of law as they promote core values and human relationships, defend State institutions, and ensure the rights and freedoms of individuals. Therefore the power of influence and coercion of legal norms is greater than that of the moral, religious, politeness norms.

The legal norms have certain specific features which differentiate them from the non-judicial norms, namely:

express the elaboration and implementation procedure. The legal norms are enacted, promulgated and enforced by the legitimate public authority subject to certain legislative procedures and techniques, while moral norms are the product of anonymous, spontaneous and diffuse collective work of individuals, groups and social collectivities, being developed mostly in unwritten form within the unorganized procedure;

their action in time and space takes the written form (laws, decrees, decisions) and therefore legal norms know a certain determination in time and space, their emergence, modification or disappearance can be determined spatially and temporally;

in terms of form and structure, regardless of variety, legal norms are characterized by a unitary structure within which can be identified three elements (hypothesis, disposition, sanction), while the non-legal norms do not know, most part of the case, these elements;

in terms of efficiency and validity, being accompanied by organized penalties, legal norms act over the entire society, their non-compliance or breach calling for intervention of specialized bodies of public authority.

Admitting that the legal norm is the rational expression of the law or the solemn pronouncement of the law, it is better distinguished that *the legal norm is the primary means of achieving and maintaining social order, of protecting the rights and freedoms of citizens*.

Considering the entire social order, social penalties and legal penalties have an important place. The sanction, as part of the norm, refers to the measures and means to be adopted against those individuals who break the norms and the prescriptive regulations.

4. Priciple of legality – concept

The ideal of legality and equality was born as a requirement of natural law and it has been sought to justify it with religious, psychological and philosophical arguments, but all proved untenable. It is a fact that people are endowed differently by nature; thus, the requirement that all people be treated equally can not be based on any theory that all would be alike. Insufficient argumentation if the natural law is exposed most clearly when dealing with the principle of equality and legality. For understanding these principles, one must start from a historical examination. Thus, in modern times, as earlier, it was appealed to these principles as a means to abolish feudal differentiation of individuals' legal rights. As long as individual development and development of some sections of the people is hampered by barriers, social life will be disturbed by violent social movements. People without rights are always a threat to social order. Their common interest in removing such barriers unites them; they are prepared to resort to violence because they can not get what they want by peaceful means. Social peace is attained only when it allows all members of the society to participate in democratic institutions. And this means equality before the law, that is, before legality.

3. Rule of law and principle of legality in rule of law

Legality is a principle of social and State life consisting in compliance with the legal norms by all participants in social relations.

---

[7] Mircea Djuvara, *Summary of Legal Philosophy*. Fascicule 1., ("Universul" newspaper printing press, Bucharest, 1941), pp. 44 and following.

[8] Ioan Muraru, Gheorghe Iancu, *The Romanian Constitutions (Textes, notes, comparative presentation*), 3rd edition, (Bucharest, Regia Autonoma „Monitorul Oficial", 1995.).

In a Rule of law, lawfulness requires duty of every citizen to observe the general provisions of the law. The principle of legality is a universal principle that requires all subjects of legal relations to comply with the law in their work.

Due to the fundamental importance of laws, and mainly of the Constitution, legality is considered a principle of constitutional democracy.[9]

Strengthening of the legality is prevented by the breach of the principles of law supremacy, of equality of all before the law, of social equity and of dysfunctions of the activity of legal norms enforcement bodies.

Trying to define legality, one can say that it is a principle, a method and a strict compliance regime, unyielding enforcement of legal norms by all participants in social relations.

The principle of legality involves primarily that the most important social relationships are governed by general and impersonal legal norms, by a democratically elected representative body, expressing the real will and fundamental interests of the nation.

Secondly, the principle of legality implies that the overall conduct of individuals, as the work of public authorities and other social organizations, to conform to the general and impersonal norms adopted by the legislative authority.

Viewed from the perspective of the principle of legality, relations between the State and the law are expressed most suggestively by the doctrine of the order of law. According to this theory[10], the State is obliged to obey its own laws that otherwise expresses the fundamental interests of the society. Therefore, the State, the public authorities, the civil servants are obliged to observe the law, like any other citizen.

The order of law is another legal category close to legality. It is an essential element in society's life. The order of law is obtained when the principle of legality prevails (if everyone complies with the law provisions). The order of law is a state of social relation governed by the legal norms that correspond to the legal provisions of laws and other normative acts.

The concepts of legality and order of law are close and interdependent. The order of law can not exist without legality, and legality weakens if there are flaws in the order of law.

The idea of the order of law is inextricably linked to the role of justice, the promotion of legality in the activity of State bodies, the firm defending of the rights and freedoms of citizens. Referring to the true meaning and the deep implications of the concept of order of law, Professor Ion Deleanu highlighted, in an assessment as successful as possible, that ″by an original feedback circuit, the law once created is imposed to the State - subject of law itself - like other subjects. To have the strength to impose, some minimum conditions are essential: by postulating through norms of law of some moral and political values which are authentic and persuasive for the global civil society and for the individual; by establishing a democratic ambience; by strengthening the principle of State responsibility; by institutionalization of effective means of control over its activity; by establishing a coherent and stable legal order; by strictly promoting the principle of legality and the principle of constitutionality; by transforming the human being into a cardinal axiological reference″.[11]

The Rule of law was the criterion for the classification of States in of law and despotic, in legislator State, administrator State or judge State. The Rule of law must not be confused with the principle of legality, because it is more than that. [12]

The complex content of the Rule of law consists of: the lordship of law; the capitalization at their actual sizes of the real fundamental rights and freedoms; achieving the mutual balance/cooperation of public authorities and achieving the free access to justice.

The Rule of law must be accompanied by a guarantee system[13], which has as its purpose the self-limitation of the State by the law. This guarantee scheme is based on the following main norms: any amendment of the Constitution to be dealt with only by an expressly authorized assembly, elected on democratic bases and which should carry out the review procedure; the review itself does not have to affect the fundamental values of constitutional democracy; the existence of a constitutional control; the restriction on the exercise of rights and fundamental freedoms by law only if necessary, only in proportion to the situation that caused it, without prejudice of the right or freedom and for the grounds expressly provided in the Constitution and the non-limitation of the free access to justice.

The social nature of the State is a current corrective brought to the classical liberalism. The essence of liberalism was constituted by individualism and freedom, which required non-

interference of the State in the social or economic life. In current circumstances, such a doctrine can not fit the realities of many countries of the world, where the material conditions can not provide a decent living, health of population, environmental protection, development of education system, etc., all united under the umbrella of the notion of general interest. The State must intervene for achieving the general interest, that is, to have a proactive rather than passive attitude, as demanded by the classical liberal doctrine. In this regard, the State must protect the weak individual; must support economic sectors required to promote the general interest; must ensure the functioning of public services and social protection.

The democratic nature of the State implies: a pluralistic system; Government members' accountability; the obligation to comply with the laws; the impartial pursuit of justice by independent and irremovable judges; the order of law, the exercise of sovereignty by the people; ensuring people's participation in solving public affairs; the enforcement of the principle of separation/balance and collaboration of public authorities; decentralization.

All these implications include: achieving balance of powers and ensuring the supremacy of the constitution, a democratic State being found where these two traits are met.

Attempting a synthesis of the relationship between modernity and tradition in the constitutional law, with profound implications for the principle of legality, one can emphasize the following:

some concepts of constitutional law have evolved naturally over time, acquiring new connotations that have defined much deeper and more clearly their profile. Thus, one can mention the concept of sovereignty, the human rights etc.;

there was recorded continuously a greater flexibility in the implementation of separation of powers, which remains a fundamental principle of political organization. In this regard, it may be mentioned, for instance, the responsibility of the Government to legislate on certain conditions, for a fixed term, under strict parliamentary control, by way of ordinance;

in modern constitutional law arose, however, new institutions designed to assure into a greater extent the human rights and the observance of democratic principles, in a word, the functioning of the order of law mechanisms. Among these new institutions is, of course, the institution of the Ombudsman (The People's Lawyer), the courts of audit, the constitutional courts (or the constitutional councils);

as a consequence of developments mentioned earlier, new opportunities to guarantee the constitutional rights of citizens emerged, judiciary ways have improved, whilst being carried out a junction between internal mechanisms to protect the rights of citizens (justice, administrative litigation, exception of unconstitutionality in the process) and international mechanisms, such as, for example, the recognition of the right of citizens prejudiced in their rights, which have exhausted domestic remedies, to appeal to the European Court of Human Rights.

Control of the constitutionality of laws is one of the legal guarantees of the supremacy of the constitution. This control includes the principle of legality, because the normative acts must be developed according to an established procedure and the Constitution, on the one hand, and on the other hand, the law, including the constitution, must be observed by all State bodies. Control is understood as the activity of verifying the enforcement of the principle of compliance of the law with the constitution and as an institution of constitutional law, including norms combined with the same object of regulation. There is subject to control not only the law, as the legal act of the Parliament, but also normative acts with equal legal force with the law (ordinances, decrees-laws). Administrative deeds are not subject to this control, because public administration authorities issue these deeds in the exercise of law and detailing of constitutional provisions is done by law. Administrative deeds are subject to judicial control, within the administrative jurisdiction. Draft laws do not submit to this control either, because they are not laws and can be withdrawn from the originator until commencement of debates (on texts of legislative initiatives). There are a number of causes determining conflict between the Constitution and laws, even if they are incomprehensible because of the similarity of those who adopt them (social contradictions; contradictions between political groups; exaggerated stiffness of the constitution; violation of the legislative technique norms; harmonization of the federal interests with ones of the federal States).

4. Conclusions

In conclusion, ensuring the constitutional supremacy actually means ensuring social stability and legal order in the State. The Constitution is the seat of citizens' rights and liberties and the structural factor of the legal order which shall provide guiding principles: equality of all citizens, legality, non-retroactivity of laws etc. Legality and the order of law are presented primarily as a means of defending the rights, freedoms and legitimate interests of citizens. Building the Romanian political lifetime on the ideas of law and legality became and is becoming increasingly a prerequisite

of acceptance of Romania as a full member of the world community of States, of some international bodies. In this comprehensive effort, jurists are given an essential role, they must be the first to contribute to promoting observance for the order of law, applying consistently and justly the laws, but also directly contributing to the awareness of the entire Romanian public opinion about the value of legal norms, with the requirement of unabated observance of the law in relations between individuals, as well as between them and the authorities, within the whole mechanism of functioning of our State bodies and organizations.

IMPLICATIONS OF THE RECOURSES IN THE INTERESTS OF LAW ON THE PROVISIONS OF LAW NO. 554/2004

Claudia Marta CLIZA[*]

Abstract

Law no. 554 was adopted in 2004 and amended in 2007. In the meantime and during all this period, the Supreme Court adopted a lot of recourses for the interest of law and these decisions modified the law in a deeply manner. This study is dedicated to these recourses and the way they affected the law.

Keywords: *Law no. 554/2004, recourses for the interests of law, modifications, first degree, recourses.*

1. Introduction

This study aims the default modifications that not the lawmaker, but paradoxically, the judge, has brought to Law no. 554/2004. It should be noted that the decisions to be contemplated by the analysis of this study are recent and fall under the scope of the actual tendency of the High Court of Cassation and Justice to come up with explanations on any matter it is requested a settlement of matters of law.

The institution of the High Court of Cassation and Justice referral in order to rule a prior resolution for the settlement of certain matters of law is new[1], and together with the recourse in the interests of the law, the institution aims to provide an uniform legal practice and both civil procedural institutions are extremely welcome in the Romanian legal frame, in order to establish case law patterns which provide the person subject to the law a greater confidence in the act of justice.

The number of litigations caused by the local government is currently large among civil litigations. This is something normal if we take into account the fact that within the administrative law, understood as a branch of public law, the term of local government holds the central position and it is natural to be so. As shown in the doctrine, the administration is the most complex activity of the state; it is ever-present within the society, the people's life and this is why there is the constant concern of decision makers to make from the local government a force in the interests of the people[2].

Therefore, the material law essentially correlates with the procedural law in the settlement of the administrative litigations.

Practically, the aforementioned civil institutions outline the possibility of the High Court of Cassation and Justice to „clear" the obscurity of the law, so that the courts of law do not rule non-uniform judgments, the premise for the person who resorted to the law to ask „why did I lose the trial" while citizen X, who was in the same situation as me, won? The question is natural and frustrating and the act of justice lacks of finality in such situations.

The obscurity of the law also affected Law no. 554/2004 of the contentious administrative, and these civil procedural instruments appeared and corrected the interpretations of the courts of law.

By means of the proposed analysis, this study reviews four matters of law settled by the High Court of Cassation and Justice, by taking into account four articles of the aforementioned law, a matter which has never been subject to any doctrinal analysis up to this point.

The author of this study aims to analyze the practice of the High Court of Cassation and Justice in this field, by summarizing the decisions which were ruled and by emphasizing their importance.

It should be noted that the institution of the ruling of a prior resolution for the settlement of a matter of law is regulated, as provided above, in art. 519 – 521 of the Code of civil procedure. In summary, in order for the referral under art. 519 of the Code of civil procedure to be admitted, the following conditions must be fulfilled at the same time[3], namely:

the case where the matter of law is raised, is on the dockets of the court of last resort;

the referral concerns a matter of law, namely an issue regarding the interpretation of a legal regulation for which the settlement in principle is required;

the settlement of the case on the merits depends on the clarification of the respective matter of law;

the matter of law the clarification of which is required, is new;

the High Court of Cassation and Justice did not rule on the respective matter of law and it is not

contemplated by any pending recourse in the interests of the law[4] .

2. Prior resolutions for the settlement of the matters of law

2.1. Decision no. 10/2015

The first reviewed decision is Decision no. 10 of May 11th, 2015[5], ruled in Case no. 427/1/2015, by the Court Panel for the settlement of matters of law which took into consideration the referral filed by the Court of Appeal of Craiova — Division of the contentious administrative and fiscal, by Closure of December 11th, 2014, ruled in Case no. 7.752/101/2013, in order to rule a prior resolution on the interpretation of the provisions of art. 23[6] of Law no. 554/2004 of the contentious administrative, as further amended and supplemented (Law no. 554/2004).

The matter of law submitted to the High Court of Cassation and Justice was the following:

„The provisions of art. 23 of Law no. 554/2004 shall be interpreted in the sense that the court ruling whereby a regulatory administrative act was annulled, is applicable only to those individual administrative acts issued under the respective act, after the annulment resolution or is it also applicable to those which, although they were previously issued, on the date of final annulment resolution were appealed in cases pending on the dockets of the court of law?"

The point of view of the court panel that filed the referral was that the provisions of art. 23 of Law no. 554/2004 provide, unequivocally, that such court rulings are generally mandatory and produce effects in the future. These provisions are exempt from the principle of the relativity of the court rulings, providing that the court ruling on the annulment of a regulatory administrative act produce erga omnes effects as the regulatory administrative act which is executed produce the same effects in practice. This feature of the court ruling logically leads to the conclusion that the court ruling whereby a regulatory administrative act was annulled in full or in part, is applicable to all matters of law.

The *erga omnes* effects are produced only for the future, an aspect which results, with no doubt, from the provisions of art. 23 first thesis, final part of Law no. 554/2004. Therefore, the legal relationships and legal effects produced by the regulatory act during its execution, until the date of its irrevocable annulment, shall remain in force and shall produce legal effects.

In what concerns the words „they only produce effects in the future", has to be construed as meaning that the invalidity of the regulatory administrative act, pronounced under an irrevocable court decision, does not produce retroactive natural effects, but only ex nunc effects, for the future, starting from the moment of its acknowledgement, by its publishing on the Official Journal of Romania, Part I, and for the issuance authority, as of the date of the final annulment resolution due to the fact, as a party to the proceedings whereby the resolution for the annulment of a regulatory administrative act was ruled, the issuance authority cannot rely on the failure of the resolution to be published in the Official Journal of Romania, Part I, as an argument for the substantiation of the dismissal to settle a petition.

Therefore, the invalidity of the regulatory administrative act cannot be opposed to the legal effects caused by the administrative acts issued prior to the mentioned time, but only to the legal effects caused by the administrative acts subsequently issued.

In what concerns the extension of the court ruling on the annulment of a regulatory administrative act similar to the effects of the motion to dismiss on grounds of unconstitutionality in what concerns pending cases (as it was noted by means of the decisions ruled by the Court of Appeal of Craiova attached to the referral), the referring court noted that the invalidity of the individual administrative act issued under a regulatory administrative act, in this case the taxation decision, must be analyzed on the time of its issuance (the invalidity grounds being previous or concomitant). The contrary solution would result in the invalidity of all individual administrative acts (in this case the taxation decisions) issued before the resolution on the annulment of the regulatory administrative act, a situation which would violate the legal certainty principle.

