OVERVIEW OF THE PROHIBITION OF REFORMATIO IN PEIUS IN THE HUNGARIAN CRIMINAL PROCEDURE

CSONGOR HERKE[*]
CSENGE D. TÓTH[**]

Abstract
The prohibition of reformation in peius has two meanings in the Hungarian legal terminology, such as the prohibition of increasing punishment and the so called reformation in peius. In the effective Hungarian legal system it is regulated, within the rules of the criminal procedure, regarding the ordinary and extraordinary legal remedies, separate procedures and, in addition to the criminal procedure, it is regulated even regarding the law of minor offences. Furthermore, the reformation in peius is not an inevitable consequence of the rule of law, but only a legal favour, and many questions and problems emerge in the light of fundamental principles and constitutionality concerning this prohibition. The prohibition of reformation in peius may be regarded as a legal guarantee for the defence to be able to file an appeal without the risk that the judgment might be altered to detriment of the accused. Therefore, it is a case of favour defensionis and as such it plays a huge role in sentencing, especially when the judgment was appealed in order to increase the severity of sentences.
This paper examines the connection between the prohibition of reformation in peius and the principle of constitutionality, as well as the its relation to the aggravating and mitigating factors of sentencing taken into account by the court of appeal.

Keywords: *Reformatio in Peius; Criminal Procedure; Constitutionality; Waving the Prohibition of Reformatio in Peius, Sentencing, Criminal-Policy*

Introduction

The expression „reformatio in peius" was mentioned for the first time in a roman legal case connected to procedural law, however it was unknown to the criminal procedure law in the 18th century (KLEINSCHROD). At the beginning of the 19th century, GONNER pointed out that the alteration of the judgment to the detriment of the accused through ordinary legal remedy (reformatio in peius) should not be required. These two sources led to ineffectual debates regarding the origin of the expression.

The prohibition of reformation in peius describes, in a wider sense, the right of state bodies entitled to permit the alteration of a decision to the detriment of the receiver (KOPP). In procedural law, reformatio in peius is mentioned in case an organ of higher degree passes a decision to the detriment of the accused, while a more favourable decision was expected to be passed thereby (SARTORIUS). In the course of time, more differentiated opinions were born regarding the expression, and the prohibition of reformation in peius was determined as the alteration of every single decision passed by the new court, and concerned the main question of the case to the detriment of the person against whom it was taken, however in favour of the person by whom the appeal was filed (RICCI). The restriction of reformation in peius focused only on the main questions of the decision.

In Hungary the prohibition of reformation in peius has two meanings which derived from the German influence where it is defined with the same differences: prohibition of increasing punishment and the prohibition of reformation in peius.

Although the first Hungarian Criminal Procedure Code (henceforth CPC) of 1896 included provisions regarding the prohibition of reformation in peius, these rules had been abolished by the following CPC on the grounds that the purpose of the legal remedy is the enforcement of substantial justice and not the safeguarding of the position of the accused ("the substantial justice prevails over all" as stated by CSÉKA). The situation changed when in 1954 the Modification of the CPC introduced the relative prohibition of reformation in peius which was improved by the following CPCs (of 1958, 1962). After the historical improvements, the effective CPC of 1998 (Act XIX of 1998) still did not succeed to have the perfect rules regarding this legal institution which may arise out of ordinary and extraordinary legal remedies, separate procedures and, in addition to the criminal procedure, it is regulated even regarding the law of minor offences. Even the Civil Procedure Code (Act III of 1952) specified in its section 253 (3) that the court of second instance shall alter the decision of the court of first instance only within the limits of motion for appeal (joint appeal) and the counter-motion for appeal (section 247). According to this rule the court of second instance may pass a decision on matters concerning rights enforced in the course of the law suit, as well as matters set up as a defence in contradiction of such rights and has not been heard by the court of first instance or no decision has been passed thereon.

The prohibition of reformation in peius as a basic requirement can be traced back to several fundamental principles of the criminal procedure. The most important one is favour defensionis which includes several favours granted for the defence, therefore it is closely linked to the principle of defence. In addition, it is also connected to the principles of legality, opportunity, right to legal remedy. The other very important principle is the principle of prosecution, given that the aggravation of the punishment is only allowed in cases where the prosecutor filed an appeal for this reason. It can be stated, that this prohibition is a "procedural protection-right", as GRETHLEIN said, which shall balance the factors hindering the submission for legal remedy, furthermore, L. MOLNÁR calls the prohibition of reformatio in peius the "principle of appeal without fear" with good reason. Some other quite popular principles should be mentioned as well, such as the requirement for fair trial, and the principle of constitutionality.

1. The prohibition of reformatio in peius and the principle of constitutionality

According to KORINEK, as for the constitutional procedure, this key-definition came into the limelight basically in the German legal literature. The prohibition of double jeopardy and the command of equity are the basis for the prohibition of reformatio in peius. However, the prohibition of reformatio in peius is not an inevitable consequence of the rule of law, ~~but~~ only a legal favour.

The mostly proclaimed counter-argument against the prohibition of reformatio in peius is that in certain countries (some provinces of Switzerland, Great-Britain) this institution is unknown, but still there is no doubt about the constitutionality of these countries. Though, this cannot be a conclusive argument against the definition deriving from the principle of constitutionality. The reference to the legal order of other countries solely does not give grounds to refuse the constitutional basis for the prohibition of reformatio in peius, as a criminal procedural institution. The required persuasive power of this argument is shown by HAUSER, when he says, that on such grounds the CPC of Luzem province is not constitutional, because it has a provision saying that the accused does not have the freedom of confession during interrogation. It cannot be stated that the criminal procedure law is not constitutional for the lack of one detailed provision, although the right to remain silence (nemo tenetur se ipsum accusare) belongs to the basic principles of the criminal procedure, and expresses the human dignity as well. The admission of the right to remain silence is a necessary element of the fair process. However, not only Luzem province, but most of the provinces of Switzerland have no regulation on advising the accused of such rights, but still, Switzerland is a state founded on the rule of law. This reasoning justifies that the definition of constitutional principles cannot be determined by the mere comparison of legal institutions.

The principle of constitutionality is found in the development of specific law and order, which is not constant and is not laid down in writing for ever. MEYER-GROßNER indicates many clauses which support the 'general fundamental principle'-character regarding the meaning of prohibition of reformatio in peius. First of all, the prohibition of reformatio in peius is restricted by several provisions which allow the aggravation de lege lata, notwithstanding that the judgment was appealed only in favour of the accused. In German law such restriction is the order of hospitalizing in a psychiatric institution or in an institution suitable for detoxication cure, which can be ordered if the judgment of first instance did not stipulate such measure, and no appeal was filed to the detriment of the accused against the judgment of first instance. Both measures can be taken posterior in the procedure of legal remedy or beside other punishments or measures. The prohibition of reformatio in peius does not restrict this in Germany either. This regulation is therefore an exception to prohibition of reformatio in peius. In Hungary the law gives even more possibilities to increase the severity of setences despite the prohibition of reformatio in peius, since in the procedure of the second instance several detrimental decisions can be taken for the lack of appeal filed to the detriment of the accused (but e.g. in the course of extraordinary remedies, all kinds of increase is forbidden by law if the extraordinary remedy was initiated in favour of the accused).

2. The right to wave the prohibition of reformatio in peius

The question arose in the scientific literature that can the accused wave the defence provided by the prohibition of reformatio in peius, well, in some cases he may live to see like the prohibition of reformatio in peius hinders the possibility to pass a subjectively favourable decision for him (e.g. if the suspended imprisonment means smaller harm to him than the fine to be executed). Two groups have been formed regarding the question of the permissibility of waiver: who agree with it and who don't. The second group allows some exception when defining the disadvantage from a general objective point of view, such as the factual surveillance (FRISCH, SCHLÜCHTER); the wish of the accused (GRETHLEIN), the attitude oriented to the case (PAULUS). Usually who refuse the right to waiver, stipulate the possibility to replace measures. We think that there is no need for the possibility of right to waiver because the actual request of the concerned party has been considered at the first level of adjudication of increase. FRISCH regards the structure of waiver as a solution that one is forced to adopt. GRETHLEIN reject the possibility of waiver due to loss of rights, which considered to be a dogmatic ground, because the criminal claim of the state is independent of the influence of the accused, therefore the state cannot enter into an agreement with the accused on the extent of punishment permissible by law.

The group of objectivity thinkers, on the contrary, explicitly suggests the possibility of waiver, because they take the general objective judgment of prohibition of reformatio in peius as its starting-point, which either does not render at all or renders only possible to replace measures in a restricted manner. Thus, e.g. the right to waiver is emphasized as a protective order of the criminal procedural instructions of prohibition of reformatio in peius by GERHARDT, i.e. it allows the accused to waive the rights protecting him.

From our point of view, the accused is not allowed to waive the prohibition of reformatio in peius in a state founded on the rule of law. The prohibition of reformatio in peius provides certain boundaries for the state regarding the extent of punishment. These boundaries cannot be shifted, and it shall be not permitted on the basis of the subjective choice of the accused. The requirement of legal security and predictability of procedure of the second instance shall always prevail. If the waiver of the effects of prohibition of reformatio in peius was permissible, then its boundaries should also be determined.

3. The prohibition of reformatio in peius and the factors related to imposition of punishments

The general preamble of the opinion No. 56/2007 of the Penal Council, entered into force on November 14 2007, on appreciable factors in the course of imposition of punishment, lays down that

the Penal Council of the Supreme Court took the Recommendation No. R (92) 17 of the Committee of Ministers of Council of Europe concerning consistency in sentencing and several decade-old judicial practise, as a starting-point. The Appendix of this Recommendation specify in 11 points the viewpoint of the Committee of Ministers of Council of Europe related to the imposition of punishment, from among these points only two concerns the question of increasing and mitigating circumstances. Point 3 of Part B deals with the penalty structures and records that the "sentencing orientations" shall indicate ranges of sentence for different variations of an offence (according to the presence or absence of various aggravating or mitigating factors), but leave the courts with the discretion to depart from the orientations. The so called "starting points" indicate a basic sentence for different variations of an offence, from which the court may move upwards or downwards so as to reflect the aggravating and mitigating factors.

Part C of the Appendix of the Recommendation deals with the aggravating and mitigating factors. According to this, the factors taken into account in aggravation or in mitigation of sentence should be compatible with the declared rationales for sentencing. The Recommendation does not render obligatory to clarify the major aggravating and mitigating factors only in law, but makes explicitly possible to determine these in legal practice. Where a court wishes to take account, as an aggravating factor, of some matter not forming part of the definition of the offence, it should be satisfied that the aggravating factor is provided beyond reasonable doubt. In the same manner, the principle of favour defensionis prevails regarding the provision of the Recommendation which says that before a court declines to take account of a factor advanced in mitigation, it should be satisfied that the relevant factor does not exists.

The imposition of sentence is always the task of the court, which requires complex evaluative work. Pursuant to the Commentary, the personality of the judges obviously gains importance in the course of this evaluative work, but the consistency and uniformity of the sentencing practise are both important requirements and social interests. This job demands remarkable thoroughness and responsibility from the court, since the imposition of sentence cannot constitute a reason for review itself, just like the fact that the provisions of section 37 and 83 of the Criminal Code (CC), the aggravating and mitigating factors and Opinion taken into account either.

The section 83 of the CC determines the principles of imposition of punishment. On the score of this, the following should be taken into account when sentencing:

- the purpose of the sentence: such as the protection of society, the special and general prevention factors (BALOGH-KŐHALMI);
- restrictions set forth by law: besides the upper and lower limit of the sentence available, it includes all the provisions of the General Part of the CC which made it possible for the courts to impose a sentence above the upper limit or under the lower limit (Commentary);
- the danger posed to society by the offence: cf. "sentence proportionate to the act" (M. TÓTH);
- the level of the danger posed to society by the offender: the offender poses a potential danger to society not in general, but because of committing a specific crime (F. NAGY);
- the level of guilt: intention or negligence (KIS), and the levels of these, which, according to F. NAGY, is a competition to the danger posed to society by the offender. Though the danger posed to society by the offender is similar to guilt, because – according to GYÖRGYI – it means the psychic relation to the specific crime, therefore it is necessary and reasonable to separate these by law;
- other aggravating and mitigating factors.

The application of the word "other" before the aggravating and mitigating factors means that the legislator constitutes the danger posed to society by the offence and by the offender, furthermore, the level of guilt as aggravating and mitigating factors. However, it highlights these factors due to their importance from among the normative factors of imposition of punishment.

The aggravating and mitigating factors – with the exception of the above mentioned highlighted factors – were not mentioned by the former Criminal Codes on substantive criminal law, and so it is in the effective CC. The list of examples was drafted partly by the scientific literature and partly by the Supreme Court. In the following table the attempts at classifying the aggravating and mitigating factors are summarized:

SCHULTEISZ	**MOLNÁR**	**KÁDÁR**	**ANGYAL-RÁCZ**	**FÖLDVÁRI**	**Opinion of the Supreme Court**
1. factors affecting (increasing or mitigating) the danger posed to society by the offence 2. factors affecting the danger posed to society by the offender 3. factors affecting guilt 4. factors affecting the materialization of the aim of punishment	1. factors related to the subjective side of the crime 2. factors related to the objective side of the crime 3. indifferent factors related to imposition of punishment 4. factors effective regarding certain crimes	1. factors increasing the danger deriving from the crime to the society 2. factors increasing the danger deriving from the personality of perpetrator to the society 3. factors increasing guilt 4. factors not provided by the legal definition of other crimes	1. level of guilt 2. the objective importance of the crime 3. the accused person 4. exogenous factors of crime 5. objective and subjective factors arose after the commitment of crime 6. aggravating and mitigating factors typically effective regarding special crimes	1. the danger posed to society by the the offence and the offender 2. perpetrator's crime 3. aggravating and mitigating factors of objective nature 4. aggravating and mitigating factors of subjective nature	1. subjective factors affecting the sentence 2. objective factors affecting the sentence

As it's evident according to the table, the Opinion, which is normative for the present legal practise, contains much easier classification than the legal literature when it examines only from two points of view (objective or subjective circumstances) the aggravating and mitigating factors which are normative for the imposition of punishment. On the other hand, the factors highlighted by the legislator (danger posed to society by the offence and the offender, level of guilt) is not regarded to be emphasized by the Opinion, but it discusses them within the scope of the two main groups. Besides, the estimation of several circumstances accepted in the legal literature (HONIG, SCHOTT). Such circumstances e.g.:

- collective evaluation of the attacked social conditions;
- examination of collective evaluation;
- the termination of the demand directed to the defence of society (FÖLDVÁRI);
- the heavier injury fails to come off;
- perpetration under the influence of force and threat;
- repeated perpetration (even is it does not constitute legal unity);
- different forms of perpetration attained simultaneously;
- perpetration encumbering the discovery;
- circumstances related to the place of the commitment of crime;
- circumstances related to the time of the commitment of crime (at a definite hour; circumstances existing at certain moment; other dates and intervals) etc.

The evaluation of these circumstances made in the course of the imposition of punishment is not excluded by the Opinion, since the enumerated factors give only basis for the judge when he passes his judgment in a special case. Furthermore, the same circumstances shall also be evaluated by

the court of appeal, when it decides on whether the court of first instance had judged the normative factors for the imposition of punishment properly, or the mitigation – if the prohibition of reformatio in peius did not take effect - or increase of severity of sentences shall take place besides the accurate evaluation.

4. The prohibition of reformatio in peius within the restrictions of criminal-political ideas

From among the three levels, distinguished by FINSZTER regarding criminal-politics (1. respondent criminal-politics: the answers of the investigating and the judiciary bodies to the committed violence of law; 2. structural criminal-politics: legislative plans, ideas of system-development and financing the operation of the legislator and government based on the prediction of delinquency; 3. strategy on public safety: political sphere, institutions and actions of the civil society and economy), the first level has special significance in terms of the prohibition of reformatio in peius. According to FINSZTER, the guarantee of legality belongs here among others, like the differentiation of enforcement of the criminal claim of the state, the speed of the procedures and the trial-parsimony. Nevertheless, these factors crucially specify the scope of prohibition of reformatio in peius.

BÁRD laid down three criminal-political basic models in the Criminal-political Conception published in 1993:

- The first is a restrictive-intervening model which protects the collective interest in the first place, and concentrates on the change or isolation of the convict (so-called strict right-wing approach).
- The second model (liberal approach) is the assisting-supporting alternative, which places the personal interest at the first place, and the public interest just behind this (not the treatment-segregation of a certain convict, but the prevention of opportunity of crimes, general prevention). When interpreting the definition "public interest", ADAM's conclusion shall be taken into account, whereas the constitutional interest contains requirements and limits for the state and citizens, and attention shall be payed at all times to not to let these values to "sink into unworthy, formal category". SAJÓ came to the conclusion that the "public interest" definition serves as suppressing or ruining the private interest and privacy, and it is applied only in order to let certain private interest get advantage in comparison to others.
- The third one is the state founded on the rule of law or constitutional alternative, which selects the behaviours to be criminally punished originated from the primacy of law. In terms of prohibition of reformatio in peius, it is obvious that only the second and the third model has significance, since the conception, which regards the convict crazy from the beginning and applies forceful retribution, cannot be made consistent with the restriction of the judicature of second instance.

In the last two decades of the 20th century and in the first decade of the 21st century, five main events took an unexpected turn regarding criminal legislation:

- In the 1980-1988 period, MÁRKI thought that the criminal-politics drifted away from reality, because the ideal of "strong state" of the party-state could not keep a tight hand on crime. Anyway, the requirement of re-socialization is attached to this period as well.
- In the 1989-1992 period the constitutional criminal law appeared, however, MÁRKI said this was, regarding the criminal-politics, the "age when the rein was thrown among horses": the prisons became somewhat empty, but this could be attributed to general pardon and de-criminalization (GÖNCZÖL).
- The main point of the change in 1993 (Act XVII of 1993) was liberalization, but to some extent this period can be described both by increase of severity and additional criminalization. Though the requirement of change in conception can be placed to this period regarding criminal

procedure law. The requirements for the new CPC were determined by the Ministry Decision 2002/1994. (I. 17.). BÓCZ mentions the stronger expression of right of disposal as a requirement as well, which supports the existence (and incidental amplification of its scope) of prohibition of reformatio in peius anyway.

- The Act LXXXVII of 1998 broke radically away from liberalization (though it kept some part of it), which was based on the requirement of proportionality composed by the Constitutional Court: if it is necessary and expected by proportionality (for the constitutional examination, see SZABÓ), the aggravation of the amount and conditions of penalty shall be demanded from punitive-politics.
- A newer change in 2003 (Act II of 2003) turned to liberalization without the termination (setting aside) of every strict criminal-political provisions.

The provisions of prohibition of reformatio in peius were not concerned specifically by any of the criminal-political changes, its modifications were exhausted by enacting the principles of former authorative ruling of the Supreme Court, but these did not constitute essential change. One cause thereof is hidden in a critique composed rightly by FINSZTER of criminal procedure legislation, whereas, the legislation urged the new act to become early effective without cause instead of having a thorough impact-research and condition-analysis completed.

None of the reasons laid down by legality and opportunity, in their debate, can be supported exclusively insomuch that one of them could be excluded completely when passing a judgment regarding a precisely stated situation. The development between legality and opportunity requires the legal-political evaluation of multitude counter-arguments, especially if it concerns the constitutional balance between legal security and legality of a certain case. This statement is effective, in the first place, regarding in what manner the aims of criminal-politics can be fulfilled the best. The interests of trial-efficiency are favourable to loosen the principle of legality as possible, but then a problem arose that how can the law-enforcement display subjective, individual approach in the course of judging a case, since the requirement of uniform criminal investigation can be curtailed easily. This can be offended even in the case of prohibition of reformatio in peius, whereas the omission of an appeal, which should have been filed by the prosecutor acting alongside the court of first instance (to the detriment of the accused), can cause that the court of the second instance shall impose such sentence to the accused which would be significantly aggravating in other case.

It shall be officially admitted that a certain limitation of the principle of legality is inevitable. This requires from the legislator to provide alternative solutions (better personnel and financial possibilities, de-criminalization measures) in order to hinder this development whenever it is possible. This is even more effective if the principle of opportunity becomes primary in comparison to the principle of legality (due to necessary diminishing of the principle of legality because of economical reasons).

No exact boundaries can be determined where does the territory of "enemy of the rule of law" starts, but the solution (aside from obvious cases) shall be left to the legal-political decision of the legislator and the law-enforcement bodies. This circumstance does not constitute a speciality of the difference between the principles of legality and opportunity, but it is a rare phenomenon which describes a general weak point of the constitutional argument. The possibility to develop the adequate relation between the principle of legality and opportunity cannot be given up. Therefore, the clause of the prohibition of reformatio in peius is necessary on the condition, that it should better fit the constitutional considerations, while accepting the critical observations, in order to not to let the prohibition of reformatio in peius to become – by using ERDEI's comparison related to another legal institution - only a birdlime, which has mighty little honey.

Conclusion

Theoretical and practical problems arise in case a detrimental alteration of the judgment is initiated, not like in case of reformation in melius which means exactly the opposite, hence, the alteration in favour of the accused no matter that the appeal was filed in favour or to the detriment of the accused. The topic of reformation in peius and the prohibition thereof have not been discussed thoroughly, and as it was shown above, some countries do not even either know or have regulation concerning it. This fact was brought up as one of the most proclaimed counter-argument against the prohibition of reformation in peius stating that these countries are still constitutional regardless to having or not any regulation about this prohibition. However, the criminal procedure law cannot be deemed to be unconstitutional for the lack of only one legal institution, if some other instructions of the law may cover it, even if it is not detailed. Furthermore, even in Hungary, despite the prohibition of reformation in peius exists; there are several possibilities to increase the severity of sentences.

Concerning the question whether the accused can or cannot waive his right to prohibition of reformation in peius it shall be taken into consideration that in case it was allowed the state would have gain even more power and the aim of the CPC trying to balance the position of the prosecution and defence would lose its significance.

Since the imposition of a heavy or light sentence lay in the hands of the judge, the factors playing a role in the evaluation process thereof shall be determined both by the legislator and –more detailed - by judicial practice, as it is in Hungary; the examples were drafted mostly by legal literature and the Supreme Court. The mitigating and aggravating factors shall be considered wholly and complexly, especially because the imposition of a sentence does not create a cause for review itself. These circumstances shall be considered by the court of first instance and also by the court of appeal when it examines whether these normative factors were properly adjudicated concerning the imposition of punishment.

The requirement of prohibition of reformation in peius was not concerned expressly by the criminal-political changes. The different criminal-political ideas vary according to the range of interest of the state (public) or of the person. The debate between the principle of legality and opportunity calls for a legal-political evaluation of several counter-arguments, but it shall be high lightened that certain limitation on the principle of legality is necessary, such as even the prohibition of reformation in peius.

CONDITIONS OF PAROLE FOR LIFE IMPRISONMENT

IOAN CHIŞ *
BOGDAN ALEXANDRU CHIŞ

Abstract
Parole in Romania has experienced great changes in the new Criminal Code, so it is necessary to study them for use by law enforcement system works in the execution of punishments and those who are direct beneficiaries of the new provisions. Parole with jobs and duties are completed after release so that the person is free to be able to re-socialize the best possible conditions and in a short time. Establish a monitoring period of time equal to the completion of the sentence is likely to warn the person convicted to the fact that it is possible to return to prison if it has a behavior consistent with the obligations

Keywords: *Parole in Romania, changes, new Criminal Code, execution of punishments, compared law, purposes.*

Introduction

Conditional release or parole is particularly designed to lead to normalization of the convict's life after serving a sentence of imprisonment, due to the fact that during the performance of the penalty it creates normal conditions, facilitating the transition from effective execution of punishment in places of detention, to assuming responsibilities in free life.

Parole is an institution used since ancient times, the belief that not the punishment is the one that re-socializes, but the confidence in the convicts possibilities and life in society, makes it so that the length of the sentence is not more important than the moment in which the punished person realizes that a life of crime should be avoided at any cost.

Offenders are sent to places of detention punished and not to be punished. This concept, accepted as a philosophy of performance of the penalty since the eighteenth century, became the reason to conclude as soon as possible the stage in which convicted persons are in state custody, and their conditional release under penalty of execution of all punishment, in order to be reinstated in the community from which they have been removed for longer or shorter periods of time.

Romanian penal philosophy of the twentieth century has been oriented, as in other European countries, towards the gradual enforcement of sentences, after the auburnian or Philadelphian system, with draconian regimes in the early period of penalty and their improvement after periods of time considered sufficient to correct criminal behavior. These regimes were continued even with conditional release of prisoners, which reflected the idea of prison "treatment" and Christian humanism of performance of penalty[1]. All inmates, including those punished with hard labor for life,

* Professor, Ph.D., Faculty of Law, "Nicolae Titulescu" University (email: profchisioan@yahoo.com).

[1] Criminal Code of March 17, 1936

- Those sentenced to hard labor for life, after serving 15 years of sentence, who gave evidence of referral would be sent to a penal colony, and after serving 5 years in prison could be released on parole;

- Those sentenced to hard labor for a specific period of time were sent to a penal colony after the execution of two thirds of the sentence and could have been released on parole after serving a ¾ of the total penalty;

- After the execution of two thirds of his sentence, the one sentenced to heavy prison, which, through incentive to work and good behavior, gave hope to referral was sent for the remainder of the sentence, to penal colony, and after serving 3 / 4 of the total penalty could get parole;

- Those sentenced to correctional imprisonment up to 2 years were detained a quarter of their sentence, separated day and night in individual cells, for a perios that may not exceed one year, two quarters of their sentence at

those with heavy prison sentence, correctional prison, rigorous imprisonment, penal servitude, simple imprisonment, began the execution by a period of isolation in cells, of different durations depending on the nature of punishment, continued with joint work under the regime of silence, and then were transferred to a penal colony, and after serving a fraction of the sentence were released conditionally.

Parole during the communist regime was a way to force all inmates to work, even if the forced labor penalty no longer existed. Under the guise of re-education through labor, through by exceeding standards you gained executed days, inmates were encouraged to push up to the physical existence the reduction of prison sentences, reduction that was optimally granted by the prison board. The Decree 720/1956 and the Act 23/1969 used the system of reduced penalty through days considered executed as a result of their work, but without applying a compulsory deduction, but as a system by which convicts entered into the discussion of the board of parole. In this way the prisoners were used for productive activities of achieving state objectives without adequate payment and in a fast pace.

The new Penal Code substantially modified the institution of parole by a new philosophy, both in terms of conditions for granting and especially on the process of social reintegration of prisoners, through the direct involvement of state institutions, by probation services, in providing qualified support for every specific situation. If the institution of parole, in the previous legislation, did not require that the convict make concrete steps towards reintegration, but not to commit new crimes, for the period from release until the end of the sentence , the new Penal Code has a new vision, continuing the rehabilitation activities by the need to fulfill other conditions under the control of probation services so as to achieve effective reintegration into society by the deadline set for the penalty.

2. The new Criminal Code in relation to the previous law

In the new penal code parole is introduced in Title III - Punishments, Chapter V - Customizing punishment, Section 6, Art. 99-106, so it becomes a separate institution to be applied according to general criteria of individualization of punishment, taking into account the seriousness of the crime and the dangerousness of the offender. In the previous Criminal Code conditional release was part of the general part of the same title, but was established under the rules on life imprisonment and prison art. 55^1, respectively art. 59, 59^1, 60 and 61, and considered to be another way of execution of sentence, without deprivation of liberty.

Although the institution of parole has special rules in the new penal code, both codes have common features that trace the continuity of the institution and its progress in the development phase of the current penal policy. These features are:

a) conditional release is provided in criminal law, following general regulatory criteria which relate to both punishment and the condemned person, so punishment can be applied individually for each situation;

b) conditional release is not discriminatory, so that when the performance requirements of law are fulfilled, any condemned person can benefit them;

c) conditional release can operate only after serving part of the sentence under the deprivation of liberty, period considered sufficient to achieve the effect of coercion, so as the convicted person would be warned about the need to respect the laws, but also to stimulate the convicted so he would wish to benefit from the execution of the sentence in custody;

---

work during day and as much as possible separated in cells at night and the remaining 1 / 4, if they proved good behavior incentive to work, could be executed, half in penal colony, half on parole;

- Those convicted of political crimes to rigorous imprisonment, penal servitude or simple imprisonment, could ask to be transferred in a penal colony, where they would be separated from other inmates, then they could ask for parole, under the same terms and conditions as convicts sentenced to corresponding common law punishments.

d) to qualify for conditional release inmates must meet certain conditions of conduct, so that the stimulatory effectiveness of the institution is enhanced and thereby constitutes a continuing incentive for others, both in terms of behavior in the place of detention, and perseverance in meeting the system's requirements and programs[2];

e) being a means of performance of an imprisonment penalty, the released convict is still considered to serving the sentence, so that the time spent in custody until the date of expiration of the period of execution is used to calculate the duration after which the penalty is considered fully executed;

f) conditional release may be granted by the court, as a vocation for the condemned, discussion, postponement or refusal of application is related to persuading the court that serving the remainder of the sentence on parole is more useful for a faster rehabilitation of the convict. The court may deny parole based on circumstances surrounding the criminal act or the convicted person, but also on considerations of an enhancement in the efficiency of punishment in periods when the preventive effect of this institution falls;

g) although parole is an institution that can be applied as a result of the subjective belief of judges, it objectifies through the fulfillment of conditions related to the execution of punishment, such as serving a portion of the required sentence in the established regime, achieving the conditions of conduct and the position of regret towards the offense, the victim, compensation, completion of specific training programs, gaining skills, rehabilitation.

Both criminal codes have set conditions for granting parole, in both documents the fulfillment of these conditions must be found by the Board of proposals for conditional release or by the convicted person, who will address the court to ascertain the veracity of their completion. Law 275 / 2006 Art. 77 shows that the commission proposes parole taking into account the fraction of the sentence actually served, the duration of punishment which is considered as served on the basis of work performed, the conduct of the convicted person and his efforts for social reintegration, particularly in the educational, cultural , therapeutic, psychological and social assistance, training and vocational training schools (for the duration of punishment considered as served as a result of participation in training activities), the responsibilities entrusted, the rewards granted, the disciplinary sanctions imposed and his criminal records.

The Commission, that consists of director, the deputy director for detention security and prison regime, the deputy director for education and psychosocial support, probation counselor, prison doctor, a worker in the production service, with participation of the judge designated for the execution of prison sentences, as Chairman, prepares a report, together with the documents proving the above claims, and forwards them to the court in whose jurisdiction lies the place of detention, proceeding to trial the conditional release. The convicted person may apply the request himself, only the court beeing the one able to establish the fulfillment of conditions for parole.

3. Elements of compared law

Conditional release was examined at the Committee of Ministers of the European Council on the occasion of the Council's Report on Criminal Cooperation in preparation of Recommendation R (99) 22, which was adopted on the 30th of September 1999.

The Recommendation concerned measures regarding the overcrowding and growth of population in confinement, so parole occupied an important place in the economy of this document, taking measures to stop the inflation of prison population was one of the desiderata in the field of crime control.

[2] DONGOROZ Vintilă, KAHANE Siegfried, OANCEA Ion, STĂNOIU Rodica, FODOR Iosif, ILIESCU Nicoleta, BULAI Constantin, ROŞCA Victor - Theoretical Explanations of the Romanian Penal Code, General Section, Vol II, Ed II Ed Romanian Academy, Bucharest, 2003, p. 39 et seq.

In respect to conditional release in European countries, the report noted a particularly high growth in the number of population subjected to custodial measures, in the first decade of our century, especially in economically developed countries[3]. The large fluctuations of convicted persons that occurred in the first decade were due to the events of 1989, the opening of borders, misunderstanding of democratic systems and the migration of large numbers of criminals from one state to another. In these circumstances parole appears to be a tool for displacing prisoners from crowded prisons to other systems of enforcement. The range of possible alternatives to imprisonment to be taken in European countries are:

a) Alternatives to sending in penal institutions:

- Limitation of preventive detention;
- Introduction of alternative sanctions or other measures without deprivation of liberty;

b) Alternatives to continuance of deprivation of liberty:

- With a reduction in the period of detention (parole, unconditional release) which would have as a result early release, intensive supervision, electronic monitoring, etc.;
- Without reducing the period of detention (semilibertate, a leave from the prison, working outside the prison) that can create conditions for a pardon, amnesty, redemption.

As can be seen, the measures envisaged by the 1999 Recommendation R (99) 22, have been implemented in the Crminal Code, with emphasis in the new Criminal Code, in the Act for enforcement, so the current number of people in holding places does not exceede 33 000 people, solving the problem of overcrowding. However parole continues to be used, furthermore it became a means of individualization of punishment, another way of serving a sentence.

Recommendation Rec (99) 22 proposes to Member States several ways of serving the sentence, to reduce the penalty by extending the effective length of parole. It recommends reducing the part of sentence to be served in detention, shortening the minimum time to be spent in prison, and the introduction of a graduated system of enforcement of sentences in transitional stages between the deprivation of liberty and unconditional release. Our country has adopted measures for each recommendation, has reduced the maximum length of specific punishments, has introduced a progressive system of enforcement that uses semi-open and open regime as stages before parole, and introduced the institution of exit permission, leave. Among the preventive measures judicial review (art. 211-215 of the Criminal Procedure Code) and house arrest (art. 218-222 of the Criminal Procedure Code) were introduced as new institutions of European recommendations.

In the German Criminal Code a similar institution of parole is suspension for the remainder of the sentence. The suspension for the remainder of the sentence applies after the execution of two thirds of the length of the sentence, but after the execution of at least two months' imprisonment, if the offender is not a danger to society, the defendant accepts the suspension and the measure takes into consideration the convict's personality, criminal records, the circumstances of committing the crime, the importance of judicial values that would be harmed in the case of recurrences, the convicted's conduct, livelihoods, and the consequences of suspension for the convicted person. Suspension may be granted at the execution of ½ the sentence if the convicted person is at his first sentence, and has spent at least six months in prison.

If the case of life imprisonment suspension of the remainder of the punishment may be ordered by the court after serving 15 years of the sentence and continuance of imprisonment is not imposed further because of the particular gravity of the offense. In the case of imprisonment as a "total punishment" due to the fact that it is a composition of several concurrent sentences, the suspension is applied in terms of each single sentence.

[3] Netherlands - 240%, Spain - 192%, Portugal - 140%, Luxembourg - 76% Ireland - 66%, Switzerland - 56%, Greece - 43%, England and Wales - 43%, Cyprus - 40%, France - 39%, Belgium - 28% Scotland - 21%, Norway - 19%, Sweden - 18%, Denmark - 6%, Czech Republic - 50%, Romania - 150%, Hungary - 55%, Poland - 60%, Ukraine - 80%, Latvia - 20% 40% Lithuania, Croatia - 100%

The Spanish Penal Code establishes the circumstances in which this institution is applied in Title III - Section 3, Art. 90[5], 91[6], 92[7], 93[8] regarding parole. Parole applies to those who are in the third year of imprisonment, have served three quarters of the sentence imposed, or the condemned showed good conduct and there is a good prognosis for reintegration and the fulfillment of civil responsibilities derived from misdemeanor in the cases and according to the criteria established in law enforcement.

For persons convicted of terrorist or criminal offenses committed within organizations, it will be understood that there was a prediction for social reintegration when demonstrating, in an unmistakable manner, that he has abandoned the goals and means of terrorist activity and cooperated with authorities, either to prevent the occurrence of crimes by armed gangs, organizations or terrorist groups or to mitigate the effects of his crime, to identify, capture and prosecute the persons responsible for terrorist acts.

The supervisory judge may impose, on granting parole, the performance of rules of conduct or legal actions.

Proposals for parole are made after serving half the sentence, up to 90 days for each year of actual performance, excepting crimes of terrorism. Offenders who met the age of 60 years or meet it during serving the sentence and fulfill the conditions laid down, unless they served three quarters of it, or, where appropriate, two-thirds, will be able to obtain parole.

The same criteria will apply to patients who suffer from serious incurable diseases, according to medical reports. If the danger to the subject's life, because of illness or due to old age, is obvious, as evidenced by the report of the forensic medical services and the establishment of the prison, the judge may authorize parole without any formalities other than the prison's report with the final outcome, in order to make the assessment referred by in the Criminal Code.

The probation period consists of the remainder unexecuted period of time of the sentence. If the convicted person will commit crimes, or will not follow the rules of conduct imposed in this period, the supervisory judge shall revoke the parole and the convict shall be imprisoned in the corresponding period and serving year, without prejudice to the calculation of time spent on parole.

In the case of those convicted for terrorist crimes the supervisory judge may require reports to enable him to prove that conditions for parole exist. If during this period of probation, the defendant commits crimes, does not follow the rules of conduct or does not meet the conditions which have enabled it to gain access to parole, the judge shall revoke the release granted and the prisoner will return to prison during the proper prison year.

Some elements of comparative law in connection with parole regulations that differentiate the institution from Romanian law would be the following criminal codes:

- The Greek Criminal Code introduces the release of drug addicts provided that they seek treatment. Also, during the holding detainees who turn 70 years can be released conditionally;

- In Portuguese law it exists the institution of commutation of sentences for prisoners who have a serious and irreversible end-stage disease who can be admitted to hospital or under house arrest;

- Since 1995, the Polish penal legislation introduced parole and suspended sentences for convictions for failure to pay fines;

- The Dutch penal code system introduced house arrest during evening or weekend, combined with participation in rehabilitation programs during working hours;

- The Swiss criminal law introduced electronic monitoring of prisoners outside the penal institutions. The base and scope of the conditional release was broaden by reducing the minimum period of performance of two thirds of the sentence to half of it, as was necessary for effective enforcement.

In 42 States that participated in the Council of Europe study on parole in 1999, alternative measures have been taken to the serving of the sentence of imprisonment, with the conditional

reduction of the period of detention and surveillance measures of the condemned during the remainder of non-custodial sentence.

4. The notion of conditional release from a custodial sentence

Conditional release is a way of executing the sentence without deprivation of liberty under the conditions imposed by the Penal Code and the Law of enforcement of penalties.

In the previous Criminal Code, the punishment (art. 52) was a measure of restraint and a means of rehabilitation of the defendant, its purpose being general and special prevention, aiming to form a correct attitude towards work, towards the law and the rules of social coexistence.

This definition, adopted in 1968, along with the adoption of the Criminal Code, resisted although there have been many changes in the law as a whole, in the sentences in their nature and content, due to developments in the state and crime.

The purpose of punishment can not be the same in this century, when convicted citizens have rights that confer them the possibility of acting in detention, of course, with limited freedom of movement, under the same conditions as in freedom. The purpose of punishment is radically changed, and release before the exhaustion of penalty time, is considered a moral, material, communicational, educational advantage and another way of serving the sentence.

Through conditional release the criminal law notes that the punishment can be individualized setting criteria (74 Criminal Code) on the seriousness of the crime and the dangerousness of the offender, as well as conditions on the concrete conduct of the convict during the period of deprivation of liberty (art. 99-100 Criminal Code).

In these circumstances, conditional release is not a complementary institution[4] but a part of the punishment enforced, in continuing the deprivation of liberty, with multiple conditions that the convict must assume, under the penalty of revoking it.

The purpose of parole is given by the means of obtaining it and by the way it is executed to the end of the sentence. The convict's compliance of numerous conditions during imprisonment, along with fulfilling all the conditions for transition from a maximum security regime or semi-closed to a semi-open or open system, creates, from the first day of detention, a progressive program of assuming responsibilities, that lead to awareness in the convict's mind, that only the accumulation of positive results can lead to the belief of the court that such conditions can be met without deprivation of liberty. The continuance in fulfilling conditions from the beginning of the sentence until the deadline, puts parole in the stage of assuming responsibilities as free citizens, but under the control of probation services to ensure the efficiency of the penalty. This continuity distinguishes conditional release from ancillary and complementary sentences, because the conditions put the released convict on an active position, to meet requirements, unlike ancillary or complementary sentences that consist of restrictions and prohibitions, which put the convict in a position to not do certain things, to refrain from the exercise of certain activities.

We can say that parole is a means of individualization of punishment, by continuing execution at large, by the continued fulfillment of conditions laid down by law, and by assuming responsibilities as free citizens, but under the control of probation services with the purpose of social reintegration.

Parole does not guarantee that the released convict will not commit another crime, but states effective actions so that, during the execution of punishment in this way, the convict would be effectively controlled, would be constantly warned about his conduct, under the possibility to return executing under deprivation of liberty if they do not comply with surveillance measures.

[4] DONGOROZ Vintilă, KAHANE Siegfried, OANCEA Ion, STĂNOIU Rodica, FODOR Iosif, ILIESCU Nicoleta, BULAI Constantin, ROȘCA Victor - Theoretical Explanations of the Romanian Penal Code, General Section, Vol II, Ed II Ed Romanian Academy, Bucharest, 2003, p. 40.

5. Preparing prisoners for release

By the resolution adopted on August 30, 1955 at the United Nations first Congress for Crime Prevention and treatment of offenders, which was held in Geneva, Switzerland, from August 22 to September 3, 1955, it is stated that custodial sanctions and measures are to protect society against crime. Such a goal will be achieved only if the period of detention is used for the purposes of obtaining, if possible, that the offenders, once released, are not only willing, but also able to live by respecting the law and caring for his needs. "To this end, the prison system must resort to all curative, educational, moral, spiritual and other means, and all forms of assistance it may have, trying to apply them in accordance with individual treatment needs of the offenders."

Rule 60 states the principle aspects of the gradual normalization and social reintegration " The regime of places of detention must seek to reduce differences that may exist between life in prison and free life, to the extent that these differences tend to weaken the sense of responsibility of the detainee or the dignity of his person. Before the end of execution of a sentence or measure, it is desirable to take steps to ensure the prisoner a gradual return to life in society. This goal can be achieved, if necessary, by a preparatory arrangement for release, organized even in the place of detention, or another institution nearby, or a sample or control release, which should not be entrusted to police but will include effective social assistance. "

Rule 61 refers to the principle of community involvement in preparing for release and reintegration post-detention: "Treatment should not focus on the exclusion of prisoners from society, but rather on the fact that they continue to be part of it. To this end, should be used where possible, cooperation of community organizations to help the prison staff in the task of reclassification of prisoners. Social workers, in collaboration with the places of detention, would have the mission to maintain or improve relations with the prisoner's family and social authorities which may be helpful. Steps must be taken to safeguard, to the extent consistent with law and punishment to be executed, the rights relating to civil interests, social security benefit rights and other social benefits of prisoners."

In preparation for release, all physical or mental deficiencies or illnesses that could be an obstacle to the reintegration of a prisoner must be removed (Rule 62). Rules 66 and 67 outline the basic issues (needs) to be considered in the preparation for release: "The treatment of individuals sentenced to imprisonment or deprivation of liberty should aim, as long as the length of the sentence allows, creating the will and skills will enable them to live after their release respecting the law and meeting their needs. This treatment must be such as to spare them respect for themselves and to develop their sense of responsibility. To this end, we must rely mainly on religious concerns in countries where it is possible, to train, guide and qualify professionally, providing means of individual social assistance, advice on work, building the physical and moral character education according to individual needs of each detainee. Must take account of social and criminal history of the convict, his physical and mental abilities and his personal inclinations, the length of the sentence and the prospects for reintegration. "This information is summed in the personality assessments made during the detention of the detainee, but also in the probation report, if such report has been prepared.

An important aspect of post-prison reintegration capacity is the work of prisoners. Prison labor should not be degrading. Prisoners should be given productive work to deal with plentiful during a normal working day. This work should be, wherever possible, such as to maintain or increase their ability to earn an honest living when set free. The organization and methods of criminal work should be as close as possible to those applied to a similar work outside the establishment, in order to prepare prisoners for the normal conditions of free labor (Rules 71-72).

Particular attention should be given to maintaining and improving relations between prisoners and their families if they are desirable in the interests of both parties. It should be taken into account, early in the sentence, the prisoner's future after his release. He should be encouraged to maintain or establish relationships with outside persons or bodies that can facilitate the interests of his family and his own social rehabilitation (Rules 79-80).

Services and bodies, social or otherwise, which help released inmates to find their place in society, should, if possible, ensure them the identity documents required, to provide them housing, jobs, suitable clothing for appropriate climate and season, as well as means to reach thier destination and to sustain himself during the period immediately following the release. Representatives of such bodies, that were granted approval, should have access inside the imprisonment place and should be able to get in touch with the prisoners. It is desirable that the work of these bodies would be as centralized or coordinated as possible, so that the best use of their efforts could be ensured (Rule 81).

The intensity of intervention for the release is directly proportional to the level of risk that could lead to community protection and the prevention of future crimes, so prisoners should make constructive use of the time spent in prison, to develop and enhance social and cognitive skills or self-control, to recover or to maintain contact with their family and the community and to initiate the supervision phase after release.

In the latter period of detention, which can be a year long for long term penalties and of 3 to 6 months for medium and short term sentences, it is necessary to to intensify the activities in preparation for release, through specialized programs that can enhance the social reintegration prospects of the prisoner, oriented towards outlining the skills needed for life in freedom, programs with simple but strictly necessary content for life in community, with the most diverse topics such as:

- Skills for everyday life;
- Personal hygiene skills;
- Money management;
- Skills on housing and use of community resources;
- Managing a house of their own;
- How to benefit from the assistance of public institutions and services?
- Social and relationships skills;
- Embracing one's own identity;
- Caring for one's own family;
- Emotions and conflict management;
- Communication;
- Leisure management;
- Skills for an individual activity and work;
- Learning skills;
- Employment skills;
- Initiative on their own business.
- The above programs and any other activities designed to help adapting the detainee to the reality of social life outside.

Society's expectations about the effectiveness of imprisonment, correctional programs, the belief that prison inmates are approached so that they will improve their ability to adapt to the demands of society when they leave prison are prejudices. In a broader sense, there is a concept in the judiciary system, that prisons may reduce crime rates, particularly recidivism. As it concerns crime rates, there are serious doubts among criminologists around the world about the positive effect of Prisons. Too many countries have gone through the experience of increasing penalties that have not influenced at all the decrease of crime rate.

As for the function of preparing prisoners for release it follows a truly institutionalized system, starting with a specialization of prison for planning the performance of sentences, completing specialized programs for the positive development of conduct of prisoners, following the route of progressive system of performance with an emphasis on assuming individual responsibility, passing to an semi-opne or open system with enforcement rules similar to life in freedom, intensive training in the latter part of the sentence, before discussing with the parole commission, for gaining the status of responsible and free person, but supervised and obliged to the fulfillment of conditions imposed by law.

Preparing for release, conditional or unconditional, is the imminent stage before the departure of convicted persons in the community, where due to the support of probation services, volunteers, their families and their own will, they will be advised on how they must and may integrate in compliance with the laws of the country.

6. Conditions of parole for life imprisonment

Those sentenced to life imprisonment can be conditionally released if they meets the following conditions:

a) The convicted person actually executed 20 years imprisonment. This provision leaves no benefit reduction for the days considered served as a result of work performed in prison. Those days can be taken into account for the situation where life imprisonment was replaced by imprisonment of 30 years, in which case the periods actually performed and those won as a result of the working days or as a result of participation in training programs will be deducted. In the case of life imprisonment, the convict must perform effectively 20 years to meet the proportion necessary for the committee to discuss the proposal for parole. Of course in relation to the age at which the convict begins serving the sentence of life imprisonment, he can appreciate when he meets the 20 years of effective enforcement, if it's not the situation of reaching the age of 65 years in this period, in which case the penalty can be replaced with imprisonment of 30 years. In this situation there is no longer the case of effective enforcement of the penalty, but rather applying the conditions of parole for a prison sentence.

b) The convicted person showed good conduct throughout the sentence.

Good Conduct covers the period until the decision of conditional release, as well as during subsequent surveillance.

For the 20 years of effective enforcement of the sentence good conduct should be characterized by:

- Obeying the rules imposed by the maximum-security system or closed system, by abbiding the obligations, restrictions and prohibitions that make these systems;
- Acceptance of prison life without disciplinary proceedings that would determine the penalties introduced by Law 275/2006;
- Persistence and constance in the system specific socio-cultural, instruction or training activities, in working activities where he is used, performance of the working programs for which he receives awards established by law;
- Carefully keeping of the goods entrusted for use, maintain collective cleanliness and personal hygiene;
- Respecting the rules of civilized coexistence, showing respect for prison staff and people he enters in contact with, use of decorous language towards other detainees;
- Voluntary participation in activities organized inside the prison service, and ocurring activities and incidents such as heavy snowfalls, floods, fires, earthquakes, blood donations, or similar, proving his intentions of becoming a responsible citizen;
- Refusal to initiate or participate in collective violations such as protests, rebellion, serious damage or destruction of objects, noise or disturbance of the daily schedule of the detention;
- Informing the personnel about aspects concerning prison life, shortcomings that may cause adverse events, also intervention to give first aid for those who are threatened, assaulted, or those who injure themselves intentionallty until staff intervention;
- To show in all the circumstances that he understood the consequences of his act, he regrets the earlier criminal conduct and is trying to prove that he directed in the sense that will not commit another crime in the future.

The period of 20 years of effective enforcement of the penalty represents a long time of reflection and meditation for the convicted person, and showing good conduct in a world of criminals

is particularly difficult, especially because the offender had a long period of negative conduct prior to conviction and that it is harder to change dramatically right away. Therefore a multi-stage extension in discussing the parole by the board will fulfill the desire of serving 20 years with good conduct. Since in the first part of the sentence, the first two or three years, the defendant can not waive his radical criminal conduct, the discussion of parole, after the 20 years of effective enforcement, is not an exception but a way of ensuring that the message set by the punishment was intercepted and that the law will be respected in the future, regardless how hard it would be for the one who has to opt for the letter and spirit of the law. The periods of deferred penalty execution are times of testing the good conduct, even if the sentenced person had an exceptional conduct, in the period before the committee would discuss the proposals for release.

c) The condemned person has fully complied with civil obligations established by the sentence, unless he proves that he had no possibility to perform.

This condition is a new provision in the Criminal Code, and represents the concrete evidence of the convict's regret towards the offense, the consequences and his desire for compensation of material damages to victim, the injured party or the state. The required condition of fully complying with civil obligations established by the court, was regulated just to emphasize the importance of paying liabilities before parole, in order to prevent giving the fraction of 20 years of imprisonment a greater role than the payment of expenses to which the convict is sentenced. The purpose of paying the civil obligations is that it proves that the convicted person actually understood the moral and material values of society, and that repairs caused by the offense are not less important than the sentence. Full compensation does not allow partial payment of civil obligations, enabling the sentenced person to "forget" about the due obligations, once released, creating the risk of delay or failure of performance of civil obligations. The mandatory provision does not allow any transaction for the convicted person, for future payment of the obligations, but sets their performance as a condition of parole.

However, the court may grant the conditional release without the fulfillment of this requirement if the convict shows that he had no opportunity to fully meet civil liabilities. He will prove he does not own goods that can be sold to fulfill civil obligations, not money or securities, that he failed to obtain through work the amounts necessary to pay the obligations, although he tried to pay a part of these obligations, proving to be of good faith. The court may take account of these efforts to show that there was no possibility, denying parole, or to consider that this obligation is not so important as to lead to a denial of parole. It is possible that the injured part would waive the requested expenses so that civil obligations would not exist until the discussion of the request for parole.

d) The court is convinced that the convicted person has straightened and can be reintegrated into society

In order for the court to build it's belief on regarding the possibility of reintegration in society of the person convicted to imprisonment for life it should consider his specific situation from at least two views.

The first aspect is the analysis of the 20 years of execution of the life sentence, by observing the proposal of the parole committee under Law 275/2006.

A second aspect that the court must review is if the convicted person is able to observe the conditions of supervision and obligations imposed by court for the next 10 years after release, according to art. 101 Criminal Code.

If under the previous Criminal Code for conditional release, the convict had no obligations after the release, other than not committing another crime, and there was no rule relating to the supervision of his activities, under the current Penal Code there is such an obligation and the court must take it into account, because if the conditions are not met, the probation service should propose changes, termination, revocation or cancellation of parole.

In connection with the system of execution of the sentence with life imprisonment, in every penitentiary was organized a committee for the individualization of penalty performance system (art. 77 para. 2 Law 275/2006), which consists of director, deputy director for imprisonment safety and prison regime, the deputy director for education and psychosocial support, probation counselor, prison doctor, a worker from the service of production, with the participation of the judge for execution of sentences, as President, who proposes parole in view of the part of sentence actually served, the convicted's individual behavior and social reintegration efforts, particularly in the educational, cultural, therapeutic, psychological and social assistance activities, learning and training, assigned responsibilities, the rewards granted, the disciplinary sanctions imposed and his criminal history.

The Commission of proposals for the admission of parole reviews weekly (Art. 191 - Government Decision no. 1897/2006 - Law Enforcement Regulation 275/2006) the state of prisoners that qualify for conditional release based on period, based on individual file of imprisonment, in presence of the convicted person, enlisting the conditions to be met if the rest of the sentence is to be run on parole.

The minute prepared by the probation committee shall be submitted to the court in which jurisdiction lies the prison, together with documents proving the claims contained therein. If the committee rejects the proposal for conditional release, it shall notify the convicted person informing him, under signature, that he can apply directly to court with a request for parole. The period of deferment of discussion for the new conditional release proposal is one year.

The convict who addresses the request for conditional release directly to court, will attach the report prepared by the commission for parole proposals, with all the particulars and documents evidencing the state of the convict. In order to fully understand the concrete situation of the convict's case, the court may require the convicted person's imprisonment file.

The court of jurisdiction where the place of detention lies, will analyse the convicted person's request for conditional release or the proposal from the comission of prison regime and shall order, under art. 587 of the Code of Criminal Procedure – Conditional release, parole or rediscussion after a further period of time, not exceeding one year. This period starts from the moment the decision becomes final. This decision may be challenged by appeal to the court in whose jurisdiction is the place of detention within three days from notice. The prosecutor's appeal submitted at tribunal shall stay the execution.

If the court gives a parole decision that becomes final, the imprisonment place shall be notified, and a copy of the decision will be forwarded to the probation service and proximity police, that will take necessary measures for receiving the convict under the surveillance system for the next 10 years from release.

In accordance with art. 99 para. (2) Criminal Code, the court must argue their decision for parole, the reasons behind it, but it must also make a reminder for the convict on "his future conduct and the consequences he is to be exposed if he will commit more crimes, or will not comply with the surveillance measures or will not perform its obligations during the term of supervision ".

THE CRIMINAL PROTECTION OF THE FETUS AND A NEWBORN CHILD IN THE ACTUAL AND NEW CRIMINAL CODE

LAVINIA MIHAELA VLĂDILĂ*

Abstract
The article presents the way in which is achieved the criminal protection of the fetus and the newborn child, especially using the means of incriminating abortion and infanticide. The study emphasizes the lack of real protection for the intrauterine life, as a promise for life, which is trying to be remedied, in accordance with other European legislations, through the new Criminal Code.

Keywords*: abortion, infanticide, fetus, newborn child, criminal protection.*

1. Introduction

In the actual Criminal Code a very important place is taken by the protection of the life of the person incriminating the offences against life. But this protection is available only for already born human beings, namely for a person. If the Civil Law offers protection to the child, when we are talking about his rights from the moment of his birth, in the Criminal Code this protection is partial. The wording and placement of the two offences which mainly insure the criminal protection of the fetus and the newborn child, namely abortion and infanticide, reveals an antiquated and limited vision of the Romanian legislator. The new Criminal Code, in line with other European legislations, has managed to expose social and legal reality which cannot be neglected: life begins and must be protected from the very moment of conception. Synchronizing, in terms of protection and rights, the civil and criminal legislations, a unique vision is created. We used a few bibliographic sources. There are not many comments about the new Criminal Code, while there are many analysis and interpretations. However, such a synthetic analysis on this subject has not yet been made, I allowed myself to bring an original contribution to the comparative study of the actual regulation in this area.

2. Criminal protection of the fetus and the newborn child in the actual Criminal Code

2.1. The criminal protection of the newborn child. Starting from the constitutional provision of Art 22, Para 1, we notice that the fundamental law protects the right to life of every person, as well as the person's right to physic and psychic integrity. In accordance with these provisions, the actual Criminal Code protects the person, and almost not at all the fetus. Distinguishing between person and fetus, it is proper to define the two terms. Thus, by *person* we understand, criminally, every human being, regardless of his/her age, since the moment of his/her birth and till the moment of his/her death. *Person* shall also include the newborns, babies, children, teenagers, young men, grownups or elders. Some differentiations of this term can criminally create differences of legal classification, as that of the newborn. The term of *fetus*[1] represents the result of conception between two human beings of opposite sex starting with the eight week of pregnancy,

* Lecturer, Ph.D., Faculty of Law and Political-Social Sciences, "Valahia" University, Târgoviște (e-mail: laviniavladila@yahoo.com).

[1] Medically, the stages of evolution of the result of conception are: immediately after fecundation it is formed the **zygote**, after the cell division the zygote transforms itself in **blastocoels**, beginning the cell differentiation process which creates the **embryo** which, in the final stage of evolution, starting in the eight month till birth, creates the **fetus**.

when the cell differentiation process has been completed and the result of conception begins to take a specific form of the human species.

A closely look over the criminal legislation at this moment reveals the fact that only the person, in his/her different stages of evolution is under protection.

Thus, starting from the baby, child and until the elder, regardless of sex, the person's life is protected against any direct aggression committed with purpose, firstly by incriminating murder, a complex incrimination stated by three provisions, from Art 174 to Art 176[2]. This crime was completed with other offences against life, whose perpetration affects this fundamental attribute, with the difference that in their case, the immediate consequence of the perpetration is the result of facts committed either involuntary, as the involuntary manslaughter – Art 179 Criminal Code – or with prater intention, as in the case of assault or other violence causing death – Art 183 Criminal Code. Also, the Romanian legislator decided to incriminate the offence of determining or easing suicide – Art 179 Criminal Code, thus creating a full protection of the ways in which the life could cease, either without the person's consent, or being encouraged, instigated or even supported by other persons to take his own life.

These offences are not the only ones attempting to human life. The Romanian legislator incriminated in the special part of the Code other offences whose immediate consequence is the victim's death, offences which mainly affects other social relations, such as the security of the state[3], freedom of the person[4], sexual freedom of choice[5], patrimony[6], justice[7], safety on railroads[8], the established regime for certain activities stated by the law[9], public health[10], other social cohabitation relations[11], peace or humankind as the inheritance of humanity[12].

But, as stated above, all these offences refer to the criminal protection of the person. Analyzing a subcategory of the person, the newborn child has a certain protection, for the moment insufficient in the actual Criminal Code. Thus, if it is about killing right after birth of a newborn child, namely still wearing the marks of birth, the offence is classified as infanticide[13] if it is committed by the mother being in a disorder caused by birth, and murder if it is committed by any other person, including by family (father, grandparents, brother, mother if the offence overcomes the previously mentioned conditions)[14].

Regarding his health state or physical or psychical integrity, currently, the Criminal Code does not state any difference of criminal protection based on the age of the person. Though were

---

[2] Art 174 C Code incriminates the simple murder, Art 175 C Code incriminates the first degree murder and Art 176 C Code incriminates aggravated murder. The Romanian legislation did not keep the term of assassination, as in the case of other criminal legislations, for example the French one.

[3] Attempt threatening security of the state – Art 160 C Code, attempt against a collectivity – Art 161 C Code and offences against the representative of a foreign state – Art 171 C Code.

[4] Illegal deprivation of freedom – Art 189 Para 6 C Code.

[5] Rape – Art 197 Para 3 C Code, sexual act with an infant – Art 198 Para 6 C Code and sexual perversions – Art 201 Para 5 C Code.

[6] Theft – Art 211 Para 3 and piracy – Art 212 Para 3 of the C Code.

[7] Torture – Art 267^1 Para 3 of the Criminal Code.

[8] Failure to fulfill professional obligations or poor service of negligence – Art 273 Para 2 C Code, intentioned failure to fulfill professional obligations or poor services – Art 274 Para 2 C Code, leaving working post and presence at work being drunk – Art 275 Para 2 C Code, destruction and false signals – Art 276 Para 3-5 C Code .

[9] Non-compliance with the nuclear and other radioactive materials – Art 279^1 Para 5-7 C Code and non-compliance with the explosive materials regime – Art 2801 Para 5-7 C Code .

[10] Food or other products forgery – Art 313, Para 3 and 5 C Code .

[11] Scuffle – Art 322 Para 3 C Code.

[12] Genocide – Art 357 C Code and inhuman treatments – Art 358 C Code.

[13] Infanticide is stated by Art 177 C Code.

[14] Aggravated murder – Art 175 Para 1 Point c) and d) C Code, against a relative and taking advantage of her helplessness condition to defend.

positively modified in 2000 by the Law 197/2000[15], introducing the members of the family[16] as active and passive subjects of assault, other violence[17] or personal injury[18], these offences does not state a qualified form whose main objective is the protection of the infant against physical or psychical abuses committed by persons other than his family or those who are in charged with his protection.

Criminal legislation in its whole states a partial and a very unsatisfactory protection of health or physical or psychical integrity based on the person's age. If, for instance, the age was considered in offences against freedom or sexual life[19] of the person, creating a special protection for infants, in the case of offences against body and heath integrity the legislator did not manifested such a wish, which from our point of view represents a deficiency, which should be immediately corrected by a new modification of the Criminal Code. In fact, the Criminal Code in its special part only states two offences which indirectly protects the health and physical or psychical integrity of the infant, and, thus, of the newborn child. We are talking about the abandon of domicile[20] and the offence of bad treatments applied to infant[21]. The special legal object of these two offences is represented by family relations, whose normal development requires the protection of the normal development of the infant[22], not the protection of infant or newborn child's health or physical or psychical integrity. If the newborn child, still wearing the marks of birth is hit by his mother being in a disorder caused by birth, right after this moment, with the intention to kill, but the result does not occur, her offence represents attempt of infanticide, not yet sanctioned, which could be re-qualified as hitting or other violence, body injury or serious body injury, the first two of them in qualified circumstances over a family member[23] or in simple circumstances, unless it is proven that the infant was living or household with his mother. The last circumstance can sometimes be less probable since the mother, right after birth intents to definitively get rid of the newborn, causing his death. The introduction of the active and passive subjects, namely the family members, about whom we know that are those relatives living and house holding with the offender, can create difficulties in the establishment of a real degree of the social danger of the offence. It is true that at the introduction of this term, the legislator wanted to separately incriminate family violence, but family relations are endangered regarding children even if the parent no longer live together with them, and not only in the limited circumstance of living and house holding together.

Outside infanticide, if the newborn child is physically harmed by the father or other relatives[24], the incriminatory solution chosen by the legislator is pretty devious. We shall have, according to the Decision No 37/2008[25] of the High Court of Cassation and Justice, an ideal contest

[15] Law No 197/amending and suplementing some provisions of the Criminal Code was published in the Official Gazette No 568/15.11.2000.

[16] For the definition of the term of *family member* see Art 149[1] C Code .

[17] Hitting and other violence – Art 180 C Code.

[18] Personal injury – Art 181 C Code.

[19] We refer here to the offence of aggravated illegal deprivation of freedom – Art 189 Para 2 C Code, to aggravated rape – Art 197 Para 2, Point b, b[1], Para 3, the offence of sexual intercourse with a minor – Art 198 C Code, the offence of seducing – Art 199 C Code, to the offence of aggravated sexual perversion – Art 201 Para 2-5 C Code, sexual corruption – Art 202 C Code.

[20] Abandonment of domicile – Art 305 Para 1 Point a) C Code.

[21] Bad treatment of the infant – Art 306 C Code.

[23] The offence of aggravated hitting and other violence – Art 180 Para1[1] and Para 2[1] C Code, qualified body injury offence – Art 181 Para 1[1] C Code and aggravated body injury offence – Art 182 C Code.

[24] The term *close relative*, in its criminal sense, is defined by Art 149 C Code.

[25] Decision No 27/2008 stated in an appeal for the law by the High Court of Cassation and Justice, published in the Official Gazette No 177/23.03.2009.

of offences between hitting and other violence, body injury or serious body injury and bad treatments of children. But the offence of bad treatments supposes a repetition to realize that was seriously endangered the physical, intellectual or moral development of the child[26]. As well as infanticide, the application framework of this offence is limited because of the active subjects, who can only be the parents, legal guardians or the educators of the child. But if the infant or the newborn child is injured by the medical staff at birth or subsequent, as result of their negligence or by any other person not related with his education or who does not have a legal obligation of maintenance, then the newborn child is not properly protected, nor the infant is completely protected against abuses[27]. Let us not forget about the situations emphasized by the mass-media showing the lack of interest and illegal negligence of the medical staff regarding the protection of newborns in maternity right after birth.

This leads to the conclusion that infants, as well as newborns can be and are harmed beyond the family or educational relations' framework, for which situation the Criminal Code did not inserted a proper protection.

Actually, what we are suggesting is either the creation of a new text of law which must join the regulations regarding offences against physical or psychical integrity or the creation of a separate title or chapter which must criminally and legally completely protect the newborns and the infants, from the view of this fundamental value, namely health and physical and psychical integrity.

The noted issues were not completely remedied by the new Criminal Code[28].

Looking for solutions to such a protection of the child we noticed that not even the Law entirely dedicated to him, Law No 272/2004[29], does not state any kind of offences which criminalize hitting or body injuring the newborn child or the infant, this law stating only civil penalties. Though it states in its Art 2 the principle of the superior interest of the child, and though it states in Art 90 that "*physical penalties of any kind are forbidden, as well as the deprivation of the child of his rights protecting life, physical, mental, spiritual, moral or social development, body integrity, physical or psychical integrity both in family or in any institution charged with the protection, care and education of children*", Law No 272/2002 does not also state the precise and criminal mechanisms to insure the compliance with this legal obligation. This law is a civil one focused on the family protection of the child, on finding solutions to solve the situations in which the infant is unprotected, or when he has committed different criminal offences, not being liable, because is under aged.

Therefore, we have one more reason, not to leave such an area as sensitive to chance and to take attitude towards the violence against infants and the situations in which newborn children are physical or psychical injured, either by negligence, by intention or by prater intention.

2.2. Regarding the criminal protection of the fetus, in the actual form, the Criminal Code states even fewer elements for his protection. Promoting a simple thinking, tributary to some philosophical and too materialistic views, the actual Code excluded or did not even questioned the

---

[26] Tudorel Toader, *quoted work*, p. 399. Alexandru Boroi, *quoted work*, p. 587.

[27] Of course that the actual Criminal Code did not left unprotected such a situation. The actions of some medical staff, as a consequence of professional negligence, have lead, or precisely has as immediate result the death of the newborn child or his body injury, are qualified as murder by negligence in aggravated form – Art 178 Para 2 C Code, and in the second hypothesis have as result the body injury by negligence, with the condition that this offence to have resulted in an injury requiring medical care for more than 10 days – Art 184 Para 1-4[1] C Code. But in this latter case, now we are thinking about the newborn children injured by medical staff, of whom some have remained with lifelong after-effects, if it is sufficient the penalty of imprisonment for 3 months up to 2 years of fine – Art 184 Para 1-3, or even imprisonment for 6 months up to 3 years? Let us not forget that these newborn children are the future and it is the way we raise, protect and care them that will make them grownups. On the other hand, the failures of the medical system are not negligible, being here in a vicious circle.

[28] The new Criminal Code – Art 286/2009, published in the Official Gazette No 510/24.07.2009.

[29] Law No 272/2004 on the protection and promotion of the rights of children, published in the Official Gazette No 557/23.06.2004.

issue of intrauterine life and the way in which the development of the fetus could later influence life and physical and psychical development of the future child.

The fetus, or precisely the result of the conception in its various stages of development, does not explicitly appear as the subject of criminal protection in any text of the Criminal Code. There are, though, some regulations which indirectly protect it. First is the incrimination of abortion[30]. Except the fact that the *special legal object* of the typical offence of abortion is represented by the social relations regarding the protection of the health and body integrity of the woman against illegal termination of pregnancy, and not the protection of intrauterine life of the fetus. In other words, what the offence of abortion protects are not those social relations who protect the result of conception, for it to benefit of a normal development insuring his birth and the manifestation as a newborn child, but those social relations allowing a pregnant woman to have a normal physical and psychical health subsequent to an improper abortion which could have endangered her health, procreation capacity or even her life. Such a view places in foreground an already existing life, that of a pregnant woman, towards that of the fetus, which is considered to be a promised life, thus placed in the background. Although the protection of life, physical and psychical integrity and health of a pregnant woman is undoubtedly important, same is the criminal legal protection of the fetus, situation remedied by the regulations of the new Criminal Code.

The other criminal provisions, which indirectly protects the fetus are those related to the aggravation of murder if the victim is a pregnant woman[31] and those related to the aggravated form of body injury, committed with intention or prater intention and has as result the abortion of the pregnant woman[32]. That is about all that the actual Criminal Code states in this matter. Unsatisfactory.

3. The criminal protection of the fetus and the newborn child in the new Criminal Code

The new Criminal Code brings important changes of view, writing and regulations. Its study from the perspective of the analyzed area offers the satisfaction of a wealth of texts and the belief that a modern view shines through its provisions, view which could not leave outside life, and thus outside its criminal protection, the result of conception. Actually, the new code brings to the fore what the actual regulation fatally ignores – the fetus. If regarding the newborn child the new code amends the regulations on body injuring him, the fetus is for the first time protected in the Romania legislation, partially, when it is a sure hope of life, thus being made important steps for recognizing it some rights.

3.1. The criminal protection of the newborn child.

As we have mentioned in the preamble of this paper, the newborn child is not totally ignored. One of our previous observations, considered by the legislator, regards harming the newborn by the mother, right after birth, without the offence being considered as infanticide, eventually as a simple, or qualified, form of general offences resulting in the body and health injury of the newborn.

Specifically, the new Criminal Code by its Art 200, Murder or body injury of the newborn child committed by the mother, incriminates both the situation in which the mother intentionally or prater intentionally causes the death of her child, and when, after birth she causes him a body or health injury.

[30] The offence of illegally inducing abortion – Art 185 C Code.
[31] Art 176 Para 1 point e) C Code states that the murder of a pregnant woman is first degree murder.
[32] See Art 182 Para 2 C Code.

However, the innovations brought by this text are not neglected. Thus, the actual offence of infanticide disappears, the Code using a more complex phrase designed to cover also the extenuating version of the offence (*murder or injury caused to the newborn child by the mother*).

In terms of the already existing conditions, modifications appear regarding the special legal object. If in the actual regulation infanticide is an offence against life, it becomes in the new Code an offence against a family member, its legal object becoming complex, injuring both family relationships, as main legal object, as well as relations of life, in the simple form, or life, health and body integrity in the extenuated form, as secondary legal object.

Regarding the offenders, they are the same, mentioning that from the very name of the offence the active subject, namely *the mother*, is emphasized, fact that makes us believe that such an offence is considered by the legislator to be less aggravated only from the perspective of the active subject and his condition when committing the offence.

From the material element's point of view, the new text has significant differences. Thus, it is precisely delimited the time in which the offence may occur for it to be qualified according to Art 200; this time, exactly, this period, is an interval of 24 hours, starting from the moment of birth, comparable to the actual situation in which the phrase "*immediate after birth*" had to be amended by the interpretation of the doctrine and the jurisprudence, in the meaning that the newborn child is considered murdered immediate after birth if he still carries the marks of birth. Of course that in the case of a suspicious death of the newborn child is the responsibility of the forensic expert to determine the exact date and time of birth, where possible, the doubt must benefit to the offender. Likewise, if in the current regulation the mother must be in a disorder mandatory caused by birth, for her offence to be infanticide, the new Code removes this wording, preferring one with a larger content, namely "*physical disorder condition*". We notice that this *physical disorder condition* refers to all kinds of disorders, regardless of the cause, allowing a broader specification of this offence. The disorder can be caused by birth, obviously, but it can be also caused by an unstable psychical condition of the mother, who, for instance, being abandoned by the husband or lover, living in harsh conditions or subjected to public opprobrium, could resort to such a thoughtless gesture. The new regulation also includes, as we can see, those past and present situations when the mother, though she is disordered, her condition was not the result of birth, but of other causes, as the above-mentioned, situations determining the qualification of first degree murder[33]. The mental disorder must be established by medical documents after a psychiatric examination.

From the subjective point of view, the offence is intended, in both its ways, the intellectual factor being affected, in the meaning of the existence of a reduced capacity of discernment than the normal one of the mother, caused by her disorder condition. We believe that there may be some legal qualification issues when the offence is committed with indirect intention, because it could be easily mistaken with prater intention, guilt specific to the mitigated form of the offence.

Regarding the applicable sanction it is still prison, but with lower limits, from 2-7 years in the actual Code to 1-5 years in the new one.

The offence is mitigated, having in its turn several means of committing, an absolute novelty in the area. Among the first means of committing is hitting, other violence or body injury[34] of the newborn child by the mother, in the same conditions as the classic form, namely right after birth, but no longer than 24 hours, the mother being in a psychical disorder condition. The text including a standard reference is amended by Art 193-194 of the new Criminal Code, which incriminates hitting, other violence and body injury, texts which are different from the actual one. If the immediate result of the offence is health or body injury of the newborn child, then the offence is intentioned, as well as in the previous regulation.

[33] According to Art 175 Para 1 Line c) and d) of the Criminal Code.

[34] The new Criminal Code reduces the offences of injuring committed with intention from 3 to 2, aggravated body injury being incriminated both in the aggravated form of the offence of injuring and other violence – Art 193 Para 2 C Code, as well as in the body injuring offence – Art 194 Para 1 Point b) C Code.

The second mean of committing refers to the situation in which the result of the injuries caused by the mother, in the previously shown situations, is the death of the newborn child[35]. We notice that as well as in the previous phrase, the immediate consequence is the death of the victim, but the essential difference is in the form of guilt that the act is committed, talking here about prater intention.

The life of the newborn child is under criminal protection because it represents a fundamental value, and is incriminating by a new offence, *domestic violence* – Art 199 of the new Criminal Code, offence consisting of intentioned murder committed by any member of the family, including relatives or the mother, but committed outside the conditions stated by Art 200 of the new regulation. It is in fact the first degree murder of the husband or any relative, but which received a special regulation, in a new chapter including all kind of violence against family members[36]. It is also considered violence against family members when the death of a member is the result of the prater intentioned offence, namely an aggravated form of the offence of injuries causing death, inserted in this article for humanitarian provisions, as well as in the case of the previously debated Art 200.

From the perspective of the protection of health and body integrity of the newborn child, it is again achieved by a special criminal protection, the future Criminal Code stating in the same Art 197 the hypothesis in which hitting, other violence and body injuries are intentionally committed against a family member.

Otherwise, Art 199 Para 1 refers to five previous legal texts, namely Art 188, 189, 193-195, stating family violence as their aggravated form[37], with the notable difference that the subjects of this offence must be family members.

We can notice that in the case of *family violence*, as well as in the case of *murder or injury against the newborn child committed by the mother*, the legislator did not understood to separately regulate the situation in which the murder or health or body injury is the result of guilt, thus applying the common law text. The special mention is the fact that in the case of intentionally committing body injury against a family member, the criminal proceedings are started ex officio, not only based on a filled complaint[38].

3.2. The criminal protection of the fetus. Remarkable for the new Criminal Code is the fact that it introduces as a possible passive subject of some offences, the *fetus* itself. The term is explicitly used in the naming of Chapter IV *Offences against the fetus*, as well as in the marginal text of Art 202, *injuring the fetus*. The idea of offering to the fetus a special regulation was borrowed from the Spanish Criminal Code; with the difference that in the Spanish regulation, the offence of abortion is stated in a separate title, Title II – *Abortion*[39], while the injuries against the fetus are found in Title IV, consisting of two articles[40]. But the Spanish criminal legal provisions protecting the fetus are different from the ones incriminated by the Romanian legislator. If the Spanish Criminal Code protects the fetus during the entire period of the pregnancy against any injuries against it, committed either by intention, or guilt, including medical guilt, offences which may endanger it normal development during the pregnancy and becoming a vivid and viable newborn child, the Romanian Criminal Code especially protects the fetus when it is about to be born, and only in certain circumstances during the pregnancy.

[35] We believe that is indirectly created a mitigated form of the offence of hitting and injuries causing death.

[36] The term of *family member* is broader in the new Criminal Code. The new term includes the wife/husband, ascendants, descendents, brothers and sisters and their children, as well as the persons adopted by the family, according to the law, without including the condition that they all must live and household themselves together with the offender, but also the persons who have established similar relationships to those between husbands (concubines) or between parents and children, if they cohabit.

[37] The special maximum of the penalty stated for each offence is increased by a quarter.

[38] According to Art 199 Para 2 of the new Criminal Code.

[39] According to Art 144-146 of the Spanish Criminal Code.

[40] Art 157 and 158 of the Spanish Criminal Code.

Chapter IV states two incriminatory texts: Art 201 regulating *abortion*, and Art 202 regulating *injuries against the fetus*.

The first one, *the abortion*, represents the text of the actual Art 195, which incriminates it. It is easily seen that the legislator enjoyed changing the articles' names!

Analyzing the new offence from the perspectives of the differences with the new regulation, we notice that its legal special object is totally opposite to the present one. Firstly, we appreciate that in this case, for all forms of the offence (Art 201 Para 1-3 new Criminal Code) the legal object becomes more complex. For the specific form, the main legal object is the protection of the life of the fetus and its normal development, while the secondary legal object is represented by the possible injury caused to the pregnant woman. Regarding the aggravated form stated by Para 2, the secondary legal object is represented by the social relations on the freedom to decide of the pregnant woman, and in Para 3 the secondary legal object is represented by the social relations which protect the health of the pregnant woman against a body injury or an offence against her life.

In terms of the material element, in the context of the simple form a single modification occurs, stating even more clearly the conditions for committing the offence. We are talking about Art 201 Para 1 Line b), which states that the abortion is an offence if it committed by *a doctor not specialist in obstetrics and gynecology, but has the right to practice it*, a new condition towards the regulation in force.

For the next paragraphs the text closely follows the actual regulation of Art 185 Criminal Code. A modification occurs regarding the attempt. The new text states[41] that the attempt is punishable only in the case of the simple form and of the qualified form stated by Para 2, namely when the abortion was produced without the pregnant woman's consent, without including here Para 3. The logical conclusion regarding this regulation is that the offence stated by Para 3 is committed with prater intention, attempt not being allowed.

Also was made a new clarification of the text regarding the punishments. In the actual code are stated as grounds for impunity the cases in which the abortion was caused to save the life, health or body integrity of the pregnant woman from a serious and imminent danger which could not be eliminated in any other way, or when the abortion is required for therapeutic reasons, even if the pregnancy exceeds 14 weeks, or when the abortion is made without the consent of the pregnant woman, being impossible for her to express her will *and* this action being required for therapeutic reasons. Stating it as situations for impunity the legislator created for the offender a delicate situation, because even if he wants to make a good deed to the pregnant woman, will not be acquitted and considered not guilty, but his action will be an offence, without being punished, ceasing only the criminal proceedings. Moreover, the first of these three situations is actually a situation for removing the penalty, namely the criminal liability[42]. Reverting to the new Criminal Code, it states that the action is not an offence, namely it removes the criminal liability when *the abortion is therapeutic, being made by an obstetrics and gynecology specialist, up to 24 weeks of pregnancy, or the subsequent interruption of pregnancy for therapeutic reasons, in the best interest of the mother or the fetus*. Differences are very important. The new text regulates that the action is not an offence only when it is about an abortion in any other circumstances that the ones already shown for therapeutic reasons, when the action is committed in these circumstances by the obstetrics and gynecology specialist, establishing a maximum limit of 24 weeks of the pregnancy (almost 6 month), the exceeding of this term being possible also for therapeutic reasons, considered in the interest of the mother, as well as of the fetus.

[41] Art 201 Para 5 in the new Criminal Code.

[42] Matei Basarab et al., Codul Penal comentat, 3rd Volume, Special Part, Hamangiu Publishing-house, Bucharest, 2008, p.203.

Finally, another innovation of the regulation refers to the express statement of the fact that the abortion committed by the pregnant woman is not punishable, this becoming a new reason for impunity in the future code.

Injuring the fetus is a new offence stated by the Romanian Criminal Code. It has a simple form[43], two aggravated forms[44] and four mitigated forms[45], as well as a clause for removing the criminal liability for the offence[46] and a clause for impunity[47].

The special legal object of this offence exclusively refers to the criminal protection of the fetus during pregnancy against any injuries which could affect its normal development towards the superior phase as a newborn child or could even lead to its death during pregnancy or after the birth.

Though are not express stated, in our opinion the active subjects of the simple and the first aggravated form of the offence – Art 202 Para 1 and 2 of the new Criminal Code, can only be the medical staff assisting the birth, because it seems hard to believe that today, the birth could occur without medical assistance. In the aggravated form stated by Art 202 Para 3, the offence can be committed by any other person, because as well as in the case of the mitigated form stated by Art 202 Para 4, the offence can only be committed by the mother. Regarding the passive subject, it is obviously the fetus, being a qualified passive subject.

We objectively notice that for all four forms the legislator added to the material element a certain period for the offence, conditioning the existence of the offence by it being committed in that time.

The simple form of the offence consists of the injury against the fetus *during birth* with the condition that it encumbers the manifestation of the extra uterine life. This assumes that, as a result of the injuries against the fetus during birth, it is born dead, not leading to a normal life, that of a newborn child.

The second form of the offence consists of injuring the fetus during birth, but in this case the child will be born, but as a result of the injuries he suffers a body injury (this is the mitigated form), or may subsequently die (the aggravated form). The difference in this latter case is that in the first case the child is not born, the fetus dying during birth, while in the second case the fetus is born, it becomes a newborn child, but subsequently dies. The legislator does not state a specific time for the child to live, he could live for from a few minutes, days, weeks or even months, but the immediate consequence, his death, occurs as result of the injuries caused during birth.

For the third aggravated form, a body injury of the fetus is produced, but this time *during birth*, namely starting from the 8th week of pregnancy until the beginning of birth, when the result of the conception is called a fetus, and as a consequence of this injury the future newborn child is harmed or dies, subsequent to the birth because of these injuries. If the fetus dies because of the body injuries occurred during birth, the offence will legally be considered as the offence of body injury if intentioned – Art 194 Para 1 Point d) of the new Criminal Code, and as negligent injury – Art 196 Para 2 of the new Criminal Code.

The last of the forms refers to the situation in which the mother injures the fetus during birth, for this situation, the text adding a second condition regarding the mother, namely that she must be in a psychical disorder. This new regulation shall end the doctrinal dispute, according to which the murder of the fetus[48] during birth by the mother psychically disordered because of the birth is not considered to be infanticide, but it is qualified by certain doctrinaires as abortion (a more realistic

[43] Art 202 Para 1 of the new Criminal Code.

[44] Art 202 Para 2 and 3of the new Criminal Code, when the death of the child occurred.

[45] Art 202 Para 2, 3, 4 and 5 of the new Criminal Code, when the physical injury of the child was caused by any person, when the physical injury was caused by the mother or when the previous actions were committed by misconduct.

[46] Art 202 Para 6 of the new Criminal Code.

[47] Art 202 Para 7 of the new Criminal Code.

[48] For the moment, the injury of the fetus during birth is not punished.

solution, because we are talking about a fetus, not a child-person)[49], while others legally consider the action as first degree murder[50].

Regarding the subjective side, the offence is committed with all its elements of guilt. Thus, mainly it is intentioned. According to Art 202 Para 5 of the new Criminal Code, the offences stated in the previous paragraphs can also be committed of negligence, then the limits of punishment being halved. The perpetration of this offence of negligence is very possible during the medical act or in the case of some accidents to which the pregnant woman is a victim. The offence is committed with prater intention when as a result of the injuries against the fetus, either during pregnancy, or during birth the child dies.

As stated at the beginning, the new regulation introduces a new clause of removing the criminal liability of the offence. According to Art 202 Para 6, the offences stated by Para 1-3, so when are intentionally committed are not an offence if are committed by *a doctor or a person authorized to participate at the birth* (midwife or nurse) *or to monitor the pregnancy, it was committed during the medical act, following medical specific procedures made in the interest of the pregnant woman or of the fetus, as a consequence of the risk inherent to the practice of medicine*. We consider that the wording of this removing clause of the criminal liability of the offence can raise contradictory solutions, remaining to the judge to decide situations as *compliance with the procedures specific to the profession, the interest of the pregnant woman or the fetus or the risk inherent to the medical act*.

The last element is represented by the fact that if the pregnant woman injures her fetus during pregnancy, the offence is not punishable, the situation being impunity[51].

4. Conclusions

The actual Criminal Code has served the society for over 40 years and continues to do it with syncope and lacks inherent to a more rapid human evolution than the legislative one. In the area of offences against life, health and body integrity, except tightening or changing penalties, among the most important modifications, and that only after 1989, were those regarding the introduction of new qualified active or passive subjects, as well as the introduction of the aggravated forms of *family violence*. Criminological proven as a widespread plague, not only in our country, but even at the European and world level, family violence has found in the new Code a more faire incrimination, though it could be easily improved. The existence of a separate chapter called *Offences against family members* is an example that the Romanian legislator has begun to consider and adapt to the situations generated in society by this offence. Moreover, it understood that in order to create a healthy society, from all perspectives, an important aspect is the protection of the fetus against any injuries or hurting, regarding which numerous psychiatric and infantile psychology studies which have emphasized that it depends the normal psychic development and health of the future child. For that it was inserted in the new Criminal Code a chapter called *Aggressions against the fetus*, incriminating offences in order to protect this hope of life, especially at birth, and in special conditions, during pregnancy. Such regulations can only enjoy us and give us hopes that the entire society and the medical act of bringing a child to the world shall be unfolded with a greater responsibility and kindness, both for the pregnant woman, who represents the archetype of motherhood, and for the fetus.

MONEY LAUNDERING TECHNIQUES COMMONLY USED. GENERAL APPROACHES

CONSTANTIN NEDELCU[*]

Abstract
Upward trend of criminality in Romania is the result both of the impact of serious social and economic problems typical of the period of transition to a market economy, and misunderstanding of freedoms by a lot of people interested in reaping benefits by evasion, doubled by the tendency of subjects infringing the law to set up illegal contacts in other countries, particularly among immigrant groups and even within some structures of "organized crime". The provisional state that existed in all sectors of socio-political and economic life, including in respect of public order observance, facilitated expansion of criminal phenomenon, particularly in the area of violent crimes and against public and private property, inappropriate settlement of each and any social tension and conflict created precedents that led to escalating protest demonstrations and personal or collective justice. In the study hereby, we shall approach a number of money laundering techniques commonly used, limiting ourselves to their general overview, exclusively.

Keywords: *money laundering, illicit income, drug trafficking, organized crime, illegal migration*

Introduction

After December 1989, white-collar crime included in its complexity practically all economic and financial spheres, starting with the technical and material supply in the economy and ending with the process of privatization and settlement of banking and financial operations. Amid a sharp state of indiscipline and disorder of an attitude of defiance, of economic legislation on the management and protection of public assets, there have occurred acts of embezzlement, abuse and negligence, beneficial for money-making subjects, numerous assets being valued outside Romania on account of aggravated smuggling.

By setting up connections in the underworld, internationally and crossing the border, using false documents or passing through locations other than those subject to customs control, there has been exploited a broad range of products, from the ones standing for the population's basic needs up to national heritage assets and radioactive substances.

On account of shortcomings in the law, abuse, negligence and other unlawful acts that are committed in connection with natural resources and environmental protection, there have been introduced in the country toxic wastes and residues under cover of products required for domestic market, as well as other goods threatening population's health and the environment, such as: lacquers, paints, pesticides, herbicides, fungicides, etc.

Within the banking and financial institutions system, abuses and corruption acts relating to loans' granting, default of duties and taxes payment, etc. have seen considerable growth.

Additionally, there became particularly widespread acts of deceit, forgery and use of forgery on account of private companies issuing limited amount bad checks (no funds available in the account) for the payment of goods or services, bringing about considerable damage, sometimes difficult to imagine by a sound mind.

There is a continued increase in customs exchange frauds and in relation to the non-compliance of import and export operations, which are substantially detrimental to the State. The escalation of corruption in all spheres of economic life and committing these acts by public servants,

[*] Lecturer, Ph.D., Department of Criminal Law, Faculty of Law, „Nicolae Titulescu" University, Bucharest (e-mail: constantin nedelcu@univnt ro).

often led to economic mechanisms' dysfunction and considerable damage brought to the public and private sector. In the economic and financial area there may be recorded a trend towards the restructuring and multiplication of organized crime, reflected in criminal acts, complex in terms of numbers of participants, methods used, damage caused, weight of economic agents and relevant institutions (state-owned companies, budgetary institutions, bank credit system, etc.).

Money Laundering Basic Rules

a) Anonymity - is one of the money laundering rules under which transaction with proceeds of crimes should be similar to other legal transactions in the field or place where they occur. Fundamentally, cash must not leave any trail leading to its source. In economies where cash is often used for purchases of smaller or greater value, its arrangement entails no risk for the offender. However, in most countries, almost all transactions involving large amounts of money are not performed cash, but by using other means of payment (checks, bills of exchange, credit cards), therefore spending or storing large amounts of cash raises suspicion.

For this reason, criminals have developed various techniques and methods of funneling cash into the financial system, namely:

- structuring, *i.e.* broking large amounts into smaller amounts and depositing them by several people in various bank accounts or using relevant amounts of money in order to purchase other payment instruments, such as bearer securities or money orders;

- cash smuggling, by simply illegally withdrawing outside the country a cash amount and placing it in another jurisdiction, generally with less rigorous rules, usually by courier or hiding the amount on cargo ships;

- interference of illegal funds with funds coming from a legitimate business with cash, amounts which are subsequently deposited together.[1]

b) Speed - Fast-movement of assets, so they can not be detected. Once the cash is pumped into the financial system, whether or not in the country of origin, the money launderer may use the benefits entailed by information technology progress (IT), modern methods of transferring money to put it quickly into service. Electronic bank transfers can move large amounts of money almost anywhere in the world in just a couple of minutes, without the owner having to go to the bank or involve bank employees.

c) Complexity. By broking its funds into several transactions and on account of the speed of these operations, the money launderer makes is difficult and sometimes impossible for investigators to follow the money track. Transfers from one account to multiple accounts in other countries and subsequent redirection from those countries create a multinational electronic complex circuit that makes it difficult to be tracked by research bodies.

d) Secrecy. Despite the fact that bank secrecy bears a legitimate purpose and a commercial justification, it can lead to the emergence of tax havens, which provide protection for criminals, worldwide operating approximately one million anonymous corporations, which impose strict financial secrecy and protect foreign investors from investigations and judicial inquiries[2].

Techniques to cover-up the illicit source of income

- overvaluing a good's price under an invoice with a value greater than its true value or under a partially or totally false invoice;

- false commercial transactions inserted into a legal business by: cash transactions from one currency to another repeatedly and quickly, using multiple bank accounts, their recurrent opening and closing, bank account wire transfers from legal entities' accounts to individuals' account, external

[2] C. Voicu, *op. cit.*, page 109.

remittances of large amounts using multiple monetary instruments, bank or travel checks, credit operations, investments, fictional guarantees;

- method of returned loan. A portion of the funds illegally transferred abroad revert to the offender or the company it controls as a loan. This operation is then followed by returning the amount borrowed, plus interest and possibly late penalties agreed by the parties, leading to increasing amounts, thus entering the legal circuit;

- insurance policies, on account of frequent changes of beneficiaries, payment of higher premiums than normal due ones and subsequent claim for refund to be made to a third person, receipt of insurance premiums by brokers or financial intermediaries in offshore centers that fail to observe registration or evidence rules, to which in fact they are not intentionally contractually bound.

Systems used in money laundering

a) Offshore destinations. Offshore havens are countries or territories, often islands or group of islands, which support fictitious implantations of companies, simply used as mailbox, elastic regulations areas in terms of currency exchange control and great freedom of taxes, providing at the same time, almost without exception, impenetrable bank secrecy and many relevant rights to private companies.

Once the money is converted into a form that can be transferred or which may be smuggled, they usually take the path of an offshore center.

This system offers real practical advantages that criminals are aware of. First, funds are placed in the geographical areas protected by jurisdictions that do not allow the influence of jurisdictions in which profits were obtained. On account of involving another jurisdiction, there emerge several legal and financial barriers in the way of investigative bodies, both in terms of achieving, as well as in terms of conserving or exploiting the evidence that can be upheld in court. Secondly, many countries are still facilitating money receipt from abroad irrespective of their origin or remittance method, money that can go directly and discreetly in the conventional banking system, since there is no obligation to pay taxes, there is no evidence of share capital, no double taxation agreement, no obligation to keep accounting records, no directors or shareholders registered, ignorance of people who hold decision-making power in the company, ignorance of the identity of the beneficial owner, etc. Typically, owners of companies are not resident in countries of incorporation of their companies, these persons being represented by proxies, who receive orders via previously agreed encoded methods.

Tax havens are one of the most common procedures used in fraud and tax evasion at international level.[3]

b) Shell companies. Essentially, shell companies are those that exist only on paper. The company's incorporation documents may include a valid bank account and something more than the name or address of lawyer or agent in charge of setting up the company, proxy and perhaps any shareholders.

It comprises those companies having no significant assets or own business operations that are used by their owners to conduct their business or to maintain control over other companies. A shell company is registered in the country of incorporation, but it is not traded on capital markets, and does not operate independently. Being not in themselves illegal, money launderers, white-collar criminals and terrorist financers can relatively easily convert and use them to disguise illicit source of income. These companies are easy to set up and can be connected with other shell companies in the world. If a shell company is incorporated in a jurisdiction with a rigorous legislation in terms of bank secrecy, it is almost impossible to identify true owners or directors of the company and, therefore, it is impossible to monitor illicit funds reimbursed to the beneficial owner.

[3] M. Mutu, *Off-shore – între legal şi ilegal (between legal and illegal)* // Revista Națională de Drept (*National Law Review*), no. 7/2003.

A successful technique used by law breakers is to set up shell companies in order to sell shares to "foreign investors". These "foreign investors" are, actually, intermediaries employed by money launderers. Buying shares is performed on account of legally required documentation and, thus, the money comes legally into possession of offenders.

Usually, setting up shell companies is performed not by owners, but by agents, who select jurisdictions that offer the advantages of fast incorporation, low cost of registration, minimum clauses or in search for those geographical areas which facilitate the emergence of companies "thick and fast", locations where no information about the owners is required or where the disclosure of such information is strictly prohibited[4].

c) Employing freelancers. Lawyers, notaries, accountants and other freelancers carry out a significant number of activities in support of their clients, organizing and administering their financial and commercial businesses. First and foremost, they assist individuals and corporations in areas such as investments, company incorporation, administration, management, optimization of their financial standing and other legal transactions. Moreover, legal advisers also prepare, and, if necessary, gather necessary documentation for the setup of companies. In many cases, in return for substantial material benefits, such professionals may be directly involved in carrying out specific types of financial transactions, for example, keeping money or paying the price for the purchase or selling of real estate. Some of these freelancers come to specialize in identifying companies or offshore locations for using them in money laundering schemes, fabricating all necessary professional documentation, providing thus a semblance of business legality.

Essentially, freelancers employed as intermediaries possess knowledge and skills that can be used by law breakers for converting illegal profits into legal income.[5]

d) **Alternative money transfer systems**. Alternative fast money transfer systems (SAT) allow money to be in circulation around the world without using the conventional banking system. SAT may be used for both legal and illegal purposes, and can exist in various forms. Records of all operations are usually kept, but these may be done in dialect, in abridged form or under unfamiliar language to investigators and therefore it may be difficult or impossible to interpret it.

For obvious reasons, SAT is an attractive and widely used system by organized crime networks and dangerous offenders. SAT is used not only to launder proceeds of crime, but also to avoid tax fees and customs duties. Anxiety is manifested internationally relating to the fact that SAT can be easily used in terrorist financing. It is estimated that there are thousands of SAT bankers in Europe, mainly falling under the heading of Asian communities, and their customers are ordinary individuals and not offenders.

Although it is a discrete business, underground economy bankers are probably known and respected within the Community for the services provided in terms of transferring money earned abroad to home families, often at a better exchange rate and under a commission lower than that of banks or official fast money transfer systems.

Money transfers are usually used by people who do not keep a traditional relationship with the bank and who want to transfer money to their country of origin, with minimum expense. These transfers can also be used by money launderers. Through the medium of an international network of agencies located all over the world, one person can electronically transfer money quickly (usually within about 10 minutes), reliably, conveniently and in exchange for charm prices to any other person in one of more than 150 countries.[6]

e) Casinos and the Internet. A casino is a commercial gambling club that offers various types of gambles, such as slot machines, which asks for coins or chips to be activated.

Casinos are vulnerable to being manipulated by money launderers due to the speed and intensive nature of cash games and because in a large number of countries casinos provide their customers with a wide range of financial services. These services available in casinos are similar in many cases with those provided by banks and may include credit or debit accounts, facilities for sending or receiving funds directly from other institutions, as well as foreign exchange services and cash collection checks.[7]

Casinos in Romania have not yet applied formal financial services, but we can not exclude the fact that they might be interested in these services in a short period of time.

Risk of money laundering is considerably high because the Internet at use in these clubs provides easy and almost universal access, eliminates face-to-face contact and is extremely fast and efficient in the removal of borders. There are three features of the Internet, which together tend to aggravate some conventional risks of money laundering:

- easy access via the Internet;
- contact between the customer and the institution is depersonalized;
- speed of electronic transactions.[8]

f) Registered and bearer bonds companies. Shareholder certificates are documents attesting priority over the corporation or the company. In most countries, the shareholder is registered and any transfer of shares to another person must be registered in an official register. However, some jurisdictions can provide ownership or transfer of shares under a "bearer" form.

These bearer shares confer ownership rights over the company more than the current ownership of shares. These "bearer" shares do not imply any record of the shareholder and the person who is in physical possession of the shareholder certificate is the owner of a relevant part in the company. It is therefore likely that the true owner of the company may not appear in any records of companies or any government statistics. When the identity of shareholders is not registered by the time of issue and transfer of shares, ownership is anonymous. Such companies represent an excellent means for acquiring, holding and transferring wealth anonymously, under cover of financial control or judicial bodies.[9]

g) Using non-profit organizations. Non-profit organizations collect hundreds of billions of dollars annually from donors and distribute this money to beneficiaries –after paying their administrative costs. Both their administrative expenses and the amount and necessity of beneficiaries' expenses may be exaggerated and their usefulness difficult to assess.

Use in bad faith of non-profit organizations for money laundering and terrorist financing is a method commonly used by organized crime networks, these entities being for the most part established for such purposes specifically[10].

This issue came to the attention of the International Financial Action Task Force (FATF)[11], the G8 and the United Nations, as well as the attention of domestic authorities in several regions.

Out of the studies carried out globally, there come to the front the **following sources of "dirty money":**

1. drug trafficking;
2. smuggling of weapons, ammunition and explosives;

---

[11] The International Financial Action Task Force.

3. illicit traffic in cultural heritage assets, gold, jewelry and precious stones;
4. tax evasion;
5. kidnapping followed by ransom;
6. trafficking in human beings (prostitution and pimping);
7. political corruption;
8. counterfeiting trademarks, banknotes or any other means of payment;
9. bank frauds and tax frauds[12].

An important indication of a serious anomaly in the international circuit of economic transactions is the fact that the total amount of overall balance of payments is zero.

More specifically, the total goods and services exported from any country and all countries should be equal to the total imported goods and services. Accordingly, the total balance of payments deficits of all countries should strive towards zero.

Since 1970, the difference between the global value of imports and exports has emerged and continues to increase, reaching a maximum of $ 100 billion in 1994, level still conserved.

This difference can be explained only by the fact that methods of recording international transactions are not working properly or that a substantial part of these transactions occur outside the legal and official framework.

A hypothesis under which it may be explained this apparent aberration is the one based on illegal capital flows, unrecorded in official statistics and caused by the double invoicing of exports and payments by beneficiaries residing abroad, failing to declare them to legal authorities.

In order to understand to some extent the explosive growth of the mass of speculative capital that flows through the veins of international finance, it is necessary to analyze some more or less common processes, whose association with money laundering has not been reviewed so far.

One of these is the process of development and integration, both nationally and internationally, of illicit markets. This development of illegal markets, especially in the last two decades has resulted in a corresponding expansion of transnational white collar crime and the need for them to establish connections with institutions hosting "countryless" capitals. It can be asserted with certainty that any major criminal action, which seeks maximum gains, continuity of operations and counteraction of official organizations, shall reach the critical moment of integration requirement into the banking and financial system.

Techniques used for "money laundering" originating from illegal businesses are greatly diversified and, presumably, many of them are unknown to specialists within bodies charged with financial control and fight against law infringement.

It can be asserted that, fundamentally, the basic technique comprises four successive stages:

1. The establishment of lock boxes - Money originating from illicit business is deposited in various lock boxes. These accounts are real bank deposits to be transferred. These accounts are designed to camouflage and are usually established on behalf of fictitious companies, being therefore hardly identifiable.

2. Bank wire transfer from lock boxes to accounts opened with foreign banks - Monies accumulated in lock boxes are transferred to accounts in foreign countries, through a number of complex operations which aim to prevent identifying the real source of money. In order to successfully carry out this stage, two types of countries are preferred:

a) countries guaranteeing bank secrecy and making it a state policy (Switzerland, Liechtenstein);

b) countries facing economic difficulty and which, under laws developed, are constantly struggling to attract foreign capital (developing countries, third world countries);

[12] C. Păun, *Crima organizată sau organizarea crimei? (Organized Crime or Crime Organization?)*, Al.I.Cuza Police Academy, Bucharest, 1993.

3. Investing monies in illicit businesses yielding benefits;

4. Reimbursement of "laundered" money. - Repatriation of benefits now smelling "clean", which accounts for the entire operational complex from the perspective of interested parties.

It should be noted that, regardless of the complexity of the technique of "laundering" money originating from illicit business, it can not be translated into practice devoid of the public servant's seduction and participation[13].

Towards a better understanding therein, we shall mention thenceforth some of the money "laundering" techniques most commonly used.

1. Double invoicing.

Accordingly, a company buys at overvalued prices goods or services of a company incorporated in a country, preferably with favorable tax laws. This system allows the export of surplus capital. Typically, the company in the haven country is a business affiliate or falling under the heading of the same corporation.

2. Real estate speculation simulated

It deals with purchasing a property by underestimating its real value and reselling it after making some "improvements" to its fair value. Ex.: A person buys a property which is worth 5 million lei, but official documents set forth the price of 3 million lei, the difference being made up "as agreed" in cash. Subsequently, the same property is sold at its fair value.

3. Loan in cash, followed by reimbursement through the instrumentality of banking tools.

This reimbursement may be covered through fictitious contracts hardly controllable (e.g. consulting, know-how, etc.) Bogus loan technique is also applicable.

4. Money laundering in casinos legally established, a system that allows laundering of dirty money and counterfeit banknotes, as well.

The system employed is based on that gambling chips can be unlimitedly purchased with cash, while earnings may be transferred, upon request, directly into the personal account or the account of another person, company, their origin being grounded. Holders of such liquid capitals accumulated out of "dirty" money take advantage of this situation and organize a real circuit of legality. However, this technique is quite laborious, it implies the assumed risk of losing substantial amounts of money and does not allow "laundering" of large amounts of money. The system is widely used by counterfeit currency launderers (obviously high-class counterfeit currency)[14].

Sources of dirty money

a. Trafficking in Human Beings ("mass" prostitution and pimping).

An explosive phenomenon manifested immediately after December 1989, which lately has assumed a more organized form, stands for prostitution and pimping.

The alarming evolution of prostitution, especially among minors, in some cases caused by blackmail and forced determination spread abroad, entailing the risk of sexually transmitted diseases and even AIDS.

The eagerness for easy and quick earnings determined that many subjects from balanced families, decent and honest, with a high school or even university education enter the crime scene of this kind of facts that amplified the phenomenon alarmingly.

However, many active prostitutes on record, disposing of capital, associated with old pimps becoming entrepreneurs and owners of commercial establishments but, in parallel and in disguise, also deal with the placement of young women to different people, especially foreigners, in exchange for safe and consistent profits.

---

[13] C. Voicu, *Investigarea criminalității financiar-bancare (White Collar Crime Investigation)*, page 201.

[14] Șt. Popa, *Economia subterană și spălarea banilor (Underground Economy and Money Laundering)*, Bucharest, Expert Publishing House, 2000, page 211.

Another category of prostitutes and pimps, promptly exploiting existing facilities moved their territory of action in other countries, especially Turkey, Greece, Cyprus, Austria, Hungary, Italy, Germany.

Investigation of individuals from these categories, claims filed by some parties as well as data and information obtained through relevant work methods, revealed that some young women, many of them underage, failing to get employed after graduation fell victims to some "entrepreneurs" who recruited and enchanted them, offering them travels abroad to earn money by providing various services, such as: dancers, housekeepers, waitresses, babysitters etc.

In fact, upon arrival at destination, lacking material possibilities for maintenance or getting back home which have not been provided as promised, a lot of young girls were forced or encouraged to accept pimps and employers' "advice" to practice prostitution, for their benefit.

There are also prostitutes and pimps operating in hotels and catering complexes in urban centers, on international traffic routes or in the mandatory parking or standing places for foreign vehicles, especially truck trailers (TIR).

Prostitutes often commute from one country border to another, in the company of foreign drivers to whom they provide sexual services in return for local and foreign currency amounts or items of clothing, cosmetics, jewelry and more.

Trends and new forms of manifestation of crime in this area, in full accordance with the general evolution of the criminal state, urged police units to act more resolutely in fighting crimes of this nature.

There have been cases where misunderstandings arose between group pimps, in terms of placing prostitutes, which have resulted in assaults that also endangered the physical integrity of other people, happening to be in the relevant area at that very instant.

b. Motor vehicle theft and international trafficking in stolen vehicles.

This international business spread extensively, focusing mainly on stealing luxury West vehicles, which are then turned to profit on different channels, where the Romanian law breakers have begun to make their presence increasingly felt and active within the Italian, German, Polish and Bulgarian networks of thieves and smugglers.

So far, 567 luxury vehicles stolen from Western European countries have been frozen, 186 of them being returned to legal owners, for which criminal proceedings were discontinued.

Investigation of these cases, including verification and exploitation under evidence of data and information obtained during the judicial inquiry processes, records difficulties due to lack of personnel specialized in the investigation of such facts, and the diversity of operation methods and forged or counterfeit documents by offenders, circumstances that make it extremely difficult to prove their guilt.

It is therefore ascertained the existence of a criminal collaboration between these networks, particularly in taking advantage of stolen vehicles, covering actions by fabrications, transporting stolen vehicles and even exchanges of similar vehicles.

c. Trafficking in counterfeit money

In the context of growth and diversification of white collar crime internationally, forgery of money and other securities, as well as trafficking in similar counterfeit or forged payment methods are experiencing an alarming recrudescence, which is why all the police in the world and other specialized bodies in the field of banking services are on permanent alert, constantly seeking new ways to counter-balance the phenomenon.

On these lines, frequent breach of regulations in force has been manifested by Romanian citizens concerned to procure, by any means, freely convertible currencies and multiple opportunities have been created for false or counterfeit banknotes to be placed on the territory of our country[15].

Radiography of forgeries investigated by the judicial police, the correlation of data and information obtained on different channels prove the fact that in Romania there have been organized networks of smugglers, who operate according to mafia principles, their purpose consisting almost exclusively in the procurement of false currency.

To this fact it should be added the large inflow of foreigners coming to Romania, many of them exchanging money "under the counter", thus avoiding specialized units, which stands for another circumstance favorable for the placement of counterfeit banknotes.

Taking our stand upon these conclusions drawn from the analysis of recorded cases, from data and information obtained during relevant police work, there have been undertaken appropriate training activities for fighting against law infringement targeting population and especially the staff within public and private specialized units, which carry out foreign trade and exchange operations.

In this respect it has been provided qualified training of agents working in foreign exchange offices, and in order to prevent citizens, there were brought forward by means of mass - media, real cases, highlighting the risks they are exposed to when accepting foreign currency acquisition by other means than the legal ones.

During 1991 - 1992, especially after the abolition of specialized stores with payment in foreign currency, Romanian and foreign subjects charged with placing money directed their attention primarily to individuals, amateurs of travels abroad or buying foreign currency for the purpose of converting it into treasury bills.

This is because subjects charged with placing money have been notified of the risks and difficulties encountered in carrying out their criminal concerns to the detriment of the state or private establishments, specializing in the field, whose staff is well trained, managing to detect counterfeits ever since their introduction[16].

During specific activities undertaken to prevent and combat international trafficking in counterfeit money, there have been obtained on multiple channels data and information attesting the presence in Bucharest of a powerful criminal organization, led by Western German citizens – bosses of disco "Le Baron" in Floreasca district that introduces and places fake currency in Romania.

In order to acquire significant financial benefits, they organized the placement of counterfeit banknotes through the medium of disco staff recruited Romanian citizens.

In conclusion, it should be noted that, in the context of manifestation of crime in counterfeiting and its trend of expansion, there is a real danger hanging over the national currency, although up to now, at domestic level, there were only four cases of placement of 500 and 5,000 lei banknotes, respectively, rudimentary executed by black and white reproduction, subsequently colored, that were placed in crowded places or at night and only in one case, eng. Tafta Gheorghe from Bucharest, respectively, it was used a color copier that made over five million lei, the forger being promptly uncovered.

This threat is primarily due to the introduction in Romania by private companies of a large number of color copiers, which stands for the biggest practicability of banknotes forgery by almost perfect reproduction, with the laser beam, which simultaneously achieve both their faces, methods of payment and other bonds.

d. Trafficking in works of art

Protecting national cultural heritage, national and universal cultural value present in our country has been a concern of the Romanian state since the last century, Romania ranging among the

[15] I. Melinescu, *Investigațiile financiare în domeniul spălării banilor (Financial Investigations in the Field of Money Laundering)*, Bucharest, Imprimeria Națională Publishing House, 2004, page 77.

[16] N. Moldoveanu, *op. cit.*, page 56.

first countries in Europe to pass a bill on ancient monuments and objects in 1892. Subsequently, the legal status of these values has been enriched and broadened through the enactment of new laws, among which we mention the Law for the conservation and restoration of historic monuments of July 28th, 1919, the Law on the organization of public and municipal libraries and museums of April 14th, 1932, Regulation on public monuments of December 16th, 1938, Decree Law no. 803 of September 20th, 1946 on the organization of national museums and Decree No. 46 of March 6th, 1951 on scientific organization of museums and conservation of historic and artistic monuments.

Protection of these artistic cultural values integrated into the Romanian national cultural heritage was regulated until early 1990 by Law 63/1974 and other regulations issued in implementation thereof, identification, recording, preservation, conservation, scientific and commercial exploitation, as well as public release of all goods that made up the national cultural heritage being enacted in a uniform manner all over the country.

Throughout the entire period, as long as Law 63/1974 has been in force, it was acted firmly in order to identify goods which may be part of the national cultural heritage and for their owners, individuals or legal entities to meet their incumbent legal duties.

Therefore, in consequence of the measures taken, there were recorded in the offices of the national cultural heritage over 15 million units of cultural property declared by religions museums, state bodies, public organizations and individuals following specialized tests performed thereupon, appreciating that approx. 4.5 million represent assets which may be part of the national cultural heritage of Romania.

Of these, under specialized expertise performing at the end of 1989, there were selected 620,591 assets from national cultural heritage, of which 35,027 were included on the list of personal property with particular value, 8,489 on the list of historic and cultural monuments, 372,939 were recorded as numismatic pieces and objects of metal and precious stones, and 117,220 were entered into the general inventory of assets belonging to the former monarchy.

Repeal of Law no. 63/1974 and other regulations issued in implementation thereof lifted all barriers and obstacles that stood in the way of smuggling and illicit trade in works of art and increased interest of businessmen and private collectors in Western Europe, North and South America, and Japan in recent years, in the acquisition of such items.

In the former Czechoslovakia, for example, from 1990 until now, there were stolen and taken out of the country over 30,000 works of art, of which less than 8% were recovered.

In Poland, all that stood for valuable work of art has been stolen or sold, unlawful removal of such property across its borders reaching incredible levels.

This was also facilitated by untrustworthiness of Polish customs officers, which led the authorities in Warsaw to lay off more than 160 customs officers caught in the act of bribery.

Concurrently, analysis of existing data and information at European level leads to the conclusion that the legal trade of such assets has become insignificant, being overshadowed by the illegal market, supported and supervised by specialized networks with well established organizational and hierarchical structures.

According to the most recent data, the illegal market of works of art in Europe pulls in annually illegal income amounting to more than $ 6 billion and is controlled by two well-organized trafficking networks, consisting mainly of criminals in the former Yugoslavia, but with connections and accomplices in all European states.

Cases investigated emphasize the fact that, in our country, illicit trade and illegal trade in works of art, facilitated in many cases by persons nominated to undermine the relevant process, experienced considerable expansion.

Only the case investigated in Cluj proves that, under a single branch organized in Cluj County, but with connections in Bihor and Arad Counties, as well, in which were involved over 20 people, including specialists from the Heritage Departments and customs controllers, there were

illegally moved out of the country works of art and assets pertaining to the national cultural heritage, assessed at several tens of millions of lei.

This case has not been and is not singular, existing information referring to real networks of traffickers in such assets, well-organized acting in Romania and having established branches and connections in major Western capitals. It is well known that many people, current and former Romanian citizens live a secure life for many years in major European capitals on account of "tipping-off", relating to the existence of valuable works of art in private, public or religious collections in our country, which are subsequently smuggled out, being acquired illegally, and in some cases even stolen from their owners and holders.

Concurrently, the number of works of art stolen from private collections, museums and religious units grew disquietingly, as the result of express request of private virtuosi or even accession to some catalogs specially designed for this particular purpose.

"The illicit trade in art" stands for a case in a class of its own.

The relevant explosion of units performing activities relating to marketing, assessment, expert appraisal and even authentication, restorations or endorsements of works of art, as well as those brokering such businesses is unprecedented. No rules are observed, non existence of depositors or purchasers records, unauthorized or unqualified people to that end are employed as specialists, invaluable cultural heritage assets are being threatened to fly to the winds, to be undervalued in order to evade customs duties or other legal provisions or that the market be flooded with fakes that have been authenticated as original works.

Faced with this real phenomenon, police in most Western European countries set up police units or divisions specialized in this area, among which those in Italy and France are considered to be the most effective.

Watching closely international and national crime developments and trends, bearing also in mind the recommendations of OIPC (*Office of the Information and Privacy Commissioner*)- Interpol addressed to Member States and in view of the emergence and accentuated development of this form of "organized crime" in Romania, it has been ordered the reorientation of the entire business on this line, taking effective measures aimed at getting familiar with and mastering to the utmost extent the criminal phenomenon, both domestically and in terms of international routes of organized crime.

e. Illegal emigration ("Moving across the border") – "guides to the West"

There is increasing criminal activity of trafficking networks dealing with the illegally crossing of our country by some groups of immigrants, usually from Sry Lanka, Pakistan and Bangladesh, which are recruited in their countries also on the route Singapore - Moscow – Chisinau, aiming to reach Western Europe countries.

Participants in the network of introduction in Romania of Asian citizens and their taking out towards neighboring western States receive large amounts of foreign currency, which in some cases are laundered through the instrumentality of companies and private agencies set up in our country.

Networks in question show thoughts to organize clandestinely and as strictly as possible, establishing strong points of support such as buildings, companies, hosts and reliable persons in several countries on the transition section, aimed to provide increased security to this business involving large amounts of money and foreign currency, as rumored.

To prevent removal of illegal immigrants from our country by the Romanian authorities, being returned to States where they came from, they are advised by the heads of networks and guides to destroy their identity documents and other supporting documents (invitations, visa, currency values) issued by countries crossed.

In the years 1993 - 1994 alone, at least 54,000 foreigners have been tracked down during illegal border crossing and sent back by border officers to neighboring countries (Hungary, Bulgaria, Moldova), numerical preponderance being held by citizens of Sry Lanka, Pakistan and China.

In addition to these, on the Romanian territory there is currently a significant number of immigrants who are staying at different addresses, and especially within the area of towns adjacent to the western border of our country, awaiting to cross the border illegally to neighboring countries.

f. Trafficking in radioactive materials, toxic waste and weapons

Although there were no clear warning signals recorded in time on this issue, cases discovered surprised, though, in terms of the large number of people engaged in various acts of law infringement and the special implications they could have in the society.

Considering that trafficking in polluting wastes and residue and radioactive materials stands for a high threat for Romania, there were carried out within jurisdiction appropriate specific activities to counteract the concerted actions of a foreign specialized criminal organization in the setting up of disguise transfer connections and channels for such products in our country[17].

g. Drug Trafficking

Opening of borders entailed a huge increase in the number of persons, means of transportation, goods and services entering or leaving Romania. This extremely favorable situation was and is still speculated by trafficking organizations that use Romania as an important beachhead connecting the East to the West.

Alongside the special geographical position held by our country, another issue to be considered is the current situation in former Yugoslavia. Due to the conflict in this country, the center of gravity of drug trafficking moved to the second segment (as it was considered so far) of the "Balkan route", which also includes Romania. Criminal organizations avoid thus the loss of large amounts of drugs pumping them big gains.

In close relation to this last point, it is worth mentioning that fabulous amounts entailed from drug trafficking attract Romanian citizens, as well. Foreign criminal organizations are sending their emissaries in search for connections among Romanian law breakers, operating thus with the view to organize and internationalize drug trafficking.

On these lines, if in 1991 and 1992 only one Romanian was involved in drug trafficking, in 1993 the number has risen to 15, while in the first six months of this year it reached 27, which represents almost 60% of the total persons investigated for such acts.

Another category involved in this kind of crime is represented by people who left the country several years ago, settling and living abroad. Many of them were drawn in different international networks, acting currently as intermediaries or messengers. Over time, they collected large sums of money, which they have invested in Romania after the revolution, where they returned and actually live.

Mafia-type organizations to which the said persons belong spread thereby their tentacles in our country, and according to some data, part of "dirty money" resulting from drug trafficking is "laundered" in Romania.

On grounds of good cooperation between the competent bodies in our country and around the world, there can be achieved good results in terms of fighting against drug abuse and trafficking and there have been undertaken efforts for close cooperation with bodies and organizations both in Europe and in America and Asia.

It also turns out an intensification of criminal organizations in South America and other parts of the world, on account of diversification of methods of introducing in our country drugs bound for Western Europe and with the participation of groups of criminals in Europe, Colombia, U.S.A., Asia, Africa and Romania.

---

[17] I. Pitulescu, *Considerații referitoare la infracțiunea de spălare a banilor (Approaches on the Money Laundering Offence)*, Dreptul (*Law*), 2002, no. 8, page 99.

As regards the illicit production and legitimate movement of drug substances and products, precursors and essential chemicals, there is a strict control of production and units producing medicines containing narcotics and units producing opium poppy for medical use, but also economic agents in the chemical industry. These measures that have been taken jointly by the concerned bodies and organizations in Romania prevented from occurring cases of fraudulent use of narcotics and precursors in the illicit production.

To the same purpose, there have been approved measures of accreditation by the relevant Ministries of imports and exports of essential and precursor chemicals that can be used to manufacture or illicit conditioning of drugs, and a draft law on the legal status of these substances was recently issued by the Ministry of Health in collaboration with other institutions and with the support of the European Community (under the Phare programme for the fight against drugs), which shall be submitted to the relevant Ministries and other competent institutions for approval and adoption.

On account of this set of rules implemented, it can be asserted with certainty that there are no clandestine laboratories in our country and that no synthetic drugs have been discovered so far.

Although to date there were reported no cases of drug addicts among Romanian citizens requiring hospitalization in rehabilitation centers, the data held reveal that there are people who take drugs occasionally (mainly marijuana and hashish). These people come especially from among youth, especially high school students or prostitutes, and the number of flagged ones is ever-growing. This fact should pose a significant policy concern for both bodies responsible for the suppression of illicit drug trafficking, and those holding prevention responsibilities (Ministry of Health, Ministry of Education, Ministry of Labor and Social Security and other governmental or non-governmental bodies).

Likewise, the Romanian authorities are facing lately a relatively new phenomenon that is spreading rapidly. It is about consumption (inhalation) by some underage and young people of volatile substances, which are not drugs in the word's meaning itself, but we argue that they might stand for the gateway to the genuine drugs. Educational measures were undertaken as regards these people, in joint connection to educational factors, such as: child welfare authorities, charities, schools, medical institutions.

Although there was a significant step taken in the legislative field by joining the United Nations Convention against Illicit Traffic in Narcotic Drugs and Psychotropic Substances in Vienna in 1988 by Decree no. 121 of June 24th, 1992, the Romanian legislation on drugs has not rallied to the international one, which hampers the work on this line, being completely overcome as to the existing reality. The new draft law on establishing and sanctioning substances and psychotropic offenses, on account of its provisions relating to the amount of sanctions, the measures to be taken against traffickers and modern methods of combating illicit consumption of drugs, etc. shall create the legal framework requisite to carry out an efficient activity in these areas, in line with international standards.

We believe it is worth pointing out that within the 48th Plenary Meeting of the UN held between 26th and 27th October 1993 attended by heads of government and ministers charged with coordination of overseeing health and social protection in 130 countries, it was put forward the issue of international cooperation against the illicit production, sale, demand, traffic and distribution of narcotic drugs and psychotropic substances.

It has been highlighted that all authorized bodies in this area are deeply alarmed and concerned by:

- constant uncontrolled rising trend in drug abuse, illicit production of and trafficking in narcotic drugs and psychotropic substances that threaten the health and well-being of millions of persons – in particular the youth, in all the countries of the world;

- growth of the drug problem which entails increasing economic costs for governments, causes irreparable loss of human lives and threatens the economic, social and political structures of the countries affected by acts of violence;

- growing violence and economic power of the criminal organizations that engage in the production, trafficking and distribution of drugs, arms and precursors and essential chemicals, which at times place them beyond the reach of law;

- intimate acknowledgement of the existence of obvious causal connection between poverty and the increase in the production of and trafficking in narcotic drugs and psychotropic substances and that the ideal solution for solving this problem is the international cooperation and its permanent development in all its aspects (information, logistics, material, direct and coordinated action, ongoing exchange of experience, etc.).

It was also substantially argued that the magnitude of organized crime, drug trafficking in particular, requires the formulation of new strategies, approaches, objectives and enhanced international cooperation that, respectful of the sovereignty of States, deal more effectively with the international operations of those who get rich through the illegal traffic in drugs, precursors and essential chemicals, threatening the stability of many societies in the world.

Conclusions

Conclusions drawn from the white collar criminal phenomenon review ground the fact that, on account of failure to adopt new regulations specific to market economy such as: bankruptcy act, tax evasion indictment law, the regulation on the transfer of currency, etc., as well as decriminalization of offenses on public property, the criminal phenomenon is increasing. In this context, the application of provisions relating to crimes on public property by the small amount of sanctions does not achieve the requisite general prevention, being even stimulating in some cases. Not incidentally, decision-making factors in the economy have been corrupted or bribed, directly participating in economic crimes with great impact on the state's assets, public-owned companies' patrimony in favor of private operators. Smuggling takes on an organized character mainly on account of the use of false or formal documents of criminal ties abroad and border crossing in places other than those subject to customs control.

"Dirty" money is a concept as innovative as it is unclear. Mainly, it is used by criminal organizations, or by other subjects, as a method of earning income and withholding taxes. It is difficult to track "dirty" money, on the grounds that it may take different forms, and the destructive power of "dirty" money movement is called *money laundering offense*. The very concept of "*money laundering*" is relatively recent in legal vocabulary, but the necessity to disguise the nature or existence of proceeds of crime, or at least, doubtful emerges in the twentieth century.

Money laundering encompasses methods and procedures allowing for acquiring funds or other property generated from illegal business and concealment, disguise of their origin, or lending their sources a clean-looking semblance. The offence under review is growing into one of the most common types of white collar crimes, both nationally and internationally.

NEW TRENDS AND PERSPECTIVES IN THE MONEY LAUNDERING PROCESS

ANA ALINA DUMITRACHE [*]
GEORGETA MODIGA [**]

Abstract
Due to its complexity, the crime of money laundering can be committed through a variety of methods which are in a constantly evolving. It seems that money launderers are always one step ahead of authorities. They find new and various ways to launder the proceeds of crime despite the efforts of the law enforcement authorities to develop the best tools to stop or at least to make difficult the criminal activity of money laundering. This study aims to analyze the latest money laundering typologies approaching online payment systems, virtual casinos, electronic auctions and Internet gambling.

Keywords: *Money laundering, money laundering typologies, online payments systems, online casinos, virtual games*

Introduction

The advantages of electronics and the Internet, that is hiding the true identity, the possibility to operate quickly, anywhere and anytime, the countless transactions and digital identities, are unfortunately vulnerable to the complex operations of money laundering process, unable to remain unexploited to criminals.

This study proposes an analysis of the vulnerability of new technologies in the face of the financial criminals, in terms of money laundering crime, the focus being on the role of electronic payment systems, casinos, virtual games and other gambling activities in order to achieve different stages of money laundering.

Far from being over and clarified, the new typologies of money laundering connected to modern reality technology have been and still are a subject to research both in international[1] and national[2] literature.

The usage of new methods of payment for money laundering is monitored in the Annual reports on various money laundering typologies by the International Financial Action Task Force

(FATF).[3] The FAFT reports on the new methods of payment used by money launderers from 2002 to 2010 represent the starting point of this study.[4]

The importance of understanding the mode of operating of the financial criminals who use the benefits of present technology to carry out the criminal intentions contributes undoubtedly to the efficient and effective fight against money laundering.

International, European And National Concerns In Matters Of Money Laundering

In terms of the concerns registered at international, European and national level in matters of money laundering and in point of defining the offense, we can mention the following documents:

- The ***United Nations' Convention against Illicit Traffic in Narcotic Drugs and Psychotropic Substances***,[5] adopted on 19 December 1988, Vienna, defines this process as: *the intention of concealing the origin, nature, disposition, the movement, or the owner of funds that come from illicit drug trafficking, including the movement or conversion by electronic transmission processes, in order to give the appearance that these funds are derived from legal activities*.[6]

- The ***Council of Europe Convention on Laundering, Search, Seizure and Confiscation of the proceeds from crime***,[7] in article 6, defines money laundering as: *processing and transfer of property of which the one who used them knew that they are proceeds of crime, in order to conceal or disguise the illicit origin of goods or for helping any person involved in committing the major crime to escape the legal consequences of his action; concealment and disguise of the nature, origin, location, disposition, movement or real ownership of property or the rights thereof, which the owner knew that the products are proceeds of crime; purchasing, procurement and use of goods, which the person who acquired, hold or used them, knew, at the moment of receiving products, that are proceeds of crime; participation in one of the offenses set out previously or any other form of association, attempt, or complicity by providing assistance or advice in order to commit the crime.*

- The ***UN Convention against transnational organized crime***,[8] uses both terms laundering of proceeds of crime and money laundering. Thus, **article 6** of the Convention called ***Incrimination of laundering of proceeds of crime***, calls on states to adopt the fundamental principles of its internal law, legislative and other measures necessary to establish the offense, when the act was committed intentionally:

a) (i) change or transfer of property to the one who knows that they come from crime, for the purpose of concealing or disguising the illicit origin of the property or of helping any person involved in committing the offense to evade from the legal consequences of his acts;

(ii) The concealment or disguise of the true nature, source, location, disposition, movement or ownership of property or other related rights, whose perpetrator knows that they are proceeds of crime;

---

[3] FATF is the intergovernmental body that aims at developing and promoting national and international policies to combat money laundering and terrorism financing.

[4] FAFT, *Money Laundering Using New Payment Methods*, (Paris, FATF/OECD, 2002); FAFT, *Report of New Payments Methods*, (Paris, *FAFT/ OECD*, , 2010).

[5] Opened for signature on 20 December 1988 in the framework of the sixth Plenary Session of the UN Conference in Vienna on Psychotropic Substances. Romania acceded to the Convention by Law no. 118 of 15 December 1992, published in Official Monitor of Romania, Part I, no. 341 of December 30, 1992.

[6] Article 3, letter b), c).

[7] Ratified by Romania by Law no. 263/2002, published in the Official Monitor of Romania no. 353 of May 28, 2002.

[8] Ratified by Romania by Law no. 565 / 2002 and published in Official Monitor of Romania no. 813/8.11.2002. Romania has signed on 14 December 2000 in Palermo, the United Nations Convention against Transnational Organized Crime and its two protocols adopted in New York, 15 November 2000: 1. Protocol on preventing, suppressing and punishing trafficking of persons, especially women and children, supplementing the United Nations Convention against Transnational Organized Crime; 2. Protocol against the smuggling of migrants by land, sea, and air, supplementing the United Nations Convention against Transnational Organized Crime.

b) and subject to the basic concepts of its legal system:

(i) the acquisition, possession or use of property which the one who purchases, possesses or uses them, knows, at the moment of the receive, that they are proceeds of crime;

(ii) participation in one of the offenses provided for under this article or any other association, understanding, attempt or complicity by assistance, help or advice in order to commit it.

According to ***European Union Directives:***[9] "Money laundering" means the following actions, when committed intentionally: a) the conversion or transfer of property, knowing that such property is derived from criminal activity or an act of participation in such activity, in order to conceal or disguise the illicit origin of property or to support any person involved in the commission of such activity in order to evade the legal consequences of his actions; b) the concealment or disguise of the nature, source, location, disposition, movement, the real rights on their property or possession, knowing that such property is derived from criminal activity; c) the acquisition, possession or use of property, knowing, at the time of receipt, that such property originates from a criminal activity or from an act of participation in such activity; d) participation, association, attempt to commit and aiding, abetting, facilitating, counselling in order to commit any of the actions mentioned in the previous paragraphs.

At national level,[10] the **Law no. 656 / 2002** for the prevention and punishment of money laundering, and instituting some measures to prevent and combat financing acts of terrorism,[11] regulates in article 23 the crime of money laundering, as follows: *(1) The crime of money laundering is punished with imprisonment from 3-12 years: a) change or transfer of property, knowing that they come from committing crimes, in order to conceal or disguise the illicit origin of property or in order to help the person who committed the offense from whom the goods come from, to evade prosecution, trial or execution of sentence; b) the concealment or disguise of the true nature, source, location, disposition, movement or ownership or rights over their property, knowing that the goods come from committing crimes; c) the acquisition, possession or use of property, knowing that they come from crime."*

FATF defines money laundering as the *de facto* financial part of all crimes through which the profit is gained. It is the process by which criminals attempt to conceal the origin and the actual possession of their income that comes from criminal activities.

The Stages Of Money Laundering

Money laundering is a complex process achieved, usually in the traditional scheme of the three stages, namely: *placement, layering, and integration*. The complexity of money laundering process is given by different techniques chosen by the perpetrator.[12]

The *placement* consists of the offender's attempt to bring illegal money in the financial system, involving the physical movement of money, in order to put a distance between them and the illicit source of funds, avoiding their confiscation. The introduction of illegal profits in the financial

[9] Council Directive 91/308/EEC of 10 June 1991 on prevention of the use of the financial system for the purpose of money laundering and the Directive 2001/97/EC of 4 December 2001. These Directives have been repealed by the Directive 2005/60 EC of the European Parliament and of the Council on prevention of the use of the financial system for the purpose of money laundering and terrorist financing.

[10] Prevention and punishment of money laundering were initially regulated by Law no. 21/1999 on preventing and sanctioning money laundering, published in Official Monitor of Romania, Part I, no. 18 of January 21, 1999, repealed in the article 31 of the Law no. 656 / 2002.

[11] Published in the Official Monitor of Romania no. 204 of December 12, 2002, as amended and supplemented by GEO no. 53/2008 regarding the amendment of Law no. 656/2002 on preventing and sanctioning money laundering and instituting measures to prevent and fight against terrorism financing, published in Official Monitor Part I, no. 333 of April 30, 2008, and **GEO no. 26/2010** for amending and supplementing GEO no. 99/2006 on credit institutions and capital adequacy and other normative acts, published in Official Monitor or Romania no. 208 of April 1, 2010.

[12] Camelia, Bogdan, *Spălarea*, p. 87 – 138.

system can be done by splitting the cash in smaller amounts (below the minimum reporting threshold). In this stage, online payment systems present a risk in terms of customers' anonymity, rendering difficult monitoring the transactions that form the channel for dirty money, because of the possibility of customers' multiple registration, detecting the source of the money due to used payment instruments.[13]

Layering is the movement of money between different accounts, in order to hide their source. In other words, criminals want to erase any connection between the illicit source and the money. At this stage, money launderers resort to transforming the cash placed in various instruments of payment (checks, promissory exchange) or purchase real estate.

Referring to the two phases of money laundering, Aaron Elkins exemplifies the hypothesis of dividing the illicit cash in more checks, then transmitted electronically from the A account of Bank 1 to B account in Bank 2, dividing and recombining so that illegal origins of the cash will be lost somewhere in cyberspace.[14]

Speed, the sheer volume, and the international feature of electronic transactions are likely to prevent authorities to investigate money laundering at this stage.

The *integration* of whitening capital in the economic and financial circuit is the final stage of money laundering. It is the objective pursued by criminals, to have a legal façade to the illegally obtained income. Specific to this stage is the purchase, by money launderers through the commercial website, of some valuable items, precious metals, real estate, and for their payment they use electronic systems.

The stages of money laundering can exist separately, simultaneously or may overlap, their achievement depends on the existing ways of laundering and criminal organizations requirements.

Specific Techniques Of Money Laundering Stages

Each stage of money laundering has specific techniques used by criminals such as:

For the *placement* stage criminals resort to techniques such as: cash smuggling, currency conversion tools or values, the banks' aid and abet, structuring funds, the introduction of illegal funds in lawful money, money transfer systems, Internet and casinos.[15] In the virtual world, money launderers can overcome the placement stage, because the money (or other values) is already in the electronic form.[16]

The most common techniques used by launderers during layering stage are: stock and holding companies, sale of shares purchased with cash, numerous electronic transfers, shell offshore companies.[17]

The most important stage of money laundering, *the integration,* is carried out mostly by: loan - back schemes, real estate purchases, ghost commercial transactions, fake import-export documents, legitimate business and credit cards.[18]

Synchronization Of Money Laundering Techniques With Technological Developments

Putting cash into the financial system, moving it to other destinations across the border, and transfer cash into and from the financial system, these are vulnerable steps to money launderers in terms of the risk of being detected.

The evolution of technology and cyberspace enables criminals to easily overcome these obstacles, money launderers are increasingly resorting to the use of virtual platforms and electronic

payment systems; these technological tools enable them to control the illicit funds, to conceal the origin of the illicit funds and the identity of persons involved in criminal activity and ultimately to benefit from these illegally obtained funds.

In the following we will analyze the latest tendencies of offenders in achieving money laundering, tendencies that are always "updated" and adapted to the technological evolution.

Electronic Payment Systems

Electronic payments are actual payments from commercial activities or transfers of funds from commercial or non-commercial activities, and they are achieved by electronic means (computers - from the type of personal PC to the complex server systems and telecommunications).[19]

According to the ***European Parliament*** and ***Council Directive no. 2009 / 110 / EC*** concerning the access to activity, pursuit and prudential supervision of the activity of the institutions' issuers of electronic money, amending ***Directives 2005/60/EC and 2006/48/EC and repealing Directive 2000/46/EC***: *"electronic money" means any monetary value stored electronically, including magnetic, representing a claim on the issuer which is issued upon receipt of funds for the purpose of making payment transactions as defined in article 4, section 5 of* ***Directive 2007/64/EC***[20] *and it is accepted by a person or entity other than the issuer of electronic money.*[21]

Compared to traditional off-line payment systems, the on-line payments have the advantage to purchase goods or services without using cash or complete checks.

The main electronic payment instruments are: cards, electronic money and electronic wallet.

The parties involved in e-cash system are: the issuing bank of electronic money, the customer (payer) and the dealer.[22]

The best known techniques used by money launderers in the electronic payment systems are the electronic transfers (using a false identity, trading money through offshore companies); investing the electronic money into financial products (bank checks, bonds and shares) or in virtual gold. The role of electronic payment systems is very well defined in money laundering matters in relation to companies, there are the transfers via SWIFT.

In the *Report of New Payments Methods*, in October 2010, FAFT does not include in the electronic payment systems category the mobile prepaid cards, having rather the feature of intermediary value reserve.[23]

Most online payment systems (transfer, mobile payment systems) are used by money launderers in the layering stage, when carrying out transactions between different accounts, countries or people.[24] For the placement stage of money, criminals are using prepaid cards.[25]

The advantages of these payment systems are very attractive to criminals. Thus, due to the mobility of electronic payment systems, there can be instantaneously achieved transfers in a network that is not subject to any jurisdictional restrictions, the cash can be stored in an unregulated financial institution.[26] The amounts stored on a card or a personal computer may not always be controlled by the competent authorities; the Internet and electronic systems facilitate fund transfer and ensure anonymity through some encryption techniques, etc.

Virtual Casinos And Gambling

Gambling is a bet on a sum of money or something of material value in a situation with uncertain outcome, mainly aimed at winning the money and / or additional material goods. In the gaming category there are included: gambling services, lotteries, casinos and mobile or on the Internet gambling, etc.

The huge gains resulted from the gambling practice organized in casinos, which are apparently legitimate and justifiable earnings for the existing currency in this industry, have created, with good reason, the suspicion of the existence of money laundering in the casino business.[27]

Thus, the appearance of legality of illicit proceeds and transfer of such amounts can be achieved also through casinos.

Virtual casino sites offer visitors the experience of real casino games.[28]

Casinos may have a series of transactions similar to financial institutions, according to Directive 2001/97/EC, in the category of entities required to report suspicious transactions are included also the casinos, all customers are required to identify themselves when selling, or buying gambling chips, whose value exceeds the sum of 1000 Euro.

To access the games on the virtual casino's website, there must be created an account on the website, download the gamming software and use a credit card or electronic funds transfer service to cover the bets and gambling earnings.

Money launderers can speculate the possibility that the virtual casino websites offer, asking them to send money coming from illicit sources in the accounts they open on these websites, justifying the origin of money obtained from gaming winnings.[29]

International Financial Action Group, in the Report on Casinos' Vulnerabilities and other gambling activities, listed a series of methods and techniques used for money laundering through casinos – the usage of casinos' value instruments (cash, casino chips, game machines credit, gift certificates); refining or structuring; use of casino accounts - credit accounts, markers, operating foreign accounts; intentional losses or gains; aiding and abetting employees (e.g. the falsification by the casino employees of assessments and other records that refer to the player in order to justify the accumulation of chips or of credits from game machines), foreign exchange, credit cards (for example, laundering of the proceeds from a stolen card) - or debit cards, false documents, etc.[30]

The value tools of the casinos are used often by money launderers in converting the illicit funds into another form.

Regarding the typologies of money laundering through casinos, the FATF exemplified: the **purchase of casino chip with cash or using a casino account**, then it is sought a ransom payment by check or by a transfer to your casino account. This method can be performed via a chain of casinos where the chips that were bought with illicit funds are then converted to credits then transferred to other jurisdictions where there is a unit of the casino chain.

In the European Parliament Report of 10 March 2009 relating to the **integrity of online gambling**,[31] it is stated that the development of online gambling industry offers increased opportunities for corrupt practices such as fraud, arranged games, illegal bookmakers and money laundering, considering that online gambling can be quickly created and removed from the market due to the proliferation of offshore operators. The European Parliament calls on the Commission, Europol and other national and international institutions to closely monitor and report on the findings in this area.

[31] Published in the Official Journal of European Union C /87/ E, p. 32.

The proxy auctions are a very effective tool for money launderers, being on a large scale expansion on the Internet. The user can register and then he can open to sale or purchase of various products.

For security reasons for people who buy and sell on auction sites, some of the auctions companies offer only certain basic financial services.[32]

The buyer sends money to the bank account of the company and the seller sends the product. If the promised product for sale is according to the one received by the buyer, the company transfers the money to the seller.

The proxy auctions give the whole operation a legitimate appearance, given the existence of a company's auction reputation and a bank account.

The proxy auctions have as object virtual goods which have a counterpart in the real world.

Online Games

The emergence of online games, such as Entropia Universe and Second Life, offers new opportunities for money launderers to transfer or conceal fraudulent income. These online games belong to a broader category of virtual games called MMORPGs (Massively Multiplayer Online Role-Playing Game), being accessed by over half a million participants interconnected online and producing profits that exceed 1.5 million PED (Project Entropia Dollars), representing the player's virtual currency.[33]

Thus, illicit money that have to be transferred from one destination to another, are changed in a virtual currency that belongs to the virtual platform.

To operate in the virtual gaming platform, the user must create a virtual identity called avatar. Theoretically, for each user it must be an avatar, but given the fact that this identity is created electronically, there can be no limit and control over the possibility that the same user may use multiple avatars.[34]

The players involved in virtual games through the so-called *Avatar,* sell virtual goods and properties for a real compensation. These avatars were able to enrich people that sell virtual goods. Players can convert virtual money into real money by simply selling them on the auction websites.

In the virtual world of games, a person who retains its anonymity, pays no taxes and is not obliged to report can produce significant amounts of financial products.[35]

Money launderers use virtual games because the virtual products can be purchased and transferred anywhere, and once the funds are withdrawn from a virtual account, they are considered legal and their source cannot be identified.

Conclusions

This scientific approach has been developed starting from the international (***The United Nations Convention against Illicit Traffic in Narcotic Drugs and Psychotropic Substances, Council of Europe Convention on Laundering, Search, Seizure and Confiscation of proceeds from crime, the UN Convention against transnational organized crime borders***), European (Council Directive 91/308/EEC of 10 June 1991 on prevention of the use of the financial system for the purpose of money laundering and the Directive 2001/97/EC of 4 December 2001, Directive 2005/60 EC of the European Parliament and of the Council on prevention of the use of the financial system for the purpose of money laundering and terrorist financing) and national concerns (**Law no. 656/2002** *on preventing and sanctioning money laundering, and instituting measures for preventing*

[32] Wojciech Filipkowski, *op. cit.*, p. 15-22.
[33] According to the virtual exchange rate 10 PED worth 1 USD.

[35] Miller, M. and Jentz, G., *Business*, p. 467.

and fighting against the financing the acts of terrorism) in matters of money laundering, and in the presentation of the process stages of money laundering (placement, layering and integration), with the ***synchronization of money laundering techniques with technological developments*** and ending with the analysis of some new types of laundering adapted to the new payment systems, casinos, gambling and virtual games.

Money launderers resort to the new opportunities offered by technological development because of the benefits of the online payment systems and the virtual world, in terms of facilitating the crime of money laundering. Due to the anonymity, the speed of transactions, anytime, anywhere, the virtual platforms are the perfect environment for trading currency and smuggled goods.

The profits derived from criminal activities can easily be transformed, disguised, transferred in order to conceal their illicit origin through electronic payments, casinos and other gambling activities, by artificial buying and selling on proxy auction sites and by creating digital identities on the platforms of online games in order to sell virtual products into a virtual currency which will ultimately be converted into real money.

A solution to fight against the phenomenon of money laundering through modern technology would be tracking and monitoring money flows, they are able to suppress the criminal activity before it even started.

MONEY LAUNDERING OR LAUNDERING OF THE PROCEEDS OF CRIME?

ANA ALINA DUMITRACHE[*]

Abstract

*This paper aims to analyses which of the phrases **money laundering** or **laundering the proceeds of crime** is more appropriate to describe the crime provided by art. 23 of Law no. 656/2002 on prevention and sanctioning money laundering, as well as for setting up some measures for prevention and combating terrorism financing. In this respect, the article includes a survey of the important international documents in this matters ratified by Romania - United Nations Vienna Convention against Illicit Traffic in Narcotic Drugs and Psychotropic Substances (the Vienna Convention), the Council of Europe Convention on Laundering, Search, Seizure and Confiscation of the Proceeds of Crime, The United Nations Convention against Transnational Organized Crime, Council of Europe Convention on Laundering, Search, Seizure and Confiscation of the Proceeds from Crime and on the Financing of Terrorism. To remove any ambiguities arising from the approach of the money laundering concept and to reach a conclusion, there are also presented the controversial views regarding the use of the expression money laundering in both Title and content of Law, views expressed in specialized literature.*

***Keywords**: concept of money, money laundering, laundering the proceeds of crime, organized crime, subject to a tranzaction*

Introduction

The common denominator in all acts of organized crime and the most serious crime is the desire to obtain unlawful financial and material profits, what motivates organized groups to be concerned with masking, disguising, concealing, recycling, or investing the profits obtained from crime, all these operations give rise to a legal appearance of illegal income.[1]

In other words, the income derived from criminal activity, in order to be reinvested in other businesses by criminals, must be "cleansed", "washed" so that it cannot be distinguished from the legitimate income.

It is fundamental in understanding the definition of money laundering the definition of money. Thus, money is any value that can be easily transferred from person to person and that it is accepted by most people as payment for goods, services, debts, etc.

Money, a present concept in the phrase money laundering may be: cash, precious metals and stones, credit cards, money orders, cards, etc., any amount deemed to be subject to a transaction. In order to properly define money laundering it must be taken into consideration that, firstly, money laundering is a complex and dynamic process, conducted in three stages, being the subject to some considerable changes[2].

The Definition Of Money Laundering

Before clarifying the correct name of the crime we will make a foray into the specialized literature both in Romania and other countries of Europe, in the European Union regulations, the United Nations and of international bodies competent in this matter - group of Financial Action (FAFT / FATF), International Monetary Fund, Interpol, the World Bank, the International Organization of Securities Commissions (IOSCO).

United Nations Convention against illicit traffic in narcotic drugs and psychotropic substances,[3] adopted on 19 December 1988 in Vienna, although they do not use terms of *money laundering*, they define this process as: the intention of concealing the origin, nature, disposal, movement or owner of the funds derived from illicit traffic in narcotic drugs, including the movement or conversion by electronic transmission methods, in order to give the appearance that these funds are derived from legal activities.[4]

The provisions of this document, money laundering is, per se, limited to criminal activity involving proceeds of crimes related to drugs.

Article 6 of the ***Council of Europe Convention on Laundering, Search, Seizure and Confiscation of the proceeds from crime***[5], defines money laundering as:

- Processing and transfer of property of which the one who used it knew that they are proceeds of crime, in order to conceal or disguise the illicit origin of goods or for helping any person involved in committing the major crime to escape the legal consequences of his action;

- Concealment and disguise of the nature, origin, location, disposition, movement or real ownership of property or the rights thereof, which the owner knew that the products are proceeds of crime;

- Purchasing, procurement and use of goods, which the person who acquired them, hold or use knew, at the moment of receiving products, that are proceeds of crime;

- Participation in one of the offenses set out previously or any other form of association, attempt, or complicity by providing assistance or advice in order to commit the crime.

UN Convention against transnational organized crime[6], uses both terms laundering of proceeds of crime and money laundering. Thus, article 6 of the Convention called the ***criminalization of laundering of proceeds of crime,*** calls on states to adopt the fundamental principles of its domestic law, such legislative and other measures necessary to establish the offense, when the act was committed intentionally:

a) (i) change or transfer of property to one who knows they are from crime, for the purpose of concealing or disguising the illicit origin of the property or of helping any person involved in committing the offense to evade from the legal consequences of his acts;

(ii) The concealment or disguise the true nature, source, location, disposition, movement or ownership of property or other related rights, whose perpetrator knows that they are proceeds of crime;

---

[3] Opened for signature on 20 December 1988 in the framework of the Sixth Plenary Session of the UN Conference in Vienna on Psychotropic Substances. Romania acceded to the Convention by Law no. 118 of 15 December 1992, published in Official Monitor Romania, Part I, no. 341 of December 30, 1992.

[4] Article 3 letter b), c).

[5] Ratified by Romania by Law no. 263/2002, published in the Official Monitor of Romania no. 353 of May 28, 2002.

[6] Ratified by Romania by Law no. 565 / 2002 and published in Official Monitor of Romania no. 813/8.11.2002. Romania has signed on 14 December 2000 in Palermo, the United Nations Convention against Transnational Organized Crime and its two protocols adopted in New York, 15 November 2000.

- Protocol on preventing, suppressing and punishing trafficking of persons, especially women and children, supplementing the United Nations Convention against Transnational Organized Crime;

- Protocol against the smuggling of migrants by land, sea and air, supplementing the United Nations Convention against Transnational Organized Crime.

b) and subject to the basic concepts of its legal system:

(i) the acquisition, possession or use of property which the one who purchases, possesses or uses them, knows, at the moment of the receive, that they are proceeds of crime;

(ii) participation in one of the offenses provided for under this article or any other association, understanding, attempt or complicity by assistance, help or advice in order to commit it.

Article 7 of the ***UNO Convention against transnational organized crime*** uses also terms of money laundering, this article is entitled ***Measures to combat money laundering***.

Regarding the different terminology used in this Convention, for the same crime, ***the General Assembly of the United Nation*** equates the expressions *money laundering* and *laundering proceeds of crime* **(A/55/383/Add.1, para. 10)**.[7]

According to the FATF recommendations, money laundering is *defined as processing the proceeds of crime in order to conceal their illegal origin*.[8]

Corpus Juris,[9] incriminates in article 3 money laundering and abetting regarding the offenses under this document. Article 3, al 1 defines money laundering as: *the conversion or transfer of property from a subject crime or a criminal act of participating to such an offense, with the purpose of concealing or disguising the illicit origin of property or of helping any person involved in this activity to avoid legal consequences of his actions.*

We note that, in Corpus Juris, it is used the phrase laundering revenue or profits resulted from fraud offenses described in Corpus Juris, crimes that affect the financial interests of the European Union (art. 1, 2, 4 and 8).

In the definition of the **World Bank** and **International Monetary Fund**, money laundering is *the process whereby the assets acquired or generated by criminal activities are moved or disguised in order to conceal their relation to crime.*[10]

Interpol General Assembly in 1995 adopted the following definition of money laundering as: *any act or attempt to conceal or disguise the origin of illegally obtained money so that it creates an appearance of legality to their origin*.[11]

French Criminal Code in ***article 324-1*** defines money laundering by the following terms: *the act of facilitating, by any means possible, the false justification for the origin of goods from the perpetrator in order to achieve a profit directly or indirectly. It also represents money laundering the participation of a placement operation, concealment or conversion of direct or indirect proceeds of an offense or crimes*.

Article 301 of ***the Spanish Penal Code*** provides that any person is guilty of money laundering if he receives, transforms or transmits property, knowing that they come from a serious crime, or makes any other act to conceal the illicit origin of goods or he helps the person who participated in the offense or crime to evade the consequences of his act (article 301, al. 1).

Also, according to Spanish criminal stipulations money laundering is also the concealment or disguising the true nature, origins, locations, destinations, movements, or property rights over their

[9] Concerned with the criminal protection of EU financial interests and the harmonization of criminal law especially regarding community fraud and corruption, a group of experts from the European Council drew up and published in 1997, a document that rules 8 offenses affecting the European Union's financial interests, as follows: article 1 – fraud; article 2 - fraud in the matter of concluding transactions; article 3 - money laundering and abetting offenses relating to the Corpus Juris; article 4 - association in order to commit crimes; article 5 – corruption; article 6 – embezzlement; article 7 - abuse of office; article 8 – disclosing service secrets.

assets, knowing that the goods come from committing any acts set forth above or from an act of participation. (article 301, al. 3).[12]

In the Italian Penal Code, **article 648 bis** it is incriminated the act of the person who replaces or transfers money, goods or other utilities that come from crime, or he connects with these operations that prevent the identification of the illegal origin.[13]

Article 648 ter. of Italian Penal Code rules the use of money, property or other utilities of illicit origin.

The German Criminal Code in **Section 261** defines money laundering as: the deed of a person who *hides* an object that comes from committing one of the criminal acts under the law (all crimes and certain offenses), *obscuring* the origin or provenance *thwarts or jeopardize* finding, tracing, seizing such asset and also the one who *has* for himself or another or *holds* or *uses* for himself or for another property knowing, at the time of acquisition, that they come from crime.[14]

In foreign specialized literature, money laundering has been defined as the process of integration of crime proceeds in commercial and financial law channel by disguising their illicit origin[15]; disguising the existence, nature, source, owner, location and / or provision of goods from the criminal activity or as a simple formulation, the process by which dirty money is cleaned[16]; the process by which criminals attempt to conceal the origin and ownership of crime proceeds in order to maintain control over them and to "cover" the illicit income.[17] Money laundering is the name given to the process by which money is moved through various transactions so that funds are separated from their criminal source.[18]

Money laundering has been defined as being a wide range of activities and processes intended to obscure the source of illegally obtained money and creating an appearance of legality of the origin of this money.[19]

According to the Romanian doctrine, money laundering has been defined as: a complex economic and fraudulent financial transactions, having as main objective to create conditions for the use and increase, on legal ways, the profits from illicit activities of large transnational organized groups;[20] any action of concealment, camouflage, acquisition, possession, use, investment, movement, storage or transfer of property which the law expressly confers the status of crime in connection with illegal acts and crimes specified in such law and which relate to earnings from other crimes;[21] a criminal action method such as drug trafficking, illegal arms trafficking and terrorism, trafficking in credit card, hide the origin of illegally acquired funds in order to avoid their detection and risk prosecution when they are placed on the market;[22] the process of trying to conceal the origin

and the real possession of income come from criminal activities;[23] giving a financial product look legitimate or legal of the financial product (money and property) resulting from certain categories of crimes committed by criminals using sophisticated methods and techniques which involve the banking system or other specific entities of the market economy (capital market, insurance companies, casinos).[24]

From the analysis of the above definitions, it results that there is money laundering offense when there are committed with intent of changing or transferring some goods in order to hide or disguise their illicit origin, knowing that they are products of crime; to hide or conceal the real nature of the goods in terms of provenance, ownership, location, movement and rights relating to such property; the acquisition, possession or use of property, knowing that they originate from a criminal action and from any act of participation or support in any form to the actions described above.

In Romania,[25] the **Law no. 656 / 2002** for the prevention and punishment of money laundering, and instituting some measures to prevent and combat financing acts of terrorism[26], regulates in article 23 the crime of money laundering, as follows: (1) The crime of money laundering is punished with imprisonment from 3-12 years:

a) *change or transfer of property, knowing that they come from committing crimes, with the purpose of concealing or disguising the illicit origin of property or in order to help the person who committed the offense from which the goods come from, to evade prosecution, trial or execution of sentence;*

b) the concealment or disguise of the true nature, source, location, disposition, movement or ownership or rights over their property, knowing that the goods come from committing crimes;

c) the acquisition, possession or use of property, knowing that they come from crime. "

Critical Analysis Of The Phrase "Money Laundering"

In Romania, on the law governing the designation of the crime, given the controversial opinions that exist in literature, there is required a series of discussions.

Thus, there were **critical opinions** to calling on Law of "preventing and combating money laundering", supporting the fact that the term *money laundering* now reflected in the title of the law and in the name of the crime provided for in article 23 does not match the content of Law no 656 / 2002 nor the crime defined by article 23, al. 1.

In the support of this opinion there were the provisions of article 1 of Law no. 656/2002 according to which "*this Law establishes measures to prevent and combat money laundering*." It was emphasized that strictly grammatically, *money laundering and laundering of proceeds of crime* are not synonymous, the latter including not only money but also other goods, values, rights, etc. Supporting the same idea it was also mentioned that the material object of this crime, as defined in article 2 al. 1 of Law no. 656/2002 consists of tangible or intangible goods, movable or immovable, and legal documents or instruments that evidence that this title or relating rights, bringing out a much broader scope than just "money".

[23] Dumitru Matis, Cristina Palfi, Răzvan Mustață, *Importanța cunoașterii clientelei în prevenirea și combaterea spălării banilor,* Tribuna Economică 51-52, (2004): 75.

[24] Costică Voicu, et al., *Drept penal al afacerilor,* Publishing House, Bucharest, 2002, p. 203.

[25] Prevention and punishment of money laundering were initially regulated by Law no. 21/1999 on preventing and sanctioning money laundering, published in Official Monitor of Romania, Part I, no. 18 of January 21, 1999, repealed according to article 31 of Law no. 656 / 2002.

[26] Published in the Official Monitor of Romania no. 204 of December 12, 2002, as amended and supplemented by GEO no 53/2008 regarding the amendment of Law no. 656/2002 on preventing and sanctioning money laundering and instituting measures to prevent and combat terrorism financing, published in Official Monitor of Romania, Part I, no. 333 of April 30, 2008, and GEO no 26/2010 for amending and supplementing GEO no 99/2006 on credit institutions, capital adequacy and other norms, published in Official Monitor of Romania no. 208 of April 1, 2010.

The arguments in favor of these criticisms were also from the **historical perspective** on the phase of prevention and combat money laundering, phase exceeded by the current reality, which requires extending the crime of conviction of any proceed which is washed, and those related to the fact that using the words *money laundering* it is affected the preventive law side because it leaves room for interpretation and confusion on the subject of crime and in executing its obligations established by the law in question.[27]

A "*regrettable gap*" between the provisions of Law no. 656/2002 and international and European law in money laundering domain – the European Convention on Laundering, Search, Seizure and Confiscation of crime and the Convention against transnational organized crime of the United Nations, has been reported by other authors as well who have views that the two phrases "money laundering ", used by the Romanian legislator and "laundering of proceeds of crime ", used by the above mentioned Conventions and that include any other property or values thus money[28], are not synonymous.

There are separate opinions[29] that the Warsaw Convention by ratifying the Council of Europe Convention on Laundering, Search, Seizure and Confiscation of crime and terrorist financing, although the Romanian legislator has not defined in the Law no. 656 / 2002 the proceeds expression, by the provisions of article 23 of the law it refers to goods coming from committing any crimes. It was also claimed that the Romanian state is not required to replace the incumbent term of laundering proceeds of crime with money laundering because the Strasbourg Convention is ratified by Romania by Law no. 263 / 2002, does not provide this obligation for states, nor the obligation to include references to the material object of the crime in the name of its marginal denomination, given that money laundering is the term used in several laws and the Conventions that contain the obligation to incriminate money laundering establishes the term of "money laundering offense."[30]

Regarding the terminology used in naming the Law no. 656 / 2002 to prevent and combat *money laundering* and establishing measures to combat and prevent terrorist financing, it was claimed that the Romanian legislator has given a broad interpretation of money laundering phrase when he incriminated these facts, given both money and property and other rights on them, the legislator incriminated the act of money laundering that come from the illicit proceeds or of money laundering illegally obtained in other securities or cash.[31]

Conclusions

As we mentioned before, money is any value that can be easily transferred from person to person and that it is accepted by most people as payment for goods, services, debts, etc. Money, a present concept in the phrase money laundering may be: cash, precious metals and stones, credit cards, money orders, cards, etc., any amount deemed to be subject to a transaction.[32]

Looking from this perspective, we believe that using the phrase *money laundering* to define the offense according to article 23 of Law no. 656 / 2002, is itself improper as a money laundering operation does not actually involve money, there is money laundering every time there is an activity (transaction) that involves any property value, assets, income, that is the product of a crime.

[32] Mary – Jo Kranacher, Richard Riley, Joseph T. Wells, *Forensic.,* p. 94.

However, based on international documents in matters of money laundering ratified by Romania (the Vienna Convention, the Strasbourg Convention, the Palermo Convention and the Warsaw Convention) which does not require to states the use of a certain terminology to define the crime of money laundering and the interpretation of article 23 of Law no. 656/2002 from where it clearly results that the Romanian legislator not only limits the incrimination of money laundering, but refers to laundering any good or any tangible or intangible, movable or immovable property derived from any crime, therefore we are not convinced of the necessity to replace money laundering with the phrase laundering of proceeds of crime.

THEORETICAL AND PRACTICAL CONCERNS REGARDING THE CONCEPT OF COMPLEMENTARY PUNISHMENTS APPLICABLE TO NATURAL PEOPLE COMPLIANT TO THE REGULATIONS OF THE NEW CRIMINAL LAW

CRISTINA DANIELA MUNTEANU[*]

Abstract

By this study we proposed to analyze the concept of complementary punishments applicable to natural people compliant to the regulations of the New Criminal Law, motivated by the numerous significant amendments brought in by the above mentioned writ, such as: deduction of the peak limits of the punishments from 10 to 5 years, increase of the number of the rights part of punishments' content, significant increase of punishments' field of incidence by introducing some of the safety orders into complementary punishments' category (prohibition of entering certain cities, foreigners' deporting, prohibition of returning to family's residence for a certain period), the facility to advertise natural person's Court Final Decision of sentencing, as well as many other news we intend to present in the present article.

Keywords: *complementary punishments, new regulations, natural people, military degradation, sentence publication.*

Introduction

New elements, regarding the complementary punishment, can be identified in the new Penal Code, starting from the setting of this punishment place in Article 55 Penal Code, respectively after accessory punishment, as a following to a natural punishment reordering, reported to the moment of their application and execution.

Expanding the scope of complementary punishment from 5 to 15 variants of complementary punishments demonstrates the penal policy orientation towards an accentuated individualization of punishment by adding to the main punishment certain appropriate complementary punishments according to the penalty level, the gravity of the offense, the specific circumstances when the criminal act was performed, and the offender with his/her level of responsibility, understanding, education and training, prior criminal experience, or membership in another legal culture of another country.

Furthermore, part of the sanctions representing safety measures in the previous legislation respectively „prohibition to be in certain localities", „foreigners' deporting" and „prohibition to return to the family residence for a certain period" were introduced in the complementary punishment content, considering that these measures have and increased restrictive character for the freedom of movement. However by applying these measures, the prevention of committing new crimes is realized, by indirectly removing the danger state, by removing the offender from the criminal field.

The applicability scope broadening in comparison to the old criminal law is given by the possibility of the measure disposing both regarding the imprisonment, regardless of duration, but also to the penalty fine.

[*]Assistant., Ph.D. candidate at Faculty of Law, "Nicolae Titulescu" University, Bucharest; Lawyer; (e-mail: av munteanu_cristina@yahoo.com).

Eliminating the provision on the punishment of at least 2 years to implement a complementary punishment, made the current criminal law more flexible and adaptable, so the detailed assessment of the nature, gravity, offense circumstances and offender becomes possible.

Changes regarding the beginning of the complementary punishments execution were made, following the introduction of penalty fines, and criminal punishments which can be executed with suspension, to which one can apply a complementary punishment. Thus, if the previous Penal Code conditioned the existence of an imprisonment sentence of at least two years to apply the complementary punishment, in case of fine or suspension of sentence under supervision, the complementary punishment of prohibiting the exercise of rights **begins from a final conviction decision.**

In the current regulation the complementary punishments are particularly development in content, and also as number by introducing "the sentence publication" as complementary punishment.

Publication of the final sentence, as new complementary punishment, develops the court's capacity to draw the public and offender's attention with a clear message of justice, as well as satisfying the injured party regarding the moral readjustment due to him from effects of carrying the offense.

As historic element we can show that publication of the sentence recurs in our country, following to this measure the reassessment in the Penal Code of 1936 (Articles 61 - 62) when it applies only to the legal person.

Furthermore, regarding the military degradation we consider that many problems in jurisprudence should be solved, at some of them a unitary solution not being applied for the moment.

Since the complementary punishment for rights prohibition requires an extensive, thorough, detailed analysis, we will limit our analysis only upon complementary punishment of military degradation and the new complementary punishment, respectively the publication of the sentence in case of individuals.

1. Military Degradation

1.1. Definition and Punishment Content

In accordance with art. 69 in the new Penal Code, the complementary punishment for the military degradation consists in the loss of military degree and the right to wear uniform from the moment the sentence becomes final.

The military degradation is compulsory applied to military prisoners in active military service, reserve or retired, if the main penalty imposed is imprisonment exceeding 10 years or life in prison.

The military degradation can be applied to military prisoners in active military service, reserve or retired for crimes committed with intent, if the main penalty imposed is imprisonment for at least 5 years and not more than 10 years.

The military degradation is a complementary punishment that applies in case of committing criminal acts of extreme gravity.

In the first paragraph of the commented text, the legislator identifies the subject of legal compulsion for the application of this complementary punishment.

The gravity of this punishment provided that over time, in some cases, was regulated even as the main punishment. According to art. 253 in the Military Justice Code in 1873 (in force until 1937) the punishment was ... "by military degradation.. fraudulent stamps and seals usage, etc ... harmful to the state or military rights or interests".

Since by Decree no. 212 dated June 17, 1960, Art. 481 in the Code of Military Justice in 1937 was repealed, Articles 62 item 1 and Article 62 item 2 were introduced in the 1968 Penal Code, by

which the military degradation punishment was applied; in the first article the military categories of all grades and crimes were enumerated. For which, in case of conviction, the military degradation was imposed, and in the second the military degradation[1] effects were presented.

The 1968 Penal Code brings modifications to simplify and clarify its rules, stipulating by art. 67 para. 1 the content and effects of military degradation. It also establishes for the first time the mandatory and voluntary nature of military degradation.

Must be seen the fact that, firstly, there was a resignation of the system for the crime determination to which the military degradation can be applied by the enouncement of their juridical qualification, adopting the punishment value criterion.

Second, the unfair legal treatment was removed, preserving in our criminal law, the provision under which the complementary punishment of military degradation will apply to reservists as well. It was taken into account the fact that it was not just that for the same criminal act a military should be punished, besides the main imprisonment, also the military degradation, and the reservists to perform only imprisonment, maintaining their level of military under reserve. In the application of the military degradation the reservists were assimilated with active military personnel, because the gravity of the acts committed imposes in their case as well the application of the complementary punishment in debate[2]. In the 1936 Penal Code, the military degradation, as it was regulated in art. 62 item 1 and 62 item 2, was applied only to military reservists.

The result is that the military degradation effect – alienation from the army and the loss of military degree for the active military, as well as for the one in reserve, was regulated for the first time in the 1969 Penal Code.

In doctrine, till the enforcement of the 2009 Penal Code, there were numerous discussion according to which there is another regulation, besides the provisions in art 62/1 and 62/2, more precise the military categories to whom this complementary punishment can be applied, that needed certain explanations due to the evident legislative incompliance.

Practically, it is related to the provision comprised in art. 69 Law no. 80/1995 regarding the military statute[3], revised and completed, which holds the basis for the application of the military degradation in accordance to the conditions foreseen in the penal law to active military, in reserve or retired personnel, condemned by court order to the complementary punishment of military degradation.

According to the mentioned text, there are 3 categories of military personnel to whom this punishment can be applied, that is: active military, military in reserve, and retired military personnel.

Unlike the provisions of art. 67 paragraph 2 and 3 Penal Code results that together with the enforcement of Law no. 80/1995, the military degradation was also applicable to the retired military personnel.

The term "retired military" is explained in art. 42 Law no. 80/1995, including, first of all, the active officers and in reserve, as well as the warrant officers and reserve officer that exceeded the degree age limit for third class in reserve, foreseen in art. 92 and 93, and second, the officers, warrant officers and active officers or in reserve, rated by the medical-military expertise commissions as "unfit for military service, with changes in the military statute".

A first problem that needed to be solved is if by such law the regime of a certain punishment already foreseen in the Penal Code could be regulated.

The doctrine opinion was affirmative; in the meaning that article 72 paragraph 3 letter f in the Constitution foresees that punishments are regulated through organic law. Nevertheless, Law no. 80/1995 is an organic law, because according to art. 117 paragraph 2 in the Constitution, the statute

[1] VASILIU T. şi colab. - The Penal Code of Socialist Republic of Romania, commented and completed. General Part – Stiintific Publishing House, Bucharest, 1972.

[2] BULAI C.- Romanian Penal Law. General Part, volume II, - Sansa Publishing House, Bucharest, 1992.

[3] Law no.80/1995 was published in the Of. G. no. 155/1995.

of military personnel is established by such a law and the regulation of certain aspect related to the complementary punishment of military degradation is in accordance to art. 72 paragraph 3 letter f in the Constitution.

