Within the legal order of the European Union, the judgments of the Court of Luxembourg are an essential element in explaining the rules and measures ordered by the European institutions. Due to the interpretations included in the reasoning of its judgments, the Court of Justice has a major influence on the whole European law. Although it is not a source of law in the sense that the judicial precedent has got in the common law system, due to the fact that its solutions do not have *erga omnes* effects, its decisions are mandatory in terms of interpretation of the provisions of European law. Nevertheless, the case law of the Court of Justice the European Union has acquired a quasi-normative function, by clarifying and specifying the provisions of the treaties and other normative acts at the level of the Union.

Moreover, the fundamental principles of European law are the creation of the Court of Justice. The ideas comprised in the reasoning of some certain cases that represent historical jurisprudential landmarks have been transformed into general principles of European law, creating the structure of resistance of the European legal edifice. Thus, thanks to the case law of the Court from Luxembourg, have emerged two legal mechanisms, essential for the efficient functioning of the European Union, namely, the direct applicability of the European law (direct effect) and the precedence of the European norms in conflict with the domestic ones. The latter rule has been taken over explicitly also by Article 148 paragraph (2) of the Romanian Constitution, with reference to the provisions of the founding treaties of the European Union, as well as the other binding community (European) regulations.

The judgment in the case *Van Gend and Loos v. Nederlandse Administratis*[30] is one of the most important decisions for the development of the European legal order, thus establishing the fundamental **principle of the direct effect of Community / European law**. According to the Court of Justice, the European Community is a new legal order of international law, in favor of which Member States have limited their sovereign rights and to which not only States but also their nationals are subject, as Community / European law creates directly rights and obligations not only to the institutions of the European

[30] NV Algemene Transporten Expeditie Onderneming van Gend en Loos v Nederlandse Administratis der Belastingen, Judgment of 5 February 1963 in Case 26/62.

Union and the Member States, but also to their nationals.

Of particular significance is the judgment in *Flaminio Costa v. Enel* case[31], which enshrined the **principle of the precedence of Community / European law**, which complements its direct effect, in the sense that, where, by a Community / European provision, citizens of the European Union are granted rights or obligations through European acts whose content is contrary to national law, the application of European law over domestic law will be the one that prevails.

The European legal order is autonomous from the law of the Member States, but at the same time it is integrated into national legal systems, so that European law can only be achieved if it is perceived and integrated in the domestic legal order of each Member State[32]. It has been shown that, in this way, a complex report of complementarity is outlined, the law of the European Union needing the support of the systems of national law, but it equally is imposing itself on them. It is essential that, whenever there are inconsistencies, elements of contradiction or conflicts between the Union legal order and the legal order of the Member States, they must be resolved in the light of the principle of the priority/precedence of European law.

The courts of each EU Member States have the responsibility to ensure the accurate application of European law on their territories. But there is a risk that courts in different states would interpret the same European provisions differently. In order to prevent such situations, when a matter of European law is at stake, there can be used the procedure for pronouncing preliminary solutions. When a domestic court has doubts about the interpretation or validity of a provision of European law, it may, and sometimes is even obliged[33] to seek the advice of the Court of Justice of the European Union in the form of a preliminary ruling.

The preliminary rulings procedure[34] is based on the basic principles of European law, namely its validity in the national law of the Member States (direct effect) and the precedence of its application over the domestic legislation of the Member States. Due to this procedure, the CJEU plays a particularly important role in the development and improvement of European law, thanks to its explanations and clarifications on the Union Treaties. Through this type of procedure, a mechanism of collaboration between the Court of Justice and the national courts is developed, without, however, any hierarchical subordination relationship between these two types of jurisdictions. This is also the reason why the Court in Luxembourg cannot be challenged in a preliminary ruling which seeks to clarify issues relating to the extent to which domestic legislation is compatible with European law. Such jurisdiction rests with national courts, in the sense that the national judge is said to be the "ordinary judge" in the European legal system. This aspect was also taken into account in the case law of the Romanian Constitutional Court[35], which noted that the CJUE does not have the competence to issue a decision aimed to establish the validity or invalidity of the national law. But the CJEU is the one that interprets the founding Treaties provisions and the aftermath of this power may be that a provision of national law appears to be inconsistent with European law.

The effects of preliminary rulings have been specified by the CJEU itself in its settled case-law, namely that "the interpretation which, in exercising the jurisdiction conferred by Article 177 (now Article 267 of the Treaty on the Functioning of the European Union), the Court of Justice shall give to a rule of Community (European) law, clarifies and defines, where necessary, the meaning and the scope of that rule, as it is or should be understood and applied from the time of its entry into force" (Judgment of 27 March 1980, Case 61/79 *Denkavit italiana v Amministrazione delle finanze dello Stato*, paragraph 16, judgment of 2 February 1988, Case 24/86 *Blaizot v University of Liege and Others*, paragraph 27, judgment of 15 December 1995, in Case C-415/93 *Bosman and Others v Union royale belge des societes de football association and Others*, paragraph 141).

The conditions for referral to the Court of Justice of the European Union have been developed in its settled case-law. In this regard, by its Judgment of 6 October 1982 in Case C-283/81, *SRL CILFIT and Lanificio di Gavardo SpA*, the CJEU ruled that Article 177 (now Article 267 TFEU) "is to be interpreted as meaning that a court or tribunal against whose decisions there is no judicial remedy under national law is required, where a question of community law is raised before it, to comply with its obligation to bring the matter before the Court of Justice, unless it has established that the question raised is irrelevant or that the community provision in question has already been interpreted by the Court or that the correct application of community law is so obvious as to leave no scope for any reasonable doubt; the existence of such a possibility must be assessed in the light of the specific

[31] Judgment of 15 July 1964 in Case 6/64 on the reference for a preliminary ruling from the Giudice Conciliatore in Milan in the case of Flaminio Costa v. Enel.

[32] Vasile Pătulea, "Principiul primordialității dreptului comunitar față de sistemele de drept naționale ale statelor membre ale Uniunii Europene", in *Dreptul* nr. 7/2005, p. 235.

[33] The national judge has the duty to address such a question to the CJEU when the decision to be given in the pending dispute is not open to any ordinary appeal. In addition, the assistance of the ECJ must be sought when the interpretation given by the European court is likely to have a significant effect on the resolution of the dispute, being decisive for pronouncing a fair solution.

[34] In accordance with Article 267 of the Treaty on the Functioning of the European Union (formerly Article 243 TEC), the CJEU may issue preliminary rulings on the interpretation of the Treaties, as well as on the validity and interpretation of acts adopted by the institutions, bodies, offices or agencies of the European Union.

[35] See, for example, Decision no. 921/2011, published in the Official Gazette no.673 of September 21, 2011.

characteristics of community law, the particular difficulties to which its interpretation rises and the risk of divergences in judicial decisions within the community". Also, in its Judgment of 9 September 2015 in Case C-160/14, *Joao Filipe Ferreira da Silva e Brito and Others*, paragraph 40, the Court of Justice of the European Union ruled that "the national court or tribunal has sole responsibility for determining whether the correct application of EU law is so obvious as to leave no scope for any reasonable doubt and for deciding, as a result, to refrain from referring to the Court a question concerning the interpretation of EU law which has been raised before it" [36].

In the light of this case-law of the Court of Justice of the European Union, it is for the Constitutional Court to determine whether or not the questions in the request for referral to the CJEU are relevant and necessary to the *a quo* case. The Constitutional Court of Romania has referred a question to the Court from Luxembourg[37], considering that the interpretation given by the European Court is imperative for resolving a certain exception of unconstitutionality. The Constitutional Court of Romania thus entered among the European constitutional contentious jurisdictions that used such a procedure to refer to the Luxembourg Court.

Therefore, as it was said[38], the Constitutional Court of Romania is one of the main factors in the process of Europeanization of the domestic legal system, respecting the national constitutional identity. This is the conclusion drawn of the many cases in which the Court ruled on the obligations of national authorities from the perspective of Article 148 of the Constitution and the manner of fulfilling these obligations.

4. Conclusions

Apparently an intricate weaving, the interaction between the European law and the domestic law was and still is a pretty challenging task for the Romanian authorities, regardless of the field they activate in. However, the Romanian Basic Law provides an accurate grid to clear up the interplay of the two normative systems. Thus, Article 148 paragraph (2) of the Constitution enshrines the primacy of the provisions of the founding treaties of the European Union and other binding Community (European) regulations over contrary provisions of national law. Looking through the glass of this principle, the judges from the ordinary courts have the power to adjudicate over the inconsistency of the domestic legislation. The constitutional review had to adapt as well to this interference. The main reference is obviously the Romanian Basic Law. But the Constitutional Court also stated that, under certain conditions, it may refer, in the reasoning of its decisions, to the binding acts of the European Union, whenever they are relevant to the case and as long as their content is not unequivocal. The present paper tried to depict the significant case law of the Constitutional Court in what concerns the interaction of the two normative systems, the European and the Romanian one and to underline its contribution in counteracting the difficulties engendered by this operation. The analyzed topic opens the door for further researches concerning especially the view of the Constitutional Court of Romania regarding the referral of requests for preliminary rulings to the Court of Justice of the European Union on the interpretation of European Union law, if it is necessary for the review of constitutionality of the Romanian legislation.

THE LEGAL REGIME OF INTERNATIONAL SANCTIONS IN ROMANIA

Adrian COROBANĂ*

Abstract

This article analyzes the legal framework through which the Romanian state implements, in concrete terms, at national level, the acts with binding legal force of the United Nations and the European Union through which international sanctions are established. The paper focuses mainly on the interpretation of Romanian legal norms governing the legal regime of the application of international sanctions on the territory of Romania. In this sense, as a research methodology are used the systematic method and the historical method of interpreting the legal norms regarding the application of international sanctions in Romania. The research shows that the Romanian legislator is in line with the international trend to increase the effectiveness of targeted sanctions by regulating the way in which they are implemented on the national territory international sanctions established at the level of the United Nations or at the level of European Union.

Keywords: *international sanctions, legal regime, targeted sanctions*.

1. Introduction

Taking into account art. 39 of the Charter of the United Nations, according to which: "the Security Council shall determine the existence of any threat to the peace, breach of the peace, or act of aggression and shall make recommendations, or decide what measures shall be taken in accordance with Articles 41 and 42, to maintain or restore international peace and security"[1], international sanctions are binding restrictive measures for member states of the United Nations.

Until 1990, the UN Security Council imposed classical international sanctions (so-called comprehensive sanctions) - which affected the entire state or the entire population of a state or territory, for example - the embargo, the non-issuance of visas to all citizens of that state, and so on They had a rather harmful effect on the population and not on the ruling elite of that state, which was responsible for those illicit acts that violated public international law.

After 1990, the practice of the Security Council and the practice of states focused mainly on so-called targeted sanctions, which more severely affect the ruling elite of states with illicit conduct. And here we have mainly sanctions such as freezing funds, withdrawing visas and residence permits for those in the ruling elite, banning the provision of funds or economic resources, and so on.

At the same time, by imposing targeted sanctions, states have a much greater role to play in implementing these sanctions and ensuring that such measures, which are taken in particular against natural or legal persons, are taken in compliance with all necessary rights and guarantees. -a democratic state.

Therefore, there was a need to create a legal framework consisting of several normative acts at national level to regulate the following aspects: 1. What kind of international sanctions will be implemented by the state authorities at national level? 2. Which institutions will have the power to implement international sanctions? 3. What will be the procedure for implementing international sanctions? 4. What kind of legal acts will be issued for the implementation of international sanctions? 5. Can these legal acts be challenged in court by persons considered to be harmed by the application of international sanctions?

This article analyzes the legal regime of the implementation of international sanctions in Romania.

2. Relevant legal provisions

In Romania, the main normative act that regulates the implementation of international sanctions is the Government Emergency Ordinance no. 202/2008 on the implementation of international sanctions[2] approved by the Romanian Parliament by Law no. 217/2009 and entered into force on December 8, 2008.

In addition to this emergency ordinance, there are a series of infralegal normative acts that regulate the procedure for the application of international sanctions at the level of each institution that has been assigned attributions in this field:

- Regulation of the National Bank of Romania no. 28/2009 on the supervision of the implementation of international sanctions for blocking funds;[3]

- Government Decision no. 603/2011 for the approval of the Norms regarding the supervision by the National Office for Prevention and Combating Money Laundering of the manner of implementation of international sanctions;[4]

- The procedure regarding the manner of fulfilling the attributions of the National Agency for Fiscal

Administration in the field of international sanctions, from 14.09.2020 approved by the Order of the President of the National Agency for Fiscal Administration no. 3486/2020;[5]

- Regulation no. 25/2020 on the supervision of the implementation of international sanctions by the Financial Supervisory Authority and the entities regulated by it[6], which repealed the Regulation of the National Securities Commission no. 9/2009 on the supervision of the implementation of international sanctions on the capital market, the Norm of the Insurance Supervisory Commission on the supervision procedure, in the field of insurance, of the application of international sanctions of 30.07.2009 and the Norm of the Commission for Supervision of the Private Pension System no. 11/2009 on the procedure for supervising the implementation of international sanctions in the private pension system.

3. Categories of international sanctions

Government Emergency Ordinance no. 202/2008 on the implementation of international sanctions regulates the manner of implementation, at national level, of international sanctions established by: 1. resolutions of the United Nations Security Council or other acts adopted pursuant to art. 41 of the Charter of the United Nations; 2. regulations, decisions, common positions, joint actions and other legal instruments of the European Union; 3. Legal acts of international organizations (non-binding international sanctions); 4. Legal acts of other states (non-binding international sanctions); 5. Unilateral decisions of Romania.

Therefore, we note that the Government Emergency Ordinance no. 202/2008 delimits between two types of international sanctions: binding international sanctions (those adopted by the Security Council of the United Nations and those adopted by the European Union) and non-binding international sanctions (adopted by other international organizations, adopted unilaterally by Romania or those adopted by other states).

With regard to non-binding international sanctions, they must fulfill the purposes provided by art. 2 lit. a) of the Government Emergency Ordinance no. 202/2008:

- maintaining international peace and security;
- preventing and combating terrorism;
- ensuring respect for human rights and fundamental freedoms;
- ensuring the development and consolidation of democracy and the rule of law;
- the pursuit of other purposes, in accordance with the objectives of the international community, international law and European Union law.

These sanctions, which are not adopted by the United Nations Security Council or by the European Union, shall become binding in national law by the adoption of a normative act, which shall also establish the necessary implementing measures, including the criminalization of their violation, as appropriate.

The types of international sanctions to be implemented by Romania are as follows:

1. blocking of funds and economic resources;
2. trade restrictions;
3. restrictions on operations with dual-use and military products and technologies;
4. travel restrictions;
5. transport and communications restrictions;
6. diplomatic sanctions;
7. sanctions in the technical-scientific, cultural or sports fields.

4. Public authorities which are competent to implement international sanctions

Legal acts by which international sanctions have been adopted are binding in domestic law for all public authorities and institutions in Romania, as well as for Romanian natural or legal persons or located in Romania, under the regulations establishing the legal regime of each category of acts.

Therefore, any person who has data and information about persons or entities that are subject to international sanctions, who owns or has control over goods or who has data and information about them, about transactions related to goods or in which persons or entities are involved has the obligation to notify the competent authority as soon as it becomes aware of the existence of the situation requiring notification.

Any person may notify the competent authority in writing of any identification error concerning the designated persons or entities, as well as the assets.

The competent authorities to receive and resolve notifications are the following:

- National Agency for Fiscal Administration (in case of sanctions for blocking funds or economic resources);
- National Office for the Prevention and Combating of Money Laundering (in case of restrictions on certain transfers of funds and financial services and aimed at preventing nuclear proliferation);

At the same time, the competent authorities to supervise the implementation of international sanctions are:

- National Agency for Fiscal Administration;
- National Office for Preventing and Combating Money Laundering;
- The National Bank of Romania;
- Financial Supervisory Authority;
- the management structures of the liberal professions;
- Ministry of National Defense.

[5] Published in the Official Gazette, Part I no. 881 of September 28, 2020.
[6] Published in the Official Gazette, Part I no. 1169 of December 3, 2020.

Each of the competent authorities listed above has adopted a number of illegal sub-legal acts setting out their powers in detail.

Thus, the National Agency for Fiscal Administration adopted the Procedure on how to carry out the duties of the National Agency for Fiscal Administration in the field of international sanctions, from 14.09.2020 approved by Order of the President of the National Agency for Fiscal Administration no. 3486/2020.

The activity of the National Office for Preventing and Combating Money Laundering in the field of application of international sanctions is also regulated by Government Decision no. 603/2011 for the approval of the Norms regarding the supervision by the National Office for Prevention and Combating Money Laundering of the manner of implementation of international sanctions.

Also, the Financial Supervisory Authority adopted Regulation no. 25/2020 on the supervision of the implementation of international sanctions, regulation entered into force on January 2, 2021.

As a rule, these infralegal normative acts establish obligations on economic operators and persons exercising a liberal profession (lawyers, accountants, notaries, bailiffs).

Therefore, those obligations are established to adopt internal policies, procedures and mechanisms for the implementation of international sanctions, which include at least the following elements: a) the detection of persons or entities subject to international sanctions and operations involving goods, applicable to potential customers and applicants for occasional transactions; b) acceptance as a customer, including in the case of occasional transactions, for persons or entities subject to international sanctions or for persons or entities requesting the performance of operations in which goods are involved; c) the detection of the persons or entities that are the object of international sanctions and of the operations in which goods are involved, applicable to the existing clientele in the context of the modification and/or completion of the international sanctioning regimes; d) the regime applicable to customers who have been identified as persons or entities subject to international sanctions, starting with the date on which they no longer fall under international sanctions, as well as the regime applicable to persons or entities that have requested operations in which goods are involved; e) the modalities of drawing up and keeping records regarding the persons or entities that are the object of international sanctions and the persons or entities that have requested the performance of operations in which goods are involved; f) the standards for employment and the verifications carried out in this respect, as well as the training programs for the personnel with attributions in the field of international sanctions and for the training and regular evaluation of the employees; g) the access of the persons with attributions in the field to the records of the regulated entity in order to examine the operations carried out in the past with persons or entities detected as persons or entities that are the object of international sanctions; h) the competences of the persons with responsibilities in the implementation of the internal norms for the implementation of the international sanctions; i) the measures applicable to internal control, risk assessment and management, compliance management and communication; j) the obligations incumbent on professionals from the perspective of blocking the property belonging to the person or entity that is the subject of an international sanction; k) the regime applicable to the persons or entities that have requested the performance of operations in which goods are involved according to Government Emergency Ordinance no. 202/2008; l) the procedures for reporting, internally and to the competent authorities, as well as for the prompt provision of data at their request, in the format and methodology established by the authorities.

From our point of view, these infralegal normative acts establish some burdensome obligations. If banks had the necessary architecture to draw up and implement such procedures, when we talk about professionals practicing the liberal professions (lawyers, accountants, notaries, bailiffs), these infralegal normative acts establish some obligations for them that can lead to block the activity of these professionals, as these people often work on their own, without hiring other people.

At the same time, the issue of respecting professional secrecy arises from these professionals, especially among lawyers.

Unfortunately, non-compliance with these obligations imposed on professionals attracts sanctions in their charge: from 10,000 to 30,000 lei.

Compliance with the obligations imposed by these infralegal acts and in particular the obligation to notify the competent authorities when entering into a legal relationship with a person subject to an international sanction is hampered by the competent authorities who often do not comply with their obligations by art. 5 of the Government Emergency Ordinance no. 202/2008 for publishing on its own website the legal acts by which international sanctions are established.

Our *de lege ferenda* proposal would be for the Ministry of Foreign Affairs to establish the obligation to publish on its website a daily updated document that would include a list of all individuals and legal persons and all entities subject to international sanctions. It is necessary for this document to be drafted by the Ministry of Foreign Affairs and not just to publish United Nations resolutions or European Union regulations in this field, as professionals who are required to verify these normative acts would be much more effective in detecting persons or entities which are subject to international sanctions.

5. Legal acts issued for the implementation of international sanctions

Among the legal acts issued by the competent authorities for the application of international sanctions, we notice that the order of the President of the National Agency for Fiscal Administration and decisions of the other competent authorities are included.

The National Agency for Fiscal Administration orders, by order of the President, without delay, the blocking of funds or economic resources that are owned, held or under the control, directly or indirectly, of natural or legal persons who have been identified as being designated persons or entities. This is done also for funds or economic resources derived or generated from assets owned or controlled by natural or legal persons targeted by these sanctions or for funds or economic resources owned or controlled, individually or jointly, by persons targeted by these international sanctions.

In the process of implementing international sanctions, the other competent authorities shall carry out any further inquiries they deem necessary, taking into account the situation, including, if necessary, consulting the competent authorities of any other State, issuing decisions.

In accordance with art. 9 para. (3) of the Government Emergency Ordinance no. 202/2008, the decisions issued by the competent authorities in the field of application of international sanctions can be challenged in court, in the contentious-administrative procedure.

Also, in accordance with art. 19 para. (5) of the Government Emergency Ordinance no. 202/2008, the order of the President of the National Agency for Fiscal Administration can be challenged in court, in the contentious-administrative procedure.

Therefore, we note that the legal acts issued by the competent authorities in the process of implementing international sanctions are considered to be administrative acts, as they can be challenged in court in accordance with the contentious-administrative procedure regulated by Law no. 554/2004.

However, the right to apply to a court is only illusory, as long as the national court checks only whether that person is on the lists of United Nations resolutions or on the lists of European Union regulations, the person cannot challenge the list of sanctions itself and how who got on those lists. Moreover, the case law of the Court of Justice of the European Communities has stated that *"where there is a threat to a nation, measures may be taken that derogate from the right to an effective remedy before a court."*[7]

6. Conclusions

In this article we tried to present the legal regime of the implementation of international sanctions in Romania, analyzing the legal provisions of the Government Emergency Ordinance no. 202/2008 and the provisions of the infralegal normative acts adopted by the Government, the National Agency for Fiscal Administration and the Financial Supervision Authority.

In our approach, we answered some of the questions posed in the introductory part of the article.

The research shows that the Romanian legislator is in line with the international trend to increase the effectiveness of targeted sanctions by regulating the way in which they are implemented on the national territory international sanctions established at the level of the United Nations or at the level of European Union.

However, we note that the entire architecture of the legal regime analyzed focuses on a series of burdensome obligations that are imposed on professionals in the banking and financial field, as well as on professionals practicing the liberal professions (lawyers, notaries, accountants, bailiffs).

As an identified de lege ferenda proposal, it would be the task of the Ministry of Foreign Affairs to establish on its website a daily updated document that would include a list of all individuals and legal entities and all entities subject to sanctions. international.

ACCESS TO CULTURE IN A DIGITALLY FRAMED EU LAW

Alina Mihaela CONEA*

Abstract

The digital shift is having a significant impact on the relation we have with culture.

Digitisation and online accessibility enable unprecedented forms of engagement. However, new methods of sharing copyright-protected content through the internet raises questions as whether these acts interfere with exclusive copyrights.

Moreover, the right to participate in cultural life implies that individuals have access to cultural heritages and that their freedom to continuously (re)create cultural heritage should be protected. Despite institutional initiatives, there is a growing concern that intellectual property rights can exclude the public from accessing and using digital cultural heritage in the public domain.

Meanwhile, the current debate about open internet has strong implications for fundamental freedoms…and everywhere in the world the courts are searching for balance….

In the search for a fair balance between various conflicting interests, it is essential to trace what values the Court of Justice of European Union protects. The relevance of the Court's judgments is no more limited to the internal market, being significant for the private life of each of us and for the way in which law builds social relations in cyberspace.

The purpose of this paper is to explore the legal base concerning culture in European Union law and in particular the dynamics between digital access to cultural heritage and intellectual property rights.

Keywords: *cultural heritage, open access, copyright, digital data.*

1. Introduction

The purpose of this paper is to explore the legal base concerning culture in European Union law and in particular the dynamics between digital access to cultural heritage and intellectual property rights.

Culture lies at the heart of the European project and is the anchor on which the European Union's "unity in diversity" is founded[1].

The relevance of the topic is multifaceted: economic (the new creativity based economic industries), anthropologic (the artificial intelligence dominance/occurrence) or social (engaging and enjoying social groups/identity).

In various legal documents, the European institutions acknowledge that the *digital shift is having a massive impact* on how cultural and creative goods and services are made, disseminated, accessed, consumed and monetized [2]. The need to seek a new balance between the accessibility of cultural and creative works, fair remuneration of artists and creators and the emergence of new business models is recognized.

Cultural diversity is seen as a source of creativity and innovation. The Council recognize that `cultural activities and creative industries, such as visual and performing arts, heritage, film and video, television and radio, new and emerging media, music, books and press, design, architecture and advertising are also playing a critical role in boosting innovation and technology, and are key engines of sustainable growth in the future`[3].

Meanwhile, the cultural diversity of the peoples of the world has been characterized as a *universal heritage of humankind*. In 1968, a UNESCO Expert Meeting defined culture as 'the essence of being human' which leaves little doubt of its connection with human rights[4]. Article 1 of the UNESCO Declaration of Cultural Diversity (2001) states that, "…as a source of exchange, innovation and creativity, cultural diversity is as necessary for humankind as biodiversity is for nature".

Moreover, the right to participate in cultural life implies that individuals and communities have access to and enjoy *cultural heritages* that are meaningful to them, and that their freedom to continuously (re)create cultural heritage and transmit it to future generations should be protected.

European Commission observed that old approaches sought to protect heritage by isolating it from daily life. New approaches focus on making it fully part of the local community. Sites are given a second life and meaning that speak to contemporary needs and concerns. Digitisation and online

accessibility enable unprecedented forms of engagement and open up new revenue streams[5].

The main questions of this paper are: Is the access to culture protected in EU law? What is the interaction between the protection of copyright in EU law and the access to cultural heritage?

In order to address this questions the paper is divided into three parts. The first part is dedicated to the concept and legal framework of EU regarding culture. The access to culture and to cultural heritage is considered in the second part. The third part of the paper investigates the dynamics between intellectual property rights and the open access to internet, focusing on Court of Justice of European Union (CJEU) case-law.

2. Culture in EU Law

2.1. Concept of *culture*

The concept of culture remains irreducible to any form of definition, especially when it is envisaged in the wide variability that is its meaning at the European level[6]. In the same fashion, the notion of '*cultural diversity*,' which is at the heart of European integration and European law, has never been explicitly defined by Community institutions[7].

The Court of Justice of European Union concede to this indefinite concept and, consequently, stated in *Fachverband der Buch* that Article 167 TFEU cannot be `invoked as a justification for any national measure in the field liable to hinder intra-Community trade`[8]. `However, the protection of books as cultural objects can be considered as an overriding requirement in the public interest capable of justifying measures restricting the free movement of goods, on condition that those measures are appropriate for achieving the objective fixed and do not go beyond what is necessary to achieve it`[9].

In fact, the different forms of action and cultural policies is based on multiple dimensions of the notion of culture. The culture is conceptualized in a polymorphic[10] way and several dimensions can be pictured.

Culture is a way of understanding the *identity* of individuals and of distinctive national community. `The diversity of cultures within the framework of a common European civilization (…) all give the *European Identity* its originality and its own dynamism`[11].

Although, culture is seen in relation to *aesthetic*, as a set of artistic expressions and elements of heritage. The identification of what artistic dimensions culture covers is controversial[12].

Another dimension points to the belonging to a certain *social* class, which define cultural practices, archetype of a social group, or inclusion.

Perhaps the most evident understanding in EU documents is the *economic* outcome of culture. The cultural and creative sectors are increasingly viewed as being drivers of economic growth. In 2017, there were more than 1.1 million cultural enterprises in the EU-27. Together, they represented approximately 5 % of all enterprises within the non-financial business economy. The value added at factor cost of cultural enterprises was equivalent to 2.3 % of the non-financial business economy total . For comparison, the value added of the cultural sector within the EU-27 was slightly higher than that for the motor trades sector. The cultural sector's turnover (the total value of market sales of goods and services) was EUR 375 billion, which represented 1.5 % of the total turnover generated within the EU-27's non-financial business economy[13].

Under the heading cultural sector, the European Union performs different *economic activities* such: printing and reproduction of recorded media; manufacture of musical instruments and jewellery (industry-related cultural activities); retail sale in specialised stores (books; newspapers and stationery; music and video recordings); publishing (books; newspapers; journals and periodicals; computer games); motion picture and television, music; renting of video tapes and disks; programming and broadcasting; news agency activities; architecture; design; photography; translation and interpretation[14].

Cultural goods are products of artistic creativity that convey artistic, symbolic and aesthetic values. Examples include antiques, works of art, jewellery, books, newspapers, photos, films, music or video

games. The cultural goods heading is very heterogeneous: while some of these goods are products of mass consumption, others are much-specialised items where demand or supply may be small.[15]

The UN Former Special Rapporteur in the field of cultural rights expressed the view that `Cultural rights have three essential and interdependent dimensions: the first relates to free creativity, including promoting and protecting the freedom indispensable for artistic creativity and scientific inquiry; the second to people's right to access cultural heritage along with new thinking and developments; the third is diversity. All three are vital to developing sustainable and inclusive policies`[16].

2.2. Culture in EU legal framework

In the EU Law the concept of *culture* underlies, more specifically, *the diversity of cultures* of the member states.

The preamble of the Treaty on European Union states that one of the reasons the Union was created was `to deepen the *solidarity* between their peoples *while respecting* their history, *their culture* and their traditions`. One of the objectives of the European Union, recognized in Art. 3 TEU is to `respect its *rich cultural* and linguistic *diversity*, and ensure that Europe's cultural heritage is safeguarded and enhanced`[17].

Consequently, the *diversity* of culture in the European Union law has a constitutional significance.

Article 167(1) TFEU states that `the Union shall contribute to the *flowering of the cultures* of the Member States, while respecting their national and regional *diversity* and at the same time bringing the *common cultural* heritage to the fore`.

Therefore, the European Union competencies in the field of culture are articulated in the treaty with a substantial accent on their *subsidiary* nature. According to Article 6 TFEU, in the area of culture, the Union shall have competence to carry out actions to support, coordinate or supplement the actions of the Member States, without thereby superseding their competence in these areas[18]. The Treaty states that legally binding acts of the Union adopted relating to these kind of areas shall not entail harmonisation of Member States' laws or regulations[19]. This provision is reaffirmed in Art. 167 (5)TFEU. In order to contribute to the achievement of the cultural objectives, `the European Parliament and the Council acting in accordance with the ordinary legislative procedure, shall adopt incentive measures, excluding any harmonisation of the laws and regulations of the Member States`.

A legal area for actions regarding culture at Community level was absent from the wording of the initial treaties. Moreover, culture was mentioned in the former art. 30 EC Treaty as *an exception admissible* from the free movement of goods, based on the need "to protect *national treasures* possessing artistic, historic or archaeological value".

It is widely accepted that, as early as *Commission v Italian Republic*[20], CJEU included cultural goods under the internal market rules. Recently, The CJEU stated in *Fachverband der Buch* that `the protection of books as cultural objects, cannot constitute a justification for measures restricting imports within the meaning of Article 30 EC`. The protection of cultural diversity in general cannot be considered to come within the 'protection of national treasures possessing artistic, historic or archaeological value' within the meaning of Article 30 EC`[21].

`*Culture*` was a later comer in the European Community discourse. At the Copenhagen European Summit of 14 and 15 December 1973, the Heads of State or Government of the nine Member States of the enlarged European Community affirm their determination to introduce the concept of *European identity* into their common foreign relations. The Declaration on European Identity (Copenhagen, 14 December 1973) focused on `common heritage` and on the will `to preserve the rich variety of their national cultures`[22].

Culture was expressly included in the EC Treaty by the amendments of Maastricht Treaty. Thus, the activities of the Community included the contribution to „the flowering of the cultures of the Member States" (art. 3 EC Treaty). Regarding the common rules on competition, it was inserted the `aid to promote culture and heritage conservation`(Article 92(3) EC Treaty). Art. 107 (3) TFEU uphold that it may be considered to be compatible with the internal market `the aid to promote culture and heritage conservation where such aid does not affect trading conditions and competition in the Union to an extent that is contrary to the common interest`.

The Maastricht Treaty inserted Title IX- Culture, Article 128 EC Treaty. The wording of that article it is almost unchanged in the present art. 167 TFEU.

The relevance of culture in EU law must be seen in interaction with other areas of EU competence.

[21] CJEU, Judgment of the Court (Second Chamber) of 30 April 2009, *Fachverband der Buch- und Medienwirtschaft v LIBRO Handelsgesellschaft mbH*, Case C-531/07, EU:C:2009:276, p. 32.

[22] Declaration on European Identity (Copenhagen, 14 December 1973).

According to Article 167(4) TFEU, `the Union shall take cultural aspects into account in its action under other provisions of the Treaties, in particular in order to respect and to promote *the diversity of its cultures*`. As such, the culture is influenced by the legal provision adopted, for example, on the internal market, completion, agriculture, information society, audio-visual services, intellectual property or common commercial policy.

The Charter of Fundamental Rights of the European Union states that `the Union contributes to the preservation and to the development of these common values while respecting *the diversity of the cultures* and traditions of the peoples of Europe as well as the national identities of the Member States`[23].

Article 22 (Cultural, religious and linguistic diversity) of the Charter indicates that `The Union shall respect *cultural, religious and linguistic diversity*`. Article 25 (The rights of the elderly) defines that `The Union recognises and respects the rights of the elderly to lead a life of dignity and independence and to *participate in social and cultural life*`. Freedom of the arts and sciences is stated in Article 13: `The arts and scientific research shall be free of constraint. Academic freedom shall be respected`.

The CJEU endorses in *Pelham* [24] that `freedom of the arts, enshrined in Article 13 of the Charter, falls within the scope of freedom of expression, enshrined in Article 11 of the Charter`.

At the international level, the creative economy is specifically addressed through two of UNESCO's normative instruments, the *Universal Declaration on Cultural Diversity* (2001) and the *Convention for the Protection and Promotion of the Diversity of Cultural Expressions* (2005)[25]. The latter was the only international legal instrument to be adopted unanimously by the European Union[26].

The right to participate in cultural life has obtained recognition under international human rights law, initially through Article 27 of the *Universal Declaration of Human Rights*. The *Covenant on Economic, Social and Cultural Rights* drawn up by the United Nations and opened for signature in New York on 10 December 1996 stated in Article 15:`the States parties to the present Covenant recognise the right of everyone (a) *to take part* in cultural life; (b) to *enjoy* the benefits of scientific progress and its applications; (c) to benefit from the protection of the moral and material interests resulting from any scientific, literary or artistic production of which he is the author'

Council of Europe *Framework Convention on the Value of Cultural Heritage for Society* (Faro Convention) of 27 October 2005, a "framework convention" which defines general objectives and possible fields of intervention for member State, introduces a key idea: rights to cultural heritage.

3. Access to culture/cultural heritage

Not explicitly stated in primary law of EU, the *access*[27] to culture is mentioned in the secondary legislation (for example: access to culture for all[28] , access to electronic communications networks[29], access to culture as a means of combating social exclusion[30], access to and promotion of culture, and the access to cultural heritage[31], access to the cultural heritage[32]) and in (limited) acts of CJEU (`popular support for the idea of free access to culture`[33], `promotion of linguistic diversity as access to culture`[34]).

The CJEU states that` freedom of the arts, enshrined in Article 13 of the Charter, which, in so far as it falls within the scope of freedom of expression, enshrined in Article 11 of the Charter and in Article 10(1) of the European Convention for the Protection of

[33] Opinion of Advocate General Szpunar delivered on 17 December 2020, EU:C:2020:1063.

[34] Judgment of the Court of 23 February 1999, *European Parliament v Council of the European Union*, Case C-42/97, EU:C:1999:81.

Human Rights and Fundamental Freedoms, signed at Rome on 4 November 1950, affords *the opportunity to take part in the public exchange of cultural, political and social information and ideas of all kinds*`[35].

The term '*heritage*' is generally defined as all cultural goods associated with a 'heritage value', meaning that it is believed that they must be transmitted to future generations[36]. According to Directive 2014/60/EU on the return of cultural objects unlawfully removed from the territory of a Member State, [37] the scope of the term '*national treasure*' should be determined, in the framework of Article 36 TFEU[38].

`Facing challenges…The heritage sector is at a crossroads. Digitisation and online accessibility of cultural content shake up traditional models, transform value chains and call for new approaches to our cultural and artistic heritage`[39].

The Commission Recommendation on the digitisation and online accessibility of cultural material and digital preservation (2011/711/EU) , is the Commission's main policy tool for digital cultural heritage. The launch of *Europeana* in 2008, Europe's digital platform for cultural heritage, was one of the most important stepping stones for digital cultural heritage[40].

The European Commission upholds that digitisation is an important means of ensuring greater *access to cultural* material[41]. Digitisation multiplies opportunities to *access* heritage and *engage* audiences[42].

The most invoked reason for making it accessible is economic. `Those cultural heritage collections and related metadata are a potential base for digital content products and services and have a huge potential for innovative re-use in sectors such as learning and tourism`[43]. Digitised cultural heritage resources are long-term economic assets.

It is also believed that the development of digital technologies such as artificial intelligence (AI), computer vision, deep learning, machine learning, cloud computing, Big Data has brought unprecedented opportunities for digitisation, online access and preservation. Digital technologies can empower and encourage people to participate in culture in a more active and creative way[44]. Digitisation of cultural heritage and the reuse of such content can generate new jobs not only in the cultural heritage sector, but also in other key areas such as the creative industries.

Moreover, due to a rapidly evolving technology, *born-digital cultural heritage* needs to be properly collected, managed and preserved to be accessible and usable in the long run[45].

A key legal document addressing the open access to heritage is Directive 2019/1024 on open data and the re-use of public sector information. `Libraries, including university libraries, museums and archives hold a significant amount of valuable public sector information resources, in particular since digitisation projects have multiplied the amount of digital public domain material. Those cultural heritage collections and related metadata are a potential base for digital content products and services and have a huge potential for innovative re-use in sectors such as learning and tourism`[46].

`Despite recent EU developments, the risk remains that a combination of property, contract, and (improper) Intellectual property claims can be used to exclude the public from accessing and using both material and digital cultural heritage in the public domain`[47]. Herein lies the long-standing international legal and ethical debate: are heritage institutions justified in claiming copyright in reproductions of public domain works to generate much needed revenue, or do such restrictive measures conflict with

educational missions and the rationale supporting a robust public domain?[48]

The national reports pointed to a positive trend among Member States[49] to ensure that *public domain status is maintained after digitisation.*

Important challenges related to copyright are expected to be addressed by the transposition and implementation of the Directive on copyright and related rights in the Digital Single Market (2019/790/EU)

4. (Open) access and (too much ?) IP rights

`We are not entering a time when copyright is more threatened than it is in real space. We are instead entering a time when copyright is more effectively protected than at any time since Gutenberg. The power to regulate access to and use of copyrighted material is about to be perfected. Whatever the mavens of the mid-1990s may have thought, cyberspace is about to give holders of copyrighted property the biggest gift of protection they have ever known. But the lesson in the future will be that copyright is protected far too well. The problem will center not on copy-right but on copy-duty—the duty of owners of protected property to make that property accessible`[50].

The Court is thus one of the promoters and creators[51] of the system of protection of intellectual property rights in the European Union.

Despite the apparent lack of EU competence, through a constitutional approach, the Court of Justice of the European Union has opened up the possibility of the emergence of a European intellectual property system. The case law of the Court of Justice has provided the basis for bringing intellectual property rights into the sphere of legislation at the level of the European Union. It was possible the harmonization of national legislation on intellectual property rights, and more, creating unitary[52] protected intellectual property rights at European level.

In the recent case-law, the Court consider that, in particular in the electronic environment, a fair balance must be found between, `on the one hand, the interest of the holders of copyright and related rights in the protection of their intellectual property rights now guaranteed by Article 17(2) of the Charter and, on the other hand, the protection of the interests and fundamental rights of the public interest`[53].

In the search for a fair balance between various conflicting interests, it is essential to observe what values the Court protects. The relevance of the Court's judgments is no more limited to the internal market, being significant for the private life of each of us and for the way in which law builds social relations in cyberspace.

The (strict) protection of intellectual property rights in the online environment can bring significant risks to the protection of private life as well to the open features of the Internet. The Court thus seems inclined to tip the balance in favour of the protection of other fundamental rights.

Moreover, the CJEU has consistently recalled that `the protection of the right to intellectual property is indeed enshrined in Article 17(2) of the Charter of Fundamental Rights of the European Union. There is, however, nothing whatsoever in the wording of that provision or in the Court's case-law to suggest that that right is inviolable and must for that reason be absolutely protected`[54]

One of the rights considered by the Court is the right to freedom of expression and information guaranteed by Article 11 of the Charter of Fundamental Rights of the European Union.

In Scarlet Extended v. SABAM (C-70/10) [55], the Court concluded that the establishment of a filtering system did not ensure a fair balance between, on the one hand, the protection of intellectual property rights and, on the other, the protection of freedom to carry out a commercial activity and the protection of personal data, as well as their freedom to receive and transmit information. The Court noted that a filtering system `could potentially undermine freedom of information since that system might not distinguish adequately between unlawful content and lawful content, with the result that its introduction could lead to the blocking of lawful communications`.

By its judgment of 29 July 2019, Pelham and Others (C-476/17), CJEU recalled that a balance must be struck between intellectual property rights, enshrined in the Charter, and the other fundamental rights also protected by the Charter, including freedom of the arts, which, falls within the scope of freedom of expression. Accordingly, the Court held that `using the sample for the purposes of creating a new work, constitutes a form of artistic expression which is covered by freedom of the arts, as protected in Article 13 of the Charter`.

[55] Judgment of the Court (Third Chamber) of 24 November 2011, *Scarlet Extended SA v Société belge des auteurs, compositeurs et éditeurs SCRL (SABAM)*, Case C-70/10, EU:C:2011:771.

The Pelham decision can be seen in relation with the doctrine of fair use, from the United States system. On 5th April 2021, the Supreme Court of Justice of the United States of America used the `fair use` doctrine in the case Google vs. Oracle. The Court declare that Google use of the code was covered by the doctrine of "fair use". Google purpose was consistent with that `creative progress that is the basic constitutional objective of copyright itself`[56].

In Telenor (C-807/18 and C-39/19) [57] the Court interprets, for the first time, the EU regulation enshrining 'internet neutrality'. The Court held that, where measures blocking or slowing down traffic are based not on objectively different technical quality of service requirements for specific categories of traffic, but on commercial considerations, those measures must in themselves be regarded as incompatible with Regulation 2015/2120[58].

In the judgment in Ulmer (C-117/13), the Court of Justice stretched the provision that allows libraries to make available works on their terminals[59] in order to grant them also the possibility of digitally reproducing their collections when digitisation was necessary to exercise the exception. The European Court of Justice excluded that this possibility could be ruled out by rightholders' offer to conclude licensing agreements on digitised copies, since this would mean subordinating the fulfillment of the purpose of the exception (to promote the public interest in promoting research and private study, through the dissemination of knowledge) to unilateral discretionary action on the part of copyright owners[60].

The Court observes in Vereniging Openbare Bibliotheken (Case C-174/15)[61] the balance between the interests of authors, on the one hand, and cultural promotion — which is an objective of general interest underlying the public lending exception— on the other hand.

CJEU concludes that `lending carried out digitally indisputably forms part of those new forms of exploitation and, accordingly, makes necessary an adaptation of copyright to new economic developments`[62].

Advocate General Szpunar consider that `books are not regarded as an ordinary commodity and that literary creation is not a simple economic activity`[63]. `Today, in the digital age, libraries must be able to continue to fulfil the task of cultural preservation and dissemination that they performed when books existed only in paper format. That, however, is not necessarily possible in an environment that is governed solely by the laws of the market`[64].

In a recent judgment, in Case C-392/19 VG Bild-Kunst v Stiftung Preußischer Kulturbesitz, the Court concluded that where the copyright holder has adopted or imposed measures to restrict framing, the embedding of a work in a website page of a third party, by means of that technique, constitutes making available that work to a new public. That communication to the public must, consequently, be authorised by the copyright holder.

The Court makes clear that a copyright holder may not limit his or her consent to framing by means other than effective technological measures. In the absence of such measures, it might prove difficult to ascertain whether that right holder intended to oppose the framing of his or her works.

`But something fundamental has changed: the role that code plays in the protection of intellectual property. Code can, and increasingly will, displace law as the primary defense of intellectual property in cyberspace. Private fences, not public law. (…) Since the intent of the "owner" is so crucial here, and since the fences of cyberspace can be made to reflect that intent cheaply, it is best to put all the incentive on the owner to define access as he wishes. The right to browse should be the norm, and the burden to lock doors should be placed on the owner[65].

5. Conclusions

In the EU law, the concept of *culture* underlies, more precisely, *the diversity of* cultures of the member states. This concept is, actually, at the heart of European integration and European law. Consequently, the diversity of culture in the European Union law has a constitutional significance. Article 167(1) TFEU states that `the Union shall contribute to the *flowering of the cultures* of the Member States, while respecting their national and regional diversity and at the same

time bringing the *common cultural heritage* to the fore`.

Digitisation, endorsed by EU institutions, multiplies opportunities to access heritage and *engage* audiences. Although, not *explicitly* stated in primary law of EU, the *access* to culture is mentioned in the secondary legislation and in (limited) acts of CJEU.

Various obstacles when accessing and reusing cultural heritage online, such as a lack of sufficient content, insufficient quality, the copyright and reuse status pose significant legal questions. In recent case-law, CJEU consider that, in particular in the electronic environment, a *fair balance* must be found between, `on the one hand, the interest of the holders of copyright and related rights in the protection of their intellectual property rights *now* guaranteed by Article 17(2) of the Charter and, on the other hand, the protection of the interests and fundamental rights of the public interest`.

Thus, a balance between a high level of intellectual protection and measures to promote learning, culture and knowledge about the European heritage should reconsider the role of museums, archives and libraries in the digital era and propose solutions to ensure that the values they defend (heritage, equity of access) are transposed to networked cultures.

The current debate about open internet has strong implications for fundamental freedoms…and everywhere in the world *the courts* are searching for balance.

REFORM OF THE INSTITUTIONAL SYSTEM OF THE EUROPEAN UNION AFTER THE LISBON TREATY

Andreea-Nicoleta DRAGOMIR[*]
Sergiu Gabriel BERINDEA[**]

Abstract

Over time, what we can define today as the European Union has gone through historical moments that marked nations, united and divided, destroyed and built, but each time the Union has managed to contribute to the fulfilment of the ideals which define it. From Paris to Lisbon it passed through Rome, Maastricht, Amsterdam and Nice - each of these places marking the emergence of a Treaty in the context of the need for a process of adaptation of Member States to the new changes that were taking place.

The entry into force of the Treaty of Lisbon imposed a change not only in terms of the vision on the future of the Union made of 28 states, but also a change of the legal and functional framework of its institutions - composition, competences, role, method of operation are aspects that needed changes in the context of the occurrence of situations such as the last wave of enlargement, not foreseen by other previous Treaties. This means that more than a decade after the entry into force of the Treaty of Lisbon, we will carry out a comparative analysis of the European Union's institutional system with a focus on those changes that mark the reform of each of the seven EU institutions.

Keywords: *Treaty of Lisbon, EU institutional system, European Parliament, European Commission, Council of the European Union.*

1. Introduction

1.1. Treaty of Lisbon

The Treaty of Lisbon, which entered into force on December 1, 2009, gives the Union the necessary attributes in the face of new challenges arising as a result of the fifth wave of enlargement and of the evolution of transformations in areas such as democracy, European protection of human rights, migration, cross-border crime, etc.

There are many divergent views on the origin of this Treaty. Some authors support its emergence following the failure of the Constitutional Treaty draft of 2005, which received a negative vote for ratification from France and the Netherlands. We believe that there are similarities between the provisions of the Treaty of Lisbon and the Constitutional Treaty, in particular as regards the acquisition of legal personality by the European Union, the position of High Representative of the Union for Foreign Affairs and common Security Policy and the possibility created for Member States to leave the Union; but the main distinguishing feature is the way the effects are produced - the Treaty of Lisbon does not replace the existing treaties, but amends the Treaty on European Union and the Treaty establishing the European Community. The need to design a European constitution was argued[1] as a solution for a predictable future for the European Union; This claim was based on the EU's "democratic deficit" manifested by the lack of loyal support of the political community, but one of the aims of the Treaty of Lisbon is to support a deeper Union between its peoples and its focus is on the values inherent in the human being[2]: respect for and promotion of citizens' rights, democracy, the rule of law, equality, etc[3]. The Treaty emphasizes the field of defence and security through the articles introduced in its content, which impose an obligation on states to provide military support to another Member State, if necessary[4].

Therefore, the intergovernmental structure of the European Union seems to be more predictable than the

[2] Moise Bojincă, Gheorghe Marian Bojincă, The European Construction according to the Treaty of Lisbon, Annals of the "Constantin Brâncuși" University of Târgu Jiu, Seria Științe Juridice, issue no. 3/2010, "Academica Brâncuși" Publishing House, pp. 176-177.

[3] These values are established by art.3 of the Treaty on European Union (consolidated version), Official Journal of the European Union C 326/13 of 26.10.2012.

The Union shall offer its citizens an area of freedom, security and justice, without internal frontiers within which the free movement of persons is ensured, in conjunction with appropriate measures on external border control, the right to asylum, immigration and the prevention and combating of crime.

[4] Art.42 (7) TEU: "If a Member State is the victim of armed aggression on its territory, the other Member States shall have towards it an obligation of aid and assistance by all the means in their power, in accordance with Article 51 of the United Nations Charter. This shall not prejudice the specific character of the security and defence policy of certain Member States."

federal structure in a democracy the virtue of which is the motto "United in diversity".

The Lisbon 2009 moment was the answer to the Union's need to prepare for the increase in the number of Member States[5] from the perspective of the operation of the European institutions. Due to its role in many areas of the world market, the Union has sought to adapt to the needs of its citizens – which is why the Treaty of Lisbon has been in favour of promoting and defending the rights of citizens of the Union.

Prior to the Treaty of Lisbon, the legal personality belonged to the European Communities, entitled to a separate patrimony and institutions. The European Union becomes a subject of international law after the Treaty of Lisbon, as a result of which it has acquired legal personality[6]. The same Treaty establishes the jurisdiction of the authority between the EU institutions and the national institutions of the Member States and thus establishes three categories:

- exclusive competences[7];
- shared competences[8] and
- complementary competences[9].

Article 4 of the Treaty on European Union defines the equality of Member States before the Treaties, as well as the prohibition of the Union from engaging in matters concerning the national identity, local and regional autonomy of the Member States. National security remains an area assigned exclusively to each Member State.

The Treaty acknowledges the rights, freedoms and principles of the Charter of Fundamental Rights of the European Union and it considers that it has an equal legal value as that of the Treaties[10], the compliance with these provisions becoming mandatory for all areas in which the European Union acts. The Charter does not fall within the scope of the Treaty, as provided for in the Treaty establishing a Constitution for Europe[11].

It should be noted that all the novelties and changes brought about by the Treaty of Lisbon with implications for the Union's democracy have a long-term impact on its functioning. And the influence of the Member States will be manifested by means of their contribution to the composition of the European Parliament in order to maintain the principle of representation.

The Reform Treaty waived the symbolic acquis provided by the Maastricht Treaty, which contained the Union's anthem, flag and motto, precisely in order to uphold and promote national values within the Union, to the detriment of the European federalist spirit.

The same text introduces, as a novelty, the right of legislative initiative granted to citizens. By virtue of this, at the request of at least one million citizens from a significant number of states, the European Commission may submit a draft in an area[12]. This process aims to ensure coherence and balance in decision-making, depending on the different interests expressed.

We conclude that the Treaty of Lisbon represents a step forward in completing the construction of Europe through the objectives and instruments used, as well as through the introduction of social aspects. To these we can add the need for institutional progress for the functioning thereof for a larger number of Member States[13].

2.The European Parliament[14]

The European Parliament has its primary origin in Article 14 TEU. Each Treaty has contributed to

[5] The last wave of enlargements before the Treaty of Lisbon took place in 2007 (Bulgaria and Romania), after the Treaty, in 2013, Croatia became an EU Member State and the number of Member States reached 28. Currently, the number has decreased to 27 Member States following the withdrawal of the United Kingdom on January 31, 2020.

[6] In accordance with Article 47 of the Treaty on the Functioning of the European Union, Official Journal of the European Union C 326/47 of 26.10.2012.

[7] See Article 3 TFEU.

[8] See Article 4 TFEU.

[9] See Article 6 TFEU.

[10] The Charter of Fundamental Rights of the European Union was established at the initiative of the European Council in 1999 and was officially declared in 2000. It contains 54 articles and a series of civil, political, personal, economic and social rights for both citizens of the European Union and for its residents.

[11] Andrei Popescu, Tratatul de la Lisabona – un tratat modificator și reformator al Uniunii Europene (The Treaty of Lisbon - a treaty amending and reforming the European Union), in Buletinul de informare legislativă, no. 1/2018, p. 7.

[12] Article 11 (4) TEU: “Not less than one million citizens who are nationals of a significant number of Member States may take the initiative of inviting the European Commission, within the framework of its powers, to submit any appropriate proposal on matters where citizens consider that a legal act of the Union is required for the purpose of implementing the Treaties."

[13] Iordan Gheorghe Bărbulescu, Alice Iancu, Oana Andreea Ion, Nicolae Toderaș, Tratatul de la Lisabona. Implicații asupra instituțiilor și politicilor românești, (Treaty of Lisbon. Implications on Romanian institutions and policies), European Institut of România, București, 2010, p. 34.

[14] According to Section 13 (1) TEU: 'The Union shall have an institutional framework which shall aim to promote its values, advance its objectives, save its interests, those of its citizens and those of Member States, and ensure the consistency, effectiveness and continuity of its policies and actions. The institutions of the Union are:

- European Parliament;
- European Council;
- The Council;
- European Commission (hereinafter referred to as "the Commission");
- Court of Justice of the European Union;
- European Central Bank;
- Court of Auditors."

increasing or strengthening the powers conferred on the European Parliament, but the completion thereof had taken place with the entry into force of the Treaty of Lisbon, which has had a major impact[15].

Since 2009, the legislative power in budgetary and political control matters has been strengthened[16] through the legislative procedure of co-decision, under which the Parliament acquires the status of co-legislator along with the Council[17]. By increasing its legislative powers through the ordinary legislative procedure, the Parliament contributes to the adoption of legislation together with the Council in 73 areas[18]. According to the Treaty, the European Parliament is made up of representatives of the citizens of the European Union, forming a close link between voters and elected officials[19]. The maximum number of MEPs is 751, and the seats of each state are allocated based on a proportionally decreasing basis. The withdrawal of the United Kingdom from the European Union could not fail to bring about changes in the composition of the Parliament, so that from February 1, 2020 the number of MEPs was reduced to 705; of the 73 mandates held by the United Kingdom, 27 were distributed to the other Member States[20], and 46 are retained for the completion of the composition of the Parliament in the context of potential accessions of some states to the Union[21]. The Parliament also elects the President of the European Commission.

However, there are also more restricted situations when the European Parliament itself can adopt legislative acts, with the approval of the Council, under the special legislative procedure[22].

Some opinions[23] support the hypothesis of the European imbalance, following the increase of the European Parliament's powers and the weakening of the role of the member states, contrary to the theory of intergovernmentalism, according to which the actions belong to the states, depending on the interest of each of them.

Therefore, the Treaty of Lisbon has increased the powers of the European Parliament, both the legislative and budgetary ones, and has continued the reforms of citizens' legitimacy[24].

3. The European Council

The meetings of the Heads of State and Government of the Member States, organized at the initiative of French President Charles de Gaulle, determined President Valery Giscard d'Estaing to create the European Council as a permanent informal structure, bringing together the Heads of State or Government of the Member States[25].

The Maastricht Treaty included the organization of a meeting of the European Council in the state holding the six-month presidency and set out how it would function.

The European Council is governed by Article 15 of the TEU. The first paragraph excludes the possibility for this institution to enforce legislative functions and outlines the main directions it follows, namely:

- provides support to the Union for its development and
- defines general policy guidelines and priorities.

The role of the European Council in the process of institutional reform was deeply manifested in December 2001 at the European Council meeting in Laeken, where they laid the foundations for the Treaty establishing a Constitution for Europe, a draft which failed and led to the signing on December 13, 2007 of the Treaty of Lisbon.

As a rule[26], the European Council shall act by consensus, a feature assigned as a result of the intended purpose by granting it a stable, well-defined form of EU institution. However, the compromise made to reach consensus may lead to situations that will negatively

[26] Article 15 para. (4) TEU.

answer to the question *is the role of the European Council that of reforming or counter-reforming the Union after Lisbon?*

The office of President of the European Council was officially established by the Treaty of Lisbon, becoming permanent. Prior to 2009, the unofficial position of President of the European Council was held by the representative of the Member State holding the Presidency of the EU Council. The President is currently elected by the European Council by a qualified majority for a term of two and a half years[27]. Starting from December 1, 2019, the current president is Charles Michel, preceded by Donald Tusk and Herman Van Rompuy, both holders of two terms each[28].

The Treaty establishes the following duties for the President of the European Council[29]:

- *chairs and promotes the works of the European Council;*
- *ensures the development and continuity of the works of the European Council, in cooperation with the President of the Commission and on the basis of the works of the General Affairs Council;*
- *acts to facilitate cohesion and consensus in the European Council;*
- *submits a report to the European Parliament after each meeting of the European Council.*

With regard to the enlargement of the European Union, the European Council has played a leading role ever since 1993[30], continuing to actively participate in the accession stages to the Union. Its most recent action took place in March 2020, culminating in the opening of accession negotiations with Albania and the Republic of Northern Macedonia[31].

In conclusion, together with the European Parliament, the European Council is among the privileged of the Lisbon Treaty, in particular in terms of institutionalization and the prerogatives conferred.

4. Council of the European Union[32]

The novelties brought to the Council by the Reform Treaty were aimed at improving efficiency, given the preparation of the institutions for new waves of states to join the Union.

An element of novelty was represented by the need to change the rotating system of EU Council Presidencies, as a result of the above reason. Following the debates, the presidencies will operate based on a three-state system for a period of eighteen months, with each Member State being allocated six months. The responsibility of EU Council Presidencies lies in setting the agenda for European summits[33].

The Council shall cooperate with the President of the European Council, but also with the Commission, when a Member State takes over the Presidency.

The bicameral character of the European Union legislature[34] places the European Parliament in a secondary role, with the Council playing a leading role.

The method of calculating the qualified majority is set out in Article 16 (4) of the TEU "*As from 1 November 2014, a qualified majority shall be defined as at least 55 % of the members of the Council, comprising at least fifteen of them and representing Member States comprising at least 65% of the population of the Union. A blocking minority must include at least four Council members, failing which the qualified majority shall be deemed attained. The other arrangements governing the qualified majority are laid down in Article 238(2) of the Treaty on the Functioning of the European Union*[35]". Thus, qualified majority voting became necessary for another 21 areas[36], of which we specify: justice and foreign affairs, the union budget, intellectual property, Economic and Monetary Union, etc. Areas such as taxation, security, social protection remained subject to unanimous voting[37].

In accordance with Article 16 (8), the Council *shall meet in public when it deliberates and votes on a draft legislative act.*

5. European Commission[38]

By virtue of Article 11 (3) TEU, the Commission shall carry out broad consultations with parties concerned in order to ensure that the Union's actions are coherent and transparent[39].

The Commission has competence in the field of taxation, materialized by the monitoring of Member States' deficits and by the issue of warnings when required.

[38] The regulation is contained in Article 17 TEU.

[39] Francesco Maiani, Citizen participation and the Lisbon Treaty: a legal perspective, Studies in Public Policy, Centre for the Study of Public Policy, Aberdeen, 2011, p. 3, available at: https://core.ac.uk/download/pdf/77157077.pdf.

The legislative initiative remains the sole responsibility of the European Commission and is accountable to the European Parliament.

The establishment of the Commission is carried out by virtue of the principle of representativeness, namely one commissioner from each Member State[40]. The Commission is composed, in addition to the European Commissioners, of the President and the High Representative of the Union for Foreign Affairs and Security Policy, a position introduced in 1999 by the Treaty of Amsterdam.

Under Article 18 (2) and (3), the High Representative of the Union for Foreign Affairs and Security Policy "shall contribute by proposals to the development of that policy which he/she shall carry out as mandated by the Council. It shall act in a similar manner with regard to the common security and defence policy" and shall chair the Foreign Affairs Council. He/she shall act as Vice-President of the Commission and shall be responsible for foreign affairs. The appointment shall be made by the European Council by a qualified majority vote, following a vote of approval granted by the European Parliament.

In the performance of his/her duties, the High Representative shall be assisted by the European External Action Service. The EEAS is under the authority of the High Representative and supports his/her actions. The role of the EEAS shall be to assist the President of the European Council, the Commission and its members in matters relating to foreign affairs.

It should be noted that the formation of the Commission takes place after the election of the European Parliament every five years.

6. The Court of Justice of the European Union[41]

The first jurisdiction body appeared in 1952, two years after Robert Schuman's Statement, it was called the Court of Justice of the European Coal and Steel Community and was composed of seven lawyers and two Advocates-General. The Court provided the remedy against decisions issued by the High Authority and was based in Luxembourg.

In 1957, following the entry into force of the Treaty establishing the European Atomic Energy Community and the Treaty establishing the European Economic Community, the Court of Justice of the European Communities was established.

Over time, the only jurisdictional institution at EU level has become the Court of Justice of the European Union (CJEU), and according to Article 19 (1) TEU "*it shall ensure that in the interpretation and application of the Treaties the law is observed*".

The Treaty of Lisbon provides that the CJEU shall comprise:

- Court of Justice;
- The County Court and
- Specialized courts[42].

In terms of composition, the Treaty intervened, establishing the existence of one judge for each Member State at the level of the Court of Justice and of at least one judge from each Member State for the County Court[43]. In addition to the Court of Justice, Advocates-General are also included.

Pursuant to Article 19 (3) TEU, the CJEU decides in accordance with the Treaties:

a) on actions brought by a Member State, an institution or a natural or legal person;

b) as a preliminary action, at the request of national courts, on the interpretation of Union law or the validity of acts adopted by the institutions, and

c) in the other cases provided for in the Treaties.

Although it has increased the powers of the CJEU, the Treaty does not confer powers on the provisions on the common foreign and security policy[44].

The Court of Justice of the European Union has promoted European integration by creating relevant case law, insofar as it ensures due observance of the national and constitutional rules of the Member States.

Therefore, in carrying out its duties of interpreting and protecting the uniform application of Union law, the Luxembourg Court is the highest judicial institution in the European Union[45].

7. European Central Bank

Following the Treaty of Lisbon, the European Central Bank has become an official and independent institution with extended jurisdiction over all Member States[46] and with legal personality. Along with the national central banks, the ECB forms the European System of Central Banks, and together with the central

[40] This principle worked until 2014, and in the event of a Union of 27 states, the Commission would consist of 18 members.

[41] The Court of Justice of the European Union is governed by Article 19 TEU.

[42] The Treaty of Nice uses the name of courts, not of specialized county courts. Set up by the Treaty of Nice, this substructure of the CJEU functioned until 2016, after the transfer of disputes to the County Court in 2015; its powers have been integrated into the County Court.

[43] From September 1, 2019, the County Court shall operate with two judges from each Member State.

[44] Maria Popescu, Lisbon Treaty – the arhitect of a nes European institutional structure, Juridical Tribune Journal, vol. 3, nr. 1, București, 2013, p. 111.

[46] Nam Kook Kim, Sa-Rang Jung, op. cit., p. 54.

banks of the euro area countries, forms the Eurosystem[47].

The monetary jurisdiction of the European Central Bank also extends to non-euro area countries, even if the monetary policy towards these states has been postponed until they adopt the euro currency.

Decisions are taken in a qualified majority voting system, which ensures efficiency in solving the identified problems[48].

The European Central Bank shall be consulted by the European Council with a view to adopting a decision amending the banking rules laid down in the TFEU, as well as on any act falling within its area of competence[49].

The European Central Bank acts for the security of monetary policy at Union level through multiple actions the role of which is either of prevention or of financial stability, namely the possibility of adapting the financial system to disruptive situations - in this situation, the ECB monitors financial system fluctuations with the aim to identify dangers and uncertainty in order to identify the measures needed to prevent certain risks.

The ECB supports the financial infrastructure, in particular that of the euro area Member States, by developing systems capable of ensuring the safe and rapid transfer of cash, securities and guarantees[50].

Article 127 TFEU defines the role of the European System of Central Banks and assigns it the duty of maintaining price stability. The role of the Governing Council of the European Central Bank is to maintain the inflation rate, set at 1.2% in 2019, for the Eurozone countries[51].

8. European Court of Auditors[52]

In order to protect the financial interests of the Union, the European Court of Auditors has been established as an institution.

The Court of Auditors of the EU has no decision-making power, and its duties concern the detection and prevention of fraud by communicating the information to the bodies empowered to act.

The European Court of Auditors shall report annually to the parliaments of the Member States, the European Parliament and the Council. It shall consist of one national from each Member State, who pursues activities in the general interest of the Union.

Although it is not part of the decision-making body of the Union, it is an important institution, and its contribution is materialized by the characteristic autonomy, which guarantees it the fulfilment in good conditions of the duties conferred[53].

In its latest annual report[54], the Court concludes that acts affecting EU spending are at 2.7% level, while high-risk spending accounts for more than half of spending made. As a result of the effects of the COVID-19 epidemic, EU spending will be much higher in the future, which is why the European Council has combined the Union's 2021-2027 budget with an instrument called the Next Generation EU[55], in order to restore the social and economic effects which will appear.

We conclude that the role of the Court of Auditors is necessary in a Union in which financial actions have developed considerably and are indestructible; on the contrary, the Union's financial and fiscal control would be affected.

9. Conclusions

Reforms of the Union's institutional system have been taking shape since the middle of the twentieth century, when the initiatives of the founders of the European Union began to materialize in concrete forms.

History supports the evolution of man through the way of adapting to what is to happen, based on the experience gained. The Treaty of Lisbon determines the evolution of the institutional framework according to the present time, with a greater predictability, unlike the previous Treaties, but insufficiently current for the times to come. A first Treaty that gives priority to the principles of democracy, to social values and to the rights of European citizens, proven over a decade to be the necessary tool for the strengthening of peace and social order.

THE REVOLUTION OF TUDOR VLADIMIRESCU – 200 YEARS OF NATIONAL REBIRTH

Cornelia Beatrice Gabriela ENE-DINU*

Abstract

With the Revolution led by Tudor Vladimirescu, the Romanian nation joined the European nations' movement to affirm their sovereign rights. By their sustained actions and by adhering to the novel ideas emerging across Europe at that time, a generation of Romanian patriots coming from all Romanian territories contributed to the ascent of the Romanian nation and the fulfillment of its political, cultural, social and economic aspirations. The period of national rebirth helped prepare the internal changes in the Danubian Principalities that were brought about by the events in the second half of the 19th century. It was the period when the domestic forces in the principalities determined the goals of their actions and how to fulfill those goals. The Romanian national movement was therefore gradually defining its own way of affirmation and the purpose thereof: achieving national unity.

Keywords: *revolution, rights, Romanian nation, principalities, national movement, Phanariote regime, domestic rule, oppression, taxation obligations, Ottoman Empire, Phanariotes, privileges, political aspirations*.

1. Introduction

The early 19th century saw Wallachia and Moldavia undergoing a severe political, economic, social and cultural crisis. The Phanariote regime, which had been established more than a century before, proved to be so burdensome and disconnected from the interests of its subjects that it had to ever increasingly cope with their hostility. The benefits that came with the appointment on the throne gave rise to fierce competition among the Greek aristocratic families in the district of Phanar. The rivalries for the throne continued even after the Porte fixed the term of rulers at seven years and the number of families entitled to rulership at four. Those matters were governed by the edicts of 1802 and 1819. Taking office with huge debts incurred with the very efforts to obtain the appointment, the Phanariotes were first and foremost concerned with paying off those debts. Then, they had to satisfy the Porte's pecuniary claims and pursue the enrichment of their relatives, who offered them support with the Sultan and the Ottoman dignitaries. For example, Alexandru Sutu came to Wallachia in 1818 with a debt of 4-to-5 million piasters and an 820-strong entourage, including nine children and about 80 relatives, each wanting to get rich[1]. The means to make money were as varied as they were harmful for the country. Office peddling, income leasing, awarding trade licenses, aristocratic titles or other favors were among the most common and resulted in the diminishing of the authority of the ruler and the other Government institutions. According to some assessments, the same Alexandru Sutu earned almost 29 million piasters in his two years of rule (1818 - 1820); his predecessor, Ioan Caragea, had left the office in September 1818 after having made an immense fortune through the methods listed above. Besides the obedience of the Phanariote regime to the Porte, which would allow such systematic despoiling by the rulers through new taxes and levies, there were also the abuses by the pashas governing the Danube forts, who would often carry out raids in Wallachia, looting and setting everything on fire. For instance, in December 1800, the troops of the Pasha of Vidin, Pasvan-Oglu, plundered Oltenia and burned the city of Craiova almost entirely; the ransacking raids repeated in the winter of 1801 - 1802, when Craiova was again set on fire, and the towns of Targu Jiu and Targu Ocna were pillaged by the Pasha's aide, Manaf Ibrahim. As if those were not enough, a major earthquake occurred in October 1802, when the Coltea Tower collapsed in Bucharest, and, in September 1804, a fire burned down the Princely Court and much of Bucharest; more destruction was brought about by the Russo-Turkish War from 1806 until 1812, while in 1813 "Caragea's Plague" took 70,000 lives in just one year. The multitude of direct and indirect levies (which increased following their lease) and the abuses in collecting such levies were causing a constant state of uncertainty in regard to the people's wealth and property; the taxpayers fleeing would result in the so called "dismemberment of villages"[2], as inhabitants left them and settled elsewhere. The country's treasury, which in most of the cases would be similar to the ruler's treasury, would barely cope with the Porte's ever increasing demands.

On the eve of the Revolution of 1821, of Wallachia's total budget of 5,910,000 thalers, 2,083,000 thalers were earmarked for the Sultan and

Ottoman dignitaries, 1,394,000 thalers were allocated to the Prince, and the remaining amount accounted for wages of the state officials or payments for various services. So, the cost of rulership and Ottoman suzerainty amounted to 60% of the country's treasury. The culture of the Danubian Principalities was undergoing a marked process of "greecification". Most of the writings were printed in Greek. Many Romanian boyars endeavored to learn the Greek language, adopted Greek customs and dressed according to the Greek fashion. Greek would be used in the official documents, in higher education and in the printed law codices. During the Phanariote regime, there were attempts to introduce Greek as a second language besides Romanian. A number of Greek and Turkish words entered the vocabulary. Political intrigue, favoritism and corruption, servility were practiced in the Romanian principalities the same as in Constantinople. It is equally true that, through the Greeks, the Danubian Principalities also came into contact with the French ideas and culture, but that happened through the agency of their language, and not through the filter of our own Romanian language and spirit.

The Revolution of Tudor Vladimirescu happened to put an end to this sort of a regime and to reinstate the principalities' old rights. This is why this event is thought to be the beginning of the Romanians' National Rebirth. The immediate effect of the revolution in terms of national revival was the return to domestic rulership and the ousting of foreign (Greek) elements from the internal matters of the principalities. The involvement of the local aristocracy in the revolutionary surged over the next decades by conceiving domestic institutional reorganization projects based on new principles: separation of powers, accountability of state officials, rule of law, removal of economic barriers, greater role for education in the national language. This renewing process had to face and overcome a number of conservative positions, both domestic and foreign, but was permanent in nature and became prevalent, culminating with the Revolution of 1848[3].

2. The European Context of the Revolution

The Revolution led by Tudor Vladimirescu unfolded against a historical European background dominated by the clash between the monarchic legitimism and conservatism on the one hand, and the new liberal ideas generated by the French Revolution on the other hand. Napoleon's attempts to establish a new European order, based on the constitutional sovereignty of nations, led to a coalition between the monarchic powers (Austria, Prussia, Russia, England) against him, giving rise to the long series of wars throughout 1805 – 1815.

After the defeat and exile of Napoleon on the Island of St. Helena, the victorious European powers met at the Congress of Vienna (1814-1815) and, with the decisions made there, they reinstated the former absolute monarchic order on the continent. In September 1815, Austria, Prussia and Russia signed in Paris the document giving birth to the "Holy Alliance", an agreement directed against any political movement that could jeopardize the principle of "monarchic legitimacy". It underlined its conservative purpose to maintain the political status quo that had been in place before the French Revolution. The liberal & constitutional movement continued to act against the resolutions of the Congress of Vienna and the "Holy Alliance", condemning the absolute power of monarchs and advocating for the separation of the branches of government[4]. This movement's main purpose was to restrict the power of rulers by adopting constitutional acts to secure civil rights and freedoms. To that effect, the revolutionary movement led by Rafael Riego started on January 1, 1820 in Spain (where the Bourbon dynasty had been restored in 1814), following which King Ferdinand VII was forced to reinstate the Constitution of Cadiz of 1812. Following the intervention of French troops in 1823, the movement was defeated, the Constitution was repealed and absolute monarchy was restored.

Similar revolutionary movements also took place in the Italian states (Piedmont, Naples) in 1820 – 1827, as well as in Portugal (1820 – 1821), with the latter introducing constitutional monarchy in 1822. As Spain and Portugal were facing liberal & constitutional movements domestically, their colonies in Latin America started declaring their independence from their parent states (1815 – 1830), giving rise to the independent national states in South America.

Concurrently with the events in Western and Southern Europe in the early 19th century, in the Balkans, the Ottoman Empire was barely coping with Russia's expansionist tendencies and with the national emancipation movements among the peoples in this region. The rebellion of the Serbs started in 1804 (initially against the janissaries who held vast domains), which subsequently turned into a national movement for liberation from the Ottoman rule. Russia, which dubbed itself as the protector of the Balkan Slavs, stepped in and, by supporting the war of 1806 – 1812, determined the Porte to sign the Treaty of Bucharest, which granted Serbia domestic autonomy and a general pardon for all those who had fought against the Ottoman Empire. However, the Turks occupied Belgrade the next year and established a

regime of fierce retaliations. The Serbs took up arms once again in 1815, and, upon Russia's intervention (which was at the time one of the victorious powers against Napoleon), the sultan recognized Milos Obrenovici as Prince of Serbia, which became an Ottoman province with limited autonomy.

The Greek also started organizing their national movement in the same period by founding a secret (Freemason-like) society called the "Eteria." Established in Odessa in 1814, this society created a vast network of branches (*ephories*) in Russia, in the Danubian Principalities and, of course, in Greece. In its endeavor to call upon the Greeks to take up arms against the Ottoman regime, the Eteria hoped for the support of Russia, which was also interested in weakening the Porte's power. The main advisor to Tsar Alexander I was Greek national Kapodistrias, whom the eterists intended to elect as leader of the society. However, the potential complications of such an appointment determined them to choose Alexander Ypsilanti as Ephor General of the Eteria, who was the son of former ruler of Wallachia Constantine Ypsilanti.[5]

The eterists placed great importance on the Danubian Principalities in their action plan, as indicated by numerous Greek boyars in the Principalities joining the movement. There were *ephories* in the cities of Iasi, Galati and Bucharest, also including some Romanian boyars. However, the purposes of the Eteria were not the same as those of the Revolution of Tudor Vladimirescu, as we shall see. The Phanariote regime, represented by the Greek aristocracy, had stirred much resentment in the Principalities, where it had been the cause of institutional degradation for more than one century. Those circumstances of revolutionary political, social and national turmoil among the European peoples constituted the background of the Romanian Revolution of 1821, led by Tudor Vladimirescu.

3. Domestic Political and Social & Economic Background

The Revolution of 1821 started under the circumstances of a severe crisis seen by the Romanian society in the Principalities as a consequence of the Phanariote regime. Throughout their rule, the Phanariote princes had instituted practices such as office peddling, political instability, servility and corruption, economic monopoly and property uncertainty, greed and abuse by the state officials. In spite of all the reforms initiated throughout the second half of the 18th century and in the first two decades of the next century, the Phanariote regime proved to be increasingly burdensome and contrary to the country's best interests. When they received their appointment decrees, Phanariote rulers would arrive in the principalities accompanied by hosts of relatives and creditors, to whom they granted the most lucrative positions. Titles and offices would be sold, heavy and abusive taxes would be levied, with severe consequences to the taxpayers. The Phanariote rulers would thusly gather and leave the country with vast fortunes, thereby stripping the principalities of significant financial resources. Displeased with the Phanariotes' policies, the local aristocracy submitted memoranda with the Porte citing all wrongdoings and asking for the reinstatement of the Principalities' former entitlements. For example, in the memorandum sent to the sultan in 1818, the boyars demanded that they be granted right to make the appointments for the vacant church positions, that the official positions in the principalities only be taken by natives, and that the Phanariote rulers be compelled to take with them all Greeks they had brought along, upon the completion of their terms.

The Phanariote regime had created a general state of discontent in Wallachia and Moldavia. The Porte was still hesitant to permanently remove Phanariotes from rulership. However, their disrepute and abuses did determine the sultan to issue the edict of 1819, whereby the right to take the throne of the Principalities was restricted to four Phanar families: Skarlatos Kallimahis, Alexandros Soutzos, Michael Soutzos and Demetrius Mourouzi.

The economic state of the Principalities had been worsened by the excessive taxation policies, with ever increasing taxes and levies. Boyar Dinicu Golescu wrote that "Wallachian tributaries living on that beautiful land are so poor and miserable that any foreigner could not possibly believe their misfortune[6]." A regulation on tax obligations was enacted in 1783, introducing a taxation unit called "*lude*". The "*lude*" consisted of a variable number of taxpayers (4, 6, 8 families), who were held jointly liable to pay the tax, which curtailed individual drive and discouraged entrepreneurship. Although the state treasury saw significant income from levies collected from taxpayers, most of it was used to meet the payment obligations towards the Porte and the Ottoman dignitaries, to sustain the forts on the Danube and the troops stationed there, to maintain the Princely Court and to pay the wages of the state officials. On the other hand, expenditure for public works (roads, bridges, urban buildings), constructing cultural, healthcare or manufacturing venues were minimal.

Economic growth was very slow, although the conditions were met for its development. This was prevented not only by the abuse and greed particular to

Însemnare a călătoriii mele, Constantin Radovici din Goleşti, făcută în anul 1824, 1825, 1826 (An Account of My Travels, Constantin Radovici of Golesti, in the Years of 1824, 1825, 1826), Minerva Publishing House, Bucharest, 1977, pages 75-78.

the Phanariote system, but also by the obligations and contributions to the Porte, both monetary and in agricultural products. Wallachian boyars indicated that, from 1812 through 1821, Wallachia had to make cash or in-kind payments amounting to approximately 63 million lei to the Porte, with Moldavia contributing a similar amount. The Romanian Principalities also saw significant loss because of the Ottoman monopoly on their foreign trade. The agricultural products purchased from the Principalities at ridiculously low prices would suffice to supply Constantinople for 4 months a year. Furthermore, this obligation to supply the Porte would double when it was engaged in wars with Russia or the Habsburg Empire.

The Phanariote regime was also in stark contrast to the novel elements emerging in the Danubian Principalities. First of all, it is worth mentioning the expanding contacts between the Principalities and the Western civilization, particularly the French one. The establishing of Russian, Austrian and French consulates in Iasi and Bucharest made it possible for closer ties to appear between the Romanian and European worlds. News travelled faster and more extensively from one side to another, there was a greater interest in the events on the continent on the part of the Romanian boyars, writings in French appeared in and about the Principalities. After one such paper – the first one, in fact – was published in 1777, thanks to Jean Louis Carra (a Jacobin, who was executed in 1793), and republished in 1789 and 1793, more writings containing information about the Danubian Principalities are printed in the early 19th century. The French publications brought to Iasi or Bucharest in various ways disseminated the ideas of the French Revolution, and the Romanian boyars would closely follow the unfolding of Napoleon's wars with Europe's monarchs. Many sons of native boyars studied in the major Western cultural hotspots and came in contact with the novel liberal ideas. The cities in the Principalities grew particularly important, as they became the main cultural and economic venues. Schools, printing works, workshops, manufactory shops represented drivers for the modernization of society. Cities were also important commercial centers, with markets becoming stimulators of economic activities.

The limitation of the Ottoman monopoly (by the Treaty of Kuchuk-Kainarji of 1774) facilitated the circulation of agricultural products from the Principalities to the European markets. In order to increase the volume of marketed products, landowners started introducing work quotas for the corvée laborers – the "*nart*"[7] – therefore better harnessing their labor day obligations. Consequently, the role of agricultural land began changing from representing a means of subsistence to becoming a driver for the circulation of goods (agricultural products).

Furthermore, the Caragea Law of 1818 strengthened the boyars' authority to arable land, substituting the feudal type of possession (granted by the will of the lord) with full ownership.

However, those reforms occurred under a failing political regime that was less conducive to more profound changes in line with the modern era. The general discontent in the Principalities favored the start of the revolution and provided it with the required social support. In his proclamations, Tudor Vladimirescu called upon all social ranks, all inhabitants, "kinsfolk of whatever ancestry", to take part in his endeavor.

While it was first and foremost caused by the poor domestic situation of Wallachia, the Revolution of 1821 was also facilitated by external drivers: the spread of the ideas of the French Revolution, the European liberal movements, the national liberation movements in the Balkans, the decay of the Ottoman Empire. This latter element was considered by Tudor Vladimirescu during the Revolution in determining the boundaries of its agenda.

4. Program of the Revolution of 1821

The agenda of the revolution was reflected in the many papers and documents that were developed at its various phases: proclamations, letters, calls to action, agreements made with and demands addressed to the local boyars.

The first manifesto of the revolution was the Proclamation of Pades (which was in fact conceived at Tismana), which was presented to the crowd that had gathered there and which was a call to all inhabitants of Wallachia to join the movement against the evil "bestowed onto us by our masters, both political and churchly." That document of January 23, 1821 merely showed the reasons for Tudor's actions, as well as one of the methods to rectify the country's situation: "let it be that those that can do good be chosen from among our leaders," who should work "with us all for the good of all" ("in the benefit of the community"). Furthermore, the crowd and the rest of the country's inhabitants were asked to "sacrifice the ill-gathered fortunes of the tyrant boyars," but do no harm to the estates of those joining the cause of the revolution.

Chronologically speaking, another document was the letter sent to the sultan through the agency of the Pasha of Vidin, which indicated that the movement was not against the Ottoman Empire, but only for the good of the people and the country. It also presented the poor condition of the country, the complaints of which could not have reached the sultan's ears. In order to prevent a military intervention by the Porte, the letter asked that "a trustworthy man be dispatched" to "do us justice and order." Letters with similar contents were also sent by Tudor Vladimirescu to the tsar and to the emperor at

[7] Cornelia Ene-Dinu, *Istoria statului şi dreptului românesc* (*History of the Romanian State and Law*), Universul Juridic Publishing House, Bucharest, 2020, page 182.

Vienna, indicating the reasons for his actions. In doing so, Tudor showed caution, as well as proper knowledge of the then-current realities of Europe, where the Habsburgs and Russia set the political tone.

Other ideas related to the revolutionary movement can be inferred from Tudor's correspondence with the boyars in Bucharest throughout February 1821. In one of his letters, he urged the boyars "to become true patriots, and not the foes to the motherland that you have been so far." In a reply to *Vornic* Nicolae Vacarescu on February 11, 1821, he stated that "the Motherland is the people, and not the league of spoliators."

The most important manifesto of the revolution was that entitled "Demands of the Romanian People" and was developed in February – March 1821. The document had three versions (containing 20, 33 and 48 items, respectively) and was the most comprehensive program of the revolution. It included modern principles for the internal organization of Wallachia. The fundamental idea that can be derived from its text was the removal of the Phanariote regime and could therefore be applied to Moldavia as well. In fact, the document demanded the enforcement of the principle of the sovereignty of the people, who sustained the ruler's authority. According to the document, the ruler had executive powers, while the "People's Assembly" represented the legislative power. The ruler was bound to comply with the will of the people ("the people's bidding") and "to take an oath to safeguard it to the letter." Another principle was the abolishment of privileges based on family origins. The program stated that the appointments to state offices "should not be made for money and should be based not on lineage, but on worthiness." It also stipulated the abolishment of the classes of peasant servants known as "*poslușnic*" and "*scutelnic*". The manifesto further included significant reforms in the areas of justice, administration, taxation, trade, public education, army and public order. As regards the legal system, it called for the enforcement of legal codes mandatory to all, therefore allowing for the removal of arbitrary decisions and the establishment of domestic stability. The administrative reforms targeted the simplification of the administrative system by abolishing positions that increased treasury expenditure. In the taxation area, the document spoke of using a portion of the Church's income to fund the schools and the army, and covering the cost of enhancing the streets of Bucharest from customs duties. The taxes were to be levied in four installments, and any tax increases were to be made by resolutions of the People's Assembly. The document further required the expansion of the network of schools, which were to be maintained by the church authorities and provide education to children of poor families. Another major item of the manifesto was the organization of the army, which was to consist of 4,000 *pandurs* and 200 *arnauts*, who would be hired on pay and exempted from paying taxes. In order to enhance trade, the document asked for the abolishment of internal customs duties and the lowering of those on the borders, therefore facilitating the export of products from the Principalities.

As to the legal status of the Principalities, the program of the Revolution of 1821 demanded that their autonomy be observed and guaranteed by international documents adopted by Russia and the Habsburg monarchy. This had been an older demand by the Wallachian and Moldavian boyars, which had been presented to the same powers as far back as in 1772, at the Congress of Focsani.

Other documents containing items of the revolution's program were the proclamations given by Tudor Vladimirescu to the people of Bucharest. One first proclamation was probably delivered on March 8, 1821, but its contents is unknown. The ideas contained therein were however reiterated in the second proclamation to the people of Bucharest, issued at Bolintin on March 16, 1821. It urged the inhabitants of Bucharest to join him "in gaining the rights benefiting the entire community." The third proclamation was more comprehensive, and was addressed to the people of Bucharest on March 20, 1821, out of Cotroceni. It restated the causes for his actions – "the loss of our privileges" and "the loathsome despoliations" – and also included a call to join the revolution for "the gaining and rebirth of our rights."

So, the programmatic documents of the Revolution of 1821 included a whole range of demands regarding the reorganization and modernization of the political, social and economic structures. A constant presence was the demand regarding the redeeming of "the country's entitlements", which – together with the other items on the agenda – meant not just a return to a national political regime, but also a change in its substance, a third, more comprehensive version of which was made known to the people of Wallachia in early April 1821.

We can therefore conclude that it was the attempt to start making some changes in the internal organization of the principality, in the spirit of the revolution's programs. However, those changes did not gain amplitude due to the conservative ideological and political limitations of both the domestic and external legal status of Wallachia.

It is worth noting that one of Tudor Vladimirescu's advisors during the revolution was Gheorghe Lazar, a well-known scholar and founder of the education system in the Romanian language. He urged the leader of the movement to continue negotiations with the Porte and not let himself be deluded by Russia's promises to intervene, as made by Alexander Ypsilanti.

5. End of the Revolution and Its Significance

The revolution unfolded under adverse domestic and international circumstances.

Domestically, the political aristocratic and ecclesiastic classes were not in favor of such profound changes as those included in the revolution's agenda. Although many Wallachian boyars were displeased with the Phanariote regime, the fear of an intervention by the suzerain power made them hostile to an overt action against the Greeks and the Phanariote rulers. That was why some of the boyars took refuge in Brasov in an act to show their lack of support for Tudor's endeavor.

However, the end of the Revolution of 1821 was not caused by the lack of support from the local aristocracy, but by the Porte's decision to send troops in the Principalities and by the eterists' attitude towards the leader of the Romanian revolution. The Porte's decision was greatly expedited by the position adopted by Russia, which, as we have seen, manifested its disproval of both movements. As early as the start of April, the Ottomans had taken positions on the left bank of the Danube, opposite of the Silistra, Ruschuk and Vidin forts. One month later, in early May, the Ottoman troops advanced in Wallachia in large numbers. Three columns headed for Craiova, with two more dispatched to Bucharest and one towards Moldavia. They were under the command of Cara Ahmed Efendi, lieutenant to the Pasha of Silistra.[8]

The failed negotiations with the pashas along the Danube, the superiority of the Ottoman forces and the positions in the capital, which were inadequate for armed resistance, made Tudor Vladimirescu withdraw from Bucharest. Since the post road through Slatina was threatened by the Turks, the retreat was made via the road to Pitesti (May 15, 1821). The Eterist act of suppressing Tudor Vladimirescu occurred during this phase of the events. Taking advantage of the discontent of some of his captains (including Dimitrie Macedonski and Hagi Prodan) with his excessive disciplining of the *pandurs*, Tudor Vladimirescu was arrested at Golesti by a band of eterists under the command of Giorgakis Olympios. Accused of having made a deal with and, therefore, betraying the fight against the Ottomans, he was taken to Targoviste and assassinated by Vasilis Caravias and several other eterists during the night of May 26/27, 1821. His mangled body was thrown in an abandoned water well. The assassination of Tudor Vladimirescu – a despicable act of revenge – was entirely unwarranted, as the accusations against him were a misinterpretation of his negotiations with the pashas along the Danube.

As indicated by the documentary evidence, those negotiations had an entirely different purpose: getting the Porte to replace the Phanariote rulers, which only the sultan could decide at the time. The eterists chose the worst way to settle their report with Vladimirescu. Given the Ottoman invasion, the most appropriate solution would have been to work with the *pandur* forces under his command. Left without a leader, the *pandur* army fought one initial battle at Zavideni, on the Olt river, on May 26, 1821. Under the Ottoman pressure, the *pandurs* retreated to Dragasani, where they fought another battle on May 29, 1821, suffering major losses. The eterists fought the decisive battle also at Dragasani, on June 7, 1821, but were defeated. Ypsilanti and some of his close associates retreated to Transylvania and then to Austria (aided by Russia in obtaining the approval of the Austrian authorities). The remaining eterist troops, under the command of Yiannis Pharmakis and Giorgakis Olympios, withdrew to Moldavia in an attempt to reach Russia through Bessarabia. A battle was fought at the Secu monastery, where Olympios resisted the Ottoman attacks for a while, then, not being able to carry on fighting, he set the gunpowder on fire and was blown up together with his few remaining troops. One last fight took place at Sculeni, on the Prut river, where the eterists were definitively defeated; Yiannis Pharmakis was taken prisoner and executed at Constantinople. The *pandur* bands led by Dimitrie Macedonski and Hagi Prodan took refuge at the monasteries in Northern Oltenia, whence they organized attacks against the Ottoman troops. In the battle at Slobozia, on July 17, the *pandurs* were however defeated, and Papa Vladimirescu and Ghita Haiducu were taken prisoners. After being taken across the Danube, nothing else was heard of them. Macedonski and Prodan managed to take refuge in Transylvania. By August, the Ottoman forces were in control of the situation in the Principalities. Their presence there extended until 1822.

Thus ended the first major Romanian action of the 19th century, which was intended to put an end to a political regime that was strange to the national interest and contrary to progress. With his proclamations, Tudor Vladimirescu voiced the aspirations of national rebirth and openness to progress in the two Romanian principalities. In April 1821, he urged the Wallachian boyars to get in touch with the Moldavian ones, so that "we can equally gain the rights for these principalities, by helping each other." The Revolution of Tudor Vladimirescu had a clear anti-Phanariote nature, as the regime enforced by the Porte was held accountable for the loss of the "country's just rights." Throughout the events that unfolded, Tudor Vladimirescu also spoke in multiple instances against the native boyars who accepted the Phanariote regime, urging them to "become patriots" and support him in his actions. The agenda of the Revolution of 1821 was comprehensive, stipulating reforms in all areas of society, with some of them applied while Tudor Vladimirescu and the Council (the "*Divan*") ruled the country. It is worth noting that some items in the programmatic documents were also included in the boyars' memoranda submitted to the Christian powers or the Porte on the occasions of their conferences, starting the Peace Congress of Focsani.

[8] Pascu Vasile, Istoria modernă a românilor (1821-1918) (The Modern History of Romanians (1821-1918)), Clio Nova Publishing House, Bucharest, 1996, page 21.

Furthermore, demands of the Revolution of 1821 continued to be supported by the native aristocracy after the removal of the Phanariotes, with the enlightened boyars establishing a "national party." The main consequence of the revolution was the return to native rulership. Tudor Vladimirescu's sacrifice led to the abolishment of a regime that had become unbearable due to its consequences on the principalities. As early as in February 1821, the Porte had appointed the new ruler of Wallachia, Skarlatos Kallimahis, who was also a Phanariote, but, after the revolution, neither him, nor other Phanariotes were ever appointed as rulers. The return to the national political regime meant not merely a return to the appointment (and then election) of princes from among the native boyars, but also the beginning of Romanians integrating in the modern European world. Historian Alexandru D. Xenopol wrote of the year 1821: "... indeed, the start of a new age in the history of the Romanian people dates back to that time."

6. Conclusions

The Revolution of 1821 led by Tudor Vladimirescu represents the starting point of our modern history, a time when the Romanians spoke up and took action for the affirmation of their national rights and the modernization of domestic institutions. Originating in the political, social, cultural and economic crisis of the Phanariote regime, the revolution was the beginning of our national rebirth, proving the Romanians' aspirations for modernity and progress. The agenda of the revolution, the application of which was limited by the domestic and foreign conditions in which it unfolded, aimed at turning deem transformations in the Romanian society into reality: abolishment of personal privileges and servitudes, equality before the law, affirmation of the nation's sovereignty, political, administrative and taxation reorganization, true domestic autonomy. Based on those programmatic principles, we can safely conclude that the Revolution of Tudor Vladimirescu was a comprehensive act, akin to the European revolutionary movements in the first quarter of the 19th century.[9]

EU-UK BREXIT AGREEMENT AND ITS MAIN LEGAL EFFECTS

Augustin FUEREA*

Abstract

The United Kingdom withdrew from the European Union on 31 January 2020. On 29 March 2017, the UK practically initiated formally the withdrawal procedure, in accordance with Article 50 TEU, informing the European Council of its intention to leave the European Union. In less than three years, the UK ratified the Withdrawal Agreement, with the purpose that the Agreement would enter into force on 31 January 2020 and, implicitly, produce legal effects. Of all the consequences of this withdrawal, naturally, we will focus on those which have legal implications, being however closely related to all the other effects, about which a lot has been written, and it certainly will be written in the years to come.

Keywords: *Withdrawal Agreement; UK; EU; legal dimension; free movement of persons.*

1. General considerations

Reflecting on my personal concerns in the matter, I found that, for the first time, I was put in the position to define the concept of "Brexit" for the drafting of a paper[1], published in 2018, which placed the notion among the specific terms of EU law. The definition that I proposed[2], has been partly adopted. This study is a prolongation of my demarches[3] in the field. The debut was immediately after the United Kingdom of Great Britain and Northern Ireland[4] "activated" Article 50 of the Treaty on European Union which had been introduced by the Treaty of Lisbon[5]. This particular article stipulates the possibility of a state to withdraw from the EU. The United Kingdom announced such an intention, initially at a declaratory level, subsequently initiating the actual procedure established by the Treaty. The proposed definition highlighted, even in anticipation, some possible legal consequences given the novelty, but also the courage of such an approach. It was of pronounced technical nature, if we consider the limitations set immediately after the announcement of such an intention by the United Kingdom. However, over time, the boundaries of the negotiations have alternated between flexibility and rigidity, with the parties being aware of the consequences, in particular, of the negative consequences caused by the "success" of achieving the goal of withdrawing the United Kingdom from the EU. Most of them refer to the capitalization of benefits obtained with consistent efforts from the part of the decision makers, but also of all the citizens of the European Union, namely the freedoms of movement by affecting, at the same time, people, services, goods, capitals and payments.

2. Withdrawal of the United Kingdom from the European Union. A first legal consequence: the Withdrawal Agreement

It is well known that the withdrawal of the UK was primarily aimed at the European Union as a subject

* Professor, PhD, Faculty of Law, "Nicolae Titulescu" University of Bucharest (e-mail: augustin.fuerea@univnt.ro).

[1] *Enciclopedia juridică (literele A-C)*, Universul Juridic Publishing House, Bucharest, 2018.

[2] Proposed definition: "Brexit" is a "pun" ("Br" - British and "exit" - exit) used to denote Britain's withdrawal from the European Union. In this regard, on 23 June 2016, a referendum was held, following which British citizens expressed their option for the United Kingdom to renounce at the status of Member State of the European Union. The result of the referendum leads to the first situation where Art. 50 of the Treaty on European Union is applied. By virtue of this article, any Member State may decide, in accordance with its constitutional rules, to withdraw from the Union. Following the stages involving the executive and the legislature (to which the supreme court was added), the United Kingdom notified its intention to the European Council (on 29 March 2017). The European Council, finding that the procedure was initiated, adopted the guidelines under which the Union negotiated and concluded an agreement with the United Kingdom laying down the conditions for the withdrawal. The Agreement is negotiated with the participation of the European Commission and the High Representative of the Union for Foreign Affairs and Security Policy, concluded on behalf of the Union by a Council acting by a qualified majority, after obtaining the consent of the European Parliament. The cessation of the Treaties of the European Union with respect to the United Kingdom shall take effect on the date of entry into force of the withdrawal agreement, and if such an agreement does not take effect, the cessation of effects takes place two years later from the notification of the European Council on the withdrawal intention (i.e. on 29 March 2019). The exception is if the European Council, in agreement with the United Kingdom, decides unanimously to extend this period. The United Kingdom is not taking part in the debate or in the decisions of the European Council and the Council on its withdrawal from the European Union. In the event that the United Kingdom wishes to become a Member State of the European Union again, it is necessary to submit a new application for membership, following the entire procedure "(For the final definition, see, *Legal Encyclopedia (letters A-C .., op cit.*, pp. 481).

Anghel, *Reglementări ale Uniunii Europene de un interes aparte - sui generis, pentru România*, Universul Juridic Publishing House, Bucharest, 2017, pp. 117-129.

[4] Hereinafter referred to as the United Kingdom/UK.

[5] On 1 December, 2009.

of international law of special nature, which, with the entry into force of the Treaty of Lisbon, acquired legal personality[6]. Paradoxically (or not!), three articles away from the one by which EU legal personality is conferred, the possibility for a Member State to withdraw from the EU[7] is enshrined, for the first time at this level, by an instrument of primary law[8] producing legal effects. Less well known is the simultaneous withdrawal of the UK also from the European Atomic Energy Community, another subject of international law, which, unlike the European Union, is the type of unequivocal international organization.

In this sense, by carefully, correctly and completely perusing the title of Withdrawal Agreement, we can easily ascertain the truth of the above, meaning that its name is as follows: "Agreement on the withdrawal of the United Kingdom of Great Britain and Northern Ireland from the European Union and the European Atomic Energy Community"[9]. Thus, the complexity of the issue is commensurate.

The rigour with which we proceed, in our analysis, is given by the overwhelming interest on this withdrawal process, and which is unprecedented in the history of the European Union. It represents a theoretical, doctrinal interest, on the one hand, but also a pragmatic and applied interest, on the other hand. We are talking about the withdrawal of a "big", strong state, with a history worthy of all admiration, which influenced the evolutionary course of the European Union, not only from a strictly economic perspective, but also from a pronounced cultural perspective, and more. That is why the consequences of such a withdrawal are multiple. We are talking about those, already stated, as being of economic nature, joined by others of political, legal, psychological, philosophical nature, to which many others can be added.

Regardless of what we might say, the EU does not seem to be the same without the UK as a Member State. It is something that we feel, not something that we just say.

Our interest is both general, meaning an interest expressed by all other EU Member States or non-members (located in Europe or on other continents), and particular resulting, without a doubt, from the large number of EU citizens of Romanian origin, but also of citizens who have the citizenship of origin of other EU Member States, who emphasized the principle of freedom of movement.

Of all the consequences of this withdrawal, we will naturally focus on those which have legal implications, being however closely related to all the other effects, about which a lot has been written, and it certainly will be written in the years to come.

Remaining on the technical field of our concerns in this part of the research, it is worth mentioning that, in addition to this Withdrawal Agreement, the European Union and the UK negotiated a second agreement, namely: the Trade and Cooperation Agreement between the European Union and the European Atomic Energy Community, on the one hand, and the United Kingdom of Great Britain and Northern Ireland, on the other hand[10].

The solidarity, at EU level, between Member States ("large" or "small") materialized in the negotiation and conclusion of such general, and not individual agreements (with each and every state) or with groups of Member States, according to criteria more or less objective.

Such an event, with historical resonance brings inevitably together a series of lessons, conclusions which aim, among other things, from a strictly legal perspective, to substantiate procedures on the withdrawal of an EU Member State, perhaps symmetrical to those on the accession to the European Union, including a transition period which would reduce the multiple negative consequences for all parties involved.

The United Kingdom withdrew from the European Union on 31 January 2020. Without going into details, we would like however to draw your attention on the following aspects: on 23 June 2016, the UK held a referendum on its status as an EU Member State. The result of the vote[11] was quite tight, with 52% voting in favour and 48% against (the ratio between Eurosceptics and Euro-optimists), among British citizens who participated in the referendum; on 29 March 2017, the UK practically initiated the withdrawal procedure, in a formal sense, in accordance with Article 50 TEU, informing the European Council of its intention to leave the European Union; in less than three years (30 January 2020), the UK ratified in turn the Withdrawal Agreement so that, on 31 January 2020, the Agreement could enter into force and, implicitly, have legal effect; with the entry into force of the Withdrawal Agreement, the transitional period set to end on 31 December 2020 began.

[6] Art. 47 TEU: "The Union has legal personality".

[8] There have been and still are many debates, in the doctrine and practice of the field, as to whether the non-existence of such a legal basis would not have given the UK the opportunity to withdraw from the EU.

3. Agreement on the withdrawal of the United Kingdom from the European Union. Technical aspects

Given the rather long period of the United Kingdom's presence in the European Union (over 45 years), the above-mentioned procedural steps were accompanied by a series of legal instruments which were naturally followed by a political statement establishing the framework for future EU-UK relations[12].

Historically, we believe that an important role in resolving the UK's withdrawal from the EU lies in that "new agreement for the UK within the EU"[13] according to the extract from the European Council conclusions of 18 and 19 February 2016[14], in accordance with which the UK and the EU, at their December reunion, and the members of the European Council agreed to work closely together to identify mutually satisfactory (not beneficial) solutions in all four areas mentioned in the British Prime Minister's letter of 10 November 2015[15].

Thus, after a series of often difficult demarches and negotiations, the two involved parties concluded that "it is necessary to provide reciprocal protection for Union citizens and for United Kingdom nationals, as well as for their family members, where they have exercised free movement rights before[16] the UK withdrew from the EU based on the principle of non-discrimination. At the same time, the conviction that "the rights deriving from periods in which those people have benefited from social security insurance"[17] must be protected, but also that "an orderly withdrawal through various separation provisions is necessary in order to prevent disruption and to provide legal certainty to citizens and economic operators, as well as to judicial and administrative authorities in the Union and in the United Kingdom" [18] was an important argument that laid the groundwork for the adoption of the Withdrawal Agreement[19].

A quantitative analysis of the Withdrawal Agreement highlights that the Agreement includes: a preamble; 21 titles (which are incorporated, according to the rules of legislative technique at EU level in 6 parts, as follows: none in Part I; 4 in Part II; 13 in Part III, none in Part IV and Part V; 4 in Part VI); 18 chapters, as subdivisions of some of the 21 titles[20] and 185 articles. It should be noted that Part I and Part V do not know the subdivisions of "titles" and "chapters", Parts II and III being complete parts that bring together both "titles" and "chapters". Part V consists exclusively of "chapters" and Part VI of "titles" only.

Therefore, and from this perspective, we consider the Withdrawal Agreement as being equally complex and diverse. The basic element of the Agreement is the "article". The 185 articles are distributed, depending on the previously mentioned complexity of such an approach, within the parts, as follows: Part I: 8 articles; Part II: 29 articles; Part III: 88 articles; Part IV: 7 articles; Part V: 25 articles and Part VI: 28 articles. In descending order, we find that the largest number of articles belong to Part III (88), followed by Part II (29), Part VI (28), Part V (25), Part I (8) and Part IV (7). We have carried out this more than necessary quantitative analysis, in this first stage of the implementation of the Withdrawal Agreement, precisely because, starting from it, we can arrive at the substantive analysis of the issues, a qualitative analysis, which can allow us, by using including mathematical criteria, to identify the main priorities of the EU and, implicitly, of the Member States for the continuation of the dialogue with the United Kingdom as a former important Member State, from all possible perspectives. Only such a continued dialogue, within the legal parameters offered by the Agreement is likely to lead, for the parties involved, at the maximization of possible advantages, but also at the minimization of the inevitable disadvantages (not possible, this time) for the parties.

The structural elements, previously mentioned, are completed by 3 Protocols[21], of which 2 have no less than 16 annexes, and the aspects of legislative technique are also interesting.

4. Some legal aspects of the Withdrawal Agreement

From legal perspective, it is very important the extent to which European Union law will be still enforceable after the Withdrawal Agreement starts producing its effects. According to its preamble, and not only[22], but also subject to the conditions laid down

[12] Available at https://eur-lex.europa.eu/legal-content/RO/TXT/PDF/?uri=CELEX:12019W/DCL(01)&from=MT.

[13] Published in OJ C 69, on 23 February 2016.

[14] Idem.

[15] The four areas are: economic governance; competitiveness; sovereignty and immigration. The letter can be accessed at https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/475679/Donald_Tusk_letter.pdf

[16] Preamble to the Withdrawal Agreement.

[17] Idem.

[18] Idem.

[19] We appreciate that this approach was responsibly undertaken, considering the fact that, in law, "liability has more meanings (..): political liability, criminal liability, disciplinary liability" (according to Elena Emilia Ştefan, *Răspunderea juridică. Privire specială asupra răspunderii în dreptul administrativ*, ProUniversitaria Publishing House, Bucharest, 2013, p. 13.

[20] We used the expression "of some of the titles" because the 18 chapters are distributed only in 4 titles. Most of them (17) do not benefit from the chapter structure. In the same direction, it should be noted, by way of exception, that Part IV does not know the subdivision of "titles", but knows directly that of "chapters", counting 7 chapters.

[21] Protocol on Ireland / Northern Ireland, Protocol on areas of sovereignty in Cyprus, Protocol on Gibraltar. A material error should be noted in OJ C 384 I, on 12 November 2019, in the numbering of titles, in the sense that instead of Title IX of Part III (Art. 79-85) Title IV is entered.

[22] We consider Art. 50 TEU and Art. 106 TEURATOM.

in the very content of the Agreement, both Union and Euratom law cease in its entirety "to apply to the United Kingdom starting with the date of its entry into force". The "orderly withdrawal" of the United Kingdom from the Union and Euratom has been and still is the main objective of the Withdrawal Agreement. Such an objective concerns, in particular, the area directly and immediately affected, with medium and long-term consequences, namely that of the freedoms of movement.

The intention stated and pursued in practice is to ensure a natural legislative framework, in such an exceptional situation for the reciprocal protection of Union citizens, but also of United Kingdom nationals, to which are inevitably added family members of those who have benefited from a right deriving from the status of citizen of the European Union, along with many other rights, namely the right to free movement. For the sake of clarity, we mention that we are referring to those beneficiaries who exercised their right before the date set by the Agreement. The aim is to create all the guarantees that their rights under the Agreement are enforceable and based on the principle of non-discrimination. Correlatively, it is recognized, after intense negotiations, that it is necessary to protect the rights deriving from periods when those people have benefited from social security insurance. In this sense, the specialized doctrine[23] refers to the issues that are, naturally, generated by the free movement of workers aiming, including, the scope of application of Art. 45 TFEU[24]. Among these, the following are noticeable: "the meaning given to the notion of worker; the rights of intermediate categories (e.g. jobseekers); the types of restrictions that states may justifiably impose on workers and their families, as well as the social or other rights that family members enjoy under EU law"[25].

The Withdrawal Agreement aims, inter alia: at avoiding disruption while ensuring the legal security of citizens and economic operators or judicial and administrative authorities in the Union and in the United Kingdom; establishing a transition or implementation period; preparing and concluding new international agreements of its own, including in areas of Union exclusive competence[26]; fulfilling mutual commitments undertaken while the United Kingdom was a member of the Union through a single financial settlement; establishing provisions ensuring overall governance, in particular binding dispute-settlement and enforcement rules that fully respect the autonomy of respective legal orders of the Union and of the United Kingdom, as well as the United Kingdom's status as a third party, in relation to the Union, but also to each of its Member States; concluding separate protocols[27] to the Withdrawal Agreement, etc.

We consider that a particular aspect of the Withdrawal Agreement, in the context of the developments that take place in the field of personal data protection, is given by Art. 71 which, in the three paragraphs, regulates precisely this field. Data subjects outside the United Kingdom benefit from such protection, with the application of the European Union law in the matter, according to para. (1), subject to two conditions, namely: the data had to have been processed in the United Kingdom in accordance with EU law prior to the transitional period (point (a)) and the data had to have been processed in the United Kingdom under the [Agreement] after the end of the transitional period (point (b)).

There is of course an exception from the rules presented above provided in the second paragraph of Art. 71. Thus, the provisions of para. (1) "do not apply to the extent that the processing of personal data (..) benefits from an adequate level of protection". Decisions made by an implementing act concerning a third country, a territory or one or more specified sectors of a third country or an international organization[28] are referred to hereby.

The equivalence between the levels of personal data protection in the EU and the UK is a principle that is ensured in the application of the Agreement in this field[29].

Regarding the transition period for the application of the Withdrawal Agreement, it is clear from the provisions of Art. 126 that it was a relatively short period (1 year), having already been concluded on 31 December 2020. Part V of the Withdrawal Agreement, which contains transitional provisions, refers, next to the transitional period, to the following aspects: the scope of the transitional provisions (Article 127); institutional provisions (Article 128); specific provisions on the Union's external action (Article 129); special provisions on fishing opportunities (Article 130); monitoring and ensuring compliance (Article

[23] Paul Craig, Gráinne de Búrca, *Dreptul Uniunii Europene. Comentarii, jurisprudență și doctrină*, 6th edition, Hamangiu Publishing House, Bucharest, 2017.

[24] Article 45 TFEU: '1. Freedom of movement for workers shall be guaranteed within the Union. 2. Free movement shall entail the elimination of any discrimination based on nationality between workers of the Member States as regards employment, remuneration and other conditions of work and employment. 3. Subject to restrictions justified on grounds of public policy, public security or public health, freedom of movement for workers shall entail the right: (a) to accept actual employment offers; (b) to move freely within the territory of the Member States for that purpose; (c) to stay in a Member State in pursuit of gainful employment in accordance with the laws, regulations and administrative provisions governing the employment of workers of that State; (d) to remain in the territory of a Member State after having been employed in that State, under conditions which shall be the subject of regulations adopted by the Commission. 4. The provisions of this Article shall not apply to employment in the public administration.'

[25] Paul Craig, Gráinne de Búrca, *op. cit*., p. 829.

[26] Article 3 TFEU.

[27] *Pre-cited*.

[28] Article 45 para. (3) of Regulation (EU) 2016/679. To these are added the provisions of Directive (EU) 2016/680, Article 36 para. (3).

[29] Article 71 para. (3).

131) and the extending of the transition period (Article 132).

The most debated issue has been and will continue to be the issue of the place of the Withdrawal Agreement in the legal order of the European Union, respectively among the European Union's own legal instruments. Being the first of this kind, the Withdrawal Agreement came after the EU acquired legal personality, becoming implicitly a subject of international law. In order to correctly identify its legal nature, it is necessary to briefly analyze the parties of the Agreement (the UK, on the one hand, and the EU, on the other), but also the steps taken to negotiate, sign, approve, conclude and ratify by the EU institutions empowered through the Lisbon Treaty, by the Member States. Only then can we draw conclusions about the place of the Withdrawal Agreement in the hierarchy of European Union rules within or outside the "five main levels"[30].

5. Conclusions

The present research is only the beginning of similar, subsequent demarches, which will increase their consistency as time passes, which will bring to light many of the difficulties of multiple nature, including legal difficulties that, at the moment, we can only intuit or perhaps anticipate. Particular attention will continue to be paid, from the point of view of the analysis we will carry out, to all those "issues" concerning the regulations that make up the substantive law of the European Union, to which the Withdrawal Agreement makes numerous references, to which new meanings or interpretations of habits that occurred, regarding the freedoms of movement or even the external action of the European Union which the UK also referred to, have been over time added.

CJEU'S JURISDICTION AFTER BREXIT

Iuliana-Mădălina LARION *

Abstract

The study explores the main provisions included in the Agreement on the withdrawal of the United Kingdom of Great Britain and Northern Ireland from the European Union and the European Atomic Energy Community regarding the Court of Justice of the European Union's Jurisdiction after Brexit, with emphasis on the preliminary ruling procedure. The scope of the analysis is to determine the nature and the limits of CJEU's jurisdiction to decide matters of EU law involving the United Kingdom and the effects of such decisions, pronounced after the end of the transition period.

Keywords: *Court of Justice of the European Union; jurisdiction; preliminary ruling procedure; withdrawal from the European Union; Brexit.*

1. Brexit

The United Kingdom of Great Britain and Northern Ireland (UK) is the first and only Member State of the European Union (EU) to exercise its right to withdraw from this international integration organisation, a choice commonly known as Brexit.

Following a referendum held on 23 June 2016, UK notified its intention to leave the EU to the European Council on 29 March 2017[1], as required by Article 50 of the Treaty on European Union[2]. This marked the beginning of negotiations for the conclusion of an agreement setting out the arrangements for UK's withdrawal. The treaty was necessary in order to facilitate UK's transition to the non-Member State status in an orderly manner, to safeguard the important interests of the other Members States, to protect the rights of the EU citizens residing and working in the UK and of the UK citizens residing and working in the EU[3].

The negotiations lasted approximately one and a half years. The process was sometimes very complicated, a no-deal withdrawal remaining always as an alternative. It was doubled by the need to establish a framework for UK's future relationship with the EU, a political engagement for further negotiations on subject matters not covered by the agreement.

Despite the difficulties, on 17 October 2019, the parties succeeded in concluding the Agreement on the withdrawal of the United Kingdom of Great Britain and Northern Ireland from the European Union and the European Atomic Energy Community (Withdrawal Agreement), a detailed treaty on the legal, economic and social consequences of Brexit.

The Withdrawal Agreement included a transition period that started on the date of its entry into force, 1 February 2020, and ended on 31 December 2020[4]. The scope was to provide more time for the states' administrations and nationals to prepare and adapt.

During the transition period EU law continued to apply in and to the UK, but without UK's participation in EU institutions and governance structures[5].

Once the transition period ended, EU law ceased to apply in its entirety to the UK and the Withdrawal Agreement came into full effect, governing the legal relationship between UK and the EU.

The study shall analyse the main provisions of the Withdrawal Agreement that recognize a residual jurisdiction for the Court of Justice of the European Union (CJEU)[6] in matters involving the UK or its nationals after Brexit and that institute the means to enforce the CJEU's rulings.

Applying these new legal rules in good faith is important for both the UK and the EU, if the efforts to build a new and a better relationship are to be fruitful. Also, since these new rules impact both the public and the private sectors of the states involved, EU and UK nationals, state authorities and legal practitioners need to be aware of their content and of their legal effects, especially in cross-border litigation.

This synthetic analysis aims to facilitate the dissemination of information on the subject matter of CJEU's jurisdiction, to put in the spotlight recent developments, research of established authors and

[5] Art. 127 of the Withdrawal Agreement.

[6] CJEU is composed at the present moment of the Court of Justice and the General Court. For further details, see Coutron, 2019, p. 130-138.

relevant case law, in order to contribute to doctrinal debate.

Effective withdrawal of a Member State from the EU is an unprecedented legal event and what happens in practice after the transition period represents a subject of great interest for EU legal literature.

2. The jurisdiction of the CJEU with respect to the UK after the entry into force of the Withdrawal Agreement

2.1. The CJEU's jurisdiction during the transition period

With the few exceptions provided in the Withdrawal Agreement, during the transition period the UK continued to be bound by EU law as any other of the Member States[7]. The EU's institutions, bodies, offices and agencies exercised the same powers with respect to the UK as before 1 February 2020. In particular, CJEU had full jurisdiction over UK, including with regard to the interpretation and application of the Withdrawal Agreement.

However, the effects of such competence reach beyond the end of the transition period, especially in what ongoing judicial cooperation in civil and commercial matters and pending cases before CJEU are concerned.

For example, the UK continues to apply Regulation Rome I[8] to contracts concluded before the end of the transition period and Regulation Rome II[9] to events giving rise to damage, if the events occurred before the end of the transition period.[10]

The provisions of several EU Regulations and Directives regarding jurisdiction of national courts, recognition and enforcement of judicial decisions, service of judicial and extrajudicial documents, taking of evidence, legal aid and mediation continue to apply after Brexit in respect of legal proceedings instituted and documents received before the end of the transition period.[11]

CJEU continues to have jurisdiction to rule on pending direct actions, including appeals, and preliminary references, a solution we envisaged and advocated for in a previous study.[12] Our main arguments supporting this view were that the UK was a EU Member State at the time the proceedings were registered, the facts of the cases occurred prior UK's effective withdrawal from the EU and the solution would be in agreement with the principle of legal certainty and with the principle of the protection of legitimate expectations, since the parties have little or no influence on the length of the procedure before the CJEU.

The case is considered to be pending if the proceedings were brought by or against the UK and if the requests from UK courts were made before the end of the transition period. The date of reference is the moment at which the document initiating the proceedings has been registered by the registry of the Court of Justice or of the General Court, as the case may be.[13]

Thus, if the document was sent to the CJEU before 31 December 2020, but it arrives at the Court and it is registered after this date, the case cannot be considered pending. It shall fall under the category of new cases and it may be deemed inadmissible under the provisions of the Withdrawal Agreement on new cases brought before the CJEU.

The Court of Justice affirmed its jurisdiction in pending cases in a judgment pronounced during the transition period. The Court stated: "it follows from Article 86 of the Withdrawal Agreement, which came into force on 1 February 2020, that the Court of Justice is to continue to have jurisdiction in any proceedings brought against the United Kingdom before the end of the transition period, such as the present action for failure to fulfil obligations."[14]

The Court's position is based on the new treaty, but it is in alignment with its case law from the period between the official notification of UK's intention to leave the EU and the date of entry into force of the Withdrawal Agreement, a period in which the UK was, in principle, under the complete jurisdiction of the CJEU, in all its aspects and it had to give full effect to all of CJEU's rulings, just like any other EU Member State.[15] The Court decided that the UK's mere intention to leave the EU, communicated in accordance with Article 50 TEU, does not have the effect of suspending the application of EU law in UK until the time of actual withdrawal[16] and cannot justify, in itself, the refusal or

[7] Art. 127 paragraphs 1 and 3 of the Withdrawal Agreement.

postponement of the execution of a European arrest warrant issued by the UK[17].

In conclusion, CJEU's jurisdiction in pending judicial proceedings shall extend after the end of the transition period, with no time limit stipulated in the Withdrawal Agreement. It is reasonable to presume, based on CJEU's existent case law with respect to the withdrawal process, that the Court shall continue to assess consistently all of the legal grounds for its judicial powers in order to ensure that EU law is observed in and by the UK, for as far as the UK is, in one way or another, still bound by EU law.

2.2. The CJEU's jurisdiction after the end of the transition period

The new cases CJEU may rule upon after Brexit are mainly infringement actions and preliminary references.[18]

Within four years after the end of the transition period, the European Commission or a Member State may bring an infringement action[19] against the UK. This may be the case if the UK has failed to fulfil an obligation under the EU treaties or under the Withdrawal Agreement before the end of the transition period and if the UK does not comply with decisions adopted by institutions, bodies, offices and agencies of the EU before the end of the transition period or in procedures initiated during the transition period, addressed to the UK or to natural and legal persons residing or established in the UK. The UK retains the right to bring infringement procedures against a Member State for the same period. The CJEU has jurisdiction over all such cases.[20]

For actions concerning UK and EU citizens rights[21] commenced at first instance before a court in the UK within eight years from the end of the transition period, the CJEU has jurisdiction to give a preliminary ruling, where the UK court considers that a decision on the question is necessary to enable it to give judgment in that case.

In what UK's participation to the EU's budget for the years 2019 and 2020 and UK's participation to EU's programmes, activities and previous financial perspectives are concerned, the CJEU retains jurisdiction to decide infringement actions and preliminary references in respect to the applicable EU law referring to this subject matter in the Withdrawal Agreement.[22]

Of course, the CJEU has jurisdiction to interpret the Withdrawal Agreement, where a court of a Member State refers for a preliminary ruling to the Court of Justice.[23]

The Withdrawal Agreement institutes a procedure of dispute settlement between the EU and the UK on its interpretation and application. If the parties cannot settle a dispute informally and in good faith, any party may require the establishment of an arbitration panel.[24] Where a dispute submitted to arbitration raises a question of interpretation of a concept of EU law or of a provision of EU law referred to in the Withdrawal Agreement or a question of whether the UK has complied with its obligation to respect the binding effects of CJEU's decisions, the arbitration panel must request the CJEU to give a ruling on that question. The CJEU has jurisdiction to give such a ruling, which shall be binding on the arbitration panel.[25]

The separate Protocol on Ireland/Northern Ireland, annexed to the Withdrawal Agreement, provides for CJEU's jurisdiction over its interpretation and application.[26]

The procedural rules to be followed in pending cases and in new cases are the ones governing the procedure before CJEU.[27]

The UK has the right to intervene, to participate and to be represented in all proceedings and requests for preliminary rulings which concern it until the last judgment or order rendered by CJEU has become final.[28]

It must be emphasized that the UK accepted CJEU's jurisdiction post Brexit for the specific matters indicated above for a nonspecific time-limit. Only the beginning of some proceedings is to take place within a certain period of time, but these proceedings may continue until the last decision becomes final.

2.3. Enforcement of the CJEU's decisions post Brexit

The UK is no longer a member of the EU and, unless otherwise provided by the Withdrawal Agreement, the CJEU lacks competence, *ratione personae*, to receive, hear and solve cases involving the UK and the UK in no longer under the obligation to observe the Court's rulings.

However, judgments and orders of the CJEU handed down before the end of the transition period, as well as those pronounced in proceedings referred to in

[17] Judgment of 19 September 2018, *RO*, C-327/18 PPU, EU:C:2018:733, paragraph 62.
[18] CJEU's jurisdiction to rule on the basis of art. 263 of the Treaty on the Functioning of the European Union (TFEU) is provided in art. 95 paragraph 3 of the Withdrawal Agreement.
[19] Art. 258-261 TFEU. For a synthesis of the main actions before the CJUE, see Fuerea, 2016, *Dreptul Uniunii Europene…*, p. 65-123. For further details, see Craig and De Búrca, 2017, p. 481-677.
[20] Art. 87 and art. 95 paragraph 1 of the Withdrawal Agreement.
[21] Part Two of the Withdrawal Agreement.
[22] Art. 160, art. 136 and art. 138 paragraphs 1 and 2 of the Withdrawal Agreement.
[23] Art. 161 of the Withdrawal Agreement.
[24] For a presentation of the dispute settlement procedure, see Chalmers, Davies and Monti, 2019, p. 417-419 and Larik, 2020, p. 7-16.
[25] Art. 174 paragraph 1 of the Withdrawal Agreement.
[26] Art. 12 paragraph 4 of the Protocol.
[27] Art. 88 and art. 161 of the Withdrawal Agreement.
[28] Art. 90, art. 91, art. 161 paragraph 3 and art. 174 paragraph 7 of the Withdrawal Agreement.

the Withdrawal Agreement, shall have binding force in their entirety on and in the UK, that is the UK is obliged to take the necessary measures to comply with that decision, which is enforceable under the UK's civil procedural rules.[29]

Article 158 paragraph 2 of the Withdrawal Agreement also stipulates that the legal effects in the UK of preliminary rulings on citizens' rights shall be the same as the legal effects given pursuant to Article 267 TFEU in the EU and its Member States.

The rule is that UK still has to respect CJEU's decisions that produce erga omnes effects and those concerning the UK or one of its nationals given before the end of the transition period and all the decisions pronounced after the end of the transition period as a result of CJEU's jurisdiction enshrined in the Withdrawal Agreement.

The main legal means of enforcement of CJEU's decisions given on the basis of the residual competence conferred upon it after Brexit include: infringement actions[30], preliminary ruling procedure[31], the use or arbitration[32] and the supervision of the UK by an independent Authority[33].

We consider that, because of its role as an instrument of dialogue between the Court of Justice and judicial bodies from EU Member States, the preliminary ruling procedure[34] might prove to be the most effective means of proper interpretation and application of the Withdrawal Agreement by its parties. Unlike the infringement procedure, which implies the idea of a sanction, preliminary rulings are meant to facilitate fulfilment of obligations and to prevent improper application of the law.

The EU, its Member States and the UK may decide to extend CJEU's jurisdiction further, by concluding a contract and empowering the CJEU to rule on direct actions based on contractual liability[35]. Another possibility would be for the UK to become a party to existing international treaties, such as the Agreement on the European Economic Area (EFTA), which authorizes courts of the EFTA Member States to refer questions to the Court of Justice on the interpretation of an Agreement rule[36].

At last, a new international treaty could be concluded to further develop UK's relationship with the EU[37], which could extend CJEU's jurisdiction over the UK to actions inspired by the CJEU's current powers or to innovative, outstanding competence. Such a new treaty could offer answers for the need to find better means of enforcement of the CJEU's decisions if the ones provided already prove to be insufficient.

Even if it appears unrealistic at this moment, the UK could even rejoin the EU on the basis of Article 50 paragraph 5 TEU, by starting over the process of accession[38].

3. Conclusions

The rather long and sinuous journey of the United Kingdom of Great Britain and Northern Ireland from declaring its intention to leave the European Union until the date of effective withdrawal has ended. Following the effort of all the parties involved, this unprecedented process has led to the conclusion and full entry into force of a Withdrawal Agreement.

Although it is no longer a part of the EU, the UK has chosen an orderly Brexit and it continues to be under the jurisdiction of the Court of Justice of the European Union in pending cases, as well as in a number of new cases that may be lodged with the Court after the end of the transition period, on 31 December 2020.

It is difficult to foresee all of the complex legal and practical issues which may arise out of the interpretation and application of the Withdrawal Agreement with respect to the CJEU's powers over the UK. The study has focused on the analysis of the main provisions regarding CJEU's jurisdiction after, as well as during the transition period, since the Court has kept, in principle, full jurisdiction in and to the UK until the end of the transition period, with the result that, depending on the length of the proceedings, pending cases may extend well beyond the loss of EU Member State status by the UK.

Also, the study has approached the issue of the means to enforce the CJEU's decisions stipulated in the Withdrawal Agreement, amongst which the preliminary ruling procedure continues to be an important instrument.

The research aims to contribute to the existing doctrinal works on this latest development of EU law, to be a synthetic source of information about CJEU's

[29] Art. 89 of the Withdrawal Agreement corroborated with art. 280 and art. 299 TFEU.

[30] Art. 87 and art. 160 of the Withdrawal Agreement. For example, the European Commission has started an infringement procedure against the UK on15 March 2021. The Commission sent a letter of formal notice to the UK for breaching the substantive provisions of the Protocol on Ireland and Northern Ireland, as well as the good faith obligation under the Withdrawal Agreement, according to: https://ec.europa.eu/commission/presscorner/detail/en/IP_21_1132 (last accessed on 20 March 2021).

[35] Article 272 of the TFEU.

[36] Article 107 of the Agreement on the European Economic Area and Protocol 34 annexed to it. For other options in defining the EU – UK relationship after Brexit, see Berry, Homewood, Bogusz, 2019, p. 308 and Schütze, 2018, p. 871-884.

[37] For example, the EU and UK concluded a Trade and Cooperation Agreement, provisionally applicable since 1 January 2021, https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=OJ:L:2020:444:TOC (last accessed on 20 March 2021).

[38] Art. 50 paragraph 5 TEU: "If a State which has withdrawn from the Union asks to rejoin, its request shall be subject to the procedure referred to in Article 49."

jurisdiction post Brexit, of use to legal practitioners, and to inspire further studies on this subject matter.

Further research works could be conducted on the specific rights of EU citizens living and working in the UK after the transition period and of UK citizens residing in the EU, on the detailed jurisdiction of the CJEU with respect to citizens' rights and on the future relationship between the EU and the UK in the areas not covered by the Withdrawal Agreement.

DISINFORMATION - THE SECRET WEAPON OF MODERN TERRORISM

Sandra Sophie-Elise OLĂNESCU[*]

Abstract

This work has been prepared with the aim of carrying out a thorough analysis of one of the fundamental drivers of the impact of the terrorist phenomenon, without which its existence would have been purely conceptual, not material in objective reality as it has occurred in the last three decades, or, at most, there would have been a little significant international dimension, namely: misinformation. The subject of the work was chosen to make a comparative assessment of the purpose and effects of the disinformation, with reference to those of terrorism, so that, at the end of its reading, it can be concluded whether the two phenomena are complementary or, at least, that they can function symbiotically or that they are mutually exclusive, having no connection (not even hypothetical) with each other. To this end, the paper proposes an analysis of the current regulatory framework at international level on misinformation, in order to highlight a general perspective – by their similarities – as well as a specific one, shaped by the differences between these normative frameworks. Last but not least, the author believes that misinformation itself acts as a tool for the subliminal control of human thought, with real success in the contemporary world, which gives it, per se, a particular danger, easily similar to the phenomenon of terrorism, insofar as it is intended to spread fear for purposes contrary to the law and incompatible with a democratic society.

Keywords: *disinformation, international terrorism, control instrument, fear, purposes contrary to the law.*

1. Introduction

1.1. What matter does the paper cover?

This paper addresses the issue of disinformation, as a means of aggression used in contemporary terrorist actions, a fact which, according to the author, has escalated in recent years to alarming proportions, which cannot be ignored, especially from the perspective of analyzing and understanding the phenomenon of modern international terrorism.

1.2. Why is the studied matter important?

This study was developed for the purpose of making a thorough analysis in relation to one of the fundamental impact drivers of terrorism, in the absence of which its very existence would have been purely conceptual, not materialized in the objective reality as it happened in the last three decades, or at most would have had little significant dimension internationally, namely: disinformation.

Likewise, this paper focuses on the contemporaneity of disinformation, as a phenomenon of mass manipulation, in the current circumstances of spreading information and data with unprecedented speed, *via* social networks, news websites and online press publications, online television (including with broadcast live) and, last but not least, the "*Internet of things*", all of this disinformation becoming a true "*weapon*" in the hands of anyone who knows how to use it, especially if we talk about the phenomenon of international terrorism.

1.3. How does the author intend to answer to this matter?

The subject matter of the study was chosen to make a comparative assessment of the purpose and effects of disinformation, in relation to those of terrorism, so that, at the end of its reading, it can be concluded whether the two phenomena are complementary or at least work "*symbiotically*" or these notions are mutually exclusive, not presenting any connection (not even hypothetical) with each other.