Therefore, in the opinion of the referring court, in consideration of the provisions of art. 23 of Law no. 554/2004, the annulment of a regulatory unilateral administrative act produces erga omnes effects only for the future, similar to the repeal or expiration, and the legal relationships and the legal effects produced by the regulatory administrative act during its execution and up to its final annulment, shall remain in force and shall produce legal effects. The High Court of Cassation and Justice decided that

[5] The court panels for the settlement of matters of law, published in Official Journal, Part I no. 458 of 2015.

[6] G.-V. Birsan si B. Georgescu, *Legea contenciosului administrativ nr. 554/2004 annotated* (Hamangiu Publishing House, 2nd edition, rev., Bucharest, 2008): „the action in contentious administrative having as scope the annulment of a regulatory administrative act annulled under a final and irrevocable court ruling, which was published in the Official Journal of Romania, Part I, or as the case may be, in the official journals of the counties or of Bucharest, lacks of object, as these court rulings are generally mandatory and they produce effects in the future (The High Court of Cassation and Justice, division of the contentious administrative and fiscal, dec. no. 2182 of May 29th, 2008, not published)".

the provisions of art. 23 of Law no. 554/2004 of the contentious administrative, as further amended and supplemented, are construed in the sense that the irrevocable/final court resolution whereby a regulatory administrative act[7] was annulled in full or in part is effective on those individual administrative acts issued under the respective act and which, on the date of the annulment court resolution, are appealed in cases pending on the dockets of the courts of law.

2.2. Decision no. 11/2015

The second analyzed decision is Decision no. 11/2015[8], whereby a settlement in principle on the following matter of law is provided: „If the provisions of art. 3 of Law no. 554/2004 of the contentious administrative, as further amended and supplemented (Law no. 554/2004), in conjunction with the provisions of art. 63 par. (5) letter e) and art. 115 par. (2) of Law no. 215/2001 of the local government, republished, as further amended and supplemented (Law no. 215/2001), and with the provisions of art. 19 par. (1) letter a) and letter e) of Law no. 340/2004 on the prefect and the prefecture, republished, as further amended and supplemented (Law no. 340/2004), and of art. 123 par. (5) of the Constitution, shall be construed in the sense that the prefect is acknowledged the right to appeal before the court of the contentious administrative, all the acts of the local government which he deems illegal or only the acts of the local government which fall under the scope of the provisions of art. 2 par. (1) letter c) of Law no. 554/2004, respectively only administrative acts".

In the reasoning of the point of view, the referring court referred the case law to the Court of Appeal of Bucharest, where the matter of law was settled differently, as shown below.

In an opinion, it was noted that art. 123 par. (5) of the Constitution is a general provision of principle, the role of which is to establish the public guardianship institution[9], without its text aiming the exact definition of the acts issued by the authorities of the local government which can be appealed before the contentious administrative, this delimitation being achieved by the „organic law", according to the reference of the constitutional text.

The organic law is law no. 340/2004, a special regulation, an exception both from the provisions of Law no. 554/2004, and from the provisions of Law no. 215/2001, and which, by means of the provisions of art. 19 par. (1) letter e), limits to the administrative acts the scope of the acts which can be appealed before the contentious administrative.

Furthermore, art. 3 of Law no. 554/2004, which refers to the „acts issued by the authorities of the local government" and to the „contentious administrative court" shall be construed by reference to the definition of the activity of „contentious administrative" given by art. 2 par. (1) letter f) of Law no. 554/2004, which refers to the term of „administrative act" provided for by art. 2 par. (1) letter c), and not to the general term of „act".

According to art. 1 par. (8) of Law no. 554/2004, the actions filed by the prefect before the contentious administrative are subject both to Law no. 554/2004, and to special law, including to Law no. 340/2004, which limits to the administrative acts the scope of the acts which can be appealed.

In another opinion, it was noted that art. 123 par. (5) of the Constitution deliberately refers to all the acts of the local government, and such an interpretation is supported by the general obligation incumbent including on the local government, provided for by art. 1 par. (5) of the Constitution, on the observance of the Constitution and of the law in all activities, regardless the nature of the legal relationships they are performed in.

Such an interpretation is also supported by the general role of the prefect established by art. 19 par. (1) letter a) of Law no. 340/2004, respectively the role to „ensure, within the county or, as the case may be, within Bucharest, the application and observance of the Constitution, laws, ordinances and resolutions of the Government, of the other regulatory acts, and of public order". Another argument is that art. 115 par. (7) of Law no. 215/2001 refers, without distinguishing, to the „orders of the mayor".

Therefore, the acts filed by the prefect by means of the contentious administrative shall be deemed admissible, regardless of the type of the acts issued by the mayor.

The High Court of Cassation and Justice decided that, for the interpretation of the provisions of art. 3 of Law no. 554/2004 of the contentious administrative, as further amended and supplemented, in conjunction with the provisions of art. 63 par. (5) letter e) and art. 115 par. (2) of Law no. 215/2001 of the local government, republished, as further amended and supplemented, and of art. 19 par. (1) letter a) and letter e) of Law no. 340/2004 on the prefect and prefecture, republished, as further amended and supplemented, and of art. 123 par. (5)

[7] Dana Apostol Tofan, *Drept administrativ. Volumul II*, (All Beck Publishing House, Bucharest, 2004), p. 49: „*Therefore, in what concerns the termination of the legal effect, the administrative acts shall produce effect until their removal from force, which is regularly performed by the issuing body, by the hierarchically higher authority or by the courts of law, being about suspension, revocation or cancellation*" (A. Iorgovan, op. cit., 2002, p. 69).

[8] The courts of law for the settlement of matters of law, published in Official Journal, Part I no. 501 of 2015.

[9] Elena Emilia Stefan, *Drept administrativ*, p. 145: „*During interwar period, the public guardianship institution was expressly established by the law, the state granting a high importance to this form of administrative control (...) Law no. 554/2004 of the contentious administrative comes to detail the procedural elements of the public guardianship as follows: the prefect can appeal before the contentious administrative court the acts issued by the local government, if he deems them illegal*".

of the Constitution, the prefect is acknowledged the right to appeal before the contentious administrative court, the administrative acts issued by the authorities of the local government[10], within the meaning of the provisions of art. 2 par. (1) letter c) of Law no. 554/2004 of the contentious administrative, as further amended and supplemented.

2.3 Decision no. 12/2015

The third decision which is subject to this analysis is Decision no. 12/2015[11] on the assessment of the referral filed by the Court of Appeal of Bucharest – Division VIII of the contentious administrative and fiscal, by Closure of November 24th, 2014, ruled in Case no. 30.461/3/2013, whereby a settlement in principle is provided on the following matter of law:

„If, under the terms of Law no. 215/2001 of the local government, republished, as further amended and supplemented (Law no. 215/2001), and of Law no. 554/2004 of the contentious administrative, as further amended and supplemented (Law no. 554/2004), the territorial and administrative division, by means of its executive authority, respectively the mayor, is entitled to appeal before the contentious administrative court the resolutions adopted its deliberative authority, respectively the local council or, as the case may be, the General Council of Bucharest".

The matter of law subject to settlement, as formulated by the referring court, aims the right of the territorial and administrative division, by means of its executive authority, respectively the mayor, is entitled to appeal before the contentious administrative court the resolutions adopted its deliberative authority, respectively the local council or, as the case may be, the General Council of Bucharest, under the terms of Law no. 215/2001 and of Law no. 554/2004.

The High Court of Cassation and Justice notes that the modifications occurred in case of the provisions of Law no. 215/2001, do not establish expressis verbis the right of the territorial and administrative division, by means of its executive authority, respectively the mayor, to appeal before the contentious administrative court the resolutions adopted by its deliberative authority, respectively the local council or, as the case may be, the General Council of Bucharest.

The acknowledgment of such a right cannot be inferred by way of interpretation, as a consequence of the removal of the law text expressly providing the right of the mayor to refer to the prefect if he considered that the resolution issued by the local council was illegal.

In such conditions, according to the „*lex dixit quam voluit*" interpretation rule, it can be concluded that the lawmaker did not intend to acknowledge the right of the territorial and administrative division, by means of the mayor, to appeal before the contentious administrative court, the resolutions adopted by the local council or, as the case may be, by the General Council of Bucharest, since, if he had intended to acknowledge such a right of the mayor, he would have done it expressly.

The High Court of Cassation and Justice notes that the provisions of Decision of June 23rd 2003[12] of the High Court – United Divisions, keep their validity, meaning that „the acts issued by the local council and the mayor are independent, and none of these authorities can pursue directly a remedy at law against the other symmetric authority, the sole authority vested with such a power being the prefect". In this respect, we note that the provisions of art. 46, in art. 71 par. (1) and art. 27 par. (1) of Law no. 215/2001, in force on the date of the decision, are included in the content of art. 45 and art. 68 par. (1) of Law no. 215/2001, in force on the date of this decision, respectively in the content of the provisions of art. 115 par. (7) of Law no. 215/2001, art. 19 par. (1) letter a) and e) of Law no. 340/2004 and art. 3 par. (1) of Law no. 554/2004.

Notwithstanding, under art. 62 par. (1) of Law no. 215/2001 and art. 1 par. (8) of Law no. 554/2004, the mayor is acknowledged the right to file court actions and to represent the territorial and administrative division before the courts of law. However, in what concerns the lawfulness of the acts adopted by the local council, both the Constitution of Romania, and Law no. 340/2004 and Law no. 554/2004 establish the express competence of the prefect in the form of the public guardianship control[13].

To accept the theory according to which the territorial and administrative division, by means of its executive authority, namely the mayor, is entitled to appeal before the contentious administrative court, the resolutions adopted by its deliberative authority, respectively the local council or, as the case may be, the General Council of Bucharest, means that the mayor acquires the prerogative of the public guardianship control. Given that the public guardianship control is expressly and restrictedly

[10] Iuliana Riciu, *Procedura contenciosului administrativ* (Hamangiu Publishing House, Bucharest, 2009), p. 131 and the following.
[11] The court panels for the settlement of matters of law, published in Official Journal, Part I no. 773 of 2015.
[12] Published in Official Journal no. 690 of October 2nd, 2003.
[13] Iuliana Riciu, *Procedura contenciosului administrativ*, p. 132: „*The public guardianship control is achieved by a higher hierarchical level authority and shall be exercised only by means of the contentious administrative court, which will rule on the lawfulness or opportunity of the control acts, but there are also opinions which note that this control relates only to lawfulness and not to opportunity. (…) It is important to note that the public guardianship body cannot annul an act deemed to be illegal which was issued or adopted by the body under guardianship, this power belonging only to the contentious administrative court, upon the referral of the body in charged with the public guardianship*".

provided within the constitutional level, by means of art. 123 par. (5) of the Constitution, and, within the organic law level, by means of art. 115 par. (7) of Law no. 215/2001, art. 19 par. (1) letter e) of Law no. 340/2004 and art. 3 par. (1) of Law no. 554/2004, as a prerogative of the prefect, the court of law is not able, by way of interpretation of the provisions in force, to grant to certain competent public authorities something they were not granted by the lawmaker.

Whereas, within the current legislative frame, the lawmaker did not expressly acknowledge the right to file court actions, although when he wanted to acknowledge at the same time the right of several subjects of law to exercise similar or identical powers, he achieved this by introducing express provisions, the High Court of Cassation and Justice admitted the referral and established the following: under the terms of Law no. 215/2001 of the local government, republished, as further amended and supplemented, and of Law no. 554/2004 of the contentious administrative, as further amended and supplemented, the territorial and administrative division, by means of its executive authority, respectively the mayor, is not entitled to appeal before the contentious administrative court, the resolutions adopted by its deliberative authority, respectively the local council or, as the case may be, the General Council of Bucharest.

2.4 Decision no. 13/2015

The last decision analyzed by this study is Decision no. 13/2015[14] on the appeal filed by the Board of the Court of Appeal of Constanta on the interpretation and application of the provisions of art. 2 par. (1) letter f) and art. 10 of Law no. 554/2004 of the contentious administrative, as further amended and supplemented, respectively art. 94 and 95 of the Code of civil procedure, on the nature of and the jurisdiction[15] over the cases contemplating the claims whereby a general directorate of social assistance and child protection requests the obligation of a county or local council or of another general directorate of social assistance and child protection to bear the living costs for the persons benefiting from protection measures provided by Law no. 448/2006[16] on the protection and promotion of the rights of persons with disabilities, republished, as further amended and supplemented, and Law no. 272/2004 on the protection and promotion of child rights, republished, as further amended and supplemented.

In what concerns this recourse in the interests of the law, it is noted that the litigations covered by the referral fall under the scope of the contentious administrative, taking into account the capacity of public authorities of the parties, and their scope consists of the dismissal to settle a petition concerning a right provided by the law.

The legal nature of the correlative rights and obligations to finance the social assistance system is specific to the administrative law, due to the fact the application of the legal provisions claimed in the referral covers the organization and establishment of the powers of the local government bodies and the relations between these bodies.

According to the provisions of art. 32 letter c) and art. 37 of Law no. 47/2006[17] on social assistance national system (in force until December 22nd, 2011) the county councils establish and organize under their subordination, general directorates of social assistance with financial and technical responsibilities in order to support social services; the social assistance is mainly financed from funds allocated by the state budget or local budgets, and according to art. 40 par. (1) of the same law, the county budgets allocated funds for the financing of social services organized within the county and for the financing of social works established under the resolutions of the county councils and municipalities, of the towns and communes or under special law, as the case might be.

In relation to the provisions of Law no. 554/2004 of the contentious administrative, as further amended and supplemented, the legal nature of the relation referred to judgment obviously belongs to the administrative law, due to the fact the application of the legal provisions claimed by court actions cover the organization and fulfillment of the responsibilities of the local government bodies and the relations between these bodies – the powers of the local council and of the county council, on the one hand, and the financing of the general directorate of social assistance and child protection, on the other hand, all of them involving the local government body.

The source of the obligation of payment of the amounts representing the balance between the monthly average costs and the monthly living contribution incumbent on the social assistance services beneficiaries – persons with domiciles in other localities – is an administrative act[18].

[14] The panel with competence to judge the recourse in the interests of the law, published in Official Journal, Part I no. 690 of 2015.

[15] On the one hand, the first opinion considered that these litigations have a civil nature, and the jurisdiction belongs, depending on the value of the claim, to the court of law or to the tribunal, as common law courts. On the other hand, the second orientation of the case law considered that these cases are contentious administrative litigations, and the jurisdiction belongs in the first instance to the tribunals.

[16] Published in Official Journal, Part I no. 1 of 03/01/2008.

[17] Published in Official Journal, Part I no. 239 of 16/03/2006.

[18] Antonie Iorgovan, *Tratat de drept administrativ. Vol. II* (Editura All Beck, editia 4, Bucuresti, 2005), p. 25: „*administrative act is that main legal form of the activities of the local government bodies, which consists of an unilateral and express manifestation of will of granting, modifying or removing rights and obligations, in the fulfillment of public power, under the main lawfulness control of the courts of law*".

In the application of the regulations in the field of social assistance, the local government bodies shall be bound to establish under administrative act the contribution of the community to the financing of the activities for the protection of disadvantaged persons.

The content of the administrative law relations consists of the rights and obligations of the subjects of this relation, the peculiarity of which is that the exercise of the subjective rights is a legal obligation.

It should be stressed out that, according to art. 2 par. (2) of Order no. 468/2009 of the Chairman of the National Authority for Persons with Disabilities on the approval of the Instructions for the application of art. 54 par. (4) of Law no. 448/2006 on the protection and promotion of the rights of persons with disabilities, the request of the leader of the general directorate of social assistance and child protection of the territorial and administrative division where the person with disabilities is domiciled, on the admission of the person in a public residential center of another county than the domicile county, is the administrative act whereby the settlement of the costs is performed.

Furthermore, the legal nature of the litigations having as scope the granting of social assistance benefits and the provision of social services – including those regulated by Law no. 448/2006, republished, as further amended and supplemented, and Law no. 272/2004, republished, as further amended and supplemented – obviously results from the provisions of art. 143 par. (1) of Law no. 292/2011 of social assistance.

According to this legal text, the administrative acts issued by the central and local public authorities on the granting of social assistance benefits and social services provision can be appealed before the contentious administrative, under the terms provided by Law no. 554/2004 of the contentious administrative, as further amended and supplemented.

The High Court of Cassation and Justice admitted the recourse in the interests of the law filed by the Board of the Court of Appeal of Constanta and therefore established that, in the interpretation and application of the provisions of art. 2 par. (1) letter f) and art. 10 of Law no. 554/2004 of the contentious administrative, as further amended and supplemented, respectively art. 94 and art. 95 of the Code of civil procedure, the litigations having as scope court actions whereby a general department of social assistance and child protection requests the obligation of a county or local council or of another general directorate of social assistance and child protection to bear the living costs for the persons benefiting from protection measures provided by Law no. 448/2006 on the protection and promotion of the rights of persons with disabilities, republished, as further amended and supplemented, and Law no. 272/2004 on the protection and promotion of child rights, republished, as further amended and supplemented, fall under the jurisdiction of the contentious administrative courts.