On the other hand it should be noted that the law on the military personnel statute is a non-criminal law, but nothing prevents such law to include provisions of criminal nature as long as it is an organic law, since the Constitution does not contain any provisions by which punishments are to be regulated only through organic laws of totally criminal nature.

In the previous expressed opinions, the correlation would regard, first, the adding of a retired military personnel as a third category to which the complementary punishment of military degradation can be applied, together with military personnel and reservists.

Moreover, it was considered that the expression "military and reservists convicts" comprised in art. 67 in Penal Code should be replaced with "active military personnel" and with "military personnel in reserve", which are widely explained in Law no.80/1995. This change was considered necessary since the term "military" has a wide meaning, if we consider that it refers to all military personnel[4] in general.

It appears that the legislator of the 2009 Penal Code took into account all these unconformities and introduced for the first time in the legal standard the provision according to which "military degradation is compulsory applied to active, in reserve or retired military convicts".

Military degradation is a complementary punishment which consists in the loss of the military degree and the right to wear the uniform.

This punishment has a limited application regarding the offender, the law naturally limiting this punishment application to military personnel and reservists.

The application of the complementary punishment of military degradation is done in case of committing criminal acts with high degree of gravity.

The military degradation punishment is a deprivation of rights punishment, which means the loss of the mentioned rights, unlike the complementary punishment of prohibiting certain rights, which is a restrictive punishment, consisting in a suspension, reducing the applicability of certain rights for a certain period of time (from 1 to 5 years), but not their loss. Thus, the convict is forbidden certain rights expressly foreseen by the law.

The military degradation punishment, under its execution, has a negative content, the execution of this punishment leading to a passive attitude imposed by law to the convict. He is not constrained in doing something; on the contrary, he is forbidden certain rights[5].

From the nature and content point of view, the military degradation is a determined punishment, in the meaning that the law expressly foresees the object upon which the juridical constraint is realized. The text of art. 67 paragraph 1 in Penal Code clearly mentions which rights are lost, thus limiting this punishment.

With deprivation of specific civic rights, this punishment can be applied only to people who own these rights upon conviction[6], namely employed military officers or in reserve. By explicit establishing of the lost rights as a following to the military degradation, the offenders to whom it becomes applicable are determined, namely active or in reserve military, meaning those who usually are granted the right to wear military degree and uniform. Regarding the reservists, we consider that this complementary punishment can sometimes affect only the loss of the military degree, the loss of the right to wear uniform or not being granted or not by the retirement Order. In this respect, we consider that if the retirement order does not confer the right to wear the uniform, the applicability of the complementary punishment of military degradation will only consist in the loss of the military

[4] BUTIUC C. –Military Degradation. Un-correlations – in RDP no. 4/1998, page 37-39.

[5] DONGOROZ V. si colab. –Theoretical explanations of the Romanian Penal Code. General Part – volume II, second edition, Academia Romana Publishing House, Bucharest, 2003.

[6] Appeal Court Bucharest, penal decision no. 55/2000, in T. Toader, Penal Law. General Part, page 116.

degree. We consider that the situation is not conferred by the Order of the movement in the right to wear the uniform; the complementary penalty of military degradation will only consist in the loss of the military rank.

The complementary punishment of military degradation consisting in the loss of military degree and the right to wear a uniform, consists in the loss of any military degree, including the soldier one, because this is a military degree and it assumes the right to wear the uniform[7].

If this quality got lost during the activity, by changing the police or penitentiary personnel statute, this complementary punishment can only be applied for the reserve or retired[8] periods. The loss of the military degree amounts some material effects regarding its financial value to be paid till the moment of the rights loss, rights granted for life to the owner. The financial value consists in salary/pension for the military, but also additional income due to military degree. The Penal Code does not contain any mention regarding the loss to the pension right, this problem being fixed by the regulations regarding the pension, where it is clearly foreseen that the right for pension is lost by the one convicted for military degradation[9]. The loss of the right to wear a uniform is referring only to retired or reserve military to whom was granted this right as recognition of personal merits during service. Furthermore the right to wear **only** the military uniform of the service where the military personnel served is regarding its use to special ceremonies and during national holidays, wearing the uniform in different environments being prohibited.

The punishment of military degradation, even if applicable beginning with the decretory conviction **has an absolute privative character,** the punishment of military degradation being taken for undetermined period. By Law 80/1995 art. 71-72 the possibility to overrule the complementary punishment of military degradation by another court decision containing the acquittal or this punishment no longer applies is foreseen; in this case the possibility to re-grant the military degree and change of the military status exists. From here we can see that the effect of the military degradation and the loss of the right to wear uniform are applied for life.

Different opinions were expressed in specialty literature regarding the perpetual and definitive character of military degradation. In this sense, some authors affirmed that complementary punishment of military degradation is definitive and has **perpetual character,** because is valid forever, even after rehabilitation[10].

---

[7] Appeal Court Bucharest, section I penal, decision no.42/A/1997.

[8] **Military Court Timişoara, s.p. 125 dated 20.10.2004,** declined his competency for the cause settlement complaint against N.U.P. resolution in favor of Arad Judicature, and this by civil sentence no. 2561 dated 17.12.2004 declined the competency in favor of Military Court Timisoara with the motivation that the provisions of article 40 Penal Procedure Code are applicable, with the motivation that the military capacity loss previous to the crime performance does not change the court competency, the military court remaining competent, if the deed is related to offender's job description, as in the case presented.

For the competence negative conflict settlement was taken into account the fact that after 90 days from October 3, 2004, when Law 293 dated 30.09.2004 was enforced, the entire military personnel (where the offender was incorporated) form the Penitentiary General Division and the units respondent to it were demilitarized, being granted the public servant statute in the system of the Penitentiaries National Administration.

Î.C.C.J., d.p. 1052 dated 14.02.2005, established the competence in favor of District 2 Judicature, because if some crimes committed by the military personnel maintained in the military instances competence, after the enforcement of Law no. 293/2004 the active law would denaturize, as well as the juridical regulations that follow the adoption of national legislation to the European Commission Legislation.

The provisions of art.40 para. 1 letter a) Penal Procedure Code are not applicable, because they assume the loss of a capacity owned at the date of the crime performance to be liable to other reasons than the legislator will.

Opinions were mentioned about the nature and its content, the military degradation is a determined punishment, and under its duration is a perpetual punishment, in the meaning that the law does not foresee the limit of its duration, the convicted being expelled from the army in a definitive way and losing his military degree[11]. It was considered that the effects of military degradation continue to exist even after the convicted rehabilitation, because, as the law foresees, the rehabilitation is not followed by the obligation to be reinstated in the position held prior to conviction or to be called in the army permanent existent personnel, or to be granted the lost military degree[12].

We approve the opinions according to which the complementary punishment of military degradation **does not have a definitive and perpetual character,** because by rehabilitation, the convicted to this punishment regains the right to accede to the military position by following the steps required by the law[13]. Thus, we consider that after rehabilitation the convicted becomes up for accession to the military position.

Considering the fact that the court cannot cleave the punishment content when it application is performed, the military degradation has a punishment character with irreducible content, the rights foreseen in the text forming an impartible complex of rights.

2.2. Applicability conditions

The military degradation has a compulsory or discretionary character.

According to art.69 para. (2) in the new Penal Code, the military degradation is **compulsory** applied in the case this complementary punishment is applied together with the main punishment, that is imprisonment for more than 10 years or imprisonment for life[14].

The **discretionary** application, art. 69 (3) in the new Penal Code, can be decided by the court, in the case of military convicts that committed the crime with **intent**, the main punishment being of at least 5 years and not more than 10 years. The discretionary character of this application is *ex lege*, stipulating that military degradation "can be applied".

It must be noted that, unlike compulsory military degradation, which is conditioned only by the crime quality and the amount or the nature of the established main punishment, the discretionary degradation is conditioned by the subject quality, the crime type and the amount of the main custodial sentence set by judge. In this respect, imperative conditions are required, namely: application of a custodial sentence established by the court and its execution to the form of guilt.

The complementary punishment of military degradation is applied regardless the existence of a certain relation between crime and military position and independent to the case where the offender was or was not in a military position at the date of the crime committal, important being for the subject to have a military position at the time of the conviction. There were many opposite solutions, unfortunately, in jurisprudence, this punishment being automatically applied together with imprisonment for more than 10 years, regardless if the defendant had or not the active or reservist military position[15].

Being conditioned not by the main punishment foreseen by law, but by the main punishment established by the court, the military degradation was not registered in the incrimination special standards, as the prohibition of certain rights[16] has been registered.

The complementary punishment of military degradation can be established by the military courts and by the civil courts (when they are trialing crimes performed by the offender before having obtained the military position).

Being conditioned by the amount of the main punishment to which it is added, the legislator did not foresee the military degradation for the different crimes attracting the application of this punishment.

What must be remembered is the fact that the military degradation, as well as the prohibition of certain rights complements the main punishment when the court appreciates as necessary the replenishment of direct repression and is functioning together with the main punishment, sometimes for the same crime being applied more complementary punishments (for instance, in case of real crimes, different complementary punishments or even the same type of complementary punishments but with different content, are applied together with the custodial punishment to be executed by the convict). Ultimately, the complementary punishments regarding the penal sanctions as main punishments, answers to the general prevention and special prevention functions, in a greater extent for the latter, the convict executing the complementary punishment being put, in certain cases, in the situation of not committing another crime.

Execution of military degradation takes place immediately after issuing a final conviction sentence, the loss of military degree and the right to wear a uniform, becoming valid from the moment in which the conviction decision becomes *res judicata*, a situation presented as a rule exception case, according to which the complementary punishments start after completing the main custodial punishment to which is added[17].

2. Sentence Publication

In accordance to the provisions of art. 70 in the new Penal Code the publication of a final sentence can be issued at any time, considering the nature and gravity of the crime, the circumstances and the convict, the court considers the publication will also help to prevent the perpetration of other crimes.

The sentence decision is published in an excerpt, in a regional or national newspaper, once. The final conviction sentence is done on the convict's expense, without disclosing the identity of others.

2.1. Concept and Punishment Content

For the first time in our penal legislation the possibility of publishing the definitive penal decision in case of natural people is institutionalized, not having a correspondent in any of the precedent regulations. This complementary punishment, in the previous Penal Code, was foreseen, in a specific frame, only for legal people.

By the establishment of these complementary punishments the increase of the justice's message efficiency was expected, but also to provide moral readjustment to the injured person[18].

However, the Penal Code aims to provide the judge a wide range of measure that, by flexibility and diversity, can allow a better judicial individualization. Thus the incidence of complementary punishments, the number of rights contained in the punishment were significantly

[18] HOTCA M.A. –The new Penal Code and the previous Penal Code. Different aspects and transitory situations – Hamangiu Publishing House, 2009, page 74.

extended, and a new type of punishment was introduced, respectively the publication of the definitive conviction sentence[19].

The conviction sentence is **established by the court** taking into account the nature and gravity of the crime, the circumstances and the convict, in relation to its effectiveness to prevent the perpetration of such crimes, but also to provide moral readjustment to the injured person.

We consider that this punishment must be applied for the crimes with high gravity, which attract public disapproval, without making use of its implementation together with crimes of lower gravity. The basic argument of this reasoning lies in the fact that applying this punishment including crimes with lower gravity has as consequence a harder reintegration in the society of the convict, despite the positive effects in term of punishment goal.

Publication of the sentence is a great **moral punishment** with powerful intimidating effect if the offender is notorious in the respective region; the criminal deeds produced a major impact at public opinion level or in the case where the nature and gravity of crime presented high interest to the community. In such situations, the sentence publication has a greater effect regarding the convict, but by the power of example the case can contribute to the prevention of such crimes.

The complementary punishment of the sentence publication is a penalty involving loss of civil rights, the convict being disapproved by the public. Such sanction can have a strong discouraging effect, forming a real denigration made on personal expense, meant to warn the public opinion about the convict's criminal activity.

In this respect, the complementary publication of the conviction sentence is a punishment with positive effects in terms of punishment goal, altering the image of the convicted person. It is a punishment that provides a strong general prevention, taking into account the prevention of committing new such crimes.

2.2. Application Conditions

Punishment is applicable for intended crimes and for crimes on guilt and it regards all natural people with penal liability, and there are no individuals excepted from this punishment. The sanction has discretionary character for the court, its application being debated from case to case, according to the crime nature or gravity, the circumstances it occurred in and the potential impact of the negative publicity made in this way[20].

The court may decide to publish the sentence in excerpt, in a form in which the content is clear and understandable to the public, in a very visible form of exposure and impact (on the first page, with a certain print format, pre-established letters size or table), within the pages of a regional or national newspaper. Regarding the display, it is obvious the legislator refers to the way the natural person is obliged to ensure the sentence decision display, respectively the announcement format, the dimensions must be established as to allow the announcement observation and reading by the people reading the regional or national newspaper. In order to achieve the sanction finality, the publication should include a brief presentation of the facts, as it was apprehended by the court, as well as the elements of the decision.

Unlike the complementary punishment of the displaying or publishing the conviction decision in case of legal persons which are made on a period of one to three months, in case of a natural person it will be published once. This way, the legislator characterizes this complementary punishment as determined punishment, although it appears to be an undetermined punishment.

Publication of the conviction final decision is made on the convict's expense.

Publication of conviction sentence must not prejudice the injured subjective rights, reasons for which by the sentence publication cannot be revealed the injured people identity, except the cases where the agreement of the injured or his/her legal representative agreement exists. The law also

[19] Reasons report of the new Penal Code, published on the Representative Chamber site – http://www.cdep ro/proiect/2009/300/00/4/em304.pdf.

[20] ANTONIU G. and co.- The new Penal Code – volume III, C.H.Beck Publishing House, 2008, page 189.

regulated the situation when in the circumstances more people are involved, being also protected regarding their right to a personal life, their identity not being revealed.

This complementary punishment for natural people is new, so the courts are about to develop their practices in the situations where such penalty can be applied together with the main punishment. The efficiency of such complementary punishments for legal people, represented by natural people, led to the conclusion of the measure application straight to the responsibility of the natural people.

The conviction sentence publication is enforced by sending the extract in the form established by court, to a regional newspaper appearing in the district court that pronounced the sentence, or to a national newspaper for publication, on the convict's expense.

Considering the provisions of the Penal Code foresee the application of complementary punishments in the situation where the main punishment is imprisonment and in the situation where the main punishment is a fine, we consider as necessary the introduction of the regulation regarding the prohibition of exceeding by publication costs the value of the fine applied to the natural person for the committed deed (source of inspiration could be the provisions in art. 131-35 French Penal Code).

In case of malevolent punishment failure, the judged assigned with its execution can consider fulfilled the constitutive elements of the penal sanctions non-performance crime foreseen and punished by art.288 para. (1) Penal Code, crime punished with imprisonment from 3 months to 2 years or with fine. According to the provisions of art.554 Penal Procedure Code he may approach the court that will proceed according to the provisions of art. 595 and art.596 Penal Procedure Code.

Conclusions

The new Penal Code aims to provide the judge a wide range of measures that, through flexibility and diversity, can allow a better judicial individualization. In this respect, the incidence was significantly extended for the complementary punishments and the number of rights under the punishment content, and a new type of punishment was introduced, respectively the publication of the conviction final sentence.

This complementary punishment for the natural people is new, so the courts are about to develop their practices in the situations where such penalty can be applied together with the main punishment. The efficiency of such complementary punishments for legal people, represented by natural people, led to the conclusion of the measure application straight to the responsibility of the natural people.

We consider that the regulations enforced by the new Penal Code regarding the complementary punishments are meant to ensure a better punishments' individualization, so as to avoid as far as possible the non-unitary solutions of jurisprudence.

CRIMINAL ACTS PREPARATORY TREATAMENT IN COMPARATIVE LAW

OANA ROXANA IFRIM[*]

Abstract
Acts preparatory treatment shows a very high importance. Romanian Penal Code adopted system unpunished preparatory acts, but there are times when preparatory acts are similar attempt or offense consumed when they present a danger to society mare. Legal regulation preparatory acts is preventive in relation to more serious offenses and multiple would be committed. Author aims to make a foray into time on the treatment of criminal preparatory acts.

Keywords: *legal treatment, preparatory acts, preparatory acts punishing*

Introduction

Preparatory acts usually are not charged other than possibly as an independent crime (which is the solution to Romanian law), consideration of this issue is of great scientific and practical interest.

It's known that old French law did not distinguish between the act Junior and enforcement act serious offenses (atrocious) such as crimes against the monarchy, parricide, poisoning. Jousse shows that if the monarch is punishable, acts committed against criminal thoughts and proved by witnesses or the offender's recognition.

For less serious offenses (simple) distinguish between proximus and conatus conatus remotus and acts more gentle closer than offense punishable consumed and not punishing the most remote at all. In France, doctrine and jurisprudence, in a spirit of schools punishing criminal acts preparatory class tend to interpret doubtful cases in favor of the delinquents sometimes, for example, qualify as acts committed by these preparatory acts, even if the acts were actually performed.

Donnedieu de Vabres, in Traité de droit criminel[1], noted in turn that there are two tendencies in the interpretation of the document preparation, an objective trend that justifies criminalizing preparatory act only within the state of the external manifestation was creating a threat to social values and the second was a subjective tendency considers the outward manifestation as a symptom of criminal personality, in this vision does not interest but determining the degree of social unrest was manifested in early danger of executing the offender, it must be punished as severely as would be consumed offense

Pradel[2] also emphasize the objective weight of distinguishing, in some cases, if we face a preparatory act or an act of execution. For instance, the thief caught in the door when you call the victim's home to check whether it is home or not, commits an act of preparation (scot) or executing an act of the theft (punishable)? Salvage, p.35, the author argues that the central problem is to determine how the external manifestation is necessary to attract criminal liability. Soyer, in the same news shows that the key problem is to determine the minimum beyond which crime crackdown should intervene.

In one case (Sconfield) the offender was convicted of attempted arson because he brought a candle and matches in his own house with the intention of fire, the court discussed this opportunity

[2] Jean Pradel, Droit penal general,Cujas, Paris, 1991, p.121.

where you can go to punish past acts consumption, not to give a general solution to this issue. In a design inspired by the German doctrine of the last century is considered that only the actual consumption of the act would involve a disorder of the rule of law and justifies the criminal liability of the perpetrator. This vision is part of an expected limitation of extreme liberal view of state intervention in the relations with citizens only to situations where such intervention would be rendered absolutely necessary by fundamental social values that were actually harmed or jeopardized.

Such a solution was not accepted by any modern legislation but sustaining that past experience and requirements that a claim of rational criminal policy sanctioning the acts of execution interrupted early or did not produce any effect, because these acts can include the germ of the result. He reasoned that it would be dangerous for the criminal law to punish only the consummated crime unprotected citizens leaving the threat of serious and imminent danger, but even such a definition excludes the criminalization and punishment of preparatory acts. Criminal law should intervene even before consumption when there is a concrete danger that time of the act to achieve the result that the legislature wants to prevent (Saleilles).

In such a view is considered necessary that social values should be protected not only after they have been made a touch and to avoid repetition of such attacks, but even before the consummation of the offense, when it profiled only possibility of such hazardous results (damage potential) and to avoid turning this possibility into reality. Such facts lead to a social alarm and disorder as high as fait (Kohler). From another perspective it was argued that the modern state must punish not only immoral act reflecting an offense will result caused a relevant criminal violation of the precept that the actual act but did not reach the drinking scene, because in this case but otherwise the rule violated the precept was made. If, for instance, the precept of the rule relating to the fait accompli of murder is "not kill" if the act preparatory to murder rule violated the precept is "not trying to kill."

Subjective theories (especially the positivist school) have proposed mandatory punishment of preparatory acts and all crimes as acts preparatory revealing the intent to commit criminal offense also makes clear the dangerous person regardless of offense (unlimited criminalization of acts preparatory solution) This position was developed by the Italian positivist school (Ferri, Garofallo). In any event outside its design faces an offense dangerous revealing the author (action was considered a symptom of individual hazards) would be justified to make any distinction between those acts and committing the offense. Moreover, the risk of the individual relevant issues of fact are identical with itself and insusceptible of graduations and quantitative assessments would not legitimize the existence of different limits of punishment for past acts of crime consumed relative to consumption. This solution was justified and other arguments, supporting it, the cell, the mere manifestation directed towards producing results include in it a threat to reach the goal of the act or the willingness to consume in such acts pose a threat already evident in such a time representing a rebellion against the collective will of the individual.

Such a design feature of the willingness of the criminal law (as opposed to the outcome of the criminal law) was rightly criticized because it undermines individual liberties and guarantees attempting therefore legal security of citizens. Although subjective theories were advocated unlimited criminalization of preparatory acts, in fact most authors have located the positions of these theories have acknowledged that criminalization could not be extended to crimes and light (so unlimited criminalization sentence and turned to accept the solution here limited criminalization of preparatory acts). On the way to punish preparatory acts, subjective theories parificării penalty system occurred on the ground that it presents the danger that the perpetrator is the same person whether it just be prepared or executed offense that led to the production performance results.

Criminalization of acts preparatory thesis argues the need to criminalize these acts taking into account the social danger they posed. Preparatory acts, it is argued in this opinion, creates conditions conducive to the perpetration ¬ laid down by the criminal law and thus should be included causal

history of socially dangerous resultment, although this result did not occur, creating a state of danger to the social value against which the act was to move ready. Criminalization and punishment of preparatory acts are therefore necessary, in the same design, just to prevent the perpetration and prepared to defend the social threat. In the criminalization thesis took shape, however, two views: one that supports the need to criminalize preparatory acts limitless, whatever the offense is ready, and another partisan of the idea of limited incrimination. According to this latter opinion, while recognizing that the preparatory acts therefore presents a danger and that in principle could be criminalized, it is considered however that such criminalization is required only for serious crimes because such crimes only harmful acts shall prepared[3] characteristic of the seriousness of the offense.

The legislature could consider that any manifestation directed towards producing an outcome of illicit acts by enrolling in all contributory to the results present the same danger as the result itself and as such production would always be criminalized even if not completed, but was interrupted or not and had its effect. Another solution would be that of the external manifestations of the perpetrator directed to the consummation of the infringement to be distinguished from those which are only preparing those committing the action is the actual execution of the crime. On the way to punish preparatory acts (if unlimited or limited shall sentence criminalization of preparatory acts) to be the solution proposed parificării prosecute acts of punishment that is prepared in the same range of punishment as a penalty offense diversification solution that is consumed or prosecute acts of preparation in lower limits of punishment for the crime than those consumed.

Authors were ranked objective theories have not considered it necessary to punish acts of training while not posing a danger to society is too far removed from the time of consumption, on the other hand, they do not enroll any causal history of crime consumed (non-accusing solution acts of preparation). Exceptionally was admitted even by those authors, that documents may be sanctioned training especially for extremely serious crimes like being treason, piracy and other overhead.

It is also accepted idea that the preparatory acts would be punishable as a crime in itself. Romanian legislature ranked objective theory, considering that you would not be justified criminalization of acts preparatory to the crime. This solution was motivated by the argument that the acts of preparedness, objective, produce no social unrest, it does not violate the law are usually equivocal, there is no doubt that the author will continue to persevere in operation offense, it is in society's interest perpetrator to leave open the path of recovery and abandonment of criminal decision, on the other hand, preparatory acts are far from time consummation.

Unpunishment thesis argues, conversely, that the preparatory acts must not be criminalized because they remain outside the act and does not form the actual causal history of criminal outcome. The main argument of the thesis that the criminalization of preparatory acts is not indicated, however, is that they generally ambiguous character in the sense that it shows clearly what the author wants them, so that it could be argued that he quit at any time to commit the crime. Finally, it was alleged that the preparatory acts not only produce an actual injury, but the state does not create any danger for the social office to which they are moving, so if you would criminalize such acts were reach and thus reduced unnecessary penalties. In theory, even if one accepts objectives exceptionally punishment in some cases, preparatory acts, limits are always lower than the penalty for the consummated crime system (diversification).

Some limited criminal codes criminalize preparatory acts, eg the Bulgarian Criminal Code, the Hungarian Criminal Code, and other countries criminalize them indefinitely. Russian Criminal Code provides in art. 30 preparatory acts that fall under criminal law only when used to commit a serious or particularly serious crimes and only if the execution was not carried through the fault of the offender. Non-accusing rule is enshrined in the preparation of acts of criminal law, but she knows some mitigation, as in our law, like most European systems devote two situations in which these acts come to be criminalized[4].

---

[3] Giusepeppe Bettiol,Diritto penale, parte generale, Padova, 1973, p.322.
[4] George Antoniu , Attempt, Pub. Daco-Română, 1997, p.186.

The two situations where we encounter preparatory act is treated as attempted, and the second assumption is that preparatory acts are treated as independent offenses. According to the provision of art. 173 par. 2 Penal Code., It is considered tentative and production or acquisition of means or instruments and take measures to commit very serious crimes against state security, and according to the first paragraph of that provision attempt to these crimes are punished. Exceptionally Romanian penal law to be upheld the criminalization of preparatory acts as autonomous crimes (eg possession of weapons and ammunition, explosive substances, possession of instruments for counterfeiting securities, possession of tools for fishing) by expanding the concept of act of execution and the acts which by their nature are acts of preparation (procurement, production means or instruments and take measures to commit a crime) when committed in connection with serious crimes, treason by helping the enemy, treason transmission of intelligence, espionage, fascist propaganda, illegal deprivation of liberty (173 par.2 Penal Code., art.189 al. Penal latter.) as well as some crimes specified in the code (Air art.1072 ff) or civil navigation Decree (D 443/1972), Art. Al.ult 123. .

FEW PRACTICAL ASPECTS AND PROBLEMS REGARDING LAW NR. 202/2010

ALEXANDRA CRISTINA JIPA*

Abstract
We have analyzed the impact the introduction of art. 74¹ penal C. over a certain category of infractions, respectively over the economical nature infractions. Harmonization of such recent norms with the already existent legislative framework rises a series of questions and possible practical problems. Also, we have considered interesting to appreciate if such changes are sufficient or there is not a conflict between the punishments set forth by regulators for each of such infractions. Should the answer be yes, there should be considered the possible conciliation methods.

Keywords: *sanction, replacement, individualization, penal liability, prejudice.*

Introduction

Occurrence of law 202 gave rise to a series of legislative changes; from my point of view, the provisions keeping the attention and regarding an institution of great interest, are those provided in art. 74¹ penal C., as well as those in art. 320¹ penal. proc. C.

They both concern new methods for individualization of punishments, cases of punishment reduction or of replacement of the penal sanction with an administrative one. The first article (74¹ Penal Code[1]) does not benefit from a marginal denomination, yet it might be „cases of imprisonment punishment reduction or of application of another sanction".

A first element worth being analyzed is the legal nature of these two new institutions introduced by the regulator by Law 202/2010. We may not remember that art. 74¹ in Penal Code would have introduced a new attenuated circumstance, as they "define circumstances, qualities, states or situations accompanying the fact, contributing to the determination of the associated danger level, of the gravity and its qualification, or which relate to the personal situation of the doer, determining this one's associated danger, the kind of his fault and the incidence of the penal liability"[2].

To which extent could we talk about a replacement method for penal liability in case of art. 74¹ Penal Code? We know that the replacement of the penal liability may be unconditional when an

*Assistant, Ph.D., Faculty of Law, „Nicolae Titulescu" University, Bucharest; (email: alexandrajipa@ gmail.com).

[1]Article 74¹ Penal Code:

Paragraph 1- In case of committing fraudulent management infractions, scam, dilapidation, abuse in service for personal interests, abuse in service against public interests, abuse in service as also qualified as negligence in service, provided in the present code, or of economic infractions provided by special laws, by which a loss was generated, if during the penal pursuit or during trial, until settlement of the case in first instance, the defendant or faulty part integrally covers the caused prejudice, limits of the punishment provided by law for the committed crime being reduced to half.

Paragraph 2- In case the prejudice caused and recovered under the same conditions is up to euro 100,000, in the national currency equivalent, the fine punishment may be applied. If the prejudice caused and recovered under the same conditions is up to euro 50,000, in the national currency equivalent, an administrative sanction applies, which is recorded in the criminal record.

Paragraph 3- Provisions of paragraphs 1 and 2 do not apply if the doer had committed another similar crime, provided in the present code, within a 5 years interval from crime committing, for which it benefited from the provisions of paragraphs 1 and 2.

[2] Vintilă Dongoroz and colab., Theoretical explanations of the Romanian penal code, vol. II, p. 129, Editura Academiei Române, Bucharest, 2003.

infraction is non-incriminated and the nature of liability changes se or may be conditioned, in which case the replacement only operates if certain conditions are met; such form of conditioned replacement may compulsory operate by simply meeting the conditions required by law, or may be at the free choice of the court instance[3].

In the present case, I think we may say that paragraph 1 in art. 74¹ Penal Code represents a cause for punishment reduction, paragraph 2 thesis I constitutes a form of conditioned liability replacement and which only operates if the court considers so (it may not be replaced by a non-penal liability, yet the court may choose a fine in case of prejudice recovery), and regarding paragraph 2 thesis II, I believe it is possible to retain a non-equivoque for of penal liability replacement with an administrative liability form, replacement only operating as the intervention of the court being no longer necessary for the observation of such situation.

By the content of art. 74¹ Penal Code a series of infractions are set forth to which the present provisions are applicable, the doer's criterion being economic: to be more exact, it refers to those result infractions, provided in the penal code within title III (against the patrimony) and title V (against the authority) and which have caused a prejudice, a loss, on one hand, as well as to economic infractions provided in economic laws and which also caused a loss.

The cause for the reduction of the punishment limits to half, becomes functional for the above mentioned infractions only in case before the end of the trial stage in instance, the defendant or plaintiff covers the entire prejudice produced. On this case I believe that including the defendant in such provisions is excessive and that the regulator should have exclusively refer to the defendant, as it does not provide for the possibility of a solution at the end of the penal pursuit to consider art. 74¹ penal C.. I say this as art. 74¹ is part of Section II – Attenuating and aggravating circumstances and from the content of **art. 80 penal C.** it results that they may only be held by the court: „any circumstance kept as attenuating circumstance or as aggravating circumstance should be shown in the **decision**." The things are just the way they are as the legal individualization work is exclusively attributed to the court instance, and positioning such article recently introduced in Chapter V. Individualization of punishments from general side of the Penal code confirms such thing.

Paragraph 2 in art. 74¹ in penal C., comes with additional specifications setting forth the quantum of the produced prejudice, what punishment and sanction may be applied. Therefore, of the prejudice was up to Euro 100,000 in national currency equivalent, than in case the fine punishment **may apply**. Two observations should be made here: first of all the possibility and not the obligation of setting forth the fine punishment, as well as the fact that it is for the first time when the regulator sets forth a quantum into another currency than the national one in the content of the Penal Code. Practically, a recommendation for clemency is made in case of economic infractions that produced a prejudice covered by the end of the trial (reduction by ½ of the punishment limits) and which does not exceed the amount of euro 100,000. Case in which minimum one paradox is obvious: if the punishment limits are reduced by half, this refers to imprisonment punishments, as for this type of infractions there is not yet provided the fine punishment as alternative. But the regulator sets forth by the present article the possibility of applying the fine sanction, which alters from the legal point of view the provisions on the sanctions from each of the articles incriminating din such infractions, either from the Penal Code special part or from special laws. Practically, a change of the sanctions occurs, which is not provided in the legal content of the mentioned infractions. Nevertheless, mentions of the regulator are not exclusive, but exemplificative – „ (...) for some economic infractions as provided in the special laws".

The second thesis of paragraph 2 regards the situation when the caused prejudice does not exceed the amount of Euro 50,000 in the national currency equivalent, in which case an administrative sanction **applies**, recorded into the criminal record. This time not like in the previous thesis that „may apply".

[3] V. Dongoroz-op. cit., p. 192.

Moreover, in paragraph 3 a negative condition is provided, more exact the provision of art. 74¹ paragraphs 1 and 2 Penal Code do not apply if the doer benefited from these provisions within a prior five years interval before committing the present penal action. We have as elements: **a negative condition** circumscribed by **previously committing a similar infraction** within a **given term** and **for which the doer benefited from such institution.** In other words, art. 74¹ penal Code may apply in case it had not been applied for the same personal action for the same person for a similar act in the past 5 years.

The thing that remains unclear in this case is the interaction between this institution and other substantial penal law institutions, like the general individualization criteria: punishment limits from the special side, the social hazard of the action performed, the doer person and the circumstances attenuating or aggravating the penal liability (the situations of infractions, recidivism, aggravating circumstances and attenuating circumstances).

If in case of paragraph 1 it seem to yet retain from the court notifying with the case instance, with the same regime as a cause for punishment reduction by half, in case of paragraph 2 thesis II the other institutions that might be present in the case are automatically eliminated.

In situation of paragraph 1 it is clear that there will be started from such reduced limits of the punishment and the incidence of other norms of punishment individualization will be normally analyzed.

Regarding paragraph 2 thesis II, the faculty of applying a fine punishment is left for the court's choice which and in this case shall be able to make an analysis of all cases that might concur to the establishment of the punishment, such as to correctly individualize the punishment. For example, if there is observed that the defendant has penal antecedents (even if not for the same type of action) and/or in case there are aggravating incidents and circumstances from the general part, the court may pronounce an imprisonment punishment, which, should the defendant is also retained the attenuating circumstances and had covered a prejudice of up to Euro 100,000, may be subject to supervision.

Problems yet occur from the analysis of thesis II of art. 74¹, paragraph 2 penal Code: the regulator pronounces in the meaning that if the prejudice is less than Euro 50,000 and covered/recovered under conditions in the previous paragraph, then the court shall apply an administrative sanction. Practically, the court may no longer analyze any other incidental institution , is not interested if we have also aggravating circumstances retained and if, let's say, the defendant is recidivist. Regardless the situation, such a sanction to be further recorded in the criminal record will apply. It is clearly an arbitrary norm attacking the legality of the penal suit by cancellation of the legal individualization in such a case. If we also consider the fact that probably most of the economic infractions frame into this thesis, we will observe that therefore the regulator found it necessary to solve the problem of the celerity of the penal trial, impairing on the other hand its legality.

O also observe the fact that an obvious pecuniary discrimination produces: defendants affording to pay the prejudice shall benefit from this institution that becomes a real shield for a potential imprisonment punishment, and those not affording it, who could not find a job after the beginning of the penal pursuit or who had no possibility of obtaining a credit for covering the prejudice or who have no assets to sell in this regard, shall receive a liberty privation punishment as such infractions are not provided with the alternative fine punishment.

By the same law 202/2010 art. 320¹ in penal proc. Code was also introduced, called „Trial in case of guilt recognition"[4]. By the present article a distinctive procedure is regulated, applicable in

[4] Article 320¹ penal proc. Code.

Paragraph 1- Until beginning of judgment investigation, the defendant may personally state or by authentic writ that it recognizes the acts retained on the court notification deed and that it requests the judgment to take place based on the evidences administered during the penal pursuit stage.

case the defendant recognizes committing the acts recorded on the prosecution deed and requires for the judgment to be made based on the probation in the penal pursuit. This thing presumes the exclusivity of the already administered probation in the previous, the new evidences only possibly consisting in deeds of circumstantiation. In this case, the trial shall be solved with celerity – practical, upon the first judgment term, if there are no reasons to postpone - , and in case the settlement of the civil side involves administration of evidences, the case will be disjoint on this side. As effects, the court is held that under such conditions to pronounce the conviction of the defendant to a punishment of which limits will be reduced by 1/3 in case of imprisonment punishment and by ¼ in case of fine punishment.

There is spoken of a single type of court notification, namely by indictment, but I assume that such provision also apply in case the court kept the case for judgment in case of admitting a claim based on art. 278¹ penal proc. Code, giving another consideration to the probation in the penal pursuit stage, for example.

We have several conditions circumscribing this institution:

First of all, the moment until it might become applicable is clearly set forth by the regulator - „until the beginning of the judgment investigation". Any further moment brings the impossibility of invoking the incidence of art. 320¹ penal proc. Code in question.

Second of all, recognition should be complete, without reservation, aiming exactly the facts retained in the defendant's task and exactly as they were retained by indictment. Also, the defendant states that it does not intend to administrate other, from such rule exception being made for deeds in circumstantiation; yet the later ones may not be submitted unless upon the same moment, the postponement excluded for their submission, therefore as it results from the law's text.

Based on paragraph 3 of this article there is practically coming back to the rules for judgment investigation carrying on, the defendant is interrogated, after which the floor is given to the prosecutor and to the other parties on the case. A lack from the regulator is that it doesn't provide the institution available for the court in case the probation is considered as insufficient? There is a suggestion in paragraph 4 where it is said that „the court settles the penal side when, from the administered evidences results that the actions of the defendant are established and there are enough information regarding its person to allow the establishment of a punishment". Otherwise, I consider that the court may dispose, according to art. 332 penal proc. Code, the return of the case for remaking the penal pursuit.

Paragraph 2 – Judgment may only take place based on the evidences administered during the penal pursuit stage, only when the defendant states that it totally recognizes the acts retained on the court notification deed and that it does not request administration of evidences, except for the writs in circumstantiation it is able to administer upon this judgment term.

Paragraph 3- Upon judgment term, the court asks the defendant if it requests the judgment to take place based on the evidences administered during the penal pursuit stage, which it knows and acknowledges, proceeds to its hearing and then it gives the floor to the other parties.

Paragraph 4- The court instance settles the penal side when, from the evidences administered, it results that the actions of the defendant are established and there are sufficient information regarding its person to allow the establishment of a punishment.

Paragraph 5 – Should for settlement of the civil action administration of evidences be necessary before the court, its disjoint will be ordered.

Paragraph 6 - In of case settlement by application of paragraph 1, the provisions of art. 334 and 340—344 correspondingly apply.

Paragraph 7 - The court instance shall pronounce the defendant's conviction, who benefits from a reduction by 1/3 of the limits of punishment provided by law, in case of imprisonment punishment, and from a reduction by ¼ of the limits of punishment provided by law, in case of fine punishment. Provisions of paragraphs 1—6 do not apply in case the penal action aims an infraction punished by life detention.

Paragraph 8 - In case of petition rejection, the court instance continues to judge the cause according to the common law procedure.

In case there is necessary to administrate evidences regarding the civil side of the case, disjoint shall be disposed, such as the settlement of the penal trial to be not delayed by the settlement of the civil action.

In the paragraph before the last one the limits of reduction for punishments is mentioned in case of guilt recognition; what amazes is that the regulator uses a strict tone for the possibilities: to be more exact, it only refers to the possibility of conviction, not considering the situation of replacement of the penal liability or defendant's acquittal based on art. 11, point 2 compared to art. 10 letter b^1 penal proc. code, for example. In any case, it is established that the imprisonment punishment will be reduced by 1/3, and the fine by ¼.

These provisions are not applicable when for the infraction the court had been notified with the life detention is provided. What is not very clearly said is if this thing is also valid in case of infractions with life detention alternative punishment provided and that of imprisonment, bur from a first interpretation it would result that including in such situations, the provisions of art. 320^1 penal proc. Code may not apply.

When such a request belongs to the defendant and it is rejected by the court, judgment shall be carried out according to common law procedure, as mentioned within paragraph 8. Practically, only this way the restitution of the case to the prosecutor would be possible for remaking the penal pursuit, as the special procedure regulated by this article does not provide for such possibility.

Conclusions

There are several observations possibly brought to this new institution, but we shall concentrate, first of all, on the issues generated by its „crossing" with the penal law institution substantially presented in the first part of the study, respectively the one in art. 74^1 in Penal Code.

Practically, two different cases of reduction are established: one in the general part of the Penal Code by which the limits of the punishment are reduced by half, respectively a fine or an administrative sanction applies, and the one in the penal proc. Code by which the limits of the punishment are reduced by 1/3 in case of imprisonment, respectively by ¼ in case of fine.

There is no reason such cases wouldn't be cumulative; therefore there will be reached a series of situations when such reductions will cumulate in the same case, but what happens if they disappear from the penal Code. They shall be bringing the application of a fine instead of imprisonment punishment, the ones in the penal procedure code are decreasing such fine by ¼, but the infraction in question is only provided with imprisonment punishment, as in case of fraudulent management, for example?

The legal nature of the case provided in art. 74^1 penal Code is bivalent: on one hand it works as a special case of punishment reduction, and on the other hand it has a nature of penal sanction replacement with another, obviously more favorable (imprisonment is transformed in fine or an administrative sanction).

Starting from those above analyzed there can be said that such new institutions introduced by the regulator by Law 202/2010, activates on several ways:

On one hand, it favors the recovery of the prejudice in case of economic nature infractions, the same time acting in favor of the penal trial celerity; it reduces the punishment limits or even another punishment is chosen, like the fine or an administrative sanction applies.

No the other hand, a positive discrimination is made concerning the defendants; those who committed economic infractions, with prejudice recovered until the end of judgment, benefit from such institutions, unlike the other defendants regarding another type of infractions who may only benefit from the provisions of art. 320^1 penal proc. Code.

In conclusion, there may be said that such institutions seem to follow a penal vanguard's policy and tend to apply less severe sanctions for certain categories of defendants. There is an evident distinction made between this type of economic infractions and, practically, an evident attenuation of

the social abstract danger in such cases is intended. It is true that the provisions of art. 320^1 may apply regardless the nature of infraction (therefore not only to economic infractions), but also its effects are more reduced that in cases retained in art. 74^1 Penal Code.

Yet there cannot be denied that such provisions positively contribute to the celerity of the penal suit settlement and helps to achieve a lower volume of files recorded on the case of one instance.

SANCTIONS WHICH OCCUR AS A CONSEQUENCE OF NON-COMPLIANCE WITH THE PRINCIPLE OF LEGALITY IN THE PENAL TRIAL

CĂTĂLIN IONUȚ ONCESCU *

Abstract
The legality principle represents a frame principle since its interaction with the other principles exceeds the simple connection with those. The legality represents the frame within and with the compliance with which all the other fundamental principles of the penal trial are realized. No other principle can be placed outside the legality, in same way in which any principle, no matter how important it may be, does not occur in any other way than according to the forms stipulated by law.Taking into consideration that the enforcement of the law is mandatory in criminal law procedures, as well as the obvious significance of the penal trial's principle of legality, it was absolutely necessary for the compliance with this principle to be doubled by numerous guarantees which, in the situations in which this fundamental rule has been violated, would become genuine sanctions referring not only to the procedural acts achieved with the law's violation, but also to the people who have not complied with the law as far as the procedural penal activities' unfolding is concerned.

Keywords: *the legality principle; procedural, disciplinary, penal and civil sanctions*

Introduction

In order to achieve its aims, the procedural activity may be regulated in such a way as to be in accordance with some leading ideas and rules. By principles (basic rules) of the penal trial we should understand those leading and fundamental ideas according to which the procedural system is organized and the entire criminal procedural activity unfolds.[1]

By means of the fundamental principles, which are at the basis of the penal trial in Romania, the same rules with general character on the grounds of which the entire unfolding of the penal trial is regulated are taken into consideration. The notion of fundamental principle can be understood only as a rule which lies at the basis of the entire procedural activities, therefore those rules which apply only to some phases of the penal trial cannot be considered as fundamental principles.[2]

Within the framework of the Romanian penal trial's system of fundamental principles, an important position is occupied by the legality principle (*nulla justitia sine lege*), exposed by the legislators in the provisions of article 2 line 1 of the Criminal Procedure Code: "The penal trial unfolds not only during the criminal prosecution, but also during the act of judging, according to the provisions stipulated by the law." Therefore, the penal trial's legality principle can be applied not only to the judicial authorities, but also to the parties, all the trial participants being obliged to respect the law during their activity.

Being a transposition on the private level of the general principle of legality acknowledged in article 1 line 5 of Romania's Constitution ("In Romania, the conformation to the Constitution, to its supremacy and to the laws is mandatory.") and having a true correspondent within the basic principles specific to the substantial criminal law (*nullum crimen sine lege, nulla poena sine lege*[3]), it is necessary to state that out of the basic rules of the Romanian penal trial its legality principle is the most significant. Even the placement chosen by the legislator – the legality of the penal trial being

* Definitive lawyer, Bucharest Bar; (e-mail: catalinoncescu@yahoo.com).
[1] N. Volonciu, *Criminal Procedure,* the Didactic and Pedagogical Publishing House, Bucharest – 1972, p.44.
[2] I. Neagu, *Criminal Procedure Treaty– General Part,* the Judicial Universe, Bucharest – 2010, p.69.
[3] C. Beccaria, *Dei delitti e delle pene* – 1764.

the first principle stated among the provisions of the Criminal Procedure Code – assures us once again of the importance of this fundamental rule.

In reasoning the statement expressed in the previous line, at the same time we refer to the Decision no. 783/12.05.2009 of the Constitutional Court. This instance has understood the importance of the penal trial's legality principle, declaring unconstitutional the provisions of article I point 185 of Law no. 356/2006 for the modification and completion of the Criminal Procedure Code, by means of which point 17^1 of line 385^9 of the Criminal Procedure Code has been abolished ("The decisions are prone to invalidation … when the decision is contrary to the law or when by the decision a wrongful implementation of the law has been made."). In this way, the motivation of the pronounced decision, "The court establishes that the abolition of point 17^1 of article 385^9 line 1 of the Criminal Procedure Code, by eliminating the possibility to criticize by means of the decree's second appeal on the grounds that it is contrary to the law or that a wrongful application of the law has been made, prevents the interested party from effectively valorizing the violated right. Actually, whenever the criminal law has been infringed upon, it must grant the interested party the possibility of demanding and obtaining the legality's re-establishment by means of the illegal decision's invalidation."

In the same time, the European Convention on Human Rights states that nobody can be deprived of one's freedom, with the exception of some cases and according to the legal ways. At the same time, according to article 6 line 1, as far as the penal charges made against one are concerned, "every person has the right to a just public trial in a reasonable term for its cause, judged by an independent and impartial court established by law." Equally important are the provisions of article 8 – the right of respecting the private and family life – which proves that "A public authority's interference in this right's exercise is not accepted unless it is stipulated by law."

The doctrine has highlighted that the legality is much more than an explicit principle of the penal trial, its extent actually covering the entire judicial activity included in the procedure norms. In this manner, the compliance with this principle is systematically verified by the judicial authorities that participate at the resolution of a penal cause, there being the possibility of invalidating the issued documents with the infringement of the legal disposition or with the restoration of the cause to the competent authorities for the respective documents' re-establishment. (e.g.: article 220, article 232, article 265, article 268, article 300 or article 332 Criminal Procedure Code)

From a certain point of view, the legality implies the foundation by means of law of courts of law, prosecutor's offices and criminal investigation authorities, as well as their activities' unfolding as far as the structure and the limits of the competence conferred by law are concerned. The norms which regulate these authorities' structure and limits are compulsory and any infringement upon these norms is to be punished.[4]

In this context, not only the Criminal Procedure Code, but also the special laws which equally represent judicial sources of the Criminal Procedural Law, consist of a series of dispositions which call for the necessity and compulsoriness of the compliance with law in the activity of justice's achieving, being in consensus with the principle *nulla justitia sine lege*, stated in article 124 line 1 of Romania's Constitution ("Justice is to be achieved in the name of law").

Therefore, Law no. 304/2004 concerning the judicial organization, in the norms comprised in article 2 line 1 demonstrates that "Justice is to be achieved in the name of law, it is unique, impartial and equal for everyone", restating the enunciation existent in Romania's Constitution.

A similar example can be observed in the contents of article 62 (the Public Ministry's Competences) of the same law where, in the second line, the following formulation can be found: "The prosecutors unfold their activity according to the principles of legality, impartiality and hierarchic control, under the Ministry of Justice's authority, *according to the law*", in this way the regulation presented by Romania's fundamental law within the framework of the stipulations of

[4] M. Damaschin, *Criminal Procedure*, Wolters Kluwer Publishing House, Bucharest – 2010, p.50.

article 132 being entirely restated ("The prosecutors unfold their activity according to the principles of legality, impartiality and hierarchic control, under the Ministry of Justice's authority"). It can easily be observed that the legislator, by intending to highlight the importance of the prosecutors' compliance with the law with respect to the specific activities' unfolding, has operated a slight completion of the stipulation recaptured by the fundamental law, by means of adding at the end the collocation "*according to the law*".

Furthermore, Law no. 303/2004 concerning the judges' and prosecutors' statute in article 2 line 3 stipulates that "The judges are independent, are to submit only to the law and they must be impartial", taking over the stipulations of article 124 line 3 of Romania's Constitution according to which "The judges are independent and are to submit only to the law." To an equal extent, according to article 3 line 1 of the same law "The prosecutors appointed by the President of Romania enjoy stability and are independent, according to the law.", this idea being reiterated also in the stipulations of art 64 line 2 of Law no. 304/2004: "In the solutions disposed, the prosecutor is independent, according to the conditions stipulated by law. The prosecutor can make an appeal at the Superior Council of Magistracy, within the framework of the verification procedure of the judges' and prosecutors' conduct, against the hierarchic superior prosecutor's intervention, in any form, as far as the penal pursuit's achievement or the solution's taking-up are concerned."

The principle of legality is also recaptured within the probation, a basic institution of the penal trial. Thus, the legislator has stipulated, in article 64 line 2 of the Criminal Procedure Code, that "The means of evidence illegally obtained cannot be used in the penal trial."

Not lastly, we also refer to the stipulations concerning the individual freedom established by Romania's Constitution where, in article 23 line 12, it is shown that "no punishment can be established or applied otherwise than under the law's conditions and on its grounds", and article 7 of the European Convention on Human Rights establishes that "nobody can be convicted for an action or an omission which, at the moment it had happened, had not been considered as a crime, according to the national or international right."

In this way, from a functional point of view, it is necessary that all the procedural documents, measures and activities to unfold according to the conditions stipulated by law, as guarantees of the accomplishment of the function for which they have been instituted. Their role and importance is overwhelming, because, by omitting to carry into effect some constitutive procedural acts or by carrying those into effect in other conditions than those stipulated by law, the just and through resolution of the cause can be negatively influenced.[5]

Taking into account the arguments exposed in the previous paragraphs, as well as the obvious importance of the penal trial's principle of legality, it was absolutely necessary for the compliance with this principle to be doubled by numerous guarantees which, in the situations in which this fundamental rule has been violated, would become genuine sanctions referring not only to the procedural acts achieved with the law's violation, but also to the people who have not complied with the law as far as the procedural penal activities' unfolding is concerned.

Procedural sanctions

Within the system of the special judicial guarantees, with the purpose of ensuring the penal trial's legality, the procedural sanctions are those which attract the invalidity of the procedural acts carried into effect with the law's violation and, sometimes, even the coercion of those who have violated the law to remake them according to the legality conditions. This type of sanctions really appear to be necessary during a just trial, within the conditions in which the application of the penal, civil or disciplinary sanctions does not produce direct and immediate consequences upon the validity

[5] B. tefănescu, *Judicial Gurantees of the Compliance with the Criminal Procedure Law as far as the Act of Judgment is Concerned*, Hamangiu Publishing House, 2007, p.112.

of the acts carried into effect with the law's violation in bad faith or by means of law abuse. The procedural sanctions represent actual procedural remedies which are meant to eliminate or to thwart the production of the judicial consequences if the law has been violated while the procedural activity has been fulfilled. [6]

By means of its multiple purpose, the procedural penal sanction constitutes an extremely important guarantee by means of which it ensures the functioning of the penal trial's legality in all its phases, due to the fact that it prevents the law's violation, sanctions it when it happens and continues to ensure the compliance with law throughout the penal trial's unfolding. Likewise, the procedural penal sanction also constitutes itself as an important guarantee as far as the purpose of finding the truth is concerned, due to the fact that the procedural acts carried into effect with the law's violation generate doubt on the truthfulness of the evidence administered abusively or arbitrarily and, as a consequence, on the correctness of the solution taken up in regard to the provisions of the penal or civil law.[7]

Contrary to the judicial sanctions of disciplinary, civil or penal nature, which are direct against the people who have violated the law with respect to the penal causes' resolution, the procedural sanctions refer to acts fulfilled with the law's violation. The means by which the procedural acts illegally fulfilled become invalid are: inexistence, incapacity, inadmissibility and invalidities.

*The **inexistence*** represents a category which is used to operate especially within the science of the criminal procedural law, the notion not being expressly regulated in the procedural penal norms. However, it is unanimously accepted that this law institution must get into action anytime the procedural acts have been elaborated by means of violating the essential conditions required by law for their existence or when they have been done by a subject who, legally, did not have the necessary competence. To that effect, it can be considered as being inexistent an ordinance of the penal action's setting in motion fulfilled by a judicial police authority or a court order fulfilled by a prosecutor.

As far as inexistence is concerned, due to the manner in which it had been formulated *ab initio*, the procedural act represents only a *de facto* reality and not a judicial one. The inexistent acts, presenting only the appearance of a judicial existence, will not be taken into account by any judicial authority and will not be able to produce judicial effects.

In this way, the inexistent procedural acts must not be rendered void nor must they become subject to any form of declaring them unavailable, the authority in front of which they produce setting them aside, as if they had never produced, considering them simply inexistent.[8]

*The **incapacity*** is a procedural sanction which interferes whenever a procedural act is not carried out within the peremptory term stipulated by law. The settlement of some imperative terms within the penal trial's unfolding ensuring the necessary actions' efficiency as far as the just resolution of the penal causes is concerned, foreshadowing in this way the achievement of the penal trial's aim.

In the Criminal Procedure Code, the incapacity is expressly regulated in article 185 where it is shown that, in the situation in which for the exercise of a procedural right the law stipulates a certain term, the non-compliance with it determines incapacity from the exercise of right and the invalidity of the act performed after its term.

The incapacity institution operates, as a procedural sanction, for example, when the complaint against the resolution of non-initiation of the penal prosecution or ordinance or, as the case may be, of the classification resolution, suspension or cease of the prosecution, has been stated after the expiration of the 20-day term after communicating to the interested people a copy of the ordinance or

[6] V. Dongoroz, *Criminal Procedure Course*, 2nd edition, 1942, p.167.

[7] N. Giurgiu, *Nullity Causes During the Penal Trial*, the Scientific and Encyclopaedic Publishing House, Bucharest – 1974, p.78.

[8] N. Volonciu, *Criminal Procedure*, the Didactic and Pedagogical Publishing House, Bucharest – 1972, p.224.

of the resolution (according to article 228 line 6, article 246 line 1 and article 249 line 2 of the Criminal Procedure Code). Moreover, according to article 278^1 line 8 letter a) of the Criminal Procedure Code, the court of law will reject as being tardy the complaint against the resolution of non-initiation of the penal prosecution or ordinance or, as the case may be, of the classification resolution, suspension or cease of the prosecution, given by the prosecutor, if the interested person has addressed to the competent court of law after the expiration of the 20-day term since the communication date of the rebutment solution ruled by the prosecutor, as a consequence of the previously made complaint's resolution, according to articles 275-278 of the Criminal Procedure Code.

In what concerns the crimes for which the law stipulates that a previous complaint is necessary, according to article 284 of the Criminal Procedure Code, the injured person or the person entitled to claim must introduce the complaint in term of 2 months since the day he/she has known who the perpetrator is. Non-compliance with the previously shown term will determine the application of the provisions of article 10, line 1, letter f) of the Criminal Procedure Code, the previously formulated complaint after the expiration of the 2-month term being tardily introduced.

Similar situations are also to be found in the case of the overdue appeal or recourse. In this way, according to article 363 line 1 and article 385^3 line 1 of the Criminal Procedure Code, the appeal's pronouncement term, respectively that of the recourse is of 10 days, if the law does not rule otherwise. In consequence, whenever the court will observe that these means of attack have been exercised after the expiration of the term established by law, the solution of the appeal's rebutment, respectively that of the recourse, as being tardy will be pronounced.

Nevertheless, in order to defend the procedural subjects' rights, by means of the term's reinstatement, the law has foreseen the possibility of suspending the passing of the term of exercising the appeal or recourse right when the interested party proves that the attack means' non-exercising has been caused by the existence of a solid impeding cause, and that the request has been made in at most 10 days since the beginning of the punishment's execution or of the civil reimbursements.

The overdue appeal and recourse institutions function with the same purpose. Thus, the party which was absent for all the trial terms, as well as for the pronouncement, can declare appeal, respectively recourse, even after the expiration of the term, but not latter than 10 days since the beginning of the punishment's execution – for the defendant – or since the beginning of the civil reimbursements – for the civil part and for the responsible party in the civil lawsuit.

Taking into consideration the conditions imposed by the legislator in such a way as the term's reinstatement and the overdue appeal, respectively recourse, to be able to be exercised by the interested parties, we can draw the conclusion that these institutions of criminal procedural law do not represent exceptions as regards the procedural sanction of the incapacity, but are real guarantees that those penal trial's participants, who found themselves in special situations of impeding or who could not defend themselves due to the fact that they had not participated to the cause's trial, will be able to take advantage of their procedural rights either in appeal or in recourse.

The incapacity distinguishes itself from invalidity for the simple reason that the invalidity refers to procedural acts, whereas the incapacity refers to procedural rights; the invalidity refers to a fulfilled act, whereas the incapacity regards an act that can no longer come into being because the term stipulated by law had expired.[9] Furthermore, the incapacity operates on the basis of law, whereas the invalidity must always be declared by a judge.

*The **inadmissibility*** is another procedural sanction which sometimes has an autonomous manifestation, however, in most cases being a consequence of the incapacity or of the invalidity.[10]

---

[9] D. Pavel, The Aknowledgement of the Invalidity of the Actions Carried into Effect with the Legal Provisions' Violation during the Penal Trial, Romanian Magazine of Law no.9/1971, p.28.

[10] N. Volonciu, *Criminal Procedure*, the Didactic and Pedagogical Publishing House, Bucharest – 1972, p.225.

As well as in the situation of the inexistence, the inadmissibility institution is not specifically regulated in the Criminal Procedure Code, there being, however, numerous legal texts which use the notion and which refer to this sanction. In this way, with the title of example, we will mention he following cases: article 52 line 5^1 shows that it is inadmissible to challenge the judge who was to decide upon the challenge; article 278 line 2^1 stipulates that the complaint formulated against the rebutment solution ruled by the hierarchic superior prosecutor is inadmissible; as a consequence of the complaint's settlement against the prosecutor's resolutions or ordinances of non-arraignment, the court, according to the provisions article 278^1 line 8 letter b), will dismiss the complaint as inadmissible, maintaining the resolution or the ordinance; article 379 line 1 letter a) stipulates that the court dismisses the appeal if it is tardy or inadmissible, the same solution existing also for the recourse, according to article 385^{15} line 1 letter a); article 403 line 3^1 shows that the subsequent reviewing requests are inadmissible if there exist identity of person, legal grounds, motives and defenses.

As procedural sanction, the inadmissibility interferes whenever acts which are not stipulated by law or which are excluded by it are fulfilled, as well as in situations when procedural rights which had been exhausted by other procedural or non-procedural ways are being fulfilled.

Therefore, the appeal declared by the injured party with regards to the civil side of the cause is affected by inadmissibility, article 362 line 1 letter c) of the Criminal Procedure Code not stipulating this means of attack. Moreover, according to article 60 line 6 of the Criminal Procedure Code, any means of attack exercised against the decision according to which the Supreme Court of Justice rules referring to the change of venue will be inadmissible, and the dispositions of article 61 of the Criminal Procedure Code shows that a cause's new request for the change of venue is inadmissible, if it is grounded on the same circumstances which were set forth at the resolution of the previous request. To the same effect, article 42 line 4 of the Criminal Procedure Code stipulates that the court of law's decision of declining the competence is subjected neither to appeal nor to recourse.

In the light of the new modifications concerning the Criminal Procedure Code, regulated by Law 202/2010, the court will dismiss as inadmissible the appeal declared against the decisions pronounced by the county courts or military courts of law, in this way this means of attack starting to be able to be exercised only against the decisions pronounced by the territorial county courts and military county courts (article 361 of the Criminal Procedure Code).

In the same time, we believe that the procedural acts fulfilled by people who do not have a procedural tile in regards to the respective penal cause will be considered as being inadmissible. In this way, as far as the appeal's or recourse's institution is concerned, the court will have to dismiss as inadmissible the means of attack exercised by the people who do not find themselves in the situations expressly stipulated by law, according to the provisions of article 362 of the Criminal Procedure Code. A similar solution will also be ruled in the case regulated by article 278^1 of the Criminal Procedure Code, whenever the complaint addressed to the court of law had not been formulated by an injured person or by a person whose lawful interests had been prejudiced by the solution ruled by the prosecutor. In addition, the Supreme Court of Justice will dismiss a inadmissible the recourse in the law's interest which had not been promoted by the general prosecutor of the Prosecutor's Office of the Supreme Court of Justice, the conduct colleges of the supreme courts of law and of the courts of appeal, or by the People's Lawyer. Not lastly, as far as the challenge's institution is concerned (article 51 of the Criminal Procedure Code), the Court in front of which the challenge had been formulated will dismiss as inadmissible the challenge request which had not been formulated by any of the parties, as well as the challenge request which refers to other judges than those who are part of the law court. The challenge request directed against the same person for the same incompatibility case and for actual grounds presented to the court of law with respect to a previous request's formulation will also be inadmissible.

It can be said that the inadmissibility is similar to the incapacity, because both of them are sanctions stipulated by the law for the same situations when the fulfilled act is without right, the

difference being made by their happening times. Thus, in the case of the inadmissibility, the lack of right is *ab initio*, whereas in the incapacity case, the lack of right is a consequence of the non-compliance with the term. In the same time, inadmissibility, in contrast to the incapacity, will always determine the invalidity of the fulfilled act with the law's violation which, if it is declared inadmissible, cannot be remade.

The invalidities, considered as being the most important procedural sanctions, interfere whenever a procedural act, or a procedural activity has been realized without the strict compliance with law. As procedural sanctions, the invalidities affect the existent procedural acts, which had come into being by means of non-compliance with the legal provisions, by omitting or violating the forms stipulated by law.[11]

The invalidity, as a procedural guarantee, prevents the infringement of the provisions which regulate the penal trial's unfolding. Hence, it fulfills the role of ensuring the penal trial's legality because, without the recording of the invalidity sanction, the procedural norms would have an optional character.

As a procedural sanction, the invalidity can be directed against the procedural acts of any kind. In this way, the grounds for instituting such a procedural sanction is that which states that the fulfillment of a procedural penal act with the violation of the provisions which regulate the penal trial's unfolding can not come into effect, due to the fact that by overruling the content and form stipulated by law it could lead to wrongful settlement of the cause, one that would not encapsulate the truth.

Therefore, the invalidity operates in the case of the violation of the provisions which regulate the procedural acts' fulfillment, as well as in that of the violation of the provisions according to which the procedural acts' fulfillment is conducted. Generally, the invalidity of an in-court procedural act also determines the invalidity of a procedural act; for example, the judging of a cause by a court of law whose structure is contrary to the law, also determines the pronounced decision's invalidity.[12]

By comparing it with the other procedural sanctions, it can be observed that, while the inexistence, the inadmissibility and the incapacity determine the act's invalidity with the effect of impeding its subsequent resume in the penal trial, their action being especially destructive, the invalidity by constituting not only a sanction, but also a procedural remedy, normally implies, the possibility of repairing – sometimes even the remaking compulsoriness – of the corrupted act.[13]

The fact that, in the Romanian Criminal Procedure, the invalidities' existence as procedural sanctions is closely related to the existence of a procedural damage, damage which must have been produced by fulfilling an act in illegal conditions, must be highlighted.[14] Moreover, the damage notion does not refer only to injury of the parties' legitimate rights and interest, but it also extends to the just settlement of the penal cause.

For that purpose, in article 197 line 1 of the Criminal Procedure Law, it is shown that the violations of the legal provisions which regulate the penal trial's unfolding determine the act's invalidity only when a damage had been produced, a damage which cannot be eliminated in any other way other than by that act's annulment.

Therefore, besides the existence of a procedural damage, it must be observed that it had been caused by a violation of the legal norms which regulate the penal trial's unfolding; the damage which can concern the parties' rights in the procedural trial, as well as the manner in which the penal trial's unfolding is actually realized. Equally, an act's invalidity will be called for only when it would be

impossible to eliminate the produced damage in any other way other than by eliminating the act fulfilled with the law's violation.

According to the procedural penal norms which are in effect and taking into consideration the manner of expression in the judicial norm, the invalidities can be deliberate and virtual. Moreover, depending on the application mode and the effects that they can produce, a classification of relative invalidities and absolute ones can be established.

The absolute invalidities interfere in the cases expressly stipulated by law and can be called for at any time during the penal trial's course and by any trial participant, being possible to be taken into consideration *ex officio*.

In the present regulation of the Criminal Procedure Code, the absolute invalidities are considered, in the same time, express invalidities, stipulated in article 197 line 2 of the Criminal Procedure Code, and interfere when some legal provisions that are particularly important in the penal trial's unfolding are violated.

Thus, according to article 197 line 2 of the Criminal Procedure Code the provisions which concern the competence according to the subject matter and according to the person's quality (referring to the law courts' competence as well as to the competence of the penal prosecution's authorities), at the court's notification, at its structure and at the judgment session's publicity, are stipulated under the absolute invalidity sanction. Moreover, the absolute invalidity sanction also stipulates the provisions which refer to the prosecutor's participation, the presence of the accused or of the defendant and their assistance by the defender, when they are compulsory, according to law, as well as the execution of the evaluation proceeding in the causes with underaged law breakers.

We observe that the legislator had chosen a limitative enumeration of the legal provisions whose non-compliance with determines absolute invalidity. However, we believe that there are numerous other procedural penal provisions whose overlooking would undoubtedly determine the interference of the absolute invalidity sanction, without the need to prove the existence of a damage that cannot be eliminated in any other way than by annulling the respective acts. Therefore, we can mention that it is compulsory to hear the accused or the defendant when taking a preventing or safety measure (article 143 line 1, article 150 line 1, article 162 line 1^1 of the Criminal Procedure Code), the arraignment without the penal pursuit authorities' implication in the penal pursuit file's presentation (article 250 – article 262 of the Criminal Procedure Code), the penal trial's unfolding without ensuring the presence of an interpreter when necessary, according to article 8 and article 128 of the Criminal Procedure Code, or whenever there is a flagrant violation of the penal trial's fundamental principles, such as the granting of a person's freedom, the compliance with the human dignity or the granting of the defense right.

In the case of the absolute invalidities, the procedural damage is presumed *juris et de jure*, in such a way as the person who calls for the invalidity does not need to prove the existence of the damage, the proof of the judicial norm's violation stipulated under the sanction of the absolute invalidity being enough. In the same time, the provisions of article 197 line 3 of the Criminal Procedure Code shows that the absolute invalidities cannot be eliminated in any way.

In what concerns *the relative invalidities*, their features result from the principle provisions stipulated by article 2 and article 197 line 1 and 4 of the Criminal Procedure Code, according to which the violation of any legal provision which regulates the penal trial's unfolding, other than those stipulated under the absolute invalidity sanction, determine the act's invalidity only when a damage, which cannot be eliminated in any other way than by annulling that act and only if they had been called for during its fulfillment, when the party is present, or at the first court term with complete procedure, when the party has not been present at the act's fulfillment, has been produced.

In this way, we can conclude that the relative invalidities are taken into consideration only if they had been called for by the person who had suffered a damage of his/her procedural rights, due to the fact that they do not operate *ex officio* but in exceptional situations. The person who calls for the invalidity caused by the law's infringement as a result of the procedural act's fulfillment is obliged to

prove the existence of the produced damage, which can consists in the injury caused to a procedural right or interest or which can be a material damage.[15]

In the same time, when, by some provisions' violation which refers to a penal trial's unfolding, the truth's finding and the cause's just resolution is affected, general order interests being involved, the relative invalidity can be taken into consideration *ex officio*, in any trial phase.[16]

In contrast with the absolute invalidities which cannot be eliminated in any way, in what concerns the relative invalidities the damage produced by means of the law's infringement can be paid for by the parties' will, having as consequence the validity of the procedural acts which had been fulfilled with the law's infringement. Furthermore, the relative invalidity must be called for only at a certain time, stipulated according to the presence or absence of the interested party at the act's fulfillment. Failing to do so determines the invalidity exception's delay and the act's execution.

Moreover, in what concerns the relative invalidities, when the voidable act's remaking can be done in front of the court of law which, by means of the closure, had observed the legal provisions' violation, the court will assign a short term for the act's immediate remaking.

Not only the relative, but also the absolute invalidity, are appealed to by means of the invalidity's exception or by the attack means, and the authority in front of which the act's annulment is requested must detect the invalidity and if the provisions stipulated by law are fulfilled, it must rule the annulment of the act fulfilled with the law's violation. The act's remaking is usually realized by the same judicial authority which had fulfilled it with the law's violation and it is rarely remade by another authority.

After the invalidity has been detected and proclaimed according to the provisions of law, its direct effect is the act's inefficiency, its lack of judicial value representing the lack of the effects it should have determined if it had been valid. Therefore, the act is considered as being void of judicial effects, from the moments of its fulfillment (*ex tunc*), and not from the moment the invalidity is detected (*ex nunc*).

The specialized literature addresses the invalidity's indirect or extensive effect, considering that the invalidity produces effects in relation to the validity of the previous, simultaneous and subsequent acts, which are related to the annulled act. We consider that it cannot be the case of an automatic spread of the invalidity, the judicial authorities having the obligation to evaluate, for each actual case, if the provisions stipulated in article 197 of the Criminal Procedure Code are applicable.

In the same time, due to the fact that in the Criminal Procedure Code there are no express stipulations as far as the invalidity's extensive effect is concerned, we believe in the applicability of the judicial norms stipulated in article 106 line 1 of the Code of Civil Procedure where it is shown that a procedural act's annulment determines only the subsequent acts' invalidity, to the extent that they cannot have an independent existence.

Disciplinary sanctions

These sanctions have a special character, because by means of their organization the legislator had established as being in the judicial authorities' competence the imperative obligation of exercising the function they had been invested with, in good-faith and without abusing of it. Thus, we can reach the conclusion that the judicial authorities' subjective rights have value of obligation for these authorities.[17]

The disciplinary sanctions interfere whenever the judicial authorities, when exercising the functions and attributions conferred to them, commit, whether by bad-faith, or by negligence or

[15] I. Neagu, *Criminal procedure Treaty – General part,* the Judicial Universe, Bucharest – 2010, p.673.

[16] Gr. Theodoru, L. Moldovan, *Criminal Procedure,* the Didactic and Pedagogical Publishing House, Bucharest – 1979, p.184.

[17] S. Kahane, *Criminal Procedure,* the Didactic and Pedagogical Publishing House, Bucharest – 1963, p.16.

ignorance, abuses or omissions referring to the basic rules which ensure the compliance with the legality principle during the penal trial.

Therefore, in Law no. 303/2004 concerning the judges' and prosecutors' statute it is shown that the judges and prosecutors are disciplinary responsible for the breach of their jobs' duties, as well as for the actions which affect the justice's reputation. Additionally, the provisions of article 99 of the same law shows that disciplinary deviations, as a consequence of the penal trial's overlooking of the legality principle, will be formed: the violation of the legal provisions which refer to the incompatibilities and interdictions concerning the judges and prosecutors (according to article 50 of the Criminal Procedure Code, the incompatible person is obliged to declare that he/she refrains from participating in the penal trial as soon as he/she is aware of the incompatibility case's existence); the interferences for some causes' settlement, the claim and the acceptance to settle personal interests or the family members' or any other people's interests, in a different way than within the limit regulated by law for all the citizens, as well as the interference in another judge's or prosecutor's activity; the non-compliance with the secret of the deliberation or with the confidentiality of the works that should be confidential (according to article 307 of the Criminal Procedure Code only the members of the Court in front of which the debate happened are allowed to take part in the recess, they being obliged to secretly deliberate); the delayed fulfillment of the works, as well as the repeated non-compliance and for imputable reasons of the legal provisions which concern the causes' settlement with celerity; the unjustified refusal of receiving to the file the requests, conclusions, memoirs or documents handed in by the trial's parties; the function's exercising, including the non-compliance with the procedural norms, by bad-faith or by severe negligence, if the action does not represent a crime; the unworthy attitude towards the colleagues, attorneys, experts, witnesses or litigants while exercising the job's responsibilities; the non-compliance with the provisions concerning the randomized distribution of the causes, as it had been regulated by article 313 line 1 and line 2 of the Criminal Procedure Law.

To the same effect, the Internal Regulations of the Judicial Courts (approved by the Decision no. 387/2005 of the Superior Council of Magistracy) shows – at article 10 – that "the lack of taking the necessary measures for the application of the norms concerning the randomized criterion of causes' distribution or the violation of these norms determine the guilty people's disciplinary responsibilities, under the law's conditions".

According to the provisions of article 97 line 1 of Law no. 303/2004 any person can notify the Superior Council of Magistracy, directly or by means of the leaders of the courts of law or prosecutors' offices, about the judges' or the prosecutors' inadequate activity or behavior, the violation of the professional obligations within the relations with the litigators or some disciplinary deviations' fulfillment by them.

To this extent, Law no. 317/2004 concerning the Superior Council of Magistracy regulates the procedure that must be followed as well as the council's competences as far as the domain of the magistrates' disciplinary responsibility is concerned. Thus, the Superior Council of Magistracy fulfills, by means of its departments, the role of court of law in the judges' and prosecutors' disciplinary responsibility domain, for the actions stipulated by Law 303/2004, republished. The disciplinary action is exercised by the Superior Council of Magistracy's disciplinary commissions, composed by a member from the Department of Judges and 2 inspectors from the Service of the Judges' Judicial Inspection and, respectively, a member from the Department Prosecutors and 2 inspectors from the Service of the Prosecutors' Judicial Inspection.

As a consequence of the disciplinary deviation's acknowledgement, the departments of the Superior Council of Magistracy can apply to the judges and to the prosecutors, according to the deviations' severity, the following sanctions: notification; the reduction of their monthly gross pay with up to 15% for a period starting from a month and up to 3 months; the disciplinary move for a period starting from a month and up to 3 months to a court of law or to a prosecutor's office, which is

under the jurisdiction of the same Court of Appeal or under the jurisdiction of the same Prosecutor's Office of this court; the dismissal from the function and the exclusion from the magistracy.

Furthermore, according to the provisions of article 51 line 2 of Law no. 303/2004 concerning the judges' and prosecutors' statute, the Superior Council of Magistracy, *ex officio* or at the general assembly's proposal or at the proposal of the court of law's president, can rule in favor of the dismissal of the judges from the leadership function, in the case of one of the disciplinary sanction's application.

Representing a genuine source of law with regards to the norms of the criminal procedure law and having direct implications in the penal trial's unfolding, Law no. 304/2004 concerning the judicial organization acknowledges the existence of the disciplinary sanctions' institution by means of the interfering consequences' expression.

Therefore, it is shown that the prosecutors appointed within the Terrorism and Organized Crime Investigation Department can be dismissed by means of the order given by the General Prosecutor of the Prosecutor's Office of the Supreme Court of Justice, with the Superior Council of Magistracy's notice, in the case of a disciplinary sanction's application.

Moreover, the law previously mentioned prescribes that the prosecutors appointed within the National Anti-Corruption Directorate can be dismissed by means of the order given by the Chief Prosecutor of the National Anti-Corruption Directorate, with the Superior Council of Magistracy's notice, in the case of the inadequate exercise of the function's specific responsibilities or in the case of a disciplinary sanction's application.

We can also encounter disciplinary sanctions in the case of the activities unfolded by the officers and specialized agents of the judicial police. In this way, in article 7 line 1 of Law no. 364/2004 concerning the organization and functioning of the judicial police, it is shown that the actions of indiscipline performed by the penal inquiry authorities of the judicial police, the General Prosecutor of the Prosecutor's Office of the Supreme Court of Justice can request the Administration and Interns minister to begin the preliminary inquiry for the deployment of the disciplinary responsibility.

We also consider that the disciplinary responsibility of the judicial police's penal inquiry authorities can be drawn in by the situation regulated by article 219 line 3 of the Criminal Procedure Code. In this way, in the case of the nonfulfillment or the deficient fulfillment, by the authority of penal inquiry, of the provisions given by the prosecutor, the prosecutor will inform the leader of the authority of penal inquiry, which has the obligation to communicate, in term of 3 days since the notification date, to the prosecutor the ruled measures. In this situation, we should bear in mind that, as a consequence of the corroboration of the norms comprised by article 219 line 2 of the Criminal Procedure Code with those comprised by article 66 line 1 of Law no.304/2004, it means that the authorities of the judicial police unfold the penal inquiry activity, directly, under the prosecutor's leadership and supervision, being obliged to fulfill his/her directives.

The specialized literature even discusses about the existence of a type of trial which directly concerns the disciplinary sanctions. Therefore, professor Grigore Theodoru mentions that the disciplinary trial comes into being in the case when, as a consequence of a disciplinary deviation, the activity of the disciplinary jurisdiction authorities unfolds, for the application of a disciplinary sanction to the person guilty for the deviation. The disciplinary sanction's application takes the form of a trial when, by law, disciplinary commissions are instituted, whose judgment activity unfolds after a specific procedure, as in the case of the disciplinary commissions of the magistrates, attorneys, teaching staff, etc. To that effect, we mention the provisions of article 24 of Law no. 304/2004; article 87 and article 101 of Law no. 303/2004; articles 44 – 49 of Law no. 317/2004 (republished) concerning the Superior Council of Magistracy; article 50, article 53, article 58 and articles 70 – 74 of Law no. 51/1995 for the organization and exercise of the profession of attorney. The disciplinary trial is similar to the penal trial due to the application of the principle of the disciplinary authorities'

ex officio interference and to the unfolding of an inquiry prior to the judgment, but the judgment usually follows the civil trial's norms.

In direct connection with the disciplinary sanctions, the legislator had also established the institution of the ***judiciary fine***. Therefore, within the framework of the penal trial, certain deviations which can be performed by the people chosen to cooperate at the judicial activity's unfolding are sanctioned with judicial fine.

Frequently, these deviations consist of: the nonfulfillment or wrongful fulfillment of the citation or procedural acts' communication works; the unjustified lack of the defender, witness, expert or interpreter; the expert's delay of fulfilling the given duties; the non-compliance with the measures taken by the court of justice's president regarding the order and solemnity of the judgment session by the parties, their defenders, witnesses, experts, interpreters or any other person, as well as their irreverent manifestations towards the judge or the prosecutor.

The judiciary fine is applicable for the deviations expressly stipulated by article 198 of the Criminal Procedure Code, which imply the non-fulfillment of the procedural obligations or their fulfillment with the non-compliance of the legal requirement. The judiciary fine's application can be cumulated with a disciplinary sanction; in the same way, according to the provisions of article 198 of the Criminal Procedure Code, the judiciary fine's application does not eliminate the penal responsibility, in case the action represents a crime.

The specialized literature shows that the judiciary fine is a procedural sanction which can be considered a typical, imperfect fine.[18]

According to article 199 of the Criminal Procedure Code, the competence of applying judicial fine belongs to the judicial authorities in front of which the cause is presented, and the establishment of its quantum is made according to the deviance's nature and severity, the commission conditions and the perpetrator's procedural position. In this way, the fine is applied by the penal inquiry authority, by means of ordinance, and by the court of law, by means of closure.

The person who received the fine can ask for a relaxation or the fine's reduction, in term of 10 days since the date of communication of the ordinance or of the resolution of the fine, justifying in his/her request the reason for which he/she could not have fulfilled his/her legal obligation. The request will be analyzed by the same judicial authority which had given the fine.

Penal sanctions

The compliance with the legality principle during the penal trial is also granted by the existence of some penal sanctions which can be applied to the people who do not fulfill or who violate the legal obligation concerning the penal trial's unfolding.

The people who unfold a judicial activity do it in compliance with the law, in the same time being obliged to fulfill their responsibilities by means of the pronouncement of legal and through settlements in relation to the legally administered evidence. To that effect, we should bear in mind the provisions stipulated by article 64 and article 68 of the Criminal Procedure Code, where it is shown that the means of evidence obtained illegally cannot be used during the penal trial, the utilization of violent threats or any other means of constraint, promises or incentives, with the purpose of obtaining evidence, also being outside the law. Moreover, article 68 line 2 of the Criminal Procedure Code shows that persuading a person to commit or to continue to commit a penal action, with the purpose of obtaining evidence, is not allowed.

Taking into account the previously mentioned points, as well as the imperative condition which implies the compliance with law throughout the penal trial, we can declare that whenever,

[18] V.Dongoroz et alii, *Theoretical Explanations of the Romanian Criminal Procedural Code*, general part, *vol.I*, the Academic Publishing House, Bucharest – 1975, p.414

during the specific activities of the penal trial's unfolding, the law's violation takes serious forms, the guilty people will be held penally responsible for their actions.

To that effect, we should remember that in the Penal Code, the Special Part, Title VI, Chapter II, the legislator had established the crimes which impede the fulfillment of justice, and some of them can be committed only during the penal trial's unfolding. Therefore, we should consider: illegal arrest and abusive inquiry (art 266 of the Criminal Procedure Code), subjugation to ill treatments (article 267 of the Criminal Procedure Code), torture (article 267^1 of the Criminal Procedure Code), unjust repression (268 of the Criminal Procedure Code). The special judicial object of these crimes is constituted by the social relations concerning the achievement of the penal justice which implies the compliance with all the legal stipulations and which also exclude any violent actions, pressures and sufferings.

We observe that the crimes previously mentioned are typical for the penal trial's unfolding, being possible to be committed only by the actively qualified subjects. Thus, as far as the crime of the illegal arrest and abusive inquiry is concerned, the active subject cannot be anything else than a functionary (magistrate, penal inquiry authority, etc.) who has responsibilities as far as the application of the detention or preventive arrest, or referring to the punishment's execution or who unfolds judicial activities. The active subject of the crime of subjugation to ill treatments cannot be anything else than a functionary who has among his/her responsibilities the surveillance of a detained or arrested person, or a person against who safety or educative measures have been taken. Moreover, although the law does not expressly refers to it, as far as torture is concerned, the doctrine[19] stipulates that the active subject of the crime, cannot be anything else than a functionary – authorities' agent or any other person who operates under an official title or when provoked by or with the express and implicit consent of these kind of people, regardless of the fact that the judicial procedure had been started or not. In the case of the unjust repression crime, the active subject will be the judicial authority that has the ability of setting into motion the penal action (prosecutor or, in exceptional cases, judge), of ruling in favor of the arrest (judge), of sending to trial (prosecutor) or of convicting a person (judge), knowing that that person is not guilty.

Besides the previously mentioned crimes, the Romanian Penal Code also refers to a series of crimes which are not typical for the penal trial, but which are frequently encountered during the activity of unfolding of the justice's administration. To that effect, we observe that without dealing with a classification of the active subjects, the violation of the penal trial's principle of legality can be sanctioned with the following crimes: abuse while on duty against the private interests (article 246 of the Criminal Procedure Code), abuse while on duty by means of limiting some rights (article 247 of the Criminal Procedure Code), aggravated abuse while on duty (article 248^1 of the Criminal Procedure Code), negligence while on duty (article 249 of the Criminal Procedure Code), abusive behavior (article 250 of the Criminal Procedure Code), conflict of interests (article 253^1 of the Criminal Procedure Code), bribery (article 254 of the Criminal Procedure Code), reception of illegal benefits (article 256 of the Criminal Procedure Code), etc.

Furthermore, we should observe the circumstance according to which the fundamental principle of the penal trial's legality can be overlooked by the judicial authorities appointed in conformity with their competences to participate in the settlement of a penal cause, as well as by the other penal trial's participants or even by the people who are not directly involved in the trial's unfolding. Therefore, within the Penal Code's special provisions the legislator had established a series of crimes among which, with the title of example, we care to mention the following: corrupt payment (article 255 of the Criminal Procedure Code), influence peddling (article 257 of the Criminal Procedure Code), defamatory denunciation (article 259 of the Criminal Procedure Code), perjury (article 260 of the Criminal Procedure Code), abetment in crime (article 264 of the Criminal

[19] M. Hotca, *Penal Code, Comments and Explanations,* C.H. Beck Publishing House, Bucharest – 2007, p.1301.

Procedure Code), the omission to inform the judicial authorities (article 265 of the Criminal Procedure Code), the judicial authorities' contempt (article 272^1 of the Criminal Procedure Code), etc.

Civil sanctions

Under certain conditions, the official subjects that had violated the law during the penal trial's unfolding can be held civilly responsible. According to the provisions of article 94 of Law no. 303/2004 the judges and the prosecutors are civilly responsible, under the law's conditions.

Therefore, we mention that the provisions of article 52 line 3 of Romania's Constitution stipulate that the State is held responsible from a patrimonial point of view for the prejudices caused by means of judicial errors. Moreover, the state's responsibility is established under the law's conditions and does no eliminate the responsibility of the magistrates who had exercised the function in bad-faith or severe negligence.

Fully reconsidering the regulation comprised in Romania's fundamental law, presented in the previous section, Law no. 303/2004 concerning the judges' and prosecutors' statute shows, in article 96 line 1-3, that "The state is held responsible from a patrimonial point of view for the prejudices caused by means of judicial errors. The state's responsibility is established under the law's conditions and, does not eliminate the responsibility of the judges and prosecutors who had exercised the function in bad-faith or severe negligence. The cases in which the injured person has the right to fix the prejudices caused by means of judicial errors which were fulfilled during the penal trials are established by the Criminal Procedure Code".

To that effect, according to article 504 of the Criminal Procedure Code, the person which was convicted definitively has the right to fix the suffered damage, if as a consequence of the cause's rejudging a definitive decision of acquittal had been ruled. Moreover, the person who, during the penal trial, had been illegally deprived of freedom or whose freedom had been limited has the right to demand the prejudices repair. Not lastly, according to line 4 of the same article, the person who had been deprived of freedom after the occurrence of the action's prescription, amnesty or non-incrimination, has the right to repair the suffered damage. By means of this enumeration of cases in which the prejudiced person has the right to repair the damage, the legislator has also managed to offer a definition to the notion of "judicial error during the penal trial".

We should also mention the provisions stipulated in the Additional Protocol no. 7 at the European Convention on Human Rights which, in article 3, states the following: "When a definitive penal conviction is subsequently cancelled or when a judicial pardon is offered, due to the fact that a newly or recently discovered action proves that a judicial error had occurred, the person who had been affected because of this conviction is reimbursed according to the law or practice in effect in the respective state, except for the case when by not discovering in time the unknown act is entirely or partly imputable to that person."

For obtaining the damage's repair, according to the provisions comprised in the internal legislation, specifically article 506 corroborated with article 504 of the Criminal Procedure Code, the person entitled may address to the court in whose circumscription he/she resides, by suing the state by means of a civil trial, which is cited by the Ministry of Public Finances. According to article 96 line 6 of Law no. 303/2004 the injured person can take action *only* against the state, represented by the Ministry of Public Finances. The grounds of the state's patrimonial responsibility are based on the fact that the State is the one that organizes the justice's activity and is the magistrates' trainer, reason for which the deficiencies of any other nature are imputable to it.

The magistrates' civil responsibility has a *subsidiary* character and is determined only when the state had paid the prejudice which had been generated by the judicial error. In this way, after the damage's repair according to article 506 of the Criminal Procedure Code, as well as in the situation in which the Romanian state had been convicted by an international court, the legal remedy against

the person who, by bad-faith or by severe negligence, had produced a damage generating situation is mandatory. Moreover, in article 96 line 7 of Law no. 303/2004 the following is mentioned: "After the prejudice had been paid by the state on the basis of the irrevocable decision ruled according to the provisions of line (6), the state can reclaim the prejudices from the judge or the prosecutor who, by bad-faith or severe negligence, had performed the judicial error which had caused prejudices."

e can observe that the legal remedy is mandatory not only for the situations which generate prejudices mentioned in article 504 – 506 of the Criminal Procedure Code, but also as far as the circumstances of the Romanian state's conviction by international courts are concerned.

To that effect, we mention the provisions of article 12 of the Government Emergency Ordinance no. 94/1999 concerning Romania's participation at the procedures presented to the European Court of Human Rights according to which the State has legal remedy against the people who, by means of their activity, guilty as charged, had determined its obligation to pay the sums established by means of the Court's decision. Moreover, it is shown that the magistrates' civil responsibility is established according to the conditions that will be regulated by means of the judicial organization law.

Additionally, considering this institution, we insist on mentioning the legislator's constant concern with the purpose of creating a coherent and efficient judicial framework as far as the application of the judges' and prosecutors' material responsibility is concerned. Thus, by means of the law project concerning the modification and completion of Law no. 303/2004 and of the Criminal Procedure Code, the legislator considers implementing an obligation in the judges' and prosecutors' duty of signing civil liability insurance for the judicial errors fulfilled due to severe negligence. Furthermore, the law project previously mentioned defines the notions of bad-faith ("there is bad-faith when the judge or the prosecutor violates, with knowledge, the material or procedural law's norms, desiring or accepting some people's injury") and severe negligence ("there is severe negligence when the judge or the prosecutor guiltily overlooks, and in a severe and unpardonable manner, the material or procedural law's norms").

In order to reinforce the penal trial's legality principle, besides the procedural sanctions, the civil or penal disciplinary sanctions, which find their applicability according to the severity of the law's violation, numerous possibilities of systematic and efficient control by means of which the illegal procedural and in-court procedural acts can be discovered and eliminated are regulated.[20] On these lines, the Criminal Procedure Code has organized the surveillance of the activity of the penal inquiry authorities by the prosecutor (articles 216 – 220), the judicial control of the penal inquiry activity (article 278^1, article 300, article 332, article 380 and article 385^{16} line 2) or the control of the court of law by declaring and judging the attack means. In this way, not only the prevention of law's violation is ensured but also the discovery and elimination of the already fulfilled ones.[21]

The legality principle represents a frame principle since its interaction with the other principles exceeds the simple connection with those. The legality represents the frame within and with the compliance with which all the other fundamental principles of the penal trial are realized. No other principle can be placed outside the legality, in same way in which any principle, no matter how important it may be, does not occur in any other way than according to the forms stipulated by law.[22]

Therefore, considering at the same time the aspects exposed in the present paper, we conclude by saying that the compliance with the fundamental principle of legality in the penal trial is guaranteed by numerous sanctions which, by means of their importance and severity, undoubtedly express the fact that the activity of justice's fulfillment must unfold within the law's supremacy

spirit, ensuring in the same time the right to a just trial. Regardless of the level at which they operate – constitutional, organic law or special law, these sanctions have a single purpose, which is the guarantee of the provisions which regulate the penal trial's unfolding according to the law.

VARIOUS TECHNIQUES OF INDIVIDUALISING PUNISHMENTS IN THE NEW CRIMINAL LAW

ION IFRIM*

Abstract
The author analyzes the new criminal code provisions in relation to criminal law in force, the new Penal Code has dropped explicit mention, as criteria of individualization of punishment, the general provisions of Part penalty and limits set out in the Special Part of Penal Code, as and causes that aggravate or mitigate criminal liability. Also, the new Penal Code was established several general criteria of individualization of punishment on which the judge can make a clearer assessment of the social significance of the individual offense and offender.

Keywords*: new criteria of individuation, penalty, mitigate or aggravate cases.*

Introduction

In order to understand the significance, the role and the place of punishment individualization in the system of the means of applying Penal Politics, it has to be viewed from the perspective of the purpose and from the light of the fundamental principles of Penal Politic, in comparison with the purpose of the Penal Law and the punishment in the Penal Code system, and most importantly, the harmonizing of material the Penal Code with the systems of other European Union countries.

The specific of Penal Politic, that regards the purpose[1], is the fact that it practically aims to gradually eliminate the crime phenomena from society. To this supreme purpose are consecrated the preventive[2] action as well as the reaction against crimes committed, reaction that also aims the causes of the same phenomena – the individual causes from the criminal's conscience. Or the repressive actions' efficiency to succeeding in this task depends, as it has been shown earlier, on the extent to which the means of this reaction and especially the punishment are adequate, on the extent to which the penal reaction is individualized.

In Penal Politics[3] and in the Romanian Criminal Law, individualizing the penalty isn't a mere principle of solid establishment of the penalty, but a condition *sine qua non* of the efficiency of the above mentioned hence of fulfilling the Law and Penal Politic's goal.

That is why, in Penal Politic and in the Criminal Law system *individualizing the penalty* has been elevated to the status of general principle and have found in this state an explicit consecration in all the European states' Criminal Laws[4]. Therefore the German Criminal Law regulates the principle of establishing the penalty[5]. In the 1st paragraph of art 46 of the Criminal Law it is mentioned that the accused blame is represents the very foundation of establishing the penalty, however when evaluating it, the effects on the future life of the doer must be considered. The French Criminal Law

establishes in article 132-24 the general individualization criteria[6], mentioning that "in the limits imposed by the Law, the Court pronounces punishments and sets their conditions depending on the circumstances of the crime and on the author of the crime[7]. The Spanish Criminal Law[8] does not mention which are the general criteria for individualizing the penalty, but holds a very vast legal framework of penalties, in which the judge can establish the defined penalty in concordance with some characteristics.

This value of general principle that is owned by the individualization of the penalty is unanimously recognized in the Romanian juridical literature. [9]

Individualization of the penalty is consecrated and works, in the Criminal Law system, in perfect harmony with the basic principles of Politics and penal law.

In regulating the application of individualizing penalty in the Criminal Law system it is indeed assured that the fundamental principles of penal politics are respected. Therefore unity and the primary purpose of Criminal politics, for whose accomplishment works together the punisher as well as the judge summoned to apply the law, the juridical conscience that guides the judge's activity, all of these guarantee the harmonious accomplishment of the fundamental principles of Penal Politics in managing the making of penalty individualization .

Among the general principles enshrined in our criminal law a leading role for *the principle of individualization* of repressive reaction is reserved[10].

Indeed even in the New Criminal Law[11] the principle of individualization has been explicitly enshrined by the position in art. 74. Cr. L from Section 1 entitled "General Dispositions", chapter V entitled "*Individualizing Penalties"* , Title III of the General Part which constricts the court to individualize the penalty, turning to some criteria.

In the disposition from paragraph 1 of art. 74 of the New Criminal Law it is provided that when establishing the length or quantum of the penalty it *is done* in accordance with some general individualization criteria, which means that the principle of individualization is consecrated through a mandatory disposition.

Under the new Criminal Law[12] the criteria applied to the individual also applies to the legal person. However, in the case of both individuals and businesses, among general criteria other special criteria becomes incident in some cases.

[11] The New Criminal Law adopted trough the Law 286/2009 with assuming responsibility by the Government has permitted the lawmaker to be superior to the new criminal law adopted by the Law 301/2004 (subsequently repealed), as well as the current Criminal Law.

[12] Art.74. *General criteria for individualizing the penalty* (1) Establishing the duration or the amount of penalty is commensurate with the gravity of the crime committed and the dangerousness of the offender, which is assessed on the following criteria: a) Circumstances and manner of committing the crime and the means used; b) the state of peril created for the protected value; c) the nature and gravity of the result produced or of other consequences of the crime; d) reason and purpose of the crime; e) nature and prevalence of crime which constitute antecedents of the offender for which he is convicted; f) conduct after committing the crime and during trial; g) education level, age, health, family and

Regarding the general specific criteria of individualization it has been questioned whether they should be evaluated together or separately in a certain sequence.

In juridical literature the opinion that "the deed of the doer and all the circumstances in which the crime has been committed – regardless of the fact that through their weight they have the role of aggravating or minimizing circumstances – they must be thoroughly analyzed, as they condition each other and, therefore, increase or decrease the level of social peril" has been expressed. That is why the problem of putting first place investigating the person or the deed cannot be considered.

In another opinion it has been highlighted that the fact that at individualizing the punishment is undeniable the fact that all criteria must be considered and the sanction applied must represent the result of a multilateral examination.

Finally, other authors share the opinion that in accomplishing "the operation of legal individualization of the penalty the starting point is represented by the penal deed in comparison with the data complex that indicates its level of social peril (gravity, frequency, prevention possibility, means of committing, consequences) and as final point the personal situation of the criminal regarding the social peril represented by itself (the role he/she had in committing the crime, the guilt's form and gravity, psycho – physical state, previous history, etc)". This order might have its legal basis in the provisions in art. 74, enumerating the individualization criteria, indicating primarily aspects regarding the severity of the deed and afterwards the personality of the doer.

Punishment individualization, on behalf of its proper determination, isn't a mere recommendation which the lawmaker brings forward to the court but an obligation from which he cannot abscond.

Regarding individualizing punishments, the New Penal Code, even if it maintains many of the previous dispositions, introduces new ones as well, highly important, such as renouncing on applying the penalty and delaying it[13] (chapter V, section III and section IV)

Waiver of penalty consist in the court's recognized right of judgment to forgive permanently the establishment and application of a penalty for a person who is guilty of committing a crime, for the fulfilling of which, taking into count the committed crime (art.80 paragraph 1 letter a.); of the personality of the criminal and he's behavior that he has had before and after committing the deed, would be sufficient applying a warning, while establishing, applying and executing a penalty would risk producing more harm than to help the recovery of the accused. (art. 80 paragraph 1. letter b.)

In art. 80 paragraph 1. letter b. from the New Criminal Law are mentioned the conditions for waiver of penalty. In paragraph 2 of the text mentioned above are showed the conditions in which the court cannot dispose waiver of penalty[14]. Waiver of penalty in case of infringements of competition (art. 80 para. 3) may be ordered if concurrent conditions for each offense are set out in paragraphs. 1 and 2 of the article cited. Waiver of penalty law is regulated in other countries as well (Germany, France, Switzerland, Italy etc.).

---

social situation. (2) When the law provides alternative penalties for the crime committed, the criteria set out in para. (A) are taken into account and choosing one of them.

[13] Versavia Brutaru, *About some new modalities of individualiyation of the punishments according with the new Code penal*, Studii si Cercetari Juridice, vol.II, Drept Public, Timisoara, Conferința internațională a doctoranzilor în drept, 2010, p. 90-97.

[14] Article 80 para. 2 of the new Criminal Code so provides, that it may not be given waive of penalty if:

a) The offender has previously suffered a conviction, except as provided in subparagraph 42.let. a) and b) or that has been rehabilitation or rehabilitation period has been fulfilled;

b) against the same offender was more willing to waive the penalty in the last two years preceding the date of the offense for which trial;

c) the offender has evaded prosecution of law or truth or attempted thwarting the identification of his whereabouts and his charging or criminal liability or the participants'.

d) penalty provided by law for the offense is imprisonment for more than three years.

It was also envisaged the postponement of the sentence in Article 83 of the new penal code for crimes for which the law provides established punishment, including in the event of multiple offenses, is a fine or imprisonment not exceeding two years; if the defendant had no criminal record, except as provided in Article 42 letter a and b) or for which has been reached term rehabilitation or to rehabilitation, and after committing the crime has given solid evidence that may point the defendant had a good attitude court may not apply to any punishment and if he had an improper conduct may be to postpone them again, for the same period of surveillance (surveillance period is 2 years in Article 84), penalty, or penalty provided by law within.

The Romanian criminal law the principle of individualization of punishment was the first time explicitly enshrined in the Criminal Code of 1936, in the provision of art. 21, stated that "punishment applied by a judge applies the statutory limits, taking into account the reasons and seriousness of the offender and the degree of perversity."

In the literature this provision has been interpreted as meaning that it contained "a recommendation and a criterion for judicial individualization of punishment"[15]. The structural changes in social and political ordering of our country, led to a reformulation of the provision of art. 21 Penal Code. which should correspond better promoted criminal policy of consistently increasing in our state.

Thus, by Decree no. 187 of 30 April 1949 to amend the Criminal Code provision in art. 21 was modified in the sense that the court "shall" take into account when determining the sentence of the Criminal Code general dispositions, the special limits of punishment for each crime, the seriousness that it shows the offender and the circumstances of the offense and the offense was committed. Through this change not only have been scientifically formulated general criteria of individuation, in a manner very close to that of the provision in art. 72 of the Criminal Code was given a very explicit mandatory provision, stating that the court must determine the actual sentence based on criteria listed in the text.

From what was stated above results that this language is no longer used in the new penal code as "must take into account" but as the phrase "take account". This wording is correct because the standard regards the operation of individuation, and not the court. As for the mandatory nature of the provision in force, it can not be, we believe, to doubt.

This norm with amount of general principle will be applied in relation to all special part of criminal law rules, whether contained in the Penal Code or in special laws for non-criminal. Enshrining the principle of individualization explicit highlights its position in relation to other principles of our penal policy and criminal law. If in the scope of application and its content is derived from the principle of determining the penalty policy and the fundamental principles of our criminal law (principles of legality, humanism and democracy)[16] and is subordinate to these principles, it is nevertheless true that the fundamental principles can not be met without observance of the principle of individualization of punishment. It is a consistent position which lies both the theory[17] and our judicial practice[18].

Consecration default principle is important in determining the penalty from a bent perspective.

---

[15] V. Dongoroz, în C. Rătescu, I. Ionescu-Dolj, I. Gr. Periețeanu, Vintilă Dongoroz şi alții, *Codul penal adnotat, vol. I, Partea generală*, Comentarii la art. 21, p. 68.

[16] Vintilă Dongoroz, *Drept penal*, (Tratat),1939, p.82.

[17] In our literature of criminal law the principle of determining the penalty has particular importance and is widely recognized and affirmed.

[18] In the legal practice is sufficient, we believe, to refer to the decision of the Plenum of the Supreme Court no guidance. 12 of 10 November 1966 on the *individualization of punishment*. George Antoniu, Vasile Papadopol, Mihai Popovici, Bogdan Ştefănescu. *Îndrumările date de Plenul Tribunalului Suprem şi noua legislație penală*, Edit. Ştiințifică, Bucureşti, 1971, p. 72 and following.

Firstly, this consecration actually increases the explicit consecration's authority on the one hand because it proves that the lawmaker has complied with this principle, he himself making an it a work of individualization, as far as he could and on the other hand because it ensures the implementation of the individualization principle via the conditions created for this purpose. Determining the legal frame for punishment individualization for each crime and providing the court with the means to apply individualization, the laws explicit provision of the individualization principle not to remain a formal proclamation, but to be actually achieved.

Second, enshrining the principle of individualization implicit control law ensures the work of individuation because individualization made in concrete determining of the sentence or during execution must take place within the framework established by law, this legal framework is itself implicit expression of the principle of individualization of consecration. The provision of art. 72 Penal Code., which enshrines the principle of individualization, refers to the individualization of punishment, namely on the occasion of its concrete determination by the court. This direct reference to the punishment could be explained if we consider that the sentence is typical of criminal sanction, the main sanction without which the system of criminal law could be conceived; is the main instrument of achieving the policy and criminal law and therefore applied the principle of individualization have reported primarily on the sentence. But punishment is not the only criminal sanction.

Alongside it in the system of enforcement of our criminal law, it measures to provide safety and educational measures that are also criminal sanctions, means of reaction to committing an offense under the criminal law, although other measures are taken on other grounds and pursue other immediate purposes. These criminal penalties can not perform any other functions (removal of a state of danger from which a person who has committed an offense under the criminal law, is exposed again to commit such an act, if not safety measures, education and juvenile offender rehabilitation, if not educational measures) if they are not individualized and do not correspond to the state of real danger and prevention needed of the facts provided by the criminal law in each case.

In other words, safety measures and educational measures are subject, as well, like any other criminal penalties, to the general principle of individualization[19], in that it must correspond to the seriousness of the crime committed, that the danger that prevents state and the individual offender, this adaptation of the penalty depending on its functional efficiency.

It is reminded that the principle of individualization of criminal sanctions not only operate at their specific determination by the courts but its presence and influence is still known at the time of the criminal law as regards the limits of punishment for each crime and the conditions under which these limits can be overcome and the regime of imprisonment during the execution.

Of course individualization principle finds its full application in the penalty execution phase, in the process of continuous adjustment of these sanctions to the actual needs of the convict rehabilitation referral and using effective means of individualizing made available to law enforcement bodies responsible for overseeing prison sentence.

One may conclude that the principle of individualization by means of criminal law is organically integrated in our criminal law system and has a general application.

OPINIONS REGARDING A NEW ACCUSATION-COMPROMISING THE INTERESTS OF JUSTICE

MARIA OPREA*

Abstract
The criminal offence of compromising the interests of justice, according to the new regulation, refers in particular to the respect and authority that needs to be attached to the performance of the act of justice, and such performance is protected by criminal law in two manners: both as regard the criminal offences committed by persons from outside the judicial system in the capacity of unqualified active subject , also against the abuses commited by the persons called to perform the act of justice.

Keywords*: compromising the interests of justice, divulge, disclosure, predictability and functionality of the criminal rule.*

The New Romanian Criminal Code[1] provides in 4-th Title of Special Part a separate chapter, Second Chapter, established for Crimes against justice's administration, art no 266-288.

In the explanatory memorandum of the New Criminal Code was shown that the name ,,Crimes which impede the course of justice,, was replaced by ,,Crimes against justice administration,, ,because through this infractions achievement of justice it is not always impeded,but producing just a state of danger for achieving the act of justice.

The changes brought to the Criminal Code regarding this infractions have been justified by the legislator by the need of ensuring legality, independence, impartiality and firmness in the process of carrying out justice by punishing criminal acts likely to affect seriously, ignore or undermine the authority of justice.

Thus, have been introduced new incriminations , such as ,,Obstructing justice,, , ,,Revenge for helping justice,, , ,,Pressure on the judiciary,, , ,,Compromising the interests of justice,, , Violation hearing solemnity,, , ,, Unfair assistance and representation,, .

Have also been redesigned other criminal acts that were already incriminated, such as, ,,not-telling,, , ,, favoring the perpetrator,, , ,,influencing statements,, , ,,perjury,, , concealment,, .

By introducing a new incrimination, that of compromising the interests of justice, provided for in art. 277, the legislature followed to achieve several objectives.In this way, was wanted to be increased the requirement to officials working in the administration of justice in connection with the management of data and information they obtain during a criminal trial, which can significantly influence the truth or the right to a fair trial of the person investigated or accused.

In the same time to strengthen the guarantees of the right to a fair trial, and in particular the presumption of innocence, enshrined in art. 6 of the Convention for the Protection of Human Rights and Fundamental liberties had been incriminated as an alternative way of offense, the act of disclosure without law, evidence or official documents in a criminal case before it has a solution not to proceed to trial or final settlement of the case by an official who has knowledge of them by virtue of office.

* Judge Buzau Court, Ph.D. candidate at Faculty of Law, "Nicolae Titulescu" University; (e-mail: moprea_just@yahoo.com) .

[1] Adopted through no 286/2009 Law,published in „The Official Monitor of Romania",part I,no 510 from 24 of July 2009

Since, under the Convention, signatory states have, besides negative obligation to refrain from any violation of the rights outside the permitted limits, and a positive obligation to take necessary measures to ensure these rights provided against their violation by any other person, violation of the presumption of innocence if disregarded state responsibility on those obligations.

It was also noted in the explanatory memorandum to the new Criminal Code, that through this legislation is intended to prevent public officials to present evidence (witnesses statements, surveys, video recordings hear) from an ongoing criminal proceedings in order not make the presumption of innocence into a presumption of guilt provisional pending the outcome of the case.It was also envisaged that the assessment of evidence, whatever its content, can often lead to erroneous conclusions as long as there shall be assessed against all the evidence taken, to determine its legality, relevance and probative force.For example, testimony which is later proven to be false or any other apparently incriminating evidence will inevitably induce the idea of guilt, and sometimes it can not be changed even by presenting the official verdict of innocence found by judicial authorities.

Another objective is the need to preserve the secrecy of the administration evidence in a criminal investigation phase which is secret.

1. Legal content

Article nr. 277 of the Penal Code provides that the crime of compromising the interests of justice may be committed in the following alternative arrangements:

(1) Disclosuring without law, confidential information concerning the date, time, place, manner or means by which evidence is to be administered by a magistrate or other public official who has knowledge of them by virtue of office if this can be hindered or prevented the prosecution. The penalty is imprisonment from 3 months to 2 years or a fine.

(2) Disclosuring without law, evidences or official documents in a criminal case before a solution has not proceeding to trial or final settlement of the case by a civil servant who became aware of them under function. In this way, the penalty is imprisonment from 1 month to 1 year or a fine.

(3) Disclosure, without right of information in a criminal case by a witness, expert or interpreter, when the ban is imposed by the law of criminal procedure, shall be punished with imprisonment from 1 month to 1 year or a fine.

The legislator has provided also in paragraph (4) of the same article and a justifiying cause:,, deed is not a crime if trough itself are disclosed or revealed clearly illegal acts or activities committed by the authorities in a criminal case,,.

Criminal Code of 1936 divided the ,,Offences against the administration of justice" located in Title IV of Special Part in ,, Crimes against judicial activity" (art. 269-294), ,,Crimes against court ruling authority" (art 295-300) and ,,The Duel" (art.301-307)[2]

Criminal Code of 1936 provided a similar indictment in art. 293 entitled ,,Crime of disclosing acts of secret procedure".

This offense which was punishable by correctional imprisonment from 1 month to 6 months and a fine of 2,000 to 5,000 RON could be commited in the following ways:

" 1.That who, contrary to the provisions of the Code of Criminal Procedure, made public in any way, in whole or in part, indictments or other proceedings in criminal or correctional before the instruction to be completed and before these acts to be public hearing was read in court, and acts of research or instruction of a closed business;

[2] Criminal Code Carol The Second,annotated by Constantin G. Rătescu, I.Ionescu Dolj, I.Gr. Perieţeanu, Vintilă Dongoroz, H. Aznavorian, Traian Pop, Mihail Papadopulu, N. Pavelescu, second Volume,Special Part,Publishing of SOCEC & Co S.A Library, Bucharest, 1937.

2.The one who publishes a report on the proceedings of a trial, that the Court has forbidden publication or has declared secret;

3.The one who publishes the names of judges, indicating their individual votes which are awarded in verdicts or judgments, or assessments made on solutions based judgments likely a current or on the facts and background of people in process;

4.Whoever publishes the report on the hearing which is being discussed as a crime committed by a minor, or portrait of a minor sought or any other illustration related to it or on its criminal acts of;

5. The one who publishes a complete account of libel,in which the sample material to the truth is not allowed.

The provisions of paragraphs 2 and 3, the second part, and at 4 and 5 shall not apply to studies, scientific comments and notes, in no case can be made on behalf of the parties to the claim.

The comment made regarding the punishment of the offense of ,,Disclosure of the secret pleadings" is showed that this crime is not only sanctioning the ban on publication of court documents expressly referred to in terms of art. 110 and 111 of criminal procedure Carol The Second,but also in the special provisions related to proceedings of the same code of crimes against minors and honor (art. 296 and 608 penal procedure)[3].

Similar incriminations are found also in the legislation of some European countries,like in the Italian Crminal Code (art.379 bis),Spanish Crimal Code(art. 466),French Criminal Code(art. 434-7-2 şi art. 226-13),Portuguese Crminal Code(art 371),Swiss Criminal Code (art.293), Swedish criminal code(Chapter 20).

Thus, the Italian Criminal Code incriminates in art. 379 bis,,disclosure of secrets required to a criminal procedure" as follows:

,,Unless the act constitutes a more serious offense who would illegally disclose the secret information on criminal proceedings,found by him because he participated or witnessed an action of this procedure, is punished with imprisonment up to one year.Same punishment applies also to the person who, after giving statements during the preliminary investigations,he doesn't respect the interdiction imposed by prosecution on the strength of art. 391 alin.5 Code of Criminal Procedure".This article was introduced by art. 21 of Law no. 397 of 7 December 2000.

Spanish Criminal Code criminalises the art. 466 par. (1) that the lawyer or the prosecutor who disclose declared secret procedural actions by the judicial authority.[4]This offense is punishable by a fine of 12 to 24 months and the special lapse item,from the civil service, profession or occupation for a period of 1-4 years.

Alin. (2) of the same article incriminates disclosure of actions declared secret taken by a judge or a member of the Court, representing the Public Prosecutor, Registrar or any official in the department of Administration of Justice, in which case the punishment laid down in article 417 applies in their half higher.

The French Criminal Code[5] also provides in art 434-7-2modificat through the nr 2005-1549 Law from 12 december 2005,the following incrimination:

,,Without prejudicing the rights of defense, the act of any person who by reason of his duties, becomes aware, in accordance with the provisions of the Criminal Procedure Code,by information relating to an investigation or pending criminal prosecution on a felony or a crime knowingly disclose such information to persons likely to be involved as perpetrators, co-authors, accomplices or adopters in committing these crimes,when disclosure is made in order to obstruct the investigation or finding the truth,it is punished by two years imprisonment and 30,000 euros fine.

---

[3] Criminal Code Carol The Second,op.,cit., pages 222-223.

[4] Hose Luis Manzanares Samaniego, Codigo penal (Adaptado a la Ley Organica 5/2010, de 22 de junio), Comentarios y jurisprudencia, II, Parte Esepcial (articulos 138 a 639, Granada, 2010, p. 1263-1265

[5] Available on http://www.legifrance.gouv fr/

When investigation or prosecution regards a felony or a misdemeanor, punishable by imprisonment up to ten years,as they are revealed by the provisions of article 706-73 of the Code of Criminal Procedure,the penalties will increase to five years in prison and 75 000 euro fine."

Thus, the Italian Penal Code incriminates in the art. 379 bis of ,,Secrets disclosure required in criminal proceedings" as follows:

,,Unless the act constitutes a more serious offense who illegally disclose the intelligence information on criminal proceedings, available to him because he participated or witnessed the action of this procedure, is punished with imprisonment up to one year. The same punishment applies to a person who, after he made statements during the preliminary investigations, the prosecution does not comply with the prohibition under Art. 391alin.5 Code of Criminal Procedure.

This article was introduced by art. 21 of Law no. 397 of December 7, 2000.

2. Preexsting conditions

A. Object of the crime

The doctrine distinguishes between legal subject and material object of the crime. It was argued that ,,the rules of criminal law, like any other legal requirements, are designed so they can be carried through and reunite on legal social order". Thus, in the concept of criminal law rules we find, always, the idea of protection of interest (primary idea or order), face to face with the idea of limiting the actions which could hit or threaten the interest protected (adjacent idea or disorder idea).

In establishing incriminating provisions, it is always considered the interest that is protected and the evil against which the protection is created; based on these two concepts is built the incriminating rule. That's why, in each incriminating provision , we find a combination of both concepts (the primary idea and the adjacent idea), combination which reflects synthetic the idea of right"[6].

In foreign doctrine was argued that the legal subject is an abstract value, immaterial, which does not identifies with a determined good, tangible or intangible[7].

Our doctrine has defined the legal object of the crime (or criminal object of protection) as ,,the interest that the criminal rule protects". In this way, ,,in all crimes we will find: an interest specially protected, that the incriminating rule was concerned directly and an interest protected generally, that that the incriminating rule was concerned indirectly"[8].

In which concerns the legal object, is also distinguished in the legal literature, between the general legal object, the legal generic object and the special legal object.

Regarding this classification some reservations were expressed in the doctrine of our country. Thus, it was argued that ,, the general legal concept of object is a category without any practical importance, and in addition, far too vague to be accepted. If we accept the idea that any crime affects the law order, we must accept that other forms of illegality have the same meaning. Therefore, the law order is not only affected by crimes, but also by contraventions"[9].

Related to the general legal object was noticed that the conditions under which this has special importance in the systematic special part of the Criminal Code can't be ignored the fact that there is a ,,plurality" of such objects when there are more groups andundergroups of crimes in the same title,being given as exemples the crimes against person[10].

---

[6] Vintilă Dongoroz, *Criminal Right* , (republication of 1939 edition), Romanian Association of Criminal Sciences, Bucharest, 2000, pages 163-164

[7] I. B. Gomez de la Torre, ş.a., *Curso de dercho penal. Parte generale*, Ed. Experiencia, Barcelona, 2004, page 204, quoted by Florin Streteanu,*Treaty of criminal right.General Part* , Vol. I, page 345.

[8] Vintilă Dongoroz, *Criminal Right* , (republication of 1939 edition), Romanian Association of Criminal Sciences, Bucharest, 2000, page 164.

[9] Florin Streteanu, *Treaty of Criminal Right*, Vol. I, C. H. Beck Publishing, Bucharesti, 2008, page 346.

[10] Florin Streteanu,op. cit., page 347

Depending on the legal structure of the object, Italian doctrine distinguishes between monooffensive and pluriofensive crimes. It was considered therefore that if in monooffensive crime, the crime is sufficient for the existence of a single violation of a social value, while plurioffensive crimes must involve necessarily undermine more social values. There is a plurioffensive crime only when its typicity is conditioned in abstract by damaging or jeopardizing more social values.

a) The special legal object of the crime lie in those social values and social relations that grow on them, whose existence is ensured by the maintenance work of justice against acts to hinder or frustrate the truth by the judicial organs.

b) The secondary legal object(adjacent) is represented by the freedom or dignity of the person and sometimes his patrimony also when sometimes by disclosuring , without law, evidence or confidential information bring some damage.

Since according to the structure of the crime's object analyzed may also be harmed the interests of justice, and rights belong to individuals, such as dignity, freedom, or its patrimony, we believe that this incrimination is part of plurioffensive crimes.

c) Material object can be, as is clear from the damning, the official documents, the evidence (witness statements, minutes of transcription of interceptions). In legal literature it is argued that the material object of the crime is ,,the good against which the action or inaction goes directly, and in its entirety can be harmed or endangered by this action"[11].

B. Crime's subjects

a) The active subject of crime is a qualified one (circumstantial):magistrate, a public servant, witness, expert or interpreter.

Participation is possible in the form of instigation and complicity, these participants were not directly required quality of the active subject. The coauthors is believed not to be possible because the obligation not to disclose confidential informations or not disclose confidential evidence, documents or information in a criminal case is a personal one.The doctrine was pronounced in the same way regarding the activ subject of the crime of disclosure of professional secrecy[12].If more persons are having the special quality required by law,based on an agreement, divulge or disclose, without law, confidential information, evidence, official documents or information they have acquired by virtue of office or the disclosure of which has been prohibited by the Criminal Procedure Act, each person commits a distinct offence of compromising the interests of justice, as author.

b) The mainly pasive subject is the state because the justice is its atribute. Along with the state natural or legal person whose rights or interests are harmed by the offense, is **secondary pasiv subject or adjacent.**

3. Constituent content

Premise situation. The premise situation is represented by the existence,prior committing the crime, of a ,,criminal cause" with the meaning of a pending cause of the judicial organs.

A. Objective side

a) Material element

The material element includes a description of the event which can be achieved by two alternative actions: ,,divulgence" or ,,disclosure". Since the law does not require that these ways to take place simultaneously, the content of the offense remains a simple one.

---

[11] Florin Streteanu, Criminal Law.General Part, volI. page 351

[12] Victor Roşca,*Crimes against person's liberty(Disclosure of professional secreacy), in* „Theoretical explanations over The Criminal Code", by V. Dongoroz and others., vol. III, Second Edition, Romania Academy Publishing,All Beck Publishing , Bucharest, 2003, page 321; Vasile Dobrinoiu, Norel Neagu, *Criminal Law, Special Part,Theory and judicial practice,*Wolters Kluwer Publishing , Bucharest, 2008, pages 191-192.

„The legislator describes the fact that he intends to prohibit (vetitum) or to impose (jussum) not from imagination or caprice, but by giving expression to the social needs, the need to protect, by means of criminal law (which is last ratio) the fundamental social values . The description from the incrimination rule is a generalization of the specific traits of the facts assessed by the legislator in pre-legislative period, is his conclusion about the need to combat this facts through the intercession of law''[13].Regarding the description of the illegal act of the incrimination rule, the doctrine was argued that it „it must be, if possible, exhaustive, the legislator has the obligation not to omit anything that would characterize the act on which it seeks to repress.But sometimes is possible that the incrimination rule not to contain all the conditions of incrimination. The doctrine recognizes the possibility of a penal offense **open content**, when the legislator does not list all the ways it comes obtaining the results.Other times the legislator establishes **closed incrimination contents**, specifying, limited, the means to achieve the result to produce. Open content indictment refers to ways of committing crime can be totally omitted (as in murder), or be listed as examples, then use the formula „and other similars" or another closed formula".[14]

Divulging is to expose, to reveal, to make a secret to be known to many people.[15]From the text formulation results that he t action must be intended to disclose confidential information about a sample, ie the date, time, place, manner or means of administration.

To reveal is to uncover, make known (by words, writing, images) to show, to disclose. Disclosure must take place without law, what is an illegal condition or special antijuridicity , which was said to represent one of the elements of conviction.[16]

In the manner of disclosure, without law, evidence or official documents in a criminal case before a solution has not proceeding to trial or final settlement of the case, it may prejudice the right to a fair trial and particularly the presumption of innocence, as guaranteed by art. 6 of the Convention.

In the case of the crime committed by a witness, expert or interpreter, typical behavior is realisedtrough disclosure rightless,of information from a criminal case when this interdiction it is imposed by the law of criminal procedure.For the incrimination to respond to requirements of predictability and functionality ,relative to be understood by recipients of the criminal rule and to be applied by the judiciary organs,the law of crimianl procedure must expressly provide those situations when it is forbidden for witnesses,experts and interpreters to communicate or disclosure information.

According to article 285 paragraph 2 of the new Criminal Procedure Code[17]:the procedure during the prosecution is not public.Also,art.352 from the same code which provides as a general rule-the publicity of the trial-,provides and the possibility of declaring the trial secret,situation when the trial's file is not public.

Paragraph 8 of the mentioned article is imposing to the presiding judge the duty to inform the persons who participates to the secrettrial,obligation of keeping the confidentiality of the information got during the trial.

Violation of this obligation may be punished with judicial fine from 1000 to 10000 RON,excepting the situation when this divulging is not an infraction.

Besides these provisions were not identified in the procedural law other bans imposed to the witness or other active subjects of the crime that could be committed in the manner prescribed by the paragraph. (3) of art. 277 by which to determine specifically what information must not be disclosed.

---

[13] George Antoniu, *The material element from the incrimination rule*, Criminal Law Magazine, nr. 2/1999, page 12.

[14] George Antoniu,Ibidem, page 12.

[15] Romanian Explicative Dictionary, Second edition, Universul Enciclopedic Publishing, Bucharest, 1998, page 321

[16] Vintilă Dongoroz,Criminal right (reeditated edition from the 1939 one), precit. page 163.

[17] The New Criminal Procedure Code,adopted through Law nr.125/2010,published in Romanian Official Monitor nr.486 from 15 of July 2010.

We consider that, at least in the manner prescribed by the paragraph. (3),the incrimination that we are analyzing can't pass the test of predictability and functionality that the objectivity of legality principle requires for any incimination.

b) Immediate consequence is endangering the social value protected. In legal literature it was argued, regarding crime's comission in modality of disclosure, without right, of confidential information as par.(1) of art. 277 provides -disclosure ,,must have as consequence hindering or preventing prosecution".[18]

We believe that this is not the meaning which the legislator has given through the wording of the law since it is alleged that the disclosure of confidential information as a requirement to complete the objective side to occur and the result also, is only sufficient to create a state of danger.Legislator has embodied this circumstance in the formulation in: ,,if through this prosecution can be hindered or prevented". By using this expression to delimit the concept of confidential information, their importance and especially the administration of some important evidence for criminal prosecution.We appreciate that for achieving the content of the crime in the the manner provided by .par. (1) is not actually necessary that the prosecution to be hindered or blocked, being sufficient just endangering the normal activity of the criminal investigation.

Towards the specific content from the incrimination rule, we believe that this crime is one of concrete danger.Considering the crimes of concrete danger was endorsed in legal literature[19] that ,,they are characterized through the provision in the incrimination rule of the demand that the fact must create a state of danger for the protected value.Therefore, the fact would be a crime only if it is proved that in concreto, it has generated such a danger.Like in the case of result crimes the existence of physical changes in the external world must be proved ,in hypothesis of crimes of concrete danger must be proved creating a state of danger for the social value protected by criminal law provisions."

c) Causality report. To complete the objective side of the offense it must be a causal link between the action (inaction) that the material element of the deed was done and the immediate consequence, endangering the social relations regarding administration of justice.

B. Subjective side.The form of guilty necessary to achieve the subjective side of the offense is intention direct or indirect.

4. Forms.Variants.Sanction

From the text's formulation results that the preparatory acts are not incriminated and the attempt is not punishable. The offense is consumed differently. In the type variant provided by alin.(1)it is necessary to must proved the actual state of danger, namely the way could be hampered or prevented the prosecution.

The legislor has provided two versions of incrimination in two legal ways and a justificative cause

Sanctions are provided alternative, namely imprisonment from one month to one year or fine and imprisonment from three months to two years or a fine.

5. Procedural issues. Criminal proceedings shall be initiated automatically

In conclusion, we are considering that the new incrimination regarding compromising the interests of justice can contribute to the prevention and punishment of those facts through which can be seek disclosure or divulging of elements, confidential information, evidence in a criminal case, issues that could hinder the proper conduct of the trial or would affect the presumption of innocence.

[18] Petre Dungan, *A new incrimination-compromising justice's interests,* in "Dreptul", nr. 8/2010, page 80.
[19] Florin Streteanu, op. cit., page 407-408.

De lege ferenda, we propose, for ensuring the predictability and functionality of the criminal rule, that the legislator to provide,in the law of criminal procedure, specifically or in ways that determine which are the information that a witness, expert or interpreter must not disclose in a criminal case. Otherwise, this task would be left to the judicial organs who could create the danger of an incrimination by analogy.

THE APPROPRIATION OF A FOUND GOOD

MIOARA-KETTY GUIU[*]
ION FLĂMÎNZEANU[**]

Abstract
The appropriation of a found good is an offense, as stipulated by Art. 216 of the Criminal Code in two normative modalities. According to the first one, the offense consists in the fact of not handing over of a lost and found good to the authorities or to the person who lost it thereof or in the fact of disposing of the respective good as of an own good. The "found" good is a good that has been lost, forgotten or wandered by another person. The lost good (wandered) can only be a movable good. Immovable goods cannot be wandered and therefore cannot be found. Furthermore, the authors are discussing, besides the juridical and material object, the subjects of the offence, the subjective aspects and the applicable sanctions, the theoretical analysis being complemented with comments on the jurisprudence.

Keywords*: appropriating, good, active subject, the moment of consuming, forms, sanctions.*

1. Concept

The appropriation of a found good is an offense, as stipulated by Art. 216 of the Criminal Code in two normative modalities.

According to the first one, the offense consists in the fact of not handing over of a lost and found good to the authorities or to the person who lost it thereof or in the fact of disposing of the respective good as of an own good.

According to the second modality, the same offense consists in the unlawful appropriation of a movable good that belongs to another person, but has reached the perpetrator's possession by mislead.

The text of Art. 216 in the Romanian Criminal Code reaches its correspondent in Art. 647 of the Italian Criminal Code.

Within the new Criminal Code, the offense is stipulated in the Special Part, Title II, Chapter III, Art. 243 under the denomination "The Appropriation of the Lost Good or of the Good That Reached by Mislead the Perpetrator's Possession".

2. Preexisting conditions

A. The object

a) The Special Juridical Object coincides with the general one, consisting in the social relations that assure protection to the person's patrimony.

b) The Material Object of the offense is given by the good found by the perpetrator (paragraph 1) or by the good that has reached the perpetrator's possession by mislead (paragraph 2).

The "found" good is a good that has been lost, forgotten or wandered by another person.

The lost good (wandered) can only be a movable good. Immovable goods cannot be wandered and therefore cannot be found.

Doctrine1 often underlines the fact that, in order to become the material object of this offense, the good shall be part of a person's patrimony, hence not to be "abandoned". The evidence of this

[*] Associated Professor, Ph.D.., Police Academy. (e-mail: rozaliaflaminzeanu@yahoo.com).
[**] Lecturer, Ph.D., researcher 3rd degree, (e-mail: rozaliaflaminzeanu@yahoo.com).

fact is necessary because the abandoned goods (res derelictae) cannot constitute the material object of a patrimony related offense.

The question related to specifying when a good can be considered as "abandoned" yet arises. Of course, the issue is not related to goods that were left in private spaces (as taking a good from a private space constitutes, without any doubt, theft), but only to the situation when a good is found unattended in a public space. In this latter case, one cannot establish if the possessor's intention was to abandon the good or if the possessor left it there for other reasons (for instance, because he/she considered that no one will touch his/her good). Therefore, for avoiding risks, one should exclude the hypothesis of the respective good being abandoned and to consider the respective good as belonging to a person's patrimony, being eventually "lost" by the owner. In any case, the possessor's intention of abandoning the good cannot be presumed, but it must result from circumstances that reflect an undoubted intention in this respect – like, for instance, the circumstance that the possessor left the good in a place where waste or residues are normally deposited.

From here, a movable good left unattended in a public space has to be considered always as a "found good" and the offense stipulated by Art 216 of the Criminal Code subsists every time a person appropriates such a good.

Consequently, it has been wrongfully decided that the appropriation of a good temporarily left unattended or forgotten by the owner in a certain place, where he/she knows about the good, constitutes the offense of theft and not appropriation of a found good2.

Regarding the good that reached by mislead the perpetrator's possession, it has to be underlined that this one can be either a good handed over to the perpetrator , based on the error of the person who handed it over, either a good that the perpetrator has appropriated by him/herself, believing that the respective good is his/hers.

In case the mislead of the person who handed over the good has been provoked by the perpetrator, the fact shall constitute the offense of fraud.

B. Subjects

a) Active immediate subject of the offense can be any person, apt for criminal liability, as the text does not require any special quality on the part of the author.

Based on the dominant position of the doctrine3, the criminal participation is possible under all its forms for this offense. As far as we are concerned, we deem that this fact, as incriminated by Art. 216 paragraph 1 in the Criminal Code, cannot be committed by co-authors, since it is an omissive offense, with an unique author (the obligation of handing over a lost good is a personal obligation).

b) Passive subject is the natural or legal person who had lost a good or to whom the good that reached by error to the perpetrator belongs to.

3. Constitutive Content

A. Objective Aspects

a) The Material Element

Within the first normative modality (Art. 216 para. 1), the material element consists either of the fact of "not handing over" a found good, either of the fact of "disposing" of the found good.

---

[1] D. Lucinescu, *Codul penal comentat şi adnotat, Partea specială*, vol.I, (The Criminal Code Commented and Amended). Special Part), Ed. Ştiinţifică şi Enciclopedică (Scientific and Encyclopedic Publishing House), Bucharest, 1975, p.328.

[2] T. S., dec.pen nr.184/1974, (Supreme Court Criminal Decision) in RRD nr.7, 1974, p.62; T. S., dec.pen.1571/1972, in *Repertoire I*, p.74 ş.a.

[3] D. Lucinescu, op.cit., p.328.

"Not handing over" implies the omission of delivering the found good to the authorities or to the person who had lost it (when the perpetrator knows this person). The text does not claim that the good to be handed over to a certain authority, hence the doctrine deemed that it can be handed over to any authority4 In fact, the good has to be handed over under evidence, which imposes that its delivery to be made to the specialized state services, organized and functioning according to law. The omission of handing over gets a criminal relevance only if 10 days have passed since the finding of the respective good. The expiry of this term leads to the legal presumption of appropriation related to that good.

The offense can be consumed even before the expiry of this 10 days term, if the perpetrator disposes of the good as of his/her own property. In this latter case, "to dispose" of the found good does not only mean legal acts enforcement towards the good (selling, renting etc.), but also the use, consumption or transformation of the good.

Under the legal practice, it has been decided that the same offense is being committed if a person, after finding such a good, denies towards the good owner the finding and the detention/ possession of the respective good. In motivating this solution, it has been evidenced that the 10 days term is granted only to the good faith finder; if the finder manifests the intention towards the good appropriation before the expiry of the term, the offense is deemed as consumed or terminated5.

However, this perspective has not been unanimously recognized. On the contrary, certain authors have criticized the solution, observing that the simple denial regarding a good found does not accomplish the material element of the offense, in none of its normative versions. As long as the term did not expire and the founder did not dispose of the found good as it was his/hers, one cannot apply Art. 216 of the Criminal Code. The contrary solution tends to sanction the simple appropriation intention, without considering that the text grants to the founder a time for reflexion and, before the expiry of the 10 days, he has the possibility to reevaluate his/her decision in appropriating the good and therefore in committing the offense.

This offense cannot be committed by the employee of a "lost and found" service, because in this case the appropriation of a good handed to him for conservation constitutes the offense of dilapidation.

In the second normative modality, the material element consists of the unlawful appropriation of a good belonging to another person, that has reached by mislead the perpetrator's possession.

Within the field literature, a proposal for amending Art. 216 para. 2 has been submitted and consisted of the establishment of a delivery term, just like in the case of Art. 216 para. 1 of the Criminal Code6, taking into account that there can be situations when the perpetrator immediately realizes who is the owner and keeps the good, but without endeavoring any disposition acts towards the latter one; or, in such a situation, there is an incertitude regarding the moment when the offense should be deemed as consumed.

As per our opinion, we consider as disputable the necessity of such an incrimination, in its both factual modalities.

On the one side, if the perpetrator takes, by mistake, a movable good belonging to another person (of course, without the owner's consent) the problem that arises is wether the theft felony has been committed or not and, for defending him/herself, the perpetrator has to make evidence that the purpose of the unlawful appropriation is missing, respectively that he/she took the object by mistake because of the similarities between his/her own good and victim's good.

On the other side, if the perpetrator appropriates a movable good belonging to another person and this person handed the good by mistake, the fact could constitute, without difficulty, the offense

[4] D. Lucinescu, op. cit., p.329.
[5] T.j. Braşov, dec.pen. nr.325/1970, în RRD nr.10, 1970, p.165.
[6] G. Antoniu, C. Bulai, op.cit., p.142.

in 216 Criminal Code, taking into account that by "found good" one can understand also a good that reached by mislead the perpetrator's possession.

In any case, the incrimination in para. 2 has an identical protection purpose with the incrimination in para. 1 of Art. 216 Criminal Code, namely assuring the accomplishment of the handing over obligation, hence its existence is not justified. In this case, the perpetrator, realizing the good does not belong to him/her, again omits to hand it over to the authorities or to the one from whom he/she has received it. Or, given the facts, the renunciation over the incrimination in para. 2 of Art. 216 would be imposed and eventually, the first paragraph would be completed, with the mention that the fact can have as its material object even a good that reached by mistake the perpetrator's intention.

b) Immediate consequence

The majority of authors assert that, for this offense, the result consists in a new situation, according to which "the good is unlawfully under the ownership sphere of the perpetrator"7.

On our perspective, such an assertion equals to the fact that the offense presents itself as a formal one, more exactly as a pure omission type of offense.

c) Causality Link result ex re, from the itself omission of handing over the good.

B. Subjective Aspects.

Subjective Element. This offense can only be committed by intention, despite the fact that, according to Art. 19 para. 3 of the Criminal Code, the fact consisting of an inaction is an offense no matter if it has been committed by intention or only by guilt, excepting the case when law sanctions its intention based accomplishment only.

This exception type solution has been explained by the fact that the denomination of this offense itself would exclude, in an implicit manner, the possibility of its accomplishment by guilt only. But, in reality, the text of Art. 19 para. 3, same as the text of Art. 19 para. 2 of the Criminal Code, assigns a falsehood – because there are no offenses, actions or omissions, committed "by guilt"; action is always a physically intentioned manifestation, oriented by a purpose.

The Mobile or Scope are not constitutive elements of the offense.

4. Forms. Sanctions

Preparatory Acts and Tentative are not being sanctioned.

The moment of the offense termination differs in relation with the modality in which the offense is being committed.

In principle, the offense is being consumed by the expiry of the 10 days term, calculated from the date of the good being found. When the expiry is a day on which the authorities have their services suspended, the handing over within the next day will be considered within the legal term. Within the 10 days period, the perpetrator can at all times hand over the good, without being held responsible of committing the offense.

An anticipate termination of the offense is limited to the situation when cert evidence is being given that, within the 10 days term, the perpetrator has disposed of the good as of its own. In other terms, when the material element consists of disposing of a good, the termination takes place together with the accomplishment of the material element.

This offense is sanctioned with detention from one month to three months or with penalty.

The court can dispose, according to Art. 90 of the Criminal Code, the replacement of the criminal liability.

CONSIDERATIONS REGARDING THE CRIMINAL LIABILITY OF CORPORATIONS – THE ROMANIAN WAY

ANDRA-ROXANA ILIE*

Abstract
Announced by the legal literature, recommended through an important number of international instruments, already provided for in the majority of European Criminal Codes, the criminal liability of corporations (re)gained its place in the Romanian legislation, through Law no. 278/2006 for the amendment of the Criminal Code and other laws. The purpose of the paper is to present the main regulations governing the criminal liability of corporations, as existing in the Criminal Code, as well as they are provided in Law no. 286/2009 (the new Criminal Code). Although the criminal liability of corporations is now consecrated in Romanian for almost five years, there is however some reticence in engaging the liability of such person which is not "in the flesh", but only, according to some opinions, an abstract entity which lives only in the universe of jurists. As a consequence, up to present there is little case law in this field. Nonetheless, in the past year, it can be noticed an emergence of the files where the problem of the criminal liability of corporations is raised. Therefore, the objectives pursued by the present study are to provide an approach on the court decisions where criminal charges against corporations were carried out and to see how the relevant legal provisions were applied in these cases.

Keywords: *criminal liability, corporations, sanctions, precautionary measures, safety measures*

Introduction

Criminal liability of corporations has become one of the most debated topics of the 20th and 21st centuries. The debate became especially significant following the 1990s, when all countries have faced an alarming number of environmental, antitrust, fraud, food and drug, false statements, worker death, bribery, obstruction of justice, and financial crimes involving corporations[1].

In Romania, the criminal liability of corporation was announced by the doctrine[2] and recommended through an important number of applicable international documents[3]. Also, the criminal liability of corporation had been already recognized through many European Criminal Codes[4]. As a consequence of all this factors and of the great number of crimes related to corporations, their criminal liability (re)gained its place in the Romanian legislation in 2006, when

Law no. 278/2006 for the modification of the Criminal Code and of other laws[5] was adopted. Therefore, this paper covers the problem of criminal liability of corporations in Romania, as regulated by the Criminal Code into force.

The criminal liability of corporations lives its first years of life in the Romanian legislation. It is thus understandable that this topic raises numerous problems. The first court decisions against corporations were given in 2009 and the jurists do not seem totally convinced by the utility of this institution, continuously named "recent". The press periodically offers examples related to criminal prosecutions against the administrators of corporations for crimes such as counterfeit, corruption, environmental crimes, tax dodging etc. although it is obvious that criminal liability of the said corporations should (also) be examined. This situation is generated by both the lack of ignorance of the conditions of the criminal liability of corporations and the fear in front of a new institution. Moreover, the few cases when the criminal liability of corporation was raised ended with questionable solutions. Last, the new Criminal Code adopted in 2009 brings some changes in this field. This is why a detailed presentation of the legal provisions related to this issue is particularly important.

In order to answer this matter, this paper shall cover, in a first phase, the conditions required by the law in order to engage the criminal liability of corporations, also taking into account the foreign regulations which inspired them, if case. Of course, the beginning of a criminal trial against a corporation creates both criminal and criminal procedural consequences, which shall be studied in the second part of the paper.

As resulting from the abovementioned statements, the criminal liability of corporations is still a new institution in the Romanian legislation. Hence, there is little literature on this topic. This paper is not meant to be a synthesis of the existent specialized literature nor does it represent a critic to this doctrine, aiming to offer another perspective on the criminal liability of corporations.

I. THE CONDITIONS REQUIRED BY THE LAW FOR THE CRIMINAL LIABILITY OF CORPORATIONS

The criminal liability of corporations is regulated in art. 19^1 of the Romanian Criminal Code, named „*The Conditions of the Criminal Liability of Corporations*"), being found in Chapter I („*General Provisions*") of Title II ("*Crime"*) of the General Part of the Code, immediately after the provisions related to the general characteristics of the crime. According to this article, the corporations[6], excepting the State, the public authorities and the public institutions which develop activities which cannot form the object of the private field are criminally liable for the crimes committed when performing the object of activity, to their benefit or on their behalf. The Code also states that the criminal liability of corporations does not exclude the criminal liability of the natural person who contributed, in any manner, to the perpetration of the same offence.

Other provisions related to the criminal liability of corporations are contained in the articles related to the attempt [art. 21 par. (2) of the Criminal Code], the concurrence of crimes (art. 40^1 of the Criminal Code), the recurrence (art. 40^2 of the Criminal Code), the intermediate plurality (art. 40 of the Criminal Code), in Title III of the General Part regarding the sanctions, as well as in the provisions related to the status of limitation of the criminal liability (art. 122 last par. of the Criminal Code) and of the execution of the sanction [art. 126 par. (2), (3) of the Criminal Code], rehabilitation [art. 123 par. (2) of the Criminal Code]. Some relevant provisions are also contained in the Special

[5] Published in the Official Journal no. 601 of July 2006. The provisions regarding the criminal liability of corporations entered into force 90 days after this date.

[6] For the purpose of this paper, we used the term "corporation" in order to define the collective entities which are liable under the Romanian Criminal Code. As explained below, only the legal persons (which acquired legal personality) can be held responsible, with the exceptions provided by the law.

Part of the Criminal Code [art. 271 par. (5) regarding the non-observance of court decisions and art. 285^1 regarding the sanctioning of the corporations for forgery crimes]. Last, as it is normal, the procedural provisions regarding the criminal liability of corporations can be found in the Criminal Procedure Code (Chapter I^1 of Title IV – *„Special Procedures"*- of the Special Part).

All these provisions create the legal framework of the criminal liability of corporations. In order to determine the conditions of the criminal liability of such persons, there are three questions which need to be answered: who (which corporation) can be criminally liable? (1), for what crimes ? (2) and how can we relate those two – the corporation potentially liable and the crimes which can be perpetrated by such entities? (3).

In order to answer these questions, we need to analyze the aspects related to the application field of the criminal liability of corporations, from both material and personal perspective (**1**), as well as the ones related to the lien between the crime committed and the corporation (**2**).

1. The domain of the criminal liability of corporations

The first issue raised by the criminal liability of corporations is related to its domain. The doctrine, either Romanian or foreign (from the states which inspired the Romanian legislator) affirms that the criminal liability of such entities is general[7]. This means that it is applicable to all legal persons and to all crimes, provided by the Criminal Code or by special laws. Some explanations must however be made in both cases. Therefore, the domain of the criminal liability of corporations include its analysis from both personal perspective, through the examination of the legal persons which can be subjects of the criminal liability, and material one, through the delimitation of the crimes which can be perpetrated by a legal person.

Regarding the legal persons subject to criminal liability, art. 19^1 of the Romanian Criminal Code clearly states that the corporations, excepting the State, the public authorities and the public institutions which develop activities which cannot form the object of the private field are criminally liable. This rule requires however various discussions regarding, on one side, the private legal persons and, on the other side, the public legal persons.

With respect to the private legal persons, as a principle, all such entities can be liable under the Romanian Criminal Code, including the commercial companies[8]. This category of legal persons is mainly concerned by art. 19^1 of the Romanian Criminal Code, taking into account that they are frequently met in the economic landscape and the most capable of perpetrating crimes through their activities. The text also concerns syndicates, economic interests groups, European economic interest groups, owners associations, political parties, associations, foundations etc. Regarding the latter two legal persons, it must be mentioned that, according to art. 1 point 2 of the Government Ordinance no. 26/2000 regarding the associations and the foundations[9], they are private legal persons without patrimonial scope. The doctrine showed that these categories cannot be included in the one of the persons excepted of the criminal liability, provided by art. 19^1 of the Criminal Code as they cannot be assimilated with the State, the public authorities and the public institutions which develop activities which cannot form the object of the private field, because they have other juridical nature, they function based on other laws and they have other functions than the associations and the foundations. Neither their recognition, through Government Decision, as being of public utility does not exclude them from the criminal liability because, on one side, the legislator does not exclude them from the winding-up when their scope or activity became illicit or contrary to the public order and, therefore, even more they are not excluded from this sanction when they committed criminal offences, and on

[7] Francis Le Gunehec and Frédéric Desportes, *General Criminal Law*, (Paris: Economica, 2006), 573.

[8] For instance, in France, in the projects of the Criminal Code of 1978 and 1983, only private legal persons were concerned by the provisions which regulated the criminal liability of corporations.

[9] Published in the Official Journal no. 39 of January 31st, 2000.

the other side, the associations and foundations are not provided in any legal text as being expressly excluded from the criminal liability[10].

Therefore, the Criminal Code concerns the lucrative legal persons, as well as the ones without lucrative purpose. Of course, the logical interpretation of the provisions regarding the criminal liability of corporations leads to the conclusion that this institution was mainly created for the lucrative legal persons[11]. It is beyond doubt, taking into account their scope (to obtain turnover), those kinds of persons are the most exposed to criminal liability. From the analysis of the first three decisions against legal persons, it can be noticed that only limited liability companies were sentenced.

Some other issues are raised with respect to the determination of the exact concept of "legal persons". We must therefore analyze the chronological limits of the criminal liability of corporations[12], meaning the determination of the criminal liability of the entities lacking legal personality, the entities which are being created, transformed or dissolved.

Regarding the first issue, it must be noticed that, according to the Criminal Code into force, only the legal persons are liable. *Per a contrario,* the entities which lack legal personality do not fall under the provisions of the criminal law. This solution is grounded on the idea that a person who does not have identity or legal existence cannot be sentenced and that, anyway, such sentencing would not have any interest, because the said entity does not have rights or a patrimony[13]. Moreover, the doctrine showed that the limitation of the criminal liability of corporations to the entities having legal personality represents a source of legal security, which would be damaged if such entities would be criminally liable[14]. Thus, it would be difficult to establish who could represent such entities in a criminal trial and the enforcement of sanctions would be hard to conceive with respect to the principle of the personal character of the criminal liability[15].

A second problem which was raised regarding the criminal liability of private corporations is related to the moment when such liability can be held against them, knowing that there is always an amount of time between the moment when the by-laws of the company are signed and until the date when the person is registered according to the law. In the absence of any case law in this field, the doctrine stated that no criminal liability of such entities could be admitted. Such idea would raise various problems, especially regarding the sanctions applicable to these entities. Moreover, it must not be forgotten that the principle of legality must always be observed: as long as the Criminal Code clearly states that only the legal persons are liable, no collective entity could be responsible before that moment.

What is the solution with respect to the criminal liability of a corporation when such person is being transformed, taking into account the fact that, in such situation, the loss of legal personality normally becomes an obstacle to the liability[16]?

According to the Romania law, the transformation of corporations can be made through merger or demerger. Those two modalities are described in art. 41 of the Decree no. 31/1954

regarding the natural and legal persons, according to which the merger is made through the acquisition of a legal person from another legal person or through the consolidation of more legal persons in order to create a new legal person, while the demerger is made by the split of the entire patrimony of a legal person between other existent legal persons or who are thus being created.

The Romanian Criminal Code does not state on this issue, but the doctrine generally accepts the possibility of engaging the criminal liability of corporations for offences perpetrated before the transformation, based on the continuity of the legal person[17]. This solution is expressly provided by the new Criminal Code adopted through Law no. 286/2009[18]. Thus, according to art. 151 par. (1) of the new Code, named "*The effects of the merger and the demerger of the legal person*", in case of the loss of the legal personality through consolidation, acquisition or demerger, after the perpetration of the crime, the criminal liability and its consequences shall be suffered by the legal person created through consolidation, the person which acquired the initial one or the persons created through demerging.

The foundation of this solution is related to the effects of the transformation of the legal persons, which suppose the transmission of the patrimony. This idea allows the practical enforcement of the sanctions against the entity which acquired the patrimony of the person which committed the crime. Of course, one could state on the breach of the personal character of the criminal liability. Also, some problems related to equity or opportunity can be raised: it is justifiable to dissolve a newly created person for crimes committed before this moment? The case law shall respond to these problems.

The "death" of a corporation raises as much problems as its birth and life. It is known that the disappearance of a legal person determines a liquidation period, when the legal person keeps its civil capacity, meaning also its legal personality. Although the Criminal Code is silent in this matter, it is generally accepted that the corporation is criminally liable during this time, taking into account the fact that it does not lack legal personality.

While it can be observed that there is no exception to the criminal liability of private legal persons, the situation is different with respect to public legal persons. The Romanian Code provides for two absolute exceptions, concerning the State and the public authorities, and an exception which requires various discussions, regarding the public institutions which develop activities which cannot form the object of the private field.

The criminal liability of the State is expressly excluded by art. 19^1 par. (1) of the Criminal Code. The same exception exists in all the laws or projects of criminal codes which accepted the criminal liability of corporations. The reasons of this exception are related to the principle of sovereignty and of the separation of powers[19]. Another argument links the State to its role regarding the criminal sanctions: the State has the monopoly of the right to punish; as a consequence, the State cannot punish itself[20]. The same arguments are used in order to justify the exclusion of the public authorities from the criminal liability.

With respect to the public institutions, their criminal liability is excluded only if they develop an activity which cannot form the object of the private field. Such solution is yet criticizable. Normally, in the legislations of the States which provide the same exception, only the legal persons which committed the crime while performing an activity which cannot form the object of the public domain are excluded. The contrary solution, existing in the Romanian Criminal Code, allows the

[17] See Streteanu and Chiriță, *Criminal Liability*, 191.

[18] Published in the Official Journal no. 510 of July 24, 2009. The date of the entering into force shall be provided through the Law for the application of the Code.

[19] See Etienne Picard, "Criminal Liability of Public Legal Persons: Foundation and Domain", *Companies Review* (1993), 261.

[20] See Cosmin Balaban, "The Corporation, Subject of Crime", *2 Criminal Law Review* (2002): 80; Costica Bulai, Avram Filipas and Constantin Mitrache, *Criminal Law Institutions. Selective Course for the Bachelor of Law Degree 2008-2009*, (Bucharest: Trei, 2009), 80.

immunity of a public institution whenever it performs at least one prerogative which cannot form the object of the private field. Or, the majority of public institutions are in this situation. This conclusion leads to problems with respect to the constitutional principle of equality. Hence, the Romanian National Bank cannot be held liable for a criminal offence, but any other commercial bank shall see its criminal liability engaged for the same crime. The new Criminal Code correctly settles this matter, excepting from criminal liability only the legal persons which committed the crime while performing an activity which cannot form the object of the public domain.

The domain of the criminal liability of corporations also includes the determination of the crimes which can be committed by moral persons. The Criminal Code into force, unlike Law no. 301/2004[21], provides for a general liability, meaning that corporations can be held liable for all crimes provided by the Criminal Code or by special laws.

The justification of the special liability, provided by Law no. 301/2004 and other foreign laws is related on the crimes which could be attributed to corporations. It was mentioned that such entity cannot commit crimes such as rape, incest, bigamy, desertion etc. However, it must be noticed that all these crime can be perpetrated by corporations, as instigator or accomplice. It is therefore almost impossible to identify a crime which can totally exclude the implication of a legal person from its perpetration[22]. A corporation can be thus sentenced for being accomplice to rape when it allows natural persons to enter its headquarters on this purpose or for helping natural persons committing bigamy, by furnishing forged papers[23].

The criminal decisions against corporations given so far engaged their liability for crimes related to copyright[24], accidental injuries and breaches of the labor law[25].

2. The lien between the corporation and the crime committed

The answer of the third question requires the research of the lien between the corporations criminally liable and the crime committed. In order to answer this question, we must first determine which are the natural persons who can engage the criminal liability of corporation, as it is widely accepted that the criminal liability of corporations cannot be conceived in the absence of the intervention of a natural person. Second, the constitutive content of the crime committed by a legal person must be analyzed, through the examination of the material element and of the subjective element.

Law no. 301/2004 which was meant to introduce for the first time the criminal liability of corporations in the Romanian law provided that corporations are liable for crimes committed by their organs or representatives. We can found here the indirect model of criminal liability of corporations. The model of this provision was art. 121-2 of the French Criminal Code. The notion of "representative" was wider than that of "organ," and includes other persons such as the temporary administrators, liquidators, and special agents. Therefore, the acts of other members or subordinate

[21] Law no. 278/2006 is not the first law on the criminal liability of the legal person. Some precationnary measures against corporations were provided by the Criminal Code in 1937. Also, Law no. 299/2004 on criminal liability of legal persons for crimes of forgery of currency or other values (published in the Official Journal no. 593 of July 1, 2004) came into force in 2004, but could not be applied in the absence of appropriate procedural provisions. Also Law no. 301/2004 on the Criminal Code (published in the Official Journal no.575/2004) provided for the criminal liability of corporations, but it never came into force and was repealed by Law no. 286/2009.

employees cannot engage the criminal liability of corporations even when the acts are committed in the benefit of the corporations.

Law no. 278/2006 did not keep this rule, providing for a direct criminal liability of corporation. This means that the liability can be engaged by any natural person who is sufficiently related to the legal person (administrator, executive director, accountant, employee, representative etc.).

The criminal liability of corporations cannot be however engaged by any person related to these entities, as the law requires for other conditions. Thus, there are three criteria pursuant to which a legal person may be charged with an offence, namely the perpetration of the offence when performing the object of activity, the perpetration of the offence to the benefit of the legal person or the perpetration of the offence on behalf of the legal person.

The perpetration of the offence when performing the object of activity means that the offence must closely connected to the performance of the object of activity of the legal person. Such offences are related to the general policy of the company or to the activities it performs (offences related to the work safety, competition, environment protection).

The perpetration of the offence to the benefit of the legal person refers to those offences that fall outside the activities related to the performance o the object of activity, but considered to result in a benefit for the legal person. The benefit may take the form of a profit or of the avoidance of a loss.

The perpetration of the offence on behalf of the legal person refers to those crimes perpetrated within the process of organizing the activity and operation of the legal person without directly connected to its object of activity[26].

It must also be stated that, according to the Criminal Code, the criminal liability of the legal person does not exonerate the criminal liability of the natural person who contributed, in any manner, to the perpetration of the same offence.

One of the arguments which discouraged the criminal liability of corporations was related to their deed, their specific *mens rea*; it was shown that the corporations do not have their own will. However, it must be admitted that, although we cannot find the psychical processes specific to natural persons, the legal persons have their own will, expressed through their capacity to assume contractual obligations or through their tort or contraventional liability.

In the Romanian law, the criminal liability of a legal person represents a direct liability; which means that the infringement must be researched from the part of the company. In this respect, the Romanian Criminal Code expressly provides that a legal person may be held liable under the criminal law where the deed has been perpetrated by means of the infringement provided by the criminal law". Therefore, the offence may be the consequence of either a decision made deliberately by the legal person or of the negligence from its part, negligence which may consist of a faulty organization, insufficient safety measures of unreasonable budgetary restrictions that provided the circumstances for the perpetration of the offence. In respect of the offences perpetrated by an agent or by an attorney in fact, it is required that the company had been aware of his/her intention to perpetrate such offences or had encouraged such actions[27].

II. THE CONSEQUENCES OF A CRIMINAL TRIAL AGAINST CORPORATIONS

Once a criminal trial begins against a corporation, there are two sorts of consequences which could be triggered. The first category refers to the criminal consequences and determines the analysis of the criminal sanctions applicable to corporations. The Romanian Criminal Code provides three

[26] See Streteanu and Chirită, *Criminal Liability*, 230.

[27] See Lex Mundi, *Business Crimes and Compliance Criminal Liability of Companies Survey* (2008), 276-288, accessed February 19, 2011. www.lexmundi.com.

types of sanctions that may be inflicted on a corporation: a main penalty, some complementary penalties and safety measures (**1**).

The second category of consequences which a criminal trial determines relates to the provisions of the Criminal Procedure Code. When the criminal liability of corporations was set forth in the Romanian Criminal Code, the legislator also modified the Criminal Procedure Code, by introducing a special chapter in this respect (**2**).

1. The criminal sanctions applicable to corporations

As a preliminary statement, it must be mentioned that the term "sanction" includes both penalties (criminal sanctions pronounced as a consequence of the sentencing of the corporation) and safety measures (such measures can be inflicted against any person which committed illicit acts provided by the criminal law, and not crimes, in order to avoid an emergency condition and to prevent other illicit acts).

With respect to the penalties which can be applied to corporations, it must be mentioned that there are only two categories of such sanctions: a main penalty and complementary penalties.

The single main sentence which may be inflicted on the commercial companies is the fine. The criminal fine which may be inflicted on the commercial companies is between the common limits RON 2,500 and RON 2,000,000 (approximately euros 580 – euros 465.000). The fine is calculated taking into account the penalty provided by the law for the natural person. Thus, in the cases in which, for an offence perpetrated by a natural person, the law provides a maximum penalty of 10 years' imprisonment or a fine, the special minimum of the fine inflicted on a legal person is of RON 5,000 and the special maximum of the fine is of RON 600,000. In the cases in which, for an offence perpetrated by a natural person, the law provides the life imprisonment or the penalty of more than 10 years' imprisonment, the special minimum of the fine for a legal person is of RON 10,000 and the special maximum of the fine is of RON 900,000.

It can be noticed that those limits are lower than the common ones (RON 2,500 – RON 2,000,000). Those common limits can be touched however by means of the mitigating or aggravating circumstances (such as concurrence of crimes or recurrence).

The complementary penalties can be applied together with the fine, whenever the judge consider necessary. They are however mandatory whenever the law provides as such (for example, in case of forgery). The service of the complementary penalties shall commence to run from the date on which the conviction sentence remains final.

The complementary penalties are as follows: the legal person's winding-up; the suspension of the legal person's activity for a period of 3 months to one year or the suspension of one of the activities performed by the legal person, in respect of which the offence was perpetrated, for a period of 3 months to 3 years; the closing down of certain working points of the legal person for a period of 3 months to 3 years; the prohibition to take part in any tender procedure for a period of 1 to 3 years; the posting or dissemination of the conviction decision[28].

In this context, it must be mentioned that the new Criminal Code adopted by Law no. 286/2009 introduces a new complementary penalty which can be imposed on a legal person: the placement under judicial surveillance. This penalty determines the appointment of an administrator or a representative who shall supervise, for a period of 1 to 3 years, the performance of the activity that triggered the perpetration of the crime[29].

---

Comparative Study regarding France and Romania" (Dissertation for the Master 2, Fundamental Criminal Law, Montpellier 2008); Ioan Lascu, „Penalties Applicable to the Legal Persons in case of Criminal Offences", *3 Law* (2007): 123.

[29] See Anca Jurma, „Sanctions Applicable against Legal Persons", *I Univeristy of Bucharest Annals* (2010): 101.

The Criminal Code provides for various safety measures which can be taken whenever an illicit act has been perpetrated. However, there is only one safety measure which can be applied to corporations: the seizure of the assets.

In order to apply this measure, the seized goods shall meet one of the following conditions: (a) such goods are obtained by means of the perpetration of a deed provided by the criminal law; (b) such goods have been used, in any manner, for the perpetration of an offence, in case they belong to the perpetrator, or, in case they belong to another person, such person was aware of the purpose for which they have been used. This measure may not be ordered in respect of the offences perpetrated by means of the press; (c) such goods have been produced and adjusted with a view to perpetrating an offence, if they have been used for the said perpetration and if they belong to the perpetrator. In case such goods belong to another person, the seizure is ordered provided that their production and adjustment has been performed by the owner himself/herself or by the perpetrator and with the full awareness of the owner; (d) such goods have been offered with a view to cause the perpetration of an offence or to reward the perpetrator; (e) such goods have been acquired by perpetrating a deed provided by the criminal law, if they are not returned to the aggrieved person and if they do not serve as a remedy for such person; (f) it is prohibited by the law to own such goods.

2. The procedural provisions relevant to criminal trials against corporations

The Criminal Procedure Code, in art. 479^1, states that its provisions are also applicable to offences perpetrated by legal persons, being amended by the special provisions contained in the Chapter referred to the enforcement of the criminal liability of corporations.

A first problem related to a criminal trial against a corporation is related to the person who can represent the legal person, especially that mostly the representative of the corporation is also the person who perpetrated the offence. The Criminal Procedure Code distinguishes between two situations. First, if solely the legal person is held liable, it shall be represented for the fulfillment of the procedural steps by its legal representatives. Second, if for the same deed or related deeds, the criminal proceedings have been initiated against the legal representative of the legal person as well, the latter shall appoint an attorney-in-fact to represent it. In the event that the legal person fails to appoint an attorney-in-fact, such appointment shall be made by the body conducting the criminal proceedings or by the court, from among the legal practitioners in the field of insolvency procedures.

Another important mention concerns the interim measures which can be applied to corporations. In this respect, the Criminal Procedure Code provides that during the criminal trial, either the judge or the court may order, for grounded reasons in order to ensure the good and proper development of the criminal trial, one or more of the following measures: the suspension of the legal person's winding-up or liquidation procedure; the suspension of the legal person's merger, division or reduction of the share capital; the prohibition of any specific patrimonial operations that may entail the significant reduction of the patrimonial assets or the legal person's insolvency; the prohibition to execute certain legal instruments, established by the legal body; the prohibition to perform activities of the same nature as those underway or as those that occurred when the offence was perpetrated[30].

The Criminal Procedure Code also provides for the possibility to take precautionary measures against a corporation (the distraint and the garnishment). These precautionary measures may be undertaken with a view to ensuring the special seizure, the remedy of the damage caused by the offence, as well for securing the service of the sentence represented by a fine.

There is not much case law on the criminal procedural provisions regarding corporations. It is however important to mention that, in one court decision given in 2010, it was established that, based on art. 200 and 202 par. (1) of the Criminal Procedure Code, whenever the prosecutor is informed

[30] See Dorina-Maria Costin, *Criminal Liability of the Legal Person in the Romanian Law* (Bucharest: Universul Juridic, 2010): 529-535.

through a criminal complaint on the perpetration of offences by a natural person who is also a representative of a legal person, the prosecutor must decide with respect to both persons. On the contrary, the prosecutor's decision is subject to suppression, the prosecutor being compelled to also perform investigations on the corporation[31].

Conclusions

From the analysis of all these aspects, we can determine the main issues regarding the criminal liability of corporations in Romania. Thus, the Criminal Code provides for the criminal liability of all corporations, either public or private, excepting the State, the public authorities and the public institutions which develop activities which cannot form the object of the private field. Such corporations are liable for any type of crime provided by the Criminal Code or by special laws, as authors, instigators or accomplices. In order to engage the criminal liability of a corporation, the offence must have been committed when performing the object of activity, to their benefit or on their behalf. The Code also states that the criminal liability of corporations does not exclude the criminal liability of the natural person who contributed, in any manner, to the perpetration of the same offence. Following a criminal trial, a corporation can be sentenced to a main penalty (the fine), together with complementary penalties. There is also a safety measure (the seizure of the corporation's assets) which can be taken against a corporation, as well as interim measures and precautionary measures.

The implications of these outcomes can be already seen in the few court decisions which raised the problem of the criminal liability of corporations. Thus, the criminal decisions against corporations given so far concerned only limited liability companies and engaged their liability for crimes related to copyright, accidental injuries and breaches of the labor law. The companies were convicted together with their administrator and the only penalty inflicted was the fine.

All these aspects show that there is still a long way until this institution shall be fully understood and applied. Other than the issues raised by this study, there are many other topics for discussion, such as the consideration of the turnover as a criterion for the individualization of the sanctions applicable to corporations[32], the criminal liability of foreign corporations or the introduction of new criminal penalties.

UNIVERSAL JURISDICTION AND THE PRINCIPLE OF NE BIS IN IDEM

MIHAELA AGHENIȚEI[*]
ION FLĂMÂNZEANU[**]

Abstract
Universal jurisdiction was defined as "the assertion of jurisdiction to prescribe in the absence of any other accepted jurisdictional nexus at the time of the relevant conduct." Professor Randall, in his seminal work on universal jurisdiction, opined that the theory of universality "provides every state with jurisdiction over a limited category of offenses generally recognized as of universal concern, regardless of the situs of the offence and the nationalities of the offender and the offended."Universal jurisdiction is considered a tool for promoting greater justice, but the rights of the accused must be protected. One of the most important guarantees is the principle of ne bis in idem, which protected persons against multiple prosecutions for the same crime. The main legal consequence of the application of ne bis in idem in most systems is the prohibition and inadmissibility of subsequent prosecutions on the same facts blocking effect).The national ne bis in idem principle is established as an individual right in international human rights legal instruments, such as the International Covenant on Civil and Political Rights of 19 December 1966, in Article 14(7). At the regional level, Article 8(4) of the American Convention of Human Rights (1969) and Article 4 (I) of the Seventh Protocol of the European Convention of Human Rights merit mention. In Europe, the ne bis in idem principle is enshrined in Article 54 of the Convention implementing the Schengen Agreement of 14 June 1985, which prohibits the initiation of a second trial for the same offence when final judgment has been imposed upon a person by a court of a contracting party.

Keywords*: "universal jurisdiction", "the principle neb is in idem", "domestic recognition", "double jeopardy".*

Universal jurisdiction was defined as "the assertion of jurisdiction to prescribe in the absence of any other accepted jurisdictional nexus at the time of the relevant conduct.[1]" Professor Randall, in his seminal work on universal jurisdiction, opined that the theory of universality "provides every state with jurisdiction over a limited category of offenses generally recognized as of universal concern, regardless of the situs of the offence and the nationalities of the offender and the offended."[2]

Universal jurisdiction is considered a tool for promoting greater justice, but the rights of the accused must be protected. One of the most important guarantees is the principle of ne bis in idem, which protected persons against multiple prosecutions for the same crime. The main legal consequence of the application of ne bis in idem in most systems is the prohibition and inadmissibility of subsequent prosecutions on the same facts blocking effect).[3]

The national ne bis in idem principle is established as an individual right in international human rights legal instruments, such as the International Covenant on Civil and Political Rights of 19 December 1966, in Article 14(7). At the regional level, Article 8(4) of the American Convention of Human Rights (1969) and Article 4 (I) of the Seventh Protocol of the European Convention of Human Rights merit mention.

In Europe, the ne bis in idem principle is enshrined in Article 54 of the Convention implementing the Schengen Agreement of 14 June 1985, which prohibits the initiation of a second

trial for the same offence when final judgment has been imposed upon a person by a court of a contracting party.

A. On the constitutional level, the Fifth Amendment to the United States Constitution contains the principle of ne bis in idem expressly. Article 39 of the Japanese Constitution clearly establishes that no person "shall be placed in double jeopardy" and, according to the general interpretation, this includes double jeopardy both in procedural law and in substantive law.

The German Constitution, in article 103(3), clearly states that no persons may be punished for the same act more than once. In Spain, although the 1978 Constitution does not explicitly proclaims the principle ne bis in idem, the Constitutional Tribunal has declared since 1981, that it is a direct consequence of the legality principle of Criminal Law (Article 25). In Croatia, in article 31 paragraph 2 of the Constitution of the Republic of Croatia establishes that "no one may be tried anew nor punished in criminal proceedings for an act for which he has already been acquitted or sentenced by a final court judgment made in accordance with the law."

In fact, all countries consider the ne bis in idem principle as a principle that is recognized at the domestic level. This basic right is directly applicable only with respect to judgments of domestic courts. The most frequent legal basis for the domestic recognition of the principle ne bis in idem, is simple statutory law, on a customary basis in Finland or in the Penal Code such in France, the Netherlands, Sweden. In Belgium, France, Germany, Romania, Italy, Hungary, Spain, Croatia Turkey it is recognition in the Code of Penal Procedure and in Spain, in other legal texts.

B. Recognition of the ne bis in idem effect of foreign res judicata at the national level is not very frequent. Except the relevant treaty expresses a prohibition, countries do not recognize a ne bis in idem blocking effect to foreign decisions, such in Germany in case of judgment of a court outside the European Union and admit a double prosecution and punishment.

In Germany, there is a distinction between foreign judgment of a Court inside and outside the European Union. Concerning foreign judgments of courts outside the European Union, if the convicted person has been punished abroad for the same act, the foreign punishment shall only be credited towards the new one to the extent it has been executed. This is the principle of accounting or deduction, mitigation or remission recognized in Japan, too. However, the public prosecutor's office may dispense with prosecuting an offence committed on foreign territory if the defendant has a sentence for the offence was already executed abroad and the sentence which is to bee expected in Germany would be negligible after taking the foreign sentence into account.