In view of this approach, this paper proposes an analysis inclusive of the legal framework currently in force at international level regarding disinformation to highlight a general perspective - by the similarities of these rules - and a particular one, outlined by the differences of these regulatory frameworks, be it international or regional.

1.4. What is the relation between the paper and the already existent specialized literature?

This paper addresses specialist literature which has covered the various aspects considered in its contents by scrutinizing the conclusions of the authors referred to, by presenting the concepts defined and explained by the aforesaid, and finally presenting the point of view of the author of this work, either to give an opinion or to express a possible disagreement, not least by giving an opinion on the complex thematic spectrum addressed, in relation to the phenomenon of international terrorism.

[*] PhD Candidate, Faculty of Law, "Nicolae Titulescu" University of Bucharest (e-mail: sandra.olanescu08@gmail.com).

2. Disinformation: Definition and Concept

2.1. Preliminary

Information is the substance of an eminently human phenomenon, *i.e.*, communication, a process in which perception and assumption acquire the importance of the truth itself, if the recipient appreciates it and the transmitter transmits it with this value.

The key factor in the process of transmission of information is always its recipient or **receiver**. Why? Simply because that information is as important as the receiver thinks it is, regardless of the degree of significance the transmitter gives it. In this regard, we appreciate that a concept clarification is necessary and appropriate as it is related to several preliminary issues concerning the communication, its elements, human perceptions, faiths and last but not least, **misinformation**.

According to literature, "***human communication***" is the fundamental way of psychosocial interaction of people, achieved through symbols structured in an articulated language or by different codes, the purpose of which is the transmission of information targeted pragmatically at influencing the behavior of individuals or groups, in order to achieve the real communication goals[1].

"*To communicate*" is therefore "*transmission of information by means of the code called « language », arbitrarily defined by reference to context outside it and independent of the user"*[2].

At the same time, **language** is defined as "*a common, arbitrary code, without any connection with the elements of the primary reality, through which the multiple transmission of information is achieved*"[3].

From the perspective of examining how to set up the communication process through language (the notion of language including not only speech – as a code of communication - but also non-verbal language), input key was made of by John Austin, teacher of philosophy and ethics at Oxford University, former MI6 agent who introduced the notion of "*performative*" utterance in opposition to "*constative*" utterance as well and the speech act - discourse vs. utterance.

In Austin's theory, what is fundamental is the notion of "*illocutionary force*" or the ability of a statement to act on the environment in which it was generated, in other words the **connotation attached to the message**.

As a result, starting from Austin's theory, communication is defined as a "*Intersubjective relationship established between participants able to make statements and to act in accordance with the stated sentence content (perlocutionary act) on the condition of intelligibility of the illocutionary force*"[4].

The impact of a statement is determined, mainly by the illocutionary force, the key driver of the influencing mechanism of that message.

In consequence, we can state the fact that, as any act of communication involves, necessarily, a rational base (that is, it implies the willingness to dialogue, the effort to argue and thus that of recognizing the grounds of the interlocutor) it must be possible to base on these reasons, an ***ethical communication.***

In fact, Austin also refers to the "*condition of sincerity*"[5], in the case of an ordinary act of communication, a condition absent in the case of a communication process with a manipulative objective. In this respect, we consider that any communication process is a process of manipulation, if each individual participant in the process wishes to maximize the impact of the message sent.

An important definition of communication, from the perspective of the process seen as a **driver of manipulation**, is constructed by Charles E. Osgood: "*in the most general sense, we talk about communication every time a system, respectively a source, influences a system, meaning a recipient, by means of alternative signals that can be transmitted through the channel that connects them*."[6]

Communication, therefore, always has - explicitly or implicitly - a purpose of influencing, the act of communication being primarily oriented to cause effects. This is always accompanied by the will (intention, desire) to influence (motivate) others to manifest a behavior inspired by the information we transmit.

One of the "*Axioms of communication*"[7], respectively Axiom 5, states that the communication process is "*irreversible*" due to a particular effect caused on the person who receives the information, effect sought intentionally or not, by the transmitter of the information. We appreciate, in this respect, that the axiom mentioned above can be applied, not only regarding the irreversibility of the process because of the impact caused on the receiver, but also on the irreversibility of the communicative context, the space-temporal context being characterized by uniqueness.

Communication, in a general sense, takes place between two actors, participants in the process, conventionally called, **transmitter** (*i.e.*, the one who initiates the communication process) and **receiver** (*i.e.*, the recipient of the communication process).

---

[1] John Langshaw Austin, Quand dire, c'est faire, La mise en stage de la communication dans des discours de vulgarisation sciantifique, Éditeur Seuil, Paris, 1971, pp. 34- 47.
[2] Émile Benveniste, Problemes de linguistique generale II, Éditeur Gallimard, Paris, 1974, pp. 48.
[3] Ferdinand de Saussure, Cours de linguistique generale, Éditeur Gallimard, Paris, 1960, p. 33.
[4] John Langshaw Austin, Quand dire, c`est faire, Éditeur Seuil, Paris, 1971, p. 53.
[5] John Langshaw Austin, Quand dire, c`est faire, Éditeur Seuil, Paris, 1971, p. 54.
[6] Flora Davis, La comunicacion no verbal, Alianza Editorial, Madrid, 1971, p. 115-153.
[7] Didier Boudineau; Nicole Catona, Manager avec PNL, Edition d`Organisation, Paris, 2006, p. 29-50.

Instead, the communication process is defined through six elements, namely[8]: transmitter, receiver, message (*i.e.* the content or the subject of the communication which can be transmitted in order to inform or influence, a person or a group), the transmission channel (*i.e.* the set of sensory means through which an information is transmitted from the transmitter to the receiver), the code (*i.e.* the kind of language usually used and understood, by the transmitter and by the receiver, a set of signs defined and known to the persons participating in the communication process).

To all these six elements of the communication process, we think that a seventh essential element should be added, namely, the communication **context**.

This is relevant when we talk about the transfer of information that has, as a final objective, influencing the receiver, manipulating and / or misinforming the receiver.

Communication thus becomes a circular process: the receiver's response has a direct impact on the transmitter's message. O'Rourke defines the response of the receiver as feedback, the circularity of the communication process being called "*strategic feedback*"[9].

The term "*information*" referring to a statement made in the communication process is due to the introduction of elements from the "*Information Theory*"[10] in communication, whose "*parent*" is the renowned mathematician and engineer Claude Shannon. According to her, given "*information*" was given a sense of diversity or indeterminacy, by the emergence of symbols that carry / convey meaning.

In the "*Information Theory*", the information is independent of the concrete meaning of the symbols considered as such, or of their value, for the receiver[11]. This theory appears as the mathematical theory of the general characteristics of information sources and information transmission channels by means of symbols for which only their statistical properties are considered.

The characteristics of the information transmission process, according to the "*Information Theory*" involve: "*translating the message into an intermediate electrical signal, encoding the intermediate signal, i.e., its biunivocal transformation into another signal with a structure suitable for channel transmission and modulation of a carrier signal by means of the previous signal*"[12].

From the perspective of the "*Information Theory*", the analysis of the message is done taking into account the following factors[13]: the amount of information contained in a message and length relative to the source; source-specific entropy, defined by the limit of the average amount of information contained in a symbol issued by the source, the speed of information of the source emitting elementary symbols per second, the redundancy of the source defined as the relative difference between the maximum specific entropy of an ideal source with the alphabet of the same number "*n*" of symbols and the specific entropy of the source .

In conclusion, we believe that the term "*information*", having the meaning of: communication, news, explanation, given in relation to: a subject, object, person, context, is in opposition to that defined by Claude Shannon in the "*Theory Information*"[14].

We emphasize that the taking over of the term information within the communication, with the meaning of the message bearer of significance was achieved in the emergence of modern media institutions, in relation to the impact produced in the receiver, which is why, in order to cause as high an impact as possible on the addressee, there have been many studies on how to increase the efficiency of the message, both at transmission, and at reception.

Thus, it was found[15] that the transmitters constantly change their messages depending on the reactions of the receiver and this adaptation is often not conscious.

To get a good communication efficiency, it was taken into consideration the passage from the unconscious to the conscious, by observing the interlocutor in order to gather as much data about his/her reactions as possible, so the transmitter can adapt his message as well as possible for maximized impact.

This type of communication - that takes into account the conscious reactions (*i.e.*, verbal) and unconscious (*i.e.*, para-verbal, non-verbal) of the transmitter and of the receiver is defined in the literature as "*interactive communicationi*"[16].

According to the interactive communication, the transmitter is responsible for the proper transmission of the message, and not the receiver, the transmitter being the one who must always adapt his message according to the possibilities of understanding of the receiver. In other words, the transmitter **encodes** the message, and the receiver tries, and sometimes failing, to decode the message. Often, people tend to worry that their interlocutors do not understand them, blaming the latter for the misunderstanding. Since the individual is accustomed to speaking, most of the time, it may have

the feeling that he has control over his speech. However, the clarity of the message sent can be affected by the use of "*parasite*" words (*i.e.*, words that come in succession in a speech).

American studies show that in a full conference room, a speech is remembered 10% for its meaning (*i.e.*, words), 30% for pace and tone of voice and 60% for gestures[17] .

The receiver should they focus all attention to effectively perceive the message transmitted by the transmitter. Very often, the recipients of the messages carry out several activities at the same time: they watch, listen to several discussions at the same time, think of something else, the process of attentive / active listening is difficult to achieve, requiring a lot of concentration. Precisely for these reasons, there have been developed "*techniques that capture the subconscious of individuals through «key» words, that cause a conscious impact*"[18] .

Renowned international sociologists Peter Berger and Thomas Luckmann describe the so-called "*reality*" perceived by the individuals as the number of physical means over which they exert their influence including personal "*individual capacity*", managing to faithfully capture, in our opinion, the human mechanism of external projection, emphasizing how it can be determined / controlled. In this sense, in the words of the famous authors mentioned above:

"*The world, as we see it, hear it and feel it, is a human world, by no means the real world. It is the world so how humans represent it with their physical means. Even this human representation is different, depending on our individual capability: a blind person or a person with disabilities of understanding will not have the same perception that an individual who has all his physical abilities*"*[19]*.

In other words, each individual has several filters used to extract from the multitude of information coming from outside, only a very small part. This selection is made, "*at subconscious level according to the accumulations of each individual*"[20]. Thus, physical filters condition the reception of external information, making a sort of selection of "*what we perceive from the environment*"[21].

Therefore, it is possible to conclude that the individual is the sum of all his accumulations up until a certain moment, the moment of communicational interaction. The more the accumulations of the individuals have a high joint average sum, the more their representations are closer, and the message has an increased impact/efficiency. In other words, the more both individuals have an amount of accumulation (*i.e.*, base) that is similar, the more efficient the process of influencing / manipulating is.

"*The interpretation that the individual operates on the reality is called faith*"[22]. This subjective interpretation, which is not based on facts, becomes for the individual the reality itself.

Faith is a partial assessment of situations that occurs either due to a lack of information (selection process), or by the transformation of a single answer into a valid universal truth (generalization process), or due to an incorrect interpretation (distortion process)[23].

In other words, faith starts from a unique experience, if it was an important one, or from the repetition of the same experience. In the process of forming a belief, it is essential the context in which it is formed, so that starting from the same experience, an individual may reach, in different contexts, beliefs that are diametrically opposed.

Based on experience, the individual will draw a conclusion that will translate into a behavior or an attitude. Then he will generalize this decision and turn it into universal truth.

As claimed by Nicole Aubert, "*the entirety of beliefs of a person is their reference and operational frame, their model about the world*"[24]. It can be said, therefore, that, in the center of representation of the individual are his beliefs and his convictions, the conviction being a strong faith.

Consequently, it can be stated that the process of influencing the individual is performed by inducing beliefs, subsequently converted into convictions, in accordance with the objectives either bad or declared, of he who coordinates the activity of reaching the manipulation targets.

Based on representation of the individual, seen as a sum of all accumulations, at the center of which are found the beliefs and convictions, we can envision the complexity of communication / influence /manipulation process:

1. at the level of the transmitter, it is performed the coding[25] of the relevant meaning (which is to be transmitted and which has not become, yet information), which undergoes a first change due to disturbances occurring on the transmission channel of the transmitter.
2. the meaning is transmitted on the channel, and it will arrive to the receiver.
3. once it reaches the receiver, the meaning goes through the decoding process26, depending on its

representation and on the interference encountered in this stage.

In this context, the response reaction of the receiver will be performed exclusively based on the way of decoding the received message. Only at the time of decoding does the relevant meaning transmitted acquire the value of information.

2.2. Information vs. disinformation, misinformation and "*fake news*"

In accordance with the definition and explanations of Explanatory Dictionary of the Romanian language (hereinafter, "*DEX*"), the word "*information*"[27] means "*act of informing and its outcome*", "*provision of new data*", "*notification of hidden items*", "*gathering of information about something*", "*to find out about someone*", "*communication*", "*news*", "*report*".

Therefore, construing the above-mentioned explanations by using the argument *per a contrario*, it can be concluded that the term "***misinformation***" means the provision of wrong data or information, disclosure of wrong " *hidden items* " and **wrong** "***news***", "***miscommunication***" or "***misinformation***".

The term "***misinformation***" is, according to the same source[28] , "*the fact of intentional, biased misinforming; mislead"*, "*to misinform and its result*", "*to inform (intentionally) wrong"* ,"*to biasedly misinform (through the media, radio, etc.)*".

At first glance, the concepts of misinformation and disinformation would be synonymous, however, as will be seen in the *infra* paragraphs, at doctrine level, it was established a clear distinction between the two concepts, related mainly to the subjective element that underlies such communication of information.

Thus, in literature[29] a distinction was made between the concepts of misinformation, disinformation and "*fake news*" so that they are considered to have the following meanings:

- **misinformation** – "*false information that is spread, whether it is intended to mislead or not*"[30];
- **disinformation** - "*deliberately misleading or biased information; manipulated narrative or facts; propaganda*"[31];
- **fake *news*** – "*intentionally crafted, sensational, emotionally charged, misleading or fabricated information that mimics the shape of the headlines*"[32].

From the interpretation of the definitions given *above*, between the first two notions / phrases (*i.e.*, misinformation and disinformation) there is a clear differentiation, by reference - mainly - to the subjective element that determines the dissemination of information.

Thus, in the case of misinformation the volitional factor is not important (there is either intention or fault), disinformation is directly intended and qualified by purpose, namely: misleading the recipients/readers, by publishing wrong information specially developed in this sense, with the purpose of creating/forming wrong and unfounded opinions, or erroneously substantiated , by forming a belief on a state of fact or situation (which is, in fact, false, untrue), inconsistent with the objective reality.

Therefore, it is can be said that the main difference between misinformation and disinformation lies in intention of the participants to the communication process: while, in the case of misinformation the intention is positive in the sense that the transmitter of the message is a descriptor of primary reality, in case of disinformation , the intention is negative, aimed at distorting reality in order to achieve objectives, generally of an economic, political, financial nature, etc. (not including in this analysis the disinformation as military tactic) .

Consequently, we emphasize that disinformation should not be confused with misinformation/wrong information, which is not deliberate. For example, if an individual or a media institution disseminates information that they consider to be true, even if, in reality, it is false, it cannot be considered that we are dealing with a process of disinformation, in the true sense of the word. For this reason (i.e. confusion /conceptual delimitation error), disinformation is often presented as misinformation / wrong information, when the broadcaster does not know that, in reality, the transmitter behind the message constructed it by deliberately distorting the primary reality.

As we mentioned *above*, we hold that the reason of disinformation (*i.e.*, the cause) can take different forms: from political, economic or social interests and to organized crime and terrorism. For these reasons, we consider that disinformation gets a high degree of danger, as a social phenomenon currently widespread, which hides obscure interests, contrary to authentic

democracy and genuine freedoms of thought, conscience and speech.

At the same time, we add that misinformation is preceded, as a premise, by the process of "*elaboration*"/creation/invention of information - as a means and / or instrument of it – to achieve illegal, unjustified, immoral, criticizable objectives or, at least, negative connotations objectives, likely to bring a profit, advantage or benefit to its authors, either directly or indirectly, or to one or more third parties.

According to the theory of Bruno Ballardini, disinformation is considered to be "*the act of transmitting misinformation, in deliberately so as to be obtain the intended attitudes and behaviors*"[33]. In other words, according to the analysis made in the previous section, disinformation is manipulating human perception, which results due to the transmission of information intended to distort reality.

Adrien Jaulmes, in the preface to "*Le Monde en 2035 vu par CIA – le report que Trump trouvé dans le bureau oval- The world in 2035 as seen by the CIA - the report that Trump found in the Oval Office*", explained the way in which was generated, worldwide, the mirage of high standard of living in Western Europe "*it did not matter that Western Europe was never as rich and prosperous, what was important was to create the image of a way of living of the middle class which the potential candidates aspired to*"[34].

There are many ways to produce and transmit information so that it meets the conditions for a disinformation, namely:

- denying the facts of the primary reality.
- reversal of the facts that determine, implicitly, the reversal of the roles of the actors participating in the fact (the perpetrator becomes a victim and *vice versa)*.
- the mixture truths and lies.
- distortion of the real reason.
- generalization of the fact, to be diminished in the generalized context.
- the process of selection and distortion when relating account, the fact (i.e., the introduction of the fact in a generalized context and its "*cut*" by the imbalance of the parties).

Among the disinformation techniques listed above, the literature[35] retains only four, namely: the denial of the fact, the reversal, the mixture of truth and lies and the distortion of the real reason.

The other techniques listed, respectively: generalization, selection and distortion[36] are specific to neuro-linguistic programming and we consider them effective in order to identify an action of disinformation.

The renowned professor of psychology, Don Fallis[37], argues about the disinformation that: "*in the same way that acts of terrorism tend to be more disturbing than natural disasters, disinformation is an especially problematic misinformation as fact that people are led into error is not accidental*"[38].

Embracing the same point of view, we add that the resemblance to the terrorist phenomenon reveals not only the problematic nature of disinformation, but the very " *coat* " it can wear, in the worst circumstances, namely: a real **threat to international peace and security**, insofar as disinformation seeks benefits or advantages by taking advantage of the emergence of crises, states of alert and/or emergency, armed conflicts, state of wars or siege and the like.

In these circumstances, a major problem arises as to the possibility of controlling or stopping this phenomenon, which is often masked by alleged free expression of opinions or thoughts, without prejudice to the fundamental right to free expression and without imposing a censorship that would give rise, in time, to abuses that are difficult to remedy, in this sense.

However, we consider that a legitimate question is worth asking: if necessary, who will implement the control of misinformation or disinformation? States, through the exercise of public authority or private entities that manage social networks and internet platforms?

If, where states are concerned, we can talk about legitimacy, to the extent of compliance *in integrum* with the fundamental human rights as an expression of sovereignty and hence of fulfillment of the state's obligations concerning the national safety, subject to judicial review of the competent courts, where private entities are concerned, that manage and control content shown on online platforms, is there legitimacy and possibility of a remedy in case of implementing an unjust censorship and removal of content ?

Moreover, we consider that we need to look carefully at new trends as far as " *use policies* " are concerned, implemented at industry and Internet platforms or networks level, in order to identify possible attempts of *manipulation* of information, under the pretext of removing false information or disinformation , to obtain the *noble* result of *purification* of the cyberspace of information that is harmful, which in reality is nothing but a **classic censorship** , meant to serve diverse groups of political

, social, economic interests or otherwise , but we shall not go into details on this issue, given that it is not the subject of this research.

In conclusion, the extent of the phenomenon of disinformation, misinformation and / or *fake news*, is caused including by the fact there are no clear regulations to stop this phenomenon, perhaps because **information is a true weapon** extremely effective everywhere it is used. For the same reason, under the current conditions, our opinion is that it is exceedingly difficult to identify and separate a real disinformation from a so-called misinformation.

2.3. Disinformation vs. propaganda

From a historical view, the term "*propaganda*" was used for the first time, by the Congregation of the propagation of Faith (lat. *Congregatio de Propaganda Fide*), the Roman congregation for preaching the Catholic faith and the conduct of missionary activities in Central America, America South, Caribbean, Philippines, Japan, China and India, but not limited to these countries. It was founded in 1622 by the Catholic Church[39], its activity is still ongoing, and it is headquartered in Rome.

According to DEX[40], propaganda is an "*organized action of mass dissemination of ideas that present and support a political party, a theory, a conception, etc., in order to make them known and accepted, to gain followers, etc*.". "*An action carried out systematically in order to spread a political, religious doctrine, theories, opinions, to make them known and accepted, to gain followers*".

Propaganda is, therefore, the action of planned persuasive communication, with the finality of influencing and, even, changing attitudes and behaviors of target-groups, to achieve interim objectives or final objectives that are (or not) explicitly stated.

The specificity of the propaganda activity consists in "*the transmission of false information and arguments, in a systematic way, partially true, distorted and exclusive, together with the true ones and accompanied by various forms of coercion and censorship*"[41].

Analyzing the definition given by Noam Chomsky, we find that the key element is the word "*systematic*" i.e., the repetitiveness with which information is transmitted.

One other feature specific to propaganda is linked to the fact that it always presents a single point of view, unlike disinformation, where we are dealing with the propagation of several views presented in dispute, or in competition.

Examining by comparison the two notions of "*propaganda*" and "*disinformation*" we find that they both have in common, the absence of quoting the source, in other words, both the propagandist and the disinformer, never give the source of the information they spread.

Note, however, that the mere exhibit of an ideology, doctrine, idea, or a concept is not *per se* propaganda. To turn into propaganda, that ideology, doctrine or concept should be spread in a communication context that promotes attitudinal and behavioral change, favorable to doctrinal or ideological information, following a process of repetition and persuasion carried out during a long period of time.

The fundamental difference between propaganda and disinformation, although they use similar manipulation techniques, resides in the manner of action to the individual. Thus, while propaganda is addressed to the emotional and affective side of the individual (*i.e.,* the right hemisphere of the human subconscious), disinformation is aimed at manipulating the reason (*i.e.,* the left hemisphere of the human subconscious). We consider that this particularity is well expressed by Richard Bandler and John La Valle, who argue that "*a false idea, clearly and precisely expressed, will always have a greater power in the world than a true, but complex idea.*"[42].

One other method of distortion of the primary reality is censorship. When the information channels cannot be completely controlled or closed, they are rendered unusable by saturation with false information, thus decreasing the value of the "*signal-to-noise ratio*"[43].

Currently, the term "*propaganda*" has a pejorative connotation, essentially referring to the deliberate dissemination of manipulative information, rumors, ideas, concepts, directed against specific groups, movements, beliefs, institutions, or governments.

If, from the perspective of the comparative analysis of the terms "*propaganda*" and "*disinformation",* the delimitation is quite clear, the same cannot be said about the notion of "*public relations*", in relation to "*propaganda*" and "*disinformation*".

From the perspective of the meaning of the notion of "*public relations"*, they are the "*aspects of communication which involve relations between a subject entity, or which require the public's attention and the various public persons who are or may be interested in it*"[44].

Consequently, the relationship between the notions of "*propaganda*" and "*public relations*" is complex and, depending on current interests and the conception of primary reality, it can be structured in

[39] W. Phillips Davison, *Public opinion*, updated on 13 November 2020, Encyclopaedia Britannica, available at: https://www.britannica.com/topic/public-opinion/The-Middle-Ages-to-the-early-modern-period, , accessed on 20 November 2020.
[40] See, in this respect, https://dexonline.ro/definitie/propaganda, accessed on 20 November 2020.
[41] Noam Chomsky, *11 settembre dieci anni dopo*, editura Il Saggiatore, Milano, 2011, p. 28.
[42] Richard Bandler, John La Valle, *Persuasion Engineering*, Meta Publication, US, 2000, p. 72.
[43] *Ibidem*, p. 62.
[44] See, in this respect, https://www.britannica.com/topic/public-relations-communications, accessed on 20 November 2020.

different ways. Here, a key factor intervenes that can significantly determine public relations, namely: public opinion.

As the French historian Alexis de Tocqueville put it "*once an opinion has taken root among a democratic people and has settled in the minds of the largest community, it persists on its own and is maintained effortlessly, because no one attacks it.*"[45].

As for the components of the "*public opinion*", the doctrinaires emphasized the importance of two fundamental elements: *attitudes*[46] (*i.e.,* hypothetical constructions - they are deducted, not objectively observable – manifested by conscious experience, verbal reports, ostentatious behavior and physiological indicators) and *values* (*i.e.,* beliefs about religion - including belief in god or lack thereof - political perspectives, moral standards and other)[47].

Thus, we appreciate that public opinion is the sum of the attitudes and values of the majority, in each historical period, not in the sense that they are adopted by most individuals, but in the sense of factors that are more "*popularized*" in relation to other factors, of the same nature, but different in content.

It can be concluded that, following the latest events in the world, even the differences between propaganda and public relations are difficult to grasp. Depending on the view of the authors of the propaganda, it can be seen as the opposite of public relations, insofar as we accept that public relations "*inform*" (the sincerity of the message), while propaganda "*disinforms*" and "*manipulates*" (distorted message)[48].

3. Disinformation: International legal framework

3.1. International legal framework

Disinformation is a hotly debated topic in contemporary international society, but we believe that, it is not debated enough, not even at this time, given the seriousness of the possible effects of this phenomenon that is more widespread than ever.

In the context of the spread of terrorism, globally, we believe that it is imperative to adopt express regulations, as mandatory rules, to prevent and respond promptly and firmly to any terrorist manifestation, no matter what tools it uses to "*popularize*" or "*market*" (including disinformation).

Basically, at international level, there is no set of imperative norms like the ones we referred to, only communications at the level of international intergovernmental organizations, initiatives, recommendations, good practices, reports and the like.

The usefulness of these guidelines and /or recommendations is of course undeniable , but given the current circumstances (*i.e.*, including the COVID-19 pandemic) , the risk of spreading false information, including for the purpose of propaganda for war and terrorism have increased exponentially, thus adding to the fear of illness / disease , the fear of global terrorist manifestations which, as we detailed in the first part, manifests itself strongly at cyber level, with devastating consequences, especially at the level of essential services of a state (*e.g.* energy, health services, transport, etc.).

In the subsections *below,* we will analyze a series of regulations / guidelines or good practices adopted at international level, with a focus on the United Nations (hereinafter "*the UN*"), as well as doctrinal opinions expressed in specialized articles or in the most important international news publications.

3.2. Universal Declaration of Human Rights

At the onset, it should be noted that the phenomenon of disinformation requires a contextualized understanding, given that respecting the fundamental freedom of expression and opinion is guaranteed by the mandatory rules of public international law, of course within the limits of the applicable legal provisions.

In this respect, for a complete understanding of how disinformation violate these limits, set by the mandatory rules of public international law, the freedom of expression and opinion being therefore the expression of abusive exercise of this fundamental right, we refer to the provisions of art. 19 of the Universal Declaration of Human Rights (hereinafter, "*UDHR*"), adopted by the UN General Assembly on the 10th of December, 1948[49].

According to the mentioned text, "*Everyone has the right to freedom of opinion and expression; this right includes freedom to hold opinions without interference and to seek, receive and impart information and ideas through any media and regardless of frontiers*".

In other words, it recognizes and guarantees, inter alia, the freedom of "*everyone*" to publish information and ideas, regardless of means or "*frontiers*". However, the provisions of art. 19 of the UDHR involve a series of limitations, imposed by art. 29 of the same international document, as duties correlative to the proclaimed rights and freedoms that also reflect the **prevalence of collective "*good*"**, to the one belonging to the individual *ut singuli.* Thus:

[45] See, in this respect, W. Phillips Davison, *Public opinion*, actualizat la 13 noiembrie 2020, Encyclopaedia Britannica, available at: https://www.britannica.com/topic/public-opinion/The-Middle-Ages-to-the-early-modern-period, accessed on 20 November 2020.

[46] See, in this respect, https://www.britannica.com/science/attitude-psychology, accesed on 20 November 2020.

[47] W. Phillips Davison, *Public opinion*, updated on 13 November 2020, Encyclopaedia Britannica, available at: https://www.britannica.com/topic/public-opinion/The-Middle-Ages-to-the-early-modern-period, accessed on 20 November 2020.

[48] *Idem*.

[49] See, in this respect, https://lege5.ro/App/Document/g42doobx/declaratia-universala-a-drepturilor-omului-din-10121948?pid=8387872, accessed on 19 November 2020.

"*1. Everyone has duties to the community in which alone the free and full development of his personality is possible.*

2. In the exercise of his rights and freedoms, everyone shall be subject only to such limitations as are determined by law solely for the purpose of securing due recognition and respect for the rights and freedoms of others and of meeting the just requirements of morality, public order and the general welfare in a democratic society.

3. These rights and freedoms may in no case be exercised contrary to the purposes and principles of the United Nations.".

From the analysis of the above text, one can identify the factors that limit the exercise of freedom of opinion and expression, according to UDHR, *i.e.*, respect for the rights and freedoms of others; observance of the rigors imposed by morality, public order and general welfare; compliance with UN purpose and principles.

Consequently, in considering the conceptual delimitation of the notion of disinformation as per Chapter I of this study, we can conclude that transmission of misleading or manipulation information intentionally, including for propaganda purposes, to gain advantages / benefits of a political, economic, or other similar nature, constitutes a violation of the obligations established in art. 29 of UDHR. In other words, we consider that such public manifestations amount to **exceeding the limits of freedom of expression and opinion** in the sense proclaimed and guaranteed by the UN, even being the expression of a behavior contrary to the aims and principles of the UN as laid down in Art. 1 and art. 2 of the Charter of the United Nations of June 26, 1945[50].

Below, we will relate the preliminary remarks previously detailed to disinformation, deciphering the UN view on this social phenomenon very widespread nowadays, especially due to the progress of information technology and communications and, not least, in the context an unprecedented global crisis.

3.3. UN and misinformation. Case study: "*the infodemic*"

2020 brought major changes internationally, strongly felt in every country, especially from the perspective of citizens under restrictions of movement, social distancing, mandatory use of health protective devices, controversial, caused by the health crisis resulting from the pandemic with the SARS-CoV-2 virus (*i.e.*, the COVID-19 pandemic).

In the context of the spread, globally, of a justified fear regarding the health and life of the population, with the emergence of a highly infectious virus, the remedies for which modern medicine has failed to promptly offer solutions, and when they appeared, they were unsatisfactory while the world didn't have time to waste in stopping the loss of human lives, it was expected that the less well – meaning would take advantage of this situation, as is perfectly true in any other crisis situation.

Thus, a new "*crisis*" was launched, this time, of an informational nature, by spreading, especially on social networks, false or distorted information, likely to endanger people's health and instigate non-compliance with the measures taken by the national authorities, as recommended by the World Health Organization (hereinafter "*WHO*").

The new "*crisis*" was named suggestively by the UN, "***infodemic***", with reference to the speed with which information is subject to widespread, and to the harmful effects of an authentic pandemic.

WHO has defined that concept in the *Joint Declaration of the WHO, UN, UNICEF, PNUD, UNESCO, UNAIDS, ITU, UN Global Pulse and IFRC*[51], in the sense that infodemia "*is an overabundance of information, both online and offline? It includes* ***deliberate attempts to disseminate misinformation*** *to undermine the response to public health and to advance alternative agendas of groups or individuals*".

Thus, the specialized agencies of the UN mentioned above concluded that *infodemia* employs several methods, respectively **misinformation** and **disinformation**, potentially leading to damage of human health and even loss of life, by misleading and encouraging non-compliance with the measures of public health.

In addition to the joint declaration of the UN agencies, we add that infodemia presents another negative effect reflected in the extensive protests[52] already shown internationally including: the growing mistrust of the population regarding the protection measures and restrictions imposed by national authorities, it's in the context of adopting regulations that do not enjoy popularity because they restrict the freedom of movement and of economic activities that present a potentially increased risk of facilitating the spread of the SARS-CoV-2 virus .

---

[51] Available at: https://www.who.int/news/item/23-09-2020-managing-the-covid-19-infodemic-promoting-healthy-behaviours-and-mitigating-the-harm-from-misinformation-and-disinformation, accessed on 19 November 2020.

[52] See, in this respect , the international press regarding the protests in Italy, Germany, Great Britain, Spain, France, Portugal, etc. on the restrictive measures imposed by the second wave of the COVID-19 pandemic, of which : https://www.aljazeera.com/news/2020/11/18/thousands-of-germans-protest-against-merkels-coronavirus-plans; https://www.france24.com/en/europe/20201101-fresh-lockdowns-fuel-angry-protests-as-covid-cases-climb-across-europe, https://www.euronews.com/2020/10/27/coronavirus-protests-in-italy-over-new-pandemic-crackdown-turn-violent, https://www.garda.com/crisis24/news-alerts/399626/portugal-activists-plan-protest-against-covid-19-restrictions-in-lisbon-november-14, https://www.euronews.com/2020/10/03/authorities-are-using-covid-19-as-a-smokescreen-to-stifle-the-legitimate-right-to-protest-, accessed on 19 November 2020.

At the same time, the above-mentioned declaration also mentions the "endangerment" of the capacity of "*countries to stop the pandemic*", precisely for the reasons detailed above.

Therefore, we maintain that disinformation and misinformation plays a negative decisive role, especially in crisis situations such as the health crisis the world faces is facing now, with serious and very serious consequences, similar to those of terrorism, by the loss of human lives and the significant decrease of the response capacity of the state authorities, thus endangering national and, implicitly, international security - considering the current pandemic phenomenon.

Returning to UN position, as expressed in the Joint Declaration of its specialized agencies, it can be concluded that it was a warning about the so-called "*news*" or information circulating on social networks and, in general, in the cyberspace, on the hypothetical healing methods, the possible ineffectiveness of wearing protection masks or other measures imposed by national authorities.

Among the opinions expressed, it is notable the opinion of the Secretary- General of the UN, António Guterres, who, through a video message during the event organized by WHO at the same time (i.e., 23 September 2020), stated the following:

"*COVID-19 is not just a public health emergency - it is also a communications emergency.*

Once the virus has spread across the globe, inaccurate and even dangerous messages proliferated savagely on social networks, leaving people confused and misled and badly advised.

***The antidote** is to ensure that science-based facts and health guidelines circulate even faster and reach people wherever they access information.*"[53] .

Thus, there is already talk of " *infodemia management*"[54], by taking steps at national level by developing and implementing action plans for prompt communication of accurate scientific information, while implementing measures to prevent the spreading and to fight against them, while observing not affecting the freedom of expression.

It is worth mentioning that, in May of this year, the UN launched a project called suggestively "***Verified initiative***"[55] , through which the UN seeks to support and encourage people everywhere to serve as "*digital first responders*" sharing accurate and reliable information on their social media platforms.

In this regard, UN Under-Secretary-General for Global Communications Melissa Fleming said:

"*COVID-19 does not represent only the greatest health public emergency of this century, but, equally, a communication crisis... We must empower people to spread reliable information with their friends, families and social network*".

Basically, the message of the Under- Secretary General of the UN does not reflect merely the absence of a legal international framework the UN can count on to require member states to take measures at legislative level, in order to prevent and / or mitigate the spread of false, distorted or incorrect information in connection with the COVID-19 pandemic.

Likewise, the UN Secretary General, António Guterres, said that "*working with media partners, individuals, influencers and social platforms, the content we spread promotes science offers solutions and inspires solidarity"*, adding that "the *fight against disinformation is critical because the UN and its partners are working to build public confidence regarding the safety and efficacy of any developing COVID-19 vaccines*"[56].

Why, is there no such solution, internationally, at this time? It seems to me that a possible settlement of this would be rightly criticized, since it would violate the fundamental principle of sovereign equality of UN Members, as set in the content of art. 2 pt. 1 of the UN Chart. This principle does not allow any interference of a legal nature in the domestic law of the Member States or in the political, administrative, or judicial system of any UN Member.

Consequently, the only levers available to the UN to combat disinformation are, at this time, are the declarations of the type described above and finding solutions by the UN members, by agreement, without any obligation imposed directly by the UN in this regard.

Furthermore, it must not be overlooked that any action involving even a minimal degree of coercion, must be proportionate to the gravity of the coerced conduct and its possible effects, and must respect fundamental rights and freedoms, as they stand proclaimed and guaranteed by UDHR (in this case, mainly, freedom of opinion and expression is questioned).

Therefore, in view of the hypothetical effect that disinformation may have, we consider that a prohibitive obligation imposed directly by the UN on its Members would be disproportionate, especially given the specific nature of disinformation, namely: its serious effects are purely hypothetical, if there is no proof, beyond any doubt, that it is t linked to those consequences. For example, in case of the retransmission of misleading information regarding the hypothetical "*non-existence*" of the SARS-CoV-2 virus on a social network, the author of the disinformation might be guilty of a

[53] António Guterres, declaration of 23 September 2020, available at: https://www.un.org/sg/en/content/sg/statement/2020-09-23/secretary-generals-video-message-for-who-side-event-%E2%80%9Cinfodemic-management-promoting-healthy-behaviours-the-time-of-covid-19-and-mitigating-the-harm-misinformation-and, accessed on 19 November 2020.

[54] See, in this respect, https://news.un.org/en/story/2020/09/1073302, accessed on 19 November 2020.

[55] See, in this respect, the press release of the Departament of the United Nations for Global Communications (DGC), May 2020, available at: https://www.un.org/en/coronavirus/%E2%80%98verified%E2%80%99-initiative-aims-flood-digital-space-facts-amid-covid-19-crisis, accessed on 20 November 2020.

[56] See, in this respect: https://news.un.org/en/story/2020/09/1073302, accessed on 20 November 2020.

possible effect on the readers of the message only if it can be shown that the latter did not comply with the security measures as a result of the change of opinion caused by the post in question.

Also, in the same direction of fighting against "*infodemia*", UN Under- Secretary-General for Global Communications Melissa Fleming announced an initiative to respond to the spread of false information about the COVID-19 pandemic as early as April 2020, by defining five ways the UN fights the "*infodemia*"[57].

According to the UN official, "*fear, uncertainty and proliferation of false news has the potential to weaken the national and global response to the virus, to strengthen nativist narratives and to provide opportunities for those who might try to exploit this moment to deepen social divisions. [...] All this threatens to undermine the international cooperation urgently needed to deal with the impact of this crisis*".

In this respect, according to the press release on the draft reply to the spread of disinformation, it is noteworthy that it is based on science, solutions and solidarity, with the purpose to fight against the phenomenon of mass disinformation, which resulted in damage to the global effort to overcoming the global health crisis . As the UN claims, disinformation affects the fight against the pandemic by "*proliferating false information that the virus can spread through radio waves and mobile networks, unbelievable information affecting the global effort to defeat the COVID-19 pandemic.*

By dispelling rumors, false news and messages of hatred and division, the United Nations is working to spread accurate information and messages of hope and solidarity." [58].

UN therefore proposes the following solution for ensuring a rapid response to the actions of disinformation and spread of distrust among people about health protection measures, those relating to misinformation on the ways SARS-COV- 2 virus spreads and others alike:

- producing and disseminating facts and accurate information.
- partnerships with companies.
- collaboration with the media and journalists.
- mobilization of civil society.
- militate for rights.

Another reference document of the UN to fight against disinformation, is the report on combating disinformation, while observing the freedom of speech, entitled "*Balancing act: countering digital disinformation while respecting freedom of expression*" prepared by the Broadband Committee for Sustainable Development[59].

Among other things, it identifies active subjects in the spread of disinformation, classifying them depending on their role in the process of disinformation. Thus, the Report of the Broadband Commission for Sustainable Development refers to and, at the same time, defines[60]:

1. the ***instigator*** **-** as an indirect beneficiary of disinformation, acts with the intention of prejudicing or misleading, for political, financial, status improvement reasons, ideologically wrong altruism, etc.
2. the ***agent*** **-** is the one who operationalizes the creation and dissemination of disinformation; can have the " *appearance* " of an "*influencer*", group, company, official or private individual, etc., their identity can be real or false ;
3. the ***message*** **-** information that spreads (*e.g.* statements or false narratives, taken out of context or fraudulently forged images and videos, profound fakes etc., are messages that wish to deviate from and / or to discredit the truthful content and actors involved in the search for the truth (for example, journalists and scientists);
4. ***the intermediary*** **–** starts from the *"dark web*" and continues with online sites / services and news media that support the spread of disinformation; it must be analyzed whether the intermediary's mode of action can be held liable, by assessing the proportionality of the measures in relation to the effects and the causal link, if they can be proved.

In legal terms, the guidelines of the Report on combating disinformation, relate to alerting the bodies and institutions competent to enforce the law, at the level of the UN members, meaning that it is imperative to ensure freedom of expression and privacy of the data, including with respect to protecting journalists publishing verifiable information of public interest. It is also recommended to **avoid any arbitrary actions in connection with any legislation criminalizing disinformation.**

For judges and other judicial actors, the Report calls to pay particular attention to the interpretation of laws in cases involving the application of measures to combat disinformation, such as criminalization to help ensure the full respect for the international standards on freedom of expression and confidentiality, within these measures.

The report is comprehensive and detailed, providing answers to some of the most important questions about online disinformation tactics and techniques (i.e. from emotional narrative constructions; fraudulently modified, fabricated or de-contextualized images, videos, and audio synthetics to fabricated websites and altered data sets).

[58] *Ibidem*.

[59] See, in this respect, the Raport on countering Digital Disinformation while Respecting Freedom of Expression, p. 13, available at: https://www.broadbandcommission.org/Documents/working-groups/FoE_Disinfo_Report.pdf, accessed on 21 November 2020.

[60] *Ibidem*, pp. 9-10.

At the same time, an express definition is given to the concepts of disinformation and misinformation, in the sense that:

- ***misinformation***: represents a series of false or inaccurate information, in particular that which deliberately seeks to mislead;
- ***disinformation***: false information that is intended to mislead, in particular propaganda issued by a government organization to a rival power or the press.

However, we cannot ignore the fact that it is not indicated (not even recommended) adopting coercive measures to punish perpetrators, instigators or any other participants in the proliferation of disinformation, precisely in view of avoiding even the lowest risk of violation of a fundamental human right and / or freedom, such a violation being equivalent to the very non-observance of the purpose and principles of the UN Charter, respectively to the violation of an imperative norm of public international law.

In conclusion, we consider that the above-mentioned Report provides a complex framework for assessing the problems imposed by the phenomenon of disinformation, as well as freedom of expression, which can serve as a real tool in establishing guidelines for states and institutions / authorities involved in formulating optimal answers to this social-media phenomenon. Concrete help offered by this paper is to outline some directions for formulating legislative, regulatory and policy answers to counteract disinformation in a way that supports and prevents the infringement in any way of the freedom of expression.

Staying on the "*land*" of the UN, UNESCO launched a broad public consultation on the phenomenon of disinformation at global level, initiative finalized by a series of proposals viable in the fight against disinformation and misinformation.

Specifically, two eloquent documents were drafted: two "*Brief Policies*"[61], by which 10 types of responses against disinformation on COVID-19 are drawn. It is noteworthy that the answers are classified rather according to their purposes, and not in relation to the actors from behind these responses (e.g., social platforms, Governments, media news, citizens), which by the directions they offered and by the proposals they made, aim at "*disinfodemize*".

The fact is that neither of these documents establishes rules criminalizing disinformation, instead they focus on non-punitive reactions which highlights, once again, the prevalence of fundamental human rights and freedoms by reference to a threat established rather conceptually, but very difficult to prove, in practice, for a possible prosecution, regardless of its nature thereof (*e.g.,* criminal, civil, administrative, etc.).

3.4. Disinformation from a NATO perspective

The last (but not the last) international intergovernmental organization under analysis in this paper, in terms of its position in the context of spreading disinformation about the COVID-19 pandemic, is the North Atlantic Treaty Organization (hereinafter referred to as "*NATO*").

Thus, on July 17, 2020, NATO published a detailed analysis[62] on how the organization counteracts disinformation in the current pandemic context. In this regard, NATO is sounding the alarm about the dangerousness of the disinformation phenomenon, by referring to the ongoing global health crisis, stressing that the source of the phenomenon can be both state and non-governmental, for various purposes, such as: "*dividing the allies, undermining the trust in the democratic institutions and the presentation of authoritarian regimes as being more effective in front of the health crisis*". The NATO study also highlights the risk to the public posed by the disinformation "*by undermining vital messages on the public health*"[63].

In the same way as the UN, the NATO press release emphasizes the role played by all the "*actors*" on the public information scene, from international organizations, national and local governments, to private companies, civil society and the free and independent media, each of which has a major importance in the fight against disinformation, especially in the current global vulnerable context.

NATO itself has become a "*victim*" of attacks of disinformation of public opinion, including in April of last year, the harmful action having as object a false "*NATO intention to withdraw troops*" from Latvia, by circulating a false interview alleging that Canadian troops in Latvia brought the virus into the country.

In its analysis, NATO refers to a series of techniques used to disinform that targeted this important international military alliance, namely **fakes** (*i.e.* medical letters of low quality, fake social media posting and false interviews); **individuals with false identities** (*i.e.* creating and using one time only accounts to share content, later abandoned); **false statements** (*i.e.* alleging false statements regarding NATO and the Allies unity and exercises during COVID-19 pandemic); **exaggeration** (*i.e.* "*beautifying*" hostile stories through news sites); **language** "***leap***" (*i.e. the* use of individuals to help fabricated content make the leap to English-language media from their original source); **mobilization** (*i.e.* forged emails sent to NATO or other media to provoke a response).

However, NATO believes that the best way to counter disinformation is by promoting credible news, based on facts and therefore on the fundamental values

[61] See, in this respect, Julie Posetti and Kalina Bontcheva, Policy brief 1, available at: https://www.sparkblue.org/system/files/2020-10/Disinfodemic%20Policy%20Brief%201.pdf, Julie Posetti and Kalina Bontcheva, Policy brief 2, available at: https://www.sparkblue.org/system/files/2020-10/Disinfodemic%20Policy%20Brief%202.pdf.

[62] See, in this respect, *NATO's approach to countering disinformation: a focus on COVID-19*, 17 iulie 2020, available at: https://www.nato.int/cps/en/natohq/177273.htm, accessed on 21 November 2020.

[63] *Ibidem.*

of the Alliance, namely: democracy, freedom of expression and the rule of law. It emphasizes the need to engage the public in the fight to counter and prevent the phenomenon of disinformation and / or misinformation.

Therefore, based on measures that NATO has taken to combat disinformation, we note the same non-punitive character as supported by the UN, in particular by exposing the disinformation "*through a wide range of media commitments, including statements rejection, corrections and briefings to inform a wide variety of audiences about disinformation and propaganda, as it did just before the pandemic*"[64].

Finally, NATO supports several actors whose work can supports its fight against disinformation, namely: independent NGOs, think tanks, academics, organizations that verify the facts and other civil society initiatives to promote debates and build resistance against this harmful phenomenon.

In conclusion, the same attitude adopted by the UN is embraced and affirmed by the most powerful international military alliance, NATO being a fast and fierce respondent to any attack, including informational attacks, thus highlighting the supremacy of fundamental rights and freedoms of human beings, as a conduct to the contrary is prohibited by the international legal framework.

4. Conclusions

In the international context of the worst health crisis of the last century, humanity has been faced with a struggle, perhaps unjust (at least at first glance), in which the causes have been less researched, being set aside in search of gaining any piece of time to establish a prompt response to this situation of extreme urgency. Thus, the "***antidote***" seems to be long overdue, despite technological advances in medicine and biochemical research, but the SARS-CoV-2 virus is not the only obstacle to a return to a well-known "*normality*" of humanity before 2020.

Simultaneously with the health crisis, an information crisis coexists, transposed into the rapid spread of misinformation, unsupported by evidence, disinformation, and the popularization of the phenomenon of "*fake news*" related to the pandemic. The outcome? The pandemic meets the "*infodemic*" and, as in an evil dance of death and suffering, despair sets the pace for a global crisis about which many pages will be written in modern history.

Thus, terrorism might be thought as the main threat to international peace and security, at least as it was made known in the first decades of the 21st century, and a legitimate question arises: can terrorism *wear the* "*coat*" of false, distorted, or misleading information that leads to deviant behavior among people, so that the expected result is achieved through minimal effort in crisis situations such as a pandemic?

It may be considered that the answer to this question must be nuanced, in the sense that "*disinformation*", by its determined purpose, is a real "*weapon*" in the hands of any representatives of a phenomenon or a malicious movement / group, so that nothing can make us exclude terrorists from the category of those "*with an interest*" to use mass manipulation, not only as a vehicle for popularizing ideas, beliefs and their expectations, but also as a factor of subliminal control, while using minimal effort and cost.

JUSTIFICATION OF TAXATION

Vanya PANTELEEVA*

Abstract

The development of taxation in the modern state is also related to the issue of justifying the payment of the tax by individuals. The legal obligation to pay taxes established by law must be justified. The tax forms as the main method for accumulating the necessary financial resources for the state. The present paper is focused on the historical appearance of the tax as a phenomenon, as a reality, as a form of accumulation of incomes and a method of insurance of the state, the justification of taxation and the types of tax incomes.

Keywords: *taxation, types of taxes, budget.*

1. Introduction

1.1. Introduction

There are many researchers of the tax who claim that modern tax theory has much in common with the Roman concept. The reason for this is that during the Roman Empire, the tax system reached a fairly high degree of perfection. Taxation is differentiated into direct and indirect. Direct taxation covers the property and fortune of citizens, which is determined on the basis of an assessment of their property. Indirect taxation in the Roman Empire is represented by the tax on crafts, customs duties, excise duties and the state monopol on salt. There was also a general tax on purchases and sales in the amount of 1%, which was later called the cumulative turnover tax.

2. Content

After the division of the Roman Empire into Eastern and Western, the well-developed tax system began to disintegrate. The kings gradually began to lose their tax rights, which they inherited from the institutions of the empire. Gradually, revenues began to decline at the expense of increasing relief. Large landowners are authorized to collect the tax at their own expense from the persons assigned to their possessions. In this way, the tax becomes a payment in favor of the owners and possessors of land and wealth, i.e. the tax acquires the character of a private deduction. In the thirteenth century there was an expansion of royal power, which led to a significant increase in monarchical spending. Hence appears the lack of resources.

From the 16th century a new concept of the tax began to emerge and forms, which was established in the 17th century and reached its apogee at the end of the reign of Louis XIV. This is the authoritarian concept of the tax.

At the base of this concept is the simplification and fairness of fiscal taxation. It is characterized by several features:

• The absolute right of the monarch to represent the state and to introduce and collect taxes is affirmed. However, this right of the monarch is exercised within the laws of the kingdom.

• Bringing to the forefront indirect taxes, which are easier to collect, they are fairer because they affect all consumers.

At the end of the 17th century and at the beginning of the 18th century, the ideas of limiting the power of the sovereign began to be perceived. In the work, “The Royal Tithing”, Woben sets out the basic principles of the tax, namely that it is a reality known to all citizens of the state who must provide funds in order for it to be supported. This gradually gave rise to the idea that the tax is inextricably linked to the security and stability of the nation, stems from the existence of the state and all citizens participate in covering its costs.

During the eighteenth and nineteenth centuries, a new concept of the tax was born and established - the exchange concept, whose main ideas are represented in the work of Charles de Montesquieu - "In the spirit of the laws." Achieving equality between the interests of society and entrepreneurs is important for Montesquieu.[1]

In determining the principles of taxation of the exchange concept of tax, an important place is occupied by the views and formulations of Adam Smith, laid down in his well-known work "The Wealth of Nations". Smith says that "government spending for the majority of the people must be paid through taxes in cash or otherwise. In this way, with part of their income, the people contribute to the collection at the sovereign or the state of what is called state revenues.[2]

There are numerous studies of the tax in historical aspect, which inevitably outline the main characteristics of the modern tax. Contemporary authors seek to define the tax by including more elements. For example, P.M. Godme defines the tax as

* Lecturer, PhD, Faculty of Law University of Ruse „Angel Kanchev” (e-mail: vpanteleeva@uni-ruse.bg).

[1] Монтескьо, Ш. За духа на законите, София, Наука и изкуство, 1984.

[2] Смит Адам, Богатството на народите изследване на неговата природа и причини, София, Пртиздат, 1983.

"a deduction made under duress by the public authorities and having the main purpose of covering public expenditures and redistributing them according to the ability of citizens to pay." According to J. Ducrot, "the tax is classically defined as a deduction on the wealth of taxpayers that the state makes in an attempt to take into account their ability to pay."[3]

2.1. Justification of taxation

The development of taxation in the modern state is also related to the issue of justifying the payment of the tax by individuals. The legal obligation to pay taxes introduced by law must be justified. The tax is formed as the main method for accumulating the necessary financial resources to provide the state.

It is logical to ask the question, what is the reason for the state to seize part of the income of its citizens through the tax? The answer to this question has been motivated in different ways. Separate ideological and theoretical concepts have been developed. Ideological are socio-psychological justifications of the tax liability. Theoretical concepts derive the organizational (state-organizational, political) basis. Both types of concepts explain taxes with the need of financial provision for the "needs" of the state.

In the early twentieth century, the American researcher Edwin Seligman, derived seven ideological views of the justification of the tax, such as: donation, support, assistance, sacrifice, debt, coercion, payment of tax by the taxpayer against his will.

In the first stage, the prevailing view was that the tax was a gift from individuals to the monarch. The second stage is characterized by a humble plea from the monarch to the people for support. The third stage meets us with the idea of assistance provided to the state by the people. The fourth stage is characterized by the idea of sacrifice, which the individual brings to the benefit of the state. The fifth stage reveals the sense of duty that forms in the individual payer, and the sixth stage introduces us to the idea of coercion by the state. The seventh and final stage is characterized by the determination of the amount by the government for payment by the individual payer, without respecting his will.[4]

The payment of the tax is essentially the deprivation of a certain part of the income of the persons. The modern legal basis of the tax is derived from the theory of the nation, as a modern form of social community, which alone and as a whole, determines its needs and provides them financially. As an equal member of the state organization, everyone is obliged to pay taxes that accumulate in the state budget. The tax claim is a subjective public right of the state to receive a certain amount. At the base of this right is the fiscal sovereignty of the state. This subjective right of the state corresponds to a certain obligation on the part of juridical and natural persons to pay taxes. This obligation is constitutionally established in Art. 60, para. 1 of the Constitution of the Republic of Bulgaria: „Citizens shall be obligated to pay taxes and fees established by a law in proportion to their income and property."

As the holder of this subjective right, the state may in some cases delegate it by determining taxes to go to the municipal budget.

2.2. Types of Sources of Revenue

The doctrine distinguishes two types of sources of revenue for the state.

- Domestic sources - Gross domestic product (GDP) and national wealth of a country;

- External sources - these are financial resources received from foreign national economies.[5]

Gross Domestic Product, better known as GDP, ranks first among domestic sources of funding. GDP is "... the total value of all goods and services (goods) produced in the national economy for one year, after deducting the so-called intermediate consumption, i.e. intended for final consumption".[6]

According to the International Glossary of Finance, Gross Domestic Product (GDP) is the monetary value (at market prices) of goods and services produced in the economy over a period of time, usually a year or a quarter. The cost of replacing fixed assets is not reported. Only final consumption goods or investments are included, as the value of intermediate goods, i.e. raw materials and supplies included in the prices of final consumer goods.[7]

We can conclude that GDP is one of the most important economic indicators. It is a comprehensive measurement of economic activity and signals the directions of all aggregates of economic activity.

Another source of domestic funding is the national wealth, which includes the natural resources belonging to the country.

External sources of finance represent the GDP of other countries. The accumulation of these sources happens through exports and investment of capital, loans, credits, aid and more. Usually, the funds received from external sources are uncertain, irregular, temporary.

In this regard, we can say that each country should rely primarily on its domestic sources and ultimately rely on the help of foreign national economies. Domestic sources of financial support for the state are accumulated in public funds through several methods of raising them:

1. Tax - the application of a system of taxes;

---

[6] Стоянов, В., Теоретични и публични финанси, София, 2009, с.218.

[7] Bannock, G, Manser, W, The Penguin International Dictionary of Finance, Penguin UK, 1999.

2. Tax-like (quasi-tax) method - includes revenues from fees, fines, interest, confiscations, etc.;

3. Non-tax method - the state credit, the economic activity of the state and the revenues from it, sale (privatization) or renting of state property (concession), money issue, etc.[8]

The economic activity of the state is too old a non-tax form to provide the necessary funds for the state. The specific manifestations of this activity of the state take the form of fiscal or financial monopolies, state and joint ventures, concessions and others; they form the public sector, i.e., the so-called indivisible and non-transferable property owned by the state. It is characteristic of the public sector that it usually generates and reproduces clumsiness, bureaucracy and inefficiency, both within it and within the national economy as a whole. This requires in recent years, in accordance with the requirements of the new neoliberal concept, to be sharply reduced (the public sector in the economy) through its privatization. All Western countries, without exception, have taken similar steps since the early 1990s and are seeking to minimize the public sector in their economies through privatization. In this way, a double benefit is obtained in the sense that, firstly, unprofitable and inefficient state economic structures are liquidated and, secondly, budget revenues are provided, which are relied on to overcome chronic budget deficits and the huge state indebtedness caused by them.

The monetary issue is a special method for providing financial resources for the state, for the budget. It essentially comes down to the issuance of unsecured banknotes, i.e. the banknotes put into circulation are provided to the budget and cover government expenditures. Such a monetary issue, which is called fiscal, in any case leads to inflation and disruption of money circulation with all the ensuing negative consequences. That is why financial theory has never been favorable to fiscal money supply.

The tax-like (quasi-tax) method is similar to the tax method, but the main difference between them is that while taxes are compulsory payments to the state, tax-like forms of income are voluntary payments. They serve to pay for used public goods. Non-tax revenue forms are also a method of providing financial support for government, but they are also to some extent related to taxes, albeit at a later stage in their use.

Of the above methods for accumulation of financial resources, the tax method occupies the first place. A significant part of government revenues (40-50%) is accumulated by taxes. These are revenues that go to the state budget and are made available to the state for its functions and government.[9]

Therefore, as we have pointed out, the main method for accumulating and securing financial resources in the state is the tax method.

2.3. Types of Tax Revenues

1. The doctrine expresses different opinions on the classification of types of tax revenues. It is indisputable, however, that the classification of tax revenues is built in accordance with the socio-economic structure of the state, legal sources, the direction of revenues and other factors.

In theory, different classifications of taxes are proposed:

• depending on the source of income, they are divided into:

- income from economic activity;
- income from the population.

• According to the direction of revenues, they are:

- revenues to the republican budget;
- revenues to the municipal budget.

• Depending on whether they go directly to the budget or are redistributed, revenues are divided into:

- basic income;
- derivative revenues - such are the revenues that do not enter the budget for the first time, but represent internal redistributions in this system.[10]

• According to the method of their collection, the following are divided:

- mandatory - taxes;
- voluntary- donations.

• Depending on whether the income is pre-planned or due to extraordinary non-specific activity, the following are distinguished:

- regular - revenues that provide the reserve of funds needed by the state to perform its functions - mandatory contributions, taxes, duties, fees;
- extraordinary - income from tort, fines, confiscations.

Classification is also possible, depending on the way in which tax revenues are paid. In this case they are divided into:

- natural - today they are extremely rare;
- monetary.

• According to the object or subject of taxation, tax revenues are revenues from:

- Taxes on the person - the object is the individual. A typical representative of this type of tax is the per capita tax, determined per capita, without considering his property status or income.
- Taxes on property - real estate and movable;
- Taxes on a certain economic activity - their prototype is the natural tithe. Gradually, with the development of crafts, an occupation tax was introduced.
- Sales taxes - the realized trade turnovers from the sale of goods and services are subject to taxation;
- Income taxes - a relatively new type of tax, as income becomes subject to taxation under conditions of a high degree of development of commodity-money

[9] Стоянов, В., Теоретични и публични финанси, София, 2009, с.225.
[10] Стоянов, И, Финансово право, София 2010, с. 315.

relations, i.e. in parallel with the emergence and development of capitalism.[11]

Theoretical interest is the differentiation of tax revenues of:

- direct and
- indirect.

This distinction of taxes is not based on a single criterion. According to John Stuart Mill and Adolf Wagner, taxes are direct, in which the payer and the taxpayer are identical, and if they are different, the taxes are indirect.[12]

Another sign of the distinction between direct and indirect taxes is whether "permanent objects or accidental events“ are taxed. In the first case, taxes are direct, and in the second - indirect.

The division of taxes into direct and indirect can be deduced depending on the subject of their taxation. Thus, taxes with the object of taxation of property or income are direct, and indirect are those whose object is the production of goods and services, at the prices of which they are calculated in advance.

With the adoption of the Public Finance Act (promulgated SG No. 15 of 15 February 2013 in force from 01.01.2014), which repealed the then existing Law on the Structure of the State Budget (SG, issue 54 of 15.07 .2011 repealed by SG No. 15 of 15 February 2013), the regulation of the general structure and structure of the public finances with one general normative act became a fact. The adoption of this law is an expression of the desire to consolidate all aspects of the management and use of public resources, both at national and local level. Public finances are considered as a unified system for providing and financing public goods and services, redistribution and transfer of income and accumulation of resources from budgetary organizations. According to §1, item 29 of the Additional Provisions of the Public Finance Act, “revenues” of the state are “cash receipts for the relevant budget year generated from: taxes, insurance contributions, other contribution, fees, fines, sanctions and penalties, confiscated assets, interest, dividends and any other income generated by financial assets, as well as any other net cash proceeds of budgetary organizations resulting from the realization and use of non-financial assets and the provision of services."

2. We accept the theoretical view that tax revenues are classified into:

A. Revenue from direct taxes:

• Income tax revenues;

• Income from property taxes;

B. Revenues from indirect taxes.

• Revenues from value added tax;

• Revenues from excises duties.

3. Conclusions

From all that has been said so far, it can be concluded that the tax is a reality, a complex multifaceted phenomenon that is immanently related to all aspects of people's lives. Joseph E. Stiglitz, in his book “Economics of the Public Sector”, outlines the five desirable characteristics of any tax system. There are five properties that define the tax system as "good":

1. Economic efficiency - the tax system should not hinder the efficient allocation of resources.

2. Administrative simplicity - the tax system should be easy to apply and relatively inexpensive.

3. Flexibility - the tax system must react quickly (in some cases automatically) to changed economic circumstances.

4. Political responsibility - the tax system must be such that people can determine for themselves how much to pay, so that the political system can more accurately reflect people's preferences.

5. Fairness - the tax system must be fair in its relative treatment of different people.[13]

The above leads to the conclusion that the actual implementation of the five properties would be a way to establish a "good" and stable tax system, which would be proof and a sure way to a well-functioning modern state.

ANALYSIS OF THE EU'S NEW PACT ON MIGRATION AND ASYLUM

Patricia Casandra PAPUC*

Abstract

This article analyses the New Pact on Migration and Asylum which was released by the European Commission on 23 September 2020. It seeks to find out which problems the New Pact aims to address, how it intends to do so, and whether its proposals are likely to succeed in this. It does so by first laying out the current system which is being targeted for legislative reform and putting it into a historical context to explain why change is called for. It then describes the scope of the policy proposals within the New Pact and identifies where the biggest and most important changes are found. Finally, it assesses the reactions from external actors and offers remarks into what challenges and potential necessary amendments lie ahead.

Keywords: *European Union, asylum, migration, policy reform, human rights.*

1. Introduction

On 23 September 2020, the European Commission revealed its new big ambition in the area of migration and asylum: the New Pact on Migration and Asylum.[1] This new package of legislative proposals announced that it aimed to be 'a fresh start on migration' as it set out to repair a system that has been described as 'broken' and 'not fit for purpose'.[2]

The New Pact comes after years of debate around asylum in Europe, propelled by an increase in boat crossings over the Mediterranean in 2015 and fuelled by various ad hoc attempts to 'fix problems' by the EU through an Agenda on Migration which 'intended to address immediate challenges', including through failed relocation plans and the controversial EU-Turkey deal.

In contrast, the New Pact 'seeks to build a complete system by providing essential new tools for faster and more integrated procedures, a better management of Schengen and borders and for flexibility and crisis resilience.'[3]

This article sets out to investigate the ways in which the New Pact imagines this to be achieved and looks at points of criticism, both in terms of its ability to protect rights and to be carried out in practice. It will do so by starting to understand what the current system is and what has led to the need for such overriding change. It will then seek to explain what it is that is being proposed and on what points it fundamentally differs from what is there already. Finally, it will assess the reactions from other actors and suggest what underlying aims and assumptions need reworking in order to achieve a common European asylum system that is both realistic and respectful of human rights.

It should be noted that, while the New Pact is namesakenly a revision of both migration and asylum policies, this article will focus solely on asylum. This has two reasons: first, it is the reform of the Common European Asylum System that provides the underlying base for discussion and secondly, the most important criticism of the New Pact in the area of legal migration so far is that a roadmap to this end is 'a glaringly absent element'.[4] As such, more substantial discussions on this topic will be saved for when there is more to discuss.

2. Background – what is being replaced and why?

The Common European Asylum System (CEAS) is the current frame for the set of policies relating to asylum and refugee protection in the European Union (EU). In the words of the European Commission itself, '[t]he Common European Asylum System sets out common standards and co-operation to ensure that asylum seekers are treated equally in an open and fair system – wherever they apply.'[5]

The CEAS consists of the following six elements:

- The Asylum Procedures Directive which sets out the conditions for asylum decisions in EU member states
- The Reception Conditions Directive which sets out common standards for housing, health care, education and other basic needs
- The Qualifications Directive which sets out the grounds for international protection and provides

access to rights for those who have been granted international protection

- The Dublin Regulation which places responsibility between EU member states as to where applications for asylum should be processed
- The EURODAC Regulation which managed the EU database of asylum seekers' biometric information
- The European Asylum Support Office which supports the implementation of the CEAS in the EU member states

The CEAS was born out of the continued EU integration during the 1990s, and a mutual need for migration management on the continent, and between 1999 and 2005 the first legal instruments were introduced with an overall aim to establish minimum standards for asylum in the EU and build on the 1990 Dublin Convention. After a period of reflection, it was decided in 2008 that the system was still not strong enough to ensure sufficient and comparable levels of protection in different member states, so a round of legal reforms saw the light of day between 2008 and 2013. Most noticeably, this is when the European Asylum Support Office (EASO) was created.

Since the so-called 'refugee crisis' in the EU in 2015, criticisms over both the CEAS' ability to protect refugees and manage migration flows into EU countries have been ongoing. Several of the Directives have already been recast several times, pointing to the need for a more thorough overhaul of the entire system, and critics have also pointed out that EU member states' treatment of refugees and asylum seekers are becoming less and less conforming to international standards, rather than more.[6]

Furthermore, the 2015 spike in arrivals made it clear that the Dublin system is not working, and that current legislation is not enough to secure the level of solidarity between countries which the CEAS originally intended. Indeed, with an increase in asylum applications, mainly the southern EU member states – those with an external border and, in particular, Greece – were hit. However, efforts to relocate individuals to other member states bore almost no fruit at all, even though court cases determined that asylum seekers who had themselves moved on to another country could not be sent back to certain EU member states as this would infringe on their right to protection and basic needs.[7]

As such, after ad hoc efforts to introduce solidarity measures and legislative change, the European Commission itself admitted defeat. In the press release of the New Pact on Migration and Asylum, it states:

'The current system no longer works. And for the past five years, the EU has not been able to fix it. The EU must overcome the current stalemate and rise up to the task. With the new Pact on Migration and Asylum, the Commission proposes common European solutions to a European challenge. The EU must move away from ad-hoc solutions and put in place a predictable and reliable migration management system.'[8]

3. The New Pact – what is being proposed?

Following on from the above, we understand that the New Pact on Migration and Asylum was a product of an existing broken system combined with a new-found sense of crisis. But what did it actually propose? What is the content of the solution envisioned?

On the EU Commission's own fact sheet,[9] the subtitle under 'The New Pact' reads: 'Building confidence: a new balance between responsibility and solidarity'. Below that, we learn that the areas of priority in the New Pact are: 'Stronger trust fostered by better and more effective procedures', 'Well-managed Schengen and external borders', 'Effective solidarity', 'Skills and talent', 'Deepening international partnerships' and 'Flexibility and resilience'.

Translated into actual legislative proposals, this means that the Commission is proposing five new Regulations:

1. Regulation on asylum and migration management
2. Regulation introducing a screening of third country nationals at the external borders
3. Regulation establishing a common procedure for international protection in the Union
4. Regulation on the establishment of 'Eurodac'
5. Regulation addressing situations of crisis and force majeure in the field of migration and asylum

Three recommendations:

1. Recommendation on an EU mechanism for Preparedness and Management of Crises related to Migration (Migration Preparedness and Crisis Blueprint)
2. Recommendation on legal pathways to protection in the EU: promoting resettlement, humanitarian admission and other complementary pathways
3. Recommendation on cooperation among Member States concerning operations carried out by vessels owned or operated by private entities for the purpose of search and rescue activities

[9] „The New Pact: Building confidence: new balance between responsibility and solidarity" (fact sheet), European Commission, September 2020, https://ec.europa.eu/info/sites/info/files/new-pact-on-migration-and-asylum-package_1.pdf.

And a 'Guidance on the implementation of EU rules on definition and prevention of the facilitation of unauthorised entry, transit and residence'.[10]

In particular, three different proposed changes to the current system deserve highlighting.

Firstly, the 'new balance between responsibility and solidarity' comes to life in an overhaul of the Dublin system, effectively retiring the old mechanism in favour of a new 'compulsory, flexible' form of solidarity which is still rooted in the idea of a first country of arrival, but which expands on the situations in which this principle gives way to another country in placing responsibility for processing an individual's asylum claim. For example, the definition of 'family' is broader, and other previous ties to a particular EU member state (e.g., work or studies) also count. This effectively means that the first country of arrival, as a criterion, has moved further down the ranks.[11]

In addition, the concrete features behind the 'compulsory and flexible solidarity' are seen in the shape of a new mechanism to be triggered in the situation where a country has reached its maximum capacity (to be calculated based on population size and GDP), which also diverts responsibility away from the first country of arrival and to another member state with a smaller proportion of asylum seekers. In this instance the 'compulsory solidarity' means that the new country does no longer have the right (such as it did before) just to reject the individual under the Dublin system scot-free, without assuming any kind of responsibility at all. The 'flexible solidarity' lies in the fact that the new country has a say in what its obligations to the first country are going to look like. Options available are to, simply, accept a relocation of the individual's asylum case and process the claim within its own system, send the case back to the first country along with a 'return sponsorship', meaning that the new country will facilitate the return of a rejected asylum seeker from the first country, or provide an undefined 'other assistance.'[12]

Secondly, the Commission proposes to transform the current European Asylum Support Office to a new 'fully-fledged EU Agency for Asylum' with the purpose to monitor and support national authorities in their implementation of, and compliance with, EU asylum legislation, 'ensuring convergence in the examination of applications for international protection and providing operational and technical assistance to Member States.'[13]

Thirdly, there is across the proposals a great emphasis on international partnerships and cooperation with third countries. This is particularly evident with respect to the overall focus on returns and readmissions, but also extends far into what typically goes under the term 'migration management', which roughly speaking concentrates itself on controlling the number of individuals who cross European borders to begin with. This includes things like 'border protection efforts' at external borders, counter-trafficking action and support to third country host communities, but 'should, according to the Commission, [also] be taken into account in all areas of the Union's external policy, such as in development aid and more precisely, in economic cooperation, the areas of science and education, digitisation and energy, etc.'[14]

4. The reactions – how has it been received?

In the lead-up to the unveiling of the New Pact on 23 September 2020, EU Home Affairs Commissioner, Ylva Johansson, predicted that '[n]o one will be satisfied' with the proposals.[15] However, as the Center for Strategic and International Studies has suggested, this may be a sign that it represents what the EU is most realistically currently able to offer.[16] Indeed, although countries like Hungary and Poland have criticised the New Pact for not going far enough in terms of aiming to stop migration altogether, and while Finland and Ireland would like to see an increased focus on human rights, no member state has rejected it blankly.[17]

Perhaps not surprisingly, among external commentators, such as scholars and non-governmental organisations, this expression of a 'lowest common denominator' has not been received with overwhelming applause. While many agree that lowering the period before refugees can apply for long-term status is good for integration, and that strengthening responsibility with more compulsory solidarity and a slight shift away from the first country of arrival principle are overall positive, they also question whether they are realistic. In a joint civil society statement, the European Council on Refugees and Exiles (ECRE), along with 88 other organisations, write that '[t]he complexity of what has been proposed raises doubts as to whether it is actually workable in practice.'[18]

[17] Ibid.

[18] „Joint Statement: The Pact on Migration and Asylum: to provide a fresh start and avoid past mistakes, risky elements need to be addressed and positive aspects need to be expanded" (statement), European Council on Refugees and Exiles (ECRE), 6 October 2020,

An element of the New Pact which has received criticism both in terms of its practicality and its ethical implications is the aforementioned 'return sponsorship' which critics have described as 'strange' and 'contradictory'.[19] Caritas Europa foresees that it 'will not lead to predictable solidarity and responsibility sharing among [member states] on the ground, and will come at the expense of people's rights and human dignity',[20] explaining that it 'could lead to tremendous suffering for migrants due to the unnecessary transfer to other [member states]' and that its 'practicality is called into question', adding that '[s]ubstantial solidarity through relocation should be privileged and encouraged.'[21] Judith Sunderland, Acting Deputy Director of the Europe and Central Asia Division of Human Rights Watch calls the proposed arrangement 'like asking the school bully to walk a kid home',[22] and ECRE asks who 'will monitor the treatment of rejected asylum-seekers when they arrive in countries whose governments do not accept relocation?'[23]

Following on from this, also in the words of ECRE, '[t]he overriding objective of the Pact is clear: an increase in the number of people who are returned or deported from Europe. The creation of the role of a Return Coordinator within the Commission and of a Frontex Deputy Executive Director on Returns without similar appointments on protection standards or relocation illustrate this point.'[24] The question of returns, then, also opens up a discussion regarding the external factor of the New Pact. As already mentioned, plans are for an increased focus on migration in the EU's general dealings with third countries, which has led to warnings that '[t]he Commission's plan for cooperation with third countries – encouraging them to host refugees and migrants, providing them with support to do that, and boosting their own enforcement against smuggling – means these relationships will continue to be shaped by the migration issue.'[25]

Civil society agrees, adding stark concerns over what this will mean for human rights and democratic development:

'Attempts to externalise responsibility for asylum, and to mis-use development assistance, visa schemes and other tools to pressure third countries to cooperate on migration control and readmission agreements will continue. This not only risks contradicting the EU's own commitment to development principles, but also undermining its international standing by generating mistrust and hostility from and among third countries. Furthermore, using informal agreements and security cooperation for migration control with countries such as Libya or Turkey risks enabling human rights abuses, emboldening repressive governments and creating greater instability.'[26]

Instead of relying on the unrealistic expectation that third countries can – and will – work readily towards keeping away migrants from risking their lives in the Mediterranean, the EU must assume its own responsibility and accept that 'an EU-coordinated [search and rescue] mission is urgently needed.'[27] In addition, 'cooperation with counties of origin and transit should be conditional on the respect of human rights and provide accountability mechanisms. Relationships with third countries should be based on genuine mutual interests, and should expand opportunities for regular migration.'[28]

In the words of Philippe De Bruycker, Professor at Université Libre de Bruxelles and Founder and Coordinator of the Odysseus Network; '[i]f the EU wants to develop authentic partnerships to ensure the cooperation of third states, it must stop pretending that the fight against irregular migration is the starting point as a shared concern. […] If the European Commission really wants a "fresh start", it should look for other elements of bargaining that it can really offer to third states in their own interest.'

5. Conclusions

So, what can we actually say about the New Pact on Migration and Asylum? The shortest answer would be that everybody agrees that it is needed but nobody agrees what it should be. In its essence, it is a continued attempt towards the same end as what was started with the Tampere conclusions in 1999, which laid the foundation for the Common European Asylum System that we have today.

Looking at the proposed changes and the reactions from different sides, it becomes clear that the difficulties in developing European asylum policies are embedded within two fundamental challenges:

https://www.ecre.org/the-pact-on-migration-and-asylum-to-provide-a-fresh-start-and-avoid-past-mistakes-risky-elements-need-to-be-addressed-and-positive-aspects-need-to-be-expanded/.

[28] Ibid.

1. Establishing a system of real functioning solidarity between 27 different countries, which is both compulsory and entered into voluntarily, while also securing rights and minimum standards around the treatment of refugees and asylum seekers.

2. Incorporating the topic of migration management into the EU's collaborations with third countries without striking deals that ignore human rights abuses or attaches speculative conditions onto separate areas such as development aid.

The first point permeates the New Pact through its central intention to create a 'new balance between responsibility and solidarity.' As we have seen, this is expressed through an envisioned solidarity which is both 'compulsory' and 'flexible'. And while some elements in the mechanism to replace the current Dublin system are welcomed by commentators (limiting slightly the default of the first country of arrival principle and introducing caps on individual countries' capacities), they have also been put under scrutiny for being too complicated to work well in practice and starved of important safeguards to secure migrants' rights.

The second point highlights the power dynamic between the EU and the wider region as it aims to introduce questions of migration into almost all interactions between European institutions and third countries. This has led to concerns over both accountability towards migrant populations in terms of human rights abuses and the risk of selling out core values of democracy and transparency – usually championed by the EU as non-negotiable – by supporting corrupt regimes in the interest of limiting the number of asylum seekers coming to Europe.

What the two points have in common is that they are both based on the same assumption that it is the minority of asylum seekers who are in actual need of protection and on two complementary objectives: one to decrease the number of people coming to Europe and the other to increase the number who are returned or deported. From an international law perspective, however, this ignores the elementary reason to have asylum legislation in the first place: to provide a system that offers protection. As such, if the New Pact is indeed the best the EU can realistically offer at the moment, yet fails to provide acceptable levels of protection, the question going forward is not only one of legislative character, but in large parts social and economic too: how can the EU halt the race to the bottom and lift the common denominator to a place where human rights are not compromised and where refugee protection is the most important goal of having an asylum system?

NEGOTIATING OUR HEALTH: THE EU PUBLIC POLICIES ON COVID-19 VACCINATION AND THE ASTRA ZENECA ADVANCE PURCHASE AGREEMENT

Monica Florentina POPA *

Abstract

The ongoing covid-19 pandemic has taken us into unchartered territories in many a field: medical, legal, social and constitutional.

The EU has been actively pursuing, within its range of competencies, a broad policy to combat this unprecedented health crisis, which included negotiating and financing on behalf of its Member States the development of a viable vaccine by multiple pharmaceutical companies. These complex agreements and financing schemes have resulted in the purchase and distribution to the EU countries of vaccine doses according to a quota based on the size of the population. Given the novelty of the circumstances, the very short time in which these vaccines have been developed and tested, some vaccines have sparkled public controversies, such as the one produced by Astra Zeneca.

This article endeavors to offer a brief analysis of the Advance Purchase Agreement signed with Astra Zeneca, recently made public by the EU Commission, with special reference to the clauses which, in our opinion, might have offered the private contracting company too much discretion in compliance with its contractual obligations.

The analysis will be preceded by an outline of the legal framework for the APA agreements concluded by the European Commission and some considerations on the legal formants – the complex interplay of the legal, political and economic interests which affect the management of the covid crisis on European and international level. The conclusions of this article will set forth the necessity of more transparency in negotiating this kind of agreements with massive impact on our health and the need of a more realistic approach to the policy of vaccination, based on the specificity of each country.

Keywords: *EU public policies, Advance Purchase Agreement (APA), private company, pandemic, vaccination, legal formants, Astra Zeneca.*

1. Introductory considerations. Of Covid and law, of citizens and states.

A much quoted, apocryphal Chinese curse says "May you live in interesting times"[1], though the actual proverb is equally compelling "Better to be a dog in times of tranquility than a human in times of chaos." Both versions hold true today, when the whole planet grapples with the effects of the Covid pandemic, when governments scramble for economic solutions, employers for business, employees for employment, and everybody else for a semblance of normality, without sanitary masks, lockdowns and restrictions.

Since its beginning in the early 2020, the Covid pandemic has changed the paradigm of living and working in the Western world, exposing in the process the vulnerabilities of our healthcare systems, the shaky economic foundations of the post-industrial societies and the rigidity of the supposedly flexible legal framework when dealing with unexpected, disruptive factors. Many an adjustment have been made: the importance of artificial intelligence has increased exponentially, resulting in the famously infamous online school, for instance, or in longer working hours for the employees working from home during successive lockdowns, which in turn prompted calls for the regulation of remote work in Europe[2] etc. There has been a domino effect on almost every aspect of our life as we know it, such as our ability to interact with friends, to dine at our favorite restaurant, to go to the local gym or to travel abroad or inland.

If at the economic level, the measures taken by the states were geared towards taming the adverse effects on businesses and employees, with various degrees of success, at the societal level the response has been less cohesive and exposed the ideological differences between, on one hand, the American and the European approach to handling the Covid crisis and, on the other hand, the differences between the various EU Member States regarding the policy mix of containment, incentives or restrictions to be implemented during the pandemics.

All these factors have heavily influenced the legislation at national and EU level since 2020, again with mixt results: at the beginning of the pandemics, a few EU states have taken measures which encroached severely on key constitutional rights, such as the freedom of movement, the freedom of association or the freedom of speech and many a piece of legislation – either primary or secondary – has been struck down

by the respective national ordinary[3] or Constitutional Courts[4].

The prolonged restrictions have taken a heavy toll on the EU citizens, confronted with a dramatic change in their lifestyles and expectations. It could be argued that the culture of rights in Europe – some critics might label it as a culture of entitlement – has significantly crippled the pragmatic efforts made by the governments to fight the pandemic. A weary population, naturally inclined to question the legitimacy and opportunity of the decisions made by those in power, even if democratically elected, have now additional reasons to criticize the political forces, in the context of the vaccination program now in full swing in the EU.

Given the extent of the crisis, the EU response to it has been adequate and varied, fully circumscribed within its range of competencies[5]. It included, *inter alia*, negotiating and financing on behalf of its Member States the development of a viable vaccine by multiple pharmaceutical companies, all of whom were, sadly, non-EU. These complex agreements and financing schemes have resulted in the purchase and distribution to the EU countries of vaccine doses according to a quota based on the size of the population.

Taking into account the very short time in which these vaccines have been developed and tested, and some deaths of inoculated persons which occurred after their vaccination with certain types of vaccines, there is no wonder that so many public controversies have surrounded the respective vaccines and the whole vaccination program. An ongoing controversy relates to the vaccine produced by Astra Zeneca. It gained such magnitude, that the EU Commission felt compelled to disclose at the end of January this year[6] the (edited) contract signed with the developing company, which did very little to quell the alarmed European public opinion.

The centralized, state-controlled way the vaccination program is run and the prominent role played by the European Commission have brought into the spotlight the EU institutions and the entire decision making process at European level.

We share the belief that it is necessary to combine both the black-letter approach – reflected in our brief analysis of the Advance Purchase Agreement signed with Astra Zeneca with special emphasis on the clauses pertaining to contractual liability, with the broader outline of the legal framework for the APA agreements at EU level. The complex interplay of the legal, political and economic interests which affect the management of the Covid crisis on European and international level will also be taken into account to formulate conclusions and recommendations in the final section of this paper.

2. Brief outline of the general legal framework for the Advance Purchase Agreements in the EU

The AP agreements negotiated by the EU Commission on behalf of EU Member States for the development, production and distribution of viable vaccines are based primarily on the so-called *ISI Regulation*, namely the Council Regulation (EU) 2016/369 of 15 March 2016 on the provision of emergency support within the Union, as amended by Council Regulation (EU) 2020/521 of 14 April 2020 activating the emergency support under Regulation (EU) 2016/369, and amending its provisions taking into account the COVID-19 outbreak. The amended ISI Regulation states at Article 4**,** paragraph 5, point (b) that[7]:

"Emergency support under this Regulation may be granted in any of the following forms:(…)

(b) procurement by the Commission on behalf of Member States based on an agreement between the Commission and Member States."

The procurement procedure is subject to the rules laid down in the same Article, paragraph 6, as follows:

"*6. In the event of a procurement procedure as referred to in point (b) of paragraph 5, the ensuing contracts shall be concluded by either of the following:*

(a) the Commission, whereby the services or goods are to be rendered or delivered to Member States or to partner organisations selected by the Commission;

(b) the participant Member States whereby they are to directly acquire, rent or lease the capacities procured for them by the Commission.

7. In the event of procurement procedures as referred to in points (b) and (c) of paragraph 5, the

[3] A recent example (March 31, 2020) comes from Belgium, where an ordinary court (*le tribunal de première instance de Bruxelles)* has ordered the government either to lift all restrictions pertaining the coronavirus situation or to translate them into proper primary legislation. See „Court orders Belgium to reframe virus restrictions as laws", available online at: https://apnews.com/article/travel-pandemics-coronavirus-pandemic-covid-19-pandemic-belgium-51dfbf0fd7becc97323f0b8d43480ce2. Commission shall follow the rules set out in Regulation (EU, Euratom) 2018/1046 for its own procurement."

In addition to these general legal provisions, the EU Commission has adopted the Decision C(2020) 4192 final of 18 June 2020 approving the agreement with Member States on procuring covid-19 vaccines on behalf of the Member States and related procedure[8].

The complexity of the EU legislation regarding the public procurement, the involvement of both the EU Council and the Commission[9], the manifold aspects concerning the delegated powers, the shared or exclusive regulatory competencies have lead, in practice, to implementation problems related to the very structure of the split decision making process in the EU. It is beyond the scope of this paper to dwell on the technicalities of the public procurement in the EU, aspects which have been analysed at length by the academic doctrine[10].

Complexities notwithstanding, this legal structure enabled the EU Member States to act cohesively and to mitigate the humanitarian consequences of the Covid crisis, benefiting both in terms of priority and of choice of vaccines, as opposed to negotiating individual agreements with the pharmaceutical companies. EU has concluded AP agreements with a number of private companies, but to date only Pfizer, BioNTech, Moderna, Astra Zeneca and Johnson & Johnson have produced and delivered tested vaccines, while the Sanofi-GSK and CureVac vaccines are still in development stage.

But what do these advance purchase agreements mean and which role do they play in dealing with the Covid crisis?

In June 2020, the European Commission has issued the Communication on EU Strategy for COVID-19 vaccines, COM (2020) 245 final, stating its goals and strategy related to this stringent issue. Recognising that the development of a viable vaccine usually takes more than 10 years, the Commission sets forth its strategy on Covid-vaccine development and production within a timeframe of 12-18 months, based on 2 principles:

" - Securing sufficient production of vaccines in the EU and thereby sufficient supplies for its Member States through Advance Purchase Agreements (APAs) with vaccine producers via the Emergency Support Instrument (ESI 2). (…)

- Adapting the EU's regulatory framework to the current urgency and making use of existing regulatory flexibility to accelerate the development, authorisation and availability of vaccines while maintaining the standards for vaccine quality, safety and efficacy."[11]

The purpose served by the advance purchase agreements is explained clearly in Section 2.2., Paragraph 1:

"In order to support companies in the swift development and production of a vaccine, the Commission will enter into agreements with individual vaccine producers on behalf of Member States. In return for the right to buy a specified number of vaccine doses in a given timeframe and at a given price, part of the upfront costs faced by vaccines producers will be financed from the ESI. This will be done in the form of advance purchase agreements (APAs)."

This upfront part-financing scheme has already yielded results, as mentioned above, EU being able to secure an adequate share of vaccines at a given price, though – it is important to note – none of the working vaccines were developed in Europe. This mechanism seemed to work flawlessly until delays in delivery of Astra Zeneca vaccines angered the public opinion in Europe. The pressure on the EU Commission mounted, culminating in the disclosure of the significantly edited procurement agreement signed with Astra Zeneca.

3. The Astra Zeneca Advance Purchase Agreement – a case for limited liability?

What are the controversial clauses? What triggered so much resentment, what prompted so many headlines in online media?

The answer is not clear-cut and it involves, as stated in the introductory section, more than the legalistic analysis of the actual contract. Caving in to public pressure, the Commission has published not only the APA with Astra Zeneca, but also the edited agreements signed with Moderna and Pfizer, while the Johnson & Johnson contract is - to date - not available[12].

The headlines in the media focused initially on the delays in delivery of the vaccine doses, Astra Zeneca invoking production issues at the Belgium manufacturing plant. Instead of (presumably) 80 million vaccines, as initially scheduled, at the beginning of the year the company had delivered only

[8] Decision C(2020) 4192 final of 18 June 2020, available at https://ec.europa.eu/info/sites/info/files/decision_approving_the_agreement_with_member_states_on_procuring_covid-19_vaccines_on_behalf_of_the_member_states_and_related_procedures.pdf.

[9] For an interesting perspective on the complex role played by the EU Council and the Commission in relation to the EU Member States, see Bantaș, Dragoș-Adrian, "Considerations relating to the role of the Council in the institutional union of the European Union", p. 448-451, CKS 2019, Public Law Section, available online at: http://cks.univnt.ro/articles/14.html.

Idei noi, practici vechi", Ed. Universitară, 2020, p. 230-233.

[11] COM (2020) 245 final, available at: https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=CELEX:52020DC0245.

[12] See https://ec.europa.eu/info/live-work-travel-eu/coronavirus-response/public-health/eu-vaccines-strategy_en#authorised-vaccines, for the published redacted contract; consulted at 8th of April, 2021.

a quarter of the amount specified by the contract[13]. The questions that were starting to pop up concerned the contractual commitments undertaken by Astra, the extent of its liability and the means – if any – available to the Commission as signatory party on behalf of the EU Member States to enforce the contract and impose penalties for delays in delivery.

There are countless ways in which a company could benefit from the wording of a contract, ranging from the definitions of the terms used, to the warranties, rights and obligations and the choice of applicable substantial or procedural law. Some key points on the Astra Zeneca APA: the choice of law is Belgian law, pertaining to the civil law tradition, hence the interpretation of contract is made according to the principles of interpretation that stem from the tradition of the Napoleonic code, which emphasizes the contextual, systematic interpretation of the contract. Like the Romanian law, the Belgium law recognises the difference between an obligation of means (endeavours clause) and an obligation of result, a difference which reflects directly in the way the liability and the burden of proof are distributed in case of breach of contract.

The wording of the contract clearly states that the company is under an obligation of means, and not of result, with respect to the manufacturing and supply of the initial doses allocated to Europe, as per Article 5.1:

"5.1. Initial Europe Doses. AstraZeneca shall use its Best Reasonable Efforts to manufacture the Initial Europe Doses within the EU for distribution, and to deliver to the Distribution Hubs, following the EU marketing authorisation, as set forth more fully in Section 7.1, approximately [*edited*], Q 1 2021, and (iii) the remainder of the Initial Europe Doses by the end of [*edited*]".

Though familiar to the Anglo-Saxon lawyers, the "Best Reasonable Efforts" is by no means a very clear concept that could be separated by the extensive case law in US or UK courts and, in our opinion, does not have an equally extensive case law equivalent in the civil legal systems. The endeavour clauses (*Best efforts/ endeavours, Reasonable efforts, Best reasonable efforts* etc.) express various degrees of commitment and efforts required from the party undertaking an obligation of means[14]. In case of the Astra Zeneca contract, the term used implies a heightened - but not a maximal, nor unmitigated - obligation and is defined in Article 1.9 as follows:

1.9. "Best Reasonable Efforts" means

(a) in the case of AstraZeneca, the activities and degree of effort that a company of similar size with a similarly-sized infrastructure and similar resources as AstraZeneca would undertake or use in the development and manufacture of a Vaccine at the relevant stage of development or commercialization having regard to the urgent need for a Vaccine to end a global pandemic which is resulting in serious public health issues, restrictions on personal freedoms and economic impact, across the world but taking into account efficacy and safety; and

(b) in the case of the Commission and the Participating Member States, the activities and degree of effort that governments would undertake or use in supporting their contractor in the development of the Vaccine having regard to the urgent need for a Vaccine to end a global pandemic which is resulting in serious public health issues, restrictions on personal freedoms and economic impact, across the world."[15]

The Commission alleged that the delays in the supply of the Initial EU Doses were caused, *inter alia*, by the parallel commitments undertaken by Astra Zeneca to deliver vaccines to other countries, mainly to the UK. Following the statements made by Pascal Sariot, the chief executive of the company, during an interview for the Italian newspaper La Repubblica[16], that the pharmaceutical company was under an obligation to make its best reasonable efforts to deliver and not under an obligation to actually deliver the vaccines, the Commission accused the British-Swedish company that it was not making its best reasonable efforts to compensate the shortages in the manufacturing site in Belgium, by using the capabilities of the UK manufacturing sites, assimilated as per Article 5.4 ("Manufacturing Sites") to the manufacturing sites located within the EU. It also invoked the warranty made by Astra Zeneca in Article 13.1. (e) that "it is not under any obligation, contractual or otherwise, to any Person or third party in respect of the Initial Europe Doses or that conflicts with or is inconsistent in any material respect with the terms of this Agreement or that would impede the complete fulfilment of its obligations under this Agreement". The means available to the Commission in case of breach of contract by the company are set out in Article 12.3. ("Termination for cause"), with a strong emphasis on pre-termination measures and negotiation.

The company undertook the necessary steps to remedy the shortages in production. The manufacturing and delivery of Astra Zeneca vaccines continue, despite new controversies which appeared, this time, in relation to the safety and efficiency of the vaccine itself.

The public interest and alarm, fuelled by the acrimonious statements on both the European and the British side, led to an intense pressure on the Commission to disclose the Advance Purchase Agreement and raised the question of where the balance

[13] Tensions rise as AstraZeneca, EU spar over vaccine delays", by Raf Casert, Samuel Petrequin and Danica Kirka, January 28, 2021, available at: https://apnews.com/article/europe-europe-coronavirus-pandemic-coronavirus-vaccine-ba107e05dec2653f91555ff88033ade9

[14] For an analysis of the way the US courts are likely to interpret these terms, see Kenneth A. Adams "Understanding *Best Efforts* And Its Variants (Including Drafting Recommendations)", available at: https://adamsdrafting.com/downloads/Best-Efforts-Practical-Lawyer.pdf.

[15] The edited Astra Zeneca APA is available at: https://ec.europa.eu/info/files/redacted-advance-purchase-agreement-astrazeneca_en.

[16] Antonello Guerrera, Stefanie Bolzen, Rafa de Miguel, *Pascal Soriot: 'There are a lot of emotions on vaccines in EU. But it's complicated', 2*6.01.2021, at: https://www.repubblica.it/cronaca/2021/01/26/news/interview_pascal_soriot_ceo_astrazeneca_coronavirus_covid_vaccines-284349628/.

of contractual power actually lies. As mentioned at the beginning of this section, the Commission also disclosed the edited versions of the APAs signed with Pfizer and with Moderna. How different are these two contracts from the Astra Zeneca agreement?

The contract signed with Moderna, a company incorporated in Switzerland, is not illuminating in any respect, given the fact that the section referring to the company's liability has been edited, so was the section setting out the applicable law and the dispute resolution (section I.11.2.) or the section detailing the schedule for the delivery of the vaccines[17]. Moreover, Article 1.2 of the contract also uses the term of *Best reasonable efforts* to circumscribe the obligation of the company "to establish sufficient manufacturing capacities to enable the manufacturing and supply of the contractually agreed volumes of the Product".

The APA signed with Pfizer and BioNTech (an American-German joint venture) is disclosed on the site of the Commission along the same lines[18]. Article 1.2 ("Definitions") has the definition of *Best Reasonable Efforts* edited in full, and that of what constitutes *Force Majeure* almost in full. Other sensitive clauses, of legitimate interest for the public opinion, such as the product supply mechanism, the schedule, indemnification are extensively or fully edited. The agreement is governed by the Belgium law, as in the case of Astra Zeneca.

Even when analysing the heavily edited versions of the contracts, it can be easily ascertained that all the disclosed APAs contain similar clauses, that all of them place the manufacturing companies under an enhanced obligation of best reasonable efforts and not under an obligation of result, and that the wording of the contracts reflects the style of contractual drafting specific to common law lawyers, in spite of the Belgium law chosen as governing law of the agreements.

This brief presentation purported to show that the legalistic approach to the Astra Zeneca contract is not sufficient by itself when attempting to analyse the possible implications of the agreement on the EU management of the pandemic and the future decisions regarding our health.

4. Vaccination today: beyond the medical side-effects

Are there any other factors to affect the EU vaccination policy, besides the somewhat too liberal wording of the contracts concluded with the pharmaceutical companies?

Borrowing loosely from the field of comparative law the concept of legal formants, defined as "the different components that concur to build any given legal system"[19], I will endeavour to show how the EU health policies and health related regulations are shaped by the complex interplay of the legal, political and economic interests on European and international level. I would like to put forth the idea that vaccines have citizenships just as people do and that they are not ideological-neutral.

This aspect has been openly acknowledged by some British commentators[20] when considering the patchwork picture of the Astra Zeneca vaccine rollout in Europe: problems with the supply, fears about the link between the vaccine and some thrombosis-caused deaths, the briefly considered, but not enforced ban by the EU on vaccine exports to the UK etc. The view from across the Channel regarding the EU agreement with Astra Zeneca is that the EU has been outsmarted by the countries with faster vaccine authorisation procedures and more flexible decision making structures and that all the legal skirmishes are actually side effects of the post-Brexit EU-UK trade relations.

Under the terms of the EU scheme for vaccine strategy, as set out by Article 7 of the Decision C (2020) 4192 final of 18 June 2020 (mentioned in the previous section), the EU Member States are allowed to conclude separate deals with vaccine producers which have not signed agreements with the EU. The implications of this apparently neutral legal provision are all but neutral: the development by Russia and China of alternative vaccines and the aggressive marketing conducted at state-level in support to their respective national vaccines divided Europe along ideological lines: Poland and Romania, for example, refused even to consider the possibility of importing these vaccines, while countries such as Hungary, Slovakia already bought the Sputnik V vaccine developed by the Russian company Gamaleya. At the end of March, Germany and France started to show more receptiveness about these vaccines, in spite of the ongoing tense relations with Russia over its treatment of political dissidents and involvement in regional conflicts or the disagreements with China over its human rights track record.

In contrast to the European policies, the US measures regarding the vaccine development have been less hampered by bureaucracy, the previous administration pursuing an aggressive policy of 'America first' in securing the supply of vaccine doses for its population through public acquisitions – a significant departure from the practice of letting private companies to procure and distribute vaccines for individuals. A faster authorisation process gave the US a competitive advantage over EU in this matter, even if the legal instruments were similar – the use of advance

purchase agreements largely, but not exclusively, funded by the government.

Last, but not least, there are sheer economic considerations at play. Can the pharmaceutical companies (some of which are ranked as "Big Pharma") reign in their drive for profit maximisation and prioritize considerations such as the global solidarity in face of an extraordinary health crisis? From the very beginning of the pandemics, governments and private donors poured huge amount of money in the development of viable vaccines. Some companies, like Astra Zeneca or Johnson & Johnson, announced they intended to sell their vaccines at a price that just covers their manufacturing costs.[21] Given the current EU official trend for redacted contracts, it is not easy to ascertain in practice if their resolution came true with respect to the advance purchase agreements signed with the EU Commission.

All these factors - ideology, politics and economics - are legal formants, in the sense that they do shape the health policies at both national and European level.

5. Conclusions

Aware of the glitches in its health policies and strategies to combat the covid pandemics, the EU Commission has launched on the 31st of March an online public consultation on the Health Emergency Preparedness and Response Authority (HERA), addressing questions on topics such as: "the EU's framework to develop, manufacture and deploy medical countermeasures; anticipatory threat and risk assessments; market dynamics and supply chain intelligence; the development and financing of new countermeasures in times of crisis; the impact, role, scope and coordination of a future HERA"[22]. It remains to be seen if yet another European body will indeed make all the difference in the management of the future crises or if the problems are of a different nature.

In the short run, measures such as streamlining the authorisation procedures for vaccines and increasing the manufacturing capacities of the EU based companies should, in our opinion, take precedence. Based on the divergent decisions adopted by the individual governments with respect to the alternative vaccines purchased in addition to those negotiated on their behalf by the Commission, it may well be that, in the future, the EU Member States will exercise more discretion in opting for certain vaccines, to the expense of the principle of solidarity within the Union. It becomes necessary to adopt a common stance – a Europe who speaks with one voice – which, in turn, will strengthen the principle of solidarity which underlines the whole European legal order.

Unwittingly, the row over the Astra Zeneca advance purchase agreement might have been the impulse for a more pragmatic approach to the all important issues and future decisions regarding our health.

LEGISLATIVE AND JURISPRUDENTIAL ASPECTS REGARDING THE PROTECTION OF PERSONAL DATA

Roxana-Mariana POPESCU[*]

Abstract

The increasing concerns in the matter of protection of personal data have been favoured, among others, by the unprecedented developments in the field of technology and digitalisation. These concerns have over time increased, at the level of the European Union, in the sense that the issue of human rights has increasingly come to the attention of European decision-makers. These aspects have materialized in the inclusion of generous objectives in the amending treaties of the European Union, in the adoption of an adequate derived legislation, but also in a consistent case law.

Keywords: *protection of personal data; Directive 95/46/EC; Regulation (EU) 2016/679; domestic legislation; CJEU case law.*

1. Introduction

The increasing concerns in the matter of protection of personal data have been favoured, among other things, by the unprecedented developments in the fields of technology and digitalisation[1]. The developments are specific to the era we are going through, that of globalization in terms of communication, and include a huge amount of information, with reference to the personal data of individuals. The latter are seen either in their interdependent existence and action or in the representation of entities, as subjects of domestic law, in their capacity as legal persons. We appreciate that it is necessary to make a distinction from the very beginning, although the delimitation between the two situations is quite sensitive, with reference to the debate, respectively to the rather accentuated controversies regarding the relative and absolute character of the right to benefit from the protection of personal data.

If we take into account from a historical point of view, the instruments of international law relevant to the field, we notice that they are not recent. When making such a statement, we consider the Universal Declaration of Human Rights[2], as an instrument of international law with universal character, which in time, through use and practice, has acquired a legally binding character. The legal instruments adopted at European level, by the Council of Europe are added hereby, in particular, the European Convention on Human Rights[3] which has generated consistent case law[4] to the European Court of Human Rights, to which the Convention for the Protection of Individuals with regard to Automatic Processing of Personal Data[5] is added.

These concerns have over time increased, at the level of the European Union, in the sense that the issue of human rights has increasingly come to the attention of European decision-makers. These aspects have materialized in the inclusion of generous objectives in the amending treaties[6] of the European Union, from the point of view of the protection of fundamental human rights. Without proceeding to an enumeration of all the treaties that directly or incidentally refer to human rights, we appreciate that the spearhead is the moment of Nice[7], with all the preliminary preparatory stages[8]. The Treaty establishing a Constitution for Europe is hereby added, on a transitional basis, as it has never produced legal effects, and which included, in Part III, the very content of the Charter of Fundamental Rights

[*] Associate Professor, PhD, Faculty of Law, „Nicolae Titulescu" University of Bucharest, (e-mail: roxana.popescu@univnt.ro).

[1] In this regard, see, Augustin Fuerea, *Dimensiunea juridică europeană a globalizării în era digitală*, in the volume "In honorem VIOREL ROȘ. Studii de drept privat și public", coordinators Ciprian Raul Romițan and Paul George Buta, Hamangiu Publishing House, Bucharest, 2021, pp. 50-58.

[2] Adopted on 10 December 1948 by Resolution 217 A at the third session of the General Assembly of the United Nations.

[3] Adopted in 1950, entered into force in 1953.

[4] It concerns Art. 8 of the Convention, according to which "1. Everyone has the right to respect for their private and family life, their home and their correspondence. 2. The interference of a public authority in the exercise of this right shall be admissible only in so far as it is provided by law and constitutes, in a democratic society, a measure necessary for national security, public security, the economic well-being of the country, defense of order and prevention of criminal acts, protection of the health, morals, rights and freedoms of others".

[5] Signed in Strasbourg, on 28 January 1981. According to Art. 5, "Personal data subject to automated processing must be: a) obtained and processed correctly and legally; b) registered for determined and legitimate purposes and are not used in a manner incompatible with these purposes; c) adequate, relevant and not excessive in relation to the purposes for which they are registered; d) accurate and, if necessary, up to date; e) kept in a form which allows the identification of the individuals concerned for a period not exceeding that necessary for the purposes for which they are registered".

[6] For international treaties and conventions, sources of law, see Elena Emilia Ștefan, *Drept administrativ. Partea I.Curs universitar*, 3rd edition, revised, completed and updated, Universul Juridic Publishing House, Bucharest, 2019, pp. 45-46.

[7] The Treaty of Nice was signed in 2001 and entered into force in 2003.

[8] It concerns the proclamation of the Charter of Fundamental Rights of the European Union, in 2000.

of the European Union[9]. On the same coordinates, but at a higher place in terms of legal enshrining, is the Lisbon moment[10]. The two treaties regulate separately the issue of the protection of personal data. Thus, Article 39 of the Treaty on European Union (TEU) states that, "according to Article 16 of the Treaty on the Functioning of the European Union and by way of derogation from paragraph 2 thereof, the Council shall adopt a decision setting rules on the protection of individuals, regarding the processing of personal data by the Member States, in the exercise of activities falling within the scope of this Chapter, as well as the rules on the free movement of such data. Compliance with these rules shall be subject to control by independent authorities. " We can also note that, while the Treaty on European Union enshrines such an issue in a single paragraph, the Treaty on the Functioning of the European Union (TFEU) reserves, in Art. 16, two paragraphs, giving details about the specifications of Art. 39 TEU. In this regard, par. (1) states that "everyone has the right to the protection of personal data concerning them". In the second paragraph, the ordinary procedure is laid down, as a means of adopting rules on the "protection of individuals with regard to the processing of personal data by the institutions, bodies, offices and agencies of the Union and by the Member States in the exercise of activities falling within the scope of Union law, as well as the rules on the free movement of such data. Compliance with these rules shall be subject to control by independent authorities.

"The reflection of the content of Art. 16 TFEU is given by the adoption of Regulation (EU) 2016/679 on the protection of personal data[11], which is preceded by Directive (EC) 95/46 on the protection of individuals with regard to the processing of personal data and on the free movement of such data[12]. The Directive was repealed by that Regulation[13].

2. Conceptual delimitations

Currently, the main derivative core of the matter is Regulation (EU) 2016/679 which, at Art. 4 clarifies a number of 26 concepts, among which the concept of "personal data" and the concept referring to the "processing" of these data are significantly important. The need to clarify such notions results from their order at point 1 ("personal data"[14]), respectively at point 2 ("processing"[15]). The biggest difficulty is the phrase by which the definition of the two notions begins, the first word being the same in both situations, i.e., "anything". Thus, personal data "means **any** information relating to a natural person (...)" and processing "means **any** operation (...)". Also, those aspects that follow this first difficulty specific to each concept are neither meaningless or insignificant. This is specified at point 1 ("personal data") with reference to the **identified** or **identifiable** natural person ("data subject"), and "any **operation** or set of operations performed on personal data is invoked at point 2 ("processing"). In the third place and from the same perspective, we appreciate that a special degree of difficulty is represented by that specification (point 1) which refers to the fact that "an identifiable natural person is that person who can be **directly** or **indirectly** identified, in particular by reference to an identifying element". At the same third level, point 2 ("processing") brings into discussion the fact that "any operation" may be carried out **with** or **without the use of automated means"**. The six[16] variables that appeared at these three levels, regarding only the two concepts, are likely to generate numerous controversies. This is also the reason why the Special Working Party set up for the protection of individuals with regard to the processing of personal data[17] adopted Opinion 4 on the concept of personal data, on 20 June 2007. The opinion has as starting point the definition[18] enshrined in Directive 95/46/EC. If we compare it to that enshrined over more than 20 years by Regulation (EU) 2016/679, we cannot help finding that it is much

[9] "An authentic catalogue of fundamental rights", according to Augustin Fuerea, *Manualul Uniunii Europene*, 6th edition, revised and added, Universul Juridic Publishing House, Bucharest, 2016, p. 93.

[10] The Lisbon Treaty was signed in 2007 and entered into force in 2009.

[11] The correct and full name is as follows: Regulation (EU) 2016/679 of the European Parliament and of the Council of 27 April 2016 on the protection of individuals with regard to the processing of personal data and on the free movement of such data and repealing Directive 95/46/EC (General Data Protection Regulation) - published in OJ L119, 4 May 2016.

[12] Published in OJ L 281, 23 November 1995.

[13] "Having in view the importance of the data protection field, the EU legislator has decided to adopt this piece of legislation through a regulation (instead of a directive), because unlike a directive, the regulation is directly binding and applicable in the Member States" - Laura-Cristiana Spătaru-Negură, Marta-Claudia Cliza, *The General Data Protection Regulation: what does the public authorities and bodies need to know and to do? The rise of the data protection officer*, Juridical, Tribune Volume 8, Issue 2, June 2018, p. 490.

[14] "Personal data" means any information relating to an identified or identifiable natural person ("data subject"); an identifiable natural person is a person who can be identified, directly or indirectly, in particular by reference to an identifying element, such as a name, an identification number, location data, an online identifier, or one or more specific elements, specific to his/her physical, physiological, genetic, mental, economic, cultural or social identity".

[15] Processing "means any operation or set of operations performed on personal data or personal data sets, with or without the use of automated means, such as collection, recording, organization, structuring, storage, adaptation or modification, extraction, consultation, use, disclosure by transmission, dissemination or making available in any other way, alignment or combination, restriction, deletion or destruction".

[16] "Identified natural person"/"identifiable natural person"; "Any operation"/"any set of operations"; "With the use of automated means"/"without the use of automated means".

[17] Constituted pursuant to Art. 29 of Directive 95/46/EC.

[18] In the sense of Art. 2 point 1 of the Directive, "personal data "means any information relating to an identified or identifiable natural person (data subject); an identifiable person is a person who can be identified, directly or indirectly, in particular by reference to an identification number or to one or more specific elements of his/her physical, physiological, mental, economic, cultural or social identity".

more succinct (lacking, for example, from the Directive, the identified elements with reference to the individual, location data and an online identifier - these two being determined by technological developments, including in the field of personal data). Opinion 4/2007 was issued almost 12 years after the adoption of Directive 95/46/EC[19], meeting the requirements of Art. 32 para. (2) par. 2, even in the conditions in which the transposition period, by the Member States was established for 3 years, in full agreement with the final provisions of Art. 32 para. (1) par. 1 and para. (2) par. 1. The Opinion shall detail the meanings of the phrase "any information", making a detailed analysis, in relation to several criteria considered at that stage by the European Union's legislator, namely: the nature of the information, the content of the information, the format or support on which the information is stored and the biometric nature of the information. The examples provided, according to each criterion of systematization of information, are edifying in order to highlight the diversity and complexity of personal data belonging to natural persons, and especially the difficulties that may arise when talking about the relative nature of data protection (rules and exceptions)[20].

All the other components of the definition given to "personal data", namely: "relating to", "identified or identifiable", "natural person", etc. are equally thoroughly analysed, by the authors of the Opinion.

All the examples are conclusive, but also controversial. Going under the dome of fundamental human rights, the Opinion goes with the details quite far, the achieved analysis stimulating a series of reflections that include the issue of "data on deceased persons", "unborn children" and "legal entities".

The views of the Working Party (which we find in the content of Opinion 4/2007) on the situation where "data do not fall under the definition" are also interesting. Here are stated the following aspects: the application of the national legislation of the Member States, the case law of the Court of Justice of the European Union, the provisions of Art. 8 of the European Convention on Human Rights and the case law of the European Court of Human Rights.

The techniques of anonymization are also evolutionary in the field of personal data protection, in terms of conceptual clarifications and more, and are closely related to the fairly comprehensive meanings of what "personal data" and "processing" mean. The latter are likely to contribute, to some extent, to the balance suggested by the correct and complete names of the two legal acts of the European Union (Directive 95/46/EC and Regulation (EU) 2016/679). Briefly, this balance aims in fact, on the one hand, at the protection of personal data belonging to individuals, and, on the other hand, at the free movement of such data. The balance also refers both to the established rules, but also to the exceptions that can be invoked, including by different socio-professional categories, even within each category where there may be some differences. Jurists, for example (bringing together arbitrators, lawyers, counsellors, executors, magistrates, mediators, notaries, insolvency practitioners)[21], but also diplomats and civil servants with legal education have correlative rights and obligations, both similar and different.

3. Current, internal and European Union regulations on the protection of personal data

Starting from the conclusions of the Working Party formulated at the end of Opinion 4/2007, we appreciate that the national legislator has an important role to play in ensuring that national legislation is in line with that of the European Union, even in the field of data protection. After the entry into force[22] of Regulation (EU) 2016/679, respectively after the date from which it started to be applied[23], two laws were adopted in Romania, with the role of creating the regulatory framework necessary for the correct and complete application of provisions of the mentioned regulation. Thus, the two laws are: Law no. 129/2018[24] and Law no. 190/2018[25]. The first of the two repeals Law no. 677/2001[26], which in turn was adopted during the period when our country had the status of candidate state for accession (2000-2004), going through the stage of negotiations for accession to the European Union and having the obligation to adopt legislation that would be consistent with European Union law, including in this respect. The repealed law is the normative act by which Romania transposed Directive 95/46/EC, even if, at that time, it was not a member state of the European Union. The second component of

[19] The Directive was adopted on 24 October 1995.

[20] About rules and exceptions, see Augustin Fuerea, *Aplicarea legislației, în materia protecției datelor cu caracter personal, de către practicienii în insolvență,* Universul Juridic Review, no. 12/2020, pp. 108-122.

[21] Example taken from Augustin Fuerea, *Aplicarea legislației, ..., op. cit.*

[22] On 25 May 2016.

[23] 25 May 2018.

[24] Law no. 129/2018 for the amendment and completion of Law no. 102/2005 on the establishment, organization and functioning of the National Authority for the Supervision of Personal Data Processing, as well as for the repealing of Law no. 677/2001 for the protection of individuals with regard to the processing of personal data and the free movement of such data, published in the Official Gazette of Romania, Part I, no. 503 of June 19, 2018.

[25] Law no.190/2018 on the implementing measures for Regulation (EU) 2016/679 of the European Parliament and of the Council of 27 April 2016 on the protection of individuals with regard to the processing of personal data and on the free movement of such data and for repealing Directive 95/46/EC (General Regulation on data protection), published in the Official Gazette of Romania, Part I, no. 651 of July 26, 2018.

[26] Law no. 677/2001 for the protection of individuals with regard to the processing of personal data and the free movement of such data, published in the Official Gazette of Romania, Part I, no. 790 of December 12, 2001.

Law no. 129/2018 aims at amending and supplementing Law no. 102/2005 (law that was adopted in the stage of preparation of the status of state in the process of accession: 2005-2006). That law aimed at establishing, organizing and functioning of the National Authority for the Supervision of Personal Data Processing (hereinafter referred to as the National Authority). The second law governs the matter of measures implementing Regulation (EU) 2016/679.

Under these two laws, several decisions have been adopted by the National Authority. Among them, the following are significantly relevant: Decision no. 128/2018 on the approval of the standard form for the notification of personal data breach in accordance with Regulation (EU) 2016/679 on the protection of individuals with regard to the processing of personal data, and on the free movement of such data, and the repealing of Directive 95/46/EC[27]; Decision no. 133 of 3 July, 2018 regarding the approval of the Procedure for receiving and resolving complaints[28] and Decision no. 174 of 18 October, 2018 on the list of operations for which it is mandatory to perform the impact assessment on the protection of personal data[29].

Given the fact that the balance in this matter is given by correlative rights and obligations, rules and exceptions or the relative and absolute character, we consider that highly important in the economy of this approach is Directive (EU) 2016/680[30], adopted at the same time as Regulation (EU) 2016/679[31]. In essence, the Directive regulates real exceptions to the application of the Regulation on the protection of personal data. Internally, Romania transposed the directive by Law no. 363/2018[32], but complementary elements of this transposition are also found in Law no. 129/2019[33], respectively in Law no. 544/2001[34] and in Decision no. 133/2018 of the National Authority, invoked above.

Like all national, European and international rules, Regulation (EU) 2016/679 is no exception to the rule according to which no regulation is perfect, but perfectible, being susceptible of additions, modifications, completions, corrections and rectifications. These inevitable corrections or rectifications are all the more necessary as we must take into account some possible errors that might appear in the process of translating, including in Romanian, the legal acts of the European Union[35]. In this regard, we cite, as an example, the rectification of Regulation (EU) 2016/679 published in the Official Journal of the European Union[36] just two days before the date of application of the Regulation. The 24 amendments to the rectification refer to: a recital (71, the fifth and sixth thesis); 20 articles and one point (point 25 of Art. 4).

Specifically, only by way of example, in order to see the difference in matters of legal consistency of the rectification that occurred prior to the application of the regulation, the powers of the supervisory authority are provided at Art. 58 para. (2) letter b). Among them, it was erroneously mentioned that, according to which it could "issue **warnings**[37]" to an operator or a person authorized by the operator if the processing operations infringed the provisions of the Regulation. Following rectification, the supervisory authority "can issue **reprimands**".

4. Jurisprudential aspects

Along with the legislator, the Court of Justice of the European Union has an important role in clarifying/interpreting some provisions of EU legal acts. The role of the European Union's legislator (European Parliament and Council) is highlighted, for example, in the content of Art. 4 of Regulation (EU) 2016/679, where 26 terms are defined. In the same direction, we also remind of the rectification made to the regulation two days before it was applied.

In the short time that has elapsed since the entry into force or application of the Regulation, a number of preliminary requests for interpretation have already

For another perspective, see Elena Emilia Ștefan, "*Interference between the protection of personal data and contraventional legislation"*, published in Volume 7, Issue 2, 2018 of the online journal *"Perspectives of Law and Public Administration"*- http://www.adjuris.ro/revista/articole/an7nr2/6.%20Elena%20Stefan%20EN.pdf, with the access date on 6 April 2021.

[34] Law no. 544/2001 on the free access to information of public interest, with subsequent amendments and completions, published in the Official Gazette of Romania, Part I, no. 663 of October 23, 2001.

[35] Each official language of each EU Member State is an official language of the Union. The entire EU acquis is translated into all 24 official languages of the Union, with the same legal value.

[36] OJ L127, 23 May 2018.

[37] Regarding the warning, see in detail, Elena Emilia Ștefan, *Răspunderea juridică. Privire specială asupra răspunderii în dreptul administrativ*, Pro Universitaria Publishing House, Bucharest, 2013, pp.223-225.

been made. Until that date, by way of example, we mention the ruling of the Court of 16 January 2019 in Case C-496/17[38]. Under point 31, it results from its content, that "the settlement of the main dispute depends on the interpretation of Art. 24 para. (1) par. 2 of the Implementing Regulation 2015/2447, interpreted in the light of Art. 8 of the Charter of Fundamental Rights of the European Union and Regulation (EU) 2016/679, as the tax identification numbers of the data subjects and the contact details of the tax centres competent for them, constitute personal data". Therefore, the Court's solution is "that the customs authorities may require the applicant for AEO status to communicate the tax identification numbers assigned for the purpose of levying income tax, which concern only natural persons who are authorized to represent the applicant or who exercise control over its management, and those responsible for customs matters within it, as well as the contact details of the tax centres responsible for all such persons, in so far as such data enable those authorities to obtain information on serious or repeated infringements of customs legislation; of the fiscal dispositions or to serious crimes related to their economic activity, committed by these natural persons"[39].

Another case in which the Court was asked to provide an interpretation of provisions on the protection of personal data is C-673/17[40]. In the present case, the referring court had doubts, first, as to the validity of Planet 49's (part in the main litigation) obtaining the consent of the users of the website www.dein-macbook.de, which it requested through a box that had to be checked, and, secondly, on the scope of the obligation to provide information, as mentioned in the Privacy and Electronic Communications Directive[41]. In the Court's view, the consent provided on that website "is not validly given when the storage of information or the acquirement of access to information already stored in the terminal equipment of a website user, through cookies, is authorized by means of a box checked in advance which this user must uncheck if he refuses to give his consent". With regard to the scope of the obligation to inform, mentioned in the Privacy and Electronic Communications Directive, the Court noted that "the information that the service provider must provide to the user of a website, includes the duration of the cookies and the possibility or the impossibility for third parties to have access to these cookies"[42].

A final case taken into account, is the one in which the Court was asked to rule, by a preliminary ruling in interpretation, on the transfer of personal data for commercial purposes to third countries, respectively the appropriate level of protection. In the Court's view, the appropriate safeguards, enforceable rights and effective remedies provided in Regulation 2016/679 "must ensure that the rights of individuals whose personal data are transferred to a third country under standard data protection clauses benefit from a level of protection (...) equivalent to that guaranteed in the European Union"[43].

5. Conclusions

The dynamics of legislative and jurisprudential developments are likely to determine the transformation of the issue of personal data protection into a real permanence of existing concerns, internally, but also at European and international level. This is generated by the practice of the field, and by the evolutions that, inevitably, digitalisation will undergo, corroborated with other components of the technical-scientific evolutions which are closely related to the unprecedented multiplication of data belonging to people, some of which are currently difficult to imagine (for example: location data or one or more elements specific to the genetic identity introduced by Regulation (EU) 2016/679 as a novelty, if we refer to Directive 95/46/EC).

LEGAL PERSONALITY OF INTERNATIONAL INTERGOVERNMENTAL ORGANIZATIONS

Roxana-Mariana POPESCU[*]

Abstract

The legal personality of international intergovernmental organizations is relevant, at international level, from the point of view of the acquisition of rights and obligations. It is the sole way in which the will manifestation of the subjects of international law can be approached. The action of international intergovernmental organizations is limited to the will of founding states, which is regulated by different instruments of international law. Given the fact that the very existence and legality of subjects of public international law depends on the very existence of the legal personality, the study, respectively its analysis, is an equal priority for both theory and practice of the public international law.

Keywords: *international intergovernmental organizations; domestic legal personality; international legal personality; rights and obligations; International Court of Justice.*

1. General considerations regarding the quality of subject of international law of the international intergovernmental organizations

Given the fact that the very existence and legality of subjects of public international law depends on the very existence of the legal personality, the study, respectively its analysis, is an equal priority for both theory and practice of the public international law. There is an intrinsic link between legal personality and the status of subject of international law in the sense that, in general, "the subject of law is the holder of rights and obligations"[1]. The exercise of these rights and obligations concerns the domestic scope, as far as the subjects of domestic law are concerned, respectively the international scope, as far as the subjects of international law are concerned, as it is the case of states or international organizations, and many more. The international legal personality confers upon the subjects of international law, limitations within which the relations of which they may be part, can be organized and carried out. The regulation of such relations falls under the rules of "international law, acquiring the character of relations of international law analysed through the classical legal concepts of: subjects, legal content (rights and obligations) and object"[2].

Starting from the twentieth century, international intergovernmental organizations have been recognized as subjects of international law. Thus, after the Second World War, the scope of subjects of international law has expanded, meaning that, in addition to states, as main, primordial subjects, also the international organizations have appeared, not all, but just the intergovernmental ones, "the only organizations that can be studied in international law"[3]. Thus, we are taking into consideration the provisions of Art. 2 para. (1) letter i) of the Vienna Convention of 1969, according to which "the expression" international organization "means intergovernmental organization". Subsequently, we find a similar wording in the debates of the International Law Commission in 1989, when in the Fourth Report on Relations between States and International Organizations[4], Special Rapporteur Leonardo Díaz González noted that the "definition of the term "international organization" from para. (1) of Art. 2 of the Draft Articles on Treaties Concluded between States and International Organizations or between International Organizations[5], is identical to the one given in Art. 2 para. (1) letter i) of the Vienna Convention on Treaties of 1969". Therefore, the international organization is assimilated to an intergovernmental organization.

As it is already known, for an entity to be subject of international law, of state type, "the following conditions must be met: permanent population, determined territory, government and the capacity to establish relations with other states"[6]. Once these requirements are met, the state becomes "direct and immediate subject of international law, having full capacity of assuming all international rights and obligations"[7]. Likewise, it is necessary for the international organization to meet certain conditions in order for it to be qualified as subject of international law. *The Draft articles on the legal situation of state*

representatives to international organizations[8] define the international organization as "an association of states, constituted by treaties, endowed with a constitution and common bodies and possessing a legal personality distinct from that of Member States"[9]. Thus, the international intergovernmental organization is a subject of international law if the following requirements are met: the members of the organization must be the states, i.e., the organization must be intergovernmental (interstate); the will agreement of states is necessary for the establishment of the organization; the organization must have its own institutional structure, which gives it "functional autonomy in international relations"[10] and must have legal personality.

Although the requirement of having legal personality is included in the constituent elements of the international organization, it should not be overlooked that it becomes subject of international law "in so far as States confer upon it this quality"[11] through the constitutive act.

Therefore, if we refer to international intergovernmental organizations, we find that their legal personality is an independent component, along with others, of course. "The endowment of legal personality [to international organizations] is the "key" element in determining the "distinction" between international organizations and forms or structures of international cooperation without legal personality in international law"[12].

2. Legal personality of international intergovernmental organizations

In order to be able to discuss about the legal personality of international intergovernmental organizations, we must keep in mind that, next to states, there are also other subjects of international law. Only then must we acknowledge that it is imperative to dissociate international legal personality from sovereignty[13].

As mentioned, legal personality can be conferred upon an international intergovernmental organization, either directly, through the legal instrument by which such an entity under international law[14] arises, or indirectly, resulting "implicitly" in so far as in order for the organization to exist and function, it is endowed with its own bodies, and for which "competences or tasks [which] could not be fulfilled in the absence of international legal personality"[15], are established.

Acquiring international legal personality through the constitutive act is also provided in the *Draft Articles on the Liability of International Organizations*[16], which, at Art. 2 letter a), states that the term "international organization" means any organization established by a treaty or other instrument governed by international law and endowed with its own international legal personality (...)".

Regarding the implicit conferment of legal personality upon international intergovernmental organizations, it is important to remember that the international case-law recognized this prerogative to those organizations for which the members had not provided, through the constitutive act. This is the well-known Advisory Opinion of the International Court of Justice[17] of 11 April 1949. In the present case, one of the questions addressed to the Court concerned the legal capacity requested to an organization (UN), which had not been endowed with legal personality through the constitutive act, to bring international claims. In other words, does the organization have international legal personality, given the fact that the constitutive act provides differently? The Court acknowledges that "this legal capacity is obviously inherent to the State; one state may bring an international claim against another state"[18]. The Court's answer is clear, in the sense that "the organization is subject to international law (...) being able to hold international rights and obligations and has the capacity of keeping these rights intact by bringing international claims"[19]. And this is possible because "the organization has been created to exercise and hold, which actually does, functions and rights that can only be explained by the fact that it has, to a large extent, personality and capacity to operate

internationally. At present, it is the highest type of international organization and could not meet the intentions of its founders if it lacked international personality. It must be accepted the fact that its members, by conferring certain functions upon it, with the inherent obligations and responsibilities, have assigned to it, the competence required for those functions to be performed effectively"[20].

The European Union offers another situation of implicit legal personality, being an entity which, until the entry into force of the Treaty of Lisbon[21], had not expressly had legal personality[22]. However, taking into account the criteria used by the ICJ in its Opinion of 1949 (the mission, functions, rights and obligations that the UN fulfilled, according to the will of founding states), we can argue that the EU had implicit legal personality. Thus, the Union has been created for an indefinite period with the mission of "asserting its identity on the international stage"[23]; at the same time, the Union "defines and implements a common foreign and security policy"[24] (CFSP) and so on. In these circumstances, we can see that the Union organized the institution of "special envoys" in the person of the High Representative for the CFSP, in the Middle East, in Kosovo and others. Moreover, once the Treaty of Amsterdam entered into force on 1 May 1999, the Union acquired the capacity to conclude international agreements with third countries in the fields of CFSP, justice and home affairs.

Given the fact that international organizations are the result of the will agreement of states, the latter establish, by the constitutive act, their field of activity, purpose and mission. The clarification of the ICJ, stated in the Opinion of 1949 is important for our approach, because according to this clarification, the organization is not a state, "which, obviously, cannot be"[25], and "its legal personality, as well as its rights and obligations are the same as those of a state. (...) It does not even imply that its rights and obligations are necessarily exclusively international, just as not all the rights and obligations of a state are exclusively international"[26]. Therefore, legal personality under international law should not be confused with legal personality under domestic law.

3. Legal personality of domestic law of international intergovernmental organizations

As a rule, the constitutive acts of international organizations regulate, distinctly, their internal legal personality[27].

The legal personality of domestic law represents the possibility for the international intergovernmental organization to acquire "the status of subject of domestic law of the Member States, to hold rights and obligations, with the consequence of having" legal capacity "or" civil capacity»"[28]. According to the rule, the international organization benefits, on the territory of each of its members, from legal capacity to perform its functions and purposes. Thus, the organization can conclude contracts for goods, services, premises. Consequently, the organization has the right to establish legal relations with natural or legal persons of domestic law from states where it has its headquarters. By virtue of personality of domestic law, the organization may buy goods or rent premises for activities (premises agreement[29])[30]. The organization may also carry out a legal activity in the state in which it is established and may enter into agreements with Member States which enable it to operate. In case of contingent problems, it can defend its rights before the courts of these states. For example, according to the constitutive act, "the European Union may, in particular, acquire or dispose of movable and immovable property and may be a party to legal proceedings"[31].

International intergovernmental organizations also enjoy privileges and immunities, such as the inviolability of space and archives. The authorities of the headquarters State shall not have the right to enter the premises of the organizations without the authorization requested and received for this purpose from a representative of the organization. Tax and

[20] Page 9 of the Opinion.

[21] Following the Treaty of Lisbon, the Union expressly acquires legal personality, becoming a subject of international law, with its own legal order, distinct institutions, bodies, offices and agencies, to which precise objectives and values are added.

[22] On the legal personality of the EU, before and after the entry into force of the Treaty of Lisbon, see Augustin Fuerea, *Dreptul Uniunii Europene. Principii, acțiuni, libertăți*, Universul Juridic Publishing House, Bucharest, 2016, pp. 19-22.

[31] According to Art. 335 TFEU.

financial privileges also allow organizations to avoid paying taxes and duties.

4. International legal personality of international intergovernmental organizations

After creating an international organization, States have to provide it with the indispensable and necessary legal instruments to carry out the inherent functions. *De facto*, the international legal personality allows the organization to act on the international stage, to use the instruments of international law[32].

International organizations have an international legal personality different from that of states, because organizations are limited to the functions entrusted to them by states.

The international legal personality of international organizations has two essential characteristics: objective and specialized. The objective nature results from the fact that "the legal personality of the international organization is opposable to third countries"[33], as emphasized by the ICJ in its Advisory Opinion of 1949[34]: "Fifty states, representing the majority of members of the international community, had the power, under international law, to establish an entity that has an objective international legal personality, not just a legal personality recognized only by them (...)"[35].

"The specialized character of the legal personality presupposes that the organization will be able to be the holder only of those rights and obligations that correspond to the assigned competences"[36].