3 Conclusions

This study aimed to analyze four interpretations granted to certain texts of Law no. 554/2004 by the High Court of Cassation and Justice, on which the national courts raised either the issue of a non-uniform interpretation, or of the potential different interpretations of the law, which are yet unsettled by means of a recourse in the interests of the law.

The High Court of Cassation and Justice granted, by means of its interpretation, the clarity so much needed by the judge in the application of the law, having as final goal the confidence in the act of justice of the person subject to the law.

It should be noted that the New Code of Civil Procedure built such a mechanism enabling the access of the person subject to the law, to an uniform interpretation during the legal proceedings, without being necessary to wait the ruling of a final court decision.

The lawmaker made a great achievement for human justice, by guaranteeing to the persons resorting to the courts of law that they will benefit from all the procedural means to achieve a fair and equitable ruling.

THE INTERACTION OF INTELLECTUAL PROPERTY RIGHTS WITH THE OBJECTIVES AND COMPETENCES OF EUROPEAN UNION

Alina Mihaela CONEA*

Abstract

Even though, at least superficially seen, the primary law of the European Union did not conferred legislative competence in the field of intellectual property (IP) to the European decisional level, for many categories of IP rights European Union established its own protective systems. This paper assesses the evolution of the amendments to EU primary law that are incident to IP rights protection. It then circumstances the interaction of IP rights with the competences of the European Communities and the European Union. Finally, it highlights several aspects on the legal basis for the European Union action significant for IP rights. Overall, the paper points out the significance of the Court of Justice of the European Union jurisprudence that opened the possibility of a European intellectual property system.

Keywords: *European Union, intellectual property rights, objectives, competences, legal basis, approximation of laws.*

1. Introduction

From the normative point of view, at least apparently, the primary law of the European Union does not confer legislative competence in the field of intellectual property to the European decisional level.

Thus, the founding treaties of European Union (EU) mentions industrial property in just two articles: the first indicates industrial property as one of the possible exceptions to the free movement of goods and the second which states that the Treaties shall in no way prejudice the laws in Member States governing the system of property ownership. Despite that, European Union has established, or is about to do, its own protective systems[1] for the most important categories of intellectual property rights (IP rights).

In order to approach this contradiction, we find useful to analize it given the constitutional nature of primary norms, in their interaction with the intellectual property rights.

We will first address the evolution of the objective sets out in the founding treaties of European Union. Secondly, the paper presents the interaction of IP rights with the competences of the European Communities and the European Union. Finally, we highlight some aspects on the legal basis for the Community and European Union action significant for IP rights.

1. The objectives of the European Communities and European Union Treaties

European Community objectives were set out in Article 2 of the Treaty establishing the European Economic Community (TEC), in 1957:

"*It shall be the aim of the Community, by establishing a Common Market and progressively approximating the economic policies of Member States, to promote throughout the Community a harmonious development of economic activities, a continuous and balanced expansion, an increased stability, an accelerated raising of the standard of living and closer relations between its Member States."* [2]

The provision has been amended twice, by the Treaties of Maastricht[3] and of Amsterdam[4]. The Lisbon Treaty[5] repealed Article 2 TEC, which is replaced in substance by Article 3 Treaty on European Union (TEU).

---

[1] Hanns **ULLRICH** in William Rodolph **CORNISH**, *Intellectual property*, 4 ed. London: Sweet & Maxwell, 1999, p. 22.

[2] Treaty establishing the European Economic Community (Rome Treaty) (1957/1958).

[3] „The Community shall have as its task, by establishing a common market and an economic and monetary union and by implementing the common policies or activities (…), to promote throughout the Community a harmonious and balanced development of economic activities, sustainable and non-inflationary growth respecting the environment, a high degree of convergence of economic performance, a high level of employment and of social protection, the raising of the standard of living and quality of life, and economic and social cohesion and solidarity among Member States", Treaty on European Union (1992), *Official Journal C 191, 29 07.1992.*

[4] „The Community shall have as its task, by establishing a common market and an economic and monetary union and by implementing common policies or activities referred to in Articles 3 and 3a, to promote throughout the Community a harmonious, balanced and sustainable development of economic activities, a high level of employment and of social protection, equality between men and women, sustainable and non-inflationary growth, a high degree of competitiveness and convergence of economic performance, a high level of protection and improvement of the quality of the environment, the raising of the standard of living and quality of life, and economic and social cohesion and solidarity among Member States.", Treaty of Amsterdam amending the Treaty on European Union, the Treaties establishing the European Communities and certain related acts, *Official Journal C 340 of 10 November 1997.*

[5] Treaty of Lisbon amending the Treaty on European Union and the Treaty establishing the European Community, signed at Lisbon, 13 December 2007, OJ C 306, 17.12.2007, p. 1–271.

In context of the analysis of intellectual property rights within the European Union, of particular interest is the evolution of the objective *„to promote throughout the Community a harmonious development of economic activities"*. Thereby, following the first changes made in 1993 by the Treaty on European Union it becomes *„a harmonious and balanced development of economic activities throughout the Community"*, adding *„a high degree of convergence of economic performance"*. In the wording of Amsterdam Treaty the objective is to promote *„harmonious, balanced and sustainable development of economic activities"* and *a high degree of competitiveness and convergence of economic performance.*

The Lisbon Treaty, which entered into force on 1 December 2009, makes substantial amendments to provisions concerning the Union's objectives, in the context of the replacement of European Community with the European Union. Thus, article 3 of TEU sets, as regards the economic aspect, that the Union *shall work for the sustainable development of Europe based on balanced economic growth and price stability, a highly competitive social market economy*. Moreover, this article reiterates to the greatest extent the provisions of the Treaty establishing a Constitution for Europe[6].

The establishment of the *common market* was one of the instruments available to the Community to achieve its objectives[7]. The notion of *'common market'* did not benefit of a definition in the wording of the EC Treaty, but its scope was outlined in the provisions of Article 3 TCE, which detailed the activities of the Community to achieve its objectives.[8]

The concept of *unity of the market* was one of the basic principles of interpretation of Community law. Removing incompatible national rules *„it must therefore be sufficiently comprehensive to include the abolition of all pecuniary, administrative or other obstacles, for the purpose of achieving a unified market between the member states"*[9].

Within the Community/ EU law the *internal market* concept was shaped gradually[10] being established in the Treaty (with the Single European Act), in Article 26[11] of the Treaty on the Functioning of the European Union (TFEU)[12]. The concept of the *internal market* appears to be narrower than that of a *common market*, the definition of Article 26(2) TFEU providing that:

„The internal market shall comprise an area without internal frontiers in which the free movement of goods, persons, services and capital is ensured in accordance with the provisions of the Treaties".

In the literature[13], it is believed that the language of the *common market* was centred mainly on economic issues; the *single market* has been used particularly in political discourse, while the concept of an *internal market* is typically found in European Union law and judicial decisions[14].

According to settled case-law, the concept of *common market* is defined by the Court of Justice of the European Union (CJUE) in the sense that it „(...) involves the elimination of all obstacles to intra-community trade in order to merge the *national markets* into a *single market* bringing about conditions as close as possible to those of a *genuine internal market*`"[15]. In this respect, the common market is considered as a step to achieve the internal market[16].

According to Article 2(2)(g) of the Treaty of Lisbon, the words "common market" is replaced by "internal market"[17].

The essential question of our analysis is how the intellectual property rights with these restrictions interrelate, given that by their nature they have an effect on intra-Community trade and the competitive structure of the market.

Thus, the EU's objective of establishing an internal market can be considered contrary to a legal

---

[6] Treaty establishing a Constitution for Europe, *OJ C 310, 16.12.2004, p. 3–474.*

[7] Together with an economic and monetary union and by implementing common policies or activities referred to in Articles 3 and 4, according to Article 2 TEC.

[8] According to Barents the term "common market" is rooted in the concept of *Binnenmarkt* of German regulations arising in the 19th century. Negotiations on "common market" were based on various existing customs unions in Germany during the 19th century and the Union's common market between Belgium and Luxembourg (1921) and Benelux (1958). EC adds to these common elements the expansion on the free market to services and capital. situation in which intellectual property rights are within the exclusive national competence. The consequence of this kind of an approach facing towards the national level of regulation is that legislation will be in a considerable extent oriented and elaborate so as to protect the domestic industry of the Member States. This type of regulation could result in a protective system in varying degrees, which can be detrimental to other Member States[18].

Therefore, this national approach to regulation and protection of intellectual property rights appear to conflict with Article 3(3) TEU which provides that *„The Union shall establish an internal market. It shall work for the sustainable development of Europe based on balanced economic growth (...)"*.

Intellectual property rights have a major impact on the economic market[19]. A holder of intellectual property rights has the right to exclude potential competitors from certain actions, such as manufacturing and importing products that infringe its right. It can also impose certain fees. By their nature and their economic purpose, intellectual property rights falls under the rule of the Treaty. Because of the importance of granting such exclusive rights to boost technical and economic progress, Member States were reluctant to subject national rules on intellectual property protection to the principles and norms of the European Union.

Thus, the Court of Justice of the European Union[20] held, regarding the protection of copyright, that,

„Such a prohibition, which would legitimize the isolation of national markets, would be repugnant to the essential purpose of the Treaty, which is to unite national markets into a single market. That purpose could not be attained if, under the various legal systems of the member states, nationals of those states were able to partition the market and bring about arbitrary discrimination or disguised restrictions on trade between member states"[21].

Furthermore, in the case *Polydor v Harlequin*[22], the CJUE stated that,

„The scope of that case-law[23] *must indeed be determined in the light of the community's objectives and activities as defined by articles 2 and 3 of the EEC Treaty. As the court has had occasion to emphasize in various contexts, the treaty, by establishing a common market and progressively approximating the economic policies of the member states, seeks to unite national markets into a single market having the characteristics of a domestic market`.*

Regarding the legal status of the objectives of the European Communities, Koen Lenaerts[24] appreciated that according to the Court of Justice of the European Union, the aims on which the establishment of the Union is based cannot have the effect of "*imposing legal obligations on Member States or of conferring rights on individuals*[25]`. Legal impact will be limited to guiding interpretation of European Union law.[26] A significant example regarding our matter of study, concerns the identification of Community competencies under the provisions of the Treaty, interpreted in the light of Article 2 and Article 3 TEC.

„the principles to be considered in the present case are those concerned with the attainment of a single market between the Member States, which are placed both in part two of the Treaty devoted to the foundations of the Community, under the free movement of goods, and in article 3(g) of the Treaty which prescribes the institution of a system ensuring that competition in the common market is not distorted"[27].

3. Competences of the European Communities and the European Union

Express or implied powers

Under the principle of conferral[28],

„*The Union shall act only within the limits of the competences conferred upon it by the Member States in the Treaties to attain the objectives set out therein. Competences not conferred upon the Union in the Treaties remain with the Member States*."[29]

The doctrine[30] considers that on the matter of intellectual property, jurisdiction of the Court was

[29] Article 5(2) TEU.

[30] Hanns Ullrich in, *Intellectual Property, Public Policy and International Trade* (New York: P.I.E. Peter Lang, 2007).

initially *indirect*[31] in the sense that it resulted from the Court's role as guardian of the principles of internal market integration.

The Treaty establishing the European Community mentions industrial property in just two articles: the first indicates industrial property as one of the possible exceptions[32] to the free movement of goods and the second in which it`s states that the Treaties shall in no way prejudice the rules in Member States governing the system of property ownership.

In this context, an important consideration is that the Lisbon Treaty retains intact the provisions of the two articles. Therefore, CJUE jurisprudence maintains a fundamental significance.

First, Article 36 TFEU (ex Article 30 TEC) provides that,

„The provisions of Articles 34 and 35 shall not preclude prohibitions or restrictions on imports, exports or goods in transit justified on grounds of (...) protection of industrial and commercial property".

Second, Article 345 TFUE (ex Article 295 of TEC) states that,

„The Treaties shall in no way prejudice the rules in Member States governing the system of property ownership"

At first sight, Article 36 TFEU seems to indicate that intellectual property rights does not operate as quantitative restrictions or measures having equivalent to quantitative restrictions, as they are exempted from the rules on the free movement of goods. This argument was, moreover, initially relied upon to support that protection of intellectual property rights must remain the exclusive competence of the Member States[33].

However, exactly this exemption from the free movement of goods principle and the limitation of the second sentence, argued the opposite view, that intellectual property rights are within the competence of Community law. The argument is that if the protection of industrial and commercial property was to be considered by the authors of the Treaty as potential measures having equivalent effect to quantitative restrictions, they would not have included the reference to them in Article 36 TFEU, nor the second sentence of the article would have any sense[34].

The Court stated in one of his first decisions[35] on intellectual property rights that,

„Articles 36, 222 and 234 of the Treaty[36] relied upon by the applicants do not exclude any influence whatever of Community law on the exercise of national industrial property rights".

In 1977, in the case *Carlo Tedeschi v Denkavit*, CJUE has ruled that,

„Article 36 is not designed to reserve certain matters to the exclusive jurisdiction of member states but only permits national laws to derogate from the principle of the free movement of goods to the extent to which such derogation is and continues to be justified for the attainment of the objectives referred to in that article"[37].

As pointed out by Inge Govaere, this paragraph contains two important elements. The first is an expression of that Article 36 TFEU does not confer exclusive jurisdiction to the Member States and therefore, European Union law is applicable to the exceptions provided therein. The rules on free movement of goods are essentially addressed to the Member States. The first objective is to address the restrictions that may be made to intra-communitarian market by the existence of divergent national legislation. CJUE clarified that the exceptions to that rule, as provided by Article 36 TFEU, may allow the national legislation, under certain conditions, to deviate from the principle of free movement of goods.

The second element is the addition of a new limitation to the possibility of invoking Article 36 TFEU, along with that provided by the second sentence of the article. This provision can be seen as a safety measure to ensure that exceptions will not be unduly relied upon.

Therefore, as a general rule, in order to comply with Article 36 TFEU, national legislation must be proportionate and justifiable according to the first sentence and must not conflict with those referred to in the second sentence of Article 36 TFEU.

From this perspective, the CJUE had to decide on the scope of exceptions to the free movement of goods and services within the meaning of Article 36 TFEU. Thus, in 1971, in *Deutsche Grammophon* judgment, the CJUE stated that,

„Article 36 refers to industrial and commercial property.

On the assumption that those provisions may be relevant to a right related to copyright, it is nevertheless clear from that article that, although the treaty does not affect the ***existence*** *of rights recognized by the legislation of a member state with regard to industrial and commercial property, the*

---

exercise *of such rights may nevertheless fall within the prohibitions laid down by the treaty.*

Although it permits prohibitions or restrictions on the free movement of products, which are justified for the purpose of protecting industrial and commercial property, article 36 only admits derogations from that freedom to the extent to which they are justified for the purpose of safeguarding rights which constitute the ***specific subject-matter*** *of such property"*[38].

From the normative point of view, it is remarkable that the two articles[39] of the Treaty on the property were not modified by any of the subsequent amendments to the treaties[40].

However, resuming the disposal of the Treaty establishing a Constitution for Europe and according to Article 118 TEU in the consolidated version of the Treaty of Lisbon[41], the Union acquired competence, covered in an express manner, to establish European titles for industrial property protection.

`In the context of the establishment and functioning of the internal market, the European Parliament and the Council, acting in accordance with the ordinary legislative procedure, shall establish measures for the creation of European intellectual property rights to provide uniform protection of intellectual property rights throughout the Union and for the setting up of centralised Union-wide authorisation, coordination and supervision arrangements.

The Council, acting in accordance with a special legislative procedure, shall by means of regulations establish language arrangements for the European intellectual property rights. The Council shall act unanimously after consulting the European Parliament[42].

Harmonization and unification

Regulatory approach regarding intellectual property rights in the European Union can be of approximation of laws based on Article 114 and 115 TFEU (ex Article 94, ex Article 95 EC Treaty) or the unification at the EU level, based on Article 352 TFEU (ex Article 308 TEC).

Harmonising protection keeps intact the principle of territoriality. Thus, to the extent that intellectual property rights can be obtained, transferred, abandoned or invalidated on the basis of national territoriality, this can cause conflicts that lead to territorial limitation of the market. Harmonization can minimize this effect, but it cannot remove it.

What is significant in the field of intellectual property, is that, except copyright[43], the European Union has established, or is about to do, its own protective systems for the most important categories of intellectual property rights, and also for certain specific matter or sector[44].

The question is whether unification can lead to reverse the effects of territorial limitation of the market. The answer to this question can only be hesitant, as shown by Hanns Ulrich. One argument is that companies are not obliged to have recourse to the Community system of protection that is offered optionally[45].

Legal basis for the Community and European Union action

To remove existing barriers to intra-Community trade due to application of Article 30 TEC (Article 36 TFEU), it can be adopted at EU level harmonization measure, as analysed in the previous section. The possibility of adopting harmonizing measures is based on the fact that Article 30 TEC (Article 36 TFEU) does not confer exclusive jurisdiction in matters concerned to the Member States.

Before the entry into force of the Single European Act, such harmonization measures were adopted on the basis of Article 94 TEC[46].