In Finland, it is recognize the ne bis in idem effect of all foreign res judicata without regard for the state of origin. In other countries, the law provides criminal proceedings after a final judgment has been rendered by a foreign court, entailing an acquittal, dismissal of the charges or conviction, if punishment has been imposed, followed by complete enforcement, pardon and in Belgium also amnesty or lapse of time, such in the Netherlands. In Croatia, although the ne bis in idem principle is recognized as obligatory only at the national level, with regard to the prosecution of criminal offenses committed abroad pursuant to the universality principle, criminal proceedings will not be initiated if the perpetrator has served the full sentence imposed on him in a foreign state or if he has been acquitted by a final judgment or pardoned in a foreign state; similary, if the statutory limitation has expired under the law of the state where the crime was committed. The perpetrator may be prosecuted for the second time in Croatia if he was sentenced by a final judgment in a foreign state, but did not serve the full sentence. In this situation, the perpetrator is not punished twice as the time previously spent in detention or prison will be included in the sentence pronounced by the domestic court for the same criminal offense.

In the United Nations ad-hoc tribunals, Article 10 of the International Tribunal for the former Yugoslavia Statute and the Article 9 of the International Criminal Tribunal for Rwanda Statute must be respected as concerns the principle of ne bis in idem.

C. In the Netherlands, the recognition of foreign res judicata is entirely independent from the prospective basis of criminal jurisdiction. In general, such in Germany, the principle of ne bis in idem

applies regardless of the principle according to which a domestic or a foreign court or authority exercises its jurisdiction. The ne bis in idem blocking effect of a foreign judgment is entirely the same, whether it derives from the state loci delicti or from a state which has exercised universal jurisdiction.

But in the Netherlands this egalitarian approach is open to criticism. One could imagine that a state might wish to shield a person, by starting criminal proceedings in his absence and next, due to lack of evidence, acquit him. The Statutes of the ad-hoc tribunals for Rwanda and the former Yugoslavia, the International Criminal Court provide for exceptions to the ne bis in idem rule in case of sham trials.

In Croatia, concerning crimes against international law foreseen in the Criminal. Code, the ne bis in idem principle has been disregarded entirely because of the incorporation of the universality principle within a provision regulating the protective principle. Croatian legal doctrine has criticized this approach and has considered it as erroneous. About the international crimes, the ne bis in idem principle limits the exercise of universal jurisdiction. In Finland the Penal Code makes it possible to exercise universal jurisdiction even in cases for which a prior foreign judgment has been handed down.

D. The principle ne bis in idem guarantees apply to a same person that risks being prosecuted or punished again for the same fact. For the application of the blocking effect of ne bis in idem in international context, the conditions are:

1) The European Court of Justice recognized in several cases, that is really difficult to asses the congruity of facts for the purpose of ne bis in idem within the transnational context. In the Van Esbroeck case[4], the issue of what amounts to the same facts was raised for the first time. In this case the accused had been convicted in one state for importing drugs and was subsequently prosecuted in another state for exporting the same amount of drugs. The Court held that in doing so, the ne bis in idem principle was violated:

a) "the relevant criterion for the purposes of the application of that article of the Convention implementing the Schengen Agreement is identity of the material acts, understood as the existence of a set of facts which are inextricably linked together, irrespective of the legal classification given to them or the legal interest protected;

b) punishable acts consisting of exporting and of importing the same narcotic drugs and which are prosecuted in different Contracting States to the Convention implementing the Schengen Agreement are, in principle, to be regarded as "the same acts" for the purposes of Article 54 of the Convention, the definitive assessment in that respect being the task of the competent national courts."

In the Van Esbroeck case, the Court of Justice continued this road.[5] In the criminal proceedings against Kraaijenbrink, the problem was whether the accused could be convicted in Belgium of laundering money coming from drug transactions after she had been convicted in the Netherlands of receiving and handling of money deriving from illegal drug transactions.[6] According to Advocate General Sharpston, the different legal qualifications do not prevent regarding this as falling within the same set of facts.[7]

In Germany, the prohibition of a second trial for the same acts is not limited to the same provision of substantive criminal law, but encompasses all the historical circumstances during the commission of the crime (prozessualer Tatbegriff).

[7] De La Cuesta, José Luis, "Concurrent National and International Criminal Jurisdiction and the Principle ne bis in idem", International Review of Penal Law 2002 3e/4e trimester, 707-736.

2) Penal orders (Strafbefehle) prohibit in Germany the initiation of a second trial once the order has entered into force, if no objections have been lodged in time.

As to the character of the decisions that may bar a new penal proceeding in general, there is an absolute prohibition of a second trial after a final acquittal or a final conviction. Only decisions adopted as a definitive termination of proceedings or a final answer on the merits of the case qualify.

Another question is that of determining if judgments determining the end of proceedings due to a procedural impediment, and the termination of proceedings by the public prosecutor, even when a court consents, have or do not have a ne bis in idem effect. The European Court of Justice decided that: "The ne bis in idem principle laid down in Article 54 of the Convention implementing the Schengen Agreement also applies to procedures whereby further prosecution is barred, such as the procedures at issue in the main actions, by which the public prosecutor of a member state discontinues criminal proceedings brought in that state, without the involvement of a court, once the accused has fulfilled certain obligations and, in particular, has paid a certain sum of money determined by the Public Prosecutor."[8]

In the Miraglia case, the European Court of Justice has established that Article 54 does not apply when the Public Prosecutor has decided not to pursue the prosecution on the sole ground that criminal proceedings have been started in another member state of European Union against the same defendant and for the same acts, without any determination whatsoever as to the merits of the case.[9] The European Court of Justice in the Miraglia case, has established that Article 54 does not apply when the Public Prosecutor has decided not to pursue the prosecution on the sole ground that criminal proceedings have been started in another European Union state against the same defendant and for the same acts, without any determination whatsoever as to the merits of the case.[10]

Another question is whether the sentence has been enforced. In Kretzinger the issue came up whether a suspended sentence must be regarded as enforced, or is actually in the process of being enforced, as meant in Article 54. The Court stated that "In that respect, it must be noted that, in so far as a suspended custodial sentence penalises the unlawful conduct of a convicted person, it constitutes a penalty within the meaning of Article 54 of the Convention implementing the Schengen Agreement. That penalty must be regarded as "actually in the process of being enforced" as soon as the sentence has become enforceable and during the probation period. Subsequently, once the probation period has come to an end, the penalty must be regarded as 'having been enforced' within the meaning of that provision."

In case of final judgment rendered by a foreign court entailing conviction, if punishment has been imposed, the sentence must have been enforced completely for the application of the ne bis in idem effect. In cases of only partial execution, the principle of deduction enters in force, allowing a further prosecution and a new punishment. In the context of the European Union, article 58 of the Schengen Convention enjoins the courts to deduct any period of deprivation of liberty served on the territory of another party from a sentence handed down in respect of the same offence.

E. One of the most important exception to the ne bis in idem principle is in the case of sham trials. One can imagine cases of abuse of criminal proceedings in foreign states, for example a state might wish to shield a person, by starting criminal proceedings with the sole purpose of shielding the perpetrators (sham prosecution). In Croatia an exception to the ne bis in idem principle has been envisaged, namely, for exercising universal jurisdiction over gross human rights violations. When proceedings in another state have been conducted contrary to internationally recognized standards of a fair trial, criminal proceedings may be initiated in Croatia against the same perpetrator and for the same crime with the approval of the Chief State Prosecutor. This is not possible with regard to the

International Criminal Court. In Hungary there is no special regulation for preventing sham trials, but due to the fact that the foreign judgment must submitted to a process of recognition of equivalence by the Metropolitan Court, this court must examine if foreign proceedings are consistent with the principles of due process of law.

THE APPLICATION OF THE SPECIALTY PRINCIPLE, CONCERNING THE SPECIAL SEIZURE IN ROMANIAN CRIMINAL LAW

MONICA POCORA[*]
GINA GOGA[**]
NICU DURET[***]
MIHAIL-SILVIU POCORA[****]

Abstract
This paper aims to be a comparative analysis of the special seizure as a safety measure, as it is regulated in Romanian special criminal legislation, and also a way to highlight certain discrepancies between the general and special criminal legislation. Special seizure, as a safety measure, may be disposed under Criminal Code regulations, as a general norm, but also under some stipulations included in special Criminal laws. Moreover, when there are such special stipulations, they have under the rules of specialty principle, priority in implementing to the general norm. In our opinion, in these cases, special seizure is also disposed under the Criminal Code provisions, as general norm, because the general terms nondescript by others field of incidence, are the ones who set by the Criminal law. In fact, in such cases, the special seizure is ordered under both Criminal provisions. In analysis of the paper, is made reference to the applicability of special seizure measure in matter of corruption offences, in customs, money laundering, illicit trafficking of drugs and fisheries and fish farming, and as a result of their presentation, we concluded that although is in question the specialty principle, mainly would find application the general norm in comparison with special norm. Moreover, corroborating the actually general norm with the provisions of the New Criminal Code, we believe the special seizure, should operate exclusively under the general law, or the provisions of the special norm, should be modified.

***Keywords**: special seizure, corruption, drugs, fishing, money laundering*

Introduction

The Criminal reform of the Romanian judicial legislation and our country's accession to the European Union, are two reasons for a thorough reflection on the institutions of Criminal law and the role of the contemporary judicial system. One of these Criminal law settlement is ***special seizure.*** Initially, showed as a safety measure and traditional regulated by the Romanian criminal law, the special seizure increasingly raises several problems both in internal law and in international regulations.

After analysis of different countries legislation, emerges that special seizure is regulated differently, being considered both a safety measure, or a criminal sanction (punishment or complementary penalty). In some states, the special seizure has a mixed judicial nature, depending on the pursued purpose, being considered either as a safety measure or a punishment. These differences are important and interfere on the judicial status of these Criminal law settlements, having different consequences, and as appropriate, either a preventive character or repressive one, made by coercion. It should be noted from the outset, that in Romanian legislation, the true judicial nature of special seizure is a *criminal sanction,* not that a *sanction of Criminal law,* enrolling better in complimentary punishment category, than in category of safety measures.

Usually, through the norms included in particular non-criminal laws, but that including penal provisions, has not been established a new category of goods liable for confiscation, other than those provided by article 118 of the Criminal Code, the provisions of these special laws are not only, just applications of the art. 118 of the Criminal Code in domain covered by special law.

These are *general provisions* on special seizure by equivalent, introduced at a time when this type of seizure was not provided in the general section of the Criminal Code, while being required by international judicial instruments, to which Romania is party. In case of incidence of special seizure, it will be applied under these provisions, and the provisions of art. 118 of the Criminal Code came to supplement them.

These are *general provisions* on special seizure by equivalent, introduced at a time when this type of seizure was not provided in the general section of the Criminal Code, while being required by international judicial instruments, to which Romania is party. In case of incidence of special seizure, it will be applied under these provisions, and the provisions of art. 118 of the Criminal Code came to supplement them.

It can be observed, that these provisions, innovative and derogatory to the general status of the special seizure since them introduction date, after changing the general status of special seizure by Law no.278/2006, has reached a coverage sphere more limited than the general provisions. Or, this was not the legislature's intention when introducing these provisions. Being particular offenses, that usually generate large profits for offenders, the legislature has intended to close any possibility that may remain with the proceeds of crime from their illegal activities. Or, actually, this purpose can be better achieved, based on the provisions *of the general part* of Criminal Code. However, there is the principle *specialibus generalia derogant*, which express the relationship between general and special law, in accordance with the special law derogates from the general one.

Also, some voids of law regulations, reflected in the inability to confiscation some certain assets, which served immediately after the committed offence, to ensure the offender escape or the retain of the obtained product, have resulted in legal practice, the controversial solutions, some of them, are unwarranted expansion of existing legislation and creating fictions to enable the confiscation of such goods, and others unable to confiscation. This controversy could be eliminated by regulating this assumption of special seizure stipulated in internal law.

Also, it should be noted the special seizure approach in Anglo-Saxon legislation. The traditional approach of serious offences means the offender capture, followed by the criminal trial intended to him, the conviction and reclusion. Recently, the offenders enriching, provide by of economic crimes or *drug trafficking*, has permitted to led to adding a new element, namely, the confiscation of crime products.

The special seizure in matters of corruption offences

In matters of corruption offences, it can be found special disposals as regards to the special seizure, as a safety measure, both included provisions in the Special Part of Criminal Code, and in special legislation. Para. 3 of art. 254 of the Criminal Code, provides that money, values or any other goods that have been the object of bribery, shall be confiscated, and if they could not be found, the convict is obliged to pay their equivalent in money.

By provisions of para. 4 by art. 255 of Criminal Code, the regulations previously indicated, relating to the confiscation is extended on bribery even if the offer was not followed by acceptance. In the situation of connection the bribery with special causes to remove the criminal nature of the crime, or unpunished, regulations provided by para. 2 and 3 by art. 255 of the Criminal Code, the money, values or other assets are returned to the person who gave them.

Also, in terms of receiving undue benefits, para. 2 of art. 256 of Criminal Code, provides that money, values or any other received assets shall be confiscated, and if they are not be found, the convict is obliged to pay their equivalent in money.

The special law with incidence on preventing and combating the corruption offences, namely, the Law no. 78/2000, are found explicit references on special seizure. Thus, in case of buying influence offence (regulated by Art. 6^1 of Law) it provides that money, values or other assets that have been object of crime, shall be confiscated, and if they are not found, the convicted must pay their equivalent in money (Pocora 2010). The money, values or any other assets are returned to the person who gave them in case of the perpetrator is not punished for the reason that he denounce the offense to the authority before the criminal authorities has been took notice for that offense. As a general provision, Art. 19 of Law no. 78/2000 provides that in case of committed offences against the European Communities' financial interests, the money, values or any other assets which were gave to determine offense committing (if they are not returned to the injured party and they could not served to them damages), should be confiscated. In case of unfounded assets, the convicted is obliged to pay their equivalent in money.

In case of corruption offences, the special seizure will be applicable under provisions of Special law, but also with observing the general regulations under Art. 118 of Criminal Code.

The Special seizure in matters of custom house

The settlement framework on custom house is provided by the Romanian Customs Code, Law no. 86/2006. To these, is added a reference to the special seizure by equivalent made through the art. 277 of Custom Code: when goods or other assets which made the object of the offense were not found, the offender is required to pay their equivalent in money. This regulation must be interpreted by reference to the art. 118 of Criminal Code, since Law no. 86/2006 has adopted. This is because is necessary to avoid controversy appeared at the time of confiscation by equivalent, and was preferred to refer explicitly to this in the special law (Boroi, Al., Voicu, C. 2007).

As regards the way how it make the reference to the regulations in matters of special seizure, we believe that when the measure is taken by nature, must be based on art. 118 of Criminal Code, but, if the seizure is made by equivalent, it must be reported to the provisions of art. 277 of Law no. 86/2006, because has a special norm character in relation to the provisions of the Criminal Code.

Referring to the special seizure as a method of fighting customs debt can create confusion about the judicial nature of this measure has. We believe that the nature is in this case, one which lies on the administrative law domain, and not the Criminal law. This is because the purpose for which the special seizure is took differently from that provided by the measure described above.

The Special seizure in matters of money laundering

Actually, In Romania, the money laundering domain is governed by Law no. 656/2002 on preventing and sanctioning money laundering and instituting some measures to prevent and combat terrorism acts. Reflecting to the exigencies manifested on special seizure through the international judicial instruments in this matter, art. 25 of the internal law, refers to the provisions of art. 118 of Criminal Code, on confiscation: "in case of money laundering offences and financing the terrorist acts, are applicable the provisions of art. 118 of the Criminal Code on special seizure".

Furthermore, as regards the provisions of art. 25, para. (2)-(6) of Law no. 656/2002 are specified as follows:

- Para. (2) - if the assets that are subject on special seizure are not found, shall be confiscated their equivalent in money or other assets acquired in lieu thereof;
- Para. (3) – the incomes or other financial benefits derived from goods referred by para. 2 shall be confiscated;
- Para. (4) –if the assets that are subject on special seizure could not be individualized to the assets acquired legally, shall be confiscated other assets ratable to the value of assets - subject to special seizure;

- Para. (5) - the provisions of Para (4) shall apply in accordance of other financial benefits and others incomes derived from assets - subject to special seizure, which could not be individualized to the assets acquired legally;

- Para. (6) – to ensure the enforcement of special seizure assets, is mandatory to take precautionary measures provided by the Criminal Procedure Code".

In case of committed crime by the legal entity, art. 23, para. 4 of Law no. 656/2002 it provides that in addition to the fine penalty shall apply, as appropriate, one or more of the complimentary penalties provided for in art. 53^1 let. 3 of the Criminal Code. Also, art. 22 para. $3^1$of Law no. 656/2002, it provides that that in case of a legal entity commits any kind of offense defined in the same law, in addition to the main penalty the legal entity may be subject to the complimentary sanction of assets confiscation, fated, used or produced by the offense. It is likely the legal provisions, about a sanction with different legal nature and base. If in case of special seizure we are dealing with a criminal penalty, in case of this sanction we are in a liability contravention field which is based on committing an antisocial fact less serious (Lascu 2005).

As can be observed, the special law with incidence to prevent and combat money laundering and financing the terrorism acts, is regulated in close terms to those of art. 118 of Criminal Code on matters of special seizure.

Moreover, the special seizure on money laundering is also regulated by international legal instruments, such as ***The Framework – Decision of Council, no. 2001/500/JAI,*** whose main objective was to ensure harmonization of laws as regard to incrimination money laundering and assets confiscation regulations, stating that coverage sphere of subject - offenses should be sufficiently broad in all Member States. Analyzing the provisions of this Framework - Decision, we can state that the EU does not act on different levels on general standards terms of cooperation established by legal instruments which emanating from other legal authorities. Rather, the assessed standards are considered as a benefit already won, and the role of the Decision being to advance on the line of cooperation especially in the field of interest.

Thus, the stated purpose of the Framework - Decision it seems to ensure that all Member States have effective rules on confiscation of crime related assets, among others, as regarding the obligation of proof on the source of assets held by a convicted person for a crime related to organized crime. It is interesting that, to indicate the aimed offenses, is not using their name, but the technique to indicate the Community legal instrument relating them.

The Special seizure for illicit drug trafficking

The regulation in this matter is ensured by the Law no. 143/2000, to combat illegal drug trafficking and consumption.

Under provisions of art. 18 of Law no. 143/2000, the restrained drugs as regards the confiscation are destroyed, the counter-keeping is mandatory. However, there are, exempted from destruction: a) employable medication, which were sent to pharmacies or hospitals, after prior approval of the Directorate of the Ministry of Health Pharmaceutical b) employable plants and substances in pharmaceutical industry or other industry, relating to their nature, which were submitted to a public or private economic agent, authorized to use or export them, c) some appropriate amounts that will be preserved for teaching and research institutions or who have received by institutions with dogs and other animals to detect drugs, for training and maintenance practice, in according with legal provisions (Nistoreanu 2008).

In the same matter, G.O no. 121/2006 on the legal status of drugs precursors, defines in art. 22 and 23 some crimes on this regime. In art. 24 of G.O no.121/2006, it provides that in case of defined offenses, it can be order the confiscation of substances classified under the law. When substances have been classified offenses are not found, the offender is liable to pay their equivalent in money. As regards drugs, art. 26 of G.O no. 121/2006, it provides destruction of confiscated classified substances or handed in custody after the activity cessation and which could not be turn account.

The Special seizure in matters of fishing and fish farming

The legal act which provides the special rules in fishing and fish farming is G.O no. 23/2008.

In connection with these facts, art. 66, para. 1 of G.O no. 23/2008 it stipulates that "are able to confiscation the fishing tackle and fishing boats, animals, vehicles, firearms and any other goods that have been used to commit crimes". In the same article, but in different paragraph were included the provisions on confiscation as a criminal law sanction, but also as a contravention: "the assets derived of committed crimes and contraventions, consisting of fish, spawn, other living being and aquatic products will be confiscated" . In this situation, depending on the specific type of behavior which is specifically identified in the case, the applicable rules will be those in the Criminal law or Administrative law.

It is very interesting the technique used by the legislature, especially for poaching fish that can be both an offence, but also contravention. In cases of assets confiscation, under this legal act, it can be seems that the authorities have power of capitalization under the law, their money equivalent completing the state budget. In this way, even in matters of special seizure, it appears that we could not talking about the recovery assets, even in case if they are seized from a person who has acquired through illegal acts – for example, the authorized fishing tools are stolen, that are owned by a legitimate administrator of a fishing fund and are used for illegal fishing. We consider, however, that such a solution is not correct in terms of fulfilling the purpose of safety measures. This is because the danger that has to be combat is only by considering a person who committed a certain type of behavior. In a situation even more clearly, a person can steal a fishing boat owned by the fishing fund manager and using it to commit an unauthorized fishing. Under the special provisions contained in G.O no. 23/2008, this boat must be seized, valuable and the equivalent must be recovered for the state budget, this is clearly an unjust solution. For this reason, we consider is very important that the special rules that we are talking about it has to be in accordance with the framework rule of the Criminal Code.

Conclusions

This paper is not aimed to present all the rules which are contained in special legislation, and having regard measures of special seizure as a safety measure, but only to illustrate some of the ways in which they were shown and to highlight some non concordances that exist between the general and specific rules, relevant for this investigation.

In special legislation there are numerous references to the safety measure of special seizure. *For example,* as is easy to understand, such provisions are contained in legal acts which guarantee the legal regimes regulating as regards the possession and using of dangerous substances. Specifically, art. 19 para. 2 of Law no. 111/1996 on the safety, regulation, licensing and controlling nuclear activities: "the nuclear fuel illegally held will be seized, will become a public property of the state and will be handed to a custodian, specially named for that purpose". Seizure itself is done accordance with the provisions of art. 118 Criminal Code. All this, because as following disposals of special legal act: „the nuclear and radioactive equipments, them components, the nuclear fuel, radioactive products, including radioactive waste, the nuclear explosive devices or their components, which were subject of special seizure by a court order, in accordance with art. 118 of Criminal Code, provided by the guilty party, must be retained with the former owner expenses, in a safety place, under the seal of public authorities, in compliance with nuclear safety requirements, so as be safety for population life or health and for environment or property until the courts order regarding to them.

In our point of view, is necessary that all these have to be expressly repealed, because as we highlight during our analysis, some of them are just warnings on the general legal text of art. 118 of Criminal Code. In previously example, the special seizure has binding performed under art. 118 para. 1 lit. 1 let. f of Criminal Code, even if special legislation has not contained any reference to this text.

According to the specialty principle, corresponding to which the special rule have priority in relation to the general rule, we propose that the special legislation have to contain some rules with considering the measures of special seizure of assets, **to indicate more clearly which is the judicial nature of this confiscation.** Otherwise, there are very high risk of confusion between the special seizure as a Criminal law sanction and special seizure as a contravention sanction.

ADMITTING GUILT IN COURT CASE IN ACCORDANCE WITH NEW LEGISLATIVE CHANGES

SIMONA TACHE*

Abstract
Entry into force of the law no.202/2010 regarding some measures to speed up the trial processes already raises some problems of interpretation especially concerning cases that are pending. Such a situation was inevitable since the transitional provisions could not cover all situations arising in practice, and the law mentioned above create some completely new institutions in our criminal law. But I believe that for the new institution of admitting guilt in court case, would be required to adopt transitional rules necessary to eliminate the controverses that arise and will arise in practice. As any new institution, admitting guilt in court case will require a certain period of time untill crystallize an unitary practice field, even more because the text contains some vague expressions. Unfortunately, the courts have no benefit yet of a fast and efficient mechanism for unifying the jurisprudence, and this fact will probably affect also the solutions that will be taken by the courts in this matter.

Keywords : *guilt, offence, court,unfair, controverses.*

Introduction

Under the statement of reasons in the Law no. 202/2010, regarding some measures for speeding up the cases settlement it has been illustrated that: *"the introduction in the Code of Criminal Procedure of a new institution, such as the institution of trial in case of pleading guilty, satisfies the need of efficacy of the judgment, contributing to the annulment of some time consuming procedures and often useless for establishing the legal truth, subsuming to the qualitative requirements of the act of justice".*

However, the entry into force of the Law no. 202/2010, stirred up numerous discussions amid the practitioners and it has already generated a series of interpretation problems in the judicial practice, especially regarding the application of this law to the pending cases, under process of settlement, as long as the above-mentioned law has introduced some completely new institutions in our criminal law, and the provisional measures could not cover all the possible situations occurred into practice.

Under the marginal title *"The judgement in case of pleading guilty"*, the new art. 320^1 of the Criminal procedure code provides that *"until the initiation of the court investigation, the accused can declare either personally of by means of an authentic document that he / she acknowledges to have been committed the incriminated actions recorded in the court notification instrument and asks for the judgement to be settled based on the evidence submitted to the file in the stage of criminal investigation"* (art. 320^1 paragraph 1 Code of criminal proc.). In the case of applying this procedure *"the court shall decide on the conviction of the accused, who benefits of the remission by one third of the limits of the sentence provided by the law, in the case of sentence to imprisonment, and a remission by one fourth of the limits of the sentence provided by the law, in the case of punishment by administrative fine"* (art. 320^1 paragraph 7 C. criminal proc.).

* Assistant, Faculty of Law, Romanian American University, Bucharest; Lawyer, Bucharest Bar (e-mail: tachesimona@yahoo.com).

Paper content

Regarding the application of the new art. 320^1 of the Code of crim. proc., regulating the trial procedure in case of pleading guilty, as far as concerning the cases pending at the effective date of this text of law, these provisions are susceptible of being interpreted differently in the judicial practice, as there are possible several solutions, depending on the procedural stage of the case, on the accused position as to that moment, on the criminal plurality registered in the case and on the legal frame of the action.

Thus, one of the problems that have occurred was the one of the moment up to which the accused can plead guilty and what consequence causes the fact that the request of being judged based on the evidence gathered during the criminal prosecution is submitted after the initiation of the court investigation.

In the cases where the court investigation has not been initiated yet, and before the procedural moment up to which pleading guilty can become incidental (the initiation of the court investigation), the accused can use, beyond any discussion, of the provisions of the art. 320^1 Code of criminal procedure, operating the rule of immediate application of the norms of criminal procedure law (*tempus regit actum*).

In the cases where the court investigation has begun or such procedural stage has not been reached, and the accused did not admit his guilt, it is not yet a matter of pleading guilty.

However, a thorough analysis of the legal provisions called forth presupposes both the hypothesis where, in the cases pending with the courts of law, where the court investigation has begun, the accused admitted to have committed the deed ever since the criminal prosecution stage, stating this position also in front of the court, as well as the case when, the accused has not pleaded guilty during the criminal prosecution stage, but, after the initiation of the court investigation, he understands to reconsider the procedural position in the sense of admitting his / her guilt, thus as, although, as procedural stage, there has been exceeded the moment of initiating the court investigation, the accused requires to be applied the new procedure.

According to the opinion of theoreticians of law as well as to the practice of the courts, there is a first trend that considers that the accused is not automatically granted the right to benefit of the provisions of the art. 320^1 Code of criminal procedure, from the very moment of the enforcement of this text, regardless of the considered hypothesis, resulting from the above-illustrated facts.

In supporting this opinion and the solutions passed by the courts in this sense, there is, firstly, the argument, according to which, one must consider the fact that the criminal trial has exceeded the procedural moment up to which the accused could plead guilty and could admit committing the crimes and when he could ask for the judgement to be done based on the evidence submitted to the file in the criminal prosecution stage (initiation of the court investigation).

The deadline established by the legislator that is until the initiation of the court investigation, is equal to the expiration of a time-limit. This presupposes that any statement formulated after the initiation of the court investigation must be dismissed as belated.

This is because the criminal trial must carry out operatively, without interruptions and reinstatements to the prior stages, and a reinstatement to a previous stage or procedural phase is likely solely in the cases in which the law expressly stipulates such action (i.e. in the case of cassation for re-judgement or in the case of reopening the criminal investigation).

However, the accused whose decision has been quashed or cancelled in one of the remedies at law, and the case has been sent to be re-judged by the court of first instance, he/she can make use or not make use of this procedure depending on the limits, in which the decision is cancelled and of the last valid procedural instrument, from which point on the criminal trial must be recessed.

Another argument of those supporting the above-opinion is that, the rule of immediate enforcement of the procedural criminal law cannot be ignored and cannot have a retroactive character unless expressly provided as such by its text. In the doctrine there has been even ascertained that the

retroactivity of the new procedural criminal law cannot be accepted under any circumstances, as it is not allowed by the art. 15 paragraph 2 of the Constitution, providing the possibility of retroactivity only for the criminal law but nor for the procedural criminal law.

It is appreciated that, in the case of a succession of procedure laws the discrimination cannot be called forth, as the procedure law applies immediately to all the persons in the same procedural stage, without any discrimination. However, the accused whose court investigation has proceeded face a different situation than those not yet in that procedural stage, and the possibility to ask for the judgement solely based on the evidence submitted during the criminal prosecution granted only to the later ones, does not represent a discriminatory act. Thus, it would mean that the new procedure law would apply to all the persons facing the same situation, including those that have been definitively convicted, which is deemed to be absurd.

Besides, if there would be adopted the contrary solution it would mean that the judgement procedure for the case of pleading guilty would be applicable, including in the case of the files under the appeal or recourse stage, such a point of view being less likely to be generally accepted.

In analysing the incidence of the art. 320^1 paragraph 7 Code of crim. pr. in the case of the files already under investigation with the court at the date of entering into force of such Code, one cannot simply ignore the fact that this norm is not one effective on its own, without entailing any condition, but a norm whose incidence is conditioned by the performance of a certain procedural action of the accused, that is the acknowledgement of the facts by the accused and his/her request, *made prior to the initiation of the court investigation*, that the judgement shall be done based on the evidence submitted during the criminal prosecution stage.

However, it is considered that, in the cases where the court investigation started before the effective date of this new art. 320^1 Code of crim. pr. this condition is not complied with and it can no longer be complied with. If the courts would only apply the art. 320^1 paragraph 7 Code of crim. pr., without considering the fact that the conditions under the paragraph 1/6 of the same article are not complied with, the result would be that the provisions of the new law and the old law would combine, thus giving birth to a new law (*lex tertia*), which is not admissible.

Thus, the surpassing of the procedural moment up to which the perpetration expression of will can intervene, entails the inapplicability of that cause providing the lack of sentence or the remission, and any likely changes in the accused plead, occurred subsequent to that moment, are ineffective, therefore, if the court investigation proceeded and if any evidence have been served to the court, the judgement cannot no longer be grounded on the evidence submitted during the criminal prosecution stage.

There is however a new approach of some courts who have admitted that both the accused acknowledging their actions since the criminal prosecution stage can benefit of the provisions of the art. 320^1 Code of crim. proc., maintain this position in front of the court, even if, by reference to the effective date of the new legal provisions, the starting date of the court investigation had passed, as well as the accused who, although have not pleaded guilty during the criminal prosecution stage, have changed their procedural position understanding to acknowledge their action and asking for the judgement to be carried out according to the new regulated procedure.

Practically speaking, as we talk about a law containing also provisions of substantial criminal law – as it provides a ground for remission by one third of the limits of the sentence provided by the law, in the case of sentence to imprisonment, and a remission by one fourth of the limits of the sentence provided by the law, in the case of punishment by administrative fine – it can apply retroactively, as this is a more favourable law.

Regarding the criteria for differentiating between the norms of substantial criminal law and the ones of criminal procedure, in the doctrine, we have a unanimous opinion according to which the placement of such norms in the Criminal Code or Criminal Procedure Code does not represent a criterion for differentiating such norms, hence, the fact that the relevant text appears in the Criminal

procedure code does not represent an impediment for its assessment as a norm of substantial criminal law, susceptible of being, thus, retroactively applied, if it is more favourable.

Even if the constitutional provisions contained in the art. 15 paragraph 2 stipulate that the *„law orders only for the future, except for the more favourable criminal law (...)"*, we consider that the reasoning of the legislator upon the drafting of such norm was to provide the possibility to retroactively apply any criminal law or procedural criminal law, containing more favourable provisions.

An extensive interpretation of the constitutional law provisions is required, in the sense that, even if the text does not expressly stipulate that the criminal procedural law can also retro-activate, we must accept that, if we talk about the remission of the sentence limits, any law, whether criminal or procedural criminal law, is subject to retroactivity.

The legislator did not refer to the constitutional law provisions of the art.15 paragraph2 and to the criminal procedural law, as the remission of the sentence limits, fall under the matter of criminal law, the provisions of the art. 320^1 Code of crim. proc. being the first procedural provisions containing norms of criminal substantial law.

We deemed as compulsory the interpretation of the art. 320^1 paragraph 7 Code of crim. proc., as it is a norm concerning the quantum of the sentence applicable to certain offences or crimes, to be further framed beyond any doubt in the category of the criminal substantial law, and not in the category of the criminal procedural norms category.

Besides, the finality of norms edicting by the legislator is represented by the granting of a right, being excluded the fact that the above-mentioned legal provision regulates any formalities, the actual result to which the application of this legal provision leads to targeting the criminal liability that can be decreased.

Thus, as far as a norm, by its actual application on the case referred to judgement, regardless of the law section it belongs to, introduces a change in the incrimination conditions, in the conditions of charging the criminal liability or in the sanctions, shall fall under the incidence of the more favourable law (mitior lex).

We also consider that, in the case of some accused that caused criminal offenses at the same date, it would be deemed as discriminating if the judgments passed by the courts to be different, in the sense of considering as incidental or not the provisions of the art.320^1 Code of crim. proc., depending on the expedience of a criminal investigation authority in more effectively run through the procedural stages and phases of research and /or execution of the criminal prosecution.

Even more discriminating would be considered the different judgments in a trial in process of settlement, if the accused had committed a criminal offense for which he/she is judged by the court, while another accused that has committed a criminal offence long before the previously-referred to accused, either a similar offence, or a different offence, but due to a more complex criminal participation, or due to the fact that the crime has been committed in a series of criminal offences, circumstances which, due to the case complexity, resulted in a longer criminal investigation.

We consider that, in the given situation, such a treatment would be a discriminating one, as long as the causes generating it are as objective as it gets, being obviously not imputable to the accused. Thus, we get to the situation in which the accused that committed a single criminal offence, related to which the evidence service did not require a long period of time, hence the file has been referred for settlement by the competent court, will not benefit of the new simplified procedure, while other accused that have committed the criminal offence long before the other accused, will benefit of the simplified procedure of pleading guilty.

For this purpose, we called forth the Decision no. 86/27.02.2003 of the Constitutional Court, establishing that the provisions of the art. 8 of the Law no. 543/2002 regarding the pardoning for certain sanctions and the removal of some measures and sanctions that are unconstitutional, because they limit the application of the law for sanctions established by means of final court decisions, unchallenged by the date of entry into force of the law, excluding the sanctions applied subsequently

for actions committed before such date. In grounding the decision the Constitutional Court showed that the situations of certain categories of persons should basically differ for justifying the difference in the legal treatment and such difference should be based on an objective and rational criterion.

Another issue of interpretation and application is the one regarding the disjunction and incompatibility, and it concerns the case where in the same case there are two or more accused with different pleadings: one or several acknowledging to have committed the criminal offence described in the indictment and requesting the case settlement based on the evidence submitted to the file during the criminal prosecution and another one or ones not recognising to have committed the criminal offence or not requesting the application of the art. 320^1 paragraphs 1-6 Code of crim. proc.

From the text analysis, it results that the legislator did not expressly provide the coercitiveness to disjoint the case in such a situation, as provided under paragraph 5 of the art. 320^1 of the Code of crim. proc. for the case where evidence are required for the settlement of the civil action.

Although we do not deal with an imperative provision that would establish the coercitiveness of the case disjunction, in the case where any of the criminal participation forms is held and the procedural position of the participants to the offence is different, the court can decide the disjunction, only when possible. In such case, the court shall proceed according to the rules of simplified procedure for those that comply with the conditions, ordering by its decision the case disjunction for the other accused parties.

The accused sentenced on the grounds of *"pleading guilty"* can be heard as witnesses in the disjoint case, in relation to the other accused parties.

The judge passing the sentence for convicting the accused, according to the simplified procedure, can find himself/herself incompatible to judge the case of the other participant to committing the criminal offence.

Based on this interpretation of the text of law, included in a study published by the Superior Council of Magistracy, some courts facing such a situation declared themselves incompatible to judge the accused towards whom they ordered the case disjunction.

Considering the rule established by the art. 32 Code of crim. pr., text providing that, the case disjunction would not represent the best solution, in case of indivisibility or joint cases, the first instance judges all the cases, if the court settles all the criminal offences and all the accused.

Even if the art. 38 Code of crim. pr. allows the disjunction in the cases of incompatibility provided under art. 33 let. a) and in all the joint cases, one should not forget the basic rule, that is, in such situations the cases it operates and prevails the case joining, and the disjunction is merely the exception.

The only case that might be taken into account is the one regulated by the art. 47 paragraph 2 of the same code, which provides the fact that the judge who has pre-empted on the judgement that might be reached in the case can no longer participate to the case settlement.

According to the legal provision quoted above, the judge that, prior to the case settlement, pre-empts on the merits of the case is incompatible for judging the case. It is of no importance if the pre-emption occurred before the appointment or during the trial, if it has happened during first instance or in during the redress procedures, if it happened in an official environment or in an occasional case.

By using the word "settlement", the legislator referred to the situation in which the judge determined on the existence of the criminal action and on the guilt of the accused, and not to other situations such as the change of juridical framing of the offence, the extension of the criminal judgement on other material actions, on other deeds or on other persons. In fact, in both the doctrine and the practice, the opinion according to which the judge that has previously settled the criminal law part of the trial is not incompatible for settling also the disjoint civil part is the majority opinion.

By relating to the provisions of the art. 33 let. a) and art. 34 Code of crim. pr., if we take into account the situation in which there was a criminal participation when the criminal offence was committed, all the persons have been sent to judgment, and, prior to the commencement of the court

investigation three of the accused have requested to be judged based on the simplified procedure, while the other accused have not pleaded guilty, if the case is disjoint, the court must order the conviction of the three persons, applying the provisions of the art.320^1 and the disjunction related to the other two accused, that will be judged by a different panel of judges.

If, in this case, there exists a prejudice, the means of settling the civil action shall be an extremely difficult one, in the context in which the three accused, that have chosen to benefit of the new procedure implied by pleading guilty, do not challenge the prejudice, precisely because the modality established in the indictment is a convenient one for them, considering the rule of solidarity operating between the debtors.

In such a case, will the court jointly convict solely the three accused that have opted for calling forth the new legal procedure in their favour, further the solidarity being established on the occasion of convicting the other two accused, or will it disjoint, regarding the three accused, the civil matter settling it together with the criminal matter that concerns the other two accused, as well?

Moreover, we have to consider the issue of what happens in the case where, on the occasion of judging the two accused, shall there be ascertained that the entire prejudice has been caused by the three accused that have benefited of the procedure of pleading guilty, and, in relation to them, has the criminal court decision, establishing the fault or the contribution to the prejudice, remained final?

We consider that the answer to the two above-posed questions is represented by the fact that, in a case like the above-illustrated one, the disjunction is not the best solution, therefore, in such a case, when the legal conditions are complied with, for the accused choosing the simplified procedure the court shall have to limit to admitting the judgement based on the evidence serviced during the criminal prosecution stage, and the judgement for these accused shall be passed concurrently to the one of the accused judged according to the ordinary procedure.

There is, however, the case when, due to different reasons, the case disjunction could not be possible. In this hypothesis, a pertinent question would be can the court dismiss the request of an accused to apply the simplified procedure, only because the other one does not agree?

Practically, in case there is a criminal offence committed by several authors and one of the accused intends to benefit of the simplified procedure, acknowledging the committing of such offence based on the evidence serviced during the criminal prosecution and the other accused opts for the ordinary procedure of settling his case, and, thus, we have a case in which the disjunction is impossible, if the case reaches the stage of court investigation and the evidence is submitted to the file pending with the court, can it still be supported the compliance with the premise for applying the remission of the sanctions limits, according to the art. 320^1 paragraph 7, if the case has not been settled solely based on the evidence serviced during the criminal prosecution?

In this case, considering the argument related to the indivisible nature of the norm provided under art. 320^1 Code of crim. pr. and to the impossibility of applying the paragraph 7 of the same article in case of concurrent non-application of the paragraphs 1-6, we consider that the accused pleading guilty should neither benefit of the remission of the sanction.

Nevertheless, in this case, the difference of legal treatment between the two accused is to be carried out, like before the effective date of the new art. 320^1 Code of crim. pr., by applying the sanction particularization criteria or by holding the mitigating circumstances for the accused pleading guilty of committing the actions indicated in the indictment.

However, we ask ourselves if it is equitable and non-discriminating that the accused who intended to benefit of the simplified procedure should receive a conviction the only mitigating factor applicable to his case being the mitigating circumstances for his honest attitude and for acknowledging his/her deed. It is obvious that, although this accused agrees that the judgement shall only be carried out based on the evidence serviced during the criminal prosecution, finds himself/herself in the impossibility of making use of the simplified procedure due to causes independent of his/her will, as long as the second accused (co-author to committing the criminal offence) understands to adopt a procedural position of pleading not guilty and the cause cannot disjoint.

On one hand, due to the occurrence of a cause independent of his/her will, the accused should be able to benefit of the new procedure. On the other hand, as long as the other accused does not acknowledge the guilt of committing the criminal offence, thus, the criminal trial must follow its course in front of the court, the file enters the stage of court investigation and other evidence is implicitly serviced during the criminal trial, thus that the first accused could no longer call forth the provisions of the simplified procedure. It is a situation that the judiciary practice must solve by adopting a majority solution in this sense.

It is true that the doctrine and jurisprudence have accepted the possibility of combining more favourable provisions stipulated under different laws, when such provisions concern institutions that are susceptible of being applied autonomously, such as, for example, the case of multiple criminal offences, where there shall be selected the more favourable law for each offence separately, and further there shall be selected that sanctioning treatment for multiple criminal offences, provided by successive laws, which is more favourable. Is, however, the institution of guilt acknowledgement, regulated by the art. 320^1 paragraphs 1-6 Code of crim. pr. one susceptible of being applied autonomously of the institution of the cause of sanction remission, provided under paragraph 7 of the same article? Does the norm provided under art. 320^1 Code of crim. pr. have a divisible nature, allowing a separate application of the paragraph 7 of this article, independent of the special procedure of pleading guilty, regulated under the paragraphs 1-6 of the same article? We believe that the answer to such questions can only be a negative one, as, according to all the criteria proposed by the doctrine, the norm provided under the art. 320^1 has indivisible nature, and the application of the sanction remission cause, provided under paragraph 7 of this article to be conditioned by the application of the separate procedure of acknowledging the guilt, regulated by the paragraphs 1-6 of this article.

Thus, in the foreign doctrine, there has been ascertained that *"the milder provisions of the new law are a sort of a counterparty to the more severe provisions the two series of provisions are trying to balance, therefore the two series of provisions cannot be applied independently one of another"*. However, it is obvious the legislator's intention to grant a "*compensation*" consisting in the remission of sanction only to that accused that pleaded guilty and facilitated a more efficient settlement of the criminal trial by the request of settling the case based on the evidence serviced during the criminal prosecution.

We deduce this also from the fact that the simple acknowledgement of guilt, without the judgement carried out based on the evidence gathered during the criminal prosecution (due to various reasons, including the dismissal of the request by the court, according to art. 320^1 paragraph 8 Code of crim. pr.), does not lead to the remission of the quantum of the sanctions applicable to the accused.

Another problem in applying the provisions of the art. 320^1 Code of crim. pr. is the significance of the verb*"to hear"*.

There are opinions according to which the hearing is carried out after the court has previously informed the accused on all the consequences deriving from opting for the simplified procedure, followed by the reading of the intimation.

It has been considered that this hearing focuses on admitting the actions described in the indictment and on accepting the evidence serviced during the criminal prosecution and that is does not have the legal nature of an evidence (not being applicable the provisions of the art. 69-74 Code of crim. pr.), representing but a mandatory procedural activity required for establishing the procedural frame, being placed at the time of prior matters, before admitting the claim for judgement, according to the procedure provided under art. 320^1 Code of crim. pr.

The mandatory nature of this procedural activity is correlated with the accused right to opt for the simplified procedure. The supporters of this opinion have accepted the fact that this simplified procedure can carry out by default, in the absence of the accused, if the legal requirements are complied, in the hypothesis in which the acknowledgement has been made by means of an authentic deed.

However, this opinion, presents some drawbacks, that we shall further detail:

Placing the action of hearing the accused at the time of prior matters not correct. From the art. 44 Code of crim. pr., marginally called *"prior matters"*, it results that: *" The criminal court has the competence to try any prior matter on which the resolution of the case depends, even if, by its nature, that matter falls under the competence of another court. The prior matter is tried by the criminal court according to the rules and probative means regarding the field to which the matter belongs. The final decision of the civil court on a circumstance that represents prior matter in the criminal trial has authority of res iudicata in front of the civil court."*.

The text of the art. 44 Code of crim. pr., illustrates the fact that, there is no provision on the procedural moment when the accused can call forth this matter and that this moment can occur whenever during the criminal trial, both in the prosecution stage (see art. 45 Code of crim. pr.), as well as in the judgment stage (both before and after the court investigation initiation).

The hearing of the accused, provided under art. 320^1 Code of crim. pr., even if, apparently, has the value of a simple statement of acknowledgement, it cannot be reduced to it. It cannot be carried out by omitting the fact that the judgment stage is governed by certain rules. These rules require an active role to both the judge and prosecutor, and provide the right of the other parties to ask questions.

As a matter of fact, the hearing of the accused must be placed in the context established by the Code of criminal procedure. After analysing the order of the legal texts it results that, in a criminal trial, the order of the activities shall be the following:

- according to the art. 320 C. cr. pr., the chairman shall explain to the damaged person that he/she can have the capacity of party in a civil trial or it can participate as damaged person in the criminal trial;

- according to the art. 320^1 paragraph 3 Code of crim. pr., the chairman shall ask the accused if he/she requires for the judgement to be carried out based on the evidence serviced during the criminal prosecution stage, evidence he/she acknowledges, or, based on the ordinary procedure and shall take note of the expressed position;

- according to the art. 320 paragraph 2 Code of crim. pr., the chairman shall ask the prosecutor and the parties if they have formulated pleas, applications or if they propose new evidence; in case of a negative answer, the court declares the court investigation initiated, and such investigation shall be carried out according to the provisions of the art. 321 Code of crim. pr.

- according to the art. 322 Code of crim. pr., the chairman shall order that the clerk to read or to make a summary of the court intimation deed.

- according to the art. 323 Code of crim. pr., the court shall proceed to hearing the accused; if there are several accused, the hearing of each of them shall take place in the presence of the others.

Practically, after hearing the accused, according to art. 323, art. 324 Code of crim. pr., the court shall be able to determine on the request of the accused to be judged based on the evidence serviced during the criminal prosecution, fully aware of the case details.

Regardless of the means of action of the court, the disjunction regarding the other accused and the continuation of the trial, the statement of the accused opting for the simplified procedure shall have the value of evidence.

After a careful reading of the provisions of the art. 320^1 Code of crim. pr., it can be noticed that under this aspect, the legislator points out two moments: the one in which the accused states that he/she opts for being judged based on the evidence serviced during the criminal prosecution, prior to commencing the court investigation and the one of hearing the accused that can only be realized as above-indicated.

Of course, it would be possible for the accused that has submitted to the file the authentic statement, but is not present, to be brought in front of the court, if the court considers his/her present necessary.

What differentiates the two procedures is the fact that in the case of simplified procedure, the evidence gathered in the criminal prosecution no longer have to be services by the court, according to oralitaty, contradictoriality and publicity conditions, as provided for the regular procedure.

As a matter of fact, we should not forget the reason of introducing such procedure that was grounded on some actual realities, the fact that the courts had to re-service the evidence during the criminal prosecution, even if the accused was admitting the actions for which he was undergoing trial.

Another interpretation issue generated by the simplified procedure of the judgement in case of acknowledging the guilt results from the ambiguous content of the paragraph7 of the art. 320^1, also mentioned by the provisions of the art. 320^1 paragraphs 1-6 Code of crim. pr., the chairman does not apply in case the criminal action targets an offence sanctioned with life imprisonment, leaving unregulated another situation much more often met in the practice, that is the one in which the law provides the sanction of life imprisonment, alternatively with the imprisonment sanction for the committed offence.

If we take into account the fact that, upon the procedural moment when the legal provisions, regarding the guilt acknowledgement, can be applied (prior to the court investigation), the court cannot assess if the judgement to be passed is the sanction of life imprisonment or the imprisonment sanction, one might consider that the provisions of the art. 320^1 Code of crim. pr. are not applicable either if the criminal action targets an offense sanctionable with life imprisonment alternatively with the imprisonment sanction.

However, if we take into account the fact that the legal provision above mentioned is of strict interpretation and application, the conclusion to be drawn is that the legislator, by the plea it has created, had in mind only the offences that are exclusively sanctioned with life imprisonment.

In an interpretation *per a contrario*, in the case of committing the criminal offences for which the law provides the sanction of life imprisonment alternatively to the imprisonment sanction, the accused can benefit of the simplified procedure, if, based on the list of evidence serviced in the case, the court shall reach the conclusion that the life imprisonment is to apply, the guiding principle being that, if the evidentiary material provides data based on which the court considers that the life imprisonment sanction should apply, even if it used the simplified procedure, the accused cannot benefit of it.

Moreover, it is difficult for the court to accurately interpret and assess the possibility of an accused to benefit of the simplified procedure in the case of committing a series of criminal offences in which we have one offence punishable only by life imprisonment and another sanctionable only by imprisonment.

In such a case, we consider that it is mandatory for the court to assess that the provisions of the art. 320^1 Code of crim. pr. are not applicable.

However, we ask ourselves what would be the solution adopted in the practice in the above-mentioned hypothesis when the accused acknowledges this/her guilt by reference to the criminal offence for which the law provides solely the imprisonment sanction, and during the trial the evidence leads to the inexistence of the accused guilt by reference to the offence sanctioned by life imprisonment, thus, in relation to such offence the court shall order the acquittal of the accused. Can the court still relate retroactively to the fact that the accused initially pleaded guilty for the offence sanctionable by imprisonment, thus as for the accused to benefit of the remission of his sanction limits, according to the simplified procedure? Because we could encounter such judicial errors that are not covered by our legal framework and for which the legislator and the judicial practice must clear such aspects.

Another aspect that needs to be brought into discussion is the one regarding the means of applying the text of the art. 320^1 paragraph 3 Code of crim. pr., which provides that at the hearing *"the court asks the accused if he/she requires the judgement to be made based on the evidence serviced during the criminal prosecution stage, evidence that he/she acknowledges and accepts, and*

in such case it proceeds to hearing the accused and then it grants the permission to speak to the prosecutor and to the other parties".

First of all, it does not clearly result what the hearing of the accused refers to, that is if it only concerns the aspect related to the judgment made based on the evidence services during the criminal prosecution stage or the hearing should also concern aspects related to the offence subjected to trial?

From the text of the paragraph 1 of the art.320^1 C. crim. pro. that provides the fact that the accused can declare also by means of an authentic deed that he/she admits to have committed the offence held in the intimation, we could deduce that the hearing of the accused concerns solely the first aspect, related to the formal statement of admitting to have committed the offence and to the request for the judgement to be made based on the evidence serviced during the criminal prosecution stage.

The same interpretation would be also required by the fact that in this case it is not about a hearing carried out during the court investigation, as the text does not make any reference to reading the intimation, or to the commencement of the court investigation, but, on the contrary, from the paragraph 1 of the art. 320^1 Code of crim. pr. we deduce the fact that the entire procedure takes place *"prior to the initiation of the court investigation"*.

Moreover, the entire reasoning of the text, of simplification and expedition of the procedure for judging the cases in which the accused acknowledges the offences described in the indictment, might lead to the same conclusion, that the hearing only refers to the formal statement of admitting to have committed the offences described in the indictment and to the express request of the accused for the judgment to be carried out based on the evidence serviced during the criminal prosecution, which, of course, can include a detailed statement of the accused regarding the offence referred for settlement, to be considered upon judging the case.

If we take into account the *cases Colozza vs. Italy, Ilisescu and Chiforec vs. Romania,* we can only conclude that the above-illustrated interpretation does not contravene to the ECHR case law in the matter, as the accused has expressly waived his/her right to be heard and to ask the hearing of witnesses in front of the court, in which case the right to a fair trial is not infringed.

Secondly, the text does not clearly explain what it means to grant the permission to speak to the prosecutor and to the other parties: is the permission to speak is granted based on their statement on the case merits or only on the accused request, of settling the case based on the evidence serviced during the criminal prosecution?

Based on the fact that the paragraph 6 of the art. 320^1 Code of crim. pr. expressly provides that in case of settlement of the file by means of this procedure, there shall be applied the provisions of the art. 340-344 Code of crim. pr. (referring to, among others, to granting the permission to speak during the debates and the last hearing being granted to the accused), we may implicitly conclude that the permission to speak granted to the prosecutor and to the other parties, after hearing the accused, concerns only his/her request of case judgment by means of the special procedure of pleading guilty.

Further, after the court approved this request of the accused, the court would grant the permission to speak both during the debates on the case merits and the last intervention would be granted to the same.

Another interpretation issue raised in the discussion is the one concerning the judgement to be ordered by the court in the case of applying the provisions of the art. 320^1 paragraph 7 Code of crim. pr..

By using the categorical formula of the legislator *"the court shall determine the accused conviction"* we might deduce that another solution than the conviction is not possible, even if there are grounds for acquittal, as provided by the art.10 C.of crim. proc., and, implicitly the accused acquittal based on the art. 10 let. b^1 Code of crim. pr., when the offence does not present the social danger of a crime, would not be possible.

It is hard to believe that the legislator would have consider that the procedure of pleading guilty is incompatible to any other solution, other than the accused conviction, although the text leaves no room for interpretation.

It might be ascertained that, for the case in which it intends to pass an acquittal, the court might dismiss the accused request to be judged based on the evidence serviced during the criminal prosecution stage and to carry on with the court investigation.

In this case, if it intends to order the acquittal of the accused based on the art. 10 let. b^1 Code of crim. pr., it would be pretty difficult for the court to reason the dismissal of the accused request to apply the procedure under the art. 320^1 Code of crim. pr., without pre-empting on the judgment to be passed in the case.

Moreover, the judiciary practice is to establish what happens in case a person, due to various considerations, takes over himself / herself the liability of a crime, that he/she did not actually committed, requests for the judgement to be made based on the simplified procedure, the court orders conviction, within the remission limits, and after a while the true author of the crime is discovered?

Shall it be considered that the criminal prosecution authorities have committed a serious judiciary error that led to the considering that person as author of the criminal offence? Shall it be considered that the statement of the accused of pleading guilty represented major evidence, and thus the state authorities shall be exonerated of any liability by reference to the existing judiciary error, as long as the accused took over him/her the crime he / she hadn't committed?

Or, in case a person, that is not guilty, still pleads guilty, due to the lack of confidence in the impartiality and objectiveness of the court, the procedural conduct of pleading guilty only for eliminating the possibility to receive a higher sanction, and later on, during the court investigation, it proves to be innocent, can there be considered the accused supporting statement, according to which he / she pleaded guilty, even if not guilty, because he/she was afraid of getting a higher sanction, for assessing the existence of a judiciary error? We will find an answer to this question again from the judiciary practice, the answer being imposed by the majority opinion.

Another problem occurred in the practice is represented by the statement of guilt acknowledgement of the accused. In relation to such statement, it has been said that the accused must not acknowledge also the legal framing of the offence, such as held in the intimation, being able to ask for the legal framing of the same, according to art. 334 Code of crim. pr.

Moreover, it has been stated that, considering the capacity of guarantor for the compliance with the right to a fair trial, the court may order the exclusion of the illegally or unfairly gathered evidence, even if the accused requested to be judged based on all the evidence gathered during the criminal prosecution stage.

This opinion is questionable in the light of the aspect referring to the court opportunity to exclude, in this simplified procedure, certain evidence as illegally or unfairly gathered. Practically, a condition for the request admissibility is that the accused must not challenge such evidence, and the court must ascertained that the same was legally gathered. If the court shall ascertain the contrary, it must dismiss the request of the accused and must settle the case according to the ordinary procedure.

As resulting from the content of the art. 320^1 Code of crim. pr., the only evidence to be serviced in this procedure are those in favour of the accused proving his/her bona fide conduct prior to such offence.

The last paragraph of the article in discussion is also susceptible of leading to non-unitary interpretation by the fact that it does not enumerate, not even as an example, the causes for which the court might dismiss the accused request for applying the procedure of the judgment in case of pleading guilty.

We could deduce from the paragraph 4 of the art. 320^1 Code of crim. pr. that such a request can be dismissed in case the evidence gathered during the criminal prosecution shows that the actions of the accused are not determined or when there are not enough evidence regarding the accused, for determining a sanction.

In lack of express provisions we consider that the request shall be analyzed by reference to the provisions of the art. 320 paragraph 4 Code of crim. pr., providing that the "*trail court settles the criminal matter when, from the serviced evidence, it results that the accused actions are determined and there are sufficient data regarding his/her person for enabling the court to reach a verdict*".

Therefore, when the accused actions are not determined and there are not sufficient evidence regarding his/her person for enabling the court to reach a verdict, the court will be able to dismiss the request. Considering that all the citizens are equal in front of the law, as provided under the art. 16 of the Constitution, it can be considered that this provision is unconstitutional as it establishes different treatments between the accused whose request is allowed and the ones whose request is dismissed, the first ones benefiting of a substantial remission while the others do not, just because their actions are not determined and there are not sufficient evidence regarding their person for enabling the court to reach a verdict.

However, considering the deficiencies occurred during the criminal prosecution cannot be imputable to the accused, there is no reasoning that would lead to the conclusion of his / her ,,sanctioning'' by dismissing the request for applying such procedure, as it would implicitly render his / her impossibility to benefit of the remission of the sanction limits as provided by the law.

It seems that a great deal of interpretation is left with the courts, when settling the accused request to be judged based on the evidence gathered during the criminal prosecution.

This circumstance has a double nuance, consisting in both a positive aspect, if we refer to the attempt of eliminating the possibility that, due to different reasoning, the accused will acknowledge offences he did not commit, but also in a negative aspect if we take into account that, if, after the court investigation, the court reaches the conclusion that the accused really committed the offence, as described in the indictment, it can no longer apply the sanction within the limits of the remission, according to the art. 320^1 par. 7 Code of crim. pr..

Even if the text of law does not provide such a possibility, we deemed as correct the opinion according to which the accused must benefit of the legal cause for remission according to art. 320 paragraph 7 Code of crim. pr., moreover, this happening in the situation in which, although he/she opted for the simplified procedure, the court dismissed the request and applied the common law rules regarding the judgement, and, on the occasion of deliberation on the case, after analysing the evidentiary material, has ascertained that the facts described in the indictment and acknowledged by the accused are proved beyond any doubt.

A major aspect is the corroboration between the art. 320^1 Code of crim. proc. and the provisions of the art.18 of the Law no. 508/2004 on the set up, organization and functioning within the Public Ministry of the Directorate for Investigating Organized Crime and Terrorism.

Thus, according to the art.18 of the Law no. 508/2004: "the person committing one of the provided by the law under the jurisdiction of the Directorate for Investigating Organized Crime and Terrorism, and during the criminal prosecution denounces and facilitates the identification and the holding criminally responsible other participants to the criminal offence benefit of the remission to half of the sanction provided by the law''.

Considering the fact that the art. 320^1 paragraph 7 C. crim. proc. provides the remission by one third of the sanctions provided by the law in the case of imprisonment sanction, there is one question to pose: how will the court act in case a person that committed a criminal offence provided by the Law no. 508/2004, has adopted a procedural attitude by which he/she has contributed, during the criminal prosecution, to the identification and to holding criminally responsible other perpetrators, thus, becoming incidental the provisions of the art. 18 of the special law, and before the court, prior to initiating the court investigation, he/she maintains the same honest attitude and understands to use the simplified procedure of pleading guilty?

We consider that in the above-illustrated example, the court will have to pass a decision by which to order the application of the art. 320^1 paragraph 7 C. crim. proc. in relation to the accused and to order the remission by one third of the imprisonment sanction, but relating to the sanction

already reduced to half, according to the art.18 of the special law. Practically, in such a situation, the court should reduce the imprisonment sanction, to be applied to the accused, by two thirds.

Conclusions

These are only some of the issues raised by the application of the new text of the art. 320[1] Code of crim. pr., the discussions that can occur and the interpretations to be given, being definitely more than those above-mentioned. As any new institution, the judgment in the case of pleading guilty shall require a certain period of adjustment until the unitary practice in this matter shall be reached, especially that the text contains some inexact formulations, meant to create multiple interpretations. Unfortunately, the courts do not yet benefit of a quick and effective mechanism for unifying the judiciary practice, fact that has affected and shall probably continue to affect the solutions adopted in this matter.

We consider that for the new institution of judgment by pleading guilty, the adoption of some transitory norms would have been required, as being necessary for eliminating the controversies occurred and still to occur in the practice, as the possible interpretations to be given to the texts related to this institution can no longer refer to the prior Romanian case law and doctrine, and the consulting of the judgments from the comparative law is still a desideratum out of the reach of most of the interested ones.

Although apparently simple, the means of settling the issue causes numerous consequences in the practice, consequences we deem solvable solely through the promotion and admission of recourse actions for judicial review that would render impossible to pass contrary judgments in similar cases, thus ensuring unitary judgments in the judiciary practice, for eliminating the discriminating verdicts, in which the same text of law is applied differently, although the situations are identical.

THE RIGHT TO AN INDEPENDENT COURT OF LAW. THEORETICAL ASPECTS. THE EUROPEAN COURT OF HUMAN RIGHTS CASE-LAW

MIRCEA DAMASCHIN[*]

Abstract

International specialized literature approaches the concept of court of law from two perspectives: on the one hand, this concept refers to the court of law, regarded as a key linking element within the unitary judicial system, and, on the other hand, to the panel of judges, regarded as the main subject of the criminal procedure, i.e. the judges who take part in trying a criminal case. In a criminal case, the court of law plays the most important role and its main attribute is the function of jurisdiction, which represents the sum of powers granted to a magistrate for the administration of justice[1]*. The court of law plays a significant role in the rule of law state; thus, both at national and international level, attempts are made in order to set up a legal framework consisting of norms issued by national lawmakers or by official international institutions or by some magistrate associations or NGOs. All these efforts are meant to underline the significant role that the judiciary plays in a rule of law democratic society. In this study we shall try to analyse the concept of "independent court of law", as this is presented in the national system of law, in its specific norms that are provided by international normative acts and in the principles deriving from the ECHR case-law.*

Keywords*: the right to a fair trial; the right to an independent court of justice; criminal case; the European Court of Human Rights (ECtHR); unification of case-law.*

Introduction

The concept of **independence of the court of justice** implies two aspects: the court's independence from the other state authorities and the court's independence from the parties involved in the trial.

The judge's independence from the other state authorities – particularly, from the executive power – depends upon the appointment procedure and the length of the term of office, the judge's protection from external pressure and the judges' appearance of independence.

The judge's independence means that litigations are settled in the absence of any interference from any state body or from any other person[2]. At the same time, the judge's main obligation is to *independently* and impartially interpret, clarify and protect the rule of law state[3].

Thus, almost all the UNO member states have adopted national constitutions and international agreements that have gradually extended the judges' power in most of the states and in international relations. The separation of powers – which is provided by the Constitution – is meant, among other things, to represent a strong judicial guarantee for the judges' independence.

Regional and international conventions on human rights, as well as other international juridical instruments, provide the right to "a public and fair trial within a reasonable term by an independend and impartial court of justice that is set up by the law." In addition to this, more and more international treaties continue to extend such individual rights of access to independent courts of law that should guarantee the fair implementation of the judicial procedures.

In this study we are going to approach the independence of the court of law principle from the Romanian legal system perspective, while taking into account international regulations and the standards imposed by the ECHR Convention and case-law.

1. Standards regarding the independence of the court of justice that are established by the Romanian system of law

National internal regulations on the independence of the judiciary are basically provided by the fundamental law of the state and they are also set forth by the laws on the organization of the judiciary.

Thus, according to Article 124 § 3 of the republished Romanian Constitution, "judges shall be independent and subject only to the law."

The judges' independence is ensured by other constitutional guarantees. We refer to the provisions of the Constitution that define the most important role played by the Superior Council of Magistracy, i.e. the guarantee of justice independence (Article 133 § 1 of the Romanian Constitution). In this respect, the Constitution also indicates the powers of the Superior Council of Magistracy, which are exercised in order to accomplish the most important role played by this council, i.e. the role of being the guarantor of justice independence[4].

Article 2 § 3 of the republished Law no. 303/2004 on the judges and prosecutors statute sets forth that "judges shall be subject only to the law and impartial."

Article 2 § 4 of the republished Law 303/2004 sets forth that "any person, organization, authority or institution shall abide by the independence of judges". At the same time, "the continuous professional training of judges and prosecutors shall guarantee their independence and impartiality in exercising their powers (Article 35 § 1)."

As to the judges' independence, Article 73 of Law 303/2004 provides that the judges' rights … shall be set forth in conformity with the place and role played by justice in the rule of law state, with the responsibility and complexity implied by the position of a judge…, with the restrictions and inconsistencies provided by the law as to these positions; the judges' independence is meant to *guarantee independence and impartiality*. ... The judges' and prosecutors' Statute also sets forth the role played by the Superior Council of Magistracy in "protecting judges…against any action that might affect their independence or impartiality or that might raise suspicion as to their independence and impartiality." "The judges or prosecutors who consider that their independence or impartiality is affected in any way by interference actions in their professional activity may address to the Superior Council of Magistracy for the necessary measures to be adopted according to the law."

Law 304/2004 on the organization of the judiciary also provides legal guarantees for the independence of judges. Thus, Article 10 sets forth that "all the persons shall enjoy the right to a fair trial and a solution to their cases within a reasonable term by an impartial and independent court, set up by the law." Article 46 § 2 provides that "The investigations made by presidents or vicepresidents personally or by especially appointed judges shall comply with the principle of independence of judges and they shall abide by the judges' subjection only to the law, as well as by the authority of the res judicata."

At the end of this subparagraph we underline the importance of magistrates' professional associations from Romania, which, without exception, have as an object of activity the obligation to

[4] Similar provisions can be found in Law no. 317/1.07.2004 on the Superior Council of Magistracy – the law was republished in the Official Gazette of Romania, no. 827/13.09.2005.

ensure and reinforce the independence of the judiciary. We refer to the Romanian National Union of Judges, SoJust-Society for Justice, the Romanian Magistrates' Association and the Association of Romanian Judges.

Thus, at the end of 2008, the Romanian National Union of Judges elaborated a document entitled "Principles for consolidating and promoting the independence and impartiality of justice"[5], which includes a minimum set of norms that should guarantee the efficiency of these desiderata for justice (and for the whole society, at the same time):

a) the firm assumption by the lawmaker and executive power of a coherent legislation in all domains of social and economic life, so that the application of the legislative norms should no longer encounter difficulties which sometimes could not be dealt with by the judiciary; the public assumption – provided in the governing program that the new Parliament votes after the future executive is invested – that the judiciary will not be constrained by any action or omission;

b) the conscious assumption by the judiciary of its own independence and impartiality, especially by assuming its own responsibility for the magistrates' actions and deeds in exercising their constitutional powers;

c) the assumption by the political class of the necessity to revise Romanian Constitution, which is an insurance instrument and a safeguard of justice independence;

d) enhancing efficiency, responsibility and adaptability of the Superior Council of Magistracy to the constitutional role it plays;

e) excessive bureaucratization of the Superior Council of Magistracy and the Ministry of Justice;

f) underlining the role of lawmaker played by the Parliament from two perspectives:

1) adopting - as soon as possible and after adequate public debates attended by specialists in law both theorists and practitioners - the civil code, the code of civil procedure, the criminal code and the code of criminal procedure. It is necessary for the new realities that are pointed out by these codes to eliminate the constant modifications of these fundamental laws, a situation that was specific for the last 18 years. Judicial stability and security can not exist if legislation is permanently instable and incoherent; 2) annihilating the executive power's tendency to annex the legislature powers by excessively adopting emergency ordinances meant to amend or modify organic laws.

A problem for the Romanian criminal procedure system – which is linked to the independence of the judiciary – is represented by the system of military tribunals. In this respect, there existed cases in which Romania was accused of having broken the right to a fair trial when judging civilians for criminal matters by military courts.

Thus, judicial military criminal bodies play a well-defined role in the Romanian criminal judiciary system. This category includes: military tribunals, the public prosecutor's offices attached to these tribunals and special criminal investigation bodies, whose functioning is regulated in Article 208 a) – c), the Criminal Procedure Code; more precisely this category includes: the commanders of headquarters and officers that are especially appointed by their commanders, the heads of commandants' offices and the officers that are especially appointed by their superiors, commanders of military centres, as well as the officers appointed by their commanders. The competence of military tribunals was regulated while taking into account the quality of the offender and also the nature of the crime. In this respect, the powers of the military courts were exercised in accordance with the offences committed by the military staff and the offences committed by civilians (no matter if they are employed by military institutions or not); these offences were committed in connection to these employees' service duties or they were directed against the military bodies patrimony. All these offences were prosecuted in conformity with the procedure applied by the special criminal investigation bodies, military prosecutors and military tribunals.

[5] According to http://www.unjr ro/comunicate/principii-de-intarire-si-promovare-a-independentei-si-impartialitatii-justitiei html.

As to the competences provided by the law in the special literature, opinions have been expressed according to which military criminal judicial bodies, even if they are special[6] bodies, are not granted a special form of competence[7]. In other words, special competence must not be mistaken for the competence of the special[8] bodies.

Thus, the inclusion of military tribunals in the category of judicial bodies that have special competence has been contested. Special competence is specific to judicial bodies that belong to a distinct judicial system and this aspect does not refer to the place occupied by military bodies within the national judicial system, which is unitarily regulated. In this way, for the military tribunals to be granted special competence, they should have been placed outside the system of courts and this hypothesis is not valid for military[9] tribunals.

This thesis is supported by another opinion according to which military tribunals do not have special competence because they also judge criminal cases that involve crimes which aggrieve various social relationships; consequently, these tribunals do not have special competence for a certain sector of social[10] activity.

However, military criminal bodies are specialized bodies whose existence is required by the particularities specific to military life. Over the last years, as to the Romanian criminal policy, there has been noticed a tencency to reduce the number military criminal judicial bodies and limit their powers. In this respect, we mention the fact that the Military Division of the High Court of Cassation and Justice was cancelled, its powers being taken over by the Criminal Division of the High Court. At the same time, the legal framework regulating the material and personnel competence of the ordinary military tribunals has been confined through many modifications that have been brought to the criminal procedure laws.

Thus, Law no. 281/2003 provides that crimes committed by civilians against the assets owned or administered or used by the Ministry of National Defence, the Ministry of Administration and Interior, the Ministry of Justice – the General Directorate of Prisons, Romanian Intelligence Service, Foreign Intelligence Service, Special Telecommunication Service and Protection and Guard Service, which have a military role or are linked through their nature to the defence capacity and security of the state – are no longer in the competence of military tribunals.[11]

In the same way, offences committed by the civil employees of military institutions and related to their service duties are no longer brought before military tribunals. Article I § 5 from Law no. 356/2006[12] provides that offences committed by civilians against the defence capacity of the

---

[6] In this respect, e.g., military tribunals are considered to be courts with special jurisdiction (V. Dongoroz, in V. Dongoroz, S. Kahane, G. Antoniu, C. Bulai, N. Iliescu, R. Stănoiu, *Explicații teoretice ale Codului penal român. Partea generală, vol. II*, the 2nd Edition, the Romanian Academy Publishing House and the All Beck Publishing House, Bucharest, 2003, p. 101).

[7] V. Rămureanu, *Competența penală a organelor judiciare*, the Scientific and Encyclopaedic Publishing House, Bucharest, 1980, p. 43.

[8] N. Volonciu, *Drept procesual penal*, the Didactic and Pedagogical Publishing House, Bucharest, 1972, p. 131.

[9] For example, the criminal procedure regulations prior to the present Criminal Procedure Code provided a large range of specialized judicial bodies (tribunals for the railways, maritime or fluvial tribunals), among which military tribunals occupied a distinct position. They held a special position in the judiciary system because they belonged to a separate judicial system, which implied the existence of a military supreme court.

[10] I. Neagu, *Tratat de procedură penală. Partea generală*, Universul Juridic Publishing House, Bucharest, 2010, pp. 360-361 (at present, however, as a consequence of the significant modifications brought to the norms regarding military competence, one can notice a more specific character of the cases judged by the military criminal bodies).

[11] Prior to Law no. 281/2003, the material competence for offences committed by civilians against the assets owned by military institutions underwent another confinement, i.e. the provision that these assets must have a military destination or refer to the defence or security capacity of the state.

[12] Law no. 356/2006 on modifying and amending the Criminal Procedure Code, as well as on modifying other laws, was published in the Official Gazette of Romania no. 677/7.08.2006.

state, according to the provisions of the Articles 348-354 of the Romanian Criminal Code, shall be brought before civil courts, as a consequence of abrogating Article 26 § 1 § b of the Criminal Procedure Code. Last but not least, it is of great significance, when mentioning the criminal policy principles that are applied in Romania, to point out the fact that offences committed by the military staff shall be judged by the military criminal bodies only if they are perpetrated in relation to their service duties (Article 26 and Article 28, the Criminal Procedure Code). The requirement to establish a connection between the illicit act that was committed by the military and the military's service duties is also provided in Article 28^2 of the Criminal Procedure Code. Thus, in the first instance, the Military Tribunal judges offences committed by the military staff against the security of the state and the offences against peace and mankind. The norm we are discussing about does not refer to the military's service attributions, but, obviously, these crimes usually imply the breach of the service attributions.

As an exception, according to Article 28^2 § 1 (c) of the Criminal Procedure Code, the Military Court of Appeal judges in first instance the crimes committed by military magistrates; this article does not provide as a condition the identification of a connection between the illicit act and the offender's service attributions. In this situation, however, the offender's quality of a magistrate is of major importance for establishing the competence of the Military Court of Appeal; the result is that a legal framework – similar to the one concerning offences committed by civil magistrates employed in courts of first instance, tribunals, courts of appeal, respectively public prosecutor's offices attached to these courts – is created.

We appreciate that the limits imposed on the jurisdiction of Romanian military tribunals are in line with the ECHR case-law, according to which criminal cases that involved civilians and were judged by the military courts were, in fact, mistrials.

2. Standards concerning the independence of the judiciary that are set forth by different international instruments

At international level, an impressive body of laws are issued by different world or regional organizations for protecting human rights, ranging from magistrates' international professional organizations to NGOs set up for this purpose, all of which militate for the independence of justice.

The ennumeration of the important international judicial instruments must start with a referrence to **the Universal Declaration of Human Rights** which, in Article 10, entitles any person the right to be judged by an *independent* court of law.

In 1985, at the 7th United Nations Congress on Prevention of Crimes and the Treatment of Offenders, a set of fundamental principles regarding the independence of the judiciary[13] were adopted. Thus, this document provides that the independence of the judiciary shall be guaranteed by each state and set forth in the National Constitutions. The judiciary systems shall be entitled to deliver judgements in the cases that are being tried, on the basis of the facts and in conformity with the law, without any direct or indirect restrictions, inappropriate influence, incentives, pressure, threat or interference coming from any party or for any reason. At the same time, the judicial systems shall have jurisdiction for all the legal matters and shall have exclusive authority to decide whether any potential case is within their competence, as the law sets forth.

The document also refers to the inconsistencies existing between the requirements imposed by a rule of law state and the courts of law that do not enforce the procedures that are provided by the law. At the same time, the document refers to those aspects that are adjacent to the independence of the judiciary and that are closely linked to non-determination. Thus, the following aspects are taken into account: the freedom of speech and assembly of the members of the judiciary, the selection and training process of magistrates, the conditions provided for magistrates as to the performing of their

[13] Milano, 26.08-6.09.1985. The principles were validated by the Resolution 40/32 (29.11.1985) and the Resolution 40/146 (December 1985) by the United Nations General Assembly.

offices, as well as the length of their term of office, professional secret, immunity, respectively norms referring to magistrates' judicial liability.

In this respect, as far as freedom of speech is concerned, the document states that – according to the Universal Declaration of Human Rights – the members of the judiciary are entitled to freedom of speech, faith, association and assembly, as all the other citizens are; this means that when exercising these rights the judges will have to behave in a manner that implies the preservation of their dignity and impartiality and the independence of the judicial system. Judges will be free to form or join judges associations or other associations which represent their interests, promote their professional training and protect their judicial independence.

In order to be recruited as personnel for the offices available in the judicial system, these persons should enjoy a good moral reputation and should also have a high professional training. Their selection must be independent of any potential forms of discrimination, on grounds of race, colour, sex, religion, political orientation or any other opinion, property, birth or statute. However, the requirement that a candidate to a judicial office should be a citizen of that state is also regulated and it is not regarded as a discriminatory one.

The exercise of judicial powers implies the ensurance of those conditions that are necessary for creating a proper legal framework in order to make the performed activity more efficient. Judges (no matter if they are elected or appointed) have life tenure and the age limit is regulated in the national legislations. The promotion of judges shall rely on objective factors, such as professional training, moral integrity and experience.

The independence of the judiciary also implies the preservation of the professional secret.

Finally, the independence of the judiciary exists only on condition that judicial liability is strictly regulated with reference to the judges.

Recommendation no. 94 (12) issued by the Committee of Ministers of the Council of Europe to the member state regarding the independence, efficiency and the role of judges[14] was adopted in order to comply with the provisions of Article 6 of the Convention and also with the previously presented document

This regional document primarily refers to the concrete measures that are necessary to be adopted for the independence of justice to be guaranteed: the independence of judges shall be guaranteed by observing the provisions of the Convention and the constitutional principles; the national systems will comprise the following rules: 1) the judges' decisions shall not be subject to any revision except for the legal means of appeal; 2) the term of office and the remuneration of judges shall be guaranteed by law; 3) no other bodies except for the courts of law shall decide upon the specific competences of the judge, as provided by the law; 4) except for the decisions regarding amnesty or pardon, the government or public administration are not entitled to decide upon the retroactive invalidation of the delivered judgements.

A magistrates' decision forum is necessary to exist and it is regarded as a judicial authority (as the Superior Council of Magistracy is in Romania) that shall have the competence to select and train magistrates and to organize their career. It is very important for this authority to enjoy, in its turn, complete independence.

Norms that guarantee the independence of the judiciary are included, such as: regulating the sanctions for those who try to influence the judges' decisions in any possible way; the aleatory

[14] Recommendation no. 94 (12) was adopted by the Committee of Ministers on the 13th of October 1994, at the 516th meeting of the state secretaries. The texts of the Recommendation project and the explanatory Memorandum were drawn up by a work group as regards the independence of civil justice. After these documents were examined by the European Committee for International Cooperation, they were sent to the Committee of Minister from the Council of Europe. The Committee of Ministers adopted the text of the recommended project and approved the publication of the explanatory memorandum.

distribution of the cases; the minute regulation of the hypotheses according to which a case can be removed; inamovibility.

According to **Recommendation 94 (12)**, the meaning of the phrase "independence of judges" does not exclusively refer to judges but it covers the whole judiciary. The independence of judges is bound to be guaranteed according to the provisions of the Convention and in conformity with the constitutional principles of every national system. As to the measures adopted for implementing this principle, one should take into account several aspects, depending on the legal traditions of every state. The law should provide norms that regulate the situations which can be classified as appeals against the delivered judgements. The revision of the delivered judgements by the government or the administration outside this legal framework will obviously be inadmissible. Similarly, the judges' term of office and their remuneration should be guaranteed by law. As to the judges' term of office, Recommendation **94 (12)** comprises specific rules regarding the cases that classify the judges' suspention or removal from office as possible. Moreover, a specific recommendation is made for the judges' remuneration. Courts of law should also be entitled to decide upon their own competence, as the law provides it, and administration or government should not be entitled to make decisions that lead to the annulment of the delivered judgement, except for some special cases, such as: amnesty, pardon, clemency or other similar situations.

The judges' independence is first of all and mainly linked to the maintenance of the separation of powers in the state. The executive and legislative bodies have the duty to ensure that judges are independent. Some of the measures taken by these bodies might directly or indirectly interfere or might modify the way the judicial power is exercised. Consequently, executive and legislative bodies have to restrain from adopting any measures that could undermine the judges' independence. Moreover, pressure groups or other interest groups should not be allowed to undermine this independence.

The independence of judges must be guaranteed when judges are recruited and also during their whole professional career, without any discrimination. All the decisions regarding the judges' professional life should rely on objective criteria and even if every member state has its own method of recruiting, electing or appointing, the selection of candidates for the judiciary and the judges' career must be based on merit. Such decisions are important to be made only on the basis of objective criteria especially when the decision for appointing judges is made by bodies that are not independent from the government or from administration or, for example, from the Parliament or the Head of the State.

The independence of the judiciary must be observed not only when a judge is appointed but also during his entire professional career. For example, the decision of promoting a judge to another position might be, in fact, a disguised sanction of an "uncomfortable judge". Such a decision is clearly incompatible with the terms of **the Recommendation 94 (12)**.

An important aspect for ensuring the fact that the most appropriate persons are appointed to the office of judge is represented by the lawyers' training. Persons who build a career as a judge must enjoy an adequate judicial training. Furthermore, professional training contributes to the independence of the judiciary. If judges have appropriate theoretical and practical knowledge, as well as other abilities, it means that they could act more independently from the administrative and, if they intend to do so, they could change their professional orientation without being obliged to continue to work as judges.

Similarly with the **Fundamental Principles regarding the Independence of the Judiciary**, in the Contents of the **Recommendation 94 (12) on the independence, efficiency and role of judges**, dispositions regarding the judges' authority, the conditions of performing the assigned job tasks, the right to association, the applicable judicial regime can be found in this document.

Thus, we shall make reference to the way in which the rules regarding the judges' responsibility are set forth. In this respect, in order to protect the rights and obligations of all persons, the responsibilities of a judge are: a. To act outside any influence and in an independent way when

judging all cases; b. To solve all cases in an impartial way and in conformity with the collected evidence and in accordance with the law, to ensure that each party is fairly heard during the trial and that the procedural rights of the parties are observed according to the provisions of the Convention; c. To dismiss a case or to decline competence whenever there are valid grounds that he must do so in conformity with the exhaustive provisions of the law (e.g. in case of health problems, conflict of interests etc.);

d. whenever necessary, to explain in an impartial manner judicial matters for the parties; e. whenever necessary, to encourage the parties to reach an agreement; f. To motivate his decision, using a plain language, except for the cases when the law or customs provide it differently; g. to undergo any training that is necessary for him to accomplish his tasks in an efficient way.

If these responsibilities are not fulfilled or they are fulfilled in a wrong way or with delay, measures are to be taken according to the judicial profile of the profession. E.g., the following measures are taken: a. the withdrawal of the case from the judge; b. the transfer of the judge; c. the judge is sanctioned with a salary cut; d. the judge's suspension[15].

The European Chart on the Statute for Judges was adopted with the same purpose[16].

Thus, this document reiterates a series of rules which have the value of principles and of which we point out those aspects that refer to the judges' inamovibility. The **Chart** sets forth the principle of the judges' inamovibility, according to which the removal of a judge is possible only if the judge agrees to be removed from office[17]. This principle is not applied if the judge's removal is provided as a disciplinary sanction in case modifications of the judicial organization occur and this implies the disappearance of a court of law or in case the judge is called to support a court that undergoes a difficult situation.

---

[15] According to Article 100 of the republished Law no. 303/2004 on the Statute of Judges and Prosecutors, the disciplinary sanctions applied to judges and prosecutors - depending on the seriousness of their misconduct - are: a) warning; b) cut of the monthly salary with up to 15% for a period of up to 3 months; c) disciplinary removal for a period of 3 months to another court of law or a public prosecutor's office in the constituency of the same court of appeal or in the constituency of the same public prosecutor's office attached to one of these courts; d) exclusion from magistracy. As one can notice in the national system, the hypothesis of ordering for a case to be withdrawn from a certain judge is not regulated. These sanctions can be imposed by the Superior Council of Magistracy if a judge is accused of misconduct for: a) breach of the legal provisions regarding the statement of assets, the statement of interests, the incompatibilities and interdictions imposed on judges and prosecutors; b) intervening to satisfy certain requests, demanding and accepting to settle one's own personal interests or the family members' interests or other persons' interests otherwise than the legal framework provides for all the citizens, as well as interfering in another judge's or prosecutor's activity; c) performing public activities that have a political character or expressing one's own political orientation when exercising the service duties; d) disclosing the secret of deliberation and the confidential nature of the performed works; e) repetitive and guilty breach of the legal disposals regarding the obligation to solve the cases within a reasonable time; f) the groundless refusal to accept applications, conclusions, reports or other documents from one of the parties in the trial; g) the groundless refusal to accomplish a service duty; h) exercising the office and breaking the procedure norms in bad faith or out of gross negligence if the deed is not an offence; i) delaying the performance of the works on imputable grounds; j) unmotivated and repeated absence from work; k) adopting a reproachable attitude during the exercise of the servive duties to the colleagues, lawyers, experts, witnesses or lawmakers; l) non-accomplishment of the obligation to transfer the basic norm to the court of law or the public prosecutor's office where the judge is employed; m) breaking the disposals regarding the aleatory distribution of cases; n) directly taking part or through the agency of other people in gambling activities or investment systems that avoid the transparency of the funds as the law stipulates.

[16] The preliminary project of **the European Chart on the Statute for Judges** was adopted in the spring of 1998 on the second multilateral reunion on the statute of judges from Strasbourg (8-10 iulie 1998).

[17] Regulations have a correspondent in Romanian national legislation. Thus, Article 2 § 1 and § 2 of the republished Law no. 303/2004 on the stature of judges and prosecutors provides that "The judges appointed by the President of Romania shall be irremovable according to the law. The irremovable judges can be removed by transfer, delegation, relocation or promotion only if they agree with this and they can be suspended or removed from office according to the provisions of the present law. "

The temporary appointment stipulated in the last ennumerated case must have a limited duration which is defined in the statute. However, taking into consideration the delicate situation of transfering a judge when the latter did not express his consent, we must underline the fact that they have the right to an appeal before an independent court that has the obligation to check if the transfer was legitimate.

In the Romanian national system, according to the republished Law no. 303/2004 on the statute of judges and prosecutors, if a court of first instance, a tribunal or a specialized court of law can not function properly because of a temporary absence of certain judges or because of a vancacy or other similar causes, the President of the Court of Appeal, at the proposal of the court of law within that appellate court's constituency, can appoint judges from another court of law within the same constituency *on the basis of a written agreement signed by those judges.* The delegation of judges from courts of first instance, tribunals and specialized courts of law to another constituency can be decided on the basis of the written agreement of those courts, with the approval of the Superior Council of Magistracy, and if the President of the Court of Appeal requires this in the constituency where the delegation is necessary and with the approval of the President of the Court of Appeal within the constituency where these judges work. The temporary appointment of appellate judges in control positions is decided ***on the basis of the written agreement thereof***, at the request of the Superior Council of Magistracy and of the President of the Court of Appeal until that position is occupied by appointment according to the present law. The appointment in control positions of judges at the High Court of Cassation and Justice is decided by the Superior Council of Magistracy ***on the basis of the written agreement thereof***, at the proposal of the President of the High Court of Cassation and Justice. The delegation of judges can be provided for a period of 90 days the most per year and it can be prolonged for other 90 days ***with the written agreement thereof.***

According to the same normative act, in Romania the removal or transfer of judges can not be accomplished without ***the written agreement*** of the judge.

At the end of this subparagraph we are going to mention a series of provisions stipulated in **the Bangalore Principles of Judicial Conduct**. Thus, the independence of justice is the premise for the rule of law state and it represents the fundamental guarantee of a fair trial. The judge, consequently, must support and be an example for the independence of the judiciary and also from an individual and institutional point of view.

The fair enforcement of this principle requires the observance of the following rules: a) the judge shall exercise his judicial office independently, on the basis of his own approach of the facts, on the basis of a faithul interpretation of the law, without being influenced or persuaded, forced, threatened or without allowing any direct or indirect intrusion that might come from the part of certain circles, no matter what the reason for such an interference; b) the judge shall be independent in society, in general, and in relationship with the parties involved in the litigation that he has to settle; c) the judge shall not only avoid any improper relationship but he shall also be beyond any influence that might come from the executive or legislative powers, and he must be perceived as such by any outside observer; d) when exercising his juridical office, the judge shall be independent from his magistrate colleagues as to those decisions that he must make independently;

e) the judge shall encourage and support all those measures that lead to the accomplishment of the judicial obligations in order to maintain and reinforce the independent functioning of justice; f) the judge shall manifest and make proof of a judicial attitude of good quality in order to consolidate the public trust in justice, without which the independence of the judiciary cannot be maintained.

Last but not least, we mention the documents elaborated by the Consultative Council of European Judges at the Council of Europe.

3. Standards for the independence of the court of law set forth by the ECtHR case-law:

The European Court of Human Rights set forth that the independence of a court of law depends on the following aspects:

a) the appointment of judges;

b) the length of the judges' term of office;

c) the existence of a legal framework that offers judges protection against potential external pressures;

d) the possibility to check the judges' appearance of independence[18].

Thus, it has been established that the exigencies of independece are met by the Parole Board (a common law advisory body that can express opinion on the way in which the penalty must be executed by the convicts and that enforces a procedure which implies a set of major guarantees[19]), the Jury Court in Belgium (the Belgium legislation provides many guarantees that are meant to protect the Jury Court magistrates from external pressures, while the appointment of jurors is subject to certain very strict rules) [20], the Prison Visiting Committee (jurisdictional institution that is specific to the UK prisons and that has contentious powers and whose members are independent) [21]. The Bar Council of Antwerp was also considered an independent body on the basis of its administrative, disciplinary, contentious or advisory powers. At the same time, the independence of the Council members is undoubtable since they are subject to their own counsciousness[22] alone.

The ECHR appreciated that the Royal Air Force Court Martial meets the independence standards because this court is comprised of members who have superior juridical competence and are presided over by a highly qualified civilian who is appointed by the Minister of Justice and who is entitled to give directions as to the administration of evidence and the settlement of the legal problems according to public mandatory procedure he is subject to[23].

If these conditions are not met, the procedure set forth by the Crown (the Queen of the Netherlands and the Public Health Minister) does not meet the requirements regarding the exigencies for the independence of the court of law. In this respect, the royal decree - by which the Crown statuated the challenge - has the force of an administrative procedure act issued by a Minister who is responsible before the Parliament. This royal decree could not be subject to the control of a judicial body[24].

In the same way, the Austrian National Council for Persons with Disabilities or the Lausanne[25] Police Commission can not be considered independent bodies. As to the latter example, it has been pointed out the fact that the unique member of this commission is a high official from the police and thus he is likely to be required to accomplish other tasks, too. In this context, the lawmakers will tend to see him as a member of the police who is part of a hierarchical system and who is solidarious to the police forces.

In another case, the problem whether a court of law (The Turkish State Security Court) which is composed of two civil judges and a military judge meets the requirements of an independent court of justice. In this respect, the independence of the two civil judges can not be doubted, but the ECHR analysed the statute of the military judge who is a part of this court of law. Thus, although the military judges undergo the same training program as the civil judges and are protected from external pressure, they are, nevertheless, part of the army, an institution which is subordinated to the executive power. At the same time, military judges are subject to a disciplinary regime and are assessed within the military system they belong to. At the same time, military judges are appointed by the administrative system and the army. Taking into consideration these aspects, the ECHR held that this court of law does not offer guarantees of independence[26].

The court's lack of independence has also been pointed out as to the circumstances in which the members of the court were appointed and could be removed by the executive[27].

As to Romania's case, the issue regarding the independence of the court of law has been repeatedly analysed; in the following lines we are going to analyse some of these cases.

Thus, the judges' obligation to comply with a case-law that was set forth by the joint divisions of a country's Supreme Court did not contravene the independence of a court of law because the reunion of the divisions of a high jurisdiction is meant to confer special authority to certain decisions adopted in important areas of the judiciary; this does not imply that the lower courts' rights and duties to independently examine the cases brought before them are aggrieved[28].

In the case Vasilescu vs. Romania[29], the ECHR held – according to Article 6 §1 of the Convention – that the Romanian prosecutors, as representatives of the Public Ministry, are first of all subject to the General Public Prosecutor, and then to the Minister of Justice, and thus, that they are not independent but subject to the executive.

In the case Maszni vs. Romania[30], the ECHR analysed whether the military tribunal – which tried an offence inflicted on a civilian – was an independent court of justice. Thus, basically, the ECHR held that military tribunals have competence to deliver judgements for the crimes directed against the military personnel on condition that the guarantees of independence and impartiality provided by Article 6 §1 of the Convention are met. However, a different hypothesis was formulated with reference to the situations in which national legislatures entitle military tribunals to judge civilians in criminal matters.

Thus, according to the text of the Convention, the competence of military tribunals to judge cases against civilians is not absolutely excluded on condition that the exigence implied by this competence should be minutely examined.

[29] ECtHR, Decision adopted on 22.05.1998 in the case *Vasilescu vs. Romania,* published in the Official Gazette of Romania no. 637/27.12.1999. For the same solution, regarding the lack of guarantees for the independence of Romanian prosecutors, see ECtHR, Decision adopted on 3.06.2003, in the case *Pantea vs. Romania,* published in the Official Gazette of Romania no. 1150/6.12.2004; ECtHR, Decision adopted on 26.04.2007, in the case *Popescu (1) vs. Romania,* according to HUDOC; ECtHR, Decision adopted on 26.04.2007, in the case *Popescu (2) vs. Romania,* published in the Official Gazette of Romania no. 830/5.12.2007.

[30] ECtHR, Decision adopted on 21.09.2006 in the case *Maszni vs. Romania,* published in the Official Gazette of Romania no. 585/24.08.2007.

The ECHR underlined the fact that it analyses with utmost care the circumstances in which the military tribunal is exclusively comprised of career military magistrates; in this case, the compliance with Article 6 §1 of the Convention is possible only under exceptional circumstances.

Without denying the special role played by the army in the constitutional organization of democratic states (this role is limited as far as national security is concernced because the exercise of the judiciary lies with the civil institutes), the ECHR held that military tribunals should basically not have the competence to judge civilians. Thus, the state should oversee that the civilians accused of committing an offence, no matter what this may be, will be judged by civil courts. At the same time, the power of the military criminal justice should not encroach upon civilians unless there are solid grounds for justifying such a situation and only in conformity with the clear provisions set forth by the law. These grounds should be proved in every particular case *in concreto*. The *in abstracto* inclusion of certain categories of offences within the competence of military tribunals might not be sufficient. Such an inclusion might place civilians in a position which is different from that of the citizens who are judged by ordinary courts of law and this could lead to inequality before the law, a fact which should be avoided in criminal matters.

Referring to the enforcement of these principles, the European Court of Human Rights noticed that the Romanian lawmaker – without being loyal or subject to the army – was, however, quoted before the military court for common offences.

Analysing the statute of military judges in Romania, the European Court of Human Rights noticed that certain independence and impartiality guarantees are provided by our legislation. Thus, the military judges undergo the same professional training as their civil counterparts do and benefit of constitutional guarantees which are identical to those of the civil judges - they are appointed by the President of the State at the proposal of the Superior Council of Magistracy, are irremovable and enjoy professional stability. On the other hand, other characteristics of the military judges' statute can cast doubt upon the judges' independence and impartiality. Articles 29 and 30 of the Law no. 54/1993[32] provide that military judges are career officers, are paid by the National Ministry of Defence, are subject to military discipline and their promotion is regulated by the internal military[31] norms.

Under these conditions, the European Court of Human Rights established that the right to a fair trial is aggrieved if the military tribunal - which judged a criminal case involving an offender accused of committing common crimes - did not observe the independence exigency. Thus, it was held that the offender's doubt as to the independence and impartiality of the military tribunals can be considered as objectively grounded.

The lawmaker's right to a fair trial obliges the state to ensure the fair application of the judicial procedures, while ensuring the equality of the parties before an independent and impartial system of justice which is set up in accordance with the law. This obligation is permanent because, otherwise, the right to a fair trial is aggrieved by the national jurisdictions.

---

[31] We notice that, although Law no. 54/1993 was abrogated, the regulations were taken from Law no. 303/2004 on the statute of judges and prosecutors. Thus, according to Article 30^1 "A person who meets the requirement provided by the law for becoming a magistrate can be appointed in the position of a military judge or prosecutor after this person became an officer within the National Ministry for Defence". According to Article 73 § (4) § (5) and (6) "(4) Military judges and prosecutors are active military officers who have all the rights and duties that this position implies. (5) The remuneration and the other rights that military judges and prosecutor have are ensured by the National Ministry for Defence, in conformity with the legislative provisions regarding salaries and the other rights that are specific to the judiciary personnel and in conformity with the regulations regarding the payment rights that are specific to the quality of a military, and to the quality of a civil employee for this Ministry. (6) Military ranks and promotion of military judges and prosecutors shall be made in accordance with the norms that are applied for the full-time employees within the National Ministry for Defence."

Conclusions

In Romania, in criminal trials, the court of law is defined as the most important processual subject and it is included in the specialized literature in the category of the official processual subjects. The lawmaker's right to a fair trial determines the state to ensure the fair enforcement of the judicial proceedings, as well as the equality of the parties involved in the trial in accordance with the legal provisions. This regulation has a permanent character and, otherwise, the right to a fair trial is aggrieved by the national jurisdictions.

The present Romanian legal framework meets the requirements imposed by the organization and functioning of an independent system of justice. A number of guarantees that support these essential requirements for the judiciary and the fairness of the judicial procedure are also regulated. Subsequent to the ECtHR decisions, important modifications have been brought to legislation in matters of criminal procedure. Thus, e.g., we mention the limitation of the military judicial bodies competence only as to the offences committed by the military personnel (declining military tribunals any competence to judge the offences committed by civilians, no matter what these may be) or exclusively placing the remanding in custody measure with the judge, thus reducing the prosecutor's competence.

CONSIDERATIONS ABOUT OVERLAPPING CRIMINAL AND ADMINISTRATIVE LIABILITY FOR THE SAME OFFENSE

MIRELA GORUNESCU[*]

Abstract
The ne bis in idem principle is one of the fundamental principles of a criminal trial in a state of law. This paper focuses on the question whether a possible overlapping between criminal and administrative liability for the same offense is or not a violation of this principle. Both the national and the European Court of Human Rights jurisprudence were investigated. By reporting to the European case we concluded that such a situation represents a case of bis in idem.

Keywords*: criminal liability, administrative liability, overlapping two kind of legal liability, non bis in idem, res judicata*

Introduction

1. This paper focuses on the problem of frequent overlapping from the Romanian jurisprudence of criminal liability and administrative liability for the same antisocial fact. It is a common situation in the jurisprudence, in some particular situations being considered as mandatory. Specifically, we refer to the *crimes by habit* whose essential condition can be practically proved only by reports concerning minimum three contraventions of the same nature. But there are other situations, generally accepted, which involve the overlapping of criminal liability over the administrative liability, without being perceived as a *bis in idem*.

2. From our point of view it is very important that these situations be studied, because their reporting to the European Court of Human Rights (ECHR) jurisprudence have the ability to be considered violations of the *ne bis in idem* principle. Moreover, the European Court stated that the meaning of "criminal responsibility" is different from the one we find in our national law doctrine and jurisprudence. The perpetuation of the overlapping practice of criminal liability over the administrative liability for the same illicit act may cause further convictions of Romania in the cases brought in front of the European judicial body.

3. In our study we show, from a national point of view, what is the relationship between crime and contravention and which are the penalties that are applicable to each of them. Equally, we will reveal the Romanian doctrine statements on the matter of overlapping criminal liability over contravention liability for the same antisocial act.

In counterweight, we will investigate the ECHR decisions on cases of overlapping of the two forms of legal liability. Comparing the two systems will result that there is no identity between them, and the internal reality requires a mandatory reconsideration.

4. In terms of the Romanian doctrine in the field of interest, the present study has a different position regarding the qualification as a *bis in idem* situation the overlaps of the criminal and administrative liability for the same fact. This happens because traditionally, in the Romanian doctrine the possibility of overlapping the two types of legal liability was admitted. Reconsideration of these opinions should be made now in the light of ECHR decisions.

[*] Lecturer, Ph.D., Head of Criminal Law Department, „Alexandru Ioan Cuza”, Police Academy, Bucharest, (e-mail: mire_gor@yahoo.com).

***Res Judicata* and *Non Bis in Idem* in Romanian Criminal Law**

In the Romanian criminal procedural law, one of the reasons which justify the use of the extraordinary appeal against a court ruling is the violation of *res judicata* rule by the fact that two final judgments for the same criminal offense[1] were delivered against the same person. Such a situation is possible when the perpetrator did not know about the existence of the first decision, because otherwise there would be invoked on the occasion of the second trial, or when the perpetrator did not know about the second trial and he could not invoke *res judicata*. For the appeal to be admitted it is sufficient to prove the existence of two final[2] decisions, regardless the reason that caused this *bis in idem*. The condition is considered fulfilled even if for the same offense two courts have given a different legal qualification (eg one considered it a fraud and the other one embezzlement).

Also in Romanian doctrine it is shown that *non bis in idem* rule requires three conditions to be fulfilled: a) to have a final conviction, acquittal or termination of criminal proceedings decision[3], b) the same person, c) the same object (the fact itself is important and not its legal qualification, because giving a different legal classification would make it possible to circumvent the rule[4]).

An express indication of the *non bis in idem* principle in Romanian legislation is more recent and is found in the field of international judicial cooperation in criminal matters. Under this name, the principle was introduced in 2006[5] in Article 10 of the Law no. 302/2004 on international judicial cooperation in criminal matters[6]. According to the paragraph (1) of this legal text, whose *nomen juris* is *non bis in idem*, the international judicial cooperation is not admissible if in Romania or in any other state has been held a criminal trial for the same offense and if: a) by a definitive decision was ordered the acquittal or the cessation of the trial, b) the penalty imposed in the case by issuing a final decision was executed or was the subject of a total or partial amnesty. However, these exemptions do not operate where the judicial assistance is requested to review a final decision in an extraordinary appeal for any reason under the Romanian Criminal Procedural Code. The text does not apply if an international treaty to which Romania is a contracting party contains provisions more favorable concerning the principle *non bis in idem*.

THE *NON BIS IN IDEM* PRINCIPLE AT EUROPEAN LEVEL

At European level, the consecration of the *non bis in idem* rule is found in both the legal instruments adopted under the aegis of the European Union and those written under the auspices of the Council of Europe.

For example, from the European Union instruments, article 50 of the Charter of Fundamental Rights concerns a fundamental right of EU citizens: "the right not to be tried twice for the same offense". Based on this text, "nobody can be tried or convicted for an offense that has already been acquitted or convicted within the Union by final judicial decision in accordance with law."

In the same way, the Council of Europe, in the 7th Protocol of European Convention of Human Rights, in article 4, defines the *"right not to be tried or punished twice"*, so nobody can be prosecuted or punished by the criminal jurisdiction of the same state for an offense for which has already been acquitted or convicted by a final decision under the criminal law and criminal jurisdiction of that state. However, these provisions do not prevent the reopening of the trial,

according to the law and penal procedure of that state, whether new or newly discovered facts appear or a fundamental flaw is discovered in the previous proceedings which might affect the solution. The importance of this rule is revealed once more by the fact that under the article 4 paragraph 3 of the same bill any exception to the rule is allowed. This principle has been included in other legal instruments adopted also by the Council of Europe and which impact in the field of cooperation in cases of certain segments of specialized crime. For example, the European Convention on Extradition adopted in 1957, in article 9 stipulates that extradition will not be granted when the person has been definitively judged by the competent authorities of the requested party for the offense or offenses for which the extradition is requested. Similarly, the Convention on Laundering, Search, Seizure and Confiscation of the Proceeds from Crime of 1990, in article 18 paragraph 1 item 3 indicate among the situations in which cooperation may be refused the one when "the requested Party considers that the measure sought would be contrary to the principle of *ne bis in idem*".

THE *NON BIS IN IDEM* RULE IN ROMANIAN DOCTRINE

Generally accepted, Romanian doctrine states that *res judicata* does not operate where there is identity of material facts, but the fact is described differently in terms of legal nature: once as the contravention and then as a crime[7]. This is because, under trial as a contravention it has not pursued a criminal action which seeks criminal liability of those who committed a crime and, consequently, no criminal action could be extinguished. Because the criminal action was not ended, a definitive judgment of an administrative court in which for the same act it was applied to the offender a contraventional sanction would not operate as a barrier to starting the penal trial[8]. Such a statement should be reconsidered because of the European Court of Human Rights jurisprudence.

ABOUT THE CUMULATION OF CRIMINAL AND CONTRAVENTIONAL LIABILITY IN ECHR JURISPRUDENCE

The ECHR, in a particular case[9], had to answer to this particular question. In this instance, the case started from a citizen's complaint, who after being contraventionally fined in a conflict in which he broke a neighbor's door then struck him, he was convicted for the same act by the criminal court for trespassing and battery or other violent acts. In this context, in front of the European Court, the plaintiff claimed violations of Articles 6 of the European Convention on Human Rights and article 4 of the Protocol no.7 to the Convention (which guarantees the right not to be tried or convicted twice for the same acts - *non bis in idem*).

The Court, in its Judgment delivered on 14 January 2010, found violations of both articles. About the article 4 of Protocol 7 to the Convention, the Court stated that: the contraventional sanctions applied for the committed acts can be considered as having a criminal nature in the autonomic sense that the Court gave to this concept, considering that on the one hand, the prohibition imposed by the violated legal text has an *erga omnes* opposability and that, on the other hand, the purpose of the applicable sanction is to punish and to prevent the future commission of similar acts.

In addition, it was stated that there is identity of facts that were considered contravention and those which have generated the criminal proceeding against the applicant, regardless of the legal definition that domestic law gives to the contravention and the to crimes. In this context, it was found that there was an overlapping of legal proceedings against the plaintiff, given that criminal proceedings were preceded by the payment of an administrative fine for the same fact.

[9] Tsonyo vs Tsonev vs Bulgaria 2376/03, 14 January 2010, www.echr.coe.int

The solution took into account the provision of art. 4 of Protocol 7 which refers only to „the law and the criminal procedure of a state", but the Court frequently gave a different content to the term "penal" compared to the national law. To identify this term sense there were considered some alternative criteria: the legal qualification of criminal issue in the national law, the kind of penalty, the severity of the penalty applicable[10].

Even when an act is not qualified considering the first criterion as penal (it is an administrative illicit fact) it must be reported also to the other criteria. In particular, it is important to observe the kind of penalty, especially who exactly is addressed to the legal rule in question: to a small group especially characterized or on the contrary, is a general disposition[11].

The third criterion, (the severity of the penalty applicable) has a low importance in the decisions on which the European Court has sentenced on several occasions. So, even in a case against Romania[12], it was established that the minor offence fine of 59 euros can be considered a penal sanction according to the Convention.

CONTRAVENTION AND CRIME IN THE DOMESTIC DOCTRINE AND JURISPRUDENCE

In Romania, the general regime of administrative liability is regulated by the Government Ordinance no. 2 from 2001[13]. In the first article of this law it is stated that „the contravention law defends social values which are not protected by the penal law".

Throughout the legal definition, the contravention is the act committed with guilt, established and sanctioned by law, ordinance or governmental decision, or as appropriate, by the decision of the local council.

In consideration of this definition, to correct it, in doctrine is laid out that this kind of antisocial act should fulfill three primary conditions[14]: a) to commit with guilt an antisocial act; b) the act should be less socially harmful than a crime; c) the act should be defined as appropriate and sanctioned by the law into force.

From these features, the second one is no longer found in the law, but was kept in doctrine and it is known as the feature able to make the difference between contravention and crime. The requirement removal was made according to the specialists' observations in which the interrelated crime-contravention social danger is no more relevant for the difference between one and another, especially when in some cases the punishments for contraventions were tougher than those for crimes[15].

Also in order to make the difference between contravention and crime it can be used the provision from article 1, paragraph l, sentence I of O.G. nr. 2/2001 in accordance with „the contravention law defends social values which are not protected by the penal law". But, the stipulation above-mentioned is not really useful because the laws in force abound in texts describing contraventions in a very similar way to those which describe the legal content of crimes. Manny cases we can find in Law no. 61/1991 on punishing the acts of disrespect community life rules, public order and social peace. The social value protected by this law is the same as the one protected by articles which describes crimes affecting community life from Title IXth Special part of the

[15] Antonie Iorgovan, Administrative Law Treaty, Nemira Publishing, Bucharest, 1996, p. 247.

Criminal Code in force. The same situation can be observed in the field of forestry contraventions described by Law nr.31/2000 in comparison to offences definitions contained in the Law 46/2008, The Forestry Code.

In these cases it appears clearly that the social value is the same, and its protection is mentioned in penal provisions and also in administrative provisions. The only factor that differentiates the two behaviors is, in fact, a different antisocial importance.

Other notes made in administrative law doctrine on how to make the correlation between the difference of gravity and penalties applied are also supported by legislative realities. This problem can be solved in a very appropriate way by respecting the requirement that any new legal regulatory edict shouldn't be contrary to the rules of the system that follows to integrate in. In this way, towards the systemic interpretation, there will no longer appear situations such as those reported.

For committing an offense it may be applied a sanction from those indicated by article 5 from O.G. no. 2/2001: main (warning, administrative fine, community service[16]); complementary (the seizure of property which was used or resulted from offenses; the abeyance or cancellation of permit, approval or authorization for exercising an activity; closing the unit; blocking the bank account; the suspension of trader activity; the withdrawal of license or approval for certain operations or activities of foreign trade, temporarily or permanently; the demolition of the work and bring the land to its original state).

The quoted text creates, however, the possibility to establish other principal and supplementary penalties, namely by special laws. This is the reason to raise some question marks on respecting the legality principle in applying administrative sanctions. At the same time, however, paragraph 5 of art. 5 O.G. no. 2/2001 provides that always "applied penalty must be proportionate to the seriousness of the committed fact."

Crime, as an antisocial act with a high level of social danger, is defined by the Penal Code in force since 1969 as being a "socially dangerous act, committed by guiltiness and provided by the criminal law." At the same time, the code expressly provides that "crime is the sole basis for criminal liability." In consideration of this definition, it has been shown in the doctrine of criminal law that a fact must meet three key features to be considered an offence: to present a social danger, to be committed by guilt and to be provided by the criminal law. Also, it is shown that in order to represent an essential feature of crime, social danger must be criminal, that is, to some degree, specific crime as criminal unlawful, distinguishing it from other forms of illicit facts (administrative, civil, etc.) and lead to a sentence[17].

From these elements of doctrine it can be seen that there is no very clear criteria to make a line of demarcation between infringement and offence. Moreover, the problem is not clarified from this point of view by the jurisprudence, either. For example, in forestry legislation[18] field, the same act of cutting standing tree can represent an infringement or an offence, based on the specific damage created by committing it or, alternatively, on the observation of persistence in the antisocial behavior over a period of two years. In some cases, it can be seen the first act of illegal cutting of trees, applied a sanction for an infringement, and upon finding indicated repeated infringement within two years to carry out criminal liability for the offence. The situation is permitted under national doctrinal acceptance regarding the *res judicata*, but, in our point of view, contrary to the ECHR rulings.

[16] Contraventional Prison Sanction was abolished from the system of administrative law.

[17] Al. Boroi, Criminal Law, Special Part, C.H. Beck Publishing House, Bucharest, 2008, p. 80.

[18] The law that settles this field is Law no. 46/2008 (Published in the Official Gazette, First part, no. 238 on 27 March 2008).

In the case of the so called *offences by habit* the situation could be similar. This is because, practically, the proof of recurrence of antisocial behavior, as a fundamental element of a crime of this nature, is the report on sanctioning same nature contraventions. Specifically, in the case of the prostitution offence (Section 328 of the Penal Code.), repeated acts of sexual intercourse that finally make up the concrete element of the crime is proved by the report on punishing the contravention defined by article 2 paragraph 6 of Law no. 61/1991. In fact, the legal content of this contravention is very close to the crime of prostitution (attracting people, under any form, committed in restaurants, parks, on streets and other public places, in order to practice sexual intercourses with them to obtain material benefits).

IMPACT OF ECHR JURISPRUDENCE ON THE SITUATIONS OF OVERLAPING CRIMINAL LIABILITY AND ADMINISTRATIVE FOR THE SAME ACT FROM DOMESTIC LAW

From what we have presented above, it is clear that the current Romanian legislation, as in the correspondent jurisprudence, there is a series of cases which are considered either contraventions or crimes, according to their specific ability to exceed the level of social risk specific to a crime. This level of risk is marked on the lack of clarity, and from this reason it generates frequent overlaps of the criminal liability and the administrative liability for the same act.

Given the ECHR decisions on this issue, we believe that it should produce a reconsideration of the boundary of the two types of antisocial acts in relation to the meaning of "criminal" term as autonomic defined by the European Court.

Moreover, the practice of administrative and judicial authorities in Romania must also undergo a shift in order to prevent the qualification of an antisocial behavior as a crime and as a contravention, at the same time, and the overlapping of two types of legal liability in the same occasion. The prohibition concerning this kind of overlap is so radical that if the act in question has already determined the application of an administrative sanction, it does not even allow the prosecution to begin against the person who was the subject of that punishment.

Conclusions

1. Both in Romanian doctrine and law it is not considered to be violated the principle of *non bis in idem* in those cases in which for the same act there are applied both criminal and administrative punishments. The solution flagrantly contradicts the ECHR decisions in this domain, which gave a more extended sense of the term "criminal" to national settlements, and regardless of their qualifications.

2. The implications of this situation on the Romanian law are among the most important, requiring a reconsideration of many elements traditionally accepted. Such efforts to align the national legislation to the requirements arising from the ECHR have been made by abolishing the punishment of contraventional imprisonment from the system of administrative penalties, but also by references to the need to comply with the proportionality rule concerning the seriousness of the act and the punishment found within GO no. 2/2001.

3. Such a research opens the perspective of a detailed investigation about the way it can be reached to a fair correlation of national reality with ECHR decisions. Such a research should identify, in the first place, a clear criteria to delimit a crime from a contravention that should permit preventing the situations of *bis in idem* in which one of the punishments is an administrative and the other a penal one.

THE ENTERPRISE - THE LEGAL FORM FOR CARRYING ON AN ACTIVITY HAVING A PROFESSIONAL NATURE

STANCIU D. CARPENARU[*]

Abstract
The new Romanian Civil Code has institutionalised a new conception regarding the regulating system for civil and commercial legal relations. Thus, new concepts emerge to fit the new conception, concepts regarding to the persons, the professionals, and the carrying on of an organised and systematised activity that qualifies such activity as having a professional nature. As one can find the new civil code has changed the conception regarding the enterprise, as it resulted from the actual commercial code. The operation of an enterprise will represent the legal form of carrying on an activity having a professional nature.

Key words: *enterprise, organised activity, professionals, traders, new civil code*

1. Introduction

The commercial code now in force qualifies the enterprise as a trading deed. According to the article 3 in the Commercial Code there are trading deeds any furnishing enterprises, public performance enterprises, commission enterprises, agencies and business offices, construction enterprises, factory, manufacturing and printing enterprises, publishing house, book and art objects selling enterprises, personnel or goods transport enterprises, etc.

There was specified that the listing of the trading deeds in the article 3 in the Commercial Code has a declarative nature, and not a limiting one.

As the commercial code regulates enterprise types, the doctrine was preoccupied with giving a general definition of the enterprise.

Within the classic conception of the commercial law the enterprise was defined as an economic organism led by a person called an entrepreneur, which combines the forces of nature with the capital and the labour for the purpose of producing goods and services[1].

Within the modern doctrine of the commercial law was attempted the grounding of a new definition of the enterprise. It was considered that within the traditional conception the material side is too much emphasised, the enterprise being only defined as a group of goods the entrepreneur allots to the carrying on of the commercial activity, without a reference to the human collective carrying on the activity. Within the proposed definition the primordial element has to be the subjective and social one. Therefore the enterprise has to be defined as a human group being coordinated by the organiser for the purpose of carrying on a commercial activity[2].

There was noted that the definition of the enterprise that mainly emphasises the subjective and social element is not of nature to clarify the notion of enterprise.

Starting from the finding that a general definition of the enterprise cannot be given based on one criterion only, within the doctrine was proposed a definition that considers the classic, economic

[*] University Professor, Ph.D. Law Faculty, "Nicolae Titulescu" University, Bucharest and the University of Bucharest, Faculty of Law; arbitrator at the Court of International Commercial Arbitration attached to the Chamber of Commerce and Industry of Romania (e-mail: carpenaru_stan@yahoo.com).

Paris 2001, pages 227-228, I.L. Georgescu, Drept comercial roman *(Romanian Commercial Law)*, vol. 1, Ed. Socec, Bucharest, 1946, page 201 and the following.

[2] Please refer to O. Căpățână, Caracteristicile generale ale societătilor comerciale *(The General Features of Trading Companies)*, in the Dreptul magazine, no. 9-12/1990, pages 28-29.

meaning of the notion of enterprise, as well as certain elements that are specific for trading deeds. Within such conception the enterprise appears as an economic and social organism; it represents an autonomous organisation of an activity by the entrepreneur, by means of the production factors (the forces of nature, the capital, and the labour), at their own risk, for the purpose of producing goods, executing works, and rendering services, in order to obtain a profit.

As a conclusion, within the conception of the Romanian commercial code, the notion of enterprise designates an activity being organised by an individual or an entity in order to produce goods and services, and not a law subject. The capacity of law subject lies with the entrepreneur, the one who organises at their own risk the activity. The same may be an individual, in the case of the individual enterprise, or a trading company, in the case of the corporate enterprise.

2. Under the influence of the doctrine opinions definitions of the enterprise were also given in certain normative documents.

Thus the article 2 in the Law no. 346/2004[3] defines the enterprise as any form of organising an economic activity that is autonomous as concerns its patrimony, and is authorised under the laws in force to perform trading acts and deeds for the purpose of obtaining a profit under competition conditions.

Then, according to the article 2 letter f in the Emergency Ordinance of the Govern no. 44/2008, the economic enterprise is the economic activity being carried on in an organised, permanent, and steady manner, in combining financial resources, attracted labour, raw matters, logistic and computer means, at the risk of the entrepreneur, and under the conditions being provided for by the law[4].

3. The new Romanian Civil Code, which was enacted by means of the Law no. 287/2009[5], has institutionalised a new conception regarding the regulating system for civil and commercial legal relations. The civil code has established the principle of the unity of regulation for the patrimonial and non-patrimonial legal relations.

According to the article 3 in the Civil Code, the provisions in the civil code are also applicable to the relations between professionals, as well as to the relations between the same and any other civil law subjects.

Within the conception of the civil code a professional is the one who is operating an enterprise, and by operating an enterprise is understood the systematic exercising by one or several persons of an organised activity consisting of producing, managing, or alienating goods, or rendering services, irrespective of the fact that the same has or not for purpose to obtain a profit.

As one can find, within the conception of the new civil code the carrying on of an organised and systematised activity qualifies such activity as having a professional nature, and the person who is carrying it on has the capacity of a professional. From those above results that the civil code has fundamentally changed the conception regarding the enterprise. While under the conditions of the commercial code the enterprise represents a category of the objective trading deeds, the civil code has generalised the notion of enterprise. According to the civil code, the operation of an enterprise represents the legal form of carrying on an activity having a professional nature.

---

[3] The Law no. 346/2004 regarding the stimulating of the establishing and developing of small and medium-sized enterprises (M.Of. *(Monitorul Oficial al Romaniei – The Official Journal of Romania)* part I no. 681/29.07.2004).

[4] The O.U.G. *(Emergency Ordinance of the Govern)* no. 44/2008 regarding the carrying on of economic activities by authorised individuals, individual enterprises, and family enterprises (M.Of. *(Monitorul Oficial al Romaniei – The Official Journal of Romania)* no. 328/25.04.2008).

[5] Published with the M.Of. *(Monitorul Oficial al Romaniei – The Official Journal of Romania)* no. 511 of the 24.07.2009.

4. Based on the article 3 in the Civil Code the enterprise is a systematically organised, autonomous activity being carried on by a person (the entrepreneur) at their own risk, which consists of producing goods, executing works, and rendering services, irrespective of the fact that the same has or not for purpose to obtain a profit.

The definition of the enterprise has a general nature; it regards any activity being carried on that has a professional nature, notwithstanding the object and the purpose of such activity. From such definition arise the features of the enterprise.

The notion of enterprise designates an activity being systematically organised, which is carried on permanently, and according to own rules.

The organising of the activity has an autonomous nature; the one who organises the activity is independent as to making the decisions.

The activity is carried on by one or several persons, at their own risk. The persons who are carrying on the activity have the capacity of professionals. The object of the organised activity is to produce goods, execute works, or render services. The purpose of carrying on the activity may be to obtain a profit, or to achieve a non-profit purpose.

5. In characterising the enterprise the essential criterion is the purpose of the person or the persons who are organising the activity.

The carrying on of an organised activity, which has a professional nature, for the purpose of obtaining a profit, is inherent to the economic (commercial) activity. This means that an enterprise the purpose of which is to obtain a profit is an economic, commercial enterprise, and reversely, an enterprise having a non-profit purpose is a civil (non-commercial) enterprise.

6. A definition of the economic enterprise was given, as we stated above, by the article 2 letter f in the Emergency Ordinance of the Govern no. 44/2008. We feel however that a definition of the economic enterprise should also retain the elements of the general definition of the enterprise. The economic (commercial) enterprise is an economic activity being carried on in an organised, permanent, and systematic manner, which is carried on by one or several persons (traders) at their own risk, and consists of producing and circulating goods, executing works, and rendering services, for the purpose of obtaining a profit.

From the definition arise the features of the economic (commercial) enterprise.

The activity of the enterprise is an economic activity. According to the article 2 letter a in the Emergency Ordinance of the Govern no. 44/2008 the economic activity is the organised industrial and commercial activity being carried on in order to obtain goods or services the value of which can be expressed in money, and which are intended for sale or exchange within the organised markets, or towards determined or determinable beneficiaries, for the purpose of obtaining a profit.

The activity of the economic enterprise is carried on in an organised, permanent, and systematic manner, by one or several persons, at their own risk. Such persons may be individuals or legal entities holding the capacity of a trader. Individuals may carry on economic activities under the following forms: individually and independently, as authorised individuals, as an entrepreneur holding an individual enterprise, as a member of a family enterprise (the article 4 in the Emergency Ordinance of the Govern no. 44/2008).

The object of the economic activity consists of producing and circulating goods, executing works, and rendering services.

The purpose of the economic activity is to obtain a profit.

The carrying on of an economic (commercial) activity imposes the conclusion of legal documents, and the performance of legal deeds, and of economic operations.

As they regard an economic (commercial) enterprise, such legal documents, legal deeds, and economic operations may be conventionally called commercial legal acts.

The commercial legal acts are the legal documents, the legal deeds, and the economic operations by means of which a trader carries on economic activities regarding the producing and circulating of goods, the execution of works, and the rendering of services, within an economic (commercial) enterprise.

From the definition arise the features of the commercial legal acts.

The commercial legal acts are the legal acts being imposed by the operation of an economic (commercial) enterprise.

Such legal acts are performed by professionals being called traders.

The commercial legal acts have for object the producing and circulating of goods, the execution of works, and the rendering of services.

The commercial legal acts have for purpose the obtaining of a profit.

Under the conditions of the new civil code the legal treatment of the commercial legal acts is the same as the one of the civil legal acts.

Currently the regulation in the new civil code only includes few provisions derogating from the principle of the unity of regulation for the civil legal relations and the commercial relations.

Thus, as regards the representation, the article 1297 in the Civil Code provides for that: "(1) The agreement having been concluded by the representative within the limits of their granted powers, when the contracting third party was not aware, and ought not be aware of the fact that the representative was acting in such capacity, shall only bind the representative and the third party unless otherwise provided for by the law.

(2) However, should the representative, when contracting with the third party within the limits of their granted powers on behalf of an enterprise, claim that they are the holder of the same, the third party having subsequently found the identity of the true holder may also exercise against the latter the rights they have against the representative."

Then, as regards the solidarity, the article 1446 in the Civil Code provides for that: "The solidarity is presumed between the debtors of a liability having been contracted in exercising the activity of an enterprise unless otherwise provided for by the law."

Finally, as regards the late performance of the obligations the article 1523 paragraph 2 letter d in the Civil Code provides for that: "The debtor is notified at law in the case where an obligation to pay an amount of money, which was undertaken in exercising the activity of an enterprise, was not fulfilled."

7. The civil (non-commercial) enterprise is an activity being systematically organised, which is carried on by one or several persons, at their own risk, and has for object legal acts and deeds having a civil nature, without having for purpose to obtain a profit.

The activities representing the object of the civil (non-commercial) enterprise are the activities being carried on within the liberal professions (lawyers', doctors' activities, etc.).

The persons carrying on the activity have the capacity of professionals, and are carrying on such activity under the structural law that regulates the legal treatment of the relevant profession.

Such persons are making available for the concerned persons their knowledge and competence, in consideration of which they receive fees, and not a profit.

The legal issues the operation of a civil (non-commercial) enterprise involves are civil legal acts, and are regulated under the special law.

8. Conclusions. Under the conditions of the new civil code, the enterprise is no longer a trading deed, but it represents the legal form for carrying on an economic or civil activity having a professional nature.

INDIVIDUAL EMPLOYMENT CONTRACT SPECIAL STIPULATIONS OTHER THAN THOSE PROVIDED BY THE LABOUR CODE

ADA HURBEAN*

Abstract
The individual employment contract parties can negotiate and provide stipulations that govern their juridical labour relations, other than those stipulated by Labour Code, according with the paraghraph1 article 20 of the bill in discussion. In principle, this legal liberty is the expression of the will's autonomy of the parties to conclude any legal act. We have to say that these stipulations transform the employment contract of an act imposed, an adhesion act in one governed by the principle of contractual freedom, even if the juridical literature calls these nonessential and optional clauses.
In concreto, the employee and employer may agree to any provision not contrary to imperative stipulation of law, public order or morality. Thus, in this study we aimed to analyze those terms often encounter in labour relations: terms of intellectual propriety rights, conscience, stability, risk, delegation of responsibilities, objective, restriction of free time, index clause, without claiming exhaustive treatment of this topic, considering the development and adaptation of labor relations in Romania in the European context and beyond.

Keywords: *labour relationship, labour contract, negotiation, contractual optional stipulations, contractual freedom.*

Introduction

As stated in the specialized legal literature[1], the individual employment contract is a mixed contract, if we take under consideration its clauses, because it contains both a legal and a conventional part. If the legal part of this contract refers to clauses expressly provided by law, clauses also named essential and obligatory, the conventional part reports to those clauses which the parties may negotiate and insert in the concluded contract.

Although in this study we proposed ourselves to analyse only the optional clauses of the individual employment contract, we believe it is necessary to make some explanatory notes regarding the clauses imposed by the legislator to be included in this contract.

On the one hand, as we have already mentioned, the statutory individual employment contract contains elements of a general nature provided, in principle, in Article 17 of the Labour Code. These general elements are also stipulated in Article 18 (the situation when the employee should perform his/her activity abroad), Article 102 (the individual part-time employment contract), and Article 106 (the individual home working contract). Specifically, according to the framework model of the individual employment contract[2], it must necessarily include the following elements: the parties of the contract, its subject, period, workplace, occupation/position, job description, work conditions, length of the working time, annual leave, remuneration, specific rights regarding the health and safety at work, other clauses referring to the probationary period, the notice, etc., general rights and obligations of the parties and final provisions (that concern the amendment of the contract, number of copies, resolution of the labour disputes). Within the limits stipulated by law, the essential and mandatory clauses of the individual employment contract may also be negotiated, because, generally,

[1] Al. Țiclea, *Tratat de dreptul muncii*, ediția a II a, Ed. Universul Juridic, București, 2007, p. 429 and next.

[2] Approved by Order of the Minister of Labour and Social Solidarity no. 64/2003, amended by Order no. 76/2003.

the normative act stipulates a minimum level of the employee's rights. Moreover, even the laws are supplemented by the provisions of the applicable collective labour agreement, a real "law" in the relations between the parties. For example, the individual employment contract must include the clause regarding the employee's wage, but its amount is negotiated between the parties and it may not be set under the national minimum gross basic pay at that time or/and under the minimum wage established in the collective agreement applicable in that unit. However, the legal part of the individual employment contract reveals its importance in the case of the personnel of public institutions and authorities and that of other budgetary units, because the wages of such personnel or the length of the leave and the sum allowed for this leave are provided by legislative acts. Therefore, the personnel may not negotiate the amount of the wage because the legal clauses do not allow it.

On the other hand, the conventional part of the individual employment contract refers to two aspects: the additional clauses provided in Articles 21-26 form the Labour Code and the clauses that are not legally regulated, but which may be negotiated and included in the individual employment contract under the general legal limits. Even the legally regulated clauses, previously, were employed for the first time in practice, then accepted by the special doctrine, and finally stipulated in the code[3]. Mainly, we talk about the non-compete clause, but also about the confidentiality and mobility clauses. The existence of these additional clauses in the individual employment contract is left at the parties' decision, which are free to determine, through negotiation, if the contract that shall to be concluded or that is already concluded will contain or not these clauses (of course depending on the type of work, the tasks service involved, etc.).

The possibility of including in the individual employment contract other additional clauses, besides those provided by the Labour Code is indisputable and it results without any equivoque from Article 20 paragraph 2 Labour Code, which states "Shall be considered specific clauses, while the enumeration is not meant to be limitative: a) clause on vocational training, b) non-compete clause c) mobility clause d) confidentiality clause." Therefore, the parties of the individual employment contract may jointly decide to include in this contract other clauses too, but they must also establish their content. In this respect, it is shown the importance of autonomy and freedom of the will of the parties' employment contract, whose principles must be in compliance with the limits of the mandatory legal rules, the collective labour contract, the public order and morals.

Special stipulations other than those provided by the Labour Code

Clauses regarding the intellectual property rights

Legally, the intellectual property rights include: copyrights (referring to musical, literary, and artistic work; computer programs; photographic works) and industrial property rights (in an invention, trademark, know-how, marks of origin, production models, and industrial designs).

In the situations governed by Law no. 8/1996 on copyright and neighbouring rights[4], in principle, the economic rights to works created (by the employee) under an individual employment contract shall belong to the author. If there is a contractual provision that stipulates otherwise, its significance lies in the employer's assignment of the copyrights, part of the individual employment contract. Such an assignment is made for a certain period. Where no such period has been specified, it shall be three years from the date on which the work is handed over. When the period specified by the contract or the three years end, the copyrights revert to the author.

[3] In this respect, see Raluca Dimitriu, *Obligaţia de fidelitate în raporturile de muncă*, Ed. Tribuna economică, Bucureşti, 2001, p.24-175; Al. Ţiclea, *Consideraţii privind admisibilitatea clauzei de neconcurenţă în contractul individual de muncă*, in *Revista de drept comercial* nr. 7-8/1999, p. 136 and next.

[4] Published in *Monitorul Oficial al României*, partea I, nr. 60/26.03.1996, as amended and supplemented by Government Emergency Ordinance no.123/2005, published in *Monitorul oficial al României*, partea I, nr. 843/19.09.2005.

In the case of computer programs or photographic works, created in the course of their duties from an individual employment contract, the economic rights belong to the employer, unless it was otherwise agreed.

In the case of industrial property rights, according to Law no. 64/1991 on patent[5], if the inventor is an employee, and there is no contractual provision more favourable to him, the right to the patent shall belong as it fallows:

- to the employer, in the case of inventions made by the employee under an individual employment contract that provides expressly the performance of inventive activities, where the said activities correspond to his actual duties (representing a part of his duty); in this case, the inventor shall benefit of an additional remuneration specified by contract;

- to the employee, for inventions made by him either in the course of his duties (but without having an inventive mission expressly mentioned) or within the area of concern of the employer, through knowledge or use of technology or means specific to the employer or information available on the premises of the employer, or again with material assistance from the employer, except where otherwise provided by contract. If such a problem arises (stipulation of a contrary contractual clause), the employer shall have a preferential right to conclude a contract in respect of his employee's invention, right that shall be exercised within three months (limitation term) of the date of the employee's offer.

Subsequently to the conclusion of the individual employment contract, the law allows either an addendum contract to the individual employment contract or a contract by itself, a civil one. This represents a solution that shall meet the principle of will freedom of the parties, allowed by the generic legal formulation, too.

Litigations between the author/inventor (employee) and the employer concerning the intellectual property rights can be characterized as conflicts of rights, if the clauses related to those rights were established by the individual employment contract (if permitted by law) or by a civil contract, if the assignment of the author/inventor' rights was done through a civil contract (even when the contract would be an accessory to the individual employment contract).

Goal clause

One of the most important differences between the individual employment contract and the civil service contract is that, in the case of the first contract, the employer is interested in providing work, by the "alive" labour, while, in the case of the second contract, the beneficiary is interested in realization of work, its result. This distinction usually appears as real. But nothing impedes the parties to establish, at the conclusion of the individual employment contract or during its execution, a goal clause, too. As consequence of the existence of this clause, the employee, who occupies a certain function or job, has the (contractual) service duty to achieve a concrete goal, a determined work of major interest to the employer. In this case, the type of work that is generally established as occupation/position is also identified through a specific goal (such as, achieving a certain work, entering a certain market). In other words, the "alive" work, seen as a kind of work, must, simultaneously, be materialized into a clear result.

In order to be valid, the clause should be, on the one hand, precise and, on the other hand, attainable (*ad impossibilum nulla obligatio*).

A goal clause, for example, is that to achieve a determined item and it may be accompanied by a clause of success or performance, so as the respective item to meet certain technical parameters or certain higher quality elements.

In conclusion, in an individual employment contract of unlimited or limited duration, full-time or part-time work, having a goal clause (including the success or performance clause), the employee's obligation does not remain exclusively a means' obligation (that of working), but it turns into one of result.

[5] Republished in *Monitorul Oficial al României*, partea I, nr. 752/15.10.2002.

In exchange for achieving a particular goal, it is possible to provide certain additional benefits to the employee. Therefore, if the target was fully achieved, the employer is obliged to provide the additional benefits. If the target is not fully achieved, then the additional benefits are granted *pro rata*[6], too.

Conscience clause[7]

The conscience clause is that clause, which, once introduced in the individual employment contract, entitles the employee to not accomplish a legal work order, in so far as, if it were implemented, it would conflict with the various options determined by the employee's conscience.

The possibility to include the conscience clause in the individual employment contract is not confined exclusively to the rules of the labour law. There is a constitutional support, too, stipulated by Article 29 of the Basic Law, which guarantees the freedom of conscience, and the fact that it shall not be restricted in any form whatsoever.

The typical situation of including and application of this clause applies in the case of media employees producers. Yet, other employees, such as those in the cultural creation, scientific, medical and legal area (legal advisers), can not be excluded.

From the employee's point of view, the object of the conscience clause can be based, in our opinion, on the following reasons: religious (for example, the refusal to write critically about the legal cult, which includes the concerned employee, or to make atheistic propaganda); morals (for instance, the refusal to write materials which produce an apologia for some life habits contrary to the traditions of the Romanian people or to a certain local community); political (i.e., the refusal to write critically about the ideology or political platform of a particular political party); scientific (such as the refusal to participate in development of works in the applied or fundamental research, judged as non-productive, even harmful or dangerous to humans or human society[8]); courtesy (such as the refusal to use harsh expressions or descriptions at one/some people.)

In turn, the employer recognizes the employee's right to refuse to execute a legal work order, to the extent that, in one case or another, the conscience clause shall interfere.

In principle, the non-performance of a legal work order can (at the employer's discretion) lead to disciplinary sanction of the concerned employee. But the existence of the conscience clause in the individual employment contract can provide protection to the employee against a disciplinary liability, in a given situation. In each case, the employee must however prove with pertinence that he can not execute the legal work order because of his conscientious objection. If the employee fails to prove, conclusively, that there is such an obstacle, he shall either proceed to the execution of the legal order given by the employer, or (if he still refuses) he shall be liable to be disciplinary sanctioned.

Of course, the illegal work order shall not be executed by the employee, in any case. So, *the conscience clause regards exclusively the employee's possibility to refuse the execution of a legal work order, without incurring disciplinary consequences*. In a sense, the conscience clause can be treated as a (contractual) clause of free disciplinary liability of the concerned employee.

The Romanian labour legislation does not regulate the possibility of including the conscience clause in the individual employment contract, nor does it explicitly prohibit it. In these circumstances what is not prohibited by law shall be recognized as possible, provided that the public order or morals shall not be violated. However, such problem can not practically arise, because affecting the public order through the non fulfilment of a legal job order, in the areas where the conscience clause may appear, it is difficult to assume. Infringing the morals represent a similar situation, too. Just on the contrary, moral reasons often found the conscience clause. On the other hand, any conscience clause

---

[6] See O. Ţinca, *Unele clauze specifice contractului individual de muncă*, R.D.C. nr. 6/2003, p. 54.

[7] See, extensively, I.T.Ştefănescu, *Inserarea clauzei de conştiinţă în unele contracte individuale de muncă*, in *Dreptul* nr. 2/1999, pp. 56-57.

[8] In this respect, see R.Gidro, *Opinii asupra unor dispoziţii din proiectul Codului muncii cu privire la încheierea şi conţinutul contractului individual de muncă*, R.R.D.M. nr. 1/2002, p. 25.

shall be carefully negotiated, shall be entirely clear, and shall have analytical and practical character. Otherwise it might leave place of subjective interpretations and even abuse of rights (of either party of the individual employment contract).

The conscience clause itself, because it creates an advantage for the employee, does not involve, therefore, a specific pecuniary obligation for the employer.

No employee can invoke the conscience clause (the objection) in order not to carry out a legal obligation imposed by a peremptory norm (for example, the employee may not be absent from work in a given day, when legally it is a working day, just by claiming the conscience clause); no employee can invoke a mere difference of opinions between him and the employer (in which case he must carry out the employer's order if it is legal), but only the conscience clause[9].

Stability clause. Extension clause

In the individual employment contracts of limited duration, but also in those of unlimited duration, it can be included a stability clause (or a clause of minimum duration of the individual employment contract). In Western practice of labour relationships, as the individual employment contracts of limited duration are increasing, the stability clause is used more and more often.

In essence, this is a clause which seeks to ensure preservation of the employee's job/position for a certain period of time.

During the existence of the individual employment contract, concluded for a limited duration, in principle, the employer may proceed to the dismissal of the concerned employee (as in the case of the employee who is a party in an individual employment contract of unlimited duration), as provided by law. The purpose of the stability clause is that the employer should oblige not to dismiss the employee (for reasons not attributable to him), ensuring to the latter a relative stability. Therefore, because the employee has the possibility to resign, such a clause limits the rights of the employer over a certain period, usually equal to that of the existence of the contract. The employer can not dismiss the employee, except in cases grounded on the culpability of the work's provider or for an objective reason (unrelated to the employee in question). If, despite this clause, the employer fires the employee, without the latter's culpability or without having an objective reason, the employee shall be entitled to claim compensations. Those are calculated, according to the stipulated wage, for the period measured from the moment the contract ended until the moment the employer had guaranteed the work stability.

In the developed market economies, the *extension clause* is practiced, too. This clause establishes that at the end of period for which an individual employment contract was concluded for a limited duration shall be concluded a new contract, of the same kind, for limited or unlimited duration.

The objective is similar to that of the stability clause, namely, the assurance of increased work stability for the employee. Yet, according to the Romanian Labour Code, including such a clause in the contract must be reported to Article 80 paragraph 3, corroborated with Article 82 paragraph 1, which stipulates that the individual employment contract of limited duration may not exceed 24 months (even its extension must be within the legal term).

The extension clause represents a promise of contract that must fulfil all the conditions of validity of any contract, including the fundamental elements of the future individual employment contract[10].

Risk clause

In those individual employment contracts in which the specific of work, but in certain cases the workplace too, involves special risks for the employee (particularly in terms of his safety or physical and/or intellectual health or even of his life) it can be inserted a risk clause.

---

[9] See G. Couturier, *Droit du travail, Les relations individuelles du travail*, Presses Universitaires de France, Paris, 1990, p. 354.

[10] See O.Ţinca,op. *cit.*, p. 58.

Such workplaces are classified according to the Labour Code and Law no. 31/1991 on the establishment of the working time for less than 8 hours per day for jobs requiring heavy, harmful or dangerous conditions, which draw certain rights for the employees, such as: a reduced daily work schedule; a higher wage (risk increment); an additional leave; health and safety measures at work, etc.

In addition to these measures established by law, the collective labour agreements may as well additionally include special provisions for employees.

However, individually, if the services of the future employee, due to his qualities, are strictly necessary to the employer, it can be reached by initial or later negotiation to the insertion of a special clause - called risk clause – in the individual employment contract. So, assuming, by the specific of work and/or by the workplace, a particular risk, the employee may receive certain benefits. The employer is contractually bound to pay these benefits.

The risk clause may concern either the increase of the benefits that the employer already has, according to the law or/and to the collective labour agreement in force, or the establishment of some additional benefits besides those already resulting from the law and the applicable collective labour agreement. Obviously, it is possible that the two ways of realizing the risk clause to be combined with each other.

The risk clause is usually inserted in the case of the employees who act as: personnel in certain areas of scientific research, medical personnel from the medical units of infectious and contagious diseases, journalists – war reporters, reporters of special investigations in the crime area, people working as bodyguard, etc.

Restriction clause in the spare time

By this clause, the parties establish a determined period from the employee's spare time, when the concerned employee is required to remain at home or to announce exactly where he is, so as, if the employer demands it, he shall be able to respond immediately and to accomplish operatively a particular job. Therefore, the restriction clause in the spare time means that the employee is required during the period that, otherwise, represents his rest period (daily, weekly).

Normally, this clause is the employee's obligation, either for a long period, or within a certain period, in which case he should be notified in advance (by the employer).

The time worked by the employee under these conditions is part of the normal working hours, and it does not represent overtime. Therefore, in all cases, the employer must ensure, overall, the compliance with legal regulations pertaining to maximum legal length of the working time (daily and weekly). Because the insertion into the individual employment contract involves the assumption of additional obligations for the employee, the employer can commit himself to remuneration accordingly, or to other ways to stimulate the employee.

In practice, such a clause is mostly included in individual employment contracts of certain employees whose qualified training allows their effective involvement in special situations (accidents, fires, disasters, etc.).

Delegation of powers clause[11]

This is a clause whereby the employer or an employee having a management position (where the law allows) delegates to an employee under his subordination a part of his attributions. Typically, such a clause occurs during the execution of the individual employment contract, when the employer has had time to acquire the necessary confidence in the concerned employee, but it may also be agreed since the conclusion of the contract.

Delegation of powers can be accepted only under certain conditions, namely when:

- it is the will's expression of the employer and concerns only attributions that, legally, are not recognized to him exclusively;

[11] See, extensively, I.T. Ştefănescu, *Delegarea de atribuţii disciplinare în dreptul muncii*, in *Dreptul* nr.12/2004, p. 106.

- it respects the condition to delegate the same tasks, at the same workplace, to a single employee;

- it is specific, meaning that it does not result from the precise job of the delegated employee (such as, for example, the inherent attributions of a management position, consisting of surveillance the activity in a given field, in a particular area of production, etc.).

- it is accurate, meaning that the general powers of organization and control, established by the individual employment contract, does not represent - in the absence of specific directions - an express delegation of powers;

- it is effective; respectively, the employer (the delegating person) takes all the measures that enable the delegate to actually perform the tasks entrusted to him; naturally, the delegate must be able, through his professional training and ability, to perform the tasks he was empowered with; he must dispose of the material and financial resources necessary to fulfil his mission; he must have the power to control and to resort to disciplinary orders in order to be able to give mandatory disposals to other employees and to impose their compliance;

- it is accepted, because, on the one side, it refers to additional tasks besides the current ones, specific to the job (position) of the concerned employee, and, on the other side, it can lead to the liability, even criminal, of the delegated employee in place of the delegating person[12];

- the rule according to which the delegate can not delegate in his turn the attributions he received as delegate duties is respected. In other words, the rule *delegata potestas non delegatur* applies to the labour law, too. It concerns the common situations when the delegate would like to submit on his own wish to another employee, by sub-delegation, a part or all the tasks he was given by the employer. It does not concern the situations when the person entitled to delegate (the employer) agrees, on purpose, with a sub-delegation of duties. It should also be noted that this has as effect, among other things, the free of the delegating person and that of the sub-delegating person of legal responsibility that comes from the failure to exercise or the improper exercise of the powers in question (as the delegation of tasks, which frees the delegating person of responsibility).

Because "the employment relationships are based on the principle of consent" (Article 8 paragraph 1 of the Labour Code) and because it does not exist a legal requirement to the contrary, the delegation of powers does not involve *ad validitatem* the written form (although, practically, it is of course preferable)[13].

We believe some more clarifications are necessary to be done in this matter: first, the delegation of powers can not produce its effects just by specifying it, in a general way, as a possibility in the constitutive act or the standing orders (respectively in the collective labour agreement); such a clarification is useful, but certainly not enough. In light of such comments (from the constitutive act, internal rules or collective labour agreement), it must be made an explicit act of delegation of powers to a certain employee who, in his turn, accepts the delegation concerned[14]. If there is no such provision stipulated by the constitutive act, the internal rules or the collective labour agreement, it is possible (in the absence of express statutory prohibitions, general or specific), the delegation of powers by act of the employer, accepted by the employee[15].

The act of will of the employer and of the employee, who accepts the modification of his work duties, on the purpose of receiving additional attributions, act initiated by the employer, represent, in most cases, an addendum to the individual employment contract or a clause to the

[12] See F. Signoretto, *Les contrats de travail*, Editions d'Organisation, Paris, pp. 226-227.

[13] In this context, we mention that the delegation of powers, even if it usually involves, additional work tasks for the delegate, in such a hypothesis, it does not involve s*ine qua non* an additional payment, too.

[14] It is possible that in the constitutive act, the internal rules, instead of a general normative, to be stipulated in details the delegated attributions from the employer's level to the level of a/some subordinate position(s).

[15] In such a case, in fact, is incident the Article 295 paragraph 1 of the Labour Code, regarding the application in the field of employment, too, of the civil law provisions, as common law.

individual employment contract, if it is established since the conclusion of the legal employment relationship.

Delegation of powers – inclusively those regarding the individual employment contract – can be done from the level of the management/chief of the organization with legal personality to the level of the chief of the sub-unit without legal personality.

In the case of public institutions and authorities, too, the delegation of tasks (of powers) appears as admissible. Moreover, according to Article 44 paragraph 1 of Law no. 188/1999 regarding the Regulations of civil servants, republished, with subsequent amendments and completions: "Civil servants are responsible, according to the law, to fulfil the prerogatives of the civil service they exercise, as well as any other authorized prerogatives delegated to them".

Delegation of powers cease by:

- withdrawal by the employer (by the chief of the authority or public institution) of the delegation of powers[16].

- agreement of the parties. Due to its subordination, the delegated person - the employee or public servant - can not deny the exercise of the powers conferred upon him[17]. Of course, he may propose at any time to his employer to cease the delegation, in which case – if the delegating person accepts – the delegation of powers shall cease by agreement of the parties.

- when the delegation of powers reaches its term. By hypothesis, this delegation was given for a determined period or for the execution of a precise task.

- cessation of the individual employment contract (as provided by Articles 55, 56, 58, 61, 65 and 79 of the Labour Code) or of the administrative contract, in case of public servants (Article 84 of Law no. 188/1999 regarding the Regulations of civil servants).

- Intervention of a case of force majeure with definitive effects.

Wage's rise clause

The rise of the wage can be usually achieved at the request of the employee or at the employer's initiative.

Given the possible decrease of the net wage by reducing the purchasing power, the wage should be raised regularly. The increase can be done under the pressure of the employees, too - as result of a trade union's action, including a strike.

Nevertheless, it is possible, taking into account the social and economical realities, to include an indexation clause in the individual employment contract. In essence, it consists in the commitment of a regular rise of the wage (quarterly, half yearly, annually or at such other time) with at least the inflation index. Thus, automatic, the rise of the wage is closely correlated with the cost of living. Such a clause is certainly an element of interest, mainly, for the employees, but also for the employers interested to keep within them the highly skilled employees, who give maximum efficiency.

Limits of the contractual freedom in the employment law and prohibited clauses of the individual employment contract

As we have already mentioned, the presentation of the additional clauses, optional to the individual employment contract, is not exhaustive[18], the parties being free to negotiate any provision,

[16] Therefore, we think it is a case in which, although the initial legal document represents an agreement of will, it always includes, implicitly, a forfeiture clause in favour of the delegating person. Indeed, it would be inconceivable that the withdrawal of the delegation of powers to engage, under the symmetry of legal acts, the consent of the employee or public servant.

[17] Just as it is possible in the case of the mandatory to renounce to the given mandate. See F. Deak, *Tratat de drept civil. Contracte speciale*, Ediția a III-a, updated and amended, Editura Universul Juridic, București, 2001, p. 333; B. Ștefănescu, R. Dimitriu and others, *Drept civil*, vol. II, Editura Lumina Lex, București, 2002, p. 348; I.R. Urs, S. Angheni, *Drept civil. Contracte civile*, vol. III, Ediția a III-a, Editura Oscar Print, București, 2000, p. 118.

[18] For example, the legal doctrine also mentions the reserve clause by which the employee obliges to have/show a circumspect and reserved behaviour, favourable to the positive image/reputation of his employer. But in

under the principle of the contractual freedom. However, this principle is not an absolute one. In our case it is circumscribed to some general limits, but also to a special limit. The general limits of the contractual freedom are those referring to the imperative legal provisions related to the public order and morality[19]. The special limit refers to the applicable collective labour agreement.

Concerning the special limit, the employee's rights included in the individual employment contract must be reported to those stipulated by the applicable collective labour agreement, meaning that they can not be below the minimum level laid down by the latter. Thus, if the rights provided by laws represent the general minimum limit regarding the employees' rights, those contained in the collective labour agreement represent the special minimum limit, applicable only to the unit or to its branch, where the collective agreement is in force. By consequence, all clauses that derogate, meaning that they are less favourable to the employee, from the legislative provisions or from those stipulated by the collective labour agreement in force are *prohibited clauses*[20]. Also, clauses such as the exclusivity one, which would limit the exercise of freedom of association, which would restrict the right to strike or to resign, can not be included in the employment individual contract, as they are under the sanction of nullity. The celibacy clause, the dismissal clause (by which the parties agree that the employer shall decide to cease the individual employment contract at the request of the employee),the place or residence clause, if it affects the employee's freedom to choose his home, the arbitration clause (whereby the parties agree to submit to arbitration the disputes between them), the variation clause (which allows the employer, on his own unilaterally intention, to amend any of the essential elements of the individual employment contract) are breaking the mandatory rules. Therefore they are considered prohibited[21].

Conclusions

In conclusion, nothing prevent the employment contract parts to negotiate and include in the labour contract any optional clauses to satisfy their interests which are not stipulated in the law with the respect of general and special limits Also, that shows that we find ourselves in the presence of a contract with all the specifications of this bilateral legal act, ruled by the principle of free will, not in the presents of an impose contract. Even more and without denial of the legal part of the employment contract, according to the applicable legal texts there is no legal regime difference between the established rights, edicts, recognized or guaranteed by legal or conventional means (by individual or collective negotiation).

DELIVERY OF GOOD IN THE LOAN AGREEMENT: CONDITION OF VALIDITY OR OBLIGATION OF THE LENDER?

LIVIU STĂNCIULESCU*

Abstract

In theory, the loan is generally defined as a contract whereby a person, called the lender, shall use or immovable property of another person, called the loan, which is obliged to repay in kind.

Based on the definition above national doctrine is unanimous in determining that the loan is a unilateral contract, because creates obligations only for the borrower. Similarly, the loan is a real contract because the manifestation of will must be accompanied by delivery of the good. Given the above, the question is obvious: delivery of the borrowed good is a condition of validity of the contract (specific for its formation) or an obligation of the borrower (operating in the execution phase) ?

Please note that determining the legal nature of the good delivery has great importance to the doctrine and practice. Thus, relative to the approach adopted: „delivery - a condition of validity" or „ delivery - obligation of the lender", legal consequences are totally different, with direct implications in defining the actual contract, the contract unilaterally rescinded the conditions in which they operate, etc.. In our approach we try to demonstrate that good delivery in the loan agreement can only be an obligation of the borrower (with all consequences arising from such qualification).

Key words: *free loan agreement, real agreement , delivery of good, sale, borrower*

a) Loan agreement in national doctrine.

Civil Code governing the two types of loan[1]: loan use and loan consummation.

The main legal regime difference[2] between the two contracts is translative of ownership (only) of loan consummation.Both loan use and loan consummation are separate, independent contracts [3].

Loan agreement, regardless of variety, is part of the real contracts

According to doctrine, the loan agreement (as for the deposit, too) is a real contract, because for the conclusion of the agreement it is necessary to achieve both will and good delivery, which is forming the contract object.[4] ".

As an exception, when at the time of the contract conclusion, the good is in the possession or detention of the tenant, the free loan agreement is valid only by the mere agreement between the parties, delivery being replaced by consent only [Art. 1593 par. (3) Civil Code]

For example, after concluding a sale, not followed by the good delivery, the parties agree that the good should be left temporary in the free use of former seller (currently tenant)

[1] See C. Hamangiu, Balanescu I. Rosetti, Al. Baicoianu, *Romanian Civil Law Treaty*, vol II, Ed All Beck, Bucharest, 2002, p. 622.

[2] Doctrine points and other criteria of differentiation, such as the subject of the loan and its repayment. According to art. 1576 Civil Code, if there is an unexpected event and need it badly, the tenant is to return it before the deadline (not found in the college loan consummation); See J. Huet, *Traité de droit civil. Les principaux contrats spéciaux*, LGDJ, Paris, 2001, p. 921-922.

[3] Loan agreement is governed, in particular, the Civil Code, Book III, Title X "On loan" (art. 1560-1575) and Title XI "On loan" (art. 1576-1590). Other recent acts include provisions relevant to (eg, GEO. 97/2000, Government Ordinance no. 130/2000, Government Ordinance no. 85/2004 and Law no. 289/2004).

[4] See Fr. Deak, *Civil Law Treaty. Special Contracts*, Actami Publishing, Bucharest, 1999, p. 367.

The real nature of the loan, allows it, to be preceded by a pre-loan agreement, regarding the obligation to conclude a contract of loan in the future.

However, we note that the preliminary contract of free loan (or consumption) does not imply delivery of the good (being valid only with the will agreement between the parties)

The loan is a unilateral contract because obligations arises only the task of the tenant.

In this situation, the good delivery by the owner at the time of the closure, signifies the fulfillment of a validity condition of the contract (delivery) and is not a requirement (the result of a valid contract concluded)

Even if during the course of contract development (of producing effects), obligations may arise for the owner, the contract remains unilateral (because the obligation is extracontractual[5]).

Loan consummtion transfers the ownership of property „of fungible and consumable things", but free loan agreementl is translative of use only (so is not constitute a real right in the favor of the borrower).

The consequence of nontranslative character of free loan agreement is that, even after the conclusion of the contract, the owner remains the owner of the good (bearing the risk of fortuitous loss, according to the rule *res perit domino*), the tenant gaining *only good detention.* [6].

Free loan agreement may concern both movable and immovable goods, provided that beeing nefungibile (following to be returned in their individuality) and neconsumptibile (being necessary that the good do not consume at first substance use, to be returned in its nature.

Thus, the tenant must return the same thing (and not a similar one, whereas if he returns another car with the same value and quality, the contract will be exchange).

The object of a consummtion loan is gender, fungible and consumable goods, according to their nature (and the use given by the parties), which will be used (consumed) by the borrower .

Thus, the borrower will not return, at maturity, the same goods, but an equal amount of other things of same nature and quality (and we can thus say that finally is achived a so-called „ exchange" of things)

Proof of loan contract is made according to general rules, laid down by art. 1191 Civil Code, *ad probationem* is required in a single written document (if the value of the good exceeds 250 lei). The material delivery of the good can be proved by any evidence.

b) Particularities of good delivery in the sale agreement.

Valid conclusion of the sale produces a double effect: the transfer of ownership from seller to buyer (legal effect) and to create obligations on the parties (personal effects)[7].

Transmission of ownership as the main (crucial) effect of the sale, has a decisive role in fulfilling the obligations of seller and buyer[8]. Thus, transmission of ownership is not an obligation of the seller (whether is operating immediately or later) because once the contract has been perfected, the property is transferred without the intervention of the parties.

We can state that the obligations of delivery and reception of the good (due to the seller, respectively, to the buyer) are actually material expressions of alienation and acquisition of ownership[9].

---

[5] See D. Chirica, *Civil Law. Special Contracts*, Lumina Lex Publishing, Bucharest, 1997, p. 219.

[6] See C. Toader, *Civil Law. Special Contracts*, All Beck Publishing, Bucharest, 2005, p. 64, D. Macon, IE Cadariu, *Civil Law. Contracts*, Junimea Publishing, Iasi, 2000, p. 203 - 204, TJ Timis, dec. no. 1573/1979, in R.R.D no. 5 / 1979, p. 54.

[7] See L. Stănciulescu, *Civil Law. Contracts and Inheritance*, Ed Hamangiu, Bucharest, 2008, p. 66 et seq ..

[8] Moreover, the French legal literature talks about the transfer of ownership as the only effect of the contract, in effect, see Ph. Malaurie, L. Aynčs, P.Y. Gautier, *Les contrats spéciaux*, Defrenois, Paris, 2003, p. 207.

[9] Civil Code does not specifically cover all the effects of the sale contract, referring only to the main obligations of the seller: "to teach him to work and be responsible for" (art. 1313 Civil Code) and the main obligation of the buyer "to pay the price at the date and place determined by the contract " (art. 1361 Civil Code).

The seller has two main legal obligations: to delivery the sold good and to guarantee the buyer for eviction and against vices (art. 1313 Civil Code).

According to art. 1314 Civil Code, " the delivery is the resettlement of the sold good in the possession and power.of buyer " "The relocation of sold good" does not mean the transfer of ownership, only detention[10].

In some cases, delivery involves a passive attitude of the seller (for example, when property is already in possession of the buyer).

In other cases, it is necessary to commit positive acts for that, the buyer enter into effective possession of the property purchased (eg, return of keys, issuing building etc..).

The delivery of the good, as a rule, is the place where it is located the object, and it is therefore portable (art. 1319 Civil Code).

If the object sold can not be located (at the time of the conclusion), the delivery must be made according to general rules (to the debtor's home seller), and in this case, Cherie.

The seller is obliged to hand over the individually-determined good "in the state it was at the time of the sale" (art. 1324 Civil Code) and " to the extent determined by the contract " (art. 1326 Civil Code), charged with fruits or not, the day of the sale, and all accessories.

In the case of generic goods (and in the absence of express clauses stipulated in the contract), the seller will be able to execute his obligation by delivering middle-quality of goods, but the size specified in the contract (art. 1326 Civil Code).

Civil Code provides special rules for delivery of land[11]. Thus, if the property was sold "with the revelation of its contents and so far" (art. 1327 Civil Code) and on delivery day or later, it is found that extension does not correspond to that shown in the contract, the difference will be considered as follows:

- when the extent is less, the buyer may require to be supplemented or a price reduction (the contract can be rescinded only if the property is not required with the purpose for which it was purchased);

- when the extent is larger, the buyer is obliged to pay a premium price for surplus (he may request termination of the contract unless it proves that the surplus is 1 / 20 of total surface - art. 1328 Civil Code)[12].

Delivery costs (weighing, measuring, counting) are the seller's obligation, and the removal costs of the place of the delivery (loading, transport, unloading) to the buyer, unless there is stipulation to the contrary.

The seller is obliged to delivery, with the good sold, also the fruits charged by transferring ownership (art. 1324 Civil Code).

The buyer is entitled also to the good selling accessories and all that was intended for perpetuuu, for example, the destination property, warranty claim or action, and appropriate accessories (art. 1325 Civil Code).

If the case that the good, it is not delivered at the conclusion of the contract, the seller is obliged to preserve it, until delivery, because the good must be delivered in the same conditions it was, when concluding the contract (art. 1074 and 1324 Civil Code) .

If the buyer, became the owner from the conclusion of the contract, he must bear the costs of maintenance. (art. 1618 Civil Code).

---

[10] See Fr. Deak, op. cit., p. 72. According to art. 1604 French Civil Code, subject to delivery include the transport of good sold and put into possession of the purchaser in this regard, see J. GATS, *Droit civil. Les contrats spéciaux*, Armand Colin, Paris, 1998 p. 41.

[11] For details, see Fr. Deak, op. cit., p. 72-76.

[12] If the sale is made "otherwise than so far", in a global price, the difference between declared and actual extent not taken into account (art. 1329 Civil Code).

In case of total or partial non-execution, of the delivery obligation of the good, due to fault of the seller, the buyer may invoke the exception for non-performance (*exceptio non adimpleti contractus*) or rescinded sale compensatory damages or enforcement in nature (not excluded any possibility things like purchasing from third parties on behalf of the seller, in accordance with art. 1077 Civil Code)[13].

c) Delivery of the borrowed good in the dispositions of 2009 Civil Code

According to art. 1174 (1 and 4) Civil Code 2009, "The contract may be consensual, affirmed or real. The contract is real when, for it's own validity, a good delivery is required of the debtor ".

From those mentioned above, it results that in the case of real contracts "the delivery of the good" is a new condition of validity (in addition to the substantive and formal conditions, required by law).

According to art. 2103 (1 and 2) Civil Code 2009, "Deposit is a contract whereby, the depositary receives a movable of the depositor, with the obligation to retain for a period of time and to repay in same kind. Remission of the good, is a condition for the valid conclusion of the deposit contract[14].

Corroborating the dispositions of art. 1174 and 2103 results, undoubtedly that the deposit is a real contract and therefore, the depositor does not have an obligation to delivery the good (object of contract) to the depositary. Thus, the depositor is only obliged to pay remuneration, expenses and damages (art. 2122 and 2123 Civil Code 2009).

Article 2144 Civil Code 2009 states that "the loan is in two ways: free loan agreement, called the loan, and a consummtion loan".

According to art. 2146 Civil Code 2009, "loan agreement for use is a free contract, whereby one part, called owner, submit a movable or immovable good to the other part, called tenant to use this asset, with the obligation to return it after a certain time" and "a consummtion loan is a contract in which the lender gives the borrower a sum of money or other such fungible and consumable goods, in nature, and the borrower undertakes to return after a certain period of time the same amount of money or quantity of goods of the same nature and quality "(sn art. 2158)[15].

We have to mention, that from the articles above, we can not establish whether :"the remission of the good" is a condition of validity or a obligation of the borrower? (in particular, because in this case there is no express disposition to qualify the remission of the good as a condition of validity, such as, those mentioned above for the deposit).

In the above, we mention also, the previous dispositions (contradictory) of art. 1483 (1) and 1485 Civil Code 2009 that the "obligation to move the property that encompasses the obligation of delivery and to preserve it until the good is delivered" and "The obligation to deliver an individual determined good it contains also, the obligation to preserve it until the good is delivered".

[13] In case of delay in execution of the teaching obligation, the buyer is entitled to damages, but only from the date of notice of the seller under Art. 1081 and 1079 Civil Code, you will see the Fr. Deak, op. cit., p. 76.

[14] According to art. 2105 (1 and 2) Civil Code 2009, "When money or other funds are also remitted fungible and consumable in nature, they become property of the recipient and must not be surrendered their individuality. In this situation applies, as appropriate, the rules of a consumer loan, unless the main intention of the parties was that the assets are held in the interests of the teaching (?).

[15] By the conclusion of a valid contract, the borrower becomes the owner of the asset and bear the risk of its destruction (art. 2160 Civil Code 2009).

Thus, the legislature recognizes explicitly that the transfer of property can not be separated from delivery of good (and possibly also from its conservation). Note also the "inconsistency" of the legislature of 2009, that although in the art. 4 Civil Code section 1174, refers to delivery as a condition for its validity "(a real contract, sn), he can not find it necessary to remind it as one of the conditions of validity of the contract (in general) specifically provided for in art. 1179 Civil Code.

d) The loan, real and unilaterally agreement?

We recall that the important institution of civil law, which is a contract, has the general meaning of an agreement (agreement) between two people, ended in the law to achieve their interests.

Consequently, the loan, the lender and borrower agree to transfer ownership or possession and use of things, or sharing an interest free.

Please note that it is a widely accepted principle according to which the will is the basis of the law (wills of the parties to the contract). Thus, the borrower wants to use the good for a period of time, and the lender wants to do an free act or get money (interest).

Consequently, the agreement of wills made under the law, ending the loan agreement, which takes effect (the parties wills materializes). In this case, the main effects of the loan means the transfer of ownership or the use of temporary work (including their component materials: teaching work) and price (interest).

In the above context, that the transfer law is a legal obligation (derived directly from the contract) and teaching (delivery) work can only be an obligation of the borrower.

Per a contrario, it would have to admit that teaching a given amount borrowed money could be made during training contract, so the above agreement of wills (and the end of contact) and not afterwards, which is logically untenable.

Please note that the issue in question was examined in the European doctrine, the conclusion of the authorized views are that: the real teaching contract, may not have the legal nature of a condition of validity, at least on the grounds that returning the (material) the work is a "matter of fact" which involves the action of a party in the execution of the contract (eg free loan agreement "delivery is not a condition of contract formation, it is the first act of execution[16]").

Of course, the above means accepting reality and accept the necessary consequences that are important, for example, contracts such as loan, deposit, pledge: there are unilateral, but reciprocal obligations are contracts (subject to termination).

Furthermore, we underline that the European doctrine institution "real contract" (the Romanian origin) is considered obsolete, supporting that for abandoning the "real contracts category" (the only notable exception that could materialize ... real contract hand is the gift[17]. "

Similarly, French law has already decided that the loan of money agreed by a professional credit is no longer considered real contract, but consensual[18].

Our opinion is in favor of maintaining the of 'real' character of free loan agreement, deposit, gift, manually, because the term expresses their special nature, since their conclusion can only be designed together.

In conclusion, we may say so, that the term "real contract" has the meaning of a "contract of work accomplished by effective delivery".

NEW DISPOSITIONS WITH REGARD TO FILIATION

DAN LUPAŞCU[*] CRISTIANA MIHAELA – CRĂCIUNESCU[**]

Abstract
The new Romanian Civil Code[1] is a milestone for the profound reform of our judiciary as regards the matter of private law relationships, on the grounds of valuating the national and international experience.[2] The novelties are represented, mainly, by the review of certain legal institutions and promotion of new principles and solutions. On this backdrop, the regulation of family relationships also received a new face.
The present task is devoted to highlighting the amendments interfered in the matter of filiation, by presenting the systematization method of legal regulations and the critical analysis of its content.

Key words: *filiation, paternity presumption, donor assisted human procreation, possession of status, legal timeframe of conception*

I. Introduction

Filiation, the subject of this paper represents an important landmark to all law systems as it provides the rules that guarantee the child's rights to know his/her parents and the duties of all parents regarding the education and care for their own children.

The new Civil Code reiterates the existing rules but also provides for innovations and settles the dispositions regarding filiation against the new issues imposed by the evolution of Romanian society, doctrine and judicial practice. The protection of child's rights and the best interest of the child with regard to filiation remain a priority objective of the new regulation.

Considering both the importance and the innovation character of the regulation of filiation issues, we feel that a systemic approach of the issues is not only necessary but also useful, having in mind that there are few literary references to this subject.

We undertake to elaborate a general presentation of the new legal norms regarding filiation both in terms of theory and practice.