By virtue of international legal personality, the international organization acquires several rights, namely: the right to conclude treaties; the right to file complaints against another subject of law; the right to stand in Court; the right to send and receive diplomatic missions (the right of passive and active legation).

The right to conclude treaties is recognized to international organizations, also through the Vienna Convention on the Law of Treaties between States and International Organizations or between International Organizations (1986) which, in Article 6 states: "the capacity of the international organization to conclude treaties shall be governed by the rules of that organization". "This capacity is not universal, but specific, depending on its purposes and functions"[37]. Therefore, this right is not absolute, in the sense that states can prohibit organizations to participate in international relations, by concluding treaties. The subjects of law with which they may conclude treaties are: Member States, third countries or other international organizations. An example worth mentioning is that of the European Union, which has concluded, in its own name or with the Member States (mixed agreements), 1266[38] agreements[39] in the most diverse fields. Some of these agreements establish reciprocal obligations (e.g., synallagmatic trade concessions), others contain interdependent obligations (e.g., compliance with fishing quotas in a certain marine area or the obligation to prohibit the use of certain dangerous substances on its territory)[40].

The right to file international complaints[41] is exercised both in its own name and for its agents, in the event that the international organization has suffered damages. Relevant in this regard is the same ICJ Advisory Opinion of 1949, in which the Court expressed its opinion on the request of the General Assembly that wished to know whether it could make a complaint in the place of Count Bernadotte, one of its officials who, in his capacity of UN mediator in Palestine (so, an agent of this organization) was assassinated. According to the Court, "the organization has the legal capacity to seek compensation for damage (...) and it is authorized to include reparation for the damage suffered by the victim". Moreover, the Court considers that "fifty States (...) had the power, under international law, to establish an entity with international legal personality (...) [and] the legal capacity to bring international claims"[42].

The right to stand in Court gives to international organizations, the opportunity to capitalize on possible claims, but also the benefit of a certain international legal status, based on the immunities and privileges it is endowed with.

The right of representation (active and passive legation) allows international organizations to send or receive diplomatic missions, respectively, to / from Member States, third countries or other international organizations.

In addition to the rights that it confers upon international organizations, the legal personality also requires them to comply with and apply the rules and

[42] Page 14 of the Opinion.

principles of international law (customary or conventional) in their relations with Member States, third countries, other international organizations and other subjects of international law[43]. Failing to comply with this obligation may result in the liability[44] of international organizations.

5. Conclusions

At international level, the legal personality of international intergovernmental organizations is relevant from the point of view of the acquisition of rights and obligations (benefit of rights and fulfilment of obligations). It is the sole way in which the will manifestation of the subjects of international law can be approached. Their action is limited to the will of states that establish the respective international organizations and that is regulated by different instruments of international law, as it is the case, for example, of the (UN) Charter, of the institutional/constitutive treaties (European Communities and the European Union) and of the Statute (Council of Europe). The current international society favours the multiplication of the subjects of international law, of the type of international organizations, in the most diverse fields, some of them of vital importance and of great topicality related to the evolutions of life, in general (environment, climate, technology, digitalization, etc. a.) and, implicitly, stimulates the establishment of a new type of legal personality, correlative to the inherent rights and obligations of such international organizations.

EXPLORING EXISTING AND POTENTIAL NORMATIVE SOLUTIONS FOR AN EU-WIDE LEGAL FRAMEWORK FOR SECURITY OF INFORMATION IN THE CONTEXT OF DEFENCE AND SECURITY PROCUREMENT

Simion-Adrian PURZA*

Abstract

In the current international environment, an effective implementation of national security objectives is to a great extent dependant on the ability of national governments to ensure the highest possible degree of confidentiality to information used in strategical, as well as tactical decisions. Ensuring security of information has been a conundrum for all international organisations seeking to reach varying degrees of coordination, cooperation or integration. As the most ambitious of all, thus far, the EU has raised the bar even higher, especially in terms of desired cooperation in defence and security, where the drive for integrated defence procurement takes centre stage. Consequently, the issue of sharing (classified) information between the Member States and their relevant authorities is of fundamental importance. Against this backdrop, this paper seeks to identify potential regulatory solutions for the management of classified information that would effectively contribute to the final objective of integrating defence and security procurement, as envisaged by the Defence Procurement Directive 2009/81/EC. An essential prerequisite in this respect is to determine what legal solutions could better serve this purpose, starting from normative instruments already implemented at various levels in the EU institutional mechanism. To this end, the paper is based on a two-phased theoretical approach: (1) the material segment – the characteristics of an effective integrated system for security of information (within the scope of defence procurement integration) and (2) the procedural segment – how to apply a potential solution at EU level (by what means). Ancillary research questions are aimed, first, at understanding the current state of play of the EU regulatory framework pertaining to handling classified information, in terms of granting security clearances to both individuals and legal persons (private, as well as public).

Keywords*: security of information, classified information, defence procurement, EU integration.*

1. Introduction

Information, understood in its widest possible definition, is a critical part of any decision-making process and even more so for strategic planning and action in the realm of national security. The delicate balancing act of ensuring security of information has been a conundrum for all international organisations seeking to reach varying degrees of coordination, cooperation or integration, such as the UN or NATO. As the most ambitious of all, thus far, the EU has raised the bar even higher, especially in terms of desired cooperation in defence and security. Consequently, the issue of sharing (classified) information between the Member States and their relevant authorities took centre stage.[1]

The main hypotheses of this paper are based on the idea that a highly coordinated (if not unitary) regime for classified information among EU Member States[2] – for the purpose of defence procurement integration – could be achieved following the same rationale used for the gradual integration of defence and security matters into the EU institutional mechanism (still an ongoing process).[3] The key starting point is the contention that, albeit some positive feedback, the fit-for-purpose provisions of Directive 2009/81/EC[4] on security of information have proved to be of little effect in terms of enabling and encouraging cross-border tendering. It should also be reiterated that, in general terms, despite an initial positive feedback from the member states and the various stakeholders after the publication of the Defence Procurement Directive, the most recent report on its effectiveness[5] underlines its limited overall impact, in terms of both legal harmonization and concrete results for the EU defence industrial base.

Although debatable, it can be said that the EU has established a proprietary and functional framework for

dealing with classified information, covering both its institutional actors, as well as its dynamics with the member states and among themselves, when dealing with EU classified information. What is, then, the missing link for establishing an integrated and functional framework for the protection of classified information that would also benefit the integration of defence procurement – i.e. what needs to change?

An evaluative study conducted by the Commission in 2016 has shown that 61% of contracting authorities strongly agreed or agreed that the Defence Directive's provisions on security of information are sufficient to ensure the protection of classified information.[6] The same study revealed that, among business respondents, a 'relative majority' of 33% expressed a favourable view, while 'only' 9% disagreed.[7] Based on these statistical iterations and additional interview-based feedback, the Commission seems content with the effectiveness of the security of information provisions in the Defence Procurement Directive.

On this point, if the benchmark is the contribution that the Directive effectively brings to opening defence procurement for the EU market, then the appropriateness of the security of information provisions must be weighed considering their concrete contribution towards achieving this goal. Therefore, as long as the provisions are only considered sufficient from the point of view of the contracting authorities (and even the industry, although to a lesser extent), but they do not actually facilitate increased market access and equal opportunity, then it must be ascertained that their appropriateness is at least questionable. In this respect, the market access barrier created by the lack of a harmonised regime for access to and protection of classified information is a strong argument as to the insufficient effectiveness of the Defence Directive's provisions on security of information.

Although outside the field of regulatory competence of the EU, the protection of classified information has been dealt with at an *ad-hoc* basis, while gradually undergoing a process of harmonisation between the main institutional actors of the EU. This evolutionary experience could provide (normative) solutions for a wider and more substantive integration of the protection of classified information at EU level, for the benefit of harmonised procurement aimed at integrating the markets for defence and security products and services.

Thus, the overarching interrogation of this paper seeks to identify potential avenues for future regulatory solutions for the management of classified information (beginning with security clearances) that would effectively serve the final objective of integrating defence and security procurement, as envisaged by the Defence Procurement Directive. An essential prerequisite in this respect is to determine whether there is legal basis to enact new EU legislation that would alleviate (or even solve) the issues pertaining to security of information. The objective is therefore that of a principled discussion with no pretention to elaborate concrete normative solutions – which could form the object of a subsequent study.

Determining if and what (regulatory) solution can be implemented is based on a two-phased theoretical approach to the issue: (1) the material segment – the characteristics of an effective integrated system for security of information (within the scope of defence procurement integration) and (2) the procedural segment – how to apply the envisaged solution at EU level (by what means). Ancillary research questions are aimed, first, at understanding the current state of play of the EU regulatory framework pertaining to handling classified information, in terms of granting security clearances to both individuals and legal persons (private, as well as public).

Aside from literature and legislative analysis, the research is complemented by an examination of the relevant case-law of the European Court of Justice dealing with security of information at large. The examination seeks firstly to find indications as to the underlying principles that the Court has defined in this field, especially in the logic of striking a balance between (national) security interests and democratic access to information. Secondly, the analysis might reveal a confirmation or critique of potential regulatory solutions that have been implemented or should be implemented in the field of security of information at EU level.

2. Defining the main concepts

The protection of classified information is an essential prerequisite for contracting authorities, but it also bears significance for the industry – national security interests and commercial confidentiality requirements dovetail, especially in fields such as defence and security. To put the issue in context, it is important to underline that, in the field of defence procurement, potential tenderers often require access to classified information while the contracting authorities seek a solid guarantee of the reliability of said tenderers regarding their ability and will to safeguard the necessary level of confidentiality. Therefore, on the one hand, there is a specific need emanating from the industry, and on the other, a (potentially) contending need of the member states, stemming from national security.

In moral or sociological terms, confidence building is key in any endeavour pertaining to the protection of classified information. Various legal instruments have been developed by national or international legislators to ensure that this notion gets empirical validation and a concrete system of accountability is in place. Nonetheless, the fundamental

[6] SWD (2016) 407 final, *op.cit.*, p. 77.
[7] Ibid.

issue is whether the originating source of the information feels enabled and safe enough to entrust said information onto one or more third parties, and more so to accept the possibility of it being subsequently distributed. Confidence building is not just an abstract moral issue, as it is also manifested in the relation between EU bodies and institutions, the most relevant case being that of the negotiations between the European Parliament and the Council on access to classified information handled by the latter.[8]

Amongst various other considerations, the foremost legal and operational principles in the field of security of information are authorization or clearance (subject to meeting a set of requirements) and need-to-know. They represent two sides of the same coin, as interdependent and cumulative conditions to be met in order that a person (private or legal) is granted access to documents and materials containing classified information. Of course, the classification policy employed by the national authorities of each state also bears important significance, but it goes further into the inner workings of security of information mechanisms and beyond the scope of this analysis.[9]

'Authorization' or 'clearance' is a type of formal validation granted to a person, natural or legal, in confirmation of their capacity to handle classified information, based on the requirement to meet strict criteria and subject to evaluation thereof.[10] This can be regarded as the first line of defence in security of information and a universal tool used to control access and contain the risks of unwarranted disclosure of information.

'Need-to-know' is to a great extent a self-explanatory notion. In context, it can be defined as a principle according to which a person can have access to classified information only if knowledge of said information is needed in carrying out their duties.[11] Establishing the existence of the need-to-know in a particular situation is generally the attribute of the originator of the information or, in some cases, the holder. This concept is widely used at national and international level,[12] either intrinsically, as a transversal notion, or expressly stated in legal or administrative acts as a mandatory prerequisite for access to information.

For clarity of argument, basic concepts such as 'classified information', 'security of information' or 'sensitive information' should be defined herein. These notions have been defined on numerous occasions and in various contexts but have retained their underlying meanings throughout. For that reason, an in-depth comparative analysis of the various definitions, although an interesting debate, would not provide any meaningful contribution to the present analysis. Therefore, for the purposes of this paper, it is most appropriate to recourse to legal definitions that have been provided within EU legislative acts (where available) and relevant policy documents.

'Classified information' has been defined[13] as 'any information or material, in any form, the unauthorised disclosure of which could cause varying degrees of prejudice to the interests of the European Union, or of one or more of the Member States, and which bears' one of the EU or corresponding classification markings.[14] The Defence Procurement Directive provides a similar definition, albeit more complex and from a national security perspective: 'any information or material, regardless of the form, nature or mode of transmission thereof, to which a certain level of security classification or protection has been attributed, and which, in the interests of national security and in accordance with the laws, regulations or administrative provisions in force in the Member State concerned, requires protection against any misappropriation, destruction, removal, disclosure, loss or access by any unauthorised individual, or any other type of compromise' (article 1.8). [15]

On the other hand, 'sensitive information' is a more elusive concept. It can be understood as a quality or characteristic of documents or information whose unauthorised disclosure is liable to bring prejudice to private or public interests, in the general sense. Therefore, it is not inherently different from classified information, the distinctive element residing solely in terminology, as classification can be regarded as the formal or administrative confirmation of the sensitive nature of a document or a piece of information. Still,

[12] For an EU-level example, *see, inter alia,* Interinstitutional Agreement of 12 March 2014 between the European Parliament and the Council concerning the forwarding to and handling by the European Parliament of classified information held by the Council on matters other than those in the area of the common foreign and security policy, OJ 2014 C 95/1, article 4.4.(a).

[13] Article 2 of the Agreement between the Member States of the European Union, meeting within the Council, regarding the protection of classified information exchanged in the interests of the European Union, Official Journal of the European Union C202, 8.7.2011, hereinafter 'Member States' Agreement on classified information'.

[14] Other EU legal acts have provided similar definitions, such as, *inter alia*: Council Decision of 23 September 2013 on the security rules for protecting EU classified information, Official Journal of the European Union L 274, 15.10.2013, article 2.1.; Commission Decision (EU, Euratom) 2015/444 of 13 March 2015 on the security rules for protecting EU classified information, Official Journal of the European Union L 72, 17.3.2015, article 3.1.

[15] For a doctrinal perspective, *see, inter alia,* D Curtin, 'Official Secrets and the Negotiation of International Agreements: Is the EU Executive Unbound?' (2013) 50 Common Market Law Review 423, 425-426; Galloway (2014), *op.cit.*, p. 672.

doctrine has at times referred to sensitive information as a distinct category (other than classified) that warrants some level of confidentiality (such as commercial information or personal data) but does not bear a formal security classification[16] or as unclassified information with controlled dissemination.[17] Nonetheless, the notion has received a formal, legal definition in Regulation 1049/2001 on public access to EU documents,[18] which effectively equates it with classified information (the wording of the Regulation refers to 'sensitive documents' and 'classified documents'). Building on this approach and considering that the differentiation proposed by doctrine is of no consequence for the analysis made in this paper, any further reference to 'sensitive information' should be considered equivalent to 'classified information' if not expressly stated otherwise.

Against this background and seen in the context of the Defence Procurement Directive, 'security of information' can be described as both a characteristic and a set of requirements. Thus, it can be regarded as 'the ability and the reliability of economic operators to protect classified information'[19] or as a set of 'measures and requirements necessary to ensure the security of such information',[20] the two perspectives bearing equal relevance.

Focusing on the field of procurement for defence and security, the most pressing issues from the perspective of the contracting authorities, when dealing with industry representatives, are national security clearances (or authorisations, needed to access classified information pertaining to this field) and the criteria used for granting them, as well as ensuring appropriate means of protection and control of the security of information throughout its lifecycle. Considering the aim to push for integration in this field, the cross-border dimension of the two bears considerable significance. As the Commission concluded, the 'lack of a harmonisation of national security clearance systems can create problems and market access barriers.'[21]

The Defence Procurement Directive is the keystone of defence procurement integration in the EU. Its central position is tributary to both its daringly ambitious goal as well as to its absolute novelty to date. As such, the red thread of its philosophical approach and key concept is *integration*, on the backdrop of which each individual normative instrument is sized and adjusted. In this respect, by resorting to an analogy with the harmonising drive of internal market law in general, Trybus underlines the similar impetus of the Defence Directive, which seeks to 'bridge the gap' between the internal market objectives of the EU and what he describes as the 'legitimate concerns of the Member States', including those pertaining to public security.[22]

This read thread is applied – albeit unevenly – to security of information as well. To this end, the recitals of the Directive outline the symbiotic link between procurement in the fields of defence and security and security of information requirements – paragraphs (9), (20) and (47) – while hinting the urgency (or usefulness, in a blander interpretation) of 'an Union-wide regime on security of information'. Although the Directive does not reach that level of ambition, it nonetheless transposes the overall approach towards the importance of security of information concerns in provisions that allow contracting authorities to include requirements pertaining to security of information in various key elements of the procurement procedure, such as conditions of performance, selection criteria or exclusions.

As with complex issues in general, where opposing interests are confronted, compromise was often used to agree on various solutions pertaining to the publicity and transparency of the procedure, while safeguarding security concerns. The Commission Staff Working Document presenting the impact assessment of the future Defence Directive showcased numerous such compromises in terms of security of information, starting with the possibility to disclose sensitive information pertaining to the procurement procedure only to the successful bidder, at a later stage – which the document considered to be "best-suited, since it allows safeguarding security of information while still ensuring equality of treatment and a fair level of transparency".[23]

3. The EU regulatory perspective

Owing to their exclusively economic scope, significantly narrower than today's comprehensive agenda, the initial European Communities had neither the incentive nor the legal justification to set up rules

on protecting classified information.[24] Somewhat unsurprisingly, the exception to this rule was provided by domains such as defence and security, particularly related to aspects of nuclear safety under the Euratom Treaty.[25]

Further on, advances in cooperation on military and civilian management operations,[26] as well as in tackling criminal matters (with a focus on transnational terrorism), have prompted exponential evolutions in the management of classified information within the EU. Therefore, it can be said that the EU's step by step involvement in defence and security matters, albeit by way of an intergovernmental approach,[27] has also served as the driving force behind initiatives focused on the protection of classified information.

In this respect, it is relevant to note that the EU has previously shown the political will power and the necessary means to respond to legitimate concerns voiced by its partners in terms of security of information. A case in point is the largely debated initiative promoted in 2000 by High Representative Javier Solana, seeking to provide reassurances to NATO on the protection of classified information it exchanged in its cooperation with the EU, which was on a strong path of consolidation at that time.[28]

The road to harmonization still faces many challenges, brought on especially by the Member States' different perspectives on how classified information should be managed, a fact that had been taken into consideration by the Defence Procurement Directive but to no conclusive solution. For example, one such element of distinction was the position of Sweden and the United Kingdom, which practically invalidated the principle of originator control[29] in situations where there is a request for the content of a classified document to be made public or to be sent to judicial authorities.[30] In such a scenario, public authorities are required and empowered to assess whether disclosure is in the public interest, thus disregarding the obligation to obtain the agreement of the originator.

David Galloway has astutely observed that the EU was required to have an original approach to regulating the management of classified information, since the Treaties lacked the proper legal basis for binding rules in this field.[31] Moreover, article 352 TFEU paragraph 4 expressly prohibits the Union from relying on the mechanism established by this article to attain objectives pertaining to the Common Foreign and Security Policy (CFSP) while also reiterating the limitations to adopt acts, enshrined in article 40 TEU. Thus, there was no possibility of having a unified legislative instrument addressing the protection of classified information. For that reason, the EU institutions, guided by the driving force of the Council, have adopted a sectoral approach, seeking to implement measures that would ensure an adequate level of protection for information deemed classified, focused on their own specific administrative procedures and processes.[32]

The EU's relationship with classified information has been split between two imperatives which carry varying weights both within the Union itself (different perspectives of the executive and parliamentary branches) and those of the public (NGOs and lobby groups especially). Thus, the EU is tasked with conciliating democratic governance (which entails extended access to sensitive information for the public) with efficient political action (which for its part might require a heightened level of discretion). A renewed legislative response could be a way to respond to both imperatives, that is to ensure the exercise of the fundamental right of access to information while also to provide a clear and effective framework to legitimately protect classified information.

In her paper on how the EU deals with classified information,[33] Deirdre Curtin asserts that adopting general rules on how the EU Council shares classified information with the European Parliament is 'a matter of broader democratic concern'. Extrapolating from this conclusion, it could be argued that the need for an EU-wide regime for clearance and access to classified information for industry representatives – seen as *sine qua non* for taking part in defence and security procurements – also touches on issues pertaining to democratic governance, in the context of common market rules and observing the need to ensure an effective benefit of the possibilities afforded by the Defence Procurement Directive. On this issue, research has underscored the contrast between the EU's approach towards intra-community transfers, which benefit from an EU Directive, and the recognition of security clearances, which has yet to be regulated at a similar level.[34]

One issue identified by doctrine, also building on the perspective of legitimate access, is that a lack of substantive classification criteria leads to intentional or unintentional abuse of power by the EU institutions –

[34] M Trybus (2014), op.cit., p. 362.

the Council in particular – when exercising their discretion in granting low-level classified status to information (such as 'restricted').[35] This practice can effectively limit or ban otherwise relevant information from legitimate public knowledge, in the disadvantage of both individual citizens as well as NGOs or the industry. Similar issues concern the way national governments make use of their prerogative to declare information of a certain type or pertaining to a specific sector as classified on the lowest possible level, but which still makes it undisclosable to third parties, thus providing a valid reason to apply the Article 346 TFEU exemption or at least inhibit the participation of (some) tenderers.

The analysis on relevant EU legislation provided further on seeks to identify and explain specific instruments of governance regulated at EU level for the management of classified information, with a focus on the degree to which the competent authorities of the Member States are involved in the process and how the distribution of tasks and authority is made. The documentary results should in turn provide a basis for evaluating if the mechanisms in place satisfy the Member States' desire to exercise an adequate level of control. To this end, the scope of the legal framework analysis includes a selection of legal/procedural instruments specially tailored for the needs of the EU institutional framework pertaining to handling classified information. The analysis is predicated *inter alia* on the notion that the Commission has had an early leading role in terms of security of information, but its position has been taken by the Council, especially considering its competences and those of the Member States in areas such as the CFSP and the Common Security and Defence Policy (CSDP).[36]

3.1. The EU regulatory perspective

The first iteration in terms of regulating the management of classified information within the EU came as an early onset, by means of Regulation (Euratom) No 3 implementing Article 24 of the Treaty Establishing the European Atomic Energy Community, a regulation which is still in force.[37] Viewed in the context of modern-day regulatory initiatives, it can be regarded as a landmark achievement in a field of profound reluctance on the part of the Member States, and, even more so, as the blueprint for future rules.[38]

Still, in the interest of objectivity, it should be underscored that the adoption of the Euratom Regulation had benefited from several favourable circumstances, such as the limited number of Member States that had to come to an agreement at the time, inspired, moreover, by the obvious and stringent need for close cooperation, following the aftermath of the Second World War. The fact that the regulation had a limited sectoral scope also came as an advantage, thus streamlining each Member States' calculations on the potential strategic and security impact of the new rules.

The main issues under consideration of the still germinating Community legislator at the time of the Euratom Regulation were the defence interests of the Member States, as explained by the only argumentative paragraph of the very concise preamble. It is interesting to note, on this point, that the preamble, as well as the normative text of the regulation[39] make no reference to the interests of the Community, as opposed to subsequent legislation that has incorporated the notion of Community/Union interests.

The underlying goal of the regulation was to empower the Commission to manage security measures applied to sensitive information, acting as a supervisory body in matters pertaining to both the content of the information as well as its dissemination. That is why the scope of the Euratom Regulation includes the two main dimensions of security of information, i.e. security grading and protective measures, which cover both information acquired by the Community, in its capacity as a standalone collective body, and that which is communicated by the Member States.[40]

Article 24.1. of the Treaty establishing the European Atomic Community[41] mandates the Council to regulate issues pertaining to security of information, following a proposal from the Commission, including a system of security gradings and complementary security measures. It is noteworthy that the Commission is entrusted with a significant margin of discretion traditionally afforded exclusively to national governments – the ability to decide on the appropriate classification (grading) level for sensitive information.[42] This courageous transfer of an inherently national prerogative to the supranational level gives additional weight to the novelty and long ranging impact that the Euratom rules have had in the field of security of information within the EU.

A general assessment of the Euratom Regulation reveals that its normative structure is based on a tailored assimilation of the fundamental principles, processes and authority instruments that define protection of classified information (indicated *supra*). The main considerations underpinning the Regulation are evident from its brief preamble, which focuses on the pre-eminence of the defence interests of the Member States, the central role of the Commission and the reach of its

[42] Article 24.2. of the Euratom Treaty.

security measures, intended to cover both the subject matter of the information and its distribution regimen.

The provisions of Articles 1 through 5 of the Euratom Regulation, regarding its scope, have a threefold approach, providing criteria to discern according to subject matter and personal capacity, while also touching on the interaction with the dedicated regulations of the Member States. In terms of subject matter, the Euratom Regulation covers both the various security levels or gradings and their respective protective measures, which apply to information communicated by Member States within the framework of the Treaty and to that acquired *ad novum* by the Community. All information that is subject to protective measures is considered under the common denomination 'Euratom Classified Information'.

Article 5 provides guidelines regarding the interaction between the Euratom Regulation and other sector specific normative instruments enacted either at Community level or by the national authorities of the Member States. The main principle in this respect is that the rules within the Regulation are to be construed as minimum requirements in terms of the protection of classified information. As such, the Community and the Member States are provided with a limited prerogative to supplement the framework with new rules tailored for the needs of their jurisdictions. The limited aspect is indeed puzzling, as it is formulated somewhat counterintuitively, in that while it opens the possibility to adopt 'appropriate provisions of their own' it also excludes complementary provisions that would 'adversely affect the uniform treatment of Euratom classified information', without providing adequate criteria to discern between acceptable and unacceptable provisions. Thus, it seems difficult to envision any type of complementary rule, adopted at national level, that would not, to some extent, affect the prescribed uniform regime.

In terms of one of the fundamental building blocks of security of information – the clearance process – the Regulation establishes the primacy of the two essential (pre)conditions for access to classified information – prior authorisation and need-to-know.[43] While the need-to-know ('need to be informed') is only briefly explained by reference to the official duties of the person seeking access, the authorisation procedure is described in detail, touching upon granting authority, recognition and the distribution of competences between Community bodies and the Member States. The authority to grant clearances is shared by the Security Bureau and the relevant authorities of the Member States. Nevertheless, the Member States retain fundamental control in granting clearances, as the Security Bureau is afforded only a slim margin of appreciation in this respect.

Once granted, the authorisation is provided with universal recognition, i.e. it is opposable to all other bodies of the Community, as well as the Member States. This is as an important step forward in terms of the Member States investing confidence and abandoning their innate reluctancy towards sharing their prerogatives and instruments of control in matters pertaining to classified information. Although it would be far-fetched to consider this a milestone, it is nonetheless an indication as to the national authorities' willingness to stretch their own limitations in the interest of cooperation, when there is a strong political will and pragmatic incentives to do so.

3.2. The EU Council Model Rules

In a pragmatic acknowledgment of the need to exchange classified information, EU Member States resorted once again to the intergovernmental framework as a panacea for solving predicaments that held back effective cooperation. Therefore, an overarching covenant was negotiated and implemented under the title "Agreement between the Member States of the European Union, meeting within the Council, regarding the protection of classified information exchanged in the interests of the European Union".[44]

While at first glance this Agreement on classified information would appear as nothing more than a fit-for-purpose international cooperation document, its underlying value should not be underestimated. It establishes a basic legal framework of general rules applicable to the protection of European Union Classified Information (EUCI) during its exchange between the Member States, on one hand, and the EU institutional body (as a whole), on the other. This represents a cornerstone firstly because it enshrines the Member States' formal recognition of the EU institutional model for the protection of classified information, thus overcoming their initial reluctancy[45] by applying similar protection measures as those provided by national laws and regulations. Secondly, it marks the determination of the Member States (and, conversely, that of their national authorities) to apply a complementary and supranational model for the classification and protection of information. Thus, this Agreement represents a form of consensus between all Member States, under the guidance of the EU, on sensitive issues pertaining to classified information. Moreover, it can be perceived as a much-needed first iteration in terms of a formalised, systemic approach towards regulating classified information in the EU, to which more in-depth rules quickly followed suit.

It is worth noting that, at the time the Agreement came into force, the EU had already developed a mechanism for the protection of EUCI, starting with internal protection regimes developed by the Commission as early as 1986[46] and decisions of the

[43] Article 14.1. of the Euratom Regulation.

[46] Ibid.

Secretary-General of the council, starting with 1995,[47] followed by Council Decisions to date.[48] In this respect, doctrine has pointed out that the Council explicitly sought to promote and institute its self-devised rules as a uniform solution for the EU as a whole (institutions and Member States alike).[49] The said reluctance of the Member States to formally adhere to the EU mechanism for handling classified information, despite the latter's sensible record of accomplishment until 2011, is in itself indicative as to complex underpinnings of such a decision.

According to Article 1 of the Agreement on classified information, its scope is twofold, in the sense that it covers two main categories of classified information according to its originator, namely: originating in the EU institutional mechanism (institutions, agencies, bodies or offices) and originating in the Member States. From an operational point of view, the Agreement covers information related to the interests of the EU, i.e. information that is classified according to EU standards, communicated either between the Member States themselves or between EU institutions and the member states.

On the backdrop of the general framework provided by the Agreement on classified information, the analysis will further touch upon one of the main pillars of EU legislation in terms of the protection of classified information, represented by the latest iteration of the Council Decision on protecting classified information (i.e. Council Decision 2013/488/EU on the security rules for protecting EU classified information[50]).

Of all the regulatory documents pertaining to security of information in the EU, Council Decision 2013/488 is the most comprehensive and, as such, could be regarded as somewhat of a standard for all other rules enacted by various institutions – in this respect, recital (7) provides that EU bodies and agencies should apply the basic principles and minimum standards laid down in the Decision.[51] This notwithstanding, the analysis reveals that the system of rules it enforces has inherent vulnerabilities stemming from the safeguards afforded to national authorities, coupled with the high level of expectations they thus create for the Member States.

From the outset, it should be noted that the scope of the Decision, however complex, is intrinsically curtailed by the limited regulatory reach afforded by its legal basis – Article 240(3) TFEU, the provisions of which enables the Council to act only in procedural matters or for the adoption its own rules of procedure. This does not necessarily mean that the normative power of the Decision is limited to the activities of the Council or its various bodies, nor does it preclude the applicability of its provisions to actions of the Member State or its national institutions, whether within the Council itself or on national territory.

The Council Decision's status as a standard for other norms of EU institutions pertaining to the protection of classified information is confirmed by the breadth of its scope, as defined by Article 3.1., which also includes Member States, as mentioned *supra*. This is especially evident when seen in comparison to the similar normative act of the Commission (i.e. Commission Decision 2015/444) which is expressly limited *ratione personae* and *ratione loci* to Commission staff and premises, respectively.

The normative structure of Council Decision 2013/488 is built on the foundation of the well-established universal legal and operational principles of originator consent (for altering the classification level – Article 3.2.), need-to-know and security clearance (Article 7.1.).

According to Article 4.3., classified information originating from Member States and with a national classification level already ascribed is protected by means of the equivalency principle, which determines the necessary protection measures according to the requirements applicable to EUCI. This provision applies not only to classified information introduced by the Member States in the EU Council or its General Secretariat, but also to that which is introduced 'into the structures or networks of the Union'. This last phrase seems to indicate that the equivalency principle is deemed to have a transversal application throughout the institutional architecture of the EU, even though the scope of the Decision is, as mentioned above, limited to the activities of the EU Council and its General Secretariat. This potential normative conflict should be clarified by cross-referencing the relevant provisions of the various regulatory instruments enacted by EU institutions in this field. The prerogatives afforded to the originator of the information, in application of the aforementioned principle, are wide-reaching and have a significant impact throughout the life-cycle of EUCI.

The corner stone of any system for security of information – personnel security – is regulated in detail throughout the Council Decision, with implementing rules provided in Annex I. The three fundamental caveats that must be respected for an individual to be

[47] Decision 24/95 of the Secretary-General of the Council of 30 January 1995 on measures for the protection of classified information applicable to the General Secretariat of the Council (not published); Decision of the Secretary-General of the Council/High Representative for the Common Foreign and Security Policy of 27 July 2000 on measures for the protection of classified information applicable to the General Secretariat of the Council (Official Journal of the European Communities, C 239, 23 August 2000).

[50] Council Decision of 23 September 2013 on the security rules for protecting EU classified information, Official Journal of the European Union, L 274, 15.10.2013 (hereinafter "Council Decision 2013/488").

[51] *See* Curtin, D. (2013), op.cit., p. 13.

granted access to EUCI are: to have the need-to-know established by the competent authority; to have the appropriate security clearance; to have been duly briefed on the responsibilities incumbent upon the person in connection with handling classified information.

Although Article 7.3. of Council Decision 2013/488 grants the General Secretariat of the Council (hereinafter "GSC") the power to authorise its personnel to access EUCI, it is nonetheless dependant on the result of the vetting procedure carried out by the National Security Authorities (hereinafter "NSA") – or other competent authorities – of the Member States, according to Article 4, corroborated with Articles 7, 16 and 18 of Annex I to the Council Decision. Thus, NSAs are primarily tasked with providing *de facto* security checks, according to the applicable national laws and regulations. This is both a burden of responsibility, as well as an essential leverage tool afforded to the Member States in the decision process as to whom is granted access to EUCI.

The leverage is indeed substantial. The "investigative and administrative procedures" – as coined by Article 1 of Annex I to the Council Decision – are built around the results of the security investigations conducted by the NSAs, which are decisive for approving or rejecting authorisation requests. The standards used by NSAs are essentially those established by national laws and regulations, although indicative criteria are provided in Article 7 of Annex I. The investigation results either in the issuance of a Personnel Security Clearance (PSC) – by the national authorities of the Member State for their own nationals –, either in the provision of "assurance" to the GSC that the individual concerned can be subsequently granted authorisation to access classified information. Thus, according to Article 18(a) of Annex 1, the GSC Appointing Authority is vested with the option (not obligation) to grant authorisation when the security check is positive, while it is expressly prohibited from granting authorisation when the result of the check is negative. Conversely, if the NSA withdraws the assurance given with regard to a person, the GSC has the obligation to withdraw said person's authorisation for access to EUCI.

The prerogatives of the Member States in connection with the decision making process and the involvement of their NSAs in this respect are further consolidated through the establishment of a Security Committee. This collegiate body, defined in Article 17 of the Council Decision, is tasked with examining and assessing "any security matter within the scope of [the] Decision" and making recommendations to the Council. It is composed of representatives of the NSAs and its meetings are also attended by a representative of the Commission and the EEAS. From a hierarchical point of view, the Committee takes instructions primarily from the Council but it can also be convened at the request of the Secretary-General of the Council or of an NSA. Although the wording of Article 17 provides that the Security Committee's central role is to "make recommendations on specific areas of security" – thus suggesting a consultative position – its standing in the overall mechanism established by the Decision is of a significant relevance, as it contributes with insights and recommendations in key moments of the decision-making process.

In terms of integration, Article 21 of Annex I to the Council Decision institutes a regimen of interinstitutional validity for authorisations for access to EUCI. Thus, the GSC is directed to accept authorisations granted by any other institution, body or agency of the EU – provided it is valid – with regard to any person working within the secretariat, irrespective of his or her assignment. This automatic recognition of authorisations is relevant, on the one hand, because it streamlines cooperation between institutions and fosters personnel mobility, contributing to enhanced operational capacity and, on the other hand, because it promotes a model of mutual institutional trust between bodies that have different – albeit complementary – roles in the Union.

Another interesting provision that could be construed as a discreet yet solid contribution to the supranational dimension of the system of prerogatives pertaining to security of information is the exceptional power of the Secretary General of the Council to grant access to EUCI to persons that have not been submitted to the prescribed security vetting procedure. According to Article 36 of Annex I, this possibility is limited to "very exceptional circumstances", which are not defined *per se* or linked to specific criteria, but only described through a non-exhaustive list of examples: 'missions in hostile environments', 'periods of mounting international tension', 'the purpose of saving lives'. Furthermore, access cannot be granted above the 'EU SECRET' grading. Like the case of automatic validation of an existing authorisation, this is another situation in which the control and supervision attributes of the Member States are superseded by the supranational prerogatives of the EU. It should be noted that such an occurrence is of an exceptional nature and it cannot be construed as an unwarranted intrusion into the exclusive competences of the Member States in issues of national security. However, it could be argued that the rather vague description of what would constitute a 'very exceptional circumstance' leaves room for potential dissenting perspectives between national authorities and the GSC.

The provisions of Council Decision 2013/488 dedicated to industrial security cover both the pre-contractual negotiations, as well as the entire lifecycle of classified contracts entered into by the GSC. From a personal point of view, the scope of said provisions includes contractors and subcontractors, so on a preliminary account it would seem that the regulations are generous in covering a wide range of possibilities.

Similar to standards developed in the field by the European Defence Agency[52], the Council Decision establishes a series of legal and contractual instruments aiming to ensure awareness and control of security related issues within a classified contract: the Security Classification Guide (SCG), the Security Aspects Letter (SAL) and the Programme/Project Security Instructions (PSI). The three are complementary and interconnected in providing standards for the contract awarding and execution phases.

Albeit consistent efforts throughout the Council Decision to ensure proper consideration and protection of the interests of Member States pertaining to national classified information and/or EUCI, the provisions on the transfer of the latter to contractors located in third states breaks this consistency. Thus, Article 30 of Annex V provides that EUCI shall be transferred to contractors and subcontractors located in third states based on "security measures agreed between the GSC, as the contracting authority, and the NSA/DSA of the concerned third State". This solution, based on the individual action and assessment of the GSC, significantly departs from previous ones, which ensured some form of control or participation of the Member States, either through guidelines adopted by the EU Council or through the involvement of the Council Security Committee in key inflexion points of various procedures entailing classified information. The aforementioned solution could prove problematic for the security interests of the member states related to EUCI, considering that, According to Article 2.1. of the Council Decision, this type of classified information is by definition liable to cause prejudice to the interests of the Member States. Since there are no criteria provided to discern between the EUCI that can be shared, one could ask how the principle of originator consent is observed. This issue is particularly relevant in cases where contractors from third states are involved, with different approaches to security of information.

In terms of governance, the Council Decision seeks to achieve a much-needed balance between the prerogatives of the Member States and the margin for action afforded to the GSC for it to carry out its functions. In effect, the interweaving of exclusive and shared competences, as well as areas of direct cooperation, come together to create an original framework complete with the types of normative complexities one would expect in a *sui generis* construct such as the EU. Aside from providing the tools necessary to ensure that the goal of the Council Decision is reached, this mechanism also serves as a driving force for synchronicity at EU level in the field of security of information. The procedural and normative instruments devised to this end operate on two complementary yet distinct layers: technical/administrative and political, with varying degrees of effectiveness.

The Council Decision has a unitary approach to the operational and administrative tasks pertaining to the management of EUCI in terms of functions, as well as in terms of institutions, which are designed to be mirrored in the national systems of each Member State, as well as by the GSC. Thus, the competent authorities within the GSC and the Member States are tasked with establishing corresponding authorities for information assurance (for electronic means of communication, including operation tasks), cryptographic approval and distribution and security accreditation (Articles 10.8 and 10.9).

A key denominator in terms of distributing governance prerogatives is the algorithm applied with respect to the principle of originator consent. While it is abstract in nature and is not intended to give priority to the interests of either actors involved in the protection of EUCI, it is nonetheless a significant source of influence – whether direct or indirect – for the Member States because it affords them the possibility to control what happens to EUCI considered to have originated from them (e.g. Article 3 of Annex III to the Council Decision).

4. The Search for Middle Ground: CJEU Case-Law on Security of Information

The involvement of the Court of Justice of the European Union (CJEU) in matters pertaining to sensitive information has seen an early onset, with the EURATOM Treaty expressly mandating the Court to set the terms applicable to licenses or sub-licences granted by the Commission, in situations where the latter was unable to come to an agreement with the licensee.[53] Building on the relevant jurisprudence developed since, this section provides a concise analysis of CJEU case law (covering both the Court *per se* and the General Court) that has ruled on issues pertaining to the protection of and access to classified information, both at EU and member state level.

The case-law is analysed in chronological order, with emphasis on the evolution of relevant principles, where applicable, and takes into consideration both situations pertaining to access to information, in general, and those pertaining to defence and security related information, in particular. This dual approach is based on the consideration that mechanisms granting public access to information managed by EU institutions represent a primary hazard for the confidentiality of said information and arguments in favour or against increased confidentiality and the way they have been received or developed by the Court provide relevant insight as to how security of information works from an institutional perspective.

In a 1999 case relating to parliamentary access to EU documents, [54] the Court examined some of the key

[52] For details on standards for the security of information developed by the European Defence Agency, *see* SA Purza, *op.cit.*pp. 261-265.
[53] Article 12 of the Euratom Treaty.
[54] Judgment of 6 December 2001, *Council v. Hautala*, C-353/99 P, ECLI:EU:C:2001:661 (hereinafter "C-353/99 P".

concepts related to access to information, including the meaning of the notion "public interest with regard to international relations". The examination was made in the context of the request made by a Member of the European Parliament to access a report drafted by the Working Group on Conventional Arms Export of the Council – the CJEU confirmed the initial ruling of the Court of First Instance,[55] which granted access to the document in question. Thus, the Court of First Instance implicitly included in the general concept of "public interest with regard to international relations" information related to the "exchanges of views between the Member States" on issues relative to third countries, which, on account that they contain "formulations and expressions which might cause tension with certain non-member countries" can be exempted from public access.[56] The Court of First Instance and, subsequently, the CJEU, therefore confirmed the Council's assessment on the extent to which protection should be granted to information exchanged with the Member States on issues falling within the general scope of international relations.[57] Another relevant guiding interpretation that resulted from this case is the distinction made between access to documents and access to information. Thus, the principle of access is not limited to documents *per se*, as individual, identifiable material objects, but is naturally extended to include the more abstract notion of "information", which is contained by documents.[58]

In its judgment in the widely cited case of Sison v. Council,[59] the CJEU made important advances in clearing out the dense web of concepts and thus further streamlined the approach to be taken regarding the margin of appreciation afforded to the institutions in the protection of confidential documents and information. In this case, the Court was called to review an appeal brought against the judgment delivered by the Court of First Instance of the European Communities on 26 April 2005 in joined cases T-110/03, T-150/03 and T-405/03,[60] which found in favour of the Council's decision to refuse access to documents and information requested by the applicant in connection with the adoption of a series of Decisions of the Council on specific restrictive measures directed against certain persons and entities with a view to combating terrorism. The applicant had requested *inter alia* disclosure of the identity of the States which had provided certain documents in that connection.[61]

In the initial ruling, the Court of First Instance upheld the need for classified information to be adequately protected against inappropriate dissemination when it is received from national authorities of Member States or those of third States, by reference to the need to protect the position of the EU in 'international cooperation concerning the fight against terrorism'.[62] The Court also explicitly gave weight to the third States' desire for their identity not to be disclosed and to the inherent secret or confidential nature of a particular type of information - concerning persons suspected of terrorism.[63] Furthermore, both the Court of First Instance[64] and the CJEU[65] explicitly confirmed the Council's approach on the statement of reasons for non-disclosure, thus validating the latter's option to provide only a brief statement of reasons, without additional information that might have been liable to breach the confidentiality they were aiming for. From a right of access perspective, the Court's approach in this judgment has been considered as conservative, owing to the arguably limited margin of examination the CJEU had afforded itself.[66]

Furthermore, the CJEU confirmed the full applicability and effectiveness of the originator consent principle, as a tool to ensure that sensitive information is not made publicly available when the member or third state which sent it to the EU institutions opposes disclosure. Moreover, it confirmed the applicability of this principle to both the disclosure of a document's content and to information regarding its very existence or its origin.[67] Thus, in interpreting the security exception of Regulation 1049/2001, the CJEU established a wide margin of appreciation for the EU institutions as well as the Member States, when exercising the principle of originator control. The classified nature of the document and the information it contains can also be extended to the identity of the originating Member State (or third state) and even to the very existence of such document. The proportional character of such measures to protect the security of information has also been confirmed against the backdrop of additional difficulty incumbent on the

applicant if a high degree of discretion were to be applied.[68]

In 2005, the European Commission brought an action against Germany for its failure to fulfil obligations because of its exemption from duty of imports of military materials, spanning a 4-year period.[69] In its defence, Germany argued that Article 346 TFEU (Article 296 EC at the time of the proceedings) allowed derogation from the application of the Common Customs Code, "where the imports are of equipment exclusively intended for military purposes, and where the objective is the protection of the essential interests of its security".[70] Furthermore, Germany made a without prejudice payment, failing to detail which imports and what periods it covered, arguing that the relevant information was confidential and that the system for processing information in customs declarations is liable to cause "serious damage to the essential security interests of Member States".[71]

In this case, the Court recognised the existence and overall effectiveness of the "obligation of confidentiality" imposed on both Member States' nationals and EU institutions' staff, as an instrument "capable of protecting the essential security interests of the Member States." Thus, it could be argued that, in this instance, the CJEU considered that the various approaches towards the protection of the security of information employed by the Member States and the institutions are capable of ensuring the requisite level of protection, notwithstanding the (most probable) elements of distinction, both form a procedural and principled point of view.[72] Nonetheless, the Court made its own assessment of the potential that third-party access to information of a certain type might damage the interests of Member States in respect of either security or confidentiality. This examination and subsequent conclusion of the Court arguably go against the very essence of what Article 346 TFEU intended - which is to afford the Member States a sufficiently wide enough margin of appreciation in such issues, to properly safeguard their national security interests as they see fit. The risk of this type of overriding action by the Court should be managed in any future regulation on an EU-wide regime for security of information.[73]

It is also interesting to note, in the fashion of the analysis made by Martin Trybus on this case,[74] the argument put forth by some Member States – among which, chiefly, Germany – that they were under no obligation to supply the information that the Commission needed to examine and prove an infringement of the provisions of the Treaties. Thus, based on the provisions of Article 346 TFEU, Germany claimed the Commission's action was inadmissible due to the former's prerogative to abstain from disclosing information, which would substantiate the case of the latter – a genuine situation of *probatio diabolica*. Of course, the Court was not persuaded by this line of argumentation.

In a preliminary ruling concerning the interpretation of the provisions of EU law on freedom of movement, the Court made an assessment of the need to safeguard the classified nature of information pertaining to public and national security, in the context of the fundamental rights granted by the Charter in terms of effective judicial protection.[75] It argued that Member States need to do more in the way of ensuring an appropriate balance between non-disclosure and access to effective judicial review. Thus, while not challenging the prerogative of national authorities to withhold information pertaining to state security, it nonetheless set higher standards for what an appropriate conduct would be in relation to a person whose rights might be affected by administrative decisions based on classified information. By all accounts, this cannot be interpreted as undermining the possibility of national authorities to ensure effective protection of sensitive information by means of ascribing to it a classified (secret) nature, since, as already underlined, this point was not an issue in this case. Rather, it remains to be ascertained whether the additional requirement described by the Court in order to satisfy the right for effective judicial protection – i.e. the mandatory scrutiny by the judiciary of the proportionality of the authorities' non-disclosure decision – is liable to produce, in the medium to long terms, situations in which the security of sensitive information might be affected to a lesser or more serious degree.

Going further, the Court also confirmed a widely accepted reasoning of the national authorities contending that the evidence supporting a decision on grounds of national security could in itself be liable to 'compromise State security in a direct and specific manner'.[76] Thus, the obligation of national authorities to disclose, to the interested person, the grounds and evidence on which a decision is based (refusing a citizen of the European Union admission to a Member State on public security grounds) is limited to 'that which is strictly necessary', with due account to the necessary confidentiality of the evidence in question.[77]

[77] C-300/11, para. 69.

The reluctance of Member States to confide trust in each other's national security authorities, in terms of handling classified information, has seen confirmation in a judgment against Austria in a case concerning its failure to fulfill its obligations related to public service contracts, which entailed the protection of essential security interests.[78] The CJEU once again proved that it is playing its part in ensuring that the need for security against transnational crime and terrorism, albeit tangible and urgent, does not become an umbrella for abuse of rights by the authorities of Member States, that would irrevocably turn the balance away from the founding principles of the common market and even the individual rights and freedoms, as guaranteed by the EU legal order.

In the cited case, the CJEU has approached the issue of classified information by using its well-established narrow or strict interpretation, based on the all-encompassing principle of proportionality. Thus, it argued that the non-disclosure provision of Article 346(1)(a) TFEU does not apply indiscriminately to any type of information that a Member State might consider to be sensitive.[79] The Court even went so far as to assess the degree in which a facility under some form of control by a Member State is in fact better suited to ensure the confidentiality of sensitive information in a works contract than other companies operating in said Member State or others. In this respect, it argued that the necessary degree of confidentiality of information could be guaranteed by means of special arrangements imposed through private-law contractual mechanisms. It should be noted that the case under consideration did not entail high-level classified information. [80]

In a recent case[81] the General Court the General Court has recognised some limitations to its powers to examine and decide on the institutions' refusal to grant access to information. Thus, the General Court is mandated to assess only if the procedural rules and the duty to state reasons have been complied with and whether the facts have been accurately described. It follows, then, that in substantive terms only finding "a manifest error of assessment or a misuse of powers by the institution" would be grounds for censoring the institution's decision to refuse access.[82] Case T-31/18 is exemplary in this respect, as the Court has established the pre-eminence of the need to protect operational information held by the institutions, *in casu* the European Border and Coast Guard Agency (FRONTEX).[83]

5. Conclusions

The research at the heart of this paper was based on the overarching idea that the provisions of the Defence Procurement Directive proved inapt to furnish a functional framework for managing the various security of information concerns and, thus, an alternative solution should be sought with a view to obtain a highly coordinated (if not unitary) regime for classified information among EU Member States.

Along these lines, the research has firstly sought to establish whether there are sufficient reasons to conclude that the EU has, thus far, managed to establish a proprietary and functional framework for dealing with classified information, covering both its institutional actors, as well as its dynamics with the member states and among themselves. On this point, the examination of the provisions of the EURATOM Regulation and those of Council Decision 2013/488 has shown that the inherent limitations of the EU's approach to a sectoral/procedural dimension in defining rules and regulation for security of information has not impeded it from tackling more substantive aspects, such as granting clearances or their automatic recognition at EU institutional level.

This conclusion is based, on one hand, on the fact that the rules prescribed by the EURATOM Regulation for the protection of classified information have stood the test of time and have proven – even if for this reason alone – their ability to respond to the specific needs of the Member States and the Community as a whole. As shown, these rules touch on the fundamental issues underpinning security of information and have therefore proven that multinational consensus can be reached and effectively implemented. Secondly, the basic elements of the solutions enacted by the EURATOM Regulation have been subsequently confirmed in the relevant Council Regulations which, and the instruments provided therein have been tested and validated by the CJEU in various circumstances.

Thus, the analysis of the rules and procedures set up by the EU for the protection of classified information has outlined that the Union has taken this imperative security need very seriously since its very inception. Moreover, it has proven consistency and determination in monitoring, evaluating and improving the mechanisms in place, in close coordination with the relevant authorities of the Member States. Current regulations and procedures duly observe the fundamental legal and operational principles, instruments and requirements pertaining to the protection of classified information (on clearance, physical protection, administrative measures, management etc.) largely implemented by Member

[78] Judgment of 20 March 2018, *Commission v. Austria (State printing office)*, C-187/16, ECLI:EU:C:2018:194, para. 68 (hereinafter "C-187/16").
[79] C-187/16, para. 72.
[80] C-187/16, para. 84-85.
[81] Judgment of 27 November 2019, *Izuzquiza and Semsrott v. Frontex*, T-31/18, ECLI:EU:T:2019:815, para. 25 (hereinafter "T-31/18").

States – while reserving a margin of criticism, voiced *supra* in individual cases, where relevant. The question remains if this conclusion bears enough weight in the rationale of the Member States to encourage them to move forward towards an EU-wide legal and procedural mechanism for the management of classified information that would provide the tools needed for unimpeded access by potential tenderers to defence and security contracts in any member state at any time.

Furthermore, the aptitude of the EU institutional framework to provide the requisite level of security of information has been acknowledged by doctrine, albeit by specific reference to the experience of the Commission in handling professional secrecy in the context of competition cases.[84] In the same line of reasoning, another paper concluded that the internal rules-based system implemented by the EU has proved effective in providing a level of protection for classified information similar to that given in member states.[85]

This positive perspective has been – to some extent – confirmed by the case-law of the CJEU, as shown in the relevant section. Thus, some points of concern notwithstanding, the Court has shown that the basic concepts and principles related to security of information have been astutely adopted and implemented by the EU institutional framework and have stood the test of judicial scrutiny, including in the context of access to information, which is particularly demanding.

In the more challenging realm of identifying potential avenues for future regulatory solutions for the integrated management of classified information, which would ultimately serve *inter alia* the specific purpose of defence procurement integration, the main issue of contention is the legal basis for any such initiative. An analysis made by Deirdre Curtin has concluded, in general terms, 'that there is no separate treaty based legal basis for adopting Union wide rules on the classification of documents'.[86] From a strict, *ad litteram*, normative perspective, this conclusion holds true, as the TEU and the TFEU do not contain an explicit mandate for the Union to regulate in this field. Nevertheless, the same analysis explores various indirect legal foundations that might be used to substantiate a regulatory initiative in this respect. It should be noted, at this point, that in Opinion 2/00 (EU:C:2001:664, paragraphs 5 and 6), the CJEU emphasised that to proceed on an incorrect legal basis is liable to invalidate the act concluding the agreement, and that that is liable to create complications both at EU level and in international law.

In the same spirit of intellectual debate and normative exploration, the research presented in this paper has hinted to some potential solutions for an EU-wide legal framework for the protection of classified information, whether in broader or more specific terms. These possibilities are presented herein, with the understanding that they require further and more in-depth research, which can form the topic of a future paper on the matter.

Before proceeding to the potential avenues of regulatory action, it is important to note that this research has revealed specific requirements pertaining to the protection of classified information, some of which have been adopted in security policies across the spectrum, ranging from civil to military organisations. Among these, the following concepts have stood out as legal and operational instruments used by national authorities to guarantee an effective level of control and protection and should thus be mandatorily included in any normative initiative in the field: security screening and authorisation; originator consent/control; physical security (premises and cyber); as a corollary to control mechanisms, the ability to invoke legal responsibility, from civil/administrative liability to prosecution under criminal law.

One way to act is still tributary to classical intergovernmental means of cooperation, considering that CFSP, CSDP – fields in which security of information is particularly relevant, especially in terms of defence and security procurement – are still outside the community acquis and out of the scope of EU regulatory instruments. In this respect, a potential solution could have a one-fold or two-fold approach. Thus, the one-fold solution envisages the Council adopting a Decision that tasks the Commission with establishing an open-ended (starting from a minimal base ensuring fundamental functionalities) EU-wide system for coordinating security of information mechanisms through an individual body set up within the European Defence Agency, having a separate governing body, comprised of designated representatives of each MS, mandated to decide on the pathway for the evolution of the mechanism for security of information tailored for defence and security procurement. The two-fold solution[87] would presume the creation of an adequate legal basis in an intergovernmental conference, within the co-decision framework and then use the mandate thus conferred to enact a normative instrument pertaining to the regime of classified information.[88] Additional research is required as to the advantages/disadvantages of each option and, more importantly, their applicability and effectiveness.

It is important to note that the solution of creating a legal framework through an international agreement should be subjected to the CJEU's autonomy test. Thus,

[84] M Trybus (2014), *op.cit.*, p. 130.
[85] Galloway (2014), *op.cit.*, p. 682.
[86] D. (2013), op.cit., pp. 433-436.
[87] *See* Curtin (2014), *op.cit.*, p. 693.
[88] The idea of a Directive that would regulate an EU-wide regime for security clearances has been mentioned by doctrine, *see* M Trybus (2014), *op.cit.*, p. 393.

if the proposed solution would be completely outside the EU legal order (a consideration that should also face scrutiny), then it should be determined whether it is liable to affect the EU's jurisdictional legal order, as defined by the concept of autonomy aiming at preserving the unity of the EU legal order and the uniform application of its rules.[89] In this respect, an original solution could be to circumvent the lack of legal basis in the Treaties by using an intergovernmental legal vehicle to which the EU can adhere.[90]

In any case, any regulatory solution should avoid ambiguous formulations, whatever the difficulties in managing various interests and sensitivities. Otherwise, the normative thread could be pulled in a direction that would potentially go against the interests of the stakeholders, amongst which national authorities of the Member States feature prominently. Thus, the wording of the regulation should be clear and concise, to avert the possibility that its scope and application be subjected to the interpretation of the CJEU.[91]

Whatever the avenue, it is without question that the art of compromise has been effectively used in solving complex issues pertaining to security of information, as proven by the relevant provisions of the Defence Procurement Directive, the system of Interinstitutional Agreements and the case-law of the CJEU on denial of access to sensitive information. In this respect, it is useful to note that a possible way towards compromise would be to limit the scope of the prescribed normative instrument to a clearly defined segment or sector. Along these lines, the fact the EURATOM Regulation had a limited sectoral scope – as shown in section 3.1. of this paper – also came as an advantage, thus streamlining each Member States' calculations on the potential strategic and security impact of the new rules.

EUROPEAN LEGAL INSTRUMENTS FOR GREEN AND DIGITAL TRANSITIONS

Oana-Mihaela SALOMIA*

Abstract

The dynamics of the European Union's evolution in recent decades have been influenced by the evolution of society as a whole, the fourth industrial revolution and technological development in parallel with environmental protection being landmarks to which European policies relate.

In this context, the new European Commission sets as priorities A European Green Deal and A Europe fit for the digital age by proposing concrete measures to be taken at Union level or by the Member States.

Such proposed acts and measures must have their legal basis in the Treaties of the Union which define both the objectives of the Union and the types of powers which it has to achieve them.

However, the question that may arise is: is there such a legal basis? What acts can be adopted by the Union institutions for green and digital transitions? Is there a need to extend Union competence?

The analysis of the legal instruments available to the Union at the moment seeks to provide an answer to these questions and to provide a perspective for the development of the specific legal framework; the sources of European Union law and the types of competences that the EU has in the main areas concerned are taken into account.

Keywords: *legal instruments, EU powers, green transition, digital transitions, priority of the EU law.*

1. General remarks

As international intergovernmental integration organization, the European Union acts within the limits of the powers conferred by the Member States in order to achieve the common objectives set out in the Treaties, objectives which diversify and multiply as society itself evolves globally.

The analysis of the powers of the European Union, hereinafter referred to as the EU, is a complex one, although it is stated that the Treaty of Lisbon clarified[1] this aspect by establishing in art. 2-6 of the Treaty on the Functioning of the European Union (TFEU) the types of competences and areas in which three main types of competence apply: exclusive EU competence/power, shared EU-Member State competence/power and Union competence to support, coordinate and complement the action of the Member States.

The principle of conferral provided by art. 5 para. (1) to (2) of the Treaty on European Union (TEU) governs the way in which the Union acts within the powers conferred by the Treaties, stating that" competences not conferred upon the Union in the Treaties remain with the Member States".

Thus, the extension or limitation of EU competences can be achieved by revising the EU Treaties according to art. 48 of the Treaty on European Union.

However, the TFEU contains, in art. 352, a flexibility clause or reservoir of competence that allows the EU to act within the policies of the Treaties if it does not have an express competence, to meet the objectives of the EU. „Thus, the invocation of these provisions may occur when the powers conferred by the treaties in the form of specific attributions (functional competence) may be insufficient to achieve the objectives expressly assigned by the treaties (material competence); but, according to the jurisprudence of the Court, in no case art. 352 TFEU cannot serve as a basis for extending the EU's areas of competence and cannot be used as a "subterfuge" to choose a legal basis leading to a simpler legislative procedure or not involving the European Parliament[2]".

2. Legal instruments for green and digital transitions

2.1. The EU powers

In this framework that defines the competences at Union level, in the current situation marked by the

* Lecturer, PhD, Faculty of Law, University of Bucharest (e-mail: oana.salomia@drept.unibuc.ro).

[1] Andrew Duff, *Saving the European Union. The Logic of the Lisbon Treaty* (London: Shoehorn Current Affairs & History Books, first published in 2009), 59: " In summary, Lisbon makes good progress in simplifying and in making more transparent the exercise of powers at the Union level".

[2] Mihaela-Augustina Dumitraşcu, *Dreptul Uniunii şi specificitatea acestuia* (Bucureşti: 2015, Universul Juridic, ed. a 2-a, revăzută şi adăugită), 61.

pandemic health crisis[3] and technological evolution[4], the EU aims to develop in the parameters of green and digital, starting the transition in this regard; the question is not whether the EU will succeed but whether it has the legal instruments in terms of powers to achieve this goal, which has, among its beneficiaries, the citizens of the Member States[5].

These goals are mentioned among the new European Commission's priorities for 2019-2024 (Political Guidelines) as following:

"A European Green Deal": Transforming the EU into a modern, resource-efficient and competitive economy, while preserving Europe's natural environment, tackling climate change and making Europe carbon-neutral and resource efficient by 2050";

"A Europe fit for the digital age": "Embracing the digital transformation by investing in businesses, research and innovation, reforming data protection, empowering people with the skills necessary for a new generation of technologies and designing rules to match"[6].

It can therefore be seen that these are priorities that are not explicitly set out in the EU Treaties in force, but involve policies defined by them or actions that have started at EU level. If environment, in which the principle of subsidiarity was first used by the Single European Act (1986, 1987), is included within the shared competences according to the art. 4 para. 2 letter (e) of the TFEU, digitalization issues are not specifically regulated in the EU Treaties[7], but secondary EU law and complementary EU law has recently developed this cross-cutting concept in EU policies and areas of action.

The working legal instruments used par excellence by the EU institutions to achieve the Union's objectives within the limits of the competences set out in the Treaties are "legal acts" (concept used for the first time in the Lisbon Treaty - Part six Institutional and financial provisions, Title I Institutional provisions, Chapter 2 Legal acts of the union, adoption procedures and other provisions, Section 1 the legal acts of the Union of the TFEU) in the category of which have been included:

legislative acts[8] (art. 289 TFEU),

non-binding acts (art. 288 final paragraph TFEU), and

non-legislative acts[9] (art. 290-291 TFEU).

At the same time, the EU institutions use to a significant extent the complementary/ or soft law[10] that does not produce legal effects, but has the ability to do so; in this case, we can mention communications, resolutions, conclusions, white papers or green papers, acts that do not have a legal enshrinement in the EU Treaties. Among those acts only „recommendations and opinions" are mentioned by the final paragraph of the art. 288 TFEU which states that they„shall have no binding force"[11].

[10] „On the European Union's website, these acts are included in the category of the EU secondary law: „Secondary law comprises unilateral acts, which can be divided into two categories:

those listed in Article 288 TFEU: regulations, directives, decisions, opinions and recommendations;

those not listed in Article 288 TFEU, i.e. atypical acts such as communications and resolutions, and white and green papers".

https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=LEGISSUM%3Al14534

[11] CJEU, Salvatore Grimaldi v Fonds des maladies professionnelles, 13 December 1989, case C-322/88, point 13-14: „13 Recommendations, which according to the fifth paragraph of Article 189 of the Treaty are not binding, are generally adopted by the institutions of the Community when they do not have the power under the Treaty to adopt binding measures or when they consider that it is not appropriate to adopt more mandatory rules. 14 Since it follows from the settled case-law of the Court (see, in particular, judgment of 29 January 1985 in Case 147/83 Binderer v Commission ((1985)) ECR 257) that the choice of form cannot alter the nature of a measure, it must nevertheless be ascertained whether the content of a measure is wholly consistent with the form attributed to it" .

For implementing the green and digital transitions, not only legal acts are adopted, but also soft law acts which are, in principle, mandatory for the Member States by virtue of the principle of loyal cooperation enshrined in art. 4 para. (3) of the TEU[12] lacking a specific legal basis in the EU Treaties.

2.2. Green transition

European Green Deal has been adopted by the *Communication from the Commission*, COM (2019) 640 final, Brussels, 11.12.2019 which sets up the following measures:

"*2. Transforming the EU's economy for a sustainable future*

2.1. Designing a set of deeply transformative policies

2.1.1. Increasing the EU's climate ambition for 2030 and 2050

2.1.2. Supplying clean, affordable and secure energy

2.1.3. Mobilising industry for a clean and circular economy

2.1.4. Building and renovating in an energy and resource efficient way

2.1.5. Accelerating the shift to sustainable and smart mobility

2.1.6. From 'Farm to Fork': designing a fair, healthy and environmentally-friendly food system

2.1.7. Preserving and restoring ecosystems and biodiversity

2.1.8.A zero pollution ambition for a toxic-free environment

2.2 Mainstreaming sustainability in all EU policies

2.2.1. Pursuing green finance and investment and ensuring a just transition

2.2.2. Greening national budgets and sending the right price signals

2.2.3. Mobilising research and fostering innovation

2.2.4. Activating education and training

2.2.5. A green oath: 'do no harm'

3. The EU as a global leader".

This Communication does not mention any legal basis for adopting and implementing these measures by the EU institutions and Member States.

It is clear that these objectives and measures cannot be achieved without the Member States taking concrete action in this regard; the phrase used in the action Plan is the following "the Commission will work with the Member States" which involves cooperation between the Union and the Member States, but the action Plan contains also references to the obligation imposed to the national authorities to comply with the Union objectives as set out in the phrase: "The Commission and the Member States must also ensure that policies and legislation are enforced and deliver effectively. The environmental implementation review will play a critical role in mapping the situation in each Member State"; so, it is an obligation for the Member States laid down into a non-binding act. The breach of the EU law leads to an infringement procedure initiated by the European Commission; it will be the case in regard with the non-respect of the action Plan for European Green Deal? In our opinion, the answer is positive." Environmental policy then is a good illustration of the development of the influence of the EU as a body, the addition of environmental powers representing an important marker in the shift of focus from the more limited economic sphere of activity that typified the original Community Treaties to the broader aspirations and ambitions of the organization today"[13].

The Green Deal must be implemented in all related policies in order to achieve the EU goals and thus it will become compulsory for the Member States in the case where that policy is covered by the exclusive or shared competence of the EU. For example, the common agricultural policy where EU has a shared competence will be influenced by the action Plan for European Green Deal and the Member States will be obliged to make reforms for complying with the specific EU law. "Farmers, agri-food businesses, foresters, and rural communities have an essential role to play in several of the Green Deal's key policy areas, including:

- building a sustainable food system through the Farm to Fork strategy;
- adding to the new biodiversity strategy by protecting and enhancing the variety of plants and animals in the rural ecosystem;
- contributing to the climate action of the Green Deal to achieve the goal of net-zero emissions in the EU by 2050;
- supporting the updated forestry strategy, to be announced in 2021, by maintaining healthy forests;
- contributing to a zero-pollution action plan, to be set out in 2021, by safeguarding natural resources such as water, air and soil"[14].

At institutional level, the new European Commission has appointed an executive vice-president "leading the Commission's work on the European Green Deal and its first European Climate Law to enshrine the 2050 climate-neutrality target into EU law"[15].

2.3. Digital transition

The digital transition is also proposed to the Member States and all society through a communication, non-binding act – Communication from the Commission to the European Parliament, the Council, the European Economic and Social Committee and the Committee of the Regions. Shaping Europe's digital future, COM (2020) 67 final, Brussels, 19.2.2020 without reference to any legal basis in the EU Treaties:

”*For the next five years, the Commission will focus on three key objectives to ensure that digital solutions help Europe to pursue its own way towards a digital transformation that works for the benefit of people through respecting our values:*

.• *Technology that works for people: Development, deployment and uptake of technology that makes a real difference to people's daily lives. A strong and competitive economy that masters and shapes technology in a way that respects European values.*

• *A fair and competitive economy: A frictionless single market, where companies of all sizes and in any sector can compete on equal terms, and can develop, market and use digital technologies, products and services at a scale that boosts their productivity and global competitiveness, and consumers can be confident that their rights are respected.*

• *An open, democratic and sustainable society: (...) A European way to digital transformation which enhances our democratic values, respects our fundamental rights, and contributes to a sustainable, climate-neutral and resource-efficient economy*”.

In line with the European Green Deal and the strategy Shaping Europe's digital future, it has been developed *A New Industrial Strategy for Europe* adopted through a communication - Communication from the Commission, COM (2020) 102 final, Brussels, 10.3.2020 which proposes for European industry[16]:

“2.1 A globally competitive and world-leading industry
2.2 An industry that paves the way to climate-neutrality
2.3 An industry shaping Europe's digital future

The digital transition will include not only the industry and economy but also the education – fundamental sector the developing the society”.

Another policy having impact for the European citizens is the education policy in which the EU can carry out actions to support, coordinate or supplement the actions of the Member States[17]. The education is one of the sectors affected by the pandemic sars-cov-2 in terms of teaching process but also in terms children education by the parents. The digitalization is used in education and it is clear that a new trend will be settled up at all levels of education. In this regard, the *Communication from the Commission to the European Parliament, the Council, the European Economic and Social Committee and the Committee of the Regions - Digital Education Action Plan 2021-2027 Resetting education and training for the digital age*, Brussels, COM (2020) 624 final, 30.9.2020 has as priorities:

“Strategic priority 1: Fostering the development of a high-performing digital education ecosystem
Strategic priority 2: Enhancing digital skills and competences for the digital transformation”.

Digital transition includes also social aspects[18]; ”MEPs (Members of the European Parliament) call for binding social targets to help the EU labour market adjust to the current realities of the digital and green economy.

- Digital and green transition must include a social dimension
- New European Social Agenda to be adopted under the Portuguese presidency
- European Pillar of Social Rights should be properly implemented[19]”.

For ensuring the implementation the European Commission's initiatives in this area, an executive vice-president of the new European Commission is responsible for „A Europe Fit for the Digital Age”:

- „setting the strategic direction of the political priority "Europe Fit for the Digital Age",
- Coordinating work on a European strategy on data and on a European approach to artificial intelligence, including its human and ethical implications,
- Steering work on upgrading liability and safety rules for digital platforms, services and products as part of a new Digital Services Act, ensuring working conditions of platform workers are properly addressed,
- Coordinating the Commission's work to achieve fair digital taxation”[20].

3. De lege ferenda proposal

The new “*Joint declaration on the conference on the future of europeengaging with citizens for democracy– Building a more resilient Europe*” states that “The European Union has to show that it can provide answers to citizens' concerns and ambitions. European policy must provide inclusive answers to our generation-defining tasks: achieving the green and

[16] Art. 6 letter (b) – competence of the EU to carry out actions to support, coordinate or supplement the actions of the Member States.

digital transition, while strengthening Europe's resilience, its social contract and European industry's competitiveness"[21].

In the spirit of this Declaration, we appreciate that, in a future revision of the EU Treaties[22], provisions on the digital transition and the green transition will be introduced at primary EU law level, including the steps and measures to be taken after the transitions are completed.

The provisions of EU primary law would allow the adoption of legislation, binding for Member States whose compliance is monitored by the European Commission.

Digitization has become an EU priority that is pursued at a cross-cutting level and has recently been encountered in the design and implementation of various European policies and areas of action. The same approach can be found with regard to green transition, as it is not limited to environmental policy but also becomes an objective to be met in other policies and actions.

Awareness-raising activities on the digital and green transitions should become a constant concern for the European institutions and the authorities of the Member States for the benefit of European citizens in accordance with the principle of sincere cooperation.

It is obvious that, at the moment, the European Commission's communications can only impose certain conduct for the Member States on the basis of the principle of sincere cooperation[23] which allows them to gradually adapt to the transition, from a legislative, structural and institutional point of view[24].

A future revision of the Treaties may also concern the nomenclature of the EU law sources which could include the complementary EU law like the Commission's communications mentioned above, European Parliament's resolutions and other *sui generis* acts.

The current art. 296 TFEU obliges to respect the principle of proportionality[25] when a specific act will be adopted by the EU institutions:" where the Treaties do not specify the type of act to be adopted, the institutions shall select it on a case-by-case basis, in compliance with the applicable procedures and with the principle of proportionality" which could be interpreted including in regard with complementary EU law because a reference to a legal act is not mentioned. The next statement of this article makes a direct reference to a legal act: "Legal acts shall state the reasons on which they are based and shall refer to any proposals, initiatives, recommendations, requests or opinions required by the Treaties".

«The accession to the EU implies a number of consequences. One of these consequences follows from the judgment of the Court of Justice in Luxembourg ruled in 1978, in which the Court ruled that, under the "principle of the supremacy of Community law, the provisions of the Treaty and the acts of the directly applicable institutions have the effect, with the mere fact of their entry into force, not only to determine the inapplicability of any provision contrary to that of the existing national legislation, but also-to the extent that those provisions and acts form an integrant part, with the national law of the Member States rank higher than the internal rules of the legal order applicable in the territory of each Member State-to prevent the adoption of new national legislation in force in so far as they are incompatible with Community rules"»[26].

In conclusion, at the present, the goals of the green and digital transitions will be implemented by the Member States in compliance with the principle of sincere cooperation[27] and the legislative acts adopted for different policies where green and digital aspects are introduced accordingly.

THE LEGAL CAPACITY OF THE INDIVIDUAL TO INFLUENCE HUMAN RIGHTS INTERNATIONAL LAW

Natale SERÓN ARIZMENDI*

Abstract

The legal capacity of the individual in international law is of a complex nature. As a subject in the legal field, the natural person has allowed to reframe the prevailing orthodoxy of the international legal order through jurisprudence. Case by case, the individual is contributing to the structural transformation the world is embedded in by standing for their fundamental rights and freedoms before international courts. Drawing on this bottom-up understanding, this article sets out to discuss whether and to what extent are individual's complaints capable of having an impact on human rights legislation through case law. For this question to be answered, this article begins by providing an overview of the evolution that the international capacity of the human person has undergone in the last decades. This is followed by a comprehensive analysis of the individual complaint procedures foreseen by international legal orders, as well as a comparative research aimed at gathering insights on the access to justice granted to natural persons by European, African and American regional human rights protection systems. Next, the paper assesses the dichotomy between monism and dualism in the particular case of Spain, a debate that is gaining ground in the ambit of the direct application of international law in the domestic legislation. Finally, this article casts doubts on the legitimacy and binding power of human rights international treaties: it is hard to perceive these legal texts as mandatory if they are subjected to national authorities' willingness to incorporate international legal dispositions and resolution into internal legislation

Keywords: *Public International Law, Human Rights, Individual's access to justice, Human Rights Treaty Bodies, International Courts.*

1. Introduction

Every human being is vested with inherent fundamental rights that can be asserted before courts and are to be respected by every political organisation including the State.[1] Yet, the acknowledgment of these rights has not been gained without prior struggle. In fact, individual's access to international courts stands out as one of the greatest accomplishments of a collective effort. The relevance of the chosen topic rests on the critical progress that has been made on the development of the '*corpus juris*' with the adoption of regional and international mechanisms that grant individuals the capacity to lodge a claim for human rights' violation.[2]

Important authors such as Philip Alston[3], Dinah Shelton[4] and Stian Oby Johansen[5] have echoed the proliferation of non-state actors' and their increasing leverage capacity. Even if the bulk of these scholars' literature has been particularly devoted to international organisations, these academics' work has paved the way for other non-traditional actors, including the natural person, to access to justice in the international arena. Soundly align with this diversification of power units and bottom-up approaches, Anne F. Bayesky [6], Sarah Joseph, Katie Mitchell & Linda Gyorki[7], among others, targeted natural person with the aim of empowering individuals with the tools and knowledge required to submit their complaints directly to the international accountability mechanism for a violation of their rights.

Using a doctrinal analysis and a qualitative approach, this contribution aims to build on the previously analysed literature and strives to examine individual's effective capacity to influence international human rights law by rising complaints before international courts and committees. To that end, this paper begins by setting forth an overall assessment of the progress that individual's active legitimation has undergone in the last decades. After the general overview of the historical context, the next section addresses the means that international schemes put at natural person's disposal in order to file a human rights' breach; this is followed by a comparative analysis of individual's legal capacity to stand for their

rights under European, African and American regional human rights law. The fifth section focuses attention on Spain and the conflict that revolves around the direct application of international committees' resolutions. Finally, the last section provides a summary of the main findings and conclusions of my research.

2. Historical evolution

In recent decades, important steps had been taken towards individual complaining procedures. In essence, the development of the individual's direct access to justice reaffirms the position of the natural person as a subject of international human rights law, and provides a set of mechanisms that enable an important shift from classical international law to accommodate the new reality. [8] That said, this section will be looking into the ways in which the right to individual complaints has evolved in the international legal scheme.

Since the adoption of the Universal Declaration of Human Rights in 1948, new regional and international mechanisms for human rights' protection have emerged. The European Convention of Human Rights (ECHR)[9] was one of those initial attempts to ensure the collective protection of human rights in the European region, still, it must be recalled that the enforcement of the Convention lies in the willingness of the Member states of the Council of Europe to comply. After the entry into force in 1953 of the ECHR, the safeguarding of fundamental rights kept gaining ground in the international agenda and up to 11 protocols to the Convention were adopted with the only propose of envisaging an all-inclusive protection and a wider range of unalienable rights under the Council of Europe and its European Court of Human Rights (ECtHR).[10]

Classical protection mechanisms were grounded on treaty commitments to which states were subjected. This traditional observance to human rights gradually shifted from 'weak' forms of protection, such as state report submissions, to a more comprehensive judicial implementation machinery that foresees the active and direct legitimation of the individual to report a human right violation against a contracting Member state.[11] The development of human rights protection mechanisms was also evidenced by the incorporation of new actors. A decade ago, non-state actors' presence in the legal domain was essentially residual and scholars' interest on the subject low. Nevertheless, this category has become increasingly powerful in a very short time frame, and for the foreseeable future, non-state actors are here to stay.[12]

The irruption of emerging global players in the legal picture urged the international community to work towards non-treaty-based methods including customary law and general principles, to ensure a far-reaching protection of human rights.[13] An example of these non-traditional instruments specifically targeted to unalienable rights was provided by the procedure foreseen in ECOSOC resolution 1503. The complaint system developed under this resolution was aimed at putting a halt to "particular situations which appear to reveal a consistent pattern of gross and reliably attested violations of human rights requiring consideration by the Commission"[14]. To that end, the 1503 procedure stipulated a complaint mechanism characterised by the following three features: first, every State, including those States who were not parties of the UN, could be subject of a complaint submitted on the basis of a human right violation; second, a far-reaching and, therefore, flexible interpretation of the 'human right' construct was promoted; and, third, individuals alleging to be victims of a human right violation were entitled to file a complaint. [15]

The 1503 procedure was only the point of departure for individual complaints. Ever since, the procedural capacity to internationally and regionally claim a violation of fundamental rights has only been strengthened. In view hereof, individual complains remain today as a key control mechanism to ensure the effective functioning of the human right protection system, since it provides to those who allege to be victims of a human right breach the entitlement to confront the State party of such violation by submitting a complaint under international law. In essence, individual direct access to justice entails a full-scale legal revolution.[16]

Individual complaints mechanism offers a unique opportunity for natural persons to stand for their rights. Yet, the excess of lawsuits filed to date has limited individual's access to international jurisdictions. The Council of Europe has attempted to address this problem through the adoption of a set of modifications included in Protocol nº 14 of May 13, 2004. Nevertheless, these measures have been subject of criticism as they may hinder individual's access to the ECtHR and therefore compromise the credibility of the European human rights protection system. Therefore, it should be born in mind that despite important advancements have been made in the field of human rights and their protection, there is still a lot to work on.[17]

3. How to file a human rights complaint through current international mechanisms

In spite of significant and positive developments in the safeguarding of fundamental rights, additional mechanisms are called for in order to guarantee a comprehensive framework that foresees the lodging of individual complaints.[18] Since the 1970s, the legal capacity of the individual has wound its way within international law to the point of being a matter of active concern among scholars in the legal field.[19] In the following, this section examines under which circumstances are natural persons entitled to formulate, directly, complaints before international and regional courts and committees.

3.1. Universal protection of human rights

The UN provides to individuals a set of mechanisms to vindicate their human rights under international law. Once national remedies have been exhausted, an individual has the legal capacity to bring a complaint before a UN Treaty Body or the UN Human Rights Council.

To begin with, the UN Human Rights Council has developed a special procedure for individuals who allege patterns of gross human rights violations to submit a complaint against a UN Member state. This procedure adopted by resolution 5/1 of 18 June 2007 is grounded on the previously analysed 1503 mechanism and is characterised by the principles of impartiality, objectivity and efficiency. This improved and victim-oriented mechanism consists of four stages. After an initial examination of the facts that allegedly constitute a human rights breach, the complaint is handed to the concerned State to respond. This first analysis is followed by a deeper examination carried out by the Working Group on Communications, which analyses if there are substantive grounds to consider a pattern of gross violations of human rights. Building on the information gathered and the recommendations made by the Working Group on Communication, the Working Group on Situations is responsible for presenting a report on the matter that will help the Council to determine how to proceed. Finally, the Council has to decide whether or not to continue considering the complaint and if further evidences or monitoring mechanisms are required. The Council may also recommend to OHCHR to lend technical assistance to the relevant Member state. [20]

A universal alternative mechanism to submit a complaint for human rights violation is the one foreseen in the UN Treaty Bodies. Provided that a country has accepted the competence of these committees to consider individual communications, a national of a State party who alleges to be a victim of a violation by a Member state, is entitled to lodge or formulate a complaint invoking the protection that these Treaty Bodies grant.

- International Covenant on Civil and Political Rights (ICCPR): This Convention foresees, in the first article of its Optional Protocol, the competence of this Treaty Body to receive communications from individuals.[21] According to 2016 data, the Committee counts with the highest number of communications received by the UN Human Rights Treaty Bodies (2,932 cases) since taking effect in 1976.[22]

- International Convention on the Elimination of all Forms of Racial Discrimination (CERD): The Committee on the Elimination of Racial Discrimination recognises in article 14 of the Convention that rules its activity, the CERD, the entitlement of this second body to consider individual communications.[23] Even if this Convention was adopted just a year after the ICCPR, it was not until the ten Member states agreed on the individual complaint procedure that the article 14 of the CERD became operative. [24] Since it went into operation

[24] Limon, "Part II", 12.

in 1982, and up until 2018, the CERD had only adopted final opinions on the merits on 36 complaints.[25]

- Convention against Torture and Other Cruel, Inhuman or Degrading Treatment or Punishment (CAT): In its article 22, the Convention contends that this Committee has the authority to examine complaints submitted by individuals.[26] According to the data published in the 2019 Report of the Committee against Torture, since the CAT entered into force in 1989, the Committee has registered 1003 complaints, 192 of those complaints are pending and in 158 cases the Committee found a violation of the Convention[27].
- Convention on the Elimination of All Forms of Discrimination Against Women (CEDAW): The Optional Protocol to this Convention envisages on its article 2 a communication procedure that provides individuals the opportunity to stand for their rights via the formulation of an individual complaint to the Committee.[28] Based on the data published in 2016, with 40 more State parties than committees such as the CAT, only 110 communications have been received by the CEDAW since its entry into force in December 2000.[29]
- Convention on the Rights of Persons with Disabilities (CRPD): The first article of the Optional Protocol to the Convention recognises the competence of the Committee to receive individual communications.[30] Despite being one of the latest Committees becoming operational (2008), it is endorsed by a large number of Member states (92); yet, in its first eight years functioning it only dealt with 40 communications.[31]
- The following three committees are the last procedures brought into operation: The Committee on Enforced Disappearances (CED); the Committee on Economic, Social and Cultural Rights (CESCR) and the Committee on the Rights of the Child (CRC). Three committees may consider communications lodged by natural persons that allege to be victims of a violation. The individual complaint procedure is foreseen in article 31 of the International Convention for the Protection of All Persons from Enforced Disappearance [32]; article 2 of the Optional Protocol to the International Covenant on Economic, Social and Cultural Rights[33]; and article 5 of the Optional Protocol to the Convention on the Rights of the Child on a Communications Procedure[34]. Based on the data published in 2016, these three committees received the lowest number of total communications: 20, 29 and 21 respectively. [35]
- Finally, although it has not yet entered into force, it is worth mentioning that complaints can be brought by an individual before the Committee on Migrant Workers (CMW). In this regard, article 77 of the International Convention on the Protection of the Rights of All Migrant Workers and Members of Their Families provides the CMW the competence to consider individual communications. Yet, in order to bring the analysed provision operational, a declaration from ten States parties recognising the individual complaint proceeding is required.[36]

Despite the formal process that the UN Human Rights Treaty system made available to individuals, it must be noted that the decisions that emanate from the obligations contained in the UN Treaty Bodies are not legally binding. UN resolutions cannot be enforced in internal courts and there is no international enforcement police that can guarantee the implementation of the decisions. Therefore, the fulfilment of the UN resolutions lies on the willingness of each contracting State to do so.[37]

3.2. European regional protection of human rights

At the emergence of the then called European Communities, now known as the EU, the regional organisation ability to perform was limited and targeted to economic cohesion and growth. The economic driving force behind the creation of the European Communities, as well as the presumption that the belonging of its Member states to the ECHR was enough guarantee of human rights protection, explains the failure to mention any norm related to fundamental rights in the original constitutional treaties of the EU.

[37] Anne F. Bayefsky, "Chapter II. Introduction to Complaints procedures", in How to Complain to the UN Human Rights Treaty System (New York: Transnational Publisher, 2002), 37-38.

Yet, the declaration of the principle of direct effect and the prevalence of the Union law over those domestic legislations, where, unlike in the EU legal order, fundamental rights were envisaged, casted doubts on whether this primacy could lead to human rights violations.[38] In this regard, the Court of Justice of the European Union (CJEU) ruled in the landmark case Erich Stauder v City of Ulm – Sozialamt, judgment of the Court of 12th of November 1969, that the fundamental human rights are "enshrined in the general principles of Community law and protected by the Court".[39]

In view hereof, there are two regional binding legal texts in the EU, both competent to intervene in human rights matters: ECtHR, responsible for enforcing the ECHR; and the CJEU, in charge of guaranteeing the implementation of the Charter of Fundamental Rights of the European Union (CFREU).[40]

As previously mentioned, EU Member states are contracting parties of the ECHR; yet, the EU is not a member itself. Nevertheless, the accession of the Union to the Convention of the Council of Europe has been a subject of ongoing debate and visible steps have been taken towards this accession[41]: the Lisbon Treaty included in article 6 of the TEU that "the Union shall accede to the European Convention for the Protection of Human Rights and Fundamental Freedoms." It is, however, worth drawing attention on the sentence that concludes the referred legal disposition and states that "such accession shall not affect the Union's competences as defined in the Treaties." On account of the subjection to the ECtHR's resolutions that would imply the accession of the EU to the Convention, the relevant authorities deemed right to submit a preliminary ruling to the CJEU. The Court filed against the accession of the EU in its Opinion 2/13, arguing a set of incompabilities between the two legal texts that need to be addressed.[42]

One of the incompatibilities alleged by the CJEU to oppose the accession of the Unión to the ECHR is that contained in articles 33 of the ECHR and 344 of the Treaty on the Functioning of the European Union (TFEU)[43]. The first of the mentioned legal precepts provides that "any High Contracting Party may refer to the Court any alleged breach of the provisions of the Convention and the Protocols thereto by another High Contracting Party". In this regard, article 55 of the same legal body adds an "exclusion of other means of dispute settlement" and states that "the High Contracting Parties agree that, except by special agreement, they will not avail themselves of treaties, conventions or declarations in force between them for the purpose of submitting, by way of petition, a dispute arising out of the interpretation or application of this Convention to a means of settlement other than those provided for in this Convention."

The CJEU interprets these cited dispositions as a possibility for the ECtHR to disregard the exclusive jurisdiction that according to the article 344 of the TFUE, the CJEU holds when deciding on any dispute between Member states on subjects of EU law that may, occasionally, interfere on ECHR related matters. A possible solution of the analysed incompatibility could be contained in a legal precept directly correlated with the object matter of analysis in this paper: the active legitimation of the individual. Article 35.2.b) of the ECHR stipulates on the admissibility criteria of the individual application, and states that the Court shall not deal with any application submitted under article 34 that "is substantially the same as a matter that has already been examined by the Court or has already been submitted to another procedure of international investigation or settlement and contains no relevant new information." This last legal precept lays out the subsidiary jurisdiction of the ECtHR, which can only be invoked once national remedies have been exhausted, and provided that the case has not been brought to another legal international proceeding. In accordance with the terms set forth in article 344 of the TFEU and the subsidiarity foreseen in article 35 of the ECHR, the disputes that arise between EU Member states could continue to be solved by the CJEU. [44]

On account of relevant authorities' inability to bring to realisation EU's accession to the ECHR, contemporary mechanisms provide individuals with the capacity to vindicate their rights before the CJEU and the ECtHR. With regard to the CJEU, the so-called Van Gend en Loos case acknowledged "that community law has an authority which can be invoked by their nationals before those courts and tribunals".[45] To do justice to this claim the EU developed a set of

protection mechanisms that entitle individuals to file human right complaints, including the action for annulment (article 263 TFEU), the action for failure to act (article 265 TFEU) and the action for damages (article 268 TFEU). Nevertheless, it is important to underline that an individual does not have the capacity to take action neither against another natural or legal person nor a Member state of the Union before the CJEU.[46]

The fourth paragraph of the cited article 263 of the TFEU provides that any natural or legal person may "institute proceedings against an act addressed to that person or which is of direct and individual concern to them, and against a regulatory act which is of direct concern to them and does not entail implementing measures.". In view hereof, the Case European Union Copper Task Force v Commission states that the cited legal precept "must be interpreted in the light of the fundamental right to effective judicial protection" as it is framed within "a complete system of legal remedies and procedures designed to ensure judicial review of the legality of European Union acts, and has entrusted such review to the European Union judicature".[47] It is yet to mention that according to a study published by Takis Tridimas and Gabriel Gari, between 2001 and 2005, from a total of 340 appeals for annulment, only 30 of these actions were filed by natural persons; moreover, of these 30 actions, only 2 were successful. That said, it is worth noting that those two actions that were estimated were filed by a scholar and a former MEP. This evidences that the chance of a proceeding instituted by a natural person with no specific knowledge and previous experience in the EU being successful is very low.[48]

Opposite to article 263 of the TFEU, which demands a direct or individual concern from "non-privileged applicants", article 265 of the TFEU provides a broader locus standi by stipulating that any natural or legal person may "complain to the Court that an institution, body, office or agency of the Union has failed to address to that person any act other than a recommendation or an opinion". To conclude with the litigation before the CJEU by private parties, the judgment of the Court of 10th of July, 1985 (CMC Cooperativa muratori e cementisti and others v Commission of the European Communities) ruled that any person who claims to have been injured by acts or conducts of an EU institution must "have the possibility of bringing an action, if he is able to establish liability, that is, the existence of damage caused by an illegal act or by illegal conduct on the part of the community"[49]. Even if this right cannot be deduced from the wording of articles 268 and 340 of the TFEU, it can be derived from the manner these dispositions are foreseen in the Treaty and the CJEU case-law.[50]

As far as the ECtHR is concerned, the ECHR stipulates in its article 34 that "the Court may receive applications from any person, non-governmental organisation or group of individuals claiming to be the victim of a violation by one of the High Contracting Parties of the rights set forth in the Convention or the Protocols thereto."[51] In this regard, the case-law of the ECtHR has established that complaints grounded 'in abstracto' violations of the ECHR are not admissible.[52] Yet, there may be exceptions to the general rule, this was evidenced in the case Klass and Others v. Germany, where the ECtHR accepted "that an individual may, under certain conditions, claim to be the victim of a violation occasioned by the mere existence of secret measures or of legislation permitting secret measures, without having to allege that such measures were in fact applied to him."[53]

Further limitations to individual complaints before the ECtHR are foreseen in article 35 of the Charter which enumerates a set of admissibility criteria: first, the Court requires to the domestic remedies being exhausted before bringing the case to the ECtHR; second, the Court will not deal with any application that is either anonymous or it has been already considered by the ECtHR or other international court; third, the Court must declare inadmissible an individual application if it is in breach with the Convention or the applicant has not suffered prejudice; and, finally, the ECtHR is competent to reject, at any stage of the proceeding, an application that is estimated to be objectionable under this article 35 of the ECHR.

4. Individual complaints before different regional jurisdictions

In the previous section, the evolution of the most effective human rights protection system was analysed: the European system. The effectiveness of this regional scheme is largely due to the ECtHR, a judicial body with compulsory jurisdiction. Although the ECtHR is not the only European Court that issues binding judgements, it is, without a doubt, the regional body

that provides the greatest human rights protection mechanisms in the judicial domain.

In accordance with the terms set forth in previous sections, this part provides a comparative analysis of the American and African human right protection systems in relation to the European counterpart, with special attention given to the individual complaint procedure foreseen by each regional system.

4.1. American human rights protection

The American Convention on Human Rights (ACHR) is the pillar that upholds the Inter-American system for the protection of human rights. The first article of the Convention obliges every States subscribing to the Pact of San José (November 1969) to respect the rights and freedoms recognised in the Convention, and to guarantee that every human being subjected to the jurisdiction of State parties holds, without any discrimination, the ability to exercise the rights and freedoms provided therein.[54] The supervisory and surveillance bodies of the Inter-American protection system are the Inter-American Commission on Human Rights and the Inter-American Court of Human Rights (IACtHR), both bodies share competence with respect to matters relating to the fulfilment of the commitments made by the contracting parties of the Convention.[55]

Framed within these control mechanisms, individual complaints lie at the heart of the scheme. Article 44 of the Convention provides that any person "may lodge petitions with the Commission containing denunciations or complaints of violation of this Convention by a State Party."[56] Unlike the ECHR, the ACHR does not require to certify the status of victim in order to submit a communication; hence, this legal provision offers the opportunity to any individual to file a complaint against a contracting State party.[57] Although it provides a broader entitlement than the Convention of the Council of Europe, communications submitted under the ACHR are still subjected to the admissibility requirements of the American Convention's article 46, criterions that are very similar to the ones established in the previously anlaysed article 35 of the ECHR.

Once an individual complaint has been lodged and a decision in this regard is ruled by the IACtHR, the judgment is binding not only among the parties involved in the dispute but also 'erga omnes partes', with national authorities, ex officio, being subjected to it. The binding character of the jurisprudence responds to the role that the Court plays as the preeminent interpreter of the ACHR and guarantor of the effective protection of human rights in the American region.[58] In this regard, the IACtHR states that those judgments that have the force of res judicata "should necessarily be complied with since it entails a final decision, thus giving rise to certainty as to the right or dispute under discussion in the particular case, its binding force being one of the effects thereof."[59]

4.2. African human rights protection

The Charter of the Organization for African Unity (OAU) does not assign a primary role to the promotion and protection of human rights. Thus, on June 27, 1981, the African Charter on Human and Peoples' Rights (ACHPR) was adopted in Banjul, with the aim of guaranteeing a human rights protection framework in the African region. Almost two decades later, the OAU aimed to enhance the African Charter establishing a judicial body capable of adopting binding decisions: the African Court of Human and Peoples' Rights (ACtHPR). [60] With 31 State parties having ratified the protocol that established the ACtHPR, this judicial organ was brought into operation in 2004. [61]

As with the previously analysed two regional human rights safeguarding systems, ACPHR envisages in its article 55 an individual complaint proceeding by which members of the Commission may consider "communications other that those of States Party".[62] Nevertheless, the consideration of these communications is subjected to what is established in article 56 of the Charter: the communication cannot be anonymous or be written in "disparaging or insulting language"; it must be consistent with the Charter of the Organisation; it cannot be "based exclusively on news disseminated through mass media" or deal with "cases which have been settled by those States involved in accordance with the principles of the Charter of the United Nations, or the Charter of the Organisation of African Unity or the provisions of the present Charter"; and, finally it has to be submitted once local remedies are exhausted and within the period of time set by the

Commission. In this regard, articles 6 and 34.6 of the Court's Protocol add further admissibility criteria and establish the requirement of States making a declaration agreeing on the competence of the ACtHPR to cases brought by an individual before the Court be considered. As of 2011, only 11 African countries accepted the competence of the Court to examine natural persons' complaints.[63]

To conclude with this section, it is key to analyse the compliance of the analysed regional mechanisms in order to evaluate the effective impact of individual complaints. Data evidences disparities between the three examined regions: ECtHR's decisions enjoy the highest rates of implementation, 56%; second is the IACtHR with 20% of its decisions being implemented, and, finally, in third place, is the African region, with a mere 14 %. Yet, this data cannot be fully interpretated without taking into account the flexibility that each court provides in the field of remedies. The ECtHR, for example, dispenses a wide scope of action for internal systems to redress the violation; opposite, the IACtHR lays out specific remedies that hinder the full implementation of the solution.[64]

5. Case Study: Spain - monism and dualism

Since international law broadens its scope of application, it should not come as a surprise an increase of tensions between national and international legislations.[65] As a means to address these problems, the academia has developed two major theoretical perspectives to approach the incorporation of international law into domestic legal order: monism and dualism. On the one hand, monism is grounded on the principles of unity and subordination. This first category postulates that both legal systems belong to a single body of law where legal norms are subordinated in a hierarchical order and the international law prevails. On the other hand, dualism is based on the premise that international law and domestic law are two equal, independent and separate systems. Unlike in the monist approach, there is no relationship of dependence or subordination, hence, in order to an international norm being applied in the domestic field, a prior incorporation is required.[66]

The Spanish Constitution foresees in the first paragraph of its article 96, that international treaties shall form part of the internal legal order on the condition that they are validly concluded and officially published.[67] Given the fact that publication of an international treaty is an essential requirement for international treaties to be directly applicable in Spain, it has been long discussed whether the system of national implementation is either monist or dualist. Professor Araceli Mangas Martin stands for a middle ground between these two models of integration and advocates a moderate monism. This approach is based upon the position that international treaties bind Spain from their entry into force in the international order and do not require transposition to be part of domestic law, only their publication.[68]

There is a constant caselaw of the Spanish courts which argues in favour of the automatic reception of international treaties.[69] A different, albeit related, matter is the internalisation of resolutions and opinions that emanate from international committees such as the Human Rights Committee. The relevance of these Committees rests on the role they play in treaty interpretation. When it comes to addressing the nature and scope of the dispositions foreseen in the treaties these Committees are grounded on, the contribution of these bodies is key. It is, thus, difficult to understand Spanish legal authorities' reluctance to frame these Committees' opinion and resolutions under article 10.2 of the Spanish Constitution.[70]

Article 10.2 of the Spanish Fundamental Norm complements the integrating role provided in article 96 of the same legal body. The tenth article of the Constitution establishes that "the principles relating to the fundamental rights and liberties recognised by the Constitution shall be interpreted in conformity with the Universal Declaration of Human Rights and the international treaties and agreements thereon ratified by Spain." This disposition involves an obligation as to the result to be achieved: the meaning and extent attributed to constitutional rights and freedoms by the Spanish Public Powers must align or correspond to the ones attributed by international treaties. In this line, Cesareo Gutiérrez, Professor of International Law and International Relations in the University of Murcia, lays down the dichotomy of the obligation of result: Gutiérrez argues that this imperative relates to a negative strand or prohibition, as it bans any restricting interpretation of constitutional rights and freedoms that is not compatible with what has been stated in the

international human right treaties ratified by Spain; yet, the obligation introduced by article 10 also demands public authorities to agree on the most favourable interpretation, the one that guarantees the greatest effectiveness of international regulations.[71]

The reticence of Spanish legal authorities to assimilate under the analised article 10.2 the decisions and opinions of important international committees is evidenced in verdicts such as the Resolution number 141/2015, of February 11, of the Spanish Supreme Court, ruling that states that the UN Human Rights Committee "does not have a jurisdictional nature, so that its resolutions or opinions lack the ability to create a doctrine or precedent that could bind this Criminal Chamber of the Supreme Court". A similar line of interpretation was adopted by the Constitutional Court in its resolution number 70/2002 of the 7th of April, and by the Spanish Supreme Court among which the following judgements are noteworthy: the resolution of the 9th of March of 2011 (cassation appeal number 3862/2009), the resolution of the 25th of July of 2002 (revision appeal number 69/2001) and the resolution of the 9th of November of 2001 (cassation appeal number 28/2001). [72]

However, the 17th of July of 2018, the Supreme Court adopted the resolution number 1263/2018 and broke with the previous trend of jurisprudence by agreeing on the application of an opinion dictated by a committee of which Spain is a contracting party. The Supreme Court ruling argues that "the decisions of the international bodies that are related to the execution of the decisions of the international control bodies, whose competence Spain has accepted, once they are received in the terms of article 96 of the Fundamental Norm, form part of our internal legislation and enjoy the hierarchy that this article -supralegal rank- and article 95-infra-constitutional rank- confer on them "[73].

The Spanish court built this last resolution on the argument that the refusal to comply with the committee's opinion would entail a violation of the applicant's human rights, and added that "although neither the Convention nor the Protocol regulate the executive nature of the Opinions of the CEDAW committee, it cannot be doubted that they will be binding / mandatory for the State party that recognized the Convention and the Protocol, since Article 24 of the Convention provides that 'States Parties undertake to adopt all necessary measures at the national level aimed at achieving the full realization of the rights recognized in the present Convention.' " The Supreme Court also invoked articles 1[74] and 7.4[75] of the Optional Protocol to reinforce the competence of the committee recognised by Spain.

The arbitrariness of the Spanish Supreme court regarding the assimilation of these committees' decisions and opinions jeopardises the right to a fair trial, and hinders the confidence of the public in the judicial system. In this regard, the ECtHR argued in the case Beian v. Romania (No. 1) that this lack of consistency "is in itself contrary to the principle of legal certainty, a principle which is implicit in all the articles of the Convention and constitutes one of the basic elements of the rule of law".[76] Further, the same court added in the case Nejdet Şahin and Perihan Şahin v. Turkey that "if justice is not to degenerate into a lottery, the scope of litigants' rights should not depend simply on which court hears their case." [77] Therefore, a clear set of guidelines is fundamental in order to guarantee a coherent approach and avoid any disassociation between State's internal and external activity. [78]

For the sake of human rights protection, these action guidelines should align with the examined last ruling of the Supreme Court, the resolution of the 17th of July of 2018. It is important to bear in mind that as analysed in a previous section (third section), most of the mechanisms provided by the UN are grounded on a group of international committees that are responsible for monitoring compliance with human rights treaties. Therefore, it can be concluded that if the Spanish legal authorities do not agree on a line of interpretation that favours first, the internalisation of Treaty Body decisions within domestic legislation, and, second, their capacity to set precedent, the individual complaint procedures lose its raison d'être.

6. Conclusions

Upon closer analysis, this paper concludes that the capacity of the individual to influence human rights international law is rather limited. Despite positive advancements in the field of human rights, the

complexity that entails reporting a breach of fundamental rights and the incongruencies that arise in the assimilation of these decisions within domestic law, call for further developments in the guarantee of those inherent rights of which every human being is holder.

Building on the Universal Declaration of Human Rights (1948), the world has gradually evolved to accommodate a new era characterised by a growing awareness of the human rights field, and a greater presence of the natural person as a subject of international law. Classical schemes are progressively shifting towards comprehensive mechanisms that are better at delivering protection by envisaging the participation of the natural person in the law-making process.

That said, the UN as well as the European, American and African conventions offer to every human-being means to vindicate their rights through individual complaints, yet, all these mechanisms are subjected to the initial willingness of the State to commit to these conventions, as well as the prior exhaustion of domestic remedies. That said, it is important to bear in mind that the lack of an international enforcement body and the reluctancy of national courts to assimilate international committees' opinions weakens the strength of many international resolutions, leaving, once again, to the discretion of nation-states the observation of the obligations that emanate from these international decisions. Thus, although significant steps have been made in favour of the natural person, much needs to be done, at both regional and global level, to improve the access to justice of every individual in line with the principle of equity of arms.

Central to meet this need of improvement is the development of a common consistent approach in the national reception of international resolutions and decisions. Spanish authorities' lack of consensus leads to inconsistencies on law-making and may lead to a breach of the right of a fair trial. Hence, the findings of this research evidence the relevance of setting a clear and stable criterion that favours the direct assimilation of international committees' opinions. This agreed line of interpretation would grant greater congruency and therefore, further protection.

The legal capacity of the individual is a matter of an active concern, therefore future research is needed to address the many questions that arise as the debate moves forwards. Will, in the future, individuals themselves be able to claim their legal capacity by vindicating their role before international courts? Or will they always be constrained by an international structure that favours the State? Given the progress that the natural person has made in the global legal scheme, will individuals be granted access to the International Court of Justice? And in a regional level, will the adhesion of the EU to the ECHR limit the discretion in the enforcement of the ECtHR's resolutions by assimilating this court's judgments within EU law, and, thus, reinforcing their binding character? If this adhesion does not occur, will the individual be entitled to bring a case against a Member state before the CJEU? All these questions that emerge from the challenging nature of the subject are issues for future research to explore.

THE COORDINATION OF SOCIAL SECURITY SYSTEMS AFTER BREXIT - DISPOSITIONS APPLICABLE FROM 1 JANUARY 2021 AND POTENTIAL LEGISLATIVE CHANGES

Maria-Cristina SOLACOLU*

Abstract

The European Union's secondary law includes several regulations and dispositions concerning the social security rights enjoyed by nationals of the EU Member States, nationals of Iceland, Norway, and Liechtenstein (as states which are part of the European Economic Area), Switzerland, stateless persons, and refugees who reside in one of these states, as well as citizens from third-party states, if they legally reside on the EU's territory and have exercised their freedom of movement.

As a consequence of the United Kingdom's withdrawal from the EU, it has become necessary to clarify the legal status and social security rights that individuals falling into one of the aforementioned categories enjoy, whether they be British citizens whose contributions have been paid in an EU Member State, or citizens of an EU Member State whose contributions have been paid in the UK. The Withdrawal Agreement concluded between the United Kingdom and the European Union covers the cross-border situations in existence at the end of the transition period, which concluded on 31 December 2020. The Trade and Cooperation Agreement between the EU, Euratom, and the UK, which was signed on 30 December 2020, contains provisions regarding the coordination of social security systems between the parties to the Trade and Cooperation Agreement, largely borrowing from the existing EU legislation on the matter, but also diverging from it in some aspects. This article will analyse the relevant provisions of the Withdrawal Agreement, those of the Trade and Cooperation Agreement, as well as potential legislative changes concerning the coordination of social security systems.

Keywords: *Social security – Brexit – Regulation (EC) no. 883/2004 on the coordination of social security systems – Trade and Cooperation Agreement – Withdrawal Agreement.*

1. Introduction

The free movement of persons is one of the four fundamental freedoms of the European Union's internal market, alongside the free movement of goods, capitals, and services,[1] and it represents a key aspect of the European citizenship.[2] When a person works in a state that is different from their state of origin, or when they're detached or posted to another state, an issue of particular interest is that of the social security system they will contribute to, with the obvious risk being that of having to contribute to two (or more) such systems. The coordination of social security systems is thus essential to ensuring that the persons exercising their freedom of movement are guaranteed social security protection when moving from one Member State to another, and that they don't lose accrued benefits. To that purpose, EU law on the subject matter follows four principles: non-duplication (persons in cross-border situations are subject to the legislation of a single state), non-discrimination (they must enjoy the same rights as the citizens of the state to whose legislation they are subject), aggregation (periods of work carried out in different EU Member States all count towards contributory benefits), and exportability (benefits earned in one Member State carry over to another, when the beneficiary moves).[3]

As long as the United Kingdom was a Member State of the European Union, it complied with the organisation's legislation in this matter, following the four principles, but the British state's departure from the Union means that EU law will no longer apply to it. 1 January 2021 marked the end of the transition period introduced by the Withdrawal Agreement[4] concluded between the EU and the UK. The contents of said Agreement ensure that citizens finding themselves in a cross-border situation at the end of the transition period will continue to be protected in accordance with EU legislation on the matter of social security, for as long as the cross-border situation continues without interruptions. In the case of cross-border situations

* PhD Candidate, Faculty of Law, "Nicolae Titulescu" University of Bucharest (e-mail: maria.solacolu@gmail.com).

[1] EU law provisions regarding the four freedoms of movement also apply to the three states (Norway, Iceland, and Liechtenstein) that are part of the European Economic Area alongside the EU Member States, as well as in Switzerland's case, by way of a series of bilateral agreements concluded between the state and the EU. For more on the free movement of persons, see Augustin Fuerea, *Dreptul Uniunii Europene. Principii, acțiuni, libertăți*, Universul Juridic, Bucharest, 2016.

[2] Introduced through the Treaty of Maastricht, which was signed in 1992 and came into force in 1993. [4] Agreement on the withdrawal of the United Kingdom of Great Britain and Northern Ireland from the European Union and the European Atomic Energy Community (2019/C 384 I/01), OJ C 384I, 12.11.2019, available at https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=CELEX%3A12019W%2FTXT%2802%29 (accessed on 20 March 2021).

occurring, between the EU and the UK, from 1 January 2021 onwards, the applicable provisions are those contained in the Trade and Cooperation Agreement,[5] signed on 30 December 2020 by the two parties, which includes a Protocol on the matter of social security, governing newly occurred cross-border situations.

2. Historical aspects and current EU secondary legislation on the matter of social security coordination

The UK's position on the matter of free movement of workers (and, implicitly, aspects related to the social security awarded to cross-border workers) and border control has been one influenced, in part, by its status as an island state,[6] a status which was invoked to explain its decision to opt out of the Schengen acquis. At the time, the UK's argument was that the possibility of strictly controlling its borders, a possibility awarded by it being an island, was too valuable to forego in favour of joining the Schengen Area. The UK's objection was solely focused on the issue of the elimination of border controls on persons, and the risk it would supposedly pose, while considering the elimination of internal frontiers with respect to goods, services, and capitals a desirable and advantageous development.[7] Despite signing the Single European Act,[8] which 'contributed to the Community's competence to adopt legislation in the field of social policy' and set the stage for the future adoption of the Community Charter of the Fundamental Social Rights of Workers in 1989, the UK chose not to adopt the Charter, and later chose to opt out of the Social Chapter annexed to the Maastricht Treaty, in the form of a Protocol which 'provided the EU with greater legislative competences and enhanced the role of the social partners and collective agreements at EU level'.[9] The UK started following the EEC's legislation on this matter in the late 1990s, when the Treaty of Amsterdam[10] consolidated all the existing dispositions on Social Policy in a single title.

At present, according to the UK's national provisions, employees and employers both are liable to pay UK National Insurance contributions (NICs), if they are resident, present, ordinarily resident, or have a place of business (in the case of employers) on the UK's territory. While the UK was a member of the European Union, employees who were nationals of an EU Member State, Norway, Iceland (as members of the EEA), or Switzerland had their social security rights protected under EU legislation. After the UK's withdrawal from the EU, this must naturally change.

At the supranational level, there have been provisions on the coordination of social security systems ever since the European Economic Community (today, the European Union) started its existence, with the signing of the Treaty of Rome, in 1957.[11] At the time, the Council (the legislative institution) adopted two regulations concerning the matter of social security for cross-border workers: Regulations No 3/1958 and 4/1958.[12] Ever since, dispositions on this subject matter have expanded, with the EU's institutions aiming to adopt legislation that would offer as thorough protection as possible for the persons exercising their right to freedom of movement. The EU legislation does not replace national legislation on the matter of who is insured, what benefits they receive, and under what conditions, focusing on aspects like the cumulation of periods when the person has been insured on the territory of a Member State, when calculating benefits.

The two 1958 regulations were replaced by Regulation (EEC) No 1408/71[13] and its corresponding Implementing Regulation (EEC) No 574/72.[14] The most recent legislative acts on the matter, which replaced the ones adopted in the 1970s, are Regulation (EC) No 883/2004[15] and its implementing act,

[10] The Treaty was signed in 1997 and came into force in 1999.

[11] The Treaty came into force in 1958, alongside the Treaty establishing the European Atomic Energy Community, which had also been signed in 1957, in Rome.

[12] Regulation No 3 concerning the social security of migrant workers and Regulation No 4 establishing the methods of implementation and completing the dispositions of Regulation No 3 concerning the social security of migrant workers.

[13] Regulation (EEC) No 1408/71 of the Council of 14 June 1971 on the application of social security schemes to employed persons and their families moving within the Community.

[14] Regulation (EEC) No 574/72 of the Council of 21 March 1972 fixing the procedure for implementing Regulation (EEC) No 1408/71 on the application of social security schemes to employed persons and their families moving within the Community.

[15] Regulation (EC) No 883/2004 of the European Parliament and of the Council of 29 April 2004 on the coordination of social security systems. The regulation also applies with regards to the EEA and Switzerland.

Regulation (EC) No 987/2009,[16] which came into force in 2010.

Regulation (EC) No 883/2004 on the coordination of social security systems in the EU was modernised and implemented through Regulation (EC) No 987/2009 on coordinating social security systems, which repeals Regulation (EEC) No 574/72. According to Regulation (EC) No 883/2004, social security contributions are payable in a single Member State, usually the one where the person is working, thus ensuring that people exercising their freedom of movement are not liable to pay double contributions. Special dispositions apply to detached workers (persons employed in one Member State, but sent to work in another), and multi-state workers (persons working in two or more Member States), as well as other exceptional situations, like those of self-employed workers. The Regulation contains six titles and eleven annexes. Title I, 'General provisions', lists a series of definitions, the persons and matters covered by the act, and the principles upon which the coordination of the security systems is founded – equality of treatment, aggregation of periods of insurance, employment, self-employment or residence, waiving of residence rules, and prevention of overlapping of benefits. Title II, 'Determination of the legislation applicable', states the core principle of the matter – persons to whom the Regulation applies are subject to the legislation of a single Member State of the EU. The text then sets out the rules according to which said legislation is determined. Title III, 'Special provisions concerning the various categories of benefits,' legislates the titular types of benefits, such as sickness, maternity, and equivalent paternity benefits, and pensions. Title IV, 'Administrative Commission and Advisory Committee,' regulates the Administrative Commission for the Coordination of Social Security Systems and other procedural aspects. Title V, 'Miscellaneous provisions', addresses matters such as the cooperation between Member States of the EU, the protection and processing of personal data, the collection of contributions and recovery of benefits (which can be effected in another Member State than that to whose institutions the contributions are due), the rights of the institutions responsible for providing the benefits. Title VI of the Regulation contains 'Transitional and final provisions.'

Regulation (EC) No 987/2009 on coordinating social security systems contains five titles and five annexes. Title I, 'General provisions,' covers definitions of the terms used within the regulation, rules on the cooperation between the institutions responsible for social security at the EU's and the Member States' level, and dispositions concerning the determination of residence, the aggregation of periods of contributions, and the prevention of overlapping of benefits. Title II, 'Determination of the legislation applicable', sets out a list of criteria, so that persons falling under the scope of the regulation will be subject to the legislation of a single Member State. Title III, 'Special rules concerning the various categories of benefits', contains dispositions on matters such as sickness, maternity and equivalent paternity benefits; benefits in respect of accidents at work and occupational diseases; death grants; invalidity benefits and old-age and survivours' pensions; unemployment benefits; family benefits. Title IV, 'Financial aspects', regulates the reimbursement and recovery of the costs of benefits, while Title V, 'Miscellaneous, transitional and final provisions' regulates the entry into force of the act, and issues such as medical examinations, administrative checks, and currency conversion.

3. Provisions of the Withdrawal Agreement and of the Trade and Cooperation Agreement

The Withdrawal Agreement concluded between the European Union[17] and the United Kingdom regulates, in Title III, the matter of the coordination of social security systems post-Brexit. The persons covered by its dispositions[18] include:

a) Union citizens (and their family members and survivours) who, at the end of the transition period, are either subject to the legislation of the United Kingdom, or who reside in the United Kingdom and are subject to the legislation of a Member State at the end of the transition period';

b) United Kingdom nationals (and their family members and survivours) who, at the end of the transition period, are subject to the legislation of a Member State, or who reside in a Member State, and are subject to the legislation of the United Kingdom;

c) Union citizens and United Kingdom citizens (and their family members and survivours), who are employed or self-employed on the territory of the other part to the Agreement, while being subjected to UK law and EU law, respectively;

d) stateless persons, nationals of third countries, and refugees (and their family members and survivours),if they reside on the territory of one of the parts to the Agreement, and are in one the previously mentioned situations, and fulfil the requirements of Council Regulation (EC) No 859/2003 (14), in the case of third-country nationals;

e) persons (and their family members and survivours) who don't fall within any of the previous

[16] Regulation (EC) No 987/2009 of the European Parliament and of the Council of 16 September 2009 laying down the procedure for implementing Regulation (EC) No 883/2004 on the coordination of social security systems. The regulation also applies with regards to the EEA and Switzerland.

[17] All relevant dispositions apply similarly in the case of Euratom, as per Art. 7 of the Withdrawal Agreement.

[18] Agreement on the withdrawal of the United Kingdom of Great Britain and Northern Ireland from the European Union and the European Atomic Energy Community (2019/C 384 I/01), OJ C 384I, 12.11.2019, Art. 30.

categories, but who fall within the scope of Article 10 of the Agreement.

The persons mentioned will be covered by the dispositions of EU law 'for as long as they continue without interruption to be in one of the situations set out in that paragraph involving both a Member State and the United Kingdom at the same time.'

According to the Withdrawal Agreement, the dispositions contained in Article 48 TFEU, Regulation (EC) No 883/2004 and Regulation (EC) No 987/2009 of the European Parliament and of the Council will continue applying to the aforementioned categories of persons.[19]

In terms of special situations covered by the Agreement,[20] it is mentioned that the EU's dispositions on 'aggregation of periods of insurance, employment, self-employment or residence, including rights and obligations deriving from such periods' will continue to apply to persons in cross-border situations (and their family members and survivors) if, despite not fitting one of the categories identified in Article 30, they were subject to the legislation of the other party to Agreement, at the end of the transition period. In these persons' cases, the periods completed both before and after the end of the transition period will be aggregated, according to Regulation (EC) No 883/2004.

The EU legislation on social security will continue to apply, even after the transition period, to persons who, before its end, 'had requested authorisation to receive a course of planned health care treatment pursuant to Regulation (EC) No 883/2004, until the end of the treatment,' as well as persons who are on a stay at the end of the transition period in a Member State or the United Kingdom, for the duration of that stay. The Withdrawal Agreement regulates the family benefits awarded, after the end of the transition period, to persons who are in a cross-border situation and who have family members residing on the territory of the other part to the Agreement.[21] The EU's provisions on such benefits will continue to apply for as long as the persons concerned fulfil the conditions of the two regulations on the subject.

EU legislation on the matter of social security will also continue to apply to nationals of Norway, Iceland, Liechtenstein, and Switzerland, provided that those states conclude corresponding agreements with the UK and with the EU, which apply to Union citizens and British citizens respectively.[22]

Concerning the matter of administrative cooperation, the Withdrawal Agreement provides that the UK shall have the status of observer in the Administrative Commission, where it may send a representative, if the items on the agenda concern the British state, and that it shall also take part in the Electronic Exchange of Social Security Information (EESSI).[23] The EU provisions on reimbursement, recovery and offsetting will continue to apply in the case of the persons mentioned in Article 30, as well as those situations which occurred before the end of transition period, or which occurred after but involve the persons covered by Articles 30 and 32.[24]

Should Regulations (EC) No 883/2004 and (EC) No 987/2009 be amended or replaced after the end of the transition period, the new dispositions shall apply wherever the two regulations are mentioned within the Agreement.[25] This means that the UK will be held to enforce regulations that it did not have a hand in elaborating and adopting, and it also means that the persons falling under the scope of the Withdrawal Agreement will enjoy a level of protection similar to that of citizens of EU Member States.

As the dispositions of the Withdrawal Agreement only cover the cross-border situations in existence at the end of the transition period, with small exceptions, it was necessary for the EU and the UK to negotiate and conclude a different agreement concerning situations that would arise from 1 January 2021.

In December 2020, EU and UK negotiators agreed on a Trade and Cooperation Agreement which came into force on 1 January 2021 and which covers several important aspects of the parties' relationship after Brexit. The matter of the coordination of social security systems between the EU's Member States and the UK was addressed through a Protocol annexed to the Agreement, thus ensuring that the UK will apply the same conditions, in this matter, for all EU Member States, avoiding discrimination between their citizens. Titled 'Protocol on social security coordination', and comprising of 5 titles and 8 annexes, it includes provisions regarding the applicable legislation to cross-border situations (maintaining the principle that individuals are to be subject to the legislation of a single state),[26] aggregation of insurance periods, exportability of benefits, and the equal treatment of workers. The Protocol will be in effect for 15 years, or until it is extended by mutual agreement,[27] or terminated by

[26] Trade and Cooperation Agreement between the European Union and European Atomic Energy Community, of the one part, and the United Kingdom of Great Britain and Northern Ireland, of the other part, OJ L 444, 31.12.2020, available at https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=uriserv%3AOJ.L_.2020.444.01.0014.01.ENG (accessed on 20 March 2021), Protocol on social security coordination, Art. SSC. 10.
[27] *Ibidem*, Art. SSC. 70.

either party.[28] It must also be noted that the Protocol only covers the UK's relationship with the EU's Member States, while the relationship with the European Free Trade Association states[29] must be regulated through bilateral agreements.

The Protocol mostly replicates the existing rules on social security coordination, and it specifies that affected workers will be subject to the legislation of only one state, determined in accordance with the Protocol, thus avoiding double imposition of taxes and contributions or the lack of a layer of social security. However, there are some differences, compared to the applicable EU regulations, and some protection measures are absent.

In the case of persons working in the UK for EU companies, the Protocol provides that the employers are liable to pay National Insurance contributions and account for their employees' National Insurance contributions. UK companies, regardless of not being resident in the EU, will pay employer social security contributions and account for the social security contributions for all of their EU-based employees. In terms of reciprocal healthcare arrangements, it's stated that persons travelling between the EU and the UK will be covered under their existing European Health Insurance Card (EHIC), or equivalent such as a Provisional Replacement Certificate (PRC), with the UK likely replacing, in the future, EHICs with a UK Global Health Insurance Card (GHIC).

The Protocol also addresses the matter of detached workers.[30] In the case of cross-border situations occurring, between the EU and the UK, from 1 January 2021 onwards, employers will be able to detach workers to the territory of the other party to the agreement and have their contributions paid in the state of origin for up to 24 months. After that point, the social security legislation of the host state will apply, unless the EU Member States and the UK conclude a new agreement on the matter. This means that persons sent by UK employers to work in the EU for periods of up to 24 months, and not to replace another detached worker, will remain liable to contribute to the UK social security system, on the condition that the Member State to which the worker was sent agrees to these rules. If it did not, the person in question would be at risk of dual contribution liability, and employers would become liable to foreign social security, being subject to the legislation in both the UK and the state to which they were sent to work in.

A provision contained by the EU's regulations, but not by the Protocol, is one according to which a detached worker can continue contributing to the social security system of their state of origin, in exceptional circumstances, usually for a period of up to 60 months, on the condition that the other state approves it. In addition, family benefits are excluded from the Trade Agreement, affecting some detached workers.

Different from detached workers, posted workers are sent to work for a different entity (that usually forms part of the same group as the employer in the state of origin); they fall under the legislation regarding the free movement of services, not the free movement of persons, and the Agreement does not cover them. Consequently, a worker posted from the UK to an EU Member State, to work for an EU entity, will pay contributions according to the legislation of the host state, and might continue to be liable to pay contributions in the UK as well. As a transitional measure, Member States of the EU may request to continue the existing posting system for a period of up to 15 years (with the possibility to end it sooner than initially requested), during which the posted workers will contribute to the social security system of the UK. Consequently, the treatment of posted workers will not be uniform, considering the possibility that Member States have to either retain the existing system or not, and if they do retain it, they can do so for different lengths of time.

Another subject covered by the Protocol is that of multi-state workers – persons who conclude most of their work in the UK, but also spend at least 5% of their working time in one or more of the EU Member States, and vice versa. According to the Protocol, that worker contributes to the social security system of the state where they are habitually resident, on the condition that at least 25% of their working time is spent or their remuneration earned in that jurisdiction. If that condition is not fulfilled, there are several tests which will be performed to determine the state where that person will be liable to social security contributions. Unlike the case of detached workers, EU Member States cannot opt out of these dispositions. The Protocol does not extend to Norway, Iceland, Liechtenstein, and Switzerland on this issue, and the matter of multi-state workers must be regulated through bilateral agreements between these states and the UK.

The Protocol doesn't cover all types of benefits that the EU regulations do, and does not, thus, provide the same level of protection. An Annex to the Protocol lists all the benefits that are excluded, divided into special non-contributory cash benefits, long-term care benefits, and payments awarded to meet expenses for heating in cold weather. Each Member State, and the UK respectively, has decides which benefits it wishes to exclude from the scope of the Protocol. For example, Bulgaria has decided to exclude social pension for old age, France has excluded the disabled adults' allowance, and Ireland has excluded jobseekers' allowance. The United Kingdom has excluded, among others, the winter fuel payment, carer's allowance, the

[28] *Ibidem,* Art. SSC. 69.
[29] Iceland, Liechtenstein, Norway, and Switzerland.
[30] *Ibidem,* Art. SSC. 11.

state pension credit, and income-based allowances for jobseekers.

As far as determining which legislation is the one applicable, the Agreement states that people will be subject to the legislation of the state on whose territory they are employed or self-employed. Civil servants are subject to the legislation of the state employing them in its administration. Persons who don't fit in any of the previous categories are subject to the legislation of their state of residence. Special provisions, similar to the ones previously applicable, are also laid in place for persons working on board vessels at sea flying the flag of a different state, and for flight and cabin crew members.

4. Potential legislative changes

On 13 December 2016 the Commission put forward a proposal[31] to revise the current legislation regarding the coordination of social security systems (specifically, Regulations 883/2004 and 987/2009). The Commission's proposal focuses on facilitating labour mobility and cooperation between the authorities of the Member States, and updates the existing provisions in four main areas: unemployment benefits, long-term care benefits, access of economically inactive citizens to social benefits, and social security coordination for posted workers. Under current rules, jobseekers can export their unemployment benefits for a minimum period of 3 months; this period is raised to a minimum of 6 months, in the Commission's proposal, offering better protection to jobseekers. Concerning frontier workers (persons who work in a different state than the one where they live, and who go to their state of residence at least once a week), the proposal states that unemployment benefits would be paid by the Member State where they worked for the last 12 months.

Simultaneously, Member States' interests are protected through a proposed provision regarding a minimum amount of time (3 months) that someone would have to work on the territory of a state, before they could claim unemployed benefits, upon becoming jobless, that take into account previous experience in another Member State. The Commission's proposal also clarifies that 'Member States may decide not to grant social benefits to mobile citizens which are economically inactive citizens – this means those who are not working nor actively looking for a job, and do not have the legal right of residence on their territory. Economically inactive citizens have a legal right of residence only when they have means of subsistence and comprehensive health coverage.'

In the case of posted workers, the proposal provides tighter administrative rules, which are meant to ensure that national authorities can adequately verify the social security status of said workers, and can cooperate with the authorities of the other Member States in order to address potentially unfair practices or abuse.

The Commission's proposal does not introduce any changes to the rules on export of child benefits, with the parent's host state (i.e. the state where the parent works) remaining responsible for paying the child allowances. Despite the fact that social benefits in general, and child benefits in particular,[32] were among the topics raised during the debate which preceded the UK's vote on its withdrawal from the European Union, it can be noticed that the EU Member States and its institutions continue to display support for the coordination of social security systems at an EU level, and for ensuring that all individuals exercising their freedom movement are protected as well as possible.

A provisional agreement, regarding the project, was reached between the Commission and the European Parliament in 2019, under the auspices of the Romanian Presidency of the Council, and the proposal continues to be negotiated between the EU's institutions.

5. Conclusions

The EU's dispositions on the coordination of social security systems constitute a guarantee that citizens of the Union's Member States, as well as other persons covered by its primary and secondary law, can exercise their freedom of movement while having their rights fully protected, and without risking a situation where the legislation of more than one state becomes applicable to them, creating an obligation to contribute to several social security systems. In short, the free movement of people could not function optimally without these EU rules in place. The Union's institutions also make sure to periodically reexamine and revise these rules, so that they accurately reflect the current social, political, and economical context, and offer the highest protection possible, at the time, to the persons falling subject to this legislation.

As long as the UK was a member of the EU, and willing to participate in measures concerning social policy matters, its citizens also enjoyed this level of protection, when working in another Member State, and, simultaneously, citizens from those states also enjoyed the same privileges (and were held by the same obligations) when working in the UK. Despite the UK's initial reluctance to transfer competences in this area to the supranational level, time proved that doing so was advantageous both to its citizens and to its economic operators, both categories benefiting from the clarity and the simplified procedures provided by the EU's

[32] According to the Commission's data, less than 1% of child benefits in the EU are exported from one Member State to another.

applicable legislation. This is confirmed by the fact that, even after having withdrawn from the Union, the UK agreed to prolong the effect of said legislation with regards to cross-border situations already in existence at the end of the transition period (31 December 2020). In addition, the UK agreed to annex the Protocol on Social Security Coordination to the Trade and Cooperation Agreement, a Protocol which largely duplicates EU legislation on the subject. For now, the UK's withdrawal from the Union has not brought any advantages to its citizens, in the area of social policy, and has instead led only to the loss of some benefits and advantages, considering the EU's Member States have the possibility, under the terms of the Protocol, to opt out of certain measures, while other possibilities guaranteed by the EU's Regulations are entirely absent from the Protocol's text. Moreover, if the EU's social policy legislation no longer applies to it, the UK must conclude separate agreements with the three EEA members who are not part of the EU, which gives those states the possibility to negotiate more advantageous terms for themselves, possibly to the detriment of UK citizens.

At a time when cross-border workers are more and more numerous, and such situations are likely to arise with a greater frequency than ever before, the loss of a mechanism that ensures a smooth and efficient coordination of social security systems does not bring any considerable advantages, suggesting that, at least on this specific issue, withdrawal from the European Union is a decisions brings clear disadvantages to the citizens and economic operators of the withdrawing state.

INTERNATIONAL AGREEMENTS CONCLUDED BY THE UK FOLLOWING ITS WITHDRAWAL FROM THE EU

Maria-Cristina SOLACOLU[*]

Abstract

Following the conclusion of the process of withdrawal from the European Union, the United Kingdom of Great Britain and Northern Ireland must now adopt new legislation to cover the areas that were previously regulated by EU law, which has now become inapplicable with regards to the British state. To this purpose, the UK must not only adopt internal acts, but also must conclude international agreements with a variety of actors, including the EU itself, its Member States (on matters that do not fall within the EU's competences), other international organisations, and third countries. This article shall analyse the EU's competence, as an international organisation with legal personality, to conclude agreements, the UK's international standing before its accession to the European Communities and the transfer of trade-related competences towards the supranational level, and the agreements concluded by the United Kingdom in order to regulate matters that, prior to Brexit, were governed either by the EU's secondary law, or by international agreements negotiated and concluded by the Union itself. In addition, the article shall look at potential international agreements that might be concluded by the UK in the future.