This article provides that,

`The Council shall, acting unanimously on a proposal from the Commission and after consulting the European Parliament and the Economic and Social Committee, issue directives for the approximation of such laws, regulations or administrative provisions of the Member States as directly affect the establishment or functioning of the common market."

As a result, harmonizing measures were to be undertaken based on unanimity in the Council

The doctrine[47], indicates that this legal basis, Article 94 TEC, has the valence to deprive Article 30 TEC of substance, leaving it inapplicable to matters subject of harmonization directives. The reason is the

[46] Article114 TFEU.

[47] Inge Govaere, The Use and Abuse of Intellectual Property Rights in E.C. Law: Including a Case Study of the E.C. Spare Parts Debate. London; Toronto Ont.: Sweet & Maxwell, 1996, p. 48.

CJUE judgement in the case *Denkavit*[48]. According to it, the recourse to Article 30 is no longer justified once in that matter was adopted a harmonization directive.

As pointed out by Inge Govaere, Article 94 TEC constituted an important potential base for the harmonization of national laws on intellectual property. However, in practice this has proved difficult, the Member States were reluctant to operate the transfer of competence in regulating the matter of intellectual property[49].

Given the unanimity in the Council provided for by Article 100 TEC (Article 115 TFEU) to avoid blocking decision at EU level when using this legal basis, the Single European Act introduced a new procedure based on Article 100a TEC (Article 114 TFEU).

This allows for the adoption of harmonization measures in codecision and the vote was to be taken in the Council by qualified majority. Loss of veto was counterbalanced by regulating of safeguard measures[50] in Article 100a(4) TEC (Article 114(4) TFEU). Thus,

`If, after the adoption of a harmonization measure by the Council acting by a qualified majority, a Member State deems it necessary to apply national provisions on grounds of major needs referred to in Article 36, or relating to protection of the environment or the working environment, it shall notify the Commission of these provisions`.

In this regard, Inge Govaere believes that, at least potentially, the Single European Act was a return to the situation in which Member States could invoke exceptions to free movement based on Article 114(4) TFEU (ex Article 95(4) TEC). According to Article 352 (1) TFEU (ex Article 308 TEC),

`If action by the Union should prove necessary, within the framework of the policies defined in the Treaties, to attain one of the objectives set out in the Treaties, and the Treaties have not provided the necessary powers, the Council, acting unanimously on a proposal from the Commission and after obtaining the consent of the European Parliament, shall adopt the appropriate measures. Where the measures in question are adopted by the Council in accordance with a special legislative procedure, it shall also act unanimously on a proposal from the Commission and after obtaining the consent of the European Parliament`.

A relevant analysis[51] regarding the legal basis for design protection is carried out by Hanns Ullrich.

The author wonders whether the establishment of unregistered Community design is not a case of "priority through pre-emption". It further considers that the protection of intellectual property rights at the EU level definitely has the potential to replace long-term national protection by mere reason of economy in terms of cost protection. This can be particularly evident in the case of Community Design where protection is granted by simply registration.

A problematic aspect is considered to be extending protection to unregistered EU design. The question is whether Article 352 TFEU (ex Article 308 TEC) authorize the Union to legislate having a pre-emptive effect on intellectual property rights, while, according to Article 36 TFEU (ex Article 30 TEC) and Article 345 TFEU (ex Article 295TCE) Member States have retained at least sovereignty to maintain their own security systems.

4. Conclusions

Accepting that the EU's objective of establishing an internal market can be considered contrary to a legal situation in which intellectual property rights are within the exclusive national competence, CJUE revealed the EU law incidence in the IP rights matter.

We share the view that without imposing legal obligations on Member States, the legal impact of the objectives set out in the Treaties will be limited to guiding the interpretation of European Union law. CJUE ruled, moreover, that the intellectual property rights "must be determined in light of the objectives and Community action".

On the matter of intellectual property, jurisdiction of the Court was initially indirect in the sense that it resulted from the Court's role as guardian of the principles of internal market integration. An important consideration is that the two articles[52] of the Treaty on the property were not modified by any of the subsequent amendments to the treaties. As a result, the Court of Justice of European Union jurisprudence upholds so far a central significance.

---

[48] Judgment in *Firma Denkavit*, Case 251/78, EU:C:1979:252, paragrapf 14: `The court of justice has held in its judgment of 5 october 1977 in case 5/77 Carlo Tedeschi v. Denkavit Commerciale (1977) that article 36 is not designed to reserve certain matters to the exclusive jurisdiction of member states but only permits national laws to derogate from the principle of the free movement of goods to the extent to which such derogation is and continues to be justified for the attainment of the objectives referred to in that article . Consequently when, in application of article 100 of the treaty, community directives provide for the harmonization of the measures necessary to guarantee the protection of animal and human health and when they establish procedures to check that they are observed, recourse to article 36 is no longer justified and the appropriate checks must be carried out and the protective measures adopted within the framework outlined by the harmonizing directive`.

MATTERS REGARDING THE HUMAN RIGHTS' PROTECTION IN THE LEGAL SYSTEM

Maria-Irina GRIGORE-RĂDULESCU[*]
Corina Florenţa POPESCU[**]

Abstract

Under the conditions of the existence of the division and balance of the state powers, it arises the human rights' protection issue by each of the titular authorities of the state functions. It is, therefore, asserted an analysis of the judiciary and its enforcement bodies' role in connection to the effectiveness' assurance of the legitimate rights and interests of the holders who bore them and request their defence, observance and protection. At the same time, we propose a comparative approach of the regulation level of the fundamental human rights at international, regional (federal) and national level.

Keywords: *human rights, protection, judicial authority.*

1. Introduction

The human rights issue represents a fundamental pillar of the internal and international public life and, as consequence, the observance of the human's fundamental rights and freedoms embodies a *sine qua non* condition for any democratic governance as well as for any political party, organization, institution or public authority.

The importance of the analysed concept is sustained by the commitment at national, regional and international level of the fundamental rights and freedoms; between the three regulation levels one can observe differences only as formal matter and not as substantive one. Also, the complementarity between the subsidiarity of the commitment and international guarantee of the human rights towards their commitment and guarantee at the domestic level, on one hand and the superiority of the international norms with regard to the human rights towards the domestic regulations, on the other hand and the direct applicability of the international norms with regard to the human rights in the domestic law represent as many arguments in the sense of showing the primary nature of the human rights concept[1].

By approaching the issues regarding the observance of the human rights in the judiciary, we propose to identify the contribution of the legal authority to the human rights' defence and protection, noticing, within this sense, that within the protection guarantees' mechanism of the human fundamental rights, a particular role is given to the judiciary, due to the constitutional commitment of the division and balance of the state powers as well as of the functions assured by the judiciary and the principles on which its establishment and performance is based[2].

Understood as „the general status of the society which is accomplished through the assurance for each individual and for all the individuals, collectively, of the satisfaction of the legitimate rights and interests"[3], the judiciary has as aim the assurance of a similar legal treatment to all the legal entities which are found in similar legal situations, contributing, therewith, to the achievement of the purpose of the legal norms in force[4], being able even to dominate them in certain situations[5] within a historical and philosophical approach too. In other words, the ambivalent relationship between the judiciary and the human rights' protection is supported by the belief had by the humans that the judiciary defends their legitimate rights and interests when these are broken.

In the legal dogma, the term of ‚judiciary' was analysed having two meanings respectively, the legal bodies system on one hand and the activity of solving the legal trials, delivering the sanctions,

resettling the broken legitimate rights and interests[6], on the other hand. We consider that both meanings are complementary because the activity described in the explanation of one of the term's meanings cannot be made but by the legal bodies system, as an independent and disinterested state authority.

Interrelated with the judiciary's idea and spirit, there have been developed the jurisdictional bodies which run jurisdictional activities, whose aim is to solve the legal conflicts and assure the laws' observance, on basis of special procedures characterized by an absolute objectivity and impartiality, the most representative type of bodies being the Constitutional Court and the Ombudsman[7].

2. The capacity of the physical person to invoke the rights acknowledgement in front of the judicial bodies

The acknowledgement of the human rights can be invoked in front of the judiciary by the physical person which can be either victim or defendant, the two perspectives offering a different range of rights.

Therefore, if found in the victim hypostasis, the physical person is provided with social and protection rights, as well as with the right to an equitable remedy[8]; one must keep in mind for the purpose of defining the concept of victim and, at the same time, the recognised rights, the distinction operated in the Statement of the Fundamental Legal Principles referring to the victims of criminality and the victims of power abuse, enacted in 1985 by the General Assembly of the United Nations by the Resolution 40/34.

As pointed out in the statement's title, within its content is established a difference between the victims of criminality and the victims of power abuse, a difference noticed in the definition of the concepts and special treatment applicable to each cathegory of victims.

At the statement's first point, the victims of criminality are defined as persons which, individually or colectively, suffered a damage, especially a prejudice of the physical or psychic integrity, a moral anguish, a material loss or an important prejudice of the fundamental rights, by means of actions or omissions which break the criminal laws in force from a state- party, being included here also the ones which sanction the power abuses, no matter of the race, colour, gender, age, religion, nationality, political or any other kind of opinion, faith, opportunity, birth, family status, ethnic and social background and physical capacity.

Within the meaning of the statement, the term of ‚victim' includes, both the person who suffered the prejudice and the family's closest members, the persons found in the direct care of the victim as well as the persons who suffered a prejudice by intervening to help the victim or to stop the victimisation.

Therewith, from the statement's analysis it follows that a person is considered a victim no matter if it suffered as consequence of a deed whose criminal is unknown, prisoner, chase or declared guilty and regardless of its kin relationships with the criminal.

The victims of the power abuse are the persons which endured a pain, a material loss, a severe prejudice of the fundamental rights, a prejudice of the physical or psychic integrity, by means of actions or inactions which do not constitute violations of the judicial legislation but represent violations of the judicial norms recognised with regard to the human rights[9].

As we mentioned, the victims of criminality and the victims of power abuse benefit of the freedom to access the justice and the right to recover the endured prejudice, according to the legislation of the state on whose territory was committed the criminal act and they have to be informed in relation to their acknowledged rights in order to receive the remedy.

As a guarantee for the accomplishment of the victims' acknowledged rights, the mentioned statement committs action directives in the activity of the national judicial and administrative body, represented by: the information of the victims about their role within the procedures and the available possibilities regarding the data and the procedures' run, especially when it is about severe crimes and when this information is requested; the easing of the presentation and examination by the court of the victims' concerns regarding the accomplishment of their interests in question, without being prejudiced their right to defence during the criminal trial; the assistance provision for the victims during the entire period of the trial; measures taken to limit as possible the hardships of the victims, by protecting when needed their private life and assuring the security of their family's members against the disincentives and revenge acts; the avoidance of the unjustified delays regarding the effective grant of remedies to the victims.

---

[6] Nicoleta Diaconu, Nicolae Purdă, Laura Macarovschi, Roberto Ştefan Ababei, Daniela Gavril, *The observance of the human rights within the activity of the police departments*, 45.

[7] Regulated in the domestic law of the states, these bodies or institutions can have different names but bear the same meaning of the jurisdictional function.

[8] Ionel Cloşcă, Ion Suceavă, *Treaty of human rights*, 2nd Edition, (Bucharest: V.I.S. Print Publishing Company, 2003), 177; Nicolae Purdă, Nicoleta Diaconu, *Legal protection of the human rights*, The second edition, reviewed and amended, (Bucharest: Universul Juridic Publishing Company, 2011), 166.

[9] Ionel Cloşcă, Ion Suceavă, *Treaty of human rights*, 2nd Edition, 179.

The second capacity under which a physical person can invoke in front of the judiciary the acknowledgement and the observance of its rights is the one of defendant, concept by which is understood, according to the art. 82 from the Civil procedure code, the person against whom was proceeded the criminal trial. Within an extended meaning of the dogma, by criminal is understood the person who is investigated or judged for the committment of a crime, without restriction of freedom or with restriction of freedom[10].

The mechanism of the international judicial and administrative guarantees regarding the protection of the human rights asserts the displayed concerns regarding the formation of a special regime applicable to the defendants, among the rights[11] which can be pleaded by them, one can keep in mind: the pressumption of innocence, the life right, the right to not be subject to torture and inhuman or degrading treatments, the right to defence, the right to an equitable trial, the right to an effective appeal, the right to a double degree of jurisdiction with regard to the criminal offence, the right to not be judged twice for the same offence, the right to receive remedies in case of judicial error[12].

Without conducting an analysis of each of the mentioned rights, we consider necessary to point out that the presumption to innocence embodies the most important guarantee of the human dignity and freedom, starting from the fact that it represents a constitutional principle and, in the same time, the principle under which is subordinated the entire judicial and jurisdictional activity. By virtue of the presumption to innocence, any person is considered not guilty as long as against it was not delivered any final sentence of a judge regarding its conviction, giving therefore, a complete guarantee of the persons' protection during the criminal trial against the arbitration, with regard to the ascertainment and the call to criminal account[13].

In the Romanian law, according to the provisions of the art. 4 par. (1) from the Civil procedure code, „any person is declared not guilty until the establishment of its guilt by a final judge's decision".

Hereinafter, at the second paragraph of the mentioned article, it is shown that 'after the use of all the evidence, any doubt of the judicial bodies to make an apprehension about the trial is understood in favour of the suspect or defendant", confirming the credibility of the logical argument *in dubio pro reo*.

Intercorrelated with the presumption to innocence, the right to defence represents both a fundamental civic right as well as a judiciary's fundamental principle, benefiting of a complete system of guarantees set up during all the stages of the civil and criminal trial and in relation to all the judicial bodies.

The right to defence is regulated at international, regional and national level and, in-line, was the object of some ample doctrinary debates, basically keeping in mind the use of the term with two meanings, a substantive respectively a formal one[14].

Substantially, the right to defence represents the entirety of procedural rights and guarantees regulated by the law which gives to the person (party) the possibility to defend its legitimate rights and interests; formally, the right to defence embodies only the possibility of the person (party) to hire for itself a defender, a purpose taken in consideration by the judicial and constitutional regulation (art. 24) provided in the Law no. 304/2004, republished, with the further changes and completions (art. 15).

Another right with an indisputable value and which benefits of a regulation upon all three levels[15] – international, regional and national – is the free access to judiciary, based on which, any person can approach the judiciary about the defence of its legitimate rights, freedoms and interests. The access to justice cannot be restricted.

Ultimately, all persons have the right to an equitable trial and to the solving of all the causes as soon as possible and expected, by a disinterested and independent court, established according to the law. The concept of „equitable trial" is regulated by the

[10] Nicolae Purdă, Nicoleta Diaconu, *The legal protection of the human rights*, The second edition, reviewed and amended, 167.

[11] According to the art. 83 from the Civil procedure code „During the criminal trial, the defendant has the following rights: a) the right to not make any statement during the criminal trial, its attention being drawn that if it refuses to make statements it will not bear any unflattering consequence and if it will make statements these will be used as evidence against it; a^1) the right to be informed regarding the offence for which it is investigated and the judicial framing of the offence; b) the right to see the file, under the conditions of the law; c) the right to have a chosen lawyer, and if it does not appoint one, for the cases in which is required the mandatory assistance, the right to be granted a public defendant; d) the right to propose the use of evidence under the conditions provided by the law, to claim exceptions and to conclude; e) the right to express any other requests which are in connection to the solving of the criminal and civil angle of the offence; f) the right to benefit for free of a translator when it does not understand, does not speak properly or cannot speak at all Romanian; g) the right to ask for a mediator, in the cases allowed by the law; g^1) the right to be informed regarding its rights; h) other rights provided by the law.

art. 10 from the Universal Declaration of Human Rights, art. 14 point 1 from the International Pact regarding the Civil and Political Rights, art. 6, par. 1 from the European Convention of Human Rights, art. 47[16] from the Charter of the Fundamental Rights of the European Union as well as by the art. 21 par. (3) from the Romanian Constitution and the art. 6 par. (1) from the Law no. 304/2004, republished, with the further changes and completions.

3. The concept of judicial authority. Conceptual confinements.

The judicial authority represents a concept which is widely witnessed within the debates regarding the principle of division and mutual control of the powers, to the support of this idea one should keep in mind the comparison between the three powers embodied in the Essay 78 from the series of the American Constitutional Essays (Federalist Papers) according to which: the executive body bears the community's sword; the legislative approves the budget; the judges have only the mind and the judgment[17].

Preserving the comparative approach of the relationship between the state powers, in the dogma it was assessed that the „Judicial power does not have neither the Strength nor the Will, but only the Judgment (Discernment); and has to, eventually, depend on the support of the Executive power so that its decisions can be put into practice"[18].

Within the regulation of the Romanian Constitution, reviewed, the system of the judicial bodies embodies: the judicial courts (art. 124-130), The Public Ministry (art. 131-132) and the Superior Council of Magistracy (art. 133-134).

The justice is achieved by the judicial bodies, also commonly named judicial courts[19].