II. General aspects regarding filiation

1. Definition of filiation

Filiation is the descendent relationship between a child and his parents.[3]

It usually consists of a biological relationship resulted from conception and birth. In some cases (assisted procreation, donor assisted procreation, unjustified application of the paternity presumption and wrongful maternal or paternal acknowledgement), filiation does not entail a biological relation.

2. Filiation reference

---

[*] Associated Professor, Ph.D., Law Faculty, "Nicolae Titulescu" University, Bucharest, judge and president of the Bucharest Court of Appeal (e-mail: stanciulescu.liviu@gmail.com)

[**] Ph.D., judge and director of the National School of Clerks

[1] Adopted by Law 287/2009, published in the Official Journal, Part I, no. 511 of 24 July 2009.

[2] Sources of inspiration were mainly the legislation of: France, Italy, Netherlands, Spain and Canada – Province of Quebec, and also a series of international regulations.

[3] Please see: A. Ionaşcu, M. Mureşan, M.N. Costin, V. Ursa –*"Filiation and protection of minors"*, Editura „Dacia", Cluj – Napoca, 1980, page 14.

The new civil code regulates filiation in chapter II, Second Book, Title III (art. 408 – 450), structured in 3 sections, namely: Section 1- establishment of filiation: Section 2 –Donor assisted procreation; Section 3 – Legal status of children .

III. Establishment of filiation

1. Means for establishing filiation

1.1. General aspects

Acknowledgement of filiation consists of the procedures that attest the legal fact or act proving the descendent relationship between a child and his parents.

Establishment of filiation is rather different considered the mother's or the father's side in questions.

The new legal norms maintain the existing legal provisions regarding the acknowledgement of filiation[4].

Thus, maternal filiation is the result of giving birth to the child, which applies both to marriage filiation and to out of wedlock filiation. This means that maternal filiation implies of proof of the following elements: a) the mother gave birth to the child; b) identity between the born child and that whose filiation is in question; c) proof of marriage (only in the case of marriage filiation).

In cases strictly provided for, maternal filiation is established by acknowledgement and court decision.

As regards parental filiation, it can be results out of application of the presumptions of paternity. In these cases indivisibility arises in the sense that if maternity filiation is established, the paternal filiation is not questionable.[5]

Paternal filiation for the child born out of wedlock is established through acknowledgement and court decision[6].

In order to produce legal effects, filiation must be proven, as prescribed by law. As a rule, civil status is proven with acts produced by the civil service officers and the civil office certificates handed to the parties. Thus, proof of filiation is made through the act of birth [7] of the respective person and the birth certificate produced on the basis of the former. For the children born inside a marriage, the marriage must be proven through the act of marriage and the marriage certificate.

Proof of maternal filiation is made through the certificate attesting the birth, which is a medical act and is not to be confounded with the birth certificate. The certificate attesting the birth proves not only the physical act of birth but also the identity of the child[8].

---

[4] Please see Family Code (Law no. 4/1953) republished in the Official Bulletin no. 13/ 18.04.1956, as subsequently amended and modified.

[5] The attestation of paternity for the child born inside marriage through the paternity presumption is embraced by all legal systems, as an application of the principle „*pater est quem nuptiae demonstrant*" (Ingeborg Schwenzer (editor) – *Tensions Between Legal, Biological and Social Conceptions of Parentage*, Ed. Intersentia, Antwerpen-Oxford, 2007, page 5).

[6] According to article. 3 of the European Convention of the legal status of children born out of wedlock, Strasbourg, 15th of October 1975, ratified by Romanian through the Law no. 101/1992, published in the Official Monitor, no. 243 /10.09.1992: „ Paternal filiation of all children born out of wedlock may be acknowledged or attested through voluntary acknowledgment or court decision.

[7] In the sense that the birth act represents, by excellence the ultimate proof of birth please see: C. Hamangiu, I. Rosetti – Bălănescu, Al. Băicoianu –*Romanian Civil law Treatise*, Editura „Academiei", Colecția „Restitutio", București, 1997, Vol. I, page. 285.

[8] Pleasse see: Sc. Șerbanescu – *Family Code, amended and modified*, Editura „Științifică", București, 1963, pag. 157; T.R. Popescu – *Family Law, Vol. II*, Editura „Didactică și Pedagogică", București, 1965, pag. 27; I. P. Filipescu – *Family Law,*, Editura „Didactică și Pedagogică", București, 1965, pag. 146. In the sense that this act does not refer to the identity of the child, please see : P. Anca –*Maternal filiation*, în lucrarea „Kinship in the law of the Romanian Socialist Republic.", Editura „Academiei", București, 1966, pag. 32.

During judicial proceedings before the courts, proof of filiation is made through all legal means of proof, as prescribed by law. The evidentiary force of the act of birth is consolidated through the possession of status in conformity with the former.

1.2. Possession of status

Unlike the former regulations, art. 410 para 1 of the new Civil Code defines the possession of status as " the factual situation indicating the ties of filiation between the child and the family he/she is presumed to belong to". Thus, a relative presumption of filiation is introduced here.

Following, examples are provided to give clues about filiation, such as:

" a) a person behaves towards the child as if it were his own, taking care of raising and educating him/her and the child behaves towards this person as towards his/her parents;

b) the child is recognized by the family, society and if the case may be, by the public authorities as being the child of the person presumably considered his/her parent;

c) the child has the name of the person presumably considered his/her parent."

Possession of status must fulfill the following conditions:

a) it must be continuous, meaning without presenting unjustified interruptions. From this point of view, several difficulties may arise if there are lacks in the raising and education process of the child, but the subjective attitude of the parent will be decisive;

b) it must be peaceful, without any violence;

c) it must be public, meaning that it is not exercised secretly and is made known to all interested parties;

d) it is unquestionable, meaning that it provides a clear significance of the relevant circumstances.

If the possession of status and the act of birth are concordant, as for instance both point to the same woman as mother of the child, then in principle the maternal filiation cannot be questioned neither by the child - requesting another civil status - nor by other persons - contesting the respective civil status.[9] Accordingly, we are in the presence of a presumption that the civil status resulting from the act of birth and the possession of status corresponds to reality.

In exceptional cases, situations may arise when such a presumption does not correspond to reality, as for instance when children have been substituted at birth or when a woman is registered as mother of the child and she is not the one who gave birth to the child. In these circumstances, legal action in court is admissible to establish the real maternal filiation, any legal means of evidence being admissible.

1.3 Presumption regarding the legal timeframe of conception

In order to prove the maternity of the child born inside marriage and out of wedlock, the presumption regarding the legal timeframe of conception applies, as prescribed by article 412 of the new Civil Code in the same lines as the existing article 61 of the Family code, namely:

"The timeframe between the 300th day and the 180th day before the birth of the child represents the legal timeframe of conception."

However, it must be mentioned that where the uterus presents several malformations

(double cavity, for instance), the legal timeframe of conception must be determined separately for each child conceived and grown in different cavities of the uterus.[10]

We are in the presence of a legal relative presumption that can be overturn in judicial proceedings through scientific evidence. Thus it can be proven that the child was conceived in a certain period of the 121 days or even outside the legal timeframe of conception, this being one of the newly introduced issues.

[9]Please see: article 411 alin. (1) şi (2) of the new Civil Code.

[10]Please see: D. Lupaşcu –*Family Law*, ediția a V-a, Editura „Universul juridic", Bucureşti, 2010, page 220.

2. Paternity presumption [11]

According to article 414 para 1 of the new Civil Code" the child born or conceived during marriage is fathered by the husband of the mother". This provision entails the following aspects:

a) the child was conceived during marriage;

b) the child was conceived before the marriage but was born inside the marriage;

c) the child was conceived during marriage but was born after the divorce, annulment or termination of the marriage.

The new norms do not contain the former disposition prescribed by article 53 para 2 of the Family Code regarding the child conceived during marriage and born after the divorce, annulment or other termination of marriage, in which case the paternity presumption favors the ex - husband of the mother on the condition that the birth takes place before the subsequent remarriage of the mother.

This omission does not mean a change of the view of the Romanian legislator in this respect, thus the solution remains the same – as deduced from article 414 para 1 of the new Civil Code –in the sense that if the mother remarries, the spouse of the mother from the subsequent marriage is presumed the father of the child.

The paternity presumption is applicable ope legis, any wrong or incorrect data in the act of birth of the child being irrelevant (this could point to an unknown father or other person than the mother's spouse)[12].

As regards the legal nature, we are in the presence of a mixed presumption that can be overturned exclusively through an action to contest paternity, in the conditions strictly provided for by law.

We must underline that the legal norms mentioned above institute a preference order, in the sense that the child born during marriage is preferred to the one only conceived during marriage. This envisages the solution in case paternity is contested, thus father of the child will be considered the mother's spouse in the subsequent marriage.

3. Establishment of filiation through voluntary acknowledgement [13]

3.1. Definition

Through voluntary acknowledgement a person, unilaterally declares or attests the filiation bond between him/her and the child he/she pretends to be his/her child. It represents a civil status act, in the meaning of negotiun juris and must be registered in the civil status registries.

Voluntary acknowledgment may be used to establish both maternal and paternal filiation.

3.2. Legal nature

Voluntary acknowledgement is of a mixed legal nature: on the one hand it is a manifestation of intent/will that produces legal effects – with regard to the filiation between the parent and the child – and, on the other hand, it is a means of evidence (a confession to a previous legal fact).

---

[11] In the sense that the former norms [art. 53 para (1) şi (2) of the Family Code) contain 2 paternity presumptions, please see: I. Albu – *"Family Law*,, Editura „Didactică şi Pedagogică", Bucureşti, 1975, page. 112; I. Bohotici –"*Establishment and contestation of paternity"*, Editura „Cordial Lex", Cluj – Napoca, 1994, page 14 – 15. In the sense that there is only one paternity presumption, please see: I. P. Filipescu, A.I. Filipescu – *Family Law Treatise*, Editura „All Beck", Bucureşti, 2001, page 302.

[12] Please see: I.P. Filipescu, A.I. Filipescu – *op. cit.*, page 303

[13] With regard to the establishment of filiation through acknowledgement, please see: A. Bacaci, C. Hageanu, V. Dumitrache –*Family law*, Editura „All Beck", Bucureşti, 1999, page 151 şi urm.; R. Petrescu –*Legal action regarding the persons' civil status*, Editura „Ştiinţifică". Bucureşti, 1968, page 165 şi urm.; I.P.Filipescu, A.I. Filipescu – *op. cit*., page 284 şi urm.; A. Corhan – *op. cit*., page.301 and next.; E. Poenaru –Recognition through will of the child born out of wedlock în Revista „Justiţia Nouă" nr. 3/1956, page 463; A. Ionaşcu, M. Costin, M. Mureşan, V. Ursa – *Filiation and protection of minors*, Editura „Dacia", Cluj – Napoca, 1980, page 23

Its legal nature also imprints the applicable regime, meaning that it should comply both with the rules which are specific to unilateral judicial acts and those regarding confession. Notwithstanding the common law, the recognition of lineage is valid even when it is made by a person lacking legal capacity or having limited legal capacity, without legal representation or the preliminary approval of the legal guardian being necessary. The only requested condition, from this point of view, is the existence of discernment at the moment of recognition.[14]

Also, acknowledgement is irrevocable, which means that it is irreversible, even if it was made by testament. However, this doesn't prevent the author to challenge it in the case of recognition by error, due to the fact that the essence of revocation is different than the one of the challenge.

3.3. Cases of acknowledgement

The new regulation maintains the current cases in which the acknowledgement of the child is possible, as follows:

1) in the case of maternity: a) the birth was not registered in civil status registries; b) the child was enlisted in the civil status registries as being born from unknown parents;

2) in the case of paternity: the child was conceived and born outside marriage.

The law doesn't distinguish with regard to the reasons for which the birth was not registered in the civil status registries, situation in which we must consider any situation related to this case (for example: the inexistence of the registers; the omission of registration by fault of the civil status officer; loss or deterioration of the registries, etc.).

An issue under the old regulations (and which, for the same reasons, is also maintained until present) is that of admissibility of acknowledgement (especially the recognition of lineage towards the mother), occurred before the birth of the child.

Some authors[15] estimate that the acknowledgement of the child before birth is not possible, because cases of establishing the maternal filiation through recognition refer exclusively to born children. Moreover, if the mother would decease immediately after the birth of the child, before she would register the child as being born, or the child would be registered as being born of unknown parents or not registered at all, proof of filiation is available through any means of evidence in a court of law[16].

Other authors[17] – whose opinion we agree with – consider this acknowledgement admissible, under the suspensive condition that at birth, the child would be in one of the limited situations provided by law in which the recognition may be made. The decisive argument is that, according to art. 36, first thesis, of the new Civil Code: „The rights of the child are recognized from conception, but only if he is born alive." Among these, there is also the right to civil status, as an attribute of identification of the natural person.[18]

The doctrinal dispute with regard to the admissibility of maternal recognition of the deceased child is ended by the express provisions according to which:"After the demise of the child, he can be recognized (both by the mother and father – s n.), only if he left natural descendants.[19]

Both minors and the adults may be thus acknowledged, the law expressly establishing such a solution.[20]

---

[14] In this regard, art. 417 of the new Civil Code provides that: „The unmarried minor can recognize his child by himself, if he has discernment at the time of recognition."

[15] In this regard, please see: P. Anca – *op. cit*., pag. 32 and the following.; T.R. Popescu – *op. cit*., pag. 76 – 78.

[16] E. Ion, T. Moise – *Legal and genetic bases of legal and medical expertise on lineage*, „Medicală" Publishing House, Bucharest, 1990, pag. 26.

[17] See: A. Ionaşcu – *Liniage towards the mother,* in the work *„Linage and Minor's Care", op. cit.,* pag. 15 – 16; I. Filipescu – *op. cit*., pag. 268.

[18] See: art. 59 and 98 of the new Civil Code.

[19] See: art. 415 para. (3) of the new Civil Code.

3.4. Forms of acknowledgement

Due to the juridical effects that it produces, the recognition of the child is a juridical act of special importance, reason for which the law provided it with a solemn character, meaning that it should carry one of the limited forms provided by law, as follows: a) statement at the civil status office; b) authentic document; c) testament.

The recognition is a personal act, which, however, does not exclude the possibility for it to be made in the name of the mother or, as the case may be, the father, by a representative with a special and authentic power of attorney.

The acknowledgement is inscribed through a mention on the edge of the child's birth certificate and, if the registration of birth was not acknowledged, the birth certificate is written and the recognition is inscribed on the edge.

The statement of recognition may be made at any civil status office, but the mention on the edge of the birth certificate is inscribed only by the civil status office which produced that document.

The authority which issued the authentic document by which a person recognizes a child has the obligation to transmit *ex officio* a copy of this document to the competent civil status office, in order for the corresponding mention to be inscribed in the civil status registry.

3.5. The sanction for disrespecting the legal provisions regarding the recognition of the child

The recognition of the child must be made with the respect of the conditions for form and substance provided by law, and, moreover, they must correspond to the truth[21].

Breaching the conditions provided by law for the recognition of the child may impose the invalidity/nullity sanction, which may be absolute or relative.

The absolute invalidity occurs if a legal provision which defends a general interest is breached[22], and the relative invalidity sanctions the breach of a legal provision which defends a particular interest[23].

Art. 418 of the new Civil Code provides for three cases of absolute invalidity:

a) a child was recognized and his filiation, legally established, was not removed;

b) a deceased child was recognized and he did not leave any natural descendents;

c) the recognition was made in forms other than those provided by law.

Beside those situations, we estimate that the absolute nullity occurs also in the case when the recognition was not made by the parent personally or by representative with a special and authentic power of attorney. Practically, we are in the presence of a virtual invalidity, meaning that the sanction must be applied in order for the scope of the breached legal provision to be reached.[24]

With regard to the applicable legal regime, absolute invalidity/nullity of the recognition is imprescriptible and may be invoked by any interested person, by legal action or exception. Also, the court is obliged to invoke the absolute invalidity ex officio.

If the previous established filiation was removed through a court decision, the recognition is valid and we are in the presence of a validation of this unilateral legal act by covering the invalidity.

The recognition may be annulled in the case of vitiation of consent, by error, dolus or violence.[25] The express provision of this sanction removes another controversy of our legal doctrine.[26]

---

[20] According to art. 413 of the new Civil Code: „The provisions of the current chapter referring to the child are applicable also to the adult whose lineage is under investigation."

[21] See: Al. Oproiu – *Cases of absolute invalidity of recognition*, Law Review „Justiția Nouă" no. 1/1961, pag. 131; T.R. Popescu – *op. cit.*, pag. 159.

[22] See: art. 1325 corroborated with art. 1247 para. (1) of the new Civil Code.

[23] See: art. 1325 corroborated with art. 1248 para. (1) of the new Civil Code.

[24] With regard to the virtual invalidity: see art. 1253 of the new Civil Code.

[25] See: art. 419 para. (1) of the new Civil Code.

The case when the parent did not have discernment in the moment of recognition is added to those presented above. It also regards an express provision of the relative invalidity.[27]

The action for annulment of recognition may be exerted only by the parent whose consent was vitiated or who had not discernment at the moment of recognition.

The term of extinctive prescription is 3 years[28] and starts „(…) from the date when the violence ceased or, as the case may be, when the dolus or error was discovered"[29]. We observe that with regard to error, there is a derogation from common law[30], meaning that an objective moment for the start of the prescription is not instituted anymore, respectively „(…) not later than 18 months from the day when the legal act was signed."

As regards the annulment for lack of discernment, we consider that the prescription term starts "from the day when the rightful person, his representative or the one called by law to approve or to authorize his acts, became aware of the invalidity cause, but not later than 18 months from the day when the legal act was signed."[31]

The relative invalidity of the recognition may be confirmed.

4. Court actions regarding filiation

Both in the case of lineage towards the mother and towards the father, the law provides the possibility for filing court actions.[32]

4.1. Actions for contesting filiation

4.1.1. Action for contesting filiation established by birth certificate

In this situation, we are in the presence of a complaint against the possession of status, which aims at the removal of a lineage, alleged unreal, and its replacement with another, alleged real.

The action for contesting filiation may be exerted in the case when the lineage is established by birth certificate, which is not in accordance with the possession of status.

This action may be filed by any interested person and is imprescriptible.

In court, the proof of the alleged real filiation is made through the medical certificate of birth, through forensic expertise for establishing the lineage or, if the certificate is missing or, in the case when the expertise cannot be carried out, in principle through any type of proof, including the possession of status. With regard to the testimonial evidence, this is admissible only in the following cases: a) a child substitution took place; b) another woman, other than the one that gave birth, was registered as the child's mother; c) there are documents which make the action trustable.

4.1.2. The action for contesting child acknowledgement

Recognition of filiation, if it is not in accordance with the truth, may be contested by any interested person, including the recognized child, by means of a court action.

---

[26] See: Al. Oproiu – *Is it possible to file an action for annulment of lineage recognition on grounds of incapacity or vice of consent?*?, in The Law Review „Legalitatea populară" no. 9/1961, pag. 51 and the following; Sc. Şerbănescu – *Family Code, commented and annotated*, „Ştiinţifică" Publishing House, Bucharest, 1963, pag. 160 and the following.; Ghe. Nedelschi – *Note to the Decision no. 54/1955 of the Bucharest Tribunal*, in the Law Review „Legalitatea populară" no. 4/1955, pag. 431 and the following; P. Marica – *Controversial aspects in Family Law*, In the Romanian Law Review no. 7/1967, pag. 101 – 102; T.R. Popescu – *op. cit.*, pag. 161 and the following.

[27] See: art. 1325 corroborated cu art. 1205 of the new Civil Code.

[28] See: art. 2517 of the new Civil Code.

[29] See: art. 419 para. (2) of the new Civil Code.

[30] See: art. 2529 para. (1) lit. c) of the new Civil Code.

[31] See: art. 2529 para. (1) lit. c) of the new Civil Code.

[32] With regard to the court actions for lineage issues, see, for example: A. Corhan, *op. cit.*, pag. 289 and the following.

Contestation against recognition may be intended also by the author of recognition, even if at the date of recognition he was not in error, because the civil status data of the person must correspond to the truth, the person's status being of interest both for him/her and for the society.[33]

Such an action is imprescriptible and any means of proof admitted by law may be used as evidence.

As a rule, the burden of proof is incumbent to the claimant. Art. 420 para. (2) of the new Civil Code deviates from this rule, stating the following: „If the recognition is contested by the other parent, by the recognized child or by his descendents, proof of filiation must be made by the author of recognition or his heirs."

4.1.3. The action contesting paternal filiation inside marriage

The action for contestation of paternity within marriage aims at removing wrongful or fraudulent application of the paternity presumption.

In such a situation, the child was wrongly registered, as being from marriage and having the mother's husband as father although: 1) the child was born prior to the marriage of parents; 2) the child was born after 300 days since the cessation, or as the case may be, or dissolution or annulment of marriage; 3) the child's parents have never been married.

This action is imprescriptible and may be introduced by any interested person, including the child.

4.2. The action for establishing filiation

4.2.1. The action for establishing maternal filiation

The action for establishing the maternal filiation is an civil status reclamation in order to determine the lineage relation between the child and his mother.

This action may be introduced in the following situations:

a) when, for any reason, the proof of lineage towards the mother cannot be made through the birth certificate;

b) when the reality of those written in the birth certificate is contested.

With regard to the first situation, under the influence of the old regulation, in the legal literature[34] it was underlined that the action's admissibility is conditioned by the absolute impossibility to establish maternity, and not when a temporary obstacle exists, such as, for example, the hypothesis of reconstruction or subsequent elaboration of the civil status act. Also, the action is inadmissible if the birth declaration can be made at a later time.

With regard to the second case, it is not sufficient to contest the reality of those comprised in the birth certificate, but the legal possibility for such contestation must exist, for example in the situations when there is no concordance between the birth act and the possession of status.

We should underline that, within the same action, it is possible to contest the reality of the mentions on the birth certificate and to claim a different marital status, not requiring two separate actions.

Action for determining maternity has a personal character, the child being the bearer of it. If the child lacks the capacity to exercise his rights, the action is introduced, in his name, by the legal representative.

If the child died subsequently to the introduction of the action, his heirs can exert it, according to the law. Even more- unlike the previous regulation- the heirs of the child can introduce the action (if it was not prior introduced by the child).

---

[33] See: T.J. Hunedoara, civil decision no. 1303/1979, în the Law Review Revista Română de Drept no. 11/1979, pag. 67.

[34] See, for example: A. Bacaci, C. Hageanu, V. Dumitrache – *op. cit.*, pag. 156; A. Corhan – *op. cit.*, pag. 300.

In our opinion, according to the procedural provisions, the prosecutor[35] can introduce or continue such an action every time it is necessary in order to protect the legitimate rights and interests of minors, of persons under interdiction and of disappeared persons.

The alleged mother has passive locus standi and, after her death, the heirs of the alleged mother.

The right to introduce an action is inalienable. If the right was not exerted by the child, his heirs, in case the child dies, can introduce the action within on year (calculated from the date of the child's death). Within such an action, it should be proven both the fact of birth by the woman against whom the action is exerted and the identity of the born child to that the holder of the action.

In terms of probation, any means of proof admitted by law can be used.

4.2.2. The action fore establishing paternity outside marriage

The action for establishing paternity outside marriage is an action in civil complaint, which is to establish the lineage between the child out of wedlock and his father, when the latter does not recognize the child.

Unlike the prior regulations - when the child and his mother were holders of the action - the new provisions state that the action belongs to the child and can be introduced, in his name, by the mother, even if she is underage, or by the legal representative of the child.

The right to introduce the action in determining paternity outside marriage is not submitted to statutory limitations during the child's life.

If the child died subsequently to the introduction of the action, his heirs can exert it, according to the law. If the child died prior to the introduction of the action, his heirs can introduce the action within one year from his death.

Also, the prosecutor can introduce the action, according to the provisions of the Civil Procedural Code.

The alleged father has the passive locus standi, and after his death this quality passes to his heirs, even if they have renounced the estate, because the action has a personal character.[36]

In case of *plurium concubentium* it is possible to summon all men with whom the mother had intercourse during the timeframe of conception.

In order to establish paternity for a child born outside marriage, the following elements need to be proved: 1) the birth of the child; 2) the intimate liaisons between the alleged father and the mother during the legal timeframe of conception[37]; 3) the fact that the child resulted from such relations.

These elements can be proved by any evidence admitted by law, including by hearings of relatives, except for the descendents.

If the defendant recognizes the child as his own, such a voluntary acknowledgement stands for recognition of paternity in authentic form.

Art. 426 of the new Civil Code provides for a relative presumption of paternity in the hypothesis that the alleged father lived together with the mother during the legal time of conception.

---

[35] Concerning the action introduced by the prosecutor, see, for example: V. Pătulea -Regarding the prosecutor's right to file an action in order to establish the lineage of minor children out of wedlock, in the Legal Magazine „Legalitatea populară" no. 10/1960, p. 56; E. Poenaru – The prosecutor's action to file a civil action and establishing strictly personal rights,, in the Legal Magazine „Justiția nouă" no. 2/1964, p. 60 and the following.; P.A. Szabo – Problems related to the civil action of the prosecutor, in the Legal Magazine „Justiția nouă" no. 7/1956, p. 127 and the following.

[36] See: T.R. Popescu, op. cit., p. 77.

[37] See: Supreme Court of Justice – Civil Section, decision no. 2264/1992, in the paper „Law problems from the decisions of the Supreme Court of Justice 1990 – 1992", „Orizonturi" Publishing House, Bucharest, 1993, p. 184 – 186.

In such a case, evidence is no longer necessary for proving intercourse and its result, but the alleged father is called upon to prove - in order to remove such presumption - that he cannot have conceived the child.

The cohabitation of the mother with the alleged father involves living in same household or the existence of stable, continuous contact.[38]

It is worth mentioning that only cohabitation leads to such presumption, and not other situations, like, for example, financially supporting the child.

The new Civil Code provides for a special regulation on the compensation the mother is entitled to ask from the alleged father, concerning the expenses made during pregnancy, birth and puerperium/post partum confinement. Thus, she may ask and obtain from the alleged father the following: a) half of the expenses at birth and puerperium; b) half of the expenses made with her living expenses during pregnancy and puerperium.

Such legal action can be introduced within 3 years from the birth of the child.

The compensation can only be requested if the action for determining paternity was introduced, even if the latter is still pending.

If the action for determining paternity will be irrevocably dismissed and if the compensation were granted during this period of time, we consider that there is no reason for keeping them, the defendant can regress against the child's mother for unjust enrichment.

Compensation may be claimed even if the child was born dead or died before issuing the decision establishing paternity.

For any other prejudice caused by the alleged father, the mother of the child and her heirs have the right to compensation according to common law provisions.

4.3. Action in denial of paternity

Action in denial of paternity is an action that aims to remove the paternity established by applying the presumption of paternity.[39]

According to art. 414 (2) of the new Civil Code, „The paternity can be contested, if it is not possible for the mother's husband to be the father of the child." The cases that fall under this general rule may differ, for example: a) the physical impossibility to procreate; b) the material impossibility of cohabitation; c) the moral impossibility of cohabitation, etc.

The new provisions extend the sphere of persons entitled to formulate the action, giving this possibility also to the alleged biological father, as well as to the heirs of the mother's husband, the heirs of the mother, the heirs of the alleged biological father and the heirs of the child.

Considering the holder of the action, we distinguish the following situations:

1) When the action is introduced by the mother's husband, the child is the defendant; if the child is a minor under the age of 14, he will be represented by the mother or by the legal representative; after reaching this age, he will sit alone in court, assisted by the mother or the guardian.

If the child is deceased, the mother's husband introduces the action against the child's mother and, if the case, against any other heirs of the child.

The mother's husband can introduce this action within 3 years, calculated either form the date that he learned he is the alleged father of the child[40], or from a subsequent date, when he learned that

[38] See: Supreme Court of Justice – Civil Section, decision no. 779/1990, in the paper Law problems from the decisions of the Supreme Court of Justice 1990 – 1992", op. cit., p. 180 – 181.

[39] For other definitions, see, for example: C. Hamangiu, I. Rosetti-Bălănescu, A. Băicoianu –Civil Law Treatise, Vol. I (republishing), „All" Publishing House, Bucharest, 1996, pg. 479; A. Corhan – op. cit., p. 309.

[40] For a de lege ferenda proposal in this respect and critics to the previous solution, according to which the deadline is calculated from the date that the father learned about the birth of the child, see: F.A. Baias, M. Avram, C. Nicolescu – Changes brought to the Family Code trough Law no.288/2007, in the Legal Magazine „Dreptul" no. 3/2008, p. 35.

the presumption of paternity does not correspond to reality. If the husband died before the expiry of the deadline and did not introduce the action, his heirs can introduce it within one year from his death.

For the husband put under interdiction, the action can be introduced by a guardian, or, failing that, by a court appointed trustee.

It is worth mentioning that the deadline for introducing the action in denial of paternity is not calculated against the husband put under interdiction, the husband being able to introduce the action within 3 years calculated from the ceasing of the interdiction, if such action was not introduced by a guardian or trustee.

2) When the action is introduced by the mother, the mother's husband is the defendant, and if he is deceased, his heirs;

The mother can introduce the action within 3 years, calculated from the birth of the child.

For the mother put under interdiction, the action can be introduced by the guardian or, failing that, by a court appointed trustee.

The deadline for introducing the action is not calculated against the mother put under interdiction, she will be able to introduce the action within 3 years calculated from the ceasing of the interdiction, if such action was not introduced by a guardian or trustee. Also, if the mother died before the completion of the 3 years deadline, without introducing the action, it can be introduced by her heirs, within one year from her death.

3) When the action is introduced by the alleged biological father, the passive locus standi is incumbent to the child and the mother's husband, and if they are deceased, the action is introduced against their heirs;

Unlike the previous 2 holders of the action, the right to introduce the action does not prescribe during the lifetime of the alleged biological father. If he deceased without introducing the action, his heirs can introduce it within one year calculated from his death.

If the alleged biological father is under interdiction, the action can be introduced by the guardian or, failing that, by a court appointed trustee.

It is extremely important to note that the law imposes the condition that the alleged biological father is due to prove his paternity, in order to have his action in denial of paternity admitted.

4) When the action is introduced by the child, the mother's husband will be called upon in court, and, if he is deceased, the action is introduced against his heirs.

We consider that the provision stating that: "The action in denial of paternity is introduced by the child's legal representative, if he is a minor" can be criticized.[41]

In our opinion, the underage child having full capacity of exercise can introduce the action by himself. Also, the child of 14 years old can promote the action by himself, without needing any previous consent, taking into consideration that the right is personal and non-patrimonial.

The right to introduce the action is cannot be subject to statutory limitations prescribed during the child's life, as well as in the case of the alleged biological father.

If the child dies before the action is introduced, it can be initiated by his heirs, within one year from his death.

4.4. The action for contesting paternal filiation inside marriage

Misapplication of the presumption of paternity to the child registered civil status, as being born in wedlock, although he was born before marriage or was conceived after a period more that three hundred days after the dissolution of marriage or whose parents were never married may be the subject of an action challenging the paternal filiation of the respective spouse.

Such an action is not expressly provided for by law, but it is a creation of the doctrine[42] and received jurisprudential applications.

[41] See: art. 433 (1) of the new Civil Code.

According to art. 434 of the new Civil Code, the action for contesting the paternal filiation inside marriage is regulated in the same line as the actions concerning the civil status of the person. Thus, the active locus standi belongs to any interested party, and the right to action is not subject to prescription.

By admitting such an action, the presumption of paternity wrongly or fraudulent applied is removed and the child becomes, retrospectively, child out of wedlock, which will have implications on the name, parental care, residence, the obligation to ensure support, etc.[43]

IV. Medically donor assisted procreation

Firstly regulated in Romanian law, the medically donor assisted procreation represents a solution for the straight couples or single women who want a child and cannot bear a child naturally.

The new Civil Code regulates[44] in detail the juridical situation of children conceived through such a method. The regulation is meant to ensure the conditions necessary for the interested persons to choose such a procreation method, the confidentiality of the act, as well as the parental relations concerning a child conceived in such a manner[45].

Third donor procreation is not expressly defined by the new regulatory framework. However, judging from the legal provisions governing its effects, one can deduce that it is a human reproduction method, using specific medical techniques and genetic material that may belong not only to those who will act as parents to the child so conceived, but also to other donors. [46]

According to article 441 of the new Civil Code, persons who may resort to this procreation method may be a couple consisting of a man and a woman or a woman alone, who shall act as parents of the child so conceived. This is quite a permissive approach, also offering to single women the opportunity to have babies[47].

---

[42] Known under different designations, as: „contesting the paternity of the child wrongly registered from wedlock" „action in contesting paternity", „contesting the paternity of the child apparently from wedlock", „contesting the filiations from wedlock", „contesting the paternity of the child from wedlock"(Emese Florian –Family Law, ed. 3, C.H.Beck Publishing House, Bucharest 2010, p. 325), „contesting the filiations against the father in the marriage" (Alexandru Bacaci, Viorica-Claudia Dumitrache, Codruța Hageanu – Family Law, ed. 4, All Beck Publishing House, Bucharest, 2005, p. 198), „contesting the paternity from marriage" (Dan Lupașcu – Family Law 5th Edition, amended and revised, op. cit., p. 200).

[43] Alexandru Bacaci, Viorica-Claudia Dumitrache, Codruța Hageanu – op. cit., p. 198; Emese Florian – op. cit., p. 325; Dan Lupașcu – op. cit., p. 201.

[44] The medically donor assisted reproduction is regulated in art. 441 – 447 of the new Civil Code. These provisions will be completed by special law concerning the legal regime, ensuring the confidentiality of information, as well as the way of transmitting such information.

[45] Such method of procreation is also regulated in other law systems. Thus, in France, 2 laws adopted on the 29th of July 1994 regulated this institution, one concerning the „human body", and the other one concerning the utilization of its „products" and the medically assisted procreation (see, Alain Bénabent – Droit civil de la famille, 9-ème édition, Ed. Litec, Paris, 2000, p. 360). Same provisions are found in the law of other countries, like: Austria, Netherlands, Spain, Japan, Switzerland, etc. For details: Ingeborg Schwenzer (editor) – Tensions Between Legal, Biological and Social Conceptions of Parentage, Intersentia, Antwerpen-Oxford Publishing House, 2007, pg. 9.

[46] The French Public Health Code defines the medical assistance for procreation within article 152-1 of the Law no. 94-654 of 29 June 1994, also maintained after the amendment occurred through the Ordinance no. 2000-548 of 15 June 2000, as "clinical and biological practice allowing the *in vitro* conception, embryo transfer and artificial insemination, and any technique having an equivalent effect and allowing procreation outside of a natural process" ("*Code civil*" 103e edition, ed. Dalloz, Paris, 2004, page 348). For more details, please see: Veronica Dobozi (I), Gabriela Lupșan, Irina Apetrei (II) - Lineage within the medically assisted reproduction, "Law" Review no. 9 / 2001, page 41 et seq.

[47] The possibility to resort to such a procreation method is regulated differently by various law system; thus, while in United Kingdom, Austria or Spain it is not conditioned by the marital status of the person (in this sense: Lupșan Gabriela, Irina Apetrei (II) - *op. cit.*, p. 50), France recognizes as beneficiaries of such means of procreation solely the man and woman forming a couple or able to provide evidence of a common life of at least two years, who are

Using medically donor assisted procreation will generate problems as concerns the filiation/lineage of the children born this way. The regime of this situation was clearly regulated by the legislator.

According to article 441, paragraph (1) of the new Civil Code, no filiation connection shall be recognized between the third donor and the child thus conceived. Parents will always be those who have resorted to this method of reproduction. For this reason they must give their consent before a public notary, who will explain beforehand the consequences of this act on the future child's filiation, in terms of strictest confidence. Until the time of conception, this consent will remain void in case of death, an application for divorce, the separation of fact or of its revocation by those who have expressed it.

In this context, the maternal filiation will result from the act of birth[48], according to the principle *mater semper certa est (the mother is always certain).*

The paternal filiation is determined differently, depending on the marital status of the woman who gives birth to the child. Thus, in the case of a married woman, the father's child will be the mother's husband, by applying the presumption of paternity, under article 408, paragraph (1) of the new Civil Code. In the case of an unmarried couple, the paternal filiation shall be determined through recognition or, if the man who consented to medically assisted reproduction using a third donor refuses to recognize the child's parentage, by court order. His responsibility towards the mother and child is expressly provided by law[49] and we believe that this translates into the possibility of applying to this situation[50] the provisions of article 428 of the new Civil Code.

The specific feature of the filiation resulting from the use of this procreation method is that it can not be challenged by anyone, not even by the child born through this method, for reasons relating to medically assisted reproduction. The action to contest/ deny paternity may be filed only if the mother's husband did not consent to medically assisted reproduction with third donor, under the law. We believe that such an action can also be filed by the mother's husband who has revoked his consent before the time of conception, or if, during this period, one of the following circumstances occurs: an application for divorce or separation in fact (cases when, according to the law, the effects of the prior consent are removed).

The opportunity provided by article 443, paragraph (3) of the new Civil Code – regarding the actual application of the provisions regulating the denial of paternity if the child was not conceived in this way – tries to sanction the case where a mother's extra-conjugal relation, which the child might result from, would be disguised by the use of medically donor assisted procreation. We agree with other authors[51], that this legal provision is likely to jeopardize the immutability principle of the child's civil status. This is due to the fact that in an action of denial of paternity filed in the conditions set by common law, where the mother's husband, the mother, the child, the alleged biological father

---

alive and have a suitable age to procreate and who agree beforehand to embryo transfer or insemination. (*Code de la santé publique*, L. 2141-2, in *„Code civil"*, Dalloz, Paris, 2004, p. 348). There are also much more permissive legal systems, such as, for example, that in Quebec. According to the law here, heterosexual and homosexual couples, as well as single women have access to medically assisted procreation (Marie Pratte - *La tension entre la filiation légale, biologique et sociale dans le droit québécois de la filiation*, în Ingeborg Schwenzer (editor) - op. cit., p. 101. A similar situation can be found within the Greek law, where the medical assistance for procreation addresses heterosexual married couples or not, as well as single women (A.C.Papachristos – *Le droit hellénique de la filiation: parenté biologique et parenté socio-sentimentale*, in Ingeborg Schwenzer (editor) – *op. cit*., p. 211).

[48] According to article 408, paragraph (1). It is worth mentioning that the Romanian legislator has not provided the possibility of using the so-called "carrying mother" or "surrogate mothers", who keep the pregnancy and give birth to a child for another couple, child that will then be taken by his/her biological parents. Such a possibility exists in the laws of many states. For details, please see: Veronica Dobozi (I), Gabriela Lupşan, Irina Apetrei (II) - op. cit., p. 45, Emese Florian - op. cit., p. 356; Ingeborg Schwenzer (Editor) - op.cit, p. 10.

[49] Please see: article 444 of the new Civil Code.

[50] In this sense, please see also Emese Florian – *op. cit.*, p. 358.

[51] Emese Florian – *op. cit.*, p. 357

or the heirs of each of the above may have *locus standi*, it can easily be proven by scientific evidence that it is impossible for the mother's husband to be the father to the child, but it is not possible to prove whether or not the child's birth is due to medically assisted reproduction. And the negative consequences of the admission of such an action will reflect upon the child, whose filiation in relation to his/her father will remain not established.

The child conceived through medical intervention with a third donor will benefit from the parental care from the father his/her lineage was established to, under the same conditions as his natural child.

V. The child's legal condition

As concerns the legal condition of the child, the new regulations will reconfirm the equality in rights of children, irrespective of the fact that they are born in wedlock or outside it. This is actually a principle that was enshrined by the Romanian legislation since the Family Code was adopted. Thus, the law provides that the child born outside the wedlock whose lineage was established according to law has the same rights as the child born in wedlock against each parent and his/her relatives.

The difference lays only in determining the child's name, but the legislator has provided modalities converging to achieve the same solution for this case too. Thus, both the child born inside marriage and out of wedlock will have the name of one of his/her parents or the parents' names combined.[52]

VI. Conclusions

The new regulations regarding filiation bring a comprehensive and detailed approach of aspects concerning the meaning of the concept, establishing filiation to the mother and the father, the procedural means that interested persons may resort to in order to solve some practical problems in establishing lineage, as well as the cases in which lineage does not derive from the natural act of procreation. The analysis of these regulations requires a high complexity, especially given the fact that, by their nature, they comprise a number of sensitive issues, which may give rise to difficulties in their practical application.

That is why we believe that a thorough analysis, when relating to how similar rules in other legal systems are enforced, as well as the problems existing in the previous Romanian jurisprudence will prove to be of real support in the implementation of the new Romanian Civil Code.

DOCUMENTARY LETTER OF CREDIT IN THE REGULATION OF 600-PARIS PUBLICATION

VASILE NEMEŞ[*]

Abstract:
In the year 2007 was adopted the Publication no. 600 of Paris regarding the Rules and the Uniform Practices for documentary letters of credit which replaced the Publication no. 500.
Publication no. 600 (UCP 600) is applied to all the irrevocable documentary letters of credit when the parties make express reference to these Rules. The Publication no. 600 includes uniform rules, international practices and standards of irrevocable documentary letters of credit. The new Publication has brought a number of changes on the issues regarding the performance of the letters of credit, both in the relationship with the non-banking institutions participants and in the relationship between the credit institutions participating in the performance of the letter of credit.
This study, without being exhaustive, aims to capture the main aspects of novelty brought by the publication no. 600 and their legal approach to the new perspective of the international trade relations.
It has in view, in particular, the irrevocable character of the letter of credit, the elaboration method and procedure of the letter of credit, the participants to the unfolding of the specific relationship of the letter of credit and the main duties of the involved credit institutions.

Keywords: *letter of credit, Publication 600, documentary, irrevocable, chief accountant, issuing bank, confirming bank, nominated bank, beneficiary.*

Introduction

The documentary letter of credit is a payment method used in the international trade relations which implies, during its carrying out, the participation in the banking institutions.

In the specialty literature is considered that the documentary letter of credit may be considered as an autonomous bank guarantee[1].

The character of bank guarantee is expressed by the fact that the creditor (the beneficiary of the letter of credit), besides the debtor of the main legal relations, also has the irrevocable obligation of payment undertaken by the issuing bank of the letter of credit. At the same time, as we shall see below, the letter of credit may be confirmed by the confirming bank, which means an extra obligation of payment incumbent to the confirming bank. Therefore, it is possible that, by issuing the letter of credit, besides the debtor's obligation undertaken within the main relationship, the creditor may obtain the obligation of payment from the issuing bank or, where appropriate, the confirming bank. Undoubtedly, by this method is provided a guarantee for cashing the money by the beneficiary creditor.

The main regulation of the documentary letters of credit is the Publication no. 600 regarding the uniform rules and practice of the letters of credit provided by the International Chamber of Commerce - Paris (UCP-600).

Publication 600 has entered into force on 1st of July 2007[2] and shall be applied to the letters of credit executed after this date.

1. Concept and legal character
Preliminary specifications

The definition of the documentary letter of credit may be found in the Publication no. 600 which foresees its main legal characters.

1.1 Notion

Publication no. 600 defines the letter of credit in the article 2, as being any arrangement, however named or described, which is irrevocable and thereby constitutes a firm commitment of the issuing bank to honor a proper presentation[3].

Within the outlook of Publication 600, to honor a letter of credit means:

a) to pay at sight if the letter of credit is usable at sight;

b) undertaking a commitment to pay on time and the payment at maturity if the letter of credit is usable by payment at deadline;

c) acceptance of a promissory note drawn by the beneficiary and payment at maturity if the letter of credit is usable by acceptance.

Finally, the proper presentation means a presentation that is consistent with the terms and conditions of the letter of credit, with the applicable provisions of the rules foreseen in the Publication and with the standards of international banking practice.

From the regulations reproduced above results the notion and the main characteristics of the letter of credit.

Pursuant to the stated regulations, we define the letter of credit as being *the instrument by which the issuing bank, at the request and after the instructions of a customer, called chief accountant, makes a payment to a person, called beneficiary, or upon his/her order, or accepts and pays bills drawn by the beneficiary, or authorizes another bank to make the payment or to accept and pay the drawn promissory notes.*

1.2 Features of the documentary letter of credit

According to article 4 of the Publication 600, the letters of credit, by their nature, are transactions distinct of the sale contracts or other agreements that underpin them and the banks are not in any way bound or implied by such contracts, even if the letter of credit makes any reference to such contracts.

From the regulations reproduced above result the main features of the letter of credit.

The documentary letter of credit is a method of payment: irrevocable, autonomous, institutionalized and subject to the submission of documentation.

A. The documentary letter of credit is an irrevocable method of payment

The irrevocable character of the letter of credit results from the definition given by the Publication 600 which qualifies it as an irrevocable commitment. The irrevocable character of the letter of credit is also resumed in the regulation of article 3 of the Publication where it expressly provides that the letter of credit is irrevocable even if there is no mention in this regard.

The irrevocable character means that the letter of credit, once drawn up and put into the banking circulation by the issuing bank cannot be withdrawn or revoked anymore. In other words, the letter of credit put into the banking circulation has to be paid by the issuing bank, respectively by the confirming bank if the letter of credit is confirmed.

[3] For the definition of the letter of credit under the regulation contained in the Publication 500, see **V. Nemeş**, Drept bancar (Bank Law), Edit. Editas, Bucharest, 2004, p. 184

The irrevocable character of the letter of credit is clearly expressed in the content of article 10 of the Publication 600 which states that a letter of credit cannot be amended or canceled without the approval of the issuing bank, of the confirming bank and of the beneficiary.

The fact that the letter of credit cannot be revoked gives a supplementary guarantee to the beneficiary creditor as regards the payment, that is why, as we pointed out above, the letter of credit is considered as a guarantee of payment, too.

B. The documentary letter of credit is an autonomous method of payment

The autonomous character means that the documentary letter of credit creates liabilities independent of the basic relationship between the chief accountant and the beneficiary. This character occurs from the provisions of article 4 of the Publication no. 600 according to which the letters of credit are transactions distinct of the sale contracts or other agreements that may underpin them.

During the carrying out of the documentary letter of credit you cannot discuss issues or raise exceptions arising from the contractual relationship under which the letter of credit was opened.

The autonomous character of the letter of credit is extended on the existing contractual relationship between the participating banks and the chief accountant and the issuing bank, meaning that such relations are not related to the payment by letter of credit. More specifically, the obligations undertaken by the participating banks in the carrying out of a letter of credit may not be the subject of the chief accountant's complaints resulted from his relationship with the issuing bank or with the beneficiary.

As well, a beneficiary cannot prevail, under any circumstances, by the existing contractual relations between the banks or between the chief accountant and the issuing bank.

In order to maintain the autonomous character of the letter of credit, the issuing bank is bound to discourage and eliminate any attempt of the chief accountant to include, as part of the letter of credit, copies of the afferent contract, of the invoice and other documents of this kind (article 4 of the Publication).

C. The documentary letter of credit is an institutionalized method of payment

The institutionalized character of the documentary letter of credit means that this method of payment requires the participation of at least two credit institutions, the issuing bank and the beneficiary's bank.

As we shall see below, along with the issuing bank and the beneficiary's bank, in a letter of credit also may be involved the confirming bank and the advising bank.

The quality of advising bank and, respectively, the confirming bank may be owned even by the beneficiary's bank or by another nominated bank.

A letter of credit cannot be carried out without the participation of the credit institutions; other legal entities can contribute, but in operations subsidiary to the letter of credit, such as shipping agencies which authenticate the shipping documents.

D. The documentary letter of credit is a method of payment subject to the submission of documentation

The documentary character of the letter of credit is foreseen by article 5 of the Publication which provides that the banks operate with documents, not with goods, services or performance mentioned in such documents.

The documentary letter of credit is opened upon request and following the instructions of the chief accountant negotiated with the issuing bank which makes the payment of the letter of credit to be conditioned by the filing of the documents mentioned in the letter of credit.

Any documentary letter of credit makes the payment of the indicated sum to be conditioned by the presentation, made by the beneficiary or by the bank nominated for that transaction, of the

following documents: shipping documents (transport contract, shipping contract, air transportation documents, way bill etc.), insurance contracts and trade invoices.

The letter of credit may provide the obligation to submit other documents, such as: quality certificates, certificates of guarantee, of origin, of goods etc[4].

The name of the letter of credit comes from the fact that it represents the mechanism which makes the payment of the amounts to be conditioned by the drawing up and submission of some documents by the beneficiary creditor of the letter of credit.

2. Mentions regarding the documentary letter of credit

Neither the previous publications nor the Publication 600 expressly regulate the content of the documentary letter of credit or the main mentions that should be included in it.

But the Publication 600 makes some references regarding the banks where it can be used and regarding the validity of the presentation period of the letter of credit and the place of payment.

Thus, according to article 6 of the Publication, a letter of credit must include the bank where it can be used or the mention that it can be used at any bank. If in the letter of credit is mentioned that it can be drawn (used) at the nominated bank, it also can be used at the issuing bank. Pursuant to the letter of credit, the issuing bank is the bank which represents the main obligation of the letter of credit and remains in that position until the completion of the operations specific to the letter of credit.

Then, the letter of credit should specify the maturity payment of the foreseen amounts. To this effect, the Publication 600 provides that a letter of credit should specify if it is usable (payable) by paying at sight, on time, or by acceptance or negotiation. The utilization methods of the letter of credit are also genuine maturities of the letter of credit. It means that the maturity may be at sight, at a settled date, or by negotiation or acceptance of some promissory notes.

Closely related to the maturity of the letter of credit is the expiry date for the presentation of the letter of credit. Before paying the amounts indicated in the letter of credit, it shall be submitted to the bank nominated to verify if the documents comply with the clauses of the letter of credit and the notification, as appropriate, to the issuing bank or to the confirming bank regarding the fulfillment of all the requirements of the letter of credit. After the checking and confirmation of such conditions, the letter of credit can be used to maturity in order to make the payments for which it was issued.

Finally, as regards the place for the payment of the letter of credit, the Publication provides that the place of presentation is the premises of the bank where the letter of credit is usable. The letter of credit may include the mention that it can be paid at any bank, meaning that it can be used at any bank chosen by the beneficiary of the letter of credit.

Being issued at the request of the debtor in the main legal relationship, the essential mentions of a documentary letter of credit will be determined in accordance with the application for opening the letter of credit and after the instructions given by the chief accountant and sent to the issuing bank.

The doctrine[5] considers that the application for opening the letter of credit and, implicitly, the instructions should include the following information: the name and full address of the beneficiary of the letter of credit (exporter, supplier); the amount; the format of the letter of credit (revocable, irrevocable, confirmed, unconfirmed etc.); the drawing up method of the letter of credit (by payment at sight, by referred payment, by acceptance, by negotiation); what kind of promissory notes should be drawn and the maturity; the brief description of the goods, specifying the quantity, the price and the maturity; if the way bill must be paid or not in advance; the documents to be submitted at the payment date; the place of loading, shipping or taking over the goods in his task, indicating their destination; if the transshipment is allowed or prohibited; if the partial shipments are allowed or

[4] For other documents regarding the payment of the letters of credit, see **I.Turcu**, *op.cit.* p. 389.
[5] See **V. Pătulea**, **C. Turianu**, *op.cit.*, p. 87-88.

prohibited; deadline of loading, shipping or taking over in his task; the term in which, after the opening date of the letter of credit, must be submitted at the payment date, acceptance or negotiation, the bill of lading or other shipping documents; validity date and place of the letter of credit; if the letter of credit must be transferable; the transmission method of the letter of credit (telegram, telex, fax etc.).

Unlike the Publication 500, the current publication does not include anymore the specification that the letter of credit shall be concluded according to the instructions and clauses sent by the chief accountant. However, the main factors and mentions of the letter of credit will be indicated by the chief accountant. This is because the letter of credit is opened at the chief accountant's request who, on the basis of some compulsory legal relationship, is the debtor for the payment of some amounts. Because the payments may be made only by bank circuit, the chief accountant notifies the main aspects of the legal relationship with the co-contractor, establishing, ultimately, the essential clauses of the letter of credit.

It is understood that the above mentioned terms will constitute the content of the letter of credit drawn up by the issuing bank and it varies according to the nature of the legal relationship which have generated the issuing of the documentary letter of credit.

3. The participants in the letter of credit[6]

From the foregoing results that, for making a payment by means of a documentary letter of credit, is required the participation of at least four parties: the chief accountant, the issuing bank, the beneficiary and the beneficiary's bank.

In the carrying on of a documentary letter of credit also may be involved the advising bank, the confirming bank, the negotiating bank and the nominated bank.

Therefore, we consider that the letter of credit is an institutionalized method of payment and it cannot be conceived and used without the participation and involvement of the credit institutions.

3. 1 Chief accountant

Publication no. 600 provides that the chief accountant is the party who required the issuing of the letter of credit.

The chief accountant is the person who must make a payment based on an international trade contract in which has the capacity of debtor of an amount. In order to make the payment, the chief accountant applies to a bank and requests the opening of the documentary letter of credit pursuant to the instructions sent to that bank. The instructions for the issuing of the letter of credit may be agreed by the chief accountant together with the beneficiary and included in the international trade contract concluded between the two parties. In this case, the letter of credit will be in accordance with contractual terms and binds the chief accountant to request to the issuing bank to remove the possible inconsistencies[7].

Therefore, the documentary letter of credit shall be triggered at the beneficiary's initiative in order to make the payment of some amounts to another person, called a beneficiary of the letter of credit[8]. It means that the letter of credit is opened at the beneficiary's initiative, for the creditor in the main legal relationship, in order the creditor to be sure that the price was paid. On the other hand, in the relationship with the issuing bank, the letter of credit is opened at the request of the debtor in the main relationship who, by issuing the letter of credit, obtains the position of chief accountant.

---

[6] See **V. Pătulea**, **C. Turianu**, *op.cit.*, p.81. and **I.Turcu**, *op.cit.*, p.370.

[7] Court of Arbitration Bucharest, Judgement no.17 of June 19, 1975 in *Jurisprudența Comercială Arbitrală (Commercial Arbitration Jurisprudence) 1953 -2000*, Bucharest 2002 p. 69.

[8] For details regarding the procedure for the opening and achievement of the letter of credit, as well as its phases, see **V. Pătulea**, **C. Turianu**, *op.cit.*, p.87. and **I.Turcu**, *op. cit.*, p.370 and the following.

Therefore, the issuing bank will act according to the instructions of the chief accountant, not of the beneficiary.

Because the chief accountant has the position of debtor in the basic relationship with the beneficiary, unless the parties did not agree otherwise, all the expenses necessary to perform the letter of credit shall be borne by the chief accountant because the beneficiary has to collect the entire amount, as foreseen in the instrument of payment.

The practice of the documentary letters of credit established that the chief accountant may be bound to pay a *pro rata temporis* penalty for the delay in opening the letter of credit or the beneficiary (the creditor in the basic legal relationship) may consider the contract as terminated due to such delay[9].

Also in the banking practice it was decided that, according to the chief accountant's viewpoint, the obligation of payment incumbent to him is considered executed at the opening date of the letter of credit by the issuing bank without being necessary the date when the amount was actually collected by the creditor as a result of the transfer operations[10].

3. 2 Issuing bank

Within the outlook of Publication 600, the issuing bank is the bank that issues a letter of credit, at the chief accountant's request or on its behalf.

The issuing bank is the bank of the chief accountant which opens the letter of credit at the request and according to the instructions received from him and which undertakes to pay an amount to a third party or to his order.

Consequently, the issuing bank is the bank the most involved in the carrying on of a documentary letter of credit which undertakes the obligation to pay the amount ordered by the chief accountant, thereby becoming the main obligee of the letter of credit.

The issuing bank will open and execute the letter of credit within the terms and conditions specified therein, set by the chief accountant, in accordance with the rules of the Publication 600 and the international bank practices applicable in this field.

The conditions for the issuing and execution of the letter of credit are called instructions for the issuing and amending of the letter of credit.

The instructions under which the letter of credit will be conducted must be complete and accurate, excluding the insertion of certain excessive details.

According to the international bank practices and standards, all the instructions for the issuing of the letter of credit, the letter of credit and, where applicable, all the additional instructions for amending the letter of credit must clearly indicate the documents under which the payment is made, the acceptance or the negotiation.

Therefore, the payment of the letter of credit is subject to the submission of the documentation specified by the beneficiary to the issuing bank.

3. 2.1 The obligations of the issuing bank

Preliminary specifications

As we mentioned above, the bank issuing is the main obligee of the letter of credit. In such position, the issuing bank has to drawn up the letter of credit according to the instructions of the chief accountant, to the rules of the Publication 600 and to the international bank practices and standards applicable in this field.

Then, the issuing bank has the obligation to endeavor and to take all measures in order to facilitate the carrying on of the letter of credit. In this respect, the issuing bank must nominate the

[9] Court of Arbitration Bucharest, Judgement no. 161 of June 15, 1979 in *op.cit.*, p.69.
[10] Court of Arbitration Bucharest, Judgement no. 39 of June 11, 1973 in *op.cit.*, p.69.

banks involved in the carrying on of the letter of credit so that the amounts enter in the beneficiary's account, in his bank. Consequently, the issuing bank must find and nominate the confirming bank, if the letter of credit is confirmed, the advising bank to check the compliance of the documents, the negotiating bank, if the payment is made by accepted promissory notes and other correspondent banks, as appropriate, depending on the nature of the legal relationship specific to the letter of credit or to the beneficiary's location.

Finally, the issuing bank is required to make the payment of the letter of credit in the manner and within the terms set up in the letter of credit.

A. The obligation to pay the letter of credit

The payment of the letter of credit may be set up at sight, within a specific term or by accepting or negotiating the promissory notes issued in favour of the beneficiary of the letter of credit.

If the letter of credit has the maturity at sight, the issuing bank is required to make the payment at sight. The term *„at sight"* coincides with the submission of the documents of the letter of credit by the beneficiary and the determination of their conformity with the letter of credit. In this case, the payment will be made after the submission of the documents expressly mentioned in the letter of credit by the issuing bank or by the bank authorized for such transaction.

If the letter of credit provides the deferred payment, the issuing bank will pay to the beneficiary the amount within the terms specified in the letter of credit.

When the letter of credit contains a fixed maturity, the issuing bank is required to make the payment within the foreseen term.

The issuing bank is required not only to pay the amount mentioned in the letter of credit, but also to keep in force, at the beneficiary's disposal, within the term specified therein, undertaking a direct and personal obligation in relation to the beneficiary[11].

B. The obligation to accept the payment of the promissory notes drawn by the beneficiary

The letter of credit may stipulate that the issuing bank accepts and pays at maturity the promissory notes drawn by the beneficiary on it.

In the letter of credit may be stipulated that the acceptance may be made by a bank, other than the issuing bank, called drawee bank or nominated bank.

For this latter situation, when the acceptance is made by the nominated bank, the issuing bank is required to pay, at maturity, the promissory notes drawn by the beneficiary on the issuing bank, if the issuing bank records, in the letter of credit, the refusal to accept the promissory notes drawn on it.

The issuing bank is required to make the payment even when the drawee bank accepts the promissory notes, but it does not pay them at maturity.

C. The obligation to negotiate the promissory notes drawn by the beneficiary.

Within the outlook of Publication 600, the negotiation means to buy the promissory notes and/or documents by the bank authorized to negotiate.

The simple inspection of the documents without buying them is not a negotiation. Under the obligation of negotiation, the issuing bank has to buy the promissory notes drawn by the beneficiary and/or the documents submitted in the content of the letter of credit and to advance the funds to pay the beneficiary.

According to the Publication, a letter of credit is not valid and it cannot be usable by promissory notes drawn on the chief accountant.

[11] Court of Arbitration Bucharest, Judgement no. 161 of June 15, 1979, in *op.cit.*, p.70.

If the letter of credit uses the words *"promissory notes drawn on the chief accountant"*, the banks will consider such promissory notes as additional documents.

The bank will make the payment of the debt set up in the letter of credit from the own deposits of the chief accountant or from the loans granted to him by opening a credit line.

When the payment is made by negotiated promissory notes, their owner, namely the beneficiary is not bound to wait until the maturity of the letter of credit in order to get the corresponding amounts, but he has the opportunity to sell them to the negotiating bank or to other bank financial institutions[12].

The issuing bank may nominate another bank to negotiate the promissory notes, being called the nominated bank. The issuing bank is required to honor the promissory notes if the nominated bank refuses to pay them, even if the nominated bank has issued a firm commitment in this regard. This is because, as we mentioned above, the only banks irrevocably bound to make the payment are the issuing bank and the confirming bank. Therefore, even if the bank nominated to negotiate undertakes to make the payment, it can change such promise, may revoke its commitment and refuse to make the payment. In all cases, if the documents comply with the letter of credit and all the requirements are met, the issuing bank remains liable to make the payment, in case the bank nominated for such negotiation refuses to pay it. However, even if the bank nominated under negotiation shall make the payment, this bank pays for and on behalf of the issuing bank or confirming bank, as appropriate, not by virtue of its own obligation of payment.

Besides the issuing bank, another bank, called confirming bank, may undertake a commitment for the payment of the letter of credit.

3. 3 Confirming bank

According to the Publication 600, the confirmation of an irrevocable letter of credit by the confirming bank, under the authorization or at the request of the issuing bank, is a firm commitment of the confirming bank, added to the commitment of the issuing bank to honor or negotiate a proper presentation.

The confirming bank is the bank which adds its confirmation to a letter of credit after receiving the authorization or request of the issuing bank.

It follows that the confirming bank intervenes at the request of the issuing bank or after its approval. However, we consider that there are no impediments for the confirming bank to confirm the letter of credit of its own initiative or at the request of the beneficiary of the letter of credit.

Provided that the documents stipulated in the letter of credit comply with its terms and clauses and be submitted to the confirming bank or to other banks nominated for such operation, the confirming bank is required, just like the issuing bank, to pay the letter of credit.

By confirmation, the confirming bank undertakes an obligation, independent of the obligation of the issuing bank, to pay to the beneficiary or at his order, the amount mentioned in the letter of credit.

The payment of the amount specified in the letter of credit is subject to the compliance of the documents with the terms and directives of the letter of credit and to submit them, in due time, to the confirming bank or to other bank nominated to receive and check the documentation.

The confirmation of the letter of credit originates, for the beneficiary, the safety for the collection of the amount foreseen therein and the confirming bank will become a true debtor of the beneficiary. It means that the beneficiary can apply, for the payment of the letter of credit, at choice, to the issuing bank or to the confirming bank, both of them having the obligation to make the payment.

---

[12] See **V.Pătulea**, **C.Turianu**, *op.cit.* p. 89.

3. 3.1. The obligations of the confirming bank

The obligations of the confirming bank are stipulated in the letter of credit and they are similar with the obligations of the issuing bank.

A. The obligation to pay the letter of credit

If the letter of credit set up the maturity at sight, the confirming bank is required to make the payment at sight. If the letter of credit provides the deferred payment, the confirming bank will pay to the beneficiary the amount within the terms specified in the letter of credit.

B. The obligation to accept the payment of the promissory notes drawn by the beneficiary

The letter of credit may stipulate that the confirming bank accepts and pays at maturity the promissory notes drawn by the beneficiary on the confirming bank.

In the letter of credit may be stipulated that the acceptance may be made by a bank, other than the confirming bank, called drawee bank or nominated bank.

When the acceptance is made by the nominated bank, the confirming bank is required to pay, at maturity, the promissory notes drawn by the beneficiary on the confirming bank, if the drawee bank records, in the letter of credit, the refusal to accept the promissory notes drawn on it or it refuses to pay without any explanation.

The confirming bank is required to make the payment even when the drawee bank accepts the promissory notes, but it does not pay them at maturity.

C. The obligation to negotiate the promissory notes drawn by the beneficiary.

The confirming bank must negotiate the promissory notes, if so provided in the letter of credit.

The simple inspection of the documents without buying them is not a negotiation. Under the obligation of negotiation, the confirming bank has to buy the promissory notes drawn by the beneficiary and/or the documents specified in the letter of credit.

In the event that the issuing bank changes the letter of credit, the confirming bank may reserve the right to expand its confirmation also for the amendment of the letter of credit.

At the same time, the confirming bank may undertake the obligation to approve an amendment for the beneficiary, without expanding its confirmation on the change, in which case it must immediately notify both the issuing bank and the beneficiary of the letter of credit, without being bound as regards the occurred changes. On the contrary, when the confirming bank expands its confirmation also for the amendment of the letter of credit, it will be irrevocably bound to execute the amended letter of credit.

3. 4. Advising bank (nominated bank)

Within the outlook of Publication 600, the advising bank is the bank which approves the letter of credit at the request of the issuing bank.

According to the international banking practices and standards, the approval means the operation of checking the compliance of the documents with the terms of the letter of credit. We specified that the letter of credit is documentary par excellence and the submission of the documents is the essence of documentary letter of credit. The drawing up and submission of the documents is a prerequisite for the payment of the amounts stated in the letter of credit. Due to the distance between the contracting parties, i.e. the seller and the buyer are not only in different states but also on other continents, just like the issuing bank and the beneficiary's bank. For this reason, the issuing bank, in order to be sure that the beneficiary fulfilled his obligations according to the provisions of the letter of credit, nominates another bank, called advising bank, to perform this operation of checking the

compliance of the documents with the requirements of the letter of credit. The documents specific to the letter of credit are: invoices, way bills, insurance policies and other documents such as certificates of quality, conformity, warranty, indications of origin etc. The issuing bank assigns the amounts in circuit to the beneficiary only if he proves that he loaded the goods into the transport vehicle and prepared all the documentation related to the goods sold pursuant to the main legal relationship. Due to that distance, the issuing bank has not the opportunity to check these requirements and, therefore, applies to the advising bank in order to carry out such operations.

The advising bank may be nominated by the issuing bank, by the beneficiary or by his bank.

The role of the advising bank is to check the authenticity of the letter of credit and the documents filed by the beneficiary in carrying on the letter of credit.

The advising bank undertakes no obligation to pay the letter of credit, independent of the obligation of the issuing bank or confirming bank.

According to the international banking practices and standards, within the operation to approve the letters of credit and the required documents, the advising bank *"will take reasonable care"*.

Hence, the advising bank will act in a professional manner, according to the international banking practices and customs in order to fulfil the obligation to approve the letter of credit and the specific documents.

At the same time, the Publication 600 binds the advising bank, in the event that it decides to refuse the approval of the letter of credit, to immediately notify the issuing bank.

The advising bank must require to the issuing bank to provide precise and complete information and instructions necessary to approve the letter of credit.

If, however, it decides to approve the letter of credit, the advising bank must notify the beneficiary and the bank from which it received the instructions, stating that it is unable to determine the authenticity of the letter of credit.

When the issuing bank gives instructions to an advising bank, by a certified TV-transmission, to approve a letter of credit or an amendment to a letter of credit, the transmission will be deemed to be an operative instrument of the letter of credit and/or of the operative amendment without requiring another confirmation (in writing) by mail.

If a confirmation in writing is sent, it has no effect, meaning that the advising bank has no obligation to check such confirmation with the operative instrument of the letter of credit.

When the TV-transmission shows *"full details to follow"* or some words having similar meaning, or specifies that the operative instrument of the letter of credit or of the operative amendment is the confirmation in writing, then the TV-transmission will not be considered an operative instrument of the letter of credit or of the amendment and, therefore, it will not lead to the carrying on of the letter of credit.

If the TV-transmission is not considered an operative instrument of the letter of credit or of the amendment, the issuing bank will have to send, to the advising bank, the operative instrument of the letter of credit or of the operative amendment as soon as possible.

If a bank uses the services of an advising bank in order to approve the letter of credit for the beneficiary, the bank has the obligation to use the services of the same bank to approve an amendment, too.

3. 5. Beneficiary

The beneficiary is the party of the international trade contract who has a debt against the chief accountant, having, therefore, the capacity of creditor. Neither the legal character of the contract (sale-purchase, services, commission etc.) nor the kind of the trade relationship is important.

Within the main (basic) legal relationship, the parties may agree that the delay in opening the letter of credit may justify the seller's refusal to deliver the goods. Likewise, in the judicial practice it

was determined that the permission for the arrival of the ship, representing the notification of the buyer, by the seller, that he can take over the goods, in a specific harbor, on a settled date, will not be equivalent to the seller's will to deliver the goods, as long as the letter of credit was not opened yet[13].

3. 6. The bank of the beneficiary of the letter of credit

The bank of the beneficiary of the letter of credit is the bank chosen by the beneficiary to collect, for him and on his behalf, the amount mentioned in the letter of credit.

The beneficiary will usually choose a bank located in the territory where he has the premises.

Note that the beneficiary's bank has no obligation to carry on a letter of credit, except to collect the amounts paid or transferred by the issuing bank or confirming bank in the beneficiary's accounts.

Our final statement is that the beneficiary's bank can confirm the letter of credit, in which case it becomes a confirming bank with all the consequences arising from that transaction or may act as an advising or negotiating bank, at the request of the issuing bank.

4. The forms of the letter of credit

The bank trade with letters of credit operates with multiple forms of documentary letters of credit, each type of letter of credit having its own legal system[14]**.**

Next, we set forth the main forms of letters of credit and the criteria according to which they have been classified.

4. 1. As they may be amended or withdrawn, the letters of credit are classified as follows:

- **revocable letters of credit**;
- **irrevocable letters of credit**.

The revocable letter of credit[15] is the letter of credit which may be amended or withdrawn (cancelled) by the issuing bank, at any time, without requiring a prior notice to the beneficiary.

When the issuing bank decides to revoke the letter of credit and the letter of credit was used, meaning that the payments were made at sight, by acceptance or negotiation by a bank participating in the letter of credit before the approval, amendment or cancellation, then the issuing bank is required to reimburse all the expenses and payments made under the above mentioned terms.

Note that, within the outlook of Publication 600, the letter of credit may be issued only as irrevocable letter of credit.

An irrevocable letter of credit is a firm commitment of the bank which makes the payment at sight or at the determinable maturity, provided that the stipulated documents to be submitted to the nominated bank or to the issuing bank and to comply with the terms and conditions of the letter of credit.

The irrevocable letter of credit creates the same obligation for the confirming bank if there is such a bank.

An irrevocable letter of credit, excepting the transferable letters of credit, cannot be changed or cancelled without the consent of the issuing bank, confirming bank and of the beneficiary.

4. 2. As the letter of credit creates the obligation of payment only in charge of the issuing bank and/or in charge of other banks, there are confirmed letters of credit and unconfirmed letters of credit.

[13] Court of Arbitration Bucharest, Judgement no. 161 of June 15, 1979, in *op.cit*., p.69.

[14] For other types of letters of credit, see **I.Turcu,** *op.cit*.. p. 372 şi urm..

[15] Publication 600 no longer contains the mention of revocable documentary credit; however, the parties may set up revocable letters of credit but this fact must be specified in the letter of credit, also see **Hubert Martini, Dominique Depree, Joanne Klein-Cornede,** op. cit. p33.

The confirmed letter of credit is the letter of credit which contains a commitment of payment undertaken by the confirming bank, independent of the commitment (obligation) of payment undertaken by the issuing bank.

The confirmed letters of credit offer a greater certainty that the beneficiary received the payment by undertaking the obligation of the confirming bank.

By virtue of the confirmed letter of credit, the beneficiary shall be entitled to receive the payment, either from the issuing bank or from the confirming bank and the latter cannot invoke the benefit of discussion or division.

Therefore, the beneficiary of a confirmed letter of credit may request the full payment from any of the two banks, without being bound by a specific order to that effect. Basically, in this case, the beneficiary has 2 debtors: the issuing bank and the confirming bank. Thus, is avoided the bankruptcy risk of one of the banks irrevocably required to pay the letter of credit.

The unconfirmed letter of credit is the letter of credit which contains only the obligation of payment undertaken by the issuing bank, the other involved banks having no such obligation. If in the carrying on of an unconfirmed letter of credit also assist other banks such as: the advising bank, nominated bank, negotiating bank, beneficiary's bank etc., the latter, without the confirmation of the letter of credit, do not undertake any obligation to pay the letter of credit, distinct from that of the issuing entity.

4. 3. According to the transmission criterion of the letter of credit to several beneficiaryies, the letters of credit are classified in transferable letters of credit and non-transferable letters of credit.

The transferable letter of credit is the letter of credit under which the beneficiary (the first beneficiary) may require the bank to pay at sight, at a postponed date, to accept or to negotiate the promissory notes under the letter of credit for one or more beneficiaries.

Within the outlook of Publication 600, the transferable letter of credit is the letter of credit which expressly provides that it is "transferable". A letter of credit may be totally or partially transferred in favour of another beneficiary.

The bank required by the first beneficiary to make the transfer of the letter of credit to other beneficiaries is called transferring bank.

The latter has the obligation to make the transfer of the letter of credit to other beneficiaries only if it expressly undertook an obligation in this regard.

To transfer a letter of credit, it must contain the express note *"transferable"*.

Terms such as *"divisible"*, *"commensurable"*, *"transferable"* or *"transferable"* do not confer to that letter of credit the quality of transferable letter of credit.

If, however, the letter of credit contains such terms, they will not be taken into account by the participants in the letter of credit.

The transfer of the letter of credit may be total or partial, according to its clauses.

The non-transferable letter of credit is the letter of credit under which the payment shall be made exclusively to the first beneficiary, excluding the possibility of total or partial transfer of the letter of credit to the subsequent beneficiaries (third parties).

4. 4. According to the maturity criterion of the letter of credit, we distinguish between letters of credit with payment at sight, letters of credit with payment in due time and negotiated letters of credit.

The letter of credit with payment at sight is the letter of credit under which the payment is made upon the checking of the documentation submitted by the beneficiary and the determination of its compliance with the requirements and terms of the letter of credit.

Within the letters of credit with payment at sight, the beneficiary is entitled to receive the payment when the issuing bank, the confirming bank or other nominated bank, following the checking of the documentation, concludes that it complies with the clauses of the letter of credit.

The letter of credit with payment in due time is the letter of credit to be paid at the determinable terms, according to the provisions of the letter of credit.

The payment in due time of the letter of credit may be made in several instalments, unless otherwise specified.

Specifically, the maturity of the letter of credit may be determined at a certain settled date after the checking and determination if the documents comply with the terms of the letter of credit (a fixed number of days, 7, 10 etc.) or in a certain period of time after that date (within 2 weeks after the determination of compliance of the documents).

The negotiated letters of credit are the letters of credit which provide that the payment will be made following the purchase of the promissory notes by the bank authorized in this respect, called negotiating bank that may be the issuing bank itself or any bank involved in the letter of credit[16].

In conclusion, you must note that unlike the Publication 500, in the regulation of the Publication 600, the maturity of the letter of credit may not be longer determined by the deferred payment.

5. Documents necessary to carry on the letters of credit Preliminary specifications

As noted above, the payment of the letters of credit is subject to the submission of the documentation at the dates and under the form specified therein.

In practice, there are situations in which the issuing bank authorizes the correspondent banks to make payments in advance, to the beneficiary, before submitting the documents but, for this, it is necessary that the chief accountant have expressly stipulated that indication in the instructions. Such a letter of credit is called letter of credit *"with red clause"* because the clause which entitles the issuing bank to make payments before submitting the documentation is written in red ink in order to draw attention to its special character[17].

The obligation to submit the documents is incumbent to the beneficiary or to the bank nominated with such operation, usually being the beneficiary's bank.

The main documents in return for which the payment is made within a letter of credit are: the transport documents, the insurance documents and the commercial invoices.

5. 1. Shipping documents

The shipping documents are, mainly, the way bills which contain, depending on transport method, certain mandatory indications. These documents have different names, depending on the type of transport: maritime/ocean bill of lading, for waterborne transport, air-borne transport document, road transport, railway transport (way bill), for land transport or inland river transport and, as appropriate, (multimodal) combined transport documents, when several types of transport are used.

The (multimodal) combined shipping documents are the shipping documents which cover at least two different ways of transport (maritime and road), known as combined transport.

---

[16] For other forms of letters of credit, see **V. Pătulea, C. Turianu**, *Garanţiile de executare a obligaţiilor comerciale (Guarantees to perform the commercial obligations)*, Ed. Scripta, Bucharest, 1994, p.83 and the following.

[17] See **V. Pătulea**, **C. Turianu**, *op.cit*., p.86. and **I.Turcu**, *Operaţiuni şi contracte bancare (Bank operations and contracts)*, Ed. Lumina Lex, Bucharest, 1995, p.373.

These (multimodal) combined shipping documents cannot be used unless the letter of credit expressly allows it.

5.1.1. Conditions regarding the shipping documents

The requirements to be met by the shipping documents, in order to be accepted, vary according to the type of transport.

A. For waterborne transport, the shipping document is called maritime/ocean bill of lading, received in order to make the payment, has to meet the following requirements:

a. to indicate the carrier's name and be signed by him or by the ship captain or by an agent appointed to act on behalf of the carrier or of the ship captain;

b. to include an indication that the goods have been loaded on board or have been delivered with a specific ship;

c. to indicate the port of loading and the port of discharge mentioned in the letter of credit;

d. to consist of one original bill of lading or, if it is issued in several original copies, to lay down the whole set;

e. not to include any indication showing that it is a subject of a "*charter – party*" contract;

f. the cargo ship which carries the goods is not propelled only by sails;

g. to comply with all other requirements of the letter of credit.

The maritime bills of lading may be non-negotiable maritime bills of lading and charter-party bills of lading.

B. In case of air-borne transport, the Publications do not have a specific name for the shipping documents but specify the indications they must compulsorily include:

- the carrier's name, his signature or authentication thereof or of the agent who acts on behalf of the carrier;
- the specification that the goods have been accepted for shipping;
- the delivery date;
- the indication of the airport of departure and the airport of destination specified in the letter of credit;
- the statement that the documents comply with any other requirements specified in the letter of credit.

As regards the air-borne transport documents remember that the Publications establish the obligation to submit them, in original.

C. For road, railway and inland river transport, the shipping documents must include the following elements:

- the carrier's name of the agent who acts on his behalf;
- the indication that the goods have been received for loading, shipping or transport;
- the place of loading and the destination foreseen in the letter of credit;
- the statement that the documents comply with all other requirements of the letter of credit.

In case the letter of credit provides that the shipping documents will be issued by the shipping agencies, these documents will be received, at the date of payment, only if they specify the carrier's name or the chief accountant of the combined transport and if they have been signed or authenticated by the shipping agent, as the agent authorized to act on behalf of the carrier or on behalf of the chief accountant of the combined transport.

5. 2. Insurance documents

The insurance policies must include the name of the insurance companies which issued them or the name of their agents.

If the insurance document provides that it has been issued in several original copies, all the original copies will be submitted, unless foreseen otherwise in the letter of credit.

According to the Publication, the cover notes issued by brokers may not be accepted if not stated expressly in the letter of credit.

The letter of credit must specify the required type of insurance and, if necessary, the additional risks that should be covered.

If not otherwise stated in the letter of credit, the banks will accept the insurance policies, as submitted.

In the absence of a contrary stipulation, the minimum amount foreseen in the insurance policies must be at least up to the C.I.F. (cost insurance and nominated freight port of destination) or C.I.P. (transport and insurance paid until the place of destination designated for the goods) value plus 10%, but only if the C.I.F. or C.I.P. value may be determined from the documents.

The banks are not allowed to accept the insurance policies which do not indicate the minimum insured amount of 110% of the amount specified in the letter of credit or 110% of the total amount of the invoice.

The banks can, however, accept an insurance certificate or a statement under open coverage, pre-signed by the insurance companies or by their agents, if not otherwise stated in the letter of credit.

At the same time, when the letter of credit does not provide otherwise or if the insurance document does not specify that the coverage is effective no later than the date of loading on board, delivery or taking over the goods for loading, the banks will not accept the insurance documents issued with a date later than the date of loading, delivery or taking over for loading.

Our final remark is that, unless otherwise specified, the currency established in the insurance documents must be the same with the one mentioned in the letter of credit.

5. 3. Commercial invoices

According to the Publications, the commercial invoices must include the description of the goods in accordance with the specifications of the letter of credit.

However, in order to be received for payment, the commercial invoices should not be issued for amounts bigger than the ones allowed by the letter of credit.

The banks may still receive invoices containing amounts which exceed the limits of the letter of credit if it is expressly provided.

The commercial invoices will contain the beneficiary's name and the chief accountant's name.

They must not contain either the beneficiary's signature or the issuer's signature.

6. Submission and checking of documents

The documents are submitted to the nominated bank within the period specified in the letter of credit.

The issuing bank, the confirming bank or the nominated bank will have a reasonable time to check the submitted documents.

The period for checking the documents is of 5 banking days from the day following the reception of the documents.

The banks to which are submitted the documents for inspection verify if they meet the requirements and terms stipulated in the letter of credit and inform the party who submitted them whether they are accepted or refused.

When the issuing bank establishes, of own initiative or following the information given by the confirming bank or by the bank nominated to check the documents, that they do not meet the requirements of the letter of credit, it may apply to the chief accountant to obviate the discrepancies within a period not exceeding 5 banking days.

If the banks involved in the carrying on of a letter of credit find that the submitted documents do not comply with the letter of credit, within the same period of 5 banking days, following the reception date of the documents and decide to refuse the documents, are required to notify, by telecommunication or any other fast communication means, to the bank which sent the documents or to the beneficiary, if the documents were submitted by him.

Such notice must include all the discrepancies and to indicate whether keeps the documents or return them to the submitter.

If the issuing bank and/or the confirming bank breaches any of the above mentioned rules or fails to make the documents available to the submitter or to return them to him, these banks will be deprived of the right to complain about the non-compliance of the documents, having the obligation to pay the letter of credit.

7. Payment of the letter of credit

Preliminary specifications

Neither the Publication 600 nor the previous publications contained rules regarding the payment of the letter of credit. Moreover, the payment deadline is replaced with the "honor" term in the Publication 600.

Publication 600 contains specific rules regarding the honor of the letter of credit in the articles 15 and 32, but indirectly by reference to the proper submission, drawings and partial deliveries.

7. 1. Terms of payment

In accordance with article 15 of the Publication, when the issuing bank, respectively the confirming bank, decides that the submission is proper, it is required to honor the letter of credit.

The submission is proper when the documents are in strict accordance with the terms and conditions of the letter of credit.

In the regulation of Publication 600, the honor of the letter of credit means the payment of the letter of credit at sight, in due time or by acceptance and negotiation of the promissory notes drawn by the beneficiary.

As a method of making payments and checking the specific documentation, the letter of credit is a legal act with *uno ictu* execution, suddenly. It means that, under a letter of credit, we cannot make partial withdrawals of amounts or partial deliveries of goods and, implicitly, to file documents.

Publication 600 provides an exception, namely when this issue is expressly mentioned in the content of the letter of credit.

The possibility of partial deliveries and drawings arises from article 32 of the Publication. According to this article, if in the letter of credit is provided a drawing or a delivery in installments within specified periods and any installment is not used or delivered within the period allowed for that installment, the letter of credit ceases to be valid for that installment or for any subsequent installment.

Therefore, the letter of credit which is not used for a certain partial payment within the established period of validity for all the subsequent installments; in other words, the letter of credit ceases to exist.

7. 2. Date of payment

The actual methods for the maturity of the letter of credit are foreseen in the Publication 600.

One method is to pay in due time, namely at a certain date established in the letter of credit.

Another method for the maturity is the payment at sight. The letter of credit with the payment at sight is paid after checking if the documents comply with the terms and conditions of the letter of credit. In such case, the letter of credit is paid at the date when the issuing bank, the confirming bank or the nominated bank "sees" the documents submitted by the beneficiary or by his representative. So, in this method of the maturity, the payment is made at the date when the documents are submitted by the beneficiary.

The letter of credit may be paid also by acceptance or negotiation of the promissory notes drawn by the beneficiary. In the letter of credit may be provided that the payment is made by drawing promissory notes against the issuing bank, confirming bank or other bank nominated for that purpose.

Finally, as stated in the foregoing, pursuant to article 32 of the Publication, in the letter of credit may be stipulated partial payments or deliveries. The maturity of the partial payments may be determined as in the case of full payment, respectively, at fixed deadlines set out in the letter of credit, at sight, namely after the submission of the documents related to partial deliveries and by acceptance or negotiation of some promissory notes drawn by the beneficiary for partial amounts.

Publication 600 does not provide the situation of the letter of credit which does not contain aspects regarding the maturity of the payment of the letter of credit.

However, by virtue of the principles governing the payment, we believe that if the letter of credit does not provide the maturity date, the payment will be made at sight, namely after the submission of the documents.

7. 3. Place of payment

The Publication does not require the indication of the place for the payment of the afferent amounts as regards the validity of the letter of credit.

As well, the Publication does not contain explicit rules concerning the place of payment. But, indirectly, they may be determined by reference to the provisions of the place of submission of the letter of credit. According to the provisions of article 6, the letter of credit must provide a date for the submission. The submission specified in the Publication is equivalent to the submission of the letter of credit and specific documents in order to make the payment. The same article 6 of the Publication provides that the place of submission is the premises of the bank where the letter of credit is used. The letter of credit may be used in a particular bank specified in the letter of credit or may be stipulated that it may be used at any bank.

Hence, the place of submission of the letter of credit, related documents and, implicitly, the place of payment is the bank where the letter of credit is usable.

Therefore, the place of payment is closely related to the bank where the letter of credit is used.

7. 4. Effects of the payment of the letter of credit

By paying the amounts recorded in the letter of credit, all the obligations of the participants are extinguished, as well as the obligations undertaken in the main relationships.

The obligation of payment under a letter of credit is incumbent to the issuing bank or to the confirming bank if the letter of credit is confirmed. The issuing bank and the confirming bank may nominate another bank to pay the letter of credit, but the nominated bank will make the payment for and on behalf of the issuing bank or confirming bank that appointed it, not on its behalf and as its own obligation.

It follows that by paying the amounts recorded in the letter of credit, all the obligations arising from the letter of credit are extinguished, out of which the most important are the obligations to check the compliance of the documents and to pay the amounts.

The amounts recorded in the letter of credit arise from the main, basic legal relations that generated the issuing of the letter of credit, such as relationships of sale-purchase, enterprise, execution of works, services or other legal relations generating the payment of different amounts.

As in the letter of credit are recorded amounts arising from the main legal relations, it means that the payment of the letter of credit extinguishes also these main mandatory relationships between the creditor and the debtor of such obligations.

8. Amendment of the letter of credit

Principles

We mentioned that the letter of credit is an irrevocable method of payment. The irrevocable character of the letter of credit is expressed by the fact that, once issued, it cannot be revoked, withdrawn or amended by the issuer or by other participant.

Pursuant to the Publication 600, the parties may use only irrevocable letters of credit.

However, it is possible, during the carrying on of the operations in the main relationships that have determined the issuing of the letter of credit or the ones specific to bank circuit, the amounts or the related documents, to intervene the demand to amend the letter of credit by adapting its clauses to the current requirements of the market.

In response to these practical requirements, the Publication 600 establishes certain rules governing the amendment of the irrevocable documentary letter of credit.

Thus, as a principle, within the article 10 of the Publication is provided that a letter of credit cannot be amended without the consent of the issuing bank, confirming bank and, if any, of the beneficiary.

Consequently, although the letter of credit is put into circulation by the issuing bank, it cannot be amended subsequently without the consent of the confirming bank and of the beneficiary. The consent of the confirming bank is justified by the autonomous obligation of payment undertaken by the confirming bank and the beneficiary's consent is based on the fact that the amounts recorded in the letter of credit represent the price due to him according to the main mandatory relations.

As not otherwise specified in the Publication, theoretically, may be amended any notes in the letter of credit, the date of payment, the period for submission the documents, the conditions for drawing up the documents, the place where the letter of credit may be used etc.

If the amendment was agreed, the issuing bank will be bound according to the new amendments, once the amendment has been issued. It is understood that, by virtue of the irrevocable character of the letter of credit, its amendments also become irrevocable.

For the confirming bank, since the date of extension of the confirmation, the amendments are compulsory also for the occurred changes. The Publication provides that the confirming bank can only approve the amendments, namely to notify that it took into account this issue without expanding the confirmation over the changes. In such a situation, the letter of credit becomes partially confirmed, meaning that the confirmation for the letter of credit shall be kept in its original form and it is not confirmed for the amendments unaccepted by the confirming bank.

As concerns the beneficiary, the consent regarding the amendment of the letter of credit may be express or tacit. Publication 600 provides that the letter of credit is valid in its original form until the time the beneficiary notifies his agreement regarding that amendment. The beneficiary must notify his acceptance or refusal as regards the proposed changes. If the beneficiary stays in passivity and communicates his viewpoint as regards the proposed amendments, they become irrevocable and it may be considered that the beneficiary accepted them.

The amendment of the letter of credit shall be notified to all the banks involved in the carrying on of the letter of credit and they must express their acceptance or approval for such changes or their refusal. In this respect, according to the Publication, the bank that approves the amendment must notify the bank which sent the amendment and if it accepts or rejects the amendment.

Partial acceptance of amendments is prohibited and such acceptance shall be deemed as a notice of rejection of the amendments (article 10 of the Publication).

9. Transfer of the letter of credit

General notions

In the absence of express stipulation, a transferable letter of credit may be transferred only once.

In this case, the secondary beneficiary may not request the transfer of the letter of credit to other third party, as beneficiary.

If in the letter of credit is provided that it may be transferred to several beneficiaries, the refusal of acceptance of one or more secondary beneficiaries does not affect the acceptance of the letter of credit by the other secondary beneficiary.

The same happens with the amendments to the letter of credit, meaning that the rejection of the amendments to the letter of credit by one or more secondary beneficiaries has no effect on the other beneficiary/beneficiaries who accepted the changes. It is understood that for the beneficiaries who refused the changes of the letter of credit, the letter of credit will be deemed unchanged.

Pursuant to the Publications, in case of transferable letters of credit, the first beneficiary has the obligation, upon the application for transfer and before operating the transfer of the letter of credit, to provide to the transferring bank the instructions regarding the transfer operation.

When the transferring bank agrees the transfer, within the terms established by the first beneficiary, it is required to notify the other beneficiaries about the transfer instructions.

As we mentioned above, the letter of credit may be transferred only within the terms and conditions specified in its original form, except: the amount of the letter of credit, the specified unit price, the delivery period, the validity expiry date and the period of submission of the documents.

Publication 600 allows the name of the first beneficiary to be replaced with the chief accountant's name, but if the chief accountant's name is expressly requested in the original letter of credit, it must be written down in all the documents, excepting the invoices.

Within the transferable letter of credit, the first beneficiary is entitled to replace his own invoice and the promissory notes with those of the secondary beneficiary.

The invoices and the promissory notes of the first beneficiary replaced by those of the secondary beneficiary cannot include amounts bigger than the original amount indicated in the letter of credit. If there is a difference between the original amount, indicated in the letter of credit, and the amounts specified in the replaced invoices and promissory notes, the first beneficiary can draw the letter of credit for the difference.

In the absence of a contrary stipulation, the first beneficiary may request that the payment or the negotiation of the letter of credit be made by the secondary beneficiaries, at the place where the letter of credit was transferred.

It should be noted that, if the letter of credit was transferred and the first beneficiary will submit his own invoices and promissory notes in exchange for the invoices and promissory notes of the secondary beneficiaries, but he did not do that on the first demand, the transferring bank is entitled to send to the issuing bank the documents received within the transferred letter of credit, including the invoices and promissory notes of the secondary beneficiaries, without any responsibility in relation to the first beneficiary.

10. Assignment of receipts from the letter of credit

Although the current practice of the documentary letters of credit uses the expression "assignment of the letter of credit" or "transferred letter of credit", actually it is about the assignment of the proceeds from the letter of credit.

The main function of the letter of credit is to perform, by bank circuit, the transfer of some amounts from the debtor in the main legal relations, becoming chief accountant by issuing the letter of credit to the creditor in the same main relations who became the beneficiary of the letter of credit.

Whereas the letters of credit are documents containing genuine rights of debt, such debts may be transferred[18].

Publication 600 establishes the transfer of the amounts related to the letter of credit by setting up some rules in the article 39.

Thus, according to the Publication 600, the fact that a letter of credit does not specify that it is transferable will not affect the beneficiary's right to assign any receipts to which he is entitled under the letter of credit, in accordance with the provisions of the applicable law.

Assignment of the receipts does not mean and does not constitute the transfer of the right to use the letter of credit.

The regulation of the Publication provides that the transfer of receipts from the letter of credit cannot be confused with the transfer of the letter of credit. In other words, a transferred letter of credit is not confused with a transferable letter of credit. A letter of credit may be transferred only if there is an express indication to that effect in the letter of credit. On the other hand, the assignment of the debts may be done even if the letter of credit is transferable or non-transferable. In other words, the assignment of the receipts may be performed regardless the type of the letter of credit.

Then, the transfer of the letter of credit is performed as provided in the content of the letter of credit, while the assignment of the receipts shall be performed in accordance with the law chosen for the assignment.

Unless otherwise indicated in the Publication, the assignment may be total, namely all the debts related to a letter of credit may be transferred, or partial, when only a portion of the receipts is transferred.

The transfer is performed according to the assignment contract concluded between the beneficiary of the letter of credit and the assignee of receipts. The assignment is based on the main relationships, under which the assignee may be the manufacturer or the supplier of the goods sold by the beneficiary of the letter of credit to the chief accountant. For the safety of price collection by the supplier or manufacturer is concluded the assignment contract under which the receipts or a portion thereof are transferred to the supplier, respectively to the assignee manufacturer. Thereby, the assignee may be the bank or other financer of the beneficiary of the letter of credit.

According to the assignment contract, after the notification of assignment by the beneficiary of the letter of credit or by the assignee, or following the date of acceptance of the assignment, the payment of the amounts will be made to the assignee, not to the beneficiary of the letter of credit.

11. Cessation of the letter of credit

Publication 600 does not contain rules regarding the cessation of the documentary letter of credit.

However, following the provisions of the Publication may be detached certain cases of cessation of the irrevocable documentary letter of credit.

As a general rule, the letter of credit ceases by carrying on its specific effects, namely the checking of compliance of the documents and the payment of the related amounts to the beneficiary or to the person appointed by him, in case of assignment or transferable letter of credit.

[18] For the assignment of debt performed under the common law, see C. Stătescu, C. Bârsan Drept civil. Teoria generală a obligațiilor (Civil Law. The general theory of obligations), Edit. All Beck, Bucharest, 2000, p. 341 and the following; Liviu Pop, Drept civil. Teoria generală a obligațiilor. Tratat, Ediție revizuită (Civil Law. The general theory of obligations, Treatise, Revised edition), Edit. Chemarea, Iași, 1994, p. 455 and the following; I Dogaru, P. Drăghici, Drept civil. Teoria generală a obligațiilor (Civil Law. The general theory of obligations), Edit. All Beck, Bucharest, 2002, p. 485 and the following.

Then, any letter of credit should include the validity period of the submission, having as consequence that the expiry of the validity period automatically draws the cessation of the letter of credit.

Finally, we saw that there is a possibility that the letter of credit may specify partial deliveries and drawings and if they are not observed, meaning that the deliveries are not performed, respectively the drawings made during the periods mentioned in the letter of credit, it cannot be used for installments or subsequent deliveries. Therefore, we deduct that the failure to comply with the terms in a letter of credit with partial installments draws the validity of that letter of credit, which corresponds with the cessation of the effects of the letter of credit.

Note that, due to its irrevocable character, the letter of credit cannot cease and cannot be withdrawn or cancelled at the initiative of the chief accountant or of the issuing bank.

For this reason, the letter of credit is the safest method of payment used in the international commercial relations.

Conclusions:

Of those mentioned above, the letter of credit is presented as one of the most stable and secure bank payment arrangements international trade relations.

Publication 600 from Paris, brought important changes to the letter of credit, such as: irrevocability of the letter of credit, letter of credit and the amendment revoking the ban without the consent of all participants, the possibility of making advance payments or partial performance of, the issuing and processing in electronic form letters, etc..

For these reasons, the letter of credit requires more care, both from the perspective of the issuer and its beneficiary, and especially banking entities involved in the movement of monies and related documents.

ASSIGNMENT OF DEBTS AS PROVIDED BY THE NEW CIVIL CODE

CĂTĂLIN BOGDAN NAZAT[*]
IRINA ANGHEL[**]

Abstract
Assignment of debts is a procedure based on which a debt is transferred from an original creditor to a new creditor. This procedure consists in a bipartite agreement (free of charge or for consideration) concluded between the original creditor (acting as assignor) and the new creditor (acting as assignee); the debtor is not part of the agreement. Nevertheless, according to the provisions of the New Civil Code[1], there are certain situations when the consent of the debtor is required (e.g. the debt is essentially related to the assignor's person).
As mentioned above, the main function of the debts assignment consists in transferring the debt. However, the doctrine and jurisprudence have revealed other functions of this legal procedure, e.g. payment of a debt that the original creditor (assignor) owes to the new creditor (assignee), guarantee the achievement of a receivable.
Although extensively treated by Romanian scholars, the provisions of the New Civil Code bring certain amendments as regards the procedures to be observed in case of an assignment of debts. The purpose of this paper is to highlight the amendments brought by the New Civil Code and to explain their impact on the procedure under discussion.

Key words: *assignment of debt, debt assignment, debt, assignor, assignee, creditor, original creditor, debtor, New Civil Code, transfers.*

Introduction

A common business practice whereby a creditor in need of cash assigns his debt in exchange of the immediate cashing-in of its price or gives it for payment to his own creditor, assignment of debts dates back to the primitive law. Thus, according to Roman jurisconsults, *inter vivos* transfer of a debt was in theory incompatible with the purely personal idea of the obligation rapport, both in terms of the active subject (creditor's right) and of the passive subject (debtor's obligation). For Roman jurisconsults, debtor's obligation was inseparable from the person of the creditor as the beneficiary of the obligation, in exactly the same way as the creditor's right was inseparable from the person of the debtor from whom the creditor was entitled to claim a benefit, to the extent that substitution of either of them could only take the form of a novation, that is by replacing the old rapport coming to extinction by a new rapport having as object a new obligation, given that it was in the charge or in the benefit of another person[2].

After a long evolution[3], modern law has finally come to accept the possibility of a direct transfer of the debt as an asset (alike any other proprietary item) under an agreement concluded between the original creditor and the person substituting him.[4]

[3] The idea of a debt assignment in the true sense of the term was recognised during the reign of Emperor Justinian. The French Civil Code of 1804 recognised fully and regulated the debt assignment, seen as a sale and buy

In this essay, we intend to highlight the changes brought to the assignment of debts, seen as a means of transmission of obligations, by the New Civil Code.

Similarly to other civil law institutions, in the case of assignment of debts, too, the New Civil Code has felt the need to respond to doctrinaires by including provisions on which they have delivered opinions over the time.

Definition. Relevant provisions. Also known by the name of "debt conveyance"[5] in the relevant doctrine, the assignment of debts is the agreement under which the creditor transfers his right to claim (*drept de creanță* in Romanian language) to another person[6]. The creditor transferring his right is called *assignor* (*cedent* in Romanian language), the person acquiring the creditor's right under the assignment agreement is called *assignee* (*cesionar* in Romanian language), and the debtor of the assigned debt is called *assigned debtor* (*debitor cedat* in Romanian language). Although the agreement produces its effects with respect to three persons (assignor, assignee and assigned debtor), the only parties in the agreement are actually the assignor and the assignee; the assigned debtor being third party to the assignment agreement[7].

While the Old Civil Code[8], in force at the date of this paper, regulates the assignment of debt in respect of the sale - purchase agreement (Articles from 1391 through 1398 and Articles from 1402 through 1404), the New Civil Code devotes an entire chapter to the institution in question – *Title VI Transmission and Conversion of Obligations, Chapter I – Assignment of debts, Articles 1566-1592.* The provisions under Articles from 1566 to 1586 are establishing the general framework of the debt assignment, while Articles from 1587 through 1592 are dealing with the assignment of debt incorporated into registered, promissory or a bearer security.

Terms of the Assignment of debts. While until the passing of the New Civil Code, the only debt assignment expressly regulated was the assignment of debt for consideration in the form of a sale – purchase agreement[9], the new Civil Code comes to answer the doctrine by implementing what it has unanimously accepted in the specialised literature. Thus, according to the provisions of Article 1567 of the New Civil Code, debt assignment may be both for consideration and for free. If the debt assignment is for free, the validity conditions established in the matter of donation contract must be observed[10]. Also, in the case of assignment of debt for consideration, the parties must comply with the legal provisions governing the type of instrument chosen by them for the execution of the obligation (sale – purchase agreement, exchange agreement etc.).

Since the assignment of debt is a bipartite agreement concluded between the assignor and the assignee, where the simple will as such of the parties is enough to ensure its valid conclusion[11], the consent of the assigned debtor is, in principle, not required. However, the New Civil Code establishes the obligation to obtain the consent of the assigned debtor, for the assignment to be effective even between the assignor and the assignee, there where, as the case may be, the debt is essentially linked to the creditor's person.

[10] Supreme Court, Commercial Section, Decision no. 5103 of 28October 2010;

[11] Prahova Tribunal, decision No. 101 of 27January 2010;

As regards the object of the assignment, basically, any debt may be subject of debt assignment, and not only the debts having a pecuniary value (i.e. debts that have as their object a sum of money)[12]. Moreover, a debt assignment may cover both present and future debts. For the latter category, the New Civil Code has expressly provided that the deed of assignment should include elements allowing the identification of the debt so assigned. Future debt is deemed transferred right upon the execution of the assignment agreement, and not from the time the debt as such is born.

However, there are categories of debts declared by law as unassignable, such as, for example, the alimony[13], the debts arising from a mutually binding agreement - synallagmatic agreement (unassignability, in this case, comes from the fact that the creditor is concomitantly a debtor, these two functions being inseparable)[14].

With regard to assignment of debts that have as object other obligation than the payment of an amount of money, the New Civil Code provides that such assignment may only take place unless the obligation subject to the assignment becomes substantially more onerous for the assigned debtor.

Although not regulated by the Old Civil Code, yet unanimously accepted by the doctrine[15], conventional unassignability is explicitly regulated under Article 1570 of the New Civil Code. Thus, debt assignment may be prohibited or restricted by assignor and debtor by an express clause incorporated in the text of the legal instrument giving birth to the debt. Nevertheless, even in the case of conventional unassignability, debt assignment may still have effects on the assigned debtor, if: (i) the debtor has consented to the assignment, (ii) the prohibition is not expressly stipulated in the document acknowledging the debt and the assignee was not aware nor was he expected to be aware of the existence of such prohibition as at the time of assignment, (iii) the assignment deals with an obligation to pay an amount of money.

Further on, the New Civil Code resumes the provisions of Article 1391 of the Old Civil Code and establishes under Article 1574 an obligation *to do* (*obligație de a face* in Romanian language) on the part of the assignor, whereby the assignor is required to submit to the assignee the deed acknowledging the existence of the debt, held by the debtor, as well as any other documentary proofs of the right being assigned. With regard to this obligation, the relevant doctrine has rightfully established, in our opinion, that failure of the assignor to fulfil this obligation entitles the assignee to abstain to fulfil his own obligations and to claim a rescission of assignment in court, there where the assignment has occurred under a mutually binding agreement[16].

Partial assignment. Governed by Article 1571 of the New Civil Code, partial assignment occurs when the assignor assigns only a part of his debt towards the debtor. Partial assignment can always take place when the debt deals with payment of an amount of money. Therefore, when the subject of a debt is other than a pecuniary benefit, such debt can be transferred provided only that the debt is divisible and unless it becomes more onerous for the debtor after the transfer.

In the case of partial assignment, the assignor's obligation to handover the document acknowledging the debt ceases, the assignee being entitled to receive a notarized (authenticated) copy of such document and to have the assignment mentioned and duly signed by both parties on the original document. If after the partial transfer the assignee acquires the rest of the debt as well, thus becoming the sole creditor of the assigned debtor, the assignor shall have the obligation to submit the document acknowledging the debt.

[14] Gabriel Boroi, *Civil Law. General part. Persons.* Forth Edition, revised and completed. Hamangiu Publishing, 2010, p. 53. The author considers also that any party in the synallagmatic agreement may, in principle, make an assignment in favour of a third party (a debt, in this case), subject only to prior consent of the other party in the agreement;

[15] Liviu Pop, *cited work*, p. 227;

[16] Liviu Pop, *cited work*, p. 239;

Opposability of the assignment of debts. As mentioned above, the validity of debt assignment does not, in principle, depend on obtaining the prior consent of the assigned debtor, as the assigned debtor is a third party in relation to the agreement between the assignor and the assignee. However, for the debt assignment to become enforceable also against all categories of third parties, including the assigned debtor[17], certain publicity formalities need to be fulfilled, as follows:

a) *Acceptance of assignment by the assigned debtor* - regulated by Article 1578 paragraph (1) letter (a) of the New Civil Code, meaning that the assigned debtor has been made aware of the assignment occurring between his original creditor and the new creditor[18].

Under the new regulation, in order to be enforceable against all categories of third parties, the acceptance by the assigned debtor has to take the form of a writ carrying a certified date (*dată certă* in Romanian language).

Under the former regulation, acceptance by the debtor had to be given in the form of an authenticated document, in order to become enforceable against all categories of third parties[19]. However, the doctrine and, in particular, the jurisprudence have admitted that the consent may also be given in the form of a deed made under private signature, or even tacitly[20], yet, in this case, the assignment is enforceable only against the assigned debtor.

Basically, by the new regulation the lawmaker has intended to satisfy the longstanding practice in this matter, according to which what the law sought by requiring that acceptance of the assignment should derive from an authentic act was not to confer the acceptance as such the character of solemn formality, but to establish the certainty of the date of acceptance, since it is the date that establishes the precise moment in time when the assignment can be deemed to have actually occurred in relation to third parties; in other words, an acceptance, even if given in the form of a deed made under private signature and registered with a public authority and, thus, acquiring a certified date, is sufficient to ensure compliance with the provisions of Article 1393 Civil Code[21].

b) *By written notice to the assigned debtor* (Article 1578 paragraph (1) letter (b) of the New Civil Code). Written notice submitted by the assignor or the assignee is another way by which the assigned debtor may be made aware of the debt assignment.

Notice may be given on paper or electronic support and must necessarily specify the following information: identification data of the assignee, identification of the debt being assigned and, in the case of partial assignment, the extent of the assignment. Most of the times, notification takes the form of an order of payment (*somație de plată* in Romanian language) sent through a bailiff, especially in cases where the debt is or has become due[22].

To protect the assigned debtor against possible frauds, the New Civil Code gives him the possibility, upon receipt of a notification from the assignee, to request the latter to produce a written proof of assignment, failing which renders the notification given by the assignee ineffective. Moreover, the assigned debtor is entitled to suspend payment pending receipt of such proof.

c) *Notification submitted together with the application of summons (cererea de chemare în judecată* in Romanian language*).* This way of notification of assignment of debt to the assigned

[17] Supreme Court, Commercial Section, Decision No. 75 dated 13 January 2006 "Debt assignment is not enforceable against the assigned debtor as long as the formalities required by law regarding notification and acceptance are not fulfilled...";

[18] Constantin Stătescu, Corneliu Bîrsan, *cited work*, p 364;

[19] Article 1393 of the Old Civil Code stipulates: "(1) Assignee may not enforce his right against a third party unless he has notified the debtor about the assignment. (2) The same effect applies also in the case of acceptance of assignment by the debtor under an authenticated deed";

[20] Liviu Pop, *Cited work*, p 230. Corneliu Bîrsan, Constantin Stătescu, *cited work*, p. 364;

[21] Cas. II, Civil decision No. 915 of 22 November 1937;

[22] Liviu Pop, *cited work*, p 228;

debtor reveals from the provisions of Article 1580 of the New Civil Code, establishing that when the assignment is communicated together with the application of summons against the debtor, the latter may not be required to pay legal charges, if he pays the debt before the date of the first hearing, unless, at the time of notification of assignment, the debtor is already in default.

The analysis of the above mentioned article reveals that the assignee, upon submitting the application of summons, also provides the court with the agreement executed with the original creditor. The court thus invested, once having satisfied itself that all legal requirements regarding the application of summons are met, establishes the date of the first hearing and orders the summoning of the assigned debtor, while submitting the assigned debtor copies of the application of summons and of other documents in the case file.

d) *Registration of assignment in the Electronic Archive of Secured Movables (Arhiva Electronică de Garanții Reale Mobiliare* in Romanian language*).* This method of debt assignment publicity, regulated by Law no. 99 of May 26, 1999 on some measures for accelerating economic reform[23] and extensively tackled by specialized doctrine, is now expressly regulated by the New Civil Code under the articles regarding assignment of a universality of debts, on one hand, and successive assignments, on the other hand.

Thus, according to the provisions of Article 1579 of the New Civil Code, assignment of a present or future universality of debts is not enforceable against third parties unless it is registered in the Electronic Archive of Secured Movables. However, debt assignment becomes binding on assigned debtors only from the moment of its communication. Therefore, in the case of assignment of a universality of debts we are dealing with a complex, two-step procedure. On the one hand, we are dealing with the obligation to notify third parties other than the assigned debtors, by registering the assignment in the Electronic Archive of Secured Movables, and, on the other hand, the obligation to communicate the assignment to the assigned debtors by any of the means of notification provided by law and described herein.

As regards the successive assignments, Article 1583 paragraph (2) of the New Civil Code provides that the prevailing assignee is the one who registered the first the assignment in the Electronic Archive of Secured Movables, irrespective of the date of the assignment or of the date of communication thereof to the debtor.

Effects of debt assignment. It should be noted that the assignment of debts has, first and furthermost, the same effects as the effects normally associated with the type of the legal instrument enshrining the assignment: sale – purchase agreement, donation, exchange agreement etc. Secondly, debt assignment produces a number of specific effects on the parties in the assignment, on the one hand, and towards third parties, on the other hand[24]. Third parties in a debt assignment transaction are: (i) the assigned debtor, (ii) the subsequent and successive assignees and (iii) the creditors of the assignor.

For purpose of this paper we will confine our analysis to the effects of debt assignment: a) between the parties; and b) between the assignee and the assigned debtor.

a) *Effect of debt assignment between the parties*. Between the parties, the main effect of the debt assignment is the transfer of the debt from the patrimony of the assignor into that of the assignee, with the debt retaining its civil or commercial nature[25]. Thus, the assignee acquires all of the rights that the assignor enjoys in relation to that debt. The assignee may ask the assigned debtor

[23] Published in the Official Gazette of Romania no. 236 of 27 May 1999;

[24] For more details on effects of assignment on third parties see Liviu Pop, *cited work*, p. 236. Corneliu Bîrsan, Constantin Stătescu, *cited work*, p. 365;

[25] Prahova Court Tribunal, civil decision No. 101 of 27 January 2010;

to pay the debt at its par value, regardless of the price paid to the assignor and irrespective of whether the assignment was for consideration or for free[26].

According to the provisions of Article 1568 of the New Civil Code, the assignment of debt will result not only in the transfer of all of the rights enjoyed by the assignor in connection with the debt, but also in the transfer of the guarantees and accessories associated to the debt[27]. However, when payment is secured by a pledge on a movable asset, the assignor cannot surrender the pledged asset to the assignee without the consent of the pledgor. Where the consent of the pledgor cannot be obtained or the pledgor raises objections, the pledged asset remains in the assignor's custody.

Suppose that, in the lapse of time from when the agreement between the assignor and the assignee is concluded and the time when the debt assignment becomes enforceable against the assigned debtor, the assigned debtor makes payments to the original creditor (the assignor), the assignee is entitled, in this case, to claim and receive all that the assignor receives from the assigned debtor. Moreover, under the same circumstances, the assignee is entitled to take actions in order to conserve the assigned right, such as, for example, interruption of the course of extinctive prescription.

The assignee, once acquiring the debt as is in the assignor's patrimony, shall be entitled to receive all the interest amounts and any other proceeds associated with the debt as are due from the moment of assignment[28]. Also, according to Article 1576 of the New Civil Code, unless the assignor and the assignee agree otherwise, the latter is entitled to charge interest and any other debt-related proceeds, which are due but not yet collected by the assignor by the date of assignment.

Where the debt is assigned for consideration, the assignor has also a guarantee obligation to the assignee. Therefore, according to the provisions of Article 1585 of the New Civil Code, the assignor is obliged to guarantee the existence of the debt and its accessories as of the date of the assignment[29]. In other words, the assignor is obliged to guarantee that at the time of the assignment agreement, the debt being assigned is actually existent, that the assignor is the holder of the debt as such, and that no debt extinction[30] has occurred to that date, such as, for example, debt payment or an extinctive prescription.

According to the same Article 1585 of the New Civil Code, the assignor is not liable for the assigned debtor's creditworthiness (*solvabilitate* in Romanian language). It means that, if the assignee cannot obtain payment from the assigned debtor due to the latter's insolvency, the assignee has no right of recourse against the assignor[31]. However, if at the time of debt transfer, the assignor was aware of the assigned debtor's insolvency, the former shall be held liable in the same way as a bad-faith seller is liable for hidden flaws in the sold good.

Nevertheless, given that the rules of guarantee described above are suppletive, the parties may amend them through explicit provisions, called *conventional guarantee clauses*[32]. Such clauses may enhance or restrict the obligation to guarantee.

Under a provision for enhanced warranty obligation, the assignor undertakes to also warrant for the creditworthiness of the assigned debtor. By an express provision to that effect, the assignor may further undertake to warrant the future solvency of the assigned debtor; otherwise, it is presumed that only the creditworthiness of assigned debtor as at the time of assignment is warranted.

Regardless of the extent of the warranty for the assigned debtor's creditworthiness, the assignor's liability is strictly limited to the price of the assignment plus any expenses incurred by the assignee in connection thereof (Article 1585 paragraph (3) of the New Civil Code).

[30] Corneliu Bîrsan, Constantin Stătescu, *cited work*, p. 366;
[31] Liviu Pop, *cited work*, p. 240;
[32] Corneliu Bîrsan, Constantin Stătescu, *cited work*, p. 367;

By a limitation clause the parties may restrict the warranty obligation of the assignor under the law, releasing the assignor from any such obligation[33].

The assignor under a debt assignment for free may not be held liable for guaranteeing the existence of the debt at the time of the transfer or the assigned debtor's creditworthiness. Also, in this case, the parties may agree to establish warranty obligations on the part of the assigned debtor.

However, even where the parties agree to limit the assignor's guarantee obligation, the assignor shall nevertheless be held liable to the assignee for the impossibility of the assignee to acquire the debt in its own patrimony or to make the debt enforceable against third parties due to a personal fault of the assignor. In this case, too, the assignor shall be held liable in just the same way as a bad-faith seller is liable for hidden flaws in the sold good (Article 1586 of the New Civil Code).

In case of a partial assignment, where both the assignor and the assignee are the creditors of one and the same debtor, they will be paid proportionally with the value of each one's debt. This rule applies also in the case of assignees acquiring the same debt in common (Article 1584 of the New Civil Code).

b) *Effects of debt assignment between the assignee and the assigned debtor*. With regard to assigned debtor, debt assignment becomes effective only after fulfilling the publicity procedures, even where there are reasons to believe that the assigned debtor may have indirectly found out about the existence of the assignment agreement[34]. Until the publicity procedures are fulfilled, even if the debt assignment is effective between assignor and assignee, it will not be enforceable against the assigned debtor as well, the latter having the freedom to simply ignore the assignment of the debt and proceed to valid payment thereof directly in the hand of the assignor.

According to the provisions of Article 1582 of the New Civil Code, the assigned debtor may oppose the payment made to the assignor, before the assignment becomes enforceable against him as well, or of any other causes of extinction of obligations as may have occurred to that date, whether or not the assigned debtor is aware of the existence of other assignments. If court proceedings are commenced against the assigned debtor by the assignee, the assigned debtor can defend himself by presenting proofs of payment, obtained from the assignor following the payment, even if the proof is bearing a later date than the date of assignment, provided however that proof must bear a date before the date of notification or acceptance of the debt assignment[35]. Consequently, the validity of these proofs does not depend on the date on which the assignment occurs, in so far as even though the debtor has paid the assignor after the date of assignment, the debtor will still be released of obligation, if the payment has been made before the fulfilment of the publicity procedures[36].

Moreover, the debtor may enforce against the assignee the payment made personally or by its trustee (fideiussor) in good faith to an apparent creditor, irrespective of whether the formalities required by law for enforceability of debt assignment against the debtor or other interested third parties have been fulfilled or not. Payment made to an apparent creditor is distinctly regulated by the New Civil Code under Article 1478[37], whereby payment made in good - faith to an apparent creditor is deemed a valid payment, even if it is later determined that the apparent creditor was not the true creditor.

After fulfilling the publicity procedures, the assigned debtor becomes the debtor of the assignee and, consequently, he may make a valid payment only directly in the hand of the assignee. Also, according to Article 1582 of the New Civil Code, where the debt assignment has become enforceable against the debtor following acceptance, the assigned debtor can no longer enforce

---

[34] Prahova County Tribunal, civil decision No. 101 of 27 January 2010;

[35] Liviu Pop, *cited work*, p. 243. ;

[36] Prahova County Tribunal, civil decision No. 101 of 27 January 2010;

[37] Article 1478 of the New Civil Code– "(1) Payment made in good faith to a known creditor is a valid payment, even if later it is determined that the known creditor was not the true creditor. (2) The known creditor shall be held liable to refund the true creditor the payment received, as per the rules regarding restitution of obligations";

against the assignee the compensation[38] which he could otherwise invoke in relation with the assignor. While Article 1582 refers strictly to the case where enforceability of debt assignment occurs through acceptance of assignment by the assigned debtor, this article is further expanded by the provisions of the second paragraph of Article 1623 of the New Civil Code, according to which a debt assignment which is not accepted by the debtor but which has nevertheless become enforceable against him by any of the other means permitted shall only prevent the netting off (compensation) of those debts of the original creditor that are subsequent to the date the assignment has become enforceable against the debtor.

Note should be made that, in case of successive assignments, the debtor is released of obligation by making the payment under the assignment that has first been communicated to him or which the debtor has accepted first by a written document with certified date.

Assignment of a debt established by registered securities, promissory or bearer securities.

Assignment of a debt established by a credit instrument is now explicitly regulated by the New Civil Code, in the Articles from 1587 to 1592. By their circulation, credit instruments are divided into: registered, promissory notes or bearer securities.

According to Article 1587 of the New Civil Code, to transfer debts incorporated in registered, promissory or bearer securities, the simple free will of the parties is not suffice; the New Civil Code establish a set of rules governing such transfers:

a) in the case of registered securities (*titluri nominative* in Romanian language), the transfer of right by assignment of the debt must be specified both on the transfer document and in the register kept for this purpose by the issuer.

b) in respect of promissory securities (*titluri la ordin* in Romanian language), the endorsement is mandatory, i.e. the assignor (endorser) must sign on the back of the document, specifying (optional) the name of the assignee (endorsee) followed by the handing over of the title[39].

c) in the case of bearer securities (*titluri la purtător* in Romanian language), the debt contained by the bearer security is transferred by the simple physical remittance of the title, with the debtor following to make payment to the bearer of the title. In the case of misappropriation of a bearer security, the person deprived of the security cannot prevent the debtor from paying the debt to the person who produces the security concerned, other than by a court sentence delivered to this effect.

Conclusion

It is our view that, by its provisions in the field of assignment of debts, the New Civil Code successfully clarifies most of the inconstancies occurred in the past between the legal provisions and the legal practice.

Furthermore, the New Civil Code provides an answer to the critics formulated by Romanian scholars to the former regulation of assignment of debts in the Old Civil Code, by implementing through its provisions most of the suggestions formulated in the doctrine.

PRIMARY REGIME AS REGULATED BY THE NEW ROMANIAN CIVIL CODE

DAN LUPAŞCU[*]
CRISTIANA MIHAELA – CRĂCIUNESCU[**]

Abstract
The regulation of patrimonial relations between spouses shall find a modern approach in the new Civil Code[1]*, according to the legislation of the European countries, which shall provide any family the possibility to choose its matrimonial regime applicable to the concrete situation and interests.*
Moreover, in order to protect the interest of the family and its life environment, the new Civil Code establishes a set of general provisions, applicable to any family, irrespective of the matrimonial regime chosen by the spouses to regulate their patrimonial relations. Even though the legal text summons those norms under the title of „Common provisions"[2]*, the doctrine assumed the name most used in the law systems having similar provisions, namely the „primary regime".*
Among the objectives of this work it is also the analysis of provisions setting up the primary regime applicable to spouses in the new Romanian Civil Code, and also its implications on the protection of the family life from a patrimonial perspective.

Key words: *primary regime, imperative rules, family house, marriage expenses, spouses*

I. Introduction

The regulatory framework on family relationships, which is reflected in the new Civil Code[3], includes many new elements, both concerning personal relations between spouses and their patrimonial relations. The patrimonial effects of marriage become more complex and more suited to the contemporary society.

Since spouses are recognized the possibility to choose the matrimonial regime applicable to their relationship, in most European countries legal systems one may find a minimum set of common mandatory rules for any marriage. We are talking about a mandatory set of rules, most often called the primary regime.

The scope of regulating a primary regime is the establishment of equitable relationships between spouses, as well as a minimum of patrimonial cohesion.

The great interest arising from such a subject, due to the novelty it brings to the Romanian law, the importance of the primary regime for the patrimonial relations specific to any given family and considering the still quite insufficient legal literature in the field we believe that deepening such a subject will be of real support in preparing its practical application.

We will try to meet this goal using an approach that will highlight the specific of the new regulation and will emphasize the reasoning behind the various aspects of the patrimonial effects of marriage contained in the primary regime.

[**] Ph.D., judge and director of the National School of Clerks

[1] Adopted by Law no. 287/2009, published in the Official Journal, Part I, no. 511 of 24 July 2009 *brevitatis causa* we shall use the abbreviation "N. Civ. C.".

[2] The above mentioned norms can be found in Section I – „Common provisions", of Chapter VI – „Spouses` patrimonial rights and obligations" of the new Civil Code.

[3] The provisions concerning family law can be found in Section II "About the family" (articles 258-534) of the new Romanian Civil Code, adopted by Law no. 287/2009.

II. General views considering the primary regime

II.1. Notion

Patrimonial relations of the spouses are an extremely important issue, with major implications for family life. The current rules on the topic are obsolete[4] and do not offer the necessary flexibility for an organization adapted to the realities of the contemporary society. In this context, a new Civil Code, which profoundly reforms this matter, represents a genuine progress, salutary in the framework of the contemporary Romanian law.

The new Romanian Civil Code brings a modern approach to the application of matrimonial regimes, which will also require some measures of protection for the material life of the family.

Irrespective of the matrimonial arrangement applicable to marriage, the new regulation provides a set of general imperative rules, which will apply to all families and which will be the support of spouses' solidarity, which expresses, in fact, the essence of the patrimonial side of family life.

We are talking about a series of special rules that apply to certain specific assets, to all marriages, regardless of the matrimonial arrangement governing[5] them. The scope of such rules is to balance the spouses' life conditions during marriage by creating a stable living environment for all family members and a minimum of material and psychological comfort for both spouses and their children, both during marriage and after divorce (until the dissolution of the matrimonial arrangement). As stated, the role of the primary regime is to daily ensure "cohesion in freedom, independence in interdependence."[6]

Perceived as a genuine "constitution" of matrimonial arrangements[7], this set of imperative rules has received different names in other legal systems. Thus, in French legal literature, it was called, for example, "primary regime"[8], "basic overriding status"[9], "basic matrimonial arrangement"[10]; "basic marital status"[11], "primary matrimonial regime or the effects of marriage."[12]

Given that the law includes the regulations under the generic name of "Common Provisions", the Romanian doctrine took over from other legal systems expressions such as "primary regime"[13] and "mandatory primary regime."[14]

[14] Cristina Nicolescu – *op. cit*., p. 56; Paul Vasilescu – „*Regimuri matrimoniale. Partea generală*", Ed. Rosetti, Bucureşti, 2003, p.; Marieta Avram, Cristina Nicolescu – „Regimuri matrimoniale", Ed. Hamangiu, Bucureşti, 2010, p. 111 and the following.

To summarize, we believe that the primary regime is *a set of fundamental and imperative rules, applicable irrespective of the matrimonial arrangement governing the patrimonial relations between spouses and between spouses and third parties.*

The primary regime can not be confused with the matrimonial arrangement applicable to marriage. While the matrimonial arrangement includes all the rules that govern patrimonial relations of spouses and their relations with third parties, the primary regime includes only some common rules, which are essential for the proper functioning of family life and which apply to all spouses, regardless of the matrimonial arrangement chosen.

The matrimonial regime and the primary regime put together represent the patrimonial charter of marriage.

II.2. The aim of regulating the primary regime

The provisions which compose the primary regime can be found in Section 1 of Chapter VI of Book II of "About Family" of the new Civil Code. The provisions of this section apply necessarily to all spouses; they can't conclude any contrary agreement, under the penalty of nullity, unless the law provides for exemption (paragraph (2) of Art. 312 from the new Civil Code).

The protective role of the provisions under the primary regime is achieved through two types of legal provisions: some apply to the normal course of family life, while others apply to extreme situations, of marital crisis.

The first category mainly comprises rules regarding the protection of the family house and the contribution of spouses to marriage expenses, and also some minimal rules concerning the patrimonial side of family life, concerning the application of matrimonial regime, the conventional mandate, the patrimonial independence of the spouses, their right to information and the matrimonial convention.

These are legal rules which try to ensure, on the one hand, a limitation of the spouses' independence in order to ensure the interdependence premises that family life involve and on the other hand, a certain independence of the spouses in their relations. Given that spouses might become individualistic while adopting a separation matrimonial regime or very interdependent in cases when they choose joint matrimonial regimes, regulating a set of minimal imperative rules is likely to balance the family life and to ensure the equality of spouses.

As regards the spouses' relations with third parties, the purpose of applying the mandatory rules specific to the primary regime is twofold: on the one hand, to prevent that the patrimonial situation of spouses holds back the freedom of their civil circuit and their legal autonomy, and secondly, to prevent damage to marriage due to the spouses' autonomy[15].

Most of the provisions of the primary regime are of great practical importance, considering their daily application, which can not be said about all of the rules specific to each of the matrimonial regimes; its specific rules represent the essence of the patrimonial mechanisms necessary for many households[16].

II.3. The specific features of the primary regime

The specific provisions of the new Civil Code regarding the primary regime include the direct patrimonial effects of marriage. This clearly results from the fact that they apply to every family, by the mere fact of concluding the marriage.

---

[15] Marieta Avram, Cristina Nicolescu – *„Regimuri matrimoniale"*, Ed. Hamangiu, Bucureşti 2010, p. 113.

[16] A. Colomer – *„Régimes matrimoniaux"*, Litec, Paris, 1990, p. 38; Cristiana-Mihaela Crăciunescu – *„Dreptul de dispoziţie al soţilor asupra bunurilor ce le aparţin, în diferite regimuri matrimoniale"*, Ed. Universul Juridic, Bucureşti, 2010, p.18. In a more pessimistic note, J. Flour said: *„En ce sens, le prétendu régime primaire est celui sous lequel on vit. Le régime proprement dit est celui sous lequel on meurt*" (apud J. Pineau, D. Burman - *„Effets du mariage et régimes matrimoniaux"*, Ed. Themis, Montréal, 1984, p. 16).

Even if spouses will be able to choose, by convention, the matrimonial regime applicable to each marriage, depending on their interests and preferences, the rules provided under the primary regime will be compulsory applicable.

The imperative nature of these legal provisions is expressly provided in paragraph (2) of Art. 312 of the new Civil Code, which states that they can not be eluded unless the law provides such a possibility.

Therefore, the primary regime applies to all families, together with the matrimonial regime which spouses have agreed to follow in their patrimonial relations.

Unlike matrimonial regimes, which according to the new Civil Code will have a changeable nature, meaning that they can be modified during marriage, the specific rules of the primary regime can not change; they shall be common to all marriages concluded in Romania and shall not depend on the will of the spouses. Therefore, the marriage itself implies that spouses agree by default to the application of the rules specific to the primary regime.

III. Provisions of the primary regime applicable to spouses during normal cohabitation

III.1. Overview

During normal times, of marital harmony, the primary regime comprises a combination of rules, some specific to separation regimes and other to joint arrangements, aimed at establishing a balance between spouses in terms of patrimonial relations, as well as a fair relation between the couple's necessary cohesion and the autonomy of each spouse.[17]

They are the essential rules that govern the patrimonial side of family life and the common denominator of patrimonial relations between spouses, as well as between them and third persons. Their daily application is likely to ensure a minimum of patrimonial cohesion for the couple[18], whatever the matrimonial regime applicable, and also the necessary independence of each spouse.

III.2. Family cohesion

The provisions of the primary regime intended to ensure family cohesion are provided in most states laws that enable the spouses to choose between the various matrimonial regimes. These relate primarily to providing special protection to the family house and to pay the marriage expenses. [19]

III.2.1. Family house

According to article 309 paragraph (2) of the new Civil Code, one of the spouses' personal duties is to live together; they may decide to live separately only for serious grounds. The purpose of marriage, to found a family, can only rejoin spouses in a common housing that they manage together. The unjustified abandonment of the common dwelling or the refusal by one spouse to live with the other spouse is considered a violation of the spouses' obligation to live together and may be a serious ground for divorce. [20]

---

[17] Cristiana-Mihaela Crăciunescu – „*Dreptul de dispoziție al soților asupra bunurilor ce le aparțin, în diferite regimuri matrimoniale*", Ed. Universul Juridic, Bucureşti, 2010, p. 19.

[18] Cristina Nicolescu – „*Coeziunea patrimonială a cuplului – finalitate a regimului matrimonial primar*" (II), Curierul Judiciar nr. 7/2008, p. 60.

[19] In some legal systems, the primary regime establishes an even stronger interdependence between spouses. One example is offered by the Quebec Civil Code, which governs the establishment of a primary patrimony, consisting of the property used as the family house, the car used by the family's members for transportation, as well as certain rights acquired during marriage. In this regard, please see: Danielle Burman et Jean Pineau – „*Le patrimoine familial*", Les Editions Thèmis, Universite de Montreal, Quebec, p. 1991, p. 7; Marieta Avram, Cristina Nicolescu – „*Regimuri matrimoniale"*, Ed. Hamangiu, Bucureşti 2010, p. 112.

[20] Marieta Avram, Cristina Nicolescu – „*Regimuri matrimoniale"*, Ed. Hamangiu, Bucureşti 2010, p. 115.

A special protection of the house where spouses leave their family life[21] was given in the legislation of many countries, based on the consideration that the living environment is very important for the balance and normality of the family, linking the personal and patrimonial effects of marriage.[22]

The concept of family housing is new in the Romanian Family Law. There is a legal definition of this concept in article 321 of the new Civil Code, according to which "family house is the common dwelling of the spouses or, failing that, the home of the spouse where the children are". One can see that the home is determined by a factual situation -that of either both spouses or one of the spouses and the common children actually living in a building. Difficulties in establishing the family house might arise, for example, when spouses have no children and live in several buildings, alternative, or when the spouses have several children, who live separately, some with their mother and other with their father. For such cases the law does not provide for the possibility of establishing several buildings as family house.

Therefore, it is not imperative that the family house should correspond to the spouses' domicile; one can not exclude cases where spouses have different domiciles, but in fact, live together. In such cases, the family house is different from the domicile of one or both spouses, and is the building where the family actually lives.

As far as the regulation on the primary regime is concerned, the concept of "family house" involves two elements: an objective, material component, represented by a housing estate and a subjective, voluntary component, which is the expression of the spouses' will to use it as the family's residential property. [23] Therefore, not every building that is owned or used by spouses is the family house, but only the one that serves the above mentioned purpose.

In terms of legal nature, the building representing the family house may be a shared asset or the exclusive ownership of one of the spouses, or it can be a leased building or a building used by spouses by virtue of another legal title, without being in their property.

The building representing the family house can be registered in the land registry as having such a destination, at the request of either spouse, even if he/she is not the owner. Thus, if the building used as family house is the exclusive ownership of one's spouse, it can be registered in the land registry with this destination even at the request of the other spouse.

The failure to register the building in the land registry as the family house affects the legal documents concerning that building, in breach of the law, as required by article 322 paragraph (5) of the new Civil Code.

The regulations contained by the primary regime concerning the protection of the family house refer to the spouses' right to dispose of the building having such a destination and the goods that furnish or decorate it.

Thus, in the case of the building determined as the family house that is the exclusive ownership of one of the spouses, the property right itself is concerned, in the sense that the spouse who owns it gives up a part of his/her prerogatives by the mere fact of such a destination. He/she can not dispose of this asset without the written consent of the spouse who does not own the building (article 322 paragraph (1) of the new Civil Code). [24] Thus, the property right lacks one of its fundamental attributes, namely the right to dispose of assets.

---

[21] The concept of family housing can be found in several law systems. Thus, the protection of family housing can be found in article 215 of the French Civil Code and articles 401-405 of the Civil Code of Quebec, which were also a source of inspiration for the Romanian legislature (in this regard, Marieta Avram, Cristina Nicolescu – *op. cit.*, p. 124), or article 169 of the Swedish Civil Code.

[22] François Terré, Phillippe Simler – *"Droit civil. Les régimes matrimoniaux"*, Ed. Dalloz, 4 édition, Paris, 2005, p. 51.

[23] Marieta Avram, Cristina Nicolescu – *op. cit.*, p. 118.

[24] The content of paragraph (1) of art. 322 of the N.Civ.C. will change through article 49, section 3 of the Act implementing the Law no. 287/2009 on the Civil Code (which is currently a draft law that can be found on the website

Also, the law provides for the obligation of gathering written consent from the spouse who did not participate to the settlement anytime he wishes to dispose of "rights on the family house". Which are the rights included? In the absence of a legal provision, we believe that it comprises of all patrimonial rights recognized by law to the owner of the property right (rights *in rem*, principal rights and ancillary rights, as well as debt collection rights) or to the owner of a lease contract.

Moreover, none of the spouses can dispose of the assets that furnish or decorate the family house and cannot be displaced from the home without the written consent of the other spouse, regardless of who owns them (art.322 para (2) new Civil Code)[25].

Consequently, any of the spouse who needs the written consent of the other or, if absent, of the authorization of the guardianship court, in order to settle any act of disposal regarding the building that constitute the family house or the assets that furnish or decorate it. Otherwise, the spouse who did not give his consent to the settlement can request its annulment within a year. The date will be calculated from the time he became aware of the settlement, but no longer than a year calculated from the date of ceasing the matrimonial regime, if the family house was registered in the land registry or if the third party knew, in any other way, that the building was a family house. If the third party was not informed or did not become aware in any other way, the spouse that did not participate to the settlement can request only damages from the other spouse[26].

The authorization of the guardianship court concerning a settlement on the family house made by one of the spouses can only be requested only if the other spouse's refusal is not based on a legitimate reason (art.322 para (3) new Civil Code). The law does not provide for the conditions necessary to appreciate if the reason invoked by one of the spouses to refuse the settlement on the family house is legitimate; thus, we consider that such situation can be encountered when the lack of consent is purely meant to tease the other spouse, the settlement not infringing in any way the family's interests.

In the case of moving out of the family house of assets that furnish or decorate it, by the owner spouse, without the written consent of the other spouse, the law does not clearly provides for the conditions in which the other spouse can act. By the strict application of the same legal provisions, the latter will have the possibility to ask the court to oblige the owner spouse to bring back the moved assets or to pay for damages, if the home was not registered in the land registry. Nevertheless, we consider that, even if the home was not registered in the land registry, the spouse that did not express his consent can request to bring back the assets in the family house, and not for damages, as long as the assets were not sold and, thus, no third party will be prejudiced (such a third party should be protected by registering in the land registry or by any other means of information).

In the case of rented houses, the law provides for ensuring the locative rights of both spouses, the new Civil Code providing an own locative right for each spouse, even if only one is the holder of the contract or even if the respective lease is completed before the marriage[27].

These regulations in the new Civil Code, protecting the family house, find their base in preventing selfish manifestations of one of the husbands, who, by selling on his own the family

---

of the Ministry of Justice at http://www.just ro/Sections/PrimaPagina_MeniuDreapta/Proiectulnouluicodcivil/proiectul deLegepentrupunereainaplicareaLeg/tabid/1452/Default.aspx), to include the specification that none of the spouses can conclude legal documents that might affect the use of the family house without the written consent of the other spouse.

[25] It was considered that, by this limitation, the risk of moving and selling the assets from the family house without the consent of both spouses will be eluded, respecting thus the special protection regime (Cristina Nicolescu – „*Coeziunea patrimonială a cuplului – finalitate a regimului matrimonial primar*" (II), Curierul Judiciar nr. 7/2008, p. 64.

[26] Cristiana-Mihaela Crăciunescu – „*Dreptul de dispoziție al soților asupra bunurilor ce le aparțin, în diferite regimuri matrimoniale*", Ed. Universul Juridic, Bucureşti, 2010, p. 168.

[27] Such provision existed in the Romanian law, being stated by Law no. 5/1973 on administering the locative fund and regulating the reports between owners and tenants. The Law no. 114/1996 did not took over the same provision.

house or by selling the assets that furnish or decorate it, can lack the family its home or affect the known environment, thus degrading the quality of the family life.

Such regulations can seem exaggerated, compared to common law, by lacking some of the attributes of the property right, but their impact is diminished by the final purpose of protecting the family and by their intrinsic acceptance on marriage.

The application of the specific provisions of primary regime is completed with thus specific to the matrimonial regime that governs the patrimonial reports between spouses.

For example, when applying a matrimonial regime of community, the building that represents the family house can be owned by either one of the spouses or be a common asset. For the family house that is a common asset, the interdiction to sell is doubled by the law of co-owning in the field of community of goods, according to which the disposal acts on common assets can be only made with the consent of both spouses[28].

If the family house is exclusively owned by one of the spouses, the written consent of the other spouse is necessary in order to conclude disposal acts on the building, according to provisions of art.322 para (1) new Civil Code Such consent only signifies the lack of opposition to concluding a legal act that will infringe on life conditions, because the spouse that has no property right could not become a part to the contract. In the case of alienating the family house by the owner spouse, he will be the sole beneficiary of the obtained price, that will enter his patrimony as personal asset (even within the matrimonial regime of community of goods, the assets or sums of money that substitute for a personal asset are a personal asset, according to art. 340 lit. g new Civil Code), being in the presence of real subrogation.

As it has been shown in the doctrine[29], the principle of the explicit consent of both spouses, for all disposal acts concerning the family house, does not determine that the family house cannot be followed for debts contracted by one of the spouses, without having the consent of the other spouse.

The lack of express consent of both spouses is admitted on concluding some juridical acts that concern the family house, such as disposing by will of the building or requesting for partition if the family house is in joint possession with another person.

Also, when the family house is owned based on a lease, ancillary to a work contract, it is acceptable that, in order to ensure the freedom of exercising the profession, the holder of the lease can resign without the written consent of the other spouse, even if, by doing so, the family loses the house[30].

The spouses' house can also be submitted to acts of forced alienation, like expropriation, without the consent of any of the spouses.

The consent of the spouse that does not participate to the settlement must be written, according to provisions of art.322 para (1) new Civil Code Taking into consideration that the law does not impose the form of the authentic act, we consider that the consent can be expressed in an act under private signature, thus being requested *ad probationem*.

The doctrine concluded[31] that, taking into consideration that it is about a building that must be registered in the land registry, are also applicable provisions of art. 1244 new Civil Code, according to which, the conventions that modify or constitute rights *in rem* to be registered to the land registry must be completed by authentic acts, under the sanction of void. Thus, if the building is common asset or shared property, taking into consideration that each spouse becomes a part of the disposal

[28] Marieta Avram, Cristina Nicolescu –*op.cit*, p.122

[29] Marieta Avram, Cristina Nicolescu –*op.cit*, p.124; see also Gerard Cornu- "Les regimes matrimoniaux", 9e edition mise a jour, PUF, Paris, 1997, p.90.

[30] Cristina Nicolescu – „*Coeziunea patrimonială a cuplului – finalitate a regimului matrimonial primar*" (II), Curierul Judiciar nr. 7/2008, p. 65.

[31] Marieta Avram, Cristina Nicolescu –*op.cit*, p.126.

act, and that the consent of both spouses must be requested as they are co-owners, the act must have the *ad validitatem* form provided by art. 1244 new Civil Code.

We also believe that, in such a hypothesis, the co-owner spouse who does not participate to the settlement will express his consent on exerting his own right, and this will have the value of a conventional mandate between spouses, and not that of a tacit consent concerning the settlement made by the other spouse. Consequently, the act by which the spouse who was not present to the settlement contest it must have the same form as the initial act of disposal of an common asset subject to registration in the land registry, namely authentic form.

Regarding the content of the act expressing the consent, in the doctrine[32] it was debated if an agreement in principle on behalf of the spouse that does not participate to the settlement is sufficient, or if it is necessary for the consent to be given according to the conditions of the settlement. We believe that the content must differ, according to the specific conditions.

Thus, if the asset is solely owned by the spouse that will conclude the disposal act, the other spouse will only express consent for not opposing. The settlement will not provide for rights or obligations for this spouse, thus his consent will be only one in principle, in no way relevant to the concrete conditions of the settlement.

On the other hand, when there is a common asset, the settlement will be opposed to the spouse who did not participate, creating rights and obligations. In such situations, the spouse will have to express his consent concerning concrete conditions of the settlement[33].

Finalizing the settlement without the written consent of the spouse who does not participate is sanctioned according to provisions of art. 322 para (4)-(6) new Civil Code

Thus, if one of the spouses disposed on a building registered in the land registry as family house, the spouse who did not express his consent might appeal against the act at the guardianship court, which can dispose its annulment. The deadline for contesting is of one year, calculated from the time he became aware of the settlement, but no longer than a year calculated from the date of ceasing the matrimonial regime.

If the building was not registered in the land registry, the damaged spouse by the conclusion of the act without his consent will not be able to request damages but from his spouse, except the situation in which the third party knew about the quality of family house.

Thus, the relative invalidity of the act concluded on the family house by one of the spouses without the express consent of the other one is under a sanctioning regime different from the common one.

III.2.2 The marriage expenses

Another way in which the new law contributes to the strengthening of the family cohesion is including, within the primary regime applicable to spouses, some provisions concerning their obligation to ensure mutual material support and to both contribute to the marriage expenses.

The obligation to ensure mutual material support, part of the patrimonial effects of any marriage, is also present in the current law, namely art. 2 of the Family Code, which states the general framework of family relationships and that family, are indebted to ensure each other material and moral support.

---

[32] Cristina Nicolescu – „*Coeziunea patrimonială a cuplului – finalitate a regimului matrimonial primar*" (II), Curierul Judiciar nr. 7/2008, p. 65.; Marieta Avram, Cristina Nicolescu –*op.cit*, p.128.

[33] In the French doctrine and jurisprudence, it was considered that the limitation of the spouse's consent when admitting in principle the settlement is not sufficient, the consent being expressed also concerning the constitutive elements of the settlement. See also: François Terré, Philippe Simler – „*Droit civil. Les régimes matrimoniaux*", Ed. Dalloz, 4e édition, Paris, 2005, p. 57.

Appreciated as the most comprising form of patrimonial assistance between spouses[34], the obligation to ensure material support is specified in any form of material assistance that spouses give each other.

The Romanian doctrine interpreted the content of this obligation, peculiar to spouses, as including the obligation to support the expenses of the marriage (provided for in art.29 Family Code) and the obligation between spouses to support each other (provided for in art. 86 of the same Code)[35].

The new Civil Code also comprises a series of provisions that regulate participation to marriage expenses, namely "Marriage expenses'[36]. The regulation starts by setting the general obligation of spouses to grant each other material support, thus materializing the feelings that fund a family.

The obligation to contribute to the expenses of the marriage is regulated by art.325 para (2) of new Civil Code, namely that for each spouse the contribution is due according to his incomes. This solution is also present in the new law[37].

The new Civil Code also provides for the possibility to modify this proportion by matrimonial convention, which is an institution not found in the actual Family Code. But not even according to this new provision, it will not be possible for only one husband to support marriage expenses, a convention bearing such provisions being considered unwritten (art.325 para (3) new Civil Code). This is a sanction that, in what concerns its effects, can be assimilated to void, taking into consideration that it cannot be validated in any way.

Obviously, as long as the spouses are in a good relationship, they can derogate from the provisions on the contribution to the marriage expenses, established by law or matrimonial convention. The problem of establishing each spouse's contribution arrises only when the spouses are in a conflict[38]. In such situations, the court will not be able to force the spouse that refuses to comply to his obligation but for his share according with the convention or the legal framework stated by art. 325 para (2) new Civil Code.

The notion of "marriage expenses" was determined by the Romanian doctrine widely, including, as well as the everyday cost of living (groceries, fuel, etc), costs concerning the upgrade and education of children and costs concerning the spouse found in incapacity to work[39].

The new Civil Code provides clearly that the work of any of the spouses in the household and for raising the children represents a contribution to the marriage expenses (art. 326 new Civil Code)[40].

The evaluation *in concreto* of the marriage expenditures shall be made on each case, according to the economic evolution of society and the patrimonial situation of the family, this having a variable[41] content.

---

[40] This a solution also present in the Romanian doctrine and jurisprudence. See also: Emese Florian- *op. cit*., p.106

[41] Dan Lupaşcu – op.cit. p.105; Cristina Nicolescu – „Patrimonial cohesion of the couple – goal of matrimonial primary regime" (II), Curierul Judiciar nr. 07/2008, p.70.

The new regulation sets the condition of fulfilling the obligation to contribute to the marriage expenditures on a privileged position, according to its importance in ensuring the good functioning of the common living. Thus, the liberty of each spouse to exert a profession and to dispose of the incomes, as regulated by the provision of art.327 of the new Civil Code is accompanied by the mention on the necessity to fulfill this obligation.

Also, appraisal of the contribution to the matrimonial expenditures constitutes one of the elements according to which it shall be evaluated the right for compensation of the spouse who effectively participated to the professional activity of the other spouse.

Enforcement of the obligation to contribute to matrimonial expenditures has a successive and permanent nature. As an effect of marriage, it shall enforced during its entire duration, irrespective of the fact that spouses live together or are separated, including during the divorce procedures[42].

Supporting the matrimonial expenditures is an obligation that each of the spouses must fulfill according to the available means, from the common or independent goods in his or her property. This may be fulfilled, according to the situation, in money or in goods.

Generally, this obligation is enforced without counting the contribution of each spouse, according to the actual possibilities and the common living exigencies.

III.3. Mutual independence of spouses

The legal provisions specific for the primary regime provide spouses a normative framework optimal for affirming the independence of each of those, but only if their living within the family is not affected, thus creating a necessary balance for a normal social and personal life[43].

Spouses` patrimonial independence is regulated on several levels, namely: in the exertion of a profession, as regards the possibility to conclude legal acts having a patrimonial character, or in the relations with banks.

Spouses` independence in the professional area is regulated by art.327 of the new Civil Code on two issues: the possibility of each spouse to exert a profession, without the consent of the other spouse, and also the liberty to dispose of the incomes, with the observance of the obligations for contributing to the matrimonial expenditures.

Thus, choosing a profession by a spouse is not subject to a prior consent granted by the other spouse, irrespective of the nature of the profession. But it is also possible that exerting a certain profession might produce to the family some patrimonial or moral damages. For example, a profession exerted by one of the spouse might worry the other spouse as regards the education of their common children, or a profession involving high financial risks, exerted by one of the spouses, may represent a threatening for the patrimonial balance of the family.

A question arises: what is the solution that one spouse may adopt in order to end such situations? We appreciate, together with other authors, that such situation can only be solved by mutual consent of the spouses, eventually by involving mediation procedures, otherwise the only option being the divorce[44].

The liberty of choosing a profession by the spouses also attracts the possibility to change the profession according to the same conditions, thus without the consent of the other spouse.

Also, the right to renounce at the exertion of a profession, by resignation, belongs to each of the spouses, independent of the others will, even if this renunciation would affect the family interests (e.g. if the family dwells in a real estate with a title accessory to the labor contract).

---

[42] Marieta Avram, Cristina Nicolescu – *op.cit*., p. 147.

[43] In doctrine it was stated the goal of regulating those norms within the framework of primary regime is, especially in the situation of applying communitarian regimes, that the „autonomy of the married person shall not be entirely sacrificed on the community altar. (Cristina Nicolescu – "*Spouses` economic and social independence as outlined by the provisions of the primary matrimonial regime* (III), Curierul Judiciar no.9/2008, p.91).

[44] Marieta Avram, Cristina Nicolescu – *op.cit*, p.150, on the same opinion, B. Vareille – "*Le regime primaire*", in Michel Grimaldi (coord.) – "*Droit patrimonial de la famille*", Dalloz, Paris, 1998, p.47.

The second aspect on the professional independence of spouses refers to the liberty of each spouse for disposing of the incomes resulted from a profession. Article 327 of the new Civil Code conditions this right only to the observance of the obligations incumbent to its titular for the contribution on marital expenses and for observing the special provisions of law.

It should be reminded the norms set up by the primary regime constitute only basic rules applicable to each marriage and shall be supplemented by those of the matrimonial regime concretely applicable to each family; thus, if the matrimonial regime is of separation, the incomes from a profession shall be the own good of the spouse able to obtain them, and if the applicable regime is one of community, those could become common goods, according to law. In the latter case, the right of disposal belonging to the titular spouse shall be exerted in a different manner, according to certain specific rules.

It is also possible that spouses are willing to collaborate on the grounds of their agreement for developing a professional activity by one of them, in a manner going further to the obligation of mutual material support or that of contributing to the matrimonial expenditures. For those situations, article 328 of the new Civil Code provides for the right of the spouse who exerted this kind of voluntarily activity for which he/she did not claim or receive a remuneration, to obtain compensation, if the other spouse was enriched. This issue regards a special application of the principle of unjust enrichment in the relationship of spouses[45].

We appreciate that such compensation could be obtained by an agreement of spouses or by judicial means, during the marriage or within the divorce proceedings for the allotment of spouses` common goods.

Another situation when the specific dispositions of the primary regime provided for by the new Civil Code regulates the patrimonial independence of spouses refers to the spouses right to conclude any legal acts between them or with other persons, if not provided otherwise by the law (article 317 point (1) new Civil Code).

This right, thus provided for, awards to each spouse a larger or smaller degree of patrimonial independence, according to the matrimonial regime concretely applicable to each family, because the law regulates the spouses` right of disposal in a different manner according to the regime.

The biggest independence of each one of the spouses is manifested in the relationship with the banks. Also, in the framework of new regulation, any spouse shall be able to act alone, without the consent of the other spouse, for constituting bank deposit and for acts related to it.

Thus being provided for within the primary regime and without mentioning any exceptions or possibility to negotiate, this independence shall be applicable to all spouses, irrespective of the matrimonial regime governing the patrimonial effects of marriage and of the legal nature of funds deposited to the bank. It is a liberty that spouses will not be able to limit by a convention, because it is disposed by an imperative provision of the law.

Consequently, in the relations with banks, any spouse shall act as a bachelor, being able to open accounts and make any operations related to those with the consent of the other spouse.

Furthermore, according to the provisions of article 317 point 3 new Civil Code, in the relationship with the bank, the spouse titular of the account shall keep the independence on the right for disposing of the deposited funds even after the end of the marriage or after the divorce, excepting the case when a court decision provides otherwise.

On the grounds of those legal provisions, it was appreciated[46] the bank shall not be liable for an eventual abuse of power made by the depository spouse, excepting the case when the bank acts together with the client spouse, but in this situation the fraudulent intention must be proved by the interested person.

---

[45] Cristina Nicolescu – "*Spouses` economic and social independence as outlined by the provisions of the new primary matrimonial regime*" (III), Curierul Judiciar, no. 9/2008, p.96.

[46] Cristina Nicolescu – "*Spouses` economic and social independence as outlined by the provisions of the new primary matrimonial regime*" (III), Curierul Judiciar, no. 9/2008, p.98.

Because in the relationships between the spouse and the bank are applicable special rules, removing the co-management mechanism for the common goods, specific to the matrimonial community regime, the credit institution can not interrupt the normal functioning of an account only at the request of the other spouse, allegedly harmed, but it is necessary a court decision to this end[47].

This independence, quite generously regulated by the new Romanian Civil Code within the framework of the primary regime, it is somehow alleviated by setting a right to informing each spouse and the correlative obligation for making possible to exert this right.

The absolute novelty in the Romanian family law, the spouses` mutual obligation on informing each other on the goods, incomes and debts results from the provision of article 318 N.C.C, described with the marginal name of "right to information".

Observing this right and the correlative obligation will be possible to be imposed even by judicial means, the tutelage court having the competence to oblige the plaintiff's spouse or any other person (if that person is not compelled to preserve the professional secret) and to provide the required information and to deposit the necessary evidence. The law also sets up a relative presumption, according to which the claims of the plaintiff spouse are true until when, according to law, the information required may be obtained only at the request of the defendant spouse who refuses to make the request.

IV. Provisions of the primary regime applicable to spouses during periods of matrimonial crisis

The primary regime regulated by the new Romanian Civil Code is not limited to regulating some imperative legal norms which shall guide the functioning of matrimony during the normal periods, but also sets up certain mechanisms applicable during the periods of matrimonial crisis.

Any family may be confronted, sooner or later, with unfortunate periods, in which the selfishness or the recklessness of one of the spouses, or with some circumstances independent to the will of spouses that may endanger the normal family life, including the patrimonial relationships.

For this kind of situations, the Romanian legislator confers to the tutelage court the competence to interfere for solving the problems, by providing two specific mechanisms, namely the judicial extension or limitation of the power for one of the spouses. Those mechanisms, together with the legal amendment of the matrimonial regime (which shall not be a part of the provisions composing the primary regime), will allow the saving of marriages in which the normal development of spouses` patrimonial relations becomes impossible, at least for a period.

The first mechanism available for the tutelage court in order to interfere in the situations when one of the spouses is not able to express his/hers will is the so-called "legal mandate", regulated by art.315 new Civil Code In such situation, the court may approve that the other spouse shall represent the other spouse who is not able to manifest his/hers will in the exertion of the rights granted according to the matrimonial regime. Thus, we discuss about an extension of the powers for the spouse asking for this approval, in the framework of a mandate for which the court shall determine conditions, limits and period of validity.

The judicial mandate can not be granted without a time limitation, because otherwise it would amend the applicable matrimonial regime, fact not allowed by law in this form. When the conditions requiring the setting of a legal mandate have disappeared, the rationale for its existence will no longer exist, thus being temporarily by its nature.

Also, by setting the limits and conditions within which the judicial mandate may be exerted it is also ensured the concluding of the urgent and necessary acts for the proper functioning of the matrimonial regime, in order to surpass the crisis period of the respective marriage, so that when the

[47] For more details see also Marieta Avram – "*Spouses mutual independence on bank deposits*", Pandectele Romane, Supplement no.2/2006 *in honorem* Corneliu Bîrsan, Liviu Pop, p.25

spouse who was unable to express its will got over this situation, he/she will be able to regain the powers temporarily took over by his/hers spouse.

This is a solution that, even though can not serve for solving the matrimonial conflicts generated by the unjustified answer of a spouse to express its consent in order to conclude certain necessary and useful acts for the family, has the vocation to cover a great diversity of practical cases[48].

The second situation of family crisis that may ask for an intervention from the tutelage court is that regulated by article 316 new Civil Code on the case when a spouse concludes legal acts by which he/she gravely endangers the family interests. In those situations, the tutelage courts shall be able to temporarily limit the power of the spouse who concludes acts damaging the family interest, by conditioning the use of disposal right on certain goods to the express consent of the other spouse.

This measure may be adopted by the tutelage court only for a limited period, which could be prolonged for at most two years.

Being a measure affecting the validity of certain legal acts, it is subject to forms of immovable or movable publicity specific to those goods, in order to be known by the potential contractors. This is because the same article of the new Civil Code provides the sanction of annulling the acts concluded without the observance of court decisions that may be required by the harmed spouse within a term of one year since the acknowledgement of the act.

If the applicable matrimonial regime is one of community, for the common goods those provisions shall be applicable together with those specific for the matrimonial regime, provided by articles 346 and 347 new Civil Code.

Both measures can be adopted only in exceptional situations and have a temporary, provisional and precarious nature, so that may be amended or ceased when the circumstances generating their pronunciation have ended or changed.

V. Conclusions

If the Romanian legal system shall return to a regulation which provides to spouses the possibility of choosing the matrimonial regime governing their patrimonial relationships, it is more then welcome the adoption of a set of fundamental, imperative legal norms ensuring the equality of spouses and a fair percentage between their independence and their interdependence.

The daily functioning of any marriage shall find the balance and security of a quiet home within the application of specific norms on the primary regime, but also a balance in their contribution to the marital expenditures and also the necessary independence for developing the professional activity of each spouse.

For more difficult periods, of marital crisis, the same primary regime will provide solutions for a series of problems, thus being able to save the marriages from the appearance of certain conflicts with consequences that could affect the scope of marriage.

We appreciate that for a correct, efficient and unitary application of the matrimonial regime provisions, a continuation of the exhaustive research of the primary regime, compared to the matrimonial regime provided for by the new Romanian Civil Code, it would be welcome.

THE NULLITY OF THE JURIDICAL PERSON IN NEW CIVIL CODE

CRISTIAN GHEORGHE[*]

Abstract

The nullity of the juridical person is a notion without correspondence in the old civil law theory. In fact the regulation of the juridical person is a matter that enters relatively recent civil law because in traditional approach civil law dealt with natural persons and associations of natural persons only.

The difference between the nullity of the agreement of association and the nullity of the juridical person itself, born by such association, is clearly revealed by the law. The two notions are still linked. One cannot imagine a nullity of the agreement without the nullity of the legal person born by such agreement. Nevertheless the nullity of the juridical person is laid down independently, comprising limited cases of occurrences.

The regulation of the nullity of the juridical person finds out its correspondence in the Company Law. The nullity of the company has a distinct regulation, in Company Law, in line with the regulation of the nullity of the juridical person.

In this case the civil law imported the notion from commercial law in order to limit the incidences of the nullity aiming the security of the civil circuit and the interest of the third persons.

In a general accepted way, nullity represents a civil sanction which impedes the effects of an act concluded in a way that breach the law. The principles of the effects of the nullity are well recognized and accepted by scholars but the sanction of nullity, applied at a superior level, of the juridical person, has a totally different effects than the old nullity.

Key words: *juridical person, the nullity of the juridical person, New Romanian Civil Code, nullity of the company.*

Introduction

Besides the general provisions of the nullity, which have a precise legal base in the new legal system, the new Civil Code comprises special cases for the institution of nullity.

In all area where the legislator focuses his interest there are explicit civil sanctions remembering the nullity.[1]

The nullity of the company and the nullity of the articles of association expose different characteristics than the general notion of nullity.

The nullity of the legal person from the new Civil Code has its roots in European and … commercial regulation. It is not difficult to realize that the nullity of the legal person follows closely the nullity of the company in the way the latter is laid down in Company Law.

The new Civil Code thoroughly regulates the legal person in the framework of the civil law. This regulation comprises the modern provisions regarding the nullity of the company too, translated, *mutatis mutandis*, in the general domain of legal person[2], irrespective of civil or commercial status.

This approach brings in civil law an original regulation, a *sui generis* nullity, if not a sanction different from the old nullity.

---

[*] Lecturer, PhD., Law Faculty, "Nicolae Titulescu" University, Bucharest (e-mail: cristiangheorghe@gmail.com)

[1] For example, Art. 66, 144, 147, 172, 196, 197, 206, 207, 215, 216, 293, etc. It is easy to observe the legislator's tendency to underline the kind of nullity: relative or absolute ones.

[2] New Civil Code, Art. 196.

Romanian specialized literature has already focused on the implementation of the nullity of the company in commercial branch of law[3]. The scholars studied and revealed special effects of the nullities and their characteristics[4].

An approach of the nullity of legal person cannot fail to observe the roots of regulation. Secondary European Law (Company Law Directives)[5] was very carefully in order to protect the third party rights in connection with company, to insure a level playing field for all the participants in the European common market. This original law was repealed in 1999[6] and replaced with an evolve directive dealing with the same subject: protection of third parties. The main principle remain in place: cases in which nullity can arise and the retroactive effect of a declaration of nullity are both limited, further more there shall be a short time limit within which third parties may enter objection to any such nullity.

These are the roots of the Romanian regulations about special commercial nullity.

The nullity of the juridical person as civil law institution will enjoy an increased interest from scholars after the enforcement of the new Civil Code.

The nullity of the agreement of association

The nullity of the articles of association, the agreement of association, from new code shall follow the implementation of subject of the legal person nullity. The aim of founding of the legal person asks for synchronization of the two regulations. As it happened in commercial law too, cannot be conceived a nullity of the agreement the legal person is found on outside of the legal person nullity itself (putting apart the partial nullity that ignores such synchronization).

The regulation of the agreement of association comes with a new element: it enforces the express nullity only. As the legislator stated, in this area virtual nullity are not longer available. The nullity of the agreement of association (simple society agreement in civil law) is applicable only in the case of breach of law which contains express nullity sanction. The law states an exemption: the nullities engaged by the breach of general conditions laid down for the formation of the contract remain active.

In fact the sanctions in this field make possible only the express nullity, for the rest a different mechanism, the "unwritten" sanction, being employed. The law declares unwritten the provisions of the association agreement that breach the law, unless the express nullity is provided[7].

The practitioners shall find out express nullities related to this subject to study the cases of nullity involved. They should scrutinize the law for express nullities.

Among provision on association agreement we will find only one provision with express nullity that govern the formal conditions and the minimum content of the agreement: the contract which establish a legal person shall be executed in written form and shall stated the person of the

[7] Ibidem, Art. 193 al. 2.

associates, contributions, legal form, object, legal name and registered office. Other sanctions of nullity are applied to acts beyond the framework of the association, respective acts executed in the course of the activity of company: issuing of financial instruments[8] and encumbrances[9].

Even the revealed express nullity is limited to legal persons – which have already a specific regulation – not to civil association agreement which, as a rule, doesn't possess a legal person status.

The conclusion is that in the civil association agreement matter the only nullity cases are those inflicted by the general condition laid down for the formation of the contract. For other cases the unwritten sanction is available, but not nullity.

Effects of the nullity of the civil association agreement.

Irrespective of nullity type the agreement can be kept in force by removing defects founded until the moment of closing arguments delivered in the court case.

The judge of the case is bound to insist to this end. The "regularization action" of the agreement is the aim of the legislator.

All the other classic effects of the nullity should be forgotten: the nullity operates only for the future (the agreement ceased to exist from the day when the nullity judgment was rendered) the effect consists of winding up of the association. Declaration on nullity doesn't inflict any damage to third parties as long as its effect failed to act for the past, legal liaisons preceding the nullity remaining in force.

From regulation of the association agreement we shall keep in mind the limitation of the nullity to the general condition put down for the formation of the contract.

Even if the exemptions from old nullity are overwhelming, at least the nullity of the association agreement is built on the hypothesis of this sanction: a contract executed outside of the rules laid down for its legal formation.

Nullity of the legal person.

Besides the nullity of the agreement the legal person is based on, the Code regulated specific sanctions for the legal person itself. The sanction of nullity of the legal person is regulated apart from its agreement of association, as is happening in the area of company law, too[10].

Although the rules seem to be as expected, the regulation contains a legal innovation for civil law. The premises for old nullity sanction rest on the contract only, on the compliance of this with the law as being verified at the moment of its formation. Although the contract is not outlined in the definition of nullity, this is beyond any doubt the only Cartesian references for the nullity sanction.

In this case nullity is not applied to contract but to an upper level represented by juridical institution. Legal person is a corpus, a superior entity which projected on the plan of contracts reveals a bundle of acts of different nature: articles of association (the association agreement), the administrative authorization for establish the legal person or for pursuing the activities (if applicable), the sentence for incorporated the legal person, etc. Legal person transcends any of these acts in order to represent a new reality with specific characteristics. Applying a sanction at this level – not to one or some acts implied by the process of legal person formation – it surpasses the particular consents concurring to establishing and functioning of the legal person. Such "holistic" approach is almost revolutionary for common law. Traditionally nullity, as concept, is attached to juridical acts, to mutual consents that can be enforced in front of a court of law. The provisions can be understood in the term of the evolvement of legal concept. In fact, legal person is after all a relatively new

[8] Ibidem, Art. 1293.
[9] Ibidem, Art. 1908.
[10] Ibidem, Art. 196.

construction. First, the old nullity doesn't observe the legal person level because such person is construed based on association agreement between associates. This agreement can be challenged from nullity point of view and such possibility sufficed a long time for legal purposes. Concept of nullity has a "curing" aim. It is trying to protect persons from effect borne outside the law. In the case of legal person principles of protection was involved too. The new principles try to prevent nullity from affecting the validity of any commitments entered into by or with the legal person. In the end, third parties protection proved to be more important than parties' protection. Legal effects cannot be inflicted to third parties acting in *bona fide*.

The sanction of nullity applied to legal person is inspired of company nullity, both of them transposing a European provision from Company Law Directives.

Despite the commercial law that could easily depicts such nullity as an commercial exemption from general regime of nullity, civil law shall focus on construction of such sanction, now ordinary for every legal person, civil or commercial one.

The effects of the nullity of the legal person

The effects of such nullity are thoroughly described by the law. The cases of nullity are prescribed in a limited manner which excludes the occurrence of the sanction at the contract level with the consequences of adding new nullity cases at the legal person level[11].

Studying the nullity cases we observe that these were translated, *mutatis mutandis*, from the company law[12]. The only difference is represented by a necessary correction, already revealed by scholars. The connection between the nullity of articles of association and the company nullity is generally accepted. Thus, it cannot be conceived a nullity of the articles independent from the nullity of the legal person. A different approach should deny the limited manner of regulation in respect of legal person or should lead to an absurd conclusion: legal person will survive the nullity of the articles of association that establish the legal person itself.

Company law provisions don't comprise, among cases of nullity of company, the general condition for the formation of the articles of association. In this legal framework the consent alteration (or even the lack of any consent) does not induce the nullity of company in respect of the limited cases of nullity (among which the legal consent elapses).

The last case of nullity of the legal person – breach of legal provisions on act of association which imply express nullity – is welcomed amendments that strengthen the weakness of the Company Law regulation.

The effects of the legal person nullity are different ones and limited, as we compare them with common civil law. The real effect means that from the moment the sentence on nullity is rendered, the legal person is wind up. In the absence of the principles of nullity which implies retroactive effects and *restitutio in integrum*, all commercial liaisons between third parties and company are kept in force[13].

This sanction knows a favourable regime; his action can be put aside. Nullity cases can be removed until the day of closings before the court.[14]

---

[11] New Civil Code, Art. 196 par. 1. Cases are similar with European Directive. The nullity cases rest only on the ground : that no instrument of constitution was executed or that the rules of preventive control or the requisite legal formalities were not complied with; that the objects of the company are unlawful or contrary to public policy; that the instrument of constitution or the statutes do not state the name of the company, the amount of the individual subscriptions of capital, the total amount of the capital subscribed or the objects of the company; of failure to comply with the provisions of the national law concerning the minimum amount of capital to be paid up; of the incapacity of all the founder members; that, contrary to the national law governing the company, the number of founder members is less than two.

[12] Law no. 31/1990, with modifications, Art. 56.

[13] New Civil Code, Art. 198, 199.

[14] Ibidem, Art. 197.

European provisions on commercial regulation of the legal person.

European secondary legislation[15] doesn't consist in rules for every fundamental institution from material law.

The reference to nullity from European law was rapidly adopted by national legislator (Company Law, New Civil Code, etc.) and it regulates companies only. Company Law Directives have already had an age, being regarded as a juridical achievement in secondary legislation and a pattern of specific harmonization of national law system[16]. The aim of regulations is coordination of safeguards which, for the protection of the interests of members and others, are required by Member States of companies with a view to making such safeguards equivalent.[17]

In this framework und following this goal, secondary legislation enforced the nullity of the company[18]. Preamble of the First Directive on Company Law stressed its aims: restrict the grounds on which obligations entered into in the name of the company are not valid, to limit the cases in which nullity can arise and the retroactive effect of a declaration of nullity in order to ensure certainty in the law as regards relations between the company and third parties. [19]

The cases of nullity (nullity must be ordered by decision of a court of law) are strictly limited, no addition being allowed[20]. The cases are enforced *ad litteram* in Romanian Company Law[21].