Keywords: *exclusive competences, shared competences, international treaties, trade agreements, bilateral agreements.*

1. Introduction

European Union law has several sources, both written and unwritten. Primary law consists of the EU's treaties[1] and the Charter of Fundamental Rights, whilst its secondary law[2] is comprised of the acts adopted by the Union's institutions as they exercise the competences they are attributed through the treaties. Unwritten sources of EU law include the case-law of the Court of Justice of the EU, and general principles of law. An important written source of EU law, distinct from both primary and secondary law, are the international agreements concluded by the EU with other international organisations and with states, in matters that fall within its exclusive or its shared competences. There is a wide array of subjects on which the EU can conclude international agreements,[3] with bilateral agreements on matters concerning trade occupying a prominent role.[4] As such, there is a growing number of areas where international relations between the EU's Member States and third countries are regulated through the EU, its agreements replacing those that the Member States had concluded in the past, or would have concluded with the third countries in question.

On 31 December 2020 the transition period agreed upon by the United Kingdom and the European Union came to an end, and the process of the UK's withdrawal from the EU was finalised. Consequently, from 1 January 2021 onwards EU law ceases to apply with regards to the UK, and the British state must work towards filling the legislative gap thus created. At a national level, this can be more easily achieved through the unilateral adoption of legislative acts by the competent authorities; in some cases, that is as simple as recreating the dispositions of a secondary source of EU law through internal laws, considering the framework for the implementation of those dispositions exists already. More complicated is the process of replacing the international agreements concluded by the EU in various matters, particularly those related to trade, where the Union is most active and has successfully concluded numerous agreements, using its economic and political power to negotiate advantageous terms for its Member States. As one of them, the United Kingdom was party to over a thousand such agreements - either bilateral or multilateral - with third countries; following its withdrawal from the EU, British authorities indicated that more than 150 agreements would have to be concluded in order to replace the arrangements existing before Brexit.

2. British international relations prior to the UK's accession to the European Communities

A defining aspect of the United Kingdom's foreign policy, until the second half of the 20th century, was that the British state prioritised its relationship with

[*] PhD Candidate, Faculty of Law, "Nicolae Titulescu" University of Bucharest (e-mail: maria.solacolu@gmail.com).

[1] These include the Treaty on the EU (TEU), the Treaty on the Functioning of the EU (TFEU), and the Treaty on the European Atomic Energy Community (Treaty on Euratom). Other sources of primary law are all amending and accession treaties, as well as the protocols annexed to any of the aforementioned treaties.

[2] Article 288 of the Treaty on the functioning of the European Union lists regulations, directives, and decisions as legal acts with binding force, and opinions and recommendations as acts without binding force.

[3] See https://eur-lex.europa.eu/browse/directories/inter-agree.html for a repertoire of the international agreements concluded by the EU.

the members of the Commonwealth above its economic and political connections to continental Europe.

World War II represented a massive economic effort for the UK, which had accrued between 1939-1945 a deficit of approximately 10 billion pounds, with its exports being reduced to just 30% of what they'd been prior to the war.[5] The USA agreed to grant the UK a loan, under the condition that the British state would sign the Bretton Woods agreement[6] and would introduce, by mid-1947, a convertibility system for the sterling pound. Despite this economic decline, the United Kingdom wanted to continue projecting a powerful image in the area of foreign policy. Consequently, the British developed an international strategy that focused on three main areas of influence – the Commonwealth, the transatlantic relationship, and the connection to Western Europe. The UK wanted to play an important part with regards to all three areas, and to represent a source of economic and political harmonisation between them,[7] but it openly prioritised the Commonwealth, due to the associated economic benefits, and the relationship with the USA over that with the Western European states, which the UK thought were on a downward economic trend. This positioning of the UK slowed down considerably its process of accession to the European Communities and economic redressing, after the war.

In the 1950s, the states that had suffered the most due to the war dedicated themselves to the process of reconstruction and cooperation, which led to the strengthening of the ties between then and to economic growth. Simultaneously, the fact that the Commonwealth was becoming less significant, from an economic point of view, together with the demands of the General Agreement on Tariffs and Trade (GATT),[8] which forbade the sort of preferential treatment that the Commonwealth countries had enjoyed until then, led to the decline of British wealth. In addition, these same states started looking towards the USA for military protection,[9] whilst the UK itself started relying more and more on it. The phrase 'special relationship' was coined at that time, by Winston Churchill, to describe the rapport between the UK and the USA, and was later used by those who believed that American interests should be given priority over Western European ones, a view even Harold Macmillan, British prime minister between 1957-1963, subscribed to. However, the USA was interested in helping Western Europe to rebuild after the war, and to recoup its economic losses, and also wanted to cooperate on a military level.[10] At the same time, the USA-UK relationship started experiencing economic and trade difficulties. The USA believed that the British should replace its preferential treatment of the Commonwealth with a reorientation towards the other European states. On the other hand, the UK believed that the Western European states would be an economic burden, its exports towards those states accounting for only 25% of the total British exports.[11]

As such, the UK refused to take part in the negotiations regarding the creation of the European Coal and Steel Community and, despite initially joining the discussion surrounding the establishing of the European Economic Community and of the European Atomic Energy Community, held at Val-Duchesse in 1956, the British state decided to withdraw before any decisions were made.[12] The UK's unwillingness to take part in the foundation of the European Communities was predicated on several factors: it was considered that joining the Communities would prioritise their members above the states of the Commonwealth, weakening the UK's relationship with the latter; a cooperation system was preferred by the British, compared to an integration one, where several competences would be transferred towards supranational institutions; the UK wanted to take part in a free trade area, not an international organisation with an economic profile and common policies).[13] However, the UK underestimated Western Europe's capacity to successfully achieve integration in several key areas, such as economy and trade. The founding members of the European Communities chose to create a customs union, with a view to encourage trade, economic growth, and regional stability, and that model quickly proved efficient and advantageous for the Member States.

The UK did participate, in 1960, in the foundation of the European Free Trade Association (EFTA), together with Austria, Denmark, Norway, Portugal, Sweden, and Switzerland. EFTA worked as a classical cooperation organisation, without a customs union and without a transfer of competence towards the supranational level. Whilst this meant that member states didn't have to adopt a common external tariff,

allowing the UK to continue practising preferential tariffs with regards to the Commonwealth states. However, despite – or because – of this lack of integration and imposition of common policies, the Association did not have the desired economic and political impact, and the UK continued declining, economically, throughout the 1960s. Simultaneously, the European Communities, supported by the USA, proved to be a success, experiencing a notable economic growth and an increased regional stability.

Due to the EFTA failing to represent a true competitor for the EEC, the national economic decline (including the pound's devaluement in 1961), as well as the fact that the Commonwealth states reorientated towards regional trade partners,[14] to the disadvantage of the UK, led to the British state having to adopt a new foreign policy. Consequently, the British prime minister at the time, Harold Macmillan, decided to prioritise the UK-EEC relationship, with a view to joining it and advancing British interests. Finally acceding to the European Communities, in 1973, stopped the economic decline the UK was experiencing, and meant that the British state was ready to transfer competences related to various matters, but trade in particular, towards the Communities' institutions, including competences regarding the conclusion of international agreements concerning said matters. As such, for more than four decades the UK's international trade relations were predominantly regulated through the European Economic Community, now the European Union.

3. The EU's competence regarding the signing of international treaties

The European Communities,[15] as international organisations with distinct legal personalities, have always had the possibility to negotiate and conclude international agreements in the areas where the Treaties conferred those competences upon them. Regarding this matter, the case-law of the Court of Justice has consistently reaffirmed the fact that once such an agreement enters into force, its provisions form an 'integral part' of EU law (previously Community law), and that Member States which fail to adopt the necessary measures for the implementation of said agreement are 'in violation of their obligations under EU law'.[16]

Following the entry into force of the Treaty of Lisbon,[17] important modifications were introduced with regards to the European Union's functioning and competences, including its role as an international actor. Article 47 of the Treaty on European Union[18] now states that the Union 'shall have legal personality', meaning that it 'enjoys the right to be represented and to receive the representatives of third states and organizations, the right to conclude treaties, the right to submit claims or to act before an international court or judge, the right to become party to international conventions, and the right to enjoy immunities. It is also subject to legal obligations and responsibility under international law'.[19] The right to conclude treaties and to become party to international conventions is now explicitly regulated in the Treaty on the Functioning of the European Union. Article 2 of the Treaty lays out the Union's exclusive competences – those competences where only it can legislate and adopt legally binding acts.[20] The second paragraph states that the EU 'shall also have exclusive competence for the conclusion of an international agreement when its conclusion is provided for in a legislative act of the Union or is necessary to enable the Union to exercise its internal competence, or in so far as its conclusion may affect common rules or alter their scope.' In addition to the agreements that the EU can conclude on matters falling within its exclusive competences, the organisation can also conclude mixed agreements, which have to be ratified by each of the Member States of the EU, in addition to the Union itself. These latter agreements are concluded in areas of shared competences, where the Member States can still legislate.

According to Article 216, the Union is empowered to 'conclude an agreement with one or more third countries or international organisations where the Treaties so provide or where the conclusion of an agreement is necessary in order to achieve, within the framework of the Union's policies, one of the objectives referred to in the Treaties, or is provided for in a legally binding Union act or is likely to affect common rules or alter their scope.' The Court of Justice of the EU's case-law is turned into primary law via the next paragraph, which provides that these agreements 'are binding upon the institutions of the Union and on its Member States.' Article 217 states that the EU is competent to 'conclude with one or more third countries or international organisations agreements establishing an association involving reciprocal rights

[20] The Member States can do so if they have been empowered by the Union or if it's necessary for the implementation of Union acts. These exclusive competences include the customs union; the establishing of competition rules necessary for the functioning of the internal market; monetary policy for euro area countries; the conservation of marine biological resources under the common fisheries policy; the common commercial policy.

and obligations, common action and special procedure.'

4. Agreements concluded by the UK in order to regulate its relationships with its international trading partners

Following the UK's departure from the European Union, the most important legislative gap, in terms of international relations, was left in the area of trade, a natural consequence of the fact that the EU, and the European Community before it, focused on international trade as a primary area of focus. The agreements concluded by the EU are estimated to have covered £117bn of UK exports annually, and included free trade agreements, such as the ones concluded with Canada or Japan, agreements covering more specific arrangements,[21] and mutual recognition agreements, covering conformity assessments conducted on products to ensure that they meet the necessary safety standards. All these agreements are part of the EU's legal order, and are legally binding for its Member States; consequently, a withdrawing state must compensate for their inapplicability.

The optimal solution, for the UK, is to conclude new agreements with all the international actors that it had previously worked with as a Member State of the European Union. In cases where it fails to do so, and an agreement is not reached with another country, the rules applicable to the relationship between the two states will be those established by the World Trade Organisation. The UK's position in the WTO was brought into question by the state's withdrawal from the EU, because its WTO commitments were tied to that of the EU,[22] and there was no precedent for an existing member of the WTO to implement a new, personal set of trading terms.[23] However, on 4 January 2021, following the end of the transition period for the UK's departure from the EU, a communication was put out, intended to clarify the UK's position in the WTO.[24] The communication drew attention to the fact that the British State was a founding party to the GATT 1947, and an original Member of the WTO, 'in its own right', and not just as a Member State of the EU. It specified that, for as long at the UK was a member of the European Union, 'the United Kingdom's concessions and commitments on goods and concessions and specific commitments in services were contained within the schedule of concessions and commitments on goods and schedule of concessions and specific commitments in services of the European Union.'

On the matter of goods, the communication noted that the UK had undertaken five rounds of negotiations and consultations with WTO members, between September 2019 and December 2020, with some of them finalising in an agreement or being 'in an advanced stage of discussion.' On the matter of services, it was noted that, following the end of the transition period, an already agreed-upon schedule of concessions and specific commitments would come into force.

On the matter of agreements negotiated and concluded after the establishment of the WTO, to which the UK participated as Member State of the EU and wasn't a party in its own right, the communication announced that, following the expiry of the transition period, the British state had endeavoured to accede to said agreements, or confirm 'its continued acceptance and implementation of these agreements.'

By early 2021, the UK had concluded continuity agreements with the most of the states with which it had previously traded as a Member State of the EU, and whilst not all agreements have been been fully implemented at a domestic level yet, 'bridging mechanisms' have been set in place in order to ensure continuity of trade until they are ratified.[25]

Some of the newly-concluded agreements of particular interest are those between the UK and Turkey,[26] and the UK and Japan,[27] respectively.

As Turkey is part of a customs union with EU, the British state could only conclude a continuity agreement with it once the appropriate measures were provided through the UK-EU Trade and Cooperation Agreement.[28] The UK-Turkey Free Trade Agreement includes provisions regarding agricultural products (tariff-rate quota based) and industrial goods, processed agricultural products, coal and stee. With regards to origin requirements, the products covered by the FTA are traded free of custom duties only when they originate in one of the states party to the FTA. Consequently, the UK and Turkey will only continue to enjoy tariff preferences for goods that originate in one

[21] An example would be the UK-Australia Wine Agreement, covering the matter of labelling requirements and recognition of winemaking techniques.

[22] The UK was already a member of the European Community when the WTO was founded.

of the two states. This is a departure from the model a customs union, and is bound to negatively affect the flow of trade.

Another agreement concluded in light of Brexit is the UK-Japan Comprehensive Economic Partnership Agreement (CEPA), which represents a step forward compared to the previously existing EU-Japan Economic Partnership Agreement (EPA), that ruled UK-Japan. Some of the areas where the UK and Japan made progress were financial services (a key domain for the UK) and digital trade (a domain with regards to which the UK has expressed a particular interested, in terms of possibile future agreements with other countries). In this latter area, the CEPA makes notable progress, compared to the EPA, providing improvements such as the prohibition of data localization requirements, better cross-border data flows, and better protection of personal data.

On the matter of goods, the UK-Japan CEPA sets out a timeframe of tariff reduction similar to the one existing under the EU-Japan EPA, with certain tariffs scheduled to be eliminated earlier than the EPA provided.

With regards to origin requirements, EU inputs are set for diagonal cumulation, meaning that they can be counted as originating in either the UK or Japan, and paperwork requirements have been reduced, compared to the EPA, thus easing trade between the two states.

5. Conclusions

With regards to the United Kingdom's relationship with other states and international organisations, Brexit's impact was strongest in the area of trade, due to the EU's focus on that specific domain, and the high level of integration achieved, to a point where matters such as the common commercial policy and the customs union are exclusive competences of the EU, and Member States can no longer legislate in those matters, or conclude international agreements.

The UK's main trading partners have been, for decades, the other Member States of the European Union, and the British state's continued trade with them has, for the time being, been ensured through the conclusion of the EU-UK Trade and Cooperation Agreement, but the UK continues to have a considerable task ahead of it in the form of concluding agreements with third states which are not members of the EU, and which all seek to further their own position, and gain as many advantages as possible. Outside of the EU, without having the backing power of a large, prosperous international organisation focused on trade and the well-being of its citizens, the UK is set to negotiate these new agreementes from a weakened position, which is set to result (and has done so already, in some cases) in less beneficial provisions for the British state, or even in a lack of agreement, meaning a reversion to WTO rules. As such, it is difficult to identify, for now, the profit and better trading conditions that the UK claimed it would achieve once it was able to negotiate and conclude agreements in its own right, as opposed to a Member State of the EU.

MILITATING IN FAVOR OF INTERNATIONAL HUMAN RIGHTS LAW (EVEN IN TIMES OF COVID-19 PANDEMIC)

Laura-Cristiana SPĂTARU-NEGURĂ*

Abstract

Human rights have always been a concern for humanity. Delimitating the protection of human rights from other branches of law is necessary due to the similarity of the legal relations that are the object of certain different legal branches. Through the efforts supported globally by the means of the international jurisdictions, the global justice system can be more efficient.

Although questions are constantly being raised about the fragmentation of law which would threaten the complex legal system created by the subjects of international law, we consider, however, that, at the level of human rights, we are witnessing a process of convergence, characterized by coherence and unity.

The purpose of this study is to offer to the interested legal professionals and to the domestic authorities the information to adequately protect the right of each individual to respect for his or her rights under the international conventions.

The study also tackles certain aspects regarding the application of human rights during COVID-19 pandemic, without alleging to be an extensive analysis of the subject.

Keywords: *COVID-19, human rights, international public law, individual, pandemic, protection, States.*

1. Introductive Remarks

International human rights law represents a discipline that is studied in law schools in Romania since 1990. Because it presents an increased interest for the theoreticians and practitioners of law, numerous publications on the subject have appeared in the Romanian legal literature.

We underline that human rights have always been a concern for humanity, considering that, in their special capacity of human beings, they hold *certain* rights.

The most prolific period for the recognition and protection of human rights was the post-Second World War period when, among others, the United Nations General Assembly adopted the Universal Declaration of Human Rights (on 16 December 1948), and the Council of Europe signed the Convention for the Protection of Human Rights and Fundamental Freedoms[1] (on 4 November 1950).

Given the atrocities of the post-Second World War period, it was emphasized more and more that these rights were inherent to human nature. From a diachronic analysis of the legal systems across the world, it is obvious that human rights do not have an immutable content, evolving with the international relations and established values – not even the fundamental rights (*i.e.* human rights that are essential to the human beings - *e.g.*, the right to life, the right to liberty). Thus, these fundamental rights may evolve or differ from one historical stage to another or from one state to another.

Human rights have also evolved due to globalization, which has left its mark on them, both positively and negatively.

Having in view the current situation in the world, when our lifes have been upset in the last year because of the COVID-19 crisis, we consider important to tackle the problem of human rights respect during this period.

2. Protection of Human Rights Across The Time And Across The World

Delimitating the protection of human rights from other branches of law is necessary due to the similarity of the legal relations that constitute the object of some different legal branches. This is important for the correct application of the law because of the juridical qualification of the legal relationship. We must keep in mind that, in order to properly juridically qualify, the specialized enforcement body will perform a number of preliminary operations (*i.e.* nomination of the legal norm, verification of its authenticity and its legal force, determination of the exact content of the legal norm[2]).

Detaching the international protection of human rights from the public international law branch is obvious (there is a relationship from individual to general between them), this new discipline being based on legal norms of public international law that define and protect fundamental human rights.

The principle of fundamental human rights is placed at the top of the pyramid of law principles. This is obvious even from the purposes of the United Nations mentioned in Article 1 of the UN Charter:

* Lecturer, PhD., Faculty of Law, "Nicolae Titulescu" University of Bucharest (e-mail: negura_laura@yahoo.com).

[2] Please see Nicolae Popa coordinator, Elena Anghel, Cornelia Beatrice Gabriela Ene-Dinu, Laura-Cristiana Spataru-Negura, *Teoria generala a dreptului. Caiet de seminar*, 3rd edition, revised and enlarged, C.H. Beck Publishing House, Bucharest, 2017, pp. 194-195.

"The purposes of the United Nations are:

(...) 3. To achieve international cooperation in solving international problems of an economic, social, cultural, or humanitarian character, and in **promoting and encouraging respect for human rights and for fundamental freedoms for all** [emphasis added], without any distinction as to race, sex, language, or religion"[3].

At the regional level, in the European Union[4], in Article 6 para. (3) of the Treaty on European Union, it is specified the fact that:

"**Fundamental rights** [emphasis added], as guaranteed by the European Convention for the Protection of Human Rights and Fundamental Freedoms and as they result from the constitutional traditions common to the Member States, shall constitute general principles of the Union's law"[5].

Therefore, all human beings, regardless of race, sex, nationality, and social position, must enjoy the respect for their rights. This statement is obvious from the nature of the legal norms of *jus cogens* that characterize the field of human rights and which determine their application everywhere and all of them, from which no derogations are allowed.

Please note that one obstacle to the universality of human rights is the specificity of each people to have its own language, its own traditions, and values, therefore the cultural diversity. Another obstacle could be the different economic and historical developments of each people. Because of these obstacles, the slogan of the European Union is so well expressed - *Unity in Diversity*, which recognizes the diversity of the European identity.

One of the basic rules of human rights is their interdependence. Even if there are several categories of human rights, they can no longer be seen singularly, independently some of others.

Given the obvious importance of respecting human rights, beyond national borders, states must cooperate at the international level. One of the most obvious forms of cooperation in this regard is the cooperation of states to repress the most serious international crimes (*e.g.*, crimes against peace, war crimes) - cooperation that also led to the creation of some special criminal jurisdictions (*e.g.*, International Criminal Tribunal for the Former Yugoslavia, International Criminal Court). From this perspective, it is important to emphasize that due to the common interest of the community to protect fundamental human rights at the national level, the matter of human rights is no longer the reserved domain of competence of the states, but subject to international cooperation.

Having in mind all the information mentioned above, it is obvious that the main source of international protection of human rights is represented by the international treaties. Besides the international treaties (*i.e.* conventions binding on the contracting states), there are also declarations or resolutions, which have political and possibly moral value. Some documents, although they are not international conventions, have acquired a binding legal value over time (*e.g.*, the Universal Declaration of Human Rights).

The subjects of legal relations are, on the one hand, people as beneficiaries of the fundamental rights enshrined in the international instruments, and, on the other hand, the states represented by its institutions that must comply with the fundamental human rights.

The evolution of human rights has been a huge step for the international community entailing an important violation of the state's sovereignty, which in the past had the right to life and death over its people.

Although the states are sovereign and independent, the flagrant violation of human rights could and should attract the international responsibility of the states, according to the international instruments they have executed. The international community is very concerned about promoting a firm attitude on the part of states regarding the respect for rights and fundamental freedoms of the people.

We strongly believe that there is an interdependent relationship between democracy and human rights because the will of the people matters in a democratic regime, while in a totalitarian system the recognition of human rights is only formal. The recognition of human rights entails the existence of a free state, democratic, subject to the principle of separation of powers, and at the same time to the principle of legality.

Please bear in mind that the European Court of Human Rights "has established in such a crystal-clear manner this link between democracy and human rights. That is why the Court remains particularly vigilant when the foundations of democracy are imperilled, including any attempt at undermining the independence of judges."[6].

Thus, based on the international treaties that proclaim the protection of fundamental human rights, concluded by the states, the states must guarantee the protected rights for all individuals found under their

jurisdiction, no matter they are their own citizens, foreign citizens, or stateless persons.

Regarding the international consecration and guarantee of the rights, we emphasize that the international human rights law requires a minimum standard of protection, from which, internally, states cannot derogate downwards, but only upwards, being able to ensure greater protection of human rights[7].

This principle also supposes that states are entrusted with the protection of human rights, the domestic courts (together with the executive and with the legislative powers) being required to respect and guarantee individual human rights. If the state authorities fail to protect these rights, the international protection then intervenes (*e.g.*, the European Court of Human Rights, the Inter-American Court of Human Rights).

Thus, the international structure intervenes only *in subsidiary*, after all domestic remedies have been exhausted.

Depending on the domestic law system of each state (monist or dualist), the norm of international law contained in a convention can or cannot be directly applicable in the internal legal order of a state. Thus, in a monist system, the legal norm of international law is not directly applicable, meanwhile in a dualistic system, it is directly applicable, creating directly rights and obligations for the benefit of individuals. However, in order for the legal rule to be applied directly in the internal order of a state, it must have a precise and complete content, without the need for creating documents in application.

The specificity of this international public branch is that, with the adoption of international conventions in this field, individuals have acquired the capacity to be holders of rights and obligations at the international level, being able to be a party to certain jurisdictional and non-jurisdictional proceedings to defend their own rights. Within these proceedings, individuals who consider that their own rights have been infringed, can bring a claim directly to the competent international bodies, if the admissibility criteria are met.

Thus, in the context of legal relations under international human rights law, we meet several subjects of law: states, individuals, and international government organizations. States can have both active and passive procedural capacity within specialized international jurisdictions, in relation to other states, in connection with their citizens, being responsible internationally for their abuses.

Effective promotion and guarantee of human rights are achieved based on the intergovernmental cooperation carried out within international, regional, subregional, and national organizations, as well as with the help of different non-governmental organizations. The media also plays an important role.

Through the United Nations or through the regional mechanism for protection (*e.g.* European, Inter-American, African, Asian), human rights law becomes more effective each day, protecting the individuals that come under its protection.

After carrying out a comparative analysis of the regional protection mechanisms of human rights, we note that the European system of protection within the Council of Europe (*i.e.* the European Court of Human Rights[8]) is the most advanced mechanism in the world. This is also the reason why other regional systems have inspired from it. In addition, this view is supported by the European Union's concern for accession of the Union to the Convention for the Protection of Human Rights and Fundamental Freedoms (hereinafter "*the Convention*").

The efficiency of the European Court of Human Rights is due to its jurisdictional character, as opposed to other protection mechanisms within the United Nations which have a political character system based on state reports presented to committees. It is worth mentioning that the Convention's rights and freedoms have a *horizontal effect*, being directly binding on domestic public authorities[9] and indirectly on private persons or entities. The contracting states have the obligation to protect the victims, otherwise their legal responsibility may be invoked[10].

Through the efforts supported globally by the international jurisdictions, the global justice system can be even more efficient.

Although questions are constantly being raised about the fragmentation of law which would threaten the complex legal system created by the subjects of international law, we consider, however, that, at the level of human rights, we are witnessing a process of convergence, characterized by coherence and unity.

Today, the unprecedented proliferation of the international organizations and jurisdictions acting in the domain of human rights law, determines a trend of their hyperspecialization, which should not be seen as having a negative connotation, because it creates a

culture of human rights ... and, implicitly, a *human rights education*, which is essential for every person.

3. Human Rights Protection During COVID-19 Pandemic

Nowadays, since we are facing new challenges brought by the COVID-19 pandemic, we are concerned about the impact of this coronavirus on human rights and the rule of law.

Invoking the preservation of life, the national authorities took exceptional measures such as nationwide lockdowns in order to slower the transmission of the COVID-19 among people. Some individuals may feel like these extensive lockdowns "*can inadvertently affect people's livelihoods and security, their access to health care (not only for COVID-19), to food, water and sanitation, work, education – as well as to leisure*"[11].

In 2020, suddenly, people from all over the world, irrespective the continent they were or their status as citizen or migrant, children or adult, woman or man, young or old, poor or rich, healthy or sick, all were "trapped" in their houses, being powerless in face of the coronavirus. The states and the international organisations had an obligation to make sure that everyone is protected through the proportionate measures taken, by minimising the potential negative consequences.

We agree that three individual rights were, worldwide, the most exposed during this pandemic.

Firstly, *the right to life and the duty to protect life* were invoked by all states when dealing with the measures to be taken during the pandemic. The duty to protect life should be, for sure, the primary focus of all State officials.

Secondly, *the right to health and access to health care* represents a right inherent to the right of life. Each individual has the right to enjoy "*the highest attainable standard of health conducing to living a life in dignity*"[12]. The medical system of many countries (*e.g.* Belgium[13], Brasil[14], Germany[15], Italy[16], Japan[17], Portugal[18], Romania[19], Spain[20], US[21]) has faced and is still facing a high risk of collapse both for coronavirus patients and pacients without coronavirus. The huge caseloads, the increasing number of infections, the impossibility to free beds in due time in the intensive care units, the extreme pressure characterise each medical system nowadays. The hospitals are treating patients beyond their installed capacity, tragedies[22] being able to happen each day everywhere.

Combating the pandemic through preventing the spread of the virus should be thought as a set of measures applicable to everyone, without any discrimination (because the virus does not discriminate!), being recommended to be taken in both public and private sector health care.

Thirdly, *the freedom of movement* has suffered many restrictions especially in case of lockdowns, in the name of controlling the spread of the virus. We agree that "[*t*]*his measure is a practical and necessary method to stop virus transmission, prevent health-care services becoming overwhelmed, and thus save lives*"[23]. Considering that the freedom of movement is crucial in order to enjoy other individual rights (*e.g.* the right to health and access to healthcare).

We salute the concern of the responsible international leaders regarding the respect of human rights during this pandemic.

For example, the Secretary General of the Council of Europe[24], Mrs Marija Pejčinović Burić, has issued on 7 April 2020, a toolkit for the European governments on respecting human rights, democracy, and the rule of law, toolkit that has been sent to all 47 Council of Europe member states[25].

The restrictive measures adopted by the states worldwide must be in accordance with the provisions of the international treaties and conventions adopted by the respective states. For instance, for the contracting states to the Convention, the measures taken in response to COVID-19 pandemic should not violate the provisions of the Convention.

[24] Regional organisation established in 1949 to rebuild peace in Europe after the Second World War.

[25] Please see the Information Document SG/Ing(2020)11, *Respecting Democracy, Rule of Law and Human Rights in the Framework of the COVID-19 Sanitary Crisis. A Toolkit for Member States*, issued by the Council of Europe, available at https://rm.coe.int/sg-inf-2020-11-respecting-democracy-rule-of-law-and-human-rights-in-th/16809e1f40.

Two types of justification for these measures under the Convention can be distinguished:

i. on the ground of the Convention provisions, based on the protection of health [*i.e.* Article 5 para. (1) letter e), Article 8 para. (2), Article 9 para. (2), Article 10 para. (2), Article 11 para. (2), Article 2 para. (3) of the Protocol no. 4 to the Convention];

ii. on the ground of Article 15 of the Convention (derogation in time of emergency) for measures of exceptional nature – this is an important feature foreseen in the Convention allowing the continued application of the Convention. We underline that certain Convention rights no not allow any derogation under Article 15 of the Convention[26]. The severity of COVID-19 pandemic justified the restrictions imposed by the contracting states on public health grounds. It is important to underline that the formal adoption of the state of emergency or any other similar regime in the contracting state invoking Article 15 is not conditional upon. It is, however, necessary that the domestic law has a specific basis for the derogation "*in order to protect against arbitrariness and must be strictly necessary to fighting against the public emergency*"[27]. Moreover, please have in mind that "[*w*]*hile derogations have been accepted by the Court to justify some exceptions to the Convention standards, they can never justify any action that goes against the paramount Convention requirements of lawfulness and proportionality*."[28].

Please note that in the cases brought in front of the European Court of Human Rights, the judges will assess each derogation in part. In this respect states have a large margin of appreciation: "[i]*t falls in the first place to each Contracting State, with its responsibility for 'the life of [its] nation', to determine whether that life is threatened by a 'public emergency' and, if so, how far it is necessary to go in attempting to overcome the emergency. By reason of their direct and continuous contact with the pressing needs of the moment, the national authorities are in principle in a better position than the international judge to decide both on the presence of such an emergency and on the nature and scope of derogations necessary to avert it. In this matter Article 15 § 1 (...) leaves those authorities a wide margin of appreciation*."[29].

Moreover, please also note that the United Nations High Commissioner for Human Rights analysed the impact of COVID-19 pandemic of the enjoyment of human rights around the world, including good practices and areas of concern[30].

Thus, despite the restrictions and challenges of the present unprecedented sanitary crisis, in 2020 and 2021, it seems that the international organizations (and the international jurisdictions) had been able to continue their activities with regards to the human rights respect.

4. Concluding Remarks

It is worth underlining that "human rights concern the universal identity of the human being and are underlying on the principle of equality of all human beings"[31], therefore all individuals have the right to complain in front of competent international jurisdictions, if the domestic authorities[32], natural or legal persons violate their individual rights under the Convention in certain conditions.

It is undisputed that human rights are constantly evolving, and that these rights can and will be respected only to the extent that they are well known by the individuals and by the authorities.

The evolutive interpretation of the international instruments should be the key for the evolution of human rights across the world. For instance, we bear in mind the words of the President of the European Court of Human Rights, Mr Linos-Alexandre Sicilianos, who, at the opening of the 2020 judicial year, emphasised that "[t]his interpretative methodology is clearly in line with the wishes of the founding fathers. They had a perception of human rights which was not static or frozen in time but dynamic and future-oriented. The generic terms used by the Convention, together with its indeterminate duration, suggest that the parties wished the text to be interpreted and applied in a manner that reflects contemporary developments. This viewpoint is backed up by the Preamble to the Convention, which refers to not only the "maintenance" but also the "further realisation of human rights and fundamental freedoms", in other words their development. This

[26] I.e. Article 2 of the Convention – the right to life, except in the context of lawful acts during the war; Article 3 of the Convention – the prohibition of torture and inhuman or degrading treatment or punishment; Article 4 para. (1) of the Convention – the prohibition of slavery and servitude; Article 7 of the Convention – no punishment without law; Protocols nos. 6 and 13 – abolishment of death penalty; Article 4 of the Protocol no. 7 - the right not to be tried or punished twice.

[32] Please note that the domestic authorities can breach individual rights trough juridical acts, material and juridical facts, material and technical operations or political acts; please see, in this respect, Marta-Claudia Cliza, Constantin-Claudiu Ulariu, Drept administrativ, revised edition according to the amendments of the Administrative Code, Pro Universitaria Publishing House, Bucharest, 2020, p. 12, and Marta Claudia Cliza, *Revocation of administrative act*, in the Proceedings of CKS eBook, 2012, Pro Universitaria Publishing House, Bucharest, 2012, p. 627.

evolutive interpretation method has allowed the text of the Convention to be adapted to "present-day conditions", without any need for formal amendments to the treaty"[33].

Over the time, a sustained concern of the international organizations can be seen to adopt common rules in all areas, especially in the field of human rights. The subjects of international law are in a permanent search for solutions.

We strongly believe that, as the promotion of human rights becomes more effective, a true human rights education will be created that will lead to fewer human rights violations.

I personally do not want human rights education to be just a slogan awaiting a universal definition, reason for why we encourage each lawmaker to consider that "the human being is the central area of interest"[34] for it.

The importance of knowing and promoting human rights is more than paramount in these times when speedy decisions taken by the national authorities could be interpreted as having adverse consequences. And human rights are essential in dealing with the pandemic response; they cannot be neglected. This is why "[*w*]*hen we recover, we must be better than we were before*", especially that "*the crisis has revealed weaknesses that human rights can help to fix*"[35].

But did we learn our lessons during the COVID-19 pandemic? Are we capable of becoming better than we were before in respecting human rights? Did we adopt, within our available resources, the fiscal, financial and economic measures to mitigate the negative impact of COVID-19 on our population?

A call to action for human rights[36] is absolutely necessary especially in times of pandemic, because it has showed not only the "*disparities between people's enjoyment of their human rights*"[37].

DRONES, PRIVACY AND DATA PROTECTION

Andrei-Alexandru STOICA*

Abstract

Data protection in the robotics and drone age must be included for an overhaul as technology evolves and offers new ways that could make current laws obsolete.

This paper focuses on showcasing weak points in data protection laws that are generally seen in states such as the ones that comprise the European Union or in the United States of America, which could also be seen in other states, while also analyzing some solutions that have been implemented. To identify the key issues, the paper will take into account major incidents that took place regarding breaches of data privacy, while also trying to distinguish how international law is applicable.

Drones come equipped with different types of equipment that must comply with different sets of rules and regulations, but can hardware alone prevent breaches of data protection or should operators and manufacturers be liable for these breaches? Furthermore, the issue at hand should also be covered with regards to a growing segment of drones that come equipped with artificial intelligence.

Notwithstanding, the paper will analyze if counter-drone systems could help mitigate data protection breaches or rather if they generate an extra issue that lawmakers and manufacturers have to handle.

Keywords: *drones, privacy, international law, European law, comparative analysis.*

1. Introduction

The notion of a drone is a more colocvial termn that describes unmanned vehicles. This termn is widely used to describe any type of unmanned vehicle but the most common types are those outfitted with rotary engines on either quad-propeller based platforms or fixed wings.

This paper will focus mostly on the aerial type of unmmaned vehicles since these are the most commercially available for the general population.

The author acknowledges that camera and audio drones do exist that are based on a wheeled or continuous track, but those are used only in a controlled environment and are yet to be fully accessible to the general population and governmental agencies.

As such, a "*drone*" as a termn is used to describe any aircraft without an on-board pilot. But that is an oversimplification that masks the incredible range in shapes, sizes and capabilities that characterize today's unmanned aircraft.

Another aspect towards identifying a drone as an unmanned vehicle is that it's different than a model airplane/vehicle and a toy.

For this reason, models are largely flown within visual line of sight and in the presence of an operator who watches and maintains control of the airplane during flight. That alone is enough to place model airplanes cleanly outside the boundaries of "*drone*."[1]

The drones that currently have the biggest impact on privacy are the cam-drones since they can record audio, videos and can store both locally and on the cloud.

2. The usage of drones and privacy concerns

Drones or unmanned vehicles have seen their usage grow ever since the 20th Century, when unmanned aerial vehicles were used by the U.S. Army for training purposes and as an experimental straight line rocket[2]. One of the closest equivalent of today's drones would have been the Goliath tracked mine[3] , a small wired controlled tracked vehicle capable of delivering explosives from a long range, but while its idea was revolutionary, the fact that it had a wired connection to the operator meant that it could be easily cut off from commands and rendered inoperable.

Later on, drones got equipped with cameras for spying and got used extensively during the Cold War period to spy on nuclear programs[4]. These drones became a norm in surveillance technology that allowed armies to have eyes on objectives without putting a human in harm's way.

The spy drones were often used against known targets and potential targets, meaning that the unmanned drones were used over the territory of foreign states and captured footage of key locations (military, economy or research). Unfortunately, programs that used drones, such as the US D-21[5] drone information that was declassified with the Freedom of

[5] See note 3.

Information Act[6], were terminated very early after a few runs because the drones were hard to recover once launched and could fall into a foreign state's influence.

As an answer to the constant threat of foreign spying, the Treaty on Open Skies[7] was adopted to give all parties a direct and legal way of gathering information about military forces and activities with an open surveillance so that it will lower tensions and possibility of military escalation.

Moving towards a civilian usage of unmanned vehicles, drones have begun being a frequent sighting at special events and public gatherings, being used mainly by event organizers, activists or law enforcement agencies.

What this paper will focus on is how privacy is being handled by civilian drones and whether drones equipped with cameras must be handled in the same way as CCTV. Most states inside the Union and outside of it have already accepted that they must comply with the European Union's General Data Protection Regulation[8] for how they handle activities on the internet, but seeing as how the European Union will implement Regulation 947/2019[9] (which deals with the rules and procedures for the use of unmanned aircraft by pilots and operators, defining categories of use and a series of requirements for their use) and Regulation 945/2019[10] (which deals with the requirements of unmanned aircraft systems and the requirements to be met by designers, manufacturers, importers and distributors in order to obtain conformity markings and monitor the market for safety and interest in the competitiveness of it), manufacturers and users must learn to comply with how they handle with how data is being gathered and used by and from the drone.

While these may act as a code of conduit for European states, the latter Regulation is addressed towards third party states who would want to bring drones inside an E.U. state and could contribute towards a global mechanism to protect privacy and data. The most common regulations that cam-drones must follow are those that are similar to surveillance cameras.

The issues that arises from usage of drones can lead to violations of privacy and data protection laws. For example, the U.K. Royal Mail started in December 2020 a delivery program with drones towards remote regions[11] that will expand over time in similar fashion to the U.S. counter-part delivery system where a waiver was allowed by the national administration for drone delivery systems over houses[12].

The aforementioned situations can be seen as a blessing in disguise, mainly because it will allow faster deliveries, but will also raise the issue of how the information that the drone is gathering directly or indirectly when it will fly over a person or building.

Most current drone flights are handled by militaries, law enforcement agencies, and border agencies and have started being used in energy and agriculture infrastructure, but the former fall under a legal waiver where the drones can be handled under certain scenarios, while the latter fall under scenarios where they are used in remote regions where privacy and data protection are not a big issue.

However, one of the fundamental human rights found in the Universal Declaration of Human Rights[13] reads that "no one shall be subjected to arbitrary interference with his privacy, family, home or correspondence, nor to attacks upon his honour and reputation. Everyone has the right to the protection of the law against such interference or attacks." As such, drone flights must be handled in such a way that any intrusion can be blocked or prevented.

Seeing as how the United States of America has had a lot of issues with aerial surveillance and because its law system allows the judicial precedence, it will offer an interesting insight in how drones and their operators can fail to uphold other people's rights.

In the judicial practice of the U.S.A., the most resonating cases regarding privacy breaches in different situations that required or not a warrant are *California vs. Ciraolo*[14], *Katz vs. U.S.*[15] and *Smith vs. Maryland*[16].

To put the cases into context, the Ciraolo case is the most definitive since it involved the use of a police helicopter to do an aerial observation of a person's backyard without warrant, while the images had been used to successfully convict the person. The ruling was later appealed and it was found that the images were taken without a warrant and as such were in violation of the U.S. Constitution.

The ruling stated[17]:"On the record here, respondent's expectation of privacy from all observations of his backyard was unreasonable. That the backyard and its crop were within the "curtilage" of respondent's home did not itself bar all police observation. The mere fact that an individual has taken measures to restrict some views of his activities does

not preclude an officer's observation from a public vantage point where he has a right to be and which renders the activities clearly visible. The police observations here took place within public navigable airspace, in a physically nonintrusive manner.

The police were able to observe the plants readily discernible to the naked eye as marijuana, and it was irrelevant that the observation from the airplane was directed at identifying the plants and that the officers were trained to recognize marijuana. Any member of the public flying in this airspace who cared to glance down could have seen everything that the officers observed. The Fourth Amendment simply does not require police traveling in the public airways at 1,000 feet to obtain a warrant in order to observe what is visible to the naked eye."

The other two cases argued that a warrant is also required when analyzing and intercepting a phone call in public space and inside a person's home. This roughly translates to a requirement that a drone operator has to not use the drone to spy and record people without their consent.

Similar to the Ciraolo case, *Florida vs. Riley*[18] featured a manned aerial vehicle that was used for aerial observation of a greenhouse, while maintaining around 120 meters altitude. The Court established that it was no violation of his property and privacy laws since the greenhouse was constructed in such a way as to promote the idea that it was trying to maintain intimacy. Such a case argues that a drone operator must take into account that processing information gathered by the drone must be censored upon public release, but only if the object or person that was filmed or photographed was even indirectly not doing something to protect the privacy of himself or the property.

In another landmark case, *Dow Chemical vs. U.S.*[19] it was argued that aerial photographs using a "*standard precision aerial mapping camera*" to conduct an investigation under the Clean Air Act can be handled without a warrant if it's in navigable space. The Court also argues that even though there are fewer concerns about privacy in the context of an industrial plant than with respect to a home, intrusion by certain technology unavailable to the public may be prohibited by the US Constitution.

All of these cases highlight that privacy is a very important aspect when flying over someone's property, mostly because the person who may feel that his or her rights are being encroached can even resort to using armed force against the drone. In the case of *Boggs vs. Mereideth*[20] a person shot his neighbors drone that was midair because he felt that the drone was violating his houses airspace.

The case was dismissed on jurisdictional claims, seeing as how the airspace is being handled by the Federal Aviation Administration and it was seen as an anticipated defense derived from federal law.

While the case offers a lot of space for theory crafting, the federal government issued in December 2020 a new Rule[21] entitled Remote ID and it states that*: "Under the final rule, all UA required to register must remotely identify, and operators have three options (described below) to satisfy this requirement. For UA weighing 0.55 lbs or less, remote identification is only required if the UA is operated under rules that require registration, such as part 107".* This new addendum to the existing legislative actions have brought a new ability for operators, that is the ability to fly over people and moving vehicles varies depending on the level of risk a small drone operation presents to people on the ground, both during the day and night.

The final rule requires that small drone operators have their remote pilot certificate and identification in their physical possession when operating, ready to present to authorities if needed. This rule also expands the class of authorities who may request these forms from a remote pilot. The final rule replaces the requirement to complete a recurrent test every 24 calendar months with the requirement to complete updated recurrent training that includes operating at night in identified subject areas.

As for privacy fears, the federal body acknowledges that privacy issues could be a concern with operations over people; however, the proposed performance-based rule focuses on the risk of injury involved with operations over people and does not address privacy issues. They also stated people over whom a small unmanned aircraft flies should receive advance warning, both at public events and in closed or restricted-access sites.

This new ability offered to registered operators could lead to unwanted spying of public events or even illicit third party monitoring of police investigations, to name a few. Sadly, the F.A.A. emphasizes that privacy issues are outside the focus and scope of the rule, however, this rule does not relieve the operator from complying with other laws or regulations that are applicable to the purposes for which the operator is using the small UAS. Drone manufacturers will have 18 months from the moment the Rule was brought to public attention to begin producing drones with remote identification.

The new federal rule brings more issues than it solves, since home owners will try and use different anti-drone technology, which could potentially affect its controls or GPS and crash said drone, causing damage or even harm.

[20] Debra Cassens Weiss, Does property owner have the right to shoot down hobbyist's hovering drone?, AMERICAN BAR ASSOCIATION JOURNAL, 14.01.2016.
[21] Part 89 issued by the F.A.A., 28.12.2020. The executive summary can be accessed at the following: https://www.faa.gov/news/media/attachments/RemoteID_Executive_Summary.pdf.

The general reaction (regardless of legal system of the state) is that attacking a drone is the equivalent of attacking someone's property, but this is also available for the drone operator as well since he is liable of civil and/or criminal charges (for example trespassing). Compliance with the data protection requires, among other things, that you only gather and use footage fairly and lawfully.

The best solution is to notify the law enforcement agencies, while states must begin drafting no-drone-zones and adopt special law enforcement policies to counter illicit drone actions.

In Europe, the situation is fairly more straightforward, because member states of the European Union and the Council of Europe must comply with Regulation 679/2016 and Treaty no. 108[22], while also have to follow the European Convention on Human Rights and its understanding of private life and property.

In the view of the European Court of Human Rights, GPS surveillance is by its very nature to be distinguished from other methods of visual or acoustical surveillance which are, as a rule, more susceptible of interfering with a person's right to respect for private life, because they disclose more information on a person's conduct, opinions or feelings. Having regard to the principles established in its case-law, it nevertheless finds the above-mentioned factors sufficient to conclude that the applicant's observation via GPS, in the circumstances, and the processing and use of the data obtained thereby in the manner described above amounted to an interference with his private life[23].

The European Union later adopted Directive 2016/680[24] for protecting individuals with regard to the processing of their personal data by police and criminal justice authorities, and on the free movement of such data, and it establishes data protection principles applicable to the processing of personal data in the area of justice, such as fair and lawful processing, proportionality, accuracy, limited conservation time, and responsibility.

Thus, the European legislation is applicable to police drones as well, meaning that justice authorities can have drone footage challenged and even annulled if it was gathered in an illicit manner, while also having to store, handle and delete certain data that was gathered with drones. The same could be applied to situations in other states as well.

However, seeing as how drones are unmanned vehicles but are treated as manned and operated vehicles, it should be noted that they should comply with aviation rules guaranteeing the total aviation safety system and consequently they must be approved by a competent authority, the operator shall have a valid RPAS operator certificate, the remote pilot must hold a valid license[25].

The future of drones was set-up through the Riga Declaration on Remotely Piloted Aircraft[26] with a progressive-risk-based task for regulation of drones, meaning that public acceptance of drones has to be handled with key aspects such as public authorities implementing ways to handle illicit drone handling, geospoofing, cyber security and implementing no-fly zones. To design such a legal and administrative system, the F.A.A. and E.A.S.A. have established a somewhat common regulation[27], both of them having fairly similar rules regarding weight limitations, flight periods and locations, and most importantly, airworthiness certifications for both the drone and its pilot.

To allow them to be operated, drones are normally combined with applications such as cameras or video-cameras (as the remote pilot has to see or detect what is in front of the drone to avoid a collision). They might also record the images, through software to process the video images, which might have further applications. For example, the U.S.A. has developed a mobile phone app entitled B4UFLY[28] that informs the user of no-fly zones (permanent or temporal) and even has a legislation option, so that the user can learn the rules on the go.

Other developers-manufacturers, such as DJI[29], have preinstalled a safety software inside their drones to warn the user of flying over sensitive locations and that in certain areas the user has to upload a special clearance permit or even pass an examination.

This has also become a norm for operators since the U.S.A. have implemented Remote ID, with the E.U. and U.K. implementing Drone Remote Identification Protocol (DRIP)[30] that will enable confidential handling of private information and all information designated by neither cognizant authority nor the information owner as public. It will also, enable selective strong encryption of private data in motion in such a manner that only authorized actors can recover it. If transport is via IP, then encryption must be end-to-end, at or above the IP layer, while notwithstanding it enables selective strong encryption of private data at

rest in such a manner that only authorized actors can recover it.

While the U.S.A. has case laws regarding flight of manned vehicles over properties and its repercussions on privacy, Europe has the benefit of having a better legal safeguard mechanism in the scope of the European Court of Justice and the European Court of Human Rights. This means that under the privacy and private life guarantees offered by these mechanisms.

As such, the E.C.J. case *Rynes vs. Úřad pro ochranu osobních údajů*[31] retained that the application of the right to privacy and data protection to private and public spaces, which implies that EU law applies regardless of the location of the person contesting the dronerelated interference. It also stated in a preliminary ruling related to CCTV that the "*household exception*" does not apply when the personal data is gathered in public spaces.

Also, should such data be shared trough a social network or published on the internet, the exception would not be applicable and the full guarantees provided by the Directive would apply. Furthermore, it is likely that the capturing and processing of personal data carried out by drones in public spaces would not be covered by the "household exemption" and hence such processing would be subject to data protection law.

However, the most common exception to data protection and privacy of drones will remain that of intelligence services, who fall outside of the E.U. competences, including when these imply the collection of data through drones.

Another issue, that legislation does not address, is the fact due to their size, drones can collect data without being recognized and therefore individuals who are being watched or monitored are not aware of this and can not only collect personal data such as videos with or without sound but also transfer the gathered data at the same time as the subject is being watched.

A more dystopian view on the usage of drones was brought up as a possible data protection risk that is the so called ”*profiling*” of personal data[32]. This can roughly mean that a drone can be used for marketing purposes, identifying customers based on their previous purchases.

Moreover, selling companies could use the sold drone, loaded with video-cameras, GPS and face recognition for tracking and identifying their existing and potential customers based on the cars they drive and their addresses, in order to perform targeted advertising. This information could later be sold, traded or transferred in a similar matter to how Google Adware or Facebook uses its information gathered with their algorithms.

Article 8 of the European Convention of Human Rights includes the notion of personal data, this being outlined in the case *S. and Marper v. U.K.*[33] personal data is linked with the right to respect for private and family life are guaranteed by article 8 of the Convention.

As such, states must ensure that personal data is not easily accessible by unauthorized third parties. This means that states must ensure that a household exception can be applied, when private individuals perform personal and family life related activities and that if the data collected is then shared or uploaded on online platforms via the internet, this exception cannot be applied and the rules provided by data protection laws have to be followed.

In the case of drones, operators must be aware that they are not covered by the household exception when they use the drone in public spaces for leisure or hobby activities. If such activities are performed on private property then the household exception is applicable, but it has limitations depending on where it is used or at what altitude. The maximum allowed altitude for leisure/hobby flights is around 400 feet or approximately 120 meters[34].

Furthermore, based on the G.D.P.R., drones must be developed and manufactured with data protection as a core design choice, meaning that manufacturers develop the hardware and software, but the operator is responsible for the way the drone was used.

These specifications that fall under the guidelines for manufacturers, are meant to provide a minimum standard of data protection, which would make the drone industry fall in line with the new regulation and therefore respect privacy and data protection rights of individuals, at least from hardware and software perspective.

The second aspect that drones may have already preinstalled, is that data protection as a default setting thanks to legislative guidelines, but as it stands it fails from a real time sharing aspect, meaning that streaming services from outside of the state where the drone is being handled may require a third party data protection mechanism for protection.

Notwithstanding, in public places, individual privacy is similar to the concept of non-privacy because by entering a public place and remaining there, there is an implication that one is aware they will be seen or recognized, and that one’s behavior may be scrutinized by anyone in that public sphere who may draw inferences from the individual’s behavior[35], meaning that drone operators must apply the *„reasonable expectation of privacy”*[36] where private life

considerations may arise once a systematic or permanent record of material from the public domain comes into existence.

The most important aspect of data protection introduced by the European Union G.D.P.R. is forbidding automated decision making. Under article 22 of the G.D.P.R.[37], consent is needed when decisions are solely automated and have a legal or similarly significant effect on people and if such automated decision making is not authorized by law. This means that information gathered or generated by drones must be filtered by the operator in such a way that it cannot be shared without consent or without a human review and validation.

In 2019 the U.K. police used an automated facial recognition software in public space and caused an uproar because of it was not clear who can be placed on the watch list, nor was it clear that there are any criteria for determining where the cameras could be deployed[38]. The system was challenged in the case of *R vs. CC South Wales*[39] where the Court ruled that *"too much discretion is currently left to individual police officers"* and the Court also held that the police did not sufficiently investigate if the software in use exhibited race or gender bias.

Such a case argues how easily drones can be placed in public space and cause a privacy problem in which the operator could never be found to be held responsible.

However, the Amsterdam Drone Declaration[40] established a focus on local needs and initiatives and a push towards integrated smart mobility and fair access to all dimensions of public space.

Smart mobility under data protection must be understood as a set of guidelines that any drone operator should know and abide. For example, the U.K.'s independent authority for data protection, the ICO[41], outlined that operators should let others know before they start recording, and also should keep the data in a safe space inside the drone.

While these outlines are general and beneficial to any type of drone operator, the fact that drones have a tendency to malfunction due to hardware or software issues or have accidents due to human errors leads to another possible type of data protection breach.

Civilian drone incidents have been documented by mass-media[42] where drones have crashed on the White House lawn or collided with a small manned aircraft at Quebec's airport. These incidents raised issues where the operator should have been prosecuted, but not all cases can be resolved since not operators are licensed or have their drones registered.

These cases can also lead to the drones being recovered by third parties who may extract the information stored on the drone, information that was not yet filtered by the operator and as such could spell a breach in a person or a company's private data. This also works both ways, since[43] other incidents such as trafficking drugs or terrorism conducted with drones could be intercepted in a way to deter potential high risk crimes.

As such, modern problems require modern solutions.

3. Possible solutions for protecting data and privacy

Solutions vary based on how local administrations and governmental agencies are able to handle and intervene to prevent drones from breaching property and privacy laws.

The most common and useful solution is to declare zone as no-fly zones and as such limit drone access to the designated areas and sanction those who do not commit to respecting said regulations.

For example, the United Kingdom[44] established no-fly zones designated as *danger areas* where it is often used for activities such as fighter pilot training, live ammunition training or weapons and systems testing (including GPS jamming exercises). Other zones are designated as *prohibited* or *restricted* and are clearly established by the air administrative authority. What is important is that person who are interested can request that their property or business area be declared as unsafe spaces for drone flights.

---

[37] Article 22 contents:"1. The data subject shall have the right not to be subject to a decision based solely on automated processing, including profiling, which produces legal effects concerning him or her or similarly significantly affects him or her.
2. Paragraph 1 shall not apply if the decision:
(a) is necessary for entering into, or performance of, a contract between the data subject and a data controller;
(b) is authorised by Union or Member State law to which the controller is subject and which also lays down suitable measures to safeguard the data subject's rights and freedoms and legitimate interests;
(c) or is based on the data subject's explicit consent.
3. In the cases referred to in points (a) and (c) of paragraph 2, the data controller shall implement suitable measures to safeguard the data subject's rights and freedoms and legitimate interests, at least the right to obtain human intervention on the part of the controller, to express his or her point of view and to contest the decision.
4. Decisions referred to in paragraph 2 shall not be based on special categories of personal data referred to in Article 9(1), unless point (a) or (g) of Article 9(2) applies and suitable measures to safeguard the data subject's rights and freedoms and legitimate interests are in place."

[44] Applying UK Air Navigation Order CAP393, no fly zones as of 01.01.2021: https://www.noflydrones.co.uk/.

Usually, the air space regulations prohibit drones from flying close to airports, large cities, sensitive industrial sites, nuclear facilities, military bases, prisons and natural reserves.

Administrations can temporary declare no-fly zones[45] while a special event or holiday is being played out. For example, France declared that the area designated for the *Tour de France* be considered a no-fly zone during the event.

In Europe, Eurocontrol[46] allows drone users who are interested in operating their unmanned aerial vehicle on the territory of another state to check the guidelines for safety and no-fly zones via an online tool that showcases 19 states who have submitted updated information in this regard.

From an international point of view, third parties have developed internet tools[47] that follow the I.C.A.O. guidelines, the U.S. F.A.A. guidelines and other states aerial recommendations. The tools allow interested parties to check free use zones and prohibited zones in almost any state around the world, but they must also check with the state they want to fly in or transit with the drone for temporary modifications or drone type bans.

Other solutions to prevent privacy invasions may come in the form of anti-drone devices or systems.

Broadly speaking, counter-drone systems are either fixed on the ground, mobile on a ground vehicle, hand-held by a single person, or mounted on another drone.

Finding a drone by either radar or radio frequencies can be done and such devices are accessible to the general population, but other types of anti-drone systems may be out of reach or illegal. Such devices may include GPS spoofers, anti-drone ammunition, radio jamming, lasers, microwave rays or even kamikaze drones.

For the most part, counter-drone systems are expensive, out of reach of almost all people, most businesses, and some governments. Securing the skies against the possibility of a threat must be weighed against the cost of acquiring and then using the system and as such care must be taken to make sure that the drones targeted pose a threat and are not just errant hobbyists unaware that they are piloting their toy into contested skies[48].

Also, counter-drone systems may cause other collateral damage to authorized users, meaning that for example a radio jammer or GPS spoofing technique could unintentionally interrupt communications of other small airplanes or helicopters or even other drones. This could be interpreted as a criminal conduct regarding laws that prohibits willful or malicious interference to communications.

In the U.S.A., the aviation authority stated in 2016[49] that: „Unauthorized UAS detection and counter measure deployments can create a host of problems, such as electromagnetic and Radio Frequency (RF) interference affecting safety of flight and air traffic management issues. Additionally, current law may impose barriers to the evaluation and deployment of certain unmanned aircraft detection and mitigation technical capabilities by most federal agencies, as well as state and local entities and private individuals. There are a number of federal laws to consider, including those that prohibit destruction or endangerment of aircraft and others that restrict or prohibit electronic surveillance, including the collection, recording or decoding of signaling information and the interception of electronic communications content.”.

Later, the federal aviation authority from the U.S. did a follow-up study in 2018[50] concluded that drone detection systems should be developed so they do not adversely impact or interfere with safe airport operations, air traffic control and other air navigation services, or the safe and efficient operation of the national air service. Also, the study showed that the costs of having a permanent counter-drone system is very high and could become obsolete by the time it’s installed and operational.

Most legislative actions in the U.S. will however be reviewed after 31st of December 2022 when the modernization of law enforcement agencies and military structures will probably end and it will allow a more commercialized defense mechanism to be accessible to the general population[51].

A more current solution is being handled in India with the *Digital Sky*[52] platform that will allow only those drones that comply with the no-fly and no-take-off protocols. These protocols have to be implemented software-wise by the manufacturers and will allow drones to operate in areas demarcated as green and yellow zones, permitting them to fly over most of India.

This means that for green and yellow zones, operators will get automatic clearance from the platform and for red demarcated zones, the security agencies will receive specific clearance request. All data and information is uploaded to the Digital Sky platform so that there is no scope for arguments to the contrary at a later stage.

The platform will also permit state agencies to identify and intercept the drone and to bring the alleged

offender to justice can be left to the discretion of the judiciary.

Analyzing how the counter-drone strategy is being handled in most states where drones play a big part in the economy, it can be concluded that currently only law enforcement agencies (to some extent) and military operators are allowed to use anti-drone systems.

For example, the U.S.A. has adopted a Memorandum Regarding Department Activities to Protect Certain Facilities or Assets from Unmanned Aircraft and Unmanned Aircraft Systems[53]. Under these guidelines agencies will adopt protective measures necessary to mitigate credible threats from unmanned aircraft or unmanned aircraft systems to the safety or security of covered facilities or assets.

Agencies who are interested in obtaining clearance to use counter-drone systems then a request will be issued to the Department of Justice. Other states can lodge requests for their own events on U.S. soil.

The memorandum also addresses privacy concerns and any clearances will only be given after consultation with the official for privacy. A component may only intercept, acquire, access, maintain, use, or disseminate communications in a manner consistent with privacy laws and cannot be issued if its sole purpose is the monitoring activities or the lawful exercise of rights.

A component should consider and be sensitive at all times to the potential impact protective measures may have on legitimate activity by unmanned aircraft and unmanned aircraft systems, including systems operated by the press. State agencies components may maintain records of communications to or from unmanned aircraft or unmanned aircraft systems intercepted or acquired under authority of data protection acts.

If a drone is caught using a counter-drone measure, then that drone is seized alongside any other systems that it was being connected to. The agencies involved can issue warnings, disrupt controls of operators and even resort to the use of force to stop the drone.

Other noteworthy defense mechanisms, which have been used to protect from unwanted drone activities were deployed in Netherlands and the U.K.[54], were in the form of hawks that could be used to hunt drones since they act in a similar fashion to other small birds, but having a hawk at home could be cumbersome for most.

4. Conclusions

Privacy and data protection concerns will remain as long as drones can be easily accessible on the market and also as long as these drones are manufactured without supervision from either a state angency or legal limits established by the state.

Having a control on the quality of drones allows a slew of other mitigating facts that can ensure that privacy and data protection fall in order and will require less intervention from military agencies or law enforcement.

Having mandatory registrations for any audio-camera drones is another way to ensure protection. This is why offering flyer-IDs[55] regardless of age is a way to protect privacy since it allows a person to have a fundamental basic on the rules of flying and data protection.

Also, adding a time valability to this ID is a futureproofing measure as to ensure that the person is always learning about legislative and administrative measures adopted.

Seeing as how basic drone flying laws are common between states, having the operator and/or flyer ID valid in other states is a measure that could develop trust in drone communities.

Basic rules for drone operators should include that if the drone is fitted with a camera or listening device, then the operator must respect other people's privacy whenever the vehicle is being used. Consent must be obtained whenever another person or property is being filmed or photographed, and if that cannot be obtained, then data laws must be applied to how the information will be distributed.

Furthermore, the operator must be clearly seen when he is out with the drone as to be easily be identified both as the operator and the drone owner. The operator must store images safely and delete anything you don't need. If the recorded images are for commercial use, than it will need to meet further specific requirements as a data controller.

While U.S. Supreme Court actions allow persons to secure their properties regarding their airspace columns, other states did not take into account updating property laws in regards to drones, and as such should update their legislative measures on how a person can obtain an administrative measure from a local or national public authority in regards to protecting their privacy and property from unwanted drone flights.

As more and more drone transportations will be green-lighted so will airspace routes be formed over private properties.

Also, legislators should craft simple, duration-based surveillance legislation that will limit the aggregate amount of time the government may surveil a specific individual. Such legislation can address the potential harm of persistent surveillance, a harm that is capable of being committed by manned and unmanned aircraft.

The most lackluster legal measure is that of responsibility of operators and enforcement measures.

[53] U.S. Attorney General, 13.04.2020.
[54] Ben Sampson, Engineers flight test hawks for drone captures, Aerospacetestinginternational.com, 10.07.2019.
[55] For refrence U.K testing for flyer ID regulation as of December 2020: https://register-drones.caa.co.uk/drone-code/getting-flyer-id.

Law enforcement angecies lack the required equipment to protect people from unwanted drone harassment.

The E.U. have more recently been conducting tests of anti-drone weapons that can be used by specialized divisions of law enforcement agencies[56], while having the European airspace agencie's approval. A similar approach had begun in U.K. with the forming of a specialized team inside the national police force that can investigate illicit use of drones[57].

Other measures should require that that technology such as geofencing and auto-redaction, may make aerial surveillance by drones more protective of privacy than human surveillance[58].

From another perspective, drone privacy violations could also translate into new types of witness evidence, but this will also translate to new procedural law provisions that have to permit such feats.

Privacy concerns were raised and had to be handled in how agencies conducted air monitoring during the Covid-19 Pandemic. For example, in the U.S.A. the F.A.A. regulations regarding drone flights do not cover data protection beyond the general rule that it must be protected[5960]. As such, data protection agencies have to adopt regulatory norms for drones and have to enforce these norms.

One such legislative action that could be applied to other states is the Californian Paparazzi Law amendment to their Civil Code[61]. This law declares that drones cannot fly above residences and invade privacy and was adopted in 2014 as a reaction to journalists invading the private life of celebrities while they were in a private environment but with walled gardens.

The journalists often employed drones to take pictures or record videos of said celebrities and this sparked a lot of outcry. The law is applicable to anyone, and can benefit from protection regardless of fame, and will protect the property, regardless of open spaces on the property.

Other mechanics that could protect the data and privacy could be represented by a killswitch built inside the drone, which could delete its storage contents if it crashed, get highjacked or sold, as to ensure that the third party does not access to sensitive information or data.

Regardless of any type of data protection measure, nothing can be enforced without proper equipment and specialized personel in the administrative authorities.

The best way to protect data and privacy can be two-fold: either create guidelines for manufacturers to insert special safety and killswitch related protocols inside the drone, thus shifting the responsibility towards the operator who has to use said protocols to their furthest extent, or the second paradigm, allowing the market to be outfitted with anti-drone technology and equipping state agencies with the required devices to both counter drones and to counter-counter-drone technologies.

Regardless of choice, a state has to adopt legislation for abuses from any side.

CASE C-648/18 HIDROELECTRICA, CJEU – A PREDICTABLE DECISION

Ionela-Alina ZORZOANĂ*

Abstract

This study proposes a post factum analysis (or rather a final conclusion) of the solution ruled in Case C-648 Hidroelectrica, a case that came before the Court of Justice of the European Union[1], as a preliminary question referred to by the Bucharest Tribunal , as a national court[2]. The case was of real interest in the context in which the preliminary question concerned the interpretation given by a national authority to a rule of domestic law, and not to a rule of European law. Unfortunately, the solution ruled by the CJEU, predictable as of the time of establishing the oral phase in the case, was no surprise, representing a faithful copy of Hidroelectrica's request and adhered to without any reservation by the European Commission.

This study shall be a critical analysis (perhaps too critical in certain places) of the reasoning of the CJEU judgment versus the point of view expressed by the European Commission and the conclusions of the Advocate General of the Court, true defenders of the operator in this case.

Last but not least, an important part shall be devoted to the previous practice of the CJEU in terms of the inadmissibility of the preliminary questions and a sudden change thereof, which leaves deep question marks as to the status of the Court, independent otherwise (or at least so it should be). In the final part, before the conclusions, we shall also refer to the applicability of the principle of proportionality, so much invoked in the CJEU Judgment.

Keywords: *Treaty on the Functioning of the European Union, Preliminary Question, Court of Justice of the European Union, Case-law, European Commission, National Court, National Interest, Advocate General, Proportionality.*

1. WHY SHOULD CJEU HAD TO DISMISS THE PRELIMINARY QUESTION AS INADMISSIBLE, BUT DID NOT

In accordance with the provisions of art. 19 lit. b) of the Treaty on European Union (TEU) "*The Court of Justice of the European Union shall rule in accordance with the treaties: on a preliminary ruling, on the request of national courts, on the* ***interpretation of Union law*** *or the validity of deeds adopted by institutions*".

At the same time, according to the provisions of art. 267 (1) (a) of the Treaty on the Functioning of the European Union (TFEU)[3] " *The Court of Justice of the European Union shall have jurisdiction to give preliminary rulings concerning:* ***the interpretation of Treaties***". The provisions of par. (2) according to which " *Where such a question is raised before any court or tribunal of a Member State, that court or tribunal may, if it considers that a decision on the question is necessary to enable it to give judgement, request the Court to give a ruling thereon*" are of interest in this scientific approach. Thus, it **follows** from those provisions that the referral to the CJEU by a national court **exclusively concerns the interpretation of the Treaties and not the national law**, as has been the case here.

The Bucharest Tribunal, as a national court, precisely approved the question in the form of Hidroelectrica " ***is art. 35 of the TFEU compatible with an interpretation*** *of Article 23 paragraph (1) and Art. 28 letter c) of the Law on Electricity and Natural Gas no. 123/2012, according to which Romanian electricity producers are bound to trade the entire amount of electricity produced, exclusively by a competitive, centralized market in Romania, under the conditions in which there is the possibility of exporting energy, but not directly, but through trading companies*?." However, the question remains as to why the national court has granted the application for a preliminary ruling, in the context in which, on the one hand, the interpretation of national law is the exclusive attribute of that court, the CJEU having no powers in such regard, and on the other hand, there are several situation from the practice of the courts which felt bound to refer the matter to the CJEU, but the cases were solved by admitting the inadmissibility or even withdrawing the applications by their holders.[4]

It can be assessed that the request of Hidroelectrica and of the national court was not for the interpretation of art. 35 of the TFEU (incident in this case) but **whether the interpretation given by the Regulatory Authority** to a legal provision of domestic law, *i.e.* art. 23 par. (1) and art. 28 lit. c) of Law no. 123/2012 is **in accordance with the Treaty**. We would

Case C-648/18 Hidroelectrica*, published in Legal Studies and Researches (p. 747-757), Universul Juridic Publishing House – Volume of the International Conference of PhD Students in Law, 12th Edition, Timișoara 2020.

[3] https://eur-lex.europa.eu/legal-content/RO/TXT/?uri=celex:12016E267

[4] For a documented study on this issue, https://www.juridice.ro/377100/exista-sanctiuni-pentru-incalcarea-obligatiei-instantei-nationale-de-efectuare-a-unei-trimiteri-preliminare-la-curtea-de-justitie.html.

say inadmissible and the Romanian Authority and Government also claimed inadmissible, but the surprise came from the CJEU which not only established the admissibility of the question, but also organized an oral debate with specific questions regarding the technical and regulatory part of the case.

And above all, even admitting the error of the court of first instance, the CJEU also ruled expressly on *the interpretation* of *ANRE* as not being compliant with the treaty.

2. WHY HAS THE *INADMISSIBILITY* BECOME *ADMISSIBLE* IN CASE C-648/2018 - the overwhelming practice of the CJEU denied for a private interest?

The practice of the CJEU has been constant in time in terms of the inadmissibility of requests for preliminary questions, which did not comply with the mandatory requirements of art. 267 TFEU.

Thus, in Case C-368/12, concerning a reference for a preliminary ruling from the Court of Appeal in Nantes, the CJEU rejected by the Ordinance from 18 April 2013 the application as ***manifestly inadmissible***[5].

Concurrently, by the Decision Miasto Łowicz and Prokurator Generalny (related Cases C-558/18 and C-563/18) ruled on 26 March 2020, the Grand Chamber of the Court declared ***inadmissible*** the applications of preliminary decision filed by the Regional Tribunal from Łódź (Poland) and the Regional Tribunal from Warsaw (Poland). By those two applications, the referring courts essentially asked the Court to rule on the issue of the compliance of the new Polish rules on the disciplinary regime of judges with the right of litigants to effective judicial protection, guaranteed in art. 19 par. (1) second indent TEU. Further to confirming its jurisdiction to interpret the art. 19 par. (1) second indent TEU, the Court ruled on the admissibility of the two applications and stated that, according to art. 267 TFEU, the requested preliminary decision has to be "necessary" so as to enable the referring court to "rule a decision". The Court found first that *the main disputes are not related to the EU law and in particular with art. 19 par. (1) second indent TEU to which the preliminary questions refer*. The Court also specified that an answer to such questions did not appear to be such as to enable the referring courts to provide an interpretation of EU law enabling them to resolve procedural issues of national law before they could rule thereon, if necessary, on the merits of the main disputes. As a consequence, the Court has held that it is not apparent from the referral decisions that there would a link between the provision of EU law at issue in the preliminary questions and the main disputes, which should make the requested interpretation necessary, so that the referring courts should be able to rule in the concerned decisions, by applying the conclusions deriving from such an interpretation. Therefore, *the Court considered that the referred questions were of a general nature, so that the applications for a preliminary decision have to be declared inadmissible*[6].

The practice of the CJEU regarding the declaration as inadmissible of the applications for preliminary questions that did not meet the requirements of art. 267 TFEU is overwhelming, but the space assigned to the study does not allow us and we want at this time only to point out the change in case-law of the Court and to show our curiosity about its preservation for future cases.

The question in the title of the chapter was obviously rhetorical and shall remain without a concrete answer, but it indirectly results from the motivation of the CJEU. The Court practically resumed the allegations of the operator in the application for a preliminary question to the national court (which, curiously, did not make any written observations in Case C-648), but its private interest was fully defended both by the Commission and the Advocate General[7].

3. CASE C-648/18. PRELIMINARY QUESTION - the subsequent development of hearing, the conclusions of the Advocate General and the "long-awaited" solution

We start the analysis in this chapter, somehow in the opposite direction, from the solution ruled by the CJEU, then returning to the almost copy-paste link between it and the allegations of the Commission, but also such of the Advocate General.

The decision of the CJEU from 19 September 2020 was that "*Articles 35 and 36 TFEU have to be interpreted so that national legislation which, as interpreted by the authority in charge with its enforcement, requires from national electricity producers to offer the entire amount of electricity available on platforms managed by the sole operator of the national electricity market designated for electricity transaction services is a measure having an equivalent effect to a quantitative restriction on exports, which is not likely to be justified on grounds of public security related to the security of energy supply, insofar as such legislation is not proportionate to the pursued objective*"[8].

[6] https://curia.europa.eu/jcms/upload/docs/application/pdf/2020-03/cp200035ro.pdf.

[7] http://curia.europa.eu/juris/document/document.jsf;jsessionid=5FF7BE7970659AE1338E90BB9933C8A2?text=&docid=224896&pageIndex=0&doclang=ro&mode=lst&dir=&occ=first&part=1&cid=16224220.

[8] http://curia.europa.eu/juris/document/document.jsf?text=&docid=231184&pageIndex=0&doclang=ro&mode=lst&dir=&occ= first&part=1&cid=15329167.

Three essential issues result from the operative part of the Decision:

- It refers (again) to the national legislation in the interpretation of the regulatory authority, so not to the conformity of the domestic legislation with art. 35 and 36 TFEU;
- Trading platforms are operated by the sole operator of the national market, but the situation has been previously notified and authorized by the European Commission[9];
- The measure is not likely to be justified on grounds of security of energy supply, if such a measure is not proportionate[10] to the pursued objective.

What we understand (and not really) is the fact that the European court declared the application of a preliminary question admissible, the Court referring in the operative part to the interpretation of the authority, not to the compliance of the articles of national legislation with such of TFEU, practically ignoring the provisions of art. 267 of the Treaty.

In a second issue, although the European Commission has been notified about the existence of a single operator managing the trading platforms, why does the CJEU put such in the same sentence as a measure having an effect equivalent to a quantitative restriction on exports?

And thirdly, the same Court claims that such a situation is not likely to be justified by security of energy supply, as such legislation *is not proportionate to the pursued scope*.

In the written observations but also in the oral conclusions, the European Commission mentioned that the provisions of art. 23 and art. 28 of Law no. 123/2012 represent an export restriction within the meaning of art. 35 TFEU, unless it proves that *there is a public interest* and the national legislation complies with *the principle of proportionality*, *i.e.* the means used are such as to ensure that the pursued objectives are accomplished and that they do not go beyond what is necessary to achieve such objectives[11]. Although it seems more than obvious that ensuring the electricity supply of the Romanian population is a public interest, general, which must be protected, the final consumer having no other leverage in this regard, the Court adhered to the Commission's conclusions. In the same sense were also the conclusions of the Advocate General in his conclusions[12], *that the scope (or one of the scopes) of the legislative measure is to condition the export of electricity upon the prior satisfaction of domestic consumption. Thus, the restriction imposed on domestic producers as regards access to the external market is clearly recognized, as they are prohibited, as indicated above, from direct export. Even if it is applied indiscriminately to all economic operators producing electricity, it affects the exit of products from the market of the exporting Member State more than the marketing of products on the national market of the concerned Member State, precisely because it gives priority to supply on the market and in this respect favours it to the detriment of foreign trade.* The approach of the Advocate General of the Court, who although he recognizes the public interest invoked by the Romanian state in his plea, nevertheless considers that foreign trade prevails, is interesting. We believe that for each individual state, the national interest must prevail, as any other interpretation will deprive of content the much-discussed principle of proportionality and all measures in which an EU state will take measures to protect the national interest shall be automatically interpreted as a violation of such principle.

Compared to the positions expressed in Case C-648, taken *ad litteram* by the Court in the Decision from 17 September 2020, we consider that it was given in violation of the very principles of the Treaty that should guide its activity.

4. THE MIRAGE OF THE PROPORTIONALITY PRINCIPLE - proportionate and not really

The idea behind this chapter is part of the operative part of the Decision - "*it is not likely to be justified on grounds of public security related to the security of energy supply, insofar as such legislation is not proportionate to the pursued objective".*

In a generic way, this principle so invoked by the CJEU (and not only) refers to the fact that any measure ordered by a state should be proportionate to the pursued scope. The principle of proportionality can be probably best illustrated by the phrase of the illustrious professor of administrative law Fritz Fleiner, who noticed that "*the police should not shoot at sparrows with cannons*" [13].

The principle of proportionality is defined in Article 5 par. (1) and (4) of the Treaty on European Union *"(1) The limits of Union competences are governed by the principle of conferral. The use of Union competences is governed by the principles of subsidiarity and proportionality (...) 4. Under the principle of proportionality, the content and form of Union action, shall not exceed what is necessary to achieve the objectives of the Treaties. The institutions*

[9] On 14 October 2015, the Ministry of Energy, Small and Medium Enterprises and Business Environment notified the European Commission that, according to Law no. 123/2012, there is only one operator of the electricity market at national level.

[10] We shall detail in the next chapter issues related to the principle of proportionality and its implications, with relevant issues from the case-law of the CJEU.

[11] See also Case C-158/04 Alfa Vita Vassilopoulos and Carrefour Marinopoulos [2006] ECR I 8135, paragraph 22.

[12] http://curia.europa.eu/juris/document/document.jsf?text=&docid=224896&pageIndex=0&doclang=RO&mode=lst&dir=&occ= first& part=1&cid=4594961.

[13] In a rough translation, "*The police should not fire cannons at scarecrows*." Quote by Păşcui Adrian-Gabriel in http://avocatpascui.ro/wp-content/uploads/2018/12/Principiul-proportionalitatii-1-1.pdf.

of the Union shall apply the principle of proportionality as laid down in the Protocol on the application of the principles of subsidiarity and proportionality." The criteria for its application are set out in the Protocol (no. 2) on the application of the principles of subsidiarity and proportionality, annexed to the Treaties. According to this rule, EU actions *must be limited to what is necessary to achieve the objectives comprised in the Treaties*. In other words, the content and form of the actions must be compatible with the pursued objective.

The practice of CJEU is constant in regard to the application and applicability of such principle. For example, in the case *Hermann Schräder HS Kraftfutter GmbH* versus *Hauptzollamt Gronau*[14] the plaintiff complained that the application of the cereal production tax also infringed the principle of proportionality. The Court dismissed the plaintiff's request, establishing the content of the concept of proportionality. Thus, in the opinion of the CJEU, the principle of proportionality is a general one indispensable to Community law, by virtue of which the measures adopted by the relevant authorities are to be appropriate and necessary to fulfil the legitimate objectives, as well as less costly in case of an option to choose more appropriate measures; *the taxes imposed further to adopting the concerned measures should not be disproportionate to the aims pursued* (par. 21 of the decision). Interesting Decision, similar to the present case, only that it differs in conclusions.

In another case, in which the national court[15] referred a preliminary question to the CJEU "*whether the principle of proportionality precludes the beneficiary from being denied the right to deduct VAT pro rata to the amount of the overall discount granted by the intra-Community supplier, in the event that the local supplier (member of the same group) has ceased its economic activity and can no longer reduce its tax base on delivery by issuing an invoice with its own VAT code, in view of reimbursement of the difference of additionally collected VAT*", the Court ruled that "*article 185 of the VAT Directive must be interpreted as meaning that a regularization of an initial VAT deduction is required in regard to a taxable person established in a Member State, even when the supplier of the said taxable person has ceased its activities in that Member State and due to such reason the concerned supplier can no longer request the reimbursement of a part of the VAT it paid* ". Why did I choose this case? In order to emphasize the discrepancy of rigor between the case which is the subject matter of this study and the one we referred to, both aiming at a reference to the principle of proportionality. If in Case C-684/18 the Court explained in detail the ruled solution in the concerned case, the Court itself merely stated that the measure has to be proportionate, without explaining what this means. And finally, who decides whether or not it is proportional in relation to the scope explained by the Romanian authorities, *i.e.* to ensure the supply of electricity to the population.

5. IN LIEU OF CONCLUSIONS. CJEU SOLUTION – WHAT'S NEXT?

The decision of the CJEU becomes binding and has to be precisely implemented, recognizing the principle of the prevalence and binding nature of its decisions. And no matter how much we debate them, they must be respected as such. What does this mean for the final consumer in Romania? That Hidroelectrica has no longer any obligation to supply the population with electricity, but can export the entire amount of energy. And if (no) such a situation ***is not a reason for security of electricity supply*** (?!) It was stated by the European Commission and the CJEU.

And in lieu of conclusions, we mention the statement of the representative of the concerned operator, after the ruling of the solution "*I consider that a very important step has been taken towards normality and a reality for which Hidroelectrica has been fighting for many years and that it wants final – the free energy market. Liberalization eliminates the gaps between the prices on the markets in Romania and such in other Member States, the main beneficiary of this correct price being, in the end, the customer"*[16].

Maybe from other EU member states, because as the representative of the European Commission declared in the oral debates - *Why should not all EU states benefit from the cheap energy produced in Romania?*.

And the final consumer in Romania? ... Who takes care of him?

EVOLUTION AND PERSPECTIVES OF CONSTITUTIONAL JUSTICE IN ROMANIA

Marius ANDREESCU[*]
Andra PURAN[**]

Abstract

The supremacy of Constitution is a reality also due to the role of the Constitutional Court, as defined in article 142 paragraph (1) of the Constitution. The Constitutional Court's powers contribute essentially to the achievement of the lawful state and, therefore, a historical analysis of the evolution of this important constitutional institution is likely to highlight the legitimacy of the constitutionality control of the laws in Romania, but also its perspectives.

In our analysis, we are debating for the concept of constitutional justice, regarded from a historical point of view, which includes the main attribution of a constitutional court, namely that of controlling the constitutionality of the laws. From this perspective, we point out the main evolution moments of the constitutionality control of the laws in Romania, analyzing briefly the particularities of the constitutional regulations during the evolution of constitutional justice in our country. At the same time, we emphasize the contemporary features of the control of constitutionality of the laws in Romania, and we argue that guaranteeing the supremacy of the Constitution, through constitutionality control, must be seen in the broad sense and in terms of the attributions of the courts in this field.

We believe that the role of the Constitutional Court must be amplified by new powers, including through future revisions of the Fundamental Law, as this creates new guarantees regarding the reality of the principle of separation and balance of powers in the state, and obviously the guaranteeing of the supremacy of the Basic Law.

Keywords: *Constitutional justice, control of constitutionality of the laws, historical stages of the control of constitutionality of the laws in Romania, contemporary features of constitutional justice, new proposals for ferenda law*.

1. Introduction

The supremacy of Constitution would remain a mere theoretical issue if there were no adequate safeguards. Undoubtedly, the constitutional justice and its particular form, the control of constitutionality of laws, represent the main guarantee of the supremacy of Constitution, as expressly stipulated in the Fundamental Law of Romania.

Professor Ion Deleanu appreciated that "the constitutional justice can be considered, in addition to many others, a paradigm of this century."[1] The birth and evolution of constitutional justice is determined by a number of factors to which the doctrine refers, among which we mention: the man, as a citizen, becomes a cardinal axiological reference of the civil and political society, while the fundamental rights and freedoms only represent a simple theoretical discourse, but a normative reality; it is done a reconsideration of democracy in the sense that the protection of the minority becomes a major requirement of the lawful state and, at the same time, a counterpart to the principle of majority; "the parliamentary sovereignty" is subjected to the supremacy of the law and, in particular, to Constitution, therefore the law is no longer an infallible act of Parliament, yet is it conditioned by the norms and values of the Constitution; and not the least, the reconsideration of the role and place of the constitutions in the sense of their qualification, especially as "fundamental foundations of the governed ones and not of the governors, as a dynamic act, in a continuous modeling and act of society".[2]

2. Content

The term "constitutional justice" or "constitutional jurisdiction" are controversial in the literature in specialty, the control of constitutionality of laws being preferred in particular. However, the notion of "constitutional justice" appears in Kelsen's work as "the jurisdictional guarantee of Constitution"[3]. Eisenmann also considers it to be "that form of justice or, more precisely, the jurisdiction that pertains to constitutional laws", without which the Constitution would be but a mere "political program, only binding morally". The same author makes the distinction between constitutional justice and constitutional jurisdiction. The "Constitutional justice" is the form through which the distribution of prerogatives between ordinary legislation and constitutional law is guaranteed, and the

[*] Lecturer, PhD, Faculty of Economic Sciences and Law, University of Pitești (e-mail: andreescu_marius@yahoo.com).
[**] Lecturer, PhD, Faculty of Economic Sciences and Law, University of Pitești (e-mail: andradascalu@yahoo.com).
[1] Ion Deleanu, *Constitutional justice* (Bucharest: Lumina Lex Publishing House, 1995), 5.
[2] Idem., 5-6.
[3] H. Kelsen, *"*La garantie jurisdictionnelle de la Constituion", *Revue de Droit publique* (1928): 197 and next.

"constitutional jurisdiction" refers to the authority through which the constitutional[4] justice is achieved.

In Romanian literature, the notion of "constitutional justice" has come about mainly due to the contribution made by Professor Ion Deleanu[5] in this field. Without a thorough analysis of this concept, we consider that the constitutional justice is a legal category of special significance whose constitutional constituents are as follows:

a) designates all the institutions and procedures through which the Constitution supremacy is achieved.

b) a state body competent to carry it out with the duties provided by the Constitution and the law;

c) a set of technical means and forms of implementation with specific and exclusive features;

d) the purpose of the constitutional justice is to ensure the supremacy of Constitution.

There is no identity between the concepts of constitutional justice and, respectively, the constitutionality control of laws. The latter one is only a part of the first.

In the sense of the above definition, the general features of the constitutional justice can be identified:

- it is a genuine jurisdiction but having some peculiarities over other forms of jurisdiction having in view this one's purpose;
- it may use common procedural rules, but also the own procedural rules consecrated in the Constitution, laws and regulations determined by the nature of the constitutional litigation;
- can be done by a specialized state body (political, judicial, or dual-nature), or by the common law courts;
- it is an exclusive justice because it has the monopoly of the constitutional litigation.
- it is not always concentrated because the common law courts may have perspectives in the area of constitutional litigation:
- the independence of the constitutional justice consists in the existence of a "constitutional statute" of the body implementing this type of jurisdiction, consisting in the independent statutory and administrative autonomy vis-à-vis of any public authority; the verification of its own competence, the prevalence of abuses of constitutional justice over any other judicial decisions: the independence and immovability of the judges and, in some cases, their designation using criteria other than those relating to the recruitment, appointment and promotion of career magistrates;

The control of constitutionality of the laws is the main form of constitutional justice and is a basis for democracy guaranteeing the establishment of a democratic government that respects the supremacy of the law and Constitution.

George Alexianu considered that legality is an attribute of the modern state. The idea of legality in author's conception is formulated as follows: all the state organs operate on the basis of a lawful order established by the legislator, which one must be respected.

The same author, referring to the supremacy of Constitution, fully affirmed and in relation to today's realities: "When the modern state organizes its new appearance, the first idea that concerns it is to stop the administrative abuse, hence the invcention of the constitutions and by judicial means the establishing of the legality control. Once this abuse is established appears a new one, a more serious one, that of the Parliament. Then are invented the supremacy of Constitution and various systems for guaranteeing it. The idea of legality thus gains a strong strengthening leverage"[6].

An important aspect is also to define the notion of control of the constitutionality of laws. In the legal doctrine[7] was emphasized that the issue of this attribution must be included in the principle of legality. Legality is a fundamental principle of organizing and operating the social and political system. This principle has several coordinates: the existence of a hierarchical legal system on top of which is the Constitution. Therefore, the ordinary law must comply to Constitution in order to fulfill the condition of legality; the state bodies must carry out their duties in strict compliance with the observance of the competences established by the laws; the elaboration of the normative acts should be done by competent bodies, after a predetermined procedure in compliance with the provisions of the higher normative acts with legal force and with the observance of the law and Constitution by all state bodies.

In the doctrine, the constitutionality control of the laws was defined as: "The organized activity for verifying the conformity of the law with the constitution, and from the point of view of the constitutional law it contains rules regarding the authorities competent to make this verification, the procedure to follow and the measures that can be taken after this procedure[8] has been completed."

The analysis of the definition shows the complex significance of the constitutionality control of the laws. This is an institution of the constitutional law, which is the set of legal norms relating to the organization and functioning of the authority competent to exercise the control, as well as the set of legal rules having a

[8] Ioan Muraru and Elena Simina Tănăsescu, *quoted work*, 191.

procedural nature that regulate which ones may be disposed by a constitutional court.

At the same time, it is also an organized activity guaranteeing the supremacy of Constitution by verifying the conformity of the norms contained in the laws and other normative acts with the constitutional regulations.

In essence, the control of the laws' constitutionality requires the verification of laws' compliance as a legal act of the Parliament, but also of other categories of normative acts with the norms contained in the Constitution. The compliance must exist both formally (the competence of the issuing body and the elaboration procedure) as well as from the material point of view (the competence of the norm in the ordinary law must be in line with the constitutional norm).

There are several factors that explain the emergence and evolution of the constitutionality control of laws, of which we mention:

a) *The inconsistency between Constitution and the laws*. This compliance of the law with the Constitution is not a given or an absolute presumption. Both theory and practice have shown that due to the dynamics and peculiarities of the legislative process, there may be inconsistencies between the law and Constitution. Thus, by giving effect to groups of political interests, which usually belong to the majority, the Parliament can adopt a law that contravenes the constitutional norms. For the same reason, the government could adopt unconstitutional normative acts.

In other cases, the legislative technique regulated by the Constitution may not be respected by the Parliament, which would lead to inconsistencies between the law and Constitution.

b) *The necessity of interpreting the Constitution and the laws in view of establishing the conformity of the right with the constitutional norms.*

The normative law-making activity must be continued with norms implementing work; in view of their application, the first logical operation to perform is their interpretation.

Both the Constitution and the law are presented as a set of legal norms, but these norms are expressed in the form of a normative text. Therefore, what is the object of interpretation are not the legal norms, but the text itself of the law or Constitution. A legal text may contain several legal rules. From a constitutional text a constitutional norm can be deduced by interpretation. The text of Constitution is drafted in general terms, which influences the degree of determination of the constitutional norms. By interpreting are identified and determined the constitutional norms.

It should also underline that a Constitution may contain certain principles which are not clearly expressed *expresis verbis*, but they can be inferred through the systematic interpretation of other norms.

In the sense of the above, the specialized literature stated: "The degree of determination of the constitutional norms through the text of the fundamental law can justify the necessity of interpretation. The norms of the Constitution are well suited to the evolution of their course, because the text is inexorably inaccurate, formulated in general terms. The formal superiority of Constitution, its rigidity, prevents its revision at very short intervals, and then interpretation remains the only way to adapt the normative content, usually older, to the constantly changing social reality. The meaning of the constitutional norms being by their very nature, that of maximum generality, its exact determining depends on the will of the interpreter." [9]

The scientific justification of interpretation results from the need to ensure the effectiveness of the norms contained both in Constitution and the laws, by means of the institutions which carry out mainly the activity of interpreting the norms enacted by the author.

These institutions are primarily the judging courts and constitutional courts.

Verifying the conformity of a normative act with the constitutional norms, institution that represents the constitutionality control of the laws, does not mean a formal comparison or a mechanical juxtaposition of the two categories of norms, but a complex work based on the techniques and procedures for interpreting both the law and Constitution.

Therefore, the necessity of interpreting the Constitution is a condition of its application and for ensuring its supremacy. The constitutionality control of the laws is essentially an activity for interpretation of both the Constitution and the law. It is necessary to have independent public authorities that have the competence to interpret the constitution and in this way to examine the conformity of the law with the Constitution. Within the European model of constitutional justice, these authorities are the Constitutional Courts and tribunals.

c) *The applying of the principle of separation and balance of powers in the state*. *Avoiding the abuse of parliamentary power*

The limits of Parliament's power to legislate are determined by the constitutional norms determining the competence and the legislative procedure. Another limit is the need to respect the supremacy of Constitution in terms of the contents of the norms enacted by the Parliament.

Consequently, the constitutionality control of the laws is the practical way for verifying the compliance with the Constitution's supremacy by the Parliament and it constitutes a counterpart to its powers in the legislative matter.

The constituent legislator and the ordinary legislator must find the most appropriate procedures to respond to two major requirements: first, the need not to obstruct the exercise of the legislative function of the

[9] Ioan Muraru and Mihai Constantinescu and Elena Simina Tănăsescu and Mihai Enache and Gheorghe Iancu, *Interpretation of Constitution, Doctrine and Practice* (Bucharest: Lumina Lex, 2002), 67.

Parliament by conferring exaggerated powers in matter to other state authorities, and, on the other hand, the need to ensure, within strictly defined limits, the compulsoriness of the decisions of some constitutional courts for the Parliament.

The necessity of the control of constitutionality of the laws is in fact the expression of the need to guarantee the supremacy of Constitution in relation to the activity of the Parliament.

If the chronological character is concerned, the constitutionality test was first made in England by Eduard Cohe through his judgment decision in 1610 in Bonham case, as chief justice. The usefulness of constitutionality control was then demonstrated by Alexander Hamilton in the U.S. in 1780: "If there were to be a pre- reconcilable difference between the laws and Constitution, it would of course be preferable to the one that has a superior validity and compulsoriness or, in other words, the constitution must be preferred to the law ... No legislation act contrary to Constitution can be valid."[10]

The one who frequently raises the issue of controlling the constitutionality of laws by a political body is the famous French lawyer and politician Siéyes. In his speech in the 1791 Convention of France, he called for the creation of a political body that would cancel out of office or at the request of those concerned, of any act or any law that would be contrary to Constitution. Moreover, this organ even had a Constituent Assembly role.

From a historical perspective, it is of particular importance the judicial control of constitutionality established in the United States at the beginning of the nineteenth century, although the Constitution does not regulate procedural rules.

The evolution of the constitutionality control of the laws in the U.S. can be divided into two periods. The first period begins with the adoption of the Constitution in 1787 and ends in 1886.

During this period, in the matter of constitutionality, the judges verified in particular whether the ordinary legislator respected the competence conferred by Constitution in the sense of not being legally enforced on matters prohibited through constitutional norms. The judges could not annul a law as unconstitutional, but could only to implement its application in the case before the court.

The Supreme Court pronounces in the *Marbury affair vs. Madison*, for the first time in a case of this nature, declaring the federal Constitution to be the supreme law of the state and removing an act of the Congress contrary to the federal Constitution. The decision of the Court is written by Judge John Marshall and forms the basis on which is based the American jurisprudence on constitutionality control.

The reasoning attributed by the American judge is the following: the judge is meant to apply and interpret the laws. The Constitution is the supreme law of a state that must be applied with priority to any other law. The Constitution, being a law, is to be interpreted and applied by the judge, including to a particular case forming the subject of the judgment.

In case the law does not comply with constitutional norms, the latter ones will be applied because of the supreme character of the Constitution.

The second period begins in 1883 with a famous decision of the Supreme Court in Massachussets in the Wiegman litigation. The judges' powers increase in matter of constitutionality. The Supreme Court is no longer confined to verifying a law in terms of respecting the legislature's constitutional competence or in regard to the observance of procedures. Starting with this moment, and until now, the justice in the matter of constitutionality control examines the law in terms of its opportunity, its rationality and its economic and social justification. Thus, through the procedure of constitutionality control, the judiciary power examines the entire activity of the Parliament and removes all measures that are deemed to be contrary to the legal order in the state. In this way, justice is a guarantor of the supremacy of Constitution and of the observance of the principle of separation of powers in the state, "as the control and mutual supervision of the powers are the very essence of the existence of a state"

But the American model of constitutional justice is not without criticism. Among the most significant ones we mention:

a) verifying the compliance of the law with the constitutional norms is a constitutional litigation that differs from the ordinary legal disputes, the latter ones being the object of settling of the common or specialized courts of law. In contrast to these, a constitutional litigation can only be solved by a constitutional judge;

b) the legal effects of the constitutionality control occur only between the parties involved in the process. In the absence of a parliamentary procedure of law reviewing, we reach the paradoxical situation to let in force an unconstitutional law;

c) the ordinary jurisdictional procedure is incompatible with the specificity of a constitutional litigation;

d) There is the danger of transforming the justice into a judges' ruling, and thereby breaking the principle of separation of the powers in the state. "The judiciary authorities become, unwillingly a branch of the legislative power, or even worse, a real governing power, an authority above the others." [11]

Therefore, several theoretical, institutional and political considerations have led to the establishment of a control of constitutionality of the laws through a specialized body, which is the European model in this field.

[10] George Alexianu, *quoted work*, 72.
[11] Ion Deleanu, Constitutional Justice, quated work, 38.

From these considerations, shown in the literature in specialty[12] we can mention two:

a) the political regime of a parliamentary or semi-presidential type existing in most European countries leads to a dominant position of the parliamentary majority, that fulfills the governing. The judicial reviewing of the constitutionality of laws is not a genuine counterpart related to the power of the Parliament. It is necessary to carry out the constitutionality control of the laws through a specialized body, which is, as the case may be, either a counterbalance to a parliamentary majority too strong – expressively, volunteering or a substitute for a non-existent parliamentary majority.

b) the control of constitutionality of the laws through a specialized body ensures the correct acceptance and application of the principle of separation of the powers in the state. In this sense, Hans Kelsen[13] said: "The guaranteeing of the Constitution implies the possibility of canceling the acts contrary to it, and not by the body that adopted them, which is considered a free-creator of law, and not a law-enforcement body, but by another organ, different and independent of the legislative one and any other authority".

The European model of constitutional justice is institutionally characterized in the constitutional courts or tribunals.

In the interwar period, this model was noted in Austria (1920), Czechoslovakia (1979), Spain (1931) and Ireland (1938).

After the Second World War are established the constitutional courts and tribunals in most European countries: Italy (1948), Germany (1949), Turkey (1961), Portugal (1976), Spain (1978) etc.

Among the Eastern European countries that have this model of constitutional justice we mention: Romania, Poland, Hungary, Czech Republic, Croatia, Macedonia, Russia, Ukraine, Lithuania, etc.

In case of France, the constitutionality control is carried out by a dual, political and judicial body, the French Constitutional Council. This is made up of the former presidents of the republic, still living, as well as of nine members appointed for a 9 years unique mandate. The members of the Constitutional Council shall be appointed as follows: three members by the President of the State, three by the Senate President and other three by the President of the National Assembly. The President of the Constitutional Council is appointed by the decision of the President of the Republic. In the competence of this Council fall other responsibilities outside the control of constitutionality of the laws.

In our country, the control of the constitutionality of laws has developed marked by the national particularities and the successive application of the two models presented above.

Thus, Cuza's statute established in article 12, that the state and constitutional laws are placed under the protection of the weighing body. Therefore, this Chamber of Parliament could verify the conformity of a law with the Constitution.

The 1866 Constitution did not regulate the control of constitutionality of the laws.

However, the provisions of Article 93 of the Constitution, according to which the Lord "sanctions and promulgates the laws" and that, he "may refuse his sanction." Consequently, the head of state could refuse to promulgate a law if he considered it unconstitutional. Obviously, it is not a genuine control of constitutionality of the laws, but it is a precursor to such verification. As long as the 1866 Constitution was in force, the head of state never made use of this procedure.

The control of constitutionality of the laws done by a judging court rather than by a specialized institution, different from the judiciary power, has also been accepted on the European continent. The constitutional history mentions a Romanian priority in this case. Thus, during the period 1911-1912, the Ilfov Tribunal and then the High Court of Cassation and Justice had the right to verify the constitutional conformity of the laws in the litigation known as the "trams affair" in Bucharest.

Interestingly, the reasoning used by Ilfov Tribunal and by the High Court of Cassation and Justice in motivation of the possibility to carry out the Constitutionality control on a pretorian basis. In essence, the recitals were the following: 1) The court did not of its own motion take the jurisdiction to rule on the constitutionality of a law and to annul it, since such a procedure would have constituted an interference of the judicial power into the powers of the legislature. As a consequence, the court assumed this competence because it was asked to verify the constitutionality of a law; 2) On the basis of the attributions that are given, the judiciary power has as its main mission the interpretation and application of all laws, whether ordinary or constitutional.

If a law invoked is contrary to the Constitution, the court can not refuse to settle the case; 3) There is no provision in the 1866 Constitution which specifically prohibits the right of the judiciary power to check whether a law is in conformity with the Constitution. The provisions of Article 77 of the Constitution are being invoked, according to which a judge, according to the oath, is obliged to apply the laws and the Constitution of the country; 4) unlike ordinary laws, the Constitution is permanent and can only be revised exceptionally. Being the law with supreme power, the Constitution is imposed by its own authority and therefore the judge is obliged to apply it with priority,

[12] See Ion Deleanu, Constitutional Institutions and Procedures, quated work, 805; Ioan Muraru and Elena Simina Tănăsescu, quoted work, 269.

[13] H. Kelsen, The pure doctrine of the law (Bucharest: Humanitas, 2000), 110-111.

including in case where the law on which the litigation is settled is contrary to the Constitution[14].

The decisions of Ilfov Tribunal and the High Court of Cassation and Justice were well received by the experts of the time. Here's a short comment: "This decision was a great satisfaction for all people of law. It is a great step forward in advancing this country towards progress, because it consecrates the principle that the Constitution of this state, its foundation, the palace of our rights and freedoms, must not be despised by anyone. We are proud that it has been given to our justice the privilege to show even to the justice of the Western countries the true way of progress in the matter of public law."[15]

For the first time, the constitutionality control of the laws was regulated by the Romanian Constitution in 1923, by article 103, adopting the American model. "Only the Court of Cassation in unified sections has the right to judge the constitutionality of the laws and to declare inappropriate those that are contrary to the Constitution. The judgment on the unconstitutionality of laws is limited to the case alone."

Consequently, the control of constitutionality of the laws was the exclusive competence of the Court of Cassation in unified sections. It could be exercised only by way of the exception of unconstitutionality invoked during the trial of the litigation. At the same time, the pronounced ruling had legal effects only between the parties in the trial and had the power of a *rex judecata* only in the case solved.

Also, the constitutionality of laws is judged after the litigation has passed all levels of jurisdiction. This procedure was an extraordinary way to appeal a judgment. The provisions of article 29 of the Law of the Court of Cassation stipulated only one exception when the applicant accepted the suspension of the trial of the case matter so that for the Cassation Court to decide in advance on the constitutionality of the law whose application was required.

At the same time, through these constitutional regulations, the transition from the "diffuse" judicial control, assumed by all courts, to a "concentrated" judicial control, assigned to a single court, namely the Court of Cassation, was made in unified sections. Also, the decision given in that procedure has effects only on the case and between the parties in litigation, and could not have legal effects *"erga omnes*".

The constitutionality control of the laws was governed identically by the Romanian Constitution in 1938, by the provisions of article 75.

In the post-war period, the constitutionality control of the laws was practically no longer regulated. The provisions of article 24 letter j) of the 1952 Constitution stated that the supreme representative body, the Grand National Assembly, has in its competence "the general control over the implementation of the Constitution", which included the right to examine the law's compliance with Constitution.

Similarly, the provisions of Article 43 (point 5) of the Constitution adopted in 1965 established the competence of the Grand National Assembly to exercise general control over the implementation of Constitution, but these provisions regulated more specifically the competence of the supreme representative body in respect of the constitutionality control of laws: "Only the Grand National Assembly decides on the constitutionality of the laws ".

The constituent lawmaker of the post-war period of the totalitarian state renounces the American model, as well as to the principle of separation of the powers in the state and entrusts the constitutionality control to a political body.

The Romanian Constitution in 1991, that restores the values of democracy and of the lawful state, regulates initially the constitutionality of laws in Article 140-145, according to the European model, the competence being entrusted to the Constitutional Court, this one being constituted as an independent public authority.

In Romania, the constitutional justice is carried out by the Constitutional Court. The core of the matter are the provisions of article 142-147 of Constitution and those contained in the Law no. 47/1992 on the organization and functioning of the Constitutional Court[16]. However, as we shall see below, the constitutional justice is not an exclusive attribute of the Constitutional Court, being only its most important component the constitutionality control of laws, to which are added the exclusive competencies conferred by Constitution and special laws.

The constitutional provisions through which the Constitutional Court of Romania became a reality were accepted after extensive parliamentary debates during the discussion of the Constitution draft. It is useful for our scientific approach to succinctly mention the maturity of these parliamentary talks, as a result of which the Constitutional Court has become a reality. The Parliamentary Committee on the Drafting of the Basic Law has made Title IV to be consecrated to the "Constitutional Council" under the influence of the French constitutional system.

The debates in the constituent assembly can be systematized, as shown in the literature in speciality, into four great ideas: "namely, a) the elimination of the institution, without any variant; b) the abolition of the constitutional council, with the entrusting of its controlling mission to the courts; c) entrusting a constitutional review to a commission; d) acceptance of the control of the laws' constitutionality, exercised by

[14] See the *Judicial Courier,* No. 32(April 29th 1912): 373-376.
[15] N.D. Comşa, "The notifications", *Judicial Courier,* No.32, (April 29th , 1912): 378.
[16] Republished in the Official Gazette no. 807 on December 3rd, 2010.

a distinct authority, council, court or constitutional court".[17]

Finally, the Constituent Assembly decided to create a specialized judicial body, namely the Constitutional Court. The essence of the reasoning behind this decision was as follows: "The Constituent Assembly has decided to institutionalize this form of control of constitutionality of the laws. Such control is inherent to the lawful state and democracy. In the post-war period, all the European states that have adopted constitutions have entrusted the control of constitutionality of the laws, not to the courts, but to a special and specialized body, so that the model offered in the project is a European model. By its makeup and its attributions, the Constitutional Court is not a "superpower", nor is it expensive – in relation to other institutions - through its nine members. Entrusting the control of constitutionality of the laws of the Supreme Court of Justice would result in the transformation of the jurisdictional body into a political body, the overordination of the judicial authority, the stimulation of arbitrariness on its part, the return to a form of desuet control, long time outdated in most of the democratic countries world "[18].

The doctrine has synthesized the following features and functions of the Constitutional Court:

a) *It is no other power in the state nor does it take any of the functions of the three powers*. The Constitutional Court is a typical example of non-formal and non-rigid interpretation of the theory of separation of powers in the state. The Constitutional Court cannot formally be classified into any of the three classical powers of the state but it contributes to the balance between them.

b) *It has a dual nature: political and jurisdictional*. The political nature derives from the way of designation of judges and from some attributions concerning the verification of the observance of Constitution in the procedure for appointing the President of Romania, the organization of the referendum, the mediation of the constitutional conflicts between the public authorities, the verification of Constitution's observance by the political parties, or in general, to verify the compliance with Constitution by some public authorities.

It has a jurisdictional nature because the members of the Constitutional Court act as veritable judges. At the same time, in the exercise of its functions, the Court applies a number of jurisdictions governed by the framework law for the organization and functioning which is supplemented by some regulations of the Civil Procedure Code. Also, the jurisdictional nature arises from the attributions of the Constitutional Court, especially in the field of constitutionality control of the laws and other normative acts.

c) *The role of the Constitutional Court as a public authority is to be the guarantor of the supremacy of Constitution*. This feature expressly results from article 142 paragraph (l) of Constitution. The Constitutional Court is not the only guarantor of Constitution, a very broad category that also characterizes the function of the Head of State. Thus, the provisions of article 80 paragraph (2) of Constitution show that the President of Romania is watching over the observance of Constitution. Our Constitutional Court is the guarantor of the supremacy of Constitution, an expression that underlines the foundation of the Court's functions.

d) It is the public authority that supports the good functioning of the public authorities in constitutional relationships, of separation, balance, collaboration and mutual control. In the sense of this feature, by amendments to the Constitution as a result of a new revision a new attribution was introduced to the Constitutional Court, namely: it solves the legal conflicts of constitutional nature between the public authorities [article 146 letter e) of the Constitution]. In order to achieve this, the Constitutional Court is independent of any other public authority; it only obeys the Constitution and its organic law (article l paragraph. (3) of Law no. 47/1992, republished]. The independence of the Court implies its right to decide on its competence and, moreover, the jurisdiction of the Constitutional Court cannot be challenged by any public authority. Therefore, there can be no positive or negative conflict of competence between the Constitutional Court and another public authority.

e) *The Constitutional Court is the only authority of constitutional jurisdiction in Romania* [article l paragraph. (2) of Law no. 47/1992, republished]. The Romanian constituent lawmaker has adopted the European model in the sense that constitutional justice is carried out by a single authority. The courts have some attributions that materialize in the right of appreciation of the admissibility of some unconstitutionality exception, but this does not invalidate the Court's monopoly on the constitutional justice, since only this public authority has the competence to resolve the constitutional disputes.

f) *The organization, operation and exercise of the duties shall be carried out in compliance with the principle of legality*. Our constitutional court exercises exclusively the powers provided by article 146 of the Constitution and those regulated by the organic law. The Court is not a supra constitutional court, its role is to interpret and apply the constitutional and law provisions.

In the same meaning, the provisions of Article 2 of Law no. 47/1992, republished, shows that the Constitutional Court ensures the constitutionality control only of the laws, international treaties, regulations of the Parliament and ordinances of the Government. The unconstitutionality can only be ascertained if the procedures of these normative acts violate the provisions or principles of the Constitution

[17] Ioan Muraru and Elena Simina Tănăsescu (coordinators), *România Constitution. Comments on the article* (Bucharest: C.H.Beck, 2008), 1370.

[18] Idem, 1373.

[article 2 paragraph (2) of the Law no. 47/1992, republished].

g) *The structure of the Constitutional Court is determined by the Constitution and the Law no. 47/1992.* As the Constitutional Court is independent in regard to any public authority, in a particular case only this institution can decide whether or not has the competence to resolve the constitutional dispute. Moreover, its competence cannot be challenged by any public authority (article 3 paragraph (3) of Law no. 47/1992, republished]. The Code of Civil Procedure regulates the resolution of negative or positive conflicts of jurisdiction between the courts. Taking into consideration the normative norms mentioned above between the Constitutional Court of Romania and, on the other hand, a court or other public authority, conflicts of jurisdiction cannot arise, because the exclusive competence in the matter of constitutional verification of the laws is in the right of the Constitutional Court, and this monopoly of constitutional jurisdiction cannot be challenged. The Constitutional Court has the power to decide on its jurisdiction in a specific case, but it cannot decline its jurisdiction in favor of another public authority in case the Constitutional Court is noticed with a request under conditions other than those stipulated by the Constitution or the organic law, the petition will be dismissed as inadmissible.

h) *In the exercise of its powers, the Constitutional Court regulates a work of interpretation of the law and Constitution*. The Constitutional Court cannot amend, complete or abrogate a law.

In its old drafting, before the revision of the Constitution, the Law no. 47/1992 prohibited the Constitutional Court to interpret the normative acts that are subject to constitutionality control. Naturally, the current regulation has removed this ban because the activity of verifying the compliance of normative regulations with the provisions of the Constitution made by the constitutional judge is in essence also a work for the law enforcement based on the interpretation of the legal norms.

The Constitutional Court participates in the achievement of the legislative function in the state, but not as a positive legislator, yet as a negative legislator whose purpose is to eliminate the "unconstitutionality venom" from a normative act. Therefore, by its attributions, the Court is not subrogated to Parliament's activity, because the amending, supplementing or abolishing of a law is an exclusive attribute of Parliament

i) *The Constitutional Court "supports the good functioning of the public authorities in constitutional relationships of separation, balance and mutual control"*. The principle of separation and balance of the powers in the state with all the criticisms expressed by some authors remains the foundation of the democratic exercise of state power and the main constitutional guarantee for avoiding the excess or abuse of power by any state authority.

The relationships between the state authorities are complex, but they must also ensure their proper functioning while respecting the principle of legality and supremacy of Constitution. In achieving this goal, it is very important to maintain the state balance in all its forms and variants, including as a social balance.

The separation and equilibrium of the powers no longer concern only the classical powers (legislative, executive and judicial). To these powers are added others that give new dimensions to this classic principle. The relationships between the participants to the state and social life can also generate conflicts that need to be resolved to maintain the balance of powers. Some constitutions refer to public law litigations (German Constitution - Article 93), to conflicts of jurisdiction between the state and autonomous communities, or conflicts of powers between state powers, between the state and regions and between regions (Constitution of Italy - Article 134).

Romania's Constitution speaks about the legal conflicts of constitutional nature between public authorities [(art. 146 lit. c)] and regulates the mediation function between the powers of the state exercised by the President.

The Constitutional Court is an important guarantor of the separation and balance of state power because it solves the constitutional legal conflicts between public authorities and through its attributions in the matter of the constitutionalilty control previous to the laws and the verification of constitutionality of the Chamber's regulations, it intervenes in ensuring the balance between the majority and the parliamentary minority, assuring effectively the right of the opposition to express itself.

j) *The Constitutional Court is a guarantor of the observance of the fundamental rights and freedoms*. In principle, three are the essential constitutional guarantees of the citizens' rights and freedoms established by Constitution:

a) the supremacy of Constitution;

b) the rigid nature of Constitution;

c) citizens' access to the control of constitutionality of the law and to the control of lawfulness of the acts subordinated to the law.

In Romania, the procedure for the unconstitutionality exception provides the indirect access of the citizens to constitutional justice.

The judicial control is an important way of guaranteeing the supremacy of the fundamental law, because by the nature of the attributions of the courts, it interprets and enforces the law, which also implies the obligation to analyze the conformity of judicial acts subjected to the judicial control with the constitutional norms. The courts therefore have competences in the matter of constitutional justice. We are considering not only the general obligation of the judge to observe and apply the constitutional norms or the powers conferred by the law to notify the constitutional court with an exception of unconstitutionality but in particular the

possibility to censure a legal act in terms of constitutionality.

The recent doctrine and jurisprudence in the matter examines the jurisdiction of the courts to verify certain legal acts in terms of compliance with the constitutional rules. An unconstitutional legal act is an act issued with excess power.

The unconstitutionality of a legal act can be ascertained by a court if the following conditions are met cumulatively:

1. the court to exercise its powers within the limits of competence provided by law;

2. the legal act may be individual or normative, may be mandatory or optional;

3. that in the case does not exist the exclusive jurisdiction of the Constitutional Court to rule on the constitutionality of the legal act;

4. the settlement of the case depends on the legal act that is criticized for nonconformity;

5. there is a reasonable, sufficient and pertinent reasoning of the court regarding the unconstitutionality of the legal act.

In case of the cumulative fulfillment of these conditions, the limits of the courts' attributions are not exceeded, but, on the contrary, the principle of supremacy of the Constitution is applied and efficiency is given to the role of the judge to apply and interpret the law correctly. Such a solution is also justified in relation to the role of the judge in the lawful state: to interpret and enforce the law.

The accomplishment of this constitutional mission, which is particularly important and difficult at the same time, requires the judge to apply the law in accordance with the principle of the supremacy of Constitution, therefore to control the constitutionality of the legal acts that form the subject of the litigation brought to justice or that is applied to the settlement of the case. The application of legal acts shall be carried out by the judge taking into account their legal force and observing the principle of the supremacy of Constitution. In this respect, worth mentioning the provisions of Article 4 paragraph (1) of Law no. 303/2004 obliging the magistrates that through their entire activity to ensure the supremacy of the law .

Another issue is to know what solutions the courts can issue, in compliance with the above conditions, when they ascertain the unconstitutionality of a legal act. There may be two situations: *In a first hypothesis*, the courts may be directly invested in verifying the legality of a legal act, as is case for the administrative litigation. In this case, the courts can determine by decision the absolute nullity of the legal acts on the grounds of unconstitutionality. *The other situation* concerns the hypothesis that the courts are not directly invested with verifying the legal act criticized for unconstitutionality, but that legal act applies to the settlement of the case brought to the court. In this case, the courts can no longer dispose the annulment of the unconstitutional legal act, but they will no longer apply it for the settlement of the case.

3. Conclusions

In our opinion, it is necessary that the role of the Constitutional Court as guarantor of the Fundamental Law to be amplified by new powers in order to limit the excess power of state authorities. We disagree with what has been stated in the literature in speciality that a possible improvement of the constitutional justice could be achieved by reducing the powers of the constitutional[19] litigation court. It is true that the Constitutional Court has made some controversial decisions regarding the observance of the limits of exercising its attributions in its charge, according to Constitution, by assuming the role of a positive legislator.[20] Reducing the powers of the Constitutional Court for this reason is not a legal solution. Of course, reducing the powers of a state authority has as consequence the elimination of the risk of misconduct of those attributions. Not in this way it is achieved within a lawful state the improvement of the activity of a state authority, but by seeking legal solutions for better performing of the duties that prove to be necessary to the state and social system.

Proportionality is a fundamental principle of the law explicitly consecrated in the constitutional, legislative regulations and international legal instruments. It is based on the values of the rational justice and equity and expresses the existence of a balanced or appropriate relationship between actions, situations and phenomena, being a criterion for limiting the measures disposed by the state authorities to what is necessary to achieve a legitimate aim, thus being guaranteed the fundamental rights and avoided the excess power of state authorities. Proportionality is a basic principle of the European Union law being explicitly consecrated in the provisions of Article 5 of the Treaty on the European Union. [21]

We consider that the express regulation of this principle only in the content of the provisions of Article 53 of Constitution, with applying on the restriction of the exercise of some rights, is insufficient to give full meaning to the significance and importance of the principle for the lawful state.

It is useful, in a future revision of the fundamental law that, at article 1 of the Constitution to be added a new paragraph stipulating that *"The exercise of state power must be proportionate and non-discriminatory"*. This new constitutional regulation would constitute as a genuine constitutional obligation for all state

[20] We are referring for exemplifying to the Decision no.356/2007, published in the Official Gazette no.322 on May 14th 2007 and to the Decision no. 98/2008 published in the Official Gazette no. 140 on February 22nd, 2008.

[21] For developments see Marius Andreescu, "Proportionality, principile of European Union law", *Judicial Courier* no. 10, (2010): 593-598.

authorities, to exercise their powers in such a way that the measures adopted be within the limits of discretionary power recognized by law. At the same time it is created the possibility for the Constitutional Court to sanction the excess of power in the activity of the Parliament and Government, by the constitutionality control of the laws and ordinances, using as a criterion the principle of proportionality.

In the attributions of the Constitutional Court may also be included the one to rule on the constitutionality of administrative acts exempted from the legality control of the administrative litigation courts. This category of administrative acts, to which Article 126 paragraph 6 of the Constitution refers to and the provisions of Law no. 544/2004 of the administrative litigation, are of great importance for the entire social and state system. Consequently, a constitutional review is necessary because, in its absence the discretionary power of the issuing administrative authority is unlimited with the consequence of the possibility of an excessive restriction on the exercise of the fundamental rights and freedoms or with the violation of some important constitutional values. For the same reasons, our Constitutional Court should be able to pronounce on the constitutionality and the decrees of the President for establishing the referendum procedure.

The High Court of Cassation and Justice has the power to take decisions in the appeal procedure in the interest of the law that are binding on the courts. In the absence of any verification of legality or constitutionality, the practice has shown that in many situations the Supreme Court has exceeded its duty to interpret the law, and through such decisions has amended or supplemented the normative acts by acting as a true legislator, violating the principle of separation of powers in the state[22]. In these circumstances, in order to avoid the excess power of the Supreme Court, we consider that it is necessary to assign to the Constitutional Court the power to rule on the constitutionality of the decisions of the High Court of Cassation and Justice adopted in the appeal procedure in the interest of the law.

SUPREMACY AND STABILITY OF THE CONSTITUTION. LOYAL CONSTITUTIONAL BEHAVIOR OF PUBLIC AUTHORITIES

Marius ANDREESCU[*]
Andra PURAN[**]

Abstract

The procedure for amending the Constitution is extremely difficult, almost impossible in the current social and political context. The essence of a constitution is its stability over time because only in this way can ensure the stability of the entire normative system of a state, certainty and predictability of the conduct of the legal subjects but also to ensure the legal, political and economic stability of the social system as a whole.

The obligation of the authorities, respectively of the parliament and of the executive to have a loyal constitutional conduct was for the first time stipulated in the jurisprudence of the French Constitutional Council, which is the constitutional court of France.

This obligation is found in the attributions to interpret and apply the constitutional norms that the state authorities have. It is not limited to the simple requirement of legality of the acts and provisions of the rulers, i.e. to the formal observance of the law.

In our opinion, the concern of the political class and state authorities in the current period, in relation to the current content of the Fundamental Law, should be oriented towards its correct interpretation and application and respect for the democratic finality of constitutional institutions.

In order to consolidate the rule of law in Romania, even in the current normative form of the Constitution, it is necessary that political parties, especially those in power, all state authorities act or exercise their powers within the limits of loyal constitutional behavior and the democratic meanings of the Constitution, the Orthodox Christian traditions and values of the Romanian people, the rights and dignity of the person.

In this study we analyze aspects of doctrine and jurisprudence of the concept of loyal constitutional behavior.

Keywords: *The supremacy of the Constitution, constitutional stability, public authorities, constitutional loyalty, guarantees of the obligation of constitutional loyalty*.

1. Introduction

The procedure for amending the Constitution is extremely difficult, almost impossible in the current social and political context, given Romania's integration into the European Union, with the consequence of subordinating the Constitution and the laws of political will of those who lead European Union bodies and legal instruments of this supranational organization but also, in the conditions in which Christianity and especially the right orthodox faith are rejected and even blamed in international legal documents and even in the jurisprudence of some international courts.

This state of affairs determines us to analyze to what extent the current normative content of the Constitution can be interpreted and applied in order to respect human dignity, the requirements of the rule of law, the Orthodox Christian traditions and values of the Romanian people, but also to eliminate excess power of the authorities with the consequence of abusive, unjustified restriction of the exercise of fundamental rights and freedoms, restrictive measures that seriously affect human life and dignity, freedom of communion of Orthodox believers, freedom of the Orthodox Church and other cults.

The governors, respectively the Parliament, the authorities of the executive power but also the courts have the obligation to have a loyal constitutional behavior. Of course, a loyal constitutional behavior must also characterize the activity of other political institutions, such as political parties and organizations, trade unions or employers' associations. In a broader sphere, loyal constitutional behavior must characterize the conduct of any subject of society. In this study we refer exclusively to the activity of state governing institutions.

The significance and content of the concept of loyal constitutional behavior that we formulate for the first time in the Romanian doctrine are analyzed in the context of the principles of the supremacy of the Constitution and the stability of the Fundamental Law.

2. Content

The supremacy of the Constitution expresses the super-ordinated position of the fundamental law. In a narrow sense, the scientific substantiation of the supremacy of the constitution results from its form and content. The formal substantiation is expressed by the superior legal force, by derogative procedures towards the common law on the adoption and modification of the constitutional norms, and the material supremacy

results from the specificity of regulations, from their content, especially from the fact that the Constitution states premises and rules of organization, functioning and attributions of public authorities.

In connection with this aspect, in the literature it has been stated that the principle of the supremacy of the fundamental law "can be considered a sacred, intangible perception (…) it is at the top of the pyramid of all legal acts. Nor would it be possible otherwise: the Constitution legitimizes power, converting individual or collective wills into state wills; it gives authority to the rulers, justifying their decisions and guaranteeing their implementation; it determines the functions and attributions that belong to the public authorities, consecrating the fundamental rights and duties, directs the relations between the citizens, between them and the public authorities; it indicates the meaning or purpose of state activity, i.e. the political, ideological and moral values under the sign of which the political system is organized and functions; the Constitution represents the fundamental basis and the essential guarantee of the rule of law; it is, in the end, the decisive benchmark for assessing the validity of all legal acts and facts. These are, however, the substantial elements that converge towards one and the same conclusion: *the material supremacy of the Constitution*. But the constitution is supreme and in *the formal sense*. The procedure for adopting the Constitution externalizes a particular force, specific and inaccessible, which is attached to its provisions, so that no law other than a constitutional one can abrogate or modify the provisions of the fundamental establishment, provisions that rely on themselves, postulating their own supremacy"[1].

George Alexianu considered that legality is an attribute of the modern state. The idea of legality, according to the author, is formulated as follows: all state bodies function on the basis of an order of law established by the legislator and which must be respected.

The same author, by referring to the supremacy of the Constitution, stated on full grounds and in relation to current realities: "When the modern state organizes its new apearance, the first idea which preoccupies it is that of ending the administrative abuse, hence the invention of constitutions and, by way of jurisdiction, the establishment of a control of legality. Once this abuse being established, it emerges a new and more serious one, that of the Parliament. The supremacy of the Constitution and various systems for guaranteeing it are then invented. The idea of legality thus acquires a strong strengthening lever"[2].

The basis of the supremacy of the Fundamental Law is national and state sovereignty. This quality of the Constitution to be supreme is absolute as the national sovereignty is absolute and intangible. The cession of some attributes of national sovereignty, even through international treaties signed, ratified or accepted by the rulers on behalf of Romania, raises the issue of legitimacy and constitutionality of these documents because it violates the two fundamental principles, essential for the existence of Romanian society and the Romanian state, namely, the national sovereignty and the principle of the supremacy of the Constitution.

The principle of the priority of European Union law must be understood and applied within the limits of respecting the principle of the supremacy of the Constitution and not superordinated to it, as unfortunately happens now in Romania.

The concept of constitutional supremacy cannot be reduced to a formal and material signification. Prof Ioan Muraru stated that: "The supremacy of the Constitution is a complex notion whose content includes political and legal features and elements (values), which express the superior position of the constitution not only in the legal system, but in the entire socio-political system of a country"[3]. Thus, the supremacy of the Constitution represents a quality or a feature which places the fundamental law on top of the political-legal institutions from a state-organized society and expresses its superior position, both in the legal system and in the entire social-political system.

The legal ground for the supremacy of the Constitution is represented by Art 1 Para 5 of the fundamental law: "In Romania, the observance of the Constitution, its supremacy and the laws shall be mandatory". The supremacy of the Constitution is not just theoretical, in the meaning that it could be considered only as a political, legal or moral concept. Due to its express statement in the fundamental law, this principle has normative value, formally being a constitutional norm. The normative dimension of the supremacy of the Constitution implies important legal obligations whose non-compliance can lead to legal sanctions. In other words, as constitutional principle, normatively enshrined, the supremacy of the fundamental law is also a constitutional obligation with multiple legal, political, but also value meanings, for all components of the social and state system. In this meaning, Cristian Ionescu stated that "Strictly formally, the obligation (to comply with the supremacy of the fundamental law) is addressed to Romanian citizens. In fact, the compliance with the Constitution and its supremacy, as well as that of the laws, was a general obligation, whose recipients were all subjects of law – natural and legal persons (national and international) in legal relations, including diplomatic ones, with the Romanian state"4.

The general signification of this constitutional obligation refers to the compliance of the entire legal system with the constitutional norms. By "law" we

mean not only the component of the normative system, but also the complex, institutional activity of interpretation and application of legal norms, starting with those of the fundamental law. "It was the intention of the Constituent Parliament derived from 2003 to mark the decisive importance of the principle of the supremacy of Constitution compared to any other normative act. There was a signal, in particular, from a public institution with a governing role to strictly respect the Constitution. The compliance with the Constitution is included in the general concept of legality and the notion of compliance with the Constitution imposes a pyramidal hierarchy of the normative acts at the top of which is the Fundamental Law"[5].

The observance of this constitutional obligation and its realization not only in the strict sphere of the normative system, but in the whole dialectic of the movement and evolution of the social and legal order, is the basis for what can be called the constitutionalization of law, but also of the whole social system organized as a state. In order to support this statement, we consider that, constantly, in the literature the principle of the supremacy of Constitution is not reduced only to its normative signification, and the Fundamental Law is also considered from a value perspective, with major implications for the entire social system. In this meaning, the Constitution is defined in the doctrine as being "a fundamental political and social establishment of the state and society"[6].

There is a system of guarantees for the compliance with the supremacy of the Constitution which, in our opinion, has two components. A specific and most important guarantee is the constitutionality control performed by the Constitutional Court. In this meaning, Art 142 Para 1 state that "The Constitutional Court is the guarantor of the Constitution". The Romanian Constitutional Court, since its establishment in 1992 until today has had an important contribution in censoring the excess of power of the Parliament and Government, but also of the political organisms which at a historical moment hold power in the state. Even if certain decisions issued by the Constitutional Court are debatable, it must me mentioned the important contribution brought by this judicial authority in maintaining the state of law, in the correct application and compliance with the constitutional provisions, in the protection and guarantee of the human rights and fundamental freedoms.

The other component of the system of guarantees is represented by the general control of the application of the Constitution conducted by state authorities on the basis and within the limits of the material competences stated by the law. the judicial control represents an important guarantee of the supremacy of the fundamental law, because by the nature of their attributions the courts interpret and apply the law, which implies the obligation to analyze the conformity of the judicial acts subjected to a judicial control with the constitutional norms.

One of the most controversial and important legal issues is represented by the relation between stability and innovation in law. The stability of legal norms is indisputably a necessity for the predictability of the conduct of legal subjects, for the security and proper functioning of economic and legal relations as well as to give substance to the principles of the rule of law and the Constitution.

On the other hand, it is necessary to adjust the legal norm and the law, in general, to the social and economic phenomena that follow one another so quickly. It is necessary for the legislator to be constantly concerned with eliminating everything that is "obsolete in law", of what does not correspond to realities. The relationship between stability and innovation in law is a complex and difficult issue that needs to be addressed carefully taking into account a wide range of factors, which can lead to a favorable or unfavorable position for legislative change[7].

One of the criteria that helps to solve this problem is the principle of proportionality. Between the legal norm the work of interpretation and its application, and on the other hand the social reality in all its phenomenal complexity must be made an adequate relationship, in other words the right to be a factor of stability and dynamism of the state and society, to correspond to the purpose of satisfying as best as possible the requirements of the public interest but also to allow and guarantee for the person the possibility of a free and predictable behavior, to realize himself in a social context. Therefore, the right, including in its normative dimension, to be viable and to represent a factor of stability but also of progress must be adequate to the social realities but also to the purposes for which the legal norm is adopted, or as the case may be interpreted and applied. This is not a new finding. Many centuries ago, when Solon was called upon to draw up a constitution, he asked the leaders of the city the question, "Tell me for what time and for what people", because later the same great sage would say that he did not give the city a perfect constitution, but only one appropriate to time and place.

The relation between stability and innovation has a special importance when it is raised the issue of maintaining or modifying of a Constitution because it represents the political and judicial settlement of a state[8] based on which it is structured the entire scaffolding of the state and society is structured.

The essence of a constitution is its stability over time because only in this way can ensure to a large extent the stability of the entire normative system of a

state, certainty and predictability of the conduct of legal subjects but also to ensure the legal, political and economic stability of the social system, as a whole[9]. Stability is a requirement to guarantee the principle of the supremacy of the Constitution and its implications. In this meaning, Prof. Ioan Muraru stated that the supremacy of the Constitution does not represent strictly a legal category, but also a politico-juridical one underlining that the fundamental law is the result of the economic, political, social and judicial realities. "It marks (defines, outlines) a historical stage in the life of a state, it enshrines victories and gives expression and political and legal stability to the realities and perspectives of the historical stage in which it was adopted"[10].