According to the disposals of the art. 126 from the Romanian Constitution, the justice is accomplished by the High Court of Cassation and Justice and by the other judicial courts provided by law. The capacity of the judicial courts and the judgment procedure are provided only by law.

With regard to the enforcement of the constitutional norms, according to the disposals stated in the Law no. 304/2004[20] regarding the judicial settlement, republished, with the further changes and completions, the judicial power is enforced by the High Court of Cassation and Justice and by the other judicial courts provided by law. The Superior Council of Magistracy is the guarantor of the judiciary's independence.

The headnote of the Law no. 304/ 2004, republished, sets up the general objectives of this regulatory document; therefore, the judicial settlement is set up having as purpose to assure the observance of the fundamental rights and freedoms of the appointed person stated, mainly, in the following documents: The International Charter of Human Rights, The Convention for the defence of the fundamental human rights and freedoms, The Convention of the United Nations upon the Child's Rights and The Charter of the Fundamental Rights of the European Union, as well as to certify the observance of the Constitution and the country's laws. The judicial settlement has also as primary objective the assurance of the right to an equitable trial and the judgment of the trials by law courts, impartially and independently of any extraneous influences.

The Law no. 304/2004 in connection to the judicial settlement, republished, establishes the cathegories of judicial courts, i.e.: The High Court of Cassation and Justice, courts of appeal; courthouses; special courthouses; judicatures.

By the Law no. 56/1993[21] was regulated the settlement and the functioning of the High Court of Cassation and Justice. Hereby, this court is set up in five departments, a panel of nine judges and the united departments, each having its own expertise. In the art. 1 of this law it is shown that the supreme court follows up the correct and united enforcement of all the laws by all the judicial courts.

Each of the appellate courts executes its inherent expertise within a district which embodies a series of courthouses. Therefore, there have been set up 15 courts of appeal, respectively at: Alba Iulia, Bacau, Brasov, Bucharest, Constanta, Cluj, Craiova, Galati, Iasi, Oradea, Pitesti, Ploiesti, Suceava, Timisoara and Targu Mures. They adjudicate, in the first instance, the cases received by them by law. As courts of appeal, they judge the appeals claimed against the sentences delivered in the first instance by the courthouses and as recourse courts, the recourses stated against the decisions delivered by courthouses with regard to the appeal as well as other cases provided by law.

The courthouses act only in the county seats and in Bucharest city. They judge by their expertise, in the first instance, a series of trials given to them expressly, as courts of appeal in the appeals stated

[16] Art. 47 refers to "the right to equitably solve the issue".

[19] With regard to the meaning of the concept of 'court', see, Maria Fodor, *Civil procedural law*, 172-173.

[20] Published in the Official Gazette of Romania, Part I, No. 576 from 29 June 2004 and republished in the Official Gazette of Romania, Part I, No. 653 from 22 July 2005.

[21] Published in the Official Gazette of Romania, Part I, No. 159 from 13 July 1993 and republished in the Official Gazette of Romania, Part I, No. 56 from 8 February 1999, with the further changes and completions.

against the decisions delivered by the judicatures in the first instance. As recourse courts, the courthouses judge the recourses against the decisions delivered by judicatures which, according to the law, are not submitted to appeal.

The judicatures represent the conventional courts, which run in every county and in Bucharest city.

Within the limits provided by law, the military courts are also settled and run, respectively the Military Courthouse, The Territorial Military Courthouse and The Military Court of Appeal.

According to the art. 131 from the Romanian Constitution, reviewed, within the judicial activity, the Public Ministry represents the society's general interests and defends the order of law as well as the rights and freedoms of the citizens.

The Prosecutor's Offices act nearby the law courts, run and control the criminal research activity of the judicial police, under the law. The Public Ministry executes its responsabilities through the prosecutors, established in prosecutor's offices, nearby each judicial authority, under the authority of the Ministry of Justice[22]. The responsabilities of the prosecutors are regulated by the disposals of the Law no. 304/2004, republished, with the further changes and completions.

As we mentioned, with reference to the disposals of the fundamental law, the Supreme Council of Magistracy[23] is the guarantor of the justice's independence, bearing the role to ensure the balance within the judicial system, as well the one between the judicial system and other state powers provided by the Romanian Constitution. In other words, the Supreme Council of Magistracy contributes to the assurance, by means of mechanisms specific to the division of state powers, of the independence of the magistrates' activity and its assurance, for the benefit of the democracy and state subject to the rule of law[24].

In the context of a complete analysis of the bodies with attributions and capacities with regard to the justice's achievement, we consider necessary to also mention the activity of the National Anticorruption Directorate[25], which runs as an independent structure, with legal personality, within the Prosecutor's Office nearby the High Court of Cassation and Justice, being independent in relation to the judicial courts and the prosecutor's offices nearby them as well as in the relationships with other public authorities, as well as the activity of the Terrorism an Organized Crime Investigation Department[26], which runs within the Prosecutor's Office nearby the High Court of Cassation and Justice, as a structure with legal personality, specialized in combating activities of terrorism and organized crime.

According to the art. 124 par. (2) from the Romanian Constitution, reviewed, the judiciary is unique, disinterested and equal for all, fact which assumes that there is only one judiciary, accomplished by the same bodies, being prohibited the existence of some extraordinary courthouses, under the constitutional disposals of the art. 126 par. (5) according to which „it is prohibited the settlement of extraordinary courts".

The constitutional principle of the uniqueness, disinterestedness and equalty of the judiciary assumes the use in similar causes of the same procedural rules and the grant of the procedural rights equally to all the trial's participants.

By the art. 21 of the Constitution is made a differentiation between the right to a trial in judiciary, whose titulary can be any person and the obligation to protection which goes to the judicial authorities, only in relation to the legitimate rights and interests, the legitimate or illegitimate character of the claims submitted to the judiciary arising after the case's judgment and being ascertained only by an order of a court.

Against the orders of a court, the concerned persons and the representatives of the Prosecutor' Office can carry out remedies at law, under the law's conditions, which represent procedural means by which it is requested and obtained the cancellation or the partial or total amendment of an order of court[27].

4. Conclusions

The protection and the observance of the human rights represent one of the main scopes of the state subject to the rule of law, a fundamental and

[22] The Ministry of Justice contributes to the proper working of the judicial system and to the assurance of the conditions required for the justice's achievement as public service, the defence of the order of law and civic rights and freedoms, according to the disposals of the art. 2 from the Government Decision no. 652/2009 regarding the establishment and the functioning of the Ministry of Justice, published in the Official Gazette of Romania, Part I, No. 443 from 29 June, with the further changes and completions.

[23] The High Council of Magistracy was established by the Law no. 317/2004, published in the Official Gazette of Romania, Part I, No. 599 din 2 iulie 2004, republished in the Official Gazette of Romania, Part I, No. 827 from 13 September 2005 and, afterwards, in the Official Gazette of Romania, Part I, No. 365 from 30 May 2012.

THE PEACEFUL SETTLEMENT OF INTERNATIONAL CONFLICTS, A RIGHT OR DUTY OF STATES?

Dan GUNĂ*

Abstract

The current article aims to establish if the peaceful settlement of conflicts is a duty of international law entities, which must generate a certain active attitude of cooperation, of looking for suitable solutions for international conflicts or, on the contrary, if it is a right whose exertion is left to the sovereign attitude of the states. Moreover, it will also be established which is the legal content of this duty or right of the states and which are the principles guiding the conduct of the states in this field. In the specialized literature, several opinions have been expressed, starting from the one that this duty does not exist, whether we speak of legal or political conflicts, continuing with opinions stating that this duty exists only when it comes to the conflicts referred to by article 33 of the U.N. Chart, namely those whose extension could endanger the peace keeping process and international security. Moreover, there have also been expressed opinions according to which this duty exists and has a general nature, concerning any type of conflict. In our opinion, the spirit of the UN Chart, the clear provisions of article 2 correlated with article 33, completed by several resolutions of the UN General Assembly adopted by mutual agreement, but also some provisions for this matter from the statutes of the main international organizations, establish a duty to settle conflicts peacefully.

Keywords: *peaceful settlement of conflicts, the UN Chart.*

1. Introduction

The issue debated by the current study is of a real interest taking into account the international contemporary context, troubled by conflicts like those in Ukraine and Syria, but also by the terrorist damage which keeps spreading around, by taking advantage of the instability generated by the internal or international conflicts. The unexpected consequences of the absent fast peaceful settlement of conflicts, irrespective of their nature, prove us that this settlement must be a priority for the foreign policy of both the states involved and the international community. We are speaking, among others, about the crisis generated in the E.U. by the phenomenon of the emigration of the population affected by these conflicts and not only. The serious border incident involving Turkey and Russia, which culminated with the crash of a Russian military plane, followed by tensions in the bilateral relation, but also the reaction of NATO (where Turkey is an important member) point out the considerable importance of the current study. By reference to the strictly theoretical aspects related to this tensioned international situation, we can reach the conclusion that the peaceful settlement of conflicts is an extremely actual field, even if it has been studied in the specialized literature and cross-border practice for a long time. Specialized literature contains several studies regarding the methods for the peaceful settlement of conflicts, but we consider that the researches in the field must also converge towards consolidating this duty, for both the states directly involved and the international community. The passive attitude adopted by some states, but also international organizations, with important consequences upon international stability, represent solid grounds for the current study.

In order to establish whether there is a duty to settle conflicts peacefully, the current study shall take into account several international documents which emerged in the conventional UN practice, but also of some important regional organization like OAS, AU, A.S.E.A.N and the bilateral practice of states. We also find relevant for the issue under research examining the legal practice of the International Court of Justice, but also the main opinions expressed by the specialized literature regarding the aspects analyzed.

2. The duties of international law subjects on the basis of the principle related to the peaceful settlement of international conflicts

Before the actual analysis of these duties, we consider appropriate presenting some controversies which emerged in regard to them, both in the international law literature and practice.

First of all, it must be established if there is a duty to settle international conflicts, and if it exists, which are its nature and the types of conflicts that it concerns. There are authors who consider that states are not bound to settle their international conflicts, this consideration being valid both for serious legal conflicts, but also for side political procedures[1]. There are points of view according to which this duty regards only the conflicts referred to by article 33 of

* **Assistant Professor**, "Valahia" University of Târgoviște, Faculty of Law and Administrative Sciences, Târgoviște, Romania, (e-mail: **gunadan@yahoo.com**).

[1] Malcolm N. Shaw, *International Law*, Sixth edition, Cambridge University Press, 2008, p.1012.

the UN Chart, namely those whose extension *could endanger the peace keeping process and international security*[2]. Moreover, there are also points of view which consider that the duty has a general nature, concerning any type of conflict[3]. Some authors have various points of view, that there is no duty to settle conflicts, but if the states want for this settlement to take place, then they must do it on a peaceful way[4].

In the analysis of this controversy, we consider necessary to take into account the purpose of public international law, but also the way in which it is reflected in international normative acts. Generally, the accepted purpose of international law is the maintenance of international peace and security. In order to reach this purpose, the peaceful settlement of conflicts must be, by any means, the only manner to resolve disputes, a conclusion imposed by the fact that nations gave up at the use of force and the threat to use force. This objective of international order can be found in several international treaties and documents. Therefore, the UN Chart provides at article 1 that the purpose of the United Nations is to maintain international peace and security, an objective for which the organization shall take effective collective measures in order to prevent and remove the threats against peace and stop any aggression act or other peace infringement. Moreover, article 2 point 3 establishes that "all the Organization members shall resolve their international conflicts by peaceful means, so that international peace and security, but also justice, are not endangered". The Chart takes over article 33, referring to those conflicts whose extension could endanger international peace and security.

The principle is also present in several resolutions adopted by the UN General Assembly, like: Resolution 42/150 from December 1987 on the peaceful regulation of the conflicts between the states, Resolution 2625 from 1970 on the friendly relations between the states, Resolution 37/590 from December 1982 on the peaceful regulation of international conflicts, Resolution 43/51 from December 1988 on the prevention and elimination of disputes and situations which can affect international peace and security and the role of the UN in this field. We have mentioned only some of the most important resolutions (many of them being adopted by mutual agreement), but the list can continue, as the matter presents interest FOR the Organisation and specialists in the field. Going back to the analysis of the duty to resolve international conflicts, in the legal literature but also international practice, some controversies emerged starting from the existence of this duty, but also from other aspects like the types of conflicts concerned by the duty. Some authors claimed that there is no such general duty in the absence of a special agreement and especially as long as there is no threat to use force or to the actual use of force[5]. Moreover, it is also invoked the practice of PCIJ, more concretely the file case from 1923between Finland and Russia regarding East Karelia, in which the court ruled by giving the opinion from July 1923, according to which no state can be forced against its will to make a dispute subject to mediation, arbitration or any other form of peaceful settlement of conflicts. It is also invoked the ICJ legal practice, namely the opinion from 1949 regarding the amends for the damage suffered in the UN service; among others, it is underlined that no pretention can be subject to the jurisdiction of an international court without the agreement of the concerned state. Regarding these arguments, we can make the following observations:

- first of all, reducing the conduct of the states only to not using the force in case of disputes would mean ignoring the UN Chart, but also its spirit, requiring an active attitude of cooperation between the states, which could lead to the peaceful settlement of conflicts.

- secondly, the practice of PCIJ mentioned before took place before the UN Chart, which changed the vision regarding the attitude of the states when it comes to settling disputes. We agree that a state cannot be made to accept the jurisdiction of international courts in the absence of its consent, a fact established for instance by the ICJ statute, at article 36, which is the natural consequence of the sovereign equality of states. Moreover, we can agree that, in the absence of its consent, a state cannot be in principle forced to take part in a procedure for the settlement of conflicts, no matter if it has a jurisdictional character or political-diplomatic one. But this statement is merely theoretical, in the current circumstances of the development of international law. First of all, we are taking into account the spread of cross-government organisations, of international courts, but also an increase of international treaties as legal sources. The common point of all these international realities is the fact that they are based on the principle (among others) related to the peaceful settlement of conflicts. International organisations provide for the duty to resolve conflicts peacefully in their statutes, rendering available several

mechanisms for this purpose. A state, once it has become a member of an organisation, takes upon these duties. The best example is UN, which provides for the duty of a peaceful settlement of conflicts, leaving to states the freedom to choose the way to accomplish it. Under the circumstances in which almost all the world states are UN members, the duty to settle conflicts peacefully is a general one. Moreover, there are several regional organisations including the duty of the peaceful settlement of conflicts in their statutes. For instance, the OAS Chart, at Chapter V, article 24, the Chart of African Union, at article 4, the A.S.E.A.N. Chart at chapter VIII, article 23. The bilateral practice points out an increase of the preoccupations for establishing mechanisms to settle disputes even in relatively new fields of the international law, like the international environmental law. The analysis of international contemporary relations points out that states, in most of the cases, are interested in resolving their disputes, and that this resolution is usually sought ever since the beginning of the dispute. Moreover, states have become more preoccupied with preventing disagreements, there being created cooperation, communication and early warning mechanisms. A major interest of the international community but also of the states which are parts in a dispute is to maintain peace in order to settle a conflict. This interest, stipulated in the UN chart ever since the beginning justifies, in certain conditions, the intervention of the international community in the internal affairs of a state, a fact which any state naturally wants to avoid[6]. Another general reason for the resolution of disputes is avoiding material and human damage. This interest is first of all of the states involved, but also of other states like the neighbouring ones or in an alliance relation. States have a common interest not only in removing the state of danger for the international peace and security, but also in the existence of friendship and good cooperation relations. In this climate, states can develop advantageous economic and cultural relations. The fact that states remove the state of danger for international peace does not mean that it disappears completely, as it can get reactivated in favourable conditions. For this reason, the attitude of states must be that of an active collaboration for the settlement of disputes. We agree that the existence of some disputes does not constitute an impediment in these relations, but the essential thing is the nature and gravity of the disputes and not least the attitude of the parties. Specialized literature has upheld the idea that, sometimes, states are interested in leaving certain conflicts unresolved[7]. Thus, if it is foreseen that the result of negotiations would do nothing but raising tensions even more, it is better for the conflict to be "frozen". As an example, we can mention the 1959 Antarctic Treaty, saying at article IV that the parties were not waiving by means of that treaty their territorial claims or sovereignty rights regarding Antarctica. In these situations, states conclude agreements according to which they do not waive their claims but they do not make others either and they also commit not to perform anything capable to modify the initial statute. In these situations, it is preferable for the states to fulfil their duty to act for the peaceful settlement than resorting to the use of force. Regarding these situations encountered in international relations, we agree that a temporary compromise solution is preferable to an apparent complete resolution of the conflict. In our opinion, the settlement of some conflicts can last for longer, but solid solutions are preferable, obtained after many years of negotiations, instead of apparent settlement solutions.

The opinions expressed in specialized literature state that the principle of the peaceful settlement must be interpreted, as it does not forbid the states to decide by means of an agreement that they will not settle a conflict, as long as this solution does not endanger international peace. Consequently, if a dispute has such a potential, the duty to settle it is also a consequence of the interdiction to use force or to threat to use force[8].