The only difference comes from the internal control procedure (sentence rendered by Romanian specialized judge, authorizations) which are added to the original cases[22].

New Civil Code proposes a better approach by adding the nullity cases related to general condition for the formation of the association agreement.

Besides the limited cases of nullity, the effects of the nullity are different from the old nullity theory. In these special provisions the nullity has no retroactive effect and shall not, itself, affect the validity of any commitments evolving the third parties entered into by or with the company.

Nullity shall entail only the winding-up of the company[23], and shall not, itself, affect the validity of any commitments entered into by or with the company, without prejudice to the consequences of the company's being wound up[24].

---

[15] After The Reform Treaty being enacted (Treaty of Lisbon, 2007, in force from 1.12.2009) the European Treaties become Treaty on European Union and Treaty on the Functioning of the European Union. The most relevant „horizontal" new provisions ask for giving up "European Community" and „of Community" replaced by "European Union" respectively "European". In this context "community legislation" should be replaced with "European legislation". Cristian Gheorghe, *Drept comercial european*, (Bucharest: CH Beck, 2009), 44.

[16] Cristian Gheorghe, *Drept comercial european*, (Bucharest: CH Beck, 2009), 66 – 72.

[17] The legal base was represented by Treaty of Rome (Treaty establishing the European Community), Art. 54, turn into Art. 44 para. 2 g) after Nice codification. In present, after The Reform Treaty the provision is found at Art. 50, Treaty on the Functioning of the European Union.

[18] FIRST COUNCIL DIRECTIVE of 9 March 1968, on co-ordination of safeguards which, for the protection of the interests of members and others (no. 68/151/ECC) regulated nullity of the company. Now this directive is replaced by a new one, Directive 2009/101/EC from 09.16.2009, published in OJ of EU no. L 258, 1.

[19] Directive 2009/101/EC, Preamble.

[20] Ibidem, Art. 12. The nullity cases rest only on the ground : that no instrument of constitution was executed or that the rules of preventive control or the requisite legal formalities were not complied with; that the objects of the company are unlawful or contrary to public policy; that the instrument of constitution or the statutes do not state the name of the company, the amount of the individual subscriptions of capital, the total amount of the capital subscribed or the objects of the company; of failure to comply with the provisions of the national law concerning the minimum amount of capital to be paid up; of the incapacity of all the founder members; that, contrary to the national law governing the company, the number of founder members is less than two.

[21] Law no. 31/1990, with modifications, Art. 56.

[22] The link to "judicial control" is contained by cited Directive, too (Art. 10).

[23] Ibidem, Art. 13.

[24] Ibidem.

The European legislation has a pragmatic writing. These provisions do not tackle the institution of nullity but aiming strictly the effects that the legislator intends to prohibit: retroactive effect and so on.

In this approach the distinction between the stages the sanction is applying at, *i.e.* to a bundle of acts, doesn't matter at all.

The lack of interest for theoretical matter is underlined by the legal term chosen (a company shall not be subject to any cause of non-existence, absolute nullity, relative nullity or declaration of nullity).

National law has already adopted these sanctions and has to accommodate such notions with its legislation system.

Conclusions

The nullity of the company has been translated almost identical from commercial law in civil law in the form of nullity of legal person.

The reasons underlined by commercial legislation target third parties protection, safeguarding the company itself, preserving the security of the commercial trade, functioning on opportunities-oriented bases.

Civil Code doesn't contain many of these principles, it being characterized by homogeneity and strictness.

The assimilation in civil area of the nullity of the legal person has born "twin legislation" with the commercial subject matter, making the latter to become redundant.

As the new Civil Code will enter to force commercial law should observe the lapping of legislation. The nullity of the company should be preserved in cases it is different from common regulation. Enacting an express nullity of the legal person should be observed in all branches of the juridical sciences and subsequent legislation should use these provisions as a starting point from their special purposes. The effect of redesigning of very basis of the legal system, as common law is, is an expected one: the trembling wave will have been observed at a moment in all upper level of law. Legal person subject has impact on a large range of juridical issue from different domains. These domains should adapt their legal provisions according the new approach of the nullity from the common law.

The limited effects of the nullity of the legal person shall be treated in a restrictive manner in order to preserve the general concept of nullity and to avoid the tendency of construing it in a limited manner in other domains, not covered by express provisions.

STATUS OF ENTREPRENEUR – NATURAL PERSON

SILVIA CRISTEA[*], ANGELICA ROŞU[**]

Abstract:
The necessity of limitation of the entrepreneur as a natural person who organizes an economic company within which the economic activity is developed in an organized, permanent and systematic way, combining the financial resources, the attracted labor market, raw materials, logistic and informational means, on the entrepreneur's risk from other categories of persons who realize trade activities like familial firm or trade companies was the starting point of this scientific research.
According to Law 26 / 1990, republished and modified "the traders are the natural persons and the family associations which realize usually trade acts, the commercial companies, national companies and enterprises, the autonomous administrations, the groups with economic interest and trade character, the groups of trade character and the cooperative organizations" (art. 1 paragraph 2).
Corroborating the provisions of OUG 44/2008, respectively the art. 2 letter h), according to which "the family enterprise is the economic enterprise, without legal personality, organized by a natural person entrepreneur with his family" with art. 4, according to which the natural persons can develop economic activities individually and independently, as natural authorized persons, or as owner holders of an individual enterprise, or as members of a family enterprise, we conclude that in the actual regulation, which abrogates the Law 300 / 2004, the notion of family association is replaced with the one of family enterprise.
The present study wants to analyze the modifications brought to OUG 44/2008 in the field, observing on one side the differences from the previous regulation concerning the family associations, and on the other side, the elements which particularize the family enterprises in comparison with PFA (natural authorized person) and with individual enterprises.

Key words: *legal status, entrepreneur, natural person, economic activity.*

Introduction

In determining the legal status of an entrepreneur – natural person is important to establish the legal personality or the lack of it and so it is necessary that the economic activity developed by the natural person entrepreneur to be compared with the activity of the familial firm, but also with the one developed by a trade company.

Entrepreneur, natural person who organizes an economic company within which the economic activity is developed in an organized, permanent and systematic way, combining the financial resources, the attracted labor market, raw materials, logistic and informational means, on the entrepreneur's risk; in this meaning the notion of individual enterprise has to be understood as economic enterprise, without legal personality, organized by a natural person authorized to develop any form of economic activity, in legal limits, using mainly its labor force.

The necessity of limitation of the natural entrepreneur from other categories of persons who realize trade activities (acts) is resulting from at least three regulations in force, namely: the Romanian Trade Law, Law no. 26 / 1990, with the ulterior modifications and amendments, regarding Trade Register, the Emergency Ordinance no. 44 / 2008 regarding the development of the economic activities by authorized natural persons[1], the individual firms and the familial firms, but also from the similarities that can be drawn between these three categories of entrepreneurs (natural person, familial firm and trade companies).

[**] Lecturer, Ph. D., Law Departament - University "Danubius" Galati, Romania (e-mail: rosuangelica@univ-danubius ro).

[1] Published in Official Monitor no. 328 on April 25th, 2008.

Starting from the legal provisions in force, respectively art. 4, letter b) from the Governmental Emergency Ordinance no. 44 according to which a natural person can develop an economic activity "as entrepreneur, holder of an individual enterprise" and those from art. 2, letter g) from the same normative act, according to which through personal enterprise follows for us to understand "economic enterprise, without legal personality, organized by a natural person", during this study we will try to answer the question to which situations from practice follows to correspond this institutions and which are the differences between it and the existent legal institutions.

Regarding the legal status of family enterprise, this study aims to examine two issues in particular regarding the effect of family enterprise registration in the Register of Commerce and the situation of minors of 16 years, especially since the Romanian legal doctrine was positioned constantly in the meaning of a declarative effect, in the meaning that at the date of registration of the natural person to trade register it appears a relative presumption of commerciality.

1. Definition

From the legislation in force we can detach some definitions of the natural entrepreneur and other categories of persons who realize trade activities (acts), as following:

- From the Romanian Trade Law, according to which "there are entrepreneurs those who develop trade activities, having the trade as usual profession and the trade companies" (art. 7), from which we can understand the dichotomy between the natural person entrepreneur / trade entity;
- From Law no. 26 / 1990, with the ulterior modifications and amendments, regarding Trade Register, concerning to which "the entrepreneurs who are natural persons and the familial associations which develop usually trade activities, trade companies, national companies and national firms, the autonomic organizations, the groups with economic interest with trade character, the European groups of economic interest with commercial character and the cooperating organization" (art. 1 paragraph 2), from which we observe, from one side the natural person entrepreneur, on the other side the trade entities with / without legal personality;
- The Emergency Ordinance no. 44 / 2008 regarding the development of the economic activities by authorized natural persons, the individual firms and the familial firms, in conformity to which the natural persons can develop economic activities in Romania under the following versions: a) individual and independent, as authorized natural persons; b) as entrepreneurs of an individual firm; c) as members of a familiar firm" (art. 4); we can separate this way the natural person entrepreneur who develops alone, as authorized person or as owner of an individual firm (entity organized by an entrepreneur natural person, without having legal form) and finally, as member of some familial firm.

From these three categories of entrepreneurs (natural person, familial firm and trade companies) there can be established the following similarities:

- they have as object of usual activity the exercise with profession title of one of the activities named at art. 3 Trade Code, considered objective acts (activities) of trade;
- they have as purposes the profit achievement (with lucrative character), not like the association / foundation which doesn't try to obtain profit (non-profit);
- the achievement of entrepreneur quality is related to the procedure of registration at the Trade Register;
- there are certain conditions requested regarding the legal capacity (the one of use and also the one for exercise);
- for the trade claims the legal responsibility has a certain extent (related to the exercise one);
- there is the obligation to obtain a specific authorization.

2. Conditions to Become Entrepreneur

a) Conditions concerning the person

- in exercising the right of free initiative, of the right of free association and the right of foundation, any natural person, Romanian citizen or foreign citizen from a state member of the European Union or of the European Economic Space, can develop economic activities in Romania, in the limits of law;

Regarding the **use capacity** of the authorized entrepreneur there are the following aspects to take in consideration:

- there is a succession of **incompatibilities** between the entrepreneur profession and other professions. By example, the organic law of attorneys interdicts them expressly to develop a trade activity whose object of activity would be the exercitation of the attorney profession;

- there is a succession of **interdictions** regarding the economic activity developed, starting from the respect for the state monopole in certain fields (how it would be the deposits extraction and processing or from some limits which are implied for the activities through contracts concluded (for example the clause of non-competition implied by the franchisor to the franchise's beneficiary);

- the **decays** from the entrepreneur quality could appear in case of penal order remained definitive, and pursuant to which through court order is forbidden expressly to the convicted the exercitation of entrepreneur profession, as sanction for the penalty.

Regarding the **exercise capacity**, it has to be remarked the fact that the development of an economic activity on its own account, implies that the entrepreneur has to have the age of 18 years. In other words only a major person, having full power of exercise, can become a entrepreneur, even if we talk about a woman or a man.

Because, pursuant to legal provisions in force a young woman and a young man can not marry before they are majors, there is no difference between genders regarding the obtaining of entrepreneur quality.

A special problem appears in the hypothesis of the familial firms, from which the underage of 16 years old can be part, but this will be analyzed at the section regarding the familial associations.

b) Conditions related to the developed activity

We can remark as first similarity between the authorized natural person, familial firm and the trade company, the obligation to choose as object of the main activity, exercised with profession title, of one of the activities considered by art. 3 Trade Code as trade activity.

We can ask ourselves from what point we can talk about obtaining the entrepreneur quality.

The most simple answer regards the trade companies, which, obtaining the legal personality at the moment of the registration at the Trade Register, become entrepreneurs at that date, fact that marks the apparition of a new subject of trade law.

The answer is more complicated at the authorized natural person, meaning that through registration doesn't appear a new legal subject, if exists, concretized in the natural person, who is recognized as being a entrepreneur from the moment of the registration at the Trade Register.

Is it possible that facts which are anterior to the registration to be qualified as being commercial? The answer is definitely affirmative, the Romanian doctrine marking this particularity of the legal acts closing with trade effects, even before the registration, when these have as purposes the profit and not the civilian finality. In the same manner, the loss of the entrepreneur quality can be anterior to the non-registration from the Trade Register, if we refer to a final legal act with commercial effects, closed by an authorized natural person.

At the familial association the answer is a little bit more complicated (see the next section).

For the commercial acts developed by an authorized natural person to have a professional character, the entrepreneur has to have a qualification conceived as professional formation or as professional experience, which can be proved with:

- diploma, certificate of graduation of an academic or post graduation educational institution;
- the certificate of graduation of a form of professional formation;
- certificate of professional competency;
- crafter book;
- labor book of the applicant, with which it can be proved that he was employed on a duration of minimum 2 years in the activity, profession or occupation for which the authorization is requested;
- notoriety statement.

These can be found in the OUG 44/2008 between the documents necessary for the registration at the Trade Register under the name: documents which attest the professional training/ professional experience.

Regarding the special notifications for the authorization for activity development, these can be found between the documents necessary for the registration under the name of frame statement on own responsibility which attests the fulfillment of the legal conditions for functioning provisioned by the special legislation from the sanitary field, sanitary – veterinary field, environment and labour protection.

3. Entrepreneur Holder of an Individual Enterprise versus the Trade Fund

The trade fund represents the legal universality in fact, constituted from the totality of the fixed assets, tangible and intangible assets which a trader can use in the exercise of his activities.

Through this formulation we understand that the trade fund has no legal personality (unlike the patrimony, which being constituted from the totality of rights and obligations to a legal subject, is a legal universality of fact) and it cannot be protected legally, unlike the regulations of the French law.

If until OUG 44/2008, the Romanian law regarding the trade law, was embracing the existent theory of the French doctrine, according to which the trade fund is a universality of fact and that each element keeps its own individuality (marks, export licenses, labour contracts and all the tangible movable assets), being able to be transmitted separately from the trade fund, we consider that after the regulation of OUG 44/2008 appears a new conception.

Starting from the theory of patrimony of affectation we assist at the centralization of some assets into a different trade patrimony, represented by the trade fund.

Of legal protection benefits the debtor – entrepreneur who can invoke the existence of a civilian patrimony (“nest egg”, constituted with the assets which are not used in trade activity) and a different trade patrimony, respectively the trade fund/individual enterprise.

This explication is argued by art. 26 from OUG 44/2008, which constitutes the liability of the holder of the individual enterprise with affectation patrimony, if this was constituted, and with the entire patrimony, in addition. The formula chosen by legislator is perfectible.

From the interpretation of art. 26 we can conclude that the natural person could answer with the entire fortune. If it’s so, why would chose a person this legal status, when it is already the one as natural authorized person?

On other side, understanding the amplitude of the trade fund from the doctrinaire definition enounced at the beginning of the present section and the notion of affectation patrimony, we consider that this time we assist at a notional superposition between the individual enterprise and trade fund, where we introduce also the notion of labour force employed, how it will be analyzed in the section 3.3.

4. Individual Enterprise versus Unipersonal Limited Liability Company (LLC)

According to art. 3 paragraph 3 of Law 31/1990 concerning the trade companies, associations of a LLC answer only until the concurrency of the registered equity. In the case of foundation through the act of will of a single person it is concluded a constitutive act, a status. (art. 5, paragraph 2).

Corroborating these provisions with those contained by art. 1 paragraph 2 and namely that the trade companies with headquarter in Romanian are Romanian legal persons, we observe that through an advantage of choosing the unipersonal LLC is that of the own legal personality, which the individual enterprise doesn't have. Although, associate is a natural person the one concluding the agreements assumes rights and obligations, the one who has the quality of employer, of contributor, etc is the unipersonal LLC, meaning a legal personality.

Having a registered equity, the unipersonal LLC can decide its putting-up for growing the credibility before thirds and to amplify the scope of businesses, meaning profit.

The accountable registration of a LLC will be developed in "double faction", each trade operation having a double registration, since at individual enterprise the registration is realized through "simple faction" (according to Law of accounting no. 82/1991). Therefore, the accountant registration of a unipersonal LLC is more rigorous.

An advantage which cannot be ignored by the entrepreneur is the fiscal one. The unipersonal LLC benefits of facilities and fiscal exceptions, the individual enterprise being deprived of them. (tax income, deducibility, etc.).

Also, the legal system is favorable for the unipersonal LLC regarding the assignation to third parts. The assignation of shares is allowed in any moment, on trade company duration (for example, through transformation from unipersonal LLC to pluripersonal), while in the case of an individual enterprise any assignation of rights and obligations would have to be realized as a transfer with universal title between living people, forbidden under the conditions of Romanian Civil Code.

Of course, the patrimony can be transmitted *mortis causa* in case of an individual enterprise, but this way of assignment is allowed also for the unipersonal LLC.

According to OUG 44/2008 the heritors of the natural person entrepreneur, holder of an individual enterprise can continue the enterprise in case of the holder death, if they manifest their will in this meaning, through an authentic statement, in term of six months from the date of the inheritance opening. If there are more heritors it can be chosen the activity continuation under the legal form of familial enterprise (acc. to art. 27).

From the point of view of the employer quality, the unipersonal LLC and the individual enterprise can conclude labour contracts, but holder of the obligation to pay income taxes from salaries is in the first case the legal person (LLC) and in the second one the entrepreneur holder of the enterprise.

Regarding the insolvency procedure regulated by Law 85/2006, in the case of individual enterprise is applied the simplified procedure, the debtor answering with the affectation patrimony or with the entire patrimony (ac. Art. 26 of OUG 44/2008). Again, the situation of the SRL is favored, the liability of the debtor – the trade company being limited at its patrimony and not at the one of the sole associate.

5. The Legal Status of the Authorized Natural Person

The natural person authorized benefits of certain rights and has obligations, which, together, constitutes the content of the legal status of the authorized natural person.

The most important obligations of the authorized natural person are:

- registration at the Trade Register;
- concluding the trade documentation;

According to OUG nr. 44/2008, both for the authorized natural person, but also in the case of the familial enterprises, the incorporation certificate, containing the sole identification number, becomes the document which proves **the registration** at the Trade Register, the **authorization for functioning** and also the **registration in the register of the competent fiscal authority.**

The documentation concerning the registration at the Trade Register, fiscal registration and the authorization of an authorized natural person is the same as in the cases of familial enterprises.

During trade exercise, according to art. 21 of Law no. 26/1990, the authorized natural person is due to register at the Trade Register all the modifications which will be called **registrations**, regarding:

a) donation, location, selling or real guarantee constituted over the trade fund, and also any document through which there are brought modifications of the registrations in the Trade Register or which cease the firm or the trade fund;

b) informations concerning the identity of the assignee. If the right of representation is limited at a certain filial or branch, the mention will be done only in the register where the filial or the branch is registered;

c) the investment licenses, the trade, production and services marks, the original names, the origin indication, firm, logo and other distinctive marks over which the authorized natural person or the familial enterprise has a right;

d) the divorce order of the trader, and also the one of the common assets sharing, pronounced during trade exercise;

e) the decision of interdiction for the authorized natural person or of institution of its trusteeship, and also the decision through which these measures are canceled;

f) the opening of the procedure of legal reorganization or bankruptcy, by case, and also the registration of the respective mentions;

g) the decision of conviction of the authorized natural person, of the administrator or censor for penal acts which make him incompatible or enable to exercise this activity;

h) any modifications concerning the registered acts, facts and mentions.

In case the authorized natural person has subsidiaries and/or branches is due to request their registration, like in the case of the familial associations, at the Trade Register where it was registered the main headquarter. The request of registration of branches / subsidiaries will be accompanied by copies after the certificates of main headquarter office, and copies concerning all the acts based on which the "mother company" was registered.

According to art. 24 of Law 26/1990, in the situation when an authorized natural person has its main quarter abroad and incorporates in Romania branches and/or subsidiaries is due to respect the provisions regarding the registration, mentioning and publishing of the documents and facts requested for the national traders.

6. The Obliteration of Registrations

According to art, 25 of Law 26/1990, republished "anyone who considers itself prejudiced through registration of through a mention from the Trade register has the right to ask its obliteration".

The authorized natural person ceases its activity and it is obliterated from the Trade Register in the following cases:

a) death;

b) its will;

c) under the conditions of art. 25 of Law 26/1990, republished, with the ulterior modifications and amendments.

The request is submitted and it is addressed at the Trade Register where the incorporation was realized. In term of three days from the date of the submission, the Trade Register Office address the

request to the court from the territory where headquarter of the familial enterprise is, and in the cases of the subsidiaries incorporated into another district, to the court of that district.

The court solution the request summoning the Trade Register Office and the familial enterprise, communicating after for the Trade Register Office the legal order pronounced, in legalized copy, mentioning that remains irrevocable.

The court decision of settlement of request can be appealed only through appeal, and the term of appeal starts from the pronouncement, for the present parties and from the communication for the absent parties (art. 25 paragraph 4).

The Trade Register Office will realize the obliteration and will publish the irrevocable court decision in the Official Monitor.

Another main obligation of an authorized natural person is the registration in the accountant registers of the activity developed.

The registers of an authorized natural person are private, and they contain all the operations concerning the trader patrimony.

Like in the case of the familial enterprises, the authorized natural person has to keep its accountancy in simple faction.

Law no. 82/1991 (art. 20) settles, explicitly, the following obligatory documents to be concluded:

- journal register;
- inventory register;
- copying book;

According to art. 25 of Law no. 82/1991, the accountancy registers, the acts and the documents that stood at the base of registration are kept for ten years, starting with the date of the closing of the financial exercise during which they were concluded.

6. Introductive Notions: Family Enterprise

The family enterprise is created at the initiative of a natural person and is constituted from two or more members of its family.

The members of a family enterprise are: the husband, the wife and their children who have the age of 16 years, at the date of the authorization of the family enterprise, like their relatives until the forth level included.

In comparison to the previous regulation we consider a progress mentioning the minimum number of members of the family enterprise, respectively two, and also the renouncing to the disposition concerning the obligation of the domicile/ residence in Romania.

Regarding the number of two associates, the regulation is argued, considering there are more members, the natural person having for the individual activity of PFA, or for the 9individual enterprise. In the same time, we have to mention the fact that the members of the association (taking about the major ones), can be in the same time PFA or holders of some individual enterprises (acc. to art. 28 paragraph 2), the cumulus of these two qualities being expressly forbidden by OUG 44/2008 (art. 19, paragraph 1).

Any member (this time including the underage of 16 years) can have the quality of associate with the one of employee of a third person who functions both in the same field, and also into other activity field that the one where the family association was organized (art. 19, paragraph 2).

The natural persons can provide activities within family enterprises since 16 years old, as proper employees (how they are named by Law 300/2004[2] within art. 3, paragraph 1), name which is not used within OUG 44/2008.

[2] Law 300/2004 concerning the authorization of the natural persons and of the family associations which develop economic activities independently, published in the Official Monitor nr. 576 on June 29th 2004.

The proper employee doesn't suppose labour reports before an employer, the quality of proper employee regarding the right of the owner to be assured in the public system of pensions and with other social insurances rights.

Like the previous regulation, the family enterprise cannot hire third persons with labour agreements, the ration being that exactly the reason for which the enterprise was incorporated was to use the labour force of associates, even of the underage of 16 years – for the members being allowed to have labour agreements.

With the third legal or natural persons is allowed the collaboration in order to realize economic activities (art. 29, paragraph 3).

Interesting is the order off art. 321, according to which "the members of the family enterprise are natural trader persons from the date of its registration with the Trade Register and answer jointly and indivisible for the debts contracted by the representative".

The same formulation is used also in art. 23, but concerning the owner entrepreneur of an individual enterprise.

These are the problems we believe it should be analyzed:

- Is it about the constitutive effect of appropriation by the members of the family enterprise of the natural trade person through registration at the Trade register?

- What is the situation for the underage of 16 years; can we extend the trader quality to those too?

Regarding the possible interpretation of a constitutive effect of registration, we consider that this kind of solution is wrong. The Romanian legal doctrine[3] was positioned constantly in the meaning of a declarative effect, in the meaning that at the date of registration of the natural person to trade register it appears a relative presumption of commerciality.

We consider that the lawgiver, through the legal norm adopted wanted to understand that even though became a member of family enterprise, the major has legal regime of PFA, in the meaning that achieves all the rights he would have achieved if he was registered as PFA.

Regarding the under age of 16 years (both, for the young boy or girl of the same age), we can consider that is a trader invoking the following arguments:

- from 16 years he can hire; this is why, not by chance through law 300/2004 it was called "proper employee"

- at the registration moment is considered as having the status of PFA, and this is the trader.

Against the trader quality can be invoked the following arguments:

- trader can become a natural person that fulfills cumulatively the conditions named at art. 8 paragraph 1 letter a-d), meaning 18 years old, they didn't do facts that need fiscal criminal record, they have a professional headquarter and declares on own responsibility that they fulfill the legal conditions of functioning, regarding the legislation of the sanitary field, sanitary – veterinary, the environment protection and labour safety.

We consider that all these conditions assume the age of 18 years.

- The jointly and indivisible responsibility, and the affectation patrimony stipulated by art. 31, assume the right of disposition of the natural person of the member of 16 years old has the capacity of restrain exercise, according to the Romanian civil code.

- For the arguments invoked previously, we consider that the answer to the question is negative, meaning the minor of 16 years, member of the family enterprise can not be considered trader.

Regarding the headquarter, before the previous regulation, we observe that it is used the name of professional headquarter, which is declared through the request of registration at Trade Register. For establishment of the professional headquarter it is obligatory that every member of the family

[3] In this context see S. Angheni, M. Volonciu, C. Stoica, "Commercial law", C. H. Beck, Bucharest, 2008, p. 19.

enterprise to hold a functioning right over the real estate to which address is declared (art. 9, paragraph 2). The law mentions at least a functioning right (without specifying if is exercised with onerous or free title) so there is no impediment for exercising a property right. In case the activity is developed by the citizens of a member state UE or SEE (European Economic Space) the professional headquarter has to fulfill the conditions of a permanent headquarter[4].

OUG 44/2008 introduced between the definitions of art. 2 and the working points, as locations where the activity is developed, in this case it is not developed exclusively at the professional headquarter 9excepting the ambulant trade, regulated by OUG 99/2000)[5].

Incorporation Agreement

The family enterprise is constituted through an incorporation agreement concluded between the members of the family enterprise in written form, as ***ad validitatem*** condition.

The incorporation agreement will contain:

- name and surname of the members;
- representative of the family enterprise
- date of the concluding;
- participation of every member to the developed activity by the family enterprise;
- the conditions of the participation;
- the contingents;
- the rate which will share the net incomes of the family enterprises;
- the reports between the members of the family enterprise;
- the conditions to take the members out of the absolute nullity sanction.

We observe that the provisions of OUG 44/2008 represent a progress in comparison to the previous regulation which was not containing a rule concerning the incorporation agreement.

Benefic is also the regulation concerning the representative named by the members of the enterprise. This manages the interests of the family enterprise, being in many ways like the administrator of the company trade, but the enterprise not having a own legal character, the representative has a distinct position with the one of the administrator who concludes document on behalf of a trade company, subject to a different law.

Just like the administrator, the representative:

- is named through a special power of attorney, which like a document under private signature;
- assures the collaboration with the third parts, no matter is they are natural or legal persons;
- assures the relation with Register Trade;
- assures the current management of a family enterprise;
- assumes its obligation of loyalty, confidentiality and con-concurrence.

Not like the administrator, the representative of a family enterprise:

- is the only one who can register documents at the Trade register;
- his act of empowerment will be signed by the main members of the enterprise, for minors will sign the legal representatives, who can be third persons before the enterprise;
- he doesn't represent a different legal subject, but the responsibility for the contracted obligations is shared and indivisible, in the limits of the affectation patrimony or even of the entire personal fortune;

[4] In this context, see S. Cristea "The taxation headquarter and the permanent headquarter. Notional delimitations", in the Romanian Review of taxatyion no. 17/2008, p. 38-41.

[5] OG 99/2000 concerning the trade with mail products and services, republished in Official Monitor no. 603 on August 31st 2007.

- the representative is always a member (he cannot be a third, like the administrator), and even it is not mentioned the employee quality he benefits of all the rights of an employee (previous regulation brings the notion of "proper employee");

- the documents of disposal over the assets of the affectation patrimony must have the previous approval of the members, obtained through the vote of the simple member majority, but also the approval of the asset's owner;

- member of the enterprise;

- in an adequate manner and in case the asset profit overpass 50% from the value of the affectation patrimony, the representative will have to have the previous approval of the members, and the asset obtained will be the members' propriety.

These last provisions must be corroborated with the ones concerning the members of enterprise, and namely:

- according to art. 30 of OUG no. 44/2008 through the incorporation agreement, the members of the family enterprise can stipulate the foundation of an affectation patrimony and through an additional act it can be established the contingent of each member of the family enterprise at the foundation of the affectation patrimony, and in case of vote unanimity these rates can be different of the to the company's contingents of profit/losses.

The remarkable progress which is realized by the new regulation in comparison to Law 300/2004, abrogated, consists in the modality of settlement of the responsibility of the enterprise's members.

If in the previous regulation the solution was shared and unlimited liability of the members (as an extent of the trade natural person quality of each member), the introduction by OUG /2008 of the notion of affectation patrimony consists a new challenge.

As an institution that contains the majority of the assets, rights and obligations of the members of the family enterprise, correspondent to the purpose of exercising an economic activity, constituted as a distinct fraction of the members' patrimony, separated by the general lien of the personal creditors of those (acc. Art. 2 letter j), the affectation patrimony restrains the responsibility of the members of a family enterprise.

The responsibility remains shared and indivisible, but becomes limited at the perimeter of the affectation patrimony, which becomes the guarantee for the satisfaction of the trade creditors' preferences.

Therefore, there is a commercial and a civil patrimony. It remains at the members' choice to enumerate the assets which follow to be destined (affected) to the economic activity, even from the incorporation agreement, the sanction for the lack of these provisions being severe and followed by the returning to the unlimited liability.

The limited nature of the liability, in case of affectation patrimony incorporation, is corroborated by art. 31 according to which, even in the case when the debts of the enterprise overpass the extent of the assets affected for economic activities, the members can be followed in completition, only in the limits of the contingents provisioned in incorporation agreement, desired to mean less than the entire personal fortune.

OUG 44/2008 doesn't induce a new institution; it only confers legal power to a theory formulated in the Romanian specialized doctrine[6] and enacted a long time ago in the French law[7].

6 The theory of the affectation patrimony was for the first time enacted in Lichtenstein through art. 834 and 896 of Civil Code of 1926. In this context see I. Voica "Legal system of SRl, with sole associate in the European Communitarian Law", vol. II, Ed. SOCEC, Bucharest, 1948, p. 515.

7 In this context see S. Angheni, M. Volonciu, C. Stoica, "Commercial law", C. H. Beck, Bucharest 2008, p. 53-54. For details, see S. Angheni "Some context concerning the trade fund in the comparative French and Romanian law", in the Review "Studies of Romanian law", no. 3-4 / 1996, p. 248-252.

Conclusions

The difference between the individual enterprise and authorized natural person results from the possibility / impossibility to hire employee personnel.

According to art. 17 of OUG 44/2008, the ANP cannot hire with labour agreements third persons for the activity is authorized for.

This provision has to be corroborated, on one side, with the ANP definition, as person who develops an activity using **mainly** the labour force (according to art. 2 letter i), with the provisions of art. 16, according to which the ANP can corroborate, in the exercise of its authorized activity, with other natural or legal persons, but also with art. 17 paragraph 2, according to which the ANP can cumulate this quality with the one of employee of a third person.

On other side, the ANP is assured in the public system of pensions benefiting of rights of social insurances and the right to be assured in the system of social insurances of health and for unemployment, meaning that it fulfills the conditions of right employee, how it was regulated by Law 300/2004, in the present abrogated through OUG 44/2008.

If the entrepreneur holder of an individual enterprise, like the ANP, can be the employee of a third person, along with the status of inherent employee (name that is no more used by the OUG 44/2008) we observe that the rest of the provisions of OUG 44/2008 distinguish the individual enterprise by ANP.

Therefore, the entrepreneur, holder of an individual enterprise, can hire third persons with individual labour agreement (art. 24).

An article that deserves a special analysis is art. 19 paragraph 1 of OUG 44/2008 according to which the ANP cannot cumulate also the quality of natural person entrepreneur, holder of an individual enterprise.

The arguments that sustain this regulation, we believe that are:

- on one side the fact the legislator distinguish the legal regime of these two institutions;
- on the other side the fact that from the liability point of view it cannot be granted with the same patrimony for two different activities.

We believe it is interesting to connect the analyzed provisions from above, context of art. 23, according to which the entrepreneur holder of the individual enterprise is the **natural person trader from the date of registration at the Trade Register.**

Using the extensive interpretation of OUG 44/2008 at least two conclusions could be formulated:

- if the ANP cannot be holder of an individual enterprise, the converse is valid; the entrepreneur, holder of an individual enterprise is ANP;
- while the individual enterprise aims always the activity of a trader, ANP can be an non-merchant, because, according to art. 20, paragraph 2, the creditors will execute their claims according to common law, in the case **when ANP doesn't have the trade quality**.

The interpretation of these conclusions is obligatory and brings a restrictive interpretation of the text of OUG 44/2008.

Therefore, if the provision regarding the validity of the formulated conversion is admitted, so the holder of an individual enterprise benefits from the status (especially rights) conferred by PFA, regarding the moment of achievement of the trade quality are necessary supplementary specifications.

It is not about the trade quality of a natural person, because in this matter the solution was consecrated by the Romanian doctrine before OUG 44/2008 and is valid until today. The registration at the Trade Register has a declarative effect for the natural person trader, but not constitutive, as in the German law.

The second conclusion, according to which the ANP can be a trader or non-trader in entirely incorrect, the legislator extending outside limits the sphere of inclusion, outside the commercial activity.

We consider that the extension of the ANP notion outside the trade law sphere is not possible because:

- the definition itself of the economic activity formulated in art. 2 of OUG 44/2008 relates with the entrepreneur risk, as risk which corresponds to the commercial activity;
- the regulation of the patrimony of affectation (art. 2 letter j), but also art. 20 and 26) allows the osculation between the civilian and the commercial patrimony, both for ANP, but also for the individual enterprise;
- the OUG 44/2008 abrogates the provisions of Law 200/2004 which regulates the commercial activity developed previously, individually, but also under the form of familial associations.

The arguments for which a natural person who wants to develop an economic activity would chose the variants of the family enterprise, would be the following:

- it is under age of 16 years and could not develop the activity on its own account and is a relative until the forth level with a major who wants to initiate a family enterprise and to be its representative;
- a major natural person, who has the initiative of incorporating a family association and having children and minor relatives until forth level, wants to assure a labour place and to have them under permanent supervision.
- There is an incorporation agreement where it can be negotiated the contingents to benefits/ losses in a way the responsibility for the contracted debts to "remain" in the limits of the affectation patrimony;
- The responsibility for debts is jointly and indivisible, so anybody can be kept for integral payment of those, but in the limits of the affectation patrimony, adequate for the contingent, but this, in our opinion concerns only the major members;
- Existing more members the risks are shared, so diminished;
- The relations with third parts are sustained by a responsible who assumes for himself the current management; the activity of the representative is strictly controlled by the members through the fact that for some documents is necessary the previous agreement of the others, as a proof of the fact that the enterprise has an owned patrimony;
- Through simple registration at trade register the members wish to achieve the status of PFA (in our interpretation we are talking about major members) ;
- The member owner of an asset from the affectation patrimony will be obligatory asked if he agrees with the asset transfer.
- The assets obtained by the representative become the member's co-property.

PREVENTIVE AGREEMENT – THE VIABLE ALTERNATIVE TO LAW NO. 85/2006 ON INSOLVENCY PROCEDURE?

PAULINA DINA*

Abstract
Given the economic crisis that Romania is going through and which influenced in a negative manner the activity of economic agents throughout the country, Law no. 381/2009 has been adopted for the implementation of the preventive agreement and ad-hoc mandate, in order to support companies facing economic difficulties in their activity. Law no. 381/2009 became applicable on January 13, 2010 and it implements, as an alternative to the difficult and time-consuming procedure of insolvency, a contractual mechanism for companies facing difficulties in organizing their activities, outside the insolvency procedure, with limited involvement from the court. This regulation is seen as a solution against the opening of the insolvency procedure. The solution applies especially to small and middle sized companies. The preventive agreement implies a longer deadline for payment liabilities based on a friendly agreement with the creditors. It is a mechanism for avoiding insolvency and it consists of an agreement made between the debtor and the creditors regarding the way in which the debtor, which is in a difficult financial position, will pay all its outstanding debts. The law applies to all legal entities which reorganize a company going through a difficult financial period, without being in insolvency and which are called debtors. Nevertheless, the preventive agreement law still forces us to relate to the notion of insolvency.

Key words: *preventive agreement, ad-hoc mandate, insolvency procedure, judicial moratorium*

Introduction

1.1. General aspects regarding the purpose and effects of the application of Law no. 381/2009 provisions

In order to approach the proposed topic it is crucial to emphasize the importance of the Judicial Moratorium Law and of the ad-hoc mandate to avoid the bankruptcy of companies. The judicial moratorium procedure must not be mistaken for the insolvency procedure (reorganization/bankruptcy), regulated by Law no. 85/2006 regarding the insolvency procedure, with all ammendments.

The judicial moratorium Law has been built starting from the idea that, in order to find financial balance, indebted companies could close a deal with the creditors for the payment of all debts.

The term 'judicial moratorium' is regulated for the first time in our country. The former Commercial Code regulated two measures to prevent bankruptcy, that is: *pre-bankruptcy moratorium*, which represented a means of delay from the debtor and the *post-bankruptcy moratorium*, both leading to unsatisfactory results in practice.

Thus, the judicial moratorium Law appeared in 1929, which eliminated the moratorium and shich, in 1938 has been recalled due to poor results in practice. It seems that the poor results of these measures meant to avoid the effects of bankruptcy are explained by the excessive involvement of the syndic judge and the court, through complicated procedures and by the fact that these institutions would intervene too late, the debtor being already bankrupt (cessation of payments).

The judicial moratorium concept is also implemented and applied in European Union countries, such as Belgium, which adopted it since 1997.

* Lecturer, Ph.D., Faculty of Tourism and Commercial Management, "Dimitrie Cantemir" Christian University, Constanta, (e-mail: pauladina2004@yahoo.com)

The purpose of the application of Law no. 381/2009 regarding the implementation of the judicial moratorium is to protect societies in financial distress in order to reorganize their activities without going into the insolvency procedure. Thus, the aim is to avoid bankruptcy, by closing a deal with the creditors regarding the way in which debts will be paid. They will be able to cover the owed amounts, by means of amicable proceedings of negotiation of debts or debt-related conditions by concluding a judicial moratorium.

In order to better understand this regulation, a few succinct comments are necessary concerning the provisions of Law no. 85/2006 regarding the insolvency procedure (modified and amended by Law no. 169/2010, inclusive). The insolvency procedure is a unitary, collective and leveling enforcement procedure. It represents "that part of the debtor's patrimony that is characterized by insufficiency of funds available for the payment of exigible debts" (art. 3, item 1). This insolvency procedure can be performed in several ways, such as: the general procedure, the simplified bankruptcy procedure, the judicial reorganisation procedure and the bankruptcy procedure, which applies to the debtor in order to liquidate its fortune to cover the liabilities, being followed by the deletion of the debtor from the Registry of Commerce where he was registered. The judicial moratorium and the ad-hoc law whishes to be a new and radical solution for the treatment of enterprises in distress that go through a solvable crisis, by convincing the creditors that there are chances to regain balance, by means of an operative mechanism and procedure, other than bankruptcy, which reduce the involvement of judicial bodies to a minimum, based on a convention between the involved parties.

In other words, by means of a contractual proceeding, concluded between the creditors and an honest debtor, in financial distress, one aims at avoiding insolvency and creating a procedure of contractual reorganization between debtor and creditors.

The mentioned law itself states that its purpose is to safeguard enterprises in distress, in order to continue their activity, maintain workplaces and cover all debts of the debtor, by means of amicable procedures for the renegotiation of debts or related conditions, or by means of a judicial moratorium. The judicial moratorium implies a contract concluded between the debtor, on the one hand, and the creditors that own at least two thirds of the value of accepted and unchallenged debts, on the other hand, through which the debtor proposes a plan to reestablish the balance of its enterprise and to cover all debts to creditors, while creditors accept to support the efforts of the debtor to get over the distress that the debtor's company is in.

A new element brought by the judicial moratorium is that during its application, secondary debts – penalties and interest are stopped. Also the interdiction to start the insolvency procedure for the same period is another new element.

This procedure can be used by any debtor that meets a number of conditions: hasn't been convicted for fiscal offences, no insolvency procedure has been started against that debtor in the last five years etc. In other words, has „a good conduct in business".

The judicial moratorium Law no. 381/2009 offers companies in financial distress the possibility to avoid bankruptcy by means of an authorized person that can hire people or make them redundant, conclude or terminate contracts, everything on the purpose to avoid bankruptcy. The purpose of the law is to save a company in distress by means of one of the following procedures: the ad-hoc mandate or the judicial moratorium.

1.2. Considerations regarding the way in which Law no. 381/2009 regulates the "Ad-hoc mandate"

The ad-hoc mandate is a confidential procedure, triggered upon the request of the debtor, through which an ad-hoc representative proposed by the debtor and appointed by the court negotiates with the creditors in order to reach an agreement between one or more creditors and the debtor, in

order to get over the distress that the debtor's company is in[1]. In such cases, only the court has the authority to decide. Actually, a debtor can address the nearest court to request the appointment of an ad-hoc representative from among the authorized insolvency practitioners. The request must comprise a detailed description of the reasons for which he or she requires the appointment of an ad-hoc representative. After receiving the request, the president of the court has five days to decide the invitation of the debtor and of the proposed ad-hoc representative. After listening to the debtor, if one finds that the company is indeed in serious distress, the court authorizes the appointment of the proposed ad-hoc representative. The ad-hoc representative has the obligation to reach, within 90 days after the appointment, an agreement between the debtor and its creditors, so that financial problems are solved, debts are paid, the company is saved from bankruptcy and workplaces maintained. The ad-hoc representative has the right to propose deletions, reschedulings or partial reductions of the debt, continuation or termination of ongoing contracts, personnel reductions, as well as any other measures necessary to save the company from bankruptcy and bring it back on the floating line.[2]

Regarding the ad-hoc mandate procedure, the law does not stipulate sanctions, but only the acknowledgement of its cessation by the president of the court, if no agreement has been mediated between the debtor and its creditors.

The purpose of the implementation of the ad-hoc mandate procedure is unclear, since it cannot offer a better position of the debtor in relation with its creditors – an agreement with the creditors being possible without the involvement of the court.

1.3. Considerations regarding the way in which Law no. 381/2009 regulates the "judicial moratorium"

The judicial moratorium is a contract that has been concluded between the debtor, on the one hand, and the creditors that own at least two thirds of the value of accepted and unchallenged debts, on the other hand, through which the debtor proposes a plan to reestablish the balance of its enterprise and to cover all debts to creditors, while creditors accept to support the efforts of the debtor to get over the distress that the debtor's company is in[3]. Thus, one can notice that in both cases, the intervention of the court is limited and under no circumstances does it involve a decision to enter insolvency. It only implies the conclusion and performance of new agreements between the debtor and most of its creditors, which are concluded through mediation by insolvency specialists. But the failure of these agreements leads, inevitably, to bankruptcy. It's also necessary to emphasize that during the ad-hoc mandate or the judicial moratorium period, the debtor maintains its right to manage its own business for all current inventory documents.

1.3.1. Entering the procedure and the offer for judicial moratorium

This procedure is similar to the ad-hoc mandate procedure, because debtors can file the competent court, a request to enter the judicial moratorium procedure. By means of this request, the debtor proposes a temporary conciliator (a negotiator that can be replaced by decision of the creditors' assembly, with the consent of the debtor), from among the authorized insolvency practitioners, as per the legislation. The syndic judge appoints the temporary conciliator through irrevocable decision. 30 days after being appointed, the conciliator drafts, together with the debtor, the list of creditors as well as the offer for judicial moratory. The judicial moratory offer will be added to the open file and, for enforceability against third parties, it will be sent to the court clerk where it will be filed and recorded in a special registry. Its submission and notification will be mentioned in the Trading companies registry where the debtor is registered.

[1] Law no.381/2009 regarding the implementation of judicial moratorium and ad-hoc mandate, art.3, item c
[2] Legea nr.381/2009 privind introducerea concordatului preventive si a mandatului ad-hoc, art.10 items 2,3
[3] Law no.381/2009 regarding the implementation of judicial moratorium and ad-hoc mandate, art.3 item d

The offer for judicial moratorium will also include the judicial moratorium project, that will have attached the debtor's statement regarding the distress it faces, as well as the list of known debtors, including those whose debts are fully or partially challenged, stating the amount and pledges accepted by the debtor.

The judicial moratorium project must also include a recovery plan that has to include the following minimum measures:

a) reorganization of the debtor's activity through outplacement, modification of the functional structure, personnel reduction or any other measures seen as necessary;

b) the ways in which the debtor understands to get over the financial distress, as well as: the increase of share capital, bank loan - obligational or other, set up or abolishment of branches or lucrative facilities, selling of assets, establishing of securities etc;

c) the estimated percentage for the payment of debts, which cannot be lower than 50%, after the implementation of proposed measures.

The judicial moratorium project is considered to be approved by the creditors when all the required votes from the creditors representing the majority of two thirds of the value of the accepted and unchallenged debts are met, except those that might not be independent, as per the exceptions stipulated by law.

Through the judicial moratorium project, subject to the creditors' approval, the debtor also proposes the confirmation of the temporary conciliator, as well as the conciliator's remuneration for the period subsequent to the date the moratorium has bwwn concluded.

Nevertheless, the debtor can also ask the syndic judge, based on the judicial moratorium offer, to temporarily suspend legal seizure.[4]

The request is judged by the council, in and urgent and special manner, without summoning the parties. Temporary suspension of individual legal seizure is maintained until the approved or rejected judicial moratorium is published, or until the debtor's offer to most of the creditors is rejected. This procedure does not apply to people who were convicted for economic felonies or who entered the insolvency procedure in the last five years. Also, the provisions of the law that regulates judicial moratorium do not apply to those companies whose shareholders, associates or administrators have been convicted in the last five years for fraudulent bankruptcy, fraudulent administration, cruel intentions, deception, peculation, false testimony, forgery and use of forgery.

The debtor will develop its business activities in a normal manner, in compliance with the signed judicial moratorium and under the supervision of the negotiator. The suspension of the application of procedures against the debtor's assets is triggered in a different manner, depending on the relevant stage of the procedure. Thus:

- on the date the judicial moratorium offer is made – the debtor can solicit the court to decide to decide with respect to the temporary suspension of the application of the foreclosure proceedings;
- on the date the court confirms the judicial moratorium – the application of the foreclosure proceedings initiated by the creditors which signed the moratorium are suspended on legal grounds;
- on the date the judicial moratorium is is homologated by the court – all the proceedings for foreclosure are suspended by the court.

Only the application procedures are suspended. Any creditor that obtains a foreclosure mandate during the procedure can solicit to adhere to the moratorium or can recover the amounts owed by the debtor via any other means stipulated by law. It is not clear what are the other means stipulated by the law. The increase of interest and penalties is suspended in relation with the creditors executing the agreement of the moratorium, when the moratorium is confirmed by the court. Regarding the creditors that do not accept the moratorium, the increase of interest and penalties is only suspended under limited circumstances stipulated by law. During the homologated judicial moratorium, no insolvency procedure can be opened against the debtor.

[4] Law no.381/2009 regarding the implementation of judicial moratorium and ad-hoc mandate, art. 22, item 1

1.3.2. Conclusion, finding and homologation of the judicial moratorium

In order to exercise the vote of the creditors over the judicial moratorium project, the debtor can organize one or several collective or individual meetings for negotiation with the creditors, in the presence of the conciliator proposed by the debtor. The initiative of negotiation can belong to one or more creditors, as well as to significant shareholders or the debtor's associates. The period for negotiations regarding the judicial moratorium cannot exceed 30 calendar days.

Creditors can also vote the judicial moratorium offer, with its potential amendments as a result of negotiations, via correspondence. The judicial moratorium project is considered to be approved by the creditors when all the required votes from the creditors representing the majority of two thirds of the value of the accepted and unchallenged debts are met. If the stipulated majority is not met, after at least 30 days, the debtor has the right to make another judicial moratorium offer. After the moratorium has been approved by the creditors, the conciliator asks the syndic judge to acknowledge the judicial moratorium.

Non-signatory creditors – those who voted against the judicial moratorium proposed by the debtor – have the possibility to introduce an action for annulment within 15 days since the judicial moratorium has been mentioned in the trade register.

The individual legal seizure of all signatory creditors over the debtor are suspended starting with the date the judicial moratorium finding decision has been communicated, and on the same date the flow on interest, penalties as well as any other debt-related expenses towards the signatory creditors will be suspended.

In order to make the judicial moratorium opposable to non-signatory creditors, including unknown or challenged creditors, the conciliator can ask the syndic judge to homologate the moratorium. By deciding the homologation, the syndic judge suspends all foreclosure proceedings. Also, upon the request of the conciliator, the syndic judge can enforce the non-signatory creditors of the judicial moratorium a period of maximum 18 months to postpone the due date of their debt, a period during which the flow on interest, penalties as well as any other debt-related expenses will cease. During the homologated judicial moratorium the insolvency procedure cannot be opened against the debtor.

Any creditor that obtains an enforceable title over the debtor during the procedure can draft a request to adhere the moratorium or can recover its debt by other means stipulated by law. The deadline to pay the debts established via moratorium cannot exceed 18 months after the judicial moratorium has been concluded.

1.3.3. The causes that generate the conclusion of the judicial moratorium procedure

The creditors that voted against the judicial moratorium can ask for the cancellation of the agreement, within 15 days since the moratorium has been mentioned in the trade register.

In case of a serious breach by the debtor of obligations undertaken through the judicial moratorium (such as to favor one or several creditors to the detriment of the others, the hiding or outsourcing of assets during the period of the judicial moratorium, performance of payments without counterperformance or under ruinous conditions), the assembly of the moratorium creditors can decide the entering of the action into the resolution of the judicial moratorium, in which case the judicial moratorium procedure is suspended automatically.

If the judicial moratorium procedure ends successfully, the syndic judge will rule a conclusion that will establish the achievement of the object of the judicial moratorium.

If during the process, the conciliator appreciates that it is impossible to reach the objectives of the moratorium for reasons that cannot be imputed to the debtor, it can request the syndic judge to establish the failure of the judicial moratorium and conclusion of the procedure.

If, on the expiry date of the deadline set by law[5] the obligations provided by the moratorium are not met, the creditors will be able to vote, upon the conciliator's request, the extension of the judicial moratorium duration with a maximum of 6 months as compared to its initial duration.

As for the judicial moratorium, the law stipulates the following sanctions:

- the creditors that voted against the judicial moratorium can ask for the cancellation of the moratorium within 15 days since the moratorium has been mentioned in the trade register;
- when absolute nullity is invoked, the right to establish nullity belongs to any stakeholder and is imprescriptible;
- the court can decide the suspension of the judicial moratorium by judge's order;
- if the debtor seriously breaches the obligations undertaken via the judicial moratorium, the assembly of the moratorium creditors can decide the entering of the action in for resolution of the judicial moratorium;
- when the conciliator appreciates that it is impossible to achieve the objectives of the judicial moratorium for reasons that cannot be imputed to the debtor, during the procedure and no later than 18 months, it can solicit the syndic judge to establish the failure of the judicial moratorium and conclusion of the procedure.

1.3.4. The advantages of the judicial moratorium procedure compared to the insolvency procedure

For the debtor, the procedure regulated by Law no. 381/2009 representes a series of advantages, such as:

- the debtor can propose measures to postpone or reschedule the payment of its debts;
- the debtor can propose the complete or partial deletion of some of the debts or only of the interest or delay penalties;
- the debtor can propose compensations and novations via debtor exchange;
- the debtor can propose partial reductions for fiscal liabilities; in this case, the agreement of the National Fiscal Administration Agency must be expressed within 30 days, otherwise the agreement is presumed;
- the debtor can obtain from the syndic judge a temporary suspension of legal seizure, based on the offer for judicial moratorium; the temporary suspension is maintained until the appoved judicial moratorium is published or until the offer of the debtor towards the majority of the creditors is rejected;
- the homologation of the judicial moratorium by the syndic judge determined the suspension of all foreclosure procedures;
- the individual legal seizure of all signatory creditors over the debtor are suspended starting with the date the judicial moratorium finding decision has been communicated;
- at the same date, the flow on interest, penalties as well as any other debt-related expenses towards the signatory creditors will be suspended;
- the measures incorporated by the judicial moratorium, including the modification of debts, profits and co-debtors, fidejussors and third guarantors;
- during the procedure, the debtor will continue its activity within the boundaries of the usual business, under the conditions of the judicial moratorium, under the supervision of the conciliator;
- the modification of debts stipulated in the judicial moratorium remain irrevocable if the procedure finalizes successfully.

[5]Law no.381/2009 regarding the implementation of judicial moratorium and ad-hoc mandate, art.21, par. 2, let.d

Conclusions

Law no. 381/2009 regarding the implementation of the judicial moratorium and the ad-hoc mandate introduces a more flexible mechanism, compared to the insolvency procedure, for companies in distress that is having problems reorganizing its activity, whose truly important characteristic, which cannot be achieved contractually, is the power to have all debtors executed by the creditors.

Basically, this law is addressed to those debtors that are victims of unfavourable circumstances, but that deserve protection, because the business has a chance to recover, for the benefit of its employees, its creditors (including the state, for budgetary debts), the local community and itself, its disappearing caused by bankruptcy being able to generate unfavourable consequences for the entire social environment it performs, starting with the employees (who rick to lose their jobs), local community, (which loses the income generated by taxes and fees, and which has to bear the increase of the unemployment rate locally), the Romanian state (which loses a tax payer and is to bear the unemployment expenses as well as those for professional reorientation of those made redundant), for suppliers and banks etc. The judicial moratorium is a solution to avoid the entrance of companies into insolvency.

Even if the provisions of this law apply to any legal person that reorganizes a company in financial distress, we believe it will target especially medium and large companies, since both the ad-hoc mandate as well as the judicial moratorium involve significant additional costs, consisting in the remuneration of the ad-hoc mandate, the conciliator, the expert accountant or the authorized auditor. Since these costs are hard to be sustained by a small company, while the economic, financial, fiscal and social implications are more important for medium-sized and large enterprises, due to the specialization involved by the size of the company and the difficulty to chose another type of activity. Compared to the insolvency procedure, the judicial moratorium agreement has a smaller impact on the image and trading credibility of the company in distress and besides, it is based on an amicable agreement with the creditors. Nevertheless, more concepts and time spans used by the law are unclear or inappropriate, being capable to make the successful practical implementation difficult.

Indeed, the solution offered by the lawmaker is a method to avoid insolvency, based on legal grounds, but one can never know if it will be able to save the companies from bankruptcy, if no additional and more permissive measures are implemented together with an infusion of capital.

THE DETERMINATION AND THE IMPACT OF THE PREFIGURED MODIFY OF ROMANIAN LABOR CODE ON THE LABOR INDIVIDUAL AND COLLECTIVE RELATIONSHIPS

AURELIAN GABRIEL ULUITU[*]

Abstract:
The Romanian Labour Code – Act no 53/2003 – has been modified several times during its application. The most important modifications were aiming at the following aspects: the termination of the labour contract (especially the individual and collective dismissal and the rightful termination of the contract), the individual labour contract for a limited duration, the work time and the rest time. These modifications were punctual and determined by the necessity of assuring a balance between the position of the employees and the one of the employers.
A lot of critics have been formulated by the representatives of the employers after the Labour Code got in force. They consider that the actual regulation is too restrictive for them. It is still extremely favourable for the employees, who are protected by the Code even in situations which are not necessary to assure this protection (professional evaluation, individual dismissal, disciplinary procedure and liability). These were the reasons which determined a constant pressure from the employer's trade unions in relation with the Government in order to modify those parts of the Code which are too favourable to the employees.
The draft of the modification act includes the following major aspects: the written form of the individual labour contract; the non-competition clause; the unilateral modification of the individual labour contract by the employer; the individual dismissal; the work time; the collective bargaining and the collective contracts; the material liability of the employee; the labour jurisdiction.

Key words: *Labour Code, labour relationship; individual labour contract; dismissal; disciplinary liability; material liability; non-competition clause.*

1. Introduction

One of the most important field of regulation in Romanian law system is the labour legislation. According to art. 1 paragraph 3 of Romanian Constitution, "*Romania is a democratic and social state, governed by the rule of law, in which human dignity, the citizens' rights and freedoms, the free development of human personality, justice and political pluralism represent supreme values, in the spirit of the democratic traditions of the Romanian people and the ideals of the Revolution of December 1989, and shall be guaranteed*".

The social character of the Romanian state had determined the special protection of the labour – in generally – and of the workers, especially. The art. 41 from the Fundamental Act – suggestively entitled "Labour and social protection of labour" – settle:

"(1) The right to work shall not be restricted. Everyone has a free choice of his/her profession, trade or occupation, as well as work place.

(2) All employees have the right to measures of social protection. These concern employees' safety and health, working conditions for women and young people, the setting up of a minimum gross salary per economy, weekends, paid rest leave, work performed under difficult and special conditions, as well as other specific conditions, as stipulated by the law.

(3) The normal duration of a working day is of maximum eight hours, on the average.

(4) On equal work with men, women shall get equal wages.

[*] Lecturer, Ph.D., Law Faculty, "Nicolae Titulescu" University, Bucharest (e-mail: gabriel.uluitu@univnt ro).

(5) The right to collective labour bargaining and the binding force of collective agreements shall be guaranteed.".

Based on these principles, the Labour Code – Act no. 53/2003[1] – was built and represent the regulatory body of the labour legislation. Since the first period of application, it was obvious that the regulation is not equilibrate. The rights and the social protection of the employees were (and mostly, are) much more represent in the Law then the rights and legal recognition of the employers' interests.

It was the reason why the Labour Code was successively modified[2]. The Romanian Legislative organisms – both Parliament and Government – had tried to determine a necessary equilibrium between the rights and interests of the labour relations parts: employees and employers.

The global financial crisis and its reflection in Romanian economy and social life has shown that the economic productivity and the labour force flexibility are far to law compared to other countries (form European Union and beyond the European Union).

On this background, the social partners – trade unions, employers' representatives and the representatives of the Government – decided to identify the possible modification of the labour legislation, especially of the Labour Code, in order to achieve a higher performance and flexibility of the labour. Of course, the opinions are not convergent, because the trade unions wants to preserve the majority of the actual legal solutions, which assure the "social status" of the employees.

The results of the consultations between the social partners determined few drafts of the Labour Code modifications, but the Government had recently announced that intends to promote a legislative initiative in the Parliament, based on its political responsibility.

We had compared the different forms of the drafts and they include the following major aspects: the written form of the individual labour contract; the non-competition clause; the unilateral modification of the individual labour contract by the employer; the individual dismissal; the work time; the collective bargaining and the collective contracts; the material liability of the employee; the labour jurisdiction.

2. A critical examination of the proposed major modification of the Labour Code

a) The written form of the individual labour contract

According to art. 16 of Labour Code, in the actual form:

"*(1) An individual labour contract shall be concluded based on the parties' consent, in writing, in Romanian. The employer has the obligation to conclude the individual labour contract in written form. Any employer who is a legal entity, any natural entity authorised to be carry out an independent activity, as well as the family association shall be under the obligation to conclude the individual labour contract, in written form, prior to beginning any labour relationship.*

(2) If the individual labour contract has not been concluded in written form, the presumption is that it has been concluded for an unlimited duration, and the parties may make the proof of contract provisions and the work performed by means of any other piece of evidence.

(3) The work performed based on an individual labour contract shall give the employee length of service"[3].

---

[1] Published in the Official Gazette of Romania, part I, no. 72 of 5th February 2003.

[2] By the: Law No. 480/2003; Law No. 541/2003; Government Emergency Ordinance No. 65/2005; Law No. 241/2005; Law No. 371/2005; Government Emergency Ordinance No. 55/2006; Law No. 94/2007; Government Emergency Ordinance No. 82/2007; Law No. 237/2007; Law No. 202/2008; Government Emergency Ordinance No. 148/2008; Government Emergency Ordinance No. 28/2009; Government Emergency Ordinance No. 37/2009.

[3] Ion Traian Ștefănescu, *Tratat teoretic şi practic de dreptul muncii* (Bucharest, Universul Juridic, 2010), p. 252-258; Alexandru Țiclea, *Tratat de dreptul muncii* (Bucharest, Universul Juridic, 2009), p. 412-414

The Government intents to abrogate the second paragraph of the art. 16, correlated to the intention of the legislative to determine the criminal liability of the person – individual or company – who will use labour force without signing a written labour contract. In present, if an employer doesn't conclude a written individual labour contract, only material and/or administrative liability are engaged.

b) The non-competition clause

The regulation of the non-competition clause in the Labour Code are the following:

"*ART. 21*

(1) Upon the conclusion of the individual labour contract or throughout its execution, the parties may negotiate and include in the contract a non-competition clause under which the employee shall be under the obligation, after contract termination, not to perform, for his/her own interest or that of a third party, an activity which is competing with the one performed for his/her employer, in exchange for a monthly non-competition emolument which the employer undertakes to pay for the entire non-competition time period.

(2) The non-competition clause shall only take effect if the individual labour contract clearly stipulates the activities the employee is prohibited from performing from the date of contract termination, the amount of the monthly non-competition emolument, the time period for which the non-competition clause causes its effect, the third parties on behalf of whom the performance of the activity is being prohibited, as well as the geographic area where the employee might be in actual competition with his/her former employer.

(3) The monthly non-competition emolument due to the employee shall not represent wages, shall be negotiated and shall be at least 50% of the average gross wages in the last 6 months prior to the date of termination of the individual labour contract was terminated or, if the duration of the individual labour contract was less than 6 months long, of the average gross monthly wages due to him/her for the contract period.

(4) The non-competition emolument shall represent an expense made by the employer, shall be deductible upon the calculation of the taxable profit, and the tax shall be charged from the beneficiary natural person, under the law.

ART. 22

(1) The non-competition clause may cause effects for a period not exceeding 2 years as from termination date of the individual labour contract.

(2) The provisions of paragraph (1) shall not be applicable when the termination of the individual labour contract has taken place rightfully, except for the cases provided in Article 56 d), f), g), h) and j), or when it has been based on the employer's initiative for reasons which not pertaining to the employee' person.

ART. 23

(1) The non-competition clause may not have as effect the employee being absolutely prohibited from exercising his/her profession or specialization.

(2) Based on a notification by the employee or the territorial labour inspectorate, the competent court of law may diminish the effects of the non-competition clause.

ART. 24

In the event of the employee having violated, in ill will, the non-competition clause, he/she may be obliged to return the emolument and, as applicable, pay damages corresponding to the prejudice caused by him/her to the employer"[4].

The principals modifications of the non-competition clause regulation are referring to the possibility of the employer:

[4] Ion Traian Ştefănescu, *op. cit.*, p. 312; Alexandru Ţiclea, *op. cit.*, p. 405-409

- to increase the period of the former employee's interdiction to work for another employer or to work on an individual and independent form in an activity related to the activity of the former employer; the actual period of two years (art. 22 paragraph 1);

- to negotiate the amount which the former employee will receive in change of the respect of the non-competition obligation; in the actual form of the Code, the employer has no possibility to bargain an amount under the minimum value mentioned by the art. 21 paragraph 3 – which is at least 50% of the average gross wages in the last six months prior the date of termination of the individual labour contract was terminated or, if the duration of the individual labour contract was less than six months long, of the average gross monthly wages due to the employee for the contractual period;

- to unilaterally denounce the non-competition clause, during the period of its application, in order to stop the payment of the former employee; in the actual regulation, if the former employee notify the former employer (the debtor of the payment of the non-competition emolument) its position of entire respect of the non-competition obligations, the former employee has to pay the non-competition emolument all the period negotiated with the employee (maximum two years), even the employer has no or limited interest in respect by the former employee of the non-competition obligation. It is possible to have such positions because the non-competition clause is negotiated at the conclusion of the individual labour contract and produce its specific effects only after the termination of the contract. Between the two mentioned moments it is possible that the initial interest of the employer to assure that the employee will respect the non-competition obligation could vanish.

c) The trial period

One of the most sensitive modification of the Labour Code implies the modification of the norms having object the trial period. In the actual settlement, the norms are the following:

"*ART. 31*

1) In order to check the abilities of the employee, on the conclusion of the individual labour contract, a trial period not exceeding 30 calendar days may be established for executive positions, and not exceeding 90 calendar days for management positions.

(2) The check of professional abilities when employing disabled persons shall be based only on a trial period of not exceeding 30 calendar days.

3) As far as unskilled workers are concerned, the trial period shall be exceptional and shall not exceed 5 workdays.

4) Graduates of higher-education institutions shall be employed, at the beginning of the employment in their profession, based on a trial period not exceeding 6 months.

4^1) Throughout the trial period or at the end of it, the individual labour contract may only be terminated, based on a written notice, following the initiative of either party.

5) During the trial period, the employee shall enjoy all the rights and have all the obligations stipulated in the labour legislation, the applicable collective labour contract, the internal regulations, as well as the individual labour contract.

ART. 32

1) During the progression of an individual labour contract, there may only be one trial period.

2) As an exception, an employee may be subject to a new trial period if he/she starts up in a new position or profession with the same employer, or is to perform his/her activity in a work place under difficult, harmful, or dangerous conditions.

(3) The failure to inform the employee, before the conclusion or amendment of the individual labour contract, about the trial period, within the term set under Article 17 (4), causes the employer to lose the right of checking the employee's abilities by such means.

4) The trial period shall represent length of service.

ART. 33

It is prohibited to successively employ more than three persons for trial periods for the same position".

The modification aim at the following results:

- the Government intends to increase the trial period for all employees' positions categories (executive positions, management positions) from 30 calendar days up to 90 calendar days for the executive positions and from 90 calendar days up to 180 calendar days for the management positions; the interest of the Government is here related to the interest of the employers representatives, because throughout the all trial period or at the end of it, the individual labour contract may only by unilaterally and unconditioned terminated by the employee, based on only a written notice (without the respect of all formal and material conditions asked by the law related to the dismissal of the employee) – art. 31 paragraph 4^1;

- the Government wants to abrogate the stipulation of art. 33 – which obliges the employers not to hire more than three persons for trial periods for the same position; if the legal provision will be abrogated, the employers will have the legal permission to conclude more than three individual labour contracts for the same position, determining the termination of each one based on the written notice addressed to the employee at the end of the each trial period; in this way, it is possible to have an undetermined number of employees hired successively on the same position with the permission of the employer to fire them without the respect of the dismissal's conditions.

d) The individual dismissal

In the actual regulation of the individual dismissal – an unilaterally way of termination of the individual labour contract – the employer could determine the end of the labour relation only if is in one of the hypotheses which are settle by art. 61 and art. 65 from the Labour Code:

"*ART. 61*

The employer may order the dismissal for reasons pertaining to an employee's person under the following circumstances:

a) if that employee has perpetrated a serious departure or repeated departures from the work discipline regulations or those set by the individual labour contract, the applicable collective labour contract, or the internal regulations, as a disciplinary sanction;

b) if the employee has been placed under police custody for a period exceeding 60 days, under the terms of the Criminal procedure code;

c) if, following a decision of the competent medical examination authorities, physical and/or mental incapacity of that employee has been found, which prevents the latter from accomplishing the duties related to his/her current work place;

d) if the employee should not be professionally fit for his/her current position;

ART. 65

(1) The dismissal for reasons not pertaining to the employee's person shall represent the termination of the individual labour contract, caused by the suppression of that employee's position, for one or several reasons not related to the employee".

The Government representatives, including the Prime-Minister, affirmed that the restrictive way of the dismissal regulations is an factor which contributes to a low degree of efficiency of the employers activity, both in the public and private sectors of activity. This is the reason why the future solutions are in order to increase the flexibility of the labour relations and the accent in this matter to be put not on the social protection of the employees, but on the professionalism and efficiency of their activity.

The employer is suppose to have the legal permission to evaluate the activity of the employees and to determine the termination of the labour relation for the ones who do not fully respond to its economical interests.

The trade unions representatives affirmed that a such solution will determine an so called "salary slavery", because the employees will depends of the simple will of the employers: when an employee shall not be necessary anymore for the employer, the last one will denounce the contract without the possibility for the employee to defence.

e) The individual labour contract for a limited duration

The principle stipulated by the Labour Code in the matter of the individual labour contract's duration is that this contract should be concluded by its parts on an unlimited duration (art. 12 paragraph 1). The exception is the limited duration of the contract. Art. 80 regulates:

"*(1) As an exception to the rule stipulated under Article 12 (1), the employers may be permitted to employ, for the purpose and under the terms of the present code, personnel based on individual labour contracts for a limited duration.*

(2) An individual labour contract for a limited duration may only be concluded in a written form, expressly stating the duration it is being concluded for.

(3) An individual labour contract for a limited duration may be extended even after the expiry of the original delay, based on the parties' written consent, but only within the delay stipulated under Article 82 and no more than two times consecutively.

(4) No more than 3 successive individual labour contracts for a limited period may be concluded between the same parties, and only within the delay stipulated under Article 82.

(5) Individual labour contracts for a limited period concluded within 3 months from the termination of a prior labour contract for a limited period shall be deemed as successive contracts".

The situations which allow the employers to propose to the future employee a limited duration of the individual labour contract are settled by the art. 81. They are the following:

- replacement of an employee in the event his/her labour contract is suspended, except when that employee participates in a strike;
- a temporary increase in the employer's activity;
- progression of some seasonal activities;
- if it is concluded based on some lawful provisions issued with a view to temporarily favouring certain categories of unemployed persons;
- hiring a person who, within 5 years from the hiring date, meets the terms of retirement for age limit;
- occupying an eligible position within the trade, employers' or non-government organizations, for the duration of the term of office;
- the hiring the retired persons who, under the law, may cumulate the pension and the wages;
- in other instances expressly stipulated by special laws or for the progression of works, projects, programs, under the terms set forth by the national and/or branch collective labour contract.

According to art. 82 paragraph 1, an individual labour contract for a limited duration may not be concluded for a period exceeding 24 months. If an individual labour contract for a limited duration is concluded with a view to replacing an employee whose individual labour contract has been suspended, the contract duration shall expire when the reasons having caused the suspension of the individual labour contract of the full employee have ceased to exist (paragraph 2 of the art. 82).

The Government intends to prolong the actual limit of 24 month up to 36 month, which represents an increase with 33% of the duration.

f) The duration of the work time

Art. 111 in its actual form regulate the maximum duration of the work time:

"*(1) The maximum lawful length of the work time shall not exceed 48 hours/week, including extra hours.*

(2) As an exception, the length of the work time, including the overtime work, may be extended over 48 hours/week, provided the average number of work hours, as calculated for a reference period of 3 calendar months, does not exceed 48 hours per week.

(2^1) For certain sectors of activity, units, or professions listed in the national sole collective labour contract, under applicable collective labour contract at the level of branch of activity, reference periods that exceed 3 months may be negotiated, without, however, exceeding 12 months.

(2^2) When establishing the reference periods stipulated under paragraphs (2) and (2^1), the length of one's annual rest leave and the instances when the individual labour contract is being suspended shall not be taken into account.

(3) The provisions of paragraphs (1), (2) and (2^1) shall not apply to young people who have not turned 18 years of age".

The Government doesn't intend to increase the maximum duration of the weekly work time – 48 hours – but wants to modify the second paragraph of art. 111, in order to prolong the reference period from the actual solution (three month) up to four month.

g) The collective bargaining and the collective labour contracts

The actual principle regulation of the labour bargaining and collective labour contracts is find on the art. 236-247 of the Labour Code.

"*ART. 236*

(1) The collective labour contract shall be the agreement concluded in a written form between the employer or the employers' organization, on the one hand, and the employees, represented by their trade unions or in any other manner stipulated by the law, on the other hand, in which clauses are set up concerning the work conditions, the wages, as well as other rights and liabilities deriving from the labour relationships.

(2) Collective negotiation shall be mandatory, except when the employer has less than 21 employees.

(3) When negotiating the clauses and concluding the collective labour contracts, the parties shall be equal and free.

(4) The collective labour contracts, concluded in compliance with the provisions of the law, shall constitute the law of the parties.

ART. 237

The parties, their representation, and the procedure for negotiating and concluding the collective labour contracts, shall be established under the law.

ART. 238

(1) The collective labour contracts shall not contain clauses which set up rights at a lower level than the one set up in the collective labour contracts concluded at a higher level.

(2) The individual labour contracts shall not contain clauses setting up rights at a lower level than the one set up in the collective labour contracts.

(3) When concluding a collective labour contract, the provisions of the law concerning the employees' rights shall constitute a minimum standard.

ART. 239

The provisions of the collective labour contract shall cause effects for all employees, irrespective of their date of employment or affiliation to a trade union.

ART. 240

(1) The collective labour contracts may be concluded at the level of the employers, branches of activity, or at a national level.

(2) The collective labour contracts may also be concluded at the level of groups of employers, hereinafter called groups of employers.

ART. 241

(1) The clauses of the collective labour contracts shall cause effects as follows:

a) for all employees of an employer, in the case of the collective labour contracts concluded at such level;

b) for all employees hired by employers that belong to the group of employers for which the collective labour contract has been concluded at such level;

c) for all employees hired by all the employers in the branch of activity for which the collective labour contract has been concluded at such level;

d) for all employees hired by all the employers in the country, in the case of the collective labour contract at national level.

(2) At each of the levels stipulated under Article 240, a single collective labour contract shall be concluded".

The modification prefigured by the Government are in order to:

- increase the number of employees of the employers who are obliged to bargain from 21 up to 50;

- renounce at the mandatory provisions of the collective labour contract at national level.

In the actual form, the Labour Code determines a mandatory solution even for the employers who were not represented at the negotiation of the collective labour contract at national level. They have to respect all the content of the collective labour contract, without having the possibility to determine this content. The employers claimed that it is a excessive solution, and proposed to be abrogated. The Government representatives affirmed that the collective labour contract concluded at the branch level will become the rule in this matter. Each branch of activity will have its specific labour relations regulations.

h) The labour jurisdiction

An important modification of the rules of labour jurisdiction was already operated by the Act no. 202/2010, which modified the composition of the labour specialized panels: in the composition enters only one judge, not two, how was settled before the entered in force of the Act no. 202/2010.

An other modification which is prefigured is referring to the provisions of art. 287 from the Labour Code:

"*The employer shall be responsible for providing evidence in labour conflicts, being obliged to submit evidence in his defence by the first day of trial*".

The Government intends to renounce at this solution, in order to determine the application of common solution in a civil trial (art. 1169 Civil Code – the claimant shall be responsible for providing the evidences).

3. Conclusions

The modification of the Labour Code is a difficult and risky task for every part which is implicated in this process. One thing is certain: the modification is necessary in order to establish a functional regulatory settlement in the field of labour relations.

In this framework, the most important institutions which need to be modify are: the written form of the individual labour contract; the non-competition clause; the unilateral modification of the individual labour contract by the employer; the individual dismissal; the work time; the collective bargaining and the collective contracts; the material liability of the employee; the labour jurisdiction.

In the future, depending on the final form of these modifications, the specialists will be able to affirm their utility or, *a contraire*, the fact that one or more modification were useless or even had determined difficulties in application.

CONTRACTUAL FREEDOM AND FORMALISM IN THE CREDIT AGREEMENT

ANCA NICOLETA GHEORGHE[*]
CAMELIA STĂNCIULESCU[**]

Abstract:
The credit agreement meaning is trust. It involves a psychological relationship between two or more persons, characterized by predictability the third one involving present or future action on the status of a particular person.
This relationship is psychological, in a certain context, social relationship and may take legal meanings. If at the beginning, people borrowed food and tools, later borrowed money to buy everything you wanted. Financial lending institution has become very popular, creating a group of people who have dealt with this service.
Over time, this community has turned into banks. Being originally a loan of money covered by the Civil Code, the credit is used daily by both individuals and by professionals, becoming an engine of capitalist society. Unprecedented expansion of this contract led to a strict control of public authorities and subsequent legislative interventions, the articles of the Civil Code is supplemented by regulations governing the progressive banking, legal interest, namely consumer credit.
Under the credit agreement, the economic situation of the parties is not equal, one party is disadvantaged in comparison to the other, protecting the disadvantaged part of the legislature making it a target in credit operations.
In French doctrine, consumer credit has been praised as "a contract of all pleasures"; but at the same time "an agreement of all risks".

Key words: *credit agreement, formalism, pre-offer, vices, contractual freedom*

Introduction

According to the principle of contractual freedom, any person capable of contracting may conclude a contract of loan money, as the lender. In the case of consumer credit, the legislature has intervened to limit freedom of contract, by strict definition of categories of persons who can act as „creditors", and control over their work.

The legislature has limited category of persons who may be professionals creditors.

Thus, firstly, consumer credit may be granted only by a professional, ie a legal person, in the course of his trade or professional activities (article 7, section 5 of the OUG. 50/2010)

Secondly, the field of consumer credit can speak of a monopoly of the credit institutions established by law. Can creditors, according to GEO. 99/2006 and GEO. 50/2010, credit institutions: banks, credit cooperatives, credit institutions, foreign branches, which operate in Romania, foreign non-bank financial institutions that operate on the territory of Romania. Banks and financial institutions are traditional forms of credit institutions.

The major difference between them lies in the fact that non-bank financial institutions to finance lending operations they carry out are not allowed to collect deposits from the public, but are obliged to use their own funds or interbank market.

This monopoly of credit institutions is likely to ensure reliability and competence of individuals, but also to protect a hazard specialists of their profession, the invasion of any persons.

[**] Assistant, Ph.D., University of Bucharest, Faculty of Social and Administrative Sciences, (e-mail: av_cameliastanciulescu@yahoo.com)

This status allows credit institutions to comply with an order that certain statutory provisions and be subject to control.

For a contract which the parties have content they wish, they must express their will freely and consciously. To this end, the legislature has established certain limitations on freedom of contract, in terms of consent, subject matter and because of the credit. Under art. 948 Civil Code, one of the essential conditions for the validity of an agreement constitutes a valid consent of the party who undertakes. Expressed to be valid, consent must come from a person with discernment, to be expressed with the intention of producing legal effects, to be externalized and not tainted by any defect of consent[1].

These common law rules applicable in the case of consumer credit. Given, however, the specifics of this contract, and especially the desire of the legislature to protect the consumer, certain rules designed to ensure a free and conscious consent of it have emerged in the EU and national legislation. Protecting consumer consent is subject to numerous laws, the legislature from its position in inferiority relation with professional lender.

Consumer is not always able to understand grativitatea its commitment with its immediate consequence of duty. Protection of their consent is secured by means of both common law and the law through specific consumptions.

Common law makes domestic consumer will prevail by the vices of consent theory. Protection provided by the vices of consent legislation applies to all types of lending, including consumer credit. The most common defects of consent for a loan of money is the error, the fraud and violence, the presence of any of them at the time the forfeiture may act.

Consumer vices of consent takes the form of a pre obligations incumbent upon the creditor, the borrower consumer information and advice.

If at home, the theory that a liberal society, composed of free men and managers, each was obliged to inform gradually abandoned this theory, the concern heading towards consumer protection.

The basis of the obligation of information and advice can be found in the provisions of art. 970 par. 2 of the Civil Code

The Convention obliges not only express what is in themselves, but all the consequences which equity, custom or law gives the obligation according to its nature.

French Court of Cassation affirmed the existence of the obligation borne by the creditor information and advice.

The question has arisen whether a bank, giving the consumer a credit agreement, based on a prior offer strictly regulated, was held and an obligation to advise his client. The Court held that the submission of a prior offer the creditor does not dispense professional advice to the borrower's obligation, especially if, for professional, total cost of credit appears to be excessive in relation to the limited resources of the consumer. In the same way, Romanian legal doctrine holds that the bank is obliged to inform customers of all banks and all terms of contracts of mutual commitments of the Parties[2].

Freedom of borrower-consumer contract is extended at the expense of freedom of contract to the creditor. To ensure that consumer consent is free and uncorrupted, that the balance between consumer and professional lender is retained, the legislature amended the usual conditions of formation of a contract.

The formalism of the consumer credit

In the consumer credit agreement may exist situations of inequality between the parties, whereas the contractual partners, even though they have the same rights, same legal capacity, don't have the same level of knowledge or proper understanding of the consequences of their commitment.

On the other hand, consumers pressured by the need to obtain a loan, risk to assume a commitment without properly assess its consequences, because of lack of expertise.

To avoid excessive consumer debt, the legislature has provided, in close correlation with the substance, certain special rules on formal requirements to be met by a consumer credit agreement..

To restore consumer contractual freedom, the principle of mutual consent is removed by an formalism information, rigorously regulated by law, with the inevitable result of the encroachment of creditors contractual freedom.

On the other hand, the lender obligations can not be considered contractual obligations, but legal obligations, as they do not arise from the contract.

Contractual freedom of the creditors is restricted because they can not circumvent this formalism information provided by the legislature. It can be said that in the case of consumer credit, the legislature created a special legislation in derogation of common law obligations.

Pre - formalism

In relation to consumer credit, the formalism is essentially challenging the very existence of the contract.. The aim of the legislature is to dispel any doubt, to prevent any disputes.

This formalism has led to massive limitation of freedom of contract, consumer credit is, as stated, a contract of adhesion, the negotiations on the valid conditions have a limited framework. The validity of the legal act depends more on what is written, rather than what is desired by the parties.

This limitation of contract freedom, is found both in terms of advertising of consumer credit and in offers of the creditors to consumers.

Formalism in a prior offer of consumer credit agreement

Directive no. 87/102/CEE , does not include special reference to the prior offer of consumer credit contract, and is concluded, attaching the same regime as an advertising (Article 3).

Act no. 289 of 2004, our legislation transposing the Directive, reflects the provisions of Article 3, adding certain obligations for the creditor, before the conclusion of the agreement, that is offering for free to the consumer, on paper or another durable medium, a repayment schedule, and a copy of the draft credit agreement, by request from a consumer; and provide the consumer ,full, fair and accurate information about the credit agreement envisaged., to inform the consumer of all documentation necessary to award a loan credit.[3].

Formalism in the supply offer is clear, the creditor not having the freedom to provide information required by law in the form desired by him.

Thus, article 5 states that the information provided on paper or durable, are supplied via form „The Standard European Consumer Credit Informations" contained in the annex. 2. Any additional information that the lender would like to deliver to consumer must be provided in a separate document that can be attached to that form.. However, the consumer will be provided on request and free of charge, in addition to the standard form of contract, a project loan agreement.

[3] Article 6 of Law no. 289 of 2004: The documents that must include at least: 1. Current financial statements of the borrower and any guarantor of its compliance with relevant regulations; 2. a description of how to guarantee full payment of the debt or, if appropriate, an assessment of the goods covered by the warranty.

State legislature has regulated also the credit agreement by using a means of distance communication which does not allow providing standard information; in this case, the creditor has the obligation to provide all the information pre-consumer, using the form „The Standard European Consumer Credit Informations", immediately after the credit agreement.

We note that efforts at EU level, on harmonization of national laws in the consumer protection, have led to the development and implementation into national law of the form „Standard information on Consumer Credit Informations" contained in the annex. 2. But the directive leaves the Member free to regulate potentially binding nature of the information provided before the consumer credit agreement, that period the information is bound to the lender. Such standardization is meant to provide complete information to consumers and an aware and informed of their decision to conclude a credit agreement, restricts freedom of professional creditors. On the other hand standardization, highlights the character of adhesion of consumer credit agreement. Consumers can join or not, the standardized contract, negotiations on the substantive conditions are very low.

In all cases, the purpose of a detailed information to a consumer, expressed as free and conscious consent to the conclusion of a consumer credit agreement is secured.

Transposing this Directive into national law, the Emergency Ordinance no. 50/2010 devote Section 2 -, Chapter II „pre-information" covering both the content of the information obligation incumbent on creditors and credit intermediaries but also form you need to wear any offer of credit, creditors freedom in this area is much smaller.

Thus, Article 11 provides that the creditor or credit intermediary to provide the consumer information required by law, on paper or on another durable medium, in writing, clearly and easily read. Failure to comply with legal provisions on credit supply formalism is in accordance with Article 86 para. 1 offense and is punishable by a fine of 10,000 to 80,000 lei.

Contract Formalism

Directive. No. 87/102/EEC., provide in article 4 item 1, the obligation to conclude the credit agreement in writing, the consumer receives a copy of the written agreement. The written contract should include the mandatory elements set out specifically. Article 7 of Law no. 289 of 2004, provide that credit agreements be in writing, on paper or another durable medium, at least two copies, one original copy is delivered to each party. The written agreement must include all data specified by law.

Formalism, specific to consumer protection is maintained during the execution of credit agreement, Article 9, providing the creditor must inform the consumer in writing about any changes during the duration of the agreement, on the annual interest or costs incurred after signing the contract, when this change occurs.

The legislature has provided that such disclosure is made by registered letter with acknowledgment of receipt or statement of account through which the consumer is provided free of charge. The penalty provided by law for breach of contract formalism is fine offenses. In the case of consumer credit contracts in which the total amount of loan repayment is made in installments, creditor has the obligations to provide the consumer with a statement as an amortization table or reimbursement schedule on paper or on another durable medium, as determined by the consumer.

The table should indicate the rates payable, terms and conditions of payment of these amounts, should contain a breakdown of each repayment showing the total amount of loan repayment, interest at the borrowing rate, any additional costs.

Article 50 para. 1 of the Ordinance provides for the creditor the obligation to inform, on paper or on another durable consumer in connection with any change in borrowing rates.

Formalism refers also to the termination of the credit, the creditor has the obligation to provide the consumer, free, by default, a document attesting the extinction all obligations of the parties arising from the credit agreement. In connection with the penalty that occurs for failure to

comply form conditions, is required some discussion, as interesting to determine whether that form is required by law ad validitatem or only ad probationem.

Considering the scope of these laws, to protect the consumer found in a inferior position to the professional creditor, it appears obvious that the penalty occurs in the formal non-compliance is the absolute nullity of the contract, form as required by the legislature as a condition of validity of the agreement.

Clearly, however, written form will serve as proof of the existence and content of consumer credit contract, and to prove that the creditor has the obligation to inform the consumer.

Such a penalty is not, however, likely to protect consumer interests in the event of detection of absolute nullity of the contract, being in a position to repay the loan amount immediately.

In the absence of legal provisions, legal doctrine expressed within the meaning of decay professional lender from the right to claim interest stipulated in the contract, following the French model[4]. Loss of professional law regarding debt interest is a more effective comminatory sanction and appropriate to consumer needs whenever information formalism required by law has been infringed[5].

Binding of consumer credit agreement

Binding force principle of contract[6] , enshrined in Article 969 para. 1 Civil Code, works also for the credit agreement: parties to such a contract are also bound by obligations arising from their agreement. In other words, the consumer credit agreement, legally bound the parties as strictly as the law. Parties are free to choose whether or not a contract ends, but once completed they are required to fulfill the obligations arising from that contract in their task. In order to protect the party in the contract, the right of consumption tend to restrict the effects of this principle.

A new concept of binding force is defined as opening the emergence of the rule of proportionality or balance of contract, that good faith in contract performance. Along with limiting freedom of contract and mutual consent, the principle of binding force of contract, knows a real decline. Parties are not free to determine the contents of consumer credit contract, making him a contract of adhesion. The legislature is to decide how to execute a credit agreement, so that we can say that the law became the foundation of the principle of binding force of this agreement.

In terms of the binding force of contract is interesting to consider both the actual execution of the consumer credit agreement and also the cases where any party fails to fulfill its contractual obligations.

Binding of the contract, regards both the performance the execution of professional creditor obligations - mainly payment of capital, starting as a genuine act of commencement of performing the contract -, and fulfilling the obligations incumbent upon the consumer, in particular capital repayment loan, plus interest due.

On the other hand, binding force of the agreement must be followed in respect of the funds destination, in those situations where the parties have agreed on a particular destination.

Compliance with the founds destination interested in both the consumers whether he is free to use the destination borrowed funds, and the creditor to know when the task arises, the obligation to monitor the use of funds by the consumer, according to the agreed destination. An incorrect use of borrowed funds can produce prejudice both consumer and professional lender.

If the consumer does not comply with the destination of the funds borrowed, the lender is entitled to terminate the contract, the refund of the money borrowed and any damages.

---

[5] See Juanita Goicovici, Sergey Golub, "Formalism information - a special view to credit consumer" in Consumerism contract. Benchmarks for a general theory of consumer contracts, coordinator Paul Vasilescu, Legal Publishing Sphere, Cluj-Napoca, 2006, p. 94.

[6] Civil Code Article 969: "Legal agreements have the force of law between contracting parties".

Similarly, if the parties have agreed that payment be made by creditor directly to a third party and the creditor does not comply with these destinations will incur contractual liability to the creditor, subject to proof by the consumer injury.

On the basis of such liability, the creditor will be required, to perform in good faith their commitments under the contract of consumer credit.

Conclusions

According to the principle of binding force of contract, the parties are required to fulfill obligations under the contract. Being a contract with successive execution, consumer credit contract is extended in time so that the parties may be at random in this interval. In economic crisis, consumer credit contract enforcement is not a certainty, and so the consumer may have financial difficulties in repaying the loan.

INSURER SEQUESTRATION OF THE DEBTOR'S IMMOVABLE PROPERTY IN BUSINESS

NICOLAE GRĂDINARU[*]

Abstract
Insurer sequestration is the insurance measure that the creditor resorts to and that is applicable if the object of the litigation is the payment of a sum of money and that consists of the unavailability of the debtor-defendant's sequestrable movable or immovable property, until the final (irrevocable) decision given in the main trial in order to profit from the property when the creditor will obtain a writ of execution. In this regard, there are the provisions of Article 591 paragraph 1 thesis I of the Civil Procedure Code: "A creditor who does not have the writ of execution, but whose claim is proven by written act and is exigible, may request the setting up of an insurer sequestration of the debtor's movable and immovable property, if he proves that he took legal action". Thus, the provisions of article 907 are understood by reference to the provisions of article 591 paragraph 1 thesis I art.591 of the Civil Procedure Code, in that: in business, the insurer sequestration may also be set up on the debtor's immovable property.

Key words: *insurer, sequestration, exigible claim, appeals in the interest of the law.*

Introduction

Insurer sequestration is the insurance measure that the creditor resorts to and that is applicable if the object of the litigation is the payment of a sum of money and that consists of the unavailability of the debtor-defendant's sequestrable movable or immovable property, until the final (irrevocable) decision given in the main trial in order to profit from the property when the creditor will obtain a writ of execution.[1]

The interested party has the opportunity provided by law to require the court to order the taking of some precautionary measures, namely blocking and conservation measures to hinder the opposing party, during the process, to destroy or alienate his property or to diminish his patrimonial assets.

In the legal practice it was found that there is not a unitary point of view on the interpretation and application of the provisions of articles 907 and 908 from the Commercial Code, in relation to the provisions of article 591 of the Civil Procedure Code, relating to the setting up of the insurer sequestration and on the immovable property not only on the movable property of the debtor in commercial cases.[2]

By the appeal in the interest of the law, pronounced by the general prosecutor of the High Court of Cassation and Justice, it has been made obvious that in the legal practice there is no unitary point of view on the interpretation and application of those provisions.

Thus, some courts have considered that the insurer sequestration in business can only be ordered on the debtor's movable property, according to the provisions of article 907 of the Commercial Code.

In justifying this point of view it has been shown that the provisions of the Commercial Code have a waiver character to the rules set out in the Civil Procedure Code, so that in business the insurer sequestration is governed only by the provisions of articles 591 - 594 of the Civil Procedure Code. Other courts, on the contrary, have considered that the insurer sequestration may be set up also

[*] Ph.D „Constantin Brancoveanu" University Pitesti, Pitesti (e-mail: gradinaru_fd@yahoo.com)
[1] V.M.Ciobanu, G.Boroi – Drept procesual civil (Civil Procedural Law,), Ed.All Beck, 2005. p. 219.
[2] Mihaela Tăbârcă – Drept procesual civil (Civil Procedural Law,), Ed.Universul Juridic, 2008, p.427-434.

on the debtor's immovable property; in this respect the provisions of article 907 of the Commercial Code being applicable, related to article 591 of the Civil Procedure Code.

Insurer sequestration of the debtor's immovable property in business

Thus, according to the provisions of article 907 paragraph 1 of the Commercial Code[3], any party interested in a commercial cause will be able, once with the suing, to request the setting up of the insurer sequestration of the debtor's movable property.

He will also be able to follow and to seize for the sums included in his writ or the sums or the effects owed to his debtor by a third party.

Regarding the other aspects of setting up the insurer sequestration in case of commercial litigations, the interested party may not be exempt from observing the provisions of the Civil Procedure Code concerning this insuring measure, provisions to which refers the regulation norm contained in article 907 of the Commercial Code, that is to say article 614 of the Civil Procedure Code.[4]

In case the ascertainment document is a writ of execution, the setting up of the insuring or protective measure lacks any interest, since the creditor can trigger the forced execution.

The insuring measure may be required when the document is not a writ of execution or when the claim is not established by a document.

In this context, there are the provisions of article 591 paragraph 1 thesis I of the Civil Procedure Code: "The creditor who does not have a writ of execution, but whose claim is proven by written document and is exigible, may request the setting up of an insurer sequestration of the debtor's movable and immovable property, if he proves that he took legal action.

He may be forced to pay a bail in the amount established by the court and that will be determined under the provisions of article 723^1 paragraph 2 the Civil Procedure Code.

The same right is held by the creditor whose claim is not ascertained in written, if he proves that he filed action and submits, together with the request of the sequestration, a bail of half the value claimed.

The court may allow the insurer sequestration even if the claim is not exigible in the cases in which the debtor has reduced by his deed the assurances given to the creditor or did not give the promised assurances or when there is the danger for the debtor to avoid surveillance or to hide or to dissipate his assets. In these cases, the creditor must prove that the fulfillment of the conditions: the claim is ascertained by written document, he proves that he sued and he pays a bail whose value shall be determined by the court.

The provision of article 591 of the Civil Procedure Code, "the creditor who does not have the writ of execution, but whose claim is ascertained by written document and is exigible, may request

---

[3] Article 907 of the Commercial Code

The interested party in a business cause will be able, together with suing, to put insurer sequestration of the debtor's movable property according to article 614 and the following from the civil procedure according to the differences stated below.

He will also be able to follow and to seize for the sums included in the writ or the sums or the effects owed to his debtor by a third party, complying with the provisions of article 456 and the following of the Civil Procedure Code.

Article 908

The sequestration or the seizure will not be set up unless there is payment of the bail, except when the request for sequestration or seizure is made under a bill of exchange or other commercial effect to order or to bearer, protesting for non-acceptance or non-payment.

Judecătoria se va pronunța asupra sechestrului în camera de consiliu fără prealabilă chemare a părților.

The insurer sequestration can only be released if the debtor deposits the sum, capital, interests and costs for which the sequestration was set up.

[4] The provisions of article 614 and the subsequent ones of the old Civil Procedure Code, to which reference is made by article 907 paragraph 1 from the Commercial Code, are found in article 591-596 of the current regulation.

the setting up of an insurer sequestration of *the debtor's movable and immovable property*", thus imposes to implicitly consider modified the content of article 907 paragraph 1 of the Commercial Code as well, which refers only to the insurer sequestration of the debtor's "movable property", in the context in which, under the current legislation the insurer sequestration can be ordered both of movable and immovable property.

Therefore, in the event of failure or improper fulfillment of the commercial obligations incumbent on the parties of the agreements concluded, because the debtor's fault or because of other causes, the creditor must be enabled to gain access to such guaranties to insure both the full fulfillment of the obligations taken by the debtor, and his efficient protection against the risks that could prevent his wealth.

The creditor who does not have a writ of execution, but whose claim is ascertained in writing and is exigible, may request the setting up of an insurer sequestration of the debtor's movable and immovable property, if he brings evidence to prove the start of the litigation[5]. If the request to set up the insurer sequestration is submitted together with the request for suing which initiates the litigation, the creditor must enclose the ascertaining document of the claim, for the situation stipulated in paragraph 1 of article 591, it may be required to pay a bail of a sum determined by the court.

The court may allow the insurer sequestration if the claim is not exigible, in the cases in which the debtor has reduced by its deed the assurances given to creditor or did not give the assurances promised or when there is the danger for the debtor to avoid the surveillance or to hide or to dissipate his assets. In these cases, the creditor must prove that the fulfillment of the other conditions stipulated by paragraph 1 and to deposit a bail whose value shall be determined by the court.

The same right is held by the creditor whose claim is not ascertained in written, if he proves that he filed action and submits, together with the request of the sequestration, the document to prove the deposit of half of the value claimed in the litigation, for the situation provided by paragraph 2 of article 591 of the Civil Procedure Code.[6]

In case the request for setting up the insurer sequestration is made after recording the request for suing, the evidence which shows the initiation of the litigation must be enclosed.

Concerning the bail and the court's sentence on the insurer sequestration there are also the provisions of article 908 paragraph 1 of the Commercial Code, which require that the sequestration

---

[5] V.M.Ciobanu, G.Boroi – Drept procesual civil (Civil Procedural Law,), Ed.AllBeck, 2005. p. 218-224.

[6] Decision no.886/2007 of the Constitutional Court published in the Official Gazette no.785/20.11.2007.

The provisions of article 591 paragraph 2 of the Civil Procedure Code concerning the sum of the claim deemed excessive of the creditor who does not have a written ascertaining record of his claim, has been the object of the unconstitutionality plea, settled by the Constitutional Court by Decision no.886/2007, by rejecting plea.

Thus, the provisions of article 591 paragraph 2 of the Civil Procedure Code, which establishes the payment obligation of a bail, aim at protecting the interests of the debtor against exercising in bad faith by the creditor of his procedural rights. The payment of the claim is not an admissibility condition of the action through which the creditor pursue the fulfillment of his rights, but only one condition for the setting up of the insurer sequestration of the debtor's movable and immovable property, in the context in which the claim is not ascertained in written and the creditor proves that he has filed civil action. Therefore, the guaranty granted to the debtor of the obligation, justified by preventing the abusive exercise of some procedural rights by the creditor, can not be regarded as a means of preventing free access to justice.

Regarding the violation of the provisions of article 16 paragraph (1) of the Constitution, the Court finds that to the extent to which the regulation deduced to the control applies to everybody in the situation stipulated in the hypothesis of the legal norm, law without any discrimination, on arbitrary grounds, the criticism as such an object is unfounded.

The Court can not hold either the criticism according to which the provisions of article 591 paragraph 2 of the Civil Procedure Code would contravene the principle of guaranteeing private property, so long as, according to article 723^1 paragraph 3 of the Code, "The bail is issued to the person who has deposited it as far as the one entitled to it has not made a request for payment of the due compensation, within 30 days from the date on which, by irrevocable decision, the cause has been settled".

or the seizure can only be set up by release of bail, except when the request for sequestration or seizure is made by virtue of a bill of exchange or of another commercial effect to order or to bearer, protested by non-payment.

The court competent to hear the case is competent to settle the request for setting up the insurer sequestration, so it will settle the request for setting up the emergency insurer sequestration on the Council premises without prior calling of the parties, pronouncing a closure execution. The sentence may be delayed up to 24 hours and the drawing up of the closure must be drawn up within 48 hours from the pronunciation.

Therefore it has been appreciated that article 907 of the Commercial Code was implicitly amended by the provisions of article 591 paragraph 1 of the Civil Procedure Code.

In this respect article 889 of the Commercial Code, provides that "the exercise of commercial actions is regulated by the Civil Procedure Code, except the provisions of the present code".[7]

The applicability also in business of the regulation in article 591 paragraph 1 of the Civil Procedure Code is also required by the provisions of article 721 of the Civil Procedure Code, according to which the provisions of this code "form the common law procedure in civil and commercial matters." Such an interpretation is also required by the peculiarity of legal relationship of commercial law, which is characterized by swiftness so that the closure of its amendment or cessation can be done with maximum efficiency and in good faith, so that the final reason of such a legal relationship is its just fulfillment.

The proper settlement of this situation of maximum importance for ensuring the effectiveness of the trade relationships has imposed examining the evolution of the existing legislation and the adoption of Decision no.84/2007[8] by the High Court of Cassation and Justice, which allowed the appeal in the interest of the law, in that sense that the provisions of article 907 are interpreted by reference to the provisions of article 591 paragraph 1 thesis I of the Civil Procedure Code, in that: in business, the insurer sequestration can also be set up on the debtor's immovable property.

Conclusion

Insurer sequestration is the insurance measure that the creditor resorts to and that is applicable if the object of the litigation is the payment of a sum of money and that consists of the unavailability of the debtor-defendant's sequestrable movable or immovable property, until the final (irrevocable) decision given in the main trial in order to profit from the property when the creditor will obtain a writ of execution.

The interested party has the opportunity provided by law to require the court to order the taking of some precautionary measures, namely blocking and conservation measures to hinder the opposing party, during the process, to destroy or alienate his property or to diminish his patrimonial assets.

The insuring measure may be required when the document is not a writ of execution or when the claim is not established by a document.

CONSIDERATIONS REGARDING THE VALIDITY REQUIREMENTS FOR THE CONSENT

VALENTIN COCEAN[*]

Abstract
For a valid conclusion of a juridical act it is, firstly, necessary for a valid consent to exist. However, the mere existence is not sufficient. For the act to be valid it is necessary that the consent expressed for its conclusion is also valid. Therefore, beside the formal existence of the consent, a few more requirements need to be fulfilled. The requirements of the consent represent another subject insufficiently clarified. The present study is an attempt to clarify some of the aspects of this matter, that have been rarely analyzed by the Romanian doctrine, keeping in mind the future legal provisions.

Key words: *consent, validity, discernment, intent, exteriorization*

Introduction

The subject of the present study is represented, as the title shows, by the requirements for the validity of the consent, excluding, though, the matter of the vices of consent, a subject matter so diverse that it needs a separate analysis. This matter has no yet received an exhaustive analysis in the Romanian legal doctrine. Furthermore, without bringing substantial changes to this matter, the new Civil Code (still not in force)[1] calls for a few comments. Therefore, the re-analysis of the requirements for the validity of consent, complemented by references to the new legal dispositions, is, without any doubt, very useful, especially given the importance of consent in the process of formation of the juridical act.

Paper content

It is generally[2] admitted that for the validity of a juridical act, four cumulative conditions, regarding the consent, should be met:

a) the consent must come from a person having discernment;
b) it must not be altered by a vice of consent;
c) it must be exteriorized;
d) it must have been expressed with the intent of producing juridical effects.[3]

I avoided naming them "validity conditions regarding the consent" and I presented them as "validity conditions of the juridical act required in connection with the consent" because some of them regard not so much the validity, but the very existence of consent.

Thus, the third of the named requirements regards the very formal existence of consent, presuming by definition an exterior manifestation, in the absence of which we can only talk about a

[*] Lecturer, Ph.D., Law Faculty, "Nicolae Titulescu" University, Bucharest (e-mail: vcocean@univnt ro)

[1] The new Civil Code has been adopted by Law No. 287/2009, published in the Official Monitory No. 511/24.07.2009, and it will come into force at a future date, to be established by the laws to be issued for its application.

[2] G. Boroi, *Drept civil.Partea Generala. Persoanele,* (Bucharest, 2010), 211, Gh. Beleiu, *Drept civil român. Introducere în dreptul civil. Subiectele dreptului civil,* 152.

[3] The new Civil Code expressly mentions these conditions (except for the one under letter c), which regards the very existence of consent), in a different enunciation. Thus, according to article 1204 of the new Code, the consent of the parties must be earnest, free and expressed wittingly.

decision that has been made, as a part of the psychological process thorough which the will is formed, having no juridical relevance.

Then, the last requirement and, somehow, the second one too (and we take into consideration the obstacle error and some cases of duress) regard the real existence of the consent, meaning that if they were not fulfilled we would find ourselves in the presence of an exterior manifestation, but this would only appear as consent and in reality the latter would not exist because the decision to conclude the juridical act would not exist.

Finally, the first and, generally the second condition indeed regard the validity of the consent, expressing the necessity for it to be the result of a witting and free will[4].

The consent must be *clarified* and *free*.

Firstly, the consent must be *clarified*. As any act of will, the decision to conclude a contract is preceded by a *deliberation*, in the course of which the interested person, analyzing the advantages and disadvantages of the operation they are considering, estimated that the advantages outweigh the disadvantages. This deliberation is obviously *illusive* if the person lacks discernment. Also, the deliberation of the party can be *distorted* by error, either casual or provoked by the counterparty's fraudulent manipulations. In the juridical terminology, the term *error* regards a casual fact. When the cause of the error consists in the manipulations of the counterparty or, in some cases, of a third party, the error is named *undue influence*.

These two vices affect the consent in its *intellectual element*: the party in error or that has been a victim of undue influence did not wittingly consent.

Secondly, the consent should be *free*. It is not free when the decision, instead of really "rising" from a deliberation, is the result of a constraint brought upon the interested party which led him to accepting disadvantageous conditions – this time consciously – in order to escape the threats they faced in case they refused to conclude the contract. The third vice of consent, *duress*, affects its *element of freedom*.[5]

However let us, in turn, analyze all these conditions.

The consent must come from a person having discernment

This requirement rises from the conscious character of the civil juridical act, the later comprising the parties' manifestation of will. The juridical act is first and foremost an intellective operation, as the will to conclude a contract presumes the knowledge of the elements of the projected operation, an operation which is "weighed" by each party before its conclusion[6]. Thusly it is a premeditated juridical operation, as the parties previously take into account all the resulting advantages and disadvantages.

However, to this point it is necessary for each party to have the intellectual faculties needed to "comprehend" and, then, to "want".

In other words, the consent must be given by a person that acknowledges the juridical consequences which result from the conclusion of the juridical act, that can conceive not only the rights they would acquire, but also the obligations they would undertake. And this capacity of representing the consequences consists exactly in the existence of the discernment.[7]

---

[4] These two conditions rather regard the cause of the juridical act and only indirectly, by way of the aforementioned, the consent. However, given that they are usually analyzed in connection with the consent, I shall follow these footsteps.

[5] See J. Flour, J.-L. Aubert, E. Savaux, *Les obligations. 1. L´acte juridique*, edition XII, (Paris, 2006), 143-144.

[6] I. Dogaru, *Valențele juridice ale voinței*, (Bucharest, 1996), 70.

[7] The lack of discernment is provided by the new Civil Code in article 1205. The disposition does not bring new elements, but, virtually, consecrates the doctrinal and jurisprudential conclusions.

The condition regarding the existence of the discernment must not be confounded with the condition of capacity[8], although they are strongly connected (the discernment representing, theoretically, a premise for acknowledging the capacity of concluding juridical acts). The capacity is a state of law (*de iure*), rising from the law, and the discernment is a state of fact (*de facto*), being of a psychological nature and needing to be assessed from person to person, taking into consideration their psycho-intellectual ability, although the law has provided some presumptions regarding it.[9]

Hence, the private persons with full exercise capacity are presumed to have the discernment needed to conclude civil juridical acts. The one lacking exercise capacity (the minor under 14 years of age and the one under court interdiction) is presumed to lack discernment, either because of their young age, or because of their mental health situation. As for the minor between 14 and 18 years of age it is generally assessed that their discernment is developing, in order to emphasize the intermediary situation they are in. but this situation rather regards their capacity and not their discernment. From the hereunder point of view we must specify that the minor between 14 and 18 years of age is presumed to have discernment, as , where the juridical acts which they can conclude on their own are concerned, according to the rules on capacity, their eventual lack of discernment must be proved by the one that invokes it.

As a matter of fact, when we question the existence of discernment we are interested only in the acts concluded by persons who have full exercise capacity and those concluded by the person with restrained exercise capacity (the minor between 14 and 18 years of age) on their own, but for which the rules on capacity did not require a prior approval.

The matter of the acts concluded by those lacking exercise capacity or of the acts concluded by those with restrained exercise capacity, but for which a prior approval is required, will be solved by the rules of capacity, an assessment on the existence of the discernment not being necessary.

Beside the cases in which a person is presumed by law to be lacking discernment (*legal incapacities*), there are also cases in which persons that have discernment by law (for whom, as previously shown, a presumption of existing discernment operates) are in fact temporarily lacking discernment (namely cases of *natural incapacity*). For that matter, have been mentioned drunkenness, hypnosis, somnambulism, rage (*ab irato*).[10]

I want to specify that, in some of these situations, for example in the case of drunkenness, if it has been voluntarily caused, the counterparty could request damages for the prejudice caused by the annulment of the contract for lack of discernment, unless of course they had contributed to appearance of that state (in which case we could even be considering it to be undue influence) or they had somehow tried to take advantage of the respective state of the other party (immoral cause), situations in which he would be prevented from doing that by the existence of their own fault.

To these aforementioned natural incapacities we must also assimilate the situation of the mentally alienated and weaklings before they had been placed under court interdiction, of course in the hypothesis they are adults. Thus, until the court interdiction, they could be considered to have full

[8] The French doctrine, when analyzing the ability to consent, took two elements into consideration: on the one hand, *the incapacities* – the matter of the persons for whom it s impossible to express a veritable consent, in connection with the lack of juridical capacity, and on the other hand, *the spiritual insanity* – where we consider persons that have juridical capacity, but that cannot acknowledge the importance of their acts and, therefore, cannot express a valid consent. For both situations the sanction is, on principle, relative nullity. For details, see F. Terré, Ph. Simler, Y. Lequette, *Droit civil. Les obligations*, 98-105.

[9] To the same effect, the jurisprudence has ruled: "the capacity of contracting, as well as the undertaking party's valid consent are, in accordance with the dispositions of art. 948 Civil Code and Decree no. 31/1954, validity conditions for the juridical acts, the lack of either one being sanctioned with nullity. Even if one had not been declared incapable, according to the law, a valid consent cannot be deemed to exist if on the date of the conclusion of the act, for reasons of illness, the party was lacking discernment", see H.C.C.J., s.civ., dec. no. 51/15.01.2003, in C.J. no. 4/2004, page 75.

[10] See Fr. Deak, *Tratat de drept civil*, II, 181 and quoted practice: Suceava Tribunal, s. civ., dec. no. 837/1972.

exercise capacity and, therefore, presumed to have discernment. Nevertheless, there is no doubt that the respective illness affects discernment and, therefore, any juridical acts they might have concluded could be annulled for the failure to fulfill this requirement regarding consent. In these cases it is possible that lucidity episodes appear. If the act was concluded during a lucidity episode, the cause for relative nullity under discussion no longer exists.[11]

This situation is also taken into consideration by the new Civil Code. According to article 1205 align. 2 of the new Civil Code, the contract concluded by a person that is subsequently placed under court interdiction can be annulled if, at the time of the conclusion of the act, the causes for court interdiction existed and were generally known.

This disposition will generate controversy when applied in practice, the reason for it being adopted, given the enunciation, being far from clear. A grammatical interpretation of the sentence leads to the conclusion that nullity *could be* sanctioned only if two cumulative requirements are met: the causes for the court interdiction to exist at the time of the conclusion of the juridical act and, at the same time, they should be generally known. But the second requirement appears to be excessive and difficult to accept. Firstly, it would itself raise interpretation problems, given the used terms – "generally known". Then, it would create significant difficulties as far as proof is concerned. Last but not least, the reason for establishing that the lack of discernment leads to the invalidity of the juridical act is incomprehensible, as it contradicts the expressly provided (in the previous article – 1204) requirement according to which consent should be expressed wittingly.

The reason for which the lack of discernment leads to the annulment of the juridical act is exactly because, in such case, the consent is not expressed wittingly. And, in the hypothesis hereunder, if at the time of the conclusion of the juridical act, due to the causes which subsequently determined the placing under interdiction, the person did not have discernment, the requirement for the consent to be wittingly expressed is not fulfilled. And that happens independently from the fact of weather the respective causes where known or not. The knowledge of the causes which determined the lack of discernment has no relevance with regard to the validity of consent. Weather the lack of discernment or the causes which have determined it were ("generally") known or not, the consent was not validly expressed. The knowledge of the causes that determined the placing under interdiction could raise the matter of the immoral purpose, but have no relevance regarding the lack of discernment.

A second possible interpretation of the legal disposition would lead to the conclusion that its purpose was only to enunciate the possibility of annulling the contract in the hypothesis in which, at the time of its conclusion, the causes that later determined the placing under interdiction existed and were known, without representing requirements for the sentencing of the annulment. However, this interpretation comes with two big flaws. Thus, it does not take into consideration the wording of the legal disposition, leaving aside the reference to the knowledge of the causes that determined the placing under interdiction. Moreover, in this interpretation, the legal disposition has no effect. The possibility of sentencing the annulment under the given circumstances (however implying the analysis of the extent to which, at the conclusion of the contract, the discernment had been affected) exists without the necessity for a legal disposition which expressly mentions it. Meaning, in this interpretation, the legal disposition would be futile, which contradicts a traditional interpretation rule (that comes from the subject matter of the juridical act) – *actus interpretandus est potius ut valeat quam ut pereat*.

Finally, in another possible interpretation we could assess that the legal disposition institutes a presumption of lacking discernment in the hypothesis in which, at the time the contract was concluded, the causes for the subsequent placing under interdiction existed and were known. This interpretation comes with the advantage of finding, for the reference to the knowledge of the causes for the placing under interdiction, a justification which would not contradict the requirements for the

[11] See Ch. Larroumet, *Droit civil. Les obligations. Le contrat*, 2003, 286.

validity of the consent. Therewith, it would also bring utility to the hereunder disposition, by admitting its effect of establishing the presumption of lacking discernment.

This was probably the intention of those who have written the new Civil Code. But the enunciation of the disposition is however imperfect, lacking clarity.

Nevertheless, even if this legal disposition was not to be reformulated or clarified by way of the subsequent laws which will be adopted for the application of the Code, I think that this third interpretation can be considered for the hereunder provision, given that the first two present inacceptable flaws.

The lack of discernment at the conclusion of a juridical act leads to the sanction of relative nullity of that juridical act.[12]

The consent must not be altered by vice

This requirement urges from the same conscious character of the juridical act, which we have already presented with regard to the first validity condition required for the consent. It is also imposed by the free character of the juridical act, which determines the necessity of a free will, of a party's (parties') manifestation of will which is a result of their own decision and not a result of an external, unnatural influence. The will which is comprised by the contract must really be the result of an inherent psychic process.

The vices of consent are those circumstances which affect the free and conscious character of the will to conclude a juridical act, which alter the psychological process of the formation of consent at the conclusion of the respective act.

As previously shown and same for the abovementioned requirement, this condition regarding the vices of consent refers to the qualities the consent should have. In the circumstance in which a vice of consent is present an exteriorized manifestation of will exists (hence, consent also exists), but it is altered in its intellectual, conscious contents, as the case is with error and undue influence (which, implying a misrepresentation of reality, generate the impossibility of a coherent analysis of the elements of the juridical act, the failure to assess the latter's consequences, similarly to the hypothesis of lacking discernment), or in its free character, as the case is with duress (which limits the freedom of assessment by violently introducing an unnatural element, which is determinant for the making of the decision to conclude the juridical act).

There are also situations that are usually analyzed together with the vices of consent due to their strong connection to the latter, in which the consent is deemed to be lacking completely (obstacle error and some cases of duress), but these represent more than simple vices of consent, the only connection to the latter being the mechanism that produces them, the effects being far more serious (they destruct will).

We should remark that the civil law does not use neither the expression "vices of consent"[13], which is used by the majority of the authors, nor that of "vices of will", which is more rarely used,

Gaiță, M.-M. Pivniceru, *Jurisprudența Curții de Apel Iaşi în materie civilă pe anul 2000*, (Bucharest, 2001), 47-48; Ploieşti Appeal Court, s. civ., dec. no. 282 of 01/02/1999, în *Curtea de Apel Ploieşti, Buletinul jurisprudenței, Culegere de practică judiciară, semestrul I, 1999*, (Bucharest, 2000), 212-215; Ploieşti Appeal Court, s. civ., dec. no. 3454 – 22/10/1999, in I.-N. Fava, M.-L. Belu-Magdo, E. Negulescu, *Buletinul jurisprudenței, Culegere de practică judiciară a Curții de Apel Ploieşti, semestrul II, 1999*, (Bucharest, 2001), 139-142.

We would like to specify that the same sanction is provided by the new Civil Code (article 1205).

[13] The new Civil Code use this expression in the very title of the paragraph which deals with this subject matter, "The Vices of Consent", articles 1206-1224.

these expressions being creations of the doctrine. As it has already been assessed[14], of the two expressions, the more suited (adequate as far exactness is concerned), is the phrase "vices of will", and that is because, on the one hand, the respective vices alter not only the consent but firstly they alter the cause (the purpose) of the juridical act[15], which together form the juridical will, and, on the other hand, as the notion of consent has two meanings (of unilateral manifestation of will and of concurrence of wills), and as vices can be met not only in bilateral or multilateral juridical acts, but also in cases of unilateral acts, confusion can be caused by using the other phrase. Nevertheless, not wishing to initiate further discussions, I shall use the already traditional expression of "vices of consent", in order to comply, under this aspect, with the majority of the authors.

The vices of consent are, according to article 953 of the Civil Code, error, undue influence and duress. Many of the authors also include lesion in the area of the notion of vices of consent, but the qualification of the lesion is, in the light of the in force legislation, subject to controversy. The provisions of the new Civil Code eliminate this controversy, by qualifying lesion as a vice of consent.[16]

The sanction for the case of vitiated consent is, as a general rule, the relative nullity of the juridical act.

However, the analysis of the vices of consent is not subject to the study hereunder.

The consent must be exteriorized

This requirement is urged by the very definition of consent: the decision of concluding a juridical act, which is manifested in the exterior.

The requirement regards the existence of the consent and in case it is not fulfilled the latter is lacking, as the decision made to conclude a juridical act, if it is not exteriorized, does not have the worth of consent.

Therefore this requirement is equivalent to the condition that consent exists. Nonetheless it could have not been named accordingly, as it only covers the hypothesis of the formal, material lack of consent, and it is necessary for the latter to exists as far as its contents, substance are regarded, meaning it should declare, reflect a real decision to conclude the juridical act. Further, as we shall see, sometimes a mere exteriorization of the made decision is not sufficient and it needs to take a certain from required by law, in the absence of which consent cannot be deemed as given, at least not for the juridical act for which the decision had been made.

Hence, this requirement establishes the connection between consent and the form of the civil juridical act, as the principle and conditions applicable in relation to the form of the juridical act regard the very exterior manifestation of will, which is consent.

Thus, the general rule applicable with regard to the exteriorization of consent is that the mere concurrence of the parties' wills is sufficient for a valid juridical act to be concluded. This means that the parties are free to choose the exteriorization form for their will, the way the decision to conclude the contract is brought to knowledge remaining irrelevant as long as it takes place.

There are though exceptions[17] from this rule, as the case of those juridical acts for which the law requires that the manifestation of will takes a certain, special form, a form tha is required *ad validitatem*.

---

[14] G. Boroi, *op. cit.*, 214; A. Pop, Gh. Beleiu, *Curs de drept civil. Partea generală*, (Bucharest, 1973), 268-269.

[15] In fact they alter the cause and, indirectly, the consent.

[16] Article 1206 align. 2 of the new Civil Code.

[17] For some juridical acts an express manifestation of will is necessary (acts for which a particular form is required *ad validitatem*, the acceptance of a donation – article 814 align. 2 of the Civil Code, the conventional solidarity in civil law – articles 1034 and 1042 of the Civil Code, *et cetera*).

In such cases, it is mandatory that the parties' will is expressed and acknowledged in the form required by law and cannot otherwise produce any effects or, at any rate, not quite the effects that the parties had in mind.

We must not leave aside the form requirement *ad probationem* because, although it does not affect the validity of the juridical act, in case the parties' manifestation of will does not fulfill the mandatory form, due to the probation issues, it could come to producing no legal effects.

The form required for the contract to be opposable to third parties does not generally concern the matter of the manifestation of consent, as it presumes the fulfillment of some formalities subsequent to the conclusion of the juridical act and, hence, to the exteriorization of the manifestation of will.

The manifestation of will can be exteriorized *expressly*, when it is expressed in ways liable to directly transmit it to the counterparties or to third parties (irrespective of the used practical means: verbally, in the case of persons that are present, by phone, fax, e-mail, by documents, by signs[18]), or *tacitly*, when it is implied, as from the parties action or attitude the intention of concluding a contract results.

For example, article 689 Civil Code provides the cases when *the acceptance of the inheritance* is express and when it is tacit. The tacit manifestation of will present the advantage of saving time, though it sometimes comes with the disadvantage of being equivocal. Moreover, such manifestation is excluded in the case of some of the legal acts, as those for which a certain form is required *ad validitatem*.

The means of exteriorization are diverse. Therefore, consent can be verbally expressed (for consensual juridical act), the agreement being considered fulfilled as soon as the parties have stated their harmonious will to fulfill the agreement. Another mean of expressing consent is represented by the deeds, in their authentic (usually requested by solemn agreements) form or in their private signature form (these being requested *ad validitatem* or in other cases *ad probationem*). Consent can be also expressed through conclusive actions or gestures (e.g.: an idle taxicab with the "vacant" light on, holding your hand up when asking to buy a newspaper etc.)

A specific issue regarding the exteriorization of consent is establishing *the judicial value of silence* (seen as the absence of any exterior manifestations).

It is unanimously considered that, on principle, silence does not mean consent, as civil law does not follow the adage "*qui tacit consentire videtur* ("qui n edit mot consent").

Still, there are certain situations when, by exception, silence is considered an expression of will in fulfilling an agreement, as follows:

- when the law specifically provides this (e.g.: article 1437 of the Civil Code[19]);
- when the parties establish by express will that silence is to be considered consent (.e.g.: by pre-contract or even contract when establishing the means of renewing an agreement or denouncing it)[20];

[18] See, e.g., R. Bercea, *Consimţământul virtual şi consimţământul real în contractele încheiate în mediul electronic*, in Dreptul no. 1/2004, 90 and fl.

[19] Article 1437 states that "after the lease term has expired, if the tenant does not move out and is left in possession, the lease is being considered renewed, its effects being regulated by the rules regarding the no term lease". Therefore, the text establishes the tacitly renewal of the lease.

[20] I would like to mention that the significance granted to silence must be the result of the parties' agreement and not the statement of a single party by itself. This is why we cannot take into consideration the example given by some authors (see D. Alexandresco, *Explicaţiune teoretică şi practică a dreptului civil român în comparaţiune cu legile vechi si cu principalele legislaţiuni străine*, (Iasi 1898), 44): not replying to a letter sent by a merchant that considers the recipient his debtor (a common practice these days as well) could be regarded as an acceptance of debt by the recipient.

• when silence is considered consent according to custom. In theory, these situations are called "circumstantiated silence", when the regularity of previous contractual relations between parties and customs do not impose an express acceptance to contract[21].

Apart from these situations, there are a few other cases when silence is to be considered consent:

• in matters of offer and acceptance, when the offer is made exclusively to benefit the other party, the latter's silence is seen as acceptance[22];

• when, at the request of one party, the other party fulfills the obligation, without having to expressly answer, in which case, the latter's silence is considered acceptance[23].

Italian theoreticians state that, for silence to be regarded as consent, the usual way of taking action or good faith, in the parties' relations, must impose the obligation to talk, or that according to a given specific historical or social timeline and regarding the quality of the parties and their business relations, one party's silence should be understood as its acceptance of the other party's will.[24]

Consent must be expressed with the intention of producing juridical effects (*animo contrahendi negotii*).

This requirement, also expressed as "consent must be stated as a juridical commitment"[25], emerges right from the essence of the civil juridical act, which is an exercise of will with the intent of producing juridical effects.

The requirement concerns the existence of consent in its substantial form. Consent is the decision to fulfill an agreement, revealed to the exterior. This decision essentially implies the intention to engage in juridical acts, to modify or extinguish juridical relations, in other words, precisely fulfilling the requirement in case.

Not fulfilling this requirement is equivalent to not making a decision on fulfilling a juridical act, or to not expressing it through an exterior act of will. There would be a statement of will creating apparent consent, but it would not be related to a decision made as to fulfill the juridical act. Consent would exist merely as a frame without content.

Thereby, we will consider this requirement not to be fulfilled, as consent is expressed without the intent of producing juridical effects, in the following cases[26]:

1. When the expression of will has been stated as a joke (jocandi causa), out of friendship, courtesy, or pure compliancy[27]. In these cases, the intention of assuming a juridical agreement is obviously missing, possibly remaining in the area of moral obligations, unsusceptible of being accomplished, if needed, through the coercive force of the state. If, in certain circumstances, some juridical effects could be born out of such acts, they would not originate in juridical acts, but in

---

[21] The silence of a customer of a regular provider, who picks up the merchandise left at his doorstep, with no will exchange, being possible, is considered to be a sale; see D. Cosma, *Teoria generală a actului juridic civil,* 128.

[22] C.Stănescu, C. Bârsan, *Drept civil. Teoria generală a obligaţiilor*, edition IX, (Bucharest, 2008), 48; D. Cornoiu, *Drept Civil, Partea generala,* (Bucharest, 2000), 142; A. Pop, Gh. Beleiu, *Curs de drept civil. Partea generală,* (Bucharest, 1973), 267; A. Cojocaru, *Drept civil. Partea generală,* (Bucharest, 2000), 191.

[23] I. Dogaru, *op.cit.*, 72-73. In this case, this silence is not in the above mentioned sense, an expression of will being revealed through the execution of the obligation.

[24] See Cass, sez. lav., 1603.07, n. 6162, in *Mass. Giust civ*., 2007, 3 cited by L. Viola, *Il contratto. Validita, inadempimento, risarciemento*, vol. 1, CEDAM, 2009, 718.

[25] Tr. Ionaşcu, *Tratat de drept civil, Vol. I, Partea generală*, (Bucharest, 1967), 263.

[26] For qualifying these situations as "non-juridical" expressions of will, see P. Vasilescu, *Manifestări de voinţă non-juridice*, in P.R. no. 1/2003, 239 and fol.

[27] The juridical literature offers many examples on this matter: promising to pay someone a visit, attempting to come to the aid of a stranded motorist, in general providing free of charge services to others. See Tr. Ionaşcu, *op.cit.*, page 263, A. Cojocaru, *op.cit.*, page 191, M. Mureşan, P. Ciacli, *Drept Civil. Partea generală*, (Cluj-Napoca, 2000), 120.

simple juridical actions (e.g.: the obligation to indemnify for damages resulting out of an illicit action)[28].

The French doctrine[29] took into consideration, regarding the compliance of wills, compliances of wills that are "non-compulsory", as follows: "*acts of courtesy or compliancy*" and "*honorable commitments*".

"Acts of courtesy or compliancy". There are compliant wills that do not oblige, from a juridical point of view, because the parties involved did not want to establish a juridical relation that would allow the claim of an obligation.[30] This is the case with *political promises* that do not oblige, legally speaking, their authors[31]. *Compliancy acts* can be seen as agreements based on "*fashionable relations*", which only compel to courtesy rules (an invitation made and accepted does not represent a legal contract)[32] . Among friends, people one knows, or family members, promises are often being made, and there is an agreement as to what aspects impose a certain "interdependence": children are being promised trips or various items in exchange for their progress in school; promises to visit back are being made; meetings for recreational purposes are being set in a certain place; certain services are being promised etc.

All of these examples are non-juridical acts, as the parties involved do not want to establish juridical relations or to capitalize the promised advantages through legal means. They are simply the result of a mannerly conduct and of natural bonds between people, with no legal connotations.

The borderline between a contract and a "courtesy act" appears to be more difficult to draw, especially when it comes to providing free of charge services.

Various activities can be performed based exclusively on the courtesy and kindness of the person assuming these responsibilities: small favors you do for a family member, a friend or a neighbor; help and advice in case of illness; counseling by a specialist in different fields (legal, financial, technical etc.); hauling people and goods free of charge etc. We can easily notice that these activities can represent the object of well defined legal provisions, resulting from proper contracts (work, contracting, counseling, transport etc.). What sets them apart is not the characteristic of being performed with no interest in gaining something, but rather their cause and their effects. These operations lack a legal cause, what is being performed is based on friendship or family bonds, and the effects are different. There is no doubt that not carrying out- *lato sensu*- a convention will lead to an assumption of responsibility for the culpable party, an unconceivable fact when it comes to courtesy acts.

[28] M. Mureşan, P. Ciacli, *op.cit.*, 120.

[29] See F. Terre, Ph. Simler, Y. Lequette, *Droit Civil. Les obligations*, 58-60.

[30] See the French jurisprudence, Paris Appeal Court, the 26th of September 1995, R.T.D. Civ. 1996, 143, observations by J. Mestre- in a contract, the parties "make promises and assume obligations; there are only promises made with the intention of assuming obligations, granting the other party the right to claim their fulfillment, resulting in a contract and a convention. But there are also other promises that we make in good faith and with genuine will to fulfill them, but without the intent of granting the other party the right to claim their fulfillment. In other words, the person that makes the promise also states that he/she does not assume an obligation, this being made possible in some situations by certain qualities of the one making the promise or the one for whom the promise is being made. For example, when a father promises his son, a law student, that he will reward him with a pleasure trip, provided that he manages his time properly, it is obvious that the father, while making a promise, does not assume an obligation, not in a juridical sense anyway.

[31] See Paris Court of Appeal, 18th of October 1994, R.T.D. Civ. 1995, 351, observations by J. Mestre. For the situation in which a journalist's press accreditation for some private charity events can be considered a contract, see T.G.I. Paris, 7th of October 1996, R.T.D. Civ. 1997, 126, observations by J.Mestre.

[32] E. H. Perreau, "*Courtoisie, Complaisance et usage non obligatoires devant la Jurisprudence*", R.T.D. Civ. 1914, 481 and following; D. Mayer, "*L'amitie*", JCP, 1974, I, 2663; P. Bedoura, "*Amitie et le droit civil*", (Poitiers, 1976).

Still, the French doctrine and jurisprudence has seen a great deal of controversy over the juridical nature of an act of assistance[33]. In order for the person that suffers a prejudice to receive compensation, the jurisprudence based it, on several cases, on tort liability or on business administration. However there are also court decisions that admit the existence of an assistance convention, a solution that reveals a strong artificial character[34].

See, for example, the case of free labor performance for the benefit of a neighbor or a friend, as well as in the situation of free medical services[35]. If the solution characterization removes some solutions to these contractual benefits, most analyze the relationships within the voluntary help of a free service contract. If some of the answers dismiss the solution of qualifying these benefits[36] as contractual, others analyze the voluntary help relationships within a free service agreement[37].

However, when it comes to these complaisance acts, tort liability is the only liability that can be undertaken, with the application of the ordinary law on the matter and with no juridical connection with the fact that the prejudice was triggered by the "performance" of said complaisance act. The hypothesis that circumscribes itself best to the last situation is represented by the damage caused during the voluntarily conveyance of passengers and goods. In this case, it was decided that the act of complaisance of the "carrier" can only be the source of tort liability, with the obligation, legal of course, to repair the damage caused by his act or his work. Tort liability applies here, not due to the fact that the conveyance is voluntary and free, but due to the fact that its source is not a legal agreement, the act of "carriage" lacking legal cause (obviously, the parties' intent to undertake legal obligations is lacking)[38]. A legal agreement will be needed though, in the situation of paid hitchhiking.

The situation of remanding various goods, of varied values, in the occasion of the anniversary of an event. It was also argued that we give and receive such objects, without any liberal intention, without being impressed of the object's value, without expecting gratitude or the return of the gift. No trace of legal intent can be detected in these acts, and any attempt to detect a juridical cause in such expression of will or the intention to make such realities into legal relationships, which the "parties" ought to execute by the force of the law, falls on the ridiculous[39].

It is also true that the tradition of gifts is only occasional and individual, with the clearly stated aim of producing pleasure and joy to another whom, in turn, appreciates the gesture of kindness of the former. Therefore, it is clear that the intentional spring of such gestures comes from the more or less sincere affection we have for each other. But this is the case, when will is expressed with the intention of it taking legal effects, namely to convey property. It is the typical situation of the manual gift, a variety of donation. It is true that, beyond the remanding of the good, the parties have no legal obligations. And it is also true that, forced execution is not the case, because the only assumed obligation, the remanding of the good, was performed (without the delivery of the good, the legal act does not exist). However, the fact that the producing of legal effects was intended, namely the transfer of property, is enough, in order to describe the manifestation of will, as a legal act

(moreover, if this operation was not qualified as mentioned the transmittal of property could not be justified, because legal effects could not be acknowledged as far as a non-juridical act is concerned). And the consideration of the person, the wish to bring them joy, have legal relevance themselves, representing the very determinant reason for the conclusion of the juridical act, which is one of the two elements that form the cause of the juridical act.

„Gentlemen's agreements". It happens that some people commit themselves to "honor". Designated also by the term "gentleman's agreement", this practice is more common than might appear at first sight, whether we refer to family, professional, economic relations or frienship. However, these agreements call for an answer to the next question: are they binding or not[40]?

Since these agreements fall within the field of family relationships, they generally seem devoid of such binding, revealing themselves as convenience relationships or courtesy relationships.

For the other relationships mentioned, things are not the same. Whether they wanted to compensate a lack of the law or to "escape" the enforcement of certain rules, or – even simpler, but perhaps more significant – to have had understood, by hesitation or repugnance, not to engage "in a valid form", the parties of these agreements seek much less to evade the effects of the law, then to situate their agreement outside of the state law field. But the state law does not acknowledge this separation and interprets gentlemen's agreements as legally binding for their authors, according to the commune rules of contracts, the case law stating the same effect[41]. The intention of the parties to take their agreement outside the limits for the application of the law is not relevant in the area of the analysis hereunder. It is sufficient that the parties' intention of concluding a binding agreement is established for that agreement to be qualified as being a juridical act. Further, it is an issue of interpretation left in order to establish the contents of the parties' manifested will, respectively, what are the effects which the parties had in mind. Surely, the issue of the intention of the parties of undertaking obligations by way of such agreements must be assessed from case to case, as the hypothesis in which such an intention did not, actually, exist cannot be excluded.

Therefore, the distinction between the non-legal expressions of will and the legal ones sometimes raise difficulties. Without being able to enunciate a general rule, some elements are in this respect, helpful. For example: the gratuity of the benefit, the type of benefit, the scope of the agreement, the legal and economic importance of the transaction, the value of the good, the risk of making the benefit. But these can only act as signs that delimitate the expression of will that produces legal effects from the one that lacks such effects.

2. *When consent was given under a pure potestative condition by the part that binds* (Article 1010 Civil Code[42]), namely under the form "I bind if I want to", being interpreted that such a condition is practically equivalent to the lack of intent to be bound - "*sub hac conditione, si* taken yet.

3. *When the expression of will is too vague,* the intention of undertaking a legal commitment or the content of such legal engagement, that the party intends to undertake, are not resulting unequivocally.

4. *When the one to whom the declaration of will is being addressed to, knows that its author gave it without the intention of legally engaging himself,* or as commonly referred to in the legal literature, when the expression of will was made with a mental remoteness (*reservatio mentalis*) known by its recipient. I preferred to avoid this enunciation because it contains a mistake: as long as the remoteness is known by another person as well, no longer can it be qualified as mental

[40] See: K. Zweidert, *Du sérieux de la promesse. Remarques de droit comparé sur la distinction des actes qui obligent et des actes qui n'obligent pas*, (1964), 33 and fol.; B. Beignier, *L'honneur et le droit*, (Paris, 1995), 562 and fol.; D. Ammar, *Essai sur le rôle de l'engagement d'honneur*, (Paris, 1990), 396 and fol.

[41] For details on the solutions adopted by the French doctrine and practice in the matter, see F. Terré, Ph. Simler, Y. Lequette, *Droit civil. Les obligations, op. cit.*, 60 and P. Vasilescu, *Relativitatea actului juridic civil (...)*, 99-100.

[42] Article 1010 of the Civil Code provides that „the obligation is void when affected by a potestative condition on behalf of the undertaker".

remoteness because, hypothetically, it was already expressed. However, the idea is clear. It refers to the situation in which the lack of intention to be bound, the remoteness is known by the other party, but hidden from the others, third parties. Namely, it creates an appearance of legal commitment, contradicted by the secret understanding between the parties. Certainly, simulation also falls under this hypothesis (it represents the case presented above, under the form of the fictitious act[43]).

It should be noted however that in such a case, the juridical act, and thus the consent can be considered valid in relation to good faith third parties.

Some authors consider that other requirements relating to consent should also be met, such as: "consent should emanate from one of the legal act's parties[44]", "consent should come form a person with full legal capacity[45]", "consent should be reliable[46]"," consent should be precise[47]", "will should be free[48]"," will should be conscious[49]".

However, it is not necessary that these requirements should be retained, due to their futility, or their being included in the content of other such requirements, or, in fact, their not concerning the consent.

Thus, the requirement that consent must emanate from one of the juridical act's parties is unnecessary. The party expressing its will shall be bound, as a party of the juridical act (except when the party acts as a legal mandate). It makes no sense to look at the problem form a reversed point of view, namely, to first establish the parties and then to identify a new requirement for the expression of consent. And if the point was to evoke the idea that nobody can be bound without his consent, it is a matter beyond our discussion regarding consent, being related to the legal effects of the juridical act, namely, the principle of relativity that applies to them.

The requirement for consent to come from a person with full legal capacity refers to, in fact, another condition of the juridical act, namely the capacity. It is certain that, in order to validly conclude a legal act it is required that all its essential requirements should be met, but also, said requirements should be considered separately and the validity of one of them is not to be confused with the validity of the juridical act itself. In any case, the requirement is also inaccurate, because not only those with full legal capacity can perform juridical acts; for example, minors between 14 and 18 years old may conclude certain legal acts by themselves, even without prior approval.

The requirement of being reliable is included in the content of the requirement stating that consent must be expressed with the intent of producing juridical effects.

The requirement of being precise regards the object of the juridical act, which needs to be determined or determinable, or the offer. In any case, to the extent that it could regard the consent, it would be also included in the content of the requirement of being expressed with the intent of producing juridical effects, which implies, as we have seen, the expression of will to be clear Even more, the expression of will can also be tacit, and therefore not quite precise, nevertheless being given a value of consent.

At last, the conditions stating that the will should be free and also conscious represents the presentation, under a different name, of the requirements regarding the lack of consent vices and the existence of discernment.

[47] *Idem.*

[48] V.V. Bica, I. Burghelea, *op. cit.*, pag. 58-59.

[49] *Idem, as in the previous note, this is about the authors' references to the work of another author, regarding to which I think a misinterpretation occured. In that work there are no additional requirements concerning consent, but they are simply presented under a different title.*

In the end, I would like to mention that the sanction that intervenes for not fulfilling the requirements for consent is the nullity of the juridical act in case. We will have *absolute void* when the conditions regarding the existence of consent are missing, both its formal existence- not exteriorizing the consent (in this case, as a general rule, no sanction can exist as the juridical act itself does not exist, not even having an apparent validity), and also in the existence of the content, of the decision made to fulfill a juridical act- lack of intention to produce juridical effects, the obstacle error[50] and some violent situations. On the other hand, we will have *relative nullity* when the conditions regarding the quality of consent are not fulfilled, the free and conscious character- lack of discernment or the existence of a vice of consent.

Conclusions

As we have seen, the validity requirements for consent still represents a present subject, an ampler approach being needed, from a perspective that also includes aspects which are especially revealed in the French doctrine. The present study completes the classic approach to the subject in discussion. The analysis can serve for a better understanding of the notion of consent, of the requirements for its validity and for a correct appraisal of the situations in which these are not fulfilled, leading to the application of the specific sanction, the nullity of the juridical act. Evidently, nevertheless, the subject is far from exhaustion. On the one hand, the matters taken into consideration in the present study need an ampler analysis and, on the other hand, other aspects have been left out, as the case is with the matter of the vices of consent. But these matters shall be object to future studies.

CONSIDERATIONS REGARDING THE GENERAL ASPECTS OF THE SUCCESSIONAL OPTION IN THE LIGHT OF THE NEW CIVIL CODE

ILIOARA GENOIU*

Abstract:
Law no. 287/2009 regarding the Civil Code, whose date of entry in force has not been established yet, brings in the successional option matter many new elements, reconfiguring it in some parts. In this paper we will analyze the general aspects of the successional option in the light of the new Civil Code dispositions. We will thus be able to reveal the novelties brought by the new regulation in the matter subjected to our analysis and to appreciate its progressive nature. As regards the general aspects of the successional option, the new Civil Code innovates mainly relative to the term of successional option.
We hope that through our approach, we enrol in the overall effort to make known and understood the disposition of the new Civil Code, until its entry in force.

Key words: *erede, successional option term, retransmission of the option right.*

1. Introduction

Our paper aims to analyze the general aspects of the successional option in the light of the new Civil Code.

Law no. 287/2009 regarding the Civil Code, published in the Official Gazette no. 511 from 24th of July 2009, whose date of entry in force has not been established yet, conveys to the successional option a new configuration. The analysis of this issue in the light of the new civil regulation presents, in our opinion, a special utility and actuality, because we believe that by making known and explaining the dispositions of the new Civil Code in this matter we bring our contribution to improve the act of justice, once this law comes into force.

Along with those who implement the justice, are also interested in knowing the dispositions of the new Civil Code in the successional option matter the justice partners, the law theorists, the public notaries, the civil servants with responsibilities in this area, Law and Public Administration specialization students. The legislator himself, being always concerned in perfecting his legislative work, is interested in *de lege ferenda* proposals stated by the legal doctrine.

In this paper we will analyze only the general aspects of the successional option in the light of the new Civil Code dispositions, the valences of the successional option right being analyzed separately in different papers. We will analyze the following aspects: the notion and the legal regulation of the successional option, the subjects of the option right, the legal characters of the act of successional option, the validity conditions of the act of successional option and the prescription of the successional option right.

About the novelty elements brought in the right to inherit matter by the new Civil Code have been written few studies in the volumes of some conferences, in the short time elapsed from the date of the publication of Law no. 287/2009 (the end of July 2009) until now. The successional option matter in the regulation of the new Civil Code was broached, from our information, only in "Noul Cod civil. Comentarii" volume, in "Continuitate şi discontinuitate în reglementarea opţiunii succesorale[1]" study, in which the author aims to observe "the level of transformations that have

[1] Bogdan Pătraşcu, "Continuitate şi discontinuitate în reglementarea opţiunii succesorale" in *Noul Cod civil. Comentarii*, coordinator Marilena Uliescu (Bucharest: Universul Juridic Publishing House, 2010), 246-72.

occurred in the successional law institutions and how profound are they", "whether or not the continuity prevails in the regulation", "but without exhausting the subject"[2].

Compared to this study, we intend to analyze the general aspects of the successional option in light of the new Civil Code, in a complete and didactic manner.

Under this consideration, we appreciate that the subject we have proposed is actual and our scientific approach is useful.

2. Content

2.1. The successional option notion[3] and its legal regulation

As one of the patrimony features is that it can not remain without a titleholder, the successional patrimony is transmitted, as a consequence of *de cujus* death, to his legal heirs or to his testamentary beneficiars, independently of any manifestation of will from the latter. Under the same legal character, the successional patrimony, transmitted by law to the *de cujus erede*[4] who dies before exercising the successional option right regarding the inheritance, is retransmitted, also by law, to the own heirs (article 1105 N.C.C.).

The retransmission of the inheritance does not generate the obligation of the heirs to accept it, according to the dispositions of the article 1106 N.C.C. "Nobody can be forced to accept a rightful inheritance". As a consequence, each *erede* has the possibility to have a choice regarding the inheritance, in respect to which he has this quality, meaning either to accept it or to repudiate it, within the applicable term of the option right regarding the inheritance their author. Furthermore, the new Civil Code, in article 1105 paragraph (2) says that the part of *erede* who benefits by the retransmission of the option right and who gives it up will be taken by the others heirs of their author.

The transmission of the successional patrimony is realised in fully right at the opening date of the inheritance. However, this transmission has only a provisional character, it being considered reinforced only after one exercise his successional option right. Although it is exercised after the opening of the inheritance, the right of successional option right has no effects from the date of exercise, but it has retroactive effects from the date of the *de cujus* death [articles 1114 and 1121 paragraph (1) N.C.C.].

Like *de lege lata*, the successional option right does not either benefit in the new Civil Code of a definition, reason why we can next appreciate that it represents the subjective right, appeared at the death time of the one who leaves the inheritance, in the person of his *erede*, consisting of a choice between the acceptance and the rejection of the inheritance and which may be exercised only in accordance with the law[5].

Although the successional option right does not benefit of a legal definition, its valences are identified in a specific manner in the new Civil Code, in article 1100 paragraph (2). These are the following two ones:

---

[2] Ibidem, 246.

[3] Regarding the valences of the successional option notion, ibidem, 248.

[4] The latin term "*erede*" has been used for the Romanian term "succesibil" (from the French "succecible") due to the lack of the English term that denominates a person who receives or is expected to succeed or is in line to receive a heritage due to a hereditary rank.

[5] In the same terms is defined the successional option right by: Constantin Stătescu, *Drept civil. Contractul de transport. Drepturile de creație intelectuală. Succesiunile* (Bucharest: Didactică și Pedagogică Publishing House, 1967), 210; Dan Chirică, *Drept civil. Succesiuni* (Bucharest: Lumina Lex Publishing House, 1996), 200; Alexandru Bacaci and Gheorghe Comăniță, *Drept civil. Succesiunile* (Bucharest: C.H. Beck Publishing House, 2006), 173; Veronica Stoica, *Dreptul la moștenire* (Bucharest: Universul Juridic Publishing House, 2008), 272; Ioan Popa, *Curs de drept succesoral* (Bucharest: Universul Juridic Publishing House, 2008), 266; Ion Dogaru, and the others, *Bazele dreptului civil. Volumul V. Succesiuni* (Bucharest: C.H. Beck Publishing House, 2009), 51.

a*) the acceptance of the inheritance*, under which the legal heirs and the legatees general and with general title answer for the debts and burdens of the inheritance only with the assets from the successional patrimony, proportionately to each other quote - *intra vires hereditatis* [article 1114 paragraph (2) N.C.C.].

Thus we identify a double novelty brought by the new Civil Code in the matter subjected to our analysis. So:

- the new Civil Code regulates only the acceptance of the inheritance, as a valence of the successional option right, giving up to the acceptance under benefit of inventory;

- the new regulation in civil matter assigns the effects of the acceptance under benefit of inventory to the acceptance of the inheritance from the regulation in force.

b) *the rejection of the inheritance*, which involves the retroactively abolishing the inheritance vocation of *erede* who rejects it, so that he became alien to the inheritance, not benefiting by the assets of the inheritance and not being responsible for the debts and burdens of the inheritance. According to the dispositions of the article 1121 paragraph (1) N.C.C., the person entitled to inherit who gives up to the inheritance is considered never to have been heir. The part of the giving up person is a profit for the heirs who otherwise would have been excluded from the inheritance or for the heirs whose part would have been diminished if he had accepted the inheritance [article 1121 paragraph (2) N.C.C.].

We consider as being just the legislator option to drop to the acceptance of the inheritance under benefit of inventory and to assign to the acceptance of the inheritance the specific effects of the acceptance of the inheritance under benefit of inventory from the regulation in force, ensuring in this way protection for any *erede*. Regulating the acceptance of the inheritance under benefit of inventory, the Civil Code in force assures protection for only a few categories of *erede*. Through its regulation though, the new Civil Code ensures protection for any patrimonial interests of any *erede*.

As we have shown before, in the lights of the new Civil Code dispositions, the debts of the inheritance will be paid by the acceptant heir only within the assets of the inheritance, not being available anymore, like *de lege lata*, a confusion between the successional patrimony and the one of the acceptant heir. This provides a protection to the acceptant heir, who will not have to bear in any way the debts of the succession from his own patrimony.

Another merit of the new Civil Code is that for the first time in our legislation the notion of "*erede*" is defined. So, according to the dispositions of the article 1100 paragraph (2), "By *erede* one can understand the person who meets the conditions required by law, but who was not yet exercised his successional option right". Therefore, the quality of *erede* subsists until the moment of exercising the successional option right, after this moment being replaced by the quality of successor

In fact, the notion of "*erede*" has about the same significance these days. Therefore, according to the literature, *erede* represents the person with successional vocation, but who has not yet exercised his successional option right. So, now, the *erede* quality is reported only to the successional vocation, while the new Civil Code reports the discussed quality to all the conditions of the right to inherit.

Regulation the notion of "*erede*", the new Civil Code is inspired by the relevant and fair view of the doctrine, aspect which we consider to be positive.

2.2. The subjects of the successional option right[6]

In light of the new Civil Code, are entitled to exercise the successional option right, all persons who cumulative meet the following conditions:

- have successional capacity;

- they are called to inheritance (general successional vocation), either by law (the legal heirs from the four classes and the surviving spouse), either according to the will (the legatees), no matter if their vocation is general, with general or particular title;

- they are not unworthy.

[6] Ilioara Genoiu, *Drept succesoral* (Bucharest: C.H. Beck Publishing House, 2008), 270-3.

In an exhaustive list, the persons who have the right of successional option are: legal *erede*, the legatees (general, with general and particular title) and the personal creditors of the legal or testamentary *erede*.

a) the legal heirs;

The persons with the successional option right are not only the persons with concrete inheritance vocation, being in a preferential class and kin degree, but all the persons with general legal vocation, from any classes of heirs, and also the surviving spouse.

It is obvious that to the inheritance would not come all the persons who accepted it, but those who are in a preferential class and kin degree. The required solution for *erede* in subsequent degree to exercise the successional option right stays in the possibility of the preferential degree *erede* to drop the inheritance, towards the end of the period established by law in this regard. If the preferential degree *erede* accept the inheritance, their right on the inheritance will be consolidated retroactively from the date of the inheritance opening. The option of the subsequent *erede* will thus be without any legal effects, their rights on the inheritance being retroactively abolished.

b) the legatees;

The new Civil Code recognizes, in several of its texts[7], the successional option right also for the legatees, no matter if they are legatees general, with general or particular title. The reasons that have determined the legislator to recognize such a right for the legatees are, mainly, the following ones[8]:

- the general vocation or with general title of the legatees involves, besides the achievement of the assets of the inheritance and bearing the liabilities of the inheritance, the possibility to reject the inheritance recognised to the legatee;

- the particular title vocation of the legatee, even if it usually doesn't mean bearing the liabilities of the inheritance, proportional with the value of the legacy [article 1114 paragraph (3) N.C.C.], it still involves moral judgments (nobody can be gratified against his will), and the legacy with liabilities also involves patrimonial interests.

c) the erede creditors.

According to the dispositions of the article 1107 N.C.C., „The *erede* creditors may accept the inheritance on oblique way, in the limit of their satiated claim".

Equally, the new Civil Code, in article 1122, also regulates the possibility of *erede* creditors who rejected the inheritance in their fraud to ask the court to revoke the rejection on their part, but only within three months from the date they found out about that rejection. The admission of the action in rejection produces the effects of the inheritance acceptance by the debtor *erede*, but only in respect with the complainant creditor and in the limit and in the limit of his claim.

We thereby identify another strong point of the new regulation in successional matter, which offers a fair solution to situations commonly encountered in practice, but that are now not legally regulated. Moreover, the solutions established by the legislature in these cases are those that currently enjoy the majority doctrinal support.

Compared to these legal dispositions, we consider that the successional option right has not an exclusive personal nature, being able to be exercised by the *erede* creditors.

2.3. The legal characters of the successional option act

The act of successional option represents the manifestation of will of the holder of the successional option right, expressed in the legal term, towards an acceptance or a rejection of the inheritance.

---

[7] We mention, as examples, article 1102 paragraph (2), article 1103 paragraph (2), article 1114 etc.

[8] Francisc Deak, *Tratat de drept succesoral*, second edition, updated and completed (Bucharest: Universul Juridic Publishing House, 2002), 382.

New Civil Code refers to the legal characters of the successional option right, in article 1101, stating that: "Under the sanction of the absolute nullity, the successional option is indivisible and can not be affected in any way". It is worthwhile the legislature's choice to identify the legal characters of the successional option act but as far as we are concerned, we consider that, under this aspect, the law in question records a decline, being at least incomplete[9]. In fact, the successional option act has the following legal characters:

a) it is an *unilateral legal* act, being available only through the successional option right holder's manifestation of will. In case of multiple *erede*, they can not collectively exercise the right of successional option.

From the unilateral character point of view, although similar to the will, the successional option act is different from the latter since it isn't essentially a personal act. As a consequence, *erede* can realise the successional option act either in person, either by using a legal or a conventional representative[10].

b) it is a *legal voluntary act*, since nobody is obliged to accept a rightful inheritance (article 1106 N.C.C.), and *erede* can choose any of the valences of the successional option right, without being held to demonstrate the reasons for his choice[11]. In the case of multiple heirs, each may choose differently on the same inheritance.

Specific to the successional option act, freedom of choice manifested on the three planes is diminished, as we have shown, by the possibility of *erede* creditors to exercise the oblique action, respectively the action in the revocation of the fraudulent rejection.

Moreover, in the light of the new Civil Code, this principle entails the following exceptions:

- the forced acceptance of the inheritance, regulated by the article 1119 N.C.C.;

According to the mentioned dispositions of the new Civil Code, *erede* who, in bad faith, has concealed or has stolen assets from the successional patrimony or has concealed a donation subject to the report or to the reduction, is deemed to have accepted the inheritance, even though he had previously rejected it;

- the retransmission of the option right, regulated by the dispositions of the article 1105 N.C.C.

Under these legal dispositions, the heirs of those who died without having exercised the successional option right exercises it separately, each for his part, in the applicable term of the option right regarding the inheritance of their author.

If, however, *erede* made acts of tacit acceptance of the inheritance, his right being exercised, it is not likely to transmit to his own heirs.

In the absence of such papers, *erede* heirs have the possibility to exercise two option rights: the own option right regarding the deceased *erede* inheritance and the retransmitted option right, aiming the previous opened inheritance The second option right can be exercised only if the inheritance of the deceased *erede* has been accepted. The rejection of his inheritance doesn't give the possibility to the rejecting person to accept the retransmitted inheritance.

In conclusion, the option regarding the two inheritances need not be identical, but in order to be accepted the retransmitted inheritance, one must not abandon the inheritance of the deceased *erede*.

Regarding the retransmitted inheritance, the option right must not be exercised by the unitary coheirs, the new Civil Code regulating the possibility that one or more *erede* to reject the retransmitted inheritance, by the part of the rejecting persons taking advantage the others successors of their author.

---

[9] See also Bogdan Pătraşcu, *op. cit.*, 263.

[10] Civil Court, civil collective, decision no. 778/1962, in *Culegere de decizii pe anul 1962*, 162-5.

[11] Mihail Eliescu, *Moştenirea şi devoluţiunea ei în dreptul Republicii Socialiste România* (Bucharest: Academiei Publishing House, 1966), 91.

The text of the article 1105 N.C.C. is inconsistent. In the first paragraph of this law text it is stated that "the heirs of the person who deceased without exercising the successional option right, exercise it separately, each for his part…", and in the second paragraph, the legislator contradicts himself and states that "from the part of *erede* who rejects the inheritance profit the others successors of their author".

As a result, the following question needs to be answered: How can benefit the others successors of their author of the rejecting person's part if the latter have accepted only their part, so they have a vocation limited only to their part of inheritance? So that the others successors of their author benefit of the rejecting person's part, the former should have vocation to the generality of the inheritance, meaning to choose (to accept) in respect with the whole retransmitted inheritance, and not only for a part of it[12].

Under these circumstances, we advise the legislator to reconsider this law text and to remove the obvious contradiction between these two paragraphs.

c) it is, in principle, an *irrevocable legal act*, as it is not possible for *erede* to reconsider the choice made;

Actually, only the acceptance act of the inheritance is absolutely irrevocable, as the heir who accepted the inheritance can no longer reconsider the choice he made (*semel heres semper heres*)[13], the subsequent rejection of the inheritance having no efficiency[14].

Irrevocability, which characterizes the rejection of the inheritance, is not, however, absolute, so that the owner can reconsider it, by accepting the inheritance, only if the prescription term of the option right has not expired and only if the inheritance has not been accepted meanwhile by other *erede* (article 1123 N.C.C.).

d) it is an *indivisible legal act*, *erede* being forced to choose unitarily for the entire inheritance;

Considering this nature of the successional option act, it is not allowed to *erede* to accept only a part of the inheritance and to reject the other part[15].

Not only the successional option act of the legal heirs, but also the legatees' one, no matter if they are general legatees, with general or particular title, has an indivisible character.

Trough the indivisible nature of the successional option act it must not be understood that if there is a plurality of heirs they must choose unitarily, this requirement not being characteristic anymore even for the retransmission of the inheritance, in the light of the new Civil Code.

So *erede* can choose differently in the same inheritance matter, some of them accepting it and some of them repudiating it. The indivisibility of the option aims only the inheritance, and not the heirs' person[16].

The indivisibility principle of the successional option includes, in the light of the new Civil Code dispositions, the exception of the multiple vocation to the inheritance[17]. Therefore, according to the dispositions of the article 1102 paragraph (1) N.C.C., "The heir who, under the law or the will, accumulates more vocations to the inheritance has for each of them a separate option right". So, the legatee called to the inheritance as a legal heir could exercise his option in any of these qualities, regarding the same inheritance, exercising two right of successional option and making two papers of successional option. This is possible due to his double call to the inheritance: bosth legal and

---

[12] See also Bogdan Pătrașcu, *op. cit.*, 256.

[13] *Semel heres, semper heres* = once became heir, stay heir forever.

[14] See as an example: Civil Court, civil division, decision no. 1968/1972, in *Repertoriu II pe anii 1969-1975*, 200; Supreme Court, civil division, decision no. 1984/1991, in *Deciziile Curții Supreme de Justiție pe anii 1990-1992*, 126-8; Galați District Court, civil decision no. 878/1976, in *Revista Română de Drept* (12/1976): 61.

[15] Civil Court, civil collective, decision no. 1778/1960, in *Culegere de decizii pe anul 1960*, 241-2.

[16] Francisc Deak, *op. cit.*, 392.

[17] In the recent literature is assessed that the multiple vocation to inheritance is not a true exception from the indivisibility character of the successional option act. See in this regard Bogdan Pătrașcu, *op. cit.*, 266.

testamentary. Such *erede* can, in respect with his interests, to accept the legal inheritance and to reject the legacy or vice versa.

However, if it results from the will (which does not affect the successional reserve) that the deceased wanted to diminish the quote of the legatee as a legal heir, the latter may choose only as a legatee [article 1102 paragraph (2) N.C.C.].

e) it is a *legal act unsusceptible by means*, so that it can not be affected by term or condition. The presence of a mean attracts, according to the dispositions of the new Civil Code, the absolute nullity of the successional option act.

As far as we are concerned, we consider that the successional option act, although unsusceptible by means, can not be absolutely considered just an act, because such a qualification would lead to ignoring *erede* will farther in class and kinship degree. The latter, *erede* in the meaning of the new Civil Code, can not accede to the inheritance, unless *erede* in preferable class and degree reject the inheritance. Therefore, the successional option act of *erede* farther in class and kinship degree is affected by the condition that *erede* in preferable class and kinship degree not to accept the inheritance. We can even appreciate that this condition is the essence of the successional option act, being implicit, and that the act in discussion can not be affected by any other condition than the previous mentioned one.

f) it is a *legal declaratory act of rights*, the effects of exercising the option right occurring, according to the dispositions of the article 1114 and 1121 N.C.C., retroactively, from the opening of the inheritance time, regardless of the chosen option (acceptance, rejection or even revocation of the rejection).

Exceptionally, however, the rights acquired by the third parties of good faith between the time of rejecting the inheritance and the revocation of the rejection will be respected [article 1123 paragraph (2) N.C.C.].

In respect with the regulation of the new Civil Code, we appreciate that, under the legal characters of the successional option right, this is totally inappropriate.

2.4. The validity conditions of the successional option act

The successional option act must comply with all the legal validity conditions. Thus, the successional option act must come from a capable person, his consent must be valid, his object must be determined, possible and lawful, the cause must be available and according to the law (article 1197 N.C.C.). These conditions will be analyzed next only under the particular aspects.

2.4.1. The required capacity to exercise the successional option right

The new Civil Code does not qualify the successional option act as a disposition act. In the literature[18] though, to whose opinion we agree, it is generally accepted that the persons without legal exercise capacity (minors under the age of 14 years old and person under interdiction) exercise their successional option right trough their legal representants and with the authorization of the guardianship court, and those with limited exercise capacity (minors with the ages beween 14 and 18 years old) exercise by themselves that right, but they still need the approval of their legal representatives and the authorization of the guardianship court (article 41 and next N.C.C.).

2.4.2. The uncorrupted consent

In the successional option act, *erede* consent must be serious, freely and knowingly (article 1204 N.C.C.). The corruption of the consent problem, in the successional option matter, rarely appears in practice due to the notary successional procedure.

[18] Mihail Eliescu, *op. cit.*, 92-4; Stanciu Cărpenaru, „Dreptul de moştenire" in *Drept civil. Contracte speciale. Dreptul de autor. Dreptul de moştenire*, Francisc Deak and Stanciu Cărpenaru (Bucharest: The University of Bucharest, 1983), 492; Francisc Deak, *op. cit.*, 385; Dumitru Macovei, *Drept civil. Succesiuni* (Bucharest: „Chemarea" Publishing House, Iaşi, 1993), 144; Dan Chirică, *op. cit.*, 204.

Although the new Civil Code (in article 1124) refers only to violence, we consider that the vitiation of the consent in this matter can be achieved also through fraud and error (both the fact one and the law one). Through the error of law it can be obtained the annulment of the successional option, only if it is excusable and represents the determinant cause of the option act.

Fraud, like the others vitiations of consent, can corrupt both the acceptance act of the inheritance and the rejecting one, and while the successional option act has is unilateral, it may come from any person.

As far as we are concerned, we believe that, in the light of the new Civil Code's regulation, the lesion can not be invoked by *erede*, in the successional option matter.

The vitiation of *erede* consent in the matter subjected to our analysis attracts the annulment of the option act.

2.4.3. The object of the successional option act

Like any legal act, the successional option act must have a determined and lawful object, under the penalty of absolute nullity [article 1225 paragraph (2) N.C.C.]. It is considered to be unlawful, according to the dispositions of the article 956 N.C.C., the acts through which is accepted or rejected the inheritance, before its opening.

2.4.4. The cause of the successional option act

The cause of the successional option act must exist, must be moral and lawful [article 1236 paragraph (1) N.C.C.]. The cause of the successional option is unlawful when it is against the law and public order and when the acceptance or the rejection of the inheritance represents only the mean to dodge the application of an imperative legal norm. The cause of the successional option is immoral when it is contrary to morality.

The unlawful and unmoral cause of the successional option act attracts its absolute nullity. But the lack of cause in the successional option matter attracts its relative nullity.

2.4.5. The form of the successional option act

The express acceptance of the inheritance can be achieved either through an authentic document or in writing under private signature. So, the solemn form in the acceptance of the inheritance case is not about its essence but about its nature. But the declaration of non-acceptance, regulated by the new Civil Code in article 111, represents an authentic act of notary. The rejection of the inheritance represents in all cases an authentic act of notary, which can be done by any public notary or by the diplomatic missions or consular offices of Romania. The absence of the form required by law in the successional option act's case attracts its absolute nullity.

In addition, for the third party information, the declaration of renunciation of the inheritance will be posted, on the expense of the rejecting person, on the national notary register, kept in electronic format.

2.4.6. The sanction for the non-observance of the validity conditions of the successional option act

Following the intervention of the nullity (absolute or relative), the option act is retroactively abolished, *erede* being allowed to opt again[19], under the law.

2.5. The prescription of the successional option right

2.5.1. The term of successional option

According to the article 1103 N.C.C., "The right of successional option is exercised in term of one year since the inheritance opening".

[19] Mihail Eliescu, *op. cit.*, 115; Francisc Deak, *op. cit.*, 387.

Thus we notice that the new Civil Code extends the deadline in which *erede* can choose about the inheritance to which they have the vocation. In this way it is assured for *erede* a longer term to exercise the option right, thing that can be considered as another positive aspect of the new regulation in the successional matter. It is true though that, in respect with the deadline of the successional option, we can equally identify also a negative aspect. So, by extending the deadline for exercising the successional option right to one year, it is also prolonged the uncertainty about the owners of the successional rights over the assets of the deceased. But we consider that, as far as the deadline of the successional option is concerned, it prevails the positive aspect identified above.

The one year term in which the successional option right must be exercised and which is regulated by the new Civil Code in article 1103 paragraph (1) should not be confused with the term in which is prescribed the right to action in the annulment of the acceptance or of the rejection, regulated by the legislative act mentioned in article 1124. The deadline for exercising the right to action in the annulment of the successional option has the legal nature of an extinctive prescription term and lasts six months, starting as follows:

- in case of violence, since it stops;
- in the other cases, from the moment when the owner of the right to action knew the relative nullity cause.

2.5.2. The legal nature of the successional option term

We appreciate that the new Civil Code, through the dispositions of the article 1103 paragraph (3), simplifies the problem of the legal nature of the successional option term. According to the legal mentioned dispositions, to the one year term is applied the provisions of the new Civil Code regarding the suspension and the reinstatement in the extinctive prescription term.

So, as far as we are concerned, the one year term is an extinctive prescription term.

2.5.3. The subject area of the successional option term

About the subject area of the 6 months option term, from the civil regulation in force, in the literature have been formulated different opinions. According to the majority's opinion, the six months term is applicable to all the *erede*, even to the legatees with private title.

However, according to the minority's opinion, the six months term is applicable only to the general transmissions or to those with general title, meaning to the legal heirs, to the legatees general or to those with general title. Consequent to this view, for the legatees with particular title are applicable the common law dispositions regarding the prescription.

The new Civil Code, in article 1103 about the successional option term, does not realise any distinction between the general transmissions and those with general title, on one hand, and those with particular title, on the other hand. On the contrary, in this law text, the new Civil Code uses terms like "legatee", "*erede*", which allow us to believe that the successional option term in discussion is applicable both to the general successional transmissions and to those with general title, and also to those with particular title.

This term is equally applicable to the state and to the administrative-territorial units, as the legatee general, with general or particular title. But if the state, the commune, the city, or where appropriate, the municipality collects *ope legis* a vacant inheritance, the legal option term becomes inapplicable[20].

2.5.4. The beginning of the successional option right prescription

As a rule, the successional option term starts from the date of the inheritance opening, meaning since *de cujus* death [article 1103 paragraph (2) N.C.C.].

[20] Ilioara Genoiu and Olivian Mastacan, "Moştenirea vacantă în lumina Legii nr. 287/2009 privind Codul civil", *Dreptul* (1/2010): 51.

Any option related to the inheritance, made before this moment, represents a pact not allowed on a future succession and it is, according to the disposition of the 956 N.C.C., null and void. *Erede* who chose so can choose differently, after the date on the inheritance opening, but this time his choice will produce legal effects, as it is exercised under the law conditions.

Similarly, it isn't valid the obligation undertaken before the inheritance opening, to choose in a certain sense about the inheritance. As a consequence, *erede* can choose at the opening date of the inheritance.

The rule according to which the successional option term starts from the date of *de cujus* death, regardless of the moment of his inclusion in the civil status registers, operates also in the following assumptions:

- *erede* found out latter about *de cujus* death;
- *erede* lives in another place than the opening place of the inheritance[21];
- *erede* doesn't know the composition of the successions;
- *erede* has only general vocation to the inheritance, but not specific vocation;
- *erede* inherits not only by himself, but also by representation or retransmission.