In order to ensure stability for the Constitution were used various technical means for guaranteeing a certain degree of rigidity for the fundamental law, of which we mention: a) the establishment of special conditions for the performance of the initiative to revise the Constitution, such as the limitation of subjects who may initiate such initiative, constitutional control over the initiative to revise the Constitution; b) the interdiction to revise the Constitution by the normal legislative assembly or, in other words, the recognition of the competence to revise the Constitution only in the favor of a constituent assembly; c) the establishment of a special procedure for debate and adoption of the initiative for constitutional revision; d) the necessity to solve the constitutional revision by referendum; e) the establishment of material limitations for the revision, especially by establishing constitutional regulations which cannot be subjected to revision[11].

On the other hand, a Constitution is not and cannot be eternal or immutable. From the emergence of the constitutional phenomenon, the fundamental laws have been seen as subjected to changes irrevocably imposed by time and dynamics of statal, political, economic and social realities. This idea was stated by the French Constitution of 1791 according to which "A people shall always have the right to revise, reform or modify its constitution" and in modern times both the "International Covenant on Economic, Social and Cultural Rights", as well as the one regarding the civil and political rights adopted by the UN in 1996 state in Art 1: "All peoples have the right of self-determination. By virtue of that right they freely determine their political status and freely pursue their economic, social and cultural development".

Esteemed Prof. Constantin G. Rarincescu stated in this meaning: "Although a constitution is meant to regulate in the future for a more or less long time, the political life of a nation it is not destined to be immovable, or forever perpetual, because, on the one hand, a constitution over time show its imperfections, and no human work is perfect, imperfections that need to be changed, on the other hand a constitution must be up to date with social needs and new political conceptions, which can change more frequently within a state or a society"[12]. Underlining the same idea, Prof Tudor Drăganu stated: "The Constitution cannot be conceived with a perennial monument destined to withstand the vicissitudes of centuries and not even decades. Like all other legal regulations, the constitution reflects the economic, social and police conditions existing in a society at some point in history and aims to create the most appropriate organizational structures and forms for its further development. Human society is constantly changing. Which is valid today, tomorrow may become obsolete. On the other hand, one of the features of the judicial regulations consists in the fact that they foreshadow certain paths meant to channel the development of society in one direction or another. Both these directions and ways of achieving the goals pursued may, however, prove to be confronted with inappropriate realities. Precisely for this reason, constitutions, like other legal regulations, cannot remain unchanged, but must adapt to social dynamics"[13].

In the light of these considerations, we appreciate that the relation between stability and constitutional revision must be interpreted and solved according to the principle of proportionality[14]. The fundamental law is viable as long as it is appropriate to the realities of the state and a certain society at a certain historical moment. Moreover – according to Prof Ioan Muraru – "a Constitution is viable and efficient if it acquires the balance between citizens (society) and public authorities (state) on the one hand, and on the other hand, between the public authorities and even between citizens. It is also important that constitutional regulations ensure that public authorities are at the service of citizens, ensuring the protection of the individual against arbitrary attacks by the state against his freedoms"[15]. In situations where such a relationship of proportionality no longer exists either due to imperfections in the Constitution or due to the inadequacy of constitutional regulations to the new

state and social realities, there is a legal and political need for constitutional revision.

However, in the relation between stability and constitutional revision, unlike the general relation between stability and innovation, in law these two terms do not have the same logical and judicial value. It is a report of vexation (and not of contradiction) in which the stability of the constitution is the dominant term. This is justified by the fact that the stability is an essential requirement for the guarantee of the principle of the supremacy of the Constitution, with all its consequences. Only through the primacy of stability over revision initiatives, a constitution can exercise its functions and role in ensuring the stability, balance and dynamics of the components of the social system, the increasing assertion of the principles of the rule of law.

The supremacy of the Constitution conferred also by its stability represents a guarantee against the arbitrariness and discretionary power of the state authorities, through the pre-established and predictable constitutional rules, which regulate the organization, functioning and attributions of the state bodies. Therefore, before raising the issue of revising the Constitution, it is important that the state authorities make the correct interpretation and application of the constitutional normative provisions in their letter and spirit. The work of interpreting constitutional texts carried out by constitutional courts but also by other state authorities in compliance with the powers conferred by law is likely to reveal the meanings and significations of the principles and regulations of the Constitution and thus contribute to the process of adapting these rules to social, political and state rules whose dynamics must not be neglected. The justification of the interpretation is found in the need to apply a general constitutional text to a concrete factual situation[16].

Guaranteeing the supremacy of the Constitution and stability of the fundamental law are the premises for what we call "a loyal constitutional behavior".

According to our opinion, the preoccupation of the political class and of the state authorities nowadays, in relation to the actual content of the Constitution, should be oriented towards the correct interpretation and application of it and towards the compliance with the democratic finality of the constitutional institutions.

In order to consolidate the rule of law in Romania, even in the current normative form of the Constitution, it is necessary that political parties, especially those in power, all state authorities act or exercise their powers within the limits of loyal constitutional behavior involving respect for meaning and the democratic significations of the Constitution, the Orthodox Christian traditions and values of the Romanian people, the rights and dignity of the person.

The obligation of authorities, namely of the Parliament and the executive to have a loyal constitutional behavior was for the first time stated in the jurisprudence of the French Constitutional Council, which is the constitutional court of France.

This obligation is found in the attributions that state authorities have to interpret and apply the constitutional norms. It is not limited to the simple requirement of legality of the acts and provisions of the rulers, i.e. to the formal observance of the law.

The normative activity of drafting the law must be continued with the activity of applying the norms. In order to apply, the first logical operation to be performed is their interpretation.

Both the Constitution and the law are presented as a set of legal norms, but these norms are expressed in the form of a normative text. What is represented as an object of interpretation are not the legal norms, but the text of the law or of the Constitution. A text of law may contain several legal norms. From a constitutional text may be deduced a constitutional norm through interpretation. The constitutional text is drafted in general terms which influence the degree of determination of the constitutional norms. Through interpretation the constitutional norms are identified and determined.

It should also be emphasized that a Constitution may contain certain principles which are not clearly expressed *expressis verbis* but may be inferred from the systematic interpretation of other rules.

In the sense of those shown above, in the literature it was specified that "The degree of determination of the constitutional norms through the text of the fundamental law can justify the need for interpretation. The norms of the Constitution are best suitable to an evolution of their course, because the text is by excellence imprecise, formulated in general terms. The formal superiority of the Constitution, its rigidity, prevents its revision at very short intervals and then the interpretation remains the only way to adopt the normative content, usually older, to the social reality that is constantly changing. The meaning of the constitutional norms being by their very nature, that of maximum generality, its exact determination depends on the will of the interpreter"[17].

The scientific justification of the interpretation results from the need to ensure effectiveness to the norms stated both in the Constitution and in the laws, through institutions that carry out mainly the activity of interpreting the rules enacted by the author. These institutions are mainly the judicial and constitutional courts.

Verification of the conformity of a normative act with the constitutional norms, an institution that represents the constitutionality control of the laws, does not mean a formal comparison or a mechanical

[16] Ioan Muraru, Mihai Constantinescu, Elena Simina Tănăsescu, Marian Enache, Gheorghe Iancu, Interpretarea Constituției (Bucharest: Lumina Lex, 2002), 14.

[17] Ioan Muraru, Mihai Constantinescu, Elena Simina Tănăsescu, Marian Enache, Gheorghe Iancu, Interpretarea Constituției. Doctrină și practică (Bucharest: Lumina Lex, 2002), 67.

juxtaposition of the two categories of norms, but a complex work based on the techniques and procedures of interpreting both the law, as well as the Constitution.

Therefore, the necessity for the interpretation of the Constitution is a condition for its application and of the insurance of its supremacy. The constitutional control of the law is essentially an activity of interpretation both of the Constitution and of the laws.

Constitutional jurisprudence through the work of interpretation and application of the norms of the Constitution can contribute to revealing the meanings and meanings of the content of the norms of the Constitution, some of these being explicitly included in the content of the interpreted norm and others only implicitly. The contribution of the constitutional jurisprudence in the construction of the norms of the fundamental law, we consider it to be a work of legal construction of the content of the interpreted norm consisting in the new revealed valences of the explicit and especially implicit form of the norms. Of course, the work of constructing the content of the constitutional norms does not represent an addition to the legal norm of some elements that exceed the intention of the constituent legislator or are contrary to his will. The Constitutional Court, considering the features of our legal system, cannot create legal norms, cannot substitute the legislator. Our constitutional court is, as it is constantly stated by the legislature, a "negative legislator" because it does not have the competence to create legal norms, but only to ascertain the unconstitutionality of the analyzed legal norm. The Constitutional Court, as any other court, does not create the law, it simply "tells the law", expresses through its decisions the explicit or implicit content of the interpreted and applied constitutional norm.

In our opinion, the Constitutional Court cannot be characterized only by the phrase "negative legislator", but has an important positive role through the jurisprudential work in the construction of the normative content of the Constitution and especially the construction of the content of certain general principles of law explicitly or implicitly formulated by the norms of the fundamental law.

The relations between the state authorities have a complex feature, but which must also ensure their proper functioning in compliance with the principle of legality and the supremacy of the Constitution. In order to achieve this desideratum, it is very important to maintain the state balance in all its forms and variants, including as a social balance.

The separation and balance of power no longer refers only to classical powers (legislative, executive and judicial). To these powers are added others which give new dimensions to this classical principle. The relations between the participants to state and social life may generate conflicts that must be solved to maintain the balance of powers. Some constitutions refer to litigations of public law (German Constitution – Art 93), to conflicts of competence between the state and autonomous communities or conflicts of attributions between state powers, between state and regions or between regions (Italian Constitution – Art 134). The Romanian Constitution speaks about legal conflict of constitutional nature between public authorities [Art 146 Let c)] and promotes the mediation conducted by the President between state powers.

The Constitutional Court is an important guarantor of the separation and balance of state powers, because it solves legal conflicts of a constitutional nature between public authorities and through its powers in constitutional review prior to laws and verifying the constitutionality of chamber regulations interferes in insuring the balance between the parliamentary minority and majority, effectively ensuring the right of the opposition to speak.

The Constitutional Court is a guarantor of respect for fundamental rights and freedoms. This fundamental role of the constitutional court in a state of law is performed through the jurisprudential interpretation of the Constitution and the laws. In principle, there are three essential constitutional guarantees regarding the civil rights and freedoms established by the Constitution: a) the supremacy of the Constitution; b) the rigid character of the Constitution; c) the access of the citizens to the control of the constitutionality of the law and to the control of the legality of the acts subordinated to the law.

In Romania, the procedure of the exception for unconstitutionality insures the indirect access for citizens to constitutional justice.

The constitutional obligation that the rulers have to have a constitutional behavior loyal to the normative content but also the purpose of the Constitution is also an expression of the requirement of legitimacy that the normative acts must fulfill, as well as the governmental measures and dispositions adopted. In order to be an expression of a loyal constitutional behavior, legal and political acts issued by the Parliament and the executive, must be not only legal, i.e. be formally in line with the Constitution, but also legitimate. The legitimacy of a legal act, individual or normative reveals the requirement according to which the act must correspond not only to the letter of the law (the Constitution), but also to its spirit.

The legality of the legal acts of the public authorities implies the following requirements: the legal act to be issued in compliance with the competence provided by law; the legal act to be issued in accordance with the procedure provided by law; the legal act to respect the superior legal norms as a legal force.

The legitimacy is a complex category with multiple significations representing the object of research for the general theory of the law, the philosophy of the law, sociology and other disciplines. The significations of this concept are multiple. We mention a few: the legitimacy of power; the legitimacy of the political regime; the legitimacy of a governance; the legitimacy of the political system etc. The concept of legitimacy may be applied also for the legal acts

issued by public authorities being related to the "margin of appreciation" recognized for them in the performance of their attributions.

The application and compliance with the principle of legality in the activity of state authorities is a complex matter, because the performance of the state functions refers also to the discretionary power invested in the state organs or in other words, the authorities' right to assess the timing of the adoption and the content of the measures ordered. What is important to underline is the fact that the discretionary power cannot oppose the principle of legality, as dimension of the state of law.

In our opinion, legality is a particular aspect of the legitimacy of legal acts of public authorities. Thus, a legitimate legal act is a legal act, issued within the margin of appreciation recognized for public authorities, which does not generate discriminations, privileges or unjustified limitations of the subjective rights and it is appropriate to the factual situation which determines it and the purpose of the law. Legitimacy differentiates between the discretionary power recognized to state authorities and the excess of power.

Not all legal acts fulfilling the conditions for legality are also legitimate. A legal act fulfilling the formal conditions for legality, but which generates discrimination or privileges or unjustifiably restricts the exercise of subjective rights or is not appropriate to the factual situation or the purpose pursued by law, is an illegitimate legal act. Legitimacy, as feature of the legal acts issued by public administration authorities must be understood and applied in relation to the principle of the supremacy of the Constitution.

At the current stage of the Romanian legal system, the requirement of legitimacy of laws cannot be verified by the constitutionality control of the Constitutional Court. It is sad to note that at present, in the exercise of governing powers, the state power is often concerned not so much with the requirements of legality, the formal correspondence of a legal act adopted with constitutional rules and very little or no fulfillment of the requirement of legitimacy. The consequence of such behavior in the performance of the governing attributions, which violate the obligation of loyalty for the Constitution, but first of all towards the Romanian people is the excess and abuse of power with serious consequences on respecting, defending and promoting the Orthodox traditions and values of faith of the Romanian people, asserting the public interest and not personal, exercising important fundamental rights and freedoms.

The obligation for a correct interpretation and application of the Constitution and of the law belongs also to rulers, namely to the President, Parliament and Government, in relation to the attributions they have. The interpretation of the constitutional norms and generally of the legal norms performed by the rulers must correspond to some minimum formal imperatives:

- the obligation to respect the supremacy of the Constitution;
- the obligation to respect the principles of stability and security of the legal relations in the activity of governing;
- clarity and predictability of the adopted normative acts;
- limiting the practice of legislative delegation in governing activity, especially in the form of emergency ordinances;
- restricting the exercise of certain rights and freedoms shall have an exceptional feature, without affecting the substance of the law and with a rigorous compliance with the principle of proportionality;
- the prohibition not to add by interpretation the interpreted normative text;
- the obligation to comply with the meaning and finality of the constitutional norm;
- the obligation to give efficiency to the interpreted legal norm;
- the obligation to strictly comply with the competence and constitutional procedures and those established by the law in the performance of the attributions;
- avoiding as far as possible conflicts of a constitutional and political nature between state authorities.

These are, in our opinion, formal requirements that are part of the notion of loyal constitutional behavior.

The loyal constitutional behavior of the public authorities is mainly a requirement of the state of law which the Constitutional Court has expressed in its jurisprudence. Even if the Constitutional Court does not explicitly use the notion of "loyal constitutional behavior", some jurisprudential aspects are part of the content of this concept.

We exemplify with some aspects of jurisprudence:

The jurisprudence of the Constitutional Court expresses the main requirements of the state of law. It is significant in this sense Decision No 17 of January 21, 2015[18], by which the Constitutional Court gives a pertinent explanation to the character of the rule of law, stated by Art 1 Para 3, 1st thesis of the Constitution: "The requirements of the rule of law concern the major purposes of its activity, foreshadowed in what is commonly referred to as the rule of law, a phrase involving the subordination of the state to the rule of law, the provision of those means to allow law to censor political choices weigh any abusive, discretionary tendencies of state structures[19]. The rule of law insures the supremacy of the Constitution, the correlation between the laws and all normative acts with it, the existence of a separation between public powers which must act within the law, namely within the limits of a law expressing the general will. The rule of law enshrines a series of guarantees, including

[18] Published in the Official Gazette of Romania, No 79/30 January 2015.
[19] Published in the Official Gazette of Romania, No 334/19 July 2000.

jurisdictional ones, which ensure the observance of citizens' rights and freedoms through the self-limitation of the state, respectively the inclusion of public authorities in the coordinates of law".

The principle of stability and security of legal relations in not expressly stated by the Romanian Constitution, but, like other constitutional principles, it is implied by the constitutional normative provisions, namely by Art 1 Para 3, which states the feature as rule of law. In this way, our constitutional court accepts the deduction, by way of interpretation, of some principles of law implied by the express norms of the Fundamental Law. In this sense, in the Decision No 404 of 10 April, 2008[20], the Constitutional Court has stated that: "The principle of stability and security of legal relations, though it is not expressly stated by the Romanian Constitution, this principle is implied both from the provisions of Art 1 Para 3, according to which Romania is a state of law, democratic and social, as well as from the Preamble of the European Convention on Human Rights and Fundamental Freedoms, as it has been interpreted by the European Court of Human Rights in its jurisprudence[21]. Moreover, our constitutional court has considered that the principle of security of civil legal relations represents a fundamental dimension of every rule of law[22].

The Constitutional Court constantly rules for the clarity and predictability of the law, these being requirements of the rule of law. Thus, "the existence of certain contradictory legislative solutions and the cancelation of some legal provisions through other provisions stated in the same normative act lead to the violation of the principle of security of legal relations, as effect of the lack of clarity and predictability of the norm, principles representing a fundamental dimension of the rule of law, as it is expressly stated by Art 1 Para 3 of the Fundamental Law[23].

Regarding the rule of law, the Constitutional Court has stated that freedom and social democracy are supreme values. In this context, militarized authorities, such as the Romanian Gendarmery, performs according to the law, specific responsibilities for the protection of public order and peace, the fundamental rights and freedoms of citizens, public and private property, the prevention and detection of crime and other violations of the laws in force, and the protection of fundamental state institutions and the fight against acts of terrorism. Consequently, the constitutional court has ruled that: "Through the possibility of militarized authorities to ascertain the contraventions committed by civilians, Art 1 Para 3 of the Constitution, regarding the Romanian state, as a democratic and social rule of law"[24].

Human dignity, along with the freedoms and rights of citizens, the free development of the human personality, justice and political pluralism, are the supreme values of the rule of law (Art 1 Para 3). In the light of these constitutional regulations it has been stated in the jurisprudence of the Constitutional Court that it is forbidden for the state to adopt legislative solutions which may interpreted as disrespectful of the religious or philosophical beliefs of parents, which is why the organization of school activities must achieve a fair balance between the process of education and teaching of religion, and on the other hand with respect for the rights of parents, to ensure education in accordance with their own religious beliefs. Activities and behaviors specific to a particular attitude of faith or philosophical beliefs, religious or non-religious, must not be subject to sanctions that the state provides for such behavior, regardless of the reasons of faith of the person concerned. "As part of the constitutional system of values, to the freedom of religious conscience is attributed the imperative of tolerance, especially with human dignity, guaranteed by Art 1 Para 3 of the Fundamental Law, which dominates as supreme value the entire system of values"[25].

It is also interesting to underline the fact that our constitutional court considers human dignity as being the supreme value of the entire system of values constitutionally stated, value also found in the content of all human rights and fundamental freedoms. Also, an important aspect imposed to all public authorities is that in their activity to first of all respect the human dignity.

It should be noted that in its jurisprudence, the Constitutional Court also identifies the content components of human dignity, as moral value but in the same time, constitutional and specific to the rule of law: "Human dignity, from a constitutional point of view, presupposes two inherent dimensions, namely the relations between people, which refers to the right and obligation of people to be respected and, correlatively, to respect the rights and fundamental freedoms of their fellows, as well as the human relationship with the environment, including the animal world"[26].

3. Conclusions

Compared to the excessive politics and acts that represent a clear excess of power of the executive contrary to the spirit and even to the letter of the Constitution, with the consequence of violating some

rights and fundamental freedoms, manifested during the last three decades of original democracy in Romania, we consider that the scientific approach and not only in the area of the constitutional revision must be oriented towards finding solutions to guarantee the values of the rule of law, of the fair Orthodox belief, of limiting the violation of the constitutional provisions, mainly to guarantee the loyal constitutional behavior of the state authorities. We propose some legislative solutions:

1. Art 114 Para 1 of the current text states that: "The Government may assume responsibility before the Chamber of Deputies and the Senate, in joint sitting, upon a program, a general policy statement, or a bill".

The commitment of the Government has a political feature and is a procedural means by which the phenomenon of "dissociation of the majorities"[27] is avoided in the situation when in Parliament the majority necessary to adopt a certain measure initiated by the Government could not be met. In order to determine the legislative forum to adopt the measure, the Government, through the procedure of assuming responsibility, conditions the continuation of its activity requesting a vote of confidence. This constitutional procedure guarantees that the majority required for the dismissal of the government, in case of filing a motion of censure to coincide with that for the rejection of the bill, program or political declaration to which the Government links its existence.

The adjustment of the laws as effect of assuming the political responsibility of the Government has as important consequence the absence of any parliamentary debates or discussions on that bill. If the Government is supported by a comfortable parliamentary majority, through this procedure it may obtain the adoption of the laws "bypassing the Parliament", which may generate negative consequences for the compliance with the principle of separation of state powers, but also for the role of the Parliament, as it is defined by Art 61 of the Constitution.

Therefore, the use of this constitutional procedure by the Government in the adoption of a bill must be exceptional, justified by a political situation and a social imperative very well defined.

This particularly important aspect for the observance of the democratic principles of the rule of law by the Government was well highlighted by the Romanian Constitutional Court: "This simplified way of legislating must be reached *in extremis*, when the adoption of the bill in the ordinary or emergency procedure is no longer possible or when the political structure of the Parliament does not allow the adoption of the bill in the current or emergency procedure"[28].

The political practice of the Government for the past years has been contrary to all these rules and principles. The executive has frequently resorted to liability not only for a single law, but also for packages of laws without a justification in the sense of those shown by the Constitutional Court.

The politicism of the Government clearly expressed by the high frequency of recourse to this constitutional procedure seriously affects the principle of political pluralism which is an important value of the legal system enshrined in the provisions of Art 1, Para 3 of the Constitution but also the principle of parliamentary law which shows that "The opposition is expressing itself and the majority is deciding"[29]; "Denying the right of the opposition to express itself is synonym with the denial of the political pluralism which, according to Art 1 Para 3 of the Constitution represents a supreme value and it is guaranteed…the principle majority decides, opposition expresses itself assumes that in all the organization and functioning of the Chambers of Parliament it is ensured, on the one hand, that the majority is not obstructed especially in the conduct of the parliamentary procedure, and, on the other hand that the majority decides only after the opposition has expressed itself"[30].

The censorship of the Constitutional Court has proven insufficient and inefficient in determining the Government to comply with these values of the rule of law.

In the context of these arguments, we propose that in the organic law on the organization and functioning of the Government, but also in the Regulations of the Parliament, the right of the Government to resort to incurring its responsibility for a single bill in a parliamentary session be limited. At the same time, it is useful to expressly provide in the same normative acts that this procedure does not apply to organic laws.

In our opinion, these provisions can be included in normative acts subsequent to the Constitution, without the need for a revision of the Fundamental Law, because the regulations in question do not contradict the provisions of Art 114 of the Constitution, but they are a concretization and explication of them.

2. All post-December governments have massively resorted to the practice of government ordinances, widely criticized in the literature. The conditions and interdictions inserted by the Law for the constitutional revision in 2003 on the constitutional regime of the emergency ordinances, proved insufficient for the limitation of this practice of the executive, also the control of the Constitutional Court proved insufficient and inefficient. The consequence of such practice is the violation of the role of Parliament as "sole legislative authority of the country" (Art 61 of the Constitution) and the creation of an imbalance between executive and legislative by emphasizing the discretionary power of the Government, which has often turned into an excess of power.

[27] Gheorghe Iancu, *Drept constituţional şi instituţii publice* (Bucharest: All Beck, 2010), 482.

[30] Muraru and Constantinescu, *Drept parlamentar românesc*, 55-69.

It is gratifying that our constitutional court, recently changing the judicial practice in this matter, has ruled that emergency ordinances cannot affect the legal regime of rights and fundamental freedoms, more precisely, the exercise of these rights cannot be restricted.

In order to limit the excess of power of the Government through emergency ordinances, we propose, without being necessary the revision of the Constitution, that by organic law to define the emergency situations and to enumerate strictly and limitingly these cases.

3. In the current conditions characterized by the tendency of the executive to take advantage of obvious politics and to force impermissibly and dangerously the limits of the Constitution and democratic constitutionalism, it is necessary to create mechanisms to control the activity of the executive able to really guarantee the supremacy of the Constitution and principles of the rule of law.

It is necessary that the role of the Constitutional Court as guarantor of the fundamental law be amplified by new attributions with the purpose of limiting the excess of power of state authorities. We do not agree with those stated in the literature that a possible improvement of constitutional justice could be achieved by reducing the powers of the constitutional court[31].

Without being necessary the revision of the Constitution, among the attributions of the Constitutional Court may be included that of ruling upon the constitutionality of the administrative acts excepted from the control of legality performed by the courts of administrative contentious. This category of administrative acts, to which Art 126 Para 6 of the Constitution and the Law No 544/2004 on the administrative contentious refers to are extremely important for the entire social and state system. Therefore, a constitutionality control is necessary because in its absence the discretion of the issuing administrative authority is unlimited with the consequence of the possibility of excessive restriction of the exercise of fundamental rights and freedoms or violation of important constitutional values. For the same reasons, our constitutional court should be able to review constitutionality and Presidential decrees on exceptional circumstances.

At the same time, the Organic Law on the Organization and Functioning of the Constitutional Court proposes to stipulate the competence and obligation of the constitutional court to rule ex officio on the constitutionality of Government ordinances, but also of all normative acts on the establishment and regime of exceptional states to enter into force.

Some brief explanations are needed: The Constitutional Court, like any court, operates according to the principle according to which it cannot notify itself for the fulfillment of its attributions, but a notification is required from one of the subjects of law to which the provisions of Art 146 of the Constitution strictly refers to. Nevertheless, as an exception, the Constitutional Court has the competence to verify *ex officio* the constitutionality of the drafts regarding the revision of the Constitution. By virtue of this precedent, we consider that it is possible to extend this competence of our Constitutional Court also for Government's ordinances, for the normative legal acts issued in consideration of an exceptional state or for those exempted from judicial control.

INVOLVEMENT OF THE OMBUDSMAN INSTITUTION IN THE MECHANISM OF CONSTITUTIONAL JUSTICE

Elena ANGHEL*

Abstract

The Romanian Constitution adopted in 1991 establishes, in a concise form, the fundamental principles regarding the organization and functioning of the People's Advocate / Ombudsman institution, specifying the role, the appointment procedure, the attributions of the People's Advocate and the ways of exercising them, the relationship with public authorities and Parliament. Also, the Constitution establishes that the Ombudsman is organized and operates on the basis of an organic law (art. 58 - art. 60). Thus, the Constitution reconfigured the constitutional order, creating new state structures, such as the Constitutional Court and the Ombudsman, called People's Advocate.

A second stage in creating the institution is related to the adoption, by the Parliament, of the organic law regarding the organization and functioning of the People's Advocate institution - Law no. 35/1997. Since the adoption of the law, the People's Advocate is organized and operates in Romania exercising a general mandate to defend the rights and freedoms of individuals in their relations especially with public administration authorities, borrowing the experience of the classic Western European ombudsman.

Year 2002 marks a new stage in the evolution of the People's Advocate institution, by adding to the existing competencies the possibility of involvement in the mechanism of constitutional justice. Thus, by Law no. 181/2002, the People's Advocate acquires the right to formulate points of view on the exceptions of unconstitutionality, at the request of the Constitutional Court.

The revision of the Constitution in 2003 finalizes the process started in the previous year, by amending the organic law, the competences in the matter of constitutionality control being extended from the formulation of points of view, to the possibility to directly notify the Constitutional Court with the objection of unconstitutionality of laws, as well as with the exception of unconstitutionality of laws and ordinances.

Keywords: *constitutional, Constitutional Court, point of view, exception of unconstitutionality, objection of unconstitutionality, law, Government ordinance, independence*.

1. Introduction

As Professor Ioan Muraru[1] pointed out, the examination of the powers of the institution of Ombudsman, of the means and procedures of exercise must be performed in the light of the constitutional provisions that define the function of this institution.

According to art. 58-60 of the Constitution and art. 1 para. (1) of Law no. 35/1997, the role of the Ombudsman is to defend the rights and freedoms of individuals in their relations with public authorities. In order to achieve this goal, the Ombudsman was invested with a series of prerogatives, among which, after the revision of the Constitution in 2003, and under the possibility to notify the Constitutional Court, the exception of unconstitutionality of laws and ordinances, under art. 146 letter d) of the Constitution, in connection with art. 15 para. (1) letter i) of Law no. 35/1997.

By means of this important power, the Ombudsman has available a serious and efficient lever for fulfilling his constitutional role. The Ombudsman can be involved, by own constitutional and legal means, in the control of constitutionality of laws and ordinances, carried out in Romania by the Constitutional Court.

Therefore, the Ombudsman can refer to the Constitutional Court on objections of unconstitutionality regarding the laws adopted by the Parliament, before their promulgation by the President of Romania. Furthermore, he can refer to the Constitutional Court on exceptions of unconstitutionality of laws and ordinances in force. Moreover, the Ombudsman formulates, at the request of the Constitutional Court, points of view on the exceptions of unconstitutionality of laws and ordinances which concern the rights and freedoms of citizens.

In addition to the duties in the field of constitutionality, the Ombudsman can refer to the competent court of contentious administrative, as well as to the High Court of Cassation and Justice, by way of referral in the interests of the law.

2. Content

2.1. Objections of unconstitutionality

According to art. 146 letter a) of the Constitution of Romania, republished, "the Constitutional Court adjudicates on the constitutionality of laws before the promulgation thereof, upon notification by the President of Romania, one of the presidents of the two Chambers, the Government, the High Court of

* Lecturer PhD, Faculty of Law, „Nicolae Titulescu" University of Bucharest (e-mail: elena_comsa@yahoo.com).

[1] Ioan Muraru, *Avocatul Poporului – instituție de tip Ombudsman*, All Beck Publishing House, Bucharest, 2004, page 63.

Cassation and Justice, the Ombudsman, a number of at least 50 deputies or at least 25 senators, as well as ex officio, on initiatives to revise the Constitution".

The constitutional provisions were transposed in the legislation regulating the institution of Ombudsman, in the content of art. 15 para. (1) letter h) of Law no. 35/1997 on the organization and functioning of the institution of Ombudsman, republished, according to which "the Ombudsman can refer to the Constitutional Court on the unconstitutionality of laws, before the promulgation thereof".

We are in the field of the a *priori* constitutionality control, and the introduction of the Ombudsman among the topics of seisin is justified by the ability of the institution to identify, based on the institutional relations with the Parliament and of the permanent contact with civil society, the legal situations that would violate, in terms of regulation, the constitutional provisions. In this case the procedural rules of both the parliament and those of the constitutional jurisdiction are applicable. These are found in Law no. 47/1992 on the organization and functioning of the Constitutional Court, republished. According to this law, the notifications must be in writing and substantiated.

2.2. Direct exceptions of unconstitutionality

According to art. 146 letter d) of the Constitution of Romania, republished, "The Constitutional Court decides on objections of unconstitutionality of laws and ordinances, brought up before courts of law or commercial arbitration; the objection of unconstitutionality may also be brought up directly by the Ombudsman".

According to art. 15 para. (1) letter i) of Law no. 35/1997, republished, "The Ombudsman can refer directly to the Constitutional Court on the exception of unconstitutionality of laws and ordinances". In this case, the Ombudsman refers directly to the Constitutional Court by way of exception of unconstitutionality, and there is no need to go through a preliminary stage before the courts of law. Therefore, we are in the field of the posteriori constitutionality control.

In what concerns the applicable procedure, we note that the exception is not brought before the court of law, but directly before the Constitutional Court. Although the specialized literature pointed out that, in the light of the constitutional and legal provisions regarding the role of the institution of Ombudsman, the exception can be raised only when laws and ordinances violate the rights and freedoms of individuals, thus becoming a guarantee of the exercise thereof, the Constitutional Court established, by Decision no. 336/2013[2], that the Ombudsman can initiate constitutionality control by way of the exception of unconstitutionality regardless of the issues addressed by it, but direct raising of exception of unconstitutionality is and remains at the exclusive discretion of the Ombudsman, who cannot be forced or prevented by any public authority to raise such an exception[3].

Because not infrequently the decision of the Ombudsman to raise or, as the case may be, not to raise an exception of unconstitutionality, created dissatisfaction, we will further detail the considerations of Decision no. 103/2020, whereby the Constitutional Court resolved the exception of unconstitutionality of the provisions of art. 2 para. (1) - (3), of art. 13 para. (1) letter f) and of art. 30 of Law no. 35/1997 on the organization and functioning of the institution of Ombudsman. Therefore, the exception of unconstitutionality was raised by the plaintiff when resolving a contentious administrative action, the scope of which was the ascertainment of the unjustified refusal of defendant Ombudsman to resolve a request for referral to the Constitutional Court, as well as the obligation of the defendant to refer an exception of unconstitutionality to the Constitutional Court.

The criticized legal texts regulate the status of the institution of Ombudsman of autonomous public authority and independent from any other public authority and provide that, in the exercise of his powers, the Ombudsman does not substitute himself for public authorities. Furthermore, the Ombudsman cannot be subject to any mandatory or representative mandate. No person may compel the Ombudsman to obey instructions or orders.

Furthermore, the duty of the Ombudsman according to which he can directly refer to the Constitutional Court for the exception of unconstitutionality of laws and ordinances is claimed; as well as the legal provisions establishing that the Ombudsman and his assistants are not legally liable for the opinions they expressed or for the acts they fulfilled, in compliance with the law, in the exercise of the powers provided by this law.

The plaintiff's complaints in support of the unconstitutionality of these legal provisions are mainly the following: the notification of the Constitutional Court is at the discretion of the Ombudsman; the decision of the Ombudsman not to refer to the Constitutional Court cannot be subject to a judicial control, as it is an autonomous public authority and independent of any other public authority and no person may compel the Ombudsman to obey instructions or orders, which would violate the provisions of art. 1 para. (3)-(5) of the Constitution; the right of access to justice cannot be sacrificed as an excuse to the independence of the institution of Ombudsman, especially since it aims the verification of the constitutionality of certain legal provisions that are in the interest of the citizens.

[2] Decision no. 336/2013 regarding the exception of unconstitutionality of the provisions of art. 13 para. (1) letter f) of Law no. 35/1997 on the organization and functioning of the institution of Ombudsman.

[3] For a detailed analysis of the juridical concepts, see Nicolae Popa, Elena Anghel, Cornelia Beatrice Gabriela Ene-Dinu, Laura-Cristiana Spătaru-Negură, *Teoria generală a dreptului. Caiet de seminar, Edition 2*, C.H. Beck Publishing House, Bucharest, 2014.

The point of view expressed by the Ombudsman emphasized that the direct notification of the Constitutional Court, without granting the Ombudsman the possibility to assess the fulfillment of the admissibility conditions established by the law, as well as to assess the inconsistency of the criticized legal provisions with the provisions of the Fundamental Law, would infringe its status of independent institution, by setting a dangerous precedent, within the reach of anyone seeking to achieve a political goal by using the mechanism of the exception of unconstitutionality. The regulation of the Ombudsman's obligation to refer directly to the Constitutional Court would be meant to annihilate any possibility of advisable analysis of constitutionality issues, in this case, the implication of the Ombudsman in the constitutionality control being limited only to the "referring" to the Constitutional Court of the substantiated request received.

On the grounds of the aforementioned legal regulation, the Ombudsman can exercise his powers only within the constitutional and legal limits established in order to fulfill his role of defender of the individuals' rights and freedoms, without being substituted for other public authorities which, in their turn, must fulfill their own duties, as regulated by the legislation in force. It is remarkable that the oath to be taken by the Ombudsman, on the occasion of his investiture, includes the obligation to defend the citizens' rights and freedoms and to fulfill his duties in good faith and impartiality. In what concerns the possibility of the citizens to benefit from the protection of their rights and freedoms, the current legislation regulates a series of means meant to ensure the protection of citizens against the application of unconstitutional legal provisions. Furthermore, natural persons have the possibility to request the Ombudsman to assess the constitutionality of a legal provision, in order to refer directly to the Constitutional Court[4].

By analyzing the filed complaints, the Constitutional Court pointed out that, both in case of laws before promulgation (art. 146 letter a) first thesis), and in case of the exception of unconstitutionality of laws and ordinances (art. 146 letter d) second thesis), the constitutionality control exercised by the Ombudsman is an abstract one, unlike the actual constitutionality control performed by the Constitutional Court at the notification of the courts with an exception of unconstitutionality, under art. 146 letter d) first thesis of the Constitution.

In this respect, we reaffirm those provided by the Constitutional Court by Decision no. 64/2017: "art. 146 letter d) of the Constitution consists of two theses. In what concerns the first thesis of this constitutional text on the exception of unconstitutionality referred to a court of law or to a court of commercial arbitration, the Court ruled that, once notified, it is bound to control the constitutionality of the acts of primary regulation, without conditioning this control on the elimination, in any way, from the active substance of the legislation of the act claimed to be unconstitutional, therefore «the laws or ordinances or the provisions of laws or ordinances the legal effects of which continue to be produced even after the expiry of the validity thereof are also subject to constitutionality control » (Decision no. 766/2011). Therefore, this thesis regulates an actual constitutionality control, which entails sine qua non the existence of a pending litigation where the exception of unconstitutionality of certain normative acts of primary regulation related to its settlement to be claimed (Decision no. 338/2013). Instead, in what concerns the second thesis of art. 146 letter d) of the Constitution, the Court established that the phrase «in force» within art. 29 para. (1) of Law no. 47/1992 «cannot be construed in the same way as in the case of Decision no. 766/2011, since the settlement of the exception of unconstitutionality raised directly by the Ombudsman is performed within an abstract constitutionality control» (see Decision no. 1167/2011, admitted and maintained by Decision no. 549/2015, paragraph 16), which means that *the Ombudsman raises an exception of unconstitutionality distinctly from any judicial procedure, therefore, in the absence of any litigation, he has no subjective right to defend* "[5].

The Constitutional Court also noted that, according to his constant case-law, the Ombudsman can initiate constitutionality control by way of the exception of unconstitutionality regardless of the issues addressed by it, but direct raising of exception of unconstitutionality is and remains at the exclusive discretion of the Ombudsman, who cannot be forced or prevented by any public authority to raise such an exception. Therefore, the Court noted that the Ombudsman has the exclusive right to decide on referring an exception of unconstitutionality, part of the institutional and functional independence he benefits from.

Although neither the Constitution nor its organic law regulates the cases where the exception of unconstitutionality is raised, it can be concluded that the possibility of notifying the Constitutional Court did not aim at the transforming of the institution of Ombudsman into an arbitrator between state institutions or its substitution for the Constitutional Court or the Parliament. Precisely for this reason, the Ombudsman has the possibility to establish the cases in which he can intervene.

The Constitutional Court pointed out that, in case the Ombudsman were obliged to refer to the Constitutional Court with an exception of unconstitutionality, upon the request of the natural

[4] See Decision no. 103/2020 on the exception of unconstitutionality of the provisions of art. 2 para. (1), (3) and (4), of art. 15 para. (1) letter i) and of art. 52 of Law no. 35/1997 on the organization and functioning of the institution of Ombudsman.

[5] In what concerns the abstract nature of the control exercised under the terms of art. 146 letter d) second thesis of the Constitution, see Decision no. 163/2013, and on the conditions and implications of a mutatis mutandis abstract constitutionality control, see Decision no. 260/2015, paragraph 33.

persons or legal persons, the constitutionality control performed by way of the exception of unconstitutionality would be converted into a genuine *actio popularis*, an instrument not regulated by the Constitution in the Romanian system of the control of constitutionality of laws.

For all these grounds, the court of contentious constitutional dismissed as unsubstantiated the exception of unconstitutionality referred and found that the objected legal provisions of Law no. 35/1997 on the organization and functioning of the institution of Ombudsman are constitutional in relation to the formulated objections.

2.3. Formulation of points of view on the constitutionality of laws and ordinances regarding human rights

According to the provisions of art. 22 of Law no. 35/1997, republished, "*In case of referring the exception of unconstitutionality of laws and ordinances regarding human rights, the Constitutional Court shall also request the point of view of the institution of Ombudsman*."

A similar provision is found in art. 30 of Law no. 47/1992, republished, according to which "the president of the Constitutional Court, after receiving the notification ruling from the court of law, he will communicate it to the Ombudsman, by indicating the date until which he can deliver his point of view on the exception of unconstitutionality claimed within actual trail proceedings".

We hereby point out that other normative acts (Government resolutions, regulations and orders of ministers etc.) cannot be subject to the constitutionality control, but only Government laws and ordinances.

The Contentious Constitutional Service, referral in the interests of the law, contentious administrative and legal, normative acts review, external relations and communication, which analyze the petitions on the request of raising an exception of unconstitutionality regarding laws or ordinances in force operate within the institution of Ombudsman, under the direct subordination of the Ombudsman. These requests are reviewed, under the coordination of the Head of Department, by the advisers of the Contentious Constitutional Department and Referral in the Interests of the Law Department in relation to the constitutional provisions claimed by the petitioner.

The procedure of referring to the Constitutional Court is a procedure entailing judicial matters, so that the petitions in this subject area must meet certain specific requirements. Therefore, for the direct referring of the exception of unconstitutionality by the Ombudsman, it is required to properly observe the procedural rules on the performance of the constitutionality control, referred to in art. 29 of Law no. 47/1992, republished, as well as the substantive rules. A certain structure inherent in any exception of unconstitutionality has been enshrined in the case-law of the Constitutional Court. The unconstitutionality notification shall consist of 3 elements:

a) the legal text in force challenged in terms of the constitutionality, provided that, by means of Decision no. 64/2017, the Ombudsman was granted the possibility to raise the exception of unconstitutionality on the emergency ordinances which, despite the fact they were published in the Official Gazette of Romania, Part I, are not yet in force due to the fact they provide a later date of entry into force;

b) the constitutional text of reference alleged to be violated;

c) the motivation of the relation of opposition existing between the two texts, in other words, the argumentation of the unconstitutionality of the challenged text.

The aforementioned conditions are required in the context in which according to art. 10 para. (2) of Law no. 47/1992, republished, "the notifications delivered to the Constitutional Court, in addition to the fact that they must be made in writing, they must also be substantiated".

3. Conclusions

The implication of the Ombudsman in the constitutionality control intervenes when, in the exercise of its duties according to its organic law, identifies the violation of certain rights and freedoms of individuals, by way of provisions of laws and ordinances. Therefore, in this respect there are *also the principles stated by the Venice Commission which established, in the document entitled "Principles on the protection and promotion of the institution of Ombudsman (The Venice Principles)", that "Following an investigation, the Ombudsman shall preferably have the power to challenge the constitutionality of laws and regulations or general administrative acts (Principle no. 19)*[6].

By awarding the Ombudsman the competence to raise directly the exception of unconstitutionality of laws and ordinances, the principal law maker did not seek to transform the Ombudsman into an authority with the role of regulating/verifying the constitutional relations between the Parliament and the Government, his role being to protect the individuals' rights and freedoms.

An essential feature of the Ombudsman's institution functional independence is set out, as principle, in item 7.2 of Recommendation 1615 (2003) of the Parliamentary Assembly of the Council of Europe, namely: "guaranteed independence from the subject of investigations, including in particular as regards receipt of complaints, decisions on whether or not to accept complaints as admissible or to launch own-initiative investigations, decisions on when and how to pursue investigations, consideration of

[6] The Venice Principle were adopted by the Venice Commission at its 118th plenary session (Venice, March 15th -16th 2019).

evidence, drawing of conclusions, preparation and presentation of recommendations and reports, and publicity."

The Ombudsman's position towards the other public authorities is established by art. 2 para. (1) and (3) of Law no. 35/1997 on the organization and functioning of the institution of Ombudsman, republished, according to which the institution of Ombudsman is an autonomous public authority and independent of any other public authority, under the terms of the law.

In the exercise of his powers, the Ombudsman does not substitute himself for public authorities. On the grounds of the aforementioned legal regulation, the Ombudsman can exercise his powers only within the established constitutional and legal limits, without being substituted for other public authorities which, in their turn, must fulfill their own duties, as regulated by the legislation in force.

The need for additional guarantees of independence was pointed out in Opinion no. 685/2012 of the European Commission for Democracy Through Law (Venice Commission), which stated that "in order to be effective in the protection of human rights, the Ombudsman has to be independent, including from Parliament, which elects the office holder".

In what concerns the activity in the field of the constitutionality of laws and ordinances, we have to understand that not every normative act, assessed in terms of various interests as immoral, inconvenient or socially and economically inappropriate, contains elements that would call its unconstitutionality. Therefore, the Ombudsman must have the possibility to assess the fulfillment of the admissibility conditions established by the law, as well as to assess the inconsistency of the criticized legal provisions with the provisions of the Fundamental Law.

THE EVOLUTION OF CONTRACTS IN ROMAN LAW

Elena ANGHEL*

Abstract

One cannot understand an institution today without researching its entire historical thread, how it evolved until it became what it is through the vicissitudes of the past. On this, our law has very deep and distant roots, partly directly in the custom of the land and in the written laws we had, partly through the influence of the laws of the Occident, and especially the French ones, with Roman law. We cannot easily realize how much we live without knowing by tradition based on the past; the scientist's job is to dig up these past influences and bring them to light in order to understand today's institutions".

Following the path shown by Professor Mircea Djuvara, in this study I propose to "dig" in order to highlight the boundless influence of Roman law in the field of contracts. Because it is this influence that explains a unique phenomenon in history, namely the fact that this legal system did not die with the people who created it, but survived for millennia, imposing itself on foreign peoples and vigorously shaping their legal spirit.

Therefore, if we want to understand the physiognomy of today's contract, we must dig for its origins, and they will be found in Roman law, where the contract was originally a convention that produced legal effects only if he wore the heavy coat of formalities required at the moment of its conclusion. The essential element of the contract was therefore not the agreement of will, but the formal elements required for its preparation.

Keywords: *contract, Roman law, formalism, influence, the essential elements of the contract.*

1. Introduction

Roman law is, to a large extent, the classic legal expression of life relationships, of the relationships within a society where private property assumes its enduring form, as none of the following legislations has succeeded in making substantial improvements in this area. The historical interest of Roman law consists in the fact that it shows us the way in which legal institutions are created and how they change in relation to the economic basis and the other forms of social life.

Roman law has created the legal language and Rome has created the alphabet of law. Thanks to this alphabet, we can formulate any legal ideas. Most of the current legal notions have largely appeared in Roman law. When Rome went down in history, the ancient world knew several legislative codes.

This legal system is not only of historical importance, but it represents a great advance in the field of legal technique. The precision and clarity of the definitions, the severe reasoning and consistency of the legal thought, combined with the vitality of the conclusions, highlight the great art of the Roman legal advisers, who played a great role in the development of the law. As Professor Emil Molcuț points out, the legal advisers of the Modern era[1] have borrowed many constructions and legal categories from the arsenal of the Roman law, as well as a series of categories and general principles that they have laid the basis for the entire regulation[2].

The subject matter of obligations and contracts has known a great development in Roman law, by taking hold of a particularly important position. This position is imposed by the exceptional vitality of the institutions related to the subject matter of obligations and contracts, which represent the first universal system of rules of a society. The institutions of the obligations exceeded the order that created them and were applied, with certain adjustments, in the social formations that followed.

2. Content

Many of the current legal concepts find their origins in Roman law, which has managed to confer them a precise wording[3]. The Romans achieved such performances, especially in the field of contracts, as they remained, to a large extent, unchanged in terms of the formation of elements and effects.

For a long time, the contract in Rome was just a convention under a certain form. The word "*contractus*" was used to mean contract, as follows: originally, contract meant reunion. Due to the fact that, in ancient times, the sale was performed by means of two separate documents, a document of purchase and a document of sale, the word appeared later[4]. The word was generalized and also used for other legal

* Lecturer PhD, Faculty of Law, „Nicolae Titulescu" University of Bucharest (e-mail: elena_comsa@yahoo.com).

[1] This is applicable even for modern organisations such as European Union. For a perspective on contractual obligations in EU law: Conea Alina Mihaela, *Politicile Uniunii Europene. Curs universitar*, Editura Universul Juridic, București, 2019, pp. 130-142.

[2] Emil Molcuț, *Drept roman*, Edit Press Mihaela S.R.L. Publishing House, Bucharest, 2002, page10.

[3] For a detailed analysis of the juridical concepts, see Nicolae Popa, Elena Anghel, Cornelia Beatrice Gabriela Ene-Dinu, Laura-Cristiana Spătaru-Negură, *Teoria generală a dreptului. Caiet de seminar*, Edition 2, C.H. Beck Publishing House, Bucharest, 2014.

[4] Cornelia Ene-Dinu, *Istoria statului și dreptului românesc. Curs universitar*, Universul Juridic Publishing House, Bucharest, 2020, page 26.

operations. Thus, if not any convention is a contract, any contract "*contractus*" implies a convention, therefore an agreement. In ancient times, this agreement was formal because only the parties were on an equal footing. The owner of the means of production imposes his will on the one who lacks the means of production, who could do nothing but follow the conditions of the owner.

In what concerns the evolution of Roman law, we can start the study in the ancient times, when the contract was a convention the obligation of which resulted from the formalities and solemnities performed on the occasion of its conclusion. The essential element of the contract was not the agreement of will, but the formal elements required on the occasion of its draw up[5].

According to Professor Molcuț, in ancient Roman law, in order for a document to produce effects, it had to be veiled under certain forms; the mere manifestation of will was devoid of legal value[6].

The first forms of contracts that we know were distinguished by a rigorous formalism. *Sponsio*, verbal contract, was concluded by the utterance of certain solemn words, and the so-called literal contract (*litteris*), by certain entries made in the register (codex) of the creditor, under the consent of the debtor.

As production and trade increased, the old forms were abolished by new social needs which were brought to life. However, their removal was gradual, only insofar as contractual forms corresponding to the new social relations were created. Along with the old formal contracts, new informal ones have appeared. This is how we explain the occurrence of the real contracts which are concluded by means of the simple transfer (re) of the object and of the consensual contracts which are concluded by means of the simple consent (*solo consensu*). Their validity is subject to substantive conditions resulting from their economic destination and use. In fact, they are actual pacts, namely agreements which are not veiled under solemn forms, raised to the rank of contracts due to their special economic importance.

Throughout the Imperial Era, the general theory of contracts is progressively developed. The contract (*contractus*), the essential element of which is now the agreement of the parties, is released from the primitive formalism. The contractual system will develop progressively throughout the Roman Imperial Era. The economic and social needs will reveal other conventions generating legal effects that will join the old contractual categories. The pacts, for example, will round the contractual system off, the viability of which consisted in a flexible adjustment to the needs of the social development in continuous transformation.

The subject of obligations has a great importance, both from a practical point of view and from a theoretical point of view. The practical interest results from the multitude and endless variety of legal relations that people create, due to permanent demands of life. In order to satisfy their most basic requirements of life, people conclude various obligation generating contracts every day. Along with the legal relationships created by will, there are others that are born independently of it, such as the obligations involved in the principle of the legal liability. Therefore, the most common act of daily life are resources of legal relations that are the object of obligations.

In a broad sense, obligations mean the legal relations which entail both the active side, which is the right of claim belonging to the creditor, and the correlative of this right, namely the passive side of the relation, which is the encumbrance of the debtor; in the narrow sense, the obligation designates only the passive side, the encumbrance of the debtor.

Therefore, in terms of the active side, the obligation is that legal relation which contains the right of the active subject, called creditor, to ask something to the passive subject, called debtor, whose obligation is to give, to do or not to do something.

If the focus is on the passive side, the active side of the obligation being present by default, the obligation can be defined as the legal relation by virtue of which a person called debtor is hold liable to another person called creditor, either to a positive benefit or to an abstention. The term of obligation sometimes refers to the title itself which establishes the existence of a debt.

If the legal relationship is considered in terms of the creditor, it is called right of claim, and if it is considered in terms of the debtor, it is called obligation.

During the classical antiquity, the obligations take on a particularly large extent due to the development of production and exchange of goods. In this world of business of all kinds, the interest-bearing loan has emerged. Such business operations required new legal instruments.

By being regulated at a higher level, the Roman obligation had a special importance for the economic circuit of Rome. At the same time, the concentration of private property has enabled the process of crystallization of the institution of obligation, by imposing a detailed regulation of contractual rights and obligations.

The obligation, as an institution of law, appears at the same time with private property and social classes, by firstly representing a means of enslaving those who lack the means of production. According to the primitive Roman conception, the obligation (*ius in personam*) is created after the image and likeness of the property right (*ius in re*), i.e. of the real rights. The Romans made the same confusion between family rights and real rights. The etymology of the word "*obligatio*" (ob-ligatio) indicates, in a plastic way, the initial meaning of the term: to bind, to chain.

The development of the production of goods and trade led to the replacement of the formalism of old law,

[5] Vladimir Hanga, Mircea Dan Bocșan, *Curs de drept privat roman*, Universul Juridic Publishing House, Bucharest, 2006, page 241.
[6] Emil Molcuț, *op. cit.*, page 235.

by bringing radical changes in the legal mentality. In this case, the notion of obligation begins to change its primitive structure. The idea of bounding (*ob-ligatio*) ceases to be understood in a strictly material sense. It becomes a purely legal relationship under which the debtor was oblige to perform a service, and in the event of a non-performance, the creditor could pursue the debtor's assets and not his natural person.

It is interesting to study the components of the obligations[7]. If we consider the creditor, he can force the debtor to pay something he owes.

The debtor is always forced to pay something to the creditor.

The scope of the obligation is the payment that the debtor has to make to the creditor. It is important to mention the fact that, by payment, the Romans did not only understand the remittance of amounts of money, but the scope of the obligation could also be established by giving, making, rendering. From the word "*prestare*", the legal expression prestațiune (provision) was formed in order to designate any scope of the obligation. Therefore, moving from Latin to modern legal terminology, the meaning of this word was amplified.

The conditions of the scope of the obligation meant, in Roman law, the fulfillment of requirements without which it could not be fulfilled. Therefore, the scope must be lawful, be possible, be of interest to the creditor and be determined.

Another essential element of the obligation is the coercion, i.e. the legal sanction that is applied to debtor in case of non-execution.

The original features of the obligation have never been lost in full, but they have known some deviations over the century. Due to the fact it is a relationship between debtor and creditor, the Romans found it very difficult to accept debt and claim to be passed to another person. The creation of a real right cannot be contemplated by an obligation. The scope and the persons are definitively established and the Romans belatedly admitted that novation could take place, so that the scope of the new obligation was distinct from that of the old obligation.

The sources of the obligation are the legal acts and facts that give rise to it. In the ancient times of Roman law, they consisted of contracts and crimes, the contracts being rare because the production of family members covered all their material needs. The crimes gave rise to the obligation of the defaulter to pay compensation to the victim.

Any obligation has the effect of the voluntary execution of the service the debtor was bound to provide. This is why, the obligation occurs, unlike property, as a transition right, due to the fact it is extinguished by means of its execution. If the debtor fails to perform the service, the creditor can sue him, as the creditor's claim is protected by the positive law. There are also obligations not sanctioned by any action, as is the case of the so-called natural obligations.

There are cases when the debtor is exempt from performing the service if the execution became impossible. Natural obligations are imperfect, not protected by actions. Being devoid of action, these obligations are not enforceable, meaning that their execution cannot be required before the courts. The term of natural obligation, unknown in ancient Roman law, is found only in the classical antiquity, being gradually developed in the Post-Classical Era. Natural obligations are a creation of the legal advisers of the Imperial Era, determined by the activity of the slaves.

The slave had no legal personality and could not be bound by his contracts.

Positive law allowed slaves, within certain limits, a certain freedom to contract. Although they are not sanctioned by actions, natural obligations still have a legal existence. Their execution represents a payment identical to that of the civil ones, so that the payment made by the debtor cannot be claimed.

Natural obligations can be changed into civil obligations by means of a novation.

They may be opposed in compensation to other civil obligations and even encumbered with a personal or real guarantee. All these are evidence of the legal nature of these obligations, the execution of which represents a payment, not a donation.

The damages are established before the court, by forcing the debtor to compensate the creditor for the damage caused, the damage being the result of the fact that the debtor fails to fulfill his obligation or fulfills it improperly or with delay. In this case, the court will order the debtor to pay damages, namely an amount of money in order to repair the damage caused. The damages will be assessed by the court before which the debtor was sued. They can also be evaluated, in advance, by the parties.

In order to establish such damages, the ancient Roman law used an objective criterion, the damages representing only the material value of the non-executed services. As production and movement of goods were low, such criterion was sufficient.

During the classical antiquity, once with the development of the production, credit and trade, this criterion proved insufficient, being replaced by a subjective one, which puts the spotlight on the creditor. This criterion seeks to satisfy any interest of the creditor[8].

The cases not chargeable to the creditor are: force majeure and unforeseeable circumstances.

Force majeure (*vis maior*) shall mean the events that the debtor cannot oppose due to the fact they are caused by forces beyond his powers, such as: floods, earthquakes, etc.

Unforeseeable circumstances (*fortuitus casus*) shall mean those events that could be avoided by exceptional measures. If the debtor fails to fulfill his

[7] Emil Molcuț, *op. cit.*, page 160.
[8] See also Vladimir Hanga and Mircea Dan Bocșa, *op. cit*., page 286 and the following.

obligations due to such events, he may be held harmless. Notwithstanding, if he fails to fulfill his obligation, due to his fault, although it would perish later by unforeseeable circumstance or force majeure, the debtor would still be obliged to pay damages. The debtor continues to be liable for the loss even if it occurred by unforeseeable circumstance or force majeure, if he failed to provide the service within the deadline, due to his fault.

The cases of culpable failure are: the notice of default and negligence.

Mora is the culpable delay of the debtor who fails to perform his obligation.

In order to be deemed in default, certain conditions are required, the summon being one of them. The creditor must demand payment from the debtor at the appropriate time and place. The existence of a deadline removes the obligation of a summon.

The claim must be enforceable, the enforceability being possible from the moment the claim arises, except the cases where the parties have not set a deadline.

Another condition is that the debtor's refusal to pay the debt is unfair due to the fact any refusal of the debtor to perform his obligation is culpable, unless the debtor proves that he had doubts on the existence of the claim.

The debtor in default shall bear the risks of the work, in other words, if the work is lost by unforeseeable circumstance or by force majeure, the debtor shall pay damages.

The creditor can also be deemed in default (mora creditoris) if he unreasonably refuses or delays to accept the payment which is due to him. The effects of the default of the creditor are the same, the risks pass on to him, the debtor being liable only for his will. The debtor's notice of default can cease if the debtor or a third party provides the creditor with the due benefit accompanied by the amount of the damages. Furthermore, the creditor's notice of default ceases if he accepts the payment and compensates the debtor for the damages suffered.

Another fact chargeable to the debtor is the negligence, which consists of an inadvertence, an inexcusable mistake in the execution of the obligation. Contrary to dilligence, contractual negligence that occurs in the performance of a contract must be distinguished from the tort[9].

It has been admitted in the classical antiquity that negligence can consist not only of a positive, commissive act, but also of an abstention, omission. Negligence is different from *dolus* due to the fact it entails an intentional fault, either commissive or omissive, of the debtor who was knowingly outside the rules of law regarding the execution of the contract.

The theory of negligence was gradually shaped in the Roman law, being definitively formulated in the Post-Classical and Byzantine Era. During the Era of Justinian, the negligence was of two kinds: slight negligence (*levis*) and gross negligence (*lata*).

In the ancient times, the discharge of obligations was governed by the correspondence principle. According to this principle, the obligation is extinguished by using a solemn act identical to the one that gave rise to it, but used in the opposite direction.

The physiognomy of personal rights is different from that of real rights in terms of capitalization. Therefore, real rights are capitalized by the exercise of certain attributes by the right holder, while personal rights are capitalized by the execution of the obligation by the debtor. Thus, real rights are, in principle, perpetual, while personal rights are temporary. Appeared in the field of patrimonial relationships between two determined persons, the rights of claim are extinguished by capitalizing the interests contemplated by the respective relationships.

There are voluntary and involuntary means of extinguishing obligations. Voluntary means entail a manifestation of will of the creditor and the debtor. In addition to the payment, which was currently used, the Romans also knew other voluntary means of extinguishing obligations: transfer in lieu of payment, remission submission, compensation, novation.

Involuntary means do not entail the will of the parties, which is why there are sometimes designated by the terms: forced means or necessary means. Obligations are involuntarily extinguished by: impossibility, non-execution, confusion, death, *capitis de minutio* and extinctive prescription.

3. Conclusions

As we have already shown, many of the current legal concept originate in Roman law, which succeeded in giving them a practical formulation. I find it very interesting that the Romans have achieved such performances, especially in the field of contracts. What I mean by saying this is that contracts have remained, for the most part, unchanged in terms of formation, elements and effects. As we have seen, current changes are formal and there are not changes in principle.

Therefore, this study proves the great importance of Roman law for education and life, due to the fact that, as Romanist say, there has been no other system of private law so thorough and capable of reaching the same high level of legal form of technique, throughout the entire history of society.

[9] For a detailed analysis of the theory of negligence, see Grigore Dimitrescu, *Drept roman. Volumul II – Obligațiuni și Succesiiuni*, Imprimeria Independența Publishing House, Bucharest, page 259.

THE JUDICIAL INTERDICTION. SPECIAL REVIEW ON THE JURISPRUDENCE OF THE CONSTITUTIONAL COURT

Izabela BRATILOVEANU[*]

Abstract

Prior to the entry into force of the new Codes, Civil and Civil Procedure, the institution of judicial interdiction was regulated in terms of substantive conditions and effects, by Title III, Chapter 2, Articles 142 - 151 of the Family Code, and the interdiction procedure was regulated in Chapter 3, first section, Articles 30 - 35 of Decree no. 32/1954 for the implementation of the Family Code and the Decree on natural and legal persons. Currently, the seat of the matter is, in terms of substantive conditions and effects in Book I, Title III, Chapter III, Articles 164 - 177 of the Civil Code, and in terms of procedural conditions in Book VI, Title II, Articles 936 - 943 of the Code of Civil Procedure, in essence the current legal provisions resuming the old regulation in the matter. In this study, we set out to analyze the substantive rules and procedure of judicial interdiction, as well as an examination of the jurisprudence of the Constitutional Court in the matter. From the short list of decisions of the Constitutional Court regarding the judicial interdiction, of particular interest is the recent Decision no. 601 of July 16, 2020 regarding the exception of unconstitutionality of the provisions of Article 164 paragraph (1) of the Civil Code, published in the Official Gazette of Romania no. 88 of January 27, 2021.

Keywords: *Civil Code; Code of Civil Procedure; the jurisprudence of the Constitutional Court; the judicial interdiction; human dignity.*

1. Introduction

As shown in a recent situation analysis[1], in the EU population, mental illness affects every fourth citizen and can lead to suicide; mental illness causes significant losses to economic, social, educational, and justice systems; there is still stigma, discrimination and disrespect for the human rights and dignity of people with mental illness and disability. According to the data provided by National Center for Statistics and Informatics in Public Health - National Institute of Public Health, in Romania, in 2019, 229,903 patients were registered by the family doctor with the diagnosis "Mental Illness", increasing compared to the previous year when 218,010 patients were recorded.

Thus, the recent jurisprudence of the Constitutional Court of Romania on the protection of the mentally ill by judicial interdiction is very important. Our study proposes an examination of the jurisprudence of the Court. Although the case law of the Court is not rich in this matter, Decision no. 601/2020, recently published, is of particular interest. We will also analyze the substantive rules and the procedure of placing under judicial interdiction, aspects for which we refer to the vast already existing legal literature[2].

2. Considerations regarding the judicial interdiction

In the literature, the judicial interdiction is defined as the measure of protection of the natural person lacking the necessary discernment to take care of his interests, due to the alienation or mental debility, which is ordered by the court and it consists in the deprivation of the one protected by the capacity to exercise and the institution of guardianship[3].

Prior to the entry into force of the new Codes, Civil and Civil Procedure, the institution of judicial interdiction was regulated in terms of substantive conditions and effects, by Title III, Chapter 2, Articles

[3] Chelaru, *Drept civil. Persoanele*, 179.

142 - 151 of the Family Code[4], and the interdiction procedure was regulated in Chapter 3, first section, Articles 30 - 35 of the Decree no. 32/1954 for the implementation of the Family Code and the Decree on natural and legal persons[5].

Currently, the seat of the matter is, in terms of substantive conditions and effects in Book I, Title III, Chapter III, Articles 164 - 177 of the Civil Code[6], and in terms of procedural conditions in Book VI, Title II, Articles 936 - 943 of the Code of Civil Procedure[7], in essence the current legal provisions resuming the old regulation in the matter, aspect criticized in the doctrine, where it was rightly referred to the regulations in the field of other legal systems that, "unfortunately, our legislator lost the chance to introduce a modern regulation in this field, which would correspond as well as possible to the needs of the various categories of vulnerable persons"[8].

The judicial interdiction must be distinguished from the regulation dedicated to the protection of persons with mental disorders by Law no. 487/2002, republished, which provides for the rights of persons with mental disorders and the procedure of hospitalization in a psychiatric unit (voluntary hospitalization and involuntary hospitalization). In the sense of Law no. 487/2002, the person with mental disorders, covered by this normative act, is the person with mental imbalance or insufficiently developed mentally or dependent on psychoactive substances, whose manifestations fall within the diagnostic criteria in force in psychiatric practice. The person subject to the protection measures provided by Law no. 487/2002, republished, may or may not be judicial interdicted.

Thus, the protection measures provided by Law no. 487/2002, republished, applies to persons with mental disorders, have no influence on the exercise capacity of the protected person[9] and are decided administratively by the medical authority, the court having only the role of resolving any complaints made against the measures thus ordered.

Instead, the judicial interdiction can be instituted only by the court and produces two effects: *1)* the interdicted is totally deprived of capacity to exercise and *2)* the establishment of guardianship of the interdicted[10], which implies a legal regime of representation of the interdicted by the guardian, no just a simple assist.

Not every cause of lack of discernment[11], in regard to the care of one's own interests, can lead to interdiction, but only that which is due to mental alienation or mental debility[12]. It should be emphasized that in Romanian law, the measure of placing under judicial interdiction is not ordered for any mental illness, but only in the case of mental alienation and mental debility defined by Law no. 71/2011 for the implementation of Law no. 287/2009 on the Civil Code[13] as *"a mental illness or mental disability that determines a person's mental incompetence to act critically and predictively on the social-legal consequences that may arise from the exercise of civil rights and obligations"* (our emphasis).

In addition, we point out that under the rule of both current and old regulations, no other cause that could prevent a natural person from taking care of his interests, such as illness, old age or physical infirmity, can lead to judicial interdiction, in the situations enunciated previously to the respective person, a trustee may be appointed, under the conditions stipulated by Articles 178 - 185 of the Civil Code, if he gives his consent in this respect; or, according to Article 181 of the Civil Code, the establishment of the trusteeship does not affect the capacity of the person the trustee represents.

As a novelty, we point out the establishment by the provisions of Article 166 of the Civil Code, following the model of other modern legislation[14], of the so-called "dative guardianship" which allows the appointment of the guardian even by the beneficiary of the protection measure. Thus, Article 166 of the Civil Code provides: *"Any person who has full capacity to exercise may designate by unilateral act or mandate contract, concluded in authentic form, the person to be appointed guardian to take care of the person and his property in if it were interdicted. The provisions of Article 114 (3) to (5) shall apply accordingly"* (emphasis added).

[14] In this regard, the legislation of Quebec and France.

The request for interdiction of a person may be formulated by the persons mentioned by Article 111 of the Civil Code, respectively: persons close to the one under judicial interdiction, as well as the administrators and tenants of the house where the minor lives; the local community public service for the registration of persons, on the occasion of the registration of the death of a person, on the occasion of the opening of a succession procedure; the courts, on the occasion of the conviction to the criminal punishment of the prohibition of parental rights; local public administration bodies, protection institutions, as well as any other person.

As regards the competent court, according to Article 936 of the Code of Civil Procedure, the application for the judicial interdiction of a person is resolved by the court of guardianship in whose district he has his domicile.

From a material point of view, jurisdiction lies with the court in accordance with Article 94 (1) (a) of the Code of Civil Procedure.

The request for judicial interdiction shall include, in addition to the elements provided for by common law in Article 194 of the Code of Civil Procedure, the facts resulting from the alienation or mental debility of the person concerned, as well as the proposed evidence [Article 937 of the Code of Civil Procedure]; it is formulated in contradiction with the person in respect of whom the measure is requested.

The phases of the prohibition procedure that we will refer to below are: the non-contradictory phase and the contradictory phase.

Thus, after receiving the request, the president of the court will order the communication of copies of the request and of the documents attached to the one whose judicial interdiction was requested, as well as to the prosecutor, when the request was not submitted by him.

According to Article 938 paragraph (2) of the Code of Civil Procedure, the prosecutor will carry out the following steps: conducting investigations into the person whose interdiction is requested, including hearing the family members of the person concerned (social investigation, conducted by the mayor's office from the domicile of the data subject and the preparation of the corresponding report, at the request of the prosecutor)[15], will take the opinion of a commission of specialist doctors, and if the one whose placement under judicial interdiction is required is hospitalized in a health unit, takes its opinion.

Where appropriate, the President of the Court shall also order the appointment of a trustee, the appointment procedure being regulated by Article 178 - 187 of the Civil Code. If the defendant's state of health prevents his personal presentation, the appointment of the trustee is mandatory for representation in court.

Article 939 of the Code of Civil Procedure provides that, once the opinion of the board of specialists or the health unit has been submitted, the court may find that it is necessary to observe the mental state of the defendant for a longer period. If the observation cannot be made otherwise, the court may order the temporary hospitalization, for a period of maximum 6 weeks, in a specialized unit.

After receiving the result of the prosecutor's investigations, the opinion of the commission of medical specialists and, where appropriate, of the health unit, the court sets a deadline for judging the request, ordering the summoning of the parties.

Concerning the hearing of the person whose judicial interdiction is requested, Article 940 paragraph (2) of the Code of Civil Procedure provides that at trial, the court is obliged to hear him, asking him questions to ascertain the mental state of the defendant. It should be noted that the hearing will take place in court, and if this is not possible, he will be heard at the place where he is.

According to Article 940 paragraph (3) of the Code of Civil Procedure, the participation of the prosecutor in the trial is mandatory.

As regards remedies, we specify that the sentence pronounced in question can be appealed exclusively within 30 days from the communication, as it results from the provisions of Article 94 point 1 letter a) of the Code of Civil Procedure, corroborated with Article 483 paragraph (2) of the same Code.

As a novelty, we show that the provisions of Article 941 of the Code of Civil Procedure have modernized the advertising system to achieve the opposability to third parties of the measure, in order to increase the sphere of the institutions receiving the communication of the operative part of the final decision in a certified copy compared to the previous regulation, Article 144 paragraph (2) of the Family Code according to which: *"After it has become final, the decision will be communicated without delay by the court that issued it the one placed under interdiction was registered, to be transcribed in the register specifically intended"* (our emphasis). The institutions listed in the current regulation are the following: the local community public service for the registration of persons with whom the birth of a person under judicial interdiction is registered, in order to make a mention on the birth certificate; the competent health service, so that it establishes on the person placed under judicial interdiction, according to the law, a permanent supervision; the competent real estate cadastre and advertising office, for notation in the land book, when applicable; trade register, if the person placed under judicial interdiction is a professional. It must be said that after the judgment of interdiction becomes final, its communication will be made by the court that pronounced it, i.e. either the first instance or the appellate court.

For the purposes of Article 941 paragraph (3) of the Code of Civil Procedure, if the request for judicial

[15] Piperea, Antonache, Piperea, Dimitriu, Sorescu, Piperea and Rățoi, Codul de procedură civilă. Comentarii și explicații, 1731.

interdiction has been rejected, the trusteeship established during the trial shall cease by right.

If the cases that caused the judicial interdiction have ceased, the court will decide to lift it, the applicable rules of procedure being the same as those of the interdiction[16]. It should be noted that the request for lifting the interdiction is made by the interdicted person, the guardian and the persons provided for in Article 111 of the Civil Code.

According to Article 943 paragraph (2) of the Code of Civil Procedure, the lifting of the judicial interdiction is mentioned on the decision to put under interdiction. However, the termination of the guardian's right of representation may not be opposed to a third party until the date of completion of the publicity formalities provided for in the Code of Civil Procedure, unless the third party has experienced the lifting of the interdiction in another way. In other words, the right of the guardian to represent the person under interdiction shall cease only from the date on which the appropriate registration on the birth certificate of the person under interdiction is made, as regards the third party who did not know the lifting of the interdiction, of noting the lifting of the interdiction in the land book or of the corresponding mention in the trade register, if the person under judicial interdiction is a professional[17].

3. The jurisprudence of the Constitutional Court regarding the judicial interdiction

Regarding the old regulation in the matter of judicial interdiction, the court of constitutional contentious ruled by Decision no. 226/2003[18]. In the motivation of the decision to reject the exception of unconstitutionality of the provisions of Articles 30 - 35 of Decree no. 32/1954 for the implementation of the Family Code and the Decree on natural persons and the provisions of Articles 43 - 45 of the Code of Civil Procedure, the Court held that the measure of interdiction of a natural person is provided in the situation where, as following an extensive and complex legal investigation, the court seized is convinced that the person lacks the necessary discernment to take care of his own interests. The Court also stated that by the effect of judicial interdiction, it is completely deprived of the capacity to exercise, being assimilated to the minor until the age of 14, having the possibility to capitalize on his capacity to use exclusively by his representation at the conclusion of legal acts, by the guardian. The court of constitutional contention has shown that this measure does not constitute a sanction, but has an obvious purpose of protection of both the natural person who is thus sheltered from the harmful consequences of their own acts, consequences which, due to lack of discernment do not - could foresee, as well as the society, as a whole, the rules of which could be seriously disrupted by maintaining the full exercise of the rights of such a person. Next, it was pointed out that, in view of the particularly drastic consequences of the interdiction - the lack of capacity to exercise and the imposition of guardianship of the interdicted person -, the legislator has established a procedure that offers sufficient guarantees to prevent and annihilate possible abuses in this matter, so that only the court has the power to decide to put the person under interdiction. Thus, as the Court stated, the procedure of judicial interdiction it can be initiated by any interested person and comprises two phases, the non-contradictory phase, in which the necessary investigations are carried out to establish the factual situation and the contradictory phase, which takes the form of an ordinary civil process, based on evidence administered by the court. By the same decision, the Court found that the legal texts deduced from the review of constitutionality only express the requirements of guaranteeing the fundamental rights and freedoms of the person and consequently do not contradict the provisions of Article 16 paragraph (1), Article 21 paragraph (1) and (2), Article 26 paragraph (1) and (2) and Article 30 paragraph (1) of the Constitution invoked in the motivation of the exception of unconstitutionality.

Article 938 paragraph (2) of the Code of Civil Procedure provides: "The prosecutor, directly or through the police, will carry out the necessary investigations, will get the approval of a commission of medical specialists, and if the one whose judicial interdiction is required is hospitalized in a health unit, he will also get its approval". By Decision no. 736/2017[19] to be summarized, the Constitutional Court rejected the exception of unconstitutionality and found that the provisions of Article 938 paragraph (2) of the Code of Civil Procedure are constitutional in relation to the criticisms made.

In order to decide thus, the Court first noted that Article 938 of the Code of Civil Procedure with the marginal name *"Preliminary Measures"* rules on the obligation to communicate the request of the person whose interdiction is requested, as well as to the prosecutor [paragraph (1)]; conducting preliminary investigations by the prosecutor directly or through the police [paragraph (2)]; the appointment of a special trustee [paragraph (3)]; and are part of the special procedure for placing under judicial interdiction regulated by Article 936 - 943 of the Code of Civil Procedure.

Distinct from the reference made to those retained by the Court in the Decision no. 226/2003, it was shown that in the interdiction procedure, the prosecutor has an important role, given that he can initiate any civil action, whenever necessary to defend the rights and legitimate interests of minors, of persons under

[16] Article 943 paragraph (1) of the Code of Civil Procedure.
[17] In this sense, Boroi and Stancu, Drept procesual civil, 967.
[18] Published in the Official Gazette no. 458 of June 27, 2003.
[19] Published in the Official Gazette no. 326 of April 13, 2018.

interdiction and of the missing, as well as in other cases expressly provided by law[20], and the measures established by Article 938 paragraph (2) of the Code of Civil Procedure are a necessary guarantee for the observance of the rights of the person whose interdiction is requested. The Court further stated that the President of the Court is obliged to take measures to ensure that the application for interdiction and the attached documents are communicated to the person concerned and to the prosecutor, and the prosecutor is obliged to carry out the necessary investigations to verify the situations are invoked in the request for interdiction, obligations that fall within the non-contradictory phase of the procedure, in which the investigations necessary to establish the factual situation are carried out.

In the reasoning of the decision, it was also noted that prior to the trial, the prosecutor must conduct the necessary investigations, obtain the opinion of a board of specialists and, where appropriate, the opinion of the health unit, if the person is hospitalized and concluded that this does not contravene to constitutional provisions that were invoked by the author of the exception of unconstitutionality. In the Court's view, the legislative solution criticized is a natural one in the context in which at this stage of the proceedings the substance of the dispute is not settled, but only the necessary measures are taken for the proper administration of the act of justice. The Court explained that the documents drawn up and obtained by the prosecutor are to be communicated by him to the court in order to fix the first trial term, under the conditions of Article 940 of the Code of Civil Procedure. The Constitutional Court has ruled that the establishment of a pretrial stage is not contrary to the principle of free access to justice, as long as the acts and measures ordered by the prosecutor are to be subject to the control of the court.

Next, the Court explained that the criticized legal provisions represent procedural norms, the regulation of which is the exclusive competence of the legislator, who may establish, in view of special situations, special rules of procedure, according to Article 126 paragraph (2) of the Constitution. Thus, the legislator can assign certain competencies to the prosecutor in the civil process, even if the attributions of the Public Ministry are exercised, mainly, in the criminal judicial activity.

Also, regarding the phrase *"necessary research*", from the content of Article 938 paragraph (2) of the Code of Civil Procedure, criticized for the lack of predictability, the Court argued that the text does not make an express determination of them, but obviously refers to the checks carried out in relation to the person whose interdiction is resolved, with regarding the facts presented in the request for interdiction and the proposed evidence, and the prosecutor will assess concretely on the investigative activities that need to be carried out and concluded that the legal provisions criticized are accurate and predictable. Continuing the argument, regarding the criticism according to which the text of the law gives the possibility to the representative of the Public Ministry to delegate the competence to the police, it was noted that this is not a relationship of subordination of police to the prosecutor, because according to Article 2 of Law no. 218/2002 on the organization and functioning of the Romanian police[21], the activity of the Romanian Police constitutes a specialized public service and is performed in the interest of the person, of the community, as well as in support of state institutions, exclusively on the basis of and in law enforcement. In addition, the Constitutional Court has also shown that the purpose of the prosecutor's action is not to obtain for a party the satisfaction of a claim, but, as a representative of the general interests of society, defends the rule of law, the rights and freedoms of citizens, fulfilling a constitutional role enshrined in Article 131 of the Constitution.

By the same decision, the Court ruled that it could not be detained either the alleged contradiction of the provisions criticized with Article 126 paragraph (1) of the Constitution because the placing under interdiction is carried out by the court, which, based on the evidence administered, will decide the admission or rejection of the application.

Recently, by Decision no. 795/2020[22], the Court found the unconstitutionality of the provisions of Article 299 paragraph (3) of Law no. 71/2011 for the implementation of Law no. 287/2009 on the Civil Code[23] according to which: "*(3) Until the date of entry into force of the regulation provided in para. (1), the attributions of the guardianship court regarding the exercise of guardianship regarding the assets of the minor or the judicial interdicted person, as the case may be, regarding the supervision of the way the guardian administers his assets belong to the guardianship authority*"(our emphasis). The legal provisions that were the object of the exception of unconstitutionality refer to Article 229 paragraph (1) of the same normative act, according to which: *"(1) The organization, functioning and attributions of the guardianship and family court are established by the law on judicial organization"* (our emphasis).

With regard to the exception with the analysis of which it was invested, the court of constitutional contentious recalled that according to Article 158 - 160 of the Family Code of 1953, repealed by Article 230 letter m) of Law no. 71/2011, the attributions of guardianship authority belong to the executive and disposition bodies of the local, communal, city, municipal or sector councils of the municipality of Bucharest, which is competent, among others, in the

[20] Article 92 paragraph (1) of the Code of Civil Procedure.
[21] Republished in the Official Gazette no. 307 of April 25, 2014.
[22] Published in the Official Gazette no. 1299 of December 28, 2020.
[23] Published in the Official Gazette no. 409 of June 10, 2011.

exercise of the guardianship of the person placed under interdiction.

As the Constitutional Court recalled, Article 107 of the Civil Code of 2009, with the marginal name *"Court of guardianship"*, established the jurisdiction of a specialized court, the court of guardianship and family, with regard to the resolution of claims and proceedings in the matter of protection of the natural person.

The Court further held that the transitional rule criticized extends the powers of the guardianship authority to supervise the manner in which the guardian administers the assets of the interdicted person regulated by the Family Code, from the date of entry into force of the Civil Code, respectively 1 October 2011, until in force of the norms regarding the organization, functioning and attributions of the guardianship and family court, by the corresponding modification of Law no. 304/2004 regarding the judicial organization[24], normative act that at the date of pronouncing the Decision no. 795/2020 had not been completed in this regard.

The Constitutional Court specified that the transitional norm criticized temporarily assigns the attributions established by the Civil Code in charge of the guardianship court to an administrative body subordinated to the local public authority, respectively the guardianship authority, thus ensuring, for a determined period, the correlation between the old and the new regulation, respectively the Civil Code of 2009 and, respectively, the Family Code. Therefore, - the Court explained - during the criticized transitional norm, there is an ultra-activation of the legal provisions contained in the Family Code regarding the attributions of the guardianship authority regarding the control of the exercise of guardianship. Thus, in the absence of express regulation by law of the organization and functioning of a special court, replacing the guardianship authority, with regard to the latter's powers of control, guidance and decision relating to guardianship, the settlement of requests for interdiction, requests for the lifting of the interdiction measure, the requests for the replacement of the guardian, as well as the establishment of other protection measures were the competence of the sections or, as the case may be, at the control of the guardianship, respectively the inventory of the goods of the person placed under interdiction[25], the receipt of the annual report of the guardian, checks related to the administration of income and property, the report of psycho social investigation provided by Article 396 and the following of the Civil Code, necessary in the case of establishing the relations between the divorced parents and their minor children, except for the investigation provided by Article 508 paragraph (2) of the Civil Code, necessary in the case of the procedure of revocation of parental rights, which is resolved by the guardianship court, on the date of the decision by specialized panels for minors and family at the request of public administration authorities with responsibilities in child protection.

Continuing its argument, the Court noted that until the establishment of the guardianship court, the authorities and institutions with responsibilities in the field of protection of the rights of the child and the individual continue to exercise the powers provided by the regulations in force at the time of entry into force of the Civil Code, except for those given exclusively in the jurisdiction of the guardianship court, on that date panels or specialized sections for minors and family which does not agree with the purpose of the new regulation on the protection of natural persons established by the New Civil Code, which established a court specialized in fulfilling important duties in the field of personal protection, as well as decisions or solving problems related to the life of the natural person, such as those related to the capacity of the natural person[26], marriage[27], rights and property obligations of spouses[28], divorce, filiation, parental authority, maintenance obligation, co-ownership sharing, liberality capacity or the nullity of the contract concluded by a minor.

The Constitutional Court insisted that, given the increased role of the guardian in the measures of protection of the natural person, assigned to him by the provisions of Title III with the marginal name "*Protection of the natural person"* of the Civil Code of 2009, the legislator considered that it is necessary to replace the control attributions of the guardianship authority as an administrative institution, subordinated to the local public authority, with those of a specialized court, respectively the guardianship court. The Court also drew attention to the fact that given the importance of quickly identifying optimal solutions to the specific problems of a person for whom the judicial interdiction is resolved, the legislator expressly provided in Article 107 paragraph (2) of the Civil Code, the speedy settlement of claims for the jurisdiction of the guardianship court, in accordance with the constitutional principle of the right to a fair trial, conducted in an optimal and predictable time.

In the Court's view, the above issues were not compatible with the fact that the transitional situation persisted from the date of entry into force of the Civil Code, the lack of intervention of the legislator in the sense of regulation, by the law on judicial organization likely to contravene Article 1 paragraph (5) of the Constitution regarding the principle of legality, in its component regarding the quality of the law, as well as Article 124 of the Constitution on the administration of

[24] Republished in the Official Gazette no. 827 of September 13, 2005.
[25] Inventory subject to court approval.
[26] Article 40, 41, 44, 46 and Article 92 of the Civil Code.
[27] Article 272 and 274 of the Civil Code.
[28] Article 315, 316, 318, 322, 337, 368, 388 of the Civil Code.

justice, as it does not ensure a good administration of justice, by the lack of correlation with the substantive legal norms established in the Civil Code, thus perpetuating a transitional situation.

The Court noted that the lack of intervention of the legislator in establishing the rules on the organization of the court of guardianship, from the date of entry into force of the Civil Code was likely to distort the purpose of the law, namely to grant a court the powers exercised until the date of entry into force of an administrative authority, respectively the guardianship authority, considering the increased role of the tutor in the administration of the interdicted person's property, a role that requires effective control by a court that benefits from guarantees of impartiality and independence.

The Court also stated that given that the legislator expressly regulated the speedy settlement of requests for protection of the individual, in case of guardianship, with the consequence of failure to exercise civil rights, as well as the minority, lack of regulation of organization and functioning of the court of tutorship lacks efficiency the purpose of the legislator to involve the court in making decisions or solving problems related to the natural person, in all cases where the intervention of the court of guardianship is necessary.

In addition, the Court emphasized that maintaining sine die in the active fund of a transitional rule, contradicts the purpose of such a rule, to ensure, for a certain period, the correlation of two successive regulations, which is likely to violate the quality requirements of the law, guarantee of the principle of legality, by lack of predictability of regulation.

The Court also noted that, under the transitional rule criticized, an administrative body, subordinated to the local public authority or the guardianship authority, rules on the exercise of guardianship over the assets of the judicial interdicted person or, as the case may be, over the supervision the way in which the guardian administers his assets, without the interested party being able to contest the decision of the administrative body before the court, which contradicts Article 21 paragraph (1) of the Constitution on free access to justice.

By Decision no. 795/2020, the Court held that, pending the organization by law on the judicial organization of the court of guardianship, its special attributions regarding the exercise of guardianship over the property of the minor or the interdicted person or, as the case may be, regarding the supervision of which the guardian administers his property, are fulfilled by the courts, sections or, as the case may be, specialized panels for minors and family.

We signal the recent publication of Decision no. 601/2020[29], an extremely important decision in this matter since the Constitutional Court admitted the exception of unconstitutionality and found that the provisions of Article 164 paragraph (1) of the Civil Code are unconstitutional, which we will refer to below.

The object of the exception of unconstitutionality was represented by the provisions of Article 164 paragraph (1) of the Civil Code with the following content: *"(1) The person who does not have the necessary discernment to take care of his interests due to alienation or mental weakness, will be placed under interdiction"* (our emphasis).

We note that prior to the settlement of the case, at the deadlines of November 21, 2019 and January 21, 2020, the request was submitted to the Court of Justice of the European Union with a preliminary question under Article 267 of the Treaty on the Functioning of the European Union, respectively Article 412 paragraph (1) point 7 of the Code of Civil Procedure in conjunction with Article 3 paragraph (2) and Article 14 of Law no. 47/1992 on the organization and functioning of the Constitutional Court and the suspension of the trial of the national case, having as object the following three questions:

"1. It is the automatic revocation of the right to vote in elections to the European Parliament of a person suffering from a mental disorder, as a result of his being interdicted on the grounds that *"he does not have the necessary discernment to take care of his interests"* compatible with Article 39 paragraph 2 of the Charter of Fundamental Rights of the European Union, taking into account Article 12 of the Convention on the Rights of Persons with Disabilities?

It is the automatic forfeiture of the right to employ a person suffering from a mental illness, as a result of being interdicted on the grounds that "he does not have the necessary discernment to take care of his interests" a form of direct discrimination prohibited by Article 2 of Council Directive 2000/78/EC of 27 November 2000 establishing a general framework for equal treatment with regard to employment and occupation, having regard to Article 12 of the Convention on the Rights of Persons with Disabilities?

In case of a negative answer to question no. 2, is the automatic revocation of the right to employment of a person suffering from a mental illness, as an effect of being interdicted on the grounds that "he does not have the necessary discernment to take care of his interests" a form of indirect discrimination prohibited by Article 2 of Council Directive 2000/78/EC of 27 November 2000 establishing a general framework for equal treatment with regard to employment and occupation, having regard to Article 12 of the Convention on the Rights of Persons with Disabilities? "

Referring to the case law of the Court of Justice of the European Union which it used in its argument, the Constitutional Court held that the application to the Court of Justice of the European Union is unnecessary, as the questions referred are irrelevant and nor the relevance in question, so that it rejected the claim as unfounded.

[29] Published in the Official Gazette no. 88 of January 27, 2021.

The Court noted that the analyzed regulation establishes *a substitute regime*, so that the rights and obligations of the person placed under judicial interdiction will be exercised by a legal representative, regardless of the degree of impairment of the discernment of the person concerned, to the detriment of *a support regime* characterized by a support mechanism to be granted by the State according to the degree of impairment of the discernment. Next, the Constitutional Court analyzed whether the unconditional option for such a substitute regime complies with Article 50 of the Constitution and Article 12 of the Convention on the Rights of Persons with Disabilities.

Regarding Article 50 of the Constitution, the Constitutional Court stated that it enshrines the right of persons with disabilities to enjoy special protection, meaning that the state must ensure the implementation of a national policy of equal opportunities, prevention and treatment of disability, in order to ensure the effective participation of people with disabilities in community life. It was stated that this constitutional norm imposes on the legislator the positive obligation to regulate adequate measures so that persons with disabilities can exercise their fundamental rights, freedoms and duties, obligation of support and backing to come to their aid[30].

With regard to the Convention on the Rights of Persons with Disabilities[31], the Court noted that it aims to promote, protect and ensure the full and equal exercise of all fundamental human rights and freedoms by all persons with disabilities[32] and seeks to respect inalienable dignity and autonomy, including the freedom to make one's own choices and the person's independence[33].

Next, the Court referred to Article 12 of the Convention with the marginal name *"Equal recognition before the law"* as interpreted by the Committee on the Rights of Persons with Disabilities in General Comment no. 1/2014[34]. Thus, the Court recalled that Article 12 paragraph (2) of the Convention states that all persons with disabilities have the right to full legal capacity and that legal capacity is indispensable for the exercise of civil, political, economic, social and cultural rights and acquires a special significance for persons with disabilities when they must make fundamental decisions about their health, education and work. The Court also noted that Article 12 point (2) of the Convention recognizes that persons with disabilities enjoy legal capacity on an equal footing with other persons in all areas of life, and that legal capacity and mental capacity are distinct concepts. The Court also mentioned that pursuant to Article 12 point 3 of the Convention, the state has the obligation to take all appropriate measures to ensure the access of persons with disabilities to the support they would need in the exercise of their legal capacity. In addition, the Court noted that according to Article 12 point 4 of the Convention it is possible to apply protection measures to persons with disabilities, adapted to their particular situation, measures that will be proportionate to the degree to which they affect the rights and interests of the person and will be adapted to his situation and will respect the rights, the will and preferences of the person. The Court pointed out that in terms of the duration for which a protection measure is instituted and its periodic review, the Convention provides in Article 12 point 4 that a protection measure is applied for the shortest possible duration and is subject to review by a competent authority. Therefore, - the Court concluded - the Convention provides for certain safeguards which must accompany the measures of protection instituted against persons with disabilities.

Regarding the provision of guarantees that must accompany the protection measures, the Court also referred to the Recommendation no. R (99) 4 of the Committee of Ministers of the Council of Europe on principles concerning the legal protection of incapable adults[35]. We note that although the recommendations are not binding, they seek to approximate the laws of the Member States and are a means of directing[36]. As such, the Court referred to Principles 3 and 6 of Recommendation no. R (99) 4 of the Committee of Ministers of the Council of Europe which states that national legislation should, as far as possible, recognize that there may be different degrees of incapacity and that the incapacity may vary over time and, if necessary, a measure of protection, it must be proportionate to the degree of capacity of the data subject and adapted to his or her individual circumstances and needs. At the same time, the Court pointed out that Principle 14 point 1 of the Recommendation no. R (99) 4 of the Committee of Ministers of the Council of Europe provides for a

[30] See, in this respect, see also Decision no. 138 of March 13, 2019, published in the Official Gazette no. 375 of May 14, 2019, paragraph 60; Decision no. 681 of November 13, 2014, published in the Official Gazette no. 889 of December 8, 2014, paragraph 21.

[31] Adopted in New York by the General Assembly of the United Nations on 13 December 2006, opened for signature on 30 March 2007 and signed by Romania on 26 September 2007. Romania has ratified the Convention by Law no. 221/2010 published in the Official Gazette no. 792 of November 26, 2010.

[32] Article 1 of the Convention. By persons with disabilities, the text of the Convention means those persons who have lasting physical, mental, intellectual or sensory deficiencies, deficiencies which, in interaction with various barriers, may impede the full and effective participation of persons in society on an equal footing with others.

[33] Article 3 letter a) of the Convention.

[34] Available at: http://www.crj.ro/wp-content/uploads/2018/01/CRPD-Comentariu-General-art-12-RO.pdf. The purpose of the General Comment no. 1/2014 is to explore the general obligations deriving from the various components of Article 12 of the Convention on the Rights of Persons with Disabilities.

[35] Adopted by the Committe of Ministers on 23 February 1999 at the 660th meeting of the Ministers' Deputies.

[36] In this regard, Anamaria Groza, *Uniunea Europeană. Drept instituțional* (Bucharest: C.H.Beck Publishing House, 2008), 359.

limited duration of the protection measure and the establishment of a periodic review of it.

In view of the foregoing, in the recitals of the decision in paragraph 34, the Court held that, in order to respect the rights of persons with disabilities, any protection measure must be proportionate to the degree of capacity, be adapted to the person's life, be only if other measures cannot provide sufficient protection, take into account the will of the person, apply for the shortest period of time and be reviewed periodically.

Considering this normative framework and taking into account the fact that by regulating a special regime for the protection of persons with disabilities, the premise of respecting all their rights is created, the court of constitutional contention mentioned that in the conception of Article 12 of the Convention on the Rights of Persons with Disabilities, as this article has been interpreted by General Comment no. 1/2014, the legal capacity of the person is not confused with his mental capacity, being distinct concepts, and the perceived or real limitations in mental capacity should not be used as a justification for rejecting legal capacity.

The Court also noted that, "The Civil Code operates with absolute values in the sense that any potential impairment of mental capacity, regardless of its degree, may lead to a lack of capacity to exercise. (...) Thus, any partial / total, permanent / temporary limitation of mental capacity may inexorably lead to loss of capacity to exercise and limitation of civilian capacity, without the possibility of such a situation being avoided by necessary support measures" (our emphasis). As such, the Court found that "there is a paradigmatic mismatch between the Convention on the Rights of Persons with Disabilities and the Civil Code on protection measures to be taken in respect of persons with disabilities, the former falling within the scope of support measures and operating with intermediate values, while the latter placing itself in a regime of substitution and absolute values, refusing intermediate solutions adapted to the particular situation of each person"[37] (our emphasis).

Given that a person's lack of capacity to exercise and his exercise through a guardian is a particularly serious consequence of placing a person under judicial interdiction, the Court further examined whether the protection measure regulated by the legal provisions criticized are accompanied by sufficient guarantees, as provided for in the Convention on the Rights of Persons with Disabilities, which ensure the exercise of their legal capacity and, as a consequence, respect for the dignity of the person.

Thus, the Court observed that from the way of regulating the measure of placing under judicial interdiction by Article 164 paragraph (1) of the Civil Code does not show that it concerns the total lack of discernment of the person in relation to the multitude of interests he can manifest in different areas of life. Or, as the Constitutional Court rightly noted, although the person in question may manifest a conscious will in a certain field, by placing him under judicial interdiction he loses his capacity to exercise. It was criticized by the Constitutional Court that although the Convention on the Rights of Persons with Disabilities stipulates that a protection measure is established taking into account the existence of different degrees of capacity, Romanian legislation provides for restricted capacity to exercise only in respect of a minor aged 14 to 18[38], no and the restricted capacity of the adult who, as a result of being placed under judicial interdiction, will be completely deprived of it, the legal acts will be concluded, on his behalf, by a legal representative[39].

The Constitutional Court held that the effects of the restriction of capacity to exercise of a person more than necessary may place him, in terms of freedom of action in areas where he manifests a conscious will, in a situation of inequality with respect to other persons who are not under a protective measure, being free to exercise their rights and to exercise their freedoms, with consequences for the principle of equality. Given that there are different degrees of disability, and a person may have to a greater or lesser extent the discernment affected, but not completely abolished, in the Court's view, until a measure is ordered to restrict the person's capacity to exercise must be taken into account the imposition of alternative and less restrictive measures than the placing under judicial interdiction. Consequently, the Court said, in the absence of such alternative measures, it is for the legislature to identify and regulate mechanisms capable of providing the necessary support in making decisions based on the will and preference of those persons. In other words, the Court noted that as assumed by the ratification of the Convention on the Rights of Persons with Disabilities, the Romanian state must provide support in exercising legal capacity, through mechanisms based on the premise of respecting the rights, will and preferences of persons with disabilities and, only to the extent that the support thus provided proves to be ineffective should it regulate protection measures adapted to the particular situation of the persons. With these arguments, the Court concluded that *"a protection measure such as judicial interdiction should be regulated only as a last resort, as it is of extreme gravity involving the loss of civil rights as a whole and must be carefully considered each time, including whether other measures have proved ineffective in supporting the person's legal capacity. Therefore, the state must not give up its positive obligation resulting from the provisions of Article 50 of the Constitution and must provide all the necessary support to avoid such an extreme measure"*[40] (emphasis added).

[37] Decision of the Constitutional Court no. 601/2020, paragraphs 35 - 36.
[38] Articles 38 and 41 of the Civil Code.
[39] Article 43 paragraph (2) of the Civil Code.
[40] Decision of the Constitutional Court no. 601/2020, paragraph 39.

Continuing its reasoning, the Court noted that neither in terms of the duration for which the protection measure is imposed nor in terms of its regular review, the legal provision does not correspond to the international standards according to which a protection measure applies for the shortest period of time and shall be subject to regular review by a competent authority. The Court recalled that according to Article 177 paragraph (1) of the Civil Code, the interdiction and, implicitly, the guardianship, lasts until the cessation of the causes that caused them. According to the Court, this legal provision is a guarantee of substantial law, but stressed that in order for it not to be illusory, the legislator must guarantee its disposition over certain periods of time and to enable the assessment of the cessation of cases that led to the establishment measure. With regard to other legal systems, the Court has ruled that these time-limits must be characterized by the fact that they are short, predetermined, easily identifiable, flexible and without an excessive duration, allowing for a periodic review of measures in a mode efficient and consistent.

At the same time, the Court held that according to Article 940 paragraph (1) letter b) of the Code of Civil Procedure, the obligation of the court to communicate the decision of interdiction to the competent health service was regulated, so that it establishes a permanent supervision over the one placed under judicial interdiction, according to the law. Therefore, as the Court rightly pointed out, a person may be placed under judicial interdiction for an indefinite period of time, and permanent supervision of the health service does not necessarily imply a regular reassessment of the person's capacity, which is not unequivocally apparent from the national regulations. Therefore, it has been shown that the mental retardation can vary over time, the judicial interdiction for an indefinite period and without a periodic reassessment of the person's capacity affects the rights and interests of people who, in certain periods, may be aware and coordinate their actions. On these issues, the Court concluded that the measure to protect the person with a mental disability must be individualized in relation to the degree of disability.

Referring to the relevant jurisprudence of the ECHR, the Constitutional Court noted that the protection measure consisting in placing under judicial interdiction, which has the consequences of depriving the person of the capacity to exercise and establish the guardianship, is not accompanied by the specified guarantees. In the recitals of the decision, in paragraph 44, the Court stated that in the absence of these guarantees *"the deprivation of the person's capacity to exercise leads to the impairment of one of the supreme values of the Romanian people, namely the human dignity provided by Article 1 paragraph (3) of the Constitution, which, according to the jurisprudence of the Constitutional Court, represents the source of fundamental rights and freedoms, as well as their guarantees"*[41] (our emphasis). At the same time, it was noted that *"the free development of the human personality is affected, which is closely related to human dignity, both in terms of its active side - expressed in the form of freedom of action - and its passive side expressed in the form of respect for the personal sphere of the individual and the underlying requirements"*[42] (our emphasis).

The Constitutional Court held in paragraph 46 of the Decision that the measure of judicial interdiction "is not accompanied by sufficient guarantees to ensure respect for fundamental human rights and freedoms. It does not take into account the fact that there may be different degrees of incapacity or the diversity of a person's interests, is not available for a specified period of time and is not subject to regular review. Any protection measure must be proportionate to the degree of capacity, be adapted to the person's life, be applied for the shortest period of time, be reviewed periodically and take into account the will and preferences of persons with disabilities. Also, when regulating a protection measure, the legislator must take into account the fact that there may be different degrees of disability, and mental deficiency may vary over time. Lack of legal capacity or discernment can take various forms, for example, total / partial or reversible / irreversible, a situation that requires the establishment of protection measures appropriate to reality and which, however, are not found in the regulation of the measure of judicial interdiction. Therefore, different degrees of disability need to be attached appropriate degrees of protection, the legislator in regulating legal measures must identify proportionate measures. An incapacity must not lead to the loss of all civil rights, but must be analyzed in each case" (our emphasis).

In conclusion, the Court ruled in paragraph 47 of the Decision that "in the absence of the establishment of safeguards to accompany the measure of protection of judicial interdiction, touches are brought to the constitutional provisions of Article 1 paragraph (3), of Article 16 paragraph (1) and of Article 50, as interpreted according to Article 20 paragraph (1), and in the light of Article 12 of the Convention on the Rights of Persons with Disabilities" (emphasis added).

The Court also emphasized that it is up to the National Authority for the Rights of Persons with Disabilities, Children and Adoptions to make regulatory proposals in this area, with Parliament or, as the case may be, the Government having the obligation to adopt regulations in accordance with the

[41] See, in this sense, Decision no. 1109 of September 8, 2009, published in the Official Gazette no. 678 of October 9, 2009. Constitution and the Convention on the Rights of Persons with Disabilities.

4. Conclusions

In connection with the effects of the decisions of the Constitutional Court, we specify that according to Article 147 paragraph (4) of the Constitution, from the date of their publication in the Official Gazette, the decisions of the Court are generally binding and have power only for the future, and regarding the provisions of the laws and ordinances in force found to be unconstitutional, paragraph (1) of the same article stipulates that *"its legal effects shall cease 45 days after the publication of the decision of the Constitutional Court if, during this period, the Parliament or the Government, as the case may be, do not agree the unconstitutional provisions with the provisions of the Constitution. During this period, the provisions found to be unconstitutional are suspended by law"*. As noted in the doctrine, the decision to establish unconstitutionality applies directly in pending cases, pending before the courts[43]. Finally, we emphasize that gradually, in the European countries, the systems of adult protection have been modernized, personalized measures have been introduced, and the possibility has been established to allow everyone to organize in advance the consequences of a mental impairment, therefore comparative law can provide valuable benchmarks for future regulation in this area.

IMPORTANT MODIFICATIONS ON FISCAL LEGISLATION - A MAJOR IMPACT UPON PRACTICAL DECISIONS OF LEGAL PRACTITIONERS AND OTHER PARTICIPANTS ON THE MARKET

Marta-Claudia CLIZA[*]

Abstract

The end of 2020 brought some major modifications on the fiscal legislation. As we can see, the impact will be significant taking in consideration that these modifications will bring some changes which will affect not only the fiscal practitioners or the lawyers or the administrative personnel but all people involved in fiscal transactions, in a word, the whole market. This study is the first step in an analytical analyse of these modifications trying to underline the impact on the market. Also, we have to have in mind that the fiscal legislation was amended year by year which meant a fiscal instability . We will try to see if these new changes will bring more predictability for all actors involved in this process.

Keywords: *Fiscal Code, fiscal authorities, fiscal documents, VAT, independent activities*.

1. Introduction

Legislative changes have always had a rather aggressive impact on civil society, especially when they directly affect the business environment that has had and still has a something to say, perhaps harder than citizens, viewed individually. That is why the changes of the fiscal legislation always enjoy maximum attention. I really wonder if we should put the verb to rejoice in quotation marks, because what changes is not always beneficial. Not to mention the harsh impact of this business environment, quite harassed, per say, in 2020 by the medical and social crisis generated by the COVID 19 virus.

Besides the direct impact on the business decision, the changes in taxation have raised an equally controversial issue: the amendment of both the Fiscal Code and the Fiscal Procedure by an Emergency Ordinance and not by parliament procedure.

The impact of adopting this solution has not always been good because it has generated substantial changes on short term. Or, the business environment and even the citizens were not and are not always ready for such a thing. Any economic impact should be weighed, adopted by consulting with the involved factors after conducting short, medium and long term analyses and previsions.

Taxation has a contractual nature in a way that together with the monetary policy contributes considerably to the achievement of the economic policy - the proximate gender of the two institutions.[1]

Also, a measure adopted should be allowed to generate the expected effects and not be amended again and again, thus leading to unpredictability, frustration and finally to a negative reaction of the legal regulation to its applicability.

The doctrine is unanimous in stating that "This source of law (s.n. Fiscal/Tax Code) is fully present in the field of social relations governed by public fiscal and financial law, but its particularities reside not in the general legal regime of the law, Government Ordinance and Emergency Ordinance, but relative to the special legal regime applicable to certain categories of laws, Ordinances or Emergency Ordinances: ... As a rule, the amendment must be promoted in public discussions with 6 months prior to the date of its enforceability."[2]

2. Presentation of the actual situation submitted to the analysis. The incidental legal framework

The market participant affected by the tax decisions incidental in this article states that in 2019 a number of new apartments with VAT included were purchased by a natural entity from a real-estate developer, in order to resell or lease them. Starting with 2021, the acquirer desired to sell these apartments.

The natural entity is not registered for VAT purposes, but practices independent activities through an entity registered for VAT purposes.

Is the raised legal issue limited to the situation of determining the VAT treatment applied to the sale of apartments considering the quality of taxable person registered for VAT purposes for liberal activity?

How will the sale of apartments be treated from the income tax perspective, as being from personal patrimony or as an independent activity?

Can the purchase/sale of apartments be carried out in reverse charge?

Can the subsequent sale of these apartments be made for a fee or is it exempted?

[*] Associate Professor, PhD, Faculty of Law, "Nicolae Titulescu" University of Bucharest (e-mail: claudia@cliza.ro).

[1] Mădălin Irinel Niculeasa, *Summa fiscalis. Tratat de drept fiscal si financiar public*. Edition, reviewed and completed, Universul Juridic, Bucharest, 2014, p. 33.

[2] Mădălin Irinel Niculeasa, op. cit, p. 245.

Does a natural entity have to register for VAT purposes or does one use the same VAT code that one has for an independent activity?

Will the tax paid for each of the five apartments be 3% on the income achieved from sale, from which we deducted the non-taxable amount of 450,000 lei?

2.1. The legal framework

- G.E.O. no. 44/2008 regarding the development of economic activities by authorized natural entities, individual enterprises and family enterprises[3];
- Law no. 227/2015 on the Tax Code, with further completions and amendments[4];
- The methodological application regulation of Law no. 227/2015 on the Tax Code, approved by Government Decision no. 1/2016 with further completions and amendments, hereinafter referred to as the Methodological Regulations[5].
- Law no. 207/2015 on the Tax Procedure Code, with further completions and amendments[6].

2.2. The legal nature of VAT

The basis for tax establishment resides the need of the state to gather resources to cover the expenses it has to make in order to meet its economic and social function.

At the basis of establishing taxes in Romania, there are a series of principles:

- Neutrality of tax measures;
- Certainty of taxation;
- Fiscal equity at individual level.[7]

The European Union lawmaker, when defining value added tax (”VAT”) as a general consumption tax applicable to all transactions consisting of supplies of goods or services for consideration, does not consider transactions free of charge at their nominal value.[8]

According to art. 1 of Directive no. 2006/112, the principle of the common system of VAT presumes the application of a general consumption tax on goods and services exactly in proportion to the price of goods and services, no matter the number of operations carried out in the manufacturing and distribution process prior to the stage in which the tax is perceived.

For each transaction, VAT, calculated on the price of the goods or services at a rate applicable to the goods or services in question, becomes chargeable after deducing of the amount of VAT directly borne by the various components other than the price.[9]

2.3. Fiscal treatment

Purchasing apartments and then selling them, represents, usually, an economic activity, for which authorization is required based on the provisions of the G.E.O. no. 44/2008 regarding the development of economic activities by the authorized natural entities, the individual enterprises and the family enterprises, with further completions and amendments.

Likewise, the purchase of apartments and selling them afterwards can also be seen as a generating fact. The generating fact represents the fact by which the necessary legal conditions for the exigibility of the tax are met. This is both the national definition and the Community definition.[10]

Taxable operations in Romania represent the delivery of goods carried out for consideration on the Romanian territory by a taxable person acting as such, i.e., those economic activities that constitute or are assimilated with a supply of goods, performed by a taxable person, with payment.[11]

The exercise of an independent activity supposes its development regularly, continuously, on own account and pursuing incomes to be achieved.

In accordance with Art. 7, point 3 of the Tax Code, an independent activity represents any activity carried out by a natural entity for the purpose of achieving income that meets at least 4 of the following criteria:

- the natural entity has the freedom to choose the place and the way of carrying out the activity, as well as the work schedule;
- the natural entity has the freedom to carry out the activity for several customers;
- the inherent risks to the activity are assumed by the natural entity carrying out the activity;
- the activity is carried out by using the patrimony of the natural entity carrying out that activity;
- the activity is exercised by the natural entity using the intellectual capacity and/or one’s physical performance, depending on the specifics of the activity;
- the natural entity is part of a professional body/order with a representative function, with the profession developed being regulated and supervised, according to the special regulatory documents that rule the organization and exercise of the respective profession;
- the natural entity has the freedom to carry out the activity directly, with employed staff or through collaboration with thirds in accordance with the law.

Natural entities can carry out economic activities, opting for one of the following possibilities:

- as a self-employed person;
- as a sole proprietor of an individual enterprise;
- as a member of a family business.

The natural entities are authorized at the Trade Register Office and are registered at the competent tax body by submitting the form (070) Statement of fiscal registration / Statement of trades / Statement of deregistration for natural entities who carry out economic activity independently or exercise free professions.

The activities carried out by a natural entity must be analysed from the VAT perspective as a whole, as it results from the provisions of art. 266 p. (1) point 4 of the Tax Code. Therefore, for all economic activities carried out by a natural entity as a taxable person, a single registration code is assigned by the competent tax body for VAT purposes.

We state that neither art. 316 of the Tax Code, regarding the registration of taxable persons for VAT purposes, nor the methodological regulations for the application of Title VII of the Tax Code, do not provide obligations regarding a new registration for VAT purposes of taxable persons who have already registered for VAT purposes as natural entities and which are subsequently registered at the Trade Register Office based on Government Ordinance no. 44/2008.

Likewise, according to art. 82 para. (1) of the Tax Procedure Code, "any person or entity that is the subject of a fiscal legal report is fiscally registered receiving a fiscal identification code", the purpose of the fiscal registration being the assignment for each taxpayer of a single fiscal identification code.

Under the circumstance where the natural entity has registered for value added tax purposes and subsequently is authorized according to G.E.O. no. 44/2008, the competent fiscal body will notify the Trade Register Office with the registration code already assigned to the respective natural entity, because as we showed above, a subject of fiscal law, regardless of the number of activities, must be identified with a single tax identification code.

From the VAT perspective, the sale of apartments is a taxable operation in Romania either by applying the standard rate of 19% or by applying the reduced rate of 5%, if the conditions imposed by law for home sales in the Romanian social policy are met.

Even if the natural entity is registered for VAT purposes, the operation is not within the scope of VAT, if the respective apartment is from the personal patrimony of the natural entity, without being an apartment from the business patrimony, for example an apartment built by the natural entity as a real estate developer.

If the apartment to be sold is part of the personal patrimony (for example, it is the home residence of the natural entity), the operation does not have an economic character because it is considered that it is part of the personal patrimony and not of the business patrimony. The real estate would be considered from the patrimony of the business if it had not been used for personal purpose, either as a home or as a holiday home.

In this case, the provisions of art. 269 of the Tax Code application regulations, point 4, p (2): "In applying the provisions of paragraph (1), natural entities are not considered to carry out an economic activity in the scope of tax application when they achieve income from sale of personal property or other property, which has been used by them for personal purposes. The category of property used for personal purposes includes construction and, where appropriate, the land related to them, personal property of natural entities who have been used as homes, including holiday homes, any other property used for personal purposes by the natural entity, as well as property of any kind inherited or acquired as a result of remedial measures provided by the laws on the reconstitution of property rights".

If the real estate has not been used for personal purposes by the natural entity or has been purchased for resale, the operation falls within the scope of VAT, in which case it can be sold by applying the exemption regime regulated by art. 292 p. (2) letter f), but only if the respective apartment is not a new construction.

The new construction is defined by regulations, at point 55 p. (5) of the Application Regulations of art. 292 p. (2) letter f) of the Tax Code: "If the delivery of a construction takes place before the date of the first occupation, as the first occupation is defined in paragraph (3), the delivery of a new construction shall be considered to take place".

The definition of the new construction can also be found in p. (3), (4) of the Application Regulations of art. 292 p. (2) letter f) of the Tax Code:

"(3) The date of the first occupation, in case of a construction or of a part of the construction that has not undergone transformations of the nature provided in art. 292 p. (2) letter f) point 4 of the Tax Code is considered to be the date of signing by the beneficiary of the final acceptance report of the construction or of a part of the construction. The final acceptance report means the acceptance report at the end of the works, concluded according to the current legislation made under own management, the date of the first occupation is the date of the document on the basis of which the construction or the part of the construction registered in the accounting records as a fixed tangible asset.

(4) The date of the first use of a construction refers to constructions that have undergone transformations of the nature of those provided in art. 292 p. (2) letter f) point 4 of the Tax Code.

The date of first use means the date on which the beneficiary signs the final acceptance report of the transformation works of the construction in question or of a part of the construction. The final acceptance report means the acceptance report at the end of the works, concluded according to the legislation in force. In the case of transformation works of a construction or part of the construction in own management, the date of the

first use of the asset after the transformation is the date of the document based upon which the value of the construction or part of the construction is increased by the value of the respective transformation.

According to art. 292 p. (2) letter f) of the Tax Code the following are specified "2) The following transactions shall also be exempt from duty:

f) delivery of buildings / parts of buildings and of the lands on which they are built, as well as of any other lands. By way of exception, the exemption does not apply to the delivery of new construction, parts of that or new build-up lands.

For the purposes of this article, the following are defined:

- buildable land represents any arranged or unarranged land, on which constructions can be carried out, according to the legislation in force;
- construction means any structure fixed in or on the ground;
- the delivery of a new construction or part of it means the delivery made no later than December 31st of the year following the first occupation or use of the construction or part of it, as the case may be, following the transformation;
- a new construction also includes any transformed construction or transformed part of a construction, if the cost of transformation, excluding tax, amounts to at least 50% of the value of the construction or part of the construction, excluding the value of land, after transformation, respectively the value recorded in accounting in the case of taxable persons who are required to keep accounting records and who do not apply the cost-based assessment method in accordance with International Financial Reporting Standards, or the amount expertise/assessment report, in the case of other taxable persons. If only a part of the construction is alienated, and its value and the related improvements cannot be determined based on the accounting data, they will be determined based on an expertise/assessment report ".

In conclusion, if the sale of the apartment is made by the natural entity, in his capacity as an authorized natural entity/self-employed, in addition to VAT, one owes income tax for independent activities, contribution for social insurance and contribution for social health insurance, as follows:

- according to art. 148 p. (1-4) of the Tax Code, natural entities who achieve income from independent activities from one or more sources and/or income categories, owe the social insurance contribution, if they estimate for the current year net income whose cumulative value is at least equal to 12 minimum gross salaries per country, in force at the deadline for submitting the sole statement provided in art. 120 of the Tax Code.

The inclusion in the annual threshold of at least 12 minimum gross salaries per country, in force at the deadline for submitting the sole statement provided in art. 120 of the Tax Code, is carried out by cumulating the net incomes from independent activities that are estimated to be achieved in the current year.

The annual basis for calculating the social security contribution, in the case of persons earning income from independent activities and intellectual property rights, is the income chosen by the taxpayer, which cannot be lower than the level of 12 minimum gross salaries per country, in force at the deadline for submitting the sole statement provided in art. 120 of the Tax Code.

According to art. 150 p. (1) of the Tax Code, regarding the specific exceptions regarding the incomes from independent activities, specifies the following:

"(1) Natural entities insured in their own social insurance systems, who do not have the obligation to insure in the public pension system according to the law, as well as the persons who have the quality of pensioners do not owe the social insurance contribution for Ct' incomes foreseen at art. 137 p. (1) letters b) and b1)."

- in what regards the social health insurance contribution, the Tax Code provides in art. 170 that natural entities owe the contribution of social health insurance if they achieve cumulative annual incomes at least equal to 12 gross minimum basic salaries per country from one or more sources of income in the following categories:

"a) net/gross income or income norm from independent activities, established according to art. 68, 681 and 69, as appropriate;

b) the net income from intellectual property rights, established after granting the share of flat-rate expenses provided in art. 72 and 721, as well as the net income from intellectual property rights determined according to the provisions of art. 73;

c) net income distributed from associations with legal entities, taxpayers according to title II, title III or Law no. 170/2016, determined according to the provisions of art.125 p. (8) - (9);

d) net income or income norm, by case, for the incomes from the transfer of the use of the assets, established according to art. 84 - 87;

e) the net income and/or revenue from investments, established according to art. 94 - 97. In the case of interest income, the amounts received are considered, and in the case of dividend income, the dividends received are considered distributed starting with 2018;

f) the net income or the income norm, as the case may be, for the incomes from agricultural activities, forestry and fish farming, established according to art. 104 - 106;

g) gross income and/or taxable income from other sources, established according to art. 114 -116."

The share of the social health insurance contribution is 10% and is due by the natural entities for whom there is the obligation to pay the social health insurance contribution, according to the Tax Code.

The natural entity registered for VAT purposes who achieves incomes from the sale of real estate, even

if one is not registered according to G.E.O. no. 44/2008, but carries out an activity regularly, continuously, on its own account and following the achievement of incomes, one has the obligation to observe own rules of incomes from independent activities.

In the situation where the natural entity carries out an activity that meets the criteria that mainly define the existence of an independent activity, then this natural entity obtains income from independent activities, whose fiscal treatment is provided in Title IV "Income tax", Chapter II "Income from independent activities" of the Tax Code.

According to the provisions of art. 14 p. (1) - (3) of the Tax Procedure Code [12]:

"(1) Incomes, other benefits and patrimonial elements are subject to tax legislation regardless of whether they are obtained from acts or deeds that meet or do not meet the requirements of other legal provisions.

(2) The relevant factual situations from the tax perspective are assessed by the tax body in accordance with their economic reality, determined on the basis of the evidence administered under the conditions of the hereby code. When there are differences between the fund or the economic nature of an operation or transaction and its legal form, the tax body assesses these operations or transactions, respecting their economic fund.

(3) The tax body establishes the fiscal treatment of an operation considering only the provisions of the tax legislation, the fiscal treatment not being influenced by the fact that the respective operation meets or does not meet the requirements of other legal provisions."

From the above legal provisions, it results that the incomes, other benefits and patrimonial elements achieved by the natural entities who purchase real estate that they subsequently alienate are subject to the tax legislation regardless of whether they are achieved from acts or deeds that meet or do not meet the requirements of other legal provisions.

Thus, natural entities who bought apartments for the purpose of resale, without being registered according to G.E.O. no. 44/2008, and which, following the reanalysis of the activity carried out, the criteria that mainly define the existence of an economic activity have been met, as it is defined in art. 2 letter a) of the G.E.O. no. 44/2008, and from the tax perspective this economic activity generates incomes from independent activities, they have the obligation to regularize their tax situation by submitting the statements regarding the income achieved according to the legal provisions, for the previous years in which they carried out this activity, must give efficiency to art. 14 of the Tax Procedure Code and to charge the stated incomes.

Likewise, we state that, at art. 2 letter j) of the G.E.O. no. 44/2008 the meaning of the term patrimony of affectation is presented and which represents the patrimonial mass within the patrimony of the entrepreneur, representing the totality of the affected rights and obligations, by written statement or, as the case may be, by the constitution agreement or by an additional document to it, exercise an economic activity.

According to the provisions of art. 111 of the Tax Code, the notaries public calculate and collect the tax related to the incomes from the transfer of the real estate's only in the situation in which the transfer of some real estates from the personal patrimony takes place.

At the same time, in accordance with the provisions of point 33 p. (2) of the Methodological Regulations, given in application of art. 111 of the Tax Code, an exception is made to the transfer of the property right or its dismemberments for the real estate properties from the business patrimony, defined according to point 7 p. (8) of the methodological regulations given in the application of art. 68 of the Tax Code, these being included in the income categories for which the annual net income is determined based on the accounting data.

3. A different example on the same topic

On December 24th, 2020, Law no. 296/2020[13] for the amendment of the Law no. 227/2015 regarding the Tax Code.

One of the amendments brought by Law no. 296/2020 was that from point 160 of the Law, which provided that:

In Article 291 (3) (c), point 3 is amended to read as follows:

"3. the delivery of dwellings with a usable area of maximum 120 sqm, excluding household annexes, whose value, including the land on which they are built, does not exceed the amount of 140,000 euros, the equivalent in lei of which is established at the exchange rate notified by National Bank of Romania, valid on January 1st of each year, excluding value added tax, purchased by natural entities. The useful area of the home is the one defined by the Housing Law no. 114/1996, republished, with further completions and amendments. The household annexes are those defined by Law no. 50/1991 on the authorization of the carrying out construction works, republished, with further completions and amendments. The reduced rate applies only in the case of homes which upon sale may be therefore inhabited."

Therefore, by enforcement of the Law no. 296/2020, the legal provisions regarding the application of the value added tax rate (VAT) of 5% on the sale of dwellings were amended by increasing the threshold to the amount of 140,000 euros.

This change has been seen by both natural entities and real estate developers as a breath of fresh air, with many people hoping to buy a new home.

[12] Published in the Official Gazette no. 547 as of 23.07.2015, lately modified by Law no. 295/2020.
[13] Published in the Official Gazette, Part I under no. 1269 as of December 21st, 2020.

However, shortly after the enforcement of the Law no. 296/2020, on December 31st, 2020, the Emergency Ordinance no. 226/2020 on some tax-budgetary measures and for amending and supplementing some normative documents and extending certain deadlines, has also entered into force.[14]

According to Art. XVIII.pct. 2 of the Emergency Ordinance no. 226/2020:

"Paragraph (1) of Article VII of Law no. 296/2020 for the amendment and completion of Law no. 227/2015 on the Tax Code, is amended and completed as follows:

2. After letter e) a new letter is inserted, letter f), with the following content:

f) the provisions of art. I point 13 and 160 shall enter into force on January 1st, 2022."

Therefore, as a result of the entry into force of Ordinance no. 226/2020 increasing the ceiling up to which 5% VAT is applied is postponed until January 1st, 2022. From that date, the threshold will reach, from 450,000 lei, as it is in present, to approximately 680,000 lei (the equivalent in lei of the amount of 140,000 euros).

Therefore, the joy generated by such a measure was of very short and those who had made predictions about the applicability of legal provisions had to postpone them at least until 2022.

4. Conclusions

The situation set out above perfectly illustrates the legislative hurdle in which a taxpayer is faced with solving tax problems. Not infrequently, the solutions of the tax bodies come in contradiction with the solutions of the courts, which makes the tax provisions even more difficult to apply.

Moreover, tax equity should not be pursued only as an impact of an income tax. 100% tax equity (utopian to be achieved) should track all taxes borne by one person.[15]

Further, in times of crisis such as the one we are going through, securing funds is the key to survival, regardless of its source.[16]

Yet, the fiscal predictability, at least in times of crisis, would help both the business community and natural entities and should be considered by the political class when deciding on tax measures concerning the society.

THE RECENT LEGAL EVOLUTION OF THE ROMANIAN PREFECT IN EUROPEAN CONTEXT: FROM SENIOR CIVIL SERVANT TO PUBLIC OFFICIAL

Crina Alina DE SMET[*]

Abstract

The prefect has the essential role of creating a link between the central and the local public administration, being most frequently described with the phrase "the representative of the Government in the territory". In the last two decades, the role, responsibilities and, especially, the juridical statute of the prefect have stirred debates. Recently, the Government has adopted an emergency ordinance that changes the statute of the prefect from senior civil servant, to public official with political affiliation. Arguments have been brought by specialists both in favour and against this change. Even though the institution of the prefect has been the subject of numerous analyses in the literature, this recent transformation demands a new one, focusing on both its impact, and its European context. However, thoroughly analysing the whole institution of prefecture, especially taking into account its whole historical evolution, is a rather vast undertaking. Therefore, in this paper, we limit ourselves to two objectives. Firstly, we aim to analyse the impact of this recent change on the main attributions of the prefect, such as on the administrative supervision of acts signed by local public authorities. Secondly, we set out to analyse comparatively the present legislative provisions of the prefect in Romania with the ones in other EU member states. In order to reach our objectives, we employ the logical and comparative methods, studying both the relevant legislation, as well as the national and international doctrine on the subject.

Keywords: *administrative law, prefect, civil servant, public official, European Union*.

1. Introduction

This paper concerns the regulatory framework of a public position essential in the Romanian public administration, the prefect, with emphasis on its evolution. Our perspective is focused on its comparative aspects – more exactly, comparing the present legislation, which has undergone recent changes, with the previous one, as well as comparing the Romanian legislation with European ones.

Analysing the prefect, both as a public position and as an institution, is important for several reasons. First and foremost, the prefect is invested with important powers and responsibilities, having the role of creating a connection between the central and the local administration. The prefect's powers also include creating and leading strategies and interventions in case of natural disasters, by having the role of president of county commission for disaster defence. Moreover, the prefect has the right to challenge the legality of acts emitted by public authorities, and having them suspended until the court makes a decision on the matter. Therefore, any changes concerning the prefect can upset a delicate balance in the public administration. Secondly, the prefect and the institution of the prefect have a long tradition in Romania, predating the Great Union of the country. Thirdly, the position of the prefect is not only established through the Administrative Code, but through the Constitution – which means that certain changes cannot be adopted only by organising a popular referendum, which underlines the importance of this position. Fourthly, the analysis of the Romanian prefect is important since it concerns a public position that is rather rare, when looking at other public administrations in the region as well as in the world.

In order to analyse the evolution of the regulatory framework concerning the prefect, we will analyse comparatively the previous legislation and the current one, underlining the relevant changes and their implications. We will also include the views of specialists on the matter, as far as these are relevant in relation to the changes in the legislation. Moreover, we will consult the legislation and doctrine of several countries that have the public office of the prefect: France, Spain, Italy, or of those that organise differently the responsibilities attributed to the Romanian prefect, such as the United Kingdom. This will underline how the recent changes relate to other public administration systems in Europe, whether they make the Romanian prefect more or less European.

Given the novelty of these legislative changes, the existing specialised literature on the role, importance and responsibilities of the prefect can be outdated, and the papers that have already discussed the implications of these transformations are quite few.

2. Recent changes concerning the Romanian prefect

Despite relative frequent changes to the duties and power of the prefect, the Romanian prefect remains an important position in the administrative system. As stated by the Constitution, the prefect acts as the Government representative at local level, also having to role of directing the decentralised services of the ministries at local level. Another role established by the

[*] PhD. Candidate, Faculty of Law, University "Nicolae Titulescu" of Bucharest (e-mail: desmet.crinal@yahoo.ro).

Constitution for the prefect is to challenge the local administrative acts considered illegal before the administrative court[1]. Further responsibilities are established in the Administrative Code, which adds duties regarding emergency situations[2]. The Administrative Code also adds details regarding the role of the prefect as the representative of the Government at local level, such as public order duties, supporting the electoral process, collaborating with certain institutions for certain goals, and ensuring the quality of some public services, such as the issue of passports and driving licenses[3].

Recently, important changes have been brought to the statute and the role of the prefect through Government Emergency Ordinance no. 4/2021. In this section, we present these changes in a comparative manner, highlighting both the previous and current judicial provisions.

First and most important of all, it has changed art. 250 from the Administrative Code, which previously categorized the prefect, as well as the subprefect, as senior civil servants; after this Ordinance, the prefect and the subprefect are public officials (dignitaries)[4]. In the same article, this new law clarifies the prefect's and subprefect's rights concerning payment, which are now subject to Law no. 153/2017.

Secondly, the new law indicates six conditions that a person has to respect in order to become prefect: Romanian nationality and residence on Romanian territory; possessing electoral rights; lack of criminal convictions or the presence of rehabilitation; having an undergraduate degree, at least; having graduated a specialised training program organised by the National Institute of Administration. This was a necessary measure, taking into consideration that the appointment of a public official has fewer conditions compared to the appointment of a senior civil servant. Therefore, if additional conditions were not clearly specified, there would have been a decrease in the standards, as well as the prestige of the position and institution of the prefect.

Thirdly, within the prefect's institution, the new law introduces a new function, that of general secretary of the prefect's institution, who is a senior civil servant directly subordinated to the prefect. In order to be appointed as general secretary to the prefect, one needs a university degree in one of these fields: law, public administration, or political sciences[5].

The role of the general secretary is to ensure a higher stability to the institution of the prefect, once the prefect becomes a public official, as well as a continuous management, taking into consideration that the prefects and subprefects will be changed each time a new government is formed and approved. Another important role of the general secretary to the prefect is to act as a link between different departments of the prefect's institution[6].

The actual responsibilities of the secretary general are to be established through a Government Ordinance, at the proposal of the minister that has as a responsibility the coordination of the prefect's institution[7] (at the moment, this is accomplished through the Ministry of Internal Affairs, through a specialised General Direction[8]). Therefore, Government Ordinance no. 906/2020 was modified in 2021 in order to indicate the specific attributes of the secretary general to the prefect, of which we underline the role in "supporting the activity of the prefect in exercising the attributions regarding the verification of legality"[9], as provided in the Administrative Code.

3.The impact of the recent changes concerning the Romanian prefect

Besides the novelty of this law and its implications, one other reason why we chose it for our analysis is the strong, opposite opinions that it generated. Regarding the shift of the prefect from senior civil servant to public official, which have quite different judicial regimes, especially in their relation to the political element, the majority of views we encountered were either in favour, or strongly opposed; the provisions of GEO no. 4/2021 were either considered long awaited and beneficial, or detrimental, anti-European and regressive.