Consequently, we believe that the debate whether there is a settlement duty is no longer actual, as more important for us are the aspects concerning the length of this duty (both in regard to the field and persons involved), but also its nature, considering if it is a result or behavioral one. For determining these aspects it is necessary to analyze some provisions of the UN Chart, some provisions of the Resolutions of the General Assembly with relevance in the field but also the legal practice of the ICJ. There will also be taken into account similar provisions from the constitutive acts of some important regional organizations like: OSCE, OAS, AU and ASEAN.

As for the UN Chart, article 2(3) of it provides for the duty of the states to settle their international disputes by peaceful means, so that the international peace and security, but also justice, are not endangered. Some authors have interpreted that the purpose of the article is for the settlement to be done peacefully, but it is not instituted the duty of settlement[9].

Other authors have interpreted that this article establishes a negative duty in its essence, namely that the states must not settle their disputes by means which would endanger international peace. In our opinion, this article institutes a duty to settle international conflicts and this duty has a general nature, as the text does not make any distinction when speaking of conflicts and when no distinction is made by law, then we shouldn't make one either. We cannot say that it is instituted a

[8] Alain Pellet, *quoted works*, p.2.

[9] Martin Dixon, *quoted works*, p.275.

negative duty of not using force, as this is the consequence of the provisions of article 2(4), which institutes the principle of not using force or the threat to use force. The text imposes a positive duty to act for the peaceful settlement of the conflict. What it should be underlined here is the fact that the text clearly speaks of "international conflicts", unlike article 33, which uses the expression "any conflict" and makes a slightly vague reference to justice, which is no longer present at article 33.

Starting from the content of article 33, which presents the category of conflicts which shall be settled peacefully, namely those whose extension could endanger the peace and security keeping process, some authors have upheld the idea that only the category mentioned above is mandatory[10]. We consider that the text should be interpreted in correlation with article 2(3), which institutes a general settlement duty. In relation to this text, article 33 appears as a special norm, underlining the need for a peaceful settlement of the more serious conflicts. Article 2(3) institutes a principle for the peaceful settlement of any conflict, even more of those referred to by article 33. We can also speak of an argument of texts topography, article 2 being included in the introductory part of the Chart regulating principles, while article 33 is part of a special chapter dedicated to the peaceful settlement of conflicts. As a consequence, we believe that the two do not exclude one another, but complete each other, determining the regulation area. Regarding the notion of dispute which must be peacefully settled, it can be noticed that article 2(3) speaks of an "international dispute", while article 33 refers to "any dispute". This expression from article 33 generated another controversy related to whether only international conflicts must be peacefully settled or also the internal ones which, due to their gravity, endanger international peace and security. The analysed field is extremely sensitive, due to the requirements of the sovereignty principle and the lack of intervention in the internal affairs, also generating controversies about the intervention right based on humanitarian reasons. For this purpose, we can give the example of several civil wars which affected and still affect Africa and Europe (the case of Yugoslavia). In our opinion, we believe that the text must be interpreted that any dispute, even the internal ones, *which damages the international peace and security*, must be settled in accordance with the principles established by the UN Chart, including that related to the peaceful settlement. Some interesting interpretations also emerged in the international practice in regards to the existence or the absence of a dispute. The enforcement of a peaceful settlement method, be it political or jurisdictional, depends on the existence of a dispute[11]. At least one of the parties must prove the existence of a conflict, even if the other denies it. The ICJ ruled like this for the East Timor, when Australia argued that it was not part of a relevant international dispute. The case was referring to the objections of Portugal regarding the negotiation and the conclusion by Australia and Indonesia of the 1989 Treaty on the East Timor, which according to Portugal was transgressing its administration rights, but also the right to make decisions of the population in Timor. As a reply, Australia claimed that the dispute of Portugal was in fact with Indonesia. The Court ruled that it was not relevant whether the true dispute was between Portugal and Indonesia, as Portugal had the right, justified or less, of not complaining against Australia. Consequently, as long as there is a contradiction between the parties regarding the legality or the facts, it is clear that a dispute between Australia and Portugal emerged.

Regarding the field of the entities subject to the duty to settle disputes peacefully, it must be underlined that the logics of the UN Chart was directed particularly towards the states. But this changed starting with 1945, due to the evolution of international law. Therefore, in our opinion, among the international law subjects which have international law related duties, like the one in question, should also be found the international cross-government organizations. Regarding the international liberation movements, they enjoy the legal right to use force, but we believe that they should seek first of all to meet their objectives peacefully, and only if this is not possible to use force in exerting their self-governing right. But in the contemporary international reality it can be noticed an increase of civil wars and of internal conflicts with a potential impact upon the regional security. As a consequence, the UN Security Council and General Assembly resorted to non-state actors (particularly the factions involved in civil wars) to find peaceful solutions[12]. Starting with the end of the '70s, both the Council and the Assembly have urged all the interested parties, including the NGO-s, to find peaceful solutions. Since states allow private entities (natural or legal persons) to settle the conflicts with them by means of international law (as it happens with the human rights or direct investments), the more necessary it becomes to enforce the duty to settle conflicts peacefully also in this relation private-state[13]. We also share this point of view, as irrespective of the nature of the subject involved in the conflict, the value transgressed are the same, namely life, health and freedom of the people. These fundamental human values must be observed by both the legal collective and individual subjects

[10] Alain Pellet, *quoted works*, p.5.

[11] Donald R. Rothwell, Stuart Kaye, Afshin Akhtarkhavari, Ruth Davis, *International Law: Cases and Materials with Australian Perspectives*, Cambridge University Press, 2010, p.206.

[12] For instance: the Resolutions of the Security Council No. 389/ 22.04.1976 on East Timor, 435/19.09.1978 regarding Namibia, 1906/23.12.2009 regarding the situation in the People's Republic of the Congo, 1781/15.10.2007 regarding the situation in Georgia.

[13] Alain Pellet, *quoted works* p.6.

From the perspective of the moment when the duty to settle conflicts peacefully appears, this duty applies all the time, even when the conflict has become an armed one. Article 3 of the Hague Convention from 1907 establishes this. Moreover, resolution 2625 of the General Assembly establishes that states must seek the fast resolution, ever since the start of a conflict. The resolution must be fair. The resolution also underlies that this duty continues to be applied even in the eventuality of the failure in using a method.

Another important aspect related to the duty to settle conflicts peacefully is the good faith which states must show when looking for solutions for settling the conflict. Good-faith means an attitude of honour, honesty and fairness, which states must show in resolving conflicts. The good faith principle can also be found in several international treaties, first of all in the UN Chart, at article 2(2)[14]. According to some opinions expressed in specialized literature, when introducing the article above in the Chart, the objective pursued was, among others, to insure a balance between political and legal interests, but also between the influences of the UN members[15]. Thus, while states benefit equally from rights on the basis of their sovereignty, the good faith clause insures an honest observance of the duties committed to by means of the Chart.

The observance of the good-faith principle when it comes to the resolution of conflicts has also been underlined by the ICJ legal practice in file cases such as Gabcikovo-Nagymaros, the Lanoux Lake and the air incident between Pakistan and India from 1999. References to good faith can also be found in the statutes of other international courts, like the International Criminal Court, at article 86, and at article 23 from the statute of CIRDI. The International Tribunal for the Law of the Sea used in its activity article 294 of the Convention regarding the Law of the Sea, which explicitly calls for the settlement of disputes in the good faith spirit[16].

3. Conclusions

In conclusion, we believe that we can speak of the existence of a duty to settle disputes (irrespective of their gravity) which belongs to all the international law subjects, as a result of the following arguments:

the purpose of international law is to maintain international peace and security and, for accomplishing this goal, states must show an attitude of cooperation and good faith, which involves including the peaceful settlement of the conflicts emerging between them. We cannot speak of international cooperation and normal relations between states which have unresolved "frozen" conflicts. Freezing the conflict must not be a long term solution, but a first step at most towards the ultimate settlement of disputes, avoiding losses of human lives and material damage. States must continue to negotiate in good faith until reaching a fair solution. For this purpose, they are free to use any settlement method they want, as long as this is a peaceful one.

the most important multilateral regulations, like the UN Chart and the statutes of the other regional organizations, provide for the settlement duty. Several bilateral agreements follow the same regulation line.

the spread of international courts and organisations constitute a clue regarding the will of the states to cooperate and settle disputes. For the same purpose, states have become more preoccupied with preventing disagreements, so that several cooperation, communication and early warning mechanisms have been created.

We consider that the specialized literature must approach the issue of the peaceful settlement of internal conflicts, the way in which the international community must intervene, but also the issue of the accountability for not observing the duty to settle disputes peacefully, irrespective of their nature.

BRIEF CONSIDERATIONS ON THE PRINCIPLES SPECIFIC TO THE IMPLEMENTATION OF THE EUROPEAN UNION LAW

Augustin FUEREA[*]

Abstract

The principles specific to the implementation of EU law have as characteristic that they mark the specificity of EU law in relation to other legal orders, from national or international point of view. These principles include the principle of conferral, with multiple consequences on the entire EU system, but also the principle of subsidiarity, proportionality or of sincere cooperation.

Keywords: *principles of EU law; principle of subsidiarity; principle of loyal cooperation; principle of proportionality.*

1. The principle of conferral[1]

Under the provisions of the Treaties, each institution shall act within the limits of prerogatives conferred on it by these Treaties.

The principle of conferral can be understood as a transfer into European Union law, of the specialty principle of international organizations. This stems from the fact that, like all international organizations, the European Union is an entity established by the Member States and does not share with them, the quality of original subject of international law.

Under Article 5 of the Treaty on European Union, "the demarcation of the Union's competences is governed by the principle of conferral". "Under the principle of conferral, the Union can only act within the limits of the competences conferred on it by the Member States in the Treaties to attain the objectives set out in those Treaties". Competences not conferred upon the Union in the Treaties remain with the Member States"[2].

Regarding the importance of the principle of conferral, it is determined by the types of competences covered in the EU treaties. In this respect, the nature and characteristics of competences will influence the process of their conferral. Thus, we can distinguish two situations. In the first case, EU competences do not replace state competences. They remain, but will be framed by rules of law originating in the EU. In this situation, the Union's institutions have the task to exercise a double action: on the one hand, to prescribe in accordance with Treaties, rules detailing and customizing the limitations set out by them and on the other hand, to ensure compliance with those limitations by Member States. In the second case, the Union's competences were intended to replace state competences. In this situation, the EU institutions have legislative powers greater than those of the Member States due to the Union dimension of actions, accounting in this way, the task to enact common rules in the implementation and enforcement of which, the Member States acquire the quality of Community authorities (such a situation is encountered for example in joint policies).

Therefore, under this principle, the EU institutions carry out only those tasks that are specifically set out. At this level, the fulfillment of implicit, deducted responsibilities is not allowed.

The reason behind this principle is rooted precisely in matters pertaining to the rigor shown in the plan of action, but also to the liability[3] of institutions to whether or not fulfill the tasks / competences.

---

2. The principle of subsidiarity[4]

The principle of subsidiarity was introduced into the legal order of the European Union for the first time, by the Single European Act in 1986, and was firmly established in Article 3B of the Treaty of Maastricht. Until the emergence of these two conventional texts, the principle was, implicitly, present in the founding Treaties, even before ever being in the case law of the Court of Justice of the European Communities.

Under Article 5, paragraph (4) TEU, actions at EU level will not exceed what is necessary in order to achieve the objectives set out in the Treaties. This means in fact that whatever it can be done at national level by Member States, it should not be done jointly at EU level; however, if this is not possible, collective intervention is required. The competence of common law belongs, therefore, to states. More specifically, it is an acceptance from states to limit their competences in order to grant more competences to the Union. Therefore, the national competence is the rule, and the competence of the European Union is the exception. The doctrine states: "the principle of subsidiarity is a principle governing competences in the Union, and not a principle under which competences are granted"[5].

The principle of subsidiarity involves the following **two** aspects:

- the first aspect considers the situation in which the Union is competent to work in the areas and to the extent of objectives assigned to it expressly and obviously, being an exclusive competence. In fact, in this case, the implementation of the principle of subsidiarity (for example, in the areas of agricultural, transport, competition policies or common commercial policies) cannot even be brought into question;
- The second aspect relates to the case where we are in the presence of competing competences, i.e. in areas which do not belong to the Union's exclusive competences (for example, areas of social policy, health and consumer or environmental protection), and Member States cannot, because of the dimension and effects of that action, to attain their objectives. In this situation, the Union will only intervene in the cases where these objectives can be better attained at its level than at the level of Member States.
- Thus, considering the two aspects above mentioned, it is obvious that the principle of subsidiarity applies only in the case of shared, competing competences, and not in the case of exclusive competences of the European Union.

3. The principle of proportionality[6]

The principle of proportionality has been jurisprudentially established, being applicable, initially, in the matter of economic operators' protection against damage that could result from the application of Community law. Subsequently, it was codified by the Treaty of Maastricht, as it follows: "the Community action shall not exceed what is necessary to achieve the objectives of this Treaty"[7]. With the entry into force of the Treaty of Lisbon, the content of the principle becomes much more accurate, in the sense that "the Union's action, in content and form, shall not exceed what is necessary to achieve the objectives of the Treaties".

Unlike subsidiarity, which "aims at determining if a competence should be exercised"[8], proportionality occurs "once the decision to exercise a competence was taken, in order to determine the extent of the law"[9]. The principle of proportionality has been designed to avoid excessive regulatory activities of the Union and to find other solutions than legislative in order for the Union to achieve its objectives.

More precisely, proportionality means that, if in the application of a competence, the Union has to choose between several modes of action, it must retain that mode which leaves states, individuals and businesses, the greatest freedom. To this end, the Union must consider whether legislative intervention is urgently needed or other means could also be used, such as reciprocity, recommendation, financial support, encouraging cooperation between states or accession to an international convention. The principle of proportionality implies that, if it

---

[4] **Legal basis:**

- Article 5 paragraph (3)*: „Under the principle of subsidiarity, in areas which do not fall within its exclusive competence, the Union shall act only if and insofar as the objectives of the proposed action can not be sufficiently achieved by the Member States at central level or at regional and local level, but the dimension and effects of the proposed action, can be better achieved at Union level.*

Institutions of the Union shall apply the principle of subsidiarity in accordance with the Protocol on the application of subsidiarity and proportionality. The national Parliaments ensure the compliance with the principle of subsidiarity, in accordance with the procedure set out in that Protocol".

- Protocol (No. 2) on the application of the principles of subsidiarity and proportionality.

[5] **Guy Isaac, Marc Blanquet**, „*Droit général de l'Union Européenne*", 10e édition, Dalloz , 2012 , p. 91.

[6] **Legal basis:**

- Article 5 para. (4) TEU: *„Under the principle of proportionality, the Union's action, in content and form, shall not exceed what is necessary to attain the objectives of the Treaties. Institutions of the Union shall apply the principle of proportionality in accordance with the Protocol on the application of the principles of subsidiarity and proportionality".*

- Protocol (no. 2) on the application of the principles of subsidiarity and proportionality.

[7] Article 5 para. (3).

[8] **Jean Paul Jacqué**, „*Droit institutionnel de l'Union européenne"*, 7e édition, Dalloz, 2012, p. 183

[9] **Idem.**

proves that it is more than necessary to adopt a rule in the European Union, its content should not be an excess of regulation, in the sense that it is preferable to resort to the adoption of a directive rather than to a regulation[10]. In this respect, there are also the provisions of Article 296 TFEU, namely: "if Treaties do not specify the type of act to be adopted, the institutions shall select it, from case to case, in compliance with applicable procedures and with the principle of proportionality".

In turn, the Court of Justice stated in its ruling[11], in *the Queen* case[12], that the "principle of proportionality requires that the acts of the [European Union's] institutions do not exceed the limits of what is appropriate and necessary in order to achieve the legitimate objectives pursued by the regulation in question, in the sense that when there is the possibility to choose between several appropriate measures, it must be resorted to the least onerous, and that the disadvantages caused must not be disproportionate to the aims pursued"[13]. In this respect, the academic literature[14] identifies three dimensions, specific to the principle of proportionality, namely: adequacy, necessity and non-disproportionality.

Therefore, according to the European Commission[15], "proportionality is a guiding principle for defining how the Union should exercise its competences, both exclusive and shared - *which should be the form and nature of EU action?* According to the TEU, the content and form of the Union's action shall not exceed what is necessary to achieve the objectives of the Treaties. Any decision should favour the least restrictive option in this regard"[16].

4. Common aspects of the principles of subsidiarity and proportionality[17]

Under Article 1 of Protocol no. (2) on the application of the principles of subsidiarity and proportionality, each EU institution shall, at all times, provide compliance with the principle of subsidiarity. In this regard, the Protocol establishes a control mechanism for compliance with this principle. Thus, before proposing legislative acts[18], the Commission, under Article 2 of the Protocol, must proceed to extensive consultations involving the regional and local dimension of actions envisaged. From the necessity of consultation, it can be derogated only in case of emergency, but in this case, the Commission must explain its decision in its proposal. Further, the Protocol provides that[19] both the European Parliament and the Commission are required to submit to national parliaments, their draft legislative acts, as well as their amended drafts, at the same time as to the Council. The Council, in turn, is required to submit to national parliaments, the draft legislative acts originating from a group of Member States, the Court of Justice, the European Central Bank or the European Investment Bank, as well as the amended drafts.