In case of retransmission, the must exercise his successional option right within the remained term, which is within the date of *erede* death and the date whent the one year term expires. The heirs of the death *erede*, after the opening date of the inheritance, but before exercising the successional option right, can not benefit of a longer term than the one of the death *erede*. For example, if the opening date of *de cujus* inheritance is 1st of January 2010, the successional option term expires on 1st of January 2011. *De cujus erede* dies on 1st of April 2010, before exercising the successional option right in respect with the opened inheritance. The option right of the deceased *erede* is transmitted to his own heirs. The latter ones have the right to choose in respect with the retransmitted inheritance in a nine months term. The non-exercitation of the option right in the remained term means the extinguishment of this right and also the extinguishment of the heir title.

In contrast, regarding the inheritance of the deceased *erede* and not the retransmitted one, his heirs have the right to choose in the one year term, which starts on 1st of April 2010 (which represents the opening date of the inheritance in respect to which they choose).

The following waivers from the rule that governs the beginning of the successional option right prescription are admitted by the new Civil Code:

a) for the child conceived at the opening date of the inheritance, but born afterwards, the option term starts at his birth [(article 1103 paragraph (2) letter a) N.C.C.];

b) in case of the legally declared death person's inheritance, the term starts from the date of registration of his death in the civil status register, under the declaratory judgement of death, unless if *erede* knew the death or the declaratory judgement of death at an earlier date, case in which the term starts from this latter date [(article 1103 paragraph (2) letter b) N.C.C.];

c) for the hypothesis in which the will that contains legacies is discovered after the inheritance opening, the term starts from the date when *erede* knew or should have known his legacy [(article 1103 paragraph (2) letter c) N.C.C.];

d) in case in which the kinship relationship on which is based the *erede* vocation is not known at the date of the inheritance opening, the option term starts from the date when *erede* knew it or should have known it [(article 1103 paragraph (2) letter d) N.C.C.].

Thus, we see that the new Civil Code also innovates regarding the exceptions of the rule about the beginning of successional option right prescription. We believe that the novelties brought by the legislator regarding this aspect may be considered positive aspects of this new regulation in civil matter.

[21] Civil Court, civil division, decision no. 1413/1973, in *Revista Română de Drept* (12/1973): 156-7; Civil Court, civil division, decision no. 213/1987, in *Revista Română de Drept*, (10/1987) 74-5.

2.5.5. The suspension and the reinstatement in the prescription term of the successional option right

According to the express dispositions of the article 1103 paragraph (3) from the new Civil Code, the prescription term of successional option right is liable of suspension and reinstatement in term. The problem of interruption the prescription term of the successional option right is not valid, since it is being exercised in the legal term, the successional option right is "consumed"[22].

A) The suspension of the successional option right prescription

The new Civil Code contains special dispositions regarding the suspension of the prescription in successional matter, being innovative under this aspect too. Therefore, causes that usually entail the suspension of the extinctive prescription are not applicable in the successional matter, it having specific causes of suspension. So, according to the dispositions of the article 2533 N.C.C., the prescription does not run in the following cases:

a) against the creditors of the deceased regarding the claims they have on the inheritance, as long as the inheritance has not been accepted by *erede* or, in the lack of the acceptance, while a guardian was not appointed to represent them;

b) against the deceased's heirs, as long as they haven't accepted the inheritance or a guardian was not appointed to represent them;

c) against the heirs, regarding the claims they have on the inheritance, from the date of the inheritance acceptance until its liquidation.

After the cessation of the suspension cause, the prescription resumes its course, taking into account the time passed before its intervention, but it will not be fulfilled, before the expiration of a six months term, reckoned from the cessation of the suspension cause [article 2534 N.C.C.].

The new Civil Code keeps therefore from the regulation in force the effects of the prescription's suspension, including the special effect, but keeping all other causes of suspension. Moreover, we consider that the legislator has done just, adapting the causes of the extinctive prescription to the specific of the successional matter.

The suspension causes of the extinctive prescription mentioned above, generally applicable in successional matter, are also about the statute of limitations in the annulment of the successional option act.

B) The reinstatement in the prescription term of the successional option right

The reinstatement in the prescription term of the successional option right may be ordered by the jurisdictional body, under the dispositions of the article 2522 paragraph (1) N.C.C., only if it finds for good reasons that *erede* didn't exercise the successional option right in term. *Erede,* who overcome the legal term of successional option, may ask the reinstatement in term and the prosecution of the case, only within 30 days, starting from the day when *erede* knew or should have known the end of the reasons that justified the overcoming of the prescription term [article 2522 paragraph (2) N.C.C.].

From the analysis of these legal dispositions it result another novelty brought by Law no. 287/2009 – the reinstatement in the extinctive prescription term must be requested by the entitled person with 30 days and not a month, as the Decree no. 167/1958 regarding the extinctive prescription states.

Furthermore, either the new regulation in civil matter does not determine the legal nature of the 30 days term in which can be ordered the reinstatement in the extinctive prescription term, reason for which, next, this aspect will be judged by the doctrine and by the jurisprudence[23].

---

[22] Francisc Deak, *op. cit.,* 406.

[23] Regarding the legal nature of the reinstatement term, see also Ion Deleanu and Gheorghe Beleiu, "Repunerea în termen, în condițiile art. 19 din Decretul nr. 167/1958", *Revista Română de Drept* (9-12/1989): 32-44.

Likewise, Law no. 287/2009, and the Civil Code in force, doesn't define the notion of "good reasons" and either offers examples. As a consequence, "good reasons" may be considered those circumstances with the following features:

- prevents *erede* to exercise his successional option right;
- they are not imputable to *erede*;
- they does not meet the force majeure character, as they are not absolutely invincible.

So, by "good reasons" should be designated the fortuitous cases, those cases which, although not absolutely prevent *erede* from exercising the successional option right within the legal term, however, they can not be imputed to him.

For example, such cases are:

- hiding in bad faith the *de cujus* death, from the heirs[24];
- *de cujus* death occurred abroad, and the links between him and his heirs were abnormal;
- death in a prison[25];
- non-exercising by the mother, by leaving the child, of the parental rights and duties[26];
- wrong direction by the notary, followed by delays on the part of local administration[27];
- not knowing the will by the legatee[28];
- subsequent finding of the kinship with the deceased[29];
- state of long and serious illness[30].

Competent to order the reinstatement in the prescription term of the successional option right are only the jurisdiction bodies and not the public notaries or the state administration bodies[31]. The reinstatement in the prescription term produces effects, not only for *erede*, but also for the third parties.

Regarding the effects produced by the admission of the request of reinstatement in term by the competent jurisdiction body, we consider that this fact has the significance of an implicit acceptance of the inheritance by the plaintiff *erede*, so that the jurisdiction body will not grant a new term for exercising the successional option right.

In respect with the dispositions of the new Civil Code, that regulates as valences of the successional option right only the acceptance of the inheritance and its rejection and according to which the acceptance of the inheritance has as effect the successional liabilities within the limits of the inheritance assets, it is obvious that *erede* who asked for the reinstatement in the prescription term intends to accept the inheritance and not to reject it.

So, the question of granting a new term, within *erede* to choose, can not be put in the light of the new regulation in successional matter.

2.5.6. The reduction of the option term

Law no. 287/2009 in article 1113 regulates the possibility to reduce the one year successional option term. So, "For good reasons, at the request of any interested person, *erede* may be asked to, under the appliance of the procedure provided by law for the injunction, to exercise his successional

option right within a period specified by the court, shorter than the one provided in article 1103", meaning shorter than one year. Furthermore, *erede* who does not chose during the term established by the court is considered to be a rejecting the inheritance person.

Thus we identify another novelty brought by Law no. 287/2009. The reduction of the option term is has, therefore, an exceptional character, intervening only in situations where it is imposed the ascribing of the successional assets in terms shorter than one year. Such reasons may be, for example, the risk of destruction, degradation or deterioration of the successional assets.

2.5.7. The extension of the successional option term

As a novelty, the new Civil Code regulates in article 1104 the possibility to extend (to prolong) the successional option term. So, "In the case in which *erede* asked the inventory before exercising the successional option right, the option term is not completed before two months earlier than the date on which it is communicated to him the inventory minutes. While performing the inventory, *erede* can not be considered an heir unless he has accepted the inheritance".

Erede, the creditors of the inheritance or any interested person can ask to the competent public notary for an inventory of the successional assets [article 1115 paragraph (1) N.C.C.]. Only *erede* request to perform the inventory of the successional assets can generate the extension of the successional option term. In order for the extension to interfere, it is necessary that the inventory application of the successional assets to be made between the successional option term limits of one year, so before the exercitation of the successional option right. In such a case, the option term is extended with two months from the date when to *erede* is communicated the inventory minutes.

Therefore, we meet in practice the following situations:

- the inventory minutes is communicated to *erede* two months before the expiration of one year option term, so that the extension of the option term is no longer necessary;
- the inventory minutes is communicated to *erede* after the expiration of the one year option term, so that the extension of the option term with two months is no longer necessary;
- the inventory minutes is communicated to *erede* before the expiration of the one year option term, but until the end of this period are less than two months, becoming necessary the extension of the option term, so that when the inventory minutes is communicated it have to run another two months term.

We believe this addition of the legislature to be fair, thus providing protection for the interests of *erede* and allowing the latter to choose in respect with the inheritance for which he has vocation, being fully informed.

2.5.8. The prescription's effects of the successional option right

As a consequence of the non-exercising of the successional option right in the legal term, *erede* is presumed by law (article 1112 N.C.C.), until proven guilty, to has rejected the inheritance. So, the legislator treats *erede* who doesn't exercise the successional option right similar with the person who rejects the inheritance. By this assumption, which has only a relative character and can be countered by the contrary evidence, is concerned only *erede* who, despite knowing about the inheritance opening and his quality of *erede*, as a result of his notification under the law conditions, does not accept the inheritance in the legal term.

On the contrary, *erede* who did not know about inheritance opening and about his quality, not being notified under the law conditions and who does not accept the inheritance in the legal term of the successional option, can not be considered a person who rejects the inheritance, he being able to retain under the law conditions the tacit acceptance of the inheritance or to claim to the competent jurisdiction institution the reinstatement in the period of limitation, under the law conditions.

Stating this, the new Civil Code removes the present doctrinal controversy concerning the effect of the prescription of successional option right. So, by prescribing the successional option right, *erede* is considered to be a person who rejects the inheritance, being considered never to be

heir. The rejection of the inheritance produces *erga omnes* effects, and it can be invoked by any interested person and to any person (such as co -heirs, subsequent heirs, legatees, creditors and debtors of the inheritance).

3. Conclusions

From the analysis undertaken in this paper regarding the general issues of the successional option in light of the new Civil Code's dispositions, it obviously results quasi-total reconfiguration of the successional option.

Law no. 287/2009 keeps from the regulation in force only the items whose correctness and timeliness have not been denied in the literature and in the judicial practice. But the new Civil Code brings many novelty elements in the successional option matter, imposed by the new social realities.

As for the general aspects of the successional option, we reveal the following new aspects brought by Law no. 287/2009: for the first time is defined the term of "*erede*"; it regulates the retransmission of the successional option right, clearly distinguishing in this way this institution from the successional representation one to which it resembles; it doesn't regulates anymore, as a valence of the successional option right, the acceptance under benefit of inventory and ascribes to the acceptance of the inheritance new effects, so that the liabilities of the inheritance will be considered only in the limits of its assets; regulates the possibility of exercising the successional option right in the oblique way by the *erede* creditors, and also the possibility of revocation by the *erede* creditors of the fraudulent rejection of the inheritance; in comparison with the regulation in force assigns a longer period of time for successional option term, equally regulating the its possibility of reduction and extension; clarifies in a greater degree than the Civil Code in force the problem of the legal nature of the successional option term, stating that it is liable for suspension and for reinstatement in term; in comparison with the regulation in force establishes new exceptions to the rule about the beginning of the prescription of the successional option right and new causes of suspension of the prescription in successional matter; identifies the prescription effect of the successional option right.

All these aspects are, in our view, the advantages of this new regulation in successional matter, constituting its strengths. Unfortunately, the new Civil Code improperly regulates the legal characters of the successional option act. Although the legislature's intention to regulate the legal characters of the successional option right is commendable, it can not be understood his option to retain only two of them, seeming to prioritize them. Then, although the new Civil Code establishes, under the penalty of nullity, the purely and simply character of the successional option act, in our view, this is illusory.

Second, the expression of the legislator used in article 1105, which regulates the retransmission of the option right, is obviously contradictory. As a consequence, we recommend to the legislator to reconsider the discussed law text and to reformulate it, taking into account the criticisms and suggestions in the literature.

We conclude therefore that, far from perfect, but only perfectible, the new Civil Code, currently using a specialized language, ensures a proper, a complete, a consistent and a fair regulation for the successional option.

NON-COMPETITION CLAUSES IN COMMERCIAL CONTRACTS

MIHAELA IRINA IONESCU*

Abstract
We begin with an analysis of areas where rivalry between economic agents can not show (any act of competition committed in this area drawing the liability of the author), we will then analyze competition in relations between the trader and servant or other employees and continue with the analysis of the legal ban on competition in the limited liability companies and joint stock companies.
So, the relevant provisions of Law 31/1990 are reviewed, views of legal doctrine and practice of judicial rulings on the nature and purpose of the relevant provisions referred to, their scope, applicability of statutory prohibition against competition in the profile activity of the company, the prohibition in the liquidation phase, procedural methods which can cover damage caused to the creditor's violated rights, as well as statute of limitations for the right to action and prescription.

Keywords: *Competition Council, non-competition, commercial code, civil code, labor code*

Introduction

Given the very high interest, in the current economic context, regarding the topic proposed for the study below I considered being important the summarization of the most important and most used aspects from the field mentioned in a material as practical as possible.

Non-Competition Clauses in Commercial Contracts

Taking into account that, a functional market economy involves the existence of an undistorted competitive environment, within which the enterprises would act freely on the market, without being affected by the unequal behavior of other enterprises, possibly located in a dominant position, or by the intervention of the state.

Also that, through the competition policy is sought to maintain an efficient competition status which would lead to the achievement of the economic progress, of a favorable climate for innovations and technical progress, **the policy in the competition field** represents a major structural factor in supporting the national economy in the process to adapt to the new competition environment created in the context of globalization.

Often, the concept of competitive market was associated with that of the democratic society, where no natural or legal person is allowed to exercise unjustified his power on another natural or legal person.

In the Romanian legal doctrine, **the completion right** was defined as being the set of rules meant to ensure, in the internal and international market reports, the normal exercise of the competition between the economic operators, in the fight to win, keep and extend the customers.

The main components of the competition right are represented by a complex of specific rules, forming the legal framework; an appropriate economical ambiance, consisting of a free market, the existence and ways to exercise the economical competition, the competition relations between economic operators.

The present paper proposes to analyze the non-competition clause concept, examining this notion both for individual commercial relations as well as within legal reports regarding goods and services circulation.

* Ph.D. candidate, Law Faculty, "Nicolae Titulescu" University, Bucharest (e-mail: mihaela.ionescu@audio-optica ro).

Also, will be examined by comparison other clauses frequently met in commercial contracts, like, for example, the exclusivity clause in the distribution contracts, as well as clauses inserted, in practice, in the individual employment contracts, next to the non-competition clause, thus wanting to achieve a conceptual delimitation.

However, there are also fields closed by law for the commercial competition. For example art. 2 par. 4 from the Competition Law no. 21/1996 establishes that **this law is not applied on the labor and work relations market.** They are subjected to a specific legal system, being instituted efficient measure to protect the employees, both by Labor Code, as well as by the Romanian Constitution.

According to the Constitution of the International Labor Organization, „the labor is not a merchandise", reason for which the labor is not subjected to legal regulations regarding competition or legal regulations regarding added tax value.

Art. 41 par. 2 from the Romanian Constitution provides that the employees have the right to social protection measures. These concern the safety and health of employees, the working regime for women and young people, the institution of a gross minimum salary in the country, weekly rest, paid annual leave, work provision in particular or special conditions, professional formation, as well as other specific situations, established by law.

Consequently, the competition cannot manifest regarding the following aspects: work safety and health, maximum duration of working time, annual leave, establishing the retiring age for old age, social insurances, minimum salary, all these aspects being regulated through legally binding rules from labor legislation and social security legislation.

There are also competition interdictions regarding the reports between trader and suspected or other employees.

The legal reports between trader and suspected are regulated by the provisions of art.392 – 400 of the Commercial Code.

According to art.392 from the Commercial Code, the suspected is that entrusted with the trade of his employer, whether where he exercises it, or other place. Thus, **the suspected is a trade auxiliary** who substitutes the trader, representing in a stabile way his enterprise and concluding legal documents for and on behalf of the trader. From the analysis of the legal norms results that the suspected is at the same time an enterprise leader and a representative.

The suspected acquires this quality based on an employment contract concluded with the trader, a contract by which the suspected acquires a general and permanent representation power. The supposed has the obligation to keep the commercial registers of the person who employed him, as well as the obligation not compete with him.

Thus, art.397 of the Commercial code institutes **a competition interdiction against your own employer**: the suspected cannot, without the express consent of the employer, perform operations, or take part, in his own behalf or of another, to other trades of the same nature with that he is entrusted with. Contrary, the suspected is responsible for damages, the employer also having the right to retain for himself the benefits resulting from these operations.

Thus, for the unfair competition, those facts are made on a field on which the competition is allowed, in such cases being in discussion exclusively the morality of the means used.

The essential condition for the applicability of the provisions of art.397 of the Commercial Code is that the trade acts made to be similar to the commerce performed by the employer, respectively the activity should be performed in the same specialized functional sector of goods or services production.

Art. 397 of the Commercial Code shows that it is possible an express consent of the employer to remove the legal interdiction. It was considered that this provision may be applied, by extension, to any employee, taking into account the principle of free conventions.

As for the regular employees of a trader, the interdiction is provided by art. 4 par. 1 let. a of Law no. 11/1991 regarding the fight against unfair competition and refers to ***the provision of services, by the exclusive employee of a trader to a competitor or the acceptance of such an offer.***

Thus, the legal provision takes into account both the actual performance of the fact, referring to the will agreement concluded by the employee with a competitor of the employer, as well as a simple action of the employee in this respect, unfinished, namely, the service offer not followed by acceptance.

The service offering by an exclusive employee of a trader to the benefit of a competitor or the acceptance of such offer constitutes a contravention punishable by fine, according to art.4 par. 2 of Law no.11/1991. If the employee commits such act, by which are caused patrimonial or moral damages, against the provisions of art.9 from Law no. 11/1991, the prejudiced one is entitled to address to the competent court with the appropriate civil liability action.

Consequently, the employer is entitled to formulate against the employee a civil liability action, to grant compensations for the damages produced, including the moral ones, according to art.6 and art.9 of Law no.11/1991. By Law no. 11/1991 regarding the fight against unfair competition, published in the Official Gazette no. 24 from 30 January 1991 modified by Competition Law no. 21/1996 and Law no. 298/2001, as well as Government Emergency Ordinance no. 121/2003, with the subsequent modifications it is accepted that the person who commits an act of unfair competence will be forced to stop or remove the act, to return the confidential documents illicitly appropriated from their lawful owner and, as appropriate, to pay compensations for the damages caused, according to the legislation in force.

Furthermore, according to art.4 par. 5 from Law no. 11/1991, "in the cases of unfair competition affecting significantly the functioning of competition of the relevant affected market" may be notified to the Competition council to solve the case according to the provisions of Competition Law no. 21/1996.

As for the report between the provisions mentioned of art.397 of the Commercial code regarding the suspected and the interdiction instituted by art.4 par.1 let. a of Law no. 11/1991 concerning other employees of a trader, it was considered that the restriction does not have an unitary legal regime, the regulations lacking in sufficient coordination. In this respect, it was criticized the qualification of facts provided by art. 4 par. 1 let. a of Law no. 11/1991 as being unfair competition, in reality this instituting a competition interdiction.

In case of failure to comply with the competition interdiction by the suspected, art. 397 par. 2 of the Commercial Code provides that he may be forced to repair the prejudice incurred by the employer. Thus, the suspected is responsible for damages, in the conditions of art. 1084 of the Civil Code, indemnifying the employer for the loss incurred and the benefit not achieved. Also, the employer has the power to substitute to the suspected to collect the benefits of operations concluded without right with third persons. Thus, the employer is entitled to hold for himself the benefits resulting from these operations.

We consider that, if the employer has chosen the alternative to substitute to the suspected, he losses the possibility to initiate auxiliary the compensation action, if he finds that the benefits of those operations are inferior to the prejudice incurred, although he had estimated them as superior. Thus, the purpose of the interdiction is that to protect the trader from possible loss caused to his enterprise, by committing by the suspected the prohibited actions. If the trader chooses to take over the operations concluded by the suspected with third persons, the purpose of the mentioned provision is achieved, not existing any more competition acts made by the suspected, those actions being made by the trader himself.

If the employer has exercised the action in compensations and then he finds that there are damages which were not covered, as they were not taken into account when pronouncing the decision, he may formulate a new action, to the extent in which it is about new prejudices, caused by the same fact.

If the employer understood to substitute to the suspected, as it is shown above, the operations made by the suspected, by which the competition interdiction was breached, become of the employer, who thus supports both the benefits, as well as the loss generated by those operations.

Apart from the sanctions mentioned, the fact consisting of the breach of the competition interdiction, whether it is made by the suspected or other employees, constitute a breach of the obligations arising from the employment contract being applicable the disciplinary sanction of the termination of the employment contract.

Consequently, according to art. 61 let. a) of Labor Code, the employer may decide the dismissal for grounds pertaining to the employee, if he has committed a serious breach or repeated breaches from the rules (...) established by the individual employment contract, the applicable collective employment contract, or the internal regulations, as a disciplinary sanction.

Art. 61 let. a of Labor Code should be corroborated with art. 264 par. 1 let. f of Labor Code, that provides, as the most severe disciplinary sanction, the disciplinary termination of the employment contract. Consequently, the employer may decide the disciplinary dismissal in case of repeated breaches of work obligations, like the performance of unfair competition fact or the breach of interdictions provided by the non-competition clause.

There is also a competition interdiction against joint stock companies.

Joint stock company is the company whose obligations are guaranteed with the social patrimony and the liability of the associates for the social obligations is limited, the shareholders being obligated only until the competence of the subscribed nominal share capital. The nominal share capital is divided in actions, negotiable and transferable titles.

In the previous drawing, according to art. 145 par. 5 of Law no.31/1990, the direction committee members and the directors of a joint stock company could not be, without the authorization of the administration council, administrators, members in the direction committee, censors or unlimited liability associates, in other competing companies with the same object, neither exercising the same trade or other competitor, on his own or on other person, under the punishment of cancellation and liability for damages.

This article was abrogated by Law no. 441/2006, by which was introduced art. 15315. According to this article, the directors of a joint stock company, in the unitary system, and the directorate members, in the dualistic system, cannot be, without the authorization of the administration council, respectively the supervision council, the directors, administrators, members of the directorate or supervision council, censors or, as appropriate, internal auditors or associates with unlimited liability, in other competing companies with the same activity object, cannot either exercise the same trade or other competitor, on his own or on other person, under the punishment of cancellation and liability for damages.

The compliance with this obligation means the removal or limitation of any conflict of interests between these persons and the commercial company.

The competition restriction regarding the directors is more pronounced, besides the position of administrator, as they cannot be either censors or unlimited liability associates to another competitor company with the same object. This regulation is explained in that, as the directors exercise the operative management of the company, they need enough time to be allocated to this position.

The interdiction mentioned includes the two modalities to commit the competition acts, namely, the direct competition, consisting in the fact that the persons mentioned cannot exercise the same trade or another competitor, on their own or on other person, as well as the indirect competition. The latter involves that the people mentioned cannot be directors, administrators, members of the directorate or of the supervision council, censors or, as appropriate, internal auditors or associates with unlimited liability, in other competing companies or with the same object.

There is the possibility, provided by the mentioned legal provision, to previously authorize, by the administration council, respectively the supervision council of the joint stock company, to fulfill the competitive activity by the people mentioned.

It is noted that, before being named director or member of the directorate in a joint stock company, the assigned person is forced to notify the body of the company charged with his assignment regarding any relevant aspects according to the provisions of art. 15315, as it is imposed by art. 15317 of Law no.31/1990.

As for the sanctions applicable in case of breach of the competition interdiction, under patrimonial aspect, the company may obtain the full compensation of the prejudice incurred, via the action in liability for damages, to cover the loss incurred and the benefit not achieved. The right to act belongs to the company, and not to the shareholders. Thus, according to art.155 of Law no. 31/1990, the action in liability against the directors, respectively the members of the directorate, for the damages caused to the company by them by the breach of their duties towards the company, belongs to the general meeting.

The joint stock company does not dispose of the alternative to substitute to the directors in that operation, as this possibility is not provided by law.

The Law does not provide a term to form the action, resulting that it is applied the common right in this regard, namely the general prescription term of 3 years provided by art. 3 of the Decree no. 167/195843.

If the general meeting decides to start the action in liability against the members of the directorate, their mandate ceases from the date of adopting the decision, situation in which, the general meeting, respectively the supervision council, will proceed to replace them, according to art. 155 par. 4 of Law no. 31/1990

The action in liability against the members of the directorate may also be exercised by the supervision council, after a decision of the council itself. If the decision is taken with a majority of two thirds of the total number of members of the supervision council, the mandate of those members of the directorate ceases automatically, the supervision council proceeding to replace them, according to par. 7 of the same article.

If the action is started against the directors, they are automatically suspended from their function until the irrevocable decision, under art.155 par. 5 of Law no.31/1990.

The Law provides the possibility that the action in liability be also initiated by the shareholders representing, individually or together, at least 5% of the nominal share capital.

Thus, according to art.1551 of Law nr.31/1990, they have the right to introduce an action in compensations, in their own name, but on the company's account, if the general meeting does not introduce the action in liability provided by art. 155 and does not follow the proposition of one or more shareholders to initiate such action.

However, the law provides a condition that the shareholders mentioned to be able to introduce the action in compensation, namely, the condition that they already had the quality of shareholders when it was debated within the general meeting the problem to introduce the action in liability.

The competence interdiction against the limited liability company.

The limited liability company, intermediate form of commercial company between partnerships and capital companies, is based on the trust of the associates, whose number is limited and who are responsible only to the extent of the contribution brought to the nominal share capital of the company.

The administrators of the limited liability company may be assigned through the memorandum or chosen by general meeting, among the associates or persons outside the company.

The ethical norms applied to the administrators force them not to take part to certain actions which may create suspicion against them or to injure the interest of the commercial company he manages or of the associates of the collective entity.

The regulation of the competition interdiction is provided by art. 197 par. 2 of the Law of Commercial Companies no. 31/1990, according to which the administrators cannot receive, without the authorization of the meeting of the associates, the administrator mandate in other competitive

companies or having the same activity object, neither to perform the same type of trade or another competitive one on his own or on another natural or legal person, under the punishment of cancellation and liability for damages.

The meeting of the associates may grant to the administrators the permission to compete the limited liability company, as it results from the provision mentioned.

In case of breach of the competition interdiction, under the patrimonial aspect, the company may obtain full compensation of the prejudice incurred, via the action in liability for damages, without disposing of the alternative to substitute in that operation, as this possibility is not provided by law.

The sanction applicable to the administrator committing the competition interdiction act is the cancellation, the legal provision being express. In the regard, the former Supreme Court of Justice decided that it is null the clause from the status by which it is provided the exclusion from the company of the administrator committing competition acts, as the legal sanction is its cancellation. Thus, as no more exclusion clauses may be established, the provisions of the law being binding, the clause formulated in this respect in the contract by the company is hit by the absolute nullity, situation where it cannot be revoked as ground of the action of the plaintiff, more so since the law provides the possibility to revoke from the position of administrator if it is found that the associate with the quality of administrator performs commercial activities of the same nature on his own with another trader.

The competition interdiction in regulating the new Civil Code.

According to art.1.887 of the new Civil Code, the regulations of the Code constitute common right in the matter of the companies, as the law may regulate different types of companies when considering the form, nature or activity object.

When regulating the new Civil Code, the company contract was defined, in art. 1.881, as being the contract by which two or more persons force each other to cooperate to perform an activity and to contribute to it through cash, goods, specific knowledge or provisions contributions, in order to divide the benefits or to use the resulting economy.

The company may be founded with or without legal personality, but, if, according to the will of the associates, the company will have legal personality, this may be constituted only in the form and conditions provided by the special law conferring it legal personality.

Up to the date of obtaining the legal personality, the reports between the associates are governed by the rules applicable to the simple company.

This latter type of company, without legal personality, was introduced by art. 1.888 of the new Civil Code, next to those already known in the Romanian legislation.

The administrators of the simple company may be associated or not associated. If it is not disposed otherwise by contract, the company is administrated by the associates, who have reciprocal mandate to administrate one for the other in the interest of the company.

There are also fields closed through convention to the commercial competition.

In the French legal literature, it was found that the most radical means to stop the performance of certain competition acts is to prevent the installation of another competitor. Unlike the exclusivity clause, under which the producer refuses to treat with other partners, the non-competition clauses are more radical, as through them the person interested is protected against the establishment of another possible competitor.

The non-competition clause in met in al economical activities, like, for example, the interdiction to create a competitive trade background, in case of selling the trade background, or the interdiction to get hired by another competitor, in case of the relationship trader – former employee.

Also, the clause may appear regarding the cession of the customers for the liberal professions, when the transferor undertakes not to return in the perimeter given in a given period.

However, the non-competition clause does not represent a stand-alone contract, but a convention the parties conclude in the context of another legal document.

The non-competition clause concept.

In the Romanian legal literature, it was considered that the explicit non-competition engagement is a contractual obligation assumed by a party, not to fulfill a determined professional activity, at the expense of the other party.

Thus, the non-competition clause is the engagement one contracting party assumes, namely, the debtor of the obligation, not to perform, for a certain amount of time and in a limited geographical area, a determined commercial activity, of the same nature with that performed by the other contracting party, the creditor of the obligation.

To this definition, regarding the non-competition clause from the perspective of the obligation not to perform, limited in field, time and space, **would be added** the necessity of the existence of a legitimate interest meant to be protected through the clause, interest belonging to, of course, the creditor.

The conclusion of such legal document, in the field of production and merchandise circulation, should comply with the principle of free trade, and the validity of the agreement depends on more aspects, like the nature of the clause by which the competition is narrowed, the legal position of the parties, territorial extension, interdiction duration.

Thus, the following obligations were considered incompatible with the normal competitive environment:

a) any direct or indirect non-competition obligation, whose duration is indefinite or exceeds five years; a non-competition obligation which may be tacitly renewed after a five year period will be considered as being assumed for an indefinite period;

however, this limitation of the duration to five years is not applied when the products or the services which are the object of the agreement are sold by the buyer within the spaces owned by the supplier or rented by him to third parties which are not in the group of the buyer, provided that the non-competition obligation would not exceed the duration of using the spaces by the buyer;

b) any direct or indirect obligation determining the buyer, that after the expiry of the agreement, not to manufacture, buy, sell or resell products or services, except when this obligation:

- regards products or services in competition with those which are the object of the agreement,
- is limited to the spaces where the buyer has operated during the agreement,
- is indispensable to protect the know-how transferred by the supplier of the buyer, provided that the duration of such non-competition obligation should not exceed one year from the expiry of the agreement; this obligation with reference to the one year term should not affect the possibility to prohibit the use and revelation of know-how which did not became public, for an indefinite period;

The relevant market includes a product or group of products and the geographical area they are produced and/or sold on. The relevant market of the product includes all products considered by the buyers as being interchangeable or substitutable, due to their characteristics, price and use.

The relevant geographical market includes the area where are located the economic operators involved in the delivery of products included in the market of the product, area in which the competition conditions are homogenous enough and which may be differentiated in neighboring geographical areas due to, especially, some competition conditions substantially different.

These principles are also applied to define the relevant market for services (Competition Council Instructions regarding the definition of the relevant market, in order to establish substantial parts of the market from 26.03.2004 published in the Official Gazette, Part I no. 288 from 01.04.2004).

c) any direct or indirect obligation determining the members of a selective distribution system not to sell the products to certain competitor suppliers.

According to the Regulation from 05.04.2004 regarding the application of art. 5 par. 2 from the Competition Law no. 21/1996, "the non-competition obligation" represents any direct or indirect obligation prohibiting the buyer to produce, buy, sell or resell products or services supplied or provided by the competitor economic operators, considered substitutable or interchangeable with the products or services making the object of the agreement, or any direct or indirect obligation requiring to the buyer to purchase from the supplier or from another economic operator assigned by the supplier more than 80% from its total purchase – summing up so many products or services provided in the contract, as well as interchangeable or substitutable products or services present on the relevant market - calculated based on the values of the purchase made during the previous years.

In the contracts concluded between the parties, the non-competition clause may be expressed or implicit, in the latter case resulting from the interpretation of that contract. In the Romanian law, implicit clauses may be considered those resulting from equity, habit or law, according to art. 970 of the Civil Code, the nature and purpose of the contract, according to art. 981 of the Civil Code and from the principle of good faith.

For the international commercial contracts, the UNIDROIT Principles provide, in art. 5.1.1, that the contractual obligations of the parties may be expressed or implicit.

It was stated that certain non-competition clauses represent restrictions collectively indispensable towards the nature and purpose of the contract, situation in which those clauses would not be regarded as competition restrictive.

The non-competition clauses are most frequently met in the selling contract of a trade background, of renting a space or commercial place, of exclusive concession to distribute merchandise.

Non-competition clause and exclusivity clause.

Usually, the parties provide exclusivity clauses in the distribution contracts, the ones of agent, of exclusive concession, of franchise.

In case of *agent* contract, the exclusivity clause has in view the monopoly given to the agent to negotiate and possibly to conclude commercial contracts in the name and on the account of the *principal*, in a certain field of activity, on a certain territory established by the parties or towards certain customers.

The exclusivity the agent benefits from *may be absolute*, in which case the *principal* cannot perform commercial operations directly or through other *agents* within the exclusivity sphere the *agent* benefits from according to the contract. In such cases, as a general rule, the exclusivity given to the *agent* is accompanied by his obligation to achieve a minimum turnover being also provided sanctions for its breach. These sanctions may consist of removing or restraining the exclusivity, or even the termination of the contract concluded between the parties.

The exclusivity the agent benefits from *may be relative*, in which case through the contract concluded between the parties the principal reserves his right to sell his own products directly in the exclusivity area given to the *agent. The Principal* will be able to sell his products in this area to certain determined clients, or, if this possibility refers to any client, usually will be stipulated his obligation to pay to the agent a commission, depending on the value of the merchandise sold on his territory.

Specifically, it may be **a combination between these two clauses** within the agency contract. As for the agency services it offers, an *agent* is, generally, an independent *economic operator*, an *enterprise in the sense of art. 81 of the Treaty*. Thus, the clauses from an agency contract by which the *principal* transfers to the *agent* exclusive rights regarding certain clients or territories (the

exclusivity clause) or, on the contrary, oblige the agent not to act in the name of other principals (the non-competition clause) should be evaluated in reference to art. 81 par. 1 of the Treaty. The jurisprudence is oriented to this point of view when there are involved cases where an *agent* acts in the name of one or more *principals* or acts partly for a *principal* and partly in his behalf.

In case of **exclusive concession** or **distribution** contracts it may be inserted an **exclusivity clause to the benefit of both parties** or only of the concessionaire or grantor.

The exclusive concession framework agreement sets complex intermediation forms, over a longer period of time, having an *intuitu personae* character and giving birth to a close and constant collaboration between the parties. Thus, the concessionaire assumes the obligation to contribute in promoting the activity of the grantor, and in the context of the collaboration, the grantor assumes a refraining obligation, consisting in excluding any competition act made as damage to the concessionaire. The concessionaire may assume the obligation to refrain from competition acts for a determined period of time after the termination of the contract.

The sale exclusivity is the exclusivity in the favor of the concessionaire and involves the situation in which the grantor undertakes to sale his merchandise, in a determined geographical area, only through the concessionaire.

The buying exclusivity is the exclusivity stipulated only to the benefit of the grantor and involves the situation in which the clause contains the obligation of the concessionaire to supply exclusively with merchandise from the grantor.

The buying exclusivity is total in fewer cases, as in general it is granted to the concessionaire the right to supply from other suppliers as well to the extent of a percentage, established by contract, from his turnover.

The exclusivity clause may be stipulated in the favor of both parties, thus having a bilateral and reciprocal character, situation in which each contracting party will have the quality of creditor of the exclusivity right established in his favor and debtor of the exclusivity obligation established in the favor of the other party.

As for the categorical exemption provided by article 2 of the Regulation no. 2790 / 1999, article 5 let. a) provides that a non-competition obligation tacitly renewable by exceeding a five year period should be considered as concluded for an indefinite period and thus it is not comprised in the maximum 5 year period allowed by the Regulation.

The exclusivity clause may be analyzed as an auxiliary restriction for agreements to create a new company.

The criteria according to which it is appreciated if an exclusivity clause is an auxiliary restriction are the following:

1. the clause should be directly connected to the operation;
2. the clause should be objectively necessary for the performance of the operation;
3. the effects of the clause should be proportioned to the purpose followed.

In this context, the fact that the clause would be necessary to allow the new company to consolidate its market position is not relevant for the classification of this clause as being an auxiliary restriction.

Another analysis criterion is that of proportionality. An exclusivity clause for an initial period of 10 years is excessive taking into account that the new company should consolidate its market position before the end of this period. It cannot be excluded the possibility that an exclusivity clause, although initially designated to strengthen the competitive position of the new company on that market, ultimately to allow that, in a few years, to eliminate the competition on that market.

Non-competition clause in labor law.
The relation between the non-competition clause and fidelity obligation of the employee.
The regulation of the non-competition clause in Labor Code. Non-competition clause.

Prior to the entrance in force of the Labor Code, in the legal doctrine and practice there was a controversy regarding the validity of the non-competition clauses in the individual employment contract.

The admissibility of these clauses was sustained by invoking the necessity to make a reasonable compromise between the principle of free labor and the principles of market economy and fair competition.

In the legal practice it was considered that a non-competition clause contained in the individual employment contract, regarding the period after the termination of the contract, is inadmissible, as it limits a fundamental right of the citizen, namely to work.

It was considered that a clause by which the employee is prohibited to exercise any other professional activity in the period he is employed with an individual employment contract is unconstitutional and unequal as it prejudices the constitutional principle of free labor.

In the current regulation, according to art.38 of the Labor Code the employees cannot give up their rights recognized by law. Any transaction seeking to give up the rights recognized by law of the employees or the limitation of these rights is invalid.

As for the obligations of the employee, he has, among others, the obligation to comply with the provisions contained in the internal rules, in the applicable collective employment contract, as well as the individual employment contract, the fidelity obligation to the employer when executing the work duties, as well as the obligation to keep the work secret.

As it has an *intuitu personae* character, the individual employment contract implies from the employer a special trust in his employee. To this trust should correspond a correlative fidelity obligation of the employee to the employer.

Although the fidelity obligation and the obligation to keep the work secret are provided separately in art. 39 par. 2 of the Labor Code, they are in a report from whole to part, the first including the second.

Also, the fidelity obligation implies a non-competition obligation, even if the latter is not mentioned expressly in art.39 of Labor Code. Thus, the fidelity obligation produces its effects on the whole duration of the employment contract and involves the obligation of the employee not to undertake any action which may damage the interests of the employer, or, the competition acts against him represent such an action.

Among the aspects that may be *negotiated and included in the individual employment contract*, art. 20 par. 2 of the Labor Code lists, as being a specific clause, the non-competition clause.

It is necessary to make the distinction between the legal non-competition obligation, which exists if it is expressly established through legal norms, and the non-competition clause, representing the result of the will of the parties, by which whether it is materialized the legal obligation, or it is extended its existence, or it is established, in the silence of the law, the non-competition, as an obligation of the employee. In the conditions of a functional market economy, during the execution of the individual employment contract, the employee has the obligation not to compete with his employer.

Currently, art.21 of the Labor Code establishes that, *at the termination of the individual employment contract* or during its execution, the parties may negotiate and include in the contract a *non-competition clause* by which the employee is forced that after the termination of the contract not to provide, in his own interest or that of a third person, an activity in competition with that provided at his employer, in exchange of a monthly non-competition allowance which the employer undertakes to pay on the whole non-competition period.

Thus, the legal provision mentioned takes into account the non-competition clause which is producing its effects after the termination of the employment contract.

In the previous drawing, art. 21 of the Labor Code regulates the content of the non-competence clause for the contractual period.

Thus, the non-competition clause forces the employee not to provide, in his own interest or that of a third person, an activity in competition with that provided by his employer or not to provide an activity in the favor of a third person who is in competition with his employer. Also, the clause forces the employer to pay a monthly allowance to the employee.

After the legislative modification occurred in 2005, Labor Code no longer regulates the non-competition clause for the period of executing the individual employment contract, or the obligation of the employer to pay the employee, in this period, an allowance to comply with the non-competition clause.

We consider that, in relation to the relevant legal provisions, as they were modified, currently, for the period of executing the individual employment contract, there is a legal non-competition obligation in the task of the employee. This obligation is a legal obligation, whereas it is a component of the fidelity obligation, which is expressly provided by the law. Thus, the fidelity obligation involves that the employee will not perform any act damaging the interest of the employer, and the competition represents such act. In this situation, the law does not provide anymore the obligation of the employer to pay an allowance to the employee, obligation which is not justified, in discussion being the compliance with a legal obligation.

In this respect, it was considered that the fidelity obligation is incumbent on the employee under the law, by considering the subordination as an essential feature of the employment contract.

As for the admissible duration of the non-competition clause, according to the rule set by art. 22 par. 1 of Labor Code, in the previous drawing, the effects of the non-competition clause were produced only until the termination of the individual employment contract. Its effects could also be produced on a 6 month period after the termination of the contract for the executive positions and of maximum 2 years for management functions only if such period was expressly agreed through the contract.

Currently, art. 22 of Labor Code limits to maximum 2 years the period when the non-competition clause may produce its effects after the termination of the individual employment contract. These provisions are not applicable when the termination of the individual employment contract was produced automatically, except for the cases provided by art. 56 let. d), f), g), h) and j), or has occurred from the initiative of the employer for reasons not related to the employee.

As for the possibility of the provision of non-competition clause for a trial period, in the previous drawing, it was provided that the clause cannot be established for a trial period.

Thus, if the employee and employer provided in the contract concluded a trial period, the non-competition clause may be inserted in the employment contract only after the expiry of the trial period.

Contrary, it was expressed the point of view according to which, within the trial period, it is admissible to provide a non-competition clause in the employment contract, for management positions. We consider founded this latter point of view, also taking into account the fact that the interdiction to set a non-competition clause for the trial period was abrogated by G.E.O. no. 65/2005.

The non-competition clause produces its effects only if in the content of the individual employment contract are provided concretely: the activities prohibited to the employee on the termination of the contract, the monthly non-competition allowance amount, the period for which the non-competition clause produces its effects, third persons for whom it is prohibited to provide activities, the geographical area where the employee may be in real competition with the employer.

The monthly non-competition allowance due to the employee is not a salary, it is negotiated and is at least 50% of the average gross wages of the employee of the last 6 months previous to the termination of the contract or, if the duration of the individual employment contract was less than 6 months, of the monthly average gross wages due to him for the duration of the contract. If the employee is deprived from the benefit of this allowance, the clause has no effects.

The non-competition clause cannot have as effect the absolute prohibition to exercise the profession of the employee or the specialization he owns (art. 23 of Labor Code).

At the referral of the employee or Local Labor Inspectorate, the competent court may reduce the effects of the non-competition clause, case in which this has an abusive character.

In case of breach, by guilt, of the non-competition clause, the employee may be forced to return the allowance and, as appropriate, to damages corresponding to the prejudice he produced to the employer.

Moral damages for the breach of the non-competition clause.

In case of action for unfair competition, the conditions for engaging the tort civil liability are put into question, provided by art. 998 of the Civil Code: the prejudice, illicit act, the existence of a casualty report between the act committed and the prejudice, as well as the guilt of the fact's author. Different from these elements, it is necessary that through that fact to be committed as a competition act, committed between a competition relation, in the respect that the two competitor companies address, mainly, to the same customers, and their activity field is similar. In general, the prejudice consists of removing the customers, with the possibility to reduce the commercial ford, sales and, consequently, the turnover.

If the conditions listed above are fulfilled, having as consequence the engagement of the tort civil liability, Law no. 11/1991 provides expressly the possibility to grant moral damages.

Furthermore, even the contract concluded between the parties provided the possibility to grant moral damages for the breach of the non-competition clause.

Non-competition clause in the agreements to create a new commercial company.

In the memorandum of the newly created company may be inserted a non-competition clause, case in which, in practice, a lot of problems may appear. Firstly, it is necessary to determine if the newly created company may be qualified as a *concentrative joint venture company* or a *cooperation joint venture company*. The joint venture companies are considered to be concentrative even if there is no risk to coordinate the competitive department between the mother enterprises.

The distinction is important because, in the first case, the joint venture economical entity is a legal person constantly fulfilling all the functions of an autonomous economical entity, however without achieving a coordination of the competitive department whether between the founding economic operators, or between it and them, situation in which the operation will be subjected to the rules applicable for economic concentration.

The conditions an association operation should fulfill to constitute an economic concentration in the meaning of art. 10 par. 2 of Law no. 21/1996, are the following:

a. the existence of the mutual control;

b. the structural autonomy of the joint venture company, which exists when, as legal person, the joint venture company constantly fulfils all the functions of an autonomous economical entity, respectively has full functioning;

c. the joint venture company should not have as object or effect the coordination of the competitive department of the mother-companies and/or economic operators.

A joint venture company will not be considered as fully functioning if it takes over only a specific function from the business of the mother-companies, without having access on the market in its own name. This is the case, for example, of the joint venture companies, limited to research-development, production, distribution or sale of the products of the mother companies as sales agents or created in order to participate to a public auction.

When the joint venture company uses the distribution network of one or more of the mother companies acting in this case as agent of the joint venture company, the latter is considered to have full functioning.

In this case, ***the non-competition clause inserted in the memorandum of the new company will have the legal regime of an auxiliary restriction of the economic concentration operation.***

Transfer of rights and obligations resulting from the non-competition clause.

Broadly, by obligation we understand the legal report in whose content is both the active side, namely the debenture right belonging to the creditor, as well as the correlative of this right, the passive side of the report, namely the debt incumbent on the debtor.

Thus, the content of the legal obligation report consists of the right of the creditor to ask the debtor to give, to do or not to do something, under the sanction of constraint by the state in case of willingly non-execution, as well as from the obligation correlative to this right, incumbent on the debtor.

The object of the legal report mentioned may consist of a positive provision, respectively to give, to do something, or in abstinence, namely, not to do something that he may have done without the obligation assumed.

The non-competition obligation is the obligation not to do, its debtor giving up performing a certain economic activity, which, without assuming the obligation, he may have exercised by virtue of the principle of free trade.

The conventional non-competition obligation may have an *intuitu personae* character (for example, the mandate given to a commercial agent), case in which the rights and obligations it involves will not pass to another holder.

Of course, the *intuitu personae* character of the non-competition obligation depend on the nature of the contract concluded between the parties.

Thus, the importance of the personal factor is greater for the administration location of the trade background or for the mandate given to a commercial agent. The rights and obligations are set by considering the personal traits of the contractual partner and will not pass to another holder.

If the personal factor does not have an essential importance, the active or passive transfer may be made.

The debentures and debts may be the object of a *mortis causa* transfer. The transfer of the right of obligation by acts between alive represents a legal operation by which, under the will of the parties or under the law, the active side or passive side of the legal obligation report is transferred from the parties to another person.

Conditions to validate the non-competition clauses.

Mainly, the non-competition clauses included in the commercial contracts should fulfill certain validity conditions.

A non-competition clause is not valid only because the parties have agreed to introduce it in the contract.

Firstly, it is necessary to exist a justified interest of the clause beneficiary, to ensure honesty in using the economical instruments upon which winning and keeping customers depends on. Secondly, through the non-competition clause should not be brought excessive restrictions of the freedom of the party care assuming the obligation not to perform a certain commerce. In this respect, the clause should prohibit only the performance of a trade similar to that performed by the beneficiary, to be limited to a reasonable amount of time and to concern a determined territory.

In the specialty literature, it was shown that the freedom to undertake may be limited by a non-competition clause. The breach of such engagement commends the liability of the author, but also of third parties to this breach.

The non-competition engagement is a clause by which it is prohibited to a person to exercise a trade or an industry for an allowance. However, the practice of the non-competition clauses has developed particularly for certain contracts. We mention in this respect the employment contract, the sale or lease of trade background, franchise contract, shares concession, co-propriety regulation in commercial centers. These clauses bring a limitation in the free creation of a competitor enterprise by a former employee, the assignor of the trade background or franchisor. They are subjected to rigorous

validity conditions. In case of anti-contractual competition, the jurisprudence usually sanctions these situations based on unfair competition, and, particularly, on that of disorganization.

In the field of Labor Law, Law no. 53 / 2003, modified in 2005, introduced an express regulation of the non-competition clause in the individual employment contracts. Its insertion in the contract is at the disposal of the parties, but the production of effects of this clause is conditioned by the compliance with the conditions provided by law.

Until the modification of Labor Code by G.E.O. no. 65/2005, it was questioned the obligation of the employer to make a contra-provision in the favor of the employee, to comply with the non-competition clause, during the individual employment contract.

To validate the non-competition clause of the individual employment contract some **additional conditions** have emerged besides the ones above. Thus, the clause may be included only in the employment contracts of a certain category of employees – specialists, engineers, technicians, who thanks to this training may / could prejudice severely the interests of the employer if they were framed in an enterprise performing a similar activity. Also, the clause will be operated only if the contract ceased as a consequence of the initiative or guilt of the employee, and should be accompanied by a contra-provision, generally consisting of a growth added to the salary. To protect the employee, at his request, the body of labor jurisdiction should have the possibility to reduce the non-competition clause with an excessive character. Of course, as an application of the general rule, the clause should concern a limited period of time (2 – 3 years) as well as a geographically delimited area.

It is noted that these non-competition clauses are subjected to more restrictive conditions than those resulting from the general regime.

Thus, for the employment contracts, the non-competition clauses are especially more dangerous, as the employee often has to accept them, without the possibility to discuss them.

Another particular case is that of affecting the space in use for commercial purposes. In this situation, the non-competition clauses are valid within commercial leases, but the lessor cannot invoke them to deny a partial change of the destination requested by a tenant competing with another.

The appreciation of the validity of a non-competition clause may be much more complex by the possible application of a foreign law, especially when the supplier, in case of an international technology transport, wished to be protected against the competition that may be exercised against him by the buyer.

The protection of the legitimate interest of the clause's beneficiary.

The freedom of commerce cannot be restrained in the benefit of some persons unless they provide a legitimate interest. It was considered that the exigency of the existence of a legitimate interest of the clause's beneficiary allows the assessment of the compliance of the clause with the public order.

In such cases, through the non-competition clause, is pursued the prevention of abnormal or dangerous competition. For example, in case of selling the trade background, this operation would lose all its importance for the buyer if the seller would have the liberty to open a new business place in the immediate vicinity of the background sold. In this case, the buyer has the legitimate interest to be protected against such risk, by inserting a non-competition clause in the sale contract of the commerce background.

This clause should be limited, the buyer not having the right to request from the seller a total inactivity. Such clause cannot be accepted, both fro economic reasons, as well as moral reasons.

The beneficiary of the clause has a legitimate interest to the extent in which the parties are competitors. If in the contract concluded is inserted a non-competition clause, but specifically, the alleged prohibited activity is not in competition with that performed by the beneficiary it cannot be claimed a breach of the non-competition obligation. In a case, the two companies in dispute were performing similar activities, respectively the place of company „L". had the designation of disco,

and „M". was operating a place with live music. „L" formulated an action to prevent „M" to function as disco Friday and Saturday nights. The non-competition clause between the two companies provided that „M" will not function for night events in direct competition with the disco owned by „L". „M" started its business as place with live music, but hidden its intention to use the place as night club Friday and Saturday nights. The judge considered that this fact does not breach the non-competition obligation as the restriction imposed to „M" not to organize discos in a similar stile or addressing to the same group of possible clients like those operated by „L", and, taking into account the proofs from which it resulted differences in the given entertainment style, those involved in the industry in question may identify the difference between the different styles of night clubs situated in the two places.

The court should verify if the restrains brought to the freedom of the debtor are justified by the necessity to protect the enterprise against a possible client blast.

Also, there should be a reasonable proportion between the legitimate interests of the debtor, which must be protected, and the effects of the non-competition obligation.

In labor law, if the former employee breached the non-competition clause by accepting a position in a competitor company, it is considered that the former employer has a protectable interest, which grants him the right to apply the non-competition clause, in the sense of requesting the coverage of the prejudice caused by the breach of the clause. Thus, the non-competition clause is applicable, being a reasonable constraint of the commerce, if the employer has a protectable interest and the restriction is directly connected to that interest.

In order for the protectable interest to be considered enough to obtain the recognition of the non-competition clause validity, the employer should own, within his business, a right characterized by importance and uniqueness, to such extent to guarantee the type of protection a non-competition clause gives.

An employer owns a protectable interest enough to justify the application of a non-competition clause if the position of the employee within the enterprise gives him the possibility to obtain confidential information, access to secret information or the possibility to develop a tight relation with the clients. Also, the protectable interest may result from the fact that the employer invested in his employee, in the respect that he has given professional training, resources and different facilities.

In conclusion, a non-competition clause is justified by the necessity to protect a legitimate interest within that business.

The principle taken into account by the American courts for example, is that the employer cannot apply a post-contractual restriction to his former employee only to eliminate competition, but he must prove the existence of a legitimate interest to be protected.

The legitimate interest of the employer should be maintained in a fair equilibrium with the interest of the employee to practice his profession and, of course, with the public interest.

One of the most important protectable interests of the enterprise is the *"goodwill"*. This notion comprises both the goodwill obtained by the employee as a result of his personal qualities and of the continuous relations with the clients, as well as the goodwill which became associated with the image of the enterprise itself. Toward this double nature of goodwill, the courts were made to decide who belongs this interest to, and namely, the enterprise or its employees. The reasoning in mind was that, if the enterprise had the possibility to protect this interest, the employees should move to great distances and to change their career each time they change work place. Thus, the courts considered that the skills and competences of an employee belong to him and are not a protectable interest of the company.

In case of selling the enterprise, the courts recognized that goodwill represents a protectable interest. Thus, the price paid by a buyer also includes the good will of the enterprise, case in which this has a protectable interest, the value of goodwill being reduced considerably if the seller would start competing with the buyer after the transaction.

Keeping the economic freedom of the debtor of non-competition obligation.

The non-competition clause should not restrain or suppers the freedom of action of the debtor. For this purpose, the non-competition clause should fulfill certain conditions.

Thus, **the interdiction** should be **limited from the point of view of it activity.** It is not allowed to prohibit any economic or professional activity, **but only the activities similar to those exercised by the beneficiary.** In this regard, difficulties may arise when a trade background is sold through which are traded different products, like for example a large store. It this situation it may be considered that the non-competition clause is applied only when exercising a commerce of the same kind, thus being instituted the interdiction to open a large store, or it is applied for each variety of commerce practiced, and namely, the interdiction to sell furniture, food products, etc. If it is considered that, through the clause, it is prohibited to open a large store, than the seller is entitled to resume his activity only in the sector he deems more profitable, thus attracting the afferent customers. If it is considered that through the clause is prohibited the sale of each type of product, it is difficult to appreciate that the clause targets a determined trade.

The interdiction should be limited in time and space.

The non-competition clause is an application of good faith in executing contracts, good faith imposing to both contracting parties.

Thus, the more specialized the trade is, the more the personal relations between the trader and his customers are closer and the duration of the interdiction may be longer. The same principles are applied regarding the territorial extension of the protection. For *endetail* commerce, within which the customers are local, the perimeter where it is prohibited to reestablish the enterprise is smaller, and may even be a city district. Unlike this situation, for the specialized activities, the protection area may be legitimately more extended.

The sanction for a too long duration of the interdiction may be, depending on the circumstances of the case, either the reduction of the non-competition obligation, or the nullity of the clause, or the nullity of the contract containing that clause.

These conditions are necessary and enough. The validity of the clause is not subordinated by the payment to the debtor of the non-competition clause of an amount representing the value of the limitation of his freedom, to which he agreed by contract.

Interpreting non-competition clauses.

The interpretation of commercial clauses involves an ensemble of rules used to determine exact and complete meaning of the content of contractual clauses.

If these clauses are unclear, in the execution process of the contract, the parties are those that may perform the interpretation of the contract. However, this operation will recur to trial or arbitration courts in which case, between the contracting parties, appeared a litigation.

The interpretation of international commercial contracts involves a greater difficulty in comparison to the interpretation of internal contracts, taking into account that the first contain a foreign element which may determine the applicability of more law systems, with different rules to interpret the contract.

The principle that should govern the interpretation of contracts consists in identifying, in the express clauses of the convention, the real will of the contracting parties.

Interpretation rules of contractual clauses in common law.

When the non-competition clauses are obscure or incomplete, their interpretation is made by the trial court, after the rules of the common law.

The interpretation rules of the contractual clauses are set in the Romanian Civil Code by art. 977 – 985, within section III „About the interpretation of conventions", from Chapter 3 „About the

effects of the conventions", Title III, „About Contracts and Conventions". The rules exposed in these articles were taken over and partially modified by the new Civil Code, art.1.266 – 1.269.

Thus, the new Civil Code classifies the interpretation rules of the contracts in four categories, and namely: the interpretation after the contracting will of the parties, the systematic interpretation, the interpretation of questionable clauses and subsidiary interpretation rules.

Within the first category of rules, art. 1.266 of the new Civil Code takes over the content of art.977 of the Civil Code, according to which the interpretation of the contract is made after the common intention (concordant will) of the parties and not after the literal meaning of the terms. Thus, it is established the principle of real will priority of the contracting parties against their declared will.

Par.2 pf art.1.266 of the new Civil Code lists the aspects to be taken into account when establishing the concordant will of the parties. These consist among others, in the purpose of the contract, of the negotiations between the parties, the practices set between them and their behavior after concluding the contract.

The systematic interpretation of the contractual clauses was established by art.982 of the Civil Code, the dispositions taken over in art.1.267 of the new Civil Code. Based on this rule, the contractual clauses are interpreted ones through the others, giving each the meaning resulting from the ensemble of the contract.

According to art.981 of the Civil Code the usual clauses in a contract are implied, although they are not expressly stated. This rule was not provided in the regulation of the new Civil Code, at the section regarding the interpretation of conventions, but to that regarding the effects of the contract, and namely, in art.1.272 par. 2. The same article takes over, in par. 1, the rule currently established by art. 970 par. 2, instituting the principle according to which the contracts force not only to what is expressly provided in them, but to all consequences that the equity, habit or law gives to the obligation, by its nature.

In conclusion, based on this legal disposition, we may consider that, in certain situations, depending on the nature and purpose of the contract concluded between the parties, the non-competition clause is implied.

We consider that, as such clause limits the competitive freedom of the debtor of the obligation, the interpretation of a contract in the sense of the existence of a tacit non-competition clause should be based on legal norms applicable in the field of that contract, like, for example, for the sale-purchase contract, art. 1337 – 1339 of the Civil Code. The new Civil Code establishes, in art.1.269, the subsidiary interpretation rules of the contracts, establishing, by par. 2 of art. 1.269, that, if, after applying the interpretation rules, the contract remains unclear, this is interpreted in the favor of those who is obliged, rule taken over form art.983 of the Civil Code. By applying this legal norm, the non-competition clause will be interpreted in the favor of the debtor of the obligation not to perform a determined economic activity.

The evolution of interpretation mode of the non-competition clauses in legal practice.

If the non-competition clauses inserted in a commercial contract have an unclear or incomplete character, the matter of interpreting these clauses will be in discussion. The determination of the legal content and the meaning of these clauses, will be made, through interpretation, in case of a litigation between the contracting parties, by the trial courts.

In such cases, the appreciation of courts will be in relation, of course, to the actual state retained in this case, so as that the solutions adopted will have value only in this case.

However, from the analysis of the jurisprudence, it results certain general aspects. Two opinions were formed: in the first opinion it was considered that, as it is derogated from the common law regime of the trade freedom, the non-competition clause should be interpreted restrictively. In the other opinion, the interpretation is made after the real will of the contracting parties, based on art.977

of the Civil Code, according to which the interpretation of contracts is made after the common intention of the contracting parties.

Thus, in this interpretation a priority is granted to the real will of the contracting parties through an extensive interpretation, by which, for example, was implied the existence of a default non-competition clause in case of sale or lease of the trade background and in the agency contract.

In this context, it was considered that the sale imposes on the assignor a tacit non-competition obligation, based on which he is prevented from exercising a trade similar to that of the assignee, in his vicinity. The legal basis of this solution is represented by art. 1339 of the Civil code, against the provisions of which the seller cannot avoid in any way the liability for eviction resulting from his own act, any contrary convention being null. Taking into account that this disposition has a public order character, the conclusion is that the useful possession guarantee of the thing sold is evidently disturbed by a fact equivalent with eviction, if the seller regains what he had gave, diverting in the favor of his new enterprise with similar profile, the customer he has sent to the buyer with the trade background. It was considered that such operation would be completely useless and senseless for the buyer, as he losses the whole use this transfer should have ensured. The abusive act of the seller engages his liability against the assignee of the trade background, even if by contract was not provided a competition prohibitive clause.

It was considered that, in these situations, the non-competition clause is implied, under art.1339 of the Civil Code.

Thus, it is admitted the existence of a non-competition tacit and implied clause, resulting from the interpretation of art.1420 pct. 3 of the Civil Code.

The sanctions applicable in case of breach of non-competition clauses.

The breach of non-competition clause by the debtor draws his contractual liability towards the creditor of the clause.

Unlike this, the performance of unfair competition acts draws the tort liability of the author.

As for the contractual competitive restrictions, the matter in question is to set the legality of the conventions excluding the competition between the parties, in a determined field, on a certain territory, regardless of the appreciation of loyalty or infidelity of acts.

If the non-competition clause is considered valid, the matter in question is if, although not prohibited by the law, those contractual clauses constitute, in certain cases, unfair competition acts. The problems are interfering in such measure, that a lot of authors treat together the unfair practices and the legal regime of the prohibited practices, grouping them, not according to the objective followed, but to the nature of the means used.

Difficulties may appear in practice regarding this delimitation, as the debtor of the non-competition obligation, beside the breach of this obligation, will also commit unfair competition acts which bring a prejudice to the creditor of the clause.

Through the unfair competition is usually followed to attract and capture through dishonest means the customers of the injured economic operator, the facts being performed in the limits of the legal competition report and on a certain relevant market.

The legal regime of the two liability forms is different, so that, in the situation exposed, the contractual liability for the breach of the non-competition obligation cannot be extended on unfair competition facts. Also, the tort liability will not be extended on the breach of the non-competition convention in relations with the creditor of the expressed or implicit clause.

Thus, the sanction for the breach of the legal competition interdiction is the tort civil liability, which may be completed with specific sanctions, like the exclusion provided by art 82 and 217 let c) of L 31/1990, and the sanction for the breach of the competition clause is the tort civil liability.

In both forms of liability, the creditor disposes of preventive means, to force the debtor to cease illicit acts, as well as repairing means, to obtain compensation. The creditor may use all remedies for the breach of the contractual non-competition clause, the choice being his.

In conclusion, in case of breach of a valid non-competition clause agreed, the creditor may request to court the protection of the right resulting from that clause. Thus, the creditor may formulate an action for the forced termination of the commercial activity contrary to the non-competition obligation, as well as granting the repairing measures in case of producing a prejudice.

On the other hand, if, through the non-competition clause are breached the national or community rules in the field of competition, besides the private litigations, public law sanctions may occur, applied by the competitor authority or by the trial court.

Conclusions

I consider useful to develop legislation, which should regulate more detailed the legal status of non-compete clauses, under different contracts, in order to avoid some different interpretations.

After comparative analysis of non-compete clause in commercial contracts and employment contracts, the conclusion is that a non-compete clause, to be lawful, must not harm the freedom of the competition or the freedom of the work. For this purpose, the clause can not be limited in time, space and regarding the nature of the exercised activity, and must not be disproportionate to the subject of the contract.

Regarding the labor contracts, I believe it is necessary to supplement the provisions of Labor Code, which regulates the non-competition clause, meaning the introduction of certain additional conditions for the validation of the clause. Thus, because, by applying the non-competition clause, the right to work of the former employee is limited, we consider useful to limit the applicability of the clause to what is necessary to protect the interests of the employer. Therefore, the clause should be included only in the labor contracts of certain categories of employees - specialists, engineers, who, because of their training, can or could seriously prejudice the interests of the employer if they would hire in a competitor company.

Also certain general requirements must be set: objective justification for inserting the clause, in the context of the agreement; the existence of a legitimate interest of non-compete obligation for creditor; precise determination of the extent of the duty in time and space.

Finally, non-compete clause should not result in an unfair restriction on the right of free competition.

Therefore, the non-compete clauses can take different forms, depending on the specific field of application, and their validity depends on the requirements set for the legal domain, applicable to each Legal Report.

An impairment of the regulation has been detected in the contents of this paper, regarding the character of the three months term that the company may act to exclude the shareholder, reclaiming benefits or claiming damages, under Article 82 paragraph 4 of Law No. 31/1990. Thus, the law provides that the right of the company (mentioned in paragraph 3 of Article 82), to exclude the partner or to claim damages, turns off after three months term pass from the day when the company was aware, without having taken any decision in this regard.In the specialized literature have been expressed opinions that the respective term is a decline term and also a special term of prescription. Of the fullfiment of this term the subjective right is extinguished. I've considered that the differences between the expressed views have their origin in the lack of legal prevision rigor, situation in which would be necessary to regulate the legal status of that period.

SOME THEORETICAL AND PRACTICAL ASPECTS REGARDING ACTION OF EVICTION

CLAUDIA LUCIANA IVĂNESCU[*]

Abstract
The paper is dealing with a few theoretical and practical aspects regarding eviction. This action is not legally established which in turn generated doctrinal debates and practical contradictions.

Key words: *action of eviction, action of claim, possession, new Code of Civil Procedure*

Introduction

Since present-day legislation does not regulate action of eviction and the very few legal texts related to eviction aren't able to establish its requirements, the features of this institution have taken shape in doctrine and jurisprudence. Still, there is no common point of view in terms of its scope, which led to different solutions to similar situations.

The present work is trying to present the institution of action of eviction combining theoretical and practical aspects in order to offer a broader vision of this matter. It is also concerned in revealing some problems regarding this subject, problems appearing in judiciary practice.

Even more, this work presents the special procedure of eviction regulated by the new Code of Civil Procedure, adopted by Law no.134/2010 published in the Official Gazette no.485/ 15.07.2010 whose date of entry into force has not been established.

Content

1. Definition

Action of eviction has no legal regulation although many times in practice, reference is made to the provisions of Article 1410 et seq of the Civil Code. That is why there is no unitary definition of this type of action, even more because its legal nature is controversial. Only in the new Code of Civil Procedure the action of eviction finds a legal basis, allocated with Title XI.

As stated in doctrine and jurisprudence, eviction is a specific sanction of legal tenancy, that is to say those relationships in which one party, called *the lessor*, has committed to purchase to the other party, called *the tenant*, the fixed-term use of a determined and unconsumptible individual good in exchange of an amount of money called *the rent*. So, the action of eviction is that action by which the use of an asset protection is done, the claimant wishing to force the defendant to leave the building.

2. Legal nature. Demarcation from the action of claim

By eviction a right to claim is protected, correlated to the obligation to give back the rented asset, that's why action of eviction is a personal, not real, prescriptive in general limitation period of three years action. It is also a realization of rights action, in terms of patrimonial estate.

In practice, in numerous cases, the difference between action of eviction and action of claim was questioned and also the scope of the two. If the admissibility of the action of eviction in case of

[*] Assistant Faculty of Letters and Sciences, University of Petroleum and Gas Ploiești, Lawyer Prahova Bar (ivanescu.claudia@yahoo.com).

the existence of locative relationship has been denied neither by any doctrine nor by jurisprudence, still there were different opinions in situations that were faced by courts.

Thus, when the lease has ended or the tenant uses the asset contrary to the destination it was rented for, when there are relationships arising from a residential lease, the lessor has access to action of eviction in order to free his estate. The tenant, as an owner without real legal rights over the asset, is forced to return it. Legal relationships regarding estate lease are obligation relationships, the ownership right of the claimant not being questioned. As stated in jurisprudence[1], the cause of the action of eviction is the defendant's occupying a home without title and the claimant's wish to stop it, establishing a status according to the claimed right, respectively handing over the estate and the cause of the application for summons is the claim of the creditor claimant against the debtor defendant. It is about the obligation of handing over the estate to the creditor which is not equivalent to the obligation of giving or forwarding a real right.

Thus, when the claiming owner aims to force the lease contract holder to free the estate, he has the action of eviction at hand. But it is questioned whether in this situation the claimant can also use the action of claim or whether it would be admissible since the defendant is not owner, but precarious holder.

In a case[2] in which a situation like that was subject to judicial review, it was said that the defendant's lack of possession of the asset makes the action of claim impossible, the claimant having only an action of eviction available. We think that the solution of The Supreme Court is too restrictive because, if we follow the theory adopted by them, after the prescription term of three years in which the action of eviction can be started has expired, the owner would not have any legal action to regain his own good. It is true that the person having the good as tenant is just a precarious holder and the action of claim is started by the not in possession owner against the non-owning possessor, but the claimed owner should still have the opportunity to choose between the action of eviction and the action of claim. Besides, in practice it is said[3] that this option right exists considering that who can do more can be less.

Action of eviction can be instituted only against precarious holder and not against a holder having the asset in property.[4]

When the defendant doesn't hold the asset as a result of a lease contract, therefore he is not a precarious holder owning the estate in someone else's behalf, the claimant hasn't got the action of eviction at hand, he has the action of claim[5]. This is a real, inalienable action, by which the claimant demands legal recognition of his property right upon the asset he has been deprived of.

Thus, when the one holding the asset has no title or he invokes the existence of a title, the property right itself is questioned, which justifies the beginning of an action of claim. In spite of all these, in practice there are solutions which deny this point of view. For instance, the action of eviction was admitted on ground that an action of claim was unnecessary in case the claimant, who has gained his ownership by a court order that substitutes an authentic act of sale purchase, has demanded that the promising vendors ,who were denying their intention of selling, to free the estate, therefore, the existence of the ownership right in the vendor's patrimony[6].

[6] Cluj Court, decision no.1209/20.05.2010,

Also questionable is the solution of a court invested with a cause regarding the eviction of some people who had abusively entered into a space belonging to the territorial-administrative unit, by braking the seal. In this case, the judges thought that the person occupying the building without a title was neither owner nor tenant because he was not part of a lease contract, but just a precarious holder. That's why their conclusion was:"the claimant did not try to assert his exclusive and absolute property right within an action of claim which would have forced the debtor to evacuate ant hand over the house. In other words, the claimant did not ask for the defendant to be obligated to admit his ownership over the building, but merely to evacuate and to turn it in.

The motivation of the Appeal Court that admitting the action of eviction is conditioned by the existence of a valid lease contract whose effects have already ceased for various reasons and the former tenant having refused to leave the home had no legal basis. To condition the action of eviction exclusively by the existence of a lease contract and in its absence to consider all actions of eviction as being actions of claim with all their consequences is a violation of the principles of Civil Procedure Law and of a long judicial practice, too."[7]

But according to Article 1853 of the Civil Code „the acts we exert on someone else's asset, in a precarious manner, that is as tenants, depository, beneficial owner etc. or on a common thing according to its legal destination does not mean possession as owner. Likewise it's the possession we would have on someone else's asset by means of his permissiveness."

This legal text offers a definition to a state of holding an asset namely precarious holding. Or, the precarious holder is the one who holds the asset given by another person, usually the owner, based on a legal act signed with the latter. In the case shown above the defendants did not hold the building based on a contract or by the owner's permissiveness, which is also a will agreement, but by breaking the seal. Thus, in our opinion, they didn't have the status of precarious holder, but they were holders of the building in territorial-administrative unit's property. It is true that, in order to produce legal effect, possession must be useful, and in the case above, due to breaking the seal, it was based on violence. That's why, in our opinion, only an action of claim would have been admissible.

Also in another situation[8], the action of eviction was admitted although the defendant, during the entire lawsuit, denied the claimant's status as owner of the building she was asked to leave. In this case, after a contested enforcement the acquirer of the building solicited the debtor's eviction enforced from the entire estate, consisting in building and terrain. The defendant company claimed all along the lawsuit that they owned the terrain as it had not been auctioned, but also the building, based on real estate ascent. Though the eviction of the defendant from the entire estate was ordered on ground that they owned the building without title, the action of eviction not being conditioned by the existence of locative relations. We appreciate that the situation submitted to court was much more complex and it aroused a series of problems which were not taken into account and which could have determined the inadmissibility of an action of eviction.

When the ownership itself is questioned its holder can defend it only in action of eviction. It is true that, in case the owner is also lessor, he can use action of claim too. But if there is no lease contract between the two parties the owner has only claim at hand in order to regain the asset illegally held by someone else.

By Law no.202/ 2010 regarding taking measures for speeding up solving lawsuits it was introduced Article 578 which, although referring to forced handing over of estate assets, shows indirectly the situations that can lead to person evacuation: abusive occupation, without title of a house and endangering cohabitation relations or serious disturbance of public peace. It appears that the legislator tried to solve the problem of the action's of eviction scope in the sense that it enlarged it, such actions being admissible not only in case there are lease ratios but also when the defendant

[7] Cluj Court, decision no. 1381/20.06.2002,

[8] The Great Court of Cassation and Justice, Civil Section and Intellectual Property – Decision no.713/4.03.2009.

abusively holds the building without title, or when he has improper conduct which affects cohabitation and seriously disturbs public peace.

Also in the new Code of Civil Procedure, adopted by Law no.134/ 2010, in Title XI, dedicated to the institution of eviction, it is detailed its scope being shown that this procedure applies in cases regarding evacuation of used buildings or illegally occupied by former tenants or other persons holding the estate with or without the owner's permission or tolerance.

3. Procedural issues

a. Locus

Active locus belongs first to the building's owner who is also locator, this being entitled to start an action of eviction to release his asset. In case the estate belongs to several people any of them can initiate such demand as action of eviction represents an act of administration. Regarding this issue, it was stated in jurisprudence[9] that common property of an asset does not represent for its holders an impediment in performing administrative or availability acts on it, including legal actions which tend to establish in relation to third parties the free ownership on the asset prior to a possible division of it.

Under Article 18 of Law no.230/ 2007 regarding the establishment, operation and status of Owners Associations, "when in homes one of the owners or tenants knowingly prevents the normal use of the building creating harm to the other owners or tenants, the owners or their legal representative can ask the court to decide upon the measures necessary to normal use of the building, as well as upon the damage pay." Thus, this legal text gives the owners and the owner associations the possibility to demand eviction of those whose conduct makes cohabitation in multiple-home buildings impossible.

There were also admitted actions of eviction started by holders of real rights dismemberments of the ownership[10] although they had confessor actions at hand, actions that protect such rights or possessory actions and not actions of claim in the absence of some legal locative relations among parties.[11]

The Supreme Court[12] appreciated that the right to legally demand eviction of a tolerated person is also given to the tenant, this being a manifestation of the possessory action that he benefits of.

In terms of passive locus, it belongs to the precarious holder who holds the asset for someone else based on a lease contract. The defendant's quality as possessor makes the action in eviction inadmissible. However, based on the provisions of Article 18, of Law no.230/ 2007, courts have disposed eviction even of the co-owner who was knowingly preventing normal use of the building. Also, from the interpretation of Article 578, line2 of the Code of Civil Procedure concerning measures for speeding up solving lawsuits, it is understood that can be evacuated people who abusively without any title occupy a home and people who endanger cohabitation or disturb public peace.

b. The Interest in Promoting Action in Eviction

In practice it was also the question of the admissibility of an action of eviction started by the owner to whom the estate asset was given by court after a partition against his former co-owner. As

[9] Iaşi Court decision no.211/R/21.05.2008,

[10] Bucharest Court – decision no.528/R/9.12.2008,

[11] D.N. Theohari – Action of eviction, Ed. Hamangiu, Bucureşti 2010, pag.123,

[12] The Great Court of Cassation and Justice, Civil Section and Intellectual Property – Decision no.109/13.02.2005,

stated in the doctrine[13] the partition decision remained definitive or irrevocable is an executor title if invested with executor form, being capable of executing no matter if in the request of partition was asked for the asset to be turned in or not and even if the court has not decided this handing over, so starting an action of claim against the co-owner that holds the assert and refuses to turn it in is not necessary. Starting from this issue, if one of the co-owners holds the asset and refuses to hand it over to the other, to whom it was given in court, the latter has no interest in beginning an action of eviction as he can start enforcement.

However, The Supreme Court[14], as a result of admitting an appeal for annulment shows that action of eviction for former co-owners is admissible. Motivating their solution the court showed that, resulting from the partition's declaratory effect, the exclusive ownership goes to the former co-owner to whom the entire estate has been given, the rights of all other co-owners having ceased. Therefore, the action of eviction of these was appreciated as admissible, due to lack of title.

Also the same court appreciated in another case[15], that the partition decision is a title giving the person to whom the estate was given the right to get use of the asset by means of action of eviction.

As we can see, there is no view unit upon this issue. But the new Code of Civil Procedure, adopted by Law no.134/ 2010 - which did not enter into force – solves the problem, we think, because in Article 980 it's stated that "once remained definitive and invested with executor form, the partition decision constitutes executor title and it can be applied even though the effective hand over of the asset was not requested or the court did not specifically ask for it." Thus, from the interpretation of this legal text it is understood that executing the partition decision can require also the eviction of the former co-owner.

As stated in the provisions of Article 981 of the same law, in case the parties specifically declare they do not demand handing over the assets, the partition decision is not susceptible of enforcement. Not even in such situation can the co-owner to whom the estate was given start an action of eviction, as he only has at hand an action of claim in order to take possession of the property whose handing over has been denied by the other co-owners.

For these reasons, it is believed[16]as being uninteresting the beginning of an action of eviction by the person who is entitled by a court order pronounced in an action of claim by which the owner has been forced to give him the estate in full property and peacefully, as this obligation involves the obligation to evacuate the estate too.

c) The Competent Court

In terms of the material competence, it varies depending on the issue type . thus, in civil cases competence belongs to the courthouse, based on the provisions of Art.1 of the Code of Civil Procedure and in commercial cases the competence belongs to the court, based on Art.2, line 1 of the same document.

Territorial competence is determined according to Art.5 and 10 point2 of the Code of Civil Procedure, being alternative competence. This justifies by the fact that action of eviction is specific to lease relationships and according to Article 10, point 2, beside the defendant's domicile court the court where the estate is can also be competent in demands derived from a lease relation. The provisions of Article 13, line1 of the Code of Civil Procedure according to which demands regarding estate assets can be made only to the court where the estate is are not incident. Though not obviously

[13] V.M.Ciobanu, G. Boroi, Civil Procedure, Ed. C. H. Beck, Bucureşti, 2009, pag.444,

[14] The Great Court of Cassation and Justice, Civil Section and Intellectual Property – Decision no..4083/18.05. 2005,

[15] The Great Court of Cassation and Justice, Civil Section and Intellectual Property – Decision no..6604/25.11 2004,

[16] D.N. Theohari – Action of eviction, Ed. Hamangiu, Bucureşti 2010, pag.272,

specified, this law text regards real estate actions ant not personal estate actions because for them the Article 10, line1 and 2 establish alternative territorial competence. As stated in the doctrine, the real demands go for the recovery of a real right or the protection of possession or, by action of eviction the protection of an asset's use is made, this being a personal, not real action.

d. Stamps

Action of eviction is taxed under the provisions of Article 3, letter b of the Law no.146/ 1997, modified by Law no.202/ 2010 regarding some measures for speeding up solving lawsuits, with 10 RON stamp tax and, under Article 3 line 1 of the Law no.32/ 1995 with judiciary stamp valued 0.3 RON.

e. Court Order. Means of Attack and Its Enforcement

The court decides the evacuation of the defendant from the building, a verdict which can be subject to the ordinary and extraordinary means of attack. The right to demand enforcement of a court order of tenants eviction is prescribed in 3 years, starting the day it remained irrevocable, an argument in the matter being the provision of Article 25, line1 of the Law no.114/ 1996. According to this law, eviction of the tenant can only be done upon irrevocable decision. Since exceptions are caused strictly by interpretation and application the result is that in the other cases appeared in practice the prescription term starts in the day when the decision is final.

Under provisions of Article 578 of the Code of Civil Procedure "no eviction from the home destined buildings can be done since December 1st till March 1st next year unless the creditor proves that he and his family don't have a home or that the debtor and his family have another home where they can move immediately.

Provisions of line 1 are not applied in case of evacuating persons who abusively occupy, with no title, a home nor to those who have been evicted because they endanger cohabitation or disturb public peace."

Thus, by introducing this law, the legislator wished to limit the possibility of eviction of the tenants in winter.

4. Eviction of the people occupying an estate illegally by means of presidential order

In doctrine[17] it is appreciated that once fulfilled the three conditions of admissibility, presidential order can be used in order to evacuate the tenant from the building he holds illegally. This point of view is also found in jurisprudence, some courts[18] appreciating that on ground of Article 581 of the Code of Civil Procedure it is admissible the owner's demand to evacuate by presidential order the person who occupies the building without title. But the principle solution offered by jurisprudence is that this measure cannot be disposed by means of presidential order because it regards the essence of the problem and not a temporary action.[19]

5. The special procedure of eviction regulated by the new Code of Civil Procedure

As shown before the new Code of Civil Procedure has dedicated Title XI to the procedure of evicting former tenants or other people occupying estates illegally. The one initiating the action has a choice between this special procedure and the action of common law.

[17] V.M.Ciobanu, G. Boroi, Civil Procedure, Ed. C.H. Beck, Bucureşti 2009, pag. 406,

[18] The Great Court of Cassation and Justice, Civil Section and Intellectual Property – Decision no.2426 din 25 martie 2004,.

[19] Piteşti Court, decision no.462/1998, Suceava Court, decision no. 526 din 12.09.2002,

Regardless of the action's nature competence belongs to the court of justice whom district the illegally occupied estate is in and the defendant will be summoned at this address.

In order to refer his matter to a court the claimant must previously notify the tenant or the occupier of the estate, in the conditions established by the law, the absence of this being a reason to refuse his petition. But according to Article 1026 the tenant can give up his right of being notified which leads to the conclusion that the preliminary procedure is not imperative and the exception of its absence is relative and can be invocated only by the party interested in a certain term.

If the tenant or the occupier previously notified refuses to evacuate or if he has given up his right of being notified and has lost the right to use the estate, the lessor or the owner will ask for his eviction to a court of law.

The petition is judged in emergency procedure in the council chamber with summoning the parties. Exceptionally, if the claimant asks for the eviction due to not paying the rent or tenancy and the contract is executor title for their pay, the petition is solved without summon of the parties. And if the pay of the rent has been also requested the court will solve the eviction demand with summon and will pronounce over the request of pay.

Since it's a special procedure, characterized by emergency, the new code dictates the rule that the summoned defendant cannot formulate counterclaim or a claim of drawing trial on third parties, as he can only invocate substance defence regarding the claimant's petition solidity.

Eviction verdict is enforceable an can be attacked only by appeal within five days since it's been pronounced if it's been given summoning the parties or 5 days since its communication if it's been given without the summon. Also, against its enforcement one can formulate litigation to enforcement by which procedural aspects can be subject to judiciary control if the eviction decision was made summoning the parties or even substance issues can be under control if it was made without summoning.

Usually, enforcement of the eviction verdict cannot be suspended. There is one exception of this rule in case the evacuation has been ordered due to not paying rent. In the litigation to enforcement or the appeal made by the defendant the court can order suspending the verdict's enforcement if he records in cash to the creditor's disposal the established amount of money necessary to pay the rent due until the date of the suspending petition as well as for those due all along the trial. But if, before the expiry of the term until the rent or tenancy has thus been covered, the debtor doesn't deposit the amount further requested by court to cover new rates, the suspending is automatically ceased.

The new Code of Civil Procedure regulates a special procedure for the eviction of those illegally holding estates, an optional procedure but which gives the possibility of solving these litigations in much shorter time.

Conclusions

Being a controversial institution due to its scope the action of eviction needed a legal regulation able to stop the contradictory solutions given in practice. Law no.202/ 2010 regarding some measures for speeding up solving lawsuits the scope has relatively outlined its scope, however without giving this institution legal regulation.

Eventually, the new Code of Civil Procedure allocates a title to regulating the procedure of eviction but it aims at a special optional procedure so people who choose common law to evacuate those illegally occupying their estates will still face contradictory solutions to relatively similar situations.

THE CONSUMER'S RIGHT OF WITHDRAWAL FROM CONTRACTS CONCLUDED BY ELECTRONIC MEANS IN ROMANIAN LAW

MIHAELA GIURANIUC (TUDORACHE)*

Abstract

The purpose of this paper is to analyse the legislation, doctrinal opinions and relevant case law regarding the consumer's right of withdrawal from contracts concluded by electronic means (e-contracts).

The objectives pursued by the author are:

- establishing the juridical nature of consumer's right of withdrawal from e-contracts;

- identification of problems that could arise from law's interpretation,

- issuing of the de lege ferenda proposals.

Governmental Ordinance no. 130/2000 introduces a new exception to the principle of irrevocability of contracts in Romanian law: the consumer's right of withdrawal from distance contracts. The same Ordinance sets the scope and conditions for the applicability of this right.

Consumer's right of withdrawal from e-contracts, as a type of distance contracts, can be exercised without the need to give any specific reason and without penalties, within 10 working days from the date of receiving the goods or from the another moment depending on the specifics set out in GO no. 130/2000. If consumer cancels the distance contract on the basis that he does not like the goods, the withdrawal from the contract is valid, even if the withdrawal solely depended on the will of the consumer, this sets out a legal exception from the provisions of art. 1010 of Civil Code which stipulate the nullity of the obligations undertook by the liable person under the condition "if I want".

Sales of goods by electronic means, as a particular case of a distance contracts, is, therefore, a new form of selling, governed by its own specific legal regime.

***Keywords**: distance selling contracts, contracts concluded by electronic means, right of withdrawal, consumer, online auctions*

1. Introduction

This paper outlines the legal regime applicable to the consumers' right to withdraw from contracts concluded by electronic means, focusing specifically on: 1) the legal nature of contracts concluded by electronic means, 2) conditions of exercise of right of withdrawal, 3) legal effects of exercitation of the right of withdrawal; 4) form of exercising the right of withdrawal, and 5) the field of application of the consumer's right of withdrawal.

The subject of the paper is of a great interest, both from the perspective of scientific research and from a practical perspective, as the global Internet enabled markets have gradually expanded, amounting today to a significant share of total world's trade.

As a method of research, the paper starts from analyzing the legal provisions, relevant case law, and the doctrine in the field, both in Romania and in the European Union. It highlights the particularities of the transposition of the of EU law in the Romanian law and outlines the current status of research in Romania. Finally, the paper draws specific conclusions meant to complement the existing scientific literature on the subject, and to contribute to the development of the Romanian doctrine in this field.

* Ph.D candidate, Academy of Economic Studies Bucharest (e-mail: mihaela@tudorache net).

2. The right of withdrawal from contracts concluded by electronic means – exception from the contract irrevocability principle

The above mentioned theme will be treated hereinafter with special reference to sale-purchase contracts for goods, given the frequency and large spread that these contracts have in the electronic trade. The terms which will be used herein are borrowed from the Governmental Ordinance no.130/2000 on the consumers' protection upon the conclusion and execution of distance contracts[1] (hereinafter "GO no. 130/2000").

Our analysis will focus on the customization of the legal regime applicable to the consumer's right of withdrawal from distance contracts, so as to be able to determine the legal regime applicable, in particular, to the consumer's right of withdrawal from sale-purchase e-contracts.

Paragraph (2) from art. 969 of the Romanian Civil Code[2] regulates the contract irrevocability principle in Romanian Civil Law:

"Agreements can be revoked by mutual consent or for reasons authorized by the law". In the draft of the new Romanian Civil Code[3], the contract irrevocability principle is mentioned under the name „Binding force", in paragraph (2) from art. 1.270, thus: "The contract can be amended or terminated only with the parties' consent or for reasons authorized by the law".

In doctrine, contract irrevocability is treated either as a principle different[4] from the contract obligativity principle, or as a consequence and, at the same time, as a guarantee for the principle of the binding force of a legal document[5].

As per art. 1295 from the Romanian Civil Code, a sale-purchase contract concluded by traditional means is considered validly concluded when the parties express their agreement, when the conveyance of the right of ownership is made from the seller to the purchaser, even if the good was not handed over, and the price was not paid. As a rule, in compliance with the contract irrevocability principle, after its conclusion, the sale-purchase contract produces full legal effects, and neither party can withdraw from it unilaterally, unless expressly stipulated otherwise in the contract or by the law.

The mutual consent principle applies to the distance selling contracts, also. Unless otherwise agreed by parties, the distance selling contract is validly concluded when confirmation message is received by the consumer, on his command (article 5 of the GO no. 130/2000). As exception from the contract irrevocability principle, art. 7 and subseq. from GO no. 130/2000 regulates the consumer's right of withdrawal from a distance contract. This normative act represents a transposition at a national level of the Directive 97/7/EC of the European Parliament and of the Council from May 20, 1997 on the protection of consumers in respect of distance contracts[6] (hereinafter the "Directive 97/7/EC").

Whereas e-contracts concluded between a trader and a consumer are a sub-species of distance contracts (which results from the corroboration between paragraph (1) art. 2 letter (a) and paragraph (2) art. 2 from GO no.130/2000), with the same legal regime as theirs, the consumer's right of withdrawal from an e-contract is an exception from the contract irrevocability principle.

Until GO no. 130/2000 became effective, the Romanian legislation also had legal cases allowing the withdrawal from a contract, for example: the right of either of the parties of withdrawal from an unlimited lease contract (art. 1436 paragraph 2 of the Civil Code), the principal's right to

revoke the mandate at any moment (art. 1552 and art. 1556 of the Civil Code), the depositor's right to ask for the return of the deposit at any moment (1616 of the Civil Code), etc[7]; all of these are also legal exceptions from the contract irrevocability principle.

3. Conditions for the consumer to exert the right of withdrawal from an e-contract

As per paragraph (1) from art. 7 (thesis 1) of the GO no. 30/2000, Consumer's right of withdrawal from distance contracts can be exercised *without the need to give any specific reason and without penalties,* within *10 working days from the date of receiving the goods.*

3.a. The *ad litteram* interpretation of the phrase "*without the need to give any specific reason*", makes us conclude that, in the case of e-contracts, the consumer has the legal right of withdrawing from the contract even for reasons of not liking the goods, although the goods are compliant with all the technical characteristics stipulated upon the conclusion of the contract. According to Romanian Law, the consumer from the sale-purchase contract concluded by traditionally means may not change its mind on the grounds of not liking the goods, after the contract was validly concluded.

According to the reasons given in the Grounds of the mentioned Directive 97/7/EC, such unlimited character of the reasons for withdrawal from a contract is not a legislative inadvertence, but it represents a means of protecting the consumer's interest, whom, not being physically present at the venue of the goods, is not able to take physical contact with the goods, to examine and test them prior to deciding whether to purchase them or not, and at the same time, it represents a means of increasing the consumer's confidence in this new sale modality, in the purpose of encouraging it. In Travel-Vac SL v Sanchis Case, European Court of Justice rules that the consumer can exercise his right of renunciation under Article 5 (1) of Directive 85/577 (this right is similar to the right of withdrawal stipulated by Directive 97/7/EC) without there being any need to prove that the consumer was influenced or manipulated by the trader.[8]

Still in order to protect the consumers' interest, the Romanian legislator set for traders, by art. 4 paragraph (1) letter b) from GO no. 130/2000, the obligation to include in the contract the following provision, in bold characters: "The consumer has the right to notify the trader in writing that it gives up making the purchase, without penalties and without the need to give any specific reason, within 10 working days from the date of receiving the goods or, in case of service supplies, from the date of concluding the contract". In case this provision is omitted, the goods will be considered as being delivered without a call-off order from the consumer. As per art. 14 from OG no.130/2000, in the case of deliveries for which no prior order was made, the consumer is exonerated from any counterperformance, the lack of an answer not being interpreted as a consent.

In our opinion, the acknowledgment of the consumer's right of withdrawing from a distance contract does not remove its right to make a complaint, both during the withdrawal term and after the expiry thereof, on the grounds that the goods are not compliant with the description thereof, submitted by the seller or that they are faulty. A contrary interpretation would be that, according to paragraph (1) from art. 7 (thesis 2), the consumer will be liable for the expenses incurred with the

return of the goods it did not want at any time, which would be against the scope of the Directive 97/7/EC (consumer protection), in reality prejudicing the honest-minded consumer.

Our interpretation is also supported by the dispositions of art. 23 from GO no. 130/2000:

"The provisions regarding the sale of goods and services according to this Ordinance are supplemented by the provisions from Law no. 363/2007 on the fighting against the incorrect practices of traders in their relationship with consumers and on the harmonization of the regulations with the European legislation on the protection of consumers, as well as with the national dispositions which transpose European regulations regarding certain aspects concerning the supply of goods and services, which are applied with priority, unless otherwise stipulated in this Ordinance."

Consequently, even in the case of distance contracts, the legal regime concerning the delivery of certain goods which are not compliant with the trader's specifications or which are faulty is regulated by Law no. 449/2003 on the sale of goods and guarantees related thereto[9] and which entitle the consumer to ask the trader to make such goods compliant, without payment, by repairs or replacement, as per art. 11, or to benefit from the corresponding reduction of the price or from the cancellation of the product for such goods, according to art. 13 and 14, within the terms stipulated in chapter V from Law no. 449/2003. According to art. 12 from Law no. 449/2003, the wording "without payment", as stipulated in art. 10 and 11, makes reference to all the costs necessary for making the goods compliant, including expenses related to mail, transportation, handling, diagnosis, expertise, dismantling, mounting, labor, materials used and packaging.

As far as the delivery of goods similar to the ones ordered, this is subject to the dispositions of art. 11 paragraph (3) from GO no. 130/2000, according to which: the trader can deliver to the consumer certain goods or services at a quality and price equivalent to the required ones only if this was stipulated before the conclusion of the contract and/or in the contract, so that the consumer is clearly informed about this possibility. Otherwise, the supply of certain goods or services similar to the required ones will be assimilated to the delivery lacking an order, as stipulated in art. 14. The expenses incurred with the return of goods, in case the right of withdrawal is exerted, are in this case the trader's responsibility, element which the consumer needs to know about." Art. 14 stipulates that „in the case of deliveries for which no prior order was made, the consumer is exonerated from any counter-performance, the lack of an answer not being interpreted as a consent".

3.b. *Withdrawal term. Legal nature and duration.*

The 10 days term stipulated in paragraph (1) from art. 7 (thesis 1) of GO no. 130/2000 is, in our opinion, a "*cooling off period*", at the discretion of Consumer, during which the consumer may change its mind about its offer of purchasing the goods and when it may revoke it, although the contract was validly concluded in a prior stage.

Analyzing the legal status of the contract during the cooling off period, we consider that, during the cooling off period, the contract is subject to a resolutive condition – the consumer's decision to withdraw from the contract. Whereas the consumer's decision should not be justified, it results that such resolutive condition has the form of a purely potestative condition on the consumer's part, when the consumer withdraws from the contract because it does not like the goods. In this type of situation, the legal clause that permit to the consumer to withdraw from the contract without need to justify any reason (art. 4 litt. b of GO no. 130/2000) becomes an exception from art. 1010 of the Romanian Civil Code[10], according to which "The obligation is null and void if it was contracted under a potestative condition on behalf of the party undertaking it."

In doctrine[11], the term of 10 days was interpreted as a progressive step in distance selling contract formation considered to be concluded in three steps: (i) the meeting of consents; (ii) the

[9] Official Gazette no. 347 from 06.05.2008

[10] Alexandru Bleoancă, *Contractul în formă electronică* (Bucharest: Hamangiu, 2010), 161

[11] Juanita Goicovici, *Formarea progresivă a contractului* (Bucharest: Wolters Kluwer, 2009), 292 - 303

payment of the price/collection of product by the consumer; (iii) the confirmation of the initial consent by un-using of the right of withdraw belong to the consumer. In our view, this interpretation is lawful only if the parties have agreed on this modality of contract conclusion, otherwise, as we noted above, the distance contract is validly concluded when the confirmation message is received by the consumer, on his command.

As far as the start of the cooling off period is concerned, this is marked by the date when the consumer receives the goods, if the provisions in art. 4 were fulfilled *(the obligation to inform the consumer)* of the same GO no. 30/2000. If the trader omits to transmit to the consumer the information stipulated in art. 4, the term for the withdrawal from the contract is of 90 days and it starts flowing from the date when the consumer receives the goods. If during the 90 days period, the information stipulated in art. 4 is transmitted to the consumer, the 10 working days term for the withdrawal from the contract starts flowing from that moment.

By analyzing the dispositions from the Directive 97/7/EC, it can be seen that the term stipulated by the Romanian legislation is three days longer than the seven working days term imposed by the Directive as minimum term. According to art. 27 from GO no. 130/2000, the Romanian consumer will enjoy the ten days term even in the case when, upon purchasing goods from outside the Romanian borders, the contracting parties choose as applicable law for the distance contract the law of a State which is not a member of the European Union, and the contract is closely connected to the territory of Romania or with that of other Member States of the European Union, as well as in case GO no. 130/2000 includes provisions that are more favorable for the consumer. The Proposal for a Directive of the European Parliament and of the Council on consumer rights[12] (hereinafter "Proposal for a new Directive") approved by the Council in January 25, 2011, which will replace the Directive 85/577/EEC on contracts negotiated away from business premises and Directive 97/7/EC on distance contracts, set up a minim general term of fourteen days (beginning from the day on which the consumer or a third party other than the carrier and indicated by consumer acquires the material possession of each of the goods ordered) to withdraw from a distance contract, without giving any reason.

In our opinion, the consumer may exert its right of withdrawing from the distance contract also between the date when the contract is concluded and the date when the legal 10 days term starts to flow, even if the goods are in transit or were not yet delivered. This interpretations has been supported by the customary law developed in electronic commerce field. Another interpretation would lead to the situation in which the consumer who did not received the goods, although it paid the price for them, is not entitled to withdraw from the contract and immediately recover the price it paid, but it must choose the rescissory and claims action.

The doctrine[13] was also supported the view that in case of the refusal of the good reception by the consumer or in case of the lack of good delivery by the trader, the distance selling contract is not validly concluded in the second stage of its structural (confirmation *in re* of the buyer's consent).

The anniversary of the 10 working days cooling off period leads to the loss of the consumer's right of withdrawing from the contract, without giving any reason, and to the retroactive consolidation of the contract, the consumer only preserving its right to claim the lack of conformity and flaws that the goods have within the terms stipulated by Law no. 449/2003.

3.c. *Absence of the sanction for withdrawal from a contract*

The *ad litteram* interpretation of the wording "*without penalties*", means that, if the consumer exerts its right of withdrawal, it may not be forced to pay any compensation for the prejudice caused to the trader as a consequence of its withdrawal from the contract. From this statutory provision can

[12]Access to European Union law, accessed February 19, 2011, http://eur-lex.europa.eu/LexUriServ/LexUriServ.do?uri=COM:2008:0614:FIN:EN:PDF

[13] J. Goicovici, *above n. 11*, 304

not be derogated from by agreement between the parties to the detriment of consumers, whereas under article 26 of the GO no. 130/2000, the consumer can not be deprived of his rights conferred by that Ordinance. The only costs that may be required are the direct costs of returning the goods, as we shall see below.

4. Effects of the withdrawal from the e-contracts.

In case of the termination of a contract which is to be executed starting on a particular date, as is the case of the sale-purchase e-contracts, the main effect of the resolutive condition (the manifestation of the consumer's will, in the sense of withdrawing from the contract) consists in the retroactive cancellation of the document. Consequently, the trader will refund the price and the consumer will return the goods.

4.a. *The trader's obligations*

According to art. 8 from GO no. 130/2000, if the consumer exerts its right of withdrawal, the supplier will reimburse the amounts paid by the consumer, within at most 30 days after the date of the consumer's withdrawal from the contract.

As far as the scope of the wording "*amounts paid by the consumer*" is concerned, in our opinion, the trader will reimburse to the consumer any amount paid by the consumer in relation to the contract, such as the full price of the goods and the price reimbursement expenses, including the bank commissions.

If, for the goods constituting the object of the distance contract, the trader credits the consumer directly or based on an agreement concluded between the trader and a third party, once with the consumer's withdrawal from the distance contract, the loan contract also terminates by law, without penalties for the consumer. Consequently, the trader must return any amount received until that moment either to the consumer, or to the financer.

If the consumer makes the payment by a credit card, a debit card or a shopping card, the contract between the consumer and the card issuer does not terminate, and the returned money will be transferred to the consumer's account.

The reimbursement of the amounts may not be conditioned by the consumer's obligation to first return the goods, because the consumer's right of withdrawing from the contract and having its amounts reimbursed, within at most 30 days since the date of its withdrawal from the contract is an unconditioned right, according to art. 8 from GO no. 130/2000. We believe that if the consumer refuses to return the goods, although the amounts it spent were reimbursed, the trader may take an action for the recovery of its possession against the consumer, in order to recover its goods. In the Proposal for a New Directive on consumer rights it is stipulated contrary: „For sales contracts, the trader may withhold the reimbursement until he has received or collected the goods back, or the consumer has supplied evidence of having sent back the goods, whichever is the earliest".

In order to establish a fair dividing of risks in case the buyer withdraws from the contract, and also not to discourage the consumer from using its right, the Community and the Romanian law giver stipulated a fair dividing of the costs incurred with the delivery of the goods from the trader to the consumer and their return to the trader. Thus, as per paragraph (1) art. 7 (thesis 2), if the consumer withdraws from the contract, the only costs it is responsible for are the direct expenses for returning the goods (transport expenses from consumer to trader), while the indirect cost of the distance trader (as would be, for example, a handling fee for checking the product, if it is damaged, or for repacking and shelving the product or for cancelling the invoice) and the expenses incurred with the delivery of the goods from trader to consumer will be borne by the trader, meaning it will not withhold them from the price of the goods[14].

[14] Siegfried, Fina. *The Consumer's Right of Withdrawal and Distance Selling in Europe, A Consumer Stronghold in European Distance Selling and E-Commerce*. Wien,

For this, the Court of Justice of the European Union has recently given a verdict in the C-511/08, Handelsgesellschaft Heinrich Heine trial:

„Article 6 paragraph (1) paragraph one, thesis two and paragraph (2) from Directive 97/7/CE of the European Parliament and of the Council from May 20th 1997 on the protection of consumers in respect of distance contracts must be interpreted as opposing to a national regulation which allows the supplier, in a distance contract, to ask the consumer to bear the goods delivery costs, if the latter exerts its right of withdrawal."[15]

4.b. *Consumer's obligations*

As an exception from the contract withdrawal retroactivity principle, the risk of the *pendente conditione* goods is borne by the buyer, as owner, under a resolutive condition. As a consequence, the consumer must behave like a good owner in relation to the goods.

If after the return of the goods, the trader ascertains that the goods were not returned in a good state of preservation, it may start an action for remedy against the consumer.

In our opinion, the wording "good state of preservation" may not be interpreted in the sense that the goods should not be unsealed, if the examination of the goods presupposes the unsealing and testing thereof.

The exception is represented by the goods which bear a seal for hygiene reasons and which can be examined without the removal of such seal. However, the trader may ask the consumer, based on certain contractual clauses, that, in case it withdraws from the contract, the consumer should return the goods in their original package, but not sealed.

Relative recently the European Court of Justice has confirmed that, unless limited exceptions, a consumer who exercises his right of withdrawal from a distance contract must not be obliged to compensate the trader for the use of the goods. In Pia Messner v Firma Stefan Kruger (Case C-489/07), European Court of Justice ruled that the provisions of the second sentence of Article 6(1) and Article 6(2) of Directive 97/7/EC must be interpreted as precluding a provision of national law which provides in general that, in case of withdrawal by a consumer within the withdrawal period, a seller may claim compensation for the value of the use of the consumer goods acquired under a distance contract. However, those provisions do not prevent the consumer from being required to pay compensation for the use of the goods in the case where he has made use of those goods in a manner incompatible with the principles of civil law, such as those of good faith or unjust enrichment, on condition that the purpose of that directive and, in particular, the functionality and efficacy of the right of withdrawal are not adversely affected, this being a matter for the national court to determine.[16]

If the trader sent gifts to the consumer together with the ordered goods, then we consider that the consumer's withdrawal from the contract has the following implications:

- If the contractual clauses stipulate the existence of a gift that is granted together with the ordered goods, then the consumer which exerted its right of withdrawing from the contract concerning the ordered goods must also return the gift.

- If the contractual clauses do not stipulate the existence of a gift that is granted together with the ordered goods, then the gift will have the legal regime of non-ordered goods, as stipulated in art. 14 from GO no. 130/2000, the consumer being entitled to keep it, without the obligation to make any counterperformance.

[15] Official Journal of the European Union from 05.06.2010, C 148/6

[16] Official Journal of the European Union from 24.01.2009, C 256/4, accessed February 19, 2011, http://eur-lex.europa.eu/LexUriServ/LexUriServ.do?uri=OJ:C:2009:256:0004:0004:EN:PDF

GO no. 130/2000 did not regulate the situation when the consumer paid the price or part of the price by offering a good in exchange.

In our opinion, and as a proposal for a *de lege ferenda*, we consider that in such situations, if the consumer exerts its right of withdrawal, the trader must return to the consumer the good received in exchange, in good state of preservation.

If, meanwhile, the trader alienated the good received in exchange from the consumer or can no longer return it in its original state, we consider that it should be forced to pay to the consumer an amount equal with the amount represented by the value of such good. The respective value can be determined in relation to the value of the trader's goods (the object of the exchange), because the parties, at the time of accepting the good, evaluated the goods as having the same value.

GO no. 130/2000 does not stipulate a period within the consumer is required to return the goods to trader. The Proposal for a new Directive requires the consumer to send back the goods or hand them over to the trader or to a person authorised by the trader to receive them, within fourteen days from the day on which he communicates his withdrawal to the trader, unless the trader has offered to collect the goods himself.

5. Form of exercising the right of withdrawal

GO no. 130/2000 does not provide any express form of exerting the right of withdrawal.

But, the proof of the exercising of the right of withdrawal is the consumer's task. In our opinion, we consider that the right of withdrawal is exercised, through an exteriorized manifestation of will, either by the non-acceptance or return of the goods, or by a written form of manifestation of the will, i.e. a letter, a facsimile, an e-mail. A part of the doctrine[17] considers that the withdrawal should be notified to the trader in writing. In Proposal for a New Directive, it is stipulated that, for a distance contracts concluded on the Internet, the consumer shall inform the trader of his decision to withdraw on a durable medium either in a statement addressed to the trader drafted in his own words or using the standard withdrawal form as set aut in the Annex I(B) to Directive. Also, the trader may, give the option to the consumer to electronically fill in and submit the standard withdrawal form on the trader's website. In that case the trader shall communicate to the consumer an acknowledgement of receipt of such a withdrawal by email without delay.

6. Field of application of the consumer's right of withdrawal from e-contracts

The consumer's right of withdrawal from e-contracts concluded between a trader and a consumer is applicable for all such contracts, except for those stipulated in art. 6, art. 10, art. 12 from GO no. 130/2000.

As it can be seen from the provisions of art. 6, GO no. 130/2000 excludes the following from its field of application:

a) distance contracts for financial services, as regulated by the Governmental Ordinance no. 85/2004 on the protection of consumers upon the conclusion and execution of distance contracts for financial services, as approved by Law no. 399/2004, with subsequent amendments and supplements.

b) contracts concluded via automatic distributing machines or in automatic commercial centers;

c) contracts concluded with telecommunication operators in the purpose of using public phones;

d) contracts concluded for the construction and sale of real estate goods or which make reference to other rights related to real estate goods, except for rental contracts;

e) contracts concluded during auction sales.

[17] Marcel Bocșa, "*Încheierea contractelor de comerț internațional prin mijloace electronice*" (Ph.D diss., Academy of Economic Studies Bucharest, 2009).

Given the extent and complexity of the conclusion of the e-sales by methods that are similar to or derived from the classic auction procedure, it is necessary to regulate the notion of auction, as stipulated in GO no. 130/2000. The problem of the absence of a legal definition of the notion of "online auction" in the context of contracts concluded on websites can be felt also at Community level, because the Member States gave a different definition of the notion of "on-line auction" which generates a different protection for consumers in the Member States. Thus, for example, in France, the e-Bay website or other similar ones are subject to the Directive 97/7/EC, the consumer being able to exert its right of withdrawal, while in the U.K. this is not the case.[18]

The Proposal for a New Directive define the "auction" as a method of sale where goods or services are offered by the trader through a competitive bidding procedure which may include the use of means of distance communication and where the highest bidder is bound to purchase the goods or the services. A transaction concluded on the basis of a fixed-price offer, despite the option given to the consumer to conclude it through a bidding procedure is not an auction.

According to art. 10 from GO no. 130/2000, the consumer may not withdraw from the following types of contracts, unless otherwise agreed by the parties:

a) service supply contracts whose execution started, with the consumer's approval, prior to the expiry of the 10 working days term;

b) contracts for the supply of products or services whose price depends on the fluctuations from the financial markets which the trader cannot control;

c) contracts for the supply of certain products executed according to the consumer's specifications or of certain distinctly customized products, as well as of those which, through their nature may not be returned or which can rapidly degrade or deteriorate;

d) contracts for the supply of audio, video or IT programs recordings, in case they were unsealed by the consumer;

e) contracts for the distribution of newspapers, reviews, magazine journals;

f) contracts for betting or lottery services.

In addition, according to art. 12 from GO 130/2000, the dispositions of art. 3 (prior informing), of art. 4 (additional informing), of art. 7-10 (withdrawal from the contract) and of art. 11 paragraph (1) (execution of the delivery obligation within 30 days) are not applicable to contracts regarding:

a) the sale of food products, beverages or of household products of current use, delivered regularly by the trader to the domicile, residency or workplace of the consumer;

b) the supply of accommodation, transportation services, of culinary products, of leisure time products, when the trader undertakes in the contract to supply such services on a precise date or in a specified period; exceptionally, in the case of leisure activities organized outdoors, the trader may retain the right not to comply with the provisions of art. 11 paragraph (2), in specific circumstances.

7. Conclusions

The theoretical analysis of the consumer's right of withdrawing from an e-contract is important for determining the legal regime applicable to the sale-purchase e-contract.

Although, at first sight, the sale of products by electronic means looks similar to the sale of goods that you can try, the two types of sale are fundamentally different from one another from at least two points of view:

- In the case of the sale of goods that you can try, the contract is concluded under the condition precedent of trying the good[19], while in the case of the sale by electronic means, between a

[18] Chirstine Riefa, "The reform of electronic consumer contracts in Europe: towards an effective legal framework?", *Lex Electronica* 2 (2009), vol 14.

[19] Francisc Deak, *Tratat de drept civil. Contracte speciale* (Bucharest: Actami, 1998), 81

trader and a consumer, the contract is concluded under the resolutive condition of the consumer's changing its mind;

• In the case of the sale of goods that you can try, the buyer cannot refuse the conclusion of the contract for not liking the good, but only if the good is incompliant, while in the case of a sale by electronic means between a trader and a consumer, the consumer can refuse to conclude the contract without giving a reason for that, including for not liking the good.

The comparison with the sale of goods that you can taste does not need an analysis, because the consumer's right of withdrawing from the contract, stipulated in art. 7 from GO no. 130/2000 is not applicable to contracts having as object goods that are susceptible of make the object of a sale of goods that you can taste (art. 12 from GO no. 130/2000).

In conclusion, the consumer's right of withdrawing from e-contracts represents an legal exception from the contract irrevocability principle. Instead, the withdrawal term is a legal cooling off period, at the discretion of the consumer. Until the expiry of the withdrawal term, the sale-purchase e-contract is affected by a resolutive condition, that in base of the law regulations, is purely potestative from the consumer's part. In our opinion, the sale of products by electronic means between a trader and a consumer, as a sub-species of distance selling contracts, is a new and independent type of sale, with a specific legal regime.

This paper does not analyze the consumer's right of withdrawal from e-contracts concluded with businesses outside European Union, the subject being open to future research.

LEGAL AID AS SEEN IN THE LIGHT OF THE LAW NO. 270/2010 REGARDING THE AMENDMENT AND THE COMPLETION OF THE LAW NO. 51/1995 FOR THE ORGANIZATION AND THE PRACTICE OF THE LAWYER'S PROFESSION

ŞTEFAN NAUBAUER[*]

Abstract

According to the explanatory memorandum of the Government as well as to the favorable opinion of the Legislative Council, the Law no. 270/2010 relate mainly to the correlation the OUG no. 51/2008 on legal aid in civil matters, by covering in detail the circumstances and the conditions for granting legal aid as well as the organization of the activity of granting such assistance. From the perspective of European law, the Legislative Council appreciated that the new law is placed within the sphere of the legislation as regulated at the European Union level, that are circumscribed to the European Area of freedom, security and justice, within the European legislation reserved to the judicial cooperation in civil matters.

In this material we will analyze the following issues: granting legal aid in criminal matters, in which defense is mandatory according to the dispositions in the Criminal Procedural Code; granting legal aid in any other causes except criminal ones, as modality to grant public legal aid, according to the law; legal aid throughout a lawyer, granted at the request of the organs of the local public administration; appointing the lawyer for legal aid; extra-judiciary legal aid; competences of the bars regarding legal aid; the department for the coordination of legal aid; services of legal aid; legal aid registry; payment for the activity of legal aid and extra-judiciary legal aid.

Key words: *the Law no. 270/2010; the lawyer's profession; legal aid in civil matters.*

I. Introduction

The adoption of the Law no. 270/2010[1] constitutes the delayed[2] materialization of an initiative of the Romanian Government meant to enhance the normative failure recorded by the Emergency Government's Ordinance (E.G.O.) no. 159/2008[3], ordinance that has been declared unconstitutional[4] and, subsequently, was rejected by law[5].

---

[*] Lecturer, Ph.D. candidate, Law Faculty, University "Nicolae Titulescu" Bucharest (e-mail: stefannaubauer@ yahoo.com).

[1] The Law no. 270/2010 for the amendment and the completion of the Law no. 51/1995 for the organization and the practice of the lawyer's profession was published in the Official Gazette no. 872 from December 28, 2010. The present study has in consideration the form of the Law no. 51/1995, right before republishing in the Official Gazette no. 98 from February 7, 2011.

[2] Although on May 19, 2010 the Government submitted to the Senate the project of the law in order for it to be adopted by an *emergency procedure* (according to the article 76 3rd paragraph form the Romania Constitution), the Senate adopted it in its séance from August 24, 2010and the Chamber of Deputies – decisional chamber – adopted it in its séance from December 7, 2010.

[3] The E.G.O. no. 159/2008 regarding the amendment and the completion of the Law no.51 /1995 for the organization and the practice of the lawyer's profession was published in the Official Gazette no. 792 from November 26, 2008 and then rectified by the Editorship "Official Gazette, Part I" in the Official Gazette no. 824 from December 8, 2008.

[4] By the Decision of the Constitutional Court no. 109 from February 9, 2010, published in the Official Gazette no. 175 from March, 18 2010.

[5] The Law no. 81/2010 for the dismissal of the E.G.O. no. 159/2008 regarding the amendment and the completion of the Law no. 51/1995 for the organization and the practice of the lawyer's profession, published in the Official Gazette no. 300 from May 10, 2010.

As shown in the explanatory memorandum regarding the issuance of the new piece of legislation, given the fact that the constitutional court criticized the promotion modality regarding the regulations on the organization and the practice of the lawyer's profession – throughout an emergency ordinance[6] -, and not their substance, as well as the fact that the reasons having determined their adoption maintain their relevance, the disposition of the Law no. 270/2010 are mainly assuming the solutions foreseen in the E.G.O. no. 159/2008.

II. Legal aid

1. Circumstances and conditions for granting legal aid

A. Circumstances (forms) of legal aid

According to article 68, 1st paragraph from the Law no. 51/1995, as amended by the Law no. 270/2010, the bars ensure the legal aid, in the following forms:

a). In the criminal cases, in which defense is mandatory according to the dispositions in the Criminal procedural code[7]

We remind that, in accordance with the article 171, 2nd paragraph from the Criminal procedural code, legal aid is mandatory when:

- the accused or the defendant is a minor, admitted to a rehabilitation center or a medical education institute;
- the accused or the defendant is detained or even arrested within another case;
- towards the accused or the defendant a safety measure was ordered for his/her admittance to a medical facility or for the obligation to assume medical treatment even within another case;
- the prosecution or the court considers that the accused or the defendant could not accomplish his/her defense by himself/herself;
- in any other circumstances as stipulated by the law[8].

b). In any other cases except the criminal cases, as means of granting the public legal aid, according to the law

Of course, in this situation, consideration must be given to the dispositions of the E.G.O no. 51/2008 regarding the public legal aid in civil matter[9], normative act in which, in the article 3, it is

[6] As grounds for the admission decision regarding the exception of unconstitutionality, the Constitutional Court invoked the failure of article 115 4th paragraph of the Romanian Constitution.

[7] According to the article 90 from the New Criminal procedural code (published in the Official Gazette no. 486 from July 15, 2010), the legal aid (terminology taken from the current Code) is mandatory:

a) when the accused or the defendant is a minor, admitted to a rehabilitation center or a medical education institute, when the accused or the defendant is detained or even arrested within another case, or when towards the accused or the defendant a safety measure was ordered for his/her admittance to a medical facility even within another case, as well as in any other cases as stipulated by the law;

b) when the prosecution or the court considers that the accused or the defendant could not accomplish his/her defense by himself/herself;

c) during the trial, in the circumstances in which the law stipulates, for the offense committed, the punishment of life imprisonment or the punishment of prison for a period longer than 5 years.

[8] In the 3rd paragraph of the same article in the Criminal procedural code it is stipulated that, during trial, legal aid is mandatory also in the circumstances in which the law stipulates, for the offense committed, the punishment of life imprisonment or the punishment of prison for 5 years or more.

[9] Published in the Official Gazette no. 327 from April 25, 2008, approved with modifications and amendments through the Law no. 193/2008 (published in the Official Gazette no. 723 from October 24, 2008). For the analysis of the legal regime regarding the public legal aid established through this ordinance, see also: I. Deleanu "*Public legal aid*". *European and Romanian legislation on this matter* in Dreptul no. 8/2008 pages 17-47; A. Tabacu, *Public legal aid*, in Romanian Magazine of Private Law no. 4/2008, pages 212-227; M. Tăbârcă, *Issues regarding the public legal aid in civil matters (The Government's Emergency Ordinance no. 51 from April 51, 2008)*, Publishing House Universul Juridic, Bucharest, 2010.

foreseen that the public legal aid is granted in civil, commercial, administrative, labor and social insurances cases, as well as in other cases, except for the criminal cases.

c). Legal assistance through the lawyer, granted at the request of the bodies of the local public administration

This hypothesis preexisted as well in the former wording[10], where the organs of the local public administration – as well as the courts or the prosecution's offices – were able to request the bar to ensure the legal assistance in the cases in which they appreciated that individuals were *facing the obvious inability to pay the retainer.*

Even if the current text no longer refers to the situation in which a body of the local public administration may request the legal assistance through a lawyer, we consider that the reason for the former regulation, namely *the obvious inability to pay the retainer*, continues to exist.

According to the article 68, 2nd paragraph from the Law no. 51/1995, such as it was modified through the Law no. 270/2010, in exceptional cases, if the rights of the person lacking material means would suffer prejudice from a delay, the dean (president) of the bar may approve the grant of legal assistance, for free. Comparing with the former wording[11], a sole intervention is noticeable, through which the term of "free legal assistance" is reformulated, the rest of the text as well as the substance of the regulation being maintained.

It is the place here to remind the fact that, regarding the protection of the crime victims *the free legal assistance*[12] was instituted and is granted, upon request – if the crime was committed on Romanian soil or, if the crime was committed outside Romanian soil, if the victim is a Romanian citizen or a foreign citizen that is legally residing in Romania, and the criminal trail takes place in Romania – to the following categories of victims (article 14, 1st and 2nd paragraph from the Law no. 211/2004):

- the individuals against whom was committed an attempt to murder, manslaughter and aggravated murder, a crime of serious body injury, an intentional crime which resulted in serious body injury for the victim, an offense of rape, sexual intercourse with a minor and sexual perversion;

- the spouse, the children and the dependants of the deceased, following the crimes of murder, manslaughter and aggravated murder, as well as the intentional crimes that resulted in the death of the person[13].

B. The conditions for granting legal aid

a). Appointing the lawyer to provide public legal aid [article 68/1, article 68/2, article 68/3 paragraphs (5) and (6) and article 68/7 letter c) newly introduced in the Law no. 51/1995 throughout the Law no. 270/2010]

---

[10] In the previous regulation the E.G.O. no. 159/2008, paragraph (1) of article 68 of Law no. 51/1995 had the following content: "The Bar association provides legal assistance in all cases where protection is required by law, as well as at the request of the courts, the prosecution or *the public local administration* in the cases in which the latter appreciate that the individuals are *facing the obvious inability to pay the retainer.* (our emphasis)".

[11] In its previous wording the E.G.O. no. 159/2008, paragraph (2) of article 68 of the Law no. 51/1995 had the following content "In exceptional cases, if the rights of the individual lacking financial means would be prejudiced by the delay, the dean (president) of the bar association may approve *free legal aid*. (our emphasis)".

[12] Through Chapter IV ("Free legal aid of victims of crimes") from the Law no. 211/2004 regarding some measures to ensure the protection of victims of crimes, published in the Official Gazette no. 505 from June 4, 2004. For a presentation of this regulation, see also M. Catea, *Free legal aid granted to victims of* crimes, in the Bulletin of the National Institute for the Training and the Improvement of Lawyers, nr. 2/2006, pages 118-121.

[13] According to article 15 from the Law no. 211/2004, free legal aid is granted, upon request, to the victims of other crimes than the ones mentioned in article 14, paragraph (1), with the observance of the conditions established in the article 14 paragraph (2), if the monthly income per family member of a victim shall not exceed the minimum gross wage in the country, as established for the year in which the victim submitted the application for free legal aid.

If there application for public legal aid was approved under the form of assistance through a lawyer[14], then, the application together with the approval minutes are immediately sent to the dean (president) of the bar association of the respective district court. Upon receipt of the two documents, the dean (president) or the lawyer he delegates appoints within 3 days a lawyers registered in the legal aid Registry[15], to whom he/she transmits, together with the notification regarding the appointment, the approval minutes. The dean (president) has also the obligation to communicate the name of the appointed lawyer to the person benefiting from public legal aid, this one having the possibility to request the appointment of another lawyer, of course with the consent of the latter.

The appointment is made considering the lawyer's professional experience and qualification, as well as the nature and the complexity of the case, the lawyer's other appointments and commitment degree. The criteria regarding *the professional experience* must be though related to the stipulation in the By-laws of the lawyer's profession[16] [article 217 paragraph (1) second thesis) according to which the cases on legal aid[17] mandatory and/or free are distributed *predominantly to trainee lawyers and young (definitive) lawyers*, of course, with the compliance of the professional competency stipulated by the law. The distribution of these cases towards *young lawyers (trainees or definitive)* results also from the dispositions of the article 55, article 73 and article 98 from the current General Regulations for the organization of the bar associations' legal aid offices[18], adopted by the Decision no. 419/2008 issued by the UNBR Council, in the context of the entry into force of the E.G.O. no. 51/2008. According to the article 112 from the same General regulation, the repartition of cases pending in *courts of first instance* is made predominantly towards *trainee* lawyers, disposition that correlates with article 22 paragraph (1) from the Law no. 51/1995, in accordance to which the trainee lawyer can draw conclusions only in front of courts of first instance. We also observe the following relevant dispositions existent in the above mentioned General Regulation:

- the lawyer having provided legal aid ex officio during the criminal pursuit phase will ensure as well the assistance in front of courts competent with the solution of the case, when he/she obtained and certified the special agreement of the beneficiary (article 40);

- the ex officio lawyer appointed for one phase of the judicial inquiry will be appointed to assist the party as well during appeal against conclusions that might be appealed separately, if he/she obtained and certified the special agreement of the party (article 45);

- the cases having as object the challenge on enforcement or changes in the enforcement of certain decision will be distributed with priority to the ex officio lawyer that provided legal assistance in the last phase of the judicial inquiry, if he/she obtained and certified the special agreement of the party (article 49);

- mandatory legal aid (ex officio) will be ensured only following the prior appointment by the Office of legal aid, according to the criteria regarding the compatibility, specialization, and with the application of the of the principle of co-fraternity (article 105);

- in the situation in which the ex officio designated lawyer chooses not to provide legal assistance under the principle of continuity, the cases will be redistributed to lawyers appointed according to the criteria adopted throughout methodological norms (article 108).

---

[14] In the conditions stipulated in Chapter III ("Competencies and procedures for granting public legal aid"), Section 1 ("Common provisions"), articles 11-19, from the E.G.O no. 51/2008.

[15] See *infra*, point II.2, letter D.

[16] Published in the Official Gazette no. 45 from January 13, 2005, with subsequent amendments and supplements.

[17] In the mentioned text the phrase "legal aid" is used.

[18] Published on **www.unbr ro** website and entered into force at October 15, 2008, therefore previous to the publishing in the Official Gazette of the E.G.O. no. 159/2008. According to the final dispositions of the Law no. 270/2010 (article II 2nd paragraph), within 60 days from the entering into force of this law, the Council of the National Association of the Romanian Bars (U.N.B.R.) has to adopt – in fact, to revise – The general Regulation for the organization of the services of legal aid.

In terms of *extra-judiciary* assistance[19], based on the decision for granting such type of assistance, the dean (president) of the competent bar association appoints a lawyer from the legal aid Registry of the bar association. Depending on the actual possibilities, the dean (president) may approve the granting of extra-judiciary assistant by a lawyer chosen by the beneficiary[20].

The lawyer being appointed to provide public legal aid cannot refuse this professional task unless a conflict of interest appears or for other justified reasons. If the appointed lawyer refuses, inexcusably, to take over the case or to continue the work is committing a disciplinary misbehavior.[21]

On the other side, if the beneficiary of the public legal aid refuses, in an unjustified manner, or renounces unilaterally and unjustified the assistance provided by the appointed lawyer, the public legal aid under the form of assistance through a lawyer ceases.

b). The extra-judiciary assistance (article 68/3 newly introduced in the Law no. 51/1995 throughout the Law no. 270/2010)

According to article 35 paragraph (1) of E.G.O. no. 51/2008, the assistance through a lawyer may be as well extra-judiciary, consisting in: providing advice; making applications, petitions, complaints, initiation of other legal proceedings; representation in front of public authorities or institutions, other than judiciary or with jurisdiction ones, in pursuit of rights or legitimate interests.

The purpose of extra-judiciary assistance envisaged by the legislator lies in providing clear and accessible information to the applicant, in accordance with legal provisions in force regarding the competent institutions, and, if possible, the conditions, the limits and the procedures prescribed by law for the recognition, the grant or the accomplishment of the right or interest claimed by the applicant.

The extra-judiciary assistance is granted by the legal aid Office[22] constituted at the level of each bar association, upon request[23], by attaching documents proving the income of the applicant and his family's, as well as evidence regarding the obligation for maintenance (care) or payment.[24] The application shall be accompanied by an applicant's affidavit, in the sense of making specifications if

[19] See forthwith *infra*, letter b).

[20] Wrongly, in the article 68/3 paragraph (6) from the Law no. 51/1995 reference is made to "the individual to whom legal aid is granted", although the text regulates the extra-judiciary assistance. A similar mistake taken, as this one, from the E.G.O no. 159/2008, has slipped in the text of the paragraph (4) of the article 68/3 from the same law (see *infra*, fn. no. 28).

[21] These provisions are correlated with the current provisions of the By-laws of the lawyer's profession, according to which the unjustified refuse to provide free legal aid constitutes disciplinary misbehavior [article 217 paragraph (1) third thesis, introduced by the Decision of the lawyers' Congress no. 6/2008].

[22] See *infra*, point II.2, letter C.

[23] The standard form of the application is approved by the Department for the coordination of the legal aid (see also *infra*, point II, letter B). The application will include references regarding the purpose and nature of the request for assistance, the identity, the social security number, the address and the financial condition of the applicant and his/her family.

[24] The proof of the applicant's financial situation is made mainly with the following documents: certificate issued by the competent authorities or by the employer, as appropriate, showing the applicant's professional income and the income of the other family members, subjected, according to the law, to income tax, revenue that is made within the period stipulated by the legislation on public legal aid or the amounts received as pension, unemployment benefit or social security and others, also received for the same period; the family book and, where appropriate, the children's birth certificates; the certificate attesting a disability of the applicant or of his/her child, where appropriate; affidavit showing that the applicant and other family members have no other income; affidavit on the patrimonial situation of the applicant and his family; affidavit showing that the applicant and / or the other natural or adoptive parent or, where appropriate, any other person entrusted with the child for adoption or having the child in placement or in emergency placement or has been appointed as trustee is handling the child's care and growth and that child is not entrusted to or in placement of any authorized private body or authorized public service or any legal person; evidence issued by the competent authorities regarding taxable goods of the applicant or, where appropriate, of other family members; other documents required to establish the right to legal aid, according to the law.

during the last 12 months he/she did benefit from public legal aid, under what form, for what case, as well as the amount for this aid.

The application for having granted the extra-judiciary assistance is settled no later than 15 working days from the date of registration, throughout an approval decision[25] or a rejection decision, where appropriate.

The decision regarding the grant of extra-judiciary assistance is communicated to the applicant within 5 working days from its issuance date. If the application for granting extra-judiciary assistance was rejected, then the applicant can challenge the decision at bar association's council, within 5 days from its communication, the challenge will be dealt with urgency, in the first session of the bar association's council. We observe that, unlike the term established for the communication of the decision, in the case of the *challenging* term for the decision of rejection it is not stipulated that the 5 days are working days, therefore they will be considered as *calendar* days.

We notice that according to article 65 from the current General Regulation for the organization of the bar association's legal aid offices, adopted by the Decision no. 419/2008 of the Council of UNBR, the lawyer having ensured the extra-judiciary assistance becomes *incompatible* with providing legal aid.

2. Organization of the activity of legal aid

A. Attributions of the bar association (article 68/7 newly introduced in the Law no. 51/1995 through the Law no. 270/2010)

The organization of legal aid was widely reformed in comparison to the former legislation, namely the E.G.O. no. 159/2008, when the Law no. 51/1995 consecrated to this aspect one sole paragraph[26].

Throughout the Law no. 270/2010, the attributions of the bar associations, taking into consideration the organization of legal aid, were substantially increased, as follows: they organize the offices (services) for legal aid[27] both at the premises of each bar association as at the premises of each court; they organize and update the legal aid Registry of each bar association, based on the requests of the lawyers, approved by the bar association's council; they appoint the lawyers registered with the legal aid Registry to provide legal aid;[28] they operate control on how legal aid is provided by lawyers registered with the bar associations; they organize and execute programs to promote the legal aid system; they accomplish any other attribution as stipulated by the law or by the General Regulation for the organization of the legal aid offices (services).

B. The Department for the coordination of the legal aid (article 68/5 and article 68/6 newly introduced in the Law no. 51/1995 by the Law no. 270/2010)

[25] Should the application for extra-judiciary assistance be approved, the decision on the extra-judiciary assistance (not legal, as wrongly appears in the wording of paragraph 4 of article 68/3 from the Law no. 511995, the mistake being taken from the E.G.O no. 159/2008) will include the following: the name of the document; the name of the issuer; the legal and factual basis for issuing the decision; the person to whom extra-judiciary assistance is provided; the type or the form of the extra-judiciary assistance granted; the date of issuance; the title and the signature of the person that issued that respective document.

[26] We are taking into consideration the paragraph (3) of the article 68 from the Law no. 51/1995, text that had the following wording: "The bar association organizes, at the premises of all county courts, the offices for legal aid, making legal aid also available at local prosecution's offices, offices that are managed by a definitive lawyer, appointed by the bar association's council and coordinated by a member of the council".

[27] See *infra*, point II.2, letter C.

[28] See *supra*, point II.1, letter B.

This department was regulated as novelty regarding the organization of the lawyer's profession throughout the E.G.O. no. 159/2008, within the National Association of the Romanian Bars, as organ with permanent activity, coordinated by one of the UNBR vice-presidents.[29]

The main attributions of the department are as follows: it runs the methodological management of the activity of granting legal aid; it elaborates the project of the General Regulation for the organization of the legal aid offices (services); it proposes, or, where appropriate, it endorses the project of memorandums that are to be concluded with competent public authorities in order to obtain financial means to organize the services of legal aid; it organizes the national Registry of legal aid, based on the registries prepared by the bar associations; it organizes and coordinates the payment methodology of the retainers for the provided legal aid; it runs the control on the legal aid provided; it prepares projects of legislation in the area of legal aid, that it submits to the Ministry of Justice, in order for them to be promoted; it establishes, in conjunction with the Ministry of Justice, the statistical indexes, it keeps the statistical evidence of the legal aid system and it analyses the information required by the planning and the proper coordination of the legal aid system; it cooperates with the Ministry of Justice for the good functioning and planning, including from the budgetary point of view, of the legal aid system; it promotes the legal aid system; it establishes the forms that are to be used by the bar associations for the organization of the activity of legal aid and of the extra-judiciary assistance, according to the law; it represents UNBR in the field of legal aid, within international cooperation in the area, according to the law or the By-laws of the lawyer's profession.

C. The legal aid offices (services) (article 36 modified, article 68/8 and article 68/13 newly introduced in the Law no. 51/1995 through the Law no. 270/2010)

The statutory regarding the legal aid offices (services) has undergone the fewest changes, being maintained, in essence, on the coordinates of the former article 68 paragraph (3) from the Law no. 51/1995[30]. Thus, as we showed during the presentation of the bar associations' attributions[31], in the area of the organization of the legal aid offices (services), the bar association organizes[32] the legal aid offices (service) under the management of a definitive lawyer appointed by the council of the bar association and are being coordinated by a member of this council.

The activity of the legal aid offices (services) is deployed at the premises of all county courts, in spaces exclusively destined to this purpose, that are made available by the Ministry of Justice, or, where appropriate, by the authorities of the local public administration, freely, and – supplementary stipulation contained by the Law no. 270/2010 in comparison with the provisions in the E.G.O. no. 159/2008 – *mandatory*. Besides, according to the article 36 from the Law no. 51/1995, such as it was modified through the Law no. 270/2010 – modification that was not operated through the E.G.O no. 159/2008 –, the Ministry of Justice *is obligated to ensure* the proper spaces for the activities of the lawyers within the premises of the courts, disposition that strengthens the preexistent[33] necessity held to the Government. These dispositions are to be correlated with the provisions of the article 68/13 from the Law no. 51/1995, according to which UNBR and the bar association are working together with the Ministry of Justice, the Superior Council of Magistracy, the courts, as well as the prosecutors' offices near the courts, in order to perform in proper conditions the activity of providing legal aid.

---

[29] The organizational structure of this department is established through a decision of the Standing Committee of the UNBR.

[30] See *supra*, fn. no. 29.

[31] See *supra*, point II.2, letter A.

[32] The organization, the functioning and the attributions of the offices for legal aid are accomplished according to the regulations approved by the bar association's council, based on the general regulations for the organizations of the offices of legal aid, as approved by the UNBR Council.

[33] In the previous wording of the article 36 from the Law no. 51/1995 it was stipulated that the "Ministry of Justice *ensures* the spaces (…) (our emphasis)".

D. The legal aid Registry (article 68/9 newly introduced in the Law no. 51/1995 through the Law no. 270/2010)

a). The legal aid Registry of the bar association

It is organized at the level of each bar association and it includes the lawyers that are able to be appointed to provide public legal aid under the form of legal aid and extra-judiciary assistance.

This Registry is updated, for the next calendar year, until the end of September of the previous calendar year, with the possibility, in exceptional cases, to operate modifications during the year.

The Registry has a public characteristic[34] and is kept both on paper as on electronic support.

b). The legal aid national Registry

It is organized at the level of the National Association of the Romanian Bars, being constituted from the legal aid registries of all bar associations from the country.

This registry has as well a public characteristic[35] and is updated, automatically, together with the update of the bar associations' legal aid registries.

c). Registration with the legal aid Registry and radiation

It is operated throughout a decision of the council of the bar association of which the solicitant lawyer is member, based on an application completed according to the form approved by the Department for the coordination of legal aid.

The lawyer's registration with the Registry may be denied by the council of the bar association, grounded, in the following cases: if the solicitant lawyer suffered a disciplinary sanction; if the solicitant lawyer is accused of having committed a crime; if an ascertainment was made towards the solicitant lawyer regarding his/her repeated of the Law no. 51/1995 or regarding the inferior quality of his legal aid being provided.

The decision through which the council of the bar association refuses the registration with the Registry can be challenged according to the procedure stipulated for the disciplinary liability[36]. This being said, we remember here the competency of:

- The Central Commission for Discipline that judges, in appeal, with a panel of 5 members, the appeals formulated by the interested lawyer, the dean of the bar association and the President of UNBR against the decisions pronounced by the Discipline Commissions of the bar associations and the conclusions throughout which against the lawyer was taken the measure of suspension of the practice of the profession, until the final settlement of the case, in case of obvious and serious misbehavior. Against the decisions of the Central Commission for Discipline, in appeal, the interested party can declare appeal at the contentious section of the Court of Appeal of Bucharest, its decision being definitive and irrevocable.

- the Council of UNBR, constituted as disciplinary court, in its plenary, except for the person involved, that judges the appeals formulated against the sentences pronounced by the Central Commission for Discipline, as court of first instance, and also that judges the appeals formulated against the conclusion throughout which against the lawyer was taken the measure of suspension of the practice of the profession until the final settlement of the case, in case of obvious and serious misbehavior. The rulings pronounced by the Council of UNBR, in the appeal stage formulated against the disciplinary decision of the Central Commission for Discipline (as court of first instance), can be challenged by the interested party with appeal at the contentious section of the Court of Appeal of Bucharest, its decision being definitive and irrevocable.

The situation due to which the refusal to register the lawyer the registry occurs may lead to the lawyer's radiation from the same Registry, for a period of one year, and if an assessment is made

[34] To be published on each bar association's webpage.

[35] To be published on UNBR's webpage.

[36] See article 72 and article 74 from the Law no. 51/1995 corroborated with article 260 and article 262 from the By-laws of the lawyer's profession.

regarding the consecutive committing of three or more misconducts in relation to the obligations stipulated in the Law no. 51/1995, the radiation may be ordered for a period up to three years. The decision of radiation is made public on the internet website of the bar association and of UNBR and may be challenged, according to the procedure that is applicable to the challenge of the bar associations' refusal to have the lawyer registered with the Registry.

With regard to the radiation measure, we consider it being improperly regulated, by reference to the effects it produces and being specific to the *suspension* institution. This is because the effects of the "radiation" for a period from one year up to three years are *temporary*; or, it is widely known the fact that the radiation has a *definitive*[37] characteristic.

E. Remuneration of the activities of legal aid and extra-judiciary assistance (article 68/4, article 68/11, article 68/12 newly introduced in the Law no. 51/1995 and article 69 modified through the Law no. 270/2010)

Although the assistance through the lawyer is a form of the public legal aid, this does not mean that the lawyer providing assistance does it *pro bono*. According to the article 30 paragraph (1) from the Law no. 51/1995 corroborated with the article 132 paragraph (1) from the By-laws of the lawyer's profession, for his/her professional activity the lawyer has the right to a retainer and to coverage of all expenses made in the procedural interest of the client.

Therefore, as same as the E.G.O. no. 159/2008, the Law no. 270/2010 stipulated that, for the legal aid provided, the appointed lawyer has the right to a retainer established by the judiciary organ, based on the nature and the volume of the activity deployed, but within the limits of the amounts agreed through the memorandum concluded between UNBR and the Ministry of Justice. The funds necessary for the payment of those retainers are ensured according to the provision of the article 26 paragraph (1), letter a) from the Law no. 146/1997 regarding the court fees.[38] As element of difference compared to the E.G.O. no. 159/2008[39], according to the Law no. 270/2010 the expenditures required by the functioning of the legal aid offices (services) within the bar associations are ensured from the approved and actually transferred amounts[40] allocated to the retainers due for the legal aid, out of which each bar holds 1% at the actual moment of payment of the retainer to the entitled lawyer[41].

---

[37] For exemplification, we remind that, from the date of cancellation, the legal personality of the commercial company *ceases*, with all consequences arising from this fact (see also St.D. Cărpenaru, *Romanian trade law*, 6th edition, revised and enlarged, Publishing House Universul Juridic, Bucharest, 2007, page 294).

[38] According to the article 26 paragraph (1) letter a) from the Law no. 146/1997 (published in the Official gazette no. 173 from July 29, 1997, with subsequent amendment and supplements), a quota of 75% from the amounts from the taxes collected from the retainers of lawyers, public notaries and of judicial executor, constitutes incomes to the state budget and is included distinctly in the income and expenditure budgets of the Ministry of Justice and Civil Liberties, of the Superior Council of Magistracy, of the High Court of Cassation and Justice, respectively of the Prosecutor of the High Court of Cassation and Justice, as follows: a 70% quota will be included in the income and expenditure budgets of the Ministry of Justice and Civil Liberties, out of which 50% shall be used to finance the public legal aid system and the legal aid system, and 20% will have as destination expenditure with investments and current expenditures.

[39] According to the article 69 paragraph (3) from the Law no. 51/1995, in the form modified by the E.G.O. no. 159/2008, it was stipulated that the funds necessary to the organization and the functioning of the offices of legal aid within the bar associations are covered from the amounts allocated for the financing of the public legal aid system and of the legal aid system, according to article 26 paragraph (1) from the Law 146/1997, with subsequent amendments and supplements, based on the proposals transmitted on a yearly basis by UNBR to the Ministry of Justice, at the drawing time of the project of the state budget, and the release of the amount approved would be accomplished according to the procedure established throughout a order (decision) of the Minister of Justice.

[40] The amount necessary to pay the retainers or, where appropriate, the remunerations for legal aid, are transferred, monthly, according to the law, in a separate account, opened by each bar association. The compliance by the bars of the destination for the funds thus transferred is making the object of the UNBR control.

[41] The payment of the retainer for the legal aid provided is made on a monthly basis, based on reimbursement documents.

With regard to the legal aid provided at the request of the organs of the local public authorities, the retainers are paid from the funds of those respective organs, within the limits of the amounts established throughout the memorandum concluded with them by each bar association, and in the lack of such a memorandum, within the limits of the amounts established by the memorandum concluded between UN BR and the Ministry of Justice. Otherwise, the article 69 paragraph (1) in the Law no. 51/1995, such it was modified, stipulates, *as general*, that the retainers for the legal aid granted in *any of its forms*[42] are established throughout this memorandum.

In fact, the payment of the retainer due to the lawyer appointed to provide legal aid is preceded by the following phases:

a). through the approving act of granting legal aid, the judiciary organ establishes a *provisional* retainer;

b). after the legal aid is provided, the lawyer prepares a *written report (memoir)*[43] regarding the effective performance;

c). the report (memoir) is subjected to the *confirmation of the judiciary organ*, which, based on the volume and the complexity of the activity deployed by the lawyer, as well as based on the length, the type and the particularities of the case, may order *the maintenance or the increase* of the initial established retainer;

d). the report (memoir) being confirmed by the judiciary organ is forwarded to the bar association in order for it to carry on *the payment formalities* of the retainer.

According to the article 42 in the current General Regulations for the organization of the bar associations' legal aid offices (services), adopted by the Decision no. 419/2008 issued by the UNBR Council, in the hypothesis in which the mandate of the ex officio lawyer being appointed is ceasing throughout the assurance of legal aid by a chosen lawyer, the lawyer shall make mentions in his/her report about the activities deployed, he/she shall submit the report to the file of the case and in copy to the file compiled by the legal aid office (service), and the competent organ shall decide over the amount of the retainer due to the ex officio lawyer for the assistance being already provided.

Although the E.G.O no. 159/2008 established in article 68/13 the issue regarding the remuneration of the *extra-judiciary* assistance, the Chamber of Deputies decided, inexplicably from our point of view, to eliminate those dispositions[44]. Or, the legal regime ruled for the remuneration of legal aid *cannot be applied by analogy* in relation to the extra-judiciary assistance. This is because, by hypothesis, the judiciary organ which, as shown, plays an important role in establishing the retainer for the legal aid, does not have the competence with regard to the remuneration of the extra-judiciary assistance.

Thus being said, there is en error in the provision in the current General Regulations for the organization of the bar associations' legal aid offices (services), adopted by the Decision no. 419/2008 issued by the UNBR Council, according to which, in the article 69, the payment of the retainers due to lawyers providing extra-judiciary assistance in accordance with the approval of the dean (president) is ordered by *the competent court throughout the conclusions that admit the legal*

[42] See *supra*, point II.1, letter A.

[43] According to the form approved by the Department for the coordination of legal aid (see *supra*, point II.2, letter B).

[44] The article 68/13 from the E.G.O no. 159/2008 had the following wording: "(1) For the extra-judiciary assistance provided, the designated (appointed) lawyer has the right to a retainer established according to the nature, the complexity and the volume of activity deployed, as certified throughout a written memoir of the lawyer, according the reimbursement form, as approved by the Department for the coordination of legal aid within UNBR.

(2) For the appointed lawyers, the coordinator of the Office for legal assistance (*legal aid* – our emphasis) of the bar association verifies and approves the report (*the memoir* – our emphasis) of the lawyer that provided extra-judiciary assistance and proposes to the bar association's council the amount of the remuneration, base don the particularities of the case, its type, work volume deployed and the quality of the assistance provided, within the limits established by the Memorandum concluded between UNBR and the Ministry of Justice".

aid, since the judiciary authorities or with judicial attributions[45] are excluded from the area of application of the extra-judiciary assistance.

Quite the contrary, we appreciate that the legal regime applicable to the remuneration of the extra-judiciary assistance, that is to be regulated in the By-laws of the lawyer profession[46], as well as in the new General Regulation for the organization of the bar associations' legal aid offices (services) must take into account the stipulations of the former article 68/13 from the E.G.O no. 159/2008.

Specifically, the payment of the retainer due to the lawyer that has been appointed to provide extra-judiciary assistance would be preceded by the following steps:

a). after having provided the extra-judiciary assistance, the lawyer prepares a *written report (memoir)*[47] regarding the services being effectively provided;

b). the report is subject *to verification and approval of the coordinator of the bar association's legal aid office (service)*, who, depending on the particularities of the case, the volume of work being deployed and the quality of the assistance provided, *proposes* to the council of the bar association the amount of the remuneration.

c). based on the proposal of the coordinator of the legal aid office (service), *the council of the bar association establishes the final amount* of the remuneration and proceeds with the retainer's *payment formalities*.

If against the lawyer a disciplinary sanction was taken, he/she will not be entitled to receive the retainer for the legal aid provided in the case for which he/she was appointed.[48] Although the legal stipulation is not explicit, obviously, the disciplinary misconduct must have a *relation* with the activity of providing legal aid in that respective case, in order to have the lawyer being denied his/her due retainer. Thus, according to the current General Regulations for the organization of the bar associations' legal aid offices (services), adopted by the Decision no. 419/2008 issued by the UNBR Council, the disciplinary misconducts may concern:

- the delayed accomplishment of the obligation to ensure the ex officio legal aid, the extra-judiciary assistance or the legal aid *stricto sensu* committed in mad faith or gross negligence (specific offense; if the delay caused serious consequences for the proper conduct of the case or the court hearing, it constitutes serious disciplinary misconduct);

- the failure in bad faith or negligence of the obligation to notify the legal aid office (service) and the competent court regarding the impossibility to attend or to secure replacement where the regulation allows it (specific serious misconduct);

- the failure of the obligation to provide the ex officio legal aid or the extra-judiciary assistance or the legal aid *stricto sensu*, without priory requiring the legal aid office (service) for his/her substitution and without communicating that fact to the competent body (specific serious misconduct in ideal concurrence with serious disciplinary misconduct);

- to provide the extra-judiciary assistance, the legal aid *stricto sensu* or the ex officio assistance without appointment through the prior issuance of the delegation by the legal aid office (service) (specific serious misconduct ideal concurrence with serious disciplinary misconduct);

- the unmotivated refusal to provide the ex officio legal aid or the extra-judiciary assistance or legal aid *stricto sensu* within the activity area for which an option was made (specific serious misconduct);

---

[45] See *supra*, point II.1, letter B.

[46] According to article II paragraph (1) from the Law no. 270/2010, within a 60 days period starting with the entry into force of this law, the By-laws of the lawyer's profession must be modified accordingly.

[47] In accordance with the reimbursement form approved by the Department for the coordination of legal aid (see *supra*, point II.2, letter B).

[48] In comparison with the E.G.O. no. 159/2008, in which reference was made to "the retainer for the particular case or for the activity deployed", in the Law no. 270/2010 the following phrase remains: „the retainer for ensuring the legal aid for which he/she was appointed, for that case".

- the omission to justify in writing the refusal to provide free or ex officio legal aid (specific offense);

- the omission to notify the legal aid office (service) regarding the change of the contact details or their malfunctioning (specific offense)

- the repeated refusal during a calendar month to provide assistance as a result of the appointment, even motivated (specific offense);

- the omission of the appointed lawyer to notify the legal aid office (service) within five days, regarding the change of the grounds that led to the admission or approval of the application for extra-judiciary assistance or for legal aid (specific serious misconduct);

- the failure to comply with the deadline for the submission of the report (specific offense; failure to comply with the deadline for the submission of the report resulting in influencing the repartition of the cases constitutes specific serious misconduct);

- the belated formulation, in bad faith, of a complaint, with less than 10 days before the deadline given in the case concerned with the complaint, when the deadline given in the case allows this (specific offense);

- the failure in bad faith of the obligation to prepare the written report requested, stated 10 days after the expiry of the deadline (specific serious misconduct).

According to the article 159 – correlated with the articles 80 and 92 – from the General Regulations for the organization of the bar associations' legal aid offices (services), adopted by the Decision no. 419/2008 issued by the UNBR Council, the lawyers have the obligation to return portions of the retainer, proportionally with the activity being deployed, to fellow lawyers substituting them or whom they substitute, the litigations in this respect being submitted to the arbitration of the dean (president) of the bar association.

Finally, we mention that, according to the article 68/4 from the Law no. 51/1995, the lawyer providing legal aid does not have the right to receive form the client or from the person he defends *any whatsoever remuneration or any other means of reward*, not even as expenses' coverage. As far as the reference to costs, of course that consideration was made towards the expenses advanced by the lawyer in the procedural interest of his/her client.[49] Although the legislator instituted this interdiction by referring only to the legal aid, we consider that it also applies – for the same reasons – to the extra-judiciary[50] assistance. Indeed, in agreement with the terminology used in the E.G.O. no. 51/2008 – "assistance through a lawyer", that may be legal aid or extra-judiciary assistance –, the legislator should have make reference either to "assistance", or to "legal aid or extra-judiciary assistance" and not exclusively to "legal aid".

III. Conclusions

The Law no. 270/2010 targets mainly to the correlate with the E.G.O. no. 51/2008 on public legal aid in civil matters, by regulating in detail the circumstances and the conditions for granting legal aid, as well as the organization of the activity of providing such assistance. From the perspective of the EC law, the new legislative act is to be placed within the sphere of regulations

[49] See article 28 paragraph (2) second thesis and article 30 from the Law no. 51/1995.

[50] Besides, according to article 157 of the General Regulation for the organization of the bar association's offices for legal aid adopted by the Decision no. 419/2008 of the UNBR Council, the lawyer providing legal aid, *extra-judiciary* assistance, special or ex officio, is not entitled to receive from the person being assisted or represented a remuneration or any other means to cover the costs, *except* the situation when a contract for *legal assistance* was agreed, with the notification of the Office for legal aid.

ruled at the European Union level, subsumed to the European Space for Freedom, Security and Justice, within the European legislation section reserved to the judiciary cooperation in civil matters.

ROMAN MARKS TO EUROPEAN LAW OF THE CONTRACTS GOOD – FAITH

LIVIA MOCANU[*]

Abstract

Beyond its political destinations, Europe is a civilization that each of its constituent parts has contributed its genius, over time. Or Rome, its original matrix, has sent her fundamental right. To what extent can it be another tool for reflection, for mutual understanding, sometimes of harmony, here's what seems to be necessarily raised, albeit briefly, by this favored means of communication and exchange, that it has always been the contract.

Since then the issue is explained by the need to have a contractual law in the middle of this community adapted to the needs of this new burning community, in Europe of the beginning of the third millennium. In fact, market opening has led to considerable development of trade between the EU-counties and this is exactly cross-border flow through contracts.

In this context we aimed to determine the role that it has one of the most important and current principles of law, that of good - faith in European contract law building.

It is known that good - faith is experiencing a very special embodiment in the contract, where it assumes many functions. She is the subject of many studies and analysis and is likely to grow rapidly in national and supranational rights.

Although contract law has evolved considerably, the theme is present and justified, under conditions which the Roman foundations remain. European contractual universe and its possible developments do not exclude but require an approach in terms of Roman law.

Methodologically, the paper is structured as follows: good - faith in contracts, the birth and evolution of the concept (ancient Rome, Middle Ages, modern and contemporary) and contemporary applications - abuse of right, information requirements, hardship principle.

Key words: *obligation, the consumer, unfair terms, abuse of rights, autonomy of will.*

1. Introduction

Roman private law is the most powerful element, because it was mostly applied, especially the law of obligations and contracts. Pragmatism has known the most beautiful success in contracting, indispensable to the development of trade in the bosom of a mosaic of communities that had, first of all its members to facilitate exchanges.

Today, in Europe at the beginning of the third millennium, the varieties of rights appears as an obstacle against trade and develop economic wealth. Multiple objects of creation and adjustments, contract law has evolved considerably, however, divergences between national laws impede the functioning of the internal market of contracts. To meet these needs are known actions to develop a European code of contracts, actions based on co-creation of a common legal culture.

The importance of our study is that it explains to what extent the roman legal approach still deserves to be considered in context with a profound mutation and the phenomenon of acculturation seems inevitable.

In this sense we proposed to determine the role that has one of the most important and actually principles of law, the principle of the good faith, in building the European contract law, knowing that good faith assumes more functions in contractual positions.

[*] Associated Professor, Ph.D., Faculty of Law and Social - Political Sciences, VALAHIA University of Târgoviște (e-mail: mocanulivia@yahoo.com).

Interpretation may have a role completely, modifying or extinguishing, merging these various issues sometimes. This could qualify for „good - faith chameleon".[1]

A significant part of work regards good - faith approach in historical perspective, especially since the concept is subject to all current attentions and is likely to grow quickly in the national and supranational rights.

The idea of this paper was born from the work of the „European contract law Committee" chaired by Ole Lando, which drafted the *European law principles of contract*, result of a concerted European action, if not common in this area

The project consists in presenting the „reflection of a pool of solutions to the problems of contract law" and a simple glance at the headings of *Principles* makes it possible to find a number of familiar concepts, existing already before our époque to the attention of magistrates and lawyers in Rome as well: good faith, consent, error, coercion, fraud, price, assignment of receivables, etc. penalty for failure, etc.

The structure and content of work is consistent with the theoretical requirements of the problem, but taking into account the practical realities of business

It is also in line with recent and intensive doctrinal, legal and jurisprudence perspectives concerns on accomplished actions and perspectives for developing an European code of contracts.

2. Paper content.

2.1. Good - faith in contracts

Cicero defined *as honesty in words* (*veritas) and fidelity (Constantia)* in commitments[2], good - faith is found in the various fields of private law, which reserves for it the specific rules that can be invoked and can produce legal effects[3].

However, it is recognized that good - faith experiences a very special embodiment in the contract. And more, good - faith meets new significance in the recent developments in contract law, presenting new situations of the old principles of law.

Good - faith in contracts is as objective behavior rule: not to harm the other party. In this sense be interpreted as art. 970 par. (a) of the Civil Code [Art. 1134 par. (3) Civil Code fr.] that: *agreements to be executed in good faith.*

The code meaning that the authors have given to the legal text, these provisions require the implementation of the contract in accordance with the commitments made under contract or under the given word. Although conflicting interests, with the finalized agreement, the parties have created a common law, which dictates a behavior consistent with the honesty required in good faith.

Fidelity task execution and contracting parties to cooperate are depicted as two aspects of good faith to enforce contracts[4].

But, invested in solving the cases regarding the sanctions of the behavior of the contracting parts, the courts appealed to this statutory text to interpret the behavior of the contracting parties during pre-contractual period of time.

In this context, most often based on lack of clarity artifice of the moment that separates the contract signing from the contract's execution, judge imposed contractual penalties in case of pre-

[2] Marcus Tullius Cicero, *De officiis*, L I, §.7., apud. Dimitrie Gherasim, *Good faith in civil legal relations*, (Bucureşti: Academy Publishing House of the Socialist Republic of Romania, 1981), 7.

[3] It is also the case for many applications of good faith in relation to real rights (subjekt of this study). See also, Felician Sergiu Cotea, *Good - faith. Implications of ownership*, (Bucureşti: Hamangiu Publishing House, 2007), 20-7.

[4] Dimitrie Gherasim, *op.cit.*, 78.

contractual breach of good faith or contrary, non-contractual penalties have been applied to stage an event of default of obligations during the contract[5].

However, while decisions take her into account, the lack of autonomy of good faith does not ensure full effectiveness[6].

Therefore, under the pressure of new social and economic phenomena that requires balancing the demands of fairness and legal certainty, the principle of autonomy with its subspecies: freedom to contract, the binding force of contract and relative effect of contract, is redesigned, it talks about becoming more than a new culture of contract[7].

Coupled with another concept of maximum generality, this also justifies the intervention on the contract, namely: public order, good - faith proves its effectiveness. As a rule it limits freedom of contract and autonomy of will by default.

2.2. The birth and evolution of the concept

2.2.1. Rome

At Rome, until around the third century before Christ, in an era of change less frequently, it was necessary to conclude the contract, to respect the solemn forms, verbal or written. With time, geographical and demographic expansion of the Roman Empire is increasing a disorder in his law, especially in the field of contract.

Relations with the peoples with different traditions, not Roman citizenship status, could not be conducted in the *ius civile*, the privilege of citizens to the third century after Christ, when by an edict of Emperor Caracalla, seems to grant citizenship to all free peoples of the Empire; this makes it indispensable rules for all. All of them are *ius gentium*, less formalistic, no way religious.

In the context of trade with the pilgrims, rapidly growing, area of business is preferred. Generated by practice, this right is reinforced by the edicts of praetorians and provincial governors, the imperial constitutions and jurisprudence.

Emergence of the concept of good - faith is the essential foundation and Greek thought influence its consecration[8]. In fact, philosophical thought practiced by Greek allows Romans to reach the fundamental concepts and introducing the notion of good - faith in relationships of obligation and other innovations of classical Roman law, which remain the basis for modern legal systems, would undoubtedly have been possible without the Greek inspiration.

This new conception opens the contractual system to ethics of fair and equitable contract, the latter after Cicero's dream, linking all people, citizens or pilgrims, in the *boni viri* universal society, appertaining to the people well intended.

Bona fides obliges the judge to decide who should answer each other and on this basis, *ius gentium* introduces a fundamental principle in contractual matters: consensualism.

Thus, the contract is distinguished from consensual agreement as strictly as is sanctioned by an act of „good - faith", allowing discretion of the judge unknown until then[9].

---

[5] Varied in this respect is the French law regarding penalties for fraud and hidden defects in material or means available to the debtor's fingertips - the victim of lack of information. For more, see: Y. – M. Serinet, *Erreur et vice caché : variations sur le même thème,* in *Le contrat au début du XX – e siècle, Études offertes à Jacques Ghestin,* (Paris: L.G.D.J., 2001), 789; M. Fabre – Magnan, *De l´obligation d´information dans les contrats, Essai d´une théorie,* (Paris: L.G.D.J., 1992), 425.

In such an action formula it is prescribing to the judge to seek - to assess the value of the conviction, all it has to give and accomplish as good - faith; whether it allows to know if the behavior of one of the parties is disproportionate to the attitude of a „loyal man". Moreover, good - faith is a means to temper the rigidity of contractual terms, the judge, in his interpretive mission, also using equity.

To illustrate the importance of the concept in Rome as well as its limitations, we created the site as a reference base of information, misuse of law and improvidence.

For the first issue, the example of the sale contract, the archetype of consensual contract of good - faith can better outline the proper function of good - faith in the Roman law, and in particular its completive role. The safeguards put into account of the seller, the Roman law required it to inform the buyer of any event that could disrupt its newly acquired right.

Abuse of law draws attention, as some of the most important roman provisions were almost taken by some major legal systems, such as the German system. Thus:

- a party can not acquire a right through dishonest conduct;
- loses its right - is German *Verwirkung* - if it does not run his own service, etc.

In connection with improvidence, Roman law has not established that such lack of foresight theory. Few passages of lawyers, such as Ulpianus, refer to it. However, certain writings of Cicero, Seneca and St. Augustine testify the existence of Rome, in the absence of specific clauses, recognition of the principle of *rebus sic stantibus*.

For example, the guarantee against eviction arises from simple contract term value. Parties are free to use it or not. However, classical jurists admit appeal to the action of "good - faith" open automatically to the purchaser, if the seller has volunteer sold a thing whose property or free and undisturbed possession by the buyer may be disturbed, because there is violation of good – faith obligations[10]. Therefore, the action can be exercised whenever the seller will refuse to insert into a contract stipulation regarding the guarantee of eviction. It is true also for the guarantee against hidden defects. Admitted first in the archaic *mancipatio*, she current becomes a current clause in the sales contract in the classical age. The action exercised by the buyer is admissible whenever the action does not meet the specifications announced by the vendor[11].

His defraud is similar to a fraudulent action, but buyer must demonstrate his bad faith.

Thus, with the edicts issued by edili curuli (*aediles curules*) in the II-I centuries before JC, it has the means of action designed to push the pressure to compel the seller to accept a contractual guarantee clause of hidden defects.

2.2.2. Middle ages

Jurists of the XII-XIV century perceive the concept of good - faith after three different approaches. First, I see him linked to the given word covenant. Force of the given word is explained by appealing to the concept of natural obligation that exceeds the requirements of the law. On the other hand, good - faith and fairness seem to oppose such lawyers, as in Rome, fraud and injustice. Finally, they consider that the first may involve unforeseen obligations in the contract, but an honest man respects it when concluding an agreement.

For a long time, the authors have never made the connection between nature and substance of the contract, on the one hand and good - faith and fairness on the other[12]. They study good - faith in terms of morality. Being „right rules of conscious life"[13] it is inherent to acts done in society, particularly in the contract; thus concluded that all contracts are good - faith, but this approach

reaches prohibit enrichment without cause or deception arising from endangering natural law and equity, as was the case in Rome.

Actual efforts of lawyers to systematize the concept good - faith in terms of enrichment without cause, have strongly contributed to the spread in different legal systems.

2.2.3. Modern times and modern ages

French Civil Code of 1804, greatly influenced by the roman concepts and techniques, did not give a true devotion to the good – faith[14]. The abandonment of the good – faith necessity strongly influenced the doctrine that has almost forgotten the concept. It is clear that the drafters of the Civil Code did not want to make this a general principle, beyond contractual matters. Article 1134 has only one interpretative purpose of the conventions and is merely a tool in the hands of judges[18]. Its importance is therefore limited.

This preference is mostly given to the principle of autonomy of the will which includes strong legal thinking in the nineteenth century and first half of the twentieth century[15].

Involving the binding force of contract and its intangibility, it leaves little place for the good - faith as a principle of law correction.

The Civil Code interpretative doctrine in the nineteenth century refers to three main ideas on the good - faith.

The first is the rejection of the Roman distinction between strictly law contracts and agreements as good – faith.

The second idea links the good - faith with the equity, that should dominate the in the interpretation of contracts.

A third idea: good - faith can allow the judge to make a value-judgment on the parties' conduct.

Between the two wars, authors such as Demogue or Ripert, begins its return to the contractual sphere[16].

According Demogue she serves as the foundation for the cooperation obligation imposed on each party, which should aim to achieve contract purpose as well[17].

Ripert believes that the reference to the good - faith is the means used by the French law to include a moral rule in the contractual relationship[18].

In *usus modernus pandectarum*, German law continues to distinguish between agreements as strictly law and contracts of good - faith.

This dichotomy will remain until age of Pandects School in the late nineteenth century.

Contracts for good - faith were considered more flexible, the judge having a broad discretion for interpretation here.

Based on the roman concept of *bona fides*, German doctrine of the last century has developed its own theory about the good – faith.

The German authors have proposed for good - believe two terms, namely: *Treu und Glauben* - meaning loyalty and trust as required in legal acts and *guter Glaube* with the meaning of as wrong and excusable faith, protected as such, equivalent to a right[19].

Under these two forms good faith is founded on fair and honest intention.

[17] R. Demogue, *De la déclaration de volonté*, (Pichon, 1902), 351 apud. Tekla Tibád, *op.cit.*, 40.

[18] G. Ripert, *La règle morale dans les obligations civile*, (Paris: LGDJ, 3e éd., 1935, nr. 6) 11, apud. Tekla Tibád, *op.cit.*, 40.

[19] Dimitrie Gherasim, *op.cit.*, 26.

Going further than his French counterpart, the German Civil Code, BGB, reappraise, at § 138, the notion of contractual morality, resumed from the Roman conceptions. Under its provisions, is void "any legal act contrary to morality".

In particular is invalid any legal act whereby a person, exploiting the need, ease or other non experience, promises or grants, either to himself or another person in return for such a benefit, of economic benefits exceeding the value of the benefit to a point as well - taking into account the circumstances - these economic benefits are disproportionate to the benefit of a shocking manners[20].

Cicero's vision is clear here. Also, under § 157 and 242: "Contracts must be interpreted as required by good - faith, considered permitted uses in business" and "the debtor must provide services as required by good – faith considered permitted uses in business".

These rules allow the judge to guide the interpretation of the contract as required by good – faith *(Treu und Glauben)*, but also to revise or to rebalance the name of fairness[21].

German law has remained more pragmatic than the French law, its more objective approach requires Parties to behave honestly, whether a failure or an action.

But here the emphasis is on the declared will of contractors, contrary to French law, seeking their real intention, uploading in this way the good - faith with a dose of subjectivity.

Whatever the system, contemporary judge may, as in Rome, to interpret the contract using the good - faith to determine the content or complete it.

It is a proof of the continuity of Roman law because „the idea of creative and corrective function of the *bona fides* remained vital and operated in used German law"[22].

German doctrine has influenced many legal systems, such as Austria, Switzerland, Holland or Portugal.

Dutch Civil Code in 1992 goes away as good - faith not only completed the obligations arising from the contract here, it may also modify and extinguish them[23].

The principle of good faith does not receive equivalent recognition in *common law* systems. Moreover, in English, *good faith* only denotes a state of mind: will to act honestly and fairly. It is a subjective concept: a person should not exercise a way of knowing she would have neither a benefit only with the intent to harm the other party.

In retaliation, *fair dealing* means that to act with loyalty is an objective criterion[24].

It should be noted that in the *common law*, the existence of a right is intimately linked to that of a procedure as in Roman law: "*there is a right if there Is a Remedy*": absence of good - faith is penalized by the denial of appeal as discretion doctrine of *estoppel*[25].