The main criticism received by this Ordinance was the so-called 'politicisation' of the prefect: under the old provisions, it was forbidden for a prefect to be member of a political party, which is now allowed. According to the Constitution, art. 123, the prefect is named by the Government, one for each county and one for Bucharest; then, each prefect acts as a representative of the Government.

In the substantiation note to GEO no. 4/2021, the legislator argues that the fact that prefects and subprefects can have political affiliation "is in line with the role of the prefect as a representative of the Government at the local level, the Government being a

[9] Art. 3, Government Ordinance no. 906/2020 for the implementation of some provisions of Government Emergency Ordinance no. 57/2019 regarding the Administrative Code, published in the Official Journal of Romania, no. 994 of October 28th, 2020.

public authority that has a political structure"[10]. One of the observations of the supporters of this change is that, until now, each Government has named its own prefects[11]. As it is stated in the doctrine, "in reality, the prefect has become a political and politicised public servant"[12]. Therefore, there was rather a contradiction between practice and the constitutional role of the prefect, on one hand, and his statute of senior civil servant, on the other hand, a statute which should ensure a high degree of continuity, predictability and independence from political shifts.

Before the Administrative Code, which repealed Law no. 340/2004, there were explicit provisions regarding the principles of the prefects' activity; more exactly, the activity of the prefect was subject to the principles of impartiality and objectivity[13]. The Administrative Code included most of the provisions of Law no. 340/2004, however, the ones regarding those principles, including the requirements of impartiality and objectivity, were left out. At the time, in 2019, the prefect was a senior civil servant, and, therefore, was subject to the general principles applying to civil servants, which, according to art. 373 of the Administrative Code, include both impartiality and objectivity[14]. Once the prefect became a public official, these principles automatically changed, and the prefect and subprefect only remain subject to the general principles of public administration, stated in art. 6-13 of the Administrative Code. Therefore, the prefect no longer has to act in accordance to the principle of objectivity, but the principle of impartiality remains.

The importance of the impartiality of the prefect, in the context of his political affiliation, concerns one of his most important responsibilities: his role in checking the legality of administrative acts issued by the public local authorities, established by art. 252 of the Administrative Code, which states that the prefect has the right to challenge any local administrative act considered illegal. Moreover, art. 255 of the Administrative Code brings further explanations to this power, stating that the prefect can check the legality of any acts issued by the mayor, the local council and the county council, and challenge the ones considered illegal. All these provisions are in accordance with the constitutional ones – actually, in this case, the Constitution has additional details on the matter: that the challenged act is suspended de jure, and that the competent court is the administrative court.

Moreover, on the matter of the impartiality of the prefect, the founding of the function of general secretary of the prefect's institution, a senior civil servant, represents an additional guarantee.

4. The Romanian prefect in European context: a comparative view

In Council of Europe's European Charter of Local Self-Government, it is stated that the right to participate in public affairs is best exercised at the local level, therefore the importance of local self-government, and of limiting the powers exercised at a central level[15]. Since the Romanian institution of the prefect represents the power of the Government in the territory, the attributions of the prefect have to be limited in order to protect the principles of local self-government and those of decentralisation. In art. 8 of the European Charter of Local Self-Government, the administrative supervision of local authorities is limited to those stated either in the Constitution, or in a statute; more exactly, its exercise should only be "according to such procedures and in such cases as are provided for by the constitution or by statute"[16]. As we have already pointed out, the institution of the prefect is enshrined in the Romanian Constitution, and its duties established in the Administrative Code are in line with those indicated in the Constitution.

When one consults comparative law literature, it appears that the institution of the prefect is rather rare in this form, even though in some cases there are some rough equivalents.

As it is widely pointed out in the literature, the Romanian institution of the prefect has been inspired after the French one, both initially, and as it evolved in time. In France, the prefect is a senior civil servant, which, given its influence on the Romanian prefect, can partly explain the controversy regarding the change into a public official.

As the literature points out, the French prefecture is a pre-democratic institution, which has been subject to a wide adaptation process in order to fit into the new context[17]. In its infancy, the French prefecture had a military component. Through several reforms, the French prefect nowadays "have justified their existence through notions related to the horizontal coordination of the State, partnership with local and regional

[16] Ibidem.

[17] Alistair Cole, "Prefects in Search of a Role in a Europenised France", *Jnl. Publ. Pol., Cambridge University Press*, 31, no. 3 (2011): 385-407.

authorities and orchestration of France's interaction with the European Union in the field of regional policy"[18]. We underline the fact that all these three elements are also present in the role of the Romanian prefect. However, we also underline an important difference between the French and the Romanian prefect: the first can be seen as a professional corps, even though this characteristic is not as strong as it was some decades ago, researchers observing a decrease and fracture in the collective identity, influence and professionalism of this corps[19].

Another European institution similar to the Romanian prefect is the Italian one. As it is the case in France, in Italy the prefect the currently is a public official. This position has historically been one of high importance for Italy; for example, a historian calls the liberal period of Italy the "prefectocracy" (it., *preffetocrazia*)[20]. Similar to the French prefect, the Italian one was subject to a deep process of adaptation and evolution. For example, before 1982, the prefect did not need special qualifications for appointment, exercised supervision over local authorities, and was involved in solving both administrative and political issues[21]. The most important force for modernizing the institution of the prefect in Italy was the decentralization. The acts that most changed the institution of the prefect in Italy were, on one hand, Act no. 300/1999, which transformed the institution of prefecture in „territorial government offices", and the prefect into the holder of these offices and, on the other hand, Regulation no. 287/2001.

In Spain, there is an equivalent of the prefect called a civil governor (sp., gobernador civil), which is a public servant, but that, in comparison with the French and Italian ones, has a more important role in public order. The Spanish civil governor generally holds less powers than the Italian one[22].

In the United Kingdom, there is no institution of the prefect in the Romanian and French model, and no perfect equivalent. A somewhat similar position is held by the lord-lieutenant, which, however, is the monarch's representative in the lieutenancy areas of the country. Lord-lieutenants are unpaid, and their main duty is to uphold the dignity of the monarchy, as well as promoting local administrative cooperation. Even so, the literature underlines how foreign is the concept of 'prefect' to the British administration: "for English observers, the most curious creature in the whole French administrative menagerie must surely be the prefect […] the prefect combines the functions and powers of many officers in British local government"[23], the author enumerating no less than eight different ones.

The foreign comparisons could continue; however, not all countries had the same evolution regarding the prefect. In the 19th century, many European countries, such as Greece, Belgium, Portugal or the Netherlands, had French-inspired prefects, but not all passed the test of time. For example, in 2013 Portugal decided to suppress its prefects, called civil governors.

5. Conclusions

Regarding the impact of GEO no. 4/2021 on the attributions of verifying the legality of local administrative acts and of contesting acts considered illegal before administrative contentious courts, the Ordinance added in this process the secretary general, in order to avoid concerns regarding the politicisation of this process, which must be exclusively legal, characterized by objectivity and impartiality. Therefore, we notice that this responsibility is shared between a public official, the prefect, and a senior civil servant, the general secretary of the prefect, who brings additional guarantees regarding the objectivity and impartiality of challenging the legality of public administrative acts.

Following the comparative analysis with the role of the prefect and the institution of the prefect in other states, we draw some conclusions. This institution is not a common one in administrative systems, and, in some states that is does not exist, its responsibilities are divided into several different positions. Where it is encountered, France and Italy being particularly relevant, the prefect is a (senior) civil servant, and many of his duties coincide with those of the prefect as regulated in Romanian law. However, we emphasize that in both in France, and in Italy, the role of the prefect has been in a constant change and evolution to in order to adapt and remain relevant in relation to the current administrative, social, political and cultural realities.

In our opinion, the change of the prefect's status from senior public officer to public official falls into this category of transformations, even though these turned in a different direction than its European counterparts.

However, taking into consideration the importance of the principle of objectivity in the activity of the prefect, further guarantees to ensure this, beyond the new function of general secretary of the prefect, would be beneficial.

We emphasize the importance of limiting the prefect's powers and consider that these changes do not have a negative impact. For example, a problematic change in relation to the European Charter of Local

Self-Government and the Romanian Constitution would have been the increase of its powers and of the domains of competence.

However, a potential problem we notice is the adoption of amendments to the prefect's status by Government Emergency Ordinance. Even if there are exceptions to the constitutional provisions regarding the obligation to regulate the prefect's institution by organic law, it is not impossible for the Romanian Constitutional Court to consider the adoption of amendments by this legislative form as unconstitutional. Only the presence of this possibility, even if it does not materialise, has the unfortunate effect of adding a negative element of uncertainty, in relation to a position and an institution that is currently of great importance for the Government, as well as for the local administration.

Taking into consideration these findings, we expect further legislative changes, firstly, in order to consolidate the objectivity of the prefect, and, secondly, in order to protect these changes from being challenged on unconstitutionality grounds.

Further research could focus on other aspects related to the prefect as a public official, or as an institution. Since this study was concerned with the evolution of legislation, others could analyse the changes by employing public administration theories. Moreover, we consider that the prefect's European role, concerning his powers related to the European Union, could be further analysed and critically discussed, as well as those concerning disaster defence.

THE RIGHT OF MINORITIES TO ADDRESS IN THEIR NATIVE SPEECH TO THE ADMINISTRATIVE AUTHORITIES

Maria-Cristiana IEREMIE [*]

Abstract

Changes on the political map of the world at the end of the Cold War, the conflicts that arose following these adjustments, along with awareness of the widespread consequences of the migration phenomenon have reminded the international public opinion the disparity between the trend of homogeneous political communities and the pronounced degree of diversity that characterizes a significant part of the states of the contemporary world. The challenges faced by the political communities in this context have brought back to the agenda older dilemmas related to the tools available to states in terms of their interest in administrative-territorial centralization and economic integration, cultural-linguistic standardization, creation and supporting a common space for identification and political participation.

Keywords: *minorities, public administration, native speech, administrative authorities, fundamental rights*.

1. Introduction

The changes on the political map of the world at the end of the Cold War, the conflicts that led to their outbreak, along with the widespread awareness of the consequences of migration have brought to the attention of international public the issue of disparities between the tendencies of congruity of political communities and the pronounced degree of intercultural diversity that characterizes a considerable part of the states of the contemporary world. The desire for homogeneity, whose foundations have been deeply rooted in the history of political reflection, has led to the dismemberment of multinational states, justified in the opinion of attempts at ethnic cleansing in several independent states, and grounded autonomous movements in the case of concentrated minorities from a territorial point of view. The challenges faced by the political communities in this situation have brought back to the agenda a number of issues already deliberated in the past regarding the tools available to old and new states regarding their interest in administrative-territorial and economic systematization, cultural-linguistic evenness, creation and support of a common space for identification and political participation. Advancements in the global politics scene have brought back into question the issues surrounding the basis of political communities revealed by a series of studies dedicated to the most diverse situations that have highlighted the fact that a political community is usually the result of a process identifying community members with a set of political institutions that they accept as legitimate in the optimal management of community life, furthermore in ensuring its long-term survival. The conclusive results of the studies reveal that the stability and unity of political communities can be ensured with greater chances if community members speak the same language, share the same culture and religion, under the conditions given by the principle of homogeneity, and where this circumstance is absent, inevitably will appear bordering categories whose interests are not appropriately defended in the internal organizational structures of the community. The situation of minorities has been a matter of great interest in political debates both nationally and internationally, representing one of the most complicated and newsworthy topics of public debate on which both members have expressed their views and dissatisfaction over minorities disadvantaged by the laws of the states in which they coexist as well as citizens of the majority ethnic groups. Nonetheless, they brought to the surface some challenging situations of a legislative nature that these minorities face, situations that aimed to diversify and expand the current legislative framework to ensure respect for the rights and freedoms of all citizens of a rule of law.

2.1. The Legal Management of Minorities in Relation to the European Public Administration from a Comparative Perspective

Following the end of the Cold War, a number of international and regional instruments emerged that are of considerable relevance from the perspective of minority rights as an indispensable part of human rights. Such an instrument is represented by the United Nations Charter of Universal Human Rights, which legislates the application of human rights without discrimination on the basis of race, sex, language or religion since its first article. This is compelling in this case because of the international emphasis on preventing discrimination in the period between the end

[*] Phd Candidate, Faculty of Law, "Nicolae Titulescu" University of București (e-mail: maria.ieremie@univnt.ro).

of World War II and the fall of communism[1]. Internationally, the most important acts on the rights of minorities are the International Covenant on Civil and Political Rights and the United Nations Declaration on the Rights of Persons belonging to Ethnic, Linguistic and Religious Minorities. While the Convention places the rights of minorities in full human rights, the Declaration speaks of the right of minorities to participate in the decision-making process, of the right to education in their native speech and of participation in economic life. At European level, the main promoters of national minority policies are the CSCE / OSCE and the Council of Europe[2]. Like other international organizations, the events in Central and Eastern Europe after the fall of communism were the main catalyst. The Organization for Security and Cooperation in Europe was established in the first instance as a tool for conflict identification and prevention, crisis management and post-conflict reconciliation, persons belonging to national minorities, which led to the establishment of the High Commissioner for National Minorities. The key documents on the protection of national minorities are: the Helsinki Final Act (1975) and the Document of the Copenhagen Meeting of the CSCE Conference on the Human Dimension. By ratifying the first document, human rights become a legitimate subject of dialogue and a topic of interest, a concern for all CSCE member states, respectively following the adoption of the second act a series of rules on the rights of persons belonging to national minorities are determined , addressing issues such as non-discrimination, the use of minority languages, minority education. Although not a treaty, the document is of legal and political importance, due to the mutual agreement of the OSCE states. The fundamental European document on the linguistic rights of minorities in affiliation to public administration authorities is the European Charter for Regional or Minority Languages[3], which was adopted by the Council of Europe on 5 November 1992 in Strasbourg. Fundamentally, in the analysis of the relevant legislation is the 10th article of this Charter which enshrines the right to use minority or regional languages in relations with public services and administrative authorities. We draw attention to the fact that this European normative act encloses arrangements with a more permissive character than the national legislation, in view of the fact that in the counties inhabited by a number of speakers of minority languages, the density necessary for the application of legal provisions is not precisely provided. Thus, each state is free to assess the percentage according to which the stipulations of the relevant legislation can be implemented. Another document of extensive importance is the Framework Convention for the Protection of National Minorities, which was adopted in 1994 and entered into coercion in 1998. This convention does not include collective rights, but is based on the idea that minorities can be protected by guaranteeing the rights of individuals belonging to these minorities. The Convention actually embodies a normative act that provides for the enactment of general principles regarding the rights of individuals belonging to national minorities, including: non-discrimination, equality, promotion of conditions necessary for the preservation and development of culture, religion, language and traditions , expression, freedom of thought, conscience and religion, use of the mother tongue in public and private, oral and written, as well as in relations with public administration authorities[4]. The protection of the rights of minorities is a recent concern of the Union, determined first of all by the extension to the areas previously governed by a communist regime, and secondly by the problem of immigrants on the territory of the Union. The post-communist space recognizes the progress made in developing the legislative framework on the regime of national minorities under international standards, especially the pressure exerted in the context of the enlargement of the European Union. Electoral systems are the mechanism by which the political representation of minorities can be achieved at the level of central and local state institutions, thus appreciating a special importance. Many states such as Albania, Hungary, Croatia, Macedonia have mixed electoral systems, combining the majority principle with the proportional one, not having special policies for minorities in the first two situations. Other countries such as Bulgaria, Slovakia, Slovenia, the Czech Republic, Montenegro, Poland, Serbia and Romania have opted for proportional representation, with an electoral verge of 5% in the last three countries and 4% in Bulgaria[5]. A successful electoral policy is the provision of reserved seats in parliament for minorities. This is also the case of some states such as Romania, Croatia, Montenegro, Slovenia that have adopted this measure as a form of compensation for non-representation through elections. However, the system may vary from state to state, so if Romania offers a place for each national minority that fails to exceed the electoral threshold, in the case of Slovenia the situation is different, the system benefiting only Hungarians and Italians, while in Croatia has three mandates reserved for Serbs, one each for Italians and Hungarians, one common for Czechs and Slovaks, one

for the other former Yugoslav minorities, except Serbs, and one for the rest of the minorities, namely Austrians, Bulgarians, Germans, Poles, Romanians, Ruthenians, Russians, Turks, Ukrainians, and Jews[6]. However, we can note many critiques about the application of special places for minorities, starting from the large number of minorities jointly represented by a single representative in the implausible case of common interests for so many minorities such as Croatia, to issues related to the lack of pluralism in the system, in the case of representation by a single mandate. Also, states such as Serbia and Poland have opted not to apply the electoral threshold to minorities, thus stimulating central representation. Regarding the rights of establishment of political parties, Albania and Bulgaria constitute special cases by legislation prohibiting the establishment of political parties on ethnic, racial or religious grounds, while noting that in neither case did the legislation succeed in preventing effective representation of national minorities in Parliament, talking here about the situation of Greeks in Albania and Turks in Bulgaria. An abnormal case is Bosnia and Herzegovina, which has a complex central power structure designed to meet both the multiethnic composition and the need for post-conflict reconciliation. Analyzing the governance formula transposed in the constitution and the state laws, we find a varied and complex form of power division that has as finality the equitable representation of all the rights of minority communities. Thus, the executive has a multiethnic structure, requiring the participation of each ethnic group, with the right of representation and the right of veto. The presidency consists of three representatives, each belonging to an ethnic group, both elected and territorial, although the latter aims to represent ethnic groups, not territorial entities. De facto, the executive power is held by the Office of the High Representative, which is a form of international protectorate that practically has as a designating element the amendment of the dysfunction of the constitution of Bosnia and Herzegovina. The inclusion of minorities in government is another way of ensuring the representation of minority interests in the political decision-making process. Given these issues, the inclusion of minority parties in government is a fairly widespread practice. Thus, in Albania, Bulgaria, Croatia, Montenegro, Romania, Serbia and Slovakia, minority parties have been included in the ruling coalition for at least one term. This form of political participation has been supported and encouraged by European Union fora, which justifies the widespread use of the system. The beneficial effects of this policy are presumed rather than documented, in very few cases there is an assessment of the participation of minority parties in government[7]. Analyzing the degree of decentralization, we find that Serbia has granted autonomy to the province of Vojvodina, the latter enjoying a limited form of territorial autonomy since 1991. The province enjoys budgetary, legislative, executive and above all, its own decision-making bodies of decisions represented by an Assembly, the Executive Board and administrative bodies. According to 112nd article of the Constitution, the legislator stipulates, instead, the fact that the central bodies can intervene whenever they want in the administrative-political life of the province[8]. Another aspect worth debating is the situation of the many states in the region that have developed minority self-governments, thus allowing minorities not only to participate in decision-making, but also to control their own lives. The system of self-government of minorities in Hungary provides for the possibility of setting them up at two levels of local government: either within local government bodies or in independent organizations under local authorities. These structures are responsible for the cultural life of the community and can influence the relevant legislation only through direct participation in decision-making mechanisms. Special accouterments stipulate the formation of self-government automatically, instead of local authorities, if more than half of the members of local councils belong to a national minority, a rare situation, given that most minorities are geographically dispersed. Following the previous analysis, we find that the role of self-government is to represent minorities and to promote the interests of their own community in relation to public authorities. In this case, self-governments can make a series of decisions at the local level, such as setting up educational or media institutions, displaying community-specific signs and names. Moreover, they can interfere in the development of educational components for minorities, in the formulation of legislation on the protection of historical monuments, thus having a veto on local education issues, media, collective use of language.

2.2. The National Legislative Framework of Minorities Regarding the Right to Address in the Native Speech in Relation to the Public Administration

According to the regulations provided by the Constitution, Romania is qualified as a national state, a phrase that includes the coexistence of a national majority with several minorities, among which we mention Jews, Germans and Hungarians. Analyzing, from the early stage of drafting the theses of the Draft Constitution was debated the existence of the right of

[8] Aleksandra Sanjevic: National Minorities in Serbia and National Councils as Institutions of Minority Autonomy, lucrare prezentată la Conferința Legal Instruments on the Status of National Minorities in South East Europe, Cluj-Napoca, 17-19 Octombrie 2007.

minorities to address in their mother tongue through an amendment belonging to Mr. Hosszu Zoltan containing the following: "unrestricted use of the language of national minorities it is guaranteed [9]"but it was not voted by the Commission. Subsequently, the issue of consecrating this right was raised, but it was expressly and limitedly provided only in relations with the public administration. Thus, Karoly Kiraly was the one who formulated the following amendment "in the territorial administrative units inhabited by citizens belonging to national minorities with a share of at least 10% of the total population in that region, they are provided with the use of mother tongue in their written and verbal relations. with the local and county public administration ". However, the Commission accepted the idea set out in this amendment from a dual perspective, namely that firstly the acts of local and county public administration authorities will be issued in the official language, and secondly the possibility for national minorities to use the language was recognized in relation to these authorities, in accordance with the law. We can note with bewilderment that the right of minorities to use their native speech in relation to public administration authorities functioned until 2003 without an express provision in the Constitution, when it was stipulated and enshrined in constitutional principle by introducing a new paragraph, which became paragraph (2) of art.120, following the analysis from which we can deduce a series of constitutive elements of the legal regime regarding the right in this case[10]. Thus, the main normative act, which regulates the rules for the use of the language of national minorities on the territory of administrative-territorial units, is Law no. 282/2007 for the ratification of the European Charter for Regional or Minority Languages. It is also joined by the Framework Convention for the Protection of National Minorities, concluded in Strasbourg on February 1, 1995, ratified by Romania by Law no. 33/1995[11]. By dwelling in detail on the above-mentioned settlements, we can extract a first aspect worthy of analysis, regarding the category of beneficiaries of the previously disputed right. Thus, focusing on the constitutional text we find that this right is not recognized to all citizens belonging to a minority but especially to citizens who form a significant share on the territory of the administrative-territorial unit in which they live. The meaning of serious gravity finds its foundation in the provisions of the Administrative Code which in the content of art. 94 mentions the express percentage share of 20%. The legislative innovation that will disrupt the constitutional legislative barriers is found in paragraph (2) of the same article which provides: in which nationals belonging to national minorities do not reach the share provided for in paragraph 1 ". We can appreciate the fact that this legislative provision is likely to jeopardize compliance with the constitutional norm, taking into account the fact that they are allowed to use their native language in relation to public administration authorities even minorities with a share of 1%[12]. Following the Constitutional Decision no. 328 of May 10 2017[13], it was stated in paragraph 37 that, respecting and ensuring the rules of applicability of the European Charter for Regional or Minority Languages, the legislator enjoys the freedom to establish the criteria according to which the state is obliged to grants this type of protection to Romanian citizens belonging to national minorities. However, in the process of establishing these criteria, it is obliged to take into account the specific conditions and traditions of each region, as they have the role of promoting equality between speakers of minority languages and the rest of the population. Another interesting legislative aspect is provided by the Administrative Code in art. 604 which stipulates that in the event that the share of the minority population falls below 20%, the recognition of the right in this case may be maintained until the final results of the next census. It is important to note that the exercise of this right is enforceable only in relation to local public administration authorities, not central ones. The de facto realization of this right is achieved by giving the possibility to persons belonging to a national minority to address themselves in writing and orally and to be able to receive answers to their requests both in Romanian and in their mother language. Moreover, the Administrative Code provides a series of ways in which this right is materialized in relation to the local public administration, of which I will mention: first of all in the content of art.94 in conjunction with 195th article paragraph (1) is recognized the right of minorities with a share of 20% to address in their mother tongue both in relations with the local public administration and in the public institutions subordinated to them as well as in relations with decentralized public services; secondly, 138th article regulates the public character of the local council meetings as well as the manner of their conduct, the rule being that the proceedings of the meetings are conducted in the mother tongue, and the exception refers to local councils where local councilors belonging to a national minorities exceed the percentage of 20%, a situation in which the mother tongue can be used during council meetings, but the documents will be written in Romanian, the official language in the state according to the regulations provided by the constitution. It is important to note that these requirements apply with respect to the relationship between the rule and the exception, noting that it is completely out of the question to turn the

exception into a rule. In the spirit of these constitutional and legal provisions, we can see that freedom of expression in the mother tongue is guaranteed for national minorities[14].

3. Conclusions

Through this article, I aimed to present the regime of the rights of national minorities as well as the concrete mention of the forms of its implementation in the countries of the European Union. In the first chapter we analyzed the constitutive elements of the minority rights regime, the main international and European documents, as well as the evolution and diversified conceptualizations of the term national minority found in them. In the second part of the paper I gave a practical perspective on the rules that respect the direct applicability of constitutional and legal provisions in Romania on the right of national minorities to address in their native speech in relations with local public administration, pursuing both the developed institutional framework and the specific policies. The implementation of the minority rights regime in the Romanian state takes different forms, depending on the types of minorities, their percentage, territorial concentration, as well as the history of interethnic relations and diversity accommodation policies. Thus, following the forms of participation and political representation of minorities, the territorial composition of the state, language, education and citizenship policies outlines a diverse landscape of institutional options for transposing the rights of minorities into practice, but also a series of deficiencies that make accommodating diversity to remain a topic of interest in Romania.

PRECAUTIONARY AND PROVISIONAL MEASURES IN CIVIL PROCEEDINGS

Andrada-Georgiana MARIN[*]

Abstract

In this article, we deal with issues related to precautionary and provisional measures in civil proceedings, such as: notion, classification, conditions to be met cumulatively in order to instate such measures, the court competent to resolve a set-up request, the settlement procedure, the enforcement of measures, the annulment of measures under the law, as a penalty for failing to fulfill an obligation, lifting the measures, capitalising on the seized goods, special provisions on the distraint imposable on civilian ships, designation and role of a distraint trustee/provisional trustee, the scope of provisional measures in matters of intellectual property rights regulated as a novelty in the Code of Civil Procedure.

Keywords: *precautionary and provisional measures in civil proceedings, distraint, garnishment, judicial lien, distraint instated on civilian ships, provisional measures in matters of intellectual property rights.*

1. Introduction

,,A civil proceeding can be defined as the activity carried out by a Court of Law, the parties involved, other persons or bodies taking part in the trial, for the purpose of obtaining or recognising the subjective rights or other legal situations brought before the Court, as well as for the purpose of a mandated enforcement of Court Rulings or other titles, in accordance with the procedures set forth by the law." [1]

The principles of a civil proceeding make up the basic rules for the entire civil proceeding, both during its trial stage and during its mandated enforcement stage.

The fundamental principles of a trial are: the principle of free access to justice, the right to a fair trial, which must be resolved within an optimal and predictable deadline, the legality principle, the equality principle, the disposability principle, the principle of good faith, the right of defence principle, the contradiction principle, the orality principle, the immediacy principle, the publicity principle, the continuity principle, the principle of conducting the civil proceeding in Romanian and the judge's active role in uncovering the truth.

Our aim, in this article, is to discuss certain aspects related to the precautionary and provisional measures that can be ordered during a civil proceeding, in observance of the legal provisions in place and the principles governing such civil proceedings, aspects related to notion, classification, the instatement conditions, the instatement procedure, capitalising on the seized assets, lifting and annulling the precautionary measures imposed, special provisions on the distraint imposable on civilian ships and provisional measures in matters of intellectual property, analysing, for this purpose, the legal provisions, the doctrine and the relevant jurisprudence in this field.

2. Content

According to the General Law Theory, ,,the law system is the result of unifying all law branches and institutions." [2]

When it comes to the notion of *law branch*, the specialised doctrine has defined this concept as ,,the bulk of all judicial norms regulating the social relationships in a certain social life domain, based on a specific regulation method and on certain common principles." [3]

In the Romanian legal system, the positive law is divided into public and private law. The Public Law includes law branches such as Constitutional Law, Criminal Law, Administrative Law, Financial Law, Procedural Law, Labour and Social Security Law, while the Private Law sphere includes Civil and Commercial Law.

With regards to the topic chosen to be developed in this paper, we've mentioned above, that the Procedural Law falls within the scope of Public Law, without specifying if we refer to Criminal Procedural Law, Civil Procedural Law or both.

Placing the Civil Procedural Law in the public or in the private law sphere has generated various controversies and opinions, as ,,the civil procedure contains legal norms that bring it closer to the public law side (those concerning the organisation and functioning of courts), but also legal norms that bring it closer to private law (those related to legal actions, the right to plead). " [4]

Besides, we want to point out that, the rules established by civil procedural law are applicable not

[2] Nicolae Popa, *General Law Theory*, 6th Edition, C.H. Beck Publishing House, Bucharest, 2020, p. 87.

[3] Nicolae Popa (coordinator.), Elena Anghel, Cornelia Beatrice Gabriela Ene-Dinu, Laura-Cristiana Spătaru-Negură, *Seminary Notebook. 3rd General Law Theory*, Edition, C.H. Beck Publishing House, Bucharest, 2017, p. 44.

[4] *Ibidem*, p. 45.

only to litigations related to subjective civil rights, pure private law litigations, but they represent the common law in procedural matters as well and, as such, they are also applicable to administrative law cases, to financial and criminal law matters, the latter being law branches that fall exclusively within the scope of public law.

With this regard, art. 2 of the Code of Civil Procedure stipulates: (1) The provisions of this Code make up the common law procedure in civil matters. (2) Besides, the provisions of this Code shall also apply to other matters, insofar as the laws regulating such matters, do not stipulated anything to the contrary.

Moreover, the Contentious Administrative Law no. 554/2004, stipulates, in its transitional and final provisions, in art. 28, paragraph (1), the following: the provisions of this law shall be supplemented by the provisions of the Civil Code and by those of the Code of Civil Procedure, to the extent that such provisions are not incompatible with the specific power relations existing between the public authorities, on the one hand and the persons whose rights or legitimate interests had been prejudiced, on the other hand.

Similarly, Law no. 207/2015, on the Code of Fiscal Procedure stipulates, in its art. 3, paragraph (2), the following: in maters not regulated by the provisions of this Code, the provisions of the Civil Code and those of the Code of Civil Procedure, republished shall apply, insofar as they may be applicable to the relations existing between public authorities and taxpayers/ payers.

Moreover, the provisions of the Code of Civil Procedure represent the common law in terms of procedure, in case of insolvency as well; thus, Law no. 85/2014 on insolvency prevention procedures and insolvency procedures stipulates, in its art. 342 paragraph (1) the following: the provisions of this law shall be supplemented, insofar as they do not stipulate anything to the contrary, by those of the Code of Civil Procedure and by those of the Civil Code.

By *Civil Procedural Law* we understand the set that includes ,,the judicial norms regulating the organisation and development of the activity of solving cases related to subjective civil rights and legal situations protected by law, as well as the enforcement of enforceable titles." [5]

A civil action is the bulk of all procedural means stipulated by law, for the protection of the subjective right claimed by one of the parties or for the protection of another legal situation, as well as to insure the parties' defence in a trial.

By *subjective right* we understand ,,a subject's capacity to claim or defend a certain right, that is legally protected, against third parties." [6]

The Code of Civil Procedure regulates, in its 4th Book, named *Special Procedures*, the 4th Title – *Precautionary and Provisional Measures*, some aspects related to distraint – general provisions and special provisions for the distraint of civil ships, garnishment, judicial lien and provisional measures in matters of intellectual property rights.

Thus, the Code of Civil Procedure regulates three precautionary measures, namely distraint, garnishment and judicial lien. At the same time, the provisional measures in the matter of intellectual property rights are also regulated, provisional measures that are not precautionary measures, but specific measures for the protection of the above-mentioned rights, regardless of their patrimonial or non-patrimonial content.

,,Precautionary measures are procedural means meant to render unavailable, a debtor's seizable assets (in the case of distraint and garnishment) or the assets making up the subject matter of a procedure (in the case of judicial lien) to prevent their debasement or their disappearance (in case of real assets) or the reduction of the debtor's patrimonial assets (in case of personal assets)." [7]

2.1. Distraint

A distraint measure consists of rendering unavailable the debtor's movable and/or immovable seizable assets, that are still in his/her possession or in the possession of a third party, for the purpose of capitalising on them when the creditor of a certain amount of money obtains an enforceable title, according to art. 952 - 959 of the Code of Civil Procedure.

The conditions that must be met in order to instate a distraint measure are stipulated in art. 953 of the Code of Civil Procedure, where we can identify three situations in which a distraint measure can be ordered; therefore, we can also identify specific conditions to be met for each of these situations.

Thus, the first such situation is presented in art. 953, paragraph (1), namely: A creditor that does not have an enforceable title, but whose receivable is confirmed in writing and exigible, may ask for the instatement of a distraint over the debtor's movable and immovable assets, if they can prove that they have filed a Suing Petition in Court. They can be ordered to pay a bail set forth by the Curt.

Consequently, when it comes to the first situation, the following conditions must be cumulatively met for the instatement of a distraint:

1. The receivable must be confirmed by a written document, which would not represent an enforceable title under the law;

2. The receivable must be exigible;

3. The creditor must prove that they have filed a Suing Petition in Court, on the merits of the case,

[5] Andreea Tabacu, *Civil Procedural Law – national and international legislation*, doctrine and jurisprudence, Universul juridic Publishing House, Bucharest, 2015, p. 8.

[6] Nicolae Popa, *op.cit.*, 2012, p. 30.

[7] Gabriela Răducan, Mădălina Dinu, *Civil Procedure Sheets for the admission to Magistracy or Lawyering Activities*, 4th Edition, revised and supplemented, Hamangiu Publishing House, Bucharest, 2016, p. 327.

having, as subject matter, the payment of the money for which the distraint measure is requested;

4. The Creditor may be ordered to pay a bail, with the posting of that bail being optional and the amount of such bail being set forth by the Court;

5. The distraint can only be instated over the debtor's movable and/or immovable seizable assets, which are still in his/her possession or in the possession of a third party.

The second situation in which a distraint measure can be ordered, is presented in art. 953, paragraph (2) of the Code of Civil Procedure, namely: A creditor whose receivable is not confirmed by a written document, shall also have the same right, if they can prove that they have filed a Suing Petition in Court and they submit, along with the distraint request, a bail amounting to half of the claimed sum.

If we read the above-mentioned text, we realise that, for to the second situation in which a distraint can be instated, the following conditions must be cumulatively met:

1. The creditor's receivable must not be confirmed by a written document;

2. The creditor's receivable must be exigible;

3. The creditor must prove that they have filed a Suing Petition in Court, on the merits of the case, having, as subject matter, the payment of the money for which the distraint measure is requested;

4. The creditor must also prove that they have posted a bail equal to half of the receivable claimed in the litigation; in this case, both the posting and the amount of the bail shall be mandatorily determined by lawmakers;

5. The distraint can only be instated over the debtor's movable and/or immovable seizable assets, which are still in his/her possession or in the possession of a third party. The seizable nature of an asset shall be determined in accordance with the exiting provisions in place in the filed of mandatory attachment – art. 727 of the Code of Civil procedure.

The third situation is stipulated in art. 953, paragraph (3) of the Code of Civil Procedure, which states: The Court may order a distraint measure even if the receivable is not exigible yet, if the debtor has reduced, via their actions, the guarantees provided to the creditor or if they have failed to provide the guarantees promised or, when there is a risk that the debtor would avoid the seizing measures or they would conceal or scatter their wealth. In such cases, the creditor must prove the fulfilment of the other conditions stipulated in paragraph (1) – the first situation – and they must post a bail in the amount set forth by the Court.

Thus, the necessary conditions that must be cumulatively met to instate a distraint measure in the third situation, are the following:

1. The creditor's receivable must be confirmed by a written document, which would not represent an enforceable title under the law;

2. The creditor's receivable must be exigible;

3. The creditor must prove that the debtor has reduced, via their actions, the guarantees provided to the creditor or that they have failed to provide the guarantees promised or that there is a risk that the debtor would avoid the seizing measures or they would conceal or scatter their wealth;

4. The creditor must prove that they have filed a Suing Petition in Court, on the merits of the case;

5. The creditor must post a bail, in the amount set forth by the Court; in this case, the posting of the bail is mandatory, but its amount shall be left at the Court's discretion.

We consider it useful to underline the provision of art. 1.417 paragraph (1) of the Civil Code, according to which: the Debtor shall forfeit the benefit of making the payments upon the deadlines agreed upon if they are in default or in insolvency declared under the law and if they reduce, via their actions, either on purpose or due to gross negligence, the guarantees set up in favour of the Creditor, or when they fail to institute the guarantees promised.

When it comes to the procedure of instating a distraint measure, the application for such measure must meet the general conditions stipulated in art. 148 of the Code of Civil Procedure, as well as the conditions presented in art. 194 of the Code of Civil Procedure.

„A request to instate a precautionary or a provisional measure may be formulated both directly and incidentally, within an on-going trial [art. 30, paragraph (6) of the New Code of Civil Procedure] or as an accessory application [art. 30, paragraph (4) of the New Code of Civil procedure], if it is requested via the very Suing Petition filed on the merits of the case." [8]

The Court competent to resolve such a request, for the instatement of a distraint measure, shall be the Court competent to try the case on its merits. If the request to instate a distraint measure is submitted via the Suing Petition filed on the case merits, it shall be entrusted to the Court charged with the settlement of the case merits, but the distraint request shall be resolved before the first hearing of the merits litigation, according to art. 203, paragraph (2) of the Code of Civil Procedure.

The Court shall urgently decide on such matter, in Council Chambers, without subpoenaing the parties, by way of an enforceable ruling, setting forth the maximum amount for which the distraint measure is approved, as well as the amount of the bail and the deadline for its posting, if applicable.

Failure to post the bail within the set deadline, shall lead to the annulment of the distraint under the law. Such annulment shall be confirmed by a final court ruling, issued without subpoenaing the parties. The

[8] Gabriel Boroi, Octavia Spineanu-Matei, Andreia Constanda, Carmen Negrilă, Veronica Dănăilă, Delia Narcisa Teohari, Gabriela Răducan, Dumitru Marcel Gavriș, Flavius George Păncescu, Marius Eftimie, *The New Code of Civil procedure. Comments by article*, Vol. II. Art. 527-1133, Hamangiu Publishing House, Bucharest, 2013, p. 490.

judicial bail concept is regulated by the provisions of art. 1.057-1.064 of the Code of Civil Procedure.

The Ruling issued on the restraint request shall be communicated by the Court to the creditor, right away and it shall be communicated by the bailiff to the debtor, when the measure is enforced. The issuance of such ruling may be postponed by maximum twenty-four hours, and the substantiation of the decision made, must be provided within maximum 48 hours of its issuance.

„The bailiff shall only communicate the enforceable ruling to the debtor if the above-mentioned ruling orders the instatement of a distraint measure; if the Court rejects the creditor's request for the instatement of such measure, the ruling shall not be communicated." [9]

Such ruling may only be challenged by appeal, within five days of its communication, before the Court hierarchically superior to the one that issued it. Such an appeal shall be tried urgently, most likely by quickly subpoenaing the parties.

In all cases when the competent first instance court is the Court of Appeal, the remedy method shall be a recourse.

A distraint measure shall be enforced by the bailiff, in accordance with the rules applicable to mandatory enforcements, which shall be applied appropriately, without any other authorisation or consent being needed with this regard.

In case of immovable assets, the bailiff shall travel, as quickly as possible, to the place where such assets are located. The bailiff shall place the seizable assets under restraint, only to the extent that this is necessary to recover the receivable. In all cases, the distraint measure shall be enforced without any prior writ or notification to the debtor.

A distraint measure applied to an asset subject to any publicity formalities, shall immediately be registered in the Land Book, in the Trade Registry, in the *National Movable Publicity Registry* (Electronic Archive of Security Interests) or in any other public records, as the case may be. Such registration shall render the distraint legally binding to anyone who gains any rights over the property in question, after the registration.

The interested party shall have the right to contest the enforcement method of any distraint measure.

The Court may order a distraint measure lifted, upon the debtor's request, if such debtor provides, in all cases, a sufficient (personal or real) security. Such request shall be resolved in the Council Chambers, with a quick subpoenaing of the parties, by way of a ruling that can only be challenged by way of appeal, within five days of its issuance, before the court hierarchically superior to the one that issued it. Such appeal shall by tried urgently.

Besides, if the main application, based on which the precautionary measure was ordered, is later annulled, rejected or declared outdated, by a final court decision, or its author no longer requests its judgement, the debtor may ask for such precautionary measure to be lifted by the same court that instated it. The court shall rule on such a request via a final ruling, issued without subpoenaing the parties.

The seized assets shall only be capitalised on, once the creditor obtains an enforceable title, represented by a final Court Decision ordering the debtor to pay the money claimed by the creditor.

2.2. Special provisions on the distraint imposable on civil ships

The creditor may ask for a distraint to be instated on civilian ships, under the conditions described above and in observance of the international conventions applicable to the distraint of ships, that Romania is part of.

With this regard, we mention the International Convention for the Unification of Certain Rules on the Arrest of Sea-going Ships signed in Brussels on May 10, 1952, that Romania adhered to, under Decree no. 40/1991 on Romania's accession to the International Convention for the Unification of Certain Rules on the Arrest of Sea-going ships, signed in Brussels on May 10, 1952, respectively, under Law no. 91/1995 on Romania's accession to the International Convention for the Unification of Certain Rules on Arrest of Sea-going ships, signed in Brussels on May 10, 1952.

According to art. 1, point 1 of the International Convention for the Unification of Certain Rules on the Arrest of Sea-going Ships, a „maritime claim" means a claim or a receivable arising out of one or more of the following: (a) damage caused by any ship either in collision or otherwise; (b) loss of life or personal injury caused by any ship or occurring in connexion with the operation of any ship; (c) salvage; (d) agreements related to the use or hire of any ship whether by charterparty or otherwise; (e) agreements related to the carriage of goods in any ship whether by charterparty, under a bill of lading or otherwise; (f) loss of or damage to goods including baggage carried in any ship; (g) general average; (h) bottomry; (i) towage; (J) pilotage; (k) goods or materials wherever supplied to a ship for her operation or maintenance; (1) construction, repair or equipment of any ship or dock charges and dues; (m) wages of Masters, Officers, or crew; (n) Master's disbursements, including disbursements made by shippers, charterers or agent on behalf of a ship or her owner; (o) disputes as to the title to or ownership of any ship; (p) disputes between co-owners of any ship as to the ownership, possession, employment, or earnings of that ship; (q) the maritime mortgage or security.

On the same time, according to art. 1, point 2 of the same Convention, „arrest" means the detention of a ship by judicial process to secure a maritime claim, but

[9] Gabriela Răducan, Mădălina Dinu, *op.cit.*, p. 329.

does not include the seizure of a ship in execution or satisfaction of a judgment.

The procedure to instate a distraint measure on civilian ships requires, in urgent cases, the possibility to formulate the instatement request, even before a Suing Petition is submitted to a Court, on the case merits. In this case, the creditor for whom the distraint measure is granted, shall have the obligation to submit the above-mentioned suing petition before the competent court or to take the necessary steps to convene an arbitration court within maximum twenty days of the precautionary measure's approval. A distraint request shall be triad urgently, in the council chambers, with the Court subpoenaing the parties. The Ruling of the Court is enforceable and it can only be appealed within five days of its issuance.

Failure to submit the Suing Petition, on the case merits, within the above-mentioned 20-day deadline, shall lead to the annulment of the distraint. Such an annulment shall be confirmed by a final Court Ruling, issued with the Court subpoenaing the parties.

The Court competent to resolve a request for the instatement of a distraint measure over a civilian ship shall be the tribunal of the region where the ship is located (the Constanta Tribunal or the Galati Tribunal), regardless of the court where the Suing Petition has been or is about to be submitted on the case merits.

No distraint measures can be instated over a civilian ship that is on the verge of leaving. A ship is considered to be on the verge of leaving, once the commander of that ship has, onboard, all the certificates, the ship's documents, as well as the departure permit, handed to him/her by the Harbour Master, according to art. 963 of the New Code of Civil Procedure.

A voyage authorisation may be issued by the same Court that ordered the distraint measure, upon the request of the creditor holding a claim over that ship, upon the request of a co-owner of the ship or even upon the debtor's request, while also setting forth all the pre-emptive measures that might be necessary, depending on the circumstances. Such a request shall be tried urgently, in the Council Chambers, with the court subpoenaing the parties. The Ruling shall be enforceable and it shall only be appealed within five days of its issuance.

The ship shall only be allowed to leave, once the approval ruling is transcribed in the records kept by the relevant maritime authority and an adequate observation is inserted in the ship's nationality document.

The expenses incurred with such a voyage shall be borne by the party that requested its approval.

The ship lease for a court-mandated voyage, may be added to the sale price, after all the voyage expenses are deducted.

A transfer of the distraint may be approved for justified reasons, upon the debtor's or the creditor's request, as the case may be; the court that ordered the distraint shall have the right to swap one seized ship for another.

The creditor, who is the legitimate owner of the Bill of Lading, may seize the merchandise on the ship, listed in such Bill of Lading. If the ship's distraint is not requested, the creditor shall have to ask for the vessel to be unloaded as well.

A precautionary distraint measure shall be enforced by the Harbour Master of the port where that ship is located, who shall arrest the vessel in question. In this case, the Harbour Master shall not issue the documents needed for the ship's navigation and it shall not allow the vessel to leave the port or the berth. The interested party shall have the right to challenge the way the distraint is enforced, by contesting such enforcement before the tribunal serving the place where the ship is located, according to art. 967 of the Code of Civil Procedure.

In order to guarantee the port traffic and the civil security while the ship is arrested, the tribunal serving the place where the vessel is located (the Constanta or the Galati Tribunal), may issue a Presidential Order, to instate emergency measures; in this case, the provisions of art. 997 and the following, of the Code of Civil Procedure shall apply accordingly.

A temporary halt of the ship, in the absence of a Court Decision, may also be ordered by the Harbour Master, under the conditions of the special law.

Thus, according to art. 132 of Government Decree no. 42/1997, on sea transport and on the transportation carried out on interior navigable ways, as modified under Emergency Government Decree no. 74/2006, Harbour Masters may prevent any ship from leaving a port or another place of stoppage located on the national navigable waters, upon a request coming from the Romanian Naval Authority, the Port Administrations and/or the Navigable Ways Administrations, from other public state authorities or from certain economic agents, if the ship's owner or operator or the owner of the merchandise transported by the ship, has debts towards the above-mentioned authorities or economic agents. Such a departure interdiction cannot last for more than twenty-four hours counted from submission of the ship's departure approval request. Once this period expires, the ship shall only be detained if the claimant provides the Harbour Master with an enforceable ruling with this regard, issued by a Court of Law. Such detention can cease if the ship's owner or the owner of the merchandise transported on the ship, as the case may be, proves that they have set-up sufficient guarantees to cover the receivable claimed and such guarantees have been accepted by the person who requested the ship's detention.

2.3. Garnishment

According to art. 970 of the Code of Civil Procedure, a precautionary garnishment can be instated over amounts of money, securities or other movable intangible seizable assets owed to the debtor by third

parties or set to be owed in the future based on certain existing legal relationships, under the conditions set forth, for the instatement of precautionary distraint, in art. 953 of the Code of Civil procedure – the three situations presented above.

As we've said before, the provisions regulating the instatement of precautionary distraint, as well as those related to the settlement of such request, the enforcement of the measure, the annulment and lifting of a distraint, shall apply, accordingly, to garnishment as well.

„A specification must be made, in relation to the content of a Garnishment request. Thus, art. 971, paragraph (2) stipulates the following: in case of a bank garnishment request, the creditor must not necessarily identify, in its content, the third parties targeted by such request. *Per a contrario*, we can conclude that, when a garnishment request is submitted against third parties other than a bank, it is mandatory to indicate the garnished third party, in the garnishment request." [10]

2.4. Judicial lien

A judicial lien consists of rendering unavailable the assets that are the subject-matter of a litigation or other assets under the law, by entrusting them for protection to a lien trustee, until the trial is resolved by an enforceable judgment.

As a rule, a lien is instated over assets making up the subject matter of a merits litigation, and the measure may be instated over the totality of such assets or over a part of them, over tangible and/or intangible assets, such as shares in limited liability or in share companies. As an exception, a lien may also be instated over goods that do not make up the subject matter of a merits litigation, in the situations and under the conditions stipulated by law.

Thus, as a rule, whenever there is a litigation over the ownership or over another main real right, over the possession of a movable or an immovable asset, or over the use or administration of a jointly-owned good, the Court may approve the instatement of a judicial lien, upon the interest party's request, if such a measure is necessary to preserve the respective right.

By "*the interested party*" we understand either one of the litigating parties or a third party, such as a creditor of the litigating parties, who asks for a judicial lien to be instated, via the oblique action regulated in the Code of Civil Procedure, in art. 1.560-1.561.

As an exception, a judicial lien may be approved, even without a trial:

Over an asset that the debtor offers for their release;

Over an asset in relation to which, the interest party has serious reasons to fear that it would be stolen, destroyed or altered by its current holder;

Over certain movable assets making up the creditor's guarantee, when the creditor reveals the debtor's default or when they have serious reasons to suspect that the debtor would avoid a mandatory enforcement or that the said assets would be stolen or deteriorated.

In the exceptional cases mentioned above, the party that obtained the instatement of a judicial lien shall have the obligation to file a Suing Petition with the competent court, to take the necessary steps to convene an arbitration court or to ask for the enforcement of the enforceable title, within maximum twenty days of the precautionary measure's approval; otherwise, the judicial lien shall be annulled under the law. Such an annulment shall be confirmed by a final Court Ruling, issued without subpoenaing the parties.

The court competent to rule on a request related to the instatement of a judicial lien, shall be the court charged with trying the case on its merits (when there is a trial pending – the rule) and the court serving the region where the assets is located (when there is no trial pending – the exception).

When it comes to the procedure employed to instate a judicial lien, the request for such a lien shall be tried urgently, with the court subpoenaing the parties.

If the request is upheld, the court shall be able to force the plaintiff to pay a bail – setting forth the amount and the posting deadline of such bail – other the penalty of having the precautionary measure annulled under the law.

The Judicial lien shall be registered in the Land Book, in the Trade Registry, in the National Movable Publicity Registry (*formerly known as the Electronic Archive of Security Interests*) or in any other public records, as the case may be. The Court ruling resolving the request to instate a judicial lien can only be challenged by appeal, within five days of its issuance, before the court hierarchically superior to the one that issued it. Its issuance may be delayed by maximum twenty-four hours, and the substantiation of the decision made, must be provided within maximum forty-eight hours of its issuance.

In all cases when the competent first instance court is the Court of Appeal, the remedy method shall be a recourse.

If the lien request is upheld, the asset shall be entrusted, for protection, to a lien trustee – namely, to a person jointly appointed by the parties and, if the parties cannot come to an agreement with this regard, to a person appointed by the court, who might be the very holder of the asset in question. For this purpose, the bailiff notified by the interested party, shall travel to where the location of the asset set to be placed under lien, to handed over to the lien-trustee, based on a handover report. A copy of this report shall be provided to the court that approved this lien measure.

The lien-trustee shall be entitled to carry out all preservation and administration activities, to cash in any incomes or amounts owed and to pay any current

[10] Gabriel Boroi, Mirela Stancu, *op.cit,* p. 379 - 380.

debts, as well as any debts certified by an enforceable title. Besides, with the prior authorisation of the Court that appointed him/her, the lien trustee shall be entitled to alienate the asset, if it cannot be preserved or if the alienation is obviously necessary for other reasons; besides, he/she shall be allowed to participate in trials related to the asset placed under lien, on behalf of the litigating parties, if he/she has been previously authorised to do so.

If a person other than the holder of the asset is appointed lien -trustee, the court shall determine an amount as remuneration for the activity performed, while also setting forth the payment methods; thus, the provisions of Title V of the Civil Code – having the marginal designation of „*Administrating other people's assets*" shall be come applicable.

„Once the trial is completed, the lien-trustee shall must hand over the asset, along with its fruits, including any income collected, to the party to whom the property was assigned by Court Decision, and if the lien - trustee was himself/ herself a party to the proceedings, and he won the case, then he/she shall keep the assets and its fruits."[11]

In urgent cases, the court will be able to appoint, by final ruling issued without subpoenaing the parties, a provisional trustee, until the judicial lien request is resolved.

2.5. Provisional measures in matters of intellectual property rights

The provisions of art. 978 – 979 of the Code of Civil Procedure regulate the provisions measures needed to protect one's intellectual property rights, regardless of their patrimonial or non-patrimonial content and regardless of their origin. The provisional measures needed to protect other non-patrimonial rights are regulated by art. 255 of the Civil Code.

If the owner of an intellectual property right or any other person who uses such intellectual property right with the owner's consent can credibly prove that their intellectual property rights are the target of a current or an imminent illicit action, that threatens to cause them a prejudice that would be hard to repair, they can ask the Court to order certain provisional measures.

When it comes to the admissibility of a request to instate provisional measures in matters of intellectual property rights, a reading of the legal provisions in place reveal the following: a) the plaintiff must be the owner of the intellectual property right in question; these measures may also be requested by any other person exercising the intellectual property right, with the owner's consent; b) the intellectual property right must be the target of a current or an imminent illicit breaching action; c) there is a risk that a prejudice might be caused, that would be difficult to repair, d) the measures ordered must be provisional in nature; the case merits must not be pore-judged." [12] The Court may specially forbid the breach or it may order the provisional cessation of such breach or, it may order the implementation of the necessary measures to preserve the evidence

Thus, Law no. 8/1996 on copyright and its related rights, stipulates, in its art. 188: (1) The holders of the rights recognised and protected under this law may ask the courts or other competent bodies, as the case may be, to recognise their rights and to confirm their violation and they may claim compensations for the reparation of the prejudices caused. The same requests may also be made for and on behalf of the holders of these rights, by management bodies, by anti-piracy associations or by other persons authorised to use the rights protected under this law, in accordance with the mandate granted to them for this purpose. When an action has been initiated by the rights holder, the persons authorised to use the rights protected under this law may intervene in the trial, requesting the reparation of the prejudice caused to them; (2). In determining the compensations due, the court shall take into account: a) either criteria such as the negative economic consequences suffered, particularly lost gains, benefits unjustly obtained by the perpetrator and, where appropriate, elements other than economic factors, such as the moral damages caused to the right's holder; b) or the granting of compensations equal to three times the amounts that would have been legally due for the type of use that made-up the object of the illicit action, if the criteria provided under letter a) are not applicable; (3) If the copyright holder or one of the persons mentioned in paragraph (1) can credibly prove that their copyright is the target of a current or an imminent unlawful action, and that such action is likely to cause them a prejudice that would be difficult to repair, they may ask the court to take certain provisional measures. The court may order in particular: a) the prohibition of the violation or its temporary cessation; b) the necessary measures to ensure the preservation of evidence; c) the necessary measures to ensure the repair of the prejudice; To this end, the court may order precautionary measures against the movable and immovable assets of the person alleged to have breached the rights recognised under this law, including a freeze of their bank accounts and other assets. For this purpose, the competent authorities may order the communication of bank, financial or commercial documents or they may provide for appropriate access to pertinent information; d) Collecting or handing-over, to the competent authorities, all the goods in respect of which there are suspicions regarding the breach of a right protected under this law, in order to prevent them from being placed on the market; (4) The applicable procedural provisions are contained in the dispositions of the Code of Civil Procedure, related to the

[11] Gabriel Boroi, Mirela Stancu, *op.cit.,* p. 382.

[12] Gabriel Boroi, Octavia Spineanu-Matei, Andreia Constanda, Carmen Negrilă, Veronica Dănăilă, Delia Narcisa Teohari, Gabriela Răducan, Dumitru Marcel Gavriș, Flavius George Păncescu, Marius Eftimie, op.cit., pp. 533 – 534.

provisional measures in matters of intellectual property rights.

Besides, Law no. 64/1991 regarding the patents for invention, stipulates, in its art. 66, as follows: (1) If the holder of a patent for invention held between March 6, 1945 and December 22, 1989 or the persons holding an industrial property right protected by a patent granted by the Romanian state and the legal successors of such persons, whose patrimonial rights conferred by the patent have been infringed by the abusive exploitation of the invention in question, without the consent of the proprietor or by any other act of infringement of such rights, or any other person exercising the industrial property right with the consent of the proprietor, can credibly prove that their industrial property right, protected by such patent is the target of a current or an imminent unlawful action, and that such action is likely to cause them a prejudice that would be difficult to repair, they may ask the court to take provisional measures; (2) The court may order in particular: a) the prohibition of the infringement or its temporary cessation; b) the necessary measures to ensure the preservation of evidence. The provisions of Government Emergency Decree no. 100/2005 on ensuring the observance of industrial property rights, approved with amendments by Law no. 280/2005, with its subsequent amendments and supplements are also applicable here; (3) The applicable procedural provisions are contained in the dispositions of the Code of Civil Procedure related to provisional measures in matters of intellectual property rights; (4) Such provisional measures may also be ordered against an intermediary whose services are used by a third party to infringe a right protected by this law.

In case of prejudices caused by the written or the audio-visual media, the court may not order a temporary cessation of the prejudicial action unless the prejudices caused to the plaintiff are serious, if the action is not obviously justified, according to art. 75 of the Civil Code, and if the measure ordered by the court does not appear to be disproportionate in relation to the prejudices caused. The provisions of art. 253 paragraph (2) of the Civil Code shall remain applicable.

The court shall resolve the request according to the provisions related to presidential orders, which shall apply accordingly, namely art. 997 and the following of the Code of Civil Procedure.

If the request is made before the Suing Petition is filed on the case merits, the decision ordering the provisional measure shall also set the time limit for the said Petition to be filed, under the penalty of having the measure ordered terminated under the law.

The measures taken prior to initiating a court action for the protection of an infringed right shall cease under the law, if the applicant fails to notify the court within the above-mentioned time limit, but not later than 30 days after their instatement.

If these measures can cause a prejudice to the opposite party, the Court may order the plaintiff to post a bail, in the amount set by the court; otherwise, the measure ordered shall cease under the law.

Upon the interested party's request, the plaintiff shall have the obligation to repair the prejudice caused by the precautionary measures taken, if the court action initiated on the merits of the case, is dismissed as unfounded. However, if the plaintiff is not at fault or the blame can be put on him only to a minor extent, taking into account the concrete circumstances of the case, he/she may refuse to pay the compensations ordered or he/she may ask for their reduction.

If the opposite party does not ask for liquidated damages, the court shall order the release of the bail, at the plaintiff's request, by decision issued after subpoenaing the parties. Such a request shall be tried in accordance with the provisions related to Presidential Orders, which shall apply accordingly.

If the defendant opposes the release of the bail, the court shall set a deadline for initiating the court action on the merits of the case, which may not be longer than thirty days counted from the date the Court Decision was issued, under penalty of having the measure that rendered the bail amount unavailable, lifted.

3. Conclusions

The Code of Civil Procedure regulates, in its 4th Book, named *Special Procedures*, the 4th Title – *Precautionary and Provisional Measures*, some aspects related to distraint – general provisions and special provisions for the distraint of civilian ships, garnishment, judicial lien and provisional measures in matters of intellectual property rights.

At the same time, the provisional measures in the matter of intellectual property rights are also regulated, provisional measures that are not precautionary measures, but specific measures for the protection of the above-mentioned rights, regardless of their patrimonial or non-patrimonial content.

A distraint measure consists of rendering unavailable the debtor's movable and/or immovable seizable assets, that are still in his/her possession or in the possession of a third party, for the purpose of capitalising on them when the creditor of a certain amount of money obtains an enforceable title, according to art. 952 - 959 of the Code of Civil Procedure.

A precautionary garnishment can be instated over amounts of money, securities or other movable intangible seizable assets owed to the debtor by third parties or set to be owed in the future based on certain existing legal relationships, under the conditions set forth, for the instatement of precautionary distraint, in art. 953 of the Code of Civil Procedure.

A judicial lien consists of rendering unavailable the assets that are the subject-matter of a litigation or other assets under the law, by entrusting them for protection to a lien trustee, until the trial is resolved by an enforceable Court Decision.

The provisions of art. 978 – 979 of the Code of Civil Procedure regulate the provisions measures needed to protect one's intellectual property rights, regardless of their patrimonial or non-patrimonial content and regardless of their origin. The provisional measures needed to protect other non-patrimonial rights are regulated by art. 255 of the Civil Code designs that complement each other. For example, you can add a matching cover page, header, and sidebar.

INCREASED PLASTIC WASTE POLLUTION OF FRESHWATER RESOURCES – DO WE HAVE THE APPROPRIATE LEGAL FRAMEWORK TO ADDRESS IT?

Stelian-Mihai MIC[*]
Cristiana MIC-SOARE[**]

Abstract

It is widely known and demonstrated that plastic waste pollution is a significant factor contributing to the deterioration of the worldwide freshwater resources. In close relation to this is also the marine and oceanic pollution, which is influenced, among other, by the pollution of the freshwater resources which discharge into the seas and oceans. On top of that comes the latest research, which shows that plastic waste pollution is predicted to exceed the efforts to mitigate such pollution with reference to the year 2030.

In such context, we find that it is important to determine, from a legal standpoint, if and how the currently applicable Romanian legal framework is capable to address and contribute to the mitigating mechanisms against freshwater pollution by plastic waste.

First, this paper undertakes to briefly discuss the latest findings related to the plastic waste pollution of freshwater resources. Second, we will analyse the most important and relevant legal provisions in the field of water protection against pollution with plastic waste, on one hand, and in the field of (plastic) waste management, on the other hand. Third, we will try to determine if and how they can be seen as establishing a coherent and integrative legal framework, capable of addressing the above-mentioned issues. Last but not least, we will present the conclusions of our study and potential areas of improvement of the applicable legal provisions in Romania in relation to pollution of freshwater resources by (plastic) waste.

Keywords: *plastic waste, waste management, freshwater resources, pollution, Romanian legal framework.*

1. Introduction

Plastics – they are everywhere. They surround us with an ever-increasing speed, because they come from everything: from plastic food-packaging (e.g. bottles used for water, juices, milk), cosmetic and other products, to the classic plastic bags of all kinds, or even to fashion products which include (perhaps surprisingly) a high amount of plastic in them.

Not only are plastics everywhere, but their quantities are continuously rising, being found in various forms in the soil, oceans, freshwater resources and in the air (e.g. the notorious PM 2.5), "even in the most remote and pristine areas of the world".[1] Thus, even though – ideally and purely theoretically – assuming there would exist an effective plastic management system at all levels, they should not enter the environmental systems, in practice they do, and in large amounts.

Due to their potentially harmful impact and high volume, various bodies at international and intergovernmental level (for example, the United Nations, the World Bank, etc.), regional level (e.g. the European Union) and national level are debating the issue of plastics in the surrounding environment, addressing it by means of various policies and regulations.

Nonetheless, even though plastics are a major concern and have been extensively documented and regulated in relation to marine environments, plastic pollution affecting freshwater resources has been subject to limited research and even more limited regulation, such research being also more recent, as we will discuss in more detail below in section 2.1. One important example is that of the European Water Framework Directive,[2] which, although older than the European Marine Strategy Framework Directive (which includes provisions related to plastic waste pollution),[3] does not encompass specific provisions related to the issue of plastic pollution, as we will further show in section 2.2. below. By contrast, the Romanian Water Law[4] does include certain provisions regarding waste in general, thus encompassing also the plastic waste, as will be detailed in section 2.2. below.

In this context, this study undertakes to answer the following main research questions, which will be subsequently analysed in the following sections:

[4] Romanian Water Law no. 107/1996, as subsequently amended and supplemented, published in the Romanian Official Gazzette no. 244 dated 8 October 1996 ("Romanian Water Law").

1. What is the current status of freshwater resources from the perspective of their pollution with plastics?

2. Are the current Romanian legal frameworks regarding freshwater resources protection against pollution by plastic waste, on one hand, and plastic waste management, on the other hand, appropriately drafted so as to address issues of pollution with plastics in such increasing amounts?

3. How are these Romanian legal frameworks working together in order to coherently mitigate the issues of plastic pollution of freshwater resources and what improvements could be brought thereto?

2. Discussions on the Romanian legal framework addressing plastic pollution of freshwater resources

2.1. Current status of freshwater resources from the perspective of their pollution with plastics

Plastic is a type of waste that is among the most frequently identified as polluting the international freshwater resources. It affects virtually every freshwater and marine ecosystem globally, being thus a "planetary threat",[5] and a very pervasive one as well.[6] Freshwater resources – particularly rivers – have been identified as being the main transporters of plastic waste to marine resources, thus significantly contributing to the pollution of our oceans and seas.[7]

Even though there is extensive research on the plastic pollution of marine environments, similar research conducted with respect to freshwater resources is much more limited and quite recent.[8]

Thus, it has been shown that, by restricting the plastic pollution from river freshwater ecosystems into marine ecosystems, the globally accumulated plastic waste into the environment would be diminished.[9] Nevertheless, it would not seem to be sufficient even to completely stop the global production of plastic – which seems rather like a long-term, rather than short- or mid-term goal – since plastic has a very long degradation duration[10] (e.g. in the marine environment, 3.1 years for a biodegradable plastic bag, 3.4 years for a plastic bag, 58 years for plastic bottles, 1200 years for plastic pipes).[11]

In this context, a life-cycle approach to plastics would be highly recommended, coordinated at global level, where attention would be drawn, *inter alia*, to the limitation of production of virgin plastics, use of more environmentally-friendly materials for plastics, alignment of global standards for the use of recoverable and recyclable designs for commodity plastics, but also to the waste cycle of plastic – such as plastic waste reduction, waste management or even environmental recovery.[12]

Recent studies have shown that, even if the waste management capacities would be increased, this measure alone would not suffice taking into account the projected plastic waste generation growth, being essential to reach a circular economy of plastics, "where end-of-life plastic products are valued rather than becoming waste."[13]

We also note that, in addition to the – perhaps more obvious and more researched upon – macroplastics, one of the most frequently identified forms of plastic found in freshwater systems all over the world are microplastics,[14] which is rarely regulated at international and national level under different policy

fields (such as waste management, chemical regulation, water management).[15]

A very recent study – published on 22 March 2021 – performed on Romanian freshwaters indicates that microplastic is present in all analysed samples from the freshwaters, recommending the elaboration of specific measures for preventing and comabint microplastic pollution of freshwaters in Romania.[16] Per article 11 para. 2. lit. (a) of the European Waste Directive,[17] "by 2020, the preparing for re-use and the recycling of waste materials such as at least paper, metal, **plastic** and glass from households and possibly from other origins as far as these waste streams are similar to waste from households, shall be increased to a minimum of overall **50 %** by weight". A similar provision was also transposed in the Romanian Waste Law[18] in article 17 para. (1) lit. b).

In spite of these regulations, against a European Union average of 47.7% in 2019, according to Eurostat data, the reality shows a decreasing rate of the waste materials from households that are recycled in Romania, with 14.8% in 2012, 13.9% in 2017 and only 11.5% in 2019 being prepared for re-use and recycling in Romania, situating our country on the second to last place in the European Union – only Malta having a lower percentage of 8.9% in 2019.[19]

We note also the recycling rates for plastic packaging waste (referring to the total quantity of recycled packaging waste, divided by the total quantity of generated packaging), which state that, against a European Union average of 41.2% in 2017 and of 41.5% in 2018, Romania had a higher recycling rate – of 47.6% in 2017, respectively of 43% in 2018.[20]

On the other hand, however, the view has been expressed that there are significant margins of error with respect to the Eurostat data, since this is received from the Romanian National Environmental Protection Authority, which receives it in its turn from local authorities and waste operators.[21]

It is important to notice that the pollution of freshwater resources with plastic waste has been for a long time at alarming levels in Romania, despite the fact that, in 2016, 66.14% of the freshwaters that were inventoried had a good ecological status (for details regarding this notion, please see section 2.2. below), 33.33% had a moderate status, and only under 1% had a poor or bad ecological status.[22] The 2018 National strategy for sustainable development mentions that one of the main measures taken for improving the quality of the freshwater resources was "the elimination of uncontrolled depositing of wastes", identifying at the same time depositing as the main method for eliminating municipal wastes (among which also plastic wastes) and confirming the existing deficiencies related to selective collection, recycling and re-use of wastes or their incineration in the waste-to-energy system.[23]

Moreover, as indicated in the report issued by the Romanian Court of Accounts on 16 March 2021 with respect to the management of municipal waste between 2016 and 2018, the authorities have identified numerous cases of uncontrolled dumping of waste and of lack of sanitation of the areas affected by this illegal activity.[24] Emphasis was placed on the fact that, despite numerour breaches of the applicable regulations on the uncontrolled depositing of waste that were observed by the National Environmental Guard, this authority did not frame the respective actions according to their gravity and the applicable legislation, thereby not actually discouraging such illegal practices.[25]

Against this background, we will proceed to analyse the most important provisions shaping the Romanian legal framework regarding freshwater resources protection against pollution by plastics and the waste management.

2.2. Main provisions of the Romanian legal framework regarding the protection against pollution by plastics of freshwater resources

Plastic waste – or waste in general – is not regulated in the Water Framework Directive, which was transposed in Romania within the Romanian Water Law.

The Water Framework Directive makes reference to the states' obligation to "implement the necessary measures to prevent deterioration of the status of all bodies of surface water",[26] as well as to "protect, enhance and restore all bodies of surface water, … with the aim of achieving good surface water status at the latest 15 years after the date of entry into force of this Directive".[27] "Good surface water status" refers to the status achieved by a surface water body when both its ecological status and its chemical status are at least "good",[28] whereas a "good ecological status" relates to the quality of the structure and functioning of aquatic ecosystems associated with a body of surface water, so classified in accordance with Annex V of the Water Framework Directive,[29] and a "good surface water chemical status" refers to the chemical status required to meet the environmental objectives for surface waters established in Article 4 para. (1) lit. (a) of Water Framework Directive, that is the chemical status achieved by a body of surface water in which concentrations of pollutants do not exceed the environmental quality standards established in Annex IX and under Article 16 para. (7), and under other relevant Community legislation setting environmental quality standards at Community level.[30]

Nevertheless, even despite the lack of specific provisions in the Water Framework Directive related to measures of protection of watercourses against plastic pollution, the necessity to prevent the deterioration of the status of all bodies of surface water indirectly implies their protection against pollution with plastics. Thus, the occurance of plastics (and even, more specifically, microplastics), can have a significant impact on the quality of the freshwaters, being able to influence the ecological status thereof, while a number of substances listed in the Water Framework Directive as priority substances, the concentration of which should not exceed certain levels in order to maintain a good chemical water status, are frequently (although not exclusively) used as additives in plastics.[31]

By contrast to the Water Framework Directive, the Romanian Water Law also includes – in addition to similar provisions regarding the good surface water status, good ecological status and other provisions as discussed in relation to the Water Framework Directive – a number of provisions regarding waste in general, thus encompassing also the plastic waste in its field of regulation.

One of the specific interdictions laid down in Article 16 para. (1) lit. c) of Romanian Water Law is the express prohibition to dump, introduce, or to deposit in anyway in the riverbeds or lake basins any kinds of waste. Depositing waste of any kind is forbidden also in the protection areas instituted by the Romanian Water Law, whereas the use, transportation and handling of waste in areas near waters and in other areas from which they could reach the surface waters is allowed only if it does not pollute waters. At the same time, the depositing of waste in areas near waters can only be performed according to the water rights permit (Romanian *aviz de gospodarire a apelor*) issued by the competent Romanian water authority.

We notice that Romanian Water Law does not couple these specific interdictions with directly correlated sanctions. This approach will be further discussed in section 2.4. below.

Nevertheless, Romanian Water Law includes a list of actions and inactions which are qualified as contraventions, if they are not performed as to be crimes. Among these, we note the following as the most relevant with respect to waste affecting freshwater resources:

- lack of operative measures taken by the local public administrative authorities regarding the establishment of special places for depositing any kinds of waste. We note that this is the only contravention expressly related to waste. This can be sanctioned by fine ranging between lei 75,000 (approximately EUR 15,370[32]) and lei 80,000 (approximately EUR 16,400) for legal persons, and between lei 25,000 (approximately EUR 5,125) and lei 30,000 (approximately EUR 6,150) for natural persons;
- depositing "any kinds of materials" in the riverbeds or at the shores of, among other, the freshwaters (rivers or lakes), or in their protection areas – we consider that this provision can also be interpreted as indirectly referring to (plastic) waste. This can be sanctioned by fine ranging between lei 75,000 (approximately EUR 15,370) and lei 80,000 (approximately EUR 16,400) for legal persons, and between lei 25,000 (approximately EUR 5,125) and lei 30,000 (approximately EUR 6,150) for natural persons;
- dumping residues "or any other materials" in water resources, in breach of the water rights permit (Romanian *aviz de gospodarire a apelor*) or of the water rights authorisation (Romanian *autorizatie de gospodarire a apelor*) – this provision can be

[27] Article 4 para. 1. lit. (a) pt. (ii) of Water Framework Directive.
[28] Article 2 pt. 18. of Water Framework Directive.
[29] Article 2 pt. 21. and 22. of Water Framework Directive.
[30] Article 2 pt. 24. of Water Framework Directive.
[31] Charlotte Wesch *et al.*, "Microplastics in Freshwater Environments. A Need for Scientific Research and Legal Regulation in the Context of the European Water Framework Directive," *Zeitschrift für Europäisches Umwelt- und Planungsrecht* 4 (2014): 277, https://www.researchgate.net/publication/269572531.
[32] All exchange rates in this paper have been calculated at a level of EUR 1 = lei 4.88.

interpreted, in our view, as encompassing the interdiction to dump (plastic) waste into freshwater resources, in breach of an existing water rights permit or authorisation, or even in lack of one. This can be sanctioned by fine ranging between lei 35,000 (approximately EUR 7,175) and lei 40,000 (approximately EUR 8,200) for legal persons, and between lei 10,000 (approximately EUR 2,050) and lei 15,000 (approximately EUR 3,075) for natural persons;

- not informing the water authorities regarding a case of accidental pollution, by the users that have produced it, respectively not taking operative measures, by the users that have produced the accidental pollution, for eliminating the causes and effects thereof – such pollution could also be made by (plastic) waste. This can be sanctioned by fine ranging between lei 35,000 (approximately EUR 7,175) and lei 40,000 (approximately EUR 8,200) for legal persons, and between lei 10,000 (approximately EUR 2,050) and lei 15,000 (approximately EUR 3,075) for natural persons;

Moreover, the following acts are qualified by the Romanian Water Law as crimes and are punished by imprisonment between 1 and 5 years:

- the evacuation, throwing or injecting in the surface waters of any kinds of waste containing substances, bacteria or microbes in a quantity or concentration that could change the water's characteristics, endangering life, health or corporal integrity of people, animals' lives, the environment, the agricultural or industrial production or the fishing stock;
- any kind of pollution of water sources (thus including plastic waste pollution) if it is systematic and it causes damages to the downstream water users.

If the above-mentioned acts are performed without criminal intent, the imprisonment is reduced by half.

2.3. Currently applicable Romanian legal framework regarding plastic waste management, relevant with respect to the protection of freshwater resources against pollution by plastics

The legislation regarding waste management is very diverse and numerous. Therefore, for the purposes of this study, only a limited number of provisions will be analysed and presented, respectively the ones directly related to the protection of freshwater resources against pollution by plastic waste.

To begin with, we note that "waste" is defined by Romanian Waste Law as "any substance or object that its holder throws or intends to or has the obligation to throw",[33] whereas the plastic waste is included in the notion of "municipal waste", which is defined as "mixed waste or separately collected waste from households, including … plastic materials …".[34] Waste is also defined in a number of other national and international legal instruments, such as the Government Emergency Ordinance no. 195/2005 on environment protection, which refers to the notion of "waste" as referring to any substance, chemical or object included of the categories established by the relevant waste legislation which is thrown by its holder or which the holder intends or is obliged to throw.[35]

The ecological management of waste is considered to be primarily ensured by an adequate legal framework regarding the collection, transport, recovery and elimination of waste, on one hand, and by the supervision of such operations and further maintenance of the corresponding facilities (especially the ones for elimination of waste).[36]

One of the main provisions included in the Romanian Waste Law refers to the general obligation that the management of waste (thus, also of plastic waste) must be performed without endangering the human health and without prejudicing the environment, especially, also among other, without generating risks to the water.[37] There are a number of obligations which must be performed by complying with this above-mentioned general obligation, among which we note the following:

- the obligation of waste producers and waste holders to recover it. The breach of this obligation is qualified as administrative offence and can be sanctioned by fine ranging between lei 20,000 (approximately EUR 4,100) and lei 40,000 (approximately EUR 8,200) for legal persons, respectively between lei 3,000 (approximately EUR 615) and lei 6,000 (approximately EUR 1,230) for natural persons;
- the obligation of waste producers and waste holders to perform the treatment operations accordingly or to transfer such operations to a competent authorised economic operator, respectively the obligation of collectors or transporters of waste to deliver and transport waste only to authorized units for sorting, treating, recycling and depositing waste. The breach of any of these obligations is qualified as administrative offence and can be sanctioned by fine ranging between lei 20,000 (approximately EUR 4,100) and lei 40,000 (approximately EUR 8,200) for legal persons, respectively between lei 3,000 (approximately EUR 615) and lei 6,000 (approximately EUR 1,230) for natural persons;
- the obligation of waste producers and waste holders to eliminate the waste that was not recovered in secure conditions. Interestingly, the breach of this obligation does not have a direct correlative sanction.

[33] Point 9 of Annex 1 of Romanian Waste Law.
[34] Point 9^2 of Annex 1 of Romanian Waste Law.
[35] Article 2 point 19 of Government Emergency Ordinance no. 195/2005 on environment protection, as subsequently amended and supplemented, published in the Romanian Official Gazzette no. 1196 of 30 December 2005.
[36] Daniela Marinescu and Maria-Cristina Petre, *Tratat de Dreptul mediului*, 5th ed. (Bucharest: Editura Universitara, 2014), 537.
[37] Article 20 lit. a) of Romanian Waste Law.

Additionally, Romanian Waste Law specifically forbids:

- the abandonment of waste. The breach of this provision can be sanctioned by fine ranging between lei 20,000 (approximately EUR 4,100) and lei 40,000 (approximately EUR 8,200) for legal persons, respectively between lei 3,000 (approximately EUR 615) and lei 6,000 (approximately EUR 1,230) for natural persons. A complementary sanction can be imposed in this case as well, that of picking up the waste deposited in areas other than the authorised ones, cleaning the respective land, as well as eliminating it according to the legislation in force;
- the elimination of waste outside of areas authorised with this purpose. The breach of this provision can be sanctioned by fine ranging between lei 20,000 (approximately EUR 4,100) and lei 40,000 (approximately EUR 8,200) for legal persons, respectively between lei 3,000 (approximately EUR 615) and lei 6,000 (approximately EUR 1,230) for natural persons.

Probably most of the activities that lead to the pollution of freshwater resources with plastic waste could be considered as representing abandonment of waste and could thus be sanctioned as such. Moreover, such activities could also be sanctioned as contraventions with a fine ranging between lei 30,000 (approximately EUR 6,150) and lei 60,000 (approximately EUR 12,300) for legal persons, respectively between lei 5.000 (approximately EUR 1,025) and lei 10,000 (approximately EUR 2,050) for natural persons, based on Government Emergency Ordinance no. 195/2005 on environment protection, which forbids, among other, throwing and depositing any types of waste in the surface waters. However, as we will show below in section 2.4., the actual application of the above-mentioned legal provisions is insufficient in Romania.

2.4. Potential areas of improvement of the currently applicable Romanian legal framework regarding waste management and freshwater resources protection against pollution by plastics

As previously stated in section 2.2, Romanian Water Law does not link specific sanctions to the breach of the interdictions regarding waste. It does indeed include a number of sanctions (qualified as contraventions or crimes, as the case may be) for various actions or inacctions, which can be interpreted to include also as indirectly referring to the above-mentioned interdictions. However, we consider that, for a higher impact and better clarity of the consequences of such forbidden acts related to waste (including plastic waste), the sanctions should be directly linked to the interdictions stated in the Romanian Water Law. If necessary, more general, broad-ranging sanctions could also be maintained, complementary to the specific ones.

Moreover, we are of the view that more specific interdictions referring to various types of waste should be included in the Romanian Water Law, with different sanctions depending, mainly, on the severity of the impact of the pollution of the respective waste on the freshwater environments, but also on other factors such as the recurring character of the action.

Additionally, the amounts of the fines should also be significantly increased, and the actual collection of the respective fines should be ensured by the Romanian competent authorities, in order for these obligations and their correlated sanctions not to remain simply „obligations on-paper".

Other legislative amendments could regard the following:

- exclusion of the currently applicable legal provisions stating that if the penalties applied in respect with environmental breaches are paid within 48 hours, they are diminished to half;
- removal of any statute of limitation regarding the right to action against the breach of at least the environmental provisions regarding the contamination of freshwater resources and negligent or irresponsible waste management, considering the specific consequences of the ecologic damages caused by plastic waste pollution;
- development of better enforcement mechanics for the „poluter pays" principle, in order to ensure not only the sanctioning of the polluter via the fine, but also the cleaning of the contaminated water resource on the cost of the actual polluter;
- introducing in the Romanian Water Law the specific obligation to monitor the presence and concentration in freshwaters of plastics in general, and of microplastics in particular;[38]
- development of a national strategy for preventing and combating Romanian freshwater pollution with waste.[39]

Last but not least, we submit, in line with other authors, that even the Water Framework Directive could benefit from amendments in the sense of including waste or even, more specifically, (micro)plastics provisions therein,[40] even though this could indeed be a cumbersome process, particularly due to the increased monitoring obligations which would be imposed on Member States of the European Union.[41] Moreover, the regional coordination of Member States with river basin authorities would also have an important role in limiting or even decreasing the plastics reaching the freshwater environments.[42]

3. Conclusions

As shown above, plastic pollution of freshwater resources is a growing and very challenging problem, and therefore "without a well-designed and tailor-made management strategy for end-of-life plastics, humans are conducting a singular uncontrolled experiment on a global scale, in which billions of metric tons of material will accumulate across all major terrestrial and aquatic ecosystems on the planet."[43] This aspect has to be placed in the context that water (in general), and freshwater (in particular), has a very important ecological and economical value as a natural resource, and therefore its quantitative and qualitative protection and conservation represent imperative objectives.[44]

However, only 79% of the Romanian citizens expressed their concern about the effects of plastics on the environment, in the 2017 Special Eurobarometer on attitudes of EU citizens towards the environment – this being the lowest proportion in the EU, where the average was of 87%.[45]

Therefore, along with the legislative amendments proposed above, we are of the view that the raising of awareness of the Romanian population on the effects that their daily actions have on the environment could have a significant impact on the improvement of the huge problem represented by the plastic pollution of freshwater resources and thus, raise the level of separate collection of plastic waste. Additionally, the strict and careful application of the provisions stating that the polluter should always support the cost of the cleaning process supplementary to the sanctions imposed by the applicable legislation, in all cases where breaches are identified are also essential. This requires a well improved monitoring by the authorities, but also the closer implication of various non-state actors such as NGOs or even natural persons for alerting the competent authorities when they notice such breaches.

HOW THE PANDEMIC AFFECTED ROHINGYA'S

Adrian Răzvan SERESCU[*]

Oana Elena MOGOS[**]

Abstract

In the face of the COVID-19 crisis, we are all vulnerable. The virus has shown that it does not discriminate - but many refugees, those forcibly displaced, the stateless and migrants are at heightened risk.

Millions of refugees worldwide are exposed to violence, family separation, culture loss and exile. The coronavirus disease 2019 (COVID-19) exposes these populations to a new threat, one that could prove to be more devastating than the events forcing them to flee their homelands.

The Rohingya population is under the successive oppression of Myanmar's governments, representing one of the largest stateless populations.

A large part of the Rohingya population lives in overcrowded refugee camps in Bangladesh while another part of them who remained on Myanmar territory in Rakhine State are subject to government persecution, being confined in villages without freedom of movement and without freedom of movement. access to food, education, adequate livelihoods and medical care.

Three-quarters of the world's refugees and many migrants are hosted in developing regions where health systems are already overwhelmed and under-capacitated. Many live in overcrowded camps, settlements, makeshift shelters or reception centers, where they lack adequate access to health services, clean water and sanitation.

Millions of refugees worldwide are exposed to violence, family separation, culture loss and exile. The coronavirus disease 2019 (COVID-19) exposes these populations to a new threat, one that could prove to be more devastating than the events forcing them to flee their homelands.

Humanitarian groups like the International Rescue Committee are concerned that people in refugee camps face a heightened risk of Covid-19.

The UN has warned that, given the conditions in the camps in Bangladesh and the high levels of vulnerability among the population, "the severity of the possible impact of the virus on refugees is of major concern".

Keywords: *Rohigya, pandemic, Covid 19, Bangladesh, Cox Bazar.*

1. Introduction

When the Covid 19 pandemic escladated in march 2020, the entire world was put in front of a new chalenge. The challenge of dealing with something worse than anyone expected. But no one even thought how the most vulnerable populations are going to face this.

When we think at vulnerable populations most of the time we associate them with poor people or with the ones with low income or no income at all, and countries all over the world have imposed measures to help this kind of people, but there is another face of this harsh reality, in this study we want to show how the most vulnerable of them all have been affected, so we study what is happening to the Rohingya's refugees and how they have been affected by this global crissys, which is the Covid 19 pandemic.

They are so vulnerable, because they have so poor conditions of leaving, the camps where they have settled are overcrowded and even if anyone would want to offer better conditions this can't be done, even thought the UN organization is trying to do so.

2. Who are the Rohingya's

The Rohingya population is a Muslim minority group in Myanmar, which over time has been discriminated against and persecuted, denied citizenship and faced numerous restrictions from the Myanmar government.

The journalist and the news stations are describing the Rohingya's as the most persecuted minorities in the world[1] have been denied the citizenship under the 1982 Myanmar nationality law[2]

and in the same time they are denied the right of movement, education and civil service jobs[3].

Even though all the prosecutions and denials that they are facing the Rohingya's, maintain the fact that descend from people in the preconolial Arakan and colonial Arakan, which was an independent kindom between Southeast Asia and the Indian subcontinent[4] but the Myanmar's government does not recognise them as descendent of Araken muslims.

The modern term Rohingya emerged from colonial and pre-colonial terms Rooinga and Rwangya[5]. The Rohingya refer to themselves as. In Burmese they are known as *rui hang gya*, while in Bengali they are called Rohingga. The term "Rohingya" may come from Rakhanga or Roshanga, the words for the state of Arakan. The word Rohingya would then mean "inhabitant of Rohang", which was the early Muslim name for Arakan[6].

The usage of the term Rohingya has been historically documented prior to the British Raj. In 1799, Francis Buchanan wrote an article called "A Comparative Vocabulary of Some of the Languages Spoken in the Burma Empire", which was found and republished by Michael Charney in the SOAS Bulletin of Burma Research in 2003[7]. Among the native groups of Arakan, he wrote are the: "Mohammedans, who have long settled in Arakan, and who call themselves Rooinga, or natives of Arakan."[8] The Classical Journal of 1811 identified "Rooinga" as one of the languages spoken in the "Burmah Empire". In 1815, Johann Severin Vater listed "Ruinga" as an ethnic group with a distinct language in a compendium of languages published in German[9].

3. The persecution and repression of Rohingya's

The contemporany persecution of the Rohigya population started in 2017, when Rakhine budist attacked a bunch of Rohingya men.

On 25 August 2017, the Government of Myanmar announced that 71 people (a soldier, an immigration officer, 10 police officers and 59 insurgents) had been killed overnight during coordinated attacks by up to 150 insurgents in 24 checkpoints. Police and the army base in Rakhine State[10]. The Myanmar Army said the attack began around 01:00, when insurgents armed with bombs, small arms and mock-ups blew up a bridge. He went on to say that most of the attacks took place around 3:00 - 4:00 AM [11]. The Rescue Army Arakan Rohingya (ARSA) claimed to be taking "defensive action" in 25 different locations and accused government soldiers of raping and killing civilians. The group also claimed that Rathedaung had been blocked for more than two weeks, starving the Rohingya and that government forces were preparing to do the same in Maungdaw[12].

According to the Special Rapporteur of the United Nations Human Rights Organization in Myanmar, Yanghee Lee, as of August 25, 2017, at least 1,000 people have been killed as a result of violence between government soldiers and the Rohyngia people[13]. Since October 2018, persecution of the Rohyngia people continues, with the UN Special Rapporteur describing the situation as "apartheid", with Rohingyas detained segregated by the "Rakhine ethnic community" and without "freedom of movement"[14].

On April 23, 2019, a Burmese army attacked the village of Rohingya Buthidaung. Subsequently, the army planted internationally banned landmines along the northern state of Rakhine to prevent the Rohingya

from escaping northwest to Bangladesh. Burmese soldiers allegedly shot Rohingya civilians fleeing south. Those who remained were targeted by airstrikes. Some have described the Rohingya as being trapped in a "genocide zone."[15]

In early April 2020, the government of Myanmar issued two presidential directives: Directive no. 1/2020 and Directive no. 2/2020. These were followed by January orders issued by the International Court of Justice for the government and army to stop genocide against the Rohingya Muslim ethnic group. Directive no. 1/2020 stipulates that the authorities are responsible for ensuring that anyone under their control does not commit activities that lead to genocide. Directive no. 2/2020 prevents all ministries and the government of Rakhine State from destroying the order of the International Court of Justice in January and also required the retention of evidence of any criminal activity that could lead to genocide[16].

4. How the Covid 19 affected the Rohingya's

Displaced people and host communities are most at risk as the COVID-19 pandemic spreads. The most vulnerable are people in refugee camps, with limited access to health care, hygiene needs and where social distance is impossible. According to the International Rescue Committee, the health care system available to these groups will be overwhelmed without the capacity to cope with the COVID-19 outbreak[17].

The rapid spread of the new coronavirus has made practices such as social or physical removal and standard hand washing a fundamental part of everyday life. In any case, these measures can be particularly difficult to try in densely populated urban settlements, especially in refugee camps, where congestion makes the "two-meter division rule" virtually impossible to maintain - and where many need it. access to basic needs such as water and sanitation, the chances of having an outbreak are obvious[18].

Most Rohyngia refugees have fled to Malaysia, Indonesia and the Philippines, but the vast majority have fled to Bangladesh, where there are two official refugee camps[19]. [11]

The virus can be transmitted to Rohingya refugee camps from one person to another very easily in two ways, one through direct physical contact and the other through close indirect contact with patients with COVID-19 (through drops caused by coughing or sneezing). a person infected with COVID-19).

Given the general life characteristics of refugee camps, where there is no hygiene or adequate hygiene, and where people are forced to share toilets with their neighbors, followed by tight living conditions, the ubiquity of disease and lack of access to medical care, and clean water, leads to difficult survival and the fight against the threat of COVID-19 becomes a major threat.

Given the large number of Rohyngia refugees in Bangladesh, about 860,000, the COVID-19 virus could easily kill more than 1,600 people. The first case of Coronavirus in Bangladesh, where most Rohingya refugees are located, was reported in the Cox Bazar by a local community, followed by the recoding of the first COVID-19 death in March.

In the thick camps of Cox's Bazaar, alternatives to social separation or self-disconnection are removed, with many displaced people living in squeezed conditions in makeshift bamboo and cloth shelters.

Cleaning practices are not practical when standard hand washing becomes a luxury, as access to clean water is severely restricted. On average, 40,000 people live in every square kilometer in the camps, if a refugee is infected with this virus, many refugees will die in a short time. There are concerns about overcrowded Rohingya camps where the virus can spread and become a hotbed in no time.

The Bangladeshi government has imposed a blockade on a southern district, housing more than a million Rohingya Muslims fleeing Myanmar to prevent the spread of the coronavirus. Recent news reports in BBC News Asia say about 350,000 people displaced from Myanmar are "on the verge of a public health catastrophe," says human rights group Human Rights Watch (HRW).

The Government of Bangladesh and humanitarian agencies are trying to create the inclusion of Rohingya refugees in the Bangladesh Government's national response plan to COVID-19[20]. However, there is a constant fear of allowing foreign distributors to enter refugee camps. Food distribution agencies are thus developing new ways to eliminate contact from one person to another. The United Nations High Commissioner for Human Rights (UNHCR) has established isolated camp areas for COVID-19-infected refugees in temporarily isolated areas until they can be transferred to specially designated isolation units[21].

5. Conclusions

What is happening is Myanmar related to the Rohigya population, is affecting deep all the entire world.

We could face a new Holocaust, if the competent authorities are not going to take more serious actions soon.

Even though the United Nations and European Union imposed sanctions to Myanmar and that International Court of Justice opened and investigation, the crimes did not stopped and the genocide is still on going.

The Myanmar Government thoes not fear the sanctions based on the fact that is not part of the Rome treaty, that goes against the crimes against humanity, so it is on going against the Rohingya.

When all this it is going to stop? Hopefully soon, because the world could not face another Holocaust and the consequences are not of those that the world would want.

Already the crisis that is on going because of huge number of Rohingya refugee, has catastrophic consequences, for the country of Bangladesh, that is overhelmed.

LIABILITY OF THE NEW AND PREVIOUS OWNERS OF A VEHICLE FOR THE NON-PAYMENT OF ROAD TAXES

Beatrice-Ștefania NICULAE*

Abstract

The present article aims to make a brief analysis of the applicable legal provisions, but also of the relevant judicial practice, regarding the application of the fine for non-payment of the necessary road taxes to the old owner by the competent authorities, despite the fact that the vehicle was already sold to the new owner. It is possible that the case presented will be considered as having a relatively simple solution, but in the context in which the new owner is in bad faith and does not fulfill its legal obligations and continues to accumulate fines for non-payment of the necessary road taxes, the previous owner will find himself in an unfair situation and which, at this point, could even be considered a legislative void.

Keywords: *sale-purchase contract, road tax, fine, contravention report, complaint, user*.

1. Introduction

The courts of justice have encountered in the recent practice numerous disputes in which the previous owner finds himself in the unfortunate situation of having to file a complaint against a contravention report, despite the fact that the vehicle already had a new owner, but the latter begins and even continues to accumulate fines for non-payment of road taxes.

Consequently, we will timidly try, using the methods of interpreting legal norms, to make the necessary distinctions, on the one hand, and on the other hand, we tend to draw attention to a situation that seems to fall under the umbrella of the concept of legislative void, regarding the following situation: when the new owner is acting in bad faith and refuses or simply unjustifiably postpones to fulfill the obligations that the legislation in force has established to be applied to him.

Thus, in addition to the interpretation of the related legal norms, we will also analyze the solutions available to the previous owner, but we will also take into account the relevant judicial practice, including but not limited to Decision no. 4/2018 pronounced by the High Court of Cassation and Justice, which gave a correct and rather interesting interpretation on the notions of transfer of ownership, user and owner, issues that we will analyze during this present article.

2. Summary of Decision no. 4/2018, pronounced by the High Court of Cassation and Justice

By Decision no. 4/2018, the High Court of Cassation and Justice admitted the appeal in the interest of the law formulated by the Board of the Court of Appeal Cluj and, consequently, establishes that, in the unitary interpretation and application of the provisions of art. 8 para. (1), referred to art. 7 and art. 1 para. (1) b) of the Government Ordinance no. 15/2002 regarding the application of the use tariff and of the road taxes on the national road network in Romania, approved with modifications and completions by Law no. 424/2002, with subsequent amendments and completions:

• in case of transfer of the ownership right over the vehicle, the former owner loses the quality of user and active subject of the contravention consisting in the fact of driving without a valid road tax;

• the proof of the transfer of the property right is made according to the common law.

Therefore, through the appeal in the interest of the admitted law, the High Court of Justice and Justice sought the unitary settlement of some issues that had different approaches from the jurisprudential point of view, interpretations of the courts that resulted in different solutions. Precisely in order to avoid a different application of the same legal issue, the appeal was allowed in the interest of the law and, on this occasion, a number of issues were clarified, such as that of the new holder being the one who needs to be fined for the lack of valid road tax, if the change of ownership is proved.

Even in the content of Decision no. 4/2018, it is clearly stipulated that, "if the ownership of the vehicle was transferred prior to the date of the contravention, by a document under private signature, the document proves until proven otherwise (...) and is opposable to other persons than those who drafted it, from the day when the date of the document became certain (...) ".

In other words, "the date of the documents under private signature becomes certain, according to the Code of Civil Procedure, as follows:

• from the day on which they were presented in order to be given a certain date by the notary public, the bailiff or another competent official in this respect;

• from the day when they were presented to a public authority or institution, this mention being made on documents;

* PhD Candidate, Faculty of Law, „Nicolae Titulescu" University of Bucharest, Romania (e-mail: beatricestefania.niculae@gmail.com).

• from the day they were registered in a register or other public document;

• from the day of death or from the day when the physical inability to write of the person who drafted it or of one of those who subscribed it;

• from the day on which their contents are reproduced, even briefly, in authentic documents, such as conclusions, minutes for sealing or making an inventory;

• from the day on which another event of the same nature occurred which unequivocally proves the anteriority of the document"[1].

3. Analysis of the relevant provisions of the Government Emergency Ordinance no. 195/2002[2] and Government Ordinance no. 15/2002[3]

From the provisions of art. 7 and of art. 1 para. (1) b) of Government Ordinance no. 15/2002 results that the obligation to pay the road tax is incumbent on the owner or user of the vehicle that is mentioned in the registration certificate, respectively the user is the natural or legal person registered in the registration certificate, who owns or who, as the case may be, can use the vehicle under a legal right. By default, it appears that the fault of the previous owner cannot be retained in the situation when the new owner did not register in his name the vehicle already purchased at the time of the fine applied by the competent authorities.

We thus understand to discuss the provisions of art. 11 of the O.U.G. no. 195/2002 on traffic on public roads, in the sense that:

Para. (1): the owners of vehicles or their mandated holders are obliged to register them, before putting them into circulation, according to the legal provisions.

Para. (2): The registration of vehicles is continuous, from the admission to circulation until the definitive decommissioning of a vehicle from the category of those subject to this condition, according to the provisions of this emergency ordinance, and involves the following operations:

a) registration in the records of competent authorities, according to the law, of the acquisition of the property right over a vehicle by the first owner;

b) the transcription in the records of the competent authorities, according to the law, of all subsequent transfers of the ownership right over a vehicle.

Para. (3): The operations provided in para. (2) shall be made on the basis of the identification data of the vehicle and the owner and condition the issuance by the competent authorities, according to law, of a registration certificate, as well as the plates with the assigned registration number and the necessary transcripts in the registration certificate and in ID card of the vehicle.

Para. (4): In case of transfer of ownership over a vehicle, the data of the new owner shall be entered in the National Register of driving licenses and registered vehicles established by the Directorate of Driving Permits and Vehicle Registration simultaneously with the mention of termination of ownership of the registration of the former owner. In order to carry out this operation, the new owner is obliged to request from the competent registration authority the transcription of the transfer of ownership, within 90 days from the date of acquiring the ownership of the vehicle.

According to the provisions of art. 17 of the same normative act, the deregistration of vehicles is made by the authority that carried out the registration only in case of their final removal from circulation, at the request of the owner, in the following cases:

a) the owner wants and requires the final withdrawal of the vehicle and proves its storage in a suitable space, kept in accordance with the law;

b) the owner proves the dismantling, scrapping or handing over the vehicle to specialized units for dismantling;

c) upon the final removal from Romania of the respective vehicle;

d) in case of vehicle theft. Thus, it was not necessary to carry out the deregistration operation, given the express and limiting cases provided for by the legal framework in force.

Consequently, from the analysis of the mentioned legal provisions, it results that all the obligations regarding the communication to the competent authorities regarding the change of the holder of the ownership right over the vehicle belong exclusively to the new owner. Thus, the previous cannot be held liable for slippage from the legal rules of the new owner of the vehicle.

Considering the aforementioned provisions, we appreciate that the previous owner no longer had the quality of user of the car starting with the date of the sale-purchase contract, since at the moment when the fine has been applied he no longer had the quality of being the owner of the latter good. Therefore, in relation to these aspects, the previous owners cannot have the quality of offender for deeds committed after the alienation of the car, as a result of the new owner acting in bad faith and refusing or simply unjustifiably postponing the fulfillment of the obligations that the

[3] Regarding the application of the use tariff and the road tax on the Romanian national road network, published in the Official Journal of Romania no. 82 of February 1st, 2002, with subsequent amendments and completions.

legislation in force has established to be applied to latter.

The contravention liability can be incurred only in the charge of a person who has committed an act provided by the contraventional law. Although, in criminal matters, no principle of personal liability has been expressly provided, as in criminal matters, however, this principle can be easily deduced both from the fact that according to ECHR case law, contraventions belong to the sphere of criminal law, as well as and for the purpose of applying a contraventional sanction.

As long as the contraventional sanctions have a punitive and preventive role and in no case reparative, it would be useless to impose a sanction on a person other than the one actually responsible for committing the illicit action or inaction.

4. Regarding the possibility of calling for a guarantee, we appreciate that a series of clarifications are needed

Currently, we can without many doubts mention that the safest solution that the previous owner has at hand, as a seller of the vehicle, is to appeal to the courts the fines received.

However, this approach can bring a number of risks and inconveniences, among which it is important to specify the mechanism of the calling for a guarantee, a concept available to the defendant, in this case, as the buyer of the vehicle.

The guarantee mechanism is one of the forms of forced intervention used on countless occasions in judicial practice, regardless of whether we consider disputes between professionals or individuals, precisely because it presents a number of advantages, the most important being that it has real and powerful potential to avoid contradictory judgments.

Thus, we understand to bring into discussion a decision recently pronounced by the Constitutional Court of Romania, namely Decision no. 854 of December 17th 2019[4], referring to the exception of unconstitutionality of the provisions of art. 73 para. (3) of the Code of Civil Procedure[5]. The latter act ruled in principle on the following:

„As regards the contention that, if, in the reply to the statement of defense, the applicant presents the true evidence on which his claims are based, the defendant would no longer be able to make a claim for guarantee, the Court finds that it cannot be retained, since, according to the rules established by art. 254 of the Code of Civil Procedure, the evidence is proposed, under the sanction of revocation, by the plaintiff by the request for summons, and by the defendant, by the counterclaim. Evidence that has not been proposed in these circumstances may no longer be required and approved during the trial, except in certain cases expressly specified by law, namely, when the need for evidence results from the changes made to the initial application, when the need for evidence arises from the judicial investigation and the party could not foresee it, when the party sees the court that, for duly justified reasons, he could not propose the required evidence in time, when the administration of the evidence does not lead to the postponement of the trial or when there is the express agreement of all parties. Therefore, the defendant will know the plaintiff's claims and the evidence on which they are based since the communication of the summons, there is, usually, no other procedural moment in which to allow the plaintiff to propose new evidence. In reply to the statement of defense, the applicant will not be able to bring evidence other than that which he has already considered necessary to prove his claims in the summons. It is true that, until the first term at which he is legally summoned, the plaintiff can modify his request for a trial, according to art. 204 para. (1) of the Code of Civil Procedure, proposing, accordingly, new evidence but this does not impede the right of the defendant to resort to the guarantee mechanism. This is because, according to the aforementioned text, in such a situation, the court will order the postponement of the case and the communication of the modified request to the defendant, in order to formulate the objections, being analogously applicable the provisions criticized in the present article, which allow him to formulate up to this new procedural moment the request for guarantee. Therefore, the criticism of the alleged infringement of the right to a fair trial cannot be upheld either, from the point of view of the defenses available to the parties during the proceedings."[6].

In the light of the argumentation of the Constitutional Court, however, we understand to bring into discussion the provisions of art. 72 of the Code of Civil Procedure, namely: „(1) The interested party may call on a third party under guarantee, against whom he may file a separate claim for guarantee or compensation. (2) Under the same conditions, the person called under guarantee may call another person under bail".

Consequently, regardless of whether the seller does not submit all the evidence he has, let's assume, at hand, in the hope that the defendant, as the buyer, will not use the guarantee mechanism, this will not be possible to achieve, in relation to the legal provisions retained even by the Constitutional Court of Romania in the aforementioned decision.

However, we consider that the defendant, as a buyer, will be able to call the person who subsequently purchased the same car as collateral, which results from the provisions already revealed, but the latter person

[5] Law no. 134/2010 regarding the Civil Procedure Code, published in the Official Journal of Romania no. 247 of April 10th, 2015, with subsequent amendments and completions.

[6] See in this respect the Constitutional Court of Romania, namely Decision no. 854 of December 17th 2010, para. 17.

will no longer have the same procedural mechanism at hand. Otherwise, it would follow that, in order to circumvent any decision of the courts, therefore in order to block an entire system, it would only be necessary to fulfill two conditions, namely: the successive alienation of the vehicle in question, respectively the non-fulfillment of the obligations imposed by the legislation on the buyers.

However, given the well-known situation at the level of the judiciary system, we can only conclude that the sale of a vehicle, in the above conditions, will be made much more quickly than a court will ever have at hand to rule on that dispute. Therefore, a whole series of calls for guarantees would be born, without reaching an effective or practical finality in any way, including violating the right to a fair trial.

On the other hand, it is important to note that, in accordance with Civil Decision no. 66 / 23.06.2016, pronounced by the Bucharest Court of Appeal, Section VIII Administrative and Fiscal Litigation, "it is inadmissible the request for guarantee made by the plaintiff against third parties, in order to capitalize their claims, in the event of its rejection of the claims made in contradiction with the defendant public authority, which appears as a party to the legal report submitted to the court.

The call for guarantee thus represents that request for forced intervention by which one of the litigants requests the introduction in the litigation of a third party against whom he/she could file a separate action in guarantee or in compensations, claiming its settlement in the pending dispute.

This procedural instrument, not being regulated as a form of modification / completion of the summons by the will of the plaintiff or the defendant, is not intended to make it possible to attract a new defendant in the litigation, but, in principle, to create a new legal relationship of procedural law between the holder of the request for forced intervention and the one called in guarantee.

A characteristic element of the guarantee application is the existence of a dependency and subordination link between the main application and the guarantee application, the solution of the first application essentially influencing the solution of the guarantee application.

In other words, so far as there is a rejection of the action brought by the applicant, the legal reality is not altered as a result of the judgment given, so as to allow the conclusion that at that time the claim for damages or guarantee claimed could ne born. At the same time, an admission of the request for the initial application will result in the rejection of the request for guarantee as being without object or without interest[7]".

That is the reason why we understand to refer to the call for guarantee made by the defendant, of interest to this article and we conclude that, currently, the caller on guarantee no longer has the possibility to call, in return, another person on guarantee.

The above conclusion is supported, for example, by the arguments consulted in the content of Decision no. 3908/21 October 2014, pronounced by the High Court of Cassation and Justice, Administrative and Fiscal Litigation Section[8], by which the following were retained: "In law, according to the provisions of art. 72 para. (1) the interested party may call on a third party under guarantee, against whom he could go with a separate claim for bail or compensation.

The High Court of Cassation and Justice, in accordance with the solution of the first instance, finds that the mentioned provisions expressly provide that "a third party" may be summoned as a guarantee, the doctrine accepting the possibility of formulating a request for guarantee between the parties in the trial only in the situation of passive procedural co-participation, by the summoning of a defendant by another defendant, and not between the plaintiff and the defendant, the former being able to capitalize his claims through the request for summons, modified according to the provisions of art. 204 Civil Procedure Code, until the first term at which he was legally summoned.

It is also noted that if in the previous regulation was provided the notion of calling another person to guarantee, the legislator through the New Code of Civil Procedure restricted this possibility".

5. Conclusions

In the case of a vehicle that has changed ownership, the new owner must be fined for driving on public roads without a valid road tax, not the previous owner. In the event that the previous user will be fined, he can appeal to the courts of justice, in compliance with the mandatory deadlines, through a complaint.

However, a really useful and fair step would be for the obligations to notify the competent authorities of the alienation of a vehicle, in this case through a contract of sales, to be found also at the disposal of the former owner, in this case having the status of seller.

An even more useful step would be to modernize and correct the databases of all the competent authorities involved, especially the databases of the Romanian police and town halls, for a much easier and correct identification of the reality of the person that can be regarded as the present owner or even user of a vehicle at a certain timeframe.

ROMANIAN OMBUDSMAN AND CONSTITUTIONAL COURT, DEFENDERS OF FUNDAMENTAL RIGHTS AND PARTNERS OF PUBLIC AUTHORITIES TO ENSURE THE RULE OF LAW, IN THE CONTEXT OF COVID-19 PANDEMIC

Simina POPESCU-MARIN*

Abstract

Currently, both internationally and nationally, the Covid-19 pandemic generates an atypical situation, with profound effects on the social and political aspects of society. The provocation of such an element of novelty is transposed also in the legal plan under the aspect of the regulations meant to ensure the establishment of clear rules of conduct, with obvious impact on the fundamental rights and freedoms. The present study proposes an analysis of the relations between the Ombudsman and the Constitutional Court, fundamental institutions of the state, which contributed to ensuring respect for fundamental rights. The Ombudsman raised before the Constitutional Court a series of constitutionality issues of some normative acts which urgently regulated aspects necessary for the management of the pandemic, with implications on fundamental rights, (the right to free movement, the right to health care, the right to property, free access to justice, the right to intimate, family and private life, economic freedom). These issues to be analyzed concerned the constitutionality control of some provisions regarding the adoption of measures during the state of emergency established by the Decree of the Romanian President, the establishment of sanctions for violating the rules established in the normative acts on the state of emergency, the establishment of quarantine, the establishment of the state of alert, as well as other measures in the field of public health in situations of epidemiological and biological risk.

The analysis of the activity of the two institutions highlights the efficiency of legal mechanisms that ensure the protection of fundamental rights in Romania and emphasizes, especially during this period, the need to perpetuate loyal cooperation between state authorities, in the spirit of principle and separation and balance and the rule of law, as a solid guarantee of respect for fundamental rights.

Keywords: *Ombudsman, Constitutional Court, fundamental rights protection, rule of law, constitutional review, Covid-19 pandemic.*

1. Introduction

The atypical situation generated by the Covid-19 pandemic brought to the level of social and legal reality a series of aspects that aimed at the constitutional observance of certain rights and freedoms or fundamental principles with impact on fundamental rights and freedoms.

In this context, is to be analyzed the relationship between two fundamental institutions, the Romanian Ombudsman, as guardian of the individuals rights and freedoms[1] of and the Constitutional Court in its capacity of "*guarantor of the supremacy of the Constitution*"[2], whose constitutional and legal role reveals the importance of their current functioning in the Romanian state governed by the rule of law, according to the provisions of art. 1 par. (3) of the Constitution. The importance of this analysis lies in highlighting some concrete situations that raised constitutional problems, solved by the way of constitutional review, the legal mechanism by which the rule of law and the rights and freedoms are effectively secured. Thus, the involvement of the two state institutions in ensuring and guaranteeing the observance of fundamental rights and freedoms in the rule of law is highlighted, so that their establishment by the Fundamental Law does not become a simple illusory declaration, with purely theoretical valences.

Health-crisis period of COVID-19 was marked by the adoption of legislative acts (laws and Government emergency ordinances), by which the state authorities, faced with the challenges of intense looking to protect population of the threat of COVID-19 imposed a number of measures to combat the virus and imposed a number of new rules. However, the respect for fundamental rights remained an inherent imperative of the rule of law.

In exercising its constitutional and legal role, Ombudsman raised before the Constitutional Court some issues of unconstitutionality in the case of some normative acts regulating measures during the state of emergency imposed by the Decree of the Romanian President establishing the state of emergency on the Romanian territory, the establishment of contravention sanctions for violating the rules established in the normative acts regarding the state of emergency, the establishment of quarantine, the establishment of the state of alert, as well as other measures in the field of public health in epidemiological and biological risk situations. Starting from the jurisprudence of the

[2] See art. 142 para. (1) of the Romanian Constitution.

Constitutional Court, concretized for example, by Decision no. 152 of May 6, 2020[3], Decision no. 457 of June 25, 2020[4], Decision no. 458 of June 25, 2020[5], or Decision no. 751 of October 20, 2020[6], without carrying out an analysis of the opportunity of the actions of the Ombudsman in this context , which exceeds this scientific approach, the present paper proposes an analysis of the issues that have been subject to constitutional review, summarizing the criticisms of unconstitutionality brought by the Ombudsman regarding these normative acts, the solutions pronounced by the Constitutional Court in these cases and considerations that substantiated them.

2. Paper Content

As an introduction, we consider it useful to present in essence the constitutional and legal grounds that give the Ombudsman the right to refer to the Constitutional Court with exceptions of unconstitutionality, within the *a posteriori* constitutionality control[7]. In this sense relevant are the considerations stated by the Constitutional Court by Decision no. 464 of July 18, 2019 on the legislative proposal to revise the Constitution of Romania[8], according to which "limiting the power of the Ombudsman to challenge directly before the Constitutional Court the constitutionality of only those laws regarding the relations between citizens and public authorities is unconstitutional", and, "the elimination of the power of the Ombudsman to directly challenge the constitutionality of the laws before the Constitutional Court violates the limits of the revision established in art. 152 par. (2) of the Constitution, being a suppression of an institutional guarantee associated with the defence of fundamental rights and freedoms".

The Court reiterated, in this context, the fact that the constitutional protection of the citizen is an ascending one, so that the constitutional revisions must also grant an increasing protection to him ". The protection of fundamental rights and freedoms, within the meaning of art. 152 par. (2) of the Constitution can know only an ascending orientation[9].

According art. 146 lit. d) of the Constitution, "The Constitutional Court has the following attributions: [...] d) decides on the exceptions of unconstitutionality regarding the laws and ordinances, raised before the courts or commercial arbitration; the exception of unconstitutionality can also be raised directly by the People's Advocate ; ".

In applying these constitutional provisions, Law no. 35/1997 on the organization and functioning of the Ombudsman[10], provides in art. 15 para. (1) letter i): „ (1) The People's Advocate has the following attributions: [...]; i) may directly notify the Constitutional Court for the unconstitutionality of laws and ordinances;".

Symmetrically, Law no. 47/1992 on the organization and functioning of the Constitutional Court[11], provides in art. 32: "The Constitutional Court decides on the exceptions of unconstitutionality raised directly by the People's Advocate regarding the constitutionality of a law or ordinance or of a provision of a law or ordinance in force."

Based on these constitutional and legal provisions, the Ombudsman raised directly before the Constitutional Court a series of unconstitutionality exceptions that concerned provisions from Government emergency ordinances or provisions from laws that produced legal effects in the context of the COVID-19 pandemic.

2.1. Analysis of the constitutionality of some provisions regarding the establishment and application of contravention fines, in case of violation of the rules established for combating the pandemic in relation to the principle of legality and the presumption of innocence

The problem of establishing and applying contravention fines, in case of violation of the rules established for combating the pandemic was analyzed on the occasion of solving the exception of unconstitutionality[12] of the provisions of art. 9, art. 14 lit. c ^{1})-f) and art. 28 of the Government Emergency Ordinance no. 1/1999 regarding the state of siege regime and the regime of the state of emergency and of the emergency ordinance, as a whole, as well as

[11] Published in the Official Gazette of Romania, Part I, no. 807 of December 3, 2010.
[12] The object of the exception of unconstitutionality is art. 9, art. 14 lit. c ^{1}) -f) and art. 28 of the Government Emergency Ordinance no. 1/1999 regarding the state of siege and the regime of state of emergency, published in the Official Gazette of Romania, Part I, no. 22 of January 21, 1999, approved with amendments and completions by Law no. 453/2004 , with subsequent amendments and completions, Government Emergency Ordinance no. 1/1999 , as a whole, as well as the Government Emergency Ordinance no. 34/2020 for the amendment and completion of the Government Emergency Ordinance no. 1/1999 regarding the state of siege and the regime of state of emergency, published in the Official Gazette of Romania, Part I, no. 268 of March 31, 2020, as a whole.

of the Government Emergency Ordinance no. 34/2020 for the amendment and completion of the Government Emergency Ordinance no. 1/1999 on the state of siege and the state of emergency, as a whole.

Ombudsman considered that art. 9 and art. 28 of the Government Emergency Ordinance no. 1/1999, violates the provisions of the Constitution contained in art. 1 par. (5) regarding the principle of legality and of art. 23 par. (11) on the presumption of innocence, arguing, essentially, that the criticised provisions impose a general obligation to respect certain rules, without criminalize a concrete act and impose sanctions, without giving minimum objective criteria in their application, which can generate arbitrariness.

By Decision no. 152 of May 6, 2020, Constitutional Court, with unanimous votes[13] decided the admission of the exception of unconstitutionality formulated by the People's Advocate and found that the provisions of art. 28 of the Government Emergency Ordinance no. 1/1999 are unconstitutional.

The Court noted that in the matter of regulating the legal regime of contraventions, the Government Emergency Ordinance no. 1/1999 is a special law that provides the sanction of a fine and, as complementary sanctions, the confiscation of goods intended, used or resulting from the contravention, the prohibition of access by applying the seal by the competent bodies, the temporary suspension of activity, the abolition of works and restoration some arrangements. The application of contravention sanctions, respectively the actual sanctioning of the subject of law for disregarding the norms of contravention law, takes place according to some principles: the principle of legality of contravention sanctions, the principle of proportionality of contravention sanctions and the principle of uniqueness in idem).

Regarding the principle of the quality of the laws, the Court reiterated its jurisprudence[14] and invoked the jurisprudence of the European Court of Human Rights[15], holding that the rule must be drafted with sufficient precision to enable the citizen to monitor his conduct so that he is able to provide for a reasonable measure, the consequences that could result from the commission of a certain deed. The law must clearly define the applicable contraventions and sanctions, being necessary that the recipient of the norm knows from the text of the applicable legal norm which are the acts, facts or omissions that can engage his contravention liability.

The Court has noted that art. 28 par. (1) corroborated with art. 9 par. (1) of the Government Emergency Ordinance no. 1/1999 does not clearly and unequivocally indicate the acts, facts or omissions that constitute contraventions, nor do they allow their easy identification, by referring to the normative acts with which the incriminating text is in connection. Thus, art. 9 par. (1), which speaks of "*all the measures established in this emergency ordinance, in the related normative acts, as well as in the military ordinances or in orders, specific to the established state*", cannot be considered a reference norm, since it is not indicates accurately the legal referenced. Thus, the legislator enacted provisions that are unable to achieve the purpose for which they were established.

The provisions of art. 28 par. (1), by the phrase "non-compliance with the provisions of art. 9 constitutes a contravention", qualifies as a contravention the violation of the general obligation to respect and apply all the measures established in the Government Emergency Ordinance no. 1/1999, in the related normative acts, as well as in the military ordinances or in orders, without expressly distinguishing the acts, facts or omissions that may attract the contravention liability. Implicitly, the establishment of the facts whose commission constitutes contraventions is left, arbitrarily, at the free discretion of the ascertaining agent, without the legislator having established the criteria and conditions necessary for the operation of ascertaining and sanctioning the contraventions. At the same time, in the absence of a clear representation of the elements that constitute the contravention, the judge himself does not have the necessary benchmarks in the application and interpretation of the law, on the occasion of resolving the complaint on the record of finding and sanctioning the contravention.

The criticized legal provisions do not respect the principle of proportionality either, a principle that has its origin in the provisions of art. 53 par. (2) of the Constitution and which allows the restriction of the exercise of certain fundamental rights or freedoms only insofar as such a limitation is necessary in a democratic society and is proportionate to the situation that determined it. The provisions of art. 28 of the Government Emergency Ordinance no. 1/1999 does not concretely foresee the facts that attract the contravention liability, but also establish for all these deeds, regardless of their nature or gravity, the same main sanction. Regarding the complementary contravention sanctions, although the law stipulates that they are applied according to the nature and gravity of the deed, as long as the deed is not circumscribed, obviously its nature or gravity cannot be determined in order to establish the applicable complementary sanction.

In conclusion, the Court found that, since the provisions of the law subject to constitutional review impose a general obligation to comply with an indefinite number of rules, with identifiable difficulty, and establish sanctions for offenses, without

[13] See the concurrent opinion formulated by two judges of the Constitutional Court.

[14] For example, Decision no. 51 of 16 February 2016, published in the Official Gazette of Romania, Part I, no. 190 of 14 March 2016, Decision no. 405 of 15 June 2016, published in the Official Gazette of Romania, Part I, no. 517 of July 8, 2016.

[15] For example, Judgment of 15 November 1996 in *Cantoni v. France*, paragraph 29; Judgment of 12 February 2008 in *Kafkaris v. Cyprus*, paragraph 140; Judgment of 21 October 2013 in *Del Rio Prada v. Spain*, paragraphs 78, 79 and 91.

incriminating concrete facts, it violates the principles of legality and proportionality. The Court has found that art. 28 of the Government Emergency Ordinance no. 1/1999, characterized by a deficient legislative technique, do not meet the requirements of clarity, precision and predictability and is thus incompatible with the fundamental principle regarding the observance of the Constitution, its supremacy and the laws, provided by art. 1 par. (5) of the Constitution, as well as with the principle of proportional restriction of fundamental rights and freedoms, provided by art. 53 par. (2) of the Constitution.

The imprecision of the analyzed text of law affects, consequently, the constitutional guarantees that characterize the right to a fair trial, enshrined in art. 21 par. (3) of the Constitution, including its component regarding the fundamental right to defence, provided by art. 24 of the Constitution.

2.2. Issue of constitutionality concerning the affecting of some rights and fundamental freedoms by adopting a Government emergency ordinance

Ombudsman alleged the violation of art. 115 par. (6) of the Constitution, according to which "Emergency Ordinances […] may not affect the regime of fundamental state institutions, rights, freedoms and duties provided by the Constitution", arguing that the Government Emergency Ordinance no. 34/2020 which amends the Emergency Government Ordinance no. 1/1999 on the state of siege and the state of emergency, by the manner of evasive and general regulation of contraventions and of the applicable sanctions, by suspending the application of legal norms regarding decision-making transparency and social dialogue during the state of siege and the state of emergency affect fundamental rights, such as the right to private property, the right to work and social protection of labour and the right to information. The Ombudsman stressed that the premise of any regulation, even during a state of emergency, must be the rule of law, a principle that enshrines a series of guarantees to ensure respect for the rights and freedoms of citizens, and the inclusion of public authorities in the frame of law.

Analyzing these criticisms, the Constitutional Court admitted the exception of unconstitutionality and found that the Government Emergency Ordinance no. 34/2020 is unconstitutional, as a whole[16].

The Court held that the Emergency Government Ordinance no. 34/2020 modifies the legal regime of the state of siege and of the state of emergency under the aspect of contravention liability in case of non-compliance or immediate non-application of the measures established in the Government Emergency Ordinance no. 1/1999, introducing complementary contravention sanctions, such as the confiscation of the goods intended, used or resulting from the contravention and the temporary suspension of the activity. Taking into considerations the legal nature of administrative sanctions, it turns out that they affect the fundamental right to property, as well as the economic freedom.

At the same time, the suspension of legal norms on transparency in decision making and social dialogue during the emergency state affect fundamental rights such as the right to information, the right to work and to social protection of labour, as well as the regime of a fundamental institution of the state (Economic and Social Council). In these circumstances, the Court found that Government Emergency Ordinance no. 34/2020 is unconstitutional, as a whole, as it was adopted in violation of the constitutional provisions contained in art. 115 par. (6).

2.3. Analysis of the constitutionality of the legal provisions regarding the competence of the President of Romania in the establishment of the state of emergency

Ombudsman invoked also the exception of unconstitutionality of Emergency Government Ordinance no. 1/1999, arguing that its legal provisions allow Romanian President to legislate in areas where the Constitution requires the Parliament or Government intervention. The Ombudsman claimed that in applying the legal criticized provisions, by the Decree of the President of Romania no. 195/2020 on the establishment of the state of emergency on the territory of Romania and by Decree no. 240/2020 on the extension of the state of emergency on the territory of Romania were temporarily restricted, expressly, but also implicitly, a series of rights: the right to free movement, the right to work, the right to education, free access to justice, the right to strike, the right to intimate, family and private life, freedom of assembly, the right to free movement, economic freedom.

Analyzing these criticisms, the Constitutional Court rejected the exception of unconstitutionality and found that the provisions of the Government Emergency Ordinance no. 1/1999 are constitutional in relation to the criticisms made[17].

Court held essentially that Decree of the President of Romania establishing the state of emergency is an administrative normative act, setting out the concrete measures to be taken and fundamental rights and freedoms whose exercise will be restricted. This act is issued under the condition of being approved by a decision of the Parliament, the non-fulfilment of the condition entailing the immediate revocation of the decree and the cessation of the applicability of the ordered measures. The President's administrative act concerns a relationship with Parliament and is exempt from judicial review by administrative litigation, but may be subject to constitutional review by the Constitutional Court, whether or not Parliament approves the state of emergency.

Court observed that the Emergency Government Ordinance no. 1/1999 rigorously establishes the limits

[16] See Decision no. 152 of 6 May 2020, cited above.
[17] See Decision no. 152 of 6 May 2020, cited above.

within which the President can act, and there are no equivocal provisions regarding the character of an administrative act for the execution of the law by the President's decree.

The restraint of certain rights is not done by presidential decree, the provisions of art. 14 lit. d) of the Government Emergency Ordinance no. 1/1999 constituting only the norm by which the primary legislator empowers the administrative authority (the President of Romania) to order the execution of the law, respectively of the provisions of art. 4 of the same normative act which expressly provides for the possibility of restricting the exercise of rights. Acting within the limits of his legal powers, the President identified the rights and freedoms whose exercise was to be restricted (free movement, right to privacy, family and private life, inviolability of home, right to education, freedom of assembly, right to private property, right to strike, economic freedom).

The Court also found that no legal provision in Government Emergency Ordinance no. 1/1999, does not entitle the President to adopt norms with the rank of law, so that the Constitutional Court did not hold the violation of the invoked constitutional norms.

Also Court said that accepting the state of emergency, the Romanian Parliament was required to verify the fulfilment of constitutional and legal conditions that presidential decree must comply with.

Regarding the criticism of unconstitutionality in relation to art. 115 par. (6) of the Constitution, in terms of affecting certain fundamental rights, the Court held that the Government Emergency Ordinance no. 1/1999, by its very incidence hypothesis - crisis situations that impose exceptional measures that are instituted in cases determined by the appearance of serious dangers to the defence of the country and national security, of constitutional democracy or to prevent, limit or eliminate the consequences of disasters - it is aimed at restricting the exercise of certain fundamental rights or freedoms. Therefore, a normative act with such an object of regulation affects both the fundamental rights and freedoms of the citizens, as well as the fundamental institutions of the state, falling within the scope of the interdiction provided by art. 115 par. (6) of the Constitution. Therefore, the legal regime of the state of siege and the state of emergency, in the current constitutional framework, can be regulated only by a law, as a formal act of the Parliament, adopted in compliance with the provisions of art. 73 par. (3) lit. g) of the Constitution, in the regime of organic law.

At the same time, the Court noted that Government Emergency Ordinance no. 1/1999 was adopted and entered into force prior to the amendment of the Romanian Constitution in 2003, and the provisions of art. 115 par. (6) invoked as being violated were introduced by the Law on the revision of the Romanian Constitution no. 429/2003, published in the Official Gazette of Romania, Part I, no. 758 of October 29, 2003. Therefore, at the date of adoption of the criticized normative act, the constitutional norm did not limit the legislative prerogative of the Government to affect the regime of fundamental state institutions or the rights and freedoms provided by the Constitution, so that Government Emergency Ordinance no. 1/1999 was considered to be adopted in compliance with the constitutional framework in force at that time , retaining its constitutional character.

2.4. Analysis of the constitutionality of the establishment of the state of alert in relation to the right of free access to justice and the right of person injured by a public authority

The issue of establishing the state of alert was submitted to the constitutionality control on the occasion of solving the exception of unconstitutionality[18] of the provisions of art. 4 par. (3) and (4), as well as of art. 65 lit. s) and ş), of art. 66 lit. a), b) and c) regarding the references to art. 65 lit. s), ş) and t) and of art. 67 par. (2) lit. b) regarding the references to art. 65 lit. s), ş) and t) of Law no. 55/2020 on some measures to prevent and combat the effects of the COVID-19 pandemic.

The Ombudsman invoked the violation of the constitutional provisions contained in art. 1 par. (4) and par. (5) regarding the principle of separation and balance of powers in the state and the quality of the law, art. 21 on free access to justice, art. 52 regarding the right of the person injured by a public authority, art. 108 regarding the acts of the Government and in art. 126 par. (6) regarding the courts , claiming that the provisions of art. 4 par. (3) and (4) of Law no. 55/2020 are unconstitutional because they allow an intervention of the Parliament on the Government's decision to establish the state of alert and exclude this decision from the scope of administrative acts subject to judicial control.

Regarding the provisions of art. 65 lit. s) and ş), of art. 66 lit. a), b) and c) and of art. 67 para. (2) lit. b) of Law no. 55/2020, the Ombudsman claimed that they lack clarity and predictability, as the material object of the contravention is uncertain and ambiguous, due to the reference to a legal norm that does not exist in the active substance of the legislation , contrary the constitutional provisions of art. 1 par. (5) regarding the quality of the law.

By Decision no. 457 of June 25, 2020 , the Constitutional Court admitted the exception of unconstitutionality raised directly by the People's Advocate and found that the provisions of art. 4 par. (3) and (4) of Law no. 55/2020 are unconstitutional[19].

[18] The object of the exception of unconstitutionality is the provisions of art. 4 par. (3) and (4), of art. 65 letters s) and ş), of art. 66 lit. a), b) and c) and of art. 67 para. (2) lit. b) of Law no. 55/2020 on some measures to prevent and combat the effects of the COVID-19 pandemic, published in the Official Gazette of Romania, Part I, no. 396 of May 15, 2020.

[19] Regarding the provisions of art. 65 lit. s) and ş), of art. 66 lit. a), b) and c) regarding the references to art. 65 lit. s), ş) and t) and of art. 67 para. (2) lit. b) regarding the references to art. 65 lit. s), ş) and t) of Law no. 55/2020 ,the Court found that the provisions governing in

The Court held that the provisions of art. 4 par. (1) of Law no. 55/2020 set up the competence of the Government to establish, by decision, the state of alert. The concept of alert state is defined in art. 2 of the same law, by which is meant "*the response to an emergency situation of special magnitude and intensity, determined by one or more types of risk, consisting of a set of temporary measures, proportional to the level of severity manifested or forecast and necessary for the prevention and removal of imminent threats to life, health, the environment, important material and cultural values or property*."

According to art. 4 par. (2) of Law no. 55/2020 , "The state of alert is established on the entire territory of the country or only on the territory of some administrative-territorial units, as the case may be." For the situation in which the state of alert is established on at least half of the administrative-territorial units on the territory of the country, the legislator provided the rule according to which the measure established by Government decision it is subject to the approval of Parliament, which may approve it in full or with amendments. Thus, the "approval in full or with modifications" presupposes the intervention of the Parliament on the Government's decision to establish the state of alert. Thus, a new institution appears configured through the criticized legal texts, namely that of the Government decision approved / modified by the Parliament, an institution created probably by "analogy" with the institution of the decree establishing the state of siege or state of emergency , which benefits of constitutional consecration and express constitutional rules.

Instead, the institution of the state of alert is an exclusive creation of the legislator. This institution must comply - pursuant to art. 1 par. (5) of the Constitution which enshrines the observance of the Constitution and its supremacy - the constitutional framework of reference, respectively, in this case, the constitutional regime that governs the relations between the Parliament and the Government and their acts .