In fact, the draft legislative acts must be grounded in terms of compliance with the principles of subsidiarity and proportionality. In this sense, Article 5 specifies that any draft legislative act must contain a detailed statement allowing the assessment of the compliance with the principle of subsidiarity. This statement includes "elements allowing the assessment of the financial impact of the draft in question and, in the case of a directive, of its implications on the rules to be implemented by Member States, including on the regional legislation, as appropriate. The reasons that lead to the conclusion that a Union objective can be better achieved at Union level shall be substantiated by qualitative and, wherever possible, quantitative indicators. The draft legislative acts must consider the need to proceed so that any burden, whether financial or administrative, falling upon the Union, national governments, regional or local authorities, economic operators and citizens, to be minimized and proportionate to the aim pursued"[20].

Within eight weeks from the transmission of the draft legislative act, the national parliaments can send to the President of the European Parliament, the Council and the Commission, a reasoned opinion stating why they consider that the draft in question does not comply with the principle of subsidiarity[21]. Once the opinion received, the President of the Council will transmit it further to the governments of states

[18] Under Art. 3, „In the meaning of this Protocol, "draft legislative act" mean proposals of the Commission, initiatives from a group of Member States, the European Parliament's initiatives, requests from the Court of Justice, the European Central Bank's recommendations and requests of the European Investment Bank on the adoption of a legislative act".
[19] Article 4.
[20] Article 5 of the Protocol.
[21] Under Article 6 of the Protocol.

which initiated the draft legislative act, respectively to the Court of Justice, the European Central Bank or the European Investment Bank, if one of these institutions is the originator of the draft legislative act.

In the case where the reasoned opinions on non-compliance of a draft with the principle of subsidiarity represent at least one third of all the votes allocated to national parliaments, or a quarter for a draft referring to the area of freedom, security and justice, the draft must be reviewed. Following this review, the Commission or, where appropriate, the group of Member States, the European Court of Justice , the European Central Bank or the European Investment Bank , if the draft legislative act is issued by them, can decide whether to maintain the draft, to amend it or to withdraw it. No matter what the solution is, it must, however, be reasoned.

Article 7 of the Protocol regulates, including the situation in which the opinion is offered in the ordinary legislative procedure. In this case, the opinions reasoned on the non-compliance of a draft legislative act with the principle of subsidiarity represent at least a simple majority of the votes allocated to national parliaments, the draft must be reviewed. Following such review, the Commission can decide to maintain the proposal, to amend it or withdraw it. If it chooses to maintain the proposal, the Commission must justify, in a reasoned opinion, why it considers that the proposal complies with the principle of subsidiarity. This reasoned opinion, as well as the reasoned opinions of national parliaments must be submitted to the Council and the European Parliament in order to be taken into consideration in the procedure[22]:

(a) before concluding the first reading, the European Parliament and the Council shall examine if the legislative proposal is compatible with the principle of subsidiarity, taking particularly into account the reasons expressed and shared by the majority of national parliaments, as well as the Commission's reasoned opinion;

(b) if, by a majority of 55 % of the members of the Council or a majority of the votes cast in the European Parliament, the Council and Parliament (as legislative institutions) consider that the legislative proposal is not compatible with the principle of subsidiarity, it will not be further examined.

In the case where a Member State or a Member State on behalf of its national parliament notices that a legal act of the Union was adopted without complying with the principle of subsidiarity, it can attack that act, through an action for annulment, the Court of Justice of the European Union being the one that has the competence to rule on such actions. Such actions can be also formulated by the Committee of the Regions against legislative acts for the adoption of which the Treaty on the functioning of the European Union provides that it must be consulted[23].

According to the European Commission[24], "the control and monitoring of subsidiarity issues have played an important role in the agenda of the European Parliament and the Committee of the Regions which adapted their internal procedures to more effectively analyze the impact and added value of the work performed"[25].

5. The principle of sincere cooperation

Under the principle of sincere cooperation, "Member States are obliged to implement EU law, thereby contributing to the mission of the Union, and to refrain from any action that could jeopardize the achievement of the EU objectives"26.

Under Article 4 TEU, "according to the principle of sincere cooperation, the Union and the Member States shall respect and assist each other in carrying out missions arising out of the Treaties. Member States shall take any general or particular action to ensure the fulfillment of obligations under the Treaties or resulting from the acts of EU institutions. Member States shall facilitate the achievement of the Union's mission and refrain from any measure detrimental to the achievement of its objectives". In this way, three obligations are established in the task of Member States27: two positive (the adoption of measures to implement EU law and facilitate the exercise of the Union's mission) and one negative - not to take any action that would jeopardize the objectives of the Union. In the Union, under the principle of sincere cooperation, the Member States are invited to support the Union's actions and not to hinder its proper functioning, for instance28 by punishing infringements of EU law, as strictly as infringements

[27] According to *Rapport* de Monsieur **Etienne Goethals** presented during „Réunion constitutive du comitésur l'environnement del'AHJUCAF. Ecole Régionale Supérieure de la Magistrature de l'OHADA Porto-Novo (Bénin) – Actes", http://www.ahjucaf.org/IMG/pdf/pdf_Actes_Porto-Novo.pdf

[28] According to:

of national law or by cooperating with the Commission in procedures linked to the monitoring of compliance with EU law, e.g. by sending the documents required in accordance with the rules etc.

The sincere cooperation is a principle that the Treaty on European Union requires to be complied with by the EU institutions, too. Thus, according to Article 13 paragraph (2), the last sentence is "institutions shall cooperate with each other fairly".

The inter-institutional collaboration principle is found in Article 249 TFEU "that stipulates that the Council and the Commission must start mutual consultation and agree on the modalities of collaboration. Inter-institutional cooperation is organized in various ways, including: exchanges of letters between the Council and the Commission; inter-institutional agreements, joint declarations of the three institutions"[29] etc.

The principle has been often invoked by the Court of Justice in Luxembourg in various rulings over time. Thus, in 1983, the Court reminded in the ruling from the case *Luxembourg v./ the European Parliament*[30], that "when provisional decisions are taken, governments of the Member States must, under the rule which requires states and Community institutions, mutual obligations of sincere cooperation, rule inspired, especially from Article 5 TEC, consider that these decisions do not affect the proper functioning "[31]of the Union's institutions. In 1986, in the ruling in case *Greece v. / the Council*[32], the Court maintains its position, extending however, the sincere cooperation also to relations between the Union's institutions, saying that in the dialogue between the Union's institutions, "must prevail the same mutual obligations of sincere cooperation (...) that govern also the relations between Member States and Community institutions"[33]. The Court goes back to the principle of cooperation, in 1990 when it specified, in the ordinance ruled in the case *Zwarveld*[34], that "in this community of law, relations between Member States and Community institutions are governed, under Article 5 TEC[35], by the principle of sincere cooperation. The principle obliges not only Member States to take all measures necessary to ensure the strength and effectiveness of Community law, including, when needed, even of criminal nature, but requires equally to Community institutions, mutual obligations of sincere cooperation with Member States"[36].

At a careful analysis of references made by the Court to the principle of sincere cooperation, we can see that, according to the Luxembourg Court, this principle has the following features[37]: it is a guiding principle of relations between Member States and EU institutions; it is a bilateral principle and it is a principle that applies not only to relations between Member States and EU institutions, but also to relations between EU institutions".

Conclusions

The principles of the European Union are stemming from specific principles of public international law, on the one hand, and from the principles contained in the legal systems of Member States, on the other hand. To become principles of EU law, these categories of principles are "communitarised"[38], as they are passed through the "filter of EU objectives, so sometimes, they may stand some limitations in order to comply with EU law"[39].

As we have seen, the European Union Treaties contain only general references to the principles specific to the implementation of EU law because the jurisprudence of the Court of Justice of the European Union was, in fact, the real developer of these principles.

UN SECRETARY- GENERAL'S FORMS OF INVOLVEMENT IN THE PEACEFUL SETTLEMENT OF INTERNATIONAL DISPUTES. THE DIPLOMATIC MEANS

Oana-Adriana IACOB[*]

Abstract

The United Nations Secretary- General is a symbol and an instrument of the peaceful settlement of international disputes, with a proven effectiveness in the prevention and resolution of conflicts, even in the most difficult political contexts. The configuration of this distinguished function is largely the result of a long evolutionary process which ultimately provided the occupants with a repertoire of practices that define a powerful and influential role in maintaining the international peace and security. The UN Secretary General's endeavours in the field of peaceful resolution of conflicts may include traditional diplomatic means, such as good offices, mediation and international inquires. Nevertheless, sometimes the traditional techniques of diplomatic approach require the complementary use of unofficial, discreet diplomatic means (such as secondary diplomacy - track two diplomacy - and hybrid diplomacy - track one and a half diplomacy)which may enable a superior information and trigger new ways of action. The present study aims to explore the political and diplomatic means, as forms of involvement of the UN Secretary-General in the peaceful settlement of international disputes and as part of the wider and powerful role in the maintenance of international peace and security.

Keywords: *United Nations, Secretary-General, peaceful settlement, diplomatic means.*

1. Introduction

Evolving from the concepts of idealism in international politics, that have emerged in the first half of the twentieth century, inspired by a new vision on the evolution of the international system, the United Nations Organization has proved countless times its centrality in the maintenance of international peace and security. The foundation of the United Nations Organization was not, however, inspired simply by an idealistic enthusiasm, but also by the international community's necessity of ensuring a favourable environment for the consolidation of inter-state harmony, cooperation and structural peace. Beyond the common goals and principles, agreed by the Member States with the adoption of the UN Charter, given the genesis and composition of the Organization, there is a risk that the Organization's work is subjected to a combination of national interests. Often in UN 's history, even if the Organization acted as an independent structure, Member States (whether it was a single powerful state or several states with common interests) tried to impose their own interests and influence UN's actions to their own benefit. In such a context, antagonisms and subsequent blockages have emerged, inevitably, within the main deliberative and executive bodies.

In this institutional context, marked by various combinations of national interests, there was a great necessity for an impartial, neutral agent that would protect the UN's highest ideals and principles. It would be the Secretary General of the United Nations, head of one of the Organization's main bodies (the Secretariat), that, despite the function's lack of decisional powers, through its position and role in the institutional structure of the UN, was enabled to exert enough influence in order to effectively intervene as a pacificator agent and as a defender of UN's principles. Perhaps, initially, UN's founders did not foresee the potential of this high function, but a number of factors - like the configuration, in rather vague terms, of the High Official's attributions in the UN Charter, the continuous challenges that the international political context posed to the various occupants of this function and, not least, the latter's remarkable personalities and knowledge that influenced greatly the evolution of the function - endowed the position of the UN Secretary General with some unique features.

One of the key features of this position, underlying every action taken by the Secretary General for the maintenance of international peace and security, is impartiality. Impartiality is a guarantee of efficiency for actions undertaken for the peaceful settlement of international disputes, as well as for any other activity implemented by the Secretary General with the scope of preventing or defusing antagonisms that may endanger international peace and security. Any breach of impartiality could cast a shadow on the High Official's reputation and prestige as well as on the usefulness of the office and ultimately on the Organization's role in the maintenance of international peace.

The Secretary General's involvement in the processes of peaceful settlement of disputes can take various forms. For instance, mediation, good offices and international enquiries undertaken by the High

Official have proven to be efficient in numerous cases of international disputes. Gradually, the international developments and the emergence of new concepts in international law, have also imposed new types of approach to conflictual situations.

This study aims to explore, through descriptive and logical analysis, from a legal and historical perspective, the political and diplomatic means, as forms of involvement of the Secretary General in the peaceful settlement of international disputes. The elaboration of the study is based on the analysis of the UN Charter's provisions regulating the peaceful settlement of international disputes, as well as of the subsequent legal developments consecrated by other international documents and of the relevant regulations of UN Secretary General's role and attributions. The analysis of the legal basis for the Secretary General's involvement in the peaceful settlement of disputes also has in view some of the author's previous research findings, as reflected in the study "Configuring the role of the United Nations Secretary - General in the peaceful settlement of international disputes. Relations with the Security Council and the General Assembly"[1].

Various Secretary Generals' reports and speeches, revealing important theoretical constructions, inspiring new directions in the evolution of the function and revolutionizing the techniques used for the peaceful settlement of disputes, have been analysed and cited as primary sources. In addition, the paper also has in view the existing literature on the role of the Secretary General.

2. Stages of conflicts and the UN Secretary General's involvement in their peaceful resolution

Previous research in the field of conflict resolution showed that conflicts are dynamic processes, "composed of alternating cycles of escalation and de-escalation".[2] Usually, researchers and specialists illustrate graphically this dynamic process through a curve or a chart, divided so as to represent the different stages identified in the evolution of a conflict[3]: latent conflict, emergence of conflict, escalation, stalemate, de-escalation, dispute settlement and peace-building. It must be said, however, that, most often, in practice, conflicts do not go through a pre-established trajectory and the transition from one phase to another is very difficult to determine.[4]

Theoretically, the Secretary-General may intervene - including by making use of diplomatic means of peaceful settlement - in either phase of the conflict. However, it was demonstrated that the intervention of the Secretary General is generally more efficient in the early stages of the conflict, through activities of preventive diplomacy, undertaken with the purpose of averting the conflict or stopping its escalation. Boutros B. Ghali[5] stated, in his well known report "An Agenda for Peace: preventive diplomacy, peacemaking and peacekeeping", that "the most desirable and efficient employment of diplomacy is to ease tensions before they result in conflict - or, if conflict breaks out, to act swiftly to contain it and resolve its underlying causes."[6]

The intervention of the UN Secretary General can also be effective in times of calmness and de-escalation subsequent to outbursts of aggression, through diplomatic activities within peacemaking, that entail actions undertaken with the purpose of bringing closer the views of the parties in conflict, using the means of peaceful settlement provided in Chapter VI of the UN Charter.[7] The Secretary-General may also intervene when the communication between the parties is irretrievably blocked, in situations that require the establishment of peace-keeping operations, as well as within subsequent missions of peace-building, conducted with the purpose of identifying and consolidating post-conflict structures in order to avoid a relapse of conflict.

Activities of peaceful settlement may be mandated by the deliberative bodies or undertaken independently by the Secretary General. Any intervention of the Secretary General must take place in accordance with the Charter's provisions, within the limits of the international law.

3. Legal basis for the UN Secretary General's involvement in the peaceful settlement of disputes

The UN Secretary General's involvement in the peaceful settlement of disputes is legally based

on the UN Charter's provisions, being implemented under the function's attributions contained therein.

Activities with the scope of peacefully settling international disputes are undertaken under Article 98 (for mandated tasks) and Article 99 (for independent actions). But neither Article 98, nor Article 99 could be implemented effectively unless in perfect complementarity and strict compliance, in letter and spirit, with Article 100 of the UN Charter. Article 100 highlights the necessity of ensuring the Secretary General's total independence from any influences coming from the Member States.[8]

When implementing an activity, either mandated or undertaken independently, the Secretary General must use the available means and resources, among which an utmost importance have: the principles and purposes of the UN Charter, the legal doctrine and precepts, complementing the UN Charter's principles and reflected in the content of the the resolutions adopted by the UN main bodies.[9]

3.1. Article 98 of the UN Charter - the Secretary General's assignments mandated by the UN main bodies

In accordance with Article 98 of the UN Charter, the General Assembly and the Security Council may mandate the Secretary-General to execute their political decisions, which may take, among others, the form of mediation, good offices, international enquiries or peacekeeping missions. Often, the vague wording of mandates allowed the Secretary General a degree of discretion in the execution of the mandated tasks, even in the sensitive area of political inter-state differences.

Especially in the first decade of UN's activity and existence, the Secretary General's actions were most often undertaken under the mandate of the Security Council and of the General Assembly, being, thus, subordinated, to their instructions.[10] Even so, in order to implement a mandated task, the High Official found a way of exerting some influence on the respective action, through his own specific interpretation of the resolutions. Of course, the Secretary General's degree of discretion depends on how accurately the assigned tasks are configured by the mandate. However, it must be said that the mandates, usually being the result of compromises between states, often have a rather vague formulation, offering a wide area for interpretation. Nonetheless, one should take into consideration the fact that, in delicate political situations, the Secretary General's discretion may be seriously impeded by restrictions imposed by the Security Council, by the General Assembly or even by some powerful and influential Member States. In reverse, it has been argued that in such circumstances, limitations imposed by the deliberative bodies are actually beneficial for the Secretary General, protecting the impartiality and neutrality of his function, as well as the prestige of his office, which may be subject to strong political pressure.