In Romanian law, the Civil Code does not contain a definition of good - faith but attached it to various forms of manifestation in the legal relations

According to art. 970 par. (1) of the Romanian Civil Code (precise transposition of the art. 1134 par. (3) of the French Civil Code), the good - faith means the obligation of loyalty and cooperation that requires the parties to the contract execution[26].

The New Civil Code expressly includes a text of good faith. Thus, according to art. 14 par. (1): „Natural and legal persons involved in civil legal relations must exercise their rights and perform its obligations in good faith, in accordance with public order and morals".

UNIDROIT[27] Principles and the Lando Commission[28] recognize the interpretative function good - faith. Rules of interpretation refer to this latter but also to other concepts, such as the common intention of the parties, uses, and their behavior. It also takes into account their legitimate expectation. However, research of the real will of the parties is less marked here than in some national legal systems. The concept is still larger than each of its applications.

Its purpose is to promote collective standards of correction, loyalty and reasonable in economic transactions. It complements the special provisions of the Principles and even get ahead of them when a limited application would lead to an unjust manifested result.

2.3. Contemporary illustrations

2.3.1. Abuse of law

Expansion of the role of good faith regarding the limiting of a right is observed mainly by the concept of abuse of rights whose applications multiply.

Many legal systems recognize that, using a contractual provision to its foreign purpose or its economy, the lender commits an abuse of law[29]. But bad faith may also result from the way that you use the law, for example, by malice or bad will.

Finally, the abuses can be found as a result of the use of law can achieve, especially when it involves a very large imbalance between rights and obligations of the parties.

In French law, based on doctrine and jurisprudence hesitations, is difficult to draw a clear border between the abuse of law and good - faith, undoubtedly related, first because hardly seems to be only a special application of more general principle of good - faith, even if it has acquired a certain autonomy.

In Germany, the right of a party may be limited, even off, if its performance is analyzed in an abuse, which was recognized in the assumptions, all inspired by Roman law.

Thus BGH, the German Federal Court of Appeal, vigorously interpreting § 138 of BGB, allows to revise the „continuing contract produce results intolerable, incompatible with the law and justice".

Anglo Saxon technique, of the *estoppel* prohibits to a person, who by his statements, his actions or his attitude, has led another to change its position to its detriment or benefit of the first one, to profit of own contradictions at the expense of other parties[30].

A person may be proud with a right for a valid reason: but this right should be protected in court if its foundation is questionable, *fortiori* if no reason justified it. Resumed by the international law, the concept of *estoppel* is the mark idea of a good - faith.

In the Roman doctrine it holds that the abuse of rights may include a very wide range of acts committed in the exercise of civil rights being contrary to good faith.

Thus: „... the exercise of a right is not abused when it is based on good faith; breach of good faith in this area means abuse of law".[31]

At the normative level, the New Civil Code provides in art. 15 that: „No rights can be exercised in order to harm or injure another or in an excessive and unreasonable, contrary to good faith", abuse of law involving such breach of good faith requirements.

[27] Capitolul 4 relating to interpretation – art. 4.8.

[31] D. Gherasim, *op.cit.,* 114.

In this area, Lando Principles repeated a number of current provisions implemented in various European rights.

So, the good - faith leads to interdict the forced execution of a contractual obligation, if includes unreasonable effort or expense for the debtor[32].

The principle of good - faith also applies to situations where one party creates complications for no reason.

Also, as in Rome, if someone has made statements or demonstrated behavior which acted on the basis of the contractual partner, is deprived of his right, if then take a position inconsistent with his past conduct[33].

2.3.2. Information

Rights enshrines the current legal framework, for example, guarantees completing the roman sale contract, above mentioned, developing more precise information obligation incumbent on the parties, based generally on the principle of good - faith.

This contract allows either complete or significantly change of its contents.

Thus, in the French law, the completive function in the strict sense [*stricto senso*] is lightened by doctrine and jurisprudence.

The judge has full power to impose contract obligations as the information, justified his approach by the principle of good – faith[34]. Even has the possibility to use the concept of equity to compel a party to provide information.

Some authors see, in addition, the guarantee against hidden defects, a consecration of the obligation to clarify the contractor on the not apparent defects of item[35].

Under German law, the buyer, properly informed - and it especially focused, but not limited to consumers - they can decide whether they want to acquire goods, even if there not in the best condition.

Contractors can not negotiate price but only as subject to a very precise and detailed information on the characteristics of the respective goods. The good - faith serves to judge also to define additional modalities of contract performance; so it may require from a party the information obligation (Aufklarungspflicht) when it was not expressly provided for by the parties[36]. In this area, the impact of the BGB reform in 2002, widely attributed to a willingness to conform to the spirit of European directives, had a special weight, as evidenced in particular the right of sale. Indeed, agreement on the quality of goods sold consists among others in information of the buyer about their characteristics. Also, the *common law*, as under French law, parties are required to change any information likely to influence their consent, but this is tempered by the fact of mutual obligation, to inform.

Finally if it is reasonably possible to obtain the information requested, the need of information doesn't provide the right to passivity.

Pre-phase fault information is often considered a vice of consent, meaning a reluctance fraudulent[37]. English law doesn't know the general need for information, only as statutory exception. The position was recently confirmed by the House of Lords refusing to admit a pre- contractual information requirement.

The duty to inform gained importance[38] in the Romanian law, finding a maximum application to the area of consumer protection.

It is found not only in regulating framework established O.U.G. no. 21/1992 on consumer protection[39], but also in various sector regulations such as those relating to contracts concluded away from business premises[40], the distance contract[41], insurance[42], credit for consumption[43] or tourism[44], etc.

European principles developed by the Lando neclect not more completive function of good - faith, and Article 4107, relating to fraud, provides a special obligation to information arising from this.

2.3.3. Lack of foresight

The systems that allowed a good general principle of good - faith, present throughout the contractual process, supports today the lack of foresight; Judges can then consider that a contractor of good - faith is committed under such circumstances, but it would not be done in other.

In contrast, rights hostile of recognition of general principle values of good - faith refuses to devote revising the contract for lack of foresight, in the name of respect for the binding force of conventions.

However, this objection must be refined by other techniques, the judges, particularly French judges, acknowledge implicitly the theory of the lack of provision.

Taking into account the theory of lack of provision in the contractual matter is due, in part, to the German doctrine and jurisprudence.

Under inflation that followed after the First World War, judges have wade interpreted the general concept of force majeure to include that of „economic impossibility" to free the debtor of commitments.

In addition, there is a school of thought, where the debtor is subject to benefit only in the limits of the good - faith, thus reviving the medieval jurists information.

Jurisprudential consecration of unpredictable theory, founded on the principle of good - faith, is maintained up to the reform of the BGB in 2002.

Currently, to revise the contract if circumstances change is legally permissible, regarding to § 313 BGB to disturbances on contractual basis.

German conception regarding the theory of lack of foresight has influenced many countries like the Netherlands, Portugal and Italy.

In the French civil law was developed the concept according to which the judge is entitled to amend the contract and in some cases unforeseen by the law, if during the execution of the agreement under certain unpredictable circumstances which broke the balance of the successive regular benefits, obligations of either party becomes very burdensome[45].

One of the first decision of the Commercial Court of Cassation Chamber of 3 November 1992 establishes indirectly an obligation to renegotiation of the contract when it became disadvantageous to one party from unforeseen economic circumstances[46].

Resorting to the notion of good - faith, the French judges accept the default theory of lack of foresight.

English law doesn't know the theory of unpredictability.

However, other means, admits that a change of unforeseen circumstances beyond the control of the contractual parties may amend the content of the contract at the point of making impossible his execution.

Founded on the notion of *frustration of the contract* contained an implied term, cancellation of the contract in case of impossibility of performance under a change of circumstances is justified by reference to the reasonable man.

English law also enshrines a notion that is no stranger to the idea of good - faith. Among other things, it grants the termination of the contract, requested by one party, in case of *economic duress*.

In Romanian law, the rule is binding power of the contract under Art. 969 par. (1) Civil Code: „legal agreements have the force of law between contracting parties". Excepting the principle of binding force of contract the doctrine accepted the revision of the legal act due to the breaking of the contractual balance as a result of changing of the circumstances agreed by the parties at the conclusion of the legal act[47].

The New Civil Code expressly states hardship principle in art. 1271.

Under these provisions the parties are obliged to negotiate in order to adapt the contract or its termination if enforcement becomes excessively onerous for one party because of a change in circumstances.

Then the text gives the possibility to the judge to adapt the contract to distribute the benefits equitably between the parties and losses resulting from changing circumstances, if the parties do not agree in a reasonable time [art. 1271 par. (3) letter a)].

Lando principles provide, in Article 6111 that the parties are obliged to fulfill obligations and to renegotiate „to adapt or end their contract if the performance becomes onerous for one of them by virtue of a change of circumstances."

Thus, we can say that the theory of unpredictability admitted by *Lando principles* bears the imprint of the good - faith.

3. Conclusions

Most contemporary authors refused to define the good - faith.

Finally, its ability to adapt to different situations is difficult to reconcile with an acceptance that limits it to a more rigid frame. In addition such a definition would limit excessive the scope.

---

Therefore, we have to return to Rome and Cicero's broad conception.

However, the polymorphism of good - faith compelled the doctrine, accusing finally this ancient concept because too moralistic approach, the other terms used to better identify the realities they cover.

Its use, combined with the equity, is surprising a little, regarding to the Roman and medieval history, because the two concepts are undeniably common foundations and frequently overlap, as already pointed out for Rome.

Still other elements were juxtaposed to the good – faith.

It is proposed triptych loyalty, solidarity and fraternity, they relied on the principle of proportionality or equilibrium contract[48].

But the base remains the more general concept of good - faith, often enshrined in the texts, on which resolves the question whether all other subdivisions of doctrine evolved, just as good - faith integrates these different aspects.

Obviously, *Bona fides* of the Romans is an open content; she always carried a correction effect of rigidity of the legal and contractual rules.

Its use today as over two thousand years is proving its full contribution.

It thus appears as a fundamental concept and we believe that the future research will have to deepen this topic. As well *UNIDROIT* and the *Lando Principles* give an exceptional imperative value. Moreover, its consecration dominants the European plan making the good – faith one of constitutive element of eventually *ius commune*.

JURISDICTION RULES APPLICABLE TO CONTRACTS CONCLUDED BY ELECTRONIC MEANS

MIHAELA GIURANIUC (TUDORACHE)[1]

Abstract

The purpose of this paper is to analyse the legislation, doctrinal opinions and relevant case law regarding the rules of jurisdiction applicable to the cases arising from contracts concluded by electronic means (e-contracts). Considering the elements of foreign origin that often affect this type of contracts, and the lack of a global agreement regarding international jurisdiction and recognition and enforcement of judgements, the objectives pursued by the author are:

- identification of rules of jurisdiction applicable to the cases arising from e-contracts,

- identification of problems that could arise from law's interpretation,

- issuing of the de lege ferenda proposals.

At European Union level, according to the provisions of Brussels I Regulation, as a general rule, actions against a person domiciled in a Member State shall be brought to the courts of that State.

According to the same Regulation, cases resulting from a contractual relationship may be decided by the courts of the place of performance of the contractual obligation. In lack of specific jurisdictional rules, the above rules apply to B2B e-contracts. In the case of B2C e-contracts, the consumer can bring proceedings either before the courts of the Member State of his domicile or before the courts of the Member State of the defendant's domicile. The consumer can only be sued in the Member State of his domicile. The rules protecting the consumer apply if the trader 'directs its activities' to the Member State in which the consumer is domiciled.

If the defendant is not domiciled in a Member State, the international jurisdiction is determined, in each Member State, according to its national rules of international private laws.

Key words: *jurisdiction, choice of law forum, international private law, business to business contract, consumer to business contract*

1. Introduction

This paper analyses the jurisdiction rules applicable to e-contracts, where no express choice of forum is stipulated in the contract. Additionally, the paper identifies the limits within which parties can agree upon the jurisdiction applicable in case of a dispute. The paper focuses on the jurisdiction rules applicable to both business to business (B2B) and business to consumer (B2C) trade relations.

We can identify two categories of electronic commerce: on the one hand, we talk about trade in goods and services and, on the other hand, we talk about selling electronic materials (software, images, voice, text, etc.).

In the first case, the Internet is used as a medium for communication and sometimes as location of concluding the contract, while in the second case the Internet is also the place where the contract takes place. In other words, while in the first case the contract is concluded by electronic means, although the execution takes place outside the electronic environment, in the latter case the entire transaction, from the moment an offer is made and until the obligation in question is executed, is located on the same network.

The importance of the theme results from the difficulties to establish the "place" on Internet, in absence of an express choice of jurisdiction by the parties. The subject of the paper is important both from the perspective of scientific research and from a practical perspective, as the global

[1] Ph.D candidate, Academy of Economic Studies Bucharest (email: mihaela@tudorache net)

Internet enabled markets have gradually expanded, amounting today to a significant share of total world's trade.

The research method starts from analyzing comparatively the legal provisions, relevant case law and doctrine in this field in Romania, EU, and USA. It further outlines the particularities of how the "*Bruxelles I Regulation*" could be applied in Romania, and describes the status of research in the field in in Romania. Based on this foundation, the paper provides analyses and conclusions of the author which are meant to cover the missing parts in the current Romanian doctrine.

2. Determining jurisdiction in absence of choice of jurisdiction clause - contractual relationships of type B2B

Jurisdiction in international private law is the ability conferred by law to the court of a State, in rapport with the courts from other States, to solve the civil law suit with an extraterritorial element[2].

Traditional international private law takes into consideration the geographically factor when determining the jurisdiction. If one party wants to sue the other party would check where the defendant is domiciled or where it is its place of establishment.

2.a Romania – Member State of the European Union

At the European Union level, there is a constant process of regulation in order to harmonize the national provisions of Member States on the rules of jurisdiction and simplify the recognition and enforcement of judgments in civil and commercial matters.

In 1968, the Member States ratified the Brussels Convention regarding jurisdiction and enforcement of judgments in civil and commercial matters[3].

Later, in 1988, the Member States together with the AELS States signed the Lugano[4] Convention, based on the Brussels Convention.

In 2000, Council Regulation (EC) No. 44/2001 on jurisdiction and the recognition and the enforcement of judgments in civil and commercial matters was adopted, and entered into force on the 1st of March 2002 (Brussels I Regulation)[5]. Brussels I Regulation is the matrix of European judicial cooperation in civil and commercial matters. It lays down uniform rules to settle conflicts of jurisdiction and facilitate the free circulation of judgments, court settlements and authentic instruments in the European Union[6]. It replaced the 1968 Brussels Convention on jurisdiction and the enforcement of judgments in civil and commercial matters, as amended by several conventions on the accession of new Member States to that Convention.

EU regulations are binding as adopted, without needing their implementation by Member States.

The Brussels I Regulation is directly applicable throughout the European Union except for Denmark. The European Union and Denmark signed an agreement on jurisdiction, recognition and enforcement of judgements in civil and commercial matters which ensures that the provisions of the Brussels Regulation are enforced in Denmark as of the 1st of July 2007[7]. The Lugano Convention of

[7] JO L 299, 16.11.2005, p. 62.

1988, which regulates the same field, is mandatory for the Member States, including Denmark, on the one hand, and Iceland, Norway and Switzerland, on the other side. This Convention shall be replaced in the near future with an agreement concluded by the European Union, Denmark and the states mentioned above8.

The Brussels I Regulation applies in civil and commercial matters irrespective of the level of the court.

The provisions of the Brussels I Regulation identify only the Member State in which the courts have jurisdiction. The specific court in its territory is to be subsequently determined by the national procedural law of that Member State.

In the absence of a choice of jurisdiction clause, Article 2 of the Brussels I Regulation states *a fundamental rule* according to which persons domiciled in a Member State shall, whatever their nationality, be sued in the courts of that Member State: *the courts of the defendant's domicile have international jurisdiction*.

From this fundamental rule there are some exceptions: rules of special jurisdiction (alternative grounds of jurisdiction – Article 5; derived jurisdiction – Article 6; protective jurisdiction in matters relating to insurance contracts, consumer contracts and individual employment contracts – Articles 8-21), rules of exclusive jurisdiction (Article 22) and the rules on prorogation of jurisdiction (Article 23-24).[9]

In order to determine whether a party is domiciled in the Member State whose courts are seised of a matter, the court shall apply its internal law. If a party is not domiciled in the Member State whose courts are seised of the matter, then, in order to determine whether the party is domiciled in another Member State, the court shall apply the law of that Member State (*Article 59 of the Brussels I Regulation*).

But, in e-contracts, often happened that the trader is an association of persons, even if not legally established.

For defendants who are company or other legal person or *association of natural or legal persons*, courts determine the domicile of the defendant by applying the provisions on *Article 60 of the Brussels I Regulation*, which stipulates that a corporation or other legal person is domiciled at the place where it has is:

(a) statutory seat, or

(b) central administration, or

(c) principal place of business.

In the United Kingdom and Ireland "statutory seat" means the registered office or, where there is no such office anywhere, *the place of incorporation* or, where there is no such place anywhere, the place under the law of which the *formation* took place.

To determine whether *a trust* is domiciled in the Member State whose courts are seised of the matter, the court shall apply its rules of private international law.

From this perspective, most of the jurisdiction rules of the Brussels I Regulation applies only when the defendant is domiciled in a Member State. If the defendant is not domiciled in a Member State, the Brussels I Regulation refers to national law (subsidiary jurisdiction), except for the cases where the courts of a Member State have exclusive jurisdiction in accordance with Articles 22 or 23 of the Brussels I Regulation or in the case of certain types of disputes on specific areas (e.g., Community trademarks).

---

[8] JO L 339, 21.12.2007, p. 1.

[9] Decebal Adrian Ghinoiu, *General rules of jurisdiction under the Brussels I Regulation* (Romania: Wolters Kluwer, 2009), Studii şi Cercetări Juridice Europene, Volumul Conferinței Internaționale a Doctoranzilor în Drept organizată de Facultatea de Drept şi Ştiințe Administrative din cadrul Universității de Vest din Timişoara şi Centrul European de Studii şi Cercetări Juridice Timişoara 16-18 iulie 2009, 13

In *Group Josi Reinsurance Company SA v Universal General Insurance Company* (Case 412/98), the European Court of Justice ruled that the jurisdiction rules of the Convention are in principle applicable where the defendant has its domicile or seat in a Contracting State, even if the plaintiff is domiciled in a non-member country. It would be otherwise only in exceptional cases where an express provision of that convention provides that the application of the rule of jurisdiction which it sets out is dependent on the plaintiff's domicile being in a Contracting State.[10]

In *Andrew Owusu v N.B Jackson* (Case C-281/02), the European Court of Justice held that the designation of the court of a Contracting State as the court having jurisdiction on the ground of the defendant's domicile in that State, even in proceedings which are, at least in part, connected, because of their subject-matter or the claimant's domicile, with a non-Contracting State, is not such as to impose an obligation on that State so that the principle of the relative effect of treaties is not affected[11].

As we mentioned above, the Brussels I Regulation establishes a number of special jurisdiction situations, some of them being relevant to e-contracts concluded B2B.

Thus, according to Article 5 of Brussels I Regulation, a person domiciled in a Member State may, in another Member State, be sued:

(1) *In matters related to a contract* – in the courts for place of performance of the obligation in question (*Article 5.1 a*). In *SPRL Arcado v SA Haviland* (Case 9/87), European Court of justice has been retain in the grounds: "as the court held in its judgment of 22 march 1983 in case 34/82 (martin peters bauunternehmung gmbh v zuid nederlandse aannemers vereniging ((1983)) ecr 987) the concept of "matters relating to a contract" serves as a criterion to define the scope of one of the rules of special jurisdiction available to the plaintiff . Having regard to the objective and the general scheme of the convention, it is important that, in order to ensure as far as possible the equality and uniformity of the rights and obligations arising out of the convention for the contracting states and the persons concerned, that concept should not be interpreted simply as referring to the national law of one or other of the states concerned. Consequently, the concept of "matters relating to a contract" is to be regarded as an independent concept which, for the purpose of the application of the convention, must be interpreted by reference principally to the system and objectives of the convention in order to ensure that it is fully effective ." [12]

Unless otherwise agreed, the place of performance shall be:

(a) In the case of a sale of goods, the place in a Member State where, according to the contract, the goods were or should have been delivered;

(b) In the case of services, the place in a Member State where, according to the contract, the services were provided or should have been provided. If subparagrapf (b) is not applicable, then subparagraph (a) would be.

The practical application of these provisions in sale-purchase e-contracts or licensing of intangible products (e.g., software) concluded by electronic means may encounter several difficulties, in absence of a legal definition for goods and services.

(2) *With regard to a dispute arising out of the operations of a branch, agency or other establishment* – in the courts for the place in which the branch, agency or other establishment is situated (*Article 5 point 5*)

(3) A person domiciled in a Member State may also be sued (*Article 6*):

[12] Eur-lex, accessed February 19, 2011, http://eur-lex.europa.eu/LexUriServ/LexUriServ.do?uri=CELEX:61987J0009:EN:HTML

• where he is one of a number of defendants, in the courts for the place where any one of them is domiciled, provided the claims are so closely connected that it is expedient to hear and determine them together to avoid the risk of irreconcilable judgments resulting from separate proceedings;

• as a third party in an action on a warranty or guarantee or in any other third party proceedings, in the court seised of the original proceedings, unless these were instituted solely with the object of removing him from the jurisdiction of the court which would be competent in his case;

• on a counter-claim arising from the same contract or facts on which the original claim was based, in the court in which the original claim is pending;

• in matters relating to a contract, if the action may be combined with an action against the same defendant in matters relating to rights *in rem* in immovable property, in the court of the Member State in which the property is situated.

In case of special jurisdictions, only the plaintiff can choose the special jurisdiction of the court. In the same sense ruled the Cour de Cassation in *Codevlanes v. Caruel Case*[13].

2.b Romania - Outside the European Union

In international private relations, outside the European Union, Law no. 105/1992 on the regulation of private international law, as well as the international conventions still apply.

As a consequence of Romania's accession to the European Union, the national rules on international jurisdiction (Articles 148-157 of Law no. 105/1992) – containing "exorbitant" grounds of jurisdiction – will determine the international jurisdiction of the Romanian courts, on one hand, *ratione personae*, in cases where the defendant is not domiciled in a Member State – save in cases of exclusive jurisdiction and prorogation of jurisdiction provided for by the Brussels I Regulation -, and, on the other hand, *ratione materiae*, in cases involving matters which are not subject to uniform rules on jurisdiction provided for by the Brussels I Regulation or by other Community regulation enacted in the field of private international law[14].

According to Law no. 105/1992, the Romanian courts are competent to solve the processes between a Romanian party and a foreign party, or only between foreign parties, be they natural or legal persons. The meaning of term "foreign", will be established by Romanian national law (Urgent Governance Ordinance 194/2002).

The Law no. 105/1992 listed some situations in which the competence of the Romanian courts are exclusive, none of them being relevant to jurisdiction rules applicable to e-contract. In other raports with element of extraneity, the competence of Romanian courts are alternative, that means that a court from other country could be competent at the same time. Some exemples of alternative competence of Romanian courts relevant to e-contracts are:

• The defendant or one of the defendants has his domicile, residence or goodwill in Romania. If the foreign defendant has no known address, the request will be submitted to courts from the plaintiff's domicile or residence in Romania;

• The headquarters of the defendant, a registered legal entity, is in Romania. To the purpose of this article, any foreign legal person is deemed as established in Romania if it has in Romania a branch, a subsidiary, an agency or a representative;

• The place where an obligation stemming from a contract has been formed or has to be executed, even in part, is in Romania;

• Lawsuits between foreigners as if they have expressly agreed, and legal relations concerning the rights they may have in connection with property or interests of the people from Romania;

[13] Curia Europa, accessed February 19, 2011, http://curia.europa.eu/common/recdoc/convention/gemdoc2005/pdf/36-u-fr-05.pdf

[14] Decebal Adrian Ghinoiu, *above 11*, 22

• Any other lawsuits stipulated by law.

Also, the Article 153 of Law no. 105/1992, established a *subsidiary competence* of the Romanian courts: if a foreign court declines its jurisdiction over an action brought to it by a Romanian citizen, then it can be brought to the court in Romania which shows the tightest relations with the process.

If, by agreement, the parties have submitted the dispute between them to a certain court of law, the chose court will be vested with competent jurisdiction, unless:

• The court is a foreign court and the dispute falls under the exclusive jurisdiction of a Romanian court;

• The court is a Romanian court and one of the parties makes evident that a foreign court shall have exclusive jurisdiction.

If multiple Romanian courts have jurisdiction under the provisions of Law No. 105/1992 and it cannot be determined which of them is entitled to solve the case, the action shall be directed according to the rules of material competence to the District 1 Court from Bucharest or the Municipal Court of Bucharest.

Competence of the Romanian courts established under Art. 148–152 of Law No. 105/1992 is not invalidated by the fact that the same case or a related case was submitted in front of a foreign court.

The Romanian seised court checks if it has jurisdiction to solve the case. If it finds that another Romanian court has jurisdiction, it decline its jurisdiction in favour of the Romanian court which have jurisdiction. If it finds that the case is of a foreign court jurisdiction, it rejects the claim on grounds of lack of jurisdiction of the Romanian courts.

2.c Comparative law - USA

In United States of America, there are two types of personal jurisdiction: general personal jurisdiction and special personal jurisdiction.

General jurisdiction is when contacts of a defendant with a state are continuous and systematic, enough that the defendant might reasonably anticipate defending any type of claim there. Under such circumstances, the court shall have jurisdiction in disputes including those involving acts taking place outside the state constituting the forum.

Special jurisdiction is when a forum has jurisdiction over a defendant whose contacts with the forum relate to the particular dispute in issue. The personal jurisdiction over a non-resident defendant by a forum state requires only that he have certain minimum contacts with it, such that the maintenance of the suit does not offend traditional notions of fair play and substantial justice. The "minimum contacts" may be determine if: (1) the defendant must purposefully direct his activities or consummate some transaction with the forum state or a resident thereof; or perform some act by which he purposefully avails himself of the privilege of conducting activities in the forum and thereby invokes the benefits and protections of its laws; (2) the claim must be one arising out of or relating to the defendant's forum-related activities; and (3) the exercise of jurisdiction must comport with "fair play and substantial justice".[15]

A defendant meeting the above conditions may be subject to special personal jurisdiction even if he or she has never crossed the territory of that state. Even one single contact with the state is enough for qualifying for personal jurisdiction.

As far as e-contracts are concerned, jurisdiction is judged by means of analysing the connection between the website of the defendant (irrespective of whether the website, its holder or the business behind it is located in the US or not, and the forum state.

[15] Denis T. Rice. "Jurisdiction and E-commerce disputes in the United States and Europe". Paper presented by Committee on Cyberspace Law of the Business Law Section at the Annual Meeting of the California State Bar, Monterey, October 12, 2002

Faced with such cases, the courts have tried to adapt jurisprudence in cases of standard special personal jurisdiction to the activities on the Internet.

For example, the evolution of the case law in the United States of America started with the Inset Case[16], when, although the defendant Instruction Set had no assets in Connecticut and was not physically transacting business there, the Connecticut court claimed jurisdiction only on the basis of the Instruction Set's use of a toll-free telephone number and the fact that there were at the time 10,000 Internet users in Connecticut, all of whom had th ability to access the website. Under the court's line of reasoning, any website would be subject to jurisdiction everywhere just by virtue of being on the Internet.[17]

Then, in 1996, a federal court delivered the first decision that include an overall analytical framework to test specific personal jurisdiction based on Internet activity. In Zippo Manufacturing Co. v. Zippo Dot Com, Inc. [18], the plaintiff Zippo Manufacturing, the Pennsylvania-based manufacturer of "Zippo" lighters sued the defendant Zippo Dot Com, a California-based newspaper and website editor, under the jurisdiction of the State of Pennsylvania for "Zippo" trademark infringement by registering domain names such as "zippo.com", "zippo net" and "zipponews.com".

Zippo Dot Com claimed a case of non-jurisdiction. However, the court decided that Zippo Dot Com has established contact with the state of Pennsylvania exclusively *via* the Internet.

The Zippo case has been the first to use criteria for establishing special personal jurisdiction for Internet-based activities. Such criteria have been divided into three categories depending on the type of activity pursued over the Internet.

The first category involves an defendant who "obviously pursues activity on the Internet", and contacts deliberately the state constituting forum by sending files. Under such circumstances, the court in the forum state has special personal jurisdiction over the cases involving such activities.

As opposed to the first category, the second category involves a passive website belonging to the defendant, namely, a website containing information accessible to visitors. Under such circumstances, the court has no special personal jurisdiction.

The third category lies somewhere in between the first two and needs special consideration.

When the website of the defendant is neither strongly interactive, nor totally passive, personal jurisdiction takes effect by "examining the level of interactivity and the nature of commercial information exchanged via the website".

The same criteria have been used by United States courts also in international cases although many courts requested "something extra"; for example, the fact that "the sales of the defendant were deliberately sent to the respective state" and have not been the result of isolated or fortuitous incidents.

The sending-to-a-forum-state condition is judged against the following criteria: the defendant sends electronically the result of his activity to a forum state, the defendant intends doing business or other interactions in the forum state, the defendent is involved in an activity creating a potential cause of action under the law in the forum state, with regard to a person in the forum state.

As evidence for sending-to-a-forum-state activity may be considered repeated business trips, telephone or fax communications, sale-purchase contracts signed with residents, contracts subject to the forum state's law, advertising in local newspapers, marketing strategies and business plans with regard to the forum state, etc.

3. Determining jurisdiction in absence of choice of jurisdiction clause - contractual relationships of type B2C

Consumers must have access to adequate redress if problems arise after buying goods and services on the Internet. Given the "virtualization" and "de-territorialisation" of electronic commerce (e-commerce), new complex questions arise as to which courts should apply to the transactions.

If consumers have to go to court in case of a problem they must have the right to take action before their own national courts. Depriving consumers of access to their own courts in practice is denying them their right to redress.

In most e-commerce transactions, consumers already bear a disproportionate risk because business requires pre-payment (for example by credit cards). The supplier will therefore rarely have any reason to want to sue the consumer[19].

The recommendations for principles on jurisdiction on consumer cross-border contracts in ecommerce issued by Trans Atlantic Consumer Dialogue at February, 2000 was:

· The consumer is entitled to bring an action against business before a court in the consumer's home country;

· The consumer can only be pursued before a court in the consumer's home country;

· A choice of forum clause in a consumer contract is not enforceable;

· Execution of a judgement rendered in a foreign country

· Acknowledgement and effective enforcement of foreign judgements which have been rendered in the consumer's home country must be guaranteed;

· The costs and the time involved for cross-border execution must be reduce

3.a. Romania – Member State of the European Union

Section 4 of the Brussels I Regulation regulates the legal regime of jurisdiction in relation to *contracts concluded with consumers*.

The concept of "consumer contract" is a contract concluded between a person, not acting in the course of business, but acquiring goods or services for his own private consumption, from a supplier acting in the course of a business.

Article 15 of the Regulation sets *the subject of the jurisdiction rules* in contracts concluded with consumers.

By comparing the provisions in Art. 13 of the Brussels Convention with those in Art. 15 of the Brussels I Regulation, results that the Brussels I Regulation maintains the legal regime applicable to consumer protection, introducing also some changes in the scope of application. Specifically, the Brussels I Regulation has retained the first two categories of contracts {(a) a contract for the sale of goods on instalment credit terms, or (b) a contract for a loan repayable by instalments, or for any other form of credit, made to finance the sale of goods} and amended the third.

Thus, the third category of contracts involving a consumer and subject to the Bruxels I Regulation is as follows:

"(c) in all other cases, the contract has been concluded with a person who pursues commercial or professional activities in the Member State of the consumer's domicile or, by any means, directs such activities to that Member State or to several States including that Member State, and the contract falls within the scope of such activities".

In the previous Convention, the third category of contracts, meant to fall under consumer protection regime, was as follows: " any other contract for the supply of goods or a contract for the supply of services, and

[19] Transatlantic Consumer Dialogue, *Jurisdiction on cross-border consumer contracts*, 2000, Doc No. Ecom-15-00, accessed February 19, 2011 http://tacd.org/index2.php?option=com_docman&task= doc_view&gid= 140&Itemid=

(a) in the State of the consumer's domicile the conclusion of the contract was preceded by a specific invitation addressed to him or by advertising; and

(b) the consumer took in that State the steps necessary for the conclusion of the contract."

As results from a comparison of the two provisions, the concepts of "contract of sale of goods" and "service contract" have been replaced by the expression "in any other cases".

Hence, digital goods also fall clearly into this category.

Amending the third category of contracts subject to the Brussels I Regulation, in the sense that a person's activity should be directed to the Member State and not to the consumer, puts end to any doctrine talks concerning consumer qualifying as being active or passive in order to determine whether the legal regime of consumer protection applies or not.

One of the drawbacks of the Brussels I Regulation as well as the Convention is that the Community legislature has not provided a definition for the verb "to direct".

In the proposal for the Brussels I Regulation[20], the Community legislature states that the notion of "directed to a Member State" was meant to clarify the fact that the provisions in subparagraph c at Article 15 apply to contracts concluded with consumers via interactive websites accessible in the state of the consumer's domicile.

Thus, two conditions become clear regarding the question whether a website redirects its activity to the Member State where the consumer is domiciled: (1) the website should be interactive, (2) the website should be accessible in the Member State.

The notion of "interactive" has no legal definition, but it can be agreed that a website posting information of commercial nature, although being passive - there is no possibility of concluding an online contract -, falls within the definition of "interactive".

As for the notion of "accessible" in the Member State of the consumer's domicile, in the statement no. 13 of the original proposal of the Commission is maintained that "electronic commerce in goods and services by a means accessible in another Member State constitutes an activity directed to that state". The European Parliament considered this criterion as being insufficient and proposed amending the statement no. 13 as follows:

"electronic commerce in goods or services by a means accessible in a Member State constitutes an activity directed to that State if the online trading site is an active site to the effect that that trader redirects deliberately and substantially its activity to the other State."

Moreover, Parliament proposed also amending Article 15 with the following paragraph:

"The notion of 'directing the activity' shall mean when a trader redirects substantially its activity to the other Member State or to some other countries including Member States. In determining whether a trader has redirected its activity in this way, the court shall consider all the circumstances, including the trader's attempts to limit its trading activity in its transactions with consumers domiciled in a particular Member State."

The Commission rejected the Parliament's amending proposal and ruled that:

"Parliament has proposed a new paragraph to define the notion of activities directed to one or more Member States, and took into account as a criterion any attempt by the operator to limit its business to transactions with consumers domiciled in certain Member States. The Commission cannot accept such a change that contradicts the principles of these provisions. The definition is based on the American perception of a commercial activity as a factor in determining competence, while the concept is almost alien to the approaches in the Regulation. Moreover, the existence of a dispute with a consumer requires the existence of a contract with the consumer. However, the existence of such a contract will be a clear indication that the seller of goods or services directed its

[20] EC OJ 28 December 1999, C376 E/1

activity to the state in which the consumer is domiciled. Finally, the definition is not necessary since it generates market fragmentation within the European Community."[21]

This viewpoint was supported by the EU Council and reflected in the joint Statement of these institutions on Articles 15 and 73:

"The Council and the Commission point out in this connection that for Article 15(1)(c) to be applicable it is not sufficient for an undertaking to target its activities at the Member State of the consumer's residence, or at a number of Member States including that Member State; a contract must also be concluded within the framework of its activities. This provision relates to a number of marketing methods, including contracts concluded at a distance through the Internet.

In this context, the Council and the Commission stress that the mere fact that an Internet site is accessible is not sufficient for Article 15 to be applicable, although a factor will be that this Internet site solicits the conclusion of distance contracts and that a contract has actually been concluded at a distance, by whatever means. In this respect, the language or currency which a website uses does not constitute a relevant factor."[22]

Relative recently, Oberster Gerichtshof (Supreme Court, Austria) was referred to two cases involving the establishment of jurisdiction in disputes with consumers:

Case C-585/08

Mr Pammer, domiciled in Austria, intended to travel on board a cargo ship from Trieste (Italy) to the Far East. Therefore, he booked a trip with the German company Reederei Karl Schlüter through a German travel agency specializing in online sales of travel by cargo ship. Mr Pammer refused boarding on the grounds that, in his opinion, the conditions on board the cargo did not meet the description he had received from the agency and requested reimbursement of the price he had paid for the journey. As Reederei Karl Schlüter has reimbursed only a fraction of the price, Mr Pammer has notified the Austrian courts before which the German company has raised an objection of lack of jurisdiction citing the fact that the Company does not perform any professional or commercial activity in Austria.

Case C-144/09

Mr Heller, with residence in Germany, booked several rooms for a period of one week at Hotel Alpenhof, a hotel located in Austria. This reservation was made by email to the address indicated on the website of the hotel Mr Heller had consulted. Mr Heller impugned the services of the hotel and left it without paying the bill. The hotel has introduced, therefore, an Austrian court action to obtain payment for the invoice. Mr Heller has raised the objection of lack of jurisdiction, maintaining that, as a consumer residing in Germany, he cannot be sued but in the courts of Germany.

Oberster Gerichtshof (Supreme Court, Austria) addressed European Court of Justice two preliminary questions in order to determine whether the fact that a company based in a Member State offers online services presumes the fact that they "are directed" also to other Member States. Thus, if so, consumers who reside in these latter countries and have used such services could also benefit, in the event of a dispute with the trader, of the more favourable rules of jurisdiction stipulated in the Regulation.

In the judgments in Joined Cases C-585/08 and C-144/09[23], European Court of Justice found that simply using a website by a trader in order to do business does not imply that its activity is

[21] Commission of the European Communities. Amended proposal for a Council Regulation on jurisdiction and the recognition and enforcement of judgments in civil and commercial matters, COM (2000) 689 final, EC Official Journal 27 February 2001, C 62 E/243

[22] Europa, accessed February 19, 2011, http://ec.europa.eu/civiljustice/homepage/homepage_ec_en_declaration.pdf

[23] Eur-lex, accessed February 19, 2011, http://eur-lex.europa.eu/LexUriServ/LexUriServ.do?uri=CELEX:62008J0585:EN:NOT

"directed to" other Member States, which would trigger the protective jurisdiction rules laid down by the Regulation. The Court considered that, for these rules to be applicable to all consumers in the other Member States, the trader must have demonstrated intent to enter into business relationships with them.

In this context, the Court seeks the clues that allow it to prove that the trader would intend to enter into business relationships with consumers domiciled in other Member States. Some of these signs are the unambiguous expressions of intent on the part of the trader to attract such consumers, for example, when the trader provides services or goods in several Member States designated by name, or when it pays for an online referencing service to the operator of a search engine to facilitate the access of consumers residing in these various Member States to its website.

However, other less obvious clues, possibly a combination thereof, are also likely to prove the existence of an activity "directed to" the Member State where the consumer is domiciled. This is especially the case with the international nature of the activity in question, such as certain tour operator activities, mention of international phone dialling prefixes, use of a top-level domain name, other than the Member State where the headquarters of the trader are located, for example: *.de,* or use of neutral top-level domain names such as: *.com* or *.eu,* description of routes starting from one or more Member States to the place of service, as well as mentioning an international clientele consisting of customers residing in different Member States, especially by presenting impressions of such clients. Also, if the website allows consumers to use a different language or currency other than those normally used in the Member State of the trader, such items may in turn serve as evidence for the latter's cross-border activity.

In contrast, there is no such evidence in mentioning the email or geographic address of the dealer on a website, as neither is the indication of its phone dialling coordinates without any international phone dialling prefixes, since such information shows no indication that the merchant directs its activity to one or many other Member States.

The Court concludes that, considering the evidence, the Austrian Court must determine whether the website and the global business and trade of the traders show that they intended to enter into business relationships with Austrian consumers (Case C-585/08) or German consumers (Case C-144/09) to the effect that they were willing to enter a contract with them.

The main rule of jurisdiction is stipulated at Paragraph (1) of Article 16 in Brussels I Regulation (Article 14 of Conventions) lays down the jurisdiction of courts in actions brought by consumers:

" Proceedings may be brought against a consumer by the other party to the contract only in the courts of the Member State in which the consumer is domiciled."

Instead, a consumer may bring proceedings against the other party to a contract either in the courts of the Member State in which that party is domiciled or in the courts for the place where the consumer is domiciled.

As consumer has the possibility to bring proceedings in the courts of his domiciled, the problem of determination of the trader's domicile could be avoided.

Where the trader has an online presence and conducts business through a website by, for example, selling goods or providing services online, then the trader would be considered to be an information society services provider falling within the Directive 2000/31/EC of the European Parliament and of the Council of 8 June 2000 on certain legal aspects of information society services, in particular electronic commerce, in the Internal Market ("Directive on electronic commerce")[24]. The trader, as a service provider, is obliged under Article 5(1) of the Directive to provide easy, direct and permanent access to recipients of its services and competent authorities of, inter alia, its name and the geographic address at which it is established.

[24] Eur-lex, accessed February 19, 2011, http://eur-lex.europa.eu/LexUriServ/LexUriServ.do?uri=CELEX:32000L0031:en:NOT

Therefore, where the trader is an information society service provider in terms of the Electronic Commerce Directive, the aforementioned information that must be provided to its customers will assist such customers to identify at least one possible place where to sue, i.e. the country where it states that it is established.[25]

3.b. Romania - Outside the European Union

The Law no. 105/1992 on the regulation of private international law does not contain special consumer protection provisions.

3.c. The comparative law - USA

Traditionally, U.S. courts have sought to ensure a balance between consumer protection and encouraging small and medium enterprises development.

Generally, the United States, in the absence of a contractual clause designating the jurisdiction, the jurisdiction in disputes involving consumers is determined by analyzing special personal jurisdiction of traders in the countries where they direct or sell their goods and services. Some American courts have declared illegal contractual clauses designating the jurisdiction in contracts involving consumers, on grounds of their being unjust and unreasonable.

In general, American courts have held that consumer protection authorities are competent as far as jurisdiction is concerned to act against the traders outside the U.S. who prejudice American consumers.

4. Choice of forum.

Taking into consideration the difficulties in determination of the defendant's domicile or the place of performance in Internet international private law, it is recommended that the parties should have express exclusive jurisdiction clauses in agreements.

At the European Union level, the provisions of the Section 4 "Jurisdiction over consumer contracts" from Brussels I Regulation may be departed from only by an agreement:

1. which is entered into after the dispute has arisen; or

2. which allows the consumer to bring proceedings in courts other than those indicated in this Section; or

3. which is entered into by the consumer and the other party to the contract, both of whom are at the time of conclusion of the contract domiciled or habitually resident in the same Member State, and which confers jurisdiction on the courts of that Member State, provided that such an agreement is not contrary to the law of that Member State.

The general conditions on the validity of choice of jurisdiction clauses are stipulated at Article 23 of Brussels I Regulation.

According to paragraph (1) of this Article, if the parties, one or more of whom is domiciled in a Member State, have agreed that a court or the courts of a Member State are to have jurisdiction to settle any disputes which have arisen or which may arise in connection with a particular legal relationship, that court or those courts shall have jurisdiction. Such jurisdiction shall be exclusive unless the parties have agreed otherwise. Such an agreement conferring jurisdiction shall be either:

(a) in writing or evidenced in writing; or

(b) in a form which accords with practices which the parties have established between themselves; or

(c) in international trade or commerce, in a form which accords with a usage of which the parties are or ought to have been aware and which in such trade or commerce is widely known to,

[25] Universitet I Loslo, accessed February 19, 2011, http://folk.uio no/emilyw/documents/S01_p04_ Weitzenboeck.pdf

and regularly observed by, parties to contracts of the type involved in the particular trade or commerce concerned.

In accordance with Paragraph (2), any communication by electronic means which provides a durable record of the agreement shall be equivalent to writing.

Where such an agreement is concluded by parties, none of whom is domiciled in a Member State, the courts of other Member States shall have no jurisdiction over their disputes unless the court or courts chosen have declined jurisdiction.

The court or courts of a Member State on which a trust instrument has conferred jurisdiction shall have exclusive jurisdiction in any proceedings brought against a settler, trustee or beneficiary, if relations between these persons or their rights or obligations under the trust are involved.

Agreements or provisions of a trust instrument conferring jurisdiction shall have no legal force if they are contrary to Articles 13, 17 or 21, or if the courts whose jurisdiction they purport to exclude have exclusive jurisdiction by virtue of Article 22.

The validity of the agreement between the parties will be analyse according to national law. Recently, in *VB Penzugyi Lizing Zrt. v Ferenc Schneider Case*[26], the European Court of Justice has conform this interpretation ruling:

"The national court must investigate of its own motion whether a term conferring exclusive territorial jurisdiction in a contract concluded between a seller or supplier and a consumer, which is the subject of a dispute before it, falls within the scope of Directive 93/13 and, if it does, assess of its own motion whether such a term is unfair."

This situation produces undesirable consequences, in that a choice of court agreement can be considered valid in one state and invalid in another Member State. For example, in the grounds of the Case no. 2279/2007[27], the Romanian Supreme Court qualify valid an "click-wrap" agreement ("I agree with the Rules RoTLD").

According to Article 27 of Brussels I Regulation, where proceedings involving the same cause of action and between the same parties are brought in the courts of different Member States, any court other than the court first seised shall of its own motion stay its proceedings until such time as the jurisdiction of the court first seised is established. Where the jurisdiction of the court first seised is established, any court other than the court first seised shall decline jurisdiction in favour of that court.

That means that one party to a choice of court agreements could seizes the courts of a Member State in violation of the choice of court agreement, thereby obstructing proceedings before the chosen court insofar as the latter are brought subsequently to the first proceedings.

The European Court of Justice, in Erich Gasser GmbH v Misat srl (Case C-116/02)[28], has confirmed that the lis pendens rules of the Brussels I Regulation requires the court second seized to suspend proceeding until the court first seized has established or declined jurisdiction.

In *Gregory Paul Turner v Felix Fareed Ismail Grovit* (Case C-159/02)[29], the European Court of Justice further confirmed that procedural devices which exist under national law and which may strengthen the effect of choice of court agreements (such as anti-suit injunctions) are incompatible with the Brussels I Regulation if they unduly interfere with the determination by the courts of other Member States of their jurisdiction under the Regulation.

The Commission has proposed to sign the Convention on choice of court agreements that was concluded on 30 June 2005 under the auspices of the Hague Conference on Private International

[29] Eur-lex, accessed at February 19, 2011 http://eur-lex.europa.eu/Notice.do?val=287586:cs&lang=ga&list=287586:cs,&pos=1&page=1&nbl=1&pgs=10&hwords=&checktexte=checkbox&visu=

Law. The Convention will apply in all cases where at least one of the parties resides in a Contracting State other than an EU Member State, whereas the Regulation applies where at least one party is domiciled in a Member State. As a result, a coherent application of the rules of the Convention and those of the Regulation should be ensured.

In international rapports outside European Community, the choice of forum clauses will be analysed in Romania in base of Law. no. 105/1992. This clause is known in Romanian doctrine[30] as a "convention of jurisdiction prorogation", which could be valid unless: the proceedings are in exclusive jurisdiction of Romanian courts, but parties chose an foreign court; or, the parties chose a Romanian court, but one of the party invoke the exclusive jurisdiction of a foreign court.

In USA, the clause of a choice of forum is generally uncontroversial and enforced, if the parties to the contract are presumed to have equal bargaining power and, therefore, an equal ability to accept or reject such clauses.

The e-contracts frequently provide choice of forum clause. The problems that could arise are the validity of the conclusion of an contract by electronic means.

For example, a "click-wrap" choice of forum could be valid if the user has a reasonable opportunity to access the terms and conditions an review them before being bound, the terms and conditions should be sufficiently conspicuous and readable, there is a clear and unambiguous manifestation of assent to the terms and conditions.

5. Conclusions

In the absence of a valid "choice of forum" clause, the jurisdiction rules that apply to international proceedings arising from e-contracts depend on the type of transaction concluded, and on the domicile of the defendant.

After Romania's accession to the European Union, as a general rule, actions against a person domiciled in a Member State shall be brought to the courts of that State. According to the special jurisdiction regulated by Brussels I Regulation, cases resulting from a e-contracts may be decided by the courts of the place of performance of the contractual obligation, *except for the business to consumer (B2C) e-contracts*. In the case of B2C e-contracts, the consumer can bring proceedings either before the courts of the Member State of his domicile or before the courts of the Member State of the defendant's domicile. The consumer can only be sued in the Member State of his domicile. The rules protecting the consumer apply if the trader "*directs its activities*" to the Member State in which the consumer is domiciled.

If the defendant is not domiciled in a Member State, the international jurisdiction is determined, in each Member State, according to their national rules of international private laws (Law no. 105/1992, in Romania).

The *choice of forum clause* determines the court of jurisdiction chosen by parties, but the court seseised by the plaintiff must determine the validity of the *choice of forum clause* according to the internal law.

The online disputes resolution clauses are not treated by the present paper, being open for future research.

CONSIDERATIONS REGARDING THE DIVORCE BY AGREEMENT OF THE SPOUSES, ACCORDING TO THE NOTARY PROCEDURE

ANCA-ANDREEA NISTOREANU[*]

Abstract
By amending the Family Code according to the provisions of the Law no. 202/2010 regarding some measures in order to speed the solving of processes ("Law of small reform"), representing the introduction to the New Civil Code adopted by the Law no. 287/2009, published in the Official Gazette no. 511 of July 24, 2009, being to become effective, is inserted for the first time the possibility to end the marital relations also before the registrar of births, marriages and deaths or notary public, in strict terms of law. For instance, if there was an agreement between the spouses, without minor children, born during the marriage or adopted, the legislator sets up the possibility to evade the contentious proceeding before the common law courts and allows the spouses to choose between the administrative procedure and the notary procedure in order to dissolve the marriage.
In other words, is legislated the possibility of spouses to cease the marital relations also by mutual agreement, like at the time of their marriage, ascertained by the registrar of births, marriages and deaths or notary public. Therefore, on the one hand, is expressed the principle of legal symmetry in this matter, in terms of recognition regarding the ascertaining of the existence of mutual agreement, without the intervention of the magistrate, according to the maxim "mutuus consensus, mutuus dissensus". On the other hand, legitimately, the legislator has in view to eliminate the settlement of the applications for divorce by the courts, given that there is the convergence of spouses' will and no minor child, for the purpose of relieving the courts, a solution that seems quite logical considering that the settlement of such case does not require the jurisdictional work.
As a conclusion, an analysis of the new vision of the legislator as regards the settlement of divorce by notary non-contentious procedure is absolutely necessary given that the New Civil Code reintegrates the provisions of the Family Code in the spirit of the unitary conception of the Romanian pre-war private law school.

Key words: *divorce, agreement, notary, conclusion, certificate*

Introduction

This paper approaches a very topical subject, which represents an element of novelty, already with great practical application having in view that the legal regulation governing this procedure is in force since a too short time: Divorce by notary procedure.

The divorce procedure has known over the time a series of changes designed to simplify and accelerate the regulation of relations between spouses when the marriage cannot continue and they intend to terminate the marriage by agreement without being necessary to disclose the reasons which led to this decision. The Law no. 59/1993 which also amended the provisions of article 38 of the Family Code[1] introduced for the first time the possibility for the court to pronounce the divorce and only by agreement of both spouses, given the previous legislation in this field of the Family Code that not only did not allow the divorce by mutual consent of the spouses but has attributed to the

[*] Lecturer, Ph.D., Law Faculty, "Nicolae Titulescu" University, Bucharest (e-mail: bnp nistoreanu@ gmail.com).

[1] Family Code-Law no. 4 of January 4, 1954 which entered into force on February 1, 1954, amended by Law no. 4 of April 4, 1956 and republished in the Official Gazette, Part I, no. 13 of April 18, 1956, further amended, the last change being made by Law no. 202 of October 25, 2010 regarding some measures to accelerate the settlement of the cases, published in the Official Gazette of Romania, Part I, no. 714 of October 26, 2010 which entered into force on December 27, 2010

dissolution of marriage (by divorce) an exceptional character[2]. Until the amendment of the Family Code by Law no. 202/2010 the divorce by agreement of the spouses could be pronounced only by the court in case of the cumulative fulfillment of two requirements: a) before the application for divorce must have passed at least one year after the marriage conclusion and b) there are no minor children as a result of that marriage. According to the current regulation of the Family Code, as amended by Law no. 202/2010, the procedure of divorce by agreement of the spouses has been simplified more and more and the jurisdiction for settlement was assigned also in the task of other authorities than the court: the notary public and the civil status registrar. Thus, the court may pronounce the divorce by agreement of the spouses regardless the period of marriage and regardless if there are minor children as a result of that marriage, being removed the both requirements from the old regulation of article 38 of the Family Code, the notary public or the civil status registrar being allowed to find the dissolution of marriage by agreement of the spouses by issuing a certificate of divorce to that effect, if the spouses have no minor children, born during the marriage or adopted, according to the new introduced articles 38^1-38^4 of the Family Code.

By introducing the divorce proceedings by notary procedure the legislator succeeded both to relieve the courts of a number of additional cases, but also to ensure the parties, for the case when there is an agreement as regards the dissolution of marriage and the legal conditions are met, for achieving a competent procedure by an expert of law who will keep watch that their rights and interests to be observed, as well as the subsequent direct access to the conventional procedure of partition to be carried on before the same authority.

Jurisdiction

According to article 38^1 of the Family Code and article 87^1, the Regulation implementing the Law of notaries public and notary activity no. 36/1995, as amended and supplemented, the jurisdiction in the field of divorce by agreement of the spouses by notary procedure belongs to the notary public having the office located in the district of the court in whose territorial jurisdiction is the place of the marriage conclusion or the last common residence of the spouses[3]. For Bucharest, the jurisdiction belongs to any of the notaries public who perform their activity in the territorial district of the Tribunal of Bucharest, properly applying the provisions of article 114 of Law of the notaries public and notary activity no. 36/1995, as amended and supplemented[4]. In order to establish the territorial jurisdiction, the public notary will check if the above mentioned condition is fulfilled and if the spouses have not previously appealed to another public notary.

The proof of the place of marriage conclusion (city in which is located the town hall or the civil status office where the marriage was celebrated or the certificate of marriage was transcribed) will be done with the certificate of marriage attached to the application. If the marriage was concluded at the diplomatic missions or at the consular offices, the territorial jurisdiction belong to the notary public of Bucharest, because the place of marriage conclusion is considered the Town Hall of sector 1 in whose civil status register are recorded the certificates of marriages issued by the diplomatic missions or by the consular offices.

The proof of the last common residence is made, where appropriate, with the identity card, if it was the residence of one spouse, or with the document proving the ownership or the use holding (sale-purchase contract, donation, lease, free loan etc.). If the spouses have lived together in a house

[2] Ion P. Filipescu, *Tratat de dreptul familiei ("Treaty of Family Law"), the 5th* edition, revised and supplemented (Bucharest:All Beck, 2000), 200-201

[3] Article 375 (1) of the New Civil Code provides the compliance with the same requirements in order to determine the territorial and material jurisdiction of the notary public in the field of divorce

[4] Law of the notaries public and notary activity no. 36/1995 of May 12, 1995 was published in the Official Gazette of Romania, Part I, no. 92 of May 16, 1995, as amended and supplemented

for which they have no title, the proof is made by authentic statement of both spouses given on their own responsibility, being recorded both in the application for divorce and in the admission conclusion based on which the certificate of divorce will be issued.

At the same time, the notary public will establish also the material jurisdiction, checking if both spouses are present before him, if they signed the application for divorce before him and if they stated in the application for divorce that: a) they agree the divorce, b) they have no minor children born or adopted during the marriage, c) they have agreed on the name that each of them will have after the divorce, respectively the name had on before the marriage or during the marriage, d) none of the spouses is laid under interdiction.

Application for divorce

In order that the notary public may check the fulfillment of the above mentioned requirements, he must be, first of all, informed by the spouses by submitting an application which, as I stated above, shall be made in writing and signed personally before the notary public to whom the application is submitted by both spouses. By derogation from the provisions of article 614 of the Code of Civil Procedure in the field of divorce by the notary procedure, the conventional representation of the spouses is not allowed, without any exception, as foreseen in the provisions of article $87^{1}(7)$ of the Regulation implementing the Law of notaries public and notary activity no. 36/1995, so that the spouses will personally appear before the notary public intimated both for the submission of the application for divorce and at the term allowed for the dissolution of marriage[5]. Therefore, the notary public will not authenticate powers of attorney of representation in case of divorce by the notary or the administrative procedure (before the civil status registrar), excepting those required for the representation in case of divorce before the court, under the article 614 of the Code of Civil Procedure.

With the submission of the application for divorce, the spouses will submit to the notary public the certificate of marriage issued by the Romanian authorities, in original and certified copy, the certified copy is to be attached to the application for divorce and the original will be kept by the notary public until the issuing of the certificate of divorce. The application for divorce will be accompanied by photocopies of the spouses' certificates of birth and of their identity documents.

By derogation from the provisions of Law of the notaries public and notary activity no. 36/1995 and the Regulation implementing the Law of the notaries public and notary activity no. 36/1995 regarding the identification of the parties, within the divorce proceedings, the identification of the spouses will be made by the notary public only based on the identity documents submitted by both spouses when filing the application for divorce. Thus, the proof of identity could be made by the spouses with one of the following documents: a) for Romanian citizens: the identity card, the temporary identity card, the ID, according to the provisions of article 11 of the Emergency Ordinance no. 97/2005 regarding the records, the domicile, the residence and the identity documents of the Romanian citizens, as amended and supplemented, and in case of Romanian citizens residing abroad, the passport in which is provided the domicile, as allowed by the provisions of Law no. 248/2005 regarding the regime of free movement of the Romanian citizens abroad, as amended and supplemented, the passport to be within the validity period, both at the time of application and at the issuing date of the certificate of divorce; b) for citizens of the European Union or European Economic Area: the identity document or the passport issued by the state to which belongs; c) for stateless: the passport issued under the Convention regarding the Status of Stateless Persons of the year 1954, accompanied by the temporary or permanent residence permit, as appropriate; d) for foreign citizens from third states: the passport issued by the state whose citizens they are, in which to

[5] According to article 376 (1) of the New Civil Code, the application for divorce is filed by the spouses together

be applied the visa for entry into the territory of Romania that must be valid both at the time of application for divorce and at the issuing date of the certificate of divorce; e) for foreigners who were granted a form of protection in Romania: the travel document issued under the Convention of Geneva of the year 1951 or, as appropriate, the travel document for the foreigners who obtained a subsidiary protection - conditioned humanitarian protection; f) for the applicants foreign citizens for asylum in Romania: the passport issued by the state whose citizens they are, accompanied by the temporary identity document.

The provisions of Law of the notaries public and notary activity no. 36/1995 and the Regulation implementing the Law of the notaries public and notary activity no. 36/1995 regarding the taking of consent at the conclusion of the notary documents and proceedings if one spouse or both of them are deaf, dumb, deaf and dumb, blind or non-connoisseur of the Romanian language, as well as at the conclusion of the notary documents and proceedings outside the notary office are accordingly applied. In such situations, the interpreter, by who is taken the consent, will sign the application for divorce, alongside the spouses, and the conclusion of acceptance or rejection of the application for divorce, alongside the notary public. If one spouse is illiterate, he/she will sign the application for divorce, the conclusion and the other procedural acts by applying the footprint of the forefinger on his left hand.

In accordance with article 871 (2) of the Regulation implementing the Law of the notaries public and notary activity no. 36/1995, upon receipt of request, the notary public verifies in advance the territorial jurisdiction. If, upon verification, is established that the divorce is in the jurisdiction of another notary office, he will direct the parties to address to the competent notary public, giving the application back to the spouses together with its appendixes, without recording in the register of divorces[6]. The same solution will be adopted also if the other conditions for the registration of the application for divorce are not fulfilled, and the parties insist to register the application, in which case the notary public will proceed to the registration of the application in the register of divorces, only if the spouses have paid the fee, and will issue a conclusion of rejection, motivated in fact and in law. The conclusion of rejection is not subject to any appeal.

If more notary offices are competent, the competence for fulfillment the divorce proceedings will belong to the first intimated office.

Before checking the territorial jurisdiction, the notary public will verify that, as regards the dissolution of marriage, there are foreign elements and will proceed according to the legal provisions governing the dissolution of marriage where there are legal relations with foreign elements[7].

After checking the material and territorial jurisdiction and all the conditions foreseen in article 38^2 of the Family Code, as amended and supplemented, and by the Regulation implementing the Law of the notaries public and notary activity no. 36/1995 (including the identity of the spouses and if the data entered in the application for divorce correspond to the information contained in the documents attached to the application), as well as after the payment of the notary's fee, the notary public will proceed, at the date of receipt of the application, to the registration of the application in the register of divorces kept by the notary office and the communication to the National Register of records of the applications for divorce[8], managed by Infonot Systems SRL[9] of the request for the registration of the

[6] The Order of the Minister of Justice no. 81/C/2011 published in the Official Gazette of Romania, Part I, no. 59 of January 24, 2011 regarding the supplement of the Regulation implementing the Law of the notaries public and notary activity no. 36/1995 following the amendments in the Family Code by Law no. 202/2010, introduces two new letters in the article 40 paragraph (1), after the letter l): m) the register of divorces; n) the index of the register of divorces

[7] Article 87^1 paragraph (5) of the Regulation implementing the Law of the notaries public and notary activity no. 36/1995, as amended

[8] National Register of records of the applications for divorce aims the keeping, at national level, of the records of the applications for divorce addressed to the notaries public in order to avoid the double registration of the applications for divorce, as well as the records of the solutions given by the notaries public

application for divorce. The application for divorce will be registered in this register if, following the verifications made by Infonot Systems S.R.L., is found that there is no other application for divorce registered by the spouses. If, following the verifications, is found that the spouses did not appeal to another notary public, Infonot Systems S.R.L. will register the application on behalf of notary office where the applicant notary unfolds his activity and will issue to him a certificate attesting the number under which the application was registered in the National Register of records of the applications for divorce and that the application for divorce is found at the notary office in order to be settled. If, following the verifications, is found that the spouses have addressed a similar application to another notary public, the registration number being already assigned for a certificate of divorce issued to the same spouses, Infonot Systems S.R.L. will issue a certificate and the notary public will reject the application and will guide the spouses to address to the first intimated notary, without being bound to refund the fee charged when submitting the application.

The Term

Receiving the certificate, the notary public will proceed to the registration of its number in the register of divorces and setting the term for the dissolution of marriage, which occasion the spouses will have to personally appear. In the absence of the certificate issued by Infonot Systems S.R.L., the notary public cannot establish a term for the dissolution of marriage.

In accordance with article 38^2 of the Family Code, the term set by the notary public for the possible withdrawal of the application for divorce is of 30 (calendar) days[10]. The term may not be shorter, it may not be extended by granting a new term and it will be recorded by the notary public both in the application for divorce and in the register of divorces. The notary public will also take into account, when granting the term of 30 days, whether term will expire in a day in which the notary office is closed for justifiable reasons (non-working days, legal holidays, rest leave), in which case the term may be extended until the first working day. For the calculation of the term of 30 days, will be applied the provisions of article 101 and the following of the Code of Civil Procedure in the field of calculation of the procedural terms. The notary public will have in view also the availability of spouses to be present at date to be determined, in which case he may, if one spouse requests and the other agrees or both of them request, to set a term longer than 30 days.

The notary public will set just one term, which he will orally notify to the parties, specifying the date (day, month, year) and the hour when they must personally appear at the notary office. If, at the determined term, the notary public may not be present for justified reasons, to settle the application for divorce, he will notify the Chamber of the Notaries Public in order to delegate another notary public to the notary office, to settle the application.

Admission/rejection conclusion of the application for divorce

At the expiry of the determined term, the notary public verifies if: a) both spouses are personally present, b) insist on the application for divorce, c) agree the name they will have after the divorce, d) maintain the other statements given when submitting the application of divorce, e) can express their free and uncorrupted consent, f) none of the spouses is laid under interdiction, g) the

[9] Infonot Systems S.R.L. is the administrator of the National Registers of computerized records of some notary acts and procedures foreseen in article 56^1 of the Regulation implementing the Law of the notaries public and notary activity no. 36/1995. By the Order of the Minister of Justice no. 81/C/2011, in the article 56^1 after letter d) was introduced a new letter, the letter e): National Register of records of the applications for divorce (NRRAD) in which are registered the applications for divorce by the notary procedure

[10] The term of 30 days for the possible withdrawal of the application for divorce is also governed by article 376 (1) of the New Civil Code

birth or the adoption of a child has not occurred until the set term. The persistence or the lack of persistence of each of the spouses is found in the conclusion of admission, respectively of rejection of the application for divorce in accordance with article 87^3 paragraph (5) of the Regulation implementing the Law of the notaries public and notary activity no. 36/1995. If, following the verifications, the notary public finds that the above requirements are met and, simultaneously, the other conditions foreseen in the Family Code and in the Regulation implementing the Law of the notaries public and notary activity no. 36/1995, will proceed to the drawing up of the conclusion of acceptance of the application for divorce in which he will ascertain the dissolution of marriage and will dispose the issuing of the certificate of divorce. The conclusion of admission will be signed both by the notary public and by both spouses and, as appropriate, by an interpreter. If, following the verifications, the notary public finds that have occurred new elements leading to a cumulative non-fulfillment of the above conditions, he will proceed to the drawing up of the conclusion of rejection in which he will dispose the rejection of the application for divorce. The conclusion of rejection will be sent the same day, electronically, to Infonot Systems S.R.L. to make the appropriate mentions in the National Register of records of the applications for divorce.

Against the conclusion of rejection there is no appeal, but the spouses may address the application for divorce to the court for the dissolution of marriage by agreement or for other reason foreseen by law. Either spouse may apply, by separate proceedings, to the competent court to repair the damage caused by the abusive refusal of the notary public to ascertain the dissolution of marriage by agreement of the spouses and to issue the certificate of divorce (article 38^4 of the Family Code).

The application for divorce, the conclusion of admission/rejection of the application for divorce has the same number as the number of the file of divorce in the register of divorces kept by each notary office.

If, after the registration of the application for divorce in the National Register of records of the applications for divorce have passed 60 days and during this period the notary office has not requested a number of certificate, the register operator will proceed to the closing of the mention in this register, in which case a new application for divorce of the same spouses may be registered. Where, in the range between 30 and 60 days after the submission of the application, another notary office asks the registration, the operator of the National Register of records of the applications for divorce will inform the notary, upon the issuing of the certificate, that the notary office which received the application has not requested a number of certificate of divorce, with possibility that the application be rejected[11].

Certificate of divorce

In case of finding the divorce by the notary public, he will issue the certificate of divorce, immediately submitting a certified copy thereof to the town hall of the place where the marriage was concluded, in order to make mention in the marriage act, in accordance with the provisions of article 38^3 of the Family Code.

Before the issuing of the certificate of divorce, the notary public will require, through Infonot Systems S.R.L., the assignment of the number of the divorce certificate from the Sole Register of certificates of divorce kept by the Ministry of Administration and Interior, and the number assigned in this register shall be written down by the notary public in the certificate of divorce. If, following the submitted application, is found that in this register is already assigned the registration number for

[11] Article 7 of the Methodological Norms regarding the organization and operation of the National Register of records of the applications for divorce (NRRAD), approved by the Decision no. 4/January 14, 2011, adopted by the Executive Office of the Council of the National Union of the Notaries Public in Romania

a certificate of divorce issued to the same spouses, the applicant notary public will dispose, by conclusion, the rejection of the application for divorce, as having no object, according to the provisions of article 87^6 paragraph (2) of the Regulation implementing the Law of the notaries public and notary activity no. 36/1995, making the appropriate mention both in the register of divorces and in the National Register of records of the applications for divorce.

The drawing up and signing of the conclusion of admission by all the parties, the obtaining of the number of the divorce certificate and the drawing up and issuing of the divorce certificate will take place at the same day, respectively at the term granted for the dissolution of marriage.

The certificate of divorce will record the dissolution of marriage by agreement of the spouses before the notary public and the surname that the former spouses will have after the divorce.

As noted above, after the issuing of the certificate of divorce, the notary public shall immediately send a copy thereof to the town hall of the place where the marriage was concluded or the place where the certificate of marriage issued in another state was transcribed, in order to make mention about the divorce in the marriage act and an original copy to the civil status register kept by the people record department of that county or of Bucharest.

Once with the issuing of the certificate of divorce, the notary public gives back to the spouses the certificate of marriage on which he will mention: "Dissolution of marriage under the certificate of divorce no. ..../...".

According to the article 39 of the Family Code, the marriage is dissolved on the date of issuing of the divorce certificate. In relation to third parties, the patrimonial effects of marriage shall cease on the date of mention about the certificate of divorce on the edge of the marriage act or the date on which they have been informed about the divorce in another way. According to article 385 of the New Civil Code, the matrimonial regime (article 312 (1) of the New Civil Code provides that the future spouses can choose as matrimonial regime: lawful community, separation of goods or conventional community) ceases between the spouses on the date of introduction of the application for divorce, but the spouses may require together to the notary public to find that the matrimonial regime ceased on the date of separation in fact. The legal matrimonial regime applies whenever the future spouses have not concluded a matrimonial convention[12].

Conclusions

According to the current regulations, the procedure of divorce by agreement of the spouses may be accomplished not only by the court, but also by non-contentious procedure performed by the notary public or by the civil status registrar. When the spouses choose the notary procedure, fulfilling the conditions foreseen by law, the term for the settlement of the application for divorce is very short (30 days), at the end of which, if they insist in the dissolution of marriage, obtain the certificate of divorce which opens the way towards solving the other effects of marriage which are not in the jurisdiction of the notary public or the cessation of common property through judicial or conventional partition, in a shorter time and enjoying a considerably increased comfort than when this procedure was in the exclusive jurisdiction of the courts.

The current regulations are in full compliance with the ones of the New Civil Code to meet the needs of a rapidly and continuous changing society, to which the old regulations, inspired from the date they were adopted, could no longer meet the need to have options with multiple settlement alternatives.

INVESTING FORMULA ENFORCEABLE BILL OF EXCHANGE, PROMISSORY NOTES AND CHECK

SILVIA - ELENA OLARU[*]

Abstract
Right bills constituted a proper, solemn and formal training both bills of exchange, promissory notes or checks, but also in terms of bills receivable realization and autonomy is manifested in the sphere of application, and in priority and exclusivity of its incidence from common law, namely the Civil Procedure Code. Legal rules relating to bills of rights realization is a perfect rigorous regime. The special regime, derogating governing procedure execution quality bills is justified and bills of exchange, promissory note and check to be instruments of scriptural money, qualified as a legal system requires great rigor. The procedural and enforcement proceedings taken by the legislature to ensure fulfillment of trade are much stricter in the right bills to go faster and safer way to realization of rights emerge. Debt securities notes (bills of exchange, promissory notes and check), by their specificity, have boosted the feature of incorporating the right way, so the title itself forms a unit with built right, subject as such forms and rules special, simple operation, formation, movement and recovery, and their binding force is a substantial, not procedural, as the essence of such securities, as their constitution and other necessary items.

Key words: *bill of exchange, promissory notes, checks, appended to the binding, securities.*

General considerations

According to article 374 of the Civil Procedure Code, "the judicial decision or any another title is executed only if it is invested with executory clause stipulated by article 269 paragraph 1, except the provisional executory closures and other decisions or documents which are executed without executory clause.[1]

The investiture of the decisions with executory clause is made by the court of justice.

The consent of the forced execution in Romania of the decisions pronounced in foreign countries is done according to the special law."

It can be thus noticed that the text has the significance of specifying that the formality of the investiture with executory clause is required for any title that is executed, whether it is a court order or another document ascertaining the claim.

But, as it can be seen, certain exceptions were established from this rule relating to the executory closures, interim executory orders, as well as other decisions or documents specified by law.

As a consequence of their executoy character set by law, these documents are executed without investiture with executory clause.

---

[*] Legal expert Committee for Legal Affairs, Discipline and Immunities - Chamber of Deputies - Romanian Parliament (e-mail: silvia_olaru@cdep ro).

[1] Article 269 of the Civil Procedure Code

Court orders will be invested with executory clause, if the law does not provide otherwise. The executory clause has the following content:

"We, the President of Romania"

(Here is the wording of the decision).

"We authorize and order the execution bodies to implement this decision. We order the public force officials to support the execution of this decision, and the prosecutors to insist on carrying it, according to the law. To faith, this decision was signed by ..... (Followed by the signatures of the President and of the clerk of court)."

The decision invested will be given only to the party who won or to his/her representative.

Under the provisions of article 376 of the Civil Procedure Code, "the decisions which remained definitive or became irrevocable, as well as any other decisions or documents are invested with the executory clause stipulated by article 269 paragraph 1 so that they become executory in cases specifically provided by law.[2]

The documents authenticated by a diplomatic or consular representation of Romania will be invested with executory clause by the court of justice of the residence of one of the parties taking part to the authentic document.

If none of the parties has the known residence in the country, the investiture with executory clause is done at the District III Court of justice of Romanian's capital city."

At the same time, these legal provisions should be corroborated with the ones in article 374^1, where the legislator expressly stipulates that: "the documents to which the law recognizes the character of writ of execution are executed without the investiture with executory clause."

This text establishes that all documents to which the law gives the character of writ of execution are fructified without further imposing the formality of the investiture with executory clause.

Concerning the interpretation and application of the provisions of article 374^1 of the Civil Procedure Code, according to which, the documents to which the law recognizes the character of writ of execution are executed without the investiture with executory clause, reported to the provisions of article 61 of Law no. 58/1934 on the bill of exchange and the promissory note, and of article 53 of Law no. 59/1934 on the cheque, on the investiture with executory clause of the bill of exchange, the promissory note and the cheque.[3] Both laws have largely taken over the solutions adopted by the Geneva Convention of June 7, 1930 on the Uniform Law on bills of exchange and promissory notes and the Geneva Convention of March 10, 1931 on the Uniform Law on cheques.[4]

Thus, according to article 61 paragraph 1 of Law no. 58/1934 on the bill of exchange and the promissory note, "the bill of exchange has the writ of execution for the capital and accessories, established according to article 53, 54 and 57."

According to article 53 of Law no. 58/1934, the holder may ask on grounds on non-payment:

C:\Documents and Settings\Dan\Local Settings\Sintact 2.0\cache\Legislatie\temp\00000002.HTML - #1. The amount shown in the unsupported or unpaid bill of exchange, with the interest, if it has been stipulated.

C:\Documents and Settings\Dan\Local Settings\Sintact 2.0\cache\Legislatie\temp\00000002.HTML - #2. The legal interest calculated starting with maturity.

3. The protest expenses, those of the notifications made, as well as other justified expenses.

If the non-payment (regression) is exercised before maturity, a discount will be deducted from the amount shown on the bill of exchange. This discount will be calculated according to the National Bank discount rate in force at the time of the non-payment, at the owner's residence.

The person who has paid the bill of exchange by regression may require from his endorsers:

- C:\Documents and Settings\Dan\Local Settings\Sintact 2.0\cache\Legislatie\temp\00000002.HTML - #The total amount paid.

Law no.59/1934 on the cheque, published in the Official Gazette no.100/01.05.1934, amended by GO no. 38/2008 published in the Official Gazette no.284/11.04.2008.

[4] O.Căpăţînă – Legislaţia cambială (Bills legislation), Ed.Lumina Lex, Bucureşti, 1994, p.75-111.

- C:\Documents and Settings\Dan\Local Settings\Sintact 2.0\cache\Legislatie\temp\00000002.HTML - #The legal interest on this amount, calculated effect from the day he paid the sum.
- C:\Documents and Settings\Dan\Local Settings\Sintact 2.0\cache\Legislatie\temp\00000002.HTML - #The costs.

Any person, being entitled to exercise the non-payment, maybe if not otherwise stipulated, to compensate oneself through a new bill of exchange (a counter bill of exchange) drawn at sight on to one of his endorsers and payable at his residence.

The counter bill of exchange comprises, in addition to the amounts shown in articles 53 and 54, as a right to brokerage and stamp duty for it.

If the counter bill of exchange is drawn by the owner, the amount is fixed by the course of a sight bill, drawn from the place where the original bill is payable on the place of residence of the endorser. If the counter bill of exchange is drawn by an endorser, the amount is fixed by the course of a sight bill, drawn from the place where the drawer of the counter bill of exchange resides on the place of residence of the endorser.

At the same time, through article 106 from this normative act, this character is attributed equally to the promissory note, to which the stipulations relating to the bill of exchange are applicable to the extent that they are not incompatible with its nature.

Therefore, article 61 paragraph 1 of Law no. 58/1934 recognizes the character of writ of execution of both the bill of exchange and the promissory note.

At the same time, the character of writ of execution is recognized for the cheque through article 53 paragraph 1 of Law no. 59/1934, as further amended, which states that: "The cheque has value of writ of execution for the capital and accessories, established according to articles 48 and 49."

The stipulations of article 320 letter a from the Framework rule no. 6 / 1994 are similar concerning the trade made by the banking companies and other crediting companies, with bills of exchange and promissory notes, based on Law no. 58/1934 on the bill of exchange and the promissory note, according to which "The bill of exchange has value of writ of execution for the amount of money written on the writ together with the interest (if it was stipulated), for the legal interest calculated starting with the maturity for the expenses of protest and the notification costs, as well as for other justified expenses".[5]

The Code of Civil Procedure through article 376 no longer lists among decisions the documents subject to the investiture with executory clause, since, by ascertaining certain and liquid claims they have the power of a writ of execution on their chargeability, so that these writs do not have to be invested with executory clause.[6]

---

[5] BNR (NBR) – FRAMEWORK RULES no. 6 from 8 March 1994 on trade made by the banking companies and other crediting companies, with bills of exchange and promissory notes, based on Law no.58/1934 on the bill of exchange and the promissory note, as amended by GO No.11/1993, approved and amended by Law no.83/1994, published in the Official Gazette no.119 bis/14.06.1995.

The rule no.11/2008 to amend the Framework-rules no.6/1994 on trade made by banking companies and the other crediting companies, with bills of exchange and promissory notes.

Rule no.7/2008 for the amendment and completion of the Framework rules of the National Bank of Romania (BNR) no. 6/1994 on trade made by the banking companies and the other crediting companies, with bills of exchange and promissory notes, based on Law no. 58/1934 on the bill of exchange and the promissory note, amended by GO no. 11/1993, approved and amended by Law no. 83/1994.

Rule no.2/2009 on the completion of the rule of the National Bank of Romania no. 7/2008 for the amendment and completion of the Rule of NBR no. 6/1994 on trade made by the crediting institutions with bills of exchange and promissory notes.

[6] Article 66 of Law no.36/1995of public notaries and the notarial activity, published in the Official Gazette no.92/16.05.1995.

Therefore, the documents listed, which ascertain a definite, liquid and claimable monetary obligation, are executed by force by the request directly addressed to the bailiff, without being necessary to undergo the non-contentious judicial procedure of investiture with executory clause.

Nevertheless, in practice of the courts of law it has been ascertained that there is no unitary viewpoint concerning the interpretation and application of the stipulations of article 374^1 of the Civil Procedure Code compared to the stipulations of article 61 of Law no. 58/1934 on the bill of exchange and the promissory note, and of article 53 of Law no. 59/1934 on the cheque, concerning the investiture with executory clause of the bill of exchange, promissory note and cheque.

Thus, some courts of justice have considered unnecessary the investiture with executory clause of the bill of exchange, promissory note and cheque, on the ground that article374^1 of the Civil Procedure Code specifically stipulates that "the documents to which the law recognizes their character of writ of execution are executed without investiture with executory clause."

Other courts of justice, on the contrary, have pronounced in the sense that in order to be executed, these instruments of payment, even if the law recognizes their nature of writs of execution, must be invested with the executory clause stipulated by article 269 paragraph 1 of the Civil Procedure Code.

The motivating this solution it was noted that executing the securities from the category to which the bill of exchange, the promissory note and the cheque belong is governed by special rules, which, by waiver from the provisions of article 374^1 of the Civil Procedure Code require their investiture with executory clause.

The issue of law that was required to be settled by appeal in the interest of the law by the High Court of Cassation and Justice, aims at interpreting the above-mentioned stipulations, in the meaning or the applicability or non-applicability of the stipulations of article374^1 of the Civil Procedure Code, to the bill, promissory note and cheque which have value of writ of execution for the capital and accessories, according to article 61 paragraph 1 of Law no. 58/1934, respectively article 53 paragraph 1 of Law no. 59/1934, and it discusses the relationship between the general rule and the special rule in the field of bills execution.

In accordance with the stipulations of article 374^1 of the Civil Procedure Code, "the documents to which the law recognizes the nature of writ of execution are executed without the investiture with executory clause".[7]

According to article 61 paragraph 1 of Law no. 58/1934 with the subsequent amendments, "the bill of exchange has the value of writ of execution for the capital and the accessories established according to articles 53, 54 and 57," and by paragraph 3 of the same article the court of justice is assigned the competence to invest the bill of exchange with executory clause.

Article 106 paragraph 1 of the same Law stipulates that "the dispositions relating to the bill of exchange are applicable to the promissory note, to the extent to which they are not incompatible with the nature of this writ."

Regarding the cheque, in article 53 paragraph 1 of Law no. 59/1934, it is stated that it "has the value of writ of execution for the capital and the accessories established according to articles 48 and 49," and according to paragraph 3 of the same article "the court of justice has jurisdiction to invest the cheque with executory clause."

The procedure of bills execution, established by laws no. 58/1934 and no. 59/1934, imposed a precondition for investing the bill of exchange, the promissory note or the cheque with executory clause, also maintained by the regulations currently applicable.

The act authenticated by the public notary, which ascertains a certain and liquid claim has power of writ of execution on its chargeability. In the absence of the original act, the writ of execution may be constituted by the duplicate or legal copy of the copy from the public notary's archive.

[7] Mihaela Tăbârcă – Drept procesual civil (Civil procedural law), Ed.Universul Juridic, 2008, p.724-727.

The legislator has considered useful the investiture of the bill of exchange, promissory note or cheque with executory clause, although these bill-related documents have value of writs of execution, to enable the judge to examine the fulfilment of the formal conditions of their validity.

Only by the investiture with executory clause the bill of exchange, the promissory note and the cheque actually become writs of execution for the amount stated on them and for the accessories determined according to the legal provisions that have been mentioned.

Thus, although the law recognizes the value of writ of execution to the respective payment instruments, their execution is conditioned by the application of the executory clause.

To think this way is to ignore the will of the legislator who, in the same text (article 61 of Law no. 58/1934 and article 53 of Law no. 59/1934) establishes the value of writ of execution of the bill of exchange, promissory note, and cheque, but at the same time it also refers to the request of investiture with executory clause of these debt securities by the competent court of justice.

It results that the investiture with executory clause of the bill of exchange, promissory note or cheque, forming the object of regulation of some specific rules, cannot be subject to the regulation contained in the general rule, represented by article $374^1$of the Civil Procedure Code, since it is a stage in the procedure of the bill-related execution which must be seen as a whole, being impossible that this stage be subject to the rules of common law, and the remaining of the stages of this procedure to be performed according to the special regulations contained in the above-mentioned laws.

The exclusive character, derogatory and special of the bill-related law towards common law, namely article 374^1 of the Civil Procedure Code, requires the application of the "specialia generalibus derogant" principle, taking into consideration that the priority of the incidence of the bill-related law is strictly subject to the fulfilment of some specific formalities for the fructification of the securities and that the bills execution is a unitary executory system, proper to the bill-related law, the investiture with executory clause in the court of law figuring among its conditions and formalities.

The High Court of Cassation and Justice has held that the provisions of article 374^1 of the Civil Procedure Code related to article 61 of Law no. 58/1934, and respectively to article 53 of Law no. 59/1934, shall be construed in the sense that the promissory note, the bill of exchange and the cheque are invested with executory clause in order to be executed.[8]

In the requests that stem from a bill of exchange, cheque or promissory note on the grounds of article 10 item 3 of the Civil Procedure Code, the jurisdiction is alternative between the court from the defendant's residence and the court from the place of payment.

When the investing entity has chosen the investiture with executory clause of the promissory note, according to the stipulations of article 10 item 3 in favour of the court from the place of payment, stipulated in the promissory note, this court of law was bound to observe the principle of availability found in the option right of the crediting company.[9]

DIVORCE PROCEEDINGS, IN LIGHT OF THE NEW PROVISIONS OF LAW NO. 202/2010 REGARDING SOME MEASURES FOR ACCELERATING THE RESOLUTION PROCESS

IOANA PĂDURARIU[*]

Abstract:
Law no. 202/2010 regarding some measures for accelerating the resolution process establishes procedural rules with immediate effect, meant to streamline judicial procedures, and to expeditiously resolve processes, regulating specific legislative measures, which aim mainly to simplify solving cases.
In matters of divorce, a first change is that, unlike the previous situation, the divorce case by agreement will be judged in the council chamber. Also, according to the above mentioned law, if the conditions for dissolution by agreement are accomplished, we can divorce not only in front of the court, but also to the notary public or officer of civil status, opportunity that did not existed in past. Another novelty is the express possibility to demand resolution through mediation for divorce, specifying that the parties can not only refuse the judge's recommendation to seek mediation, but that the parties can refuse mediation session even after information. Regarding mediation, the law brings news on divorce. Under that legislation, divorce can be made by the parties even when the couple has minor children and agree to the mediation process.

Key words: *divorce by agreement, family mediation, divorce to the public notary, divorce in front of the civil state officer, Law no. 202/2010*

Introduction:

The Law regarding some measures for accelerating the resolution process, so-called "Law of the small reform in justice's domain"[1] came into force in two steps. So, excepting the provisions regarding the divorce in front of the civil state officer and to the public notary (provisions which came into force in 60 days from the date when this law was published in the Romanian Official Monitor, first part), the above mentioned law has to be applied even from the end of November, 2010.

By this law it has been introduced new juridical institutions and the legislator had intervened on so-called procedures of prevarication of the judicial act.

Therefore, in the domain of divorce, we are talking about setting up new possibilities for dissolution of marriage (divorce by agreement to the public notary or in front of the civil state office, mediation in divorce proceedings, as we will detail below) or by changing certain aspects of the development process of divorce by agreement before the court (proceedings in closed session, the acceptability of divorce even if there are minor children resulted from marriage).

The new provisions will first try to answer the organizational needs of the overcrowded courts, but also to promote the idea that the divorce should be seen not as a war but as an expression of reciprocal enforcement *"mutuus consensus, mutuus dissensus"*.

Thus, it seems that the establishment of divorce by agreement - administrative or notary way - could answer the real need for those who want an easier and faster divorce. On the other hand, in fact, the new law states also the stimulation of the parties to settle their conflicts outside the judiciary way, many of the processes aiming the collapse of families being "pushed" into a mediation process, possible or not, as we see in the following.

[*] Lecturer, Ph.D., Law Faculty, "Nicolae Titulescu" University, Bucharest (e-mail: ipadurariu@univnt ro).
[1] Law no. 202/2010, published in Romanian Official Monitor, first part, no. 714/26 october 2010.

Paper content:

I. Divorce by agreement - changes and new institutions

In matters of divorce, a first change from the Law no. 202/2010 is that, unlike the previous situation, the divorce case by agreement will be judged in the council chamber (article 613^1 paragraph 2 of the Romanian Civil Procedure Code, modified by the Law no. 202/2010). Spouses may use the path to divorce by agreement in front of the court, regardless of the duration of their marriage and whether or not there are minor children resulting from the marriage (article 38 paragraph 1 of the Romanian Family Code, as it was amended by Law no. 202/2010); it is required that the court determine whether the consent of each spouse is free and uncorrupted. However, divorce by agreement between the spouses can not be accepted if one spouse is put under ban (see Romanian Family Code, article 38, paragraph 2).

If we are make a comparative analysis for *the mutual consent divorce in France*, we will see that this type of divorce proceedings is available for couples who consent to divorce and who are also agreeable as to the separation and settlement terms (child custody, financial matters, property and so on). A single court appearance is required to obtain this type of divorce. The acting lawyer(s) file a divorce petition at the clerk's office of the Higher District court. The couple will be then be summonsed to appear before the Family Affairs Judge of the Higher District Court of their place of residence. At this time, the couple will submit their written agreement settling all practical and financial issues regarding themselves and their children, for review by the court. The judge will grant the divorce immediately, if he approves the agreement. However, if the judge considers that the agreement does not protect the children's interests sufficiently, or that of either spouse, a second hearing will be required to examine a new settlement.

Also, returning to the Romanian law, according to the above mentioned act (Law no. 202/2010), if the conditions for dissolution by agreement are accomplished, we can divorce not only in front of the court, but also to the public notary or civil state officer, opportunity that did not existed in past.

But, in these both cases, the civil state officer or the public notary at the marriage place or at the last common house of the spouses may divorce them by consent only if they haven't any minor children born naturally from marriage or adopted (article 38^1 from the Romanian Family Code, introduced by the Law no. 202/2010).

Divorce application is filed by the spouses together. Civil state officer or public notary registers the request and grant a period of 30 days for the eventual withdrawal of an application for divorce. Thereafter, the civil state officer or, where appropriate, the public notary verifies that the spouses insist on divorce and whether, in this sense, their consent is free and uncorrupted. If the spouses continue in divorce, civil state officer or, where appropriate, the public notary gives them a certificate of divorce without making any mention of the guilty of the spouses. Also in the case of divorce by agreement in front of the court, the judge does not make any mention regarding the guilty of one or another husband. If spouses can not agree on the family name to wear after the divorce, the civil state officer or, where appropriate, notary public releases a disposition to reject the application for divorce and spouses are guided to address to the court. Also, for the resolution of any other effects of divorce, on which the spouses do not understand, court will have jurisdiction.

When the divorce application is filed to the hall where the marriage took place, the civil state officer, after releasing the certificate of divorce, makes a proper mention in the act of marriage.

If the application is made to the municipality in whose jurisdiction the last dwelling spouses were common, civil state officer releases the certificate of divorce and forward forthwith a certified copy thereof to the municipality where the marriage took place, to be made the mention in the act of marriage.

In case of divorce by notary public, it shall release the divorce certificate and forward immediately a certified copy thereof to the municipality where the marriage took place, due to be mentioned in the act of marriage.

II. Mediation in divorce proceedings

It is well known that divorce mediation is a dispute resolution process in which, as an alternative to judicial or administrative decision-making, the spouses are assisted by an impartial and neutral professional (the mediator or mediators) in order to analyse the situation arising from the spouses' wish to be divorced and to try to reach their own agreement with regard to some or all the matters under dispute. [2]

Mediation and the processes of negotiation or arbitration. Mediation has the common characteristic of resolving disputes between spouses or among family members without a judge's order after an adversarial trial. However, by contrast with negotiation, where the parties or their representatives try to seek a resolution to their dispute through direct discussions, in mediation the dispute resolution process is facilitated by a third party, neutral and impartial. Comparative to arbitration, where the parties delegate, by mutual agreement, the power to decide to a third party, in mediation this third party does not have the power to decide the dispute and his purpose is to help the parties to reach to their own decision.

The European Union promote actively methods of an alternative solution of the conflicts, among them mediation. Directive 2008/52/EC regarding mediation[3] applies to cross-border disputes in civil and commercial matters. This refers to disputes in which at least one party is domiciled in a member State other than that of any other party to the date on which the parties agree to use mediation or the date on which a court decides the use of mediation. The main objective of this legal instrument is to encourage the use of mediation in the Member States. In this respect, the directive includes five basic rules:

• requires to the Member States to encourage training of mediators and to ensure high quality of mediation;

• provides for any individual judges the right to invite parties in conflict to use mediation first if deemed advisable, given the circumstances of the case;

• provides that agreements resulting from mediation can become effective if both parties request that; this can be achieved, for example, through an approval by a court or authentification by a public notary;

• ensures that mediation takes place in an atmosphere of confidentiality; that is why the mediator can not be required to provide evidence in court about what happened during mediation in a further dispute between parties to that mediation;

• guarantees that the parties do not lose their right to address to the court as a result of the mediation period running: time limits for bringing an action in court are suspended during mediation.

Mediation is a natural response to the evolution of society, serving to produce social ties and affirmation of values such as autonomy, responsibility, adapting to new circumstances, solidarity and agreement. Also, mediation is a process of creation and management of social life, which allows either restoring the social connection, either preventing or resolving conflicts due to the intervention of a third party, impartial and free of power decision, which guarantees communication between partners.[4]

---

[2] See M.M. Casals, *Divorce mediation in Europe: An Introductory Outline*, E.J.C.L., Vol. 9.2 July 2005, on http://www.ejcl.org/92/art92-2.html.

[3] The Directive was published in the EU Official Journal on 24 May 2008. Member States must comply with this Directive by 21 May 2011.

[4] M. Sassier, *Construire la médiation familiale*, ed. Dunod, Paris, 2001, p. 10.

The definition of mediation should not be limited to that of an alternative model of conflict resolution. Thus, it can prevent conflicts, fix and restore the social and cultural ties, it is important to be seen not as a procedure, but rather as a process. This is because a process is adaptive, while a procedure involves constraints, pre-establish stages, precisely determined. Although based on specific rules and steps are inevitable, the process of mediation does not follow a procedural logic, the mediator mastering the process and having the ability to adapt it, depending on the situation.

In family law, mediation scope is various: the separation of spouses, the divorce, the children's custody, the division of goods or some behavioural problems in the family. Written contract of mediation is a condition *ad validitatem*; article 45 paragraph h) of the Act[5] draws attention to the condition of multiple copies for the approval by which a settlement is achieved (separate from the mediation agreement), if agreed to be in written form, that is to be drawn in as many copies as are parts (in accordance with the provisions of the Romanian Civil Code, article 1179).

The paradox of the mediator's neutrality[6] is that it stops where begins the debate of mediation philosophy. In this case it is not neutrality, but a commitment from the mediator that a conflict can be solved otherwise than by force report. Neutrality gets, in mediation context, a different meaning than the traditional, defined in public international law. It no longer appears as a state or attitude of non-involvement in the strained relations that exist between states, but as an active manifestation of the mediator to facilitate resolution of a conflict without a specific interest in the solutions. Also, the neutrality translates into a lack of quality for the mediator to represent the parties or to be their warrant.[7]

On the other hand, it must not understand that the neutrality of the mediator excludes its commitment and responsibility. The mediator must be neutral towards the parties, not toward the human relationships, since the conflict resolution through mediation is a choice freely consented.

Resolving conflicts through mediation, the parties make an appropriate response to the conflict, by focusing on the interests at stake. If the traditional conflict resolution is focused mainly on the legal aspects of the dispute, the mediation's aim (in accordance with the law) is to find a realistic and convenient solution for both sides in the conflict.

Thus, the mediation process, in comparison with the classic justice, does not have the purpose to establish guilt or innocence of the parts. The mediator has no power of decision, but provides procedural information, stimulates dialogue, facilitates the exchange of views and information between the parties, helps parties to clarify their needs and interests, to overcome barriers in communication and to resolve disputes through an advantageous solution for both parties.

Family mediation, like other forms of mediation, is divided between different visions of what it should be, what is its purpose and how does she evolve.[8]

Many authors and practitioners define mediation as a practical, specifically concept: a way of resolving conflicts, which allow finding solutions for situations of disagreement, tension, even outrage among people, channelled, more or less, to a concrete goal of reorganization of family life.

Mediation is a way to better manage conflicts[9] and is based on the principle of dialogue, listening and construction of the agreement, not on that of confrontation which would involve the

dichotomy winner / loser. It will require techniques thanks to which the mediator helps the parties to resolve the conflict between them. About the voluntary, consensual nature of the mediation, we note the absence of any obligations of the parties to participate in such proceedings. In terms of a conflict of private law, the possibility of amicable settlement is available to the parties directly involved, rather as an opportunity to slow, rigid and costly mechanism court proceedings, and whether the arbitration. None of the special laws, without violating fundamental human rights, will not be able to regulate the requirement of an institution designed to address, through a third party, by way of negotiations between the parties, their conflict. Because, therefore, it would be create an obligation for the parties from a conflicting report to address, contractually, to a third person that facilitate their settlement. [10] And, more of this, we must make a grammatical interpretation of the article 43 from Law no. 196/2006 (above-mentioned), who provide that the parties in a conflict *may presents* together in front of a mediator.

Mediation can occur by an independent manner, at the initiative of the parties and outside of any legal proceedings when the parties feel that certain difficulties arise. But the mediation can be used also when the dispute is already in front of the court. Thus we are talking about "judicial mediation"[11] and his complementarities to the judicial proceedings. This other form of justice, a gentle justice, joins the traditional one, filling it by proposing different ways to see and resolve conflict. When the judge recomands mediation and the parties accept it, the parties should go in front of one mediator, for information regarding the advantages of the mediation. After this session of information, the parties decide if they are going to proceed in accepting or not resolving their divorce through mediation.[12]

We also have to avoid some myths about family mediation, like: the mediator gives legal advice (the fact is that the mediator does not give legal advice to the parents, he may only suggest possible best or worst case scenarios and this is done only to help the parents to think about what might happen); mediation is similar to going through counselling services (the mediation is not counselling or therapy; the mediator focuses the parents on future goals to help avoid future disputes); family mediation requires compromise (we must take into consideration that the goal of mediation is an agreement that everyone can accept, but it does not always require a compromise, it does just require that each person listen to each other and be flexible); the family mediator makes the decision for the parties (never a family mediator does not make decisions); if we mediate, we must come to an agreement (no, the parties do not have to come to an agreement and they should not feel pressured to agree to anything; if one party or another does not agree the mediation the court will decide); courts are more qualified to reach a fair decision (only the spouses know their needs and wants better than the court, so they are in a better position to reach an acceptable agreement).

Conclusions:

Regarding divorce by agreement, it is undeniable that the Law no. 202/2010 intended to streamline divorce proceedings. However, leaving aside the necessity to relieving the courts of the many processes of divorce, we must not forget that although we have the possibility to divorce in front of a public notary, some issues concerning property division between husbands will be solve nevertheless in front of the court because the non-agreement between the parties in this regard (and they are many cases of). This is regrettable if we take into consideration that the main purpose of these provisions is that they would have to be a helping hand to the courts. So, whether we like it or not, we do not think that the courts will actually be relieved considerably from their cases.

[12] See art. 614^1 from the Romanian Procedure Civil Code, introduced by the Law no. 202/2010.

Regarding mediation, it is good that we should not see this exclusively in his peaceful image, as if it will be enough for the individuals to enter into such a process for the inequalities and differences of opinions and interests to be subdued.

Most conflicts end up in court because the individual believes the court ruling is the sole and only way which can be set right. Mediation is a new liberal profession, in the pioneering stage, appeared recently in Romania and therefore, that any new institution, it is harder understood and accepted by Romanian citizens.

It may be good that between justice / judges and mediation / mediators it will be establish a fully functional collaborative partnership, justice being the ultimate solution to the serious conflicts that could not be resolved through mediation.

Basically, by signing such of cooperation protocols can be brought to the attention of potential justice seekers information regarding: the advantages of mediation, the mediation service procedure, the role of the mediator in resolving disputes amicably, mediators and the parties' right to choose their own mediator.

Family mediation (not only this form, but the mediation, in general) remains a practical as confidential, so little known in society. The absences of an information, accurate and complete (if possible), which must be released in the juridical literature or in practice, produce a utopia effect on individuals, depriving the real impact of the necessity of such institutions.

But to what extent the regulation of the profession of mediator will become compatible with its conceptual and philosophical foundations, and the social realities, it remains to be seen.

„STABILITY AND GROWTH PACT, COMMUNITY DOCUMENT „REVIVED" IN THE CURRENT GLOBAL ECONOMIC CRISIS"

ROXANA-DANIELA PĂUN*

Abstract:
The article proposes to make a reasoned radiography Stability and Growth Pact, EU document revived therefore need to strengthen financial discipline and budget 6 to 7 September 2010 meeting of the Economic and Financial Affairs Council (ECOFIN). He talked about the introduction of the Stability and Growth in a 'European quarter' which will be monitored in structural and fiscal policies of the Member States. He also held a first exchange of views about the possible introduction of a levy on banks and a tax on financial transactions. Thus, the European Union has moved to create the world's first supranational system of control over the financial markets, particularly in order to reduce the risk of global financial crisis. The system will act in early 2011. For the first time in history, European financial control agencies will have more seats than national governments. In addition, the European Central Bank will see a branch that will track the emergence of crisis risk.
The financial crisis has diminished the EU's growth potential, and made it clear just how interdependent its members' economies are, particularly inside the eurozone.
The most important priority now is to restore growth and create effective mechanisms for regulating financial markets - in Europe and internationally.
In strengthening its system of economic governance, Europe must learn from previous shortcomings which have put the financial stability of the whole eurozone at risk:

- *poor observance of the EU's sound rules and procedures for economic policy coordination*
- *insufficient reduction in public debt during the good times – with peer pressure proving an adequate incentive*
- *failure to deal effectively with the build-up of macroeconomic imbalances - despite the Commission's warnings – resulting in high current account deficits, large external indebtedness and high public debt levels in a number of countries (above the official 60% limit for eurozone countries).*

Greater economic policy coordination in the EU will be achieved by tools designed to:

- *strengthen the preventive and corrective arms of the Stability & Growth Pact*
- *address imbalances through stronger macroeconomic surveillance, including alert and sanction mechanisms*
- *set out effective enforcement mechanisms to ensure that member countries will act in compliance with the EU framework they have agreed.*

Key words: *Stability and Growth Pact, enforcement mechanisms, current account deficits, large external indebtedness, high public debt levels, structural and fiscal policies, the risk of global financial crisis*

1. Introductory remarks:

Stability and Growth Pact (SGP) is a regulatory framework for coordinating national tax policies in the Economic and Monetary Union (EMU), designed to ensure the stability of public finances, an important requirement for the proper functioning of EMU.

Pact includes a component of preventive and corrective component. For EMU to function smoothly, Member States must avoid excessive budgetary deficits. In accordance with the provisions of the Stability and Growth Pact, Member States agreed to meet two criteria: a deficit-GDP ratio not exceeding 3% and a debt-GDP ratio exceeding 60%.[1]

* Associate Professor, Ph.D., Faculty of Law and Public Administration, University "Spiru Haret", Bucharest (e-mail: roxanadpaun@yahoo.com).

[1] See: http://ec.europa.eu/economy_finance/sgp/deficit/index_ro htm

While this document is important for the proper functioning of the euro area, due to the historical moment we live is marked by global economic crisis and the difficulties of every European country covered in a separate development, the subject is not considered in the literature. (Maybe because it is constantly moving and controversy at all meetings of the Council of Finance Ministers of the Member States and of the European Councils).

This topic is of particular importance, both from theoretical perspective, legal, given that there is a procedure for sanctioning of Member States that violate the Stability and Growth Pact, but for any case unfinished state), but mostly practice.

A practical component is essential to optimize the effects, especially as the recasting of the measures discussed at the European level, can have positive effects on economies and the growing trend of European finance.

2. Principles underlying the achievement of Economic and Monetary Union. (EMU)

EMU is based on three principles: the principle of the single currency convergence principle and the principle of irreversibility in three-stage process of monetary unification.

The principle of the single currency issue involves a monetary unit equal power movement and the disappearance of national currencies. Therefore there will be no national monetary policy, quotes of various community currencies in the currency markets, but a single currency for all EU countries.

The principle of convergence can be summarized in three stages caledarului presentation introducing the euro, which is in fact the achievement of monetary integration.

The principle of irreversibility of the process of monetary unification is in meeting the five criteria of convergence:

1. Price stability is expressed by an inflation rate of max.1, 5% of the most well-located three countries in this regard;
2. Interest rate on term loans under 2% of average interest rates ranked top three but not more than 8.5%;
3. **The budget deficit must not exceed 3% of GDP;**
4. **Public debt below 60% of GDP;**
5. Stability of course, that the national currency exchange rate over the past two years have maintained the margin of fluctuation of exchange rates agreed by the mechanism of the EMS (2.25%), not to proceed with the realignments.

The convergence criteria are set out in the Treaty on European Union (TEU) also known as the Maastricht Treaty. After the changeover, with waiver of national currencies in favor of adopting the euro by the Member States met the convergence criteria established by the Treaty, began to experience problems even for countries that adopted the single currency at the wrong time, having regard to Community-frequent violations of overcoming that deficit ceiling of 3% and 60% threshold for public debt.

Thus, there was the Stability and Growth Pact, a document which establishes a procedure for penalizing Member States which do not meet two of the five criteria set by the Treaty of Masstricht.

3. Introductory aspects of the Stability and Growth Pact before installing the global economic crisis.

Stability and Growth Pact (SGP) is a regulatory framework for the coordination of national fiscal policies in economic and monetary union (EMU). The pact was designed to ensure the stability

of public finances, an important requirement for the proper functioning of EMU. Pact includes a component of preventive and corrective component. [2]

The preventive component

Under the preventive provisions, Member States must submit annual stability programs (convergence) to show how they intend to perform or provide stable medium-term fiscal positions, taking into account the immediate impact that aging will have on the budget . These programs are evaluated by the Commission and Council shall advise each of them.

Preventive component includes two policy tools that can be used to avoid deficits "excessive."

▪ Based on a proposal from the Commission, the Council may trigger an **early warning procedure** to prevent an excessive deficit.

▪ By the **early warning system**, the Commission may recommend that a Member State to comply with the obligations of the Stability and Growth Pact.

Corrective component

▪ Corrective pact component governing the excessive deficit procedure (EDP). This is triggered when the budget deficit threshold of 3% of GDP in the Treaty. If it is concluded that the deficit is excessive under the Treaty, the Council shall issue recommendations to the Member States concerned to correct the excessive deficit and set a deadline for it. Nerespectarea recomandărilor conduce la declanşarea următoarelor etape ale procedurii, inclusiv la posibilitatea sancționării statelor membre din zona euro. Failure to recommendations leading to trigger the next steps of the procedure, including the possible sanctions in the euro area Member States.

Long-term sustainability of public finances

Given that Europe's aging population as people live longer and have fewer children, the EU Member States face the challenge of ensuring long term sustainability of public finances, given the impact this phenomenon will have on the budget. To meet this challenge and given special attention paid to long-term viability of the revised version of the Pact in 2005, are compiled shared long-term budget forecasts at EU level and monitor and evaluate the individual situation of the Member States. Complete analysis can be found in the report on its viability. Long-term sustainability of public finances is taken into account when assessing the stability and convergence programs.

Proceedings against Member States which have exceeded the budget deficit and government debt documents required by legislation in force.

Stability and Growth Pact, a document must be respected in the euro area [3]:

■* EURO area Member States undertake to respect strict rules on budget deficit and public debt levels.

■* for violating these rules will state that they support the EU imposed sanctions for failure to recommendations to avoid or correct excessive budget deficits.

Stability and Growth Pact-exceptions-

■ An excess of more than 3% of GDP budget deficit is allowed in two situations:

1) when determined by an unforeseeable event beyond the control of the Member State;

2) when the result of a severe economic drop, at least 2% respectively, calculated at the actual level of GDP.

[2] According: http://ec.europa.eu/economy_finance/sgp/index_ro htm

[3] See: Păun Roxana-Daniela, „"Community law", Ed of Tomorrow Foundation Romania, Bucharest, 2009, Chapter VII, p.151-157

Sanctioning procedure prescribed by the Stability and Growth Pact:

■State States penalize procedure that has an excessive budget deficit, imposed by the Council of Ministers of Finance and Economy:

✓ *Issue a recommendation by the State concerned to correct excessive budget deficit, with the application within four months;

✓ * If the time limit are not taken corrective measures, the Council makes public its recommendation;

✓ * If after one month are not taken effective corrective measures, the Council shall notify the Member State to take appropriate action;

✓ * In more than two months, the Council may decide on sanctions, if the State continues to be "insensitive" to the measures recommended!

■**Size deposit =**

■ **0.2% of GDP (fixed component) +**

■ **one tenth of the difference between the deficit as a percentage of GDP this year it was described as excessive, and the reference value of 3% of GDP (variable component).**

The penalty may be enhanced by the formation of new deposits.

■The total size of the deposits made by a Member State may not exceed 0.5% of GDP.

■The Council may terminate the sanctions if the Member State has corrected this deficiency.

■Penalty imposed can not be undone.

■Interest on deposits and revenues from fines are distributed to Member States without excessive deficits, in proportion to their share of their combined GDP. **The procedure can be accelerated if the excessive deficit situation deliberately planned to apply the sanction.**

Types of programs developed by Member States:

■Member States are required to develop and implement programs for Stability (euro area member states), and where appropriate, Convergence Programs (Member States outside the euro area).

Although the Stability and Growth Pact (SGP) provides preventive component includes two elements proactive avoidance of excessive deficits in an early stage that the procedure for early warning and early recommendation, in practice almost all Member States have exceeded these values.

Early warning procedure

According to a Commission recommendation, the Council can issue an "early warning" by a State prior to the occurrence of an excessive deficit.

Council acts in this way if it finds a significant deviation from the medium-term budgetary objective (MTO) or the adjustment strategy for achieving the MTO, to prevent an excessive deficit. The recommendation calls for early warning of the Member State concerned shall take the necessary adjustment measures to prevent such a situation.

Early Recommendation

As another element of proactive, can make early recommendations, where appropriate, to advise a Member State to comply with PSC requirements may petition the call when considering political stability and convergence programs**.**

A **first attempt to reform the SGP** took place at the **European Council on the Stability and Convergence, 22-23 March 2005.**

Summarizing the discussions and solutions,

■The Council adopted opinions on the stability and convergence program for 2005 set by Cyprus, Spain, Latvia, Lithuania, Hungary, Slovenia and United Kingdom.

■ Council approved a recommendation to the Hungarian budget deficit caused by excessive.

■Although the provisions relating to public deficit and public debt profile have remained unchanged,

■It was decided a "flexibility" in the application of the pact more

■The new Member States where pension reform has increased the public deficit, will have a grace period of five years, allowing them to more easily introduce the euro. (As a concession to the Poland and Hungary)

■New EU members such as Hungary and Poland, requested to be excluded costs from the calculation of pension reform budget deficit to meet the requirements for entry to the eurozone.

■Great Britain won that governments no longer have to reduce their deficits by 0.5 percentage points in years of robust economic growth

In an attempt to unblock the application of the SGP have accepted some exemptions to exclude certain expenses from the calculation of budget deficit reforms, reforms which allow Member States to justify exceeding the deficit limit:

■Supported reforms whose costs have been excluded from the calculation of the budget deficit were:

■**1. development aid (France)**

■**2. public investment (Italy)**

■**3. Research and development expenses, plus structural reforms of the pension and investment for 'achieving European policy goals'.**

In conclusion, among the 12 states that had adopted the euro in 2005 (France, Germany, Italy, Spain, Portugal, Holland, Belgium, Luxembourg, Ireland, Austria, Finland and Greece) - 10 of them violated the Stability and Growth Pact. Most violations were: excessive budget deficit: highest = 6% Greece, the largest public debt = 100% Italy.

4. Stability and Growth Pact after the global economic crisis.

Poland, Sweden, Czech Republic, Hungary, Slovakia, Romania, Bulgaria, Lithuania and Latvia in August 2010 asked to be allowed to exclude costs of pensions reform representing public debt and deficit amounts to avoid corrective action of the EU.

In response, the Commission has offered five years of transition, the budget deficits to exceed 3% of GDP ceiling and / or debt to exceed 60% of GDP.

Poland, Slovakia and other countries, however, said the proposal is not appropriate and have raised the issue again at the summit of 28-29 October 2010. But the Commission has maintained the position, saying 'not possible' to agree with such a requirement, under current rules.

Summit conclusions are merely to invite the Council of Ministers to expedite work on the integration of pension reforms in the revised Stability and Growth Pact.

Prior to the summit of 16-17 December, where he had to agree on revising the EU's economic governance, including the penalties for those who violate budget rules, reiterated the importance of systemic reforms recognizing that pensions should be provided equal rules Stability and Growth Pact. If the Euro area Member States violated the Stability and Growth Pact even before the outbreak and spread of the current global economic crisis, now in crisis conditions, is even harder to comply with the Maastricht Treaty on inflation and budget deficit. Paradoxically, the solutions are expected from Germany, financial and budgetary discipline model for other European countries.

At the last European Council (4 February 2011), Chancellor Angela Merkel came up with a proposal called "Stability Pact" in the euro area. Thus, Member States would be unable to score in their Constitution exceeded a certain threshold of budget deficit and public debt. Working time should be standardized, as well as retirement age, which would be 67 years. Also, Germany wants

the legislation states that the automatic indexation of wages to waive this provision. There are also proposals for the harmonization of tax legislation.

"If this proposal is a strong will to coordinate and monitor economic policies in the euro area, I will strongly support, as is consistent with what the ECB Governing Council has repeatedly claimed. We see the results of consultations undertaken by the EU Council President, Herman van Rompuy, "said President of the European Central Bank (ECB), Jean Claude Trichet.

"If this proposal is a strong will to coordinate and monitor economic policies in the euro area, I will strongly support, as is consistent with what the ECB Governing Council has repeatedly claimed. We see the results of consultations undertaken by the EU Council President, Herman van Rompuy, "said President of the European Central Bank (ECB), Jean Claude Trichet.

„Our message is very clear: we call on all concerned to exercise responsibility. And not by words but by deeds. Therefore, our strong message is that monetary union based on the euro, it works. Coin is reliable and has proved able to maintain price stability. Now is the time for economic union to work just as well, "said ECB president.

At the same time raising salaries in the countries of the euro area would be "a foolish measure" to the States out of recession, while the monetary union increase inflationary pressures.

European authorities should make every effort to avoid raising other prices above the levels set by the ECB definition of price stability.

As can be seen easily, the series of measures prescribed by the Stability and Growth Pact can not be analyzed only in the context of global economic and financial. Thus, the budget deficit and inflation threshold set by the Maastricht Treaty (below 3%) becomes a challenge for European countries in the euro area, ruled by an unshakeable political will, catalysed around France and Germany, seeking solutions viable exit from recession, to position their economies back on an upward trend of growth, not least by strengthening Eurozone.

5. Conclusions:

Currently, European economies are facing a classic problem of too much indulgence. A state spends more than people can pay and short-term benefits generated domestically. But long-term costs are transferred to all other members of the euro area are suffering because of rising interest rates.

Bigger deficits are covered with a capital that would otherwise be invested in the private sector, which raises interest rates. The economic situation in Greece is living proof of the failure of a State to manage its own economy and financial difficulties, but those who are charged to their European partners.

But other major European countries faced with the prospect of growing budget deficits because of their generous social insurance programs and the continually aging population. Thus, Spain, France, Germany, Portugal, Italy and other EU nations should introduce fiscal measures, primarily to reduce spending on pensions and health insurance, as European tax rates are already high.

Without adjustments, rising budget deficits would cause higher risks of inflation and would erode the euro as a safe image. A country with a less gradualist monetary policy, the euro and the monetary policy of the European Central Bank (ECB) implies that a recession becomes too restrictive monetary policy, while in periods of "boom" is too lax.[4]

To maintain the credibility of the euro on international markets, the EU needs a common tax plan long term, which would generate the necessary budgetary savings.

All EU members should take part in a coordinated process of consolidating budgets, regardless of their economic positions. Consolidation should be subject to demographic profiles,

[4] Opinion expressed by Caraiani Petre in „Models of monetary policy. Applications for Romania, Ed Wolters Kluwer, 2009, p.148."

budget structures, financial vulnerabilities and capacities to produce revenues to the budget of each state.

An attempt to control the financial and fiscal policy coordination of Member States is also a goal of specialists, since all the current difficulties arise amid internal imbalances of the national budget, affecting European finances. Mutual aid system is designed to save states in the threshold of entry into default, but the system can not work of carrying long. To paraphrase, no European country that fall within the targets set by the Maastricht Treaty can not accept failure than a solution, temporary, substantial financial support granted to a state in domestic politics does not prove serious economic and financial-monetary.

Although there have been personalities who have harshly criticized the Stability and Growth Pact, it can be observed under normal conditions, but the economic crisis. Thus, during favorable budget balance should be maintained, in which the pact appears to be flexible ("flexibility" that I argued it in Section 3. Introductory aspects of the Stability and Growth Pact before the onset of economic crisis). This "flexibility" is the Covenant to be "questionable" in the binding character of the fines, which raised the political struggle in the Council discussion

We share views on the pact that removes threats to maintaining a policy of debt, use more debt means higher inflation, higher taxes ... that reduces investment.[5]"

A policy of borrowing money means lack of investment, only winners are the banks. "But this is not about the European notion of social market economy" [6].

Certainly, the future will demonstrate the political will of European leaders in saving the "Euro Zone" and the Stability and Growth Pact is one of the instruments can do this!

DAMAGE – CONSTITUTIVE ELEMENT OF TORT LIABILITY IN ENVIRONMENTAL LAW

ANDRADA TRUŞCĂ*

Abstract:
In order to discuss about tort liability, several conditions need to exist: the illicit act, damage, causal link between the illicit act and damage, and last but not least, illicit offender fault. Thus, the damage is a sine qua non condition of tort liability, the illicit act being necessary but insufficient for its employment. Damage was defined as the harmful result, with a patrimonial or a non patrimonial nature, a result of violations of subjective rights and legitimate interests of an individual. It is known that the patrimonial damage does not present special discussions, but in terms of non patrimonial damage is required to be made a few observations. In the expression of environmental damage caused by pollution, it is used phrases like "environmental damage" or "environmental prejudice" including both the damages suffered by the natural environment through pollution as well as those incurred by the person or property, other than those in natural environment. In this paper we propose to analyze the environmental damage with special attention on the non patrimonial damage, both theoretically, but also in terms of jurisprudence.

Key-words: *damage, tort liability, environment, patrimonial, non-patrimonial.*

1. Introduction

Damage is the sine qua non condition for tort liability[1]; the unlawful act is necessary, but insufficient for its involvement[2].

Thus, damage was defined as the damaging result, of pecuniary or non-pecuniary nature, a result of violations of subjective rights and legitimate interests of an individual[3].

There are several types of damage, their classification being made according to several criteria[4]. With regard to the first criterion, *after the intrinsic nature of loss*, losses are divided into pecuniary and non-pecuniary. *The pecuniary loss (material)* is the most common and can be measured in money, such as: destruction of property, killing an animal, a person's health injury followed by decrease or loss of the working capacity etc. *The non-pecuniary loss (moral)* can not be measured in money, resulting from prejudices and violations of non-pecuniary rights: death, physical and mental pain, harm caused to the physical harmony or appearance of a person, reducing the human being's possibilities to enjoy life's pleasures and joys etc.

The second criterion for classification is *after the way an injury can affect the human being or just his assets. Injuries caused directly to the human person* are also classified, after the human personality criterion, as it follows: bodily injury, caused to the physical personality: physical and psychological pain (the monetary compensation for such harm is also called *pretium doloris*), recreational injury (consisting of the loss or restriction of the human being's opportunities to enjoy the normal joys and pleasures of life), aesthetic injury – damage done to the physical harmony and

[4] Ernest Lupan, *Civil liability* ..., p. 73-76; Ion Dogaru, Pompil Draghici, *op. cit.*, p. 196-197.

appearance caused to a person (the compensation is called *price of beauty*[5]); damage to the affective personality: the death of a close relative, death of an animal, etc., damage caused to the social personality: honour, dignity etc. *The damage caused directly to assets* may appear under two forms: damage caused to public property, damage caused to private property.

The third criterion is *related to the possibility of predicting the moment of damage*, and they are divided into predictable and unpredictable. *The predictable damages* are those harmful consequences that could have been foreseen at the moment of committing the illegal act. *The unpredictable damages* could not have been foreseen at the moment of committing the illegal act.

Finally, the last criterion for classification is related *to their occurrence length* and distinguishes between instant damages and successive damages. *The instant damages* are harmful consequences that occur suddenly or in a very short period of time. *The successive damages* occur continuously or in a long period of time.

Going back to the first criterion for classification, it is known that the pecuniary loss does not involve particular aspects; on the other hand, a few observations are required to be made on the non-pecuniary loss. According to the specialized literature[6], the tort liability for non-pecuniary loss has existed since the Roman law when the victim of the crime of writing and saying outrageous words, or of gestures and actions defamatory or contrary to morality was provided by law with her own action, *actio iniuriaro.*

The modern civil law settles in a differential manner, the tort liability for non- pecuniary losses: *Swiss and German law* recognizes tort liability for non-pecuniary losses only in cases provided by law; in the *common law* system, the law does not cover such liability, but it is widely accepted judicially; *in French and Romanian law*, the tort liability for non-pecuniary losses was judicially admitted due to some express legal texts[7].

Regarding the expression for environmental damage caused by pollution, phrases like "environmental damage" or "ecological damage" are being used, and they include both damages suffered by the natural environment, through pollution as well as those damages incurred by the person or property, other than those from the natural environment. The term of "environmental damage" was first used by Michel Despaux to reveal the particular features of indirect damages resulting from harming the environmental quality, especially if it envisages that the damage caused to some of the environment natural components spreads and influences other environmental components[8].

A controversy was born on the question who is the victim of ecological damage? The environment or the man? Most authors say it is about people and property damage caused by the environment, in which they are located, and other authors, who are fewer, state that environmental damage can only be considered the harm caused by man, to the environment.

In this regard, a clarification initially made by other specialists in the field[9], to which we join, should be made, namely, the emergence of damage represents the general foundation for the right to compensation of the holder of environmental factor, namely the polluter's obligation to pay compensation for environmental damage caused by pollution.

Regarding the definition of environmental damage, it should be noted that a complete and accurate definition of this notion is missing from traditional environment sources. Romanian legislature has attempted a definition which, unfortunately, as we shall see below, does not actually cover all the damage caused by environmental pollution, in general.

[9] *Idem*, p. 78-79; Ernest Lupan, "The pollution victim's right to compensation", "Dreptul" Review, no. 9 (2002), p. 69 et seq.

Thus, Environmental Protection Law no. 137/1995 was the first legal text that defined the environmental damage as "the measurable effect in cost of damage on human health, property or environment caused by pollutants, harmful activities or disasters", in Annex nr. 1. Subsequently, Government Emergency Ordinance no. 195/2005 resumed in art. 1, the definition of environmental damage without any improvement. *In this respect, we believe that the suggestion of ferenda law of an addition, in a future regulation, to the definition of environmental damage, in order to eliminate the existing confusion in theory and in practice is entitled.*

We detach the following characteristics from the definition given by the legislation in force[10]: it is about expressing the value of consequences of damages caused; damage can be done to human health, goods of any kind or to the environment; damages are the negative consequences of pollutants, harmful activities or disasters.

An observation[11] is required to be made: the effect of the value of environmental damage is indeed measurable, but this measurement is not always real, knowing the fact that the damage dimension does not come to light immediately.

Before further analysis of the environmental damages, a comparison between the notion of "civil damage" and "environmental damage" is required to be made:

- first, the civil law protects the subjective rights of individuals; the environment can not be protected by civil means. A form of protection is, however, ensured, most negative effects on the environment resulting in violations of civil rights, such as the right to property or the right to health;
- the task of civil law is to restore the situation previous to causing the damage, focusing rather on *restitutio* than on prevention, which characterizes environmental law;
- in environmental law, the categories of *damnum emergens* (Latin expression that means an element of the prejudice, the actual damage. In its totality, the damage includes both the actual loss, but also the lack of gain or benefit that the creditor of the obligation or the injured person would have achieved if no illegal act had occurred) and of *lucrum cessans* (Latin expression used to designate part of the prejudice which consists of the legitimate gain or benefit unrealized by a person as a result of failure or improper fulfilment of obligations assumed by another person or of the committing, by that person, of illegal acts. According to a fundamental principle from the civil liability field, compensation should cover the actual damage, damnum emergens and lucrum cessans) are not sufficient to determine the concept of damage, knowing that the environmental damage can be the outcome of a long process and can occur immediately and permanently or irreparably or only in the future.

2. Categories of environmental damages

The environmental damage consists of damage of primary origin or damage of secondary origin[12]. Thus, *the damage of primary origin* is the one caused to material values, having a real character (it prejudices the pecuniary interests of persons and may consist of losses in the agricultural production, the death of animals for production, destruction of plantations, etc.). *The damage of secondary origin* is the result of primary damage caused to the environment, appearing as losses of physiological, moral, genetic nature etc.

With regard to environmental damage, in Romanian environmental law, one can distinguish the following categories: environmental damage assessed and repaired; predictable environmental damage and acceptable or permitted environmental damage.

[10] Ernest Lupan, *On the legal ...*, p. 79.
[11] *Idem*, p. 79-80.
[12] Ernest Lupan, On *the legal ...*, p. 85-86.

3. Conditions for the pecuniary loss

Regarding the first condition, in environmental law, just as in civil law, the damage must be *certain*, its existence must be beyond doubt and it must be evaluated at present. Certain are, however, not only *the actual damages, but also the future ones*, if there is certainty that they will occur and if there are the necessary elements to determine their dimension.

If the whole extent of the damage can not be know (which happens most often when it comes to environmental pollution or its components), the court order will be limited only to the repair of the damage found with certainty; the Court can also subsequently go back on the order and give the entire reparation for all damage arising after the ruling, under the only condition to prove that it comes from the same act. The natural or legal person responsible for the damage will be compelled to repair it and to pay the costs of removing its consequences in order to restore the previous situation[13].

The second condition for pecuniary damage is for it *not to be repaired*, because otherwise, the civil liability ceases.

Finally, the third condition is for the damage to be direct, occurring as a direct consequence of the act by which is connected through a causal relation; otherwise, the damage goes outside the scope of tort liability[14].

4. The repair of environmental damages

The repair of environmental damages is driven by a set of principles, as it follows[15]:

The first principle concerns the *polluter's legal obligation to pay compensation* for covering the environmental damage caused, and is accomplished through the "polluter pays" principle, and if the polluter is not a person, compensation expenses are paid of funds specially created for this purpose, at national level.

The second principle refers to the *total compensation for the environmental damage caused* by using different methods to assess the damage (the judicial evaluation, the legal contractual evaluation, the administrative evaluation)[16].

The joint compensation in case of multiple authors of the damage is the third principle.

The fourth principle according to which *the environmental damage is repaired regardless of the polluter's fault*, ensures and guarantees the obligation of any natural or legal person, guilty or not to restore the polluted environment, not only in the case of damage caused by high-risk sources.

5. The repair of non- pecuniary losses from the environment field

It is known the fact that environmental degradation through pollution may be the source of pecuniary losses, but also of non-pecuniary losses resulting from the breach of the right to privacy[17].

Thus, the European Convention on Human Rights (adopted at Rome on the 4th of November 1950, and entered into force in September 1953, document through which the first steps were taken in order to ensure the guarantee of some of the rights enumerated in the Universal Declaration of Human Rights from December 1948) indirectly guarantees the right to a healthy environment. This

right is considered, by a part of the legal specialized literature, as part of the third generation of human rights, called solidarity rights, next to the right to peace, the right to development etc.[18] , which however does not enjoy of an express dedication in the Convention. Given the importance of this right, the European Court of Human Rights has used the technique of "indirect protection" that has allowed the extension of the protection of some rights guaranteed by the Convention to rights which are not contained therein. Thus, through a broad interpretation of the scope of rights expressly stipulated by the Convention, the right to a healthy environment has been put next to the right to privacy, being considered a component of this right, leading, thus to the indirect protection of the right to environment.

The European Convention on Human Rights (the Convention) does not include in its articles or Protocols, the phrase "environment" or "right to a healthy environment". But, looking back at the moment of adopting the Convention (Rome, 1950), environmental issues were not a significant concern and industrial development did not pose serious problems for the environment. Under these conditions, the right to environment might be considered as not being part of the category of rights and freedoms guaranteed by the Convention[19].

According to theorists[20], the Convention was created as a result of atrocities committed during the Second World War, in an attempt to ensure human dignity and to support a true European Constitutional Charter, formulating in its content, individual rights to protect man's moral and physical integrity and freedoms; for this reason, the Convention editors were not concerned about the environment, at that time.

The interest in environmental issues emerged much later, namely, in 1972 during the first United Nations World Conference held in Stockholm. This was the first global environmental conference, attended by delegates from 114 countries. As it is known[21], the most important document adopted at the Conference is the "Declaration on the environment" in which 26 principles on states rights and obligations in that area and developing means of international cooperation were established. The importance of the document is that it explicitly stated for the first time, the connection between environmental protection and human rights. Thus, Principle 1 of the document states that: *"The man has the fundamental right to freedom, equality and satisfactory living conditions in a quality environment, which allows him to live with dignity and prosperity. He has the sacred duty to protect and improve the environment for present and future generations (…)"*[22]. But as stated above, the document establishes a relation between human rights and environmental protection, the quality of the latter being a key factor to ensure satisfactory living conditions, but, nevertheless, does not recognize directly a right to environment. Another novelty is that through this document, the grounds for the development of international environmental law have been set up.

After two decades from the first global environmental conference, despite the results achieved in terms of international cooperation, the planet's environment continued to deteriorate in a general manner[23], requiring a new measure, namely, the second United Nations Conference on Environment and Development held in Rio de Janeiro, in 1992 (during the second United Nations Conference on Environment and Development, a series of documents have been adopted, such as : the Rio Declaration on Environment and Development (Earth Charter), Agenda 21, the Convention on

Climate Change, the Convention on Biological Diversity and the Declaration of Principles on the conservation and exploitation of forests).

Although, through the Rio Declaration, no progress was made in the recognition of the material right to a healthy environment, the document is important because its provisions enshrine a number of procedural rights that are considered derived from the material right to environment: the right to access to environmental information, the public participation in the decision-making process and the access to justice in environmental matters[24].

However, the first international legal instrument specifically consecrating the right to environment was adopted during the Conference of the Organization of African Unity (now African Union, successor of the Organization of African Unity, founded in July 2002. The African Union is modelled after the European Union, its purposes being to promote democracy, human rights and development on the African continent), as "the African Charter on Human and Peoples Rights, a regional document, which in art. 24 provided that *"all peoples have the right to a general environment, satisfactory and favourable to their development"*. The document is especially important since it comes from a cooperative structure belonging to third world countries which, due to socio-economic difficulties do not give priority to environmental concerns[25].

Continuing the regional line of adopting some legal instruments enshrining the right to environment, we focus our attention on the "Additional Protocol" of the American Convention on Human Rights, adopted at San Salvador on the 17th of November 1998, on economic, social and cultural rights, which in art. 11, para. 1 recognizes the right to a healthy environment adding that *"everyone has the right to live in a healthy environment and to benefit from essential public services* (art. 11, para. 2)", but also states the obligation to *"promote the protection, preservation and improvement of the environment"* (art. 11, para. 2).

The Convention on the access to information, public participation in the decision- making process and the access to justice in environmental matters, signed at Aarhus on the 25th of June 1998 (ratified by Romania, by Law nr. 86 of May 10, 2000) brings an important contribution to affirming the legitimacy of the right to a healthy environment at European level[26], being particularly important due to the fact that it recognizes even from the preamble that *"everyone has the right to live in an environment adequate to his health and welfare* (…)[27]" and believes *"that to be (...) able to maintain this right, citizens must have access to information, be entitled to participate to the decision- making process and to have access to justice in environmental matters* (...)[28]. Also, the Convention believes that a better access to information contributes to public awareness of environmental issues.

As for the scope of legitimacy of the right to a healthy environment, three such situations are provided in the contents of the Convention, more specifically in article 9 (Access to justice): the access to justice in order to ensure procedural access to information, the access to justice for ensuring public participation in environmental decisions and the access to administrative or judicial procedures to challenge acts or omissions of private persons and public authorities which contravene to provisions of the national legislation on the environment.

Because after the first UN Conference held in Stockholm in 1972, to which we referred at the beginning of the chapter, the procedural guarantee of the right to a healthy environment and its recognition as independent right has penetrated the common constitutional traditions, from that moment on, all European constitutions have undergone reviews or have been replaced, by the insertion of provisions relating to that right considered of new generation; we consider of utmost

[24] Doinița-Luminia Nițu, *op. cit*., p. 45.
[25] Daniela Marinescu, *op. cit.*, p. 393.
[26] Mircea Duțu, *Treaty of Environmental Law*, 3rd Edition, (Bucharest: C.H. Beck Publishing House, 2007), p. 327.
[27] Dumitra Popescu, Mircea I. Popescu, *op. cit.*, p. 121.
[28] *Ibidem.*

importance also Community provisions of the Treaty of Maastricht from 1995, which states that *"The Union recognizes the fundamental human rights, as guaranteed by the European Convention of Rome (1950), and resulting from the constitutional traditions common to Member States, as well as from the general principles of Community law"* recognizing, by indirect reference, the fundamental right to environment within human rights recognized and guaranteed in the Community judicial order[29].

As a conclusion to the above, we agree with the assessment of authors of the specialized literature[30] who consider that, in virtue of the fact that there is no legal document in the European Community, to enshrine and guarantee the fundamental right to environment, this right receives, however, the status of an essential component of the constitutional traditions of European countries.

Below, we shall present some decisions that concern the violation of article 8 of the Convention, and hence of the fundamental human right to a healthy environment.

The first case to which we shall make reference is Moreno Gomez v. Spain[31] (2004). The plaintiff has been living since 1970 in a residential area in Valencia. From 1974, Valencia City Council has granted authorizations for the opening of bars, pubs and discos in the neighbourhood where the applicant resides, making it impossible for the inhabitants of that neighbourhood to sleep. The first complaint of neighbourhood residents was related to vandalism and noise, before 1980. With regard to the problem caused by noise, in 1983, Valencia City Council took the decision to grant no more authorizations for opening new nightclubs in the area. However, the measure was never implemented, and new authorizations are still being released. In settling the case, the Court finds that the exceeding of the maximum level of noise in the area has been found several times by the municipal services, so it does not consider necessary to claim an inhabitant of the area to prove what is already officially known by the mayor. Given the intensity of noise, beyond the level permitted at night, as well as the fact that this state has been repeatedly happening for several years, the Court concludes that there has been a breach of rights protected by art. 8. The administration has adopted general measures, but tolerated the infringement of rules imposed; the plaintiff has suffered a serious violation of her right to respect for home, because of local government passivity to nocturnal noises. For this reason, the Court finds that the respondent State did not fulfil its positive obligation to ensure the plaintiff's right to respect for home and private life, therefore, art. 8 of the Convention has been violated[32].

The second case is represented by Giacomelli v. Italy[33] (2006). The plaintiff has been living since 1950 near a factory that has as activity object, the storage and treatment of "special waste", variously described as either toxic or non-toxic. The factory started its activity in 1982. Since then, the plaintiff has requested several times to the Court to reconsider the authorization given to the factory. Even the Ministry of Environment found, in 2000 and 2001 that the factory functioning endangered the health of people who lived in the nearby. Other competent authorities reached the same conclusions. In December 2002, the local council moved temporarily the plaintiff's family together with other families, until the end of the lawsuit in which the factory was involved. In 2003, at the plaintiff's request, the administrative Court ruled that the decision to reopen the factory activity was illegal and must be cancelled, sentencing at the same time the temporary suspension of the factory activity. However, the decision was never implemented, and in 2004 the Ministry of Environment issued a favourable assent for further work in the factory, on the condition that it changed its operating conditions, under the control and supervision of the Court. However, only after

[32] Corneliu-Liviu Popescu, *The Jurisprudence of European Court of Human Rights 2004*, (Bucharest: C.H. Beck Publishing House, 2006), p. 92.

[33] ECHR, Decision of November 2nd, 2006, application no. 59909/00, available on site. www.echr.coe.int

14 years since the factory started its activity and seven years after it began to detoxify industrial waste, the Ministry requested a report on the impact of the factory activity on the environment. Consequently, the Court considers that public authorities have not fulfilled the obligations imposed by internal law and have ignored court orders establishing that the activity of the factory was illegal. Also, the Court stated that, even assuming that since 2004, the factory activity had no longer been dangerous for the lives of local people, in previous years, the state failed to fulfil its obligation to guarantee them the respect for private and family life. Therefore, the Court concludes that article 8 has been violated[34].

In its jurisprudence, the ECHR, in addition to having recognized the right to a healthy environment through the broad interpretation of the right to privacy, family and home, it has also shown that the right to an environment of a certain quality can be related to the respect for property. Thus, chronologically, in terms of material right, the issue was raised for the first time in the case Arrondelle v. England[35] (1980). In fact, the plaintiff, the owner of a pavilion situated at the extremity of the flight and landing runways of London Gatwick airport and near a highway, complained about the noise that violated her right to privacy, but also her right to respect for property, the pollution contributing to the reduction of the visiting value of her house. In this case, the Commission admitted that complaints suffered by the plaintiff were related to art. 8 of the Convention and art. 1 of Protocol nr. 1 regarding the property. In this case, the admissibility decision focuses on the individual situation of the plaintiff "whose property is so close to the airport runway, that the airplanes noise submits her, according to an inspection report of 1976, to an intolerable stress. It seems that the noise of highway M23 aggravates this situation"[36].

In the case of Baggs v. England[37] (1985) the plaintiff, Frederick William Baggs, who lived with his family in a house situated in the surroundings of London's Heathrow airport, complained of noise pollution caused by airport runways extension, which put that family in an unbearable situation, the house being located in an area of 72.5 NNI (noise metric). It should be noted that if the index exceeds 60 NNI, the administration does not issue building permits. However, the town planning service refused the plaintiff's application to classify his property as for "commercial use" in order to be able to sell it more easily and then to buy another property in a quieter area. The complaint was declared admissible, the Commission finding that, according to an official report, the situation that family Baggs had to endure was "truly deplorable and outrageous"[38].

We agree with the doctrine[39] that states that within the European system of judicial protection of human rights, the damage caused to the environment and, therefore, to individual human rights must be proved in order for them to be covered by the Convention guarantees. In other words, individuals must provide, at least a piece of evidence to support their claims, without which they could not "pretend", in terms of the Convention, to be victims of a violation of rights and freedoms guaranteed by this text.

In this regard, we focus our attention on the case Tauira v. France[40] (1995), referring to an alleged harm done to the environment, caused by the resumption of French nuclear experiments in the Pacific, in 1995. The Commission stated, among others, that the plaintiffs had not provided any document related to their health. As a result for not having any proof to support their claims, they could not pretend to be victims of any violation of the Convention. According to the Commission,

the mere invocation of inherent risks in the use of nuclear energy is not sufficient to allow plaintiffs to pretend that they are victims of any violation of the Convention, since a significant number of human activities are risks generators. At the same time, plaintiffs must be able to support, in a reasoned and circumstantial manner, that in the absence of adequate preventive measures taken by authorities, the degree of probability of damage occurrence is high enough to be considered as generating a violation of the right, on the condition that the criticized act does not have repercussions too distant in time[41].

6. Conclusions

We can say that the main differences between civil and environmental damage can be highlighted by the following criteria[42]: from the point of view of *the protected interest by applying the repair rules*: by repairing *the civil damage*, private rights and interests of individuals are being protected, and by repairing *the environmental damage*, the public interests of the entire society, including of persons are being protected; as for *rules by which the damage is repaired*, *the civil damage* can be recovered only upon the notification of the person suffering the injury, under the regulations on civil liability, while *the environmental damage* can be recovered after the procedure and rules of environmental law, conceived outside the idea of liability, at the request of the holder of environmental factor, non-governmental organizations, or at the request of specialized state bodies; depending on *the position of parties in the legal relations for repairing the damage, in civil law*, the parties' position is of legal equality, and *in environmental law*, the position is of subordination; as for *the possibility to renounce at the recovery of damages, in civil law*, the one who suffered the damage may not claim for damage recovery, but *in environmental law*, the owner of the polluted factor can not waive the recovery of the polluted environment, because this is a legal obligation; *depending on the possibility of negotiating the amount of damage caused*, as for *the civil damage*, parties are offered the possibility to negotiate the size of the damage to be repaired, while in the case of *environmental damage*, negotiating is excluded, the damage must be entirely repaired, the polluter is compelled to bear the cost of damage repair and to remove the consequences of pollution; he must also restore as much as possible, the conditions prior to the damage.

THE OPTIONAL INSTRUMENT OF EUROPEAN CONTRACTS LAW

LUMINIȚA TULEAȘCĂ*

Abstract
The pragmatic approach of the European contracts lawissueimposes the conceptualization and the execution of a form to materialize it accordingly, thus as to meet the legal, economic, socialand political realitiesexisting at the level of the European Union.The actual harmonization of the European private law and, implicitly, the instrument by which it can be accomplished, represents the current concern of the European specialists, but also of the European competent bodies in the legislative process.This work analyzes and supports the need to harmonize the European private law under the form of a regulation for creating a European contracts law optional instrument, conceived as "the 28th regime" or "the second regime" in each member state, offering the parties an option to choose between the two regimes of contracts domestic law.

Key words: *European contracts law, harmonization, regulation, directive, legal nature, optional instrument*

I. Introduction

The European Commission and the European Parliament have taken the first major steps in the direction of harmonizing the European private law and, to this end, by its resolutions, in the 1989 and 1994, the European Parliament has made an invitation to initiate the work on a European private law common Code.

At its turn, the European Commission has launched in 2001 a debate on the European contracts law, to which have been participating the European Parliament, the Council and different interested parties: enterprises, scholars, law practitioners, a.s.o.

In the current context of the single market and, especially, the one forecasted for the next decade through the Commission Communication "Europe 2020 – an European strategy for smart, sustainable and inclusive growth"[1], the economic and legal surveys, but also the political positions of the member states of the European Union, reveal the need to adopt an instrument for European contracts law.

It is obvious that, amongst the barriers of powerful and intelligent development of the single market, the existing differences and disputes existent at the level of the domestic laws in contractual matter play a major role.

The main problems of the current stage of regulation of the contractual matter at the EU level consider the costs the enterprises and the consumers have to incur upon concluding the contracts with their EU states partners and, in particular, the fact that the policing differences among the member states prevent or render difficult the commercial transactions regulated by the matter of consumers protection law, partially harmonized at the level of the European Law.

In this sense, the constant example is the one provided by the rule under the art.6 of the Roma I Regulation protecting the consumers, but, for the enterprises, this rule means that, when selling their goods or services beyond the borders of their country of origin, the contracts concluded with the consumers are regulated by the rules applicable in the countries where they are residents, regardless if they choose or not the law applicable to the contract thus concluded. The enterprise must comply with the provisions of a foreign law, which might entail the possibility to confront with very high costs for the cross-border transactions performance. This situation represents a contractual

* Lecturer, Ph.D., Faculty of Law, Romanian-American University, (e-mail: luminita.tuleasca@ profesor rau ro).

[1] COM (2010) 2020, 3.3.2010;

uncertainty for the enterprise and, sometimes, it even blocks the cross-border commerce performance.

Due to such reason, according to the European Economic and Social Committee, "61% of the cross-border sales fail to complete, as the traders refuse to make deliveries to the country the consumer is residing. This is mainly because of the legislative barriers and uncertainty regarding the applicable rules "[2]. The consumers in Romania and in other member states of the European Union, often must face the situation pointed out by the European authorities that is, they are in the position of being denied the execution of the cross-borders transactions, and especially the e-commerce transactions, being blocked in the country and deprived of the possibility of benefiting of more offers and lower prices existing on the Domestic Market. There are numerous the cases when the website of a seller can be accessed by the consumers in all member states of the EU, including Romania, but after ordering a product, the seller refuses to conclude the contracts with the consumers residing in these states, due to the high costs and due risks, motivating its refusal on the fact that the products cannot be delivered in that member state or the unavailability of the ordered products.

In the current context, the potential offered by the electronic commerce remains insufficiently exploited, for the disadvantage of the enterprises and of the consumers.

The performance of the classic commercial transactions and of the ones carried out electronically would be significantly encouraged by the existence of a European legal space harmonized in the contractual matter and even more completely harmonized in the matter of consumers protection.

Last, but not least, the contractual relations between enterprises would be much safer, more quick and more efficient, if there would be European common legal instruments in the contractual matter.

For all these general observations, we fully agree with the Commission's opinion, according to which the states must take the necessary actions for finalizing the European domestic market also under the aspect of the European contracts law and also with the proposition that, by 2012, there must be drafted an optional instrument related to contracts law, which should complete the directive on the consumers rights, for remedying the contracts law, including the online environment.

II. The instrument for European contracts law

The development of the single market of the European Union, weaken by the current economic crisis, can be powerfully boosted through eliminating the legislative obstacle materialized in the shape of policing differences at the level of the member states in the matter of contract law and consumers protection, grounds of internal and cross-border transactions.

The desideratum for contract law coherence can be accomplished by creating an optional law, "the 28thregime", a solution frequently discussed upon within the documents of the European Commission and European Parliament, even when talking about major fields, as indicated also in the Final notice of the European Economic and Social Committee[3]on the Green Book of the Commissionon the policy options in the perspective of a European contract law for consumers and enterprises[4], the harmonization at the European level seemed difficult to achieve, if not even impossible.

Undoubtedly, the harmonization of the laws in the matter of contracts must be achieved step by step, but in a steady, complete, safe manner and, most importantly, by means of an instrument that is provided free of charge and directly accessible to the enterprises and to the consumers.

< http://ec.europa.eu/justice/news/consulting_public/0052/consultation_questionaire_ro.pdf> (last view on January 23rd2011);

Although it has been constantly considered that the observance of the subsidiary and proportionality principles is mainly ensured by means of directives, in some fields, such as the field of consumers protection, this instrument for legislative harmonization has proved to be insufficient for the single market' needs.

Considering this reality, the European Commission has assessed, within its Communication, "Europe 2020 - an European strategy for smart, sustainable and inclusive growth ",that: "for eliminating the existing blockages, in reference to the single market what is needed is: the continuation of works under the agenda for an intelligent regulation, examining, among others, the possibility to rather favour the use of regulations than directives".

From this perspective, the most suitable is the variant of a regulation that would create an optional instrument of European contract law, conceived as a "second regime" in each member state, offering the parties an option to choose between the two regimes of contracts domestic law, regimes applicable to both domestic and cross-border transactions. In this sense, Mario Monti, ex commissioner for the domestic and competition market, in his Report on the single market, published on May 9th, 2010, has pointed out the advantages offered by the optional "28th regime" to the enterprises and consumers, mentioning that:"In other instances, where upfront harmonisation is not the solution, it is worthwhile exploring the idea of a 28th regime, a EU framework alternative to but not replacing national rules. The advantage of the 28th regime is to expand options for business and citizens operating in the single market: if the single market is their main horizon, they can opt for a standard and single legal framework valid across Member States; if they move in a predominantly national setting, they will remain under the national regime. An additional benefit of this model is that it provides a reference point and an incentive for the convergence of national regimes. So far, the 28th regime model received little attention except for the European Company Statute. It should be examined further for expatriate workers or in the area of commercial contracts where a reference framework for commercial contracts could remove obstacles to cross-border transactions. "[5].

Moreover, under the aspect of the e-commerce transactions, the Digital Agenda for Europe[6], presented by the European Commission on May 19th, 2010, indicates as necessary action for building the single and dynamic market, the strengthening of trust in the digital environment including by proposing an instrument on contract law that would complete the project of the directive on consumers' rights.

Such an optional instrument would facilitate both the domestic and the cross-border transactions offering sufficient advantages and additional value by reference to the classical system, to both enterprisers and consumers.

As far as the scope and substance of the optional instrument shall reflect a fair balance between the interest of the involved parties and a high level of consumers' protection, the offered advantages shall determine its use on a large scale.

Thus, as an alternative to the plurality of the existing regimes in contractual matter, the optional instrument shall eliminate, in a large extent, the adverse effects felt at the level of the domestic market, generated by the legislative fragmenting at the European Union level; it shall

All these are available at:

http://ec.europa.eu/information_society/eeurope/i2010/index_en htm.

eliminate the conflicts of laws and, especially, the legal insecurity mainly manifested, in the matter of consumers' rights. The set of standards applicable in contractual matter shall be easily accessible in all the languages of the member states, thus eliminating the costs entailed by the diversity of the regulations.

By its recent recommendation contained in the Notice on the Green Chart of the Commission on the policy options in the perspective of a European law of contracts for consumers and enterprises adopted on January 19th, 2011[7], the European Economic and Social Committee has, mainly, the same opinion ; however it limits, without any grounds, the scope of an optional instrument of European contract law and recommends in the perspective of an European contracts law, "a mixed solution, that would consider the decrease of the costs and the legal security, by means of:

– a „set of instruments", which would establish a common reference framework that the parties can use for drafting transnational contracts, accompanied by

- an optional regulatory regime that would allow the parties to start from more advantageous grounds, thanks to a „new advanced optional regime", to be used within the transnational contractual relations, as an alternative to the national laws, save that both the „set", and the regulation to be available in all the EU member states languages and to provide legal security based on the most advanced protection formula for citizens and enterprises. Such a regulatory regime shall not prevent the member states from maintaining or establishing more strict protective measures for the consumers "[8].

In its turn, the European Parliament has adopted resolutions on the possibility of harmonizing the material private law, first in certain sectors of the private law, as an essential condition for completing the domestic market.

In the direction of the two main aspects of these issue related to the legal nature of the European instrument and its structure, the European Commission has also set up a group of experts[9]for studying the feasibility of an instrument of European contract law and for assisting the Commission in the activity for selecting the parties in the Principles, Definitions and Model Rules of European Private Law (PCCR)[10]that are directly or indirectly applicable to the contracts law, as well as the restructuring, review, and completion of the topics selected from the draft common frame of reference, considering also other research works in the field, as well as the EU Acquis Communautaire. The CoPECLnetwork - Common Principles of European Contract Law, has completed and submitted to the European Commission the Draft Common Frame of Reference.

The Draft Common Frame of Reference (DCFR)[11]has been published at the begging of 2008, but in a first edition, DCFR did not contain any reference to DCFR[12], which was surprising[13] -

[12] See also Ch. von Bar, E. Clive, H. Schulte-Nölkeș.a., Principles, Definitions and Model Rules of European Private Law – Draft Common Frame of Reference (DCFR) Outline Edition, Sellier. European Law Publishers, München, 2009;

considering that one of the main purposes of DCFR was to represent an instrument for the Commission, in order to review the Acquis Communautaire in the field of contractual law.

The authors of the CRF Project specify that the project can be used as "grounds for one or several optional instruments". For this purpose, in the EESC opinion, "the proposition could be also applied in a restrictive manner, by introducing the general dispositions provided by the CRF project in an optional instrument that would apply only in certain specific fields of the contracts. This would contribute to avoiding the legislative gaps that would most certainly occur upon the adoption of some provisions specific to certain types of contracts"[14].

In fact, such a solution would eliminate the current legislative obstacles of cross-border trade, which represents *per se* a great benefit for the participants to the commercial activity on the domestic market and, in addition, could significantly improve the quality of the national transactions. The enterprises shall be strongly motivated to apply a set of uniform standards in contractual matter, both in the enterprises-consumers relations, but also in the enterprises-enterprises relations designed as an optional instrument set up as "the second regime" in each member state.

Following the same direction of the advantages offered by this option, the practitioners in the field of law, magistrates and lawyers, would be able to refer to a single set of legal provisions applicable in the contracts matter and, thus, the administrative tasks of the judiciary systems would be diminished.

In the same time, by choosing the optional regulation as an instrument of European contract law, in any of the assigned official names and/or doctrinaire names: "the 28thregime" or "the second regime", such will be part of the domestic laws of the member states, with all favourable consequences deriving from this statute. We hereby mention in this sense, the possibility of using the procedure applicable to the preliminary decisions provided under the art.267 TFEU and, implicitly, the guarantee for a correct and uniform interpretation of the provisions of the regulation by the European Union Court of Justice.

We are of the opinion that such an optional instrument in the matter of European contracts law shall not pointlessly over-charge the national legal framework, considering that, as far as it shall represent a preferable and more adaptive option to the needs of the domestic market, the disadvantage of the over-charge shall be practically annulled and, in time, the national laws in this matter shall harmonize with the provisions of the European instrument provisions, eliminating the duality thus created.

From the political point of view, Romania has partly expressed its option, under the aspect of the legal nature of the instrument in the contracts matter. Thus, the politically agreed option is to draft a regulation for the setting up of an European contract law that would replace the diversity of domestic laws with a uniform set of rules applicable at European level[15].

Beyond the maximum efficiency of such a solution, it must be related to the current European stage of economic and political views and to the fact that, as indicated in the Green Chart of the Commission, the major disadvantage of this option consists in the fact that such a solution might raise delicate issues on the failure to comply with the principles of subsidiary and proportionality as,

the replacement of the domestic laws with a single set of rules in the contracts matter could be considered a disproportionate measure for eliminating the barriers against the commerce on the domestic market.

III. Conclusions

An European regulation that creates an optional instrument of European contracts law presents the parties with the possibility to choose between two regimes of domestic contract law, applicable to both national and cross-border transactions, and, as it provides an European legal statute in the matter of civil and commercial contracts, it is relatively easy to accept by the member states and by the European organisms, it complies with the principles of subsidiary and proportionality, it leads to the achievement of the objectives proposed by the experts and by the European Commission, and (optionally) it eliminates the national legislative differences, it can be a complete instrument regarding the essential aspects in the contractual matter and, in time, it shall represent, by the legal safety it offers and by the frequency of its use, a model for the national legislators, a major step on the path of European legislation harmonization in the matter of contracts law.

THE LETTER OF GUARANTEE FROM THE PERSPECTIVE OF THE NEW CIVIL CODE

LUMINIȚA TULEAȘCĂ*

Abstract:
The letter of guarantee is frequently used in the domestic and international commercial activity, first of all, for the safety offered for securing the contractual obligations without blocking the pecuniary funds and, second of all, due to the existing uniform international regulations that correspond to the needs supporting the occurrence of these types of autonomous securities.
In Romania, the lack of legal policing of the letter of guarantee has created practical difficulties and offered judges the possibility to "make the law" in the litigations generated by the enforcement or by the suspension of enforcement of these contractual securities.
This work analysis the regulation of the letter of guarantee provided in the New Civil Code from the perspective of its harmonization with the Uniform Rules of the International Chamber of Commerce in Paris and with the Draft Common Frame of Reference in the matter of the European private law.

Key words: *letter of guarantee, autonomous guarantees, personal securities, New Civil Code, demand guarantees*

I. Introduction

Undoubtedly, the international trade activity and the banking practice represented, along the time, the main engines for the modernization of commercial legislation.

On the other hand, it is axiomatic that commercial activity is accomplished almost exclusively on the basis of contracts and, in this matter, contract guarantees are essential, as strongest and most inexpensive guarantees are needed.

In this context, the codification and standardization by the International Chamber of Commerce of Paris of international commercial usual practices having as object the various forms of contract guarantees had a primordial role internationally.

In the first instance, we are considering The Uniform Customs and Practice for Documentary Credits (UCP) whose utilization was generated by The New York Bankers, and which have been regulated in the form of UCP in 1933, with the last revision of July 1st, 2007 – UCP 600.

Secondly, we are considering the demand bank guarantees – The ICC Uniform Rules for Demand Guarantees (URDG) adopted in 1992 and successively revised until reaching the latest form entered in force on the date of July 1st, 2010 – URDG 758 and the contract guarantees – The ICC Uniform Rules for Contract Guarantees – ICC Publication no. 325, which have not been revised since 1978 and became almost obsolete after almost one decade of non-use in the banking practice.

At the European Union level, the contract guarantees issue is included in the experts' and European organisms' concerns as part of the extensive and ambitious project of the Common Frame of Reference for European Private Law (CFR).

Thus, the European Commission financed through a research grant the activity of an academic international network which performed preliminary legal research in view to adopting CFR. The research activity has been completed at the end of 2008 and lead to publishing the Draft Common Frame of Reference (DCFR) – Principles, Definitions and Model Rules of European

Private Law. Draft Common Frame of Reference (DCFR)[1]. The objective of this project is to provide a uniform contract law to the European internal market. This is due to the fact that various international and regional organizations admitted that the legislative differences in the law of contracts create barriers in the international trade.

Within the DCFR, contract guarantees are assigned three chapters with general provisions in Part G – Personal Security of Book IV – Specific contracts and the rights and obligations arising from them (IV-G1:101 – IV-G-3:109).

The Romanian legislator, proving an illaudable consistency, did not understand to answer coherently and rapidly to the essential requirements of the commercial activity, therefore our legislation does not regulate up to now any of the modern guarantees of extensive use in the national and international commercial practice.

In this context, the New Civil Code of Romania, adopted by Law no.287/July 17th, 2009[2] and foreseen to enter into force on July 27th, 2011 fills in this long-time gap of the Romanian law.

In this work, we shall analyze and determine the legal regime of the letter of guarantee from the perspective of the New Civil Code and, not in the last resort, how much appropriate and adjusted the Romanian regulation is to the most modern approaches of this form of guarantee.

II. Personal securities

Traditionally, the regulatory Romanian private law comprises a single form of personal security: the surety. For this reason, the autonomous conditional securities have been sometimes assimilated to this type of guarantees[3].

It was inevitable and necessary to complete the category of personal securities with other forms existing in other domestic regulations and in the commercial practice, respectively to regulate expressly the autonomous guarantees and to generally indicate any other types of personal guarantees that may be provided by law, without other such guarantees to be regulated, up to this moment, by the Romanian law.

Thus, according to article 2.279 of the New Civil Code: "The personal securities are the surety, the autonomous guarantees, as well as other guarantees expressly provided by law".

Analyzing the trends of the European private law, as recently illustrated in Principles, Definitions and Model Rules of European Private Law. Draft Common Frame of Reference (DCFR), we believe that creating a clearer and more simple dichotomy by regulating the dependent and independent securities as main categories which would include expressly or by qualification the concrete types of guarantees would have been more adequate.

Thus, according to DCFR, the personal securities are either dependent or independent securities, the distinction being taken into consideration especially from the perspective of the conditional or unconditional nature of the way in which the guarantor personally undertakes.

---

Academiei, Bucharest, 1987, page 113; Ion Turcu, Liviu Pop, Commercial Contracts. Conclusion and Performance. Introduction to the Theory and Practice of the Special Commercial Contracts Law, Vol.I, Ed. Lumina Lex, Bucharest, 1997, page 202; I. Rucareanu, Victor Babiuc, The Legal Regime of the Bank Guarantees, World Economy Institute, Bucharest, 1980;

In DCFR, the independent personal security is regulated as an obligation a guarantor provides to a creditor with the purpose of guaranteeing a right to execute an actual or future obligation of a debtor to a creditor, execution which is incumbent only if and to the extent that the obligation execution is due by the latter – art.IV.G.-1:101: Definition (a) – DCFR[4].

The second main type of personal securities – the independent security is considered to be an obligation undertaken by a guarantor in behalf of a creditor for the purpose of guaranteeing and which is expressly or impliedly declared as not depending on the obligations undertaken by another person towards the creditor – art.IV.G.-1:101:Definition(b) – DCFR.

In DCFR's vision, the personal securities category includes any type of guarantee undertaken voluntarily, including the letters of comfort (a form of conditional – dependent personal securities) and the stand-by letters of credit (a form of unconditional – independent securities) and it creates the presumption of the dependent character of all personal securities, except where the creditor indicates it has been agreed otherwise.

Accordingly, it has been opted in DCFR for a less rigid regulation and classification of the personal securities, the legal bond between the guaranteed obligation and the security being determinative for distinguishing between the dependent and the independent securities, not in an abstract but in anactual manner, in particular regarding the way the guarantor undertakes towards the creditor.

It is relevant from this perspective to mention that the independence of the security is not affected a by a simple general reference to a basic obligation (including to a personal security).

ICC Publication no.325 regarding the contract guarantees represented an unsuccess from the perspective of using these rules in the banking practice, probably due to the conditional character of the obligation undertaken by the personal guarantor.

Thus, The Uniform Rules for Contract Guarantees – ICC Publication no.325[5] are applied to the guarantees granted to some natural and legal persons for participating to tenders, for guaranteeing contract obligations performance and for guaranteeing the repayment of the advance payment given, any bails, insurances or similar commitment, whatever their name or description may be, which indicate it is submitted to the ICC Uniform Rules for tender bonds, performance guarantees and repayment guarantee – Publication no.325, all these guaranteed obligations arising from supply, service and works execution contracts.

The capacity of guarantor may be held by banks, insurance companies and any natural or legal persons, but in the domestic and international banking practice the guarantees granted by banks in the form of the letters of credit imposed.

From the perspective of ICC Publication no.325, the autonomous guarantee issued in the form of a letter of guarantee is the title on whose grounds a bank, an insurance company or any natural or legal person (guarantor) undertakes to pay, based on the instructions of a person called originator, an amount of money inscribed in the title to another person called beneficiary, upon this one's request, in case that the originator fails to fulfill his obligations to the beneficiaryarising from participating to the tenders organized by the beneficiary or from the supply, service or works contracts concluded between the originator and the beneficiary.

In order to prevent the fraudulent use of contract guarantees, ICC Publication no.325 rules the principle of justifying any letter of guarantee execution demand.

---

[4] Distinction is made in DCFR between the obligation and its performance (<<"Obligation" -An obligation is a duty to perform which one party to a legal relationship, the debtor, owes to another party, the creditor. art. III. –1:101(1) - DCFR si, "Performance", in relation to an obligation, is the doing by the debtor of what is to be done under the obligation or the not doing by the debtor of what is not to be done.- art. III. – 1:101(2) DCFR>>);

[5] International Commercial Law, Source Materials, Selected by Willem J.H.Wiggers, Kluwer Law International, Hague, 2001;

Thus, the conditional character of a demand guarantee means that the execution of the guarantee is conditioned by the proof or the justification of failure to fulfill the contract obligations by the originator in the base contract.

The guarantor must comply with the obligation of paying the amount of money inscribed in the guarantee text only in case of failure to fulfill or inadequate fulfillment of the obligations by the originator in the base contract concluded with the beneficiary of the guarantee, failure to fulfill or inadequate fulfillment which must be duly proved or at least justified by the beneficiary.

It is obvious that, in case that the originator dully fulfilled the obligations undertaken in the base contract, the beneficiary has no right to request and receive the payment of the demand guarantee, as he cannot present justifying documents for his guarantee payment request neither can he justify this non-execution by statement, and the Guarantor shall thus refuse the payment according to ICC Paris Publication no.325.

It results from the short analysis of the contract guarantees regulated by ICC Publication no.325 that the main characteristics of this form of guarantee: the dependent and conditional character of the obligation undertaken by the guarantor have lead to avoiding them in the commercial and banking practice, creditors being much more interested in much safer autonomous guarantees, in unconditional or independent autonomous securities on first demand.

In this sense, ICC Publication no.325 on the demand guarantees, recently revised in the form of URDG 758[6] met exactly the creditors' needs, and we shall present these independent personal demand guarantees in the section dedicated to the letter of guarantee.

This last statement might be contradicted by a short glimpse to the United Nations Convention on independent guarantees and stand-by letters of credit of 1995[7], a regulation not very successful itself in the banking activity despite the fact that it regulates, as the very name of this international act indicates, the independent guarantees[8].

III. The letter of guarantee in the New Civil Code

The Romanian New Civil Code regulates the letter of guarantee as following: "The letter of guarantee is the irrevocable and unconditional commitment by which the guarantor undertakes, upon the demand of a person called originator, in the consideration of a pre-existing obligational relationship, but independently of it, to pay an amount of money to a third-person called beneficiary, according to the terms of the undertaken commitment" – art.2.321 paragraph 1 of the New Civil Code.

It is, undoubtedly, the only general definition that could have been given to this form of autonomous guarantee. It lacks any connection to the ICC Publication no.325 on contract guarantees and it corresponds to the similar concept regulated by URDG 758.

But by acting in this manner the Romanian legislator decides not to regulate the conditional personal securities. A counter-argument would be that surety is already regulated and it is a

[6] ICC Uniform Rules of Demand Guarantees Including Model Forms, 2010 Revision, Implementation Date July 1, 2010, ICC Publication No.758, ICC Services Publications, Paris, 2010;

[7] United Nations Convention on independent guarantees and stand-by letters of credit, adopted by the Resolution 50/48 ofn December 11th, 1995 at New York, entered into force on January 1st, 2000, not ratified by Romania,available at: <http://www.uncitral.org/pdf/english/texts/payments/guarantees/guarantees.pdf>, the last view at february 19, 2011;

[8] In art.3 al United Nations Convention on independent guarantees and stand-by letters of credit, the independence of the guarantee is defined as folows: "For the purposes of this Convention, an undertaking is independent where the guarantor/issuer's obligation to the beneficiary is not: (a) Dependent upon the existence or validity of any underlying transaction, or upon any other undertaking (including stand-by letters of credit or independent guarantees to which confirmations or counter-guarantees relate); or (b) Subject to any term or condition not appearing in the undertaking, or to any future, uncertain act or event except presentation of documents or another such act or event within a guarantor/ issuer's sphere of operations.";

conditional personal security, but, no doubt, it is a species and not a specific institution, and not in the last instance, the regulation of the letter of comfort as an implicitly conditional autonomous security.

In our opinion, it would have been much more necessary to distinctly regulate the conditional and unconditional personal securities[9] as general tools which would have included several expressly or impliedly indicated species, following the DCFR model for example.

In such a context, letters of guarantee could have been, as case may be, either conditional or unconditional, according to the terms of the commitment undertaken to the creditor[10].

Thus, from the perspective of the New Civil Code, the letter of guarantee is an autonomous guarantee, independent of the pre-existing legal relationship which generated the issuing of the guarantee, independently strengthened by its unconditional character.

Similarly to URDG 758, the guarantee is, by its nature, independent of the pre-existing relationships and the guarantor is not preoccupied of these ones at all. The references in the guarantee text to the pre-existing legal relationships made with identification purpose do not change the independent nature of the letter of guarantee.

In the same direction, an interesting aspect is seen in the French law, which did not include until by 2006[11] an express provisions on the letter of guarantee so that the literature assimilated it to a form of simple or imperfect delegation, qualified as an abstract act and ruled by the principle of unenforceability of exceptions: the initial debtor cannot elude the execution of his obligation to the assigning debtor by invoking an exception (nullity, termination, non-fulfillment exception) extracted from his relationships with his assigning debtor or from the relationship of the assigning debtor with the assigning creditor[12].

In these conditions, according to the provisions of art. 2.321 paragraph 2 of the new civil code, the guarantor must execute the obligation undertaken in the letter of guarantee upon the first and simple demand of the beneficiary if the text of the letter does not provide otherwise.

This superficial disposal is to be completed by the doctrine and especially by the jurisprudence, considering that, even in the case of the demand guarantees regulated by URDG 758, it is necessary, as a "formal" condition for the execution of the demand security, that the beneficiary's demand, based on the security, to be accompanied by a beneficiary's statement indicating the grounds on which the applicant (the originator) is found to be in default of fulfilling his obligations arising from the subsidiary relations (the pre-existing legal relationships). This statement may be included in the text of the demand based on the guarantee or in a separate document. The condition regarding this statement can only be superseded by express exclusion which would indicate that this condition is not required to be fulfilled. The exclusion formula is not sacramental, but it must be express and explicit in its essence, being necessary to mention that the guarantee execution demand justification statement is excluded.

The beneficiary's justifying statement is indicated in all modern regulations of the letter of guarantee and it is based on maintaining a balance between parties' interests and especially on the wish of demanding with good faith the execution of the letters of guarantee.

Accepting the possibility to derogate by the text of the letter of guarantee from the rule of executing it upon the beneficiary's first and simple demand provided for by art.2.321 paragr. 2 of the new civil code may be understood either in the sense of imposing by convention the formal condition

[11] The Ordonance from 23 martie 2006 has been included the art.2321 in French Civil Code about personal securities; for detailes: Alain Cerles, Le cautionnement et la banque, 2e edition, Revue Banque, Paris, 2008, p.33;

[12] Philippe Malaurie, Laurent Aynes, Philippe Stoffel-Munck, Civil Law, The Obligations, Ed.Wolters Kluwer, Bucharest, 2010, page 831;

having as object the above-presented justifying statement, or in the sense of imposing a real condition which may be connected even with the modality of execution of the obligations arising from the pre-existing legal relationship which justified the issuing of the letter of guarantee. Such a last meaning of the legal phrase "if the text of the letter of guarantee does not provide otherwise" would lead to the conventional transformation of the letter of guarantee from unconditional to conditional, which would mean that, in the new civil code's conception, the conditional character is of the letter of guarantee's nature and not of its essence.