But, by "approval in full or with modifications" on the Government decision on the state of alert, Parliament combines the legislative and executive functions, contrary to the principle of separation and balance of powers enshrined in art. 1 par. (4) of the Constitution . At the same time, a confusing legal regime of the Government decisions is created , such as to raise the issue of their exemption from judicial control, with the consequence of violating the provisions of art. 21 and art. 52 of the Constitution , which enshrines the free access to justice and the right of the injured person by a public authority.

Hence, the Court held that the formulated criticisms are well-founded, with the consequence of the unconstitutionality of art. 4 para. (3) and (4) of Law no. 55/2020.

2.5. Analysis of the constitutionality regarding the Minister of Health competence on the establishment by its order, the prevention and management of emergencies caused by epidemics and transmissible diseases, treatment or hospitalization and to decide the measure of quarantine in relation to individual freedom, right to free movement and the right to intimate, family and private life

The issues on the Minister of Health competence to establish by its order the measures on prevention and management of emergencies caused by epidemics and communicable diseases for which declaration, treatment or hospitalization are required and the establishment of quarantine were subject to constitutional review with the occasion of solving the exception of unconstitutionality[20] of the provisions of art. 25 par. (2) of Law no. 95/2006 on the reform in the field of health and of art. 8 par. (1) of the Government Emergency Ordinance no. 11/2020 on emergency medical stocks, as well as some measures related to the establishment of quarantine.

The Ombudsman claimed that the criticized legal provisions infringed the provisions of the Constitution contained in : art. 1 par. (5) regarding the obligation to respect the Constitution, its supremacy and the laws, art. 23 par. (1) regarding the inviolable character of the individual freedom and of the security of the person, art. 25 on free movement, art. 26 regarding intimate, family and private life, art. 53 regarding the restriction of the exercise of some fundamental rights or freedoms and art. 115 para. (6) regarding the interdiction to affect by emergency ordinances the rights and freedoms provided by the Constitution, as well as art. 5 of the Convention for the Protection of Human Rights and Fundamental Freedoms, on the right to liberty and security of person.

The Ombudsman claimed that the provisions of art. 25 par. (2) of Law no. 95/2006 and those of art. 8 par. (1) of the Government Emergency Ordinance no. 11/2020 are unconstitutional because they assign the power of an administrative authority, the minister of health, to set the mandatory quarantine and hospitalization to prevent the spread of contagious diseases, which involve measures restricting fundamental rights without being established in legislation the conditions, the procedure and the limits within which the public administration authorities can act in the sense of restricting these rights, respectively

contravention area proved lack of accessibility, clarity, precision and predictability, being contrary to art. 1 para. (5) of the Constitution which enshrines the principle of legality, the component regarding the quality of the law.

[20] The object of the exception of unconstitutionality is art. 25 para. (2) of Law no. 95/2006 on health care reform, republished in the Official Gazette of Romania, Part I, no. 652 of August 28, 2015, and art. 8 para. (1) of the Government Emergency Ordinance no. 11/2020 on medical emergency stocks, as well as some measures related to the establishment of quarantine, published in the Official Gazette of Romania, Part I, no. 102 of February 11, 2020.

the guarantees that protect the citizens from a possible illegal, discretionary or abusive application of these measures.

By Decision no. 458 of June 25, 2020, with unanimous votes, regarding the provisions of art. 25 par. (2) the first sentence of Law no. 95/2006 and of art. 8 par. (1) of the Government Emergency Ordinance no. 11/2020 , and with a majority of votes[21], regarding the provisions of art. 25 par. (2) the second thesis of Law no. 95/2006 , the Constitutional Court admitted the exception of unconstitutionality and found that the provisions of art. 25 par. (2) the second thesis of Law no. 95/2006 and of art. 8 par. (1) of the Government Emergency Ordinance no. 11/2020 are unconstitutional. Also, the Constitutional Court rejected, as unfounded, the exception of unconstitutionality and found that the provisions of art. 25 par. (2) the first sentence of Law no. no. 95/2006 are constitutional in relation to the formulated criticisms.

Thus, the Court held that art. 25 par. (2) of Law no. 95/2006 obviously aims to face critical situations, which call firm, coherent and adequate interventions for the defence of public health, which may also involve restrictions on the exercise of certain rights or fundamental freedoms.

The art. 25 par. (2) the first sentence of Law no. 95/2006 , which enshrines the competence of the Minister of Health to issue orders in order to establish measures for the prevention and management of emergencies generated by epidemics, is not contrary to the provisions of the Constitution, but is an expression of the role of public administration to ensure law enforcement and to satisfy the general interest of society - the protection of public health. An eventual exceeding of the constitutional and legal framework in which the Minister of Health acts in application of the analyzed text of law may be subject to the control of the administrative contentious courts, not representing an aspect that belongs to the control of the Constitutional Court.

Regarding art. 25 par. (2) the second thesis of Law no. 95/2006 , the Court noted that Health Minister has the power to determine diseases for which declaration, treatment or hospitalization are required. As the regulation does not establish the criteria on the basis of which the Minister decides in the sense indicated above, it appears that he enjoys, in reality, the freedom to establish the conditions under which, in the case of certain communicable diseases, the declaration, treatment or compulsory hospitalization are required. The provisions of art. 25 par. (2) the second thesis of Law no. 95/2006 expressly refers to the measures regarding the obligation of the persons who have been diagnosed with some communicable diseases to declare this diagnosis, to follow treatment or to be hospitalized, even without their consent. This text of the law is the only regulatory framework for these measures and, consequently, the only ground for primary legislation under which the Minister can issue orders to oblige citizens to declare, receive treatment or hospitalize if they have a transmissible disease. The provisions of art. 25 par. (2) the second thesis of Law no. 95/2006 , having a incomplete character, entrust the Minister of Health with the fulfilment of the obvious legislative omissions in the regulated matter, by issuing orders.

Recalling its jurisprudence, which stated the principle that any law must meet certain qualitative conditions, among them the predictability[22], the Court held that the task of the minister is to complete the regulation regarding the conditions in which the persons with communicable diseases are obliged to declare, to undergo treatment or to be hospitalized, as well as the freedom to modify at any time and without respecting certain limits, the provisions of art. 25 par. (2) the second thesis of Law no. 95/2006 acquire an unpredictable, uncertain and difficult to anticipate character , being contrary to the provisions of art. 1 par. (5) of the Constitution , from which derive the conditions regarding the quality of the legal norm.

However, the effects of the found unconstitutionality issues appear even more significant if it is taken into account that the compulsory hospitalization of persons with communicable diseases involve measures that infringe fundamental rights and freedoms (individual freedom, free access to justice, the right to free movement.

In its analysis, the Court started from the regulation of individual freedom through the provisions of art. 23 of the Constitution, also retaining the provision in this matter from international legal acts[23] and aspects of the case law of the European Court of Human Rights[24].

Court held that the legal detention of a person liable to transmit a contagious disease is a deprivation of liberty that can be accepted in a society to ensure public health and safety, but is only allowed with the conditions and procedure established by law, being excluded arbitrariness. Also, any person must enjoy the possibility of challenging in court the measure of social medical detention in a short time, so that, in case of finding the illegality of the ordered measure, the person can be released.

[21] See the separate opinion formulated by one of the judges of the Constitutional Court.

[22] See, to that effect, Decision no. 903 of July 6, 2010, published in the Official Gazette of Romania, Part I, no. 584 of August 17, 2010 or Decision no. 447 of January 29, 2013, published in the Official Gazette of Romania, Part I, no. 674 of November 1, 2013.

[23] Article 3 of the Universal Declaration of Human Rights: "*Every human being has the right to life, liberty and security of person*" ; Article 9, paragraph 1, of the International Covenant on Civil and Political Rights : "*Every individual has the right to to the liberty and security of his person. No one shall be subjected to arbitrary arrest or detention. No one shall be deprived of his liberty except for legal reasons and in accordance with the procedure laid down by law.* "; Article 5 of the Convention for the Defense of human rights and fundamental freedoms regarding the right to liberty and security.

[24] See Judgment of 25 January 2005 in *Enhorn v. Sweden* , Judgment of 8 January 2009 in *Kuimov v. Russia* , Decision of 7 May 2013 in *Koufaki and Adedy v. Greece,* or Judgment of 20 March 2018 in *Mehmet Hasan Altan v. Turkey.*

Analyzing the domestic legislation regulating the measure of involuntary hospitalization[25], the Court noted that provisions of art. 25 par. (2) the second thesis of Law no. 95/2006 , referred to a hypothesis that the legal texts mentioned above do not cover, respectively the one in which the hospitalization can be ordered against the will of the person in order to prevent the spread of a communicable disease. However, the provisions of Law no. 95/2006 are not accompanied by safeguards appropriate to you and, through this legislative omission, violated the constitutional provisions of art. 23 par. (1), art. 53 and art. 20, by reference to the provisions of art. 5 paragraph 1 letter e) and paragraphs 4 and 5 of the Convention for the Protection of Human Rights and Fundamental Freedoms and of art. 9 paragraph 1 of the International Covenant on Civil and Political Rights.

The mere mention of a measure of deprivation of liberty, such as compulsory hospitalization to prevent the spread of transmissible diseases, cannot, however, be regarded as sufficient to satisfy the condition of legality. Only the law, not the subsequently acts, must provide the reasons and conditions under which such a measure may be ordered, the person's right to appeal against the act under which the measure was taken and ensure safeguards for effective access to justice. The legislator must also keep in mind that the provisions on compulsory hospitalization are the last option that the authorities can use to achieve the goal of preventing the spread of a transmissible disease, so it is necessary to regulate other measures of lower severity to be applied, if effective. The legislature should not ignore the impact that compulsory hospitalization can have on people in care or in the care of the person admitted.

The hospitalisation to prevent the spread of communicable diseases involves the restriction of other fundamental rights such as the right to free movement and, in some cases, the right to intimate, family and private life, enshrined in art. 25 and 26 of the Constitution and therefore, it is necessary to comply with the constitutional requirements of art. 53 regarding the restriction of the exercise of certain rights or freedoms.

Regarding the provisions of art. 8 para. (1) of the Government Emergency Ordinance no. 11/2020, the Court addressed a similar argument and noted that they provide, essentially, the quarantine and competence of the Minister of Health on this measure, representing the only regulatory primary legislation on establishing quarantine measure. Thus, the legislator left it to this administrative authority to establish the types of quarantine, the conditions for the establishment and termination of the measure, ignoring the need to regulate guarantees for the observance of the fundamental rights of the persons to whom this measure was applied. The regulation is therefore lacking in clarity and predictability, so that a person cannot reasonably anticipate the concrete manner and extent of the restrictive measures of rights. Therefore, the provisions of art. 8 par. (1) of the Government Emergency Ordinance no. 11/2020 do not meet the conditions regarding the quality of the normative acts deriving from the constitutional provisions of art. 1 par. (5).

The unconstitutional character of the norm appears all the more obvious since, similar to the obligatory hospitalization to prevent the spread of a transmissible disease, quarantine involve, depending on the form of the measure, the restriction, if not the deprivation of liberty of the person. Therefore, it is necessary to establish by law, the conditions for the establishment of quarantine, the forms that this measure may take, and its procedure, so as to represent a legal framework flexible for the appropriate intervention of the administrative authorities. It is also imperative to ensure an effective right of access to justice, especially when quarantine acquires all the characteristics of a deprivation of liberty.

Court also stated that "in exceptional circumstances, such as the one determined by spreading virus infection COVID-19, the establishing of energetic, prompt and appropriate measures is, in fact, a response of authorities to the obligations set forth in art. 34 par. (2) of the Constitution , according to which "the *State is obliged to take measures to ensure hygiene and public health* ". Also, both compulsory hospitalization in order to prevent the spread of transmissible diseases and the quarantine measure are restrictions on the exercise of fundamental rights and freedoms that can be justified given the reasons for the need to ensure public safety and health. However, the measures in question have severe effects on the person rights and freedoms and therefore the relevant regulations must strictly comply with all constitutional requirements. The exceptional, unpredictable nature of a situation cannot be a justification for violating the rule of law, legal and constitutional provisions regarding the competence of public authorities or those regarding the conditions under which restrictions may be imposed on the exercise of fundamental rights and freedoms. National authorities - especially the central and local authorities - are best placed to identify and establish the set of actions needed for appropriate intervention at each stage of the pandemic, but the measures can only be based on a primary legal framework, which is subject to the constitutional and international provisions regarding the restriction of the exercise of certain rights or freedoms. Given that the crisis situation generated by a pandemic is the inevitable premise of such restrictions, national legislation must be accompanied by clear and effective safeguards against any abuse or discretionary or illegal act"

[25] See for example, art. 108 letter b), art. 109 para. (2) and art. 110 Criminal Code, art. 184 para. (5), art. 247 and 248 of the Code of Criminal Procedure , Law on mental health and protection of persons with mental disorders no. 487/2002 , republished in the Official Gazette of Romania, Part I, no. 652 of September 13, 2012.

2.6. Analysis on the constitutionality measure of isolation in a sanitary unit or in an alternative location attached to the sanitary unit in relation to access to justice and individual freedom

The regulation of the measure of isolation in a sanitary unit or in an alternative location attached to the sanitary unit was subject to the constitutionality control on the occasion of solving the exception of unconstitutionality[26] of the provisions of art. 8 par. (3) - (9) and of art. 19 of Law no. 136/2020 on the establishment of measures in the field of public health in situations of epidemiological and biological risk.,

The Ombudsman claimed that the criticized legal texts infringed the constitutional provisions of art. 147 par. (4) regarding the effects of the decisions of the Constitutional Court, with the consequence of affecting art. 21 and art. 23 on the free access to justice and individual liberty, as well as art. 1 par. (5) on the obligation to respect the Constitution , its supremacy and the laws.

The Ombudsman argued, in essence, that the legislative solution regarding isolation in a health unit or in an alternative location attached to the health unit is constitutional, only insofar as this type of isolation is required as a last resort measure, after all other measures, of a lower severity, were exhausted. The solitary confinement in a health unit or at an alternative location attached to the health unit, established *ope legis* , without regulating the possibility of doctors, the public health directorate and judges to order the application of a less severe form of isolation (isolation at home) proved the non-observance by the legislator of the Constitutional Court Decision no. 458 of June 25, 2020 and the violation of free access to justice since the judge is limited to solving the action for annulment of the decision regarding the measure of isolation or extension of isolation in health units ordered by the public health directorate. Another vice of unconstitutionality raised by the Ombudsman was about the lack of provisions on competent authorities with enforcement of the measure of isolation in a health facility when the contagious person opposes the measure.

By Decision no. 751 of October 20, 2020 , with unanimous votes, regarding the provisions of art. 8 par. (3) - (9) and of art. 19 par. (2) - (6) of Law no. 136/2020 and with a majority of votes, regarding the provisions of art. 19 par. (1) of the same law, the Constitutional Court rejected as unfounded the exception of unconstitutionality and found that the provisions of art. 8 par. (3) - (9), with reference to the phrase "isolation in a sanitary unit or to an alternative location attached to the sanitary unit", and of art. 19 of Law no. 136/2020 are constitutional in relation to the criticisms made.

The Court held, in essence, that the provisions of art. 8 par. (3) - (9) of Law no. 136/2020 regulates the conditions under which the isolation of persons in situations of epidemiological and biological risk may be ordered.

The provisions of Law no. 136/2020 establish the standards that the authorities and the persons involved in the decision-making process regarding the disposition and application of the isolation measure must respect so as to create a correct balance between the need to prevent the spread of a contagious infectious disease. imminent community transmission and the freedom of individuals. According to the law, the need to ensure a correct balance between the general interest of public health protection and the imperative to respect the person's freedom, as well as the proportionality of the isolation measure with the considered situation are established as mandatory benchmarks when ordering the isolation of persons.

As it appears from the content of art. 8 of Law no. 136/2020 , there are two types of isolation : preventive isolation of the person for at least 48 hours, for the purpose of clinical examinations, laboratory and biological evaluations until receiving the results thereof and the extension of it the measure of isolation in a health care facility or in an alternative location attached to the health unit or, as the case may be, at the person's home or at the location declared by him.

According to the law, the isolation measure ceases on the date of confirmation of the person as cured based on clinical and para clinical examinations or on the recommendation of the doctor who finds that the risk of transmitting the disease no longer exists. Also, the isolation ceases as a result of the finding of illegality of the measure by the court.

Court noted that the measure of preventive isolation of a sick person with suggestive signs and symptoms specific to the case definition or of a person carrying the highly pathogenic agent, even if he does not show suggestive signs and symptoms, for a maximum of 48 hours, in a health unit or a another location attached to the health unit is an adequate and proportionate measure with the purpose pursued by the legislator, namely to ensure the medical examination of the person and to guarantee, at the same time, the protection of public health and the protection of the person's health. The legislator has the freedom to establish the concrete measures to ensure the achievement of the objectives shown above, being essential the observance of their proportional character.

The modality of application of the measures provided by Law no. 136/2020 is made by order of the Minister of Health, this being the authority which, depending on the concrete situation of epidemiological and biological risk, assesses the most appropriate measures necessary to be applied in order to prevent the spread of infectious diseases. In elaborating this decision, the Minister of Health will have to

[26] The object of the exception of unconstitutionality is constituted by the provisions of art. 8 para. (3) - (9), with reference to the phrase "isolation in a sanitary unit or to an alternative location attached to the sanitary unit", and of art. 19 of Law no. 136/2020 on the establishment of measures in the field of public health in situations of epidemiological and biological risk, published in the Official Gazette of Romania, Part I, no. 634 of July 18, 2020.

circumscribe all the guarantees that Law no. 136/2020 regulates them in order to respect the fundamental rights and freedoms of persons, so that all measures are proportionate to the situation that determined them, limited in time to it and applied in a non-discriminatory manner.

Therefore, Law no. 136/2020 enshrines a set of measures that can be instituted in situations of epidemiological and biological risk. However, the application of these measures is not done directly, based on the legal provisions, but in a mediated way, by order of the Minister of Health, ensuring at the same time a balance between the public interest and the imperative of respecting the fundamental rights of persons. Equally, the obligation to ensure fairness and proportionality of the measure isolation lies doctor examining the state of the sick person and the test results and will assess and recommend complicated those measures which are best suited his situation fits within the limits set by the Minister of Health. The same obligation belongs to the health directorates, which analyze the measure recommended by the doctor, and may mention or reject it.

Hence, the task of ensuring a gradual application of the measure of isolation, so that the restriction of the exercise of fundamental rights and freedoms of the person is achieved only to the extent strictly necessary to prevent the spread of an infectious disease belongs to several institutional actors who, given both data on the existence and the evolution of an epidemiological and biological risk situation and the risks it presents for public health, but also the concrete situation of the examined patient, will determine the necessity, place and duration for which this measure can be ordered.

The hypothesis that, in certain extraordinary circumstances, the Minister of Health may consider that the most appropriate measure to prevent the spread of an infectious disease can only be to isolate infected persons in health facilities or in alternative locations attached to them cannot be ruled out. This hypothesis does not contradict *per se* those established by the Constitutional Court by Decision no. 458 of 25 June 2020 as long as this measure is ordered for a limited time, in a non-discriminatory manner and in proportion to the factual situation that determines it, aims to prevent the spread of an infectious disease, dangerous to human safety and public health and is established to protect the public interest and do not create an imbalance between the need to protect public health and the imperative to respect the person's freedom.

In order to guarantee the observance of all these conditions, the provisions of art. 15 par. (4) of Law no. 136/2020 provide for the possibility of challenging in court, by any interested person, the administrative acts of a normative nature regarding the establishment, modification or termination of the measures provided by law. Also, pursuant to art. 17 of Law no. 136/2020**,** the person against whom the measure of isolation in a health unit or a location attached to the health unit was ordered has the possibility to challenge in court the individual administrative act by which this measure was instituted.

Thus , Law no. 136/2020 ensures the guarantees of exercising the right of access to justice, so that, as provided by art. 21 par. (1) of the Constitution , the person concerned " *may apply to the judiciary for the defence of his rights, freedoms and legitimate interests* ". The fact that the provisions of the criticized law do not provide for the possibility for the court to order another measure than the one ordered by the doctor or by the public health director cannot be considered as infringing the right of free access to justice or the right to defence, while the person concerned can obtain in court the solution of not applying an administrative measure that is disproportionate or illegal. In conclusion, the Court has appreciated that the provisions of art. 8 par. (3) - (9) of Law no. 136/2020 complied with the invoked constitutional provisions.

3. Conclusions

The observance of fundamental rights and freedoms, established as supreme values of the rule of law, requires therefore that the public authorities, in achieving essential purposes of their work, to act continuously within the constitutional and legal framework so that potential discretionary tendencies can be avoid or removed. In this way, "the rule of law ensures the supremacy of the Constitution , the correlation of laws and all normative acts with it, the existence of the principle of separation of public powers which must act within the law, namely within a law expressing the general will" and "enshrines a series of guarantees, including jurisdictional ones, to ensure the observance of the rights and freedoms of the citizens through the self-limitation of the state, respectively the inclusion of the public authorities in the coordinates of the law "[27].

Thus, the rule of law and the observance of fundamental rights and freedoms are constantly in a relationship of interdependence, not being conceivable the existence of one in the absence of the other, even in the situation generated by the COVID-19 pandemic.

The issue of respect for fundamental rights during the Covid-19 pandemic has also been a concern of the European Commission for Democracy through Law (Venice Commission), an advisory body to the Council of Europe, which in the documents issued during this period stressed the need to compliance with democracy, the rule of law and human rights in the context of the health crisis. Thus, in the Information Document of 7 April 2020 entitled "Respect for democracy, the rule of law and human rights in the context of the health crisis caused by COVID-19. A set of tools for Member

[27] See the Constitutional Court Decision no. 17 of January 21, 2015, published in the Official Gazette of Romania, Part I, no. 79 of January 30, 2015.

States", the Venice Commission noted that: the Governments face terrible challenges in seeking to protect its populations from the threat of COVID-19 virus. It is also understood that the normal functioning of the society cannot be maintained, in particular in view of the main protection measures needed to combat the virus, namely isolation. In addition, it is accepted that the measures taken will inevitably infringe on the rights and freedoms that are an integral and necessary part of a democratic society governed by the rule of law. The main social, political and legal challenge that our Member States will face will be their ability to respond effectively to this crisis, while ensuring that the measures taken will not undermine our special long-term interest in protecting the fundamental values of democracy, the rule of law and human rights in Europe". The Venice Commission also emphasized that: "Even in emergencies, the rule of law must prevail" (see point 2.1. *The principle of legality,* point 2. *Respect for the rule of law and democratic principles in situations emergency* in the information document referred to above).

The interaction between the Romanian Ombudsman and the Constitutional Court at the beginning of the pandemic COVID-19 resulted in confirming the constitutionality of some normative adopted during this time, thus validating the effort of the state authorities to respond effectively in front of the health crisis. The result of this interaction was also the removal from active legislative fund those provisions that violated the Constitution, while the Constitutional Court decisions created eloquent constitutional benchmarks for the primary and delegated legislator, allowing to legislate appropriate norms to combat the Covid-19 pandemic, while ensuring, in the conditions of deviation from the usual, the respect for fundamental rights and freedoms, without which it can not be conceived the existence of the rule of law.

From the analyzed perspective, it is useful to reiterate that for the proper functioning of the rule of law it is permanently necessary the cooperation between public authorities in the sphere of state powers, which should be manifested in the spirit of constitutional loyalty norms, loyal behaviour being an extension of the principle of separation and balance of powers[28]. As the Constitutional Court stated[29] "loyal collaboration presupposes, beyond the respect for the law, the mutual respect of the state authorities/institutions, as an expression of some assimilated, assumed and promoted constitutional values. Constitutional loyalty can therefore be characterized as a value-principle intrinsic to the Fundamental Law, while loyal collaboration between state authorities/institutions has a defining role in the implementation of the Constitution". Such a loyal cooperation is also materialized in the fair and adequate reception of the actions undertaken in good faith by all participants in the state life. Otherwise, the constitutional norms would be purely declaratory, which is an inadmissible situation for a state that shares the democratic values part of European public order, as foreshadowed by the European Convention on Human Rights and the Charter of Fundamental Rights of the European Union[30].

ENSURING AND GUARANTEEING THE PETITION RIGHT IN ROMANIA AND THE REPUBLIC OF MOLDOVA

Cătălin-Radu PAVEL*

Abstract

The aim of the present study is to analyze the ensuring and guaranteeing the petition right in Romania and Republic of Moldova as a consequence for ensuring of a good administration. The objectives of this study were to analyze the petition right as a fundamental guarantee and the correlation with ensuring of a good administration. In this research we have highlighted the importance of granting the petition right for the citizens and the contribution to the developing of a good administration of the state in the favor of the citizens.

Keywords: *petition right in Romania, petition right in the Republic of Moldova, Romanian Constitution of the Republic of Moldova, fundamental rights, guarantees rights, good administration.*

1. Introduction

This study is intended to analyse and identify how the petition right is ensured and guaranteed in Romania and the Republic of Moldova.

The structure of the study is the following: an analysis of some selective aspects of ensuring the petition right in Romania and some selective aspects regarding the guarantee of the petition right in the Republic of Moldova.

The studied matter is important because granting the right to petition as a fundamental right ensures the protection of citizens' manifestations of will in relation to public authorities and also in relation to other citizens' rights, freedoms and interests, and thus it ensures good administration of the state in favour of its citizens.

The present paper intended to answer to the studied matter by analysing the evolution of the petition right in Romania and in the Republic of Moldova and how it is secured and guaranteed, the constitutional provisions in force, as well as how good administration is ensured.

As regards the relation between this paper and the existing relevant literature, this paper approaches a topic which has been rather rarely analysed so far, namely securing and guaranteeing the right to petition in Romania and in the Republic of Moldova. Moreover, the author has drawn a correlation between granting this right-guarantee (in Romanian, 'drept garanție' – a right that is a guarantee) and ensuring good administration.

In the current context, I have considered that the aspects approached in this piece of research have some special importance having regard to societal tendencies towards ensuring good administration for the development of social sciences and of the relations between public institutions and citizens, thus achieving good administration of a state governed by the rule of law.

2. Selective aspects of ensuring the petition right in Romania

The petition right is part of the category of fundamental citizens' rights, freedoms and duties set out in the Constitution of Romania[1].

Therefore, the petition right was brought under regulation in Romania by Article 51 of the Constitution of Romania: "(1) Citizens have the right to address public authorities through petitions formulated only in the name of their signatories. (2) Legally established organisations have the right to address petitions exclusively in the name of the groups they represent. (3) The exercise of the right to petition is free of charge. (4) Public authorities have the obligation to answer petitions within the terms and under the conditions established by law."

The petition right has been guaranteed in the European Union, being stipulated by Article 44 of the Charter of Fundamental Rights of the European Union [2]: *"Any citizen of the Union and any natural or legal person residing or having its registered office in a Member State has the right to petition the European Parliament."*

The petition right, a fundamental right of the Romanian citizen, is a legal guarantee by its nature since it benefits, on one hand, from the systems granting the constitutional rule and, on the other, from the legal guarantee of a subjective right.

In legislative terms, the right to petition in Romania has been set out by the Government Decree

* PhD Candidate, Faculty of Law, International Free University of Moldova; Lawyer, Bucharest Bar Association (e-mail: radu.pavel@avocatpavel.ro).

[1] *Constitution of Romania*, republished, Official Gazette of Romania, Part I, no. 767 of 31 October 2003.

[2] The Charter of Fundamental Rights of the European Union was published in the Official Journal of the European Union, the edition in Romanian, C83/02/30 March 2010.

no. 27/2002[3] on the settlement of petitions, approved with amendments and additions by Law 233/2002. According to Article 2 of this regulatory document, "*a petition is understood as being a request, a complaint, a notification or a proposal formulated in writing, or by electronic mail, which a citizen or a legally established organisation may address to central and local public authorities and institutions, to decentralised public services of the ministries and of other central bodies, to national companies, to businesses of interest at county or local level, as well as to autonomous municipal companies, hereinafter called public authorities and institutions."*

Fundamental rights are essential rights for the Romanian citizens. Since fundamental rights and freedoms are supreme values guaranteed by the Constitution, they form a system of legal guarantees for Romanian citizens and for their dignity, values and way of life.

The petition right has the value of a right-guarantee (in Romanian, 'drept garanție' – a right that is a guarantee), representing a person's right to call for the involvement of the state through its administrative bodies anytime their intervention is required.

Good administration is, in my opinion, about how the state ensures good governance with regard to its citizens, where the citizens benefit from the legal protection of their fundamental rights, as well as the realization of rights that are guarantees, which ensure for citizens the realization of all fundamental rights in a state governed by the rule of law.

The petition right is a fundamental citizen's right which grants a right to demand and to make requests before the authorities of the state. Therefore, this right to demand, being an essential right, guarantees the existence and the observance of all other fundamental citizens' rights.

Therefore, several types of petitions have been defined and how they should be settled by public authorities, thus securing a citizen's right to address any authority and establishing in correlation also the obligation for the authorities to answer citizens' petitions within the legal term.

The petition right has also been characterised as "a citizens' right with tradition in the Romanian legal system, belonging to the category of rights that are guarantees, and being also a general legal guarantee for other rights and liberties."[4]

We regard to the guarantee of the petition right, professors Ioan Muraru and Elena Simina Tănăsescu stated that it is "a citizens' right with tradition in the Romanian legal system, belonging to the category of rights that are guarantees, and being also a general legal guarantee for other rights and liberties."[5]

Professors Ioan Muraru and Elena Simina Tănăsescu held that the petition right *"is considered as being a first generation right*".[6] They also mention that this fundamental right has been qualified in the doctrine as a *"right that is a guarantee"*[7].

Furthermore, professors Ioan Muraru and Elena Simina Tănăsescu held that through the petition right "citizens enter a direct relationship with the state authorities at their own initiative and have a possibility to solve both personal problems and matters of general interest."[8]

Professor Ioan Muraru has analysed the Romanian Constitutions, beginning with "Statutul dezvoltatoriu al Convenţiei de la Paris" (the Developing Status of the Paris Convention) of 7/19 August 1858 and until the 1991 Constitution of Romania, and identified therefore the petition right in its various forms until its current regulation in the 2003 Constitution of Romania.

The petition right has been acknowledged by professors I. Muraru and E.S. Tănăsescu as being *"a citizens' right with tradition in the Romanian legal system"*[9].

The Romanian doctrine held that "through the petition right, citizens enter a direct relationship with the state authorities at their own initiative and have a possibility to solve both personal problems and matters of general interest."[10]

The petition right has been qualified as "a right that is a guarantee, meaning a right by means of which, in fact, effective legal protection is secured for other rights and legitimate interests, at the same time with the protection of some form of citizens' manifestation."[11]

Professors Nicolae Pavel and Vasile Gionea held that the petition right is one of the *"main human rights (...) which is free of charge".*[12]

Professor Nicolae Pavel has defined and analysed citizens' fundamental rights and completed a comparative study on the identification of fundamental

rights, including the right to petition and the right of a person aggrieved by a public authority, in the reviewed Constitution of Romania of 2003, the Universal Declaration of Human Rights, the International Covenant on Civil and Political Rights, the International Covenant on Economic, Social and Cultural Rights, and in the Convention for the Protection of Human Rights and Fundamental Freedoms.

The petition right has been characterised as "a citizens' right with tradition in the Romanian legal system, belonging to the category of rights that are guarantees, and being also a general legal guarantee for other rights and liberties."[13]

Therefore, the petition right secures and guarantees the right of any citizen to petition and, correlatively, the obligation for the authorities to answer petitions within the terms and under the conditions set forth by organic law. Depending on the type of petition, the legislator defined various ways of settlement. Petitions may be formulated in several forms of applications, complaints, proposals or notifications. In the Constitution of Romania, the petition right is free of charge. Therefore, the petition right *ensures legal protection for citizens, for all their fundamental rights, in general*[14] and also contributes to ensuring good administration of the state, in particular.

The fundamental right to petition has been called in the doctrine *"a right that is a guarantee"* (in Romanian, 'drept garanţie' – a 'right-guarantee'), playing the role of a constitutional guarantee by means of which efficient legal protection is secured for citizens, as well as for other rights and their legitimate interests.

Pursuant to Article 51 of the Constitution of Romania, the petition right is granted to citizens and to legally established organisations, that formulate petitions only in the name of their signatories and exclusively on behalf of the groups they represent. The right to petition refers to *assuming responsibility by the petitioner* and *does not encourage anonymous petitions*.

The subjects of the petition right are "citizens individually or groups of citizens, irrespective of whether they are established ad hoc or organised in the forms provided by law".[15] Entitled people may be both natural and legal persons.

The responsibility assumed by signing the petition and the fact that petitions can only refer to issues concerning the petitioner reinforce the moral aspects of this constitutional provision.

With regard to the status of a foreigner who has not been granted the right of residence in Romania, the Constitutional Court of Romania held that *"with reference to the criticism concerning the breach of Article 47 (*Article 51 now – author's note*) of the Constitution, which governs the right to petition, the Court finds that the aforesaid constitutional provision is not applicable in the case, since it is concerned with individuals who are Romanian citizens.*"[16]

The petition right is guaranteed in the European Union by Article 44 of the Charter of Fundamental Rights of the European Union[17]: *"Any citizen of the Union and any natural or legal person residing or having its registered office in a Member State has the right to petition the European Parliament."*

In my opinion, the petition right is characterised by unicity with regard to its scope and the legal effects it generates. Through its effects, it guarantees all fundamental rights and freedoms of citizens.

It is also my opinion that, correlatively with citizens' right to petition in their name or on behalf of the legal organisations they represent, an obligation also subsists in the fundamental law for the state to answer – through its public authorities – the petitions that have been put forward.

The petition right guarantees the good administration of the state in favour of its citizens by granting the citizen's right to petition any public authority and through the correlative obligation of the notified authorities to provide an answer.

Professor I. Deleanu[18] stated about the petition right that "it has some special significance for the relations between a person and the public authorities, being not only a means to request them to fulfil the duties that fall on them, but also a means of control on their activity."

The opinion of professor T. Drăganu[19] on the petition right is that "citizens' petitions may tend to enforce not only rights, but also some simple personal interests. Consequently, even if a personal interest, not protected by the possibility sanctioned by law to request a third party to accomplish an action or to

[16] Decision of the Constitutional Court of Romania no. 151 of 17 April 2003 published in the Official Gazette of Romania, Part I no. 290 of 25 April 2003.

[17] The Charter of Fundamental Rights of the European Union was published in the Official Journal of the European Union, the edition in Romanian, C83/02/30 March 2010.

[18] I. Deleanu, *Instituții și proceduri constituționale – în dreptul român și în dreptul comparat* (*Constitutional Institutions and Proceedings in Romanian Law and in Comparative Law*), C.H. Beck, Bucharest, 2006, p. 529.

[19] T. Drăganu, Drept Constituțional și Instituții Politice – Tratat Elementar – Volumul I (Constitutional Law and Political Institutions – An Elementary Treaty), Lumina Tipo, Bucharest, 1997, p. 185.

refrain from it, is not a subjective right, that interest can still be protected through the right to petition."[20]

Also, professor T. Drăganu held that, in respect of the petition right, "it can be applied both in the political field, and in the economic, social and cultural one, which confers as a matter of fact its characteristic of social-political right."[21]

According to paragraph 4 of Article 51 of the Constitution of Romania, *"the exercise of the right to petition is free of charge"*, securing a free and unconditioned right for citizens to have access to public authorities. Equally, under paragraph 4 of the same article *"public authorities have the obligation to answer petitions within the terms and under the conditions established by law"*, the fundamental law ensuring the citizen's right to receive an answer to their request addressed to public authorities within the legal term.

The concerned public authorities have the obligation to answer a citizen who formulated a petition within 30 days from its registration at the latest, irrespective of whether the solution is favourable or unfavourable, according to Article 8 of the Government Decree no. 27/2002[22] on the settlement of petitions, approved with amendments and additions by Law 233/2002.

The Constitutional Court of Romania pronounced a decision to settle an exception of unconstitutionality concerning the fact that "*the object of the Government Decree no. 27/2002 is to regulate how citizens exercise their right to address petitions formulated in their name to public authorities and institutions, as well as how these petitions are settled, as an expression of the right to petition stipulated by Article 51 of the Constitution, determining the responsibilities of the public authorities and institutions to which the petitions are addressed, as well as the terms in which they have to settle the petitions, as provided for in paragraph (4) of the same article"*[23]

Pursuant to Article 2 of the regulatory document mentioned above, "a petition is understood as being a request, a complaint, a notification or a proposal formulated in writing, or by electronic mail, which a citizen or a legally established organisation may address to central and local public authorities and institutions, to decentralised public services of the ministries and of other central bodies, to national companies, to businesses of interest at county or local level, as well as to autonomous municipal companies, hereinafter called public authorities and institutions."

Therefore, several types of petitions have been defined and how they should be settled by public authorities, thus securing a citizen's right to address any authority and establishing correlatively also the obligation for the authorities to answer citizens' petitions within the legal term, which guarantees the good administration of their interests by public authorities.

In my opinion, citizens enjoy the petition right as a fundamental right, this being a subjective citizen's right, an essential right for the safeguard of fundamental rights and a legal guarantee for the citizen, ensuring and guaranteeing good administration of the state in favour of the citizen.

The subjective nature of the petition right gives prerogatives to citizens to benefit from its regulatory force, to expect some appropriate conduct from the passive subject, and if the passive subject fails in its duty, the citizens may resort to the coercive force of the state for the realisation and the safeguard of their right.

3. Selective aspects regarding the guarantee of the petition right in the Republic of Moldova

In the Republic of Moldova, the right to petition was set out by the Constitution of the Republic of Moldova[24] in Article 52, which provided that: "(1) Citizens have the right to address public authorities through petitions formulated only in the name of their signatories. (2) Legally established organisations have the right to address petitions exclusively in the name of the groups they represent."

With regard to Article 52 of the Constitution of the Republic of Moldova, i.e. the right of petition, we can see that this right is granted to citizens and legally established organisations.

The examination of anonymous petitions has been declared unconstitutional by the Constitutional Court of the Republic of Moldova: *"Citizens have the right to address public authorities with petitions formulated only in the name of their signatories (...) it is therefore clear that any petition is to be signed, so it must contain the identification data of the petitioner. The Court held that, through its express formulation, the constitutional text neither establishes, nor provides legal protection for a right to anonymous petitioning."*[25]

Professors B. Neagu, N. Osmochescu, A. Smochină, C. Gurin, I. Creangă, V. Popa, S. Cobăneanu, V. Zaporojan, S. Țurcan, V. Șterbeț, A.

[20] Ibidem.

[21] Ibidem.

[22] Government Decree no. 27/2002 on the settlement of petitions, approved with amendments and additions by Law 233/2002, published in the Official Gazette of Romania, Part I, no. 84 of 1 February 2002.

[23] Decision of the Constitutional Court of Romania no. 307 of 29 March 2007, published in the Official Gazette of Romania, Part I no. 279 of 26 April 2007.

[24] Constitution of the Republic of Moldova, published in the Official Gazette of the Republic of Moldova no. 1 on 12 August 1994.

[25] Judgment no. 25 of 17 September 2013 for the control of the constitutionality of some provisions referring to the examination of anonymous petitions, published in the Official Gazette of the Republic of Moldova no. 276-280/44 of 29 November 2013.

Armeanic, D. Pulbere, [26] held that: *"the petition right has an unquestionable tradition in the history of law (...) the concerned right has been known ever since the time of feudal Moldova, when those who were seeking justice were taking their grievances to the boyar, the High Steward, the Lord, etc. The petition right was brought under regulation in the Constitution of the Soviet Union, including in the Constitutions of the Union Republics, which took over its provisions. The 1978 Constitution of the Moldavian Socialist Soviet Republic stipulated in Article 47 that every citizen is entitled to address the bodies of the state and the community organisations with proposals concerning the improvement of their activities and to criticise the shortcomings of their work. People in positions of responsibility were obligated to examine the citizens' petitions and requests, to give answers and undertake the necessary measures. Oppression for criticism was prohibited and punished by law. However, in the circumstances of a totalitarian state, it was impossible to have petitions in connection with the exercise of political rights, the freedom of information and expression, the freedom of conscience, the respect for private and family life, the secrecy of correspondence, etc."*

Also, professors B. Neagu, N. Osmochescu, A. Smochină, C. Gurin, I. Creangă, V. Popa, S. Cobăneanu, V. Zaporojan, S. Țurcan, V. Șterbeț, A. Armeanic, D. Pulbere[27] held that "*Bacause it belongs to the category of rights that are guarantees, the petition right is also a general legal guarantee for other human rights and fundamental freedoms."*

Moreover, according to the doctrine professors B. Neagu, N. Osmochescu, A. Smochină, C. Gurin, I. Creangă, V. Popa, S. Cobăneanu, V. Zaporojan, S. Țurcan, V. Șterbeț, A. Armeanic, D. Pulbere, *"the Constitution of the Republic of Moldova does not expressly provide for an obligation for the public authorities to answer petitions, take measures in connection with their examination, and nor does it provide a term for their examination. The manner and the procedures applied are governed by the Petition Law (Articles 8-9, 12-14, 16, etc.)."*[28]

Professor Teodor Cârnaț held that the petition right "presents itself also as a guarantee of the effective exercise of all other rights, being a general legal guarantee."[29]

Professors Teodor Cârnaț and Marina Cârnaț mentioned about the petition right that "its exercise is a way of solving some personal problems or problems concerning a collective."[30]

Professor Ion Guceac held that the petition right is part of the category of "rights that are guarantees"[31], and this "suggests their significance of being constitutional guarantees".[32]

The petition right was brought under regulation in legislative terms with the provisions of Law 190-XIII of 19 July 1994 on petitioning, published in the Official Gazette of the Republic of Moldova no. 4/47 of 8 September 1994.

Law 190 on petitioning in the Republic of Moldova defined the petition as being "any request, complaint, notification addressed to the relevant bodies, including the preliminary application appealing against an administrative act or the failure to settle a request within the term provided by law"[33].

At the same time, the regulatory document also set out the procedure for protecting the citizen with regard to the petition right: *"(2) The preliminary application is addressed to the issuing body. In case that the issuing body has another hierarchically superior body, the preliminary application may be addressed, at the petitioner's choice, to the issuing body or to the hierarchically superior body. (3) The petitioner who is not satisfied with the answer received to the preliminary application or has not received an answer within the term provided for by the law is entitled to notify the competent administrative dispute court."*[34]

Petitions are examined by the authorities in the Republic of Moldova within the term of a month according to Article 8 paragraph 1 of the law above. Equally, pursuant to paragraph 2 of the same article, in some special cases, the term may be extended by a month and the petitioner is informed thereof.

Compared to the regulations studied before, we can see that "in the Republic of Moldova, there is no mention in the Constitution or in other laws that petitions are free of charge, in comparison with the rules of the petition right in the Constitution of Romania, and this fact may lead to petitioners being

[26] B. Neagu, N. Osmochescu, A. Smochină, C. Gurin, I. Creangă, V. Popa, S. Cobăneanu, V. Zaporojan, S. Țurcan, V. Șterbeț, A. Armeanic, D. [32] Ibidem.

[33] Article 4 paragraph (1) of Law 190-XIII of 19 July 1994 on petitioning, published in the Official Gazette of the Republic of Moldova no. 4/47 of 8 September 1994.

[34] Article 4 paragraphs (2) and (3) of Law 190-XIII of 19 July 1994 on petitioning, published in the Official Gazette of the Republic of Moldova no. 4/47 of 8 September 1994.

asked by the public authorities to pay post charges, clerical duties, travel costs etc."[35]

The petition right, being a fundamental right guaranteed by the Constitution of the Republic of Moldova, secures the citizens' legal protection and ensures good administration of the state.

4. Conclusions

The petition right is a fundamental citizen's right which grants a right to demand and to make requests before the authorities of the state. This right to demand, being an essential right, guarantees the existence and the observance of all other fundamental citizens' rights and ensures good administration of the state in favour of its citizens.

The petition right is part of the category of fundamental citizens' rights, liberties and duties provided for in the Constitution of Romania.

As regards the right to petition in the Constitution of the Republic of Moldova, it was held that this right is granted to citizens and to legally established organisations.

The petition right, as a fundamental right, both in Romania and in the Republic of Moldova, guarantees the citizen's civil liberties.

The petition right has the value of a right-guarantee, representing a person's right to call for the involvement of the state through its administrative bodies anytime their intervention is required.

The petition right is part of the category of rights-guarantees, which are rights that confer legal protection to the citizen and ensure good administration of the state in favour of its citizens. The petition right grants a citizen's right to address a public institution and to receive an answer within the legal term.

The fundamental right to petition has the role of a constitutional guarantee by means of which efficient legal protection is ensured for citizens and for their other rights and legitimate interests.

The subjects of the petition right are citizens individually or groups of citizens, irrespective of whether they are established ad hoc or organised in the forms provided by law. Entitled people may be both natural and legal persons.

Correlatively with citizens' right to petition in their name or on behalf of the legal organisations they represent, an obligation also subsists in the fundamental law for the state to answer – through its public authorities – the petitions that have been put forward.

Therefore, with the realisation of the petition right, this also contributes to ensuring good administration in favour of citizens, both in Romania and in the Republic of Moldova.

THE RIGHT TO EDUCATION OR THE RIGHT TO HEALTH - GOOD GOVERNANCE CAN CHOOSE BETWEEN THEM?

Oana ŞARAMET*

Abstract

Any human society will seek to educate its next generations, passing on to them its most precious values, thus it will ensure that this supreme values will be forwarded in the future. But anyway it will put at least the same price on the health of its members. Moreover, in any contemporary society in which democratic values, such as freedom and dignity of the human being, but also fundamental rights and freedoms are declared and guaranteed by the fundamental, constitutional law, the education and health of its members must be central elements of any government. Good governance must be individual-centered, it must aim every member of society concerned.

But when a society struggles to pass by a deep crisis, there is a risk of conserving its resources to use them only for what it needs to get out of that crisis. In our opinion, there is even more risk of doing so when that crisis is a public health crisis, such as the one from nowadays.

In such situations, we ask ourselves if at least the values mentioned above are protected, but also if and which of them should be guaranteed to the human being, perhaps more than ever in such periods. Indeed, any government will have to appreciate and decide, fully assuming the decision taken, how it will still be able to ensure good governance in such unfavourable conditions, ensuring and guaranteeing not only the right to health but also the right to education, among other fundamental rights and freedoms.

In this paper, we will search for answers to the above, as we will try to find out if there is a legitimate and moral possibility to give priority to one of the two rights, if we could use the principle of proportionality to answer this dilemma, but also if good governance, in special situations, can be realised by prioritizing one of these rights. In this paper, we will search for answers to the above, we will try to find out if there is a legitimate and moral possibility to give priority to one of the two rights, but also if we could use the principle of proportionality to answer this dilemma, and if good governance, in special situations, can be realised by prioritizing one of these rights.

Keywords: *fundamental right, health, education, proportionality, good governance.*

1. Introduction

Good governance, although not a modern concept has become a fashionable concept in recent years, being „a major ingredient in analyses of what's missing in countries struggling for economic and political development" [1].

Besides, the Commission on Global Governance in its report from 1995 has defined the governance as „the sum of the many ways individuals and institutions, public and private, manage their common affairs. It is a continuing process through which conflicting or diverse interests may be accommodated and co-operative action may be taken. It includes formal institutions and regimes empowered to enforce compliance, as well as informal arrangements that people and institutions either have agreed to or perceive to be in their interest"[2].

This is just one of the many definitions given to this concept, reinforced by the opinion that, in fact, „while good governance has gained prominence in the literature, there is little agreement on the essence of the concept"[3].

So whenever we discuss about good governance, whenever governements discuss about this concept, we should be able to identify measures decided by governments in the interest of all of us.

In our opinion, the effectiveness of veritable good governance should be all the more visible in times of crisis, as is the Covid-19 pandemic, a crisis we are still going through. The competence and ability of the political leaders to ensure a government that responds to the needs caused by such a crisis, will be able to be identified in the measures they take precisely to ensure not only a government, but good governance. Such good governance would also be able to provide a framework and climate as close as possible to the one familiar until then, to exercise of fundamental rights, such as the right to education and the right to health.

In a time of crisis, especially in a time of public health crisis, the exercise of fundamental rights and freedoms may be affected or even restricted by measures taken by the authorities to protect the population, within the limits set by constitutional

regulations such as those relating to the nature of exception of the restriction of the exercise of some fundamental rights or freedo In a time of crisis, especially in a time of public health crisis, the exercise of fundamental rights and freedoms may be affected or even restricted by measures taken by the public authorities to protect the population[4], within the limits set by constitutional regulations such as those relating to the exceptional character of the restriction on the exercise of certain rights or freedoms, provided by art. 53 of the Romanian Constitution.

In a time of profound public health crisis, such as the one generated by the current pandemic, there is no doubt that any government in a constitutional democracy will focus on taking those measures that will at least preserve the health of the population. This crisis, as well as the fundamental right to health, will be the ones that will be prioritized to the detriment of other aspects of our lives and other rights. When measures taken to protect the population and its health are concentrated in a short period of time, the impact on other rights and their exercise is not major. However, as the crisis continues, the impairment of other rights and of the exercise of these rights, such as the right to education, becomes more and more serious.

In this context, in this article, we will emphasize relevant aspects, in our opinion, of the concept of good governance, as well as of the right to education and the right to health, as they emerge from the literature, legislation, jurisprudence. Taking into account our own pedagogical experience from last year since the onset of this public health crisis, we will try to identify the causes that determine the governments to choose between exercising two fundamental rights, through the measures taken, possible solutions to avoid such a decision.

2. Good governance

The concept of good governance is tempting and tender at the same time.

„Good governance is a good idea”[5] because it provides a minimum framework with principles that should be followed by governments so that the governed ones can have an effective governance that meets their needs in a constitutional, legal, and practical framework where public institutions are „[f]air, judicious, transparent, accountable, participatory, responsive, well-managed, and efficient”[6].

Although it is a concept with multiple dimensions[7], reiterated and developed by the World Bank, through its 1992 report[8], good governance is not a new concept[9], as we already have mentioned, but once reiterated in the twentieth century XX, has become a necessity in any state governed by democratic principles or which tends to become so.

On the other hand, good governance is a concept that has not only been imposed in the public system, and which we will take into consideration in this article, but also the private one[10]. In fact, the development of this concept in the private environment is not accidental as long „[t]he initial debate over good governance was concerned less with improving the political leadership of democracy and integrating economic and social goals…..than with reversing decades of state-dominated economic and social development”[11].

Good governance is a good concept for states founded and developed on democratic principles, as well as for those who strive to be like those because it is also a complex concept that considers „multiparty elections, a judiciary and a parliament, which have been emphasised as the primary symbols of Western-style democracy”[12], but also „formidable: universal protection of human rights; non-discrimatory laws; efficient, impartial and rapid judicial processes;

[4] See the two presidential decrees regarding the establishment of the state of emergency on the Romanian territory, namely Decree no. 196 of 16.03.2020, published in the Official Gazette of Romania, Part I, no. 212 of 16.03.2020, and Decree no. 240 of 14.04.2020, published in the Official Gazette of Romania, Part I, no. 311 of 14.04.2020, as well as the last of the government decisions regarding the establishment, respectively the extension of the alert state on the Romanian territory, namely: Government Decision no. 293 of 10.03.2021 on the extension of the alert status on the Romanian territory starting with March 14, 2021, as well as the establishment of the measures applied during it to prevent and combat the effects of the COVID-19 pandemic, published in the Official Gazette of Romania, Part I, no. 245 of 11.03.

[6] Ibidem.

[7] For more definitions of good governance from different perspectives of different international institutions, see, for example:

Th. G. Weiss, *Governance, Good Governance and Global Governance: Conceptual and Actual Challenges*, in Third World Quarterly, Vol. 21, No. 5 (Oct., 2000), pp. 796 – 798.

[8] See, World Bank, *Governance and Development*, 1992, p. 1, but also the introductory remarks regarding the concept of governance, but also the one of good governance, available at: http://documents1.worldbank.org/curated/en/604951468739447676/pdf/multi-page.pdf.

[9] For example, some authors have mentioned that „the concept of ‘governance’ has a long and distinguished pedigree. From the Greek city-state to the modern nation-state, governance—or the art of governing—has been a constant preoccupation for rulers and political philosophers”, and added that „in the 1990s, aid donors and a range of international institutions, including the multilateral development banks, the International Monetary Fund (IMF), the Organization for Economic Cooperation and Development (OECD), and the United Nations Development Program (UNDP), formally adopted ‘governance’ agendas”. See V. Collingwood, editor, based on research by E. Drake, A. Malik, Y. Xu, I. Kotsioni, R. El-Habashy, and V. Misra, *Good Governance and the World Bank*, Nuffield College, University of Oxford, 2001, p. 4. Also see, for the meaning of governance: Y. Keping, *Governance and Good Governance: A New Framework for Political Analysis*, in Fudan J. Hum. Soc. Sci. (2018) 11:1–8, pp. 1-2. Also see: M. S. Grindle, *op. cit.*, p.3.

[10] Regarding the good governance and even the codes of governances – „a set of ‘best practice’ recommendations regarding the behavior and structure of the board of directors of a firm”, see, for example, R. V. Aguilera and A. Cuervo-Cazurra, *Codes of Good Governance Worldwide: What is the Trigger?*, in Organization Studies 25(3) SAGE Publications, London, Thousand Oaks, CA & New Delhi, 2004, pp. 415 – 417.

[11] Th. G. Weiss, *op. cit.*, p. 805.

[12] Idem, p. 801.

transparent public agencies; accountability for decisions by public officials; devolution of resources and decision making to local levels from the capital; and meaningful participation by citizens in debating public policies and choices"[13]. So, taking into account these elements, we also can appreciate that a shot definition of good governance can sound like this: „[a] mode or model of governance that leads to social and economic results sought by citizens"[14].

Being an attractive concept, „a seductive idea"[15], perhaps not so much for states as for international organizations and citizens, it is a concept that enjoys „popularity among researchers and practitioners"[16]. Therefore, „the conceptual and operational battles about governance and good governance are a few decades old, but the journey to explore global governance has just begun"[17].

Even if it is such a broad concept, we appreciate the importance and necessity to identify its defining elements, elements necessary to be found in the content, substance of the concept of good governance in any historical context - influenced or not by a fundamental crisis - provided that state it remains a democratic one. Thus, elements of good governance, which must be respected by any democratic state, are: „[e]ffectiveness, efficiency, transparency, accountability, predictability, sound financial management, fighting corruption, the respect for human rights, democracy and the rule of law"[18]. On the other hand, „[t]he state and its administrative capacities play a crucial role in the good governance debate"[19], so „improving governance, therefore, means building and strengthening state institutions and capacities"[20], which is, in our opinion, a natural phenomenon that such a state should go through to ensure good true governance.

Based on the reports of various international organizations or their structures, as The United Nations Development Program (UNDP), the juridical doctrine has highlighted the identification of principles of good governance, such as those identified by UNDP in „Governance and Sustainable Human Development, 1997"[21]: legitimacy and voice – by participation and consensus orientation, direction – by strategic vision, performance – by responsiveness and effectiveness and efficiency, accountability and transparency, and fairness – by equity and rule of law[22]. The same authors have mentioned that these five principles represent „a set of principles that, with slight variations, appear in much of the literature"[23] and also that „there is strong evidence that these UNDP – based principles have a claim to universal recognition"[24].

Certainly, the identification and definition of these principles of good governance is a „difficult and controversial"[25] process. Thus, for example, the Council of Europe, by Centre of Expertise for Good Governance, identifies 12 such principles, namely: „Participation, Representation, Fair Conduct of Elections; Responsiveness; Efficiency and Effectiveness; Openness and Transparency; Rule of Law; Ethical Conduct; Competence and Capacity; Innovation and Openness to Change; Sustainability and Long-term Orientation; Sound Financial Management; Human Rights, Cultural Diversity and Social Cohesion; Accountability"[26] – principles designed to ensure „the responsible conduct of public affairs and management of public resources"[27], meaning good governance[28].

On the other hand, „the concept of governance may be applied to any form of collective action"[29] which means, as these authors point out, that when it is about governance and, implicitly, good governance, that it must "govern" the actions of international organizations and other supranational structures, of public authorities from national, regional and local level, but also of private organizations. Moreover, in

our opinion, good governance does not imply involvement only at one level or another of those mentioned before. On the contrary, we appreciate that the collaboration, especially in times of profound crises, such as the current public health crisis, between national authorities at different levels, for example, will be able to ensure veritable good governance or, at least, to create the premises in this sense[30].

It is also necessary to emphasize that the actors on the political scene have different views on what is supposed to be good governance. Thus, „for those on the political right, good governance has meant order, rule of law, and the institutional conditions for free markets to flourish"[31], instead „for those on the political left, good governance incorporates notions of equity and fairness, protection for the poor, for minorities, and for women, and a positive role for the state"[32]. Moreover, some of them confuse good governance with the possession and exercising of power only under the conditions and limits agreed by them, moving away from the will of the majority who elected them. Actually, „governance is about governing, and governing is predominately about making decisions"[33], but good governance does not involve making decisions only unilaterally, even dictatorially, ignoring, sometimes even completely, the connection with the governed people.

Perhaps this is also the reason why the constitutions do not provide much about governance. In the constitutions of the Member States of the European Union, the reference to governance and good governance, in particular, does not usually exist. By art. 10, the Constitution of Poland[34] settles about „the system of government of the Republic of Poland" that „[s]hall be based on the separation of and balance between the legislative, executive and judicial powers". The art. 17 of the Constitution of Portugal[35] stipulates about governance saying that the existence of „the set of rules" that are „[g]overning rights, freedoms and guarantees shall apply to those set out in Title II and to fundamental rights of a similar nature". The Constitution of Slovakia[36] stipulates, in its preamble, that one of the puroposes of Slovak people recognized at constitutional level is „seeking the application of the democratic form of government", and the Instrument of Government[37] of Sweden[38], as the effective constitution is officially called, identifies in its first articles, especially in art. 1 - art. 10, "basic principles of governance"[39] and which correspond to any rule of law.

However, we could appreciate that the recognition, through the constitutional provisions, of the fact that a state has the specific features of a rule of law, implies, implicitly, the recognition, but also the assumption, of the achievement of good governance. In this sense are, for example, the provisions of art. 2 of the Constitution of Poland according to which „the Republic of Poland shall be a democratic state ruled by law and implementing the principles of social justice", or those of art. 2 of the Constitution of Slovenia[40] according to which „Slovenia is a state governed by the rule of law and a social state"[41], of those of Constitution of Romania[42] which, by art. 1 para. (3), state, among othe provisions, that „Romania is a democratic and social state, governed by the rule of law…".

There are also constitutions, such as that of Nicaragua[43], which, although it provides, by art. 6, that this state „[i]s organized as a democratic and social state based on the rule of law", by art. 98 para. (2), speaking about the national economy, mentions that „the State must play the role of facilitator in the production sector which creates the conditions which allow the private sector and the workers to pursue their economic, productive and labor activities in a

framework of democratic governance and full legal certainty…". Also, the same constitution, by art. 131 para. (4), provides good governance among the principles according to which it must be „the centralized, decentralized or deconcentrated Public Administration to serve the general interest with objectivity".

Starting from the provision of this constitution, we will be able to emphasize that good governance must be a principle, but also a goal for any government in a state governed by the rule of law. On the other hand, democracy also involves the exercise of power, inclusively by public administration, but not only centralized, but also decentralized in order to be closer to the needs of those governed, to understand and satisfy them. The better you understand the needs of the people as a government, the more you will be able to find and implement the best solutions to satisfy them, through the decisions you make because „multi-level governance benefits from both centralized and decentralized capacity, mutual learning and integration, and celebrating and exploiting differences"[44].

„Equating good governance arrangements to good COVID-19 response outcomes is not straightforward"[45]. However, we wonder whether good governance necessary to enable the exercise of two fundamental rights - the right to education and the right to health, can not be better achieved through real, effective collaboration between central and local authorities.

In this regard, we also agree that can be „[h]ighlighted how four positive qualities of multi-level governance can contribute, when combined, to greater chances of positive practical outcomes in times of crisis:

- a strong central capacity - in terms of the ability to implement rapid, decisive action;
- decentralised capacity – to mobilise different resources to tackle the outbreak;
- mutual learning and integration;
- celebrating differences - by providing local governance centre with the freedom and resources to undertake what they feel is needed for their communities"[46].

3. The right to education

For any human being, education is a fundamental right recognized by international, regional or national regulations[47]. Obviously, in a state governed by the rule of law, education and the right to education are essential even for the existence of the state, education being interconnected with democracy[48] because „to render democratic governments safe, the people's "minds must be improved to a certain degree""[49].

Through education we can transmit knowledge, we explain it, but also we can contribute essentially to the training of the youngest of, as the ECHR pointed out mentioning „that the education of children is the whole process whereby, in any society, adults endeavour to transmit their beliefs, culture and other values to the young, whereas teaching or instruction refers in particular to the transmission of knowledge and to intellectual development"[50].

We are living in a world full of challenges that forces us to adapt continuously, permanently, and the Covid-19 pandemic has shown us that such challenges, of different natures and intensities, can occur at any time. Rather, we believe that the current pandemic reminded us that "history repeats itself," but also that we should not forget its lessons as soon as the event occurred. Maybe now at least we will work harder to prepare for almost any future event, little or not at all predictable in terms of size, duration and consequences.

In our current existence, as we have already mentioned, education is an essential element, and its providing by the main actors, including the public authorities of the states, is a permanent challenge whose intensity has increased during this pandemic period. Thus, in a world already aware that „was already facing formidable challenges in fulfilling the promise of education as a basic human right"[51], we faced a new challenge - the COVID-19 pandemic that „has caused the largest disruption of education in history, having already had a near universal impact on learners and

Besides, in this document is pointed out that „despite the near universal enrolment at early grades in most countries, an extraordinary number of children – more than 250 million – were out of school and nearly 800 million adults were illiterate", according to different data from websites as: http://uis.unesco.org/en/topic/out-school-children-and-youth, or http://uis.unesco.org/en/topic/literacy. The same document revealed many other practical problems regarding education and the implementation of the right of education existing even before the Covid-19 pandemic.

teachers around the world, from pre-primary to secondary schools, technical and vocational education and training (TVET) institutions, universities, adult learning, and skills development establishments"[52].

To protect our health and not only, we had to adapt by resorting to a solution used occasionally and only for certain types of education such as distance or part-time higher education. Thus, „the virtual world has come to the rescue"[53] and „many of schools and universities closed turned to technology to try to continue the teaching and learning process"[54].

Thus, we tried to continue to educate, respectively to learn, as the case, from a distance, through various learning platforms in the online environment. But, it is very difficult, complicated and demanding to involve the student in the activities carried out through online platforms, as we could do in face-to-face learning. Certainly, educating and learning through online tools is a constant challenge, especially when this process takes place in the area of legal sciences, with first-year students who at that moment meet for the first time, most often, with legal notions and terms. The inventiveness and adaptability of the teacher will be decisive in making such abstract notions as understandable as possible. These issues are mentioned only to highlight some of the challenges that have arisen in learning law through online platforms, but to these are added challenges that affect the entire education system, such as:

- „the lack of Internet or almost non-existent Internet connectivity in educational centers across the board in the poorest geographical areas"[55]
- the lack of equipment with a laptop or computer to be able to actively participate in teaching activities; most of the time a phone, although it is a useful, device, is not enough - assertion valid for the pupil, student, but also for the teacher;
- the lack of specific skills of teachers or the existence of such skills, but only at an acceptable level;
- the increased temptation to look for the answers to the teacher's requests during the teaching activities in the virtual environment, without checking their correctness [56].

Social and economic disparities have negatively influenced the way this education has been done through the means offered by the internet. Thus, „in high-income countries, the closure of educational centers to this unknown level has been alleviated by providing the necessary coverage from homes"[57], affirmation that we appreciate to be largely true even when we refer to middle and high income families.

„The right to education, also in distance modalities, is once again a threatened and non-realized right for children in the most impoverished societies, and for those belonging to the most disadvantaged and vulnerable groups, ranging from women to students with special educational needs"[58]. All the more so as the exercise of the right to education will suffer when the central public authorities of a state fail or have difficulty in adopting measures to manage the crisis situation for a considerable period of time. Or when they grope by adopting and, especially, amending normative acts without predictability, without the participation and consultation, perhaps only superficial sometimes, of the representatives of all participants in the educational process, wanted an absolute centralization of the decision, the risk that the measures taken further affect the right to education is even greater.

It must not be forgotten that „the right to education it is a precondition for the exercise and understanding of other rights civil and political rights"[59], „freedom of information and the right to vote depend on a minimum level of education"[60]. More than that „through education individuals can be taught values such as tolerance and respect for human rights"[61]. Thus, we have the same opinion according to which „education is not merely an end in itself, but also a means to address many other social problems"[62], and when we are „[d]efining educational adequacy"[63] it is necessary for the „[g]overnment to provide its citizens with better schools"[64].

The configuration of a general framework, of some general principles, at national level in which education can be continued in such a crisis situation is welcome, but the role of a central decision-making public authority in the field of education must not be

absolutized. Just as it has to take into account the implications of the principle of university autonomy, so it should take into account the actual needs and possibilities of schools from different counties and allow the adaptation of the way of achieving education according to them. As we mentioned above, it is important to have a central public authority with a real capacity to identify measures, to make prompt decisions, but it is equally important to use the best resources, taking into account the regional and / or local specifics, in order to identify the best appropriate form of education that works as optimally as possible and for as long as possible.

In the end „education is a socio-cultural practice, where young people are given access to formal knowledge codes in mediated relationships with others"[65]. On the other hand, schools are institutions „within which vastly different experiences may be provided"[66] which, because of the „[l]ink with nation-building and social cohesion"[67] or „[l]abour markets to provide, or close off, access to jobs"[68], „[t]end to reproduce the patterns of inequality and privilege of their broader societies, rather than change them"[69].

But education must presuppose equality, at least in the opportunities offered to any child to access it and to reap its benefits. Thus, „the deployment of online distance learning (together with radio and television), should only be seen as a temporary solution aimed at addressing a crisis, and the digitalization of education should never replace onsite schooling with teachers"[70]. This way we have certainly discovered new and „[u]nlimited drive, and untapped resources"[71], that will be needed for „[t]he restoration, not only of education's essential services, but of its fundamental aspirations"[72]. But, even in our opinion, if „[d]istance education become the new paradigm for education after the end of the pandemic, it would affect the heart and purpose of the right to education. Onsite and face-to-face education enables teachers not only to provide content, but to ensure it is understood and well received. Besides, education goes much beyond a single objective of transmitting didactic knowledge, and aims at developing socio-emotional skills, critical spirit and creativity, citizenship and mutual understanding between groups that need to interact and mix in order to live in and build a peaceful society, and at connecting children to nature and to their environment. Education is a social act of a community of learners that require real human interactions."[73]

And we also considered that „it is the responsibility of governments and the international community to stay true to principles and conduct reforms"[74] to configure solutions tailored to the specific needs of each community for possible other future crisis situations in order to allow, as optimally as possible and non-discriminatory, the full exercise of the right to education.

4. The right to health vs. right to education?

Any „state constitution is a charter document expressing citizens' values, priorities, and aspirations"[75], and one of these ia our health, and this is why, indeed, „the centrality of health as an important aspect of the human condition is universally recognized"[76].

The Universal Declaration of Human Rights, by art. 25, provides that „everyone has the right to a standard of living adequate for the health and well-being of himself and of his family, including food, clothing, housing and medical care and necessary social services, and the right to security in the event of unemployment, sickness, disability, widowhood, old age or other lack of livelihood in circumstances beyond his control". The Charter of Fundamental Rights of the European Union, by art. 35, states that „everyone has the right of access to preventive health care and the right to benefit from medical treatment under the conditions established by national laws and practices", and also that „a high level of human health protection shall be ensured in the definition and implementation of all the Union's policies and activities." Even at national level, by constitutional provisions, it is usually

regulated that „everyone has the right to the protection of health”[77].

The right to health, enshrined, usually, in fundamental normative acts, such as the right to health care, is "a complex, ambivalent right, with two components, one substantial and the other procedural"[78]. If every human being should enjoy the right to health, the international community, but especially the states, through specific mechanisms, are obliged to configure the legal framework and not only of the health system to ensure the protection of the health of each of us. In other orders, we can affirm that „the right to health is therefore better thought of as '[w]hat we as a society do collectively to ensure the conditions in which people can be healthy'”[79].

Therefore, it is the obligation of each state to respect, and as regards the right to health and its protection, especially in public health emergencies, fundamental principles, such as:

- „equality and non-discrimination whereby governments must refrain from acting in a manner that either directly or indirectly discriminates against individuals or groups, including avoiding unintended consequences of policies and programmes and protecting against third party discrimination;
- communities must have access to accountability mechanisms and remedies in situations where their rights have been, or are at risk of being, breached.”[80]

We can identify some neighboring rights – as the right to food, the right to a decent standard of living, and the right to work, and some other rights – as the right against torture, the right to life, and the rights of prisoners, the enforcement or nonenforcement of which contribute to or detract from the state of human health”[81]. But, we also can mentione some „certain rights which are stand-alone rights are also part of the right to health and have particularized meaning in defining the right to health”[82], and one of them is the right to education[83]. Indeed, in this situation it is mainly about the right to health education and its protection, but even for this it is necessary to ensure a minimum of general education, which is why, in our opinion, it is more than obvious that these two fundamental rights of any human being - the right to education and the right to health - are interconditioned. Even that sometimes „without the right to health other rights have less meaning and importance”[84], this does not mean that in cases of crisis, such as a pandemic, any other fundamental rights, such as the right to education, must be restricted or even abolished. We consider such a assertation to be valid especially when, acting responsibly, predictably and in a timely manner, public authorities can set up an optimal framework in which the two rights are exercised simultaneously, with minimum conditions and restrictions.

We support the above mentioned because, even we agree that „[g]ood health does not depend only on health care. It also depends on nutrition, lifestyle, education, women's empowerment, and the extent of inequality and unfreedom in a society”[85].

In crisis situations, such as the Covid-19 pandemic, it is natural for state authorities to take measures to protect every citizen, to configure the framework in which they can protect their health and, if necessary, to appeal, of the means, procedures, legal institutions to protect their health. However, these measures must be taken so as not to affect the substance of other rights, such as the right to education.

Thus, it is necessary that our governments to design an ethical framework, which is also a legal one, to represent „a constellation of values and considerations that ought to be considered by decision-makers in this context”[86]. Such values[87] can be:

- substantive values: individual liberty, protection of the public from harm, proportionality, privacy, duty to provide care, reciprocity, equity, trust, solidarity, stepward-ship;
- procedural values: reasonable, open and transparent, inclusive, responsive, accountable.

We consider that it is appropriate to emphasize that when we are speaking about individual liberty and proportionality, as substantive values, „[i]n a public health crisis, restrictions to individual liberty"[88] may be decided by the governements only if it „[i]s necessary to protect the public from serious harm"[89]. Such „restrictions to individual liberty should be proportional, necessary, and relevant, employ the least restrictive means, and be applied equitably"[90]. So, these „restrictions to individual liberty and measures taken to protect the public from harm should not exceed what is necessary to address the actual level of risk to or critical needs of the community"[91].

5. Conclusions

Good governance will focus on the needs of those governed, building on state, regional and local possibilities, but will also require the obligation of governments to identify and develop other mechanisms, procedures, institutions through which to strengthen and develop good governance.

Five principles are considered critical to guiding the reforms of global governance and global rules[92]: common but differentiate responsibilities and respective capacities, subsidiarity, inclusiveness, transparency and accountability, coherence, responsible sovereignty.

Adapting[93] these principles and their essence, we consider that in a crisis situation as Covid-19 pandemic, when there are discussions about the priority of these two fundamental rights - the right to education or the right to health, our governments must act taking into consideration the following:

- the diversity of national circumstances and policy approaches that requires common but differentiate responsibilities and respective capacities at national and local level;
- in respect of subsidiarity and proportionality, some problems can be handled well and efficiently at the local or regional levels reducing the number of issues that need to be tackled at national level;
- the institutions that participate in a real good governance, need to be representative of, and accountable to, the entire community, while decision-making procedures need to be democratic, inclusive and transparent;
- enhanced coherence is also needed between the local or regional and national spheres of policymaking, an improved coordination among various stakeholders and enhanced information sharing is also needed.

Human health is „a claim, interest, need, or demand which is cognizable under law and which proceeds from moral precepts necessary for respect for human dignity"[94], but also the right to education has its role in defining the human dignity. There are two rights that, in our opinion, must be able to be exercised simultaneously, especially since „in the case of a right to health, there is increasing evidence that globalisation itself will lead to greater levels of disease"[95] that can be preventable and avoidable or at least managable, as the movement of people, goods and ideas continues to increase on a global scale[96].

On the other hand, „while we might think COVID-19 will pass and this will all be over soon, other disasters might warrant more online delivery, such as earthquakes or floods"[97]. „Our ability to learn from this pandemic will determine not only our success in responding to future pandemics but also other global challenges"[98], so it is necessary „to build protection systems and resilience"[99].

Governments need to discover mechanisms and procedures to ensure the realization of education in such situations of severe crisis, when education in classical way is difficult or impossible to carry out. And for those possible situations in which it is necessary for the educational process to take place in the online environment, the governments are obliged to ensure, in advance, that any participant in this process has the necessary technical equipment, but also has assimilated essential knowledge, methods and techniques to use this kind of teaching or learning, as the case.

As we can still observe, „it is essential that in today's digital world, teachers can switch from face-to-face teaching to online when required and that they can support all of their students no matter from which section of society"[100].

Even in our opinion, in any situation „teachers should have autonomy and liberty in deciding when and

where to integrate technology to support their teaching practices"[101]. And this is another reason why the governments must create clear, predictable, simple procedures that allow for the decentralization of educational processes, but also of some decisions in this area, in order to adapt them to the specific needs and possibilities of the each local community.

Consequently, veritable good governance will find optimal solutions so that in crisis situations, such as a pandemic, the governments do not have to choose between the right to health and the right to education, to the detriment of the latter.

On the other hand, good governance must not be perceived as a chameleon-like concept that is determined or at least influenced exclusively by the discretionary power of national governments.

LONG AWAITED ROMANIAN LAW ON FOOD SUPPLEMENTS FINALLY ENACTED

Laura-Cristiana SPĂTARU-NEGURĂ[*]
Mihai SPĂTARU-NEGURĂ[**]

Abstract

The aim of this study is to raise awareness and to improve knowledge of food supplements legislation in Romania.

Special attention should be given to the new piece of legislation applicable in Romania – Law no. 56/2021 on food supplements, which is intended to bring light and transparency in this field, after transposing the Directive 2002/46/EC of the European Parliament and of the Council of 10 June 2002 on the approximation of the laws of the Member States relating to food supplements as amended by other European Union legislative acts.

After several years of legislative struggle, the Law no. 56/2021 has been promulgated on March 31, 2021 through the Presidential Decree no. 256/2021. Since the fines are consistent, attention should be given by the private players on the Romanian food supplements' market in order to comply with the new rules.

Therefore, this study intends to provide guidance for both legal professionals, and non-specialist legal professionals working in the field of food supplements.

Keywords: *food supplements, dietary supplements, Law no. 56/2021, Health Ministry, Romania.*

1. Introductive Remarks – What About Food Supplements in Romania?

Food (dietary) supplements are products that are becoming, each day, worldwide more attractive for the consumers. Their increasing interest in everyday consumption of food supplements push the international and national legislators to rule effectively in order to protect the health of the consumers, who should be correctly and completely informed by the producers or importers of such products.

In Romania the legal framework for food supplements is very complex, being applicable both European and national specific legislation.

Very recently the Romanian legislation applicable to food supplements has been amended through the promulgation of the Law no. 56/2021 on food supplements (hereinafter "*the Law no. 56/2021*"). Special attention should be given to this new law which is intended to align the Romanian applicable legislation to the European legislation, and to prevent unfair commercial practices in this field.

Since the fines provided by the Law no. 56/2021 are consistent, attention should be given by the private players on the Romanian food supplements' market in order to comply with the new rules.

In Romania, the regulation of food supplements is an attribute of the Health Ministry, and of the National Institute of Research and Development for Food Bioresources (in Romanian "*Institutul National de Cercetare-Dezvoltare pentru Bioresurse Alimentare*" – hereinafter abbreviated "*IBA*"), as we will emphasize in the second part of the study.

Please note that the National Agency for Medicines and Medical Devices of Romania (hereinafter abbreviated "*NAMMDR*"), the public institution operating as a legal entity subordinated to the Health Ministry, and which develops national strategies and policies in the field of medicines and medical devices, is not competent to regulate food supplements (as well as cosmetic products, controlled substances, and veterinary medicines). Therefore, we emphasize that the food supplements legislative framework is clearly different that the one regulating medicines.

According to the applicable legislation, food supplements may not legally claim a medicinal effect or combat diseases. In order to establish the medicinal product status of a product marketed as a food supplement, the NAMMDR has to investigate first its ingredients and to study its public presentation.

2. Certain Aspects Regarding the Applicable Legal Framework in Romania

Please note that the food supplements market in Europe "presents a less permissive specific comparative to the US"[1], whereas a specific legislative framework was created starting with the European Directive 2002/46/EC of the European Parliament and of the Council of 10 June 2002 on the approximation of the laws of the Member States relating to food supplements[2] (hereinafter "*the Directive*

[1] Emilia Stancu, Adriana-Elena Taerel, Valentina Soroceanu, Cristina Rais, Manuela Ghica, *Ethical Aspects of Food Supplements in EU and Romania*, in Farmacia, vol. 67, no. 4/2019, p. 736.

[2] Available at https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=CELEX%3A02002L0046-20170726 (consolidated version).

2002/46/EC"). The aim of this Directive is to create a legal framework for the food supplements' producers/importers in order to ensure consumer protection in the European Community.

Among the most important aspects regulated by this Directive, we mention the creation of the list of vitamin and mineral supplements, the definition and the establishment of the purity criteria for substances and of the maximum amount of vitamins and minerals per daily portion of consumption, the setting up of the classification of micronutrients in a risk category.

Through art. 10 of the Directive 2002/46/EC, it was imposed to notify the food supplements in each Member State to the competent authority: "*[t]o facilitate efficient monitoring of food supplements, Member States may require the manufacturer or the person placing the product on the market in their territory to notify the competent authority of that placing on the market by forwarding it a model of the label used for the product*".

As for the Romanian legislation, please bear in mind that the most relevant food supplements normative acts are:

- Emergency Government Ordinance no. 97/2001 regarding the production, circulation and commercialization of food (hereinafter abbreviated "*EGO 97/2001*") approved by Law no. 57/2002;
- Joint Order no. 243/402/2005 of the Minister of Agriculture, Forests and Rural Development and Health Minister on the approval of technical rules for the production, processing, processing and marketing of medicinal and aromatic plants;
- Joint Order no. 1228/244/63/2005 of the Minister of Agriculture, Forests and Rural Development, Health Minister and President of the National Sanitary Veterinary and Food Safety Authority approving the Technical Norms on the commercialization of pre-dosed food supplements of animal and vegetal origin and/or of their mixtures with vitamins, minerals and other nutrients (hereinafter "*the Order no. 1228/2005*");
- Health Minister Order no. 1069/2007 on approving the Norms on food supplements (hereinafter "*the Order no. 1069/2007*");
- Law no. 56/2021 on food supplements.

Please note that, according to art. 15 para. (1) of the Law no. 56/2021, in 90 days from the entry into force of this law, the Health Ministry shall elaborate the technical norms for manufacturing, marketing, and use of food supplements (hereinafter "*the Norms on food supplements*") which shall be approved through a government decision and shall abrogate the Order no. 1069/2007.

Moreover, please bear in mind that according to the art. 15 para. (2) of the Law no. 56/2021, on the date of entry into force of the technical norms above-mentioned, the Health Minister Order no. 1069/2007 on approving the Norms on food supplements shall be abrogated.

But what are more precisely the food supplements? Pursuant to art. 2 letter a) of the Directive 2002/46/CE, food supplements means „*foodstuffs the purpose of which is to supplement the normal diet and which are concentrated sources of nutrients or other substances with a nutritional or physiological effect, alone or in combination, marketed in dose form, namely forms such as capsules, pastilles, tablets, pills and other similar forms, sachets of powder, ampoules of liquids, drop dispensing bottles, and other similar forms of liquids and powders designed to be taken in measured small unit quantities*"[3].

According to art. 10 of the Directive 2002/46/EC, „*[t]o facilitate efficient monitoring of food supplements*", a manufacturer or the person placing on the market a food supplement shall notify the competent authority of that placing on the market, by forwarding it a model of the label used for the respective product.

Depending on the composition of foodstuffs, food supplements in Romania, have to be notified either before the Health Ministry or before the IBA.

As regards the notification before the Health Ministry, attention should be given to the Norms on food supplements, because once these Norms shall be adopted, the actual procedure set-up in the Order no. 1069/2007 shall be changed, although in the present the Health Ministry already represents the competent authority for the notification of food supplements consisting of nutrients (i.e. vitamins and minerals).

The notification procedure set-up by the Order no. 1069/2007 is quite simple, having an informative purpose, rather than an analythical one. According to art. 10 para. (1) of the norms contained in the Order no. 1069/2007, this procedure consists of submitting a notification form together with a template of the food supplement's label (in hard and soft copy). According to art. 11 of the norms contained in the Order no. 1069/2007, the Health Ministry representatives shall evaluate the information on the label and shall issue the form attesting the registration of the notification within 48 hours from the moment of the notification submission, while in 15 days shall deliver the notification.

As regards the notification before the IBA, the provisions of the Order no. 1228/2005 are relevant, taking into consideration that certain products may be commercialized on the Romanian market only further to a prior notification to this institute.

Having in view the novelty character of the Law no. 56/2021, which has been published in the Romanian Official Gazzette no. 332 dated April 1st, 2021, we shall further analyse it, considering the high interest in this piece of legislation.

[3] Please note that this is also the exact definition used by the Romanian legislator in art. 2 letter a) of the Law no. 56/2021.

3. The Legislative Process of the Law no. 56/2021

We consider that the legislative process[4] of the Law no. 56/2021 is very interesting to follow, reason for which we shall further analyse it. Even from the beginning we must emphasize that the Law no. 56/2021 has been promulgated after 8 years from the moment it was put on the table of the parliamentariens (i.e. no. L333/10.09.2012 / PL-x 468/12.11.2012[5]).

The first Chamber of the Parliament was the Senate, and the initiator of the law was the Government.

On October 30, 2012, the Senate has rejected the bill of law, and on November 12, 2012 it was presented in the Permanent Office of the Chamber of Deputies.

After receiving the notices from the Juridical, Discipline and Immunities Commision (on January 15th, 2013) and from the Commission for education (on February 19th, 2013), as well as the favorable report from the Commision for agriculture, silviculture, food industry and specific services and the Commission for health and family (on September 30, 2020), it has been submitted to debates on October 14th, 2020 and October 20th, 2020.

On October 20th, 2020, the Chamber of Deputies has adopted the bill of law establishing the legal framework regarding food supplements, commercialized as foodstuffs, bill that has been sent for promulgation, on October 26th, 2020, to the Romanian President.

On November 25th, 2020, the Romanian President, Mr Klaus Werner Iohannis, has attacked the bill of law to the Constitutional Court, arguing that, by means of its adoption, the law violates art. 61 para. (2) and art. 75 para (1) of the Romanian Constitution, being breached the competence of the Senate as the first chamber seized of the Parliament.

Arguing that the form of the initiator of the law provided a shared competence of several authorities[6] depending on the composition of the food supplements, the Romanian President underlined that the final form of the piece of law overruled the constitutional principle of bicameralism.

On March 24, 2021, the Constitutional Court has rejected the objections of unconstitutionality through the Decision no. 902 dated December 16, 2021.

On March 31st, 2021, through the Presidential Decree no. 256/2021, the bill of law was enacted, becaming the Law no. 56/2021. The following day, on April 1st, 2021, the law has been published in the Romanian Official Gazzette no. 332, and it came into force in 3 days after its publication date according to the first thesis of the art. 78 of the Romanian Constitution[7].

4. The Provisions of the Law no. 56/2021 Under the Magnifying Lens

Establishing the legal framework of the food supplements[8], please note that the provisions of this law are not applicable for (i) the drugs defined in title XVIII „Drug" of the Law no. 95/2006 regarding the reform in the health domain, republished, with the subsequent amendments and completions and for (ii) the food supplements based on medicinal and aromatic plants, as well as beehive products, ruled by the Law no. 491/2003, republished, with subsequent amendments and completions.

Even from the beginning of the law, the Romanian legislator clarifies on the establishment of the "*Health Minister as the **competent authority in the field of the food supplements based on*** [emphasis added]*:*

a) vitamins, minerals;

b) mixtures of vitamins and/or minerals;

c) substances having a nutritional or physiological effect other than vitamins and minerals[9];

d) mixtures of vitamins and/or minerals with substances having a nutritional or physiological effect other than vitamins and minerals;

e) mixtures of vitamins and/or minerals with vegetable and/or animal extracts;

f) mixtures of vitamins and/or minerals with plant and/or animal extracts, with substances having a nutritional or physiological effect, with plants and/or beehive products[10]." [11].

Please note that according to art. 1 para. (3) of the Law no. 56/2021, in the use of mixtures containing vitamins, minerals, or substances having a nutritional or physiological effect other than vitamins and minerals; "*consumed as ingredients foreseen in para. 2 letters d)-f), the notification*[12] *shall be made to the*

[4] Please see the information available on the website of the Chamber of Deputies (http://www.cdep.ro/pls/proiecte/upl_pck.proiect?idp=12983) or of the Senate (https://senat.ro/legis/lista.aspx?nr_cls=L333&an_cls=2012).

[5] The number of the bill of law, given by the Senate and by the Chamber of Deputies.

[6] E.g. the Health Minister, the Agriculture Minister and the Anti-Dopping National Agency instead of the Health Minister as unique competent authority in this field.

[7] For the English version of the Romanian Constitution, please see the website of the Romanian Constitutional Court - https://www.ccr.ro/en/constitution-of-roumania/.

[8] According to art. 1 para. (1) of the Law no. 56/2021.

[9] By the expression "substances having a nutritional or physiological effect other than vitamins and minerals" the Romanian legislator understands "*amino acids, enzymes, prebiotics and probiotics, essential fatty acids, plant extracts, including plants, algae, lichens, fungi, as well as their essential extracts and oils and/or animal extracts, bioactive substances authorised and included in the Novel-Food Catalogue - new foods, of the European Union*" – please see art. 2 letter c) of the Law no. 56/2021.

[10] I.e. pollen, propolis, honey and royal jelly according to art. 1 para. (2) letter h) of the Law no. 491/2003 regarding medicinal and aromatic plants, as well as beehive products.

[11] According to art. 1 para. (2) of the Law no. 56/2021.

[12] By "notification" it should be understood notifying the competent authority of the placing on the market of a food supplement.

Health Ministry, after receipt of the technical advisory opinion issued by the Technical Committee referred to in art. 5 of Law no. 491/2003 regarding medicinal and aromatic plants, as well as beehive products, republished, with the subsequent amendments and completions, and for vegetal extracts, medicinal and aromatic plants, as well as for beehive products, the technical advisory opinion shall be requested by the Health Ministry."[13].

The notification procedure in order to place a food supplement[14] on the Romanian market has to be performed either by the manufacturer, the importer or the responsible person for placing the product on the market. The placing on the Romanian market is subject to the obtention of the notification certificate for the respective food supplement, and we underline that it shall not be possible to place a product on the market before the obtention of such certificate[15].

The notification procedure is provided by art. 5 of the Law no. 56/2021, depending on the type of the ingredients of the food supplement to be placed on the Romanian market:

a) for the food supplements containing *only vitamins and minerals and/or mixtures of vitamins and minerals*[16]: the notification file consisting in a printed notification request, the notification form, accompanied by the model of the label for the product concerned, in electronic and *folio* form; the file shall be transmitted to the Health Ministry;

b) for the food supplements based on *substances with nutritional or physiological effect, other than vitamins and minerals, mixtures of vitamins and/or minerals with substances having a nutritional or physiological effect, other than vitamins and minerals, mixtures of vitamins and/or minerals with plant and/or animal extracts, mixtures of vitamins and/or minerals with plant and/or animal extracts, medicinal and/or aromatic plants and/or beehive products*: the notification file (in two copies, with the exact content) shall be notified to the institutions under the authority of the Health Ministry. A copy of the notification file submitted on which it shall be applied the visa for conformity with the original (in Romanian "*viza de conformitate cu originalul*") shall be returned to the applicant with the notification certificate issued by the specialised structure of the Health Ministry.

Please note that the notification certificate to be issued by the competent authority is an administrative act[17], which can be attacked according to the provisions of the Law no. 554/2004 on contentious administrative, with the subsequent amendments and completions.

The notification certificate shall be canceled in case of amendment of the quality and composition of the respective food supplement[18], no information being provided regarding the annulment procedure.

Article 6 of the Law no. 56/2021 brings new solutions to the problems existing on the food supplements Romanian market regarding the placing on the market of certain products:

"(1) The food supplements referred to in art. 5 paras. (1) and (6) notified in another Member State of the European Union and/or in the European Economic Area [emphasis added], can be placed for the first time on the Romanian market by notification to the competent authority, accompanied by a model of the product label and documents attesting that it is legally placed on the market in a Member State of the European Union and/or in the European Economic Area, in accordance with the provisions of the Regulation (EU) no. 515/2019 of the European Parliament and of the Council of 19 March 2019 on the mutual recognition of goods lawfully traded in another Member State and repealing the Regulation (EC) no. 764/2008. In this case, the competent authority shall issue a notification certificate.

2. For food supplements originating in third countries [emphasis added], manufacturers, importers or the person responsible for placing them on the market shall apply for a notification certificate from the competent authority in accordance with the provisions of the rules referred to in art. 15.".

These new provisions of Law no. 56/2021 do not answer, unfortunately, to essential questions, in our oppinion.

Firstly, according to the Law no. 56/2021, it might be possible to notify food supplements containing plant and/or animal extracts not listed neither in the list of permitted ingredients, nor in the list of forbidden ingredients? A partial answer to this question can be found in art. 2 letter c) of the Law no. 56/2021 which provides that the ingredients of the food supplements must be authorised and included in the Novel Food Catalogue of the European Union. Taking into consideration the procedure to authorise and include new ingredients in the Novel Food Catalogue, it results that a new ingredient can be used for food supplements after it has been proven with safety and efficacy trials that the respective ingredient is safe for human use consumption.

Secondly, will it be sufficient for the notification of a new food supplement to file the certificate of notification issued by the country of origin? We cannot imagine, at this stage, this situation, having in view that before the Law no. 56/2021, these type of food supplements could not be notified upon IBA except the situation the food supplement contained ingredients

[13] According to art. 1 para. (2) of the Law no. 56/2021.
[14] Each food supplement shall be marketed to the final consumer only in prepackaged form.
[15] According to art. 5 para. (7) of the Law no. 56/2021.
[16] Please see art. 5 para. (1) of the Law no. 56/2021. We underline that for the manufacture of food supplements only vitamins and minerals provided in the European Union's legislation can be used.
[17] Please see Marta-Claudia Cliza, Constantin-Claudiu Ulariu, *Drept administrativ*, *revised edition according to the amendments of the Administrative Code*, Pro Universitaria Publishing House, Bucharest, 2020, p. 12.
[18] According to art. 3 para. (2) of the Law no. 56/2021.

authorised by IBA. It is obvious that the Norms will be essential in order to answer this question.

Thirdly, during the notification procedure, in order to accept the health claims of a new food supplement, will the Health Ministry accept as proof the clinical trials conducted in third countries where domestic legislation accepts these trials on food supplements[19] which do not treat any disease, just helps maintaining the health of the consumer?

We cannot imagine this situation because in Romania, the central authorities involved in the approval of any clinical trial are NAMDMR and the National Bioethics Committee for Medicines and Medical Devices (for ethical reasons) for drugs and medical devices only, and not competent (yet) for food supplements. If the Health Ministry decides to authorise NAMDMR for food supplements notification and research, NAMDMR will become as like a "Food and Drugs Administration" authority.

Fourthly, under the Law no. 56/2021, will IBA continue to notify food supplements containing medicinal and aromatic plants, as well as beehive products? Having in view that (i) at the moment of the entry into force of the Law no. 56/2021, IBA has suspended the activity of notification for new products according to Order no. 1228/2005, and that (ii) art. 15 para. (1) of the Law no. 56/2021 provides that in 90 days from the entry into force of this law, the Health Ministry shall elaborate the Norms which shall be approved through a government decision and shall abrogate the Order no. 1069/2007, we consider that the decision of IBA is either premature, or it betrays the direction in which the Norms shall be construed. In any case, the Norms will clarify which authority will be competent to notify the categories of food supplements in Romania.

As a result of the fact that the Health Ministry is the competent authority according to Law no. 56/2021, please bear in mind that it must display on its official website[20] several lists of:

a) documents necessary for the notification of food supplements;

b) plants accepted in food supplements, taken from the Ministry of Agriculture and Rural Development;

c) substances having a nutritional or physiological effect permitted in food supplements;

d) food supplements already notified to the Health Ministry, through the specialized structures, i.e. the regional public health centres, from 2007 until the date of entry into force of Law no. 56/2021;

e) food supplements to be marketed in Romania, as well as their label and their leaflets. This list shall be updated monthly.

According to the art. 14 para. (1) of the Law no. 56/2021, it is underlined that food supplements already notified *before* the entry into force of this law, will not require any other notification if are respected the conditions that have stood at the issuance of the notification certificate. However, please note that the food supplements that do not comply with the provisions of the Law no. 56/2021 may be marketed on the Romanian market "*until the expiration of the date of minimum durability, but not later than 12 months*", provided that:

i. they do not contain ingredients other than those listed in the list of plants accepted in food supplements, taken from the Ministry of Agriculture and Rural Development or in the list of substances having a nutritional or physiological effect permitted in food supplements [art. 8 para. (1) letters b) and c) of the Law no. 56/2021]; *or*

ii. they do not constitute a risk for consumers and to be labeled in accordance with the legal provisions in force at the time of placing on the Romanian market[21].

It is also important to underline that "[i]n the case of information (our note – not suspicion!) according to which a food supplement endangers human health even if it is in accordance with the provisions of this law, the competent authority (our note – the Health Ministry) may temporarily suspend or restrict the marketing of the food supplement in question in Romania; the European Commission shall be notified promptly in accordance with the legislation in force."[22].

As for the transitional provisions mentioned in the Law no. 56/2021, a few aspects deserve to be pointed out in order to discover how the correlation with other rules was thought by the legislator, so that the implementation of the Law no. 56/2021 proceeds naturally and avoids retroactivity or the conflict between successive norms.

As mentioned before, please note that, according to art. 15 para. (1) of the Law no. 56/2021, in 90 days from the entry into force of this law, the Health Ministry shall elaborate the Norms which shall be approved through a government decision and shall abrogate[23] the Order no. 1069/2007.

It is also expressly provided that, within 30 days from the entry into force of the Law no. 56/2021, "*the central public authorities that have attributions regarding the food supplements modify and/or complete the subsequent legislation in the field according to the provisions of the present law*"[24].

As regards the purpose of preventing unfair

[19] Please see the case of a clinical trial conducted upon *Antrodia camphorata* used in a food supplement. *Antrodia camphorata* it is a rare and endemic fungus species originated in Taiwan island forestries. This trial is available at https://www.clinicaltrials.gov/ct2/show/NCT01007656.

[20] According to art. 8 of the Law no. 57/2021. At the moment of writing this study, we made a research on the website of the Health Ministry, but these lists were not yet available on www.ms.ro.

[21] According to art. 14 para. (2) of the Law no. 57/2021.

[22] According to art. 14 para. (4) of the Law no. 57/2021.

[23] According to art. 15 para. (2) of the Law no. 56/2021.

[24] According to art. 15 para. (3) of the Law no. 56/2021.

commercial practices, please have in mind that "[*i*]*n the labelling, presentation and commercial communications relating to food supplements addressed to the consumers and health professionals, it is prohibited to assign the properties of prevention, treatment or cure of a human disease or to refer to such properties.*"[25]. It is also prohibited "*the use of direct or suggesting statements that varied and balanced nutrition cannot provide adequate amounts of nutrients.*"[26].

Emphasis should be made that "[*w*]*ithout prejudice to the rules in force on food labelling, the labelling of food supplements shall contain the following additional mentions:*

a) the names of categories of nutrients and/or other substances having a nutritional or physiological effect characterising the product;

b) the daily dose recommended by the manufacturer;

c) the warning not to exceed the daily dose recommended by the manufacturer;

d) the warning that food supplements should not replace a varied and adequate diet;

e) *the warning that products must be kept out of the reach of children.*"[27].

Additionally, please note that "[c]ommercial communications for the promotion of food supplements shall comply with the provisions of this law and of the special regulatory acts on advertising; in commercial communications to promote the properties of food supplements, shall be used only the information on the label and in the food supplement leaflet, information approved by the competent authority, in accordance with the provisions of the national/European legislation in force."[28]. By "commercial communication" the legislator understands "any form of communication intended to promote, directly or indirectly, the products, services, image, name or corporate name, firm or emblem of a trader or of a member of a liberal profession"[29] without being made any reference to the clinical trials, scientific communication and fairs, usually considered as professional communication Should we include here the reference to clinical trials made for the respective product? We consider that, in order to protect the innovation and the scientific progress, the citations should be permitted having in mind that the Law no. 56/2021 does not exppresly prohibits it.

5. Control and Sanctions Imposed by the Law no. 57/2021. Final Provisions of the Law

The Health Ministry, in its capacity of competent authority according to the Law no. 56/2021, "shall ensure compliance with the provisions of this law, being able to establish infringements and apply penalties for the non-compliance with the provisions thereof."[30].

The following deeds, foreseen in art. 9 para. (1) of the Law no. 56/2021, constitute offences according to the table below (made by us in order to simplify the legal information):

Letter	Offence	Sanction
a)	labelling noncompliant with the legislation in force for food supplements	civil fine from 3,000 to 10,000 RON and temporary stop from marketing until the entry into legality
b)	classifying food supplements in other category of foodstuffs or medical devices for the purpose of circumventing the provisions of this Law	civil fine from 10,000 to 12,000 RON and temporary stop from marketing until the misconduct is remedied
c)	marketing of food supplements exceeding the date of minimum durability	civil fine from 7,000 to 9,000 RON and definitive stop from marketing
d)	marketing of food supplements without a certificate of notification	civil fine from 13,000 to 15,000 RON and definitive stop from marketing
e)	failure to comply with the legal provisions relating to the plants and substances having a nutritional or physiological effect, permitted in food supplements[31]	civil fine from 13,000 to 15,000 RON and definitive stop from marketing
f)	advertising non-compliant with the legislation in force for food supplements	civil fine from 3,000 to 10,000 RON and temporary stop from marketing until the entry into legality

[25] According to art. 7 para. (2) of the Law no. 56/2021.
[26] According to art. 7 para. (3) of the Law no. 56/2021.
[27] According to art. 7 para. (4) of the Law no. 56/2021.
[28] According to art. 7 para. (5) of the Law no. 56/2021.
[29] Please see art. 2 letter j) of the Law no. 56/2021.
[30] According to art. 10 par. (1) to the Law no. 56/2021.
[31] Please note that the non-compliance shall be notified on the rapid alert system for food and feedingstuffs and the notification certificate shall be cancelled by the Health Ministry.

Please note that the rules regarding the offences and sanctions provided in the Law no. 56/2021 shall be completed with the legal provisions of the (i) Government Decision no. 857/2011 on the establishment and sanctioning of offences of public health rules, with subsequent amendments and completions, issued on the basis of Law no. 254/2010 for the repeal of Law no. 98/1984 on the establishment and sanctioning of the offences to the legal rules of hygiene and public health, as well as with the provisions of the (ii) Government Decision no. 2/2021 on the regime of offences, approved with amendments and completions through Law no. 180/2002, with subsequent amendments and completions.

Additionally, please bear in mind that "the deed of the person to prepare or manufacture counterfeit food supplements, as well as to introduce, offer, sell or distribute such food supplements on the market, knowing that they are counterfeit, constitutes a crime and it is punished according to the provisions of Law no. 286/2009 on the Criminal Code, with subsequent amendments and completions."[32].

6. Concluding Remarks – What the Future Holds for the Romanian Food Supplements Market?

Having in view that it is undisputed that the global consumption of food supplements is fastly growing, even in Romania, we consider that the topic of our study will be of high interest for both legal professionals and non-specialist legal professionals working in the field of food supplements.

Containing vegetal and animal substances, together with minerals, vitamins, and other micro- or macronutrients, the food supplements have the role to complete a normal diet in order to maintain health or to improve it, and not to treat it.

Although the Law no. 56/2021 has been waited among the years to change certain things in the food supplements market, things are quite unclear until the Norms on food supplements will be adopted further on.

The Norms on food supplements are being awaited by the food supplements market. Many questions arise to all the players in the market, out of which we mention the following:

i. What institution of the Health Ministry shall be competent to analyse the notification file – the NAMMDR?

ii. What will contain the notification file?

iii. Besides the documentation required, would it also be required a statement of commitment of the applicant?

iv. What will contain the notification certificate?

Hoping that the new legislation's requirements, contrary to the Order no. 1228/2005, shall not go beyond the notification requirements imposed under the Directive 2002/46/EC and shall not affect the goal of this Directive, namely affecting the free movement of such food supplements and the creation equal conditions of competition for the players acting in the internal market. We strongly believe that the placing on the Romanian market must be in line with the European law.

In order not to be victims of the food supplements market, the consumers found on the Romanian territory must benefit of a clear and coherent legalframe.

Of course that special attention should be given to the online marketing of food supplements because in the recent years many alert signals had been given regarding the charlatanism with certain food supplements[33].

Even though many questions arise and, in the present, the Romanian legislation seems unclear and incomplete, we shall see very soon what the future reserves to us, when the Norms shall be adopted.

Until then, stay connected and informed about all the changes in the food supplement market.

BRIEF CONSIDERATIONS REGARDING THE PUBLIC SERVANTS ADMINISTRATIVE-DISCIPLINARY LIABILITY

Elena Emilia ȘTEFAN*

Abstract

The recent legal changes in the field of administrative law have led to a unitary regulation of many judicial institutions, by means of codification. However, in the Administrative Code, we can notice an insufficient allocation of regulation space for administrative liability. Legally, on one hand, there are general provisions regarding the public servants' liability, the administrative-disciplinary liability regulated by the Administrative Code, and, on the other hand, we have special Statutes for a whole series of categories of public servants. Therefore, we speak of common law in the matter of administrative liability, represented by the Administrative Code, but also by special legislation, namely "Statues", on different domains.

In recent jurisprudence, the Romanian Constitutional Court has ruled regarding disciplinary sanctions, analyzing the „warnings" method taken in the matter of police officers, as prevention measure against committing disciplinary misconduct. Therefore, the pretext that we use in the present study is to check the validity of the current legislation regarding the administrative-disciplinary liability, having as starting point the adopting of the Administrative Code, in the sense of observing what is administrative-disciplinary misconduct and what are the administrative-disciplinary sanctions applicable to public servants.

In the end, we will present the conclusions we reached through our study, based on the legislation, doctrine and judicial practice.

Keywords: *Administrative Code, public servants, disciplinary misconduct, disciplinary sanction, Romanian Constitutional Court.*

1. Introduction

Adopting the administrative Code[1] in our law system gave us the joyous occasion to reanalyze a very important subject for scientific research in the legal domain, namely, judicial liability[2]. With this occasion we continue the analysis dedicated to liability in administrative law[3], developing the subject of public servants' administrative-disciplinary liability[4], one of the three forms of administrative liability. The doctrine showed that: "liability presupposes that a person or authority has to explain and justify its own actions. In administrative law, this would translate through the fact that any administrative body must respond for its acts in before the administrative, legislative or judicial authority"[5].

If in philosophy everything is transient, "All things before our eyes are changing very quickly: they will either vanish, if it is true that substance is a unit, or they will disperse"[6], in the life of the city, society evolves, knowledge discoveries are amazing and law is static, requiring a permanent (re)correlation of legislation to the social life. At the same time, we mention another aspect that we considered in the analysis performed on the personnel from public administration[7], namely that the national administration was forced to adapt to the communitarian acquis: "in the conditions of acceding to the European Union, member states have taken on the obligation to incorporate the EU judicial norms in their judicial order"[8].

The suggested topic is current, referring to the analysis of recent legislation, bringing to light the Constitutional Court jurisprudence that refers to disciplinary sanctions applied, regulated by special Statutes, more precisely pertaining to police employees. The administrative Code philosophy

[8] A. Fuerea, *Manualul Uniunii Europene*, 6th edition, revised and added after the Lisbon Treaty (2007/2009), Universul Juridic Publishing House, Bucharest, 2010, p.241.

regarding the categories of personnel that undergo activities that involve the public power regime is, on one hand, to submit the public servants to the rules mentioned by the administrative Code and, on the other hand, to allow the existence of special Statutes.

Administrative liability is mentioned in the Administrative Code Part VII, named „*Administrative liability*", articles 563-579, but, regarding the administrative-disciplinary liability of public servants there is also Part VII, *Public servants' Statute*, Chapter VIII – *Disciplinary sanctions and public servants liability*, articles 490-497. We agree with the doctrine, according to which "we use the phrase *administrative-disciplinary liability* because, on one hand, we do not consider that the idea of *discipline* must necessarily be tied to the idea of service and to public authority/public servant and, on the other hand, we appreciate that it is just a phrasing that allows a clearer delimitation from the other two forms of administrative liability (...)"[9].

The objective of this study is to briefly observe what are the actions that represent administrative-disciplinary misconduct and which are the administrative-disciplinary sanctions applied to public servants, by using the prevailing scientific research methods such as logical, deductive and comparative analyses.

2. The public servants' administrative-disciplinary liability

2.1. Disciplinary misconduct according to the Administrative Code

As the specialty literature indicates, "administrative-disciplinary liability represents the first form of liability that is specific to administrative law and it intervenes for committing actual administrative crimes, in the form of disciplinary misconduct"[10]. We mention the fact that disciplinary misconduct expressions are listed not in the public servants' administrative-disciplinary liability, but in Part IV, *Public servants' statute*, Chapter VII – *Disciplinary sanctions and public servants' liability*. Also, the Administrative Code has retained from former legislation on public servants (Law no. 188/1999 on the public servants' Statute[11]), which it abolished, the provisions regarding the liability of public servants.

Thus, according to article 492, para. 2 of the Administrative Code, the following actions are considered disciplinary misconduct:

a. „Systematic delay in carrying out work;
b. Repeated negligence in performing work;
c. Unjustified absence from work;
d. Failure to comply with work schedule;
e. Interference or efforts to solve a demand outside the legal framework;
f. Failure to comply with keeping the professional secret or confidentiality of secret work;
g. Manifestations that affect the prestige of the public authority or institution in which the public servant performs their activity;
h. Conducting activities with political character, during work hours;
i. Unjustified refusal to comply to work attributions;
j. Unjustified refusal to subject to work medicine control and medical expertise, following the recommendations made by work medicine doctor, according to the law;
k. Breach of provisions that refer to duties and interdictions established by the law for public servants, other than those referring to conflict of interests and incompatibilities;
l. Breach of provisions that refer to incompatibilities, if the public servant does not act to cease them within 15 calendar days from the date that the incompatibility occurred;
m. Breach of provisions that refer to conflict of interests;
n. Other deeds regarded as disciplinary misconduct in the normative acts in the field of public function and public servants or applicable to them".

2.2. Disciplinary sanctions according to the Administrative Code

According to the doctrine, "there is a general principle of law according to which the breach of an obligation that comes from a judicial norm triggers the author's liability and the obligation to settle the resulted prejudice"[12]. As it has been noticed on a previous occasion, "disciplinary sanctions are[13]:

"**According to the legislation prior to the Administrative Code:**

a. Written reprimand;
b. Diminishing the wage rights by 5-20% for a period up to 3 months;
c. Suspending the right to advance in wage ranks or, if necessary, to promote in public office, for a period from 1 to 3 years;
d. Demotion to a lower function for a period up to 1 year, with the corresponding diminishing of wage;
e. Public office destitution.

According to the Administrative Code:

a. Written reprimand;
b. Diminishing the wage rights by 5-20% for a period up to 3 months;

[9] D. A. Tofan, Drept administativ, Volume II, 5th edition, C.H.Beck Publishing House, Bucharest, 2020, p.299.
[10] V. Vedinaș, Drept administrativ, 10th edition, revised and updated, Universul Juridic Publishing House, Bucharest, 2020, p.571.
[11] Law no.188/1999 on the public servants Statute, published in the Official Journal no. 600 from December 8, abolished by Government Emergency Ordinance no.57/2019 regarding the administrative Code.
[12] R. M. Popescu, Introducere în Dreptul Uniunii Europene, Universul Juridic Publishing House, Bucharest, 2011, p.189.
[13] E. E. Ștefan. Manual de drept administrativ. Partea I. Caiet de seminar, Universul Juridic Publishing House, Bucharest, 2019, pp.255-256.

c. Diminishing the wage rights by 10-15% for a period up to one year;

d. Suspending the right to be promoted for a period of 1 to 3 years;

e. Retrograding to a lower public office, for a period of up to one year, with the corresponding wage diminishing;

f. Public office destitution".

Analyzing the two normative acts, Law no. 188/1999 on the public servants' Statute (applicable legislation prior to the Administrative Code) and the current legislation (the Administrative Code), we notice there are few novelties regarding disciplinary sanctions:

- There is one new sanction: the diminishing of the wage rights from 10% to 15%, for a period up to one year
- "The right to advance" is rephrased and it is replaced with „the right to be promoted"
- "Demotion to a lower function" is rephrased and it is replaced by "retrograding to a public office of inferior level".

2.3. Disciplinary misconduct according to the special Statutes

Regarding the Special Statutes, the Administrative Code, on one hand, expressly lists the special Statutes categories when it comes to a certain domain and, on the other hand, allows the performing of special activities, exceptional in character, for a certain category of public servants, expressly indicated, according to article 380, corroborated with article 370.

Thus, according to article 380, para. 1: "the public servants who fulfill the activities indicated in article 370, para. 3 (activities with special character in exercising the prerogatives of public power) may benefit of special statutes, if working within:

a. Special structures of the Parliament of Romania;

b. Special structures of the Presidential Administration;

c. Special structures of the Legislative Council;

d. Diplomatic and consular services;

e. Institutions of public order and national security system;

f. Customs structures;

g. Any other public services established by law that meet the activities indicated in article 370, para. 3, letter h"[14].

In the Administrative Code, "implicitly, two categories of public servants are established, **to whom the general statute applies** and those who benefit of, and to whom the **special statutes** apply, regulated by special organic laws"[15]. The cited author continues: "the sectors in which **special statutes** may be added are, on one hand, listed by the Code but, on the other hand, there is a possibility to complete them with *other public services established by law*, that perform the activities indicated in article 370, para. 3, letter h"[16].

Next, we are going to briefly present two special Statutes for the public servants categories: police personnel and penitentiary police personnel, with respect to disciplinary misconduct and disciplinary sanctions.

2.3.1. The Statute of police personnel

The judicial regime of disciplinary liability applied to police personnel is regulated by Law no. 360/2002 on the Statute of police personnel[17]. Thus, according to article 57 of Law no. 360/2002 on the Statute of police personnel, the following acts constitute "disciplinary misconduct, if they were not committed in such ways that according to criminal law they are considered criminal offences, acts guiltily committed:

a. Unfit behavior in work, family or society that affects the honor, professional probity of the police personnel or the prestige of the institution;

b. Negligence, manifested in carrying out service duties or dispositions received from hierarchical superior or from authorities that indicated by the law;

c. Repeated or unjustified delay in performing work;

c¹. Unjustified refusal to fulfill a work attribution mentioned in the job description;

d. Overlap of work attribution or lack of solicitude in relating with the citizens;

e. Unmotivated absence or repeated tardiness for work;

f. Causing material damage to the unit that the person is a part of or to the patrimony of the Ministry of Internal Affairs;

g. Breach of norms regarding confidentiality for the undertaken activities

h. Non-compliance with the pledge of allegiance provisions;

i. Illegal interference in the activity of another police employee;

j. Intervention to influence the solving of certain requests regarding the satisfaction of any person;

k. Breach of provisions that refer to tasks, incompatibilities, conflicts of interest and interdictions established by law".

---

[14] Article 370, line 3, letter h) - „other activities with special character that regard the exercising of public authority in domains of exclusive competence of the state, according and in executing the laws and other normative acts".

[15] V. Vedinaș, *Codul administrativ adnotat. Noutăți. Examinare comparativă. Note explicative*, Universul Juridic Publishing House, Bucharest, 2019, p.247.

[16] *Ibidem.*

[17] Law no. 360/2002 regarding the police person's Statute, published in the Official Journal no. 440 from 24 June 2002, last time modified by Government Emergency Ordinance no. 36/2020 for modification and completion of some normative acts (…), published in the Official Journal no. 268 from 31 March 2020.

2.3.2. The Statute of penitentiary police personnel

The judicial regime of disciplinary liability that applies to penitentiary police personnel is regulated by Law no. 145/2019[18] regarding the Statute of penitentiary police personnel. The following are considered disciplinary misconduct, according to article 140 of Law no. 145/2019 (...):

a. „Manifestations that affect the prestige of the authority or public institution where the persons work;

b. Negligence and superficiality manifested while carrying out the work attributions, the legal dispositions or dispositions received from one's hierarchical superior or the authorities named by law;

c. Repeated and unjustified tardiness in performing work tasks;

d. Unjustified refusal to fulfill a work attribution that is part of the job description;

e. Manifesting unfit behavior towards the detained persons, which is against the law on the execution of punishments, or towards other persons that they have contact with during work;

f. Unmotivated absence or repeated tardiness to work;

g. Unjustified departure from work during work hours;

h. Causing material damage to the unit that the person is a part of or to the patrimony of the National Penitentiary Administration;

i. Breach of norms regarding confidentiality about activity or work;

j. Exceeding the work attributions or illegal interference in the activity of another penitentiary police employee;

k. Intervention to influence the solving of a request regarding the satisfaction of any person;

l. Failure to comply to obligations foreseen by legal dispositions in their task, including those that are part of the penitentiary police personnel's Ethical Code and the provisions that refer to incompatibilities, conflicts of interest and interdictions;

m. Prohibiting or preventing the exercise of public liberties and union rights of penitentiary police personnel ;

n. Tolerant attitude of hierarchical superiors regarding committing certain disciplinary misconduct acts by their subordinates;

o. Conducting activities that are not related to work duties, of a nature to impact the execution of work attributions during work hours;

p. Failure to comply to the obligations foreseen in article 119".

Comparatively analyzing the disciplinary misconduct acts nominated by both special Statutes, we notice that when it comes to the penitentiary police personnel there is a greater number of acts that are considered disciplinary misconduct. For example, "Tolerant attitude of hierarchical superiors regarding committing certain disciplinary misconduct acts by their subordinates" is mentioned only for the penitentiary police person; We consider that a rethinking of the existence of this extremely general disciplinary misconduct is necessary, because the current text can lead to abuse in interpreting its content.

Also as an example, we present an act that is mentioned as disciplinary misconduct just for police personnel, but not for penitentiary police personnel, namely "Failure to comply with the provisions of the pledge of allegiance". Well, we consider that this act may be considered disciplinary misconduct for all public servants, be it under the Administrative Code, be it under the special Statutes.

2.4. Disciplinary sanctions according to the special Statutes

Speaking about police officers, there are five disciplinary sanctions, gradually mentioned:

a. "Written reprimand;

b. Wage diminishing by 5-20% for a period of 1-3 months;

c. Postponement of promotion in professional ranks or superior functions for a period between 1-3 years;

d. Demotion to an inferior office, up to, at most, the base level of the professional rank held;

e. Dismissal from the police force".

It is interesting to mention the definition of reprimand's in para. 2 of the same article, namely: "*written reprimand consists of the official reprimand, addressed in written to the guilty policeperson*".

We also mention that there is jurisprudence about article 58¹ on which the Constitutional Court[19] has recently ruled, appreciating that this article is not constitutional. The content of article 58¹ is: *"In order to prevent disciplinary misconduct from happening, the person mentioned in article 52, para. 2 may order the police person's warning. In this case, the measure is taken in writing, it has administrative-prevention character and does not produce consequences on the work report".*

Thus, in the case judged by the Constitutional Court, the authors of this unconstitutional[20] exception have shown that "the measure of warning has produced effects on their work report, being taken into account

[18] Law no. 145/2019 regarding the Statute of penitentiary police personnel, published in the Official Journal no. 631 from 30 July 2019, last modified by Government Emergency Ordinance no. 36/2020 (…), published in the Official Journal no. 268 from 31 March 2020.

[19] Romanian Constitutional Court decision no. 833 from 17 November 2020, published in the Official Journal no. 114 from 03 February 2021.

[20] For more on unconstitutional exception see: S. G.Barbu, C. M. Florescu, *Aspects concerning the admissibility of the exception of unconstitutionality*, Bulletin of the Transilvania University Braşov, Series VII, Vol 13 (62) No.2-2020, http://webbut.unitbv.ro/Bulletin/Series%20VII/2020/BULETIN%20I/23_Barbu-Florescu.pdf, pp.293-298, last accessed on 08.03.2021, 20.00 or I. Muraru, N. M. Vlădoiu, A. Muraru, S.-G. Barbu, *Contencios constituțional*, Hamangiu Publishing House, Bucharest, 2009, p.208 and the following.

when the approval to be named in the Judicial Police structures was withdrawn, respectively when the request to be promoted in function was rejected (par. 30)".

We extract some arguments of the Constitutional Court in accepting the unconstitutionality exception of article 58¹ of Law no. 360/2002 on the Statute of police personnel:

"The Court establishes that the dispositions of article 58¹ of Law no. 360/2002 indicate the warning is a managerial measure that is ordered in writing, has preventive character, but has no effect on the police person's work report (...) (*par. 31*);

The Court establishes that, although, according to legal dispositions the warning does not represent a disciplinary sanction and does not have any effects on the work report, in fact, applying this measure is linked to the idea of intervention with a role in disciplining the police person's conduct when a disciplinary misconduct of little gravity has occurred (...) (*par. 33*);

Besides, even if the police person's work report presupposes his/her subordination to their hierarchical superiors, the Court appreciates that this subordination must clearly be circumscribed to fulfilling the work duties and must not create the possibility to generate abusive or awkward situations, either from the hierarchical superior or from the subordinate, capable of affecting their dignity. Or, the fact that the legal text does not condition the warning on the existence of concrete, objective situations that could justify this measure of the hierarchical superior, may constitute the grounds for the manifesting of actions based merely on the desire to exercise authority towards a person who is in a subordinate position and who cannot properly defend themselves (...) (*par. 36*)"[21].

Regarding the penitentiary police personnel , the disciplinary sanctions that may be applied are six:

"a. Written reprimand;

b. Diminishing of the salary rights for the function with 5-10% for a period between 1-3 months;

c. Postponement of the promotion to professional ranks or superior functions for a period of 1-2 years;

d. Transfer to a lower function, up to the base level of the rank held;

e. Revocation from a leadership position;

f. Dismissal from function".

3. Conclusions

With respect to the judicial regime of the liability of public servants, the Administrative Code has taken on the content of Law no. 188/1999 regarding the public servants' Statute, without bringing any important changes regarding the listing of disciplinary misconduct and disciplinary sanctions.

From the analysis of the law, we derive that there is, on one hand, the common law of administrative-disciplinary liability for the public servants, and for this we analyzed the Administrative Code and, on the other hand, there are special statutes. For this, we have shown examples of what disciplinary misconduct and disciplinary sanctions are in case of two special categories, namely the police personnel and the penitentiary police personnel. For the penitentiary police personnel there is a greater number of disciplinary sanctions (six), in comparison to the police staff (five).

In conclusion, a gradual regulation for the sanctions was noticed, starting from the easiest written reprimand and ending with the worst, the termination of the employment contract or destitution from office. This philosophy of the lawmaker is in accordance to what our doctrine noticed, namely "*the educational character of the sanction*" that "aims at the social rehabilitation of the author"[22].

At this moment, no analysis was performed on other aspects of the administrative-disciplinary liability, such as disciplinary investigation or disciplinary sanction individualization, but we envisage future research perspectives that could develop these subjects, as well.

CERTAIN ASPECTS REGARDING THE ADMNISTRATIVE ACTS ISSUED BY PUBLIC AUTHORITIES

Elena Emilia ȘTEFAN*

Abstract

Amongst the most debated judicial acts issued by the President of Romania, in exercising his constitutional attributions, through which he adopted measures, from 1990 to the present day, were, on one hand, the individual pardon and, respectively, the pardon revocation decree and, on the other hand, the establishing of the state of emergency on the territory of Romania.

In the first case, in 2004, the theoretical debates amongst law theoreticians, but also in the public opinion in general, were abundant, and the problem developed by these doctrinal analyses moved into the courts of law. Pending on the docket before the administrative and fiscal contentious section there was a case in which was decided on the illegality exception of the decree through which the individual pardon given by decree by the President of Romania was revoked.

17 years after that case we notice a reprise of the same effervescence at the public opinion level, but this time we are in an exceptional situation, during the SARS CoV19 pandemic. Thus, in March 2020 there came a moment of reflection on the public agenda regarding another measure taken by the President of Romania, a measure that is seen as controversial, namely the establishing of the state of emergency on the territory of Romania.

Therefore, in this study, based on the analysis of the legislation, doctrine and jurisprudence, we will present our point of view on the administrative acts of the President of Romania, all in a personal approach and, in the end, we will present the conclusions reached following this analysis.

Keywords: *Constitution, administrative act, public authorities, individual pardon, state of emergency.*

1. Introduction

The analysis of the decrees issued by the President of Romania is not new. On one hand, this was developed in doctrine[1], but a scientific research such as the one we propose, was not done before. On the other hand, the subject is current, the decree of state of emergency on the territory of Romania being recently brought to the attention of the public opinion, in March 2020, in the context of a global pandemic such as the one generated by the Covid virus, an epidemic like no other that humankind has faced before. The importance of the study resides in the emphasis of the idea that, although in the history of a state there may be exceptional situations (states of emergency or alert), respecting the citizens' fundamental rights and freedoms by the public authorities is a non-negotiable must.

In this regard we mention, as shown in our doctrine: "The evolution of human society, the complex and sinuous character of the relations coming to existence within states, as well as at supra-state level, be it regional or global, determines the need to identify new judicial, as well as politico-economical instruments, certain protection measures of the fundamental human rights and liberties, seen in general, of the individual freedom, in particular, as constant counterweight to the tendency of state repression that any government manifests towards its citizens, sometimes openly, other times discretely, under reasonable or imaginary pretexts"[2].

The research objective for this study is to prove the importance and actuality of the administrative act in the contemporary society, as a main judicial form of activity of the public authorities. The research methods that we are going to use in this study are the informational method, the comparative method or the logical method.

2. Judicial acts of the President of Romania

2.1. The individual pardon

According to article 100, para. (1) of the Constitution: "In the exercise of his duties, the President emits decrees that are published in the Official Journal of Romania. Failure to publish brings forth the non-existence of the decree". Our analysis regards only the individual pardon, this being the exclusive attribute of the President of Romania, unlike the collective pardon[3], where the authority lies with the Parliament of Romania. We will not analyze this

thoroughly, but will only look at those elements essential in accomplishing the objective of this study.

From the analysis of the constitutional provisions of article 100 para. (1) and article 94 letter d), the following judicial regime of the individual pardon is evident:

- A single person is individually pardoned, the authority lying with the President of Romania. Our Constitution does not detail any other formal details of this decree in the sense of limiting the number of individual pardons in a year or what categories of crimes are being pardoned.
- The individual pardon has to be countersigned by the Prime-minister, ad validitatem.
- The individual pardon must be published in the Official Journal of Romania, under the express sanction of non-existence.

From the analysis of the constitutional texts, we understand that in Constitution there is no imperative norm regarding the pardon decision taken by the President. He only has the possibility to pardon, not the obligation to do so. However, the Constitution imposes the countersigning and publishing in the Official Journal, formalities following the pardon decision taken by the chief of state through decree. In fact, at first glance, the decision to individually pardon a person is more a political decision, which, still, has a legal form, although this is the case of a public authority that performs the activity of public administration[4].

At the same time, in our analysis, we also indicate other relevant legislative provisions, such as article 1 para. (5) of the Constitution: "In Romania, respecting the Constitution, its supremacy and laws is compulsory", as well as also article 6 of the Administrative Code, with the marginal title - the principle of legality: "the authorities and institutions of public administration, as well as their personnel, have the obligation to act with the observance of the applicable legal provisions and treaties and international conventions to which Romania is party". Moreover, as the doctrine showed, "the fundamental law governs the principle of legality as one of the essential elements of public administration, which ultimately signifies the administration's subordination to the Constitution and the law, and represents a warranty of those being administered against abuse or mistakes following the actions of the authorities"[5]. This reference from the Administrative Code restates the constitutional provisions that refer to the harmonization of the national law and the community acquis[6] but also with the priority of the international regulations regarding the fundamental human rights.

The case study that we briefly present in this section refers to individual pardon no. 1164/December 15th, 2004, on certain individual pardons[7], revoked by decree no. 1173/December 17th, 2004, on the revoking of the individual pardon of certain individuals[8]. Practically, the legal problem that was stated at that moment was referring to the question: can an administrative act published in the Official Journal still be revoked by the issuing authority? Obviously, the answer was not easy to give, especially since the issuing authority was not any public authority, but the President of Romania and, corroborated with the provisions of article 126 para. (6) of the Constitution and article 5 of the Law of the administrative contentious no. 554/2004, the problem raised was if that administrative act – the revoking decree of individual pardon may or may not be subjected to the legality control coming from the administrative contentious courts, respectively if, in the meaning of the law, it does not fall into the category of administrative acts that regard the relations with the Parliament.

The doctrine stated that: "within the current constitutional framework, the administrative acts that regard the relations with the Parliament refer either to the direct relation between the legislative and the executive (for example, the appointment of the Government – article 85 of the Constitution, the dissolution of the Parliament – article 89 of the Constitution), or the indirect relation that gives them the character of complex administrative acts, such as the countersigning of the President's decrees by the Prime-minister, who, in his turn, is subjected to Parliamentary control (art. 100 para. 2 of the Constitution)[9]".

Through decision no. 1840/2005, the Administrative and Fiscal Contentious Section[10] of the High Court of Cassation and Justice notices that: "the decrees regarding individual pardon are unilateral judicial acts of public law through which two wills are manifested, but which have the same effect, and, regardless of the fact that these are called complex administrative acts or atypical administrative acts, certainly these judicial acts cannot be assimilated to another category of administrative acts, because they are the result of relations of a constitutional nature, on

one hand, between the two heads of the executive and, on the other hand, with the Parliament".

In the opinion of the High Court of Cassation and Justice: "the reason of the obligation to countersign these decrees by the Prime-minister comes exactly from exercising an indirect control that arises from the principle of constitutional democracy (...). By means of the countersigning institution, the Parliament exercises an indirect control, through the mediation of the Prime minister, who is accountable to the legislative". Essentially, in this case, it was appreciated that the President's decrees countersigned by the Prime-minister are exempted from the administrative contentious control[11].

Moreover, it was recently stated that: "(...) talking about a revocation decree of an individual pardon (...), exercising control, the court had to verify if, talking about an individual administrative act, is enters or not in the category of exceptions from the revocation principle"[12]. The cited author continues: "In the absence of an Administrative Procedure Code that could list these mandatory exceptions, by reporting to the administrative doctrine, we consider that an individual pardon enters the category of irrevocable acts, as long as the pardon has been enforced, meaning that it produced effects in a different judicial regime, namely the criminal executional law"[13].

In a different opinion, it was stated that "the individual pardon, once published, is an irrevocable administrative act, and the decree through which it is revoked cannot be exempted from the control of the administrative contentious courts, so its legality can make the object of an action in administrative contentious or an illegality exception"[14].

2.2. The state of emergency decree

In Romania, the state of emergency regime is governed by G.E.O. no. 1/1999 regarding the regime of state of siege and state of emergency[15]. According to article 93 of the Constitution, named – *Exceptional measures*: para. (1): "*The President of Romania instituted, according to the law, the state of siege or the state of emergency in the entire country or in certain administrative-territorial units and requests the approval of the Parliament for the adopted measure, no later than 5 days after it has been taken"* and para. 2: "*If the Parliament is not in session, it shall lawfully convene no later than 48 hours from the institution of the state of siege or state of emergency and it functions throughout its entire duration".*

In Romania, in the spring of 2020, two decrees were issued regarding the state of emergency. Thus, on March 16th, 2020, the President of Romania, through decree no. 195 instituted the state of emergency on the territory of Romania[16], according to article 93, para. 1 of the Constitution, article 100 and article 3 and article 10 of the Government Emergency Ordinance no. 1/1999 regarding the state of siege and state of emergency regime. In addition, through decree no. 240 from April 14th, 2020, issued by the President of Romania, the state of emergency on the territory of Romania was extended[17]. From that moment through the present, a multitude of administrative acts of the public authorities regarding people's quarantine or isolation have been issued. Subsequently, and we will only mention one case, the Constitutional Court rendered its opinion, admitting the unconstitutionality exception[18] regarding the legislation on quarantine and isolation[19].

According to article 3 of Government Emergency Ordinance no. 1/1999 the state of emergency represents: "the entirety of measures with political, economic, social character that are instituted throughout the country or in certain areas, or in certain administrative-territorial units, in the following situations:

a. The existence of threats regarding national security or constitutional democracy, which makes necessary the defense of the institutions of the constitutional state and the maintaining or reestablishing of the state of legality;

b. The imminence or occurrence of disasters, which makes the prevention, limiting and the removal of their effects necessary".

The institution of the state of emergency by the President of Romania must also be analyzed according

[19] Decision of the Constitutional Court no. 458/2020, published in the Official Journal no. 581 from July 2nd, 2020.

to article 53 of the Constitution, which regulates the restriction of the exercise of certain rights or freedoms. From the analysis of the constitutional construction, the following judicial regime of the instituting the state of emergency is derived:

- The state of emergency is instituted by the President of Romania, through decree.
- The imposing of the state of emergency is instituted *"according to the law".*
- The Parliament must approve of the adopted measure, within 5 days at most after been taken or, if the Parliament is not in session, it will rightfully convene within 48, hours at most, from the institution of the state of siege or state of emergency and it functions throughout its duration.
- According to article 100 para. (2) of the Constitution, "the decrees issued by the President of Romania in exercising the attributions established in article 93 para. (1) *are countersigned* by the Prime-minister".
- The declaration of the state of emergency must observe the judicial regime of the restriction of certain rights or freedoms established by article 53 of the Constitution: "*only through law and only if it is necessary"* (...).
- The decree of instituting the state of emergency must be published in the Official Journal.
- Being an administrative act, issued by a public authority, the decree must be motivated.
- Recent doctrine states that "precisely because it is a normative administrative act, the Presidential decree can be subjected to a legality control from the administrative contentious courts, according to article 5 para. 3 of the Law of the administrative contentious. The court could verify if the President went beyond the competence given by the lawmaker and acted with excess of power, going beyond the purpose of the rule"[20].