Over time, the function of UN Secretary General has established itself as a diplomatic instrument of great value, importance and exceptional efficiency not only at the operational level, as "impartial intermediary, investigator of abuses and voice of world conscience"[11], but also symbolically, as an interpreter and defender of the true ideals of the United Nations. Generally, the Secretary General's prestige is a fairly accurate barometer for the importance and utility of the Organization's activity. Therefore, the deliberative bodies should be particularly cautious when mandating the Secretary General's tasks. In order to ensure efficiency in the execution of the mandated tasks and protect the prestige and credibility of the Secretary General's function, the deliberative bodies should avoid the High Official's involvement in extremely delicate circumstances. One such situation would be that of assigning to the Secretary General tasks of peaceful settlement of disputes that are impeded by the total lack of will of the parties to communicate and reach a compromise or by the refusal of the Member States to contribute with funds and personnel or, simply, by the general disinterest of the international community in resolving the dispute in question at that specific time. There were also situations (especially in the first decades of UN's existence) when the deliberative bodies, faced with difficult, controversial situations, being on the verge of failure, but, nevertheless, wishing to create the illusion of action, sought to transfer the responsibility to the Secretary General.[12]

On the other hand, however, it must be said that, despite the risky, controversial character of such situations, that were specific to the general context of the Cold War, Secretary Generals have excelled in identifying original ways of tackling this challenges, prompting new directions in the evolution of the function. Although there have been situations that may or could have overshadowed, to a greater or lesser extent, the reliability of the function, the High Official's efforts in the peaceful

[12] *Ibidem.*

settlement of disputes have proved many times their efficiency even in such controversial circumstances.

However, to ensure the protection of his office, it was often felt necessary to introduce a public or private instrument through which the Secretary General could decline the tasks considered to be faulty in their conception or insufficiently supported by the Member States. One such instrument was created by Dag Hammarskjöld[13], during the American hostage crisis in China, in 1954-1955 - the so-called "Peking formula". In this particular conjecture, the Secretary General dissociated himself from the wording of the General Assembly's Resolution (Resolution 906/1954) - which authorized him to provide good offices for the release of the "unlawfully detained" American war prisoners - and adopted a neutral and impartial position, absolutely necessary for the successful fulfilment of the mission. In front of the Chinese officials, who felt offended by the critical text of the resolution, Hammarskjöld explained his position in the affair, by citing the responsibility he has, by virtue of the general principles and purposes of the UN Charter.[14] Through "the Peking formula", Hammarskjöld created a model that was subsequently emulated in an entirely different international conjecture, by Javier Perez de Cuellar[15] in 1990, in the context of the first Gulf war, when he dissociated himself from the Security Council's Resolution no 664 of 18 august 1990, which assigned to him the role of good offices provider.[16] Also, in 1998, in the context of the crisis of the alleged presence of weapons of mass destruction on Iraqi territory, Kofi Annan[17] made use of Hammarskjöld's formula, in order to separate his good offices from US and UK's firm position, as expressed within the Security Council.[18]

3.2. Article 99 of the UN Charter - activities undertaken independently by the Secretary General

The provision of Article 99 is based on a genuine political authority with which the UN Secretary General is endowed. According to this article, the Secretary General "may bring to the attention of the Security Council any matter which in his opinion may threaten the maintenance of international peace and security". Apart from the recognition of a valuable right of initiative for the Secretary General, that doesn't have any equivalent in other international structures, this article is particularly relevant for the peaceful settlement of disputes, as it provides the legal basis for a significant part of the activities undertaken by the Secretary General in this field. Thus, through a broad interpretation of this provision (absolutely justified from a conceptual and logical perspective, as well as from a functional point of view), by virtue of the political authority conferred to him by Art. 99 of the UN Charter, the Secretary General may investigate conflictual situations and be involved in their regulation by initiating investigative operations, good offices and other forms of diplomatic activity, conducted with the scope of maintaining the international peace and security. [19]

A logical and systemic analysis of Article 99, including a research of its application and its logical integration within the UN Charter's regulatory system, reveals that only such a broad interpretation of this provision could ensure its utility and applicability. In order to be able to distinguish the potential danger of a situation and subsequently refer the matter to the Security Council, the Secretary General must keep a high level of information, based on the development of a vast network of formal and informal contacts.

It is true that Article 99 was rarely invoked in its letter, for various reasons related, in general, to the reluctance of the Secretary Generals towards assuming the risk of expressing an official opinion, representing an assessment of a situation, which, even if it is well documented, retains a degree of subjectivity that can arouse controversy. However, the provision has proved extremely useful in the field of peaceful settlement of disputes, precisely through its logical extrapolation.

In this regard, Dag Hammarskjöld has developed a comprehensive theory on the role of the UN and its Secretary-General, which was the basis for his initiatives when the issue of intervention for the appeasement of potential conflictual situations was raised. Dag Hammarskjöld's theoretical construction (largely expressed in his entries to his annual reports) has influenced significantly the evolution of the Secretary General's position, all his successors driving their inspiration from this construction when assuming political functions in accordance with the "spirit" of Article 99. U Thant[20], for instance, reiterated the Secretary General's role of good offices provider, recalling, at the same time,

[20] U Thant was a Burmese diplomat who served as the third Secretary-General of the United Nations from 1961 to 1971.

the legal basis of his actions. Corroborating Article 99 with Article 2.3.[21] and Article 33[22], which compel the parties to a dispute to seek its settlement by peaceful means, U Thant believed that if the parties seek or accept the Secretary-General's involvement in fulfilling their obligations under the Charter to identify a solution to the dispute, the Secretary General is manifestly competent to do so.[23]

3.3. Article 100 - the UN Secretary General's impartiality

Impartiality is an essential requirement for the Secretary General in order to effectively conduct activities in the field of peaceful settlement of disputes, as well as a guarantee for the utility of this function.

According to Article 100: "1. In the performance of their duties the Secretary-General and the staff shall not seek or receive instructions from any government or from any other authority external to the Organization. They shall refrain from any action which might reflect on their position as international officials responsible only to the Organization. 2. Each Member of the United Nations undertakes to respect the exclusively international character of the responsibilities of the Secretary-General and the staff and not to seek to influence them in the discharge of their responsibilities."

The impartiality of the Secretary-General has been extensively debated in the first decades of the UN's existence. In the turbulent context of the Cold War, characterized by a climate of mistrust and irreconcilable differences of vision, the impartiality of the Secretary General, defining an independent structure that represents the interests of the international community as a whole, did not enjoy the unanimous consent of the Member States. Although there were more or less obvious political pressures, from each of the two powers - US and USSR - the most intense controversy was aroused by the Soviet bloc. As a result of these controversies, Dag Hammarskjöld has developed an interesting theory, in his efforts to explain some aspects that seemed vague at the time.

Thus, the Soviet bloc argued that "while there are neutral countries, there can be no neutral men". "There can be no such thing as an impartial civil servant in this deeply divided world. "The kind of political celibacy, which the British theory of the civil servant calls, is in international affairs a fiction." [24]

In fact, in the High Official's vision, to be neutral, the Secretary General does not have to be apolitical, but rather it is necessary that its policies are not formally joined with the governmental policies of some states. The Secretary General should not pursue or support the interests of certain states.[25]

Since the UN Charter doesn't offer any guarantees for the impartiality of the Secretary General in the execution of his tasks, there is a dilemma on the appropriate operational approach that would ensure the total neutrality of his actions. Dag Hammarskjöld addressed this dilemma, invoking the strict compliance with the High Official's international obligations, as agreed within the UN Charter. The Secretary General's impartial position should be translated into the absence of any adherence to particular national or ideological attitudes and interests. Indeed, even when his tasks are mandated by the deliberative bodies, the Secretary General retains a degree of discretion when implementing the mandate, based on his freedom of interpretation and assessment. Of course, interpretations and assessments are delivered in accordance with the UN Charter, within the limits set by international law. It is true that any interpretation implies some degree of subjectivity, however this does not necessarily constitute a breach of impartiality. In order to reduce discretion and ensure that his position is representative for the Organization as a whole, the Secretary General should use constitutional means such as "consultations with permanent missions to the United Nations, safeguarded by diplomatic privacy"; advisory committees "composed of representatives of the governments most directly concerned, and representing diverse political positions."[26]

If, however, the Secretary General inevitably retains a generous area of assessment, risking to become the subject of political controversy, Hammarskjöld considers that "the international civil servant cannot be accused of lack of neutrality simply for taking a stand on a controversial issue when this is his duty and it cannot be avoided. But there remains a serious intellectual and moral problem, as we move within an area inside which personal judgement must come into play. Finally, we

[21] UN Charter - Article 2.3. - 'All Members shall settle their international disputes by peaceful means in such a manner that international peace and security, and justice, are not endangered.".

[22] UN Charter - Article 33 - "The parties to any dispute, the continuance of which is likely to endanger the maintenance of international peace and security, shall, first of all, seek a solution by negotiation, enquiry, mediation, conciliation, arbitration, judicial settlement, resort to regional agencies or arrangements, or other peaceful means of their own choice.".

have to deal here with a question of integrity or (...) conscience. (...) and if integrity in the sense of respect for law or respect for truth were to drive him into positions of conflict with this or that interest, then that conflict is a sign of his neutrality and not of his failure to observe neutrality".[27]

4. Diplomatic means of peaceful settlement

The activities implemented by the UN Secretary General in the field of the peaceful settlement of disputes, whether they are mandated by the deliberative UN bodies or undertaken independently, often take the form of one or another of the political and diplomatic means consecrated by the UN Charter. The role of third party pacificator - which has proven its efficiency countless times, even in the most difficult and delicate circumstances, during missions of good offices or mediation involving the High Official - is the one that conferred popularity and visibility to this function. But the Secretary General's demarches in this field are not confined to this role, which generally corresponds to the use of the specific methods of traditional diplomacy.

The High Official's position in the institutional framework of the United Nations, based on the essential requirement of impartiality in the performance of his duties, opened the opportunity for the development of a dense network of contacts, including at an informal level, allowing the Secretary General to effectively intervene in various delicate situations. Due to his position, the Secretary General can also opt for an informal approach to conflictual situations, making use of alternative diplomatic means, such as those that are specific to the unofficial type of diplomacy - track II diplomacy - or to the hybrid type of diplomacy (which combines official and unofficial diplomatic means).

4.1. Traditional diplomatic means

Often, the Secretary General's involvement in the peaceful settlement of disputes corresponds to the use of traditional diplomatic means, circumscribed to a set of classical procedures, flexible and accessible to the parties involved in a dispute, perfectly compatible with situations in which there is a genuine will to compromise.

The use of such means is concordant with the provision of Article 33 of the UN Charter stipulating that: "The parties to any dispute, the continuance of which is likely to endanger the maintenance of international peace and security, shall, first of all, seek a solution by negotiation, enquiry, mediation, conciliation, arbitration, judicial settlement, resort to regional agencies or arrangements, or other peaceful means of their own choice."

The most popular diplomatic means used by the High Official are mediation and good offices, as traditional procedures of peaceful resolution of disputes that involve the participation of a third party and are, therefore, compatible with the role and functions of the UN Secretary General. Also conducting international enquiries, based on a previous mandate or undertaken independently, is one of the means often used by the Secretary General, with the purpose of clarifying certain aspects or collecting information on a dispute or a potential conflictual situation.

Typically, the use of diplomatic means is especially compatible with disputes that have a predominantly political character. Nevertheless, in the recent period, the use of soft, flexible, diplomatic means generally enjoys a certain prevalence to the detriment of the use of jurisdictional means of peaceful settlement, regardless of the disputes' typology.[28]

International conciliation, although is one of the diplomatic means consecrated by the UN Charter, that require the intervention of a third party (a commission), combining elements of mediation and enquiry, has certain features that make it resemblant to the jurisdictional means, constituting a somewhat transitory procedure between the two categories (diplomatic and jurisdictional). As international conciliation usually involves the activity of an established body (a permanent or an ad hoc commission), this means of peaceful settlement is less compatible with the role of Secretary General. However, in the past, the High Official participated in processes of international conciliation, providing assistance and advice for the establishment of various international commissions of conciliation.[29]

It must be said that generally the diplomatic means of peaceful settlement are derived or inspired from the spirit of negotiations. It is common in the international practice that the use of a diplomatic procedure, implemented in the spirit of negotiations, can not be accurately categorized as it combines specific features of different diplomatic means (for example, when passing imperceptibly from good offices to mediation).[30]

Although the diplomatic means are traditional procedures, that have known a historical evolution and developed within the framework of the official

inter-state diplomacy, their flexibility and adaptability make them quite compatible with the more modern types of diplomacy - track II diplomacy and hybrid diplomacy.

The specific features of the diplomatic means make them fit to the UN Secretary General's functions and popular in the international practice. Parties to a dispute experiencing blockages in their direct communication during the process of peaceful settlement can benefit from the Secretary General's prestigious and impartial position, that many times proved to be very efficient in the prevention or appeasement of conflicts. The use of the diplomatic procedures of peaceful settlement always requires the consent of the parties. Even when this use is mandated to the Secretary General by UN's deliberative bodies, the respective resolutions do not impose it on the parties to the dispute, but only recommend it. Also, if the parties accept the Secretary General's intervention as a third party pacificator, the High Official cannot impose on them the identified compromise solution. The parties always enjoy the freedom of option between accepting or rejecting any such proposal.

4.1.1. Good offices and mediation

The UN Secretary General often intervenes for the peaceful settlement of disputes through good offices or mediation missions. Good offices or mediations may be mandated by the UN deliberative bodies, offered independently by the Secretary General or requested directly by the parties. Sometimes, parties can show a reluctance towards asking themselves for the Secretary General's good offices.[31] It is preferred that the good offices are either recommended by the General Assembly or by the Security Council or offered independently by the Secretary General.

In the first years of the UN's existence, missions of good offices and mediation were usually mandated by the deliberative bodies. But the often vague wording of the mandates conferred to the Secretary General an extensive discretion in the implementation of the mandates, stimulating the evolution his role of good offices provider, to such extent that, in a short time, the Secretary General had established himself as a valuable agent of peace, with an independent political role.

The two diplomatic means - the mediation and the good offices - are very similar. Their common objective is that of ensuring a favourable environment for negotiations. The difference between the two means resides in the intensity of the third party intervention, which in the case of the good offices is moderate.

Good offices are not expressly consecrated by the UN Charter as a peaceful procedure for the settlement of disputes (being considered a mild variant of mediation). Nevertheless, they were mentioned in the Hague Conventions of 1899 and 1907. Subsequently, good offices find their consecration in international documents adopted by the UN, such as the General Assembly Declaration in 1982 at Manila, on the peaceful settlement of international disputes.

This diplomatic procedure entails the amicable intervention of the Secretary General in order to appease the contradictions and unblock the negotiations between the parties, previously obstructed by political antagonisms and / or legal differences. Therefore, the role of the Secretary General, during the good offices procedure is to facilitate contacts between the parties, by providing a neutral and secure environment, in order to stimulate a common approach that would cover the divergent points of view to a sufficient extent that the parties should be able to reinstate negotiations.

The good offices procedure consists of activities of exploration and information (to this end, enquiries and informal contacts with non-state actors could also be used), in order to provide an adequate communication channel between the parties, that would enhance their exchange of ideas and opinions and, eventually, would serve their efforts to formulate the objectives of the process of peaceful settlement (including the determination of the specific rights and obligations of each party) and to agree on the necessary procedures for initiating or resuming negotiations.[32]

The main qualities that recommend the intervention of the UN Secretary-General as good offices provider are his impartiality, objectivity, credibility, prestige and, not least, the high level of expertise and information regarding the international context. Adequate knowledge of the situation, of the parties to the dispute and of the characteristics of their differences is a key factor for the efficiency of the peaceful settlement process.

In a good offices procedure, the UN Secretary General's role as a third party intervener ceases with the resumption of negotiations. In a mediation procedure, on the other hand, the Secretary General's intervention goes even further and deeper.

As a mediator, the Secretary General performs a variety of tasks from the examination of the actual substance of the issue in dispute to providing a communication channel and support for the parties in the configuration of their key objectives, offering them an objective and impartial assessment as a foundation for their peaceful settlement. In addition to offering a neutral environment, conducive to

negotiations, the Secretary-General performing his functions as a mediator, shall formulate concrete proposals for the identification of a compromise solution and for the definitive resolution of the dispute. The role of the Secretary General in the mediation process ceases either when his compromise solution is accepted by the parties or when it is rejected by them or when it is found that the hostilities between the parties have resumed, the possibilities of communication being irremediably blocked, in the respective circumstances.

In practice, both diplomatic means - mediation and good offices - are often used in the context of the same dispute, a strict delimitation between the two being very difficult to distinguish.

Mediation, as well as good offices, can be used both in the initial stages of a conflict within the framework of preventive diplomacy - often with the scope of clearly defining the substance of the issue in dispute and of identifying a compromise solution that would address the claims of the parties - as well as in the more advanced and difficult phases of the conflict within the diplomatic interventions of peacemaking - sometimes with the purpose of identifying an interim solution (for instance, concluding a ceasefire) and prepare the ground for future negotiations.[33]