In the actual configuration of the new civil code, this one does not indicate either the period of time within which the guarantor must execute his obligation to the beneficiary nor the form that the execution demand must have. For this reason, the parties will probably refer to the provisions of URDG 758 as specific usual practices in this field. According to URDG 758, the guarantor must examine the beneficiary's demand and to determine if this one meets the requirements for being qualified as an execution demand within 5 business days from the date of being presented. When the guarantor determines that the beneficiary's demand is a consistent letter of guarantee execution demand, the guarantor must make the payment in the currency indicated in the guarantee, at the place of payment (art.20 and art.21 of URDG 758).

Due to the autonomy of the letter of guarantee by reference to the pre-existing legal relationship, the new civil code grants a special statute to unenforceability and, in this sense, the guarantor cannot oppose to the beneficiary the exceptions based on the obligational relation pre-existing to the commitment undertaken by the letter of guarantee[13] and he cannot be oblige bound to pay in case of abuse or evident fraud (art.2.321 paragraph 3 of the new civil code).

The Romanian doctrine and more rarely the jurisprudence admitted beneficiary's abuse or fraud as reasons for refusing to execute the letter of guarantee even when missing a legal definition of these manifestations.

The New Civil Code does not entirely cover this old gap of the Romanian private law and we do not believe that the practice can suitably apply these non-execution exceptions, still preferring to reject the demands for the suspension of bank letters of guarantee execution based on the fraud of the beneficiary's payment demand.

Thus, we shall be in the presence of abuse of rights by the letter of guarantee's beneficiary any time when his demand is made with the purpose to injure or prejudice the originator or it is excessive and unreasonable, contrary to the good-faith (art.15 of the New Civil Code).

The beneficiary's abuse or fraud is referred to the pre-existing legal relationship, more precisely to the beneficiary's demand's justified or unjustified character. Inasmuch as the letter of guarantee's originator, having pre-existing legal relationships with the beneficiary, has fulfilled all the obligations undertaken, the beneficiary cannot place the execution demand unless by abuse or fraud.

Certainly, the guarantor who made the payment had the right of recourse against the originator of the letter of guarantee[14]; otherwise the originator would record an unjust enrichment of his patrimony.

In practice, the bank issuing the letter of guarantee requests a collateral deposit, that is debited after enforcing the letter of guarantee. Another frequently used option for the guarantor is to credit the originator based on the terms established upon accepting the guarantee. In default of a contrary convention, the letter of guarantee is not transmittable together with the transmission of the rights and/or obligations arising from the pre-existing obligation relationship.

The letters of guarantee are usually not transferable but, by means of exception, the beneficiary may transfer the right to claim the payment under the letter of guarantee, if such

[13] Detailes in: Jean-Michel Jacquet, Philippe Delebecque, Droit du commerce international, 2e edition, Dalloz, Paris, 2000, p. 245;

[14] Jacques Beguin, Michel Menjucq, Droit du commerce international, LexisNexis, Litec, Paris 2005, p.562;

possibility is expressly stipulated within the text of the letter of guarantee. Thus, the letters of guarantee can be "transferable" only by means of an express statement in this sense provided in its text. A similar provision in provided by art.33 of URDG 758, with an additional mention regarding the non-transferable nature of the couter-guarantee.

Obviously, if the letter of guarantee's text does not provide otherwise, the letter will produce effects from the issue date and will *de jure* cease to be valid upon the expiration of the stipulated period, regardless of the delivery of the original letter of guarantee.

The New Civil Code, by its sole article on the letter of guarantee, composed of 7 (seven) paragraphs, obviously cannot even sketch properly the structure of this guarantee.

IV. Conclusions

This analysis of the letter of guarantee from the perspective of the New Civil Code, referred to the newest and most modern approaches in definitive or provisory regulations, respectively the ICC Uniform Rules for Demand Guarantee URDG 758 and the Principles, Definitions and Model Rules of European Private Law, Draft Common Frame of Reference (DCFR) reveals essential aspects of the letter of guarantee taken into consideration in the new civil code.

We are considering the definitions of the parties involved in the issuing and execution of the guarantee, some terms interpretation, non-documentary conditions of the letter of guarantee, the contents of the instructions, modifications and completions of the letter of guarantee, the extension of the guarantor's responsibility, the presentation of the letter of guarantee, the enforcement application, including partial and multiple demands, the examination of the beneficiary's demand, etc.

We cannot consider acceptable such an option of regulating the letter of guarantee even if considering the provisions of art.10 paragraph 1 line 1 of the new civil code according to which in all these cases which are not provided by the new civil code usual practices and respectively, in our case the URDG 758, may be applied.

From this perspective, the reserve we have in based firstly on the provisions of art.10 paragraph 2 of the New Civil Code: "In the matters regulated by law, the usual practices are effective only inasmuch as they are recognized and expressly admitted by law". Or, the matter of the letter of guarantee is regulated by the New Civil Code, which does not recognize nor expressly admit the applicability of URDG 758 or of other usual practices.

As far as art. 10 paragraph 2 of the New Civil Code will be interpreted in the sense of applying the usual practices to the aspects and not to the matters which are not regulated by the law, we may have a more favorable attitude towards the legislator's option of regulating the letter of guarantee in a minimalist manner, outlining of the legal regime of these guarantees in a simple way.

Undoubtedly, the importance and the frequency of the practical use of the letters of guarantee would have justified a better legal regulation in accordance with the most modern European and international approaches.

THE UNPREDICTABILITY THEORY AND THE CONTRACTUAL LIABILITY

CRISTINA ZAMSA[*]

Abstract:
The purpose of the present study is to establish a relationship between the unpredictability theory and the contractual liability, from both theoretical and practical point of view. Usually, the unpredictability is invoked by way of defense by the debtor, refusing to perform the excessively onerous obligation. However the unpredictability theory shall apply also to the hypothesis of a performed obligation, by way of main action, depending on more factors: the nature of the agreement, investigating the attitude of the party affected by the unpredictability. Observing the conditions and the effects of these two ways of invoking the unpredictability will form the objectives of the present study.
The debtor of the excessively onerous, in order to avoid the contractual liability, shall nevertheless perform such obligation, by carrying along some additional costs. If subsequently, the creditor shall refuse to revise the agreement and implicitly, to reimburse the exorbitant costs, the debtor will have to raise the unpredictability by way of action, in order to recover the exorbitant costs in performing the obligation. In such case, the unpredictability is accompanied by another legal issue: the contractual liability of the co-contractor of the party affected by unpredictability.

Key words: *liability, obligation, onerousity, performance, unpredictability*

Introduction

Analyzing the relationship between the unpredictability theory and the contractual liability represents a new approach in the field of the civil and commercial obligations. The unpredictability theory raises the question of an excessive onerousity of the obligation which, even if not impossible to be performed, can expose the co-contractor to a very difficult economic position, even to bankruptcy, in the context of the occurrence of a very enhanced unbalance of the value of the reciprocal performances of the parties to the agreement.

De lege lata, the Romanian law does not stipulate an express provision, which should define and regulate the applicability conditions of the unpredictability theory. The current Civil Code - in force since 1864 - does not contain any reference to unpredictability. The Romanian legislation provides solely special dispositions of the unpredictability theory, such as: art. 43 par (3) of the Law no. 8/1996 on copyright,[1] art. 54 of Emergency Ordinance no. 54/2006 regarding the regime of the concession agreements of public property assets,[2] art.14 of the Law no.195/2001 on voluntary activity.[3]

---

In the future Romanian Civil Code, the unpredictability theory shall be expressly regulated by art.1271, called *„The unpredictability"*.[4] Regulating the unpredictability by the future Civil Code represents a confirmation of the opinions expressed by the representative, classical and current doctrine and by the Romanian jurisprudence in favor of the acknowledgment and application of the unpredictability theory in the Romanian law.

The present study shall demonstrate that the unpredictability theory may be applied also to the hypothesis of a performed obligation, while the issue of contractual liability of the parties may arise. In this respect, it is important to settle the legal basis of the unpredictability, to analyze its conditions, by taking into considerations the rules and the exceptions in this matter. The opinions expressed in the present study are mostly based on the Romanian jurisprudence and they are totally or partially confirmed by the Romanian, French and Belgian doctrine on this topic.

The unpredictability theory in the case law of the Romanian courts of law and arbitration courts

The current Romanian jurisprudence admits the unpredictability in two fields: the rent increases in relation to the lease agreements and updating of the price of certain goods delivered and not paid. However, the Court of International Commercial Arbitration attached to the Chamber of Commerce and Industry of Romania has admitted in principle this theory without any limitation or discrimination in respect to the application fields.

The Supreme Court of Justice, the Decision of the commercial division no. 21/1994, statuated: "*In this case, the plaintiff leased to the defendant the disputed premises for a 5-year period, there being determined through the lease agreement a monthly rent of ROL 1441.20, on September 13, 1990. In consideration of the liberalization or prices and increase of the inflation rate registered after September 13, 1990, the plaintiff is entitled to claim a higher rent, even if there is no such clause provided in the agreement.In this respect, there are considered the provisions of art. 970 of the Civil Code according to which the agreements are binding not solely for what is expressly provided thereon, but also for all consequences given to the obligation by equity, custom or law, according to the nature thereof. ....Otherwise, one could face the unnatural and inequitable situation that the performance of an obligation assumed through the agreement by the plaintiff ...becomes very onerous, which is inadmissible (art. 1042. item 2 of the Civil Code). In consideration of the foregoing, it is necessary that the court of remand determines, based on an expert report, the amount of the rent for the disputed premises and if the defendant does not agree with such payment, the court is entitled to order the cancelation of the agreement between the parties.*[5]

---

the agreement, the agreement shall be renegotiated and in case such situation renders impossible further performance of the agreement, it shall be lawfully terminated."

[4] Art. 1271 of the future Civil Code, as approved by Law no. 287/2009:

"(1) The Parties shall be bound to fulfill their obligations, even it such fulfillment became more onerous.

(2) In spite of the foregoing, the parties shall be bound to conduct negotiations for adaptation or termination purpose of the agreement, in case the performance thereof becomes excessively onerous for any of the parties due to the change of circumstances:

a) that occurred after the conclusion of the agreement;

b) that could not be reasonably provided upon the conclusion of the agreement;

c) and for which the prejudiced party must not run the risk of the change occurrence.

(3) Upon the parties' failure to come to an agreement within a reasonable time, the court may order:

(a) the adaptation of the agreement for an equitable distribution between the parties of the losses and benefits arising out of the change of the circumstances;

(b) the termination of the agreement at the time and under the conditions provided thereby. ."

[5] Constantin Crisu, *Repertoire of Romanian doctrine and jurisprudence*, tome I, Bucharest Argessis, 1995, 211.

The Supreme Court of Justice (the decision of the commercial division no. 4456/1999) as regards the contractual liability for non-payment of updated price, combined the unpredictability rules with those of the contractual liability:

- "*According to art. 970 and 981 of the Civil Code, the ordinary clauses are implied in an agreement, although such clauses are not expressly provided therein, and the agreements are binding not solely upon those expressly provided thereon, but also upon all consequences given to the obligation by equity, custom or law, according to the nature thereof. According to art. 1084 of the Civil Code, the damages generally include the loss incurred by the creditor and the benefit it has been deprived of. Therefore, the lack of a contractual clause regarding the price updating according to the inflation rate is irrelevant, such clause is implied, as it is not required to expressly provide the creditor's right to obtain full remedy for the damage caused by non-payment of the price on the maturity date*"[6]

- The Supreme Court of Justice, the decision of the commercial division no. 347/2000: "*The contractual balance of the agreement has no longer been kept, due to price non- payment by the debtor on the maturity date thereof, the creditor being harmed by the devaluation of the national currency, according to the inflation rate. In reality, there is no question about the application of a sanction for non-performance of a contractual obligation … but about updating of the price agreed upon the conclusion of the agreement, by the determination of the value of plaintiff's obligations on the effective payment date by the defendant, in order to reestablish the contractual balance."* [7]

Further, the jurisprudence of the Court of International Commercial Arbitration attached to the Chamber of Commerce and Industry of Romania has issued relatively recently its opinion concerning the admission in principle of the unpredictability theory in the Romanian law system, in its Decision no. 208/2005: "*The defense of the defendant raises two questions, one of principle, regarding the admissibility of the unpredictability theory in the Romanian commercial law, particularly if the parties did not agree anything in this respect and the second one, in case of affirmative response to the first question, if the conditions related to the applicability to the case of the unpredictability are fulfilled.*

As regards the first issue, it should be held that the unpredictability theory entitles the parties to a long-term agreement to request the re-adaptation thereof, in case the initial circumstances, based on which the agreement has been concluded under a certain configuration, have so seriously affected the balance that one of the parties, although she could perform the assumed obligations, the performance would be excessively onerous. The Romanian law, unlike other law systems, did not provide legislatively such possibility. On the contrary, the judicial doctrine and practice (including arbitration), particularly in the last 15 years are prone to the application of such re-balancing solution of the agreement, including when the contracting parties did not agree to such effect as in this case (…). Consequently, it is held that the unpredictability theory can find its application, in principle, if the applicability conditions are fulfilled, in a specific case.

As regards the second issue - if the conditions for the application of the unpredictability theory are fulfilled - the following should be held:

Apart from the fact that the agreement - or other related evidence - does not reveal that the parties contemplated, upon the conclusion of the agreement, a certain development of the national ferrous metallurgy industry and a certain situation concerning the raw material for this industry, it should be considered that the parties to the case have concluded a share sale-purchase agreement …

[7] C.Bădoiu,C. Haraga, *Commercial obligations. Judicial practice*, Bucharest, Hamangiu Publishing House, 2006, 202.

In consideration of the foregoing, there is no question about the impairment of the contractual balance that might raise for discussion the unpredictability theory, so that this defense of the defendant is to be set aside."

It is important to notice that Decision no. 208/2005 acknowledges the applicability of the unpredictability theory, based on the principle of the contractual balance, for an unpredictability cause other than the financial or monetary fluctuations - the development of the national ferrous metallurgy industry - even if in this case, the requirements of the unpredictability have not been actually deemed as fulfilled.

The basis of the unpredictability theory

The primary basis of unpredictability retained by the Romanian jurisprudence and doctrine is art. 970 of the Civil Code, which regulates the principle of good faith fulfillment of the obligations (art. 970 par 1 of the Civil Code: *"The agreements must be performed in good faith")*, and the equity principle (art. 970 par 2 Civil Code: *"They oblige not solely to what is expressly included thereon, but also to all consequences granted by equity, custom or law to the obligation, according to the nature thereof."*Thus, the Supreme Court of Justice of Romania applied art. 970 of the Civil Code (sometimes together with art. 981 or art. 1084 of the Civil Code) in the unpredictability admission decisions related to the lease agreements and to contractual liability for non-payment of updated price.

It results that the Romanian doctrine - inspired from the French doctrine and practice - deduced two obligations derived from the principle of good faith performance of the agreements (art. 970 par 1 Civil Code): of fidelity and cooperation in the performance of the agreement. Non-observance of these obligations could entail the contractual liability of the party in default based on art. 970 par 1 of the Civil Code. These obligations are also falling under the unpredictability legal provisions, with the consequences set forth in the aforementioned quote.

Other basis of the contractual unpredictability, the contractual balance principle, has been upheld by the Romanian jurisprudence in the following decisions:

- The Supreme Court of Justice, the decision of the commercial division no. 347/2000 claimed the principle of contractual balance for justifying the agreement's price updating by the inflation rate, inflation which represents a situation with unpredictable effects on the agreement and determines, in the opinion of the court, the impairment of the contractual balance;
- The Court of International Commercial Arbitration attached to the Chamber of Commerce and Industry of Romania, in its decision no. 208/2005, admitted, as principle, the application of unpredictability based on the contractual balance principle, even if, as a practical matter, in this case, the unpredictability conditions had not been verified.

The conditions of unpredictability theory and the impact upon the contractual liability

a) The unpredictability: occurrence of an unpredictable event or with unpredictable effects

In my work drafted in 2006, I wrote about this condition the following: *"it is a question that bears on the fact that the unpredictability and the economic-financial issue – which should characterize the effect on the agreement - should be referred not solely to the nature or cause of the event - as we would be tempted to think starting from the name of the theory itself - but particularly to the effects thereof on the fulfillment of the contractual obligations.(...) In case the unpredictability refers not to the situation itself, but to the effects thereof, there shall remain valid the requirement related to the ascertainment of the disturbance of the contractual economy for the purpose of applying the unpredictability mechanism. It remains to be considered whether a predictable feature of the event would constitute an impediment against the application of the unpredictability theory.*

The response is negative, provided that the predictability of the event is "absorbed" by the unpredictability of the effects thereof on the agreement."[8]

Further, most of the French doctrine refers to a large and unlimited sphere of the situations constituting unpredictability, which should include, besides the economic-financial circumstances, those situations (for example: natural facts, human facts etc.) which have a disturbing effect over the agreement.[9]

It is important to underline that the future Romanian Civil Code makes no distinction between the sphere or nature of the situations that trigger the unpredictability, or, more correctly, that trigger the excessive onerousness. It means that, according to the syntagm *ubi lex non distinguit nec nos distinguere debemus,* legally, there are no circumstances or situations apriori producers of excessive onerousness or unpredictability. The future Civil Code regulates the so-called *large vision* over the sphere of the events constituting unpredictability.

Unpredictable effect over the agreement or unpredictable situation? Most of the classical and modern French doctrine particularly concludes the unpredictability as attribute of the effect caused to the agreement, not as attribute of the causing event itself. In 1994, Ph.Stoffel-Munck considered that: "*The focus is generally on the event causing the imbalance. It is this event that must have an unpredictable character or be unpredictable. But we can see such issue in more simple terms and at the same time we can directly consider the imbalance."*[10]

More radically, the famous French jurist Jean Ghestin considered that the unpredictability requirement would no longer be necessary, there being emphasized the effect triggered over the agreement - the imbalance of the obligations: "*In fact, for the positive law, the unpredictability is not itself a condition for revise or for the termination* [of the agreement] *due to a cause other than the one representing the force majeure. … This is the objective imbalance of obligations, occurred after the event, which brings into question the fully preserving or revising of the agreement and not the occurrence of a new an unpredictable event."*[11] In this opinion, it would be sufficient to ascertain together with the imbalance of the obligations that the affected party cannot be held responsible for the occurrence of the event or for the effect thereof on the agreement.

b) The time of the occurrence of the change of circumstances or of the ascertainment of the effect thereon

In my work drafted in 2006 I wrote about this condition the following: *"As regards the contractual unpredictability, two moments are interesting, due to the effects they trigger: a) the first moment refers to occurrence of the unpredictable event or to the effect thereof on the agreement; b) the second moment refers to the ascertainment of the disturbance of the contractual economy and to the application of the unpredictability mechanism, through the revision or adaptation of the agreement (…)Another relevant stage consists in the performance of the agreement, so that from the conjugation of two stages, it results that:*

- the moment of the occurrence of the situation or unpredictable effect should be placed in time after the execution of the agreement and prior to the fulfillment of the obligation; because in the hypothesis according to which the negative effect of an exceptional situation would have existed from

[11] J.Ghestin, C.Jamin, M.Billiau, *Treaty of Civil Law. Effects of agreement*, vol.I, Paris, LGDJ, 2001, 395.

the very moment of the contracting, the legal issue of mistake in which the contractor was is raised, not the issue of unpredictability;

- the application of the unpredictability mechanism for an obligation already performed cannot be requested, since the fact of the performance thereof by the debtor demonstrates that it could fulfill its obligation from economic point of view.(…)"[12]

This condition has been specified above, in principle; however, it should be shaded depending on certain particular situations. The unpredictability theory shall apply, inclusively, in the hypothesis under which, although existent the situation – objectively - at the agreement execution, the exteriorization of the situation or of the effect thereof is placed in time after the execution of the agreement, on the occasion of its performance. The temporal condition should be consistent with the unpredictability condition of the situation or effect thereof on the agreement: what it really matters with respect to the economy of the unpredictability conditions is the verification of the unpredictability upon contracting, upon the party affected by such unpredictability.

Further, the temporal condition should also be consistent with the condition of non-assuming the risk occurred: upon contracting, the party assumed those risks she could reasonably foresee. The Belgian doctrine specified, to the same effect, that "*the contractor must bear the burden resulting from a change of circumstances it could assess at execution of agreement* . [13]

Finally, the temporal condition should be regarded by virtue of the unpredictability, as shown above; the unpredictability is, first of all, an attribute of the effect caused to the agreement, not an attribute of the causing event itself. That is why I showed in the work drafted in 2006 that the time of the occurrence of the unpredictable situation or effect should be placed in time after the execution of the agreement.

Therefore, it is not necessarily required that the unpredictable situation occurs prior to the execution of the agreement, but it can pre-exist or it can be concomitant with the execution of the agreement, but the effects of such situation could be always produced after the execution of the agreement.

Usually, the unpredictability is invoked by way of defense by the debtor, refusing to perform the excessively onerous obligation. However the unpredictability theory shall apply also to the hypothesis of a performed obligation, by way of main action, depending on more factors: the nature of the agreement, investigating the attitude of the party affected by the unpredictability. Therefore, the debtor of the excessively onerous, in order to avoid the contractual liability, shall nevertheless perform such obligation, by carrying along some additional costs, notifying the creditor about the occurrence of such a situation or of the unpredictable effect. Notifying the creditor is a requisite that must be fulfilled to evidence a correct and non-imputable attitude of the debtor.

If subsequently, the creditor shall refuse to revise the agreement and implicitly, to reimburse the exorbitant costs, the debtor will have to raise the unpredictability by way of action, in order to recover the exorbitant costs in performing the obligation. In such case, the unpredictability is accompanied by another legal issue: the contractual liability of the co-contractor of the party affected by unpredictability.

The aforementioned solutions inferable by way of logics may be supported by the French case law, as it was summarized by D.M.Philippe: "As of the occurrence of new circumstances, the debtor must inform the creditor about its intentions regarding the follow-up of the contract's execution. *(…) …the debtor must justify its unilateral initiative establishing the refusal of the creditor to accept the reasonable proposals that were brought to his knowledge."*[14]

---

[14] D.M.Philippe, *Change of circumstances and upheaval of the contractual economy*, Bruxelles, Etablissements Emile Bruylant, 1986, 648-649.

In the current French legal writings, Jean Ghestin, while analyzing this condition, also states in principle that: *"the unpredictability must in principle be quantified upon performance of the agreement"*. Furthermore, as a particular case, the famous French jurist admits that depending on circumstances, the unpredictability can also be quantified upon signing the agreement: *"The moment of quantifying the unpredictability sometimes depends on the circumstances that accompany the agreement's formation."* [15]

c) The effect produced on the agreement

The effect produced by an unpredictable situation on the agreement is the practical, economic argument that has in fact imposed the creation of the entire theory of unpredictability. The law cases as summarized by the doctrine propose more objective criteria for measuring the effect produced on the agreement:

a) *the percentage of 50%* for increasing the value of the debtor's obligation, respectively of reducing the value of the counter-obligation received by the creditor [16];

b) *doubling* the value of the performance the debtor is obligated to[17];

c) *the percentage of 30%* for increasing the debtor's obligation has been recently proposed by an author, by analogy to a solution regulated by a special French law (art.L.131-5 of the Intellectual Property Code)[18].

d) The risk determined by an unpredictable situation not falling under the category of contractual risks

The existence in the agreement of an adjustment clause or a clause of assuming the risk (occurred) does not exclude the application of unpredictability, as one should have in view both the condition of unpredictability and the condition of excessive onerousness. There is interference among the unpredictability's conditions, laying stress on the situations' unpredictability and on the effect of such situation as well as on the ascertainment of the excessive onerousness. Moreover, the French jurist Jean Ghestin considers that what matters is only the lack of balance of the obligations by minimizing the role of the unpredictable situation: *"It is the objective imbalance of obligations, occurred after the event, which raises the question of full maintain or of agreement's revision and not the emergence of a new and unpredictable circumstance."*[19] In other words, "even the adjustment clause may be adjusted" in case the imbalance created by the occurrence of an unpredictable situation is so great that the parties turn aside from what they could agree at the execution of the agreement, considering the reasonably predictable circumstances of that point.

Thus, the work of 2006 distinguishes between two situations:

"a) *the presence of an express contractual clause whereby the parties undertake any risk determined by the changing of the contractual circumstances;*

b) the occurred major risk arises of the agreement's nature.

…In terms of legal nature, the respective clause of assigning the risks shall not be confused with an aggravation of the debtor's liability in case of non-performance, as the risk is undertaken by him regardless of the liability issue, being determined by an objective circumstance. Remaining in the area of contractual freedom exercise, we can notice that we can go back to the issue regarding the application of the unpredictability for the hypothesis of the inefficiency of the agreement's clause

[19] J.Ghestin, C.Jamin, M.Billiau, *Treaty of civil law. The effects of agreement*, tome I, Paris, LGDJ, 2001, 395.

of adjustment…. It can be triggered that one may resort to the agreement's adjustment under the following situations, where the unpredictability's requirement is verified:

- the risk occurred following an unpredictable event is different in nature of the risk undertaken by the parties by the contractual clause;

- the risk occurred, although it makes the object of the clause for assigning liability to one of the parties, exceeds, by the spread of its effects, the parties' provision, causing the agreement's upheaval ….." [20]

In the French and Belgian legal writings, this condition is similarly analyzed, in relation to undertaking only the provided for/predictable risk upon the agreement's execution. Therefore, in 1986 D.M.Philippe stated: "*The contractor must bear the costs resulting from a modification of circumstance the impact of which it could evaluate upon the agreement's execution.*(...)... *the contractor must bear 10% of the new charges. It is difficult, even in case of a determined type of contract, to establish in advance a percentage of the costs representative for the undertaken contractual risk. (…) Often, the application of the standard clause or the legal provisions is dependent on the occurrence of unpredictable circumstances".* [21]

As regards such arguments, I consider that the existence of such a clause of adjustment of the agreement or of bearing the risks resulting from a possible unpredictable situation does not lead to the *„de plano*" impossibility to apply the theory of unpredictability. The competent jurisdictional body is fully entitled to analyze the effects of the respective clauses by referring to the actually occurred unpredictable situation.

The effects of unpredictability's application. The contractual liability of the party who refuses the application of unpredictability.

Admitting the unpredictability, the Romanian Supreme Court of Justice directly intervened in the agreement, ordering the updating of the price or of the rent (decision no. 21/1994, decision no. 4456/1999, decision no. 347/2000). It must be underlined that in the last two decisions, the Supreme Court of Justice applied art. 970 of the Civil Code (the good faith and equity in executing agreements), art.1084 Civil Code (complete remedy of the damage, as a measure of the contractual liability) and the contractual balance principle, ordering the update of the price for some merchandise with the inflation index. Therefore, both the rules of unpredictability and those of the contractual liability of the debtor of the obligation to pay the price have been applied.

In the work of 2006, I particularly analyzed the unpredictability's effects starting from the hypothesis of its pleading by way of defense, as means of defense of the debtor who informed the creditor that he would not perform the excessively onerous obligation. However, the unpredictability could be also invoked by way of action, in the sense of activating the contractual liability of the co-contractor who refuses the application of unpredictability, thus causing damages.

Therefore, the analyzed Romanian case law demonstrates that the unpredictability may be accompanied by the application of the rules of the contractual liability of the co-contractor who refuses to adjust the agreement to the new circumstances, by not paying the price or the rent much higher at the time of performance than upon the agreement's execution, due to the occurrence of a situation unpredictable or with unpredictable effects. Such cases imply the careful combining of the unpredictability rules with the contractual liability rules.

---

[20] Cristina Zamșa, *Unpredictability theory. Doctrine and jurisprudence study*, Bucharest, Hamangiu Publishing House, 2006, 137-138.

[21] D.M.Philippe, *Change of circumstances and upheaval of the contractual economy*, Bruxelles, Etablissements Emile Bruylant, 1986, 632-635.

Thus, the party affected by the unpredictability must notify the co-contractor about the occurrence of the event unpredictable or with unpredictable effects. If the co-contractor, debtor of the price, refuses to adjust the agreement, the affected party shall take legal action whereby she will request the recovery of the damage incurred by putting upfront some exorbitant costs for the performance of the obligation, costs that imply the increase of the contractual price.

The cause of advancing of the exorbitant costs is objective, independent of the party's fault and represents an event unpredictable or with unpredictable effects. Such a legal action relies on two grounds: the first ground is represented by the theory of unpredictability (based on art. 970 Civil Code or the balance of obligations, according to the aforementioned decisions of the Supreme Court) and the second one is the contractual liability of the co-contractor who refuses to pay the price increased following the occurrence of an unpredictable situation (or with unpredictable effects), by virtue of art. 1084 of the Civil Code.[22]

In the mentioned decisions of the Supreme Court, the increase of price occurred as a result of inflation – unpredictable situation – however any unpredictable and objective event, independent of the will of the party affected by the unpredictability may trigger the recalculation of the agreement's price.

Conclusions

The conditions of the unpredictability theory must be globally acknowledged and verified. Therefore, the following issues are important both theoretically and practically:

- The condition of unpredictability shall be verified even if only the unpredictable effect has occurred after the agreement's performance, although such situation is existent before such performance;
- The consequence over the agreement is essential, produced by the unpredictable situation or by the unpredictable effect, namely: the contractual imbalance created by the excessive onerousness of one of the obligations;
- The scope of the situations unpredictable or with unpredictable effect does not limit to the financial or monetary phenomena but can also include natural phenomena, actions made by man, evolution of an industrial domain, etc.;
- The agreement's adjustment clauses or the risk allocation clauses do not impede the application of unpredictability, if the risk which occurred, although makes the object of a risk-allocation clause, exceeds, by the spread of its effects, the parties' provisions, determining the excessive onerousness of an obligation or if the risk which occurred as a result of an unpredictable event is different in nature of the risk undertaken by the contractual clause.

The unpredictability may be invoked not only as defense but also by way of action, for recovering the damage suffered following the performance of the excessively onerous obligation, in order to avoid the debtor's contractual liability (in this case, the condition of the lawful character of non-performance is not longer required). The party refusing to apply the unpredictability upon verifying its conditions may be subject to the contractual liability. There are no legal impediments for the Courts to reject such actions issued upon the performance of the excessively onerous obligation.

ACCEPTANCE OF THE INHERITANCE IN THE NEW CIVIL CODE REGULATION

ILIOARA GENOIU*

Abstract
The new regulation in civil matter, represented by Law no. 287/2009 regarding the Civil Code, whose date to entry in force has not been established yet, reconfigures quasi-totally the acceptance inheritance institution. In this paper we will analyze the acceptance of the inheritance issue under all its aspects, as a valence of the successional option right, in the light of the new Civil Code dispositions. We will thus be able to reveal the novelties brought by the new regulation and to appreciate its progressive nature. In the acceptance of the inheritance matter, the new Civil Code innovates, mainly as regards its forms (in the new Civil Code the acceptance under benefit of inventory is no more regulated), the effects of the acceptance (the heirs are responsible for the debts and for the delivers of the inheritance only with the assets from the successional patrimony) and the procedure that has to be performed in the case of inventory preparation and taking special measures for preserving the successional assets. We hope that through our approach, we enrol in the overall effort to make known and understood the disposition of the new Civil Code, until its entry in force.

Keywords*: express acceptance, tacit acceptance, forced acceptance, statement of unacceptance, presumption of waiver.*

1. Introduction

Our paper aims to analyze the problem of the inheritance acceptance, one of the valences of the successional option right, under all its aspects in the light of the new Civil Code.

Law no. 287/2009 regarding the Civil Code, published in the Official Gazette no. 511 from 24th of July 2009, but whose date of entry in force has not been established yet, provides to the acceptance of the inheritance a new configuration, reason for which we appreciate that the analysis of this institution of the successional right presents a particular up-to-date and utility. We also believe that making known and explaining the dispositions of the new Civil Code incidents in the acceptance of the inheritance matter, we bring our contribution to increase the justice quality, once this governmental decree comes into force.

Along with those who administer justice, are also interested in knowing the dispositions of the new Civil Code in inheritance acceptance matter equally the justice partners, law theorists, public notaries, civil servants with responsibilities in this area, Law and Public Administration specialization students. The legislator himself, always concerned with improving his legislative work, is interested by the *de lege ferenda* proposals formulated by the legal doctrine.

In the present paper we will analyze the problem of the inheritance acceptance under the following aspect: notion and legal regulation, ways (voluntary acceptance – express and tacit and forced acceptance), effects (general and special), inventory preparation and taking special measures to conserve the successional assets.

There have been written several studies, in the volumes of some conferences about the novelty elements brought by the new Civil Code, concerning the right to inherit in general since the date of the publishing of the law no. 287/2009 (2009, at the end of July). The inheritance acceptance

* Lecturer, Ph.D., Faculty of Juridical, Social and Political Sciences, "Valahia" University of Târgovişte, (e-mail: ilioaragenoiu20@yahoo fr)

This work was supported by CNCSIS-UEFISCSU, project number PN II-RU, code PD_139/2010, contract number 62/2010.

problem in the regulation of the new Civil Code has been approached, as far as we know, only in volume "Noul Cod civil. Comentarii", in the study "Continuitate şi discontinuitate în reglementarea opțiunii succesorale[1]", where the author realises a brief analysis of the legal institution, subjected to our analysis.

In respect with this study we analyze the acceptance of the inheritance in the light of the new Civil Code, in a didactically and complete manner.

Under these circumstances, we consider that the subject we have proposed is up-to-date, and our scientific approach is useful.

2. Content

2.1. The notion and the legal regulation of the acceptance of the inheritance

The acceptance of the inheritance is the act or the unilateral legal fact through which *erede*[2] definitely strengthens his heir quality of the deceased[3].

The new Civil Code mainly dedicates to the acceptance of the inheritance articles 1106-1119. Unlike the Civil Code in force, the new Civil Code does not regulate two forms of the inheritance acceptance, but, abandoning the distinction between the pure and simple acceptance and the acceptance under inventory benefit, it regulates only the inheritance acceptance.

2.2. The acceptance types

As a consequence of the inheritance acceptance, legal heirs and legatees general or with general title are responsible for the debts and tasks of the inheritance only with the assets from the successional patrimony, proportionally with each person's quote [article 1114 paragraph (2) N.C.C.], (meaning *intra vires hereditatis*). By accepting the inheritance, *erede* appropriates the quality of heir, strengthening the transmission of the inheritance fully achieved at the date of the death [article 1114 paragraph (1) N.C.C.].

Any *erede* can choose regarding the inheritance, in the acceptance sense, new Civil Code regulating, in the article 1106, the freedom principle of the inheritance acceptance. As a consequence, "Nobody is forced to accept an inheritance that is rightfully his".

Although the new Civil Code, in the article 1108, that bears the name "The acceptance types", states about the express acceptance and about the tacit acceptance, we consider that, in the light of this governmental decree we have to distinguish between the voluntary acceptance and the forced acceptance (new Civil Code regulates the latter one in the article 1119). In turn, the voluntary acceptance may be express tacit, too[4].

As a consequence, the inheritance acceptance may be: voluntary and forced.

---

Succesiuni* (Bucharest: All Beck Publishing House, 2003), 394.

[4] Regarding the acceptance of the inheritance in the light of the new Civil Code in force, see also, as an example: Veronica Stoica, *Dreptul la moștenire* (Bucharest: Universul Juridic Publishing House, 2008), 286-96; Ioan Popa, *Curs de drept succesoral* (Bucharest: Universul Juridic Publishing House, 2008), 290-306; Ion Dogaru, and the others, *Bazele dreptului civil. Volumul V. Succesiuni* (Bucharest: C.H. Beck Publishing House, 2009), 285-99; Ilioara Genoiu, *Drept succesoral* (Bucharest: C.H. Beck Publishing House, 2008), 294-312.

2.2.1. The voluntary acceptance

Voluntary acceptance is the result of the *erede* free will. It may be: express and tacit.

A) The express voluntary acceptance

According to the dispositions of the article1108 paragraph (2) N.C.C., the inheritance acceptance is express when *erede* explicitly assimilates the title or the quality of heir thorough an authentic document or under private signature. So, in order to be in the presence of the express acceptance, the following conditions must be satisfied:

a) the *erede*'s willingness to accept the inheritance shall be evidenced by a document, whether it is under private signature or authentic;

Therefore, the explicit acceptance of the inheritance is a formal act, but not a solemn one. Consequently, the verbal statement of *erede*, towards the inheritance acceptance, doesn't have the value of an acceptance. The legislator gave an official character to the acceptance act of the inheritance, both to protect *erede*'s interests, who "is not bound up with a word spoken randomly and also to avoid the evidence given by witnesses to an acceptance by words"[5].

In the situation in which the acceptance is made by an authentic document, the acceptance declaration will be written, kept in electronic format, in the National Notary Register, according to law (article 1109 N.C.C). This condition is imposed by the legislator, for advertising reasons.

Regarding the document under private signature, where *erede*'s will to accept the inheritance is manifested, it must not contain sacramental formulas and must not be especially drawn up for this purpose. The express acceptance of the inheritance can result from a document, drawn up in another way than the inheritance option, such as a letter, as far as it has legal character (referring to matters that concern the inheritance) and it is not strictly confidential or does not contain different requests, addressed by *erede* to the court, to the public notary or to the public administration bodies, in order to solve some aspects related to the inheritance[6]. These documents, even if they are not exclusively drawn up with the purpose of the inheritance acceptance[7], must be accomplished by *erede*, respecting the legal rules regarding the capacity and must be within the one year prescription term.

The inheritance may be accepted by *erede* not only personally, but also through his legal representative (with the consent of the guardianship court) or through a representative, authorized in writing (as the mandate forms a total with the document for which it was given) and especially (as the successional option act is a disposal act) in this regard. In order to have the value of an acceptance, the assignee's will, expressed in the sense resulted from the received mandate, must be expressed in writing and within the legal term of option. The existence of the assignee's mandate of the inheritance acceptance, not followed by an acceptance under the law conditions, does not value as

---

[7] Entries like this are considered to be: the letter addressed to the creditors of the inheritance, containing an offer of giving in payment or through which is requested a payment term; deferment request of payment of the debt; the letter addressed to the co-heirs, containing an offer of voluntary division of the inheritance; the petition of heredity; opening request of the notary successional procedure, containing *erede* willingness to accept the inheritance; declaration given to the local council indicating the successional assets and heir quality, in order to submit the entry to the competent notary office responsible for the succession debate; the opposition formulated by *erede* against a forced sale of a successional tenement. On the contrary, it is considered that the appeal brought by an heir against a court decision, if its author was part of the process and then died, is not by itself an act of acceptance of the inheritance. See also, Alexandru Bacaci and Gheorghe Comăniţă, *op. cit.*, 193.

an acceptance of the inheritance, as the trust deed given to the assignee may be subsequently revoked by the mandatory. So, the mandate given to the assignee is revocable, but the acceptance that he is doing in the name and on behalf of the mandatory, is irrevocable. If the mandatory dies before the assignee applies the received trust deed, the latter may accept the inheritance, so that the delay does not cause damages to the heirs of the former[8].

According to the dispositions of the article 1107 N.C.C., the inheritance may be accepted also by the *erede*'s creditors, on oblique way, in the limit of their claim.

It obviously results that the act of accepting the inheritance, also like the successional option act generally, does not have an exclusive personal character.

b) From the acceptance act should directly result that *erede* had assimilated the title and the quality of heir[9]. The unequivocal nature of the *erede*'s is appreciated by the court, which will conduct an analysis of the actual contents of the document.

B) Voluntary tacit acceptance

According to the dispositions of the article 1108 paragraph (3) N.C.C., the acceptance is tacit when *erede* makes an act or a fact that he is allowed to do but only as an heir. So *erede* does not directly express his willingness to accept the inheritance, as in the case of the express acceptance, but this derives from the acts and facts that he commits.

In order to be in the presence of the tacit acceptance, the condition that, by the acts committed by *erede* should show unequivocally his willingness to accept the inheritance must be fulfilled[10].

Like the express acceptance, the tacit acceptance may be realised personally, through a representative, a legal or a conventional one or even through a business manager. The assignee must benefit of a special mandate and must realise the acts of the tacit acceptance of the inheritance in the one year prescription term. Even a co-heir can have the quality of *erede*'s assignee.

The tacit acceptance acts, made by the business manger, have the value of an inheritance acceptance, as far as *erede* ratifies the management, within the successional option term, transforming it in a mandate[11].

Both the legal and the testamentary inheritance may be tacitly accepted, since from the above mentioned dispositions it does not result the contrary. The legatee, no matter if he is general, with general or with particular title, may tacitly accept the legacy, but it is necessary to invoke in front of the interested persons the will that confers him vocation to inheritance and not to act occult[12].

The new Civil Code enumerates the acts with the value of a tacit inheritance acceptance. For this purpose, the legislator distinguishes between the acts of disposition, the administrative acts and the acts of conservation, which are related to a part or to all the rights on the inheritance.

In all cases, the acts made by *erede*, in order to be considered acts of tacit acceptance of the inheritance, must be made within the prescription term of the inheritance option right.

So, according to the dispositions of the article 1110 N.C.C., the following categories of acts *have value of tacit acceptance*:

---

[8] Francisc Deak, *op. cit.*, 413.

a) the legal disposition acts regarding a part or all the rights on the inheritance;

Included in this category, with limitative title, the following acts:

- the alienation, with free of onerous title, by *erede*, of the rights on the inheritance;

We are certainly referring to those acts made by *erede* for the rights on an open inheritance, so it is about those acts that were made by *erede* after the inheritance opening date.

- the renunciation, even the free one, in favour of one or more determined heirs (*in favorem* renunciation);

Thus we found the free title renunciation in favour of all the co-heirs or of the subsequent heirs (purely abdicative or impersonal renunciation) does not have the value of a tacit inheritance acceptance.

- the renunciation of the inheritance, with onerous title, even in the favour of all the co-heirs or of the subsequent heirs.

According to the legislator, the legal disposition acts, regarding a part or all the rights on the inheritance, attract the tacit inheritance acceptance. Therefore, in these cases, the inheritance acceptance operates by right, being excluded the appreciation of the court.

b) the disposition, the definitive administration or the usage acts of some assets from the inheritance.

The new Civil Code states in paragraph (2) of the article 1110 that these acts may have the value of the tacit inheritance acceptance. As a consequence, in this case, the court will appreciate, from case to case, if the disposition, the definitive administration or the usage acts represent inheritance acceptance acts. So, in this case, the inheritance acceptance does not operate by right.

Like in the light of the Civil Code in force, the acts related to the single successional assets may represent disposition acts as follows: the buying-selling contract, the exchange contract, the donation contract, the annuity contract, the maintenance contract etc., having as objects the successional assets, on matter if they are entered with a third party or with a co-heir: the dismemberments constitutional documents of the property right on the successional assets; acts through which successional assets are taxed; the renunciation to a right; entering a contract for exploitation of a copyright in respect of any literary, artistic or scientific work remaining from the deceased; entering a selling-buying pre-contract in respect of a successional building etc.

The acts of the successional assets regarded *ut singuli* can be used as examples of definitive administration: making some useful or for pleasure expenditure, that increase the value of the successional asset or that are realised for luxury or pleasure; the collection of some claims of the inheritance, which don't have the nature of some current incomes of the inheritance; long-term demurrage of the successional assets; significant pay debts of the deceased, as far as the paying *erede* does not have in the same time the quality of co-debtor; the payment of the taxes on lands, buildings or vehicles that are part of the inheritance mass, the payment of the taxes on the inheritances etc.

On the contrary, *it does not represent tacit inheritance acceptance acts*, in the light of the dispositions of the article 1110 paragraph (3) N.C.C., the acts of conservation, supervision and provisional administration if from the circumstances under which they were made it does not result that *erede* did not assimilate by them the status of heir. They are considered to be of provisional administration of the urgent nature acts whose fulfillment is necessary for the normal enhancement, on short-time, of the inheritance's assets [article 1110 paragraph (4) N.C.C.].

They may represent conservation acts of the inheritance's assets, for example: making the inventory, conducting emergency repairs; collection of some amounts due to the succession, the exercise of possessive actions in respect with a successional asset etc.

They may be qualified as provisional administration acts, for example: the payment of the funeral expenses; the debts resulting from the last illness of the deceased; the payment of the small debts of the deceased, made from considerations of respect for his memory etc.

In the context of the tacit acceptance of the inheritance, the new Civil Code regulates, in article 1111, *the non-acceptance declaration.* Therefore, *erede* who intend to commit an act which

may signify the inheritance acceptance, but who does not wish to be considered an acceptant, must give in this regard, previous to the fulfilment of the act, an authentic notarized declaration.

Therefore, the non-acceptance inheritance can be given by *erede* only in respect with the disposition acts, the definitive administration acts or the usage acts of some inheritance's assets, as only in their cases the acceptance does not operate by right and it can be ordered by the court. If *erede* enters the dispositions acts regarding a part or all the rights on the inheritance, he is considered by right an acceptant of the inheritance, and the non-acceptance declaration in such a hypothesis is not acceptable.

We also notice that the non-acceptance declaration, unlike the express acceptance of the inheritance, is a solemn act, the validity of the former being conditioned by its realisation in an authentic notarized form. On the contrary, the express acceptance of the inheritance must not be materialised in a genuine document, but it can be expressed in a document under private signature.

In conclusion, the new Civil Code regulates for the first time in our law system the non-acceptance declaration, a useful institution of the successional option, as we consider. The legislator's preoccupation to regulate in a complete manner a judicial institution, namely the inheritance acceptance, so that the letter of the law covers as much as possible from the practical situations can but be appreciated.

2.2.2. The forced acceptance

The notion of the forced acceptance and its legal regulation

The new Civil Code, in the article 1119, states that for *erede* who, in bad faith, defalcated or hidden assets from the successional patrimony or hide a donation subjected to the report or to reduction is considered to have accepted the inheritance, even if he previously rejected it. However he had no right on the defalcated or hidden assets, and, where appropriated, he is obliged to report or to reduce the hidden donation, without participating to the distribution of the donned asset. Moreover, the heir is the above descript situation is required to pay the debts and the duties of the inheritance, proportionally with his quote from inheritance, including his own assets.

So, the facts that attract the forced inheritance acceptance are the following:

- the defalcation or the hiding of some assets from the successional patrimony;
- the hiding of a donation subjected to the report;
- the hiding of a donation subjected to reduction.

Analysing the dispositions of the article 1119 N.C.C., we notice that this governmental decree innovates also in this regard. Although the Civil Code in force regulates the forced inheritance acceptance and assigns it, in principle, the same effects as the new Civil Code, the latter mainly innovates as regards the causes that attract this sanction. *De lege lata*, only the defalcation or the hiding of some assets from the successional patrimony attract the forced inheritance acceptance. The new Civil Code adds to this cause the hiding of a donation subjected to the report or to reduction.

Therefore, in the light of the dispositions of Law no. 287/2009, the forced acceptance represents the sanction applied to *erede* who, driven by a fraudulent intention, has hidden assets that were part of the inheritance mass or a donation subjected to the report or to reduction with the purpose to exclusively appropriate them, respectively to defalcate the donation that already was subjected to the report or to reduction and to damage the co-heirs and the successional creditors.

The forced acceptance of the inheritance, common in practice, represents an exception from the voluntary character of the successional option act[13] and it is applicable both for the legal and testamentary inheritance.

De lege lata, from their legal nature point of view, the defalcation or the hiding of successional assets are classified as unlawful legal facts, as civil offenses and not as successional

[13] Mihail Eliescu, *op. cit.,* 125; Francisc Deak, *op. cit.,* 423; Alexandru Bacaci and Gheorghe Comăniță, *op. cit.,* 200.

option acts, and the penalty that accompanies them represents a civil penalty[14]. The same opinion can be supported, in our opinion, and in light of the new Civil Code's dispositions.

The conditions of the forced acceptance

In order to be in the presence of the forced acceptance, there must be met the following conditions:

a) the existence of the objective element;

The objective element consists of giving away, hiding or the non-declaration from the inventory of some successional assets or of a donation subjected to the report or to reduction, by *erede*, alone or in equity. In the light of the dispositions of the Civil Code in force, the jurisprudence and the doctrine have given a very broad interpretation of the concepts of defalcation and hiding, their scope being circumscribed to any acts or deeds of any kind to reduce the assets, rather in the damage of the co-heirs and / or of the successional creditors and in the bad-faith *erede*'s benefit. Same orientation can be hold, in our opinion, also after the entry in force of the Law no. 287/2009.

Therefore, the material objective can represent both deeds, like the material hiding of some assets, the drawing up of a false will or of a proving document of an unreal claim for the succession, and also omitted facts, like the non-declaration of some assets for the completion of the successional inventory, the non-declaration of some *erede*'s debts to the succession, the non-declaration of a donation subjected to report or to reduction etc.[15]. In all the cases, the existence of the hiding or of the not declared assets in the successional patrimony must be proven[16].

Following the commission of such acts, there is operating a clandestine self possession of one co-heir the expense of the others[17]. The lack of clandestinity (co-heirs knew about the assets' existence) entails the inapplicability of the sanctions by the article 1119 N.C.C.

In the judicial practice and in the literature has acknowledged that the defalcation or the hiding entails the forced acceptance of the inheritance and also in the following assumptions:

- these are not only about the movable assets, but also about the immovable assets of the successional patrimony[18];

- they are committed not only before the inheritance opening, but even before that time, perhaps even with the complicity of the deceased[19];

- they are committed not only before exercising the successional option right, but even after that moment[20].

We consider that these hypotheses may attract the forced inheritance acceptance in the light of the new Civil Code.

b) the existence of the subjective element;

---

[14] Mihail Eliescu, *op. cit.*, 130-1; Francisc Deak, *op. cit.*, 423; Supreme Court, the civil collective, decision no. 2520/1989, in *Dreptul* (8/1990): 79.

[17] Dan Chirică, *op. cit.*, 227.

[18] Dimitrie Alexandresco, *op. cit.*, 326, footer note 1; Ioan Rosetti-Bălănescu and Alexandru Băicoianu, *op. cit.*, 292.

[19] It can be seen the complicity of the deceased, in the hypothesis in which he states in favour of one of the heirs, through a donation, disguised under the appearance of a sale, in order to avoid the excessive reduction of the liberality. Mihail Eliescu, *op. cit.*, 129; Francisc Deak, *op. cit.*, 424.

[20] Francisc Deak, *op. cit.*, 424.

The subjective element is represented by erede's intention to defraud the others co-heirs or the creditors of the inheritance[21].

In order to be in the first case (defraud of the co-heirs), there must be a plurality of heirs so that *erede* acts the fact to damage another or other co-heirs. *Erede* who committed the fact with this purpose is declined from the right to reject the inheritance and also from the right to receive his part from the subtracted assets.

For us to in the second case (defraud of the inheritance's creditors), the plurality of heirs is not necessary, being sufficient that the only deceased's *erede* to commit the fact with the purpose to damage the inheritance's creditors[22]. Being the only heir[23], he can be declined from his right to reject the inheritance but not from, his right to receive his part from the subtracted assets.

The non-declaration by *erede*, when the inventory is made, of some successional assets, by mistake or with the wrong belief that these assets are his, does not attract the application of the sanctions regulated by article 1119 N.C.C. For these sanctions to become applicable it is necessary that *erede* be conducted by a fraudulent intent. The *erede* bad-faith is not presumed, it must be proven by the one who invoke it (co-heir or creditor of the inheritance)[24].

If *erede* returns the hided assets on its own initiative, before this fact is discovered, the doctrine[25] considers that the provisions of the article 1119 N.C.C. are no longer applicable. But if *erede* who committed the act of concealment, dies before returning the hidden assets, his heirs will be punished in the sense that, for their part, the tacit acceptance of the inheritance operates, even if they return themselves these assets[26].

We believe that these views can be sustained also in light of the new Civil Code.

c) fraudulent facts are likely to damage other persons;

In order to attract the application of the sanctions of the article 1119 N.C.C., the fraudulent facts of *erede* must not harm the rights of other persons (co-heirs or successional creditors). This condition is not met, therefore the mentioned penalties are not available, in the following cases:

- *erede* has excusive rights on the inheritance[27];

- the surviving spouse, who comes to the inheritance of the deceased in contest with other heirs than the descendants of the latter, had stolen or concealed household items that have been affected to the common use of the spouses[28]. The household objects can be tracked by the creditors of the succession, only if their claims can not be met from other successional assets, including the surviving spouse part from these assets[29].

- the legatee with particular title has subtracted or concealed assets that are exclusively his, these assets not being subjected to any reduction[30].

---

[21] Judicial practice and doctrine have acknowledged that *erede* fraudulent intent may be carried out and the creditors of the inheritance, not only the co-heirs. Supreme Court of Justice, civil division, decision no. 622/1990, in *Dreptul* (9-12/1990): 236-7; Francisc Deak, *op. cit.*, 425; Alexandru Bacaci and Gheorghe Comăniță, *op. cit.*, 201.

[22] Supreme Court of Justice, civil division, decision no. 622/1990, in *Dreptul* (9-12/1990): 236-7.

[23] Mihail Eliescu, *op. cit.*, 129. In the literature was sustained too the contrary opinion, according to which the applicability of the sanctions in question is conditioned by the existence of multiple heirs. Eugeniu Safta-Romano, *op. cit.*, 114.

[24] Supreme Court of Justice, civil division, decision no. 1979/1992, in *Deciziile CurțiiSupreme de Justiție pe anii 1990-1992*, 124.

[25] Mihail Eliescu, *op. cit.*, 131.

[26] Alexandru Bacaci and Gheorghe Comăniță, *op. cit.*, 202.

[27] Dimitrie Alexandresco, *op. cit.*, 329; Francisc Deak, *op. cit.*, 426; Dan Chirică, *op. cit.*, 229; Alexandru Bacaci and Gheorghe Comăniță, *op. cit.*, 202.

[28] Mihail Eliescu, *op. cit.*, 129; Supreme Court, the civil collective, decision no. 1349/1983, in *Culegere de decizii pe anul 1983*, 90-2.

[29] Francisc Deak, *op. cit.*, 426.

[30] Ibidem. The legatee with particular title is not responsible to the creditors of the inheritance, only if their claims can not be satisfied by the successors general and with general title from the value of the successional patrimony.

d) the author of the fact must have the quality of heir.

For the dispositions of the article 1119 N.C.C. to be applicable, it is necessary that the author of the fraudulent fact to have the quality of legal heir or general legatee or with general title. As we have shown before, for the legatee with particular title the discussed legal dispositions are not applicable, not in the case in which he concealed the assets that represented the object of his legacy and not in the case in which he concealed other assets. In the first case, the concealed assets are totally his, and in the second case he is in the situation of any third party. Correspondingly, the legatee with particular title is not entitled to seek the application of the forced inheritance acceptance sanction to the other heirs who have committed fraudulent acts provided by law[31].

In case in which *erede* who committed fraudulent acts provided by law dies before the liquidation of the inheritance, the transmission of his own successional rights to the own heirs operates, who are deemed to have accepted the retransmitted inheritance, not having the possibility to reject it.So, the sanction of the forced inheritance acceptance operates in the inheritance retransmission case.

It will bear the consequences of committing the fraudulent facts, to which the dispositions of the article 1119 N.C.C. refer, only *erede* with fraudulent capacity in their committing moment. Are relatively presumed[32] to have fraudulent capacity (have acted with discernment) persons who have aged 14 years and are not put under interdiction. With regard to incapacitated persons (those under 14 years and persons under interdiction), the existence of the discernment when the deed was committed must be proved. It is possible, therefore, that the minor placed under interdiction or the individual to be affected by the forced inheritance acceptance. The sanction of the forced inheritance acceptance is applicable for them in the hypothesis in which they committed with discernment the fraudulent facts foreseen by law.

In the hypothesis of committing the fraudulent facts by *erede* in participation, the consequences regulated by law will affect everybody, and in regards the restitution of the concealed assets to the inheritance, their responsibility will be in solidarity[33].

2.3. The effects of the inheritance acceptance

2.3.1. The general effects of the inheritance acceptance

The successional patrimony transference, which has operated provisionally since the inheritance opening, is strengthened, becoming final by accepting the inheritance. By accepting the inheritance, the heir title of *erede* is strengthened, but his right of successional option is definitely off, meaning *erede* decades of the right to reject inheritance.

The inheritance acceptance generates this effect, whether it was voluntary acceptance (whether express or tacit) or forced, or it was the result of inheritance rejection revocation. In all cases, the effect of acceptance rises over time until the date of the inheritance opening [article1114 paragraph (1) N.C.C.]. Therefore, although it is exercised after the opening of the inheritance, and within the prescription term of the successional option right, the inheritance acceptance produces retroactive effects. This effect is common to both valences of the successional option right, and thus to the rejection of the inheritance, too.

As a specific effect of the inheritance acceptance, however, the legal heirs and the general legatees and with general title are responsible for the debts and burdens of the inheritance only with the assets from the successional patrimony (*intra vires hereditatis*) proportionately to each quote.

Thus we identify, the major novelty brought by the Law no. 287/2009 in the matter of the successional option right, namely the ascribing of the acceptance under inventory benefit specific effects from the regulation in force, deriving from the inheritance acceptance.

---

[31] Mihail Eliescu, *op. cit.*, 129; Francisc Deak, *op. cit.*, 427.
[32] Article 1366 N.C.C.
[33] Francisc Deak, *op. cit.*, 427.

Consequently, the inheritance acceptance generates the following specific effects:

A) separation of the patrimonies;

In accepting the inheritance case, the successional patrimony remains separate from the heir's personal patrimony. Therefore it operates under the provisions of the article 1114 paragraph (2) N.C.C., the separation of the patrimonies, as an exception to the principle of unity which patrimony entails.

The separation of patrimonies specific to the inheritance acceptance produces effects to all the successional creditors, including to the legatees with a particular title, as well as to the accepting heir and to his personal creditors.

The patrimonies' separation, resulting from the acceptance of the inheritance, leads to the following consequences:

a) the liabilities or claims of the accepting heir towards to *de cujus* are not extinguished by confusion. In contrast, the mutual claims (the claim that the heir has for his inheritance and *de cujus* claim towards the heir) can be compensated. Also, the confusion does not stop the real rights that the heir has on a successional asset, respectively the real rights that *de cujus* has on an asset from the heir's patrimony[34].

b) *erede* is considered third party against the successional patrimony so that he may become the contractor subject to some of the successional assets on sale at auction;

c) the heir may acquire new rights and obligations in respect with the successional patrimony;

d) third parties can not impose to the heir the personal exceptions, they could invoke against the *de cujus*, as the heir does not take place of the deceased, in the latter's contracted relationships with third parties[35];

e) from the price obtained from the sale of successional assets, the claims of the successional creditors and of the legatees will be satisfied preferentially, while the personal creditors of the heir claims will be fulfilled only from the remaining liabilities after liquidation.

B) the responsibility of the heir to the liabilities, only within the asset limit (*intra vires hereditatis*).

As for the responsibility for the liabilities, the new Civil Code regulates that the legal heirs and general legatees with general title are responsible for the debts and burdens of the inheritance only in proportion to each quote.

So, unlike the Civil Code in force, the new Civil Code no longer regulates the possibility of the heir to abandon the succession's assets in favor of creditors and legatees by particular title.

According to the dispositions of article 1114 paragraph (3) N.C.C., as a rule, the legatee with a particular title is not obliged to pay the debts and the inheritance duties. By exception, however, it responds for the liabilities, only with his asset or assets which form the object of the legacy and only in the following situations:

a) the testator had expressly disposed for this purpose;

b) the right left by legacy has as its object an universality, such as an inheritance collected by the testator and non-cleared yet;

c) the other assets of the inheritance are insufficient to pay the inheritance debts and the inheritance duties.

C) the assets entered into the successional patrimony after the inheritance opening, by effect of subrogation, may be affected to debt settlement and inheritance duties.

Thus, according to article 1114 paragraph (4) N.C.C, where alienation of assets after the inheritance opening, goods entered in the successional patrimony by the effect of subrogation may be affected to the debt and burdens of the inheritance extinguishment. From the expression of the

[34] Ididem, 445 and the footer note 2.
[35] Ibidem.

legislature, we can assume that these assets can be affected to the debt and burdens of the inheritance extinguishment only if the other successional assets do not appear to be sufficient.

2.3.2. The special effects of the inheritance acceptance

The general effects of acceptance (the strengthening of title of heir, the separation of patrimonies and damage to goods entered in the successional patrimony, by the effect of subrogation, to satisfy debts and inheritance duties) occur in both voluntary acceptance, and in forced acceptance. In addition, however, the forced acceptance of the inheritance generates, under the provisions of article 1119 N.C.C., the following specific effects:

a) forfeiture of the *erede* from the right of successional option, not being able to reject the inheritance;

If the heir had renounced his inheritance, before committing the act liable to attract the forced acceptance of the inheritance, he decays of the quitting quality, becoming thus acceptant of inheritance.

b) forfeiture of the *erede* from the successional rights on the assets stolen or hidden;

Erede who has stolen or hidden successional assets, is void of any right on these. These assets will revert to the statutory rates, to the co-heirs of the guilty party. It follows, therefore that the forfeiture of the successional right of stolen or hidden property occurs only in relation to fraud co-heirs[36].

c) the obligation of *erede* to report or to reduce the hidden donation, without participating in the distribution of donated asset;

d) although the guilty heir does not collect his share of the stolen or hidden assets, respectively from the reported or reduced donation, he will be bound to pay the duties and the succession burdens, in proportion to the quote of the inheritance due to him, including his own assets.

So, in the forced inheritance acceptance, the separation of patrimonies no longer operates, thus the guilty *erede* will incur debts and inheritance duties, which correspond to its quote of inheritance, in case of failure of successional assets, even with his own goods (*ultra vires hereditatis*).

2.4. Inventory and special measures to conserve the successional assets

2.4.1. Inventory of the successional assets

As for the inventory, the new Civil Code provides in article 1115 paragraph (1) that *erede*, the heritage creditors and anyone interested may require the empowered notary to have an inventory of the assets from the successional patrimony, expenses incurred by it being in charge of the inheritance.

Therefore, the inventory can be requested to any competent notary by any *erede* (with legal or testamentary vocation), by the inheritance creditors and even by any interested person, for the purpose of ascertaining the exact composition of the successional mass, so that the entitled one to exercise the successional option right should do so in full knowledge.

According to the dispositions of the paragraph (2) of the same law text, if *erede* or persons who hold assets from the successional patrimony object, the carrying out of the inventory is ordered by the court from the place of the inheritance opening. Consequently, regarding the inventory we may encounter two situations:

a) those who hold assets from the successional patrimony (whether or not they have the quality of *erede*) do not oppose the request of those entitled by law to make an inventory of the successional assets, in which case the public notary is empowered to dispose of inventory performance;

[36] Mihail Eliescu, *op. cit.*, 130.

b) those who hold assets from the successional patrimony (whether or not they have the status of *erede*) oppose the request of those entitled by law to make an inventory of the successional assets, case in which the inventory carrying can be ordered by the court from the opening place of the inheritance.

There are also two situations as far as the person who makes the inventory is concerned. Thus, according to the dispositions of the article 1115 paragraph (3) N.C.C., the inventory is made by the person designated by the *erede* and creditors' agreement, or failing such agreement, by the person designated by either the notary or, where appropriate, the competent court.

So the two situations that can be found regarding the person who will carry out the inventory are the following two:

- the person who will carry out the inventory is designated by *erede* and creditors;
- if there is no agreement between the *erede* and creditors, the person who will carry out the inventory will be designated either by the competent notary (in case those who have assets from the successional patrimony have no objection to achieve the inventory) or by the competent court (in case those who have assets from the successional patrimony have objection to achieve the inventory).

Inventory results will materialize in the power of the dispositions of the article 1116 N.C.C., in a report of inventory, which contains references to both the assets and the liabilities of the inheritance. As for the assets of the inheritance, goods of the inheritance whose ownership is contested must be shown separately.

For the inheritance assets whose ownership is not contested, the person conducting the inventory must distinguish between goods, that on the opening date of the inheritance, were in possession of the deceased and the goods that at the same date, were in possession of another person. The goods that were in possession of the deceased on the inheritance opening date will be listed, described and assessed provisionally, while the successional assets owned by other persons will be counted, stating the place where they are and why they are there.

Where, during the count a will left by the deceased will be found, it will be attested as unchanged and deposited in the public notary office [article 1116 paragraph (5) N.C.C.].

The inventory is signed by the person who carried it out, by *erede* who were there, and if they are absent or if they refuse to sign, the inventory will be signed by two witnesses [article1116 paragraph (6) N.C.C.].

The deadline to realize the inventory

As a consequence of the dispositions of article 1104 N.C.C. the inventory can be realized as it follows:

- prior exercising the successional option right, in which case the one-year option term will not be fulfilled before two months from the date on which the applicant *erede* shall be notified of the minutes inventory, in this case we are now extending the deadline of the successional option term;
- after exercising the option right, in which case the successional option term mustn't be extended.

During the realization of the inventory, *erede* can not be considered heir unless he has accepted the inheritance. So, only *erede* who commissioned the inventory of the successional assets, after accepting the inheritance, will be considered an heir. In other words, only the inheritance acceptance makes him heir, not the request to carry the inventory of the successional assets, this does not have the significance of the tacit inheritance acceptance.

2.4.2. Special conservation measures of the successional assets

The new Civil Code contains provisions relating to special measures and conservation of the assets. So, according to the article 1117 N.C.C., in case of danger of alienation, loss, substitution or destruction of the successional assets, the notary will be able to put them under seal and will submit them to a custodian.

Custodian may be appointed by agreement of the concerned parties or by failing such agreement, the custodian will be appointed by the public notary. In the first case, the custodian will be one of *erede* and in the second case he will be a third party.

From the mentioned legal dispositions, we conclude that the role of custodian is to conserve the successional assets, avoiding alienation, loss, substitution or destruction. Any storage costs will be contracted only with the approval of the notary.

The successional assets can also be transferred in administration to a special guardian appointed by the notary. Just like the custodian, the trustee may incur expenditure on the successional assets in order to preserve it, but only with the notary's approval.

In all cases, the assets are delivered protocol based, signed by both parties, by the public notary or by special guardian and custodian. If the delivery takes place in the same time with the inventory, the inventory report will be mentioned the delivering statement, a copy of the minute report in question being handed to the custodian or to the trustee.

The custodian or the curator is forced to return the assets and to account for them to the notary regarding the preserving or the administration expenses of these goods, when the successional procedure ends or when the notary sees it fit.

Regarding the sums of money, the bonds, the checks or any other values found when carrying out the inventory of the successional assets, the new Civil Code regulates special measures, in article 1118. They consist in submitting the values listed in the notary's store or in a specialized institution, mentioning this in the minute report of the inventory.

From the sums of money found in the inventory, will be left to the heirs or to those living with the deceased and that kept the household together with the amounts required for:

- the maintenance of the persons who were in charge of the deceased for up to 6 months;
- the payment of the amounts due under employment contracts or social insurance payments;
- the expenditure for conservation and management of heritage assets.

Entitled to receive such amounts, are therefore only:

- the heirs of the deceased, legal or testamentary (general or with general title);
- in the absence of the heirs of the deceased, the persons who lived with the deceased and who kept the household with him.

We consider that the new Civil Code, that contains references to the inventory and the preservation of the successional assets, registers another positive aspect.

Analyzing the dispositions of article 1115-1118 N.C.C., we identify the concern of the legislature to regulate in a more complete manner the acceptance of the inheritance problem.

3. Conclusions

After an analysis of the inheritance acceptance, we can appreciate that the new Civil Code assigns to this valence of the successional option right a new configuration. Law no. 287/2009 preserves from the regulation in force of the inheritance acceptance only items whose correctness and timeliness have not been denied by the literature and by the judicial practice, bringing many new elements imposed, however, by the new social realities.

As regards the acceptance of the inheritance, we reveal the following new aspects brought by Law no. 287/2009: it does not regulate anymore the acceptance under inventory benefit, form of the inheritance acceptance in the regulation of the Civil Code in force, but it contains dispositions only regarding the inheritance accepting, but to which it assigns the legal effects of the acceptance under inventory benefit from the regulation in force; it enumerates the acts with tacit acceptance value, respecting under this aspect the line of the Civil Code in force; it regulates for the first time in our law the non-acceptance declaration; adds new causes that attract the forced inheritance acceptance; it contains dispositions regarding the elaboration of the inventory and of the special measures of

conserving the successional assets; it regulates the possibility of extension of the option term, as a consequence of the inventory's elaboration, before exercising the successional option right.

In our opinion, all these aspects represent advantages of the new regulation in successional matter, constituting its strengths. We particularly highlight the new Civil Code's concern to ensure to the inheritance acceptance a regulation as complete as possible and assure protection for any acceptant *erede*, stating that the debts and inheritance duties shall be considered *intra vires hereditatis.*

We conclude therefore that the new Civil Code, using a modern specialized language, ensures to the inheritance acceptance a proper, complete, consistent and fair regulation.

OVERVIEW OF OWNERSHIP AND ITS BORDERLINES WITH THE OBSERVANCE OF THE INJUNCTIONS RULED BY THE INTERNATIONAL COURT OF JUSTICE, THE EUROPEAN HUMAN RIGHTS COURT AND THE COURT OF JUSTICE OF THE EUROPEAN COMMUNITIES

ELENA-RALUCA DINU[*]

Abstract
Guaranteed for and preserved by many law abiding institutions and documents, starting with national ones, mentioning the regional treaties and completing with the universal deeds, the ownership seems to be detached from its classic conceit and appears as a common concept, but nevertheless with a variable content, based on a series of constant elements such as juridical tradition of different member states, their economical and social upraise and even historical and political implications. Ownership must be perceived as a double sided coin, its right side up being a country's normative system and the toss consisting of the international legal provisions that bring under regulation the most cherished material right of an individual. From time to time the coin lands on its brim, meaning that a conflict will be spawned between the two. It's not to be neglected that the international protection of this fundamental right can be achieved by subjecting it to a number of courts that created the Community acquis. Which of them had the most important contribution in establishing a guideline shall transpire from the pages of this article.

***Key words**: ownership deed, human rights, international courts, injunctions of the international judicial institutions referred to by Romanian courts, encroachment of a private property right*

Introduction

In spite of the fact that they have been functioning for quite a while, both the European Human Rights Court (Strasbourg) and the Court of Justice of the European Communities (Luxemburg) can't be perceived as anything more than dialogue mechanisms between the national courts. In order to invigorate this allegation, we should turn our attention at least to the sever injunctions of the romanian Constitutional Court that makes many refferals in its decisions to the rulings of the European Human Rights Court. In essence, this judicial institution upbraided the romanian state on the matter of inconsequence, incoherence and incapacity to frame a legal system that can be able to create a juridical security climate as well as for the numerous legislative gaps that can't be strewed in another way than by an autonomous approach of every judge in a litigation.

Out of the 47 signing states of the European Declaration of Human Rights, members of the European Council, Romania has the largest number of complaints registered when it comes down to laying the overall population over the number of offences claimed before the international institution, oscilating forwards and backwards between Rusia and Turkey. From 478 injunctions ruled by the European Human Rights Court, over half of them, 280 to be more precise, were given in relations to the encroachment of the ownership right, thus the interest that such a topic raises for a detailed analysis of the points made by the international courts when they enforced their decisions on the Romanian state.

[*] Phd. Candidate, "Nicolae Titulescu" University, Bucharest (e-mail: dr_dinu_raluca@yahoo.com)
The article has been elaborated within Cerdoct Project – phd. grants for supporting the scientific research activities of phd. candidates in the technical or humane domains, environmental protection and health fields, national, european and worldwise legislation,with an eco-economical and socio-economical impact "CERDOCT" ID 79073.

A professional concern was put forth for this particular issue throughout the specialized literature, the subject being the main focus even for a phd. thesis. This fact underlines the timeliness of the item that makes the objective of the article that unfurls from here on.

In the paragraphs below I will give my best efforts in trying to capture the main particularities of the ownership right's borderlines in accordance with the conceit of the Strasbourg judges and he Luxemburg principal of proportions, in detecting the core of the private property concept and in shedding light on the institution of exerting use on assets in conformity with the general interest.

Overview of ownership and its borderlines with the observance of the injunctions ruled by The International Court of Justice, The European Human Rights Court and The Court Of Justice of the European Communities

The International Court of Justice had a diminished role in insuring the legal protection of ownership, mainly due to several circumstances like the fact that its organic writ (the Statute of the International Court of Justice[1]) invests the Court with resolving the judicial litigations solely on the basis of the member states'[2] consent and that the only parties that can raise an issue are the states themselves[3]. Qualified as the major juridical unit of the Organization, the International Court of Justice had insufficient means in order to proceed to offering an effective protection for the ownership right. Although the Statute is an almost universally signed treaty, so that at least in theory it had the ability to stress upon safeguarding the above mentioned right, it doesn't regulate any particular right, but nevertheless it accomplished heeding the interest of the international community over the necessity of vouching for human rights as well as for imanent personal rights, without segregating on cultural, ethnical or religious criteria. The Universal Declaration of Human Rights which can't be enforced on all of the member states, due to the fact that it hasn't a mandatary power is all the same the first international deed that incorporates a catalogue of the cardinal human rights and liberties. Art. 17 stipulates the private property ownership, concluding that every individual may detain one or several estates, on his own or alongside others and that no one shall be divested in an arbitrary manner of his property. Subsequently, two more treaties came into being (The International Pact for Civil and Political Rights; The International Pact for Economical, Cultural and Social Rights), but neither of them tied the ownership right to rules. All of these international documents were reunited under the generic denomination of The Human Rights Chart that may encompass the instrument referred to by the International Court of Justice when it tries a litigation. As I underlined anterior, the Chart is fairly irrelevant when it comes to conferring an international protection for the ownership right, this being the factor for which the regional systems that provide for the property right have an increased efficiency.

Since the international scene can't offer the solution for the moots that are brought before it, the interest for the matter grew on the European scale and on the Community level, the two proficient institutions in instrumenting the litigations concerning ownership being the European Human Rights Court and the Court of Justice of the European Communities.

In conformity with art. 1 of the First Protocol to the European Convention for the observance of human rights and fundamental liberties, denominated edgeways the Ownership Protocol, no private or juridical individual can be deprived of his property unless it is done for a public utility

[1] Art. 1 of the Statute stipulates that the International Court of Justice that was established by the United Nations Chart as the primary judicial unit of the Organization shall be encompassed and shall function in compliance with the provisions of this Statute.

[2] Art. 36 point 1 of the Statute postulates that the Court is competent to pass a judgment in the moots that the parties bring before it, as well as in all the others vexed questions that are listed by the United Nations Organization's Chart or that are referred to in the treaties and conventions effective at that certain time.

[3] Art. 34 of the Statute affirms that only the states are entitled to be parties in the issues that are brought before the Court; Ch. Domincé, L'émergence de l'individu en droit international public, in L'ordre juridiqe international entre tradition et innovation, Recueil d'études, PUF, Genève, 1997, 109.

cause and with the compliance to all the provisions and to all the general principals of the international law. These proclivities don't inflict upon the right of the states to carry out any of the deeds that are considered to be necessary for regulating total utility of the assets in accordance with the general interest or in order to insure the excise tax payment, of other contributions or of fines. As I have already shown, art. 1, paragraph 1, second thesis of the Protocol stipulates the abridgement of property for public utility on the groundmap of the legal dispositions and the principals of the international public law.

The notion of deprivement of ownership rights is equivalent with that of dispossessing the entitled person of the asset itself and of all the attributes that bestowed on it and transferring the right to another's patrimony (most of the times, the state's). The capital manners through which the action is enforced are: expropriation, nationalization and, in exceptional cases, requisition. Although requisition is mainly a temporary limitation of one's right to dispose at his own will of the good, sometimes it resembles expropriation, meaning that the transfer of the property right is definitive and is done with the payment of a retribution.

Expropriation, the most common way to dispossess someone of the ownership right, is considered acceptable if it obeys a set of rules: the deprivement shall be enforced by internal juridical norms by each state on its own[4]; the action against the title holder shall be justified by a public utility interest; the dispossessing shall be in conformity with the general principals on the international law. To these three legal postulates, the Court added another two jurisprudential ones: the divesting shall be done with the defray of a counterbalance sum; the existence of an equilibrium between the deprivation and the pursued aim of it.

Nationalization is a form of expropriation, that has a specific trate, that in its classical configuration engages the lack of retribution, the existence of arbitrary or political[5] reasons for which the divesting is taking place and the fact that it's endorsed maily upon enterprises and industrial branches. This issue and foremost the consequences of the nationalizations from the comunist period, as well as the annulment of the decisions to reinstaurate the former owners in their rights by granting the annulment appeals promoted by the Romanian General Prosecutor have been parameters for which Romania was convicted before The European Human Rights Court, on top of the list being inscribed the repercussive cause of Brumarescu vs. Romania (1999). Therefore, the idea of nationalization[6] is not in itself abhorrent to the ownership right as it is guaranteed for by the Convention, this being the reason for which the Court granted permission to nationalize the aeronautical and naval industry[7], but the arbitrary one tells against the private property.

Another restraint entailed on the ownership right, or more precise on one of its prerogatives, is, in conformity with art. 1 paragraph 2 of the Convention, the use exertion of assets in accordance wih the general interest. In comparison with the deprivement of the ownership right, this manner of limitation reverberates solely on the use, meaning that the asset will not be transferred from one title holder to another, instead the exercise of the use will be restricted by the existence of a general

[4] Proffesor Corneliu Bîrsan, representative of Romania at the European Human Rights Court, considers that the concept of internal juridical norms should be perceived in extenso, meaning that it also includes decrees, injunctions or other law enforcing deeds, even the jurisprudence of some courts when this is thought to be a legal spawning grownd. He explains himself by underlining that different states conduct by different legal systems, so we shouldn't misinterpret the will of the European Convention of Human Rights. Nevertheless, we appreciate that in the Romanian ownership right cocoon, the conceit of "law in the sense conferred by the Convention" shall be used in the perspective of art. 44 of the Romanian Constitution, corroborated with art. 73 letter m) and the Decision of the Court no. 6/1992, thus the restrictive interpretation of organic law.

[7] Lighgow vs United Kingdom and North Irland Cause.

interest which must be appeased and the observance of the ratio between the abridgement and the greatness of the general interest. The control of the usage may manifest itself through dictating some obligations or active conduct (the bondage to crop the land or to plant trees for the improvement of the ecosystem) or, on the contrary, through limiting the conduct of the owner or drawing directory lines (adopting rule catalogues for exerting some professions, establishing barrier prices for certain goods, setting roof type lease prices[8], prelonging the lease contracts over the term agreed to by the parties). The legal provision asserts that the states are entitled to adopt the necessary law abiding measures, but nevertheless they will be subjected to the ratio control test of the Court. It decided to appraise the equilibrium by ruling in a favorable way in the following situations: prohibiting the owner to use as residence a construction building rigged up in a protected area[9]; the obligation enforced on some woodland owners to plant trees of a particular essence that would favor the protection of the ecosystem and the production of timber[10]; forbidding the emplacement of a mechanical repair shop in a residential location[11]; appealing to an urban plan in order to limit the building of other types of estates than the ones approved in the plan[12]; instauring legal provisions that prohibit applying the succesoral sharing institution to an agricultural areal, in order to maintain its economical viability[13]; classing an agricultural terrain as a natural site permanently under protection and exploiting it only by obtaining an authorization[14].

A special kind of usage control, even if sometimes it is the equivalent of the dispossession[15], consists of confiscating the asset as a complementary punishment for committing a crime. The jurisprudence of the Court accounts that the confiscation measure is legitimate as long as the state obliges to the just equilibrium between its own interest and those of the owner and takes notice of the level of liability or the type of prudence needed in the circumstances that involve the case. For example, confiscation was ruled as legitimate when it referred to more immoral publications[16] or to a vehicle used to commit a crime for the purpose of impending the owner to continue with the misconduct[17].

The Court stated that they won't be perceived as overriding of art. 1 of the First Protocol of the European Human Rights Declaration the following: the legal provisions for declaring bankruptcy[18]; the recognizance of minoritary stake holders to sell their social parts for a price established by independent arbitrators, but preserving the right to buy them back, in the very same conditions[19]; the eviction of a person from a locative environment over which he didn't posses any right[20]; the adopting by the national authorities of a legislation that restrains the right of the owner to cancel the lease contract that is in the proceeding stage[21]; adopting legal measures that roof the lease prices which had been anterior free settled[22]; sentencing a contractual party to paying indemnities to the other[23].

Despite the analysis that I carried out, on the 4th of March 2008, the Court of European Human Rights ruled against Romania in a litigation based on the infringement of art. 1 of The Protocol. In the Burzo vs. Romania cause, the Court exceeded its attributions and substituted the national legislative organ even though it states that "although the Court doesn't possess the proficiency to substitute the national courts in an act of offering an interpretation of the internal juridical proclivities, it ascertains that the Appellate Court omitted to take into account one of the motives that the plaintiff claimed in the eviction matter that he brought before the court, on the fundament of which the inferior courts had granted the action, in the same manner in which it overstepped other arguments of the plaintiff, thus making the conduct of the Appellate Court an encroachment of the equitable trial principal". Furthermore, the European Court finds that "the restrictions that the owner-plaintiff had to endure in favor of the tenants (payment of a minimal lease price, the degradation of the asset) on a regular basis for several years are clearly disproportionate by comparison with the level of general interest that represented the motive for which he was deprived of the asset's use". In closing arguments, the Court referred to its constant jurisprudence in the matter of art. 1 of the Protocol, underlining the fact that O.U.G. 40/1999, whose provisions have been used by the Appellate Court to maintain the tenants in the locative area, represents a settlement of the use exercion that pursues a general interest. At the same time, the European Court marked the fact that while the prerogatives of art. 13 of O.U.G. 40/1999 weren't fulfilled, the Appellate Court hasn't made any mention of art 14 paragraph 2 of the same normative deed which stipulates that tenants who delay on a systematic basis the payment of the rent are not entitled to the renewal of the lease contract. The Court appreciated that the restrictions enforced upon the owner-plaintiff in favor of the tenants (the minimal retribution, the degrading state of the asset) weren't affiliated to the observance of the just equilibrium between the protection of the plaintiff's ownership right and the exigency of the general interest, meaning that, in this particular cause, art.1 of The Protocol suffered an infringement.

The guarantee and defense of the fundamental individual rights is also being encompassed by the European Court of Justice (the former Court of Justice of the European Communities). If we would trace a time schedule for the evolution of the ownership's observance on the Community grounds, the best place to start is the analysis of one case that became the head stone in the matter of encroachment over the private property right. In the absence of a catalogue that would inscribe all he fundamental rights, the Court of Justice of the European Communities, with the aid of Hauer vs. Land Rheiland-Pfalz[24] case (1979), consacrated at that time a principal of general application that forced all of the others to respect the fundamental rights and liberties. The Court stated that "the ownership right is ensured for in the Community juridical order, in acceptance with the member states' Constitutional conceptions, as always, reflected by the first additional protocol of the European Human Rights Declaration…" In that particular case, the plaintiff was denied the release of an authorization for planting grapevine on a square surface over which the petitioner had an ownership right. The interdiction would have been for a 3 year long period, because of a Community regulation that stipulated that planting any crop would be contrary to hazard proclivities. The plaintiff made the allegation that his ownership right was struck by inefficiency and he was disallowed to practice his profession, in the manner that the fundamental German law should be interpreted. Ruling for the defendant, the Court declared that there was no infringement of the ownership right due to the fact that the provisions of the Regulation 1162/1976 weren't inflictive, instead they were a type of restrictions that was generally spread throughout the Community member states, thus trying to implement a general interest.

In the circumstances that even though the Community law is the beneficiary of spremacy in comparison with internal normative systems of the member states, at the same time that the first isn't to clear in regulating rights and liberties or it does it at a lower standard than the national law, the

[24] T. Ştefan, B. Andreşan-Grigoriu, Drept comunitar, C. H. Beck , Bucharest, 2007, 154-158.

cold shoulder of the German people and of the Italians raises the question of knowing which of the two will be declared as having priority. The answer came through a decision of the Federal Constitutional Court of Germany that, although it was very controversed at the beginning, proved its efficiency on the long run, being followed by a number of other injunctions ruled on a unitary practice trend. The Solange 1 cause became the means of asserting that "the national proclivities regarding the fundamental rights must be perceived as reference points for the Community law, at the times when community organs can't guarantee a protective cover for these rights at the same level as the national ones may do it"[25]. The Maastricht Decision concluded that "the German constitutional court grants protection for the fundamental rights in cooperation with the Court of Justice of the European Communities".

A new high point on the stage of the evolution of fundamental rights and liberties on a Community level was represented by the legitimize of art. 6 of the Treaty for establishment of the European Union, which conferred the Court of Justice of the European Union proficiency in this matter. However, since the Union is not a party to the European Declaration, the Court will apply this convention not as an enforceable deed, but more as a source of inspiration.

The private property right has been regulated two more times, in 2004 in the text of the Treaty for the constituence of the European Union and again in 2007 in that of the Lisbon Treaty. In both cases, the treaties came with attachments of the rights' catalogue from the European Union's Fundamental Rights Chart, because the signing of the conventions would have meant the rights themselves would have acquired juridical force. The rejection that the two treaties faced at the referendum that several member states organized put the objective on a waiting list. Therefore the ownership, aside from having an European dimension, it also has a Community aura, that has grown on its own, but not without establishing a conexion with the one that is mentioned by the First Protocol to the European Convention regarding the defence of the individual's fundamental rights and liberties and not without being tinted by the jurisprudence of the European Human Rights Court.

Conclusions

There are two proficient juridical organisms on the European continent that can be addressed to with the plea to solve litigations regarding the enroachment of fundamental rights, this situation being the origin of the well assumed risk of obtaining different injunctions in similar cases. The formality of the coexistence was accomplished with the aid of the European Union's Fundamental Rights Chart and of the European Social Chart, which have the role to create a catalogue of the preconsacrated rights, to try to uniform their interpretation in front of the two courts and most important of all, to make talk at art. 17 about the regulation and guarantee of the ownership right: "every person has the right to benefit from his legally acquired assets, to use and dispose of them, as well as leave them as heritage. No man can be deprived of his property, unless it's for a public utility cause, in the strict conditions mentioned by the law and with the receivance in a just amount of time of a just retribution for his loss. The usage of the assets can be regulated through law as long as the respective action is in the general interest." Article 17 makes transpire on one hand the partially borrowed expression from the European Declaration of Human Rights and on the other hand the numerous shades of the formulation that were entailed by the judicial practice of The European Human Rights Court, for example the express consacration of the retribution's just character and the necessity for it to be paid in a fair amount of time.

On the Community level, a strong German law influence made itself sensed by enforcing for the first time in 1979 the principal of proportions in the Hauer Cause stipulating that "in realizing the pursued objective, the restrictions mustn't be perceived as disproportionate and intolerable inflictions

[25] G. Gornig, I. E. Rusu, Dreptul Uniunii Europene, second edition, C. H. Beck, Bucharest, 2007; I. E. Germania cu privire la drepturile fundamentale, RRDC 1/2006, 55 and the next pages.

in the owner's prerogatives that bring contiguity to the very essence of the ownership right". In the twenty year younger Standley cause, the Court of Justice of the European Communities points out that "even the authorities of the member states are obliged, whenever they regulate limitations of the ownership right, to obey the principle of proportions. The owner shouldn't be forced to bear any duties that overcome the absolute necessary for the pursued objectives to become reality".

The preoccupation manifested by the Strasbourg judges for defining the borderlines of the private property right, places its jurisprudence on a privileged staircase, thus any interpretation of The European Human Rights Declaration must be done by directing it to the judicial practice of the European Human Rights Court. A chronological glance over the decisions ruled by this institution will shad light upon the pulsing mechanism of the Declaration, trate that confers it a great adaptability to the economical, social and political reality that permanently undergoes transformations and reinterpretations.

The ownership right was the beneficiary of an elliptical regulation in the Treaty establishing the European Community which only underlined that the European Community will not prejudice the property regimes that are effectual in member states[26]. In harsh conditions, the observance of the ownership right faced a brick path, its protection being realized in a praetorian manner and by being sustained by the common constitutional traditions of the member states[27]. Although the Luxemburg judges were assigned only to watch over the abiding by the European constitutive treaties, they became real challengers for the ones in Strasbourg, in the matter concerning the protection of human rights.

ALTERNATIVE DISPUTE RESOLUTION – CREATING VALUE OUT OF CONFLICT

ADRIANA ALMASAN*

Abstract:
The paper is deemed to present the advantages of resolving a dispute or a potential dispute throughout negotiation. This alternative of dispute resolution to legal proceedings in front of the law court may be considered as more favorable to the parties in conflict, from an economical perspective. Therefore the scope of the paper herein is eventually to establish that a conflict may generate value by negotiation.
Further to the conclusion that by negotiation, a conflict may be solved more efficiently, the objectives of the paper are to identify (i) the role played by the legal counsel in identifying the values thereto and (ii) the mechanisms leading to such effect, as well as (iii) the intrinsic connection between law and economics in an adequate approach of the negotiation throughout a commercial dispute. Not lastly, the paper has as objective identifying the key elements of a settlement agreement that are reflecting the added value.

Key words: *negotiation, dispute, alternative, value, settlement*

Introduction

For obvious reasons, the dispute resolution is generally analyzed in relation with litigation. As lawyers are most of the times the designers of the entire dispute solution process, the most reachable instrument foreseen by them is the one allowing them control and the one mostly related to their command of law. Such approach may not be the most valuable to their clients that may lose by entering into conflict with the counterparty the personal interrelating enabling the further business relations.

Consequently, with the cope to achieve added value, the alternative dispute resolution approaches may be taken into account as well, assessing on a case by case basis which one would be most appropriate in each case.

The alternatives to dispute resolution are, in an order corresponding to their strength and enforceability, arbitration, mediation and negotiation. The Romanian Civil Procedure Code also provides the conciliation as a distinctive procedure to be followed prior to any litigation of commercial nature in certain cases that are brought to the attention of the ordinary commercial courts. Such conciliation procedure is not however a distinctive alternative *per se*, as it only indicates the necessity of an amicable resolution attempt from the claimant instead of providing the means that are availed to the parties in dispute. This means that both negotiation and mediation may be used in reaching the result and only the minimal formal proofs of summoning for a conciliation meeting is not equivalent of using the very means of alternative dispute resolution instruments.

Choosing the proper alternative in settling a dispute is also a key element in determining the resolution strategy. Sometimes the very alternative to litigation is not reasonably conceivable. Such are the situations in which at least one of the parties are mostly concerned to either clear its name (for an instance in an intellectual property infringement), or want to make a powerful statement prone to discourage other possible claims against the company that may cast an unfavorable light upon the company itself (such being the case for instance of the large multinational companies in a tort case).

This work was supported by the strategic grant POSDRU/89/1.5/S/61968, Project ID61968(2009), co-financed by the European Social Fund within the Sectorial Operational Program Human Resources Development 2007-2013.

Other times, the arbitration is a proper instrument. Not only that sometimes the arbitration is mandatory due to an arbitration clause previously agreed upon by the parties in dispute, but the more facile and less complex in proceedings the process may be. In practice the arbitrators are retired judges that are reluctant to apply strict procedural rules in favor of a more substantial overview of the case. The time limitation also may help in electing this course.

Mediation is a process that implies, as well as arbitration, a third party in settling the matter. Mediation presents the undeniable advantage to enable an added value outcome in opposition to litigation. In principle is also less expensive than litigation, nevertheless it never provides an absolute solution to the dispute and there are no guarantees that a mediated conflict might not be eventually brought to the court by a discontent party.

Finally, the negotiation is the instrument more likely to bring to the parties the added value that is able not only to save money and time but also to enable the further continuation for business relations, not altered by resentments that always arise from litigation and arbitration.

Therefore, this extremely important issue of relating dispute resolution to the alternatives the parties may have in order to create value out of conflict and mitigate losses and even achieve gains is to be analyzed from an economic perspective: the paper present the key role of the legal counsel integrated in identifying the added value thereto and also the mechanisms leading to such effect. Such approach enabling the link between law and economics presents the manner of turning by negotiation a commercial dispute into a settlement agreement reflecting the added value.

Alternative Dispute Resolution – Creating Value Out Of Conflict

Legal disputes initiate with the grievance perception, sometimes with communications and end to a resolution that may be negotiated, mediated, arbitrated or litigated. There are of course the grievances that not necessarily lead to resolution due to the reluctances of the party that has suffered the nuisance to further pursue claims against the other. It is nevertheless almost certain that even not duly resolved, a dispute does not lack the capacity to generate added value but, most of the times, as the claiming party may want to discontinue the relations with the other, is event worse than the situation where satisfaction may be obtained by resolving the conflict[1].

For instance, in United States of America most cases settle[2] due to the fact that the lawyers are well trained in order to explain to their clients the risks and opportunities ensued by the dispute. A legal valuation is crucial to such purpose. Each lawyer assesses the chances to win the case and the assessment exercise may go further to the point that each piece of evidence is counted in; each element contributing to the success of its case is accounted for. Neither the assessment nor the other objective instruments availed to both the client and the lawyer are able to provide certainties, nevertheless, the result of valuation represents the grounds for the standpoint they are to assume and the election of a certain dispute resolution method.

The valuation in the settled cases results from certain elements that, combined, indicate the substantive endowments (i.e. the applicable laws and how they influence the value of the conflict by litigation), procedural endowments (what procedural incidents are applicable and how are likely to affect the value of litigation), transaction costs (the expenses incurred, including lawyers' fees and legal taxes), risk preference (how do the client's preference is likely to lean towards litigation or settlement)[3].

[3] Robert H. Mnookin, Scott P. Pepper, Andrew S. Tulomello, *Beyond Winning*, The Belknap Press of Harvard University Press, London, 2000, ibid.

Hence it results that all these elements, including some that are of subjective nature and imply a good knowledge of the client's decisional process and the emotional side of the case, are required in order to even consider the possibility of advising on the very matter of election.

Contrary to this hypothesis, the case where a party is forced not to settle takes into account the same principle and criteria as described in the prior situation, in a formula that is most likely to have a larger amount of uncertainty about the outcome of litigation. The distributive elements of the bargaining tend to split between the parties in conflict in the Zone of Possible Agreement (for instance arguments in the vicinity of "you have no actual case", "we can hurt you worse than you can hurt us" and, most of all, "we'll fight to the bitter end" may be decisive where the information about the substantial and procedural – still slight chance! – endowment are scarce and enable the perception influences alter the decision).

Moreover, the perception shifting by using of arguments such as "we'll see you in court" is less likely to lead to settlement, as both parties adopting extreme positions have unreasonable perception about the chances in court. Their antagonism may be avoided only by disclosing certain information, the risk exploitation being absolutely necessary for the benefit of an added value result.

In principal, a lawyer may advise its client that information disclosure is an expensive endeavor and presenting the information to the unlimited exploiting of the counterparty is necessary to be strictly monitored (e.g. the fact that the client may need in the future the similar service or goods that are currently provided by the counterparty is sensitive information that may be used prudently). Moreover, the lawyer depending on the fee that is agreed with the client, the lawyer may be inclined to protract the litigation.

The main challenge in alternative dispute by negotiation is how to transform the actual conflict into a settlement agreement that ideally includes an added value thereto. From this perspective, the negotiation of a dispute very much resembles to a contract negotiation as the final result of the bargaining is the settlement agreement, an agreement having certain particularities to the other contracts that may be commercially negotiated.

The litigation dynamics leading to settlement is explained by the fact that a settlement is more rapid than any litigation consequently reducing the expenses, and also by the fact that the litigation is not oriented towards adding value thereto. There is no contest to the fact that litigation may also bring to light certain advantages and value-creating opportunities. They are most of the times overlooked by the fact that the litigation is less conducted by the client, as during the negotiation are expected to lead, but by the lawyer whose litigation strategy even if submitted to the client for approval and input, most of the times is simply endorsed without actual censorship by its client.

Therefore, in such circumstances the lawyer's tendency to focus on the legal matters (over substance and procedure) as natural as it may be considering its formation as a legal counsel will leave little room to the business aspects that are overcome.

The system of legal negotiations involves multiple relations between each party and its lawyer as well as between the lawyers and clients in terms of legal culture (implicit expectations and impact at the bargaining table)[4].

Sometimes the negotiation itself is a target towards which the parties direct, and the subject of negotiations. The negotiation of how to negotiate is a common phenomenon for adversarial proceedings as well. Where a parallel scenario is depicted in order to emphasize the positive effects is effective to such scope. Most of the lawyers may be inclined to describe the alternative of opening proceedings in the court. Such mistake is often immediately sanctioned by retaliation or even civil action from the counterparty's lawyer.

A productive process of discussing the law is more efficient: as most of the times the process of negotiation is led by the lawyers as a veritable boxing match, by attacks, fight backs an retorts, the

[4] Robert H. Mnookin, Scott P. Pepper, Andrew S. Tulomello, *Beyond Winning*, The Belknap Press of Harvard University Press, London, 2000, 4-5.

dynamics of the negotiation, even if arguments well presented and explained, they are not likely to lead to a satisfying result. The unlikely situation where one lawyer simply assumes the other party's lawyer position is not to be accounted for.

It is then self evident that the lawyer are influencing the negotiation process to a degree sufficient to obviate the essential in negotiations, that is identification and putting into effect the value that would lack in a litigation. As a related observation, it becomes that wherever the legal discussion are extended to a degree that indicates the business issues are overwhelmed by the legal approach, no swift efficient solution is on its way. Consequently, the legal added value may be of use solely provided that a reasonable ratio is maintained within the equation. I estimate that negotiations where legal issues exceed 50% of the issues in discussion are to be subject to drastic re-evaluation in order to design a new path enabling the business elements to intervene and generate the additional value.

When proceeding to negotiation, some assumptions are limiting and lead to less value, others are more helpful. Also, sometimes the mere discussion of benefits and costs of the alternative approaches is recommended in order to identify the added value in the transaction. If the most efficient solution may be reached by negotiation, however the counterparty is reluctant to proceed to negotiations due to various reasons it has to be made a distinction between the case in which they provide the grounds for denying bargaining, and the case where such reason is presented. Adopting a problem-solving attitude towards the resolution process is not only the key to the success but also makes possible the disclosure from the other party and therefore establishes a process that supports the problem solving approach[5].

The value creating opportunities reside in reducing the transactional costs and trading on differences, as shall be presented hereinafter[6].

The sources of value in a conflict may be either: differences between the parties, noncompetitive similarities, economies of scale and scope. The conflicting parties are individually interested to identify such elements that may be used as a golden bridge towards the other, as follows.

Differences are often expressed in different resources of reciprocal interest, different relative valuation (what is most important to one of them is of less relevance to the other) – nevertheless such difference may not be induced by manipulation or similar as it would become of no effect to the added value concept -, different forecasts, different risk preferences (the risk intolerant party may always lose gains counterpart to predictability comfort), different time preferences and so on.

Also, from the distribution of noncompetitive similarities (such as a common interest) added value may be found. This may result of the basic lower interest to increased legal costs entailed by the litigation to more complex issues. Either production or consumption can create value, as well as the effect obtained by the same elements to achieve a different scope, as further explained by Mnookin, Pepper and Tulomello.[7]

Moreover, the negotiation indicates how the added value may be distributed between the two parties. The added value consists not only in reducing the costs of dissolving the conflict but most of the times is also in the form of the proceeds of a new venture of the parties equilibrating the possible gains of one in constructed gain of the other. At the basic level, the distribution of the gains starts from a simple formula. For instance, if A claims 1000 and expects to win in a percentage of 90%, B is willing to pay 100 and estimates it has 10% chances to win the dispute in court, than the formula

takes into account their Reservation Value, that is their Best Alternative to a Negotiated Agreement[8] by considering the alternatives, in such a value. The calculation enables a Zone of Possible Agreement that is in the range of the two Reservation Values. That zone may be divided between the two of them into identifying a solution.

Obviously, the techniques that may include asymmetric information, strategic opportunism and hard bargaining tactics are as well utilized during the course of negotiation, in order to maximize profit.

However, the largest source of value is always ensued by mitigating the transaction costs in both time and money and dampening the strategic opportunism. There is a classic negotiation example in which an intellectual property infringement regarding a software product expedited the settlement proceedings as the claimant realized that not only a long litigation but also protracted bargaining may render the intellectual property solution that was making the object of dispute irrelevant in the perspective of the technology advance. In such a process, there are taken into account the so-called "lemon" problems where one party knows the value of the settled issue whereas the other party is not aware in terms of precision and also the moral hazard resulted from the asymmetric information in the possession of the two participants to the settlement.

Another issue that has to be solved in an adversarial commercial negotiation is managing the tension, a particularity source of difference in relation to the other contract negotiation situations.

In strict relation thereto, there is the possible case where the counterparty is not willing to identify a value during negotiations, acting as a tough negotiator holding strictly a certain position, in which case various techniques may be used in order to alter such approach towards the value finding perspective[9]. One solution resides in the extended effort of identifying value and advantage not only form the self perspective but also from the perspective of the counterparty.

It has to be stressed out that although a win-win negotiation, the negotiation regarding a settlement agreement holds the intrinsic fear that the object of bargaining is a problem that may not be resolved. Such approach, besides being one not aimed to succeed and provide the added value both parties should be looking for, it is also less likely to save time and money. It is a case that may never occur if the parties properly prepare negotiations offering BATNA (i.e. Best Alternative to a Negotiated Agreement) to the other in a reasonable fashion. The apparently counterproductive time spent in identifying the opportunities the other side afforded on the occasion of preparing the negotiations could be proven eventually as time well spent: from the other party interests' may result most of the solutions in negotiation. Knowing and improving ones BATNA is however mandatory for a result that allows satisfaction throughout the process. So are interests, resources and capabilities.

An instrument that may be always useful in identifying the adequate solution for achieving value is that any decision may be taken only further to realistic assessment and constructing a joint decision tree[10]. In fact this renders necessary an in depth analysis from the legal and economical perspective where all the hypotheses are properly developed so the risk level may be mitigated to a degree enabling a decision in knowledge.

Also, as the new research has pointed out[11], a well constructed apology is underrated in adversarial negotiations. The mediation also may be designed using not only some of the most common negotiation techniques but the strategic steps to be followed.

[11] "Why Your Lawyer Could Be Wrong, Avoid Lawsuits with Apologies" in *Negotiation, Helping You Build Successful Agreements and Partnerships*, Program on Negotiation at Harvard Law School, volume 13, no 6, June 2010,

Eventually, the value is created by the parties alongside the bargaining process, solutions being available by any techniques, including brainstorming, that include sharing of information, lacks ownership and valuation of the idea emerged. When the solution is difficult to be found, setting a principle (e.g. it is equitable to consider the problem rather a risk to be split than a liability to be solved by one of the parties) is a useful tool. Equally, establishing norms to be followed or simply changing the game may be of aid.

Nevertheless, it has to be equally pointed out that the most powerful incentive for the two parties in conflict to achieve an added value transaction is the possibility acknowledged by the both to carry on the trading relations. Where by circumstantial coercion the most favorable situation for them is to resume or continue business added value is rendered inherent. Such conduct of negotiations allows a good grasp of reality and mitigates the possibility that the aspiration level is out of frame of actual possibilities.

Also, it is possible to combine the alternatives at hand. As explained in the literature[12], the combination mediation and arbitration allows a practical approach to have the best effect. In principle, parties commence mediation that is non binding and gives the liberty to expedite the process and find the added value maximizing the result. If the parties observe such a first step without the foreseeable success within a short timeframe, they may address the arbitrator/s with the scope to have a mandatory solution that is less controlled by them and more influenced by rules. As arbitration is more formal, its best usage is considered to have occurred where the lack of restraint in procedure has lead to failure.

One question that has recorded various solutions is whether the very bringing of a lawyer at the mediation table (and the arguments is equally valid for the negotiations as well) might hamper the mediation process. As it results from the recent literature[13], the presence of lawyers may contribute to the success of the mediation as the key legal elements are used as a rule during the caucuses and their structuring is crucial for an expedited process.

The early settlement should be the parties' primarily goal, the odd case of failure not being able to be taken into account seriously. However, challenges to the early settlement may always occur where the parties have established different dispute resolution strategies with their lawyers and, sometimes, different retribution systems. The key in such situation is that the client must have the decisional string available (in opposition with the litigations where the lawyers traditionally hold the decisional string). The common fear of the business people that the lawyers "kill" the business may be applied *mutatis mutandis* to the dispute resolution negotiations as well, having as link the fact that in both cases there is an added value to be pursued and protected.

The settlement agreement is the final objective where a dispute is resolved. The alternative of holding fruitful negotiations that may even lead to a new agreement without addressing the initial dispute is not desirable at all. The actual resolution of a dispute, regardless the alternative elected has to include a release of liability, indemnification or similar, depending on the nature of the issue in dispute. In the absence of this cornerstone of the adversarial negotiations, the new structure that is build will lack the foundation and the former nuisances may be reactivated, provided that the statute of limitation may not interfere with the claim.

Consequently, the key elements for the final document concluded by the parties in the course of negotiating throughout a dispute are the ones necessary for such document to be considered a binding settlement agreement.

Conclusions

As a conclusion, several elements emerge from the analysis of the topic in discussion: the alternative dispute resolution is an efficient, cost effective solution to the litigation and involves in most of the times a negotiation process. Even where the mediation or arbitration is elected as process of resolving the conflict, negotiation techniques are mostly used. Consequently, the identification of the most appropriate resolution process is crucial in obtaining a good result.

Even though the litigation may in exceptional cases bring an added value to the resolution (that may consist in mitigating the costs, identifying a future partnership or other advantage availed to both parties) negotiation and, in subsidiary, mediation may be considered superior in an economic approach of the problem solving the dispute. The instruments afforded to the parties in solving the dispute are to be observed by further research, in the context of the procedural instruments of mediation and conciliation that have not been properly implemented in Romania, due to little awareness of the benefits of the alternative dispute resolution solutions.

One of the instruments that reflects the advantages resulted form negotiation is the settlement agreement, including all the elements that have been established by the parties further to the bargaining process and, if not valid such an instrument, the dispute itself may not be considered as supervened.

THE RELATION BETWEEN ART. 6 OF THE EUROPEAN CONVENTION ON HUMAN RIGHTS AND ART. 1 OF PROTOCOL NO. 1 TO THE CONVENTION

CLAUDIU-IULIAN FUEREA*

Abstract:
Article 6 of the European Convention on Human Rights (1950) (ECHR) guarantees the right to a fair and public hearing, within a reasonable time, by an independent and impartial tribunal established by law, in the determination of an individual's civil rights and obligations or of any criminal charge against him (or her). The European Court of Human Rights (EctHR), located in Strasbourg, decides on the application of Article 6 in the domestic jurisdictions of each Council of Europe Member State. Article 1 of the First Protocol to the European Convention on Human Rights states that every person is entitled to peaceful enjoyment of his possessions. No one shall be deprived of his possessions except in the public interest and subject to the conditions provided for by law and by the general principles of international law.

Key words: *European Convention on Human Rights; Article 6 of the Convention; The First Protocol to the European Convention on Human Rights; Article 1 of the First Protocol.*

1. The right to a fair trial

A. A. Introduction

Article 6 of the Convention enshrines "the right which, by its affirmation, ensures the connection between human rights and the rule of law"[1], namely the right to a fair trial, as it follows:

1. Everyone is entitled to a fair and public trial, within a reasonable period of time necessary for their cause, by an independent and impartial court of justice, established by law, which will decide, either on the infringement of their civil rights and obligations or on the validity of any criminal charge against them. The court order must be pronounced publicly, but the access of the press and public in the courtroom may be prohibited throughout the whole trial, or only during a part of it, in the interest of morality, public order or national security, in a democratic society when interests of juveniles or the protection of parties' privacy require it, or if strictly required by the court when, under special circumstances, publicity would be likely to prejudice the interests of justice.

2. Any person accused of a crime is presumed innocent until her guilt is legally established.

3. Every accused has the following rights:

a. to be informed as soon as possible in a language that he understands and in a detailed way, on the nature and cause of the accusation brought against him;

b. to have the necessary time and facilities to prepare his defence;

c. to defend himself or be assisted by a counsel of his choice and, if he has no necessary means to pay for an attorney, to be assisted, without charge, by a public defender when the interests of justice so require;

d. to examine or have examined witnesses against him and to obtain the citation and examination of defence witnesses, under the same conditions as witnesses against him;

* Ph.D. candidate, Faculty of Law, University of Bucharest (e-mail: claudiu-iulian fuerea@drept.unibuc ro).

[1] Raluca Miga Beşteliu, Catrinel Brumar, *"International Protection of Human Rights. Course Notes"*, Pro Universitaria Publishing House, Bucharest, 2006, p.115.

e. to be assisted, without charge, by an interpreter if he does not understand or speak the language used in court".

As mentioned above, paragraph 1 is enlightening to this approach, because in the following, we will refer, in particular, to this paragraph.

Some doctrinaires of the field believe that "the protection of freedom would be meaningless if it was not entrusted to an independent justice, guarantee of a fair trial"[2].

Article 6 of the Convention "has its origins in the texts of article 10 and article 11, paragraph 1 of the Universal Declaration of Human Rights"[3], adopted by the UN General Assembly on December 10th, 1948. According to art. 10 of the Declaration, "everyone is entitled in full equality, to be heard in a fair and public hearing, by an independent and impartial court of justice which will decide either on the infringement of their civil rights and obligations, or on the validity of any criminal charge against them", and according to art. 11, par. 1 "any person charged with a crime is presumed innocent until her guilt is proven, equally, in a public trial, in which all guarantees for her defence were ensured". We find similar provisions also in the UN International Covenant on Civil and Political

rights of 1966[4], in the Inter-American Convention on Human Rights[5] and even in the African Charter of Rights and Peoples[6].

Article 6 of the Convention enshrines a fundamental principle, namely the superiority of law in a democratic society. The article does nothing else than to help ensuring a proper administration of justice, which means that a narrow interpretation of its provisions is incompatible with the object and purpose pursued. As an argument, we quote the opinion of judges of the European Court of Human Rights (ECHR) in the case Delcourt v. Belgium, according to which: "In a democratic society, in the meaning of the Convention, the right to a good administration of justice plays such an important role that a restrictive interpretation of art. 6, paragraph (1) would not fall within the scope and purpose of that provision"[7].

[4] Article 14: "All persons are equal before the tribunals and courts of justice".

[5] Signed at San José (Costa Rica) on November 22nd, 1969. Article 8: "1. Any person has the right to make her case heard with the desired guarantees within a reasonable period of time, by a judge or a competent, independent and impartial court, established in advance, by law, which will decide the merits of any criminal charges brought to her, or establish rights and obligations in civil matters and in employment, taxation, or any other field. 2. Any person accused of a crime is presumed innocent until guilt is proven in accordance with the law. The accused is entitled in full equality, at least to the following guarantees: a) the right to be assisted, without charge, by a translator or interpreter if he can not understand or speak the language used in court, b) the prior notification, in detail, on charges against him, c) providing for the accused time and facilities to prepare his defense; d) the right to be assisted by a lawyer of his choice and to communicate with him freely and without witnesses; e) the right to be assisted by a lawyer provided by the State if the accused does not defend himself or fails to appoint an attorney within the time established by law; he can not derogate from this right, f) the defense right to examine witnesses at the hearing and obtain the participation, as witnesses or experts, of other persons; g) the defendant's right not to be compelled to testify against himself or to plead guilty, h) the right to go to a higher court. 3. Confessions of the accused shall be valid only if made without coercion of any kind. 4. The defendant acquitted by a final decision, can not be prosecuted again for the same offense. 5. Criminal trials are public, unless it is necessary to protect the interests of justice" (http://www.cidh.org/Basicos/French/c.convention htm).

[6] Adopted at Nairobi on June 27th, 1981. Article 7 para. 1, letters a) - d): "Any person has the right to make her case heard. This right shall include: a) the right to go to any competent national jurisdictions with any act that breaches fundamental rights which are recognized and guaranteed by conventions, laws, regulations and customs in force; b) the right to presumption of innocence until guilt is established by a competent jurisdiction, c) the right to defense, including that of being assisted by a chosen defender; d) the right to be trialed within a reasonable time by an impartial tribunal (http://www.aidh.org/Biblio/Txt_Afr/instr_81 htm).

[7] Taken from Nuala Mole, Catarina Harby, *"The right to a fair trial. Guidance on implementation of Article 6 of the European Convention on Human Rights"*, published in the Republic of Moldova, 2003, p. 6. (http://www.bice md/UserFiles/File/publicatii/Manuale/manual3.pdf).

To a close examination of the article, we see that it refers to two aspects, for which we can say that it is divided into two pillars, namely: the general right to a fair trial in civil and criminal matters (par. (1)) and guarantees specific to the right to a fair trial in criminal matters (par. (2) and (3)).

Article 6 guarantees every person, natural or legal[8], the right to a fair trial in civil and criminal matters. The right established by this article, is a "procedural right"[9]. By establishing this right, the Convention does not seek anything else than to protect all personal and property rights of a legal subject within internal procedures, by ensuring a fair trial. From the point of view of States Parties to the Convention, this right appears as a "substantive right, with specific penalties"[10] for its breach, namely the international liability of states concerned.

We observe from the study of specialized literature (quoted in the bibliographic sources), that the provision under which an "independent and impartial court of justice, established by law, shall decide (...) either on the infringement of civil rights and obligations, or on the validity of any criminal charge against any person" is not without critics. In this regard, we note that "authors of the Convention did not want that procedural guarantees contained in its text to be applicable to all judicial proceedings, but only to those of civil or criminal nature. I think that this option is at least strange"[11]. This assertion is based, on the one hand on ECHR jurisprudence which has extended, according to the doctrine, the scope of art. 6, and thus, many areas remain outside the protection offered by the Convention and, on the other hand, on fundamental laws of the States Parties to the Convention, enshrining the right to a fair trial, and which do not distinguish by the case nature "and do not exclude from the protection scope, certain procedures"[12]. Criticism goes further, considering that the principle of ensuring effective guarantee of rights, principle stated in the preamble of the Convention, "undergoes a significant prejudice"[13].

B. The scope of art. 6, paragraph (1)

Under the Convention, art. 6 applies only to disputes "concerning civil rights and obligations and criminal charges"[14]. Given the fact that nowadays, 47[15] countries are States Parties to the European Convention on Human Rights, naturally, there are just as many systems defining the civil or criminal nature of a procedure. The ECHR considered that these concepts can not be interpreted simply by reference to internal law of the state defendant. In this situation, for a uniform interpretation and a proper application of art. 6, paragraph (1), the Strasbourg Court has defined "the concepts of civil rights and obligations and of criminal charge"[16].

a. The concept of civil rights and obligations

This notion is not defined in art. 6, par. (1), which "does not determine the substance of civil rights and obligations in the legal order of States"[17] Parties to the Convention.

According to ECHR, in order for art. 6, par. (1), to be invoked before it, under civil aspect, the following conditions must be met[18]:

[8] This article shall apply to both natural and legal persons. This stems from the opening words of the paragraph (*"any person"*); the text does not mention what persons it refers to.

[15] www.coe.int

[16] Radu Chiriță, *op. cit.*, p. 239.

[17] Corneliu Bîrsan, *op.cit.*, p. 400.

- the existence of a contestation on a right that can be claimed through an action in court, in the national system. However, according to the Court, even if a person has, internally, some claims that may give rise to legal action, sometimes it is not enough only to take into account the material nature of the civil right in question, as defined by national law, in order to consider applicable the provisions of art. 6, par. (1). At the same time, there should not exist "procedural barriers" (such as, for example the immunity of a State from jurisdiction).

- the contestation must be real and serious;

- the outcome of the procedure must be direct and determined by the existence of the right.

More broadly, however, we can say that art. 6, par. (1) shall apply, under civil aspect, in situations where it refers to a "contestation" with patrimonial object and is based on the alleging infringement of patrimonial rights.

Resorting again to the doctrine, which, in turn, is based on the analysis of ECHR jurisprudence, we can identify a number of situations which, by extension, are subject to the provisions of art. 6, par. (1). Thus, we mention:

- the disciplinary litigation;

- the social litigation. The social security rights are civil rights within the meaning of art. 6, par. (1).

- the administrative decisions regarding the exercise of the property right.

- the civil litigation. In those cases, art. 6, par. (1) is applicable when the dispute is related strictly to patrimonial issues (e.g. the payment of salaries or other indemnities).

- the exercise or restraining of ownership. We mention, for example, the situation where a town planning permit is refused, leading thus to the impossibility of building;

- tax matters. We take into account those disputes which have as object the enforcement of taxes. We consider that such disputes have a patrimonial character, because they affect the plaintiff's right to property;

- the unfair competition, etc.

It is clear that disputes that have as object the following are not covered by art. 6, par. (1):

- the procedures described by the ECHR as "administrative and discretionary involving the exercise of prerogatives of public power"[19].

- the control of the authority power to verify the legality of foreigners' situation, for procedures of granting political asylum;

- the officials involved in the exercise of public power;

- the electoral disputes.

b. The notion of criminal charge

Within the meaning of the Convention, the term of "charge" is independent of national law. In the Deweer v. Belgium[20] case, ECHR noted that the term of "charge" should be understood in its material, and not formal acceptation. The notion of "charge" is defined as "the official notification, emanating from a competent authority, of the accusation of having committed a criminal offence, or as having a significant impact on the situation of the suspect".

To determine whether a person is accused of committing a crime, the Court has established in its jurisprudence, the following three criteria[21]:

---

[18] Taken from Corneliu Bîrsan, *op.cit.*, p. 401.

[19] Frédéric Sudre, *op. cit.* p. 254.

[20] In this case, the prosecutor had ordered the provisional closure of the applicant's butchery, on grounds of a report demonstrating his breach of an order establishing the price of beef and pork. The acceptance of the proposed transaction by the trader in a friendly settlement cancelled the public action, as required under Belgian law. This did not prevent the ECHR to consider that the applicant had been the object of a criminal charge. (Nuala Mole, Catarina Harby, *op. cit.*).

[21] Corneliu Bîrsan, *op.cit.*, p. 444.

- its qualification as a crime under national law;
- the nature of the crime;
- the nature and degree of seriousness of the penalty that will be applied to its author.

These criteria are alternative and not cumulative.

According to Professor Corneliu Bîrsan, "in order for art. 6, par. (1) to be applied to "a criminal charge" is sufficient that "the offence in cause is, by nature, criminal, by reference to the Convention provisions, or to expose the perpetrator to a penalty that can be qualified as criminal penalty; this does not hinder the adoption of a cumulative approach, if the separate analysis of each criterion does not allow to reach a clear conclusion, regarding the existence of a "criminal charge".

In the scope of art. 6, par. (1), we have the following conditions:

- the order to arrest a person for a criminal offence;
- the formal notification of a person on prosecutions taken against her;
- the requirement of evidence, addressed to a person, by a competent investigation authority on customs offences and the freezing of the bank account of the interested person;
- the appointment of a defender, by a person, after an investigation has been initiated against her, based on a police report.

The procedures for:

- temporary detention,
- extradition,
- a convicted inclusion in a particular category of inmates,
- the reintegration into employment, of a person released on parole or the extension of the detention period due to subsequent discovery, of a relapse status, are outside the scope of art. 6, par. (1).

2. Property protection

A. General aspects

Article 1 of the additional Protocol no. 1 to the Convention[22] enshrines the protection of ownership, as it follows:

"Any natural or legal person is entitled to peaceful enjoyment of possessions. No one shall be deprived of their possessions, except for a cause of public interest and under the conditions provided by law and general principles of international law. The preceding provisions shall not affect the right of states to enforce such laws that they deem necessary to regulate the use of property in accordance with the general interest or to secure the payment of taxes or of other contributions or fines".

The right to property is qualified in the doctrine, as civil right, by content and as economic right, by purpose[23].

Article 1 of the Protocol has its origins in the Universal Declaration of Human Rights, which, at art. 17 provides the following: "Everyone has the right to property, both alone and in association with others", no one shall be deprived, arbitrarily, of their property". Provisions relating to ownership can be found in art. 5, letter d), section V[24] of the UN International Convention on the Elimination of

[22] Called hereinafter, Protocol.

[23] Corneliu Bîrsan, *"The right to property in the ECHR. Jurisprudence applications"*, Journal of Public Law, no. 4 / 2004, p. 103

[24] "States Parties commit to prohibit and eliminate racial discrimination in all its forms and to guarantee the right of everyone to equality before the law, irrespectively of race, color, national or ethnic origin, in order to use the following rights: (...) other civil rights, in particular: (...) the right to property of any person, both alone and in association"

(http://www.onuinfo ro/documente_fundamentale/instrumente_internationale/conventie_eliminare_discriminare_rasiala/).

All Forms of Racial Discrimination of 1965, but also in art. 47[25] of the International Covenant on Civil and Political Rights of 1966.

The Protocol envisages the establishment of international control of how national authorities of States Parties to the Convention shall ensure the enforcement of the right to property.

Any "natural or legal person or group of individuals who claim and demonstrate a breach of the right to property on certain assets (they are holders of this right), within the meaning of the Convention "benefit" from the provisions of art. 1 of the Protocol, under art. 34 of the Convention. An action brought before the Court, by the right holder can be continued by his heirs"[26].

In a careful study of art. 1 of the Protocol, we observe that it contains three rules, interdependent, namely: the general principle of the need to respect property rights, the deprivation of property is possible, but only under certain conditions, and the control over the use of property. The article has its own structure, namely: the respect for property, the causes of deprivation of property and the regulation of property limits.

It should be mentioned even from the beginning that the right to peaceful enjoyment of property implies the protection of the right to property, namely the protection of an existing right and not of a right to property, i.e. the right to acquire in the future, a right to property is not guaranteed. However, in theory it is noted that between "these two concepts lies the concept of legitimate expectation that defines the situation where it is not about an existing property, but not even of a virtuality; under certain legal provisions or court orders, a private person may, legitimately, hope that she will acquire a right over an asset"[27].

The fact that the provisions of the Protocol consider only the already existing right to property and not also the future one is criticized in the doctrine. In this respect, we consider the view expressed by Radu Chiriță[28]: "(...) the incidence of art. 1 of the Protocol undergoes an extremely important and unfortunate limitation (...). Thus, the Convention protects only the right to property of an asset. (...) The presentation, in parallel, of two examples in this direction (...) is enlightening and has as object the jurisprudence of the Court regarding the existence of property in case of nationalized or confiscated property by the communist power. In the first case, (…) the former owners of nationalized buildings (...) brought actions for recovery against the State, demanding for nationalization to be held invalid. After having obtained final court orders, these were cancelled by the Supreme Court, following the exercising of appeals for annulment, on grounds that courts had no jurisdiction to rule on such claim actions, which were outside the scope of court powers. The Court established, in such cases, that it had no jurisdiction to rule on nationalization, because it occurred before the ratification of the Convention by the Romanian state. Instead, the Court found that, after the ratification moment, applicants were recognized the right to property on the building, by a final decision of a court, so that they were, for a while, owners over a good that was in their patrimony. In the other type of cases, applicants have also promoted, action claims, but they were rejected by courts, on grounds that they had no jurisdiction to rule on such claim actions, leaving the remit of the judiciary power. In the latter case, the Court dismissed the complaints as inadmissible, on grounds that people were never holders of a current right to property, after the moment of ratification of the Convention, by Romania. Unlike the first case, in this second case, plaintiffs could not prove that, after the Convention ratification, they were holders of a right on the building, right that they subsequently lost. Consequently, because art. 1 of Protocol no. 1 does not guarantee the right to obtain ownership of an asset, but the respect of existing rights over an asset, in order for a complaint

[25] No provision of the Covenant can affect "the inherent right of all peoples to enjoy and fully and freely use the natural wealth and resources".

[26] Corneliu Bîrsan, op. cit., p. 1007.

[27] Raluca Miga Beşteliu, Catrinel Brumar, *"International Protection of Human Rights. Course Notes"*, Universul Juridic Publishing House, Bucharest, 2006, p.150

[28] *Op. cit.*, pp. 352-356.

to be admissible, the plaintiff must prove to the Court that at one point, after the Convention ratification, the right to property was recognized to him and, as a result of a state action, this right has been affected".

B. The scope of the right to property

a. The concept of "asset"

ECHR judge has given to the concept of "asset", one "independent coverage area"[29] that extends considerably the scope of the right to property.

From the study of doctrine, we keep in mind that the broad concept of property refers to "certain rights and interests constituting assets"[30]. By way of example, we mention that, besides tangible property, the protection granted by art. 1 of the Protocol also envisages the following:

- assets with patrimonial value, including intangible assets (e.g. clients, social parties, rights to inherited assets etc.);
- economic resources and incomes that people have from all their economic activities (e.g., houses built on communal land of the state);
- the established customary right to fish on a lake;
- the right to raise a real estate project;
- the right to exploit a stone quarry;
- the right of usufruct etc.

"Examining various aspects of the concept of "asset" within the meaning of article 1 of the Protocol, it results that this article protects rights on existing assets or on property values, representing at least one legitimate hope for obtaining the asset. On the contrary, the hope of seeing recognized a property right that you are unable to effectively exercise, can not be considered an asset in the sense of this text, and the solution is valid in the case of the conditional claim that is lost for not accomplishing the condition"[31] .

In conclusion, it is important to remember that, within the meaning provided by the ECHR, the notion of "asset" refers to "any interest of a private person that has economic value"[32].

b. Ownership limits (deprivation of property)

From the writing of article 1 of the Protocol, it is clear, unequivocal, that ownership is not an absolute right. Deprivation of property, as already noted, is possible only if certain conditions are met. These conditions apply regardless of how national law calls the deprivation of property: "expropriation, nationalization, deprivation of fact, deprivation of essential prerogatives of ownership"[33].

The necessary conditions for the presence of a lawful deprivation of property are divided into two categories, namely:

- those provided expressly in art. 1 of the Protocol (par. (1) and (2) of art. 1 contain, on the one hand, provisions on deprivation of property, and the property case settlement, on the other hand) and
- those judicially inferred.

To be consistent with the Protocol, the deprivation of property must pursue a purpose of public utility and take place under conditions stipulated by law and general principles of international

[29] Frédéric Sudre, *op. cit.* pag. 376.
[30] *Idem.*
[31] Cristina Nicoleta Ghiță, *"Applicability of Article 1 of Protocol no. 1 of the ECHR"*, in THEMIS, Magazine of the National Institute of Magistrates, no. 3 / 2005, p. 100-101.
[32] Radu Chiriță, *op. cit.*, vol. II, p. 352.
[33] Raluca Miga Beşteliu, Catrinel Brumar, *op. cit.*, 2007, p. 150.

law. In other words, the deprivation of property must be done in the following conditions: it must be provided by law, it must be of public utility and consistent with international law.

The deprivation of property must be provided by law. Making reference to the law requires, first, that the internal law defines, with "sufficient precision, terms and ways of property deprivation"[34].

Again, as in the previous section, we note that the concept of "law" has a special meaning in the context of the Convention. ECHR is, also in this case, the one providing a specific definition of the "law". First, we point out, as shown in the doctrine and jurisprudence of the field, that there must be a distinction between formal and material aspects involved in "the European concept of law"[35]. Under the formal aspect, the ECHR points out that the term "law" refers both to "the right of legislative origin and to the jurisprudential right"[36]. Regarding the material aspect, ECHR said that "in order for a law to exist, within the meaning of the Convention, its formal existence is not enough; the rule must meet two conditions: availability and predictability"[37].

The deprivation of property must be of public utility. According to ECHR, the notion of "public utility" means "any legitimate policy of social, economic or other nature"[38] and, in particular, a policy of "social justice"[39] that can respond to the public utility.

Next, we present some cases of ECHR that are considered by the court in Strasbourg of public utility. In our approach, we resort to the Romanian doctrine, namely, the already mentioned work written by Professor dr. Dr. Corneliu Bîrsan[40]. So, we mention:

- the expropriation of land by national authorities, several years ago, which aimed at securing housing for refugees from Minor Asia, as a result of statutory changes in population, provided in the Treaty of Lausanne, of 1923, was a measure which corresponded to a legitimate purpose, representing, in this view, a cause of public utility, because at that time, receiving refugees was a economic and social matter";

- "auctioning the applicant's goods constitute an interference with his right of respecting property, but it pursues a legitimate purpose, of public utility, namely to pay the bank debt, borrowed by the applicant";

- the control of the art market "by a state through a protection policy of cultural and artistic heritage of the country is a legitimate purpose, as national authorities have certain discretionary power in determining the concept of "general community interest";

- "the obligation of the person who bought the building from the State, whose return to the former owner was ordered, under legal provisions pursuant to remedy abuses committed by the former totalitarian authorities of the State pursues a legitimate purpose, namely to mitigate the patrimonial consequences of these abuses".

The deprivation of property must be consistent with international law. Referring to international law brings in discussion, in particular, "the issue whether art. 1 extends to nationals, the requirement under international law, for prompt, adequate and effective compensation to foreigners deprived of their property"[41]. This issue occurred in the context where, "in case of deprivation of property that occurs as result of the implementation of a social reform, there may be serious reasons to distinguish, in terms of compensation, between nationals and foreigners (...). If it is true that any expropriation must always correspond to a public utility, there may be differences between national

[37] *Idem*, p.10.
[38] Frédéric Sudre *op. cit.*, p. 380.
[39] *Idem.*
[40] Corneliu Bîrsan, *"European Convention on Human Rights. Comments on articles. Vol. I. Rights and Liberties"*, op. cit., pp. 1024-1027.
[41] Frédéric Sudre *op. cit.*, p. 380.

and foreign; national authorities might consider that there are legitimate reasons to ask nationals to bear, in order to fulfil a general interest, a greater sacrifice than foreigners. This distinction has its origins in a traditional conception, specific to international law, under which nationals can not claim, in a situation of purely internal interest, such as the disposition of a deprivation of property, that they have a right of international origin, i.e. a right that finds its source in an international treaty"[42].

At the end of the presentation of art. 1 of Protocol no. 1 to the Convention, we conclude that there is, however a condition to limit the right to property, namely the proportionality between purpose and means of achievement. There are cases in which the deprivation of property is made in compliance with all requirements, including the providing of compensation to the owner. Nevertheless, the Court sanctioned a state when it took into account, for determining the compensation value for the expropriation of land, only the intrinsic value of the land, without taking into account the damage caused, by depriving that person from the revenue obtained from that agricultural area. Allowance must occur within a reasonable time. It must not be only pecuniary, but may also consist of other compensatory measures.

3. "The connection" ("relation") between art. 6 of the European Convention on Human Rights and art. 1 of Protocol no. 1 to the Convention

As stated above, any provision of legislative, administrative or judicial nature or a court order can affect the right to property. The question is: "shall provisions of art. 1 of the Protocol also apply to relations between individuals?"[43] The answer to this question is provided by the Strasbourg Court. In this regard, ECHR provides that "disputes between individuals on the right to property may create problems regarding the right to a fair trial, within the meaning of art. 6 of the Convention, but not also regarding the compliance with art. 1 of the Protocol"[44]. In this respect, it is stated that "the ruling of a dispute between individuals, by a court, on grounds of rules in force does not engage the state liability in the content of this text"[45]. Thus, "in relations between individuals (...) achieving ownership should not come solely from a private person; the involvement of public power must be, at least mediated, if it is not direct and immediate. However, when an individual puts into question the breach, by a public authority, of the right to property, not only the infringement of provisions of article 1 of the Protocol is invoked, but also those of art. 6 of the Convention"[46].

4. The fair remedying for breach of art. 6, par. (1) of the European Convention on Human Rights and of art. 1 of Protocol no. 1 to the Convention.

Under article 41 of the Convention, "if the Court finds that there was an infringement of the Convention or of its Protocols, and if the internal law of the High Contracting Party concerned allows only imperfectly erasing the consequences of such breach, the Court grants to the injured party a fair compensation, if it is the case".

In other words, in the situation where the state is guilty of breaching any provision of the Convention or its Protocols, and implicitly of items analyzed by us, at the request of the applicant, ECHR compels the State to "measures to ensure compensation for damage suffered by the plaintiff, by violating his rights"[47].

It is important the fact that the Strasbourg Court "can not order the annulment of court orders or administrative acts"[48], but can compel the State to remedy the material and moral damage suffered.

According to the Court's jurisprudence, as shown in literature[49], the provisions of article 41 have been subject to a "strict interpretation considering that it only allows the European court to

[47] Radu Chiriță, *op. cit.*, vol. II, *p*. 323.

[48] *Idem.*

condemn the State defendant to pay to the injured party, a cash allowance to compensate the damage suffered"[50]. However, there is an exception from this narrow interpretation, in cases of breach of art. 1 of Protocol no. 1 to the Convention. In these cases, the Court, under the principle of restitutio in integrum, pronounced injunctions against the respondent States, ordering them to return the goods to the injured parties". But even in these situations that represent the exception, ECHR did not establish for the convicted state, an unique obligation, to return the asset in kind, but only an alternative obligation, either the restitution in kind or the compensation payment for fair satisfaction; the choice is left solely to the state, which can execute the decision, being released therefore (...) from obligation (…), at free choice"[51].

The allowance for fair satisfaction granted pursuant to art. 41 of the Convention, covers the damage suffered by the injured party (...) and the moratory interests for not fulfilling, in time, the obligation to pay sums awarded as damages for the pecuniary and moral prejudice and for procedural costs"[52].

In conclusion, the right provided in art. 6 of the Convention is a procedural right, while the right guaranteed by Art. 1 of Protocol no. 1 to the Convention is a civil right, through its content, and an economic right, through its purpose. By guaranteeing the right to a fair trial, the Convention seeks to protect all personal and patrimonial rights of a subject of law in internal proceedings. The right to peaceful enjoyment of property involves the protection of the right to property, namely the protection of an existing right and not of a right to property. In case of breach of rights guaranteed, the international liability of States concerned is engaged.

CONSIDERATIONS REGARDING THE DEFINITION AND CLASSIFICATION OF COMMERCIAL INTERMEDIATION

DAN-ALEXANDRU SITARU[*]

Abstract

The commercial intermediation is a complex juridical operation which includes a different number of juridical relationships that takes place between contractual partners either on a national or international level. These partners bare different naming due to their different set of rights and obligations set forth by the law or by the parties, and it is from this that the classification of the intermediation can be set forth. The commercial intermediation represents the activity that one person executes either in the name and on behalf of another person, or using its own name but on behalf of another person, or, finally, using its own name but on behalf of acting towards a common goal with the person who mandated her (the principal), in relation with who it is either a proxy or an independent intermediary, only negotiating or both negotiating and binding the principal. The purpose of the paper is to strictly define and set in order the various variations of the juridical operation that is the commercial intermediation, presented both in the light of the actual legal framework and also by reference to the New Civil Code. Also, the purpose is to highlight and systematize the contractual relationships from which the parties involved in a commercial intermediary operation may choose and the rights and obligations specific to each contract.

Keywords: *commercial intermediation, contract of mandate, contract of commission, agency contract, brokerage contract, franchise contract, exclusive distribution contract*

1. Introduction. The notion of commercial intermediation.

a) Intermediation – complex commercial operation

Commercial intermediation is a complex operation, which includes several legal relations concluded between its contractual partners, having various names and various capacities, carried out either inland or internationally.

Participants to legal relations arising out of intermediation contracts bear various names, depending on the actual contractual relation to which they participate, the capacities in which they act may range from that of mandator and mandatary (in the case of the contract of mandate), to that of principal and commission agent (in the case of the contract of commission), of consignor and consignee (in the case of the consignment contract), principal (client) and sender or shipper (in the case of the shipment contract), principal and agent (in the case of the agency contract), client and broker (in the case of the brokerage contract) etc.

Independently from the legal nature of each intermediation contract, a common feature of all forms of intermediation may be discovered. This discovered feature, common to all forms of intermediation, consists of the object of the intermediation, namely, in that the intermediary, by means of the rendered activity under a specific commercial intermediation contract, acts as an agent for particular commercial affairs between particular partners or on behalf of another person (client), in exchange for payment. This particularity gives the contracts, based on legal relations of commercial intermediation, an onerous feature[1].

[1] See R. Munteanu, *Intermediation contracts in Romanian foreign commerce* (*Contracte de intermediere în comerțul exterior al României*), Printing House of the Academy of the Romanian Socialist Republic, 1984, p. 138.

Generically, intermediation contracts are contracts for services, the intermediation activity carried out under such contracts favour, especially commercially speaking, the exchange of goods and in general economic development.

b) Origin of commercial intermediation

The origin of commercial intermediation is to be found in the Middle Ages, when it was used every day for carrying out commerce practised at distance. In the 10th and 12th centuries in Italy and in Northern Europe drafts similar to those of the nowadays contract of commission appeared. Commerce at distance carried out on a daily basis by frequent exchanges occurring in European medieval fairs, represented the premise for the first forms of intermediation.

The fast-paced development of commercial transactions, occurring throughout Renaissance, lead to the necessity of adapting commercial transactions, in view of traders cooperating and improving the actual means of exchanging goods.

It was during this period that the commercial mandate was born[2]. However, along with it, as an expression of the expansion of the principle of free commerce, especially international commerce[3], other types of intermediation were encountered more and more often, similar to the nowadays commission and agency contracts.

Indeed, the ever higher complexity of the concluded operations and the obstacles, given the large geographical areas in which such commercial relations arose, along with the language and culture barriers and the significant differences in terms of laws, lead throughout time to the necessity of discovering some advantageous methods for traders to enter and expand in markets from other states, in order to conclude international contracts under easy terms and to maintain durable economic connections[4]. One method which was frequently resorted to as a result of international commerce developing was the execution of intermediation contracts namely contracts of commission.

Once with the development of international commerce, a tradesman entering a foreign market in which he could sell his goods had to be done, via persons they knew on the local market, who had earned their trust and were prestigious, thus procuring the popularization and personal guarantee of their products[5]. The persons in question, who became the intermediaries under the conventions they executed with foreign tradesmen, carried out the required precedent operations and effectively executed commercial contracts in their own name or on behalf of clients; the effects of such contracts reflected upon foreign tradesmen.

c) Sense and definition of the notion of intermediation

The notion of intermediation[6] had an historical evolution, in the traditional sense of the notion, up to the modern concept of our days.

Popescu, International Commerce Law, (*Dreptul comerțului internațional*) Didactic and

In the traditional sense, the notion of intermediation is based on the idea of representation, in the sense of technical and juridical procedure whereby a person, named representative (in Romanian *reprezentant*), executes a legal deed in the name and on behalf of another person, called the principal (in Romanian called *reprezentat*), and the effects of the executed legal deed will directly and immediately produce over the principal[7].

It follows that the institution of intermediation is based, in Romanian law, on the contract of mandate; however it may not be restricted to this type of contract.

In commercial law, the notion of intermediation, as that of representation, underlying the former, has a wider range, referring to the situation in which the mandatary acts on behalf of the mandator (in Romanian *mandant*), either in his own name, or in the principals name.

Therefore, according to the principles of the Romanist law system, to which Romanian law belongs, there is a difference between activities in one's own name and on behalf of mandator, in the form of the contract of mandate with representation, or in ones own name by a mandatary however on behalf of the mandator, under the form of a contract of mandate without representation (commission, consignment etc.).

From this respect, a distinction may be noted between the vision of the Romanist law and the Anglo-Saxon one. As far as the Anglo-Saxon system[8] believes the distinction between the mandate with representation and that without representation does not exist, both types of intermediation take the form of the „*agency*"[9] institution. Consequently, intermediaries, no matter if they act as mandataries or consignees the Romanist law system, are both included by the wide term "*agents*"[10]. Agency is characterized in the Anglo-Saxon law system by the multiple possibilities of adapting to the requirements and the nature of the business object of the intermediation, and also by pragmatism and flexibility[11].

In the modern sense of the notion of intermediation, it may not however be limited to traditional contracts, contracts of mandate and commission, and it has so developed that it currently comprises a series of contracts – such as shipment, agency, brokerage, franchise, exclusive distribution, etc. -, in which the institution of representation has either suffered transformations arising from practical reasons, or it is missing.

In the case of contracts in which the institution of mandate (with or without representation) is not met, the intermediary establishes contracts third parties in his own name and on his own behalf, and not on behalf of the principal. Nevertheless the contract is still an intermediation one, due to the fact that certain effects arising from the legal deeds executed by the intermediary with third parties

are reflected upon the principal. This is justified by the common interest both the representative and the principal have in executing the intermediation contract, which particular interest is served by the intermediary, through contracting third parties[12].

As regards what has been shown above, we believe that nowadays for the institution of intermediation the idea of mandate or representation is less significant, than in particular the intermediary carrying out an activity in/and for the benefit of another person[13].

It follows that **intermediation may be defined** as being an activity which a person (the intermediary) performs on behalf of another person (the principal), either in the name of the principal (in a legal relation of a mandate with representation), or in his own name (in a legal relation of a mandate without representation), or in his own name and on his own behalf however for achieving a common interest with the principal, activity in which the intermediary is the prepositive of the mediated parties or is independent therefrom, as the case may be, and which solely consists of negotiating or of negotiating and concluding legal deeds with third parties.

Thus, intermediation is the activity carried out by another person other than the actual beneficiary of the economic interest (the principal), on behalf of the latter, either in his own name, or in the name of the beneficiary of the interest in question, or in their own name and on their own behalf however in the context of a professional collaboration with the principal.

Specific to the intermediation contracts is the fact that, based on the powers granted to the intermediary by the principal, the intermediary acts in the sense of perfecting civil or commercial operations whose effects exclusively reflect upon the principal.

2. Classification of legal relations of commercial intermediation

Depending on the criterion of the powers granted to the intermediary, we find four types of commercial intermediation contracts [14], to which we refer hereinafter.

2.1. Intermediation contracts in which the intermediary acts in relation to third parties as the holder of a mandate of representation

The intermediation contracts to which we refer to presuppose the fact that the intermediary, when concluding legal deeds with third parties, acts in the name and on behalf of the person wherefrom the powers follow. Therefore, the intermediary discloses (exhibits) to third parties his capacity as representative (*i.e.* the fact that he is acting *nomine alieno*), third parties are thus informed as regards the fact that the effects arising from the concluded legal deed will reflect not upon the person that handled the execution of the deed, but in the account of the beneficiary of the economic interest, the issuer of the proxy.

The contract of mandate with representation is the highlight of this category of intermediation contracts. The Civil Code in force regulates the mandate under Articles 1532-1559. The new Civil Code[15] dedicates Articles 2013 – 2038 to the mandate of representation.

The commercial mandate is regulated by the provisions of Articles 374-391 of the Commercial Code[16].

[13] Dragoș A. Sitaru, Ș.A. Stănescu, *Intermediation contracts in international commerce (I)*, (*Contractele de intermediere în comerțul internațional (I)*) *op.cit*, p. 21.

[14] For a similar opinion, but with some highlights, see Dragoș A. Sitaru, C.P. Buglea, S.A. Stănescu, *op. cit*., p. 306-308.

[15] We will hereinafter also use the abbreviation N.Civ.C.

[16] As regards the notion and the characteristic features of the mandate contract in domestic commercial law, see St. Cărpenaru, Treaty on Romanian commercial law, (*Tratat de drept comercial român*) Universul Juridic Printing House, Bucharest, 2009, p. 539-548, and for an analysis of the mandate contract in international commerce law, see R. Munteanu, *op. cit*., p. 34-47.

The general principles of the contract of mandate from the civil law[17] are applied to the commercial contract of mandate, its juridical outline is supplemented by the characteristic features of the commercial mandate, arising from the nature of this operation, that of mediating commercial affairs[18].

According to Article 374 of the Commercial Code, "The commercial mandate deals with handling commercial affairs on behalf and on the account of the mandator. The commercial mandate is not supposed to be free of charge".

This legal provision allows us to note the essential features of the commercial mandate institution, which we will briefly reveal hereinafter.

Therefore, the commercial mandate is that particular contract under which a person called the mandatary undertakes to conclude particular legal deeds in the name and on behalf of another person who gave the proxy, called the mandator, which legal deeds are facts of commerce for the mandator[19].

The entering into and execution of the contract of mandate, by the mandatary handling commercial affairs with third parties, in the name and on behalf of the mandator, lead to specific effects, consisting of creating direct legal relations between the mandator and the co-contracted third party. The essential condition for the effects of the legal deeds perfected by the mandatary with the third party producing, directly in the mandator is that the mandatary acted within the limits and under the powers received in his capacity as representative, since the mandate may not be employed and held for the execution of other obligations other than in which the will of participating to the legal deeds generating rights and obligations, via the mandatary, was validly expressed.

The capacity of the mandatary of acting in the name and on behalf of the mandator causes the existence, in principle, of a subordination relation, in the sense that the mandatary is a prepositive of the mandator.

The said provisions of Article 374 of the Commercial Code, according to which the commercial mandate is not presupposed to be a free of charge contract, the concept of the commercial law maker is inferred according to which the commercial mandate is in its nature an contract in exchange for a consideration, in the sense that usually the mandatary is paid for his activity of concluding legal deeds in the name and on behalf of the mandator. The same idea is conveyed by Article 2010 of the N.Civ.C., which states the following "the mandate given for acts of exercising a professional activity is presumed to be in exchange of a consideration", this provision is common for the mandate with and without representation.

Under the commercial contract of mandate, the mandatary benefits from powers higher than the mandatary in a civil contract of mandate. The reason behind this is that in the commercial mandate, the mandatary may fulfil all the operations required by trading.

2.2. Intermediation contracts in which the intermediary acts in relation to third parties as mandatary without representation

Contracts of mandate without representation are mainly characterized by the fact that the mandatary (the intermediary) concludes legal deeds in his own name, however on behalf of the represented person (the principal).

The New Romanian Civil code defines this type of mandate under Article 2039. According to its text, the mandate without representation is the contract under which a party, called the mandatary, concludes legal deeds in his own name (*nomine proprio*) however on behalf of the other party, called

[17] See C. Popa Nistoreanu, *Representation and mandate in private law*, All Beck Printing House, Bucharest, 2004; Cl. Roşu, *Mandate contract in domestic private law*, (*Reprezentarea şi mandatul în dreptul privat*) C.H. Beck, Bucharest, 2008.

[18] R. Munteanu, *op. cit.*, p. 34-38.

[19] St. Cărpenaru, *op. cit.*, p. 540.

mandator, and in relation to third parties undertakes the obligations arising from these deeds, even if the third parties were aware of the mandate.

In the eyes of the new code, the mandate without representation is *genus proximus* for three types of contracts, namely the commission, consignment and shipment contracts, whose main features we will present hereinafter. However such contracts do not exhaust the list of contracts based on this legal institution. Other types of mandate without representation, which are actually forms of commission, maybe encountered in various sectors of commerce, especially international one, such as terminal benefits contracts, applicable in matters of international shipment of goods[20].

a) Contract of commission

The contract of commission is typical for intermediation contracts based on a mandate of representation[21].

Pursuant to Article 405 of the Commercial Code "The commission deals with the commission agent handling commercial affairs on behalf of the principal".

The New Code defines the contract of commission as being the mandate having as object the purchase and sale of goods or services being rendered on behalf of the principal and in the name of the commission agent, acting professionally, in exchange for a payment called commission (Article 2043).

Commercial doctrine defines the contract of commission as being the will by which one of the parties, called commission agent, undertakes based on a proxy issued by the other party, to conclude certain commercial actions, in its own name, however on behalf of the principal, in exchange for a payment, called commission[22].

It follows from what has been mentioned above that this agreement is the technical and legal procedure by which the legal deeds concluded between certain parties produce effects in favour of another person. Therefore, the contract is an original mechanism of intermediation, created to allow a tradesman to conclude commercial operations, benefiting from the services of another tradesman.

The contract of commission is one of the most frequent applications of intermediation contracts, in domestic commerce and also especially in international commerce,[23] this type of contract fulfilling some clear necessities.

The contract of commission appeared as a solution to the limitations presupposed by the commercial mandate, whose use requires some specific conditions, such as that of informing third parties with which they establish contracts on the person of the mandator and the limits of their powers granted under the proxy.

The frequency with which commission is applied in commerce is of course due to the advantages it brings to the contractual parties. Thus, the contract of commission deals with commercial operations occurring over large geographical areas and is based on a legal mechanism favourable to both parties. On the one hand the principal is relieved from having to supervise and control the stages of the operations whose execution and carrying out are delegated to the

[20] See, for terminal benefits contract, especially, O. Căpăţînă, *Transports law. Contract of expedition for goods, (Dreptul transporturilor. Contractul de expediţie a mărfurilor*) Lumina Lex Printing House, Bucharest, 1997, p. 138 - 160; A.T. Stoica, *Contractual liability of the operator in terminal benefits contract*, in the Commercial law Magazine No. 4/2000, p. 134-143 (*Răspunderea contractuală a operatorului în contractul de prestaţii terminale, în Revista de drept comercial nr. 4/2000, p. 134-143*) ; Gh. Piperea, *Transports law*, (*Dreptul transporturilor*) second edition, All Beck Printing House, Bucharest, 2006, p. 87 - 91.

[21] For a more detailed analysis of the contract of commission in Romanian commercial law, see St. Cărpenaru, *op. cit*., p. 559-568, and as regards the features of the contract of commission in international commerce law, see R. Munteanu, *op. cit*., p. 48-70.

[22] See, St. Cărpenaru, *op. cit.*, p. 560.

[23] D. Florescu, L.N. Pîrvu, *op.cit.*, p. 204.

commission agent, and his entire attention and resources are turned to the main activity it carries out, at the same time benefiting from the experience and prestige of the commission agent it has on the relevant market in which it is active[24]. On the other hand, the commission agent in its turn gets benefits from intermediation operations, properly developing its commercial reputation, nevertheless holding on to its independence from the principal who contracted it. It is not only the parties who benefit from this type of contract, but also the third parties with which commercial operations on behalf of the principal are concluded. The third parties in question have the advantage to directly deal with the commission agent, who is undertaking in its capacity as co-contractor and from which they can easily recover debts, unlike the situation in which the legal relations had been established directly with the principal, whom they do not know or is in another state other than the one where the business is perfected.

Given the features specific to the legal regime of the contract of commission, and also the fact that it is a variety of the commercial mandate, a number of similarities and differences may be observed which we will hereinafter present in terms of their essential elements.

The main similarity is the fact that the legal deeds are concluded with third parties by the mandatary "on behalf" of another person, who has given the proxy (the mandator). This similarity is clearly shown by Article 2009 of the N.Civ.C., that defines the mandate as mentioned, in general (with or without representation).

Also, the two commercial agreements are similar in terms of their object, namely "handling commercial affairs". Pursuant to Article 405(2) of the Commercial Code "between the principal and the commission agent there are the same rights and obligations as between the mandator and mandatary" along with the differences established under the Code.

The fact that the commercial mandate is a paid one, as shown above, and the commission is always paid - Article 2043 of the New Civil Code includes this feature in the definition – also brings closer these two forms of contracts of intermediation. The abovementioned Article 2010 of the N.Civ.C. in a common provision for both types of mandate, establishes the same idea.

The main difference between a commission and a commercial mandate resides in the fact that the individual empowered as commission agent acts in its own name, however on behalf of the principal, whereas the mandatary has a right of representation and handles commercial affairs in the name and on behalf of its mandator. It is from here that the defining trait of the commission follows - that of being qualified as a mandate without representation.

Therefore, the commission agent concluding *nomine proprio* legal deeds personally undertakes towards them, and thus direct legal relations arise between third parties and the commission agent, and their effects will however reflect upon the principal. The principal, on whose behalf the commission agent acts, may remain unknown to third parties, who acquire and undertake obligations solely in their relation with the commission agent. This trait specific to the contract of commission is expressly regulated by the provisions of Article 406(1) of the Commercial Code, according to which "the commission agent is directly bound by the person with which it established a contract, as if the affair were its own". Consequently, „the principal may hold no action against the persons contracted by the commission agent and such persons may hold no action against the principal" (Article 406(2) of the Commercial Code), since they established no contractual relations.

As a difference between the mandate and the commission one may also note particular facts, consisting of the actual transparency of one party related to the opacity of the other party. The mandate presupposes representation, arising from the presentation of the mandatary in front of third parties as a simple spokesman of the mandating-tradesman, whereas the commission is characterized by trading commercial affairs in the commission agent's own name, however on behalf of the principal, irrespective whether the principal is acknowledged or not to third parties.

[24] See M.L. Belu-Magdo, *Special contracts*, (*Contracte comerciale*) Tribuna Economică Printing House, Bucharest, 1996, p. 116-117.

Unlike the mandatary, who is usually a prepositive of the mandator, the principal acts "professionally" (Article 2042 of the N.Civ.c.), that means that the latter is organized under the form of an enterprise.

b) Consignment contract

A form of intermediation contracts based on the mandate without representation is also the consignment agreement[25], a variety of the contract of commission.

The consignment contract is lawfully established by Law No. 178/1934 for the regulation of the consignment contract. The New Civil Code, under Article 2054, limits to providing that this agreement is a variety of the contract of commission having as object the sale of some immovable goods which the consignor entrusted to the consignee for this purpose.

The consignment agreement may be defined as the consent, by which a party, called consignor, entrusts the other party, called consignee, certain goods in view of being sold in its own name, but on behalf of the consignor, at a price established by the parties, in exchange for a payment. The consignee is bound to deliver the obtained price or, as the case may be, return the unsold good.

The similarity with the contract of commission resides in the fact that the object of the consignment contract is represented by handling a commercial affair, in its own name, but on behalf of the consignor. The particularity of this type of contract and, at the same time, the distinction in relation to the commission, is the actual object of the operations perfected by the consignee, namely, the execution of sale-purchase contracts for movable goods belonging to the consignor.

c) Shipment contract

In the matter of transport activities, the contract of commission is materialized in the shipment contract. In terms of legal nature, the shipment of goods is an intermediation operation which, according to some standardized conventional norms, it oftentimes also bears the name „contract of commission for transport"[26].

The New Code defines the shipment contract as a variety of the contract of commission by which the sender undertakes to execute, in its own name and on behalf of the principal, a transport contract and to fulfil the related operations (Article 2064).

According to doctrine, the shipment contract is the willing consent between the client / principal (supplier or seller of goods) and shipper (sender), whereby the latter undertakes, in exchange for a payment to execute in its name, however on behalf of the principal, the required agreements with third parties for the shipment of the cargo, and also to fulfil the preliminary acts and things (cargo handling, loading the cargo in the transport means) and the cooperation necessary in view of performing the delivery[27].

The shipment contract is commercial in nature for the shipper (carrier), fulfilling a professional activity of intermediation, enterprise-specific.

The similarity of the shipment contract with the contract of commission consists of the representative concluding commercial operations in its own name, however on behalf of the client, the particularity arising from the specific sector where the shipment contract applies – transport

activities – and from the specialized object of the commercial contracts perfected by the shipper – the transport contract of the goods and the services related to the shipment.

2.3. Intermediation contracts in which the intermediary acts as an independent professional tradesman, for business negotiation with third parties or for the negotiation and the conclusion of business with third parties

The category of intermediation contracts we refer to is firstly characterised by certain elements pertaining to the legal regime of the intermediary, as follows:

- the intermediary acts on a sustained and professional basis, and is organised under the form of an enterprise, and is not acting as an occasional intermediary, as it usually happens in the case of a commercial mandate;

- the intermediary runs his activity as an independent intermediary, specialised in that particular area, without being subordinated to the principal (client).

- the intermediary acts on the basis of a common interest with the principal, which means that a complex co-operation relation will be formed between them, by means of a contract.

Secondly, these contracts are particularized by the extent of the proxy granted by the principal (client) to the intermediary. Thus, the intermediary might be empowered, either to only negotiate commercial deals with third parties (which is the rule in practice), or to negotiate and conclude such deals in the name and on behalf of the principal.

Within the category of contracts we refer to; the following contracts are especially included: the agency contract, intermediation contracts (occasional) and the brokerage contract.

a) Agency contract

The agency contract is a contract of Anglo-Saxon origin, where the complex juridical institution of "agency", practically refers to all the range of agreements by which a person (the agent) acts on behalf of another person (the principal), as previously shown. Therefore, in the Anglo-Saxon conception, the agent may be empowered either to only to negotiate commercial deals with third parties or to negotiate and conclude such deals in the name and on behalf of the principal.

In Romanian law[28], the agency contract is generally defined, in the specialised literature, as that agreements concluded between two independent tradesmen, by which one person (the agent) undertakes to promote the business of the other person (the principal or the client) within a certain area, through business negotiation and/or the conclusion of business contracts by the agent, on behalf of the principal, in all cases, in exchange for a commission, without there being any subordination relation between the agent and the principal[29].

The institution of the commercial agent is regulated in the Romanian Law No. 509/2002 on permanent commercial agents.

In the New Civil code, the notion of "civil contract" means that agreement by which the principal unfailingly empowers the agent either to negotiate or to negotiate and to conclude contracts, in the name and on behalf of the principal, in exchange for remuneration in one or more determined regions. The New Code adds the provision that the agent is an independent intermediary who acts on a professional basis, and he cannot be the prepositive of the principal at the same time. (Article 2072)

Therefore, according to the Romanian Law, the parties in the agency contract are independent tradesmen, and the agent is not economically dependent or dependent for executive decisions, on the

[28] See, for a detailed analysis of the agency contract, especially, St. Cărpenaru, *op. cit.*, p. 548-559; V. Anghelescu, Al. Deteşanu, E. Hutira, *op. cit.*, p. 109-110; 113-114; Dragoş A. Sitaru, Ş.A. Stănescu, *Intermediation Contracts in international commerce (I)*, (*Contractele de intermediere în comerţul internaţional (I)*) *op.cit.*, p. 19-43.

[29] Dragoş A. Sitaru, C.P. Buglea, S.A. Stănescu, *op. cit*., p. 312-313; D. Florescu, L.N. Pîrvu, *op. cit.*, p. 205-213.

principal. At the same time the agent acts as a professional, meaning it is organised as an enterprise. The agent, as an enterprise, has as main activity business intermediation, and the client (the principal) resorts to his experience as a result of a good professional reputation. The commercial agent is entrusted with dealing with the business of a client on a determined clientele (usually a geographic area), and the legal relations that arise from the agency contract are long lasting.

From the point of view of the scope of the proxy, meaning the extent of the mandate the agent receives from the client (the principal), the agency contract is, of two kinds, as follows:

Firstly, the agent may be granted a proxy solely for the purpose of negotiating the client's affairs, when he is granted by the client a mandate without representation. Under this mandate, the agent negotiates the conditions of future contracts, with third parties, contracts which will be concluded directly between the client and the third parties. Therefore, in this case, the proxy is limited to the procurement of orders/offers from third parties, thus to finding contractual partners for the client. This situation is presumed, in case the contract does not grant explicit powers of representation to the agent.

Secondly, the proxy (explicit) granted to the agent may be for the purpose of negotiating and concluding affairs in the name and on behalf of the client. In this case, the mandate granted to the agent in a mandate with representation.

For a better understanding of the juridical outline of the agency contract, a short comparative overview is mandatory, between the agency contract and the contract of commission and the commercial mandate with representation.

Therefore, there is a difference between the agency contract and the contract of commission, which primarily consists in the fact that the commission agent is empowered by the contract of commission, to conclude in his name, but on behalf of the principal, one or several specific legal deeds; the contract ceases to be in force after the obligation of the intermediary is fulfilled. As regards the agency contract, it is concluded for a determined or non-determined period of time throughout which the agent is bound to conclude commercial contracts on behalf of the client, with a pre-established scope, within the envisaged territory (generally with an exclusivity clause). Therefore, the commission agent usually concludes one or more determined legal deeds, whereas the agent concludes an undetermined number of legal deeds for his client.

Unlike the commercial mandate with representation, the intermediation activity in the case of the agency contract is long lasting and professional in nature, not occasional. Moreover, unlike this commercial mandate where the intermediation activity predominantly unfolds in the principal's interest, the agency contract is characterised by the fact that the intermediation activity is based on the mutual interest of the agent and of the principal to conclude and execute the intermediation activity. Thus, the interest of the principal to capitalize his products and render the services which make the object of its commercial activity is doubled by the agent's interest to negotiate or to negotiate and conclude in the name of and on behalf of the principal as many commercial contracts, thus justifying the right of the agent to be paid[30].

For the situation when the agent is strictly empowered to obtain offers and negotiate contracts, and not with the power to conclude legal deeds, there is an even more clear distinction between the agency contract on one hand, and the contract of commission and the mandate without representation, on the other hand. This distinction resides in the existence of a different scope, such as the conclusion of legal deeds by the commission agent or the mandatary with representation, respectively the execution of pre-contractual commercial operations (of negotiation) by the agent.

To conclude, given the above mentioned particularities, the agency contract represents a special form of intermediation contracts, and not a particular case of mandate or contract of commission.

[30] St. Cărpenaru, *op. cit.*, p. 550.

b) Intermediary contract (occasional)

The New Romanian Civil Code provides for the intermediary contract under Article 2096 - 2102. As per Article 2096, the intermediary contract is defined as the contract by which the intermediary undertakes, in relation to the client, to put him in contact with a third party, for the purpose of concluding a contract. The intermediary is not the prepositive of the intermediated parties and is independent in relation to them in the execution of his obligations.

For the use of the participants to the international commerce, the International Chamber of Commerce in Paris drafted a model for the occasional intermediary contract, entitled ICC Occasional Intermediary Contract –ICC Publication No. 619-2000.[31] The scope of the contract essentially consists of, for the intermediary (agent) obtaining information for the principal about potential clients or about a particular business and, as the case may be, of the assistance offered for the negotiation of a contract, and for the principal, of the payment he is bound to pay to the intermediary for his services rendered. Unless otherwise provided in the contract, the intermediary is not empowered to contract third parties in his capacity as mandatary (with or without representation) of the principal.

Therefore, in principle, the intermediary in this type of contract is empowered by the principal (client) only for pre-contractual operations, acting as a mandatary without representation.

c) Brokerage contract

The brokerage contract[32] is defined in the specialised literature as a contract by which one person, named a broker, undertakes to find for the person from whom he received the task to contract, named client, a contractual partner for carrying out a commercial deal (a co-contractor) in exchange for a payment named brokerage.[33].

The brokerage contract, hardly distinguishes from the intermediary contract (occasional), both resembles and presents important differences from the contracts of mandate with representation, mandate without representation (commission) and agency contract.

The most important difference between the brokerage contract and the contracts of mandate with representation is the fact that in the case of the brokerage contract the mandate is granted without representation. The broker, unlike this mandatary, professionally performs the activity of intermediation, which constitutes the scope of the contract, without participating to the conclusion of the contract. The broker limits himself to making the connection between the persons who want to contract, facilitating and mediating the conclusion of commercial transactions. While the scope of the contract of mandate is the conclusion of legal deeds by the mandatary, in the name and on behalf of the mandator, the broker simply searches for a co-contractor for the client.

The brokerage contract resembles the contract of commission[34] especially because both of them have as scope independently performed intermediation activities. The commission agent distinguishes from the broker through the fact that he concludes in his name the legal deeds he was empowered to perform. The broker limits himself to making the connection between the persons who resorted to his services, without intervening in the conclusion of the contract. Thus, the broker, even if he receives a special mandate, does not act in his own name, but in the name of the mandatary, on the basis of a mandate without representation. Also, the broker does not have any privileges for the

[31] See also, for analysis, Dragoș A. Sitaru, C.P. Buglea, S.A. Stănescu, *op. cit.*, p. 324 - 328.

guarantee of debts against the client, unlike the commission agent, whose debts are secured under a special privilege, provided by the law.

The brokerage contract is essentially close in form to that of the agency contract in which the agent is entrusted only to negotiate deals with third parties, meaning the situation where the principal grants the agent a mandate without representation.

2.4. Intermediation contracts in which the intermediary acts in his own name and on his own behalf, in the relations with third parties, but having a mutual legal and economical interest with the principal

As it was justly noted in the specialised literature[35], in the modern sense, the intermediation is no longer restricted to the contracts of mandate and to the contract of commission, which presume a direct or indirect representation, but knows a series of other contractual forms in which the institution of representation, even an indirect one, is no longer found. In the case of these contracts, the intermediary enters into contractual relations with third parties in his name and on his behalf, and not as a mandatary with or a without representation (commission agent). Nevertheless, the activity performed by the intermediary is also in the interest of the co-contractor party to the intermediary contract, for whom it ensures a more efficient sale of merchandise or rendered services. Consequently, at the moment, the intermediation criterion is based less on the idea of mandate (with or without representation), and more on the intermediary performing an activity and in the interest of another person.

Therefore, the contracts to which we refer come under the institution of intermediation because the principal and the intermediary both act for the realisation of a mutual economical and legal interest, similar to that which characterises the agency contract. As a result of this, relations of professional co-operation between the intermediary and the principal are established, and this puts the intermediary in a mixed position, one of independence, but also in a position of economical interdependence on the principal. These contracts are essentially different from the agency contract, when the agent acts in the name and on behalf of the principal (client), as seen above.

We now give a short description of the main categories of contracts, which in our opinion, fall under this category of intermediation.

a) Franchise contract (franchising)

The franchise contract, known in the international commerce under the Anglo-Saxon name of franchising,[36] means the contract by which a person, named franchiser, allows the exploitation of a trademark or a production brand or of rendered services by an independent person, manufacturer or one who provides services, named franchisee, and of the know-how, the use of his trademark and

Stănescu, *Intermediation Contracts in internaţional commerce (II)*, in Commercial Law magazine no. 12/2005, p. 49-61 (*Contractele de intermediere în comerţul internaţional (II), în Revista de drept comercial nr. 12/2005, p. 49-61*). For a presentation of characteristic features of the agency contract, please see also D. Florescu, L.N. Pîrvu, *op.cit*, p. 213-214.

sometimes the related supply, which the beneficiary should exploit according to the convention, in exchange for a remuneration[37].

In the specialised literature, the franchise contract was defined as representing the system of commercialisation based on a continual collaboration between natural persons or legal persons, financially independent, by which a person, named franchiser, grants another person, named beneficiary, the right to exploit or to develop a business, a product, a technology or a service[38].

In the domestic law, the franchise contract is regulated by the provisions of Government Ordinance No. 52/1997 on the legal regime of the franchise.

In international commerce, tradesmen most often use, as a model for the franchise contract, the codification of usage drafted by the International Chamber of Commerce in Paris, namely ICC Model International Franchising Contract – ICC Publication No. 557-2000. This document provides a summary of commercial practice related to this domain[39].

b) Exclusive distribution contract

The exclusive distribution contract[40] is the commercial contract, concluded for a long term, under of which a party, named supplier, undertakes to deliver to the other party, named distributor, under terms of exclusivity, certain quantities of merchandise, according to the received requirements, which the latter will resell to his clients, using the supplier's trademark, on a market already determined in the contract, in exchange for a remuneration, which consists of the difference between the purchase price and the re-sell price.

Given the lack of special regulations in the Romanian domestic law, the contract to which we refer is included, for usage in international commerce, in the model contract drafted by the International Chamber of Commerce in Paris, entitled ICC Model Distributorship Contract (Sole Importer-Distributor) – ICC Publication No. 646-2002[41] - which has the advantage of representing a summary the commercial practice, representing a codification of usages related to this domain.

The exclusive distribution contract may not be reduced to a contract of mandate (with representation) or to an agency contract, because the deeds to re-sell performed by the distributor are not made in the name and on behalf of the supplier. At the same time, the exclusive distribution contract is not a form of the contract of commission, although the distributor acts, just as the commission agent, in his own name, in relation with third parties. Nonetheless, the distributor, unlike the commission agent, acts in his name and on his behalf.

The exclusive distribution contract is significantly close though to the agency contract, because it presumes that a permanent professional co-operation relation is established between parties, as a consequence of the fact that both parties act for the purpose of achieving a common interest, which is the commercialisation of merchandise and the provision of services which make the scope of the contract.

3. Conclusions

The concept of commercial intermediation has not been seen as a whole but usually it has been analyzed by the doctrine and confirmed by the courts practice in specific, referring only to the