3. Comparative analysis between the individual pardon and the decree instituting the state of emergency

The main resemblance between the two acts consists of the fact that they are Presidential acts with legal character, being administrative acts, expressly mentioned by the Constitution. Then, they both fall in the category of decrees that must be countersigned by the Prime-minister and published in the Official Journal, under the sanction of non-existence.

A first distinction refers to the fact that the decree of state of emergency imposition must be later on approved by the Parliament, within a mandatory deadline provided by the Constitution, two hypotheses being entertained: one in which the Parliament is in session (within 5 days from the taking of the measure) and the second one when it is not in session (within 48 hours from the institution of the state).

Unlike the individual pardon that is analyzed, and related to it, the decree revoking a individual pardon (2014), regarding the decree instituting a state of emergency and the extension of the state of emergency by 30 days, have been impacted by a series of other administrative acts, most of which have been contested because of the imposed sanctions. For example, the fines given to the citizens for disrespecting the obligation of wearing masks, a situation still not definitively resolved at institutional level, a frail jurisprudence being seen.

On the other hand, if in case of individual pardon, the President may give pardon to any individual, although regarding collective pardon Law no. 546/2002 (...) confers a more restrictive regime to this act of clemency, in the case of the instituting the state of emergency, the President enforces the legal dispositions, in this case speaking about Government Emergency Ordinance no. 1/1999 (...) as subsequently modified and completed.

4. Conclusions

The present study proposed a summary consideration of the President's administrative acts, starting from two well-known cases (from 2004 and 2020). The analysis of the administrative acts issued by the President of Romania approached both a normative administrative act – the decree of instituting the state of emergency, and an individual administrative act – the individual pardon, in order to emphasize the fact that his acts with legal character can have both a normative and an individual character.

Although the administrative act benefits of the legality presumption[21], which is relative, still, in some cases we speak about the absolute presumption of legality. In this sense, we consider the proposed objective of this study as being fulfilled and along with the doctrine we express our point of view according to which: "the presidential decrees countersigned by the Prime-minister enter the sphere of exception from the legality control mentioned by article 5 of the Law on the administrative contentious no. 554/2004 and by article 126 para. 6 of the Constitution which refers to *the acts that regard the relation with the Parliament*"[22].

Dima, *Care este natura juridică a decretelor Președintelui României emise pentru instituirea și prelungirea stării de urgență*, available online: https://www.g4media.ro/care-este-natura-juridica-a-decretelor-presedintelui-romaniei-emise-pentru-instituirea-si-prelungirea-starii-de-urgenta-op-ed.html, accessed on February 22nd, 2021, 21.00.

[21] M. Comsa, S. G. Barbu, *Contencios administrativ și fiscal. Sinteze de jurisprudență,* Hamangiu Publishing House, Bucharest, 2013, p. 11: "It is a known fact that the administrative act enjoys the legality presumption, as well as the fact that the unilateral administrative act is in itself an executive title (...)".

[22] V. Vedinaș, *op.cit.*, 2020, p.140.

The legislation used with respect to the President[23] and on which we performed the judicial interpretation[24] comprised, mainly, the revised Constitution[25], but also other normative acts. In conclusion, by means of the two types of decrees analyzed in the present study, we appreciate the actuality and importance of the administrative act in the contemporary society.

ABOUT THE THEORY OR THE OPINION ON GENDER IDENTITY IN EDUCATION. THE RELEVANT CASE-LAW OF THE ROMANIAN CONSTITUTIONAL COURT

Cristina TITIRIȘCĂ*

Abstract

A legislative change of the National Education Law No 1/2011, passed by Parliament at the middle of 2020 brought to the attention of the public the notion of "gender identity". The provisions of Article 7 (1) (e) of Law No 1/2011, introduced by the Sole Article of the Law amending Article 7 of the National Education Law No 1/2011, prohibited, inside all teaching establishments and institutions and inside all facilities intended for vocational education and training, including inside those establishments that provide extracurricular education, any activity aimed at spreading the theory or opinion of gender identity, understood as the theory or opinion that gender is a concept different from biological sex and that the two are not always the same.

Keywords: *theory, opinion, gender identity, Constitution, case-law, education, Constitutional Court.*

1. Introduction

The impugned legislative amendment under review concerned a text in Title I - General provisions of the National Education Law No 1/2011, which included the concept, the principles governing the pre-university and university education system, as well as lifelong learning in Romania, the main purpose of education, general aspects regarding the funding of the education system, general competencies regarding the national strategies in the field of education, the organization of specific theological education, as well as general standards regarding the prohibition of activities likely to violate morality standards and of any activities that may endanger the physical or mental health and integrity of children and young people, respectively of teaching staff, auxiliary teaching staff and non-teaching staff, of political activities and religious proselytism, of psychological violence. The newly introduced text supplemented these rules, which underlied the organization and unfolding of the education process in Romania, with a general prohibition of any activity "*aimed at spreading the theory or opinion of gender identity*", the legislator understanding by this prohibited opinion/theory that "*gender is a concept different from biological sex and that the two are not always the same".*

According to the explanatory statement accompanying the legislative proposal, the established prohibition was motivated by the statement that "*in recent years, a new gender ideology has emerged. According to this, biological sex should not label persons as 'females' or 'males'; instead, each person can choose from among the dozens of gender types that (s)he prefers. Following the emergence of the gender ideology, the phenomenon of proselytism, based on both sex and gender, has become a real danger in the education system. Consequently, the legislative proposal supplements the list of prohibitions with the prohibitions of proselytism on the basis of sex and of proselytism on the basis of gender."*

The original wording of the proposed text, which referred to the prohibition of proselytism on the basis of sex and gender, according to the explanatory statement, was kept by the Chamber of Deputies, prohibiting "*e) proselytism on the basis of sex, as defined by Article 4 (d^2) of Law No 202/2002 on equal opportunities and equal treatment for women and men, as subsequently amended and supplemented; f) proselytism on the basis of gender, as defined by Article 4 (d^3) of Law No 202/2002 on equal opportunities and equal treatment for women and men, as subsequently amended and supplemented*." Within the Senate, as the decision-making Chamber, this wording was amended, the prohibition referring to gender identity and being regulated in point (e) of Article 7 (1) of Law No 1/2011, in the wording impugned by the author of the referral.

The President of Romania brought the issue to the attention of the Constitutional Court, who, in a remarkable decision[1], upheld the referral of unconstitutionality formulated by the President of Romania and found that the provisions of Article 7 (1) e), introduced by the sole Article of the Law amending Article 7 of the Law on national education No 1/2011, were unconstitutional.

The present paper aims at bringing to the fore the above-mentioned decision of the Constitutional Court.

2. The decision of the Constitutional Court

2.1. The notions of "gender" and "gender identity"

By examining the terminology used by the legislator, the Court noted that, according to the Explanatory Dictionary of the Romanian Language, the word "spreading", when referring to ideas (theories/opinions as in this case), it has the meaning of "passing from one to another; becoming known to a wide group of people". Thus, it resulted that the impugned standards prohibited - inside all teaching establishments and institutions and inside all facilities intended for vocational education and training, including inside those establishments that provided extracurricular education - any activity aimed at spreading the theory or opinion according to which gender is a concept different from biological sex and that the two are not always the same.

Taking into account the notions contained in the wording of the impugned legislative amendment, the enshrined prohibition and its rationale, contained in the explanatory statement according to which, "*in recent years, a new gender ideology has emerged*", the Court then proceeded to an analysis of the national regulatory framework so as to identify whether and how the notions of "gender"/"gender identity", used by the legislator, are reflected at regulatory level.

Thus, by examining the constitutional provisions, it was found that the notions of "gender"/"gender identity" do not appear to be regulated as such. The Romanian Constitution uses the plural masculine form in several situations, such as: (the) citizens (Articles 4, 15, 16), voters (Article 81), candidates (Articles 37), or the singular masculine form - the citizen (Article 19). The Constitution refers to "women" and "men" (see Article 16), but it also uses neutral terms such as "person" (natural person - Article 26) or "persons" (natural and legal persons - Article 35), the meaning being a generic one, without gender connotation. Official positions do not have a feminine form, phrases such as "Senators" and "Deputies" being used (for example, in Article 90). The Constitution does not contain any distinction likely to establish affiliation to the female (or male) sex based on biological or other criteria. Article 16, read in conjunction with Article 4 of the Basic Law, enshrines formal equality, regardless of sex.

Law No 287/2009 - The Civil Code, republished in the Official Gazette of Romania, Part I, No 505 of 15 July 2011, which contains the rules that represent the general law governing the patrimonial and non-patrimonial relationships between persons, as subjects of civil law, states in Article 30 - *Equality before the civil law* that "*Race, colour, nationality, ethnic origin, language, religion, age, sex or sexual orientation, opinion, personal beliefs, political affiliation, affiliation to a trade union, to a social category or to a disadvantaged category, wealth, social origin, level of education, as well as any other similar situation have no influence on civil capacity."* The Civil Code makes no reference to the situation of transgender people, but the Romanian legislation regulates the legal effects of sex change by Article 4 (2) (l) of Government Ordinance No 41/2003 regarding the acquisition and administrative change of the names of natural persons, according to which "(*2) The requests for name changes are deemed justified in the following cases: l) when a person was approved to have a sex change through a final and irrevocable court decision and requests to bear an appropriate first name by presenting a medical-legal document indicating her/his sex."*

Law No 202/2002 on equal opportunities and equal treatment for women and men, republished in the Official Gazette of Romania, Part I, No 326 of 5 June 2013, distinguishes between the notions of "sex" and "gender" through the provisions of Article 4 (d^2) and (d^3), introduced by Article I (3) of Law No 229/2015, published in the Official Gazette of Romania, Part I, No 749 of 7 October 2015, worded as follows:

„d^2) sex shall mean the set of biological andphysiological traits by which women and men are defined;

d^3) gender shall mean the set of roles, behaviours, traits and activities that society deems appropriate for women and for men, respectively. "

The definition of the notion of "*gender*" also appears in the Council of Europe Convention on preventing and combating violence against women and domestic violence, adopted in Istanbul on 11 May 2011, ratified by Law No 30/2016, published in the Official Gazette of Romania, Part I, No 224 of 25 March 2016. Thus, according to Article 3 (c) of the Convention, "*For the purpose of this Convention: (...) c) 'gender' shall mean the socially constructed roles, behaviours, activities and attributes that a given society considers appropriate for women and men;* Article 12 of the Convention sets a series of general obligations, among which, in point 1: "*Parties shall take the necessary measures to promote changes in the social and cultural patterns of behaviour of women and men with a view to eradicating prejudices, customs, traditions and all other practices which are based on the idea of the inferiority of women or on stereotyped roles for women and men.*" Based on this view, States' obligations are shaped, including that of promoting the social and cultural changes and of eradicating prejudices and other practices based on discrimination between men and women and on "gender stereotypes".

Considering all the above, in the Court's view, it appeared that, since 2003, the national regulatory system has been regulating State's administrative obligations for those situations in which a person proceeds to a sex change. This equaled, implicitly, to the legal acceptance of the perception of sex not as a simple biological "given", but as an element of identity and, respectively, of social identification. Undoubtedly, for a person who chooses such a change, biological sex does not correspond to the sexual identity perceived by the respective person, as the two are not always the

same, contrary to the idea advanced by the prohibition enshrined in the impugned text of law.

This view was also reflected by the provisions of Law No 287/2009 - The Civil Code, which take into account, through the concept of "sexual orientation", elements of sexual identity, as perceived by the individual, and not only the biological features that define sex. The recognition, by law, of differences in sexual orientation and of sex changes equals, implicitly, to the acceptance, by the legislator, of the idea that biological sex is not perceived as gender by all individuals equally and that gender identity is different from biological sex.

The social component of sex/sexuality and the view/distinction between biological/psychological, contrary to socially imposed stereotypes, were clearly outlined at legislative level, in 2015, by the amendment of Law No 202/2002 on equal opportunities and equal treatment for women and men. Thus, Law No 202/2002 defines the notions of "sex" and "gender", distinction strengthened by the definition of "gender" in the Istanbul Convention, ratified a year later through Law No 30/2016.

In relation to this regulatory evolution, the Court noted that the notion of "gender" has a wider scope than that of "sex"/sexuality in the strictly biological sense, as it incorporates complex elements of a psychosocial nature. Thus, while the notion of "sex" is limited to the biological features that mark the differences between men and women, the notion of "gender" refers to a set of psychological and sociocultural traits. This latter notion includes elements of social identity of the individual, which evolve together with society and with the continuous re-evaluation of the interpretation of the principle of equality and non-discrimination on the basis of sex. Gender identity also involved customarily assigned social roles and discrimination based on sex/gender. Thus, becoming aware of one's sex appears as a component in gender identification, but biological factors are supplemented by social ones, gender identity including sexual identity and adapting it to social demands. The Romanian State has legislated this view/approach, undertaking obligations aimed, in essence, at combating gender stereotypes and at the effective realization of the principle of equality and non-discrimination.

In line with this regulatory evolution, the case-law of the Constitutional Court reflects the changes that have taken place over time regarding the social roles attached to women and men and the removal of gender stereotypes. A conclusive example in this regard is represented by the cases concerning the retirement age for women and men or those related to the regulation of parental leave.

Thus, in 1995, the Court noted that "due to the imperatives related to children upbringing and education, especially during the early years, to the increased burdens on women around the household, to the lack of widely accessible social and economic means, during the current transition period, that could ease such burdens, as well as to other aspects that hinder their professional advancement (maternity leaves, postnatal leaves, parental leaves to care for sick children, prohibitions aimed at preventing work under certain conditions, etc.), as well as due to other circumstances, women are in situations that disadvantage them compared to men", which justified, from the perspective of the principle of equality, the establishment of different retirement ages[2].

But, in 2010, on this same subject, the Constitutional Court found that "cultural traditions and social realities are still evolving towards ensuring real factual equality between the sexes, so that it cannot be concluded that, at present, the social conditions in Romania can be considered as supporting an absolute equality between men and women. However, important steps have been taken. An example in this regard is the extension of the right to parental leave for men as well, including for militaries[3]. For these reasons, raising women's retirement age to 65 was intended to take place over a period of 15 years, during which it is expected that, in Romania, the social conditions will change significantly"[4]. The Court noted, in the same context, "the normal changes that occur in society in terms of mentalities, culture, education and traditions", stating that "the provision of an equal treatment between the sexes is increasingly necessary in the context of the European trend that requires States to comply with the standards of equal, non-discriminatory treatment between men and women"[5].

Thus, were noted the recitals that address the traditional social perception, closely attached to the biological significance of sex - which seemed to overwhelmingly underlie the solution delivered in 1995, respectively the recitals that highlight the social developments in the sense of moving away from gender stereotypes, as an effect of the change/the acceptance of the change in the social roles of women and men under the influence of the factors highlighted by the Court in its reasoning.

The issue of gender/gender identity had also been the subject-matter of numerous cases before the European Court of Human Rights (*ECHR*), even if, similar to the Romanian Constitution, the Convention for the Protection of Human Rights and Fundamental

[2] Constitutional Court, "Decision of the Constitutional Court of Romania No 107 of November 1, 1995" (Official Gazette of Romania, Part I, No 85, April 26, 1996).

[3] Constitutional Court, "Decision of the Constitutional Court of Romania No 90 of February 10, 2005" (Official Gazette of Romania, Part I, No 245, March 24, 2005).

[4] Constitutional Court, "Decision of the Constitutional Court of Romania No 1237 of October 6, 2010" (Official Gazette of Romania, Part I, No 785, November 24, 2010).

[5] Constitutional Court, "Decision of the Constitutional Court of Romania No 387 of June 5, 2018" (Official Gazette of Romania, Part I, No 642, July 24, 2018).

Freedoms does not expressly regulate these notions. However, the lack of express rules to this effect did not prevent the ECHR from ruling on the above-mentioned concepts, from ascertaining social developments in this respect, resulting in the duly imposition of States' obligations, in particular with regard to the principle of equality and respect for the right to privacy (which also includes in its scope the gender identity of a person).

Thus, the ECHR stated that gender equality was a major goal in the member States of the Council of Europe, noting, for example, in its Judgment of 22 March 2012, delivered in the Case of *Konstantin Markin v. Russia*, point 127, that "the advancement of gender equality is today a major goal in the member States of the Council of Europe and very weighty reasons would have to be put forward before such a difference of treatment could be regarded as compatible with the Convention. (...). In particular, references to traditions, general assumptions or prevailing social attitudes in a particular country are insufficient justification for a difference in treatment on grounds of sex. (...)."

The case-law on gender equality of the ECtHR covers a variety of legal aspects, such as cases where women are victims of violence (see, for example, the judgment of 28 May 2013 in the Case of *Eremia v. Republic of Moldova*, in which the ECtHR held that the failure by the authorities to comply with their duty to protect the applicants reflected the fact that they did not assess the seriousness of acts of violence against women, and the failure by the authorities to take into account the issue of violence against women constitutes discriminatory treatment on grounds of sex, in breach of Article 14 read in conjunction with Article 3 of the European Convention on Human Rights), employment and parental leave (see, for example, Case of *Konstantin Markin v. Russia*, cited above, where the ECtHR found that men were in a similar situation to that of women as regards parental leave), age conditions in relation to the exercise of the right to social benefits (see, for example, the judgment of 17 February 2011 in the Case of *Andrle v. Czech Republic*, where the applicant complained that, unlike the situation of women, there was no lowering of the retirement age for men who had raised children, and the Czech Government argued that this difference in treatment was due to the situation in the old communist system, where women with children had an obligation to work full-time, as well as to take care of children and care for the households, the measure being designed to compensate women for that dual burden), national provisions on the choice of first name and the transfer of the parents' surname to their children (see, for example, the judgment of 7 January 2014 in the Case of *Cusan and Fazzo v. Italy*, where the ECtHR found that a rule which does not allow a married couple to give their children the surname of their mother is discriminatory against women), homophobic violence (see, for example, the judgment of 12 April 2016 in the Case of *M.C. and A.C. v. Romania*, where the ECtHR found that the authorities had not taken into account possible discriminatory grounds when investigating a homophobic attack).

Another field of gender identity, which was very significant as regards developments both at the level of case-law and national legislation, concerned the situation of transgender people. The case-law of the ECtHR to this effect has developed from the Court's statements in the sense that it was aware "of the seriousness of the problems affecting transgender people and of their suffering" and the recommendation as to "constant consideration of appropriate measures, having regard in particular to developments in science and society" (point 47 of the judgment of 17 October 1986 in the Case of *Christine Goodwin Rees v. United Kingdom*), to finding a violation of Article 8 (right to respect for private and family life) of the Convention in a case concerning the recognition of transgender people (see judgment of 25 March 1992 in the Case of *B. v. France*) where, observing that several official acts revealed in France "a discrepancy between the legal gender and the apparent gender of a transgender person" (Article 59 of the judgment), which also appeared in the acts relating to social security contributions and in the salary slip, the ECtHR held that the refusal to amend the register of civil status in her regard had placed the applicant "in a daily situation which was inconsistent with her private life".

These considerations were reiterated in subsequent cases, such as the judgment of 30 July 1998 in the Case of *Sheffield and Horsham v. the United Kingdom*, where the Court reaffirmed that "the area must be kept under constant review by the Contracting States" (point 60 of the judgment), in the context of "extended acceptance of the phenomenon and recognition by society of the problems that transsgender people may encounter", in its judgment of 11 July 2002 in the Case of *Christine Goodwin v. the United Kingdom* (Grand Chamber), where the Court ruled that Article 8 of the Convention Convention had been violated, retaining a clear and continuous international trend towards greater social acceptance of transgender people and the legal recognition of the new sexual identity of transgender people who have undergone surgery. In its judgment of 12 June 2003 in the Sase of *Van Kuck v. Germany*, the ECtHR held, inter alia, that sexual identity is one of the most intimate aspects of aperson's private life, in its judgment of 10 March 2015 in the Case of *Y.Y. v. Turkey*, it reiterated in particular that the possibility for transgender people to fully enjoy the right to personal development and physical and moral integrity cannot be regarded as a controversial issue, and in the judgment of 11 October 2018 in the Case of *S.V. v. Italy*, the ECtHR found that there had been an infringement of Article 8 of the Convention by relying in particular on the inflexibility of the judicial process for recognising the sexual identity of transgender people then in force, which placed the applicant — whose physical and social identity had long been that of a female — for an

unreasonable period of time in an abnormal situation, leading to feelings of vulnerability, indignity and anxiety. Similarly, it is also possible to mention the judgment of 17 January 2019 in the Case of *X against the former Yugoslav Republic of Macedonia*, in which the ECtHR found that the circumstances of the case revealed legislative gaps and serious deficiencies in the recognition of his identity which, first, leave the applicant in a situation of uncertainty as to his private life and, second, have long-term negative consequences on his mental health.

Also under European Union (EU) law, the promotion of gender equality and the fight against discrimination on grounds of gender are issues developed at both legislative and case-law level. Thus, according to the EU Treaties, protection against discrimination on grounds of gender has been and remained a fundamental function of the European Union and gender equality is a "fundamental value" (Article 2 TEU) and an "aim" (Article 3 TEU) of the Union. The degree of acceptance of the social and economic importance of equal treatment was strengthened by the central position it received in the Charter of Fundamental Rights of the European Union.

To the same effect, Directive 2006/54/EC of the European Parliament and of the Council of 5 July 2006 on the implementation of the principle of equal opportunities and equal treatment of men and women in matters of employment and occupation (recast) establishes in the second recital that "*equality between men and women is a fundamental principle of Community law under Article 2 and Article 3(2) of the Treaty and the case-law of the Court of Justice. Those Treaty provisions proclaim equality between men and women as a «task» and an «aim» of the Community and impose a positive obligation to promote it in all its activities".* According to recital 3 of that directive, "*The Court of Justice has held that the scope of the principle of equal treatment for men and women cannot be confined to the prohibition of discrimination based on the fact that a person is of one or other sex. In view of its purpose and the nature of the rights which it seeks to safeguard, it also applies to discrimination arising from the gender reassignment of a person."* Another relevant example is Directive 2012/29/EU of the European Parliament and of the Council of 25 October 2012 establishing minimum standards on the rights, support and protection of victims of crime, and replacing Council Framework Decision 2001/220/JHA, which protects lesbian, gay, bisexual, transgender and intersex (LGBTI) persons from hate crimes. This includes the criteria of sexual orientation, gender identity and gender expression in the recognition of victims' rights, helping to ensure that victims affected by a crime due to prejudice or discrimination receive adequate information, support and protection.

The Court concluded that regulatory developments at national, Council of Europe, EU level, as reflected in the case-law of the Constitutional Court, the ECtHR, the Court of Justice of the European Union (CJEU), support and highlight the fact that gender identity/gender equality is more than biological sex/differences thus combating gender stereotypes attached to the traditional approach to women's and men's roles in society. The Romanian State has, for almost two decades, undertaken that approach by express rules, Romania being connected to international developments in this area by the provisions of Article 20 of the Constitution, which set the priority for the highest standards of protection of fundamental rights.

This was essentially the national and European context in which the law containing the criticised rule has recently been adopted, a rule which establish that, in all teaching facilities, it is forbidden to spread the idea/theory that gender identity is a concept different from biological sex. In other words, gender stereotypes appear to be established by law (in the premises where the teaching process takes place), opinions to the contrary being penalised. The legislative solution with that content is considered to be contrary to the constitutional rules relied on in the statement of reasons for the referral, to be analysed in the order in which they are mentioned in the referral.

2.2. Submissions related to the infringement of Article 29 of the Constitution on freedom of conscience

According to the author of the referral, the prohibition, applicable to the teaching staff and to pupils and students, inside all teaching facilities, of activities aimed at spreading theories or opinions on gender identity, understood as the theory or opinion that gender is a concept different from biological sex and that the two are not always the same, was *eo ipso* a problem likely to lead to violations of the freedom of conscience, as long as those provisions generated obligations in the sense of teaching/attending courses/classes on a certain theory/opinion with a result/purpose contrary to the beliefs of each individual.

The Court found that those claims were well founded. Freedom of conscience essentially presupposes that the person has the opportunity to have and publicly express his or her views of the surrounding world. Such views are developed under the influence of a multitude of factors during the life of the individual, a framework in which the education system plays an essential role. This is also the meaning of the provisions under Article 4 of Law No 1/2011 on national education, according to which "*the main purpose of education and training of children, young people and adults is to develop competences, understood as a multifunctional and transferable set of knowledge, skills and abilities, necessary for: (a) the personal fulfilment and development, by achieving their own goals in life, in accordance with the interests and aspirations of everyone and the desire to learn throughout their lives; (b) social integration and active citizen participation in society; (c) employment and participation in the functioning and development of a*

sustainable economy; (d) forming a vision of life, based on humanistic and scientific values, national and universal culture and fostering intercultural dialogue; (e) education in a spirit of dignity, tolerance and respect for human rights and fundamental freedoms; (f) nurturing sensitivity to human issues, moral-civic values and respect for nature and the natural, social and cultural environment." These principles, which may be subsumed to the freedom of conscience, are incompatible with the imposition by law a "truncated" knowledge of reality as a prerequisite for shaping the conception of the surrounding world. These views of life cannot be "prescribed" or imposed by the State by asserting certam ideas as absolute truths and by prohibiting, de plano, any attempt to learn about any other opinion/theory existing on the same topic, especially when such opinions/theories are promoted/supported from a scientific and legal point of view, marking the societal evolutions at a certain point in time.

The drafting of Article 29 (1) of the Constitution highlights the complex area of freedom of conscience, which includes *„freedom of thought"*, *"freedom of opinion"* and *"freedom of religious beliefs"*. They *"shall not be restricted in any form whatsoever"* and no one shall be *"compelled to embrace an opinion or religion contrary to his own convictions"*. However, the contested law prohibits any activity of knowledge/expression in the organised educational environment of theories/opinions relating to gender identity other than that established by the State. This is tantamount to forcing both young people and teachers to adopt and express - on the teaching premises - only the view promoted and recognised by the State by law, according to which gender is identical to biological sex, a constraint incompatible *de plano* with the freedom of conscience as defined by that constitutional text.

Thus, with reference to Article 29 (2) of the Constitution, according to which the State guarantees freedom of conscience, and taking into account the content of that freedom, it follows that, in order to meet constitutional requirements, the education system must be open to ideas, values, opinions and encourage their free expression and criticism. In organising educational activities, the State must ensure that these freedoms are respected by ensuring that pupils/students can take part in the study of particular subjects, theories or opinions, be able to know, think to, understand, analyse certain concepts and theories and express themselves freely in relation thereto, regardless of their complexity or controversial nature. In other words, the State — through the education system, must support the formation of views of the surrounding world, rather than impose them, by preventing any possibility to learn/discuss information on a particular topic/subject.

Moreover, as stated in the referral, freedom of conscience must be examined "in particular in relation to the human dignity guaranteed by Article 1 (3) of the Basic Law, which dominates the entire system of values as its ultimate value" (the author of the referral refered to the reasoning part contained in Decision No 669 of 12 November 2014, published in the Offîcial Gazette of Romania, Part I, No 59 of 23 January 2015). The prominent position of human dignity in the constitutional system of values was reinforced by the considerations underlying the decisions by which the Constitutional Court ruled on initiatives for revision of the Constitution, such as Decision No 465 of 18 July 2019, published in the Official Gazette of Romania, Part I, No 645 of 5 August 2019, in which the Court held that "the fundamental rights and freedoms of citizens and their guarantees cannot be regarded as a diffuse set of elements unrelated one to the other, but form a coherent and uniform system of values, based on human dignity. In addition to the fact that the fundamental rights and freedoms described as such in the Constitution are based on human dignity (Decision No 1109 of 8 September 2009), human dignity being a supreme value of the Romanian State, it is not only proclamative in nature and is not deprived of legislative content, but, on the contrary, has normative value and can be classified as a fundamental right with a distinct content calling into question the human nature and condition of the individual. To that effect, the Constituțional Court itself held that disregarding the subjective principles characterising human beings is contrary to human dignity by expressly referring to the object-subject formula used by the German Federal Constitutional Court when analysing the concept of human dignity[6]. In that decision, the Court emphasised that a particular regulatory framework must not disqualify the person and place them on the second level in relation to the State's intention to keep an electronic health record and/or to centralise various medical data." (paragraph 47). The ECtHR has held in the same sense that of the very essence of the Convention for the Protection of Human Rights and Fundamental Freedoms is the respect for human dignity and human freedom (judgment of 29 April 2002, Case of *Pretty v. the United Kingdom*, paragraph 65). Any violation of human dignity affects the essence of the Convention (judgment of 2 July 2019 in the Case of *R.S. v. Hungary*, paragraph 34) (paragraph 48). Similarly, the Court noted that the Court of Justice of the European Union had also held that the EU legal order, unequivocally, endeavours to ensure respect for human dignity as a general principle of law (judgment of 14 October 2004 in Case C-36/02, Omega Spielhallen-und Automatenaufstellungs-GmbH, paragraph 34).

However, a legal constraint, in the sense of prohibiting the teaching staff and the pupils and students, inside all teaching facilities, from conducting any activity aimed at "spreading" - that is, actually, any act of communicating/learning about opinions on gender identity contrary to the one imposed by the

[6] Constitutional Court, "Decision of the Constitutional Court of Romania No 498 of July 17, 2018" (Official Gazette of Romania, Part I, No 650, July 26, 2018), par.52.

State, a theory that can contradict opinions, beliefs or maybe even the gender identity that a person perceives, is contrary to human dignity itself. Applying *mutatis mutandis* the case-law cited above, the Constitutional Court held that, by the legislative framework created with regard to the organisation of education, the State must not disregard the individual, with all the complexity inherent to that concept, and place the individual in a secondary position in relation to the possible intention of the State to impose a particular idea. In other words - with reference to the present case - the intention of the State, through its authorities, to promote at some point a conception of the concepts of "sex" and "gender", must not be transformed into an act imposing and penalising the actions for knowledge/bringing to knowledge of existing opinions on this subject, that is to say, an act which represents a constraint of the freedom of conscience, as an inherent dimension of human dignity.

2.3. Submissions as to the infringement of the constitutional provisions of Article 16 (1) relating to the principle of equality of citizens before the law, in conjunction with the provisions of Article 32 on ensuring access to education and the protection of children and young persons

The author of the referral took the view that, by imposing a condition in the sense described above, the law subject to review by the Constitutional Court is such as to exclude from the scope of beneficiaries of the right to education those who wish to study the theory/opinion of gender identity other than as it is subjectively set out by the legislator. Making access to education conditional by imposing constraints on the expression of a theory/opinion expressly provided for by law, both for beneficiaries and education providers, constitutes, according to the author of the referral, an interference which does not respect the principle of proportionality between the measures taken and the public interest safeguarded.

The Court found that those claims were also well founded. Thus, ensuring the right to education and, from that point of view, guaranteeing it at constitutional level by the provisions of Article 32 were actions aimed at the education of children, young people and people so that they can form part of society, which implies an awareness of the developments inherent in society and an informed acceptance/rejection of theories or opinions conveyed at a given time. As a result, education must be continuously linked to these developments and not *de plano* deny the knowledge of them.

The issue of gender identity with its many dimensions has long been present in the social and legal landscape - even though the initiators of that legislation use vague terms, referring to "recent years" and without indicating where and how the "theory" whose prohibition they propose has emerged and developed. The developments of legislation and case-law in Romania, of the rules adopted at the level of the Council of Europe and the EU and of the case-law developed by the ECHR and the CJEU demonstrate that the distinction between sex and gender and its much wider and more complex scope are recognised in the instruments mentioned for several decades. In this context, the prohibition in the organised educational environment of any activity aimed at knowing this issue appeared almost anachronistic, such as to suppress access to information and, thereby, access to education, aiming at a psycho-social phenomenon recognised both in legislation and case-law. This is all the more so as the prohibition is formulated in general terms and on a concept which, through the multitude of legal, sociological, psychological meanings, can emulate a variety of fields of study and research that thus become forbidden to the recipients of the educational act only because, in one way or another, they can be interpreted to question aspects of gender identity.

According to the explanatory statement, the intention of the initiators was to prohibit "proselytism", i.e. to prohibit acts of persuading young people to embrace a certain idea/theory. With regard to this wording of the text of law, considerations may have been eventually made in the light of the conditions for restricting the exercise of certain rights and freedoms. However, the final form of the law - criticised by the author of the referral - prohibits any activity of expression/knowledge of opinions different from that imposed by the legislator. Such an absolute prohibition is incompatible with the organisation of education in a democratic state and also with the protection of children and young people, as regulated by Articles 32 and 49 of the Constitution. The concealment / denial / repression of an opinion does not lead to its disappearance, nor can "protect" the individual from the alleged harmful effects that the state would like to prevent in relation to the education of children and young people.

The criticised regulation also violates the principle of equality, invoked by the author of the referral, being in conjunction with the provisions of Article 32 of the Constitution on the right to education and of Article 49 on the protection of children and young people. According to the case-law of the Constitutional Court, "the place that the principle of equality occupies in all constitutional provisions confers particular importance on it"; "the principle of equality characterises fundamental rights and freedoms, while being a guarantee of each fundamental right"; "equality is closely correlated with all fundamental rights and freedoms, so that the analysis of the suppression of fundamental rights and freedoms must be based on the principle of equality, principle which underlines fundamental rights and freedoms"; "as the principle of equality is related to the essence and function of human dignity, it follows that equality is a characterising and intrinsic element of human

dignity."[7] In the light of the principle of equality thus defined, in conjunction with the right to education and the protection of children and young people, they must have, without any discrimination, the possibility to know and to study theories, ideas, concepts in accordance with societal developments, without any constraints to censor their freedom of thought and expression. The educational ideal promoted in Romania is represented by "*the free, integral and harmonious development of human individuality", "the formation of autonomous personality", "the assumption of a system of values that are necessary for personal fulfilment and development"* [Article 3 (2) of Law No 1/2011], and the mission assumed by the legislator in terms of education is, among others, to *"train, through education, the mental infrastructure of the Romanian society, in agreement with the new requirements, derived from the status of Romania as member of the European Union and from the functioning in the context of globalization, and to sustainably generate a national highly competitive human resource, capable of efficiently operating in the current and future society".* [Article 2 (2) of Law No 1/2011]. The prohibition of the access to education and the obligation for the state to express its opinion in this regard do not serve the conscious assumption of a system of values necessary for personal fulfilment and development, being at the same time a genuine violation of equal opportunities, as long as young people in Romania, citizens of the European Union, are forbidden in their country to know/express opinions/study a certain sphere of problems and theories. The issue of gender identity is present not only in theoretical debates, but also in legislations and in a rich case-law at European level, and the prohibition on information about it appears as an unjustified violation of the equal access to education of young people in Romania.

2.4. Submissions regarding the violation of the provisions of Article 30 (1) and (2) of the Constitution on freedom of expression and prohibition of censorship

The author of the referral stated that the criticised rules equate with the establishment of a censorship of opinions/theories in theoretical research on gender identity. This is the imposition of a certain result, of a distorted knowledge regarding the matter of gender identity, and, according to Article 30 (2) of the Constitution, censorship of any kind is prohibited. Moreover, the criticised rule, by the way it will be applied, will result in the prohibition, by law, of an academic theory and will equate with the pre-establishment of the result of scientific research in the matter, with the aim of falling within the established legal limits, in contradiction with the rules of the framework law on education.

With reference to these claims, the Court recalled its statements that "the freedom of consciousness inevitably implies the freedom of expression, which makes possible to externalise, by any means, the thoughts, opinions, religious beliefs or spiritual creations of any kind."[8]. Regarding the content of the ideas, of the opinions that can be expressed at some point, the ECHR stated, referring to the interpretation of Article 10 of the Convention for the Protection of Human Rights and Fundamental Freedoms, that the freedom of expression constitutes one of the foundations of a democratic society and one of the basic conditions for its progress and for the fulfilment of each individual (Judgment of 25 October 2018 in Case *E.S. vs. Austria*). "The freedom of expression enshrined in Article 10 shall be valid, subject to paragraph (2), not only for the 'information' or 'ideas' received in favour or regarded as harmless or indifferent, but also for those which catch, shock or worry" [see, inter alia, Judgment of 7 December 1976, in Case *Handyside v United Kingdom*, paragraph (49), and Judgment of 23 September 1994, in Case *Jersild v Denmark*, paragraph (37)].

Under Article 30 (1) of the Constitution, freedom of expression is inviolable, however, "according to Article 30 (6) and (7) of the Constitution, it shall not be prejudicial to the dignity, honour, privacy of a person and to the right to one's own image, being prohibited by law any defamation of the country and the nation, any instigation to a war of aggression, to national, racial, class or religious hatred, any incitement to discrimination, territorial separatism or public violence, as well as any obscene conduct contrary to morality. The limits of the freedom of expression are entirely consistent with the concept of freedom, which is not and cannot be understood as an absolute right. The legal-philosophical conceptions promoted by democratic societies admit that one person's freedom ends where another person's freedom begins. (...) An identical limitation shall also be laid down in Article 10 (2) of the Convention for the Protection of Human Rights and Fundamental Freedoms, according to which "*The exercise of these freedoms, since it carries with it duties and responsibilities, may be subject to such formalities, conditions, restrictions or penalties as are prescribed by law and are necessary in a democratic society, for the protection of the reputation or rights of others (...)",* as well as in Article 19 (3) of the International Covenant on Civil and Political Rights, which establishes that the exercise of freedom of expression carries with it special duties and responsibilities and may therefore be subject to certain restrictions, but these shall only be such as provided by law, taking into account the rights or reputation of

[7] Constitutional Court, "Decision of the Constitutional Court of Romania No 464 of July 18, 2019" (Official Gazette of Romania, Part I, No 646, August 5, 2019).

[8] Constitutional Court, "Decision of the Constitutional Court of Romania No 485 of May 6, 2008" (Official Gazette of Romania, Part I, No 431, July 9, 2008).

others. Being a restrictive rule capable of circumscribing the framework within which freedom of expression can be exercised, the listing made by Article 30 (6) and (7) is a strict and limiting one"[9].

The Court observed that the prohibition of access to knowledge of an opinion and expression in this regard only because it does not agree with that of the state on an issue - in this case gender identity - arises from that perspective as a clear violation of the freedom of expression in a democratic society and cannot be classified within any of the limits enshrined in the constitutional text of reference. However, "as the limits imposed on the freedom of expression are themselves of constitutional rank, the determination of the content of this freedom is of strict interpretation, no other limit being admitted except in breach of the letter and spirit of Article 30 of the Constitution."[10].

The Court also noted that a specific expression of the freedom of expression in higher education units is, according to law, the academic freedom [Article 123 (1) of Law No 1/2011]. This involves the free expression of academic opinions, without restrictions of ideological, political or religious nature. At the same time, academic freedom requires objectivity in knowledge and appropriate scientific training, the universities having the freedom to impose certain scientific and ethical standards. In higher education institutions it is prohibited to jeopardise in any form the right to free expression of scientific opinions and the freedom of research is ensured in terms of determining the themes, choosing the methods, processes and capitalising on results, according to the law [Articles 123 (5) and (6) of Law No 1/2011]. However, the prohibition of free expression in relation to gender theory clearly determines the prohibition of any research initiative in this field, the criticised rule imposing, independently of any free debate or research, a dogmatic, truncated education, compelling for the free expression of teachers and beneficiaries of the educational act, ignoring their right to opinion.

2.5. Submissions regarding the violation of the provisions of Article 1 (3) and (5) of the Constitution on the rule of law and the respect for the Constitution and laws, as well as Article 20 (2) on the priority of international regulations in the field of fundamental human rights

It was argued, in essence, that the normative act does not comply with the legal requirements regarding its integration into the entire legislation and its correlation with the international treaties to which Romania is a party, that it contains provisions which are inconsistent with the regulations of Articles 6 and 14 of the Istanbul Convention and also contravenes the solution established by the constituent legislator in Article 20 (2) of the Fundamental Law. With regard to the existence of contradictory legislative solutions, the Constitutional Court held, by Decision No. 1 of 10 January 2014, that it breaches the principle of legal certainty, principle which constitutes a fundamental dimension of the rule of law, as expressly enshrined by the provisions of Article 1 (3) of the Fundamental Law. Taking into account the case-law of the constitutional court in the matter, binding according to Article 147 (4) of the Constitution, it was appreciated that the criticised law is contrary to the provisions of Article 1 (3) and (5) of the Constitution referring to the rule of law and the respect for the Constitution and laws.

The Court found that those criticisms were well founded. The Romanian legislation prohibits discrimination on grounds of sexual orientation, contains legislative solutions for situations aiming at sex change, the distinction between the concepts of "sex" and "gender", therefore clear provisions, in line with the obligations assumed by Romania as a signatory party to international treaties relating to the field of "gender identity". Similarly, the internal normative system is connected, through Article 20 of the Constitution, to the international regulatory framework on human rights and to the evolutionary interpretation given by international courts such as the ECHR, enshrining the priority of the highest standards on fundamental rights. Through Article 148 of the Constitution, mandatory European rules have priority if they are contrary to the domestic ones. In this context, the prohibition by law of the expression and knowledge in educational institutions of the issue of gender identity other than as identity between gender and biological sex equates to the promotion of normative solutions that are mutually exclusive, capable of creating a confusing and contradictory regulatory framework, contrary to the requirements of law quality law imposed by Article 1 (3) and (5) of the Constitution.

The establishment of different legal solutions for the same normative situation represents a contradiction of the legislator's conception, which cannot be accepted as it generates a lack of coherence, clarity and predictability of the legal rule, making the recipients of the law unable to adapt their conduct. It would be inferred from the corroboration of the incidental rules in this area that a pupil/student/teacher/a person must comply exactly with legislation that promotes gender identity distinct from sex as biologically given and does not commit any discrimination because he/she is liable to be sanctioned, but, at the same time, in educational areas to support the contrary to this legislation because - again - he/she is liable to be sanctioned, this time because he/she does not agree with gender-specificity, meaning he/she does not agree to discrimination in a

[9] Constitutional Court, "Decision of the Constitutional Court of Romania No 649 of October 24, 2018" (Official Gazette of Romania, Part I, No 1045, December 10, 2018); Constitutional Court, "Decision of the Constitutional Court of Romania No 629 of November 4, 2014" (Official Gazette of Romania, Part I, No 932, December 21, 2014).

[10] Constitutional Court, "Decision of the Constitutional Court of Romania No 629 of November 4, 2014", par.48; Constitutional Court, "Decision of the Constitutional Court of Romania No 650 of October 25, 2018" (Official Gazette of Romania, Part I, No 97, February 7, 2019).

broad sense. The obligation to comply with the law imposed by Article 1 (5) of the Constitution thus obtain a derisory nature, the person being objectively unable to comply with it. Whereas, according to other regulations in force, the State does not discriminate against persons with other sexual orientation, administratively recognises the change of sex, distinguishes between sex and gender and respects the obligations imposed by the ECHR in matters of equality and non- discrimination with its multitude of facets. Such a normative solution appears to be contrary to legal logic and lacking any reasonable reasoning.

4.Conclusions

Romania's accession to the E.U., in 2007, meant the acceptance of multiple changes. Little by little, European values were inserted in legislation and subsequently, in everyday life. The evolution of E.U. and ECtHR case-law were also reflected in the case-law of ordinary courts and of the Romanian Constitutional Court. The decision of the latter regarding the theory or the opinion on gender identity in education is another example of the adaptations undergoing in Romanian legislation.

THE METHOD OF NORMING THE TRANSLATION CONDITIONS TO COMPETITIVE ELECTRICITY SUPPLY MARKET

Constantin Claudiu ULARIU [*]

Abstract

In objectifying a desirable economic and social reality, the undistorted and efficiency regulatory mode of the conditions for the supply of electricity on a free commercial market by the national authority, a minimum legal requirement for the functioning of the electricity sector and market should be respected, in terms of efficiency, competition, transparency and consumer protection.

However, on the electricity market in Romania, marked by a successive translation of the conditions of electricity supply by suppliers and the establishment of the electricity tariff, between the method regulated by state institutions, having legal competences in the field, and the competitive market, the role of the National Energy Regulatory Authority, hereinafter referred to as ANRE, is even more important in avoiding competitive slippage and abuses against final consumers.

Contrary to its role of administrative guardianship in the field of electricity supply, ANRE stood out, by issuing administrative orders regulating the conditions for the transition of captive consumers from the regulated to the competitive market, through an administrative-normative approach not only defective, but also harmful to consumers as well as through a lack of transparency and the adoption of at least questionable administrative orders. Therefore, from this point of view, it is strictly imposed the necessity of the systematic and teleological analysis of the ANRE Order no. 188/2020(subsequently amended by Order no. 6/2021), of the ANRE Order no. 241/2020 and of the ANRE Order no. 242/2020, from the perspective of the excess of power in the issuance / adoption of the administrative act institution, regulated by disp. art.2 paragraph 1 letter n) of Law no.554 / 2004.

It is necessary to analyze the legal character of these orders issued by ANRE, including the possibility of censoring their stipulations by the court on the basis of excessive power adoption, as an indispensable requirement of compliance with the principle of legality of the administrative act, with the use of the jurisprudence of the European Court of Human Rights (ECHR) and the jurisprudence of the Court of Justice of the European Union (CJEU) relevant in the matter.

Keywords: *order, administrative guardianship, excess of power, regulation.*

1. Introduction

The specificity of the organization of modern society, characterized by globalization, but largely by placing certain types of activity under the prerogative of a few professionals, who exercise a real monopoly in those fields, involves identifying, preparing and implementing a timely, transparent legislative framework. efficient, applied, balanced, non-discriminatory, proportionate and adapted to the specifics of that activity or public service.

These regulatory needs imply the involvement of state institutions in shaping and elaborating the ways of organizing these activities of general interest or providing public services, regardless of whether they are carried out by public institutions, by legal entities with whole or majority state capital or by legal entities of private law who, according to the law, have obtained the status of public utility or are authorized to provide a public service, in public power regime, according to the stipulations of art.2 paragraph 1 (b) thesis II of Law no. 554/2004.

The public services activities, being characterized by a synoptic and complex structuring and by a regime of often monopoly, fact that puts the citizen, as recipient of the public interest, in a situation of severe inferiority to the suppliers of these services, involve state institutions control, focused on regulating the supply conditions, the rules of commercial behavior of suppliers on the economic market, the general regulatory framework for respecting the competitive environment and also the structuring, deployment and control of compliance with the rules of participation in the free market of public services.

One of the primary areas of public service provision in any state, and the Romanian society does not make a discordant note, is that of electricity supply, which is characterized as a strategic area of national interest, being thus subject to a complex and specialized regulation, aimed to maintaining a fair balance, on the one hand, between suppliers, by stimulating and preserving a competitive environment, and, on the other hand, between the actors in the electricity supply market and consumers, as final recipients in a clear position of inferiority and vulnerability on the market, determined by the poor level of information, market involvement and influencing the conditions for providing this service, including through the way of negotiating the price of electricity.

Therefore, the role of Romanian state institutions is a strong and decisive one in this fundamental field, of electricity supply, aiming to ensure balance on the free market, through the combined game of creating a proper environment for the development of this

[*] Judge at Bucharest Court, PhD Candidate at „Nicolae Titulescu" University (e-mail: claudiu_ulariu@yahoo.ro).

economic field, by stimulating investments correlated with well-structured legislative levers, designed to protect vulnerable customers.

In this regard, the concern of public institutions in regulating the electricity market and in establishing a strategy for its development is very well set out in the stipulations of Article 4 paragraph 1 of Law no. 123/2012[1], according to which: *"National Energy Strategy defines the objectives of the medium and long-term electricity field and the most efficient ways to achieve them, in the conditions of ensuring a sustainable development of the national economy and meeting the energy needs and a civilized standard of living, in quality conditions, both now and in the medium and long term, at an affordable price. The energy strategy is developed by the relevant ministry in consultation with representatives of the energy industry, non-governmental organizations, social partners and representatives of the business environment, is promoted by a draft law by the Government and approved by the Parliament. The energy strategy is periodically reviewed at the initiative of the relevant ministry, without prejudice to the stability and specific predictability of such a document, the revised form to be approved in accordance with the law. "*

This legal text has the merit of concentrating the object of a complex national strategy in the field of electricity, focusing on the legal values of state law, characterized by the need to respect a reasonable ratio of proportionality between the means of implementing the strategy and the goal and the development of this field, in order to ensure a civilized standard of living for the Romanian consumers, at a reasonable price.

The criterion of the quality of the legal norm is transposed in the national legislation, as it transpires from the jurisprudence of the European Court of Human Rights, respectively the requirement that the structure of the normative construction regulating the electricity field should be accessible and predictable, not only in order to create a climate conducive to the development of the activity of authorized suppliers, but also in order to achieve the goal of protecting final customers, who have a disadvantageous position on the energy market, being dependent on certain suppliers, often having a monopoly contribution on the electricity supply market, at least in a certain region of the country.

1.1. ANRE, Protection duties in the energy field

From this point of view, the role of the Energy Regulatory Authority (hereinafter ANRE) is a strong one and a benchmark in the field of electricity market regulation, stipulations of art.71 para. 1 of Law no. 123/2012 stating that *"ANRE monitors the implementation of the rules on the roles and responsibilities of transmission and system operators, distribution operators, suppliers, customers and other market participants in accordance with Regulation (EC) no. 714/2009. "*

This role is well structured by art.1 paragraph 1 of GEO no. 33/2007[2]*, according to which „The National Energy Regulatory Authority, hereinafter referred to as ANRE, is an independent administrative authority, with legal personality, under parliamentary control , financed entirely from own revenues, decisively independent, also organizationally and functionally, having as object of activity the elaboration, approval and monitoring of the application of the set of obligatory regulations at national level necessary for the functioning of the electricity, thermal and natural gas field and market, competition, transparency and consumer protection. "*

The legal activity carried out by ANRE aims at issuing orders, decisions and notices, whose legal regime is outlined by the stipulations of art. 5 of GEO no. 33/2007, according to which:

„(1) The orders, decisions or opinions of ANRE regarding the regulatory activity refer to:

a) granting / modifying / suspending / refusing or withdrawing licenses or authorizations;

b) approval of regulated prices and tariffs and / or their calculation methodologies;

c) approval of technical and commercial regulations for the safe and efficient operation of the electricity, heat and natural gas sector;

d) the approval / endorsement of the documents elaborated by the economic operators covered according to the legal provisions in force;

e) granting / modifying / suspending / refusing or withdrawing certificates / authorizations to economic operators and individuals carrying out specific activities in the electricity and natural gas sector;

f) approval of other regulations, norms, studies, documentation provided by the legislation for the field of electricity and heat and natural gas.

(2) The orders and decisions provided in par. (1) lt. a) -d), accompanied by the motivation instruments, drawn up in compliance with the legal provisions in force, shall be debated in the Regulatory Committee and shall be adopted by a majority vote of its members; the quorum for meetings of the Regulatory Committee shall be deemed to have been met if at least 4 members of the Committee are present.

(3) The orders and decisions provided in par. (1) are binding on the parties until a final and irrevocable court decision has been issued to the contrary, unless they have been revoked by the issuer ... "

Therefore, one of the concrete forms of exhibiting the attributions of ANRE, as a tutelary body in the field of electricity, is represented by the activity of issuing orders having as object the elaboration of technical-

[1] Of electricity and natural gas, published in the Official Gazette no. 485 of July 16, 2012

[2] Regarding the organization and functioning of the National Regulatory Authority in the Energy Field, published in the Official Gazette no. 337/2007.

legal norms aiming at the functioning of the electricity supply sector.

2. Excess of power - The issue of excess power in the exercise of duties

For a pertinent analysis of the way in which ANRE fulfills the role of administrative guardianship in the field of electricity, with particular observations on the limits of the right of appreciation in the exercise by this institution of legal attributions, it is necessary to observe a particular case of regulation by ANRE , as much as publicized, as controversial from a legal point of view.

Thus, one of the unilateral administrative acts with normative character (within the meaning of stip. Art.2 paragraph 1 letter c) of Law no.554 / 2004) issued by ANRE is the ANRE Order no. 171/2020[3], legal act aiming at determining the general legal framework for the supply of electricity by economic agents, called suppliers of last resort.

The determination of this notion has a legal origin, within the meaning of art.3 point 27 of Law no.123 / 2012, by *"provider of last resort (meaning - sn) the provider designated by the competent authority to provide the universal supply service in specific regulated conditions "*.

In the analysis of the controversial norms referred to in the above lines, the provisions of art. 4 of ANRE Order no. 171/2020 are relevant, according to which *"Starting with January 1, 2021, household customers in the portfolio of suppliers of last resort may continue to benefit from the universal service, by maintaining the contractual relationship with the provider of last resort in whose portfolio it is located or by concluding a contract with another provider of last resort, at the price of its universal service offer, or they may choose an electricity supplier with which to conclude a contract for the supply of electricity in a competitive manner ".*

Also, art. 5 of the same order states that *"Starting with January 1, 2021, as a result of the elimination of regulated tariffs, electricity consumption of household customers who have not chosen a competitive offer and have not concluded a contract on the market shall be invoiced by the suppliers of last resort with whom they had concluded a supply contract in force on 31 December 2020, at the offer price for the universal service, established in accordance with the provisions of the annex to this order ".*

In order to fully understand the significance of these two legal texts on how to set the price of electricity for consumers who have not concluded an agreement with the supplier, in a competitive market, so which are dependent on the service provided on the regulated market, the relevant provisions are of art. 3, Thesis II of the Annex to ANRE Order no. 171/2020, according to which *"... if the providers of last resort reserve the right to adjust the price of the offer for the universal service communicated to the household customer, they have the obligation to indicate in a complete and transparent manner the reasons which may lead to a variation in the supply price and explicitly describe the method by which that price varies."*

At a first analysis of these legal norms, it is noted that the situation of customers benefiting from the electricity supply service on the universal market is particularly disadvantageous compared to those on the competitive market, the supply price being left by the ANRE order mentioned , corroborated with ANRE Order no.188 / 2020, subsequently amended by Order no.6 / 2021, with ANRE Order no.241 / 2020, as well as with ANRE Order no.242 / 2020, at the simple discretion of the supplier of last resort, no reasonable criterion for determining this price has been established, obviously respecting the contractual freedom of the supplier, the principles of free competition and the free market, as they are conceived in the legislation of the European Union and in the jurisprudence of the Court of Justice of the European Union.

However, in order to establish whether these orders, as controversial as they are important, are disproportionate and whether they object to the abusive exercise, exceeding the reasonable limits of appreciation, of ANRE's attributions, it is necessary to proceed to a detailed analysis of the legal institution of the excess of power in the issuance / adoption of the administrative act, regulated by stip. art.2 paragraph 1 letter n) of Law no.554 / 2004.

Thus, for the beginning, as noted in the doctrine[4], *"We define the competence through all the attributions conferred by law to administrative persons and, sometimes, to their structures, to act for the organization of the execution and the concrete execution of the law. Using the competence, the authorities, the public institutions can act in the regime of administrative law, they can make administrative acts, administrative operations, technical-material facts. "*

From the point of view of administrative competence, it is unequivocal that the orders mentioned above are issued by an administrative institution, empowered by the provisions of art. 5 of GEO no. 33/2007 to issue normative administrative acts, through which to structure a general, abstract and conceptual framework for regulating the legal relations of an administrative nature born in the activity of providing electricity to household customers.

Therefore, ANRE issued these orders based on legal enabling norms, based on which it exercises the

[3] For the approval of the conditions of electricity supply by the suppliers of last resort, published in the OFFICIAL GAZETTE no. 876 of September 25, 2020.

[4] Emil Bălan, Administrative procedure, University Publishing House, Bucharest, 2005, p.59.

tutelary role in the field of determining the legal regime of electricity supply.

However, this simple legal authorization is not enough to reach the easy conclusion of ANRE's observance of the reasonable limits of appreciation in issuing these orders, but it is necessary to determine the legal modalities, the legal regime and especially the concrete effects that these orders produce regarding the manner of determining the price of electricity in the case of household consumers remaining on the regulated market, therefore of customers who have not concluded agreements with suppliers, on the competitive market.

From this point of view, we notice that ANRE had a certain margin of appreciation in determining the legal framework for establishing these prices, by issuing the orders in question, but this power of evaluation is not unlimited in terms of structure and especially within its limits, but, on the contrary, it is a finite one.

The answer to this matter is an important one, considering the fact that, if the court, to which the consumer, the People's Advocate or the prosecutor can address for the annulment of the mentioned orders, based on stip. art.2 paragraph 1, paragraph 3 and paragraph 5 related to those of art.8 paragraph 1 and art.11 paragraph 4 thesis II of Law no.554 / 2004, finds that by the orders issued by to ANRE the general legal framework was created, based on which the suppliers set the price of electricity and that it is disproportionate, harming household consumers, the latter can claim compensation, including ANRE, for repairing the damage suffered.

For example, regarding the issue of ANRE's margin of appreciation, the jurisprudence of the European Court of Human Rights held that *"it must take into account the state's margin of appreciation, which varies significantly depending on the circumstances, the nature of the protected right and the nature of the interference [Paradiso and Campanelli v. Italy (MC) no. 179-182; The Swiss Raelian movement against Switzerland (MC) no. 59-61]. 296.*

The same principle applies not only to the above-mentioned articles, but also to most of the other provisions of the Convention - including cases relating to implicit limitations, which are not mentioned in that article. For example, the right of access to a court, guaranteed by art. 6 § 1 of the Convention is not absolute, but may be subject to limitations; these are implicitly allowed because the right of access, by its very nature, requires regulation at the state level. In that regard, the Contracting States have a certain margin of discretion, although the final decision on compliance with the requirements of the Convention is a matter for the Court. It must be convinced that the restrictions applied do not restrict or reduce the access allowed to the person in a way or to an extent that the right, in essence, is violated. In addition, such a limitation of the right of access to a court will not be in accordance with art. 6 § 1 if it does not pursue a legitimate aim and if there is no reasonable relationship of proportionality between the means employed and the aim pursued [Cudak v. Lithuania (MC), § 55; Al-Dulimi and Montana Management Inc. v. Switzerland (MC), § 129]. 297.

If, following the preliminary examination of the application, the Court is satisfied that all the above conditions have been met and that, in view of all the relevant circumstances of the case, there is no obvious disproportion between the aims pursued by State interference and the means employed, that claim is inadmissible as manifestly unfounded. [Mentzen v. Latvia (dec.)]"[5].

Nor has the Court of Justice of the European Union omitted such an important subject, having a fruitful jurisprudence on the right of assessment of the state, from which we note the following considerations[6], particularly relevant in the field: *"Finally, another general source of inspiration would be the case law of the European Court of Human Rights, which interprets Articles 6 and 13 of the ECHR. In accordance with the case law of the European Court of Human Rights on Article 6 of the ECHR, the adequacy of the judicial review available to the applicant is assessed in relation to the powers of the judicial body concerned and factors such as: "(a) the subject matter of the contested decision , in particular whether or not an issue requiring specialist knowledge or professional experience is concerned and whether it has involved the exercise of discretion by the administrative authorities and, if so, to what extent; (b) the manner in which that decision was reached, in particular the procedural guarantees in the proceedings before the competent body; and (c) the content of the dispute, including specific grounds of appeal and those at the level of intent* [7]....

As noted in the Decision in the Rahman case, Article 3 (2) gives the Member States a wide margin of discretion. However, the margin of appreciation is not unlimited. The Commission rightly emphasized that such a power of assessment concerns the choice of factors and conditions adopted by the Member States in accordance with their obligation to adopt national provisions in order to provide a regime to facilitate the entry and residence of extended family members. This margin of appreciation also extends to the actual assessment of the relevant facts in order to determine whether those conditions are met.

109. However, the margin of appreciation does not mean 'black box'. According to the jurisprudence of the Court, even if the competent authorities have a margin of discretion, the judicial review must verify

[5] Practical guide on admissibility conditions, https://www.echr.coe.int/documents/admissibility_guide_ron.pdf, f.70.

[6] In Case C 89/17 Secretary of State for the Home Department v Rozanne Banger.

[7] Decision of the European Court of Human Rights of 21 July 2011, Sigma Rado Television Ltd v Cyprus (EC: ECHR: 2011: 0721JUD003218104, paragraph 154 and the case law cited).

that the decision is based on a sufficiently sound factual basis and that it complies with procedural guarantees[8]. *In order to determine whether the limits on the discretion laid down by the Directive 2004/38 have been complied with, the national courts must be able to assess all the procedural aspects and the material elements of the decision, including the facts on which they are based*[9].

110. Again, the Rahman case decision has already provided strong indications in this regard: a person making an application under Article 3 (2) „has the right to have a court verify whether the national law and the manner in which it has been applied are not have exceeded the limits of the margin of appreciation laid down by that Directive "[10]. *Although the directive leaves a considerable margin of discretion, it must be possible for national courts to verify the compatibility of a national decision with the obligations laid down in Article 3 (2) of the directive „.*

As the legal wording has rightly stated[11], *„the term subsidiarity is also used by the doctrine in a second sense, in connection with the fact that in the case law of the Court a margin of quasi-discretion has been granted to the need for interference or, after some even discretionary. This discretion is a competence to classify situations which impose restrictions and / or derogations from the exercise of the rights protected by the Convention, which the Court recognizes for States. Interference is thus authorized by the Convention within the limits of the Court's discretion. This competence recognized to the States is based on reasons similar to those which led to the introduction of a principle of subsidiarity in the Maastricht Treaty"*.

But what is meant by the expression "excess of power"? The answer is given to us by art.2 paragraph 1 letter n) of Law no.554 / 2004, which states that by *"excess of power (we designate -sn) the exercise of the right of appreciation of public authorities by violating the limits of competence provided by law or by violating the rights and freedoms of citizens "*.

Therefore, we can state that the excess of power means the abusive exercise of the right of disposition of the public authority or of the public institutions subordinated to them, among which is ANRE, by the unequivocal and unjustified exceeding of the margin of appreciation of which, naturally , they dispose, or by non-compliance with the competence, material or territorial, of the issuing body or by exercising in such a manner the legal powers that, by evading the law, the rights and freedoms of the citizens are harmed.

In the analyzed case, the excess of power imply an exceeding of the external limits of ANRE's attributions, as they are established by law, transgressing, as a consequence, these assingning competence norms. Therefore, the excess involves the commission of an abuse of rights by this public institution, by issuing the orders in question with disregard for the right of household consumers to clarity and accessibility of the normative administrative act and to establish in a transparent, proportionate and balanced price of electricity supply.

A particularly relevant point of view was expressed in this regard by a renowned professor[12], who pointed out that "*The principle of avoiding abuse of power in administrative behavior implies the absence of abuse of power, in the sense that the Community official will have to - exercises its prerogatives only for the purpose for which they were conferred, and will avoid, in particular, their use without a solid legal basis or for the achievement of purposes that are not justified by a public interest. Therefore, if in the case of breach of the principle of proportionality it is a question of an excess of power in the exercise of the right of assessment by the Community official, in the case of abuse of power it is a diversion of the prerogatives conferred to them its administrative action being free of any legal basis and foreign to the realization of a public interest.* "

Also, the valences of this institution were detected by the national jurisprudence, which stated that "*it is known that the permissive norm, in administrative law, expresses the discretionary power given to the authority to act or not, the freedom to assess to act in a sense or otherwise, which does not equate to the fact that this power can be misused without legal justification of its choice. To accept the opposite means to accept the excess of power without any control of the administration activity, which is not allowed in a State law, which (...) is organized not only according to the principle of separation of powers (...), but also of that of their balance within the constitutional democracy* [13]".

Therefore, the abuse of power is the reverse of ANRE's natural right to analyze and assess the opportunity to issue the above-mentioned orders, in excess of reasonable limits of option, in relation to the circumstances and adverse effects produced by

administrative acts issued in relation to household consumers.

It was also noted in practice that "*In the analysis of excess power can not be ignored the idea that in administrative law relations the public interest prevails, which aims at the rule of law and constitutional democracy, guaranteeing the fundamental rights, freedoms and duties of citizens, meeting needs as well as achieving the competencies of public authorities*[14] ".

In another decision, the court stated that "*In exercising their powers, administrative entities have a margin of appreciation, so that, in the event that no grounds for formal illegality or elements can be identified as a result of which the issuer of the administrative act had an arbitrary conduct, deviated from the purpose of the law or violated the principle of proportionality between public and private interest, an assessment of the substance of the measures ordered, made by the administrative court itself, would constitute an unauthorized interference in public administration.*

The reasons invoked by the appellant-plaintiff do not indicate punctual violations of the law, do not concern irregularities of the administrative procedure, being disputed the score given by the experts involved in the evaluation and selection stages, score to which the party opposes its own arguments and evaluation made in the specialized technical expertise test.

But, as it was expressly and clearly mentioned in the cassation decision no. 4680 of December 5, 2014, the administrative contentious court cannot replace the public authority with attributions in establishing the total score resulting from the evaluation, and the expertise performed according to art. 201 para. (1) C. C. Proc., it includes only a specialized opinion on the issue subject to analysis, an opinion that the court must analyze in relation to all the evidentiary elements and the circumstances of the case [15] *".*

Applying all these doctrinal and jurisprudential considerations in the analysis of the stipulations of art. 4 and art. 5 of the ANRE Order no. 171/2020, we observe, as a preliminary, the fact that on the one hand, they were not properly informed by ANRE about the deadline they would benefit from in order to conclude the electricity supply contracts, according to the rules of the competitive market, and on the other hand, it established an extreme restrictive term. on the conclusion of new contracts, only a few days.

It can also be unequivocally noted that the method of pricing, determined by this order and subsequent ones, is one that creates an inadmissible discrepancy between the interest of household consumers in calculating an equidistant and predictable price, based on the principles of free supply and demand, specific to a liberalized commercial market and the right of suppliers to set, at their discretion and without any reasonable legal limitation, the supply price.

Basically, the provision according to which *the price charged to consumers will be that of the offer made by suppliers for universal service* allowed suppliers to arbitrarily set the price of electricity, taking advantage of their obvious superiority, logistics, information, functional structure, lobby, etc., to impose disproportionately high prices on customers compared to those charged by the same suppliers in the competitive market.

So, from the corroborated game of the lack of option of the domestic clients in choosing a tariff from the supplier's offer, with the very short time of concluding a contract on the competitive market and with the possibility conferred by ANRE to the suppliers to establish its own price for universal service, it is concluded that ANRE has exercised its right of option abusively, exceeding the natural limits of its right of appreciation in the field of regulation of the electricity market.

Through this behavior, ANRE destructured the contractual balance between suppliers and customers, creating the legal premises for harming the right of the latter to provide a quality service and with reasonable costs.

Moreover, ANRE determined the creation of a discriminatory situation, in the negative sense of the notion (application, without a solid justification, of differentiated treatments in objectively identical situations), between consumers who managed to conclude the contract on the competitive market and those who did not achieved this, without retaining any concrete fault on the part of the latter, since the term of choice was very short, combined with the very large number of contracts to be exchanged.

In this way, the rights of the latter are obviously affected, being put in a position to pay a price and 25% higher than customers in a position absolutely identical to them, but who have entered the competitive market, in regarding the contract for the supply of electricity.

ANRE, instead of ordering through the mentioned orders that the perceived price will be the most favorable to the customers from the universal service, among those practiced by the provider of last resort, decided that this price is the one arbitrarily established by each provider, which creates huge damage to a large number of customers.

3. Conclusions

From the analysis of the documents issued by ANRE, individualized above, it results that this public institution, having a fundamental role in the complex and flexible process of regulating the electricity market, failed miserably in creating a predictable, reasonable,

[14] HCCJ, S. Cont. Adm. and Fisc., dec. no. 3800 / 02.11.2006, unpublished, cited by Gabriela Bogasiu, Law on administrative litigation. Commented and annotated., Universul Juridic publishing house, 2015, p.111.

[15] HCCJ, S. Cont. Adm. and Fisc., dec. no. 56 / 22.01.2016.

transparent legislative framework. and in proportion to the interests of the actors engaged in the energy market, whether they are suppliers or domestic customers.

The orders issued by ANRE regarding the transition from the regulated market to the competitive one for electricity supply, being affected by a serious defect of abuse in the assessment of opportunity and lack of equidistance, are the object of a real abuse of power by the issuing institution.

This legal reality opens the premises of the appeal before the administrative contentious court, based on disp. art.1, corroborated with art 7 and art.8 of Law no.554 / 2004, of these ANRE orders, with the possibility of the court to cancel them, and the subsequent effect is that of the cancellation and of the electricity supply contracts concluded in based on those orders, based on the *accesorium sequitur principale* principle and which harms household consumers.

The latter may also obtain, based on the provisions of art. 18 paragraph 3 of Law no. 554/2004, compensations for the damages suffered, consisting in the difference in additional price paid for one kw, in relation to the price charged by each supplier for household customers in the competitive market.

This is a relevant example, in which the non-observance of the principle of proportionality between the administrative measure taken and the object in view, in this case, the liberalization of the electricity market, with the non-observance of the balance of interests of the actors engaged in this process, it is likely to produce possible harmful legal consequences for clients and costly for ANRE, on the other hand, unnecessarily burdening the courts.

THE LEGAL NATURE OF THE RIGHT TO INFORMATION UNDER ROMANIAN REGULATIONS

Sorin-Alexandru VERNEA*

Abstract

The author aims at establishing the limits and components of the right to information in the actual Romanian legal system, departing from the provisions of art.31 of the Romanian Constitution and of Law no.544/2001 regarding the free access to information of public interest.

To this purpose, the notion of the right to information will be analyzed, alongside its components by reference to both the special legal and the Constitutional provisions. After pointing out some particularities regarding the relation of the right to information and mass media, the substantial limits of the right will be identified.

After the analysis undertaken, the author will establish a dual nature of the right to information.

Keywords: *right to information, constitutional rights, civil rights, freedom of expression, mass-media.*

1. Notion

In constitutional law literature[1], the right to information has been qualified as a fundamental right, necessary for the material and spiritual development of mankind. Other authors[2] have shown that this is an essential right, without which humans cannot exist as a social being.

Although the importance of the right to information appears to be essential for the field of public communication, we observe that legal literature avoids to offer a definition.

Considering the dynamic nature of social relations in the field of public communication, we appreciate that a definition of the concept is relatively difficult, as the right to information appears to be linked to freedom of expression, being seen as a dimension of the latter.

In order to provide a definition, we consider that the starting point must be the fundamental regulations, in this case art. 31 of the Romanian Constitution and art. 10 of the European Convention on Human Rights, which provide the content of the right to information, in the first case separate from the freedom of expression, and in the second case as a component of the freedom of expression.

In both cases, the essence of the law is the communication of information between people or between people and institutions.

Formulating our own definition, we consider that *the right to information is a human right, to receive data and information in its area of interest, either from public authorities and institutions, or from other people, under the provisions of the law, without unjustified limitations imposed by other entities.*

2. Sedes materiae

Regarding the regulation, we distinguish between the fundamental norms, which in this situation are found in the Constitution and in the European Convention on Human Rights and the special regulations, respectively Law no. 544/2001 on free access to information of public interest[3], together with its application norms, contained in the Government Decision no. 123/2002[4].

Art.31, paragraph 1 of the Constitution provides: "The right of the person to have access to any information of public interest may not be restricted".

According to art.1 of Law no.544/2001: “The free and unrestricted access of the person to any information of public interest, thus defined by this law, is one of the fundamental principles of relations between people and public authorities, in accordance with the Romanian Constitution and with the international documents ratified by the Romanian Parliament”.

The same normative act regulates the categories of information subjected to communication, the procedure for requesting that information and the remedies against the refusal to communicate.

Another normative act of reference, in this sense, is represented by Government Decision no. 123/2002 on the norms of application of Law no. 544/2001 on free access to information of public interest, which stipulates a series of clarifications in order to apply the provisions Law, along with models of documents, respectively requests, complaints in order to obtain access to information of public interest.

[4] Published in the Official Gazette, Part I, no. 167 / 08.03.2002.

3. Content of the right to information

A. Starting from the provisions of art. 31 of the Constitution, the right to information brings together three components:

(i) *the right of access to information of public interest*

The regulation expressly refers to the information of public interest, as stipulated in art. 31, paragraph 1 of the Fundamental Law. Although the notion is not defined by the Constitution, it is found in art. 2, letter b of Law no.544/2001, adopted in order to effectively apply the constitutional provision.

Consequently, private and secret information cannot be made available to citizens on the basis of the constitutional text, but can, possibly, on the basis of national law.

(ii) *the right to be properly informed by both the authorities and the media*

Public authorities have the obligation to communicate real information at the request of citizens, both in matters of public interest and in matters of personal interest[5]. We notice a difference in terminology compared to the provisions of the previous paragraph, because the term "public affairs" is used, opposed to "information of public interest". Apparently, the distinction is superficial, the information related to public affairs being information of public interest.

We appreciate that by "issues of personal interest" the legislator did not want to designate "issues of private interest", but a problem belonging exclusively to the person making the request or his representative. Consequently, the text does not allow one person to receive information about the private interests of another person.

The mass media, regardless of the source of financing, the owner or the specifics of its activity, has the obligation to correctly inform the public opinion, respectively the recipients of the information, as it results from the provisions of art. 31, paragraph 4 of the Constitution. We consider that the reason behind the text is that of preventing the manipulation and misinformation of public opinion, given the impact that the communication of information through media has on people.

(iii) *autonomy of public radio and television services*

The regulation only applies to public radio and television services, which cannot be imposed on privately owned media. In essence, it is a guarantee of the equidistance of the main radio and television services from the spheres of public influence, both from the political environment and from outside it. We also note that the organization of the activity of public television and radio services is done by organic law[6].

We note, starting from the three dimensions, that they combine two prerogatives, namely (i) the right of the person to be informed correctly and (ii) the right to access public information directly.

We consider that these prerogatives represent the essence of the right to information, as guaranteed at constitutional level.

Some authors[7] state that the right to information also includes the right to inform, but, in our opinion, the latter is provided by the freedom of expression as regulated by art.30 of the Constitution.

B. Starting from the provisions of Law no. 544/2001, in order to determine the content of the right to information, it is necessary to start from the special terminology, found in art. 2 of the Law:

„a) by *public authority or institution* it is understood any public authority or institution that uses or manages public financial resources, any autonomous administration, a company regulated by the Companies Law no. 31/1990, republished, with subsequent amendments and completions, under the authority or, as the case may be, under the coordination or subordination of a central or local public authority and in which the Romanian state or, as the case may be, an administrative-territorial unit is sole shareholder or majority, as well as any operator or regional operator, as they are defined in the Law on community services of public utilities no. 51/2006, republished, with subsequent amendments and completions. Political parties, sports federations and non-governmental organizations of public utility are also subject to the provisions of this law,

b) *information of public interest* means any information concerning the activities or resulting from the activities of a public authority or public institution, regardless of the medium or the form or manner of expressing the information;

c) *information on personal data* means any information on an identified or identifiable natural person".

Given the terminology used by the national legislator, we can note that the information of public interest is related to the activities carried out by public authorities or institutions, being both information on how to carry out the activity within the public institution and information resulting from the activity carried out within public institution, such as financial statements, professional balance sheets, etc.

In our opinion, the definition given by art. 2, letter b of Law no. 544/2001 is inaccurate, as we cannot consider that all the information resulting from the activity of a public institution is information of public interest, some of them having an eminently professional or administrative nature, such as drawing

[5] Article 31, paragraph 2 of the Constitution provides: "Public authorities, according to their competences, are obliged to ensure the correct information of citizens on public affairs and on issues of personal interest".

[6] Gh. Iancu - *Constitutional Law and Political Institutions*, ed. IV, Ed. Lumina Lex, Bucharest, 2007, pg.168.

[7] C.A. Păiușescu, O.Duță - *The law of communication. Theoretical Considerations and Relevant Legislation*, Universitară Publishing House, Bucharest, 2011, pg.113.

up income registers obtained for each taxpayer, or conducting research on improving the main activity.

They cannot be included in the category of information exempted from the free access of citizens, but they also do not appear as information of public interest, in a legitimate sense. In reality, the text of the law provides a general classification of the designated category, which has an indirect effect on the interpretation of the constitutional text we referred to earlier, which does not define the notion of information of public interest, although it uses it.

4. Categories of information subject to communication

We note that in accordance with the provisions of art. 5, paragraph 1 of Law no. 544/2001, certain categories of information are communicated *ex officio* by any public authority or institution, respectively: "a) normative acts governing the organization and functioning of the authority or the public institution; b) the organizational structure, the attributions of the departments, the functioning program, the audience program of the public authority or institution; c) the name and surname of the persons from the management of the public authority or institution and of the official responsible for the dissemination of public information; d) the contact details of the public authority or institution, respectively: the name, the headquarters, the telephone numbers, the fax, the e-mail address and the address of the Internet page; e) financial sources, budget and balance sheet; f) own programs and strategies; g) the list containing the documents of public interest; h) the list comprising the categories of documents produced and / or managed, according to the law; i) the mean of appeal to the decision of the public authority or institution in the situation when the person considers himself / herself injured regarding the right of access to the requested information of public interest".

Considering the text of the law previously indicated, we note that the first four categories of documents[8] refer to ordinary data concerning the functioning of an institution. The information regarding the normative framework that regulates the activity, the management bodies of the institution and its contact data are made public in order to facilitate the communication with the respective institution.

With regard to information on financial sources, budget, balance sheet, own programs and strategies, we note that they are published in order to ensure the transparency of the activity in that institution.

The provisions of art. 5, paragraph 1, letters g and h of the Law generate difficulties in legal practice. Usually, the list of documents of public interest is not common to all institutions, even in the same field of activity, as its establishment depends on the interpretation of the law by the governing bodies of that institution. In addition, the list of categories of documents produced or managed is subjected to an even greater degree of relativity, as any public institution, by its nature, manages a variety of documents either from third parties or from its work.

With regard to the last category of information, concerning the manner of appealing the decision not to provide information of public interest, we note that this has a procedural nature, being, thus, irrelevant for defining the content of the law.

In accordance with the provisions of art. 5, paragraphs 2 and 3 of Law no. 544/2001, the information bulletins published by the public authorities and their periodic activity report are subject to *ex officio* communication.

We note that the law stipulates the obligation of the authority to communicate information *upon request*. This category is represented by: (i) the information of public interest as defined by art.2, letter b of Law no.544 / 2001, under the conditions of art.6, paragraph 1, of the same normative act, (ii) the privatization contracts concluded after the entry are subject to communication in force of the Law, under the conditions of art. 5, paragraph 5 of Law no. 544/2001 and (iii) the public procurement contracts concluded by the contracting authorities from among the public authorities or institutions, according to art. 11^1 of Law no. 544/2001.

We note that the legislator has expressly stipulated the obligation to communicate privatization contracts, on the basis of a procedure for transferring state participations to private property of individuals, carried out at national level, in the last three decades. The legal provision is intended to respond to an urgent social need for decisional transparency regarding large privatizations, but, in order to respect the principle of non-retroactivity of the law, the obligation to communicate contracts operates only for those concluded after December 22, 2001, the date of entry into force of the law.

For the same reasons, respectively for the transparency of the procedures, public procurement contracts concluded by contracting authorities from public authorities or institutions shall be subject to communication, upon request.

We consider that, essentially, the communication of information of public interest has as a premise the existence and possession of that information by the authority to which the request was submitted. In this regard, in accordance with judicial practice[9], we appreciate that the previously mentioned legal provisions do not oblige the public institution to compile statistics or reports that would involve a high

[8] Found in art.5, paragraph 1, letter ad of Law no.544 / 2001.

[9] Civil decision no. 2047/2010, Bucharest Court of Appeal, Administrative and Fiscal Litigation Section, cited by A.Moraru, E.Iorga, L.Lefterache - *(un)Restricted access to information of public interest 10 years after the adoption of the law*, Institute for Public Policies, Bucharest, 2011, pg.11, available online at:https://www.juridice.ro/wp-content/uploads/2012/02/Studiu-544.pdf, accessed on 24.03.2021.

degree of complexity and information processing. To this end, the institution shall provide only the data necessary for the preparation of the study, report or statistics in question.

If, in addition to the information of public interest mentioned, copies of documents issued by the public authority or institution to which the request was submitted are also requested, the cost of the copying services shall be supported by the applicant[10]. According to art.18, paragraph 5 of Government Decision no.123 / 2002, the cost of the copying service cannot exceed 0.05% of the minimum wage per economy, calculated per page.

5. Access of the media to information of public interest

The access of the press to information of public interest is a guarantee of its role in a democratic society.

The law establishes a series of special rules regarding the way in which information of public interest reaches the knowledge of the press, in addition to the common law rules on requesting information by any person, under the conditions of art. 5 and 6 of Law no. 544/2001.

In this sense, public authorities and institutions have the obligation to appoint a spokesperson, usually from the information and public relations departments[11]. Public authorities have the obligation to organize, periodically, press conferences for the communication of relevant information, on which occasion they will respond to requests for information of public interest[12]. In addition, public authorities shall, upon request, grant accreditations to journalists and media representatives[13] and inform the press in due time about the organization of press conferences or public actions, to which access of the media cannot be prohibited[14].

6. The right to reply. A guarantee of correct information according to art.31 of the Romanian Constitution

The right to reply does not benefit from a general regulation applicable to the written press, the online press and audiovisual content, as special provisions exist only for the latter. Despite this fact, it has been held in the jurisprudence of the Constitutional Court that the right to reply has a constitutional nature.

Thus, in the Constitutional Court Decision no. 8/1996 regarding the exception of unconstitutionality of the provisions of art. 74 paragraph 2 and of art. 75 paragraph 2 of the Press Law no. 3/1974[15], it was noted that "the right to reply is not expressly mentioned in the provisions of the Constitution, but, through a systematic interpretation of its provisions, the constitutional character of this right results".

In order to reach this statement, the Court took into account that under Article 15 of the Constitution, citizens enjoy the rights and freedoms provided for therein, including freedom of expression and the right to information, guaranteed by Article 30 and Article 31 of the Constitution. Thus, given that freedom of expression cannot prejudice the dignity, honor, privacy and the right to one's own image, and the media are obliged to ensure the correct information of public opinion, the Court held that the right to reply has the value of a constitutional right correlative to the right to free expression and the right to information.

Most probably, the Court's reasoning took into account the first prerogative of the right to information.

In the jurisprudence of the European Court of Human Rights, it was held that the journalist has the obligation to adopt an equidistant and professional position, ensuring the person referred to, in its material, the opportunity to express its own view of the situation, by ensuring the right to reply[16].

Equally, in the cases of Ediciones Tiempo SA v. Spain and Haider v. Austria[17], it was ruled that freedom of expression also includes the right to reply, as the latter is a guarantee of informational pluralism.

In what concerns the normative system of the European Union, the right to reply is ensured by the provisions of art. 23 of Directive 89/552/EEC, on the coordination of certain laws, regulations and administrative provisions of the Member States concerning the dissemination of television programs. However, as shown in legal literature[18], the extension of the applicability of this provision in the online press has not been formally achieved.

Specifically, we note that in the matter of written press and online press the right to reply does not benefit from an express regulation, but, given the mandatory jurisprudence of the ECHR, along with the interpretation given by the Romanian Constitutional Court in Decision no. 8/1996, we can note that the right

of reply is correlated with freedom of expression and the right to information, as constitutionally guaranteed, resulting from these regulations.

7. Limits of the right to information

A. From the *constitutional regulation* perspective, the right of access information of public interest cannot be restricted, a fact expressly stipulated in art. 31, paragraph 1 of the Fundamental Law. We note that the text should not be seen as absolute. Thus, the right is susceptible to limitation under the conditions of art. 53 of the Constitution, by law, for: "the defense of national security, order, health or public morals, the rights and freedoms of citizens; conducting criminal investigation; prevention of the consequences of a natural calamity, of a disaster or of a particularly serious disaster".

In addition to the general limitation mentioned above, the right to information must not prejudice measures to protect young people and national security, as provided in Article 31, paragraph 3 of the Constitution. In legal literature[19] these limitations have been designated by the terminology "value coordinates" which should not be prejudiced by the exercise of the right to information.

Although the field of national security appears to be a justified limitation and does not involve further discussion, a fact directly stated in the jurisprudence of the Romanian Constitutional Court[20], "youth protection measures" cannot be precisely determined. First of all, the terminology leads to the conclusion of the pre-existence of some measures, activities or rules adopted at national level for the protection of the age category of young people. Secondly, the classification of a person in the category of young people does not benefit from any constitutional landmark.

In these conditions, the limit imposed by art. 31, paragraph 3 of the Constitution, regarding the measures for the protection of young people, is susceptible in a high level, to arbitrary appreciation from the person interpreting the legal text.

B. From the perspective of the *special regulation*, the limitations are found in art.12, paragraph 1 of Law no.544/2001, according to which „(1) It is exempted from the free access of the citizens, provided in art. 1 and, respectively, to art. 11^1, the following information: a) information in the field of national defense, security and public order, if they are part of the categories of classified information, according to the law; b) information on the deliberations of the authorities, as well as those concerning the economic and political interests of Romania, if they are part of the category of classified information, according to the law; c) information on commercial or financial activities, if their publicity infringes the intellectual or industrial property right, as well as the principle of fair competition, according to the law; d) information on personal data, according to the law; e) information on the procedure during the criminal or disciplinary investigation, if the result of the investigation is endangered, confidential sources are disclosed or the life, bodily integrity, health of a person are endangered as a result of the investigation carried out or in progress; f) information on judicial proceedings, if their publicity impairs the assurance of a fair trial or the legitimate interest of any of the parties involved in the proceedings; g) information the publication of which prejudices the measures for the protection of young people".

Regarding the limitations of art.12, paragraph 1, letters a and b, against the decision to classify certain information, an appeal may be filed under the conditions of the special law, respectively art. 20 of Law no. 182/2002: "Any Romanian natural or legal person may appeal to the authorities that classified the information respectively, against the classification of the information, the duration for which it was classified, and against the manner in which one or another level of secrecy has been assigned".

In what concerns the limitation from art.12, paragraph 1, letter c, it is necessary that the disclosure of information leads to an effective infringement of intellectual property rights or the principle of fair competition, a simple fear in this regard being not enough. In addition, the existence of a confidentiality clause in the contract is not, *per se*, sufficient to lead to a refusal to disclose information of public interest.

Regarding the limitation from art.12, paragraph 1, letter d, we note that personal data do not fall into the category of information of public interest, but they will be provided if the data affects the person's ability to perform a public office[21].

Information on criminal or disciplinary investigation procedures, or on judicial proceedings, enjoys a special protection regime, which is not susceptible to communication if ongoing legal proceedings are affected or if a person's rights or legitimate interests are endangered.

Similar to the provisions of art. 31, paragraph 3 of the Constitution, previously analyzed, art. 12, paragraph 1 letter g of Law no. 544/2001 limits the communication of information whose publication prejudices the measures for the protection of young people. The above considerations regarding the inaccuracy of the regulation remain relevant.

8. Conclusions

As we have previously observed, the right to information in Romanian legislation benefits from both

[19] M. Năstase-Georgescu - *Communication Law*, Universitară Publishing House, Bucharest, 2009, pg. 88
[20] Romanian Constitutional Court Decision no. 37 / 29.01.2004, published in the Official Gazette no. 183 / 03.03.2004
[21] As it results from art.14, paragraph 1 of Law no. 544 / 2001

a constitutional regulation and a national regulation made by special law.

Given the field of interest of this paper, we note that the provisions of Article 31 of the Constitution determine the content of the right to information, in our opinion, as: (i) the right of the person to be properly informed and (ii) the right to access public information directly.

Although the first prerogative is slightly limited, being related only to the obligation of public authorities and the media to communicate correct information, we note that this has the nature of a fundamental right, inherent in the social dimension of the human personality.

In what concerns the second prerogative, regarding the right to access public information directly, we note that this is detailed in national legislation, for which we have analyzed the relevant provisions of Law no. 544/2001. In reality, this right is limited to information of public interest related to the activity of public authorities and institutions, having the nature of a subjective civil right, guaranteed by law in order to ensure the transparency of administrative activity.

The existence of a legal discrepancy between the two meanings of the right to information lies precisely in the nature of this right, as regulated in the Constitution. Thus, the first meaning takes the form of a dimension of freedom of expression, as defined by international instruments, such as Article 10 of the European Convention on Human Rights or Article 11 of the Charter of Fundamental Rights of the European Union, respectively the right to receive information freely, without unjustified intervention by the authorities. The second meaning takes the form of a new right, consisting in ensuring the transparency of decision-making and administrative activity for institutions financed from public funds, which cannot be elevated to the rank of a fundamental right.

For these reasons, we consider it appropriate to qualify the right to information, as regulated by art. 31 of the Romanian Constitution as a complex right, which includes both a fundamental right and a subjective civil right, in its meanings.

THE MILITARY COMMAND ACT IN THE LIGHT OF THE CONSTITUTIONAL PROVISIONS AND OF THE LAW ON ADMINISTRATIVE LITIGATION

Adelin-Mihai ZĂGĂRIN[*]

Abstract

The military authorities are empowered to carry out a form of public administration, respectively to provide a public service called national defense, in exceptional circumstances, being at the same time the holders of the means of armed violence authorized by the state. At the same time, the discretion with which the military authority is legally determined to issue military command documents, exempted from forms of judicial control, must not lead to the violation of fundamental human rights, the whole activity being subordinated to the principle of legality. Not all acts of military authority concerning military relations are also acts of military command, especially those concerning military careers (promotions, promotions, secondments, appointments, transfers or retirements, etc.) or related to human resources management. (recruitment competitions, holding positions, participation in competitions, change of profile, etc.). The acts of military command are those issued for the needs of the war and justified by it, both in time of peace and in time of war. The military command is endowed with absolute state force, the non-observance of its dispositions attracting the criminal responsibility reserved for the crimes of insubordination.

Keywords: *military authorities, military command act, end of inadmissibility, military actions, troop leadership, sanctioning decisions, decisions and decisions of appointment, annual evaluations, administrative contracts concluded by military structures.*

1. Introduction

The military authorities are empowered to carry out a form of public administration, respectively to provide a public service called "national defense" in exceptional circumstances, being at the same time the holders of the means of armed violence authorized by the state. The discretion with which the military authority is legally determined to issue military command documents, exempted from forms of judicial control, must not lead to the violation of fundamental human rights, the whole activity being subordinated to the principle of legality.

Being introduced for the first time in the Romanian Constitution of 1923, the formula "*military command documents*" has kept its form until today, being found under the same structure in the Law of Administrative Litigation of 1925.

Subsequently, despite the doctrinal controversies, famous specialists[1] from the interwar period stressed the need to distinguish the documents issued by the military authorities according to the criteria of relations between different entities:

- acts of military authority of a purely administrative nature, which intervene between the military authority and civilian pollution and which can be challenged through administrative litigation;
- acts of the military authority that intervene within the military hierarchy which includes the acts aimed at commanding the troop (*in time of peace or war*) and for which control in administrative litigation was not allowed.

In order to overcome the terminological inaccuracy of the interwar period, we will note that not all acts of military authority concerning military relations are also acts of military command, especially those concerning military career (*promotions, promotions, secondments, appointments, transfers or retirement etc*.) or related to human resources management (*recruitment competitions, employment, participation in competitions, change of profile etc.*).

2. Military command act. Constitutional and legal foundations

In order to identify the place of military command acts among administrative legal acts (administrative acts - according to the school in Bucharest, having as representative Prof. Romulus Ionescu; acts of administrative law, through Prof. Tudor Dragan) we can report to the applicable administrative legal regime, which in its current version regulated in Romania is known in two forms[2]:

- The judicial administrative contentious, **the typical form**, being the common law, having in center the Law no. 554/2004 of the administrative contentious, together with other specific regulations;
- **atypical forms** that do not allow the control of the courts.

From this point of view, military command documents are administrative acts to which the atypical form is applied, meaning that the control of the courts over their legality or opportunity is not allowed.

The exception to the judicial control exercised by the administrative contentious courts and the lack of

[2] Marta Claudia Cliza, *Drept Administrativ*, Partea a II-a, Editura Pro Universitaria, București, 2011.

typicality do not allow the evasion of the obligations regarding the written requirements when issuing or adopting military command acts (internal and external structure of a content, the organization of the elements from which is composed[3]) in conjunction with those related to their motivation[4]. The mandatory nature of the requirements for motivation and written form has as a consequence the prevention of abuses, ensuring the guarantee of compliance with the law and the protection of citizens' rights.

Delimited from a historical point of view, the exemption of administrative acts finds its constitutional consecration for the first time in the Romanian Constitution of 1923, where at art. 7, last paragraph, it was specified that "the judiciary does not have the power to judge acts of government, as well as acts of command of a military nature".

The idea of exempting certain administrative acts from the control exercised by the administrative courts, which influenced the legal way of thinking in Europe, has its origins in nineteenth-century France, where the appeal for annulment for excess of public power had begun to take shape[5].

The exceptions concern two broad categories of acts, namely: administrative acts of the public authority concerning their relations with the Parliament, respectively military command documents. For the two categories of administrative acts, it is indicated to us by the legislator that we are in the presence of **absolute exceptions**, having constitutional rank[6], being resumed in the Law on Administrative Litigation[7].

For the authors of administrative law, the causes or conditions that determine the evasion of administrative acts from the control exercised by the administrative contentious courts are called **fines[8]**, which were traditionally categorized[9] as fines deducted from the nature of the act, respectively inadmissibility caused by the existence of a parallel appeal.

From the jurisprudence of the Constanța Court of Appeal (case no. 307/2015[10]) having as object of the file "Cancellation of administrative act", in the appeal, the court considered that the hypothesis according to which the military command acts cannot be challenged in administrative contentious and not to determine the jurisdiction of the court, since the solution of the admissibility / inadmissibility of the action can be pronounced only by the competent court, in this case the administrative contentious court.

The jurisprudence has held that certain administrative acts are acts of command of a military nature depending on the nature of the content. We consider case no. 2941/2014[11] pending before the Bucharest Tribunal, Administrative and Fiscal Litigation Section having as object Litigation regarding Civil Servants (Law no. 188/1999), where the plaintiff, as a military cadre, requested the annulment of the Order of the Minister of National Defense MP621 / 15.12 .2011 ordering his recall from the international mission carried out in Afghanistan, where he served as 3rd Platoon Commander in the 1st Infantry Company of the 1st Maneuver Battalion, as well as all the documents that were the basis for issuing the contested act, annul the provision no. A142 issued by the competent military unit, deletion from the personal memorandum of the mentions related to the premature cessation of its secondment, etc. The competent court, in this case the Bucharest Tribunal, correctly considered that the act challenged by the applicant was a military command act that evaded control in administrative litigation, intended to ensure and maintain the discipline and order of military units and formations over time. The applicant was seconded to the Afghanistan Operations Theater, and the reasons for its issuance were in violation of the rules on the handling of weapons, which were indispensable for the performance of military missions.

It should be noted that art. 5 of the Law on administrative litigation was amended by Law no. 212 of July 25, 2018. In **the initial form** it was specified what are the limits of control before the administrative contentious court, in aliis verbis it was specified that certain administrative acts could be challenged only for excess of public power, as follows: administrative acts issued for the application of war, the state of siege or

the state of emergency, those concerning defense and national security or those issued for the restoration of public order, as well as for removing the consequences of natural disasters, epidemics and epizootics.

The legislator thus opted for the elimination of the limited control situations previously provided in the law and extended the rules established by the Decision of the Constitutional Court no. 302 of March 1, 2011 on all categories of documents listed in art. 5 para. (3) of the Law on Administrative Litigation.

The constitutional exceptions from the judicial control of administrative acts are also mentioned in the Decision of the Constitutional Court no. 302 of 2011[12], previously stated, by which it was noted that absolutely the exceptions refer only to the acts of military command and to the administrative acts of the public authorities regarding their relations with the Parliament. By their nature, these acts are not subject to any form of judicial control. However, this does not preclude the fact that military command documents may be subject to higher hierarchical control as provided for in the internal military regulations.

From the findings of the Constitutional Court it appears that the previously mentioned provisions, respectively art. 126 para. (6) of the Constitution and art. 5 para. 2 of Law no. 554/2004 are exceptions of strict interpretation, no other situations being allowed[13].

Under functional aspect, based on the new provisions of art. 5 para. (3) of Law no. 554/2004, it can be concluded that the administrative acts issued for the application of the state of war, state of siege or emergency, those concerning defense and national security or those issued for the restoration of public order, as well as for removing the consequences of natural disasters, epidemics and episodes are subject to judicial control under the same conditions as for administrative acts, general conditions regulated by the relevant law. The only applicable derogation refers to the inapplicability of art. 14 regarding the suspension of the execution of the act in the phase of the preliminary administrative procedure.

The current amendment that we mentioned earlier in the form of a change brought by an organic law, portrays the same picture of administrative acts, but for which the regime of suspension of the execution of the act no longer applies, regime provided in art. 14 of the Law on administrative litigation in its consolidated form. In other words, this restrictive table of administrative acts is not liable to suspend enforcement for reasons which are easy to understand, which are related to the consequences which would result from the temporary cessation of the effects of these categories of acts and which are seriously disturbed. the functioning of public administrative services essential for the proper functioning of the company, in exceptional conditions.

The late Professor Antonie Iorgovan, referring to Anibal Teodorescu's assessments[14] of the needs generated by the First World War, explains the reasons behind the concerns of the legislator to create the premises for censorship of such administrative acts by the judiciary, invoking historical conditions and the effects that the First World War had on Romania.

In post-war legal doctrine[15], the commander is described as a holder of relatively limited power by the state and the relevant minister, and of all the civil, political and military powers conferred, only the latter are outside the administrative contentious. The legitimacy of the military command derives from its feature of state command and from its recognition as obligatory for society and those to whom it is addressed, without which social efficiency would not be achieved.

The interwar specialty doctrine made the distinction between military command acts that emerge within the military hierarchy and military command acts that intervene between the military and the civilian population. Those who intervene between the military authority and the civilian population are subject to judicial control exercised in administrative litigation[16].

Consequently, under the scope of the notion of military command, the doctrine retained those administrative acts whose purpose was to respond to a military command, understood as the prerogative to command or issue orders from a strictly military point of view[17].

The reference for the mentioned period, as examples of military command documents **issued during the war**, we find: the modification of the composition of the troops in the sense of diminishing, dividing, completing etc.; concentrating the troops on the lines of attack or defense, advancing or withdrawing the troops.

From the period of the First World War we can mention some military command documents, as follows: Operation Order no. 214 for the day of 23.11.1916 of Division IV of the III Army Corps of the Second Army, which describes the mission of the Division to occupy a defensive position meant to stop the advance of the enemy[18]; Operation order no. 212 for the night of 21/22 November 1916 of Division IV of the 3rd Army Corps of the Second Army, ordering the

withdrawal to a new position of resistance[19]; Ordinance no. 468 of August 26, 1916 of the commander of the Northern Army regarding the exclusive spoken and written use of the Romanian language, in public and in private[20]; The high agenda of King Ferdinand no. 3, p. 51 of October 7, 1916, ordering the maintenance of positions and the resumption of the attack in case of territorial losses[21]; Order of the General Headquarters no. 2420 in conjunction with the Order of the General Inspectorate of the Army no. 32 of 1916 regarding the obligations of the officers to transit or remain in the Bucharest garrison, under the sanction of immediate sending to the front[22].

In peacetime examples include: setting up, reorganizing, dismantling and relocating units; maneuvers and exercises performed with troops and other components, etc.

By jurisprudence (case no. 349 of 2010 pending before the Timișoara Court of Appeal, the object brought to trial being the exception of illegality of an administrative act) it was ruled that **we are not in the presence of military command acts in the following situations**: acts concerning the status military personnel; acts concerning the organization and functioning of public authorities in the field of defense; acts concluded by the armed structures in the exercise of their activities[23].

We agree with other authors[24] that not all administrative acts issued during the war are exempted from the control indicated by the Law on Administrative Litigation, because placing an administrative body above the law, even in exceptional situations, would lead to freedom to violate , non-restrictive, the fundamental rights and freedoms of citizens.

As a main idea it can be noted that any acts issued by military authorities, foreign to the necessities of war, including orders to enter the reserve, advancement orders, sanctioning decisions, etc., are not acts of military command within the meaning of the law, but true administrative acts and are subject to censorship or control by way of administrative contentious, in this sense the supreme court ruling by the decision of the ICCJ, the administrative and fiscal contentious section, no. 532 of February 15, 2006. In the jurisprudence of the Sibiu Tribunal, it was retained on the merits, in case no. 307/2018[25] having as object the refusal to solve the request, that the sanctioning act with Warning of a military cadre, provided in art. 60 para. (2) of Order M64 / 2013 does not represent a military command act, the disciplinary procedure being foreign to the needs of the war.

In another case, respectively no. 169/2020[26] pending before the Bucharest Court of Appeal, having as object of the file the annulment of the administrative act, the defendant active military cadre in the corps of non-commissioned officers erroneously motivated his action claiming that the Order of the Ministry of National Defense no. MP53 / 2009 promotion to the rank of major lieutenant is an act of military command, which led to the inadmissibility of the lawsuit.

From a literary point of view, the command is an order that is imposed in front of certain categories of persons obliged in the indicated sense. By extrapolation, the military command, contained in a norm of positive law, emanates directly from a state body, in our case the military bodies, by which the observance of its content is ordered. The military command is endowed with absolute state force, the non-observance of its provisions attracting, in certain situations, the criminal liability indicated by art. 417 of the New Criminal Code reserved for the crime of insubordination.

We are in the presence of a military command whenever we are dealing with a legal relationship of public law between the military that meets the condition to oblige regarding purely military matters and that are related to the organization and leadership of the forces. The imperative of the rules of military command is always manifested in the form of an order, thereby understanding an obligation that can be executed relatively unconditionally.

Moreover, R.G.-1 Regulation of internal order in the unit approved by the Order of the Minister of National Defense no. M 38 of 15.03.2016[27] defines at art. 10 the order as an "imperative requirement transmitted by the commander in accordance with the normative acts in force, the customs of the war, the conventions and treaties to which Romania is a party and is the basis of any military action / activity". Ensuring the command of a military structure is carried out through this military command, called an order, which systematizes the legal relations between the military through coordination and subordination. The

[27] publicat în Monitorul Oficial nr. 214 din 23 martie 2016.

desideratum of the imperative requirements imposed by the military command is limited to ensuring victory in battle, the key element of the success of military actions being discipline, recognized by legal doctrine as a defining feature of military forces.

The military commands, both from an organizational-functional point of view and stricto sensu, regardless of the level at which they are (battalion, brigade, division, staff, etc.) are meant to lead the armed troops, along with the other components of the force. to ensure victory in time of war, and in time of peace to prepare / train military forces in order to maintain or increase combat capability (combat capability of the troop, improve combat techniques and tactics, improve methods used, etc.). At the base of the idea of command we have the organizational, coordination and command foundation of the troops, which leads to the idea that not all acts issued by a military authority are also acts of command of a military nature.

The Supreme Court, by Decision no. 1937 of 2019 of the High Court of Cassation and Justice, Administrative and Fiscal Litigation Section[28], pronounced on appeal, having as object of the action the suspension of the execution of Decree no. 1131 of December 28, 2018 on the extension of the term of office of the Chief of Defense Staff issued by the President of Romania and the Presidential Administration, invoking its own jurisprudence on the complex nature of presidential decrees, not being competent to rule, resumes the reasoning of the Bucharest Court of Appeal. 79 of March 29, 2019 regarding the qualification of the decree as an act of military command, subscribed to the consecrated fines of non-receipt found in art. 126 para. (6) of the Romanian Constitution. According to our assessments, Decree no. 1131/2018 cannot be a substitute for a military command act, being foreign to the objective needs of war, missions or armed operations, essentially representing a complex administrative act with autonomous existence, not being able, according to some authors, to be assimilated to administrative acts normative or individual[29]. The decree regulates the situation of the highest military civil servant with regard to his own career, without any causal link with the war.

Among the acts of military authorities that may be the subject of an action in administrative litigation, we list, non-exhaustively:

- sanctioning decisions issued by the unit commander on the basis of proposals in the minutes drawn up by the disciplinary investigation commission or the honorary council;
- failure to resolve within the legal time limit or unjustified refusal of a military authority to resolve a request regarding a right or a legitimate interest, issued by the military;
- decisions and decisions of appointment, transfer to reserve or retirement, transfer to another garrison etc.;
- imputation decisions in case of recovery of material damages;
- the decisions of the commission of jurisdiction of the accused
- annual, stage and final evaluations;
- *administrative contracts concluded by military structures*[30].

The right of commanders to give order in the leadership of troops does not lie only in aspects related to the necessities of war in the classical sense, as the legislator uses in the regulations in the field formulas such as *military actions*, *operations*, *missions*, etc. As is well known, with Romania's entry into NATO, our country has assumed, according to Article 118 of the Romanian Constitution, the obligation of collective defense, being stated to participate in actions on maintaining or restoring peace in military alliance systems. By reference to Law no. 121 of 15 June 2011 on the participation of the armed forces in missions and operations outside the territory of the Romanian state[31], Article 2 describes the types of military actions in which Romania participates under the mandate of the UN - United Nations, OSCE - Organization for Security and Cooperation in Europe, under NATO leadership - the North Atlantic Treaty Organization or the European Union, respectively in coalitions or at the request of an affected state.

Pursuant to art. 118 in the Constitution, the prerogative of the participation of the armed forces in military actions in theaters of war lies in the international commitments assumed by the Romanian state, which together with the actions of maintaining or restoring peace must be compatible and compliant with the fundamental principles of the rule of law[32].

Military doctrine and literature argue that war is governed by a series of specific principles, its conduct and execution related to military science proper, military normative acts in force, objective realities and ways of action specific to the art of war[33]. Specialized military works also use the formula of *actions other than war*[34], defined as post-war actions, adjacent to or complementary to the war, whose characteristics aim to protect the heritage in general and reduce the impact on social, economic and cultural life, during which issue military command documents.

While the war is declared based on Law no. 355 of November 20, 2009 regarding the regime of the state of partial or total mobilization of the armed forces and of the state of war, where at art. 6 describes the procedure for declaring by decision of the Parliament, the armed struggle, which is the core of any war, takes place on the basis of a military decision, so an atypical administrative act, unanimously called by law and jurisprudence as a military command.

3. Conclusions

The military command act, provided for the first time in the Romanian Constitution of 1923, which maintained its exceptional status from the control exercised by the administrative contentious courts, arising from the objective needs and consequences of the First World War, still exists today. the conditions for the fulfillment by the Romanian state of the constitutional obligations of collective defense provided in article 118 of the Romanian Constitution, respectively art. 2 of Law no. 121 of June 15, 2011 on the participation of the armed forces in missions and operations outside the territory of the Romanian state.

Although we are in the presence of an absolute exception, the legislator did not allow that by establishing the fines of non-receipt to be violated at their issuance, the conditions related to form, content or motivation.

The legal doctrine has distinguished between military acts of command that arise within the military hierarchy and military acts of command that intervene between the military and the civilian population. Those who intervene between the military authority and the civilian population are subject to judicial control exercised in administrative litigation.

Consequently, in the sphere of the notion of a military command act, those administrative acts were retained in the doctrine whose purpose is to respond to a military command, understood as the prerogative to command or issue orders from the point of view. strictly military.

SUSPENSION OF THE ENFORCEMENT OF THE REGULATORY ADMINISTRATIVE DEED - A FATA MORGANA OF CASE-LAW AND DOCTRINE

Ionela-Alina ZORZOANĂ*

Abstract

The article aims to be an analysis of the effects of suspending the enforcement of the regulatory administrative deed in the context in which, as we shall see, opinions are divided both in the specialized literature and in the case-law of administrative contentious courts. Starting from the provisions of Law no. 554/2004 of the administrative contentious, the study shall go through a comparative analysis in regard to the institution of annulment of the administrative deed, as there are authors but also courts of law considering the two concepts as equal ones.

We have also shown why we do not adhere to the latter current, inclusively by reference to a series of decisions of the Constitutional Court from which clearly results the individuality of the effects that the two institutions produce on regulatory administrative deeds.

We concurrently exemplified this, in the content of the study, with a recent case of the Bucharest Court of Appeal having as a subject matter the suspension of enforcing a regulatory administrative deed.

We express our belief, or perhaps at least hope, that in the end, both the specialized literature and especially the practice of the courts of law shall be uniform in the sense of recognizing the independence of the institution to suspend the enforcement of the regulatory administrative deed and its own effects that each case separately has.

Keywords: *regulatory administrative deed, annulment of the administrative deed, suspension of enforcement, Constitutional Court, decisions, case, Court of Appeal, independent, own effects.*

1. Introduction

The present study aims to analyze the effects of suspending the regulatory administrative deed, in the context in which at doctrinal level there are differences of opinions, an issue that we shall also develop during this material.

On the other hand, such an analysis is also necessary in view of a comparison in regard to the annulment of the regulatory administrative deed, a situation clearly regulated by Law no. 554/2004 of the administrative contentious in view of the effects of such a solution by the court of law. For the rigor of research, we appreciate that it is necessary to emphasize the differences between the two institutions, from the perspective of the effects produced by the solution of suspending the enforcement/annulment of the regulatory administrative deed.

If the situation of regulatory administrative deeds does not involve discussions, Law no. 554/2004 expressly providing the effects produced by a final decision annulling such a deed, the issues mainly occur in case of ruling a decision suspending the enforcement thereof where there is no clearly outlined regulation.

Taking advantage of this legislative void, let's say, some of the authors went so far as to equate the effects produced by the two institutions (cancellation vs. suspension of enforcement), strictly by reference to the fact that a regulatory administrative deed produces erga omnes effects, completely ignoring the specific conditions and characteristics of the two concerned institutions.

On the other hand, we do not consider it necessary to concretely regulate the effects of a decision admitting the suspension of the enforcement of a regulatory administrative deed, in the context in which, from our point of view, besides other authors, we consider that they clearly result from the conditions expressly provided by art. 14 and art. 15 of Law no. 554/2004.

Last but not least, the present analysis would not be complete, if it did not include a case study, starting from a solution ruled by the Bucharest Court of Appeal in a case[1] in which it was requested to suspend the enforcement of a regulatory administrative deed, a solution favourable to the plaintiff. Why did I feel the need for a reference to the Fata Morgana concept in the title of the article? Precisely in the light of the mirage that a favourable solution in an application to suspend the enforcement of an regulatory administrative deed can create versus all the other recipients of the concerned deed. And the proof lies precisely in the case study that we analyzed at the end of this material.

* PhD. Candidate, Faculty of Law, University "Nicolae Titulescu" (e-mail: alinazorzoana@gmail.com).

[1] Civil Judgement no. 132/02.03.2020, ruled by the Bucharest Court of Appeal in file no. 7222/2/2019, having as a subject matter the suspension of enforcing the Order of the President of ANRE no. 216/2019, a regulatory administrative deed, published in the Official Gazette of Romania Part I , no. 1001/12.12.2019.

2. Content

2.1. Annulment of the regulatory administrative deed vs. suspension of its effects

2.1.1. Regulation from Law no. 554/2004 - legislative issues

The relevant provisions in this analysis are those of art. 14 and 15 of Law no. 554/2004 which refers to the suspension requested by the "*injured person*", the request for suspension of the enforcement of the administrative deed having a subjective component. Therefore, we deal with an injured person, who considers that by a regulatory administrative deed there is the possibility of inflicting an "*imminent*" prejudice. Therefore, if the imperative requirements of the contentious law impose the existence of an injured person who, "*for the prevention of imminent prejudice*" can resort to the court with a request to suspend the enforcement of the administrative deed, it is more than obvious that we cannot talk about an objective contentious, but a subjective one, with the specificity of the person formulating the request. Such claim is based on the existence of an own "imminent prejudice" of the applicant and is not a claim concerning the "*general interest*". It can be rightfully concluded that in view of ordering the suspension of enforcing an administrative deed, the lawmaker imposed a subjective condition, specific to the plaintiff - the imminent prejudice, which has to be proven in his patrimony. It is true that the second condition should be also cumulatively fulfilled - the well-justified case which presupposes a proven illegality of the administrative deed (which is obvious and supposes a superficial investigation of the merits), but this second condition obviously pertains to the objective side of contentious, the illegality being the same regardless of the plaintiff in the suspension request**.**

On the other hand, Law no. 554/2004 expressly provides the effects, which the admittance of a request for annulment of the regulatory administrative deed produces in case of annulling a regulatory administrative deed, by non-appealable decision. Thus, according to the provisions of art. 23 "*Final and irrevocable court decisions by which a regulatory administrative deed was fully or partially annulled in are generally binding and have power only for the future*". From the mentioned text it can be noticed that we are talking about an expressly regulated situation, so that, *per a contrario*, in all other situations, inclusively in case of suspending a regulatory administrative deed, we deal with effects exclusively produced against the person who proved the cumulative fulfilment of the two conditions provided above, and against which the effects of a possible decision by which the suspension of the enforcement of the deed was ordered shall take place. In such a context, it is obvious that we cannot speak of *erga omnes* effects in case of court decisions suspending the enforcement of regulatory administrative deeds, as on the one hand, the lawmaker did not provide for any subsequent measures to rule such a solution, as no reference is made either to the general effects or to the obligation to publish the decision in the Official Gazette, as art. 23 thesis II of Law no. 554/2004.

Anyway, such a solution is consistent with the fact that, unlike the annulment of a regulatory administrative deed, the suspension of enforcement is a provisional and extraordinary measure. Moreover, the suspension of enforcement is always and regardless of the nature of the administrative deed a provisional measure, "*is exceptional and is ordered only in well-grounded cases*"[2].

It is important to remember, in support of our statements there is also a series of decisions of the Constitutional Court, which had as a subject matter the exception of unconstitutionality of the provisions of art. 23 and 24 from Law no. 554/2004. We consider that such decisions are relevant, even if they did not have as a subject matter the analysis of the constitutionality of the provisions of art. 14 or 15 of the mentioned regulatory deed, in view of the effects of suspending an regulatory administrative deed. Thus, by Decision no. 914 of 23 June 2009[3], the Constitutional Court held that „*the provisions of art. 23 of the Law on administrative contentious no. 554/2004 consecrates, at the level of the substantive law, the erga omnes effects of the non-appealable and irrevocable court decisions by which a regulatory administrative deed was fully or partially annulled. The binding nature of this type of decisions towards all legal subjects is concretely ensured by publishing in the Official Gazette of Romania the court decisions regarding the regulatory administrative deeds issued by the Government and the other central bodies of public administration, in the official monitors of counties respectively of those decisions regarding the annulment of certain deeds of the local public administration bodies, corresponding to the counties, municipalities, towns and communes. The usefulness of this publication is indisputable, considering the fact that, by their nature, regulatory administrative deeds approach an indeterminate number of legal subjects."* Also, by Decision no. 126 of 10 March 2015[4], the court of constitutional contentious ruled that "*for persons who had the capacity of a party to the dispute in which the court ordered the full or partial annulment of a unilateral regulatory administrative deed, insofar as they also request the recognition of the claimed right, together with reparations, the effects of annulment of the deed occur by virtue of the principle of the relative*

[2]Alexandru-Sorin Ciobanu, *Administrative Law. Public Administration Activity. Public Field,* Universul Juridic, Bucharest 2015, p. 84 et seq.

[3] Published in the Official Gazette of Romania, Part I, no. 544 of 5 August 2009.

[4] Published in the Official Gazette of Romania, Part I, no. 346 of 20 May 2015.

effect of court decisions " also occur for the past, meaning that, for the parties to the dispute, the annulment of the unilateral regulatory administrative deed produces legal effects also for the past. Therefore, "*the annulment of a unilateral regulatory administrative deed, considering the provisions of art. 23, produces erga omnes effects also only for the future for third parties who did not have the capacity of party in the dispute in which the annulment decision was ruled, after the publication of this decision".* I n conclusion, as it results from the practice of the Constitutional Court, the lawmaker conditioned the production of *erga omnes* effects, inclusively by the publication of the final annulment decision in the Official Gazette.

Finally, it is important to also mention an attempt by the courts to obtain a settlement of the issue from the High Court of Cassation and Justice, which was asked to rule by a second appeal in the interest of the law on "*the interpretation and application of the provisions of art. 14 and 15 of Law no. 554/2004 on administrative contentious, with subsequent amendments and supplementations and of art. 435 of the Civil Procedure Code, regarding the hypothesis of admitting the request for suspension of the enforcement of an regulatory administrative deed and the effects of this solution towards the parties to the dispute as well as towards third parties*". In the notification filed by the Prosecutor General of the Prosecutor's Office attached to the High Court of Cassation and Justice, "*Starting from the fact that the suspension of the enforcement of the administrative deed is a means to ensure compliance with the principle of legality, which governs the entire activity of public administration, the author of the notification believes that the suspension of a regulatory administrative deed produces erga omnes effects, and it is fair that, as long as the public authority or the court, as a result of challenging the administrative deed, is pending the verification of its legality, it should not produce its effects on the targeted persons".* The author of the notification also believes that "*due to reasons of legal logic*"[5] "the fact that "*the decision aiming at the suspension of such a deed, legally enforceable under the conditions of art. 14 par. (4) of Law no. 554/2004, in turn produces also effects erga omnes, whereas a possible application having a similar subject matter is irrelevant"* and considers that *"It would be discriminatory for an regulatory administrative deed to produce the legal effects for which it was adopted towards all concerned persons, except those who were parties to the dispute of administrative law, in which the court ordered the suspension of enforcing the administrative deed*."

Unfortunately, the High Court dismissed by Decision no. 18/02.10.2017[6] the notification as inadmissible, motivated by the fact that "*in this case, there was no evidence of divergent case-law regarding the invoked legal issue, an issue which, moreover, is neither contemporaneous versus the period of ruling the concerned decision, and the alleged non-unitary practice, invoked in the notification, concerns only decisions ruled by the supreme court*".

2.1.2. Views expressed in doctrine

As noted in the doctrine, the suspension is "a temporary measure of temporary protection of the rights and legitimate interests of the recipient of the deed or other injured persons."[7] Starting from these issues, corroborated with the fact that, as previously shown, in order to rule a decision of suspending the enforcement of an (individual or regulatory) administrative deed is necessary the cumulative fulfilment of the two conditions expressly provided by Law no. 554/2004.

Returning to Decision no. 18/02.10.2017 of the High Court of Cassation and Justice, in order to resolve the appeal in the interest of the law, the court requested even the views of specialists from the Faculty of Law of the "Babeș-Bolyai" University from Cluj-Napoca and the Faculty of Law of the Bucharest University (from here probably comes the surprise that, although it seems that it rigorously analyzed the case, the solution was to dismiss the complaint as inadmissible).

As mentioned at point V. 20 of the said Decision, the Faculty of Law of the "Babeș-Bolyai" University of Cluj-Napoca, by the point of view expressed by Univ. Reader PhD Ovidiu Podaru, appreciated that, in the spirit of the systematic interpretation of the provisions of art. 7, 14 and 1 of Law no. 554/2004, the suspension of a regulatory administrative deed, as well as its issuance, revocation, abrogation and annulment, by symmetry, produces *erga omnes* effects; the applicable legal reasoning is, *mutatis mutandis*, the one provided by art. 60 par. (2) of the Civil Procedure Code, according to which, since, by the nature of the legal relationship, the effects of the regulatory administrative deed are extended to an indeterminate number of persons, the effects of the decision to suspend such is beneficial to everyone. On the other hand, the Faculty of Law of the Bucharest University - through the point of view expressed by Univ. Prof. PhD Dana Tofan and Verginia Vedinaș and Univ. Readers PhD Alexandru-Sorin Ciobanu and Univ. Lecturer PhD Bogdan Ionuț Dima - appreciated that the court decisions by which, pursuant to art. 14-15 of Law no. 554/2004, the enforcement of regulatory administrative deeds is suspended (except for a few situations related to the actions in objective administrative contentious and to the damage of a legitimate public interest by the concerned deeds) do not produce, *de lege lata*, *erga omnes* effects.

[5] We do not understand what they are, in the context in which the solutions of the courts have to comply with the legal provisions, in the letter and spirit of the law, there are no norms of legal logic expressly regulated, which would represent a possible source of law (our note).

[6] Published in the Official Gazette of Romania, Part I, no. 970 from 07 December 2017.

[7] Gabriela Bogasiu, *Justice of the Administrative Deed. A Bi-univocal Approach*, Universul Juridic, Bucharest, 2013, p. 247.

In the specialized literature were outlined two currents of opinion in regard to the effects of the suspension of the regulatory administrative deed.

Thus, in a first opinion, it was noted that "the effects of the suspension occur inter partes litigantes, irrespective whether they concern individual deeds or regulatory deeds" even if "it is true that maintaining the applicability of a regulatory administrative deed, for persons who did not request and obtain the judicial suspension, may seem unfair, but we have to also consider the fact that the plaintiff had to prove the two conditions imposed by law, including the threat of concrete material prejudices in their regard"[8]. Since we fully agree with this opinion, we shall not insist upon it, but shall try to debate more the theories comprised in the second opinion formed in regard to the legal effects and their erga omes extent in case of suspending the enforcement of a regulatory administrative deed.

Another current of opinion (as it also results from the considerations of the HCJC Decision no. 18/2017), is the one according to which "the issue of the effects of extending the suspension of a regulatory administrative deed can be analyzed only by relating to the provisions of art. 14 and art. 15 of Law no. 554/2004 to the provisions of art. 23 of Law no. 554/2004 which, regulating the effects of annulment of a regulatory deed by a final decision of the administrative contentious court, states that the effects of annulment, by publishing the final court decision in the manner provided by law, occur for the future and have erga omnes effects. As a consequence, by applying the principle of symmetry, if the annulment of the regulatory administrative deed produces effects for the future and erga omnes, the suspension of enforcing the regulatory administrative deed has to produce the same legal effects"[9]. Although the author invokes the principle of symmetry, but which to our knowledge represents something completely different (i.e. we do not understand how the annulment can be symmetrical with the suspension of enforcing the regulatory administrative deed), he does not bring any argument to support his statements, whereas his entire theory remains in the stage of pure claim.

Moreover, in supporting this opinion, the author states that "such a conclusion is highlighted also in the judicial practice"[10] invoking a solution ruled (how else) by the Court of Appeal Cluj, in the merits, without notifying us whether the solution was maintained or not in a possible second appeal at the High Court.

A theory, which we could say is at least curious, is outlined at another author [11] who believed that "Since it is a party in the lawsuit in which the suspension of enforcing the regulatory administrative deed was ordered, for the public authority the court decision ordering the suspension is mandatory in terms of the power of res judicata. As the authority is bound not to enforce the deed in respect of the plaintiff, implicitly it will not be able to perform enforcements deeds against other legal subjects (...) and the suspension should concern all subjects for whom the act is intended, regardless of whether they had or not the capacity of a party to the dispute in which the deed was suspended."

If we admit such a theory, we could reach the absolutely bizarre situation from a legal point of view, when a decision to suspend the enforcement of a regulatory administrative deed ruled by the court further to verifying the cumulative fulfilment of the two conditions expressly provided by Law no. 554/2004, would it end up producing erga omnes effects, but in fact only partially, towards the authority issuing the deed?! We do not understand how the said author reached such a theory, but obviously it exceeds any legal norm applicable to administrative law and not only.

2.2. Case study - a solution of the Bucharest Court of Appeal, from ecstasy to agony for the other recipients of the concerned challenged regulatory administrative deed

We shall analyze at this point, the solution ruled in the case that was the subject matter of file no. 7222/2/2019 ordering the suspension of enforcing *Order no. 216/2019* - regulatory administrative deed, in which the plaintiff was the National Company Nuclearelectrica. The solution, a lucky one for the plaintiff in the case, generated numerous discussions in view of its invocation by another operator (Hidroelectrica[12]) in its own dispute having the same subject matter, but also by a company having the capacity of a shareholder of the two operators (Fondul Proprietatea - the Ownership Fund[13]). In both cases, the applicant relied on the solution in File no. 7222/2/2019, strongly claiming that it is a regulatory administrative deed e, the solution produces *erga omnes* effects, the suspension of enforcing Order no. 216/2019 operating against all those involved. Obviously, by reference to both the legal and doctrinaire issues invoked in the antecedence, our opinion is to the contrary, so that the solution is not binding to all operators, as such a situation is not regulated in the law of administrative contentious, *i.e.* that the suspension of a regulatory administrative deed produces general effects, *erga omnes.*

In accordance with this opinion, in the two subsequent cases, the same court - the Bucharest Court of Appeal, ruled in favour of dismissing the suspension

[8] Alexandru-Sorin Ciobanu, *op.cit.*, p.88-89.

[10] Idem, p. 299.

[11] Claudiu-Angelo Gherghină – *The Legality of the Regulatory Administrative Deed in the Rule of Law*, Universul Juridic, Bucharest 2019, p. 206 et seq.

[12] In File no. 1267/2/2020; the request for suspension was dismissed on the merits.

[13] In File no. 426/2/2020; the request for suspension was dismissed on the merits.

requests filed by both Hidroelectrica and Fondul Proprietatea.

In view of the topic submitted to the analysis of this study, not so much the solution is relevant, but the considerations of the two ruled judgements. Thus, by the civil judgement no. 258/23 April 2020[14] ruled by the Bucharest Court of Appeal, the court ruled that "the reference to the solution ruled by the Bucharest Court of Appeal in file no. 7222/2/2019 has no implications on this action, one posing its own individuality related to the holder of the summons and the invoked reasons, not in view of the standing of the company Nuclearelectrica SA that obtained the suspension solution in the concerned case, but of a company in which Fondul Proprietatea is a shareholder, namely Hidroelectrica SA." Moreover, the court goes further and notes in a detailed analysis that "starting from the premise that the suspension of enforcing a unilateral administrative deed at the request of a plaintiff determines the lack of interest or the lack of interest of a similar request filed by another plaintiff, it omits the fact that the standing of the latter person no longer depends in such a circumstance in view of suspending the enforcement of the solution to be ruled in its own merits action in annulment of that administrative deed, but on the court decision by which it analyzes the action of the first plaintiff, who obtained the concerned suspension, respectively the extent to which it assumes the continuation of the procedural steps". The approach of the court in this case is interesting, but beyond this issue, even indirectly perhaps, the Bucharest Court of Appeal ruled that a solution to suspend the enforcement of a regulatory administrative deed does not produce effects against another person, a third party to the dispute in the case.

On the other hand, in the second case that I mentioned, the same court noted by the civil judgement no. 350/03.06.2020[15] that "on the first argument of the plaintiff regarding the existence of the well-justified case, namely the fact that by the civil judgement no. 132/02.30.2020 (...) it was already ordered to suspend the enforcement of Order no. 216/2019 (...) until the ruling of the court of first instance, the Court shows that the plaintiff who promoted this request for suspension is Nuclearelectrica" so that "the court does not consider that the order to suspend the enforcement of Order no. 216/2019 at the request of Nuclearelectrica would automatically lead to the adoption of the same solution in this case". In the conclusion of these considerations, and also in agreement with our opinion, the Bucharest Court of Appeal ruled that "as it obviously results from the regulation of art. 15, art. 14 of Law no. 554/2004, the suspension of enforcing the administrative deed, as an extraordinary measure that can be ordered by the administrative contentious court in the hypothesis that an injured person proves the fulfilment of the legal conditions, does not produce erga omnes effects".

3. Conclusions

We consider that the institution of suspending the enforcement of the regulatory administrative deed deserves more attention, both from the doctrine, but especially from the courts of law.

We make this statement, in the context in which, in view of the effects that a decision of the court of first instance confirming such a solution, is legally enforceable and a possible second appeal does not suspend its enforcement. Therefore, we believe that the administrative contentious judge should more rigorously analyze the cumulative fulfilment of the two conditions expressly provided by Law no. 554/2004 and order the suspension of enforcing the regulatory deed only if they are cumulatively fulfilled. We cannot agree, in any form, with the theory according to which such a decision has to produce *erga omnes* effects, as such an interpretation would deprive of content the very institution of suspending the enforcement of the administrative deed. None of the supporters of this opinion convinced us (nor did they explain in any way) how the threat that a prejudice occurred proven in a dispute can (or is) the same for all recipients of that deed!

On the other hand, in the absence of a careful analysis of the well-justified case and the existence of threatened prejudice upon the property of the person considering itself injured, serious consequences may arise in the disruption of the issuing authority, which practically undergoes the impossibility of applying any legal norm throughout the period of suspending the concerned deed.

[14] The applicant filed a second appeal. But it gave up his trial, considering the lack of interest generated by the repealing of Order no. 216/2019.

[15] In this case, too, the plaintiff filed a second appeal but filed a waiver of the lawsuit, as there was no longer any interest in filing an action.

INTELLECTUAL PROPERTY IN TIMES OF COVID-19

Cristiana BUDILEANU[*]

Abstract

Since the beginning of year 2020, we are facing a pandemic of a coronavirus disease discovered in 2019 in China and rapidly spread worldwide. This pandemic affected many sectors of economic activities, such as the medical system, tourism, culture, education, work life.

The life we knew before the pandemic may never return to us or it would be possible to have a better life after the pandemic is over because since the beginning of times, the human being tried to overcome his condition by creating all sort of things to have an easier and more comfortable life. All such creations were made due to his intellectual activity which later, with the development of the societies, it began to be recognized and protected by laws. Nowadays, the intellectual property is present in all economic sectors and we protect it through patents, designs, copyright, trademarks.

Therefore, the intellectual property is nowadays more important than ever in order to try to end the pandemic because only the creative mind of human beings may find a way to eradicate this disease.

The purpose of this article is to analyse the consequences of the pandemic into the intellectual property. We would try, among others, to see if the human being remained as creative as before the pandemic or if he taken the opportunity to become even more creative, to invest more in research and development and if the laws protecting the intellectual property would stay in front of the needed progress to overcome this pandemic.

Keywords: *vaccine, counterfeit, pharmaceuticals, fashion, free use.*

1. Introduction

Intellectual Property ("**IP**"), as any other law discipline, is alive one or even more alive than others, even if like in other disciplines, the IP regulations are sometimes behind our times. Examples of such situations are the regulations of Artificial Intelligence ("**AI**"), of 3D printing in relation to which the specialists arise many questions.

In the present, we are in the middle of a pandemic, a Coronavirus disease pandemic ("**Covid-19**") which affected and changed our lives since its beginning in 2020, but which it is, as we will see below, manageable due to the creators, researchers, in other words due to the IP which "even in a period of such challenge and adversity (…) IP can provide opportunities for innovation, and the regulatory framework can evolve and be responsive to facilitate the adoption of new technology models."[1]

When arrived in Europe, Covid-19 put the biggest states (such as Italy, France, Spain) in distress from medical point of view, because of the large number of sick people who needed very attentive medical care and also because of the lack of sufficient medical supplies, medical staff, rooms in hospitals, etc.

However, ignoring these shortcomings, if we look back in time a year ago, we may see that unlike the situation in prehistoric and even more recent epidemics or pandemics, the Covid-19 pandemic caught the humankind and the technology more advanced than ever, which despite the restrictions of freedom, lot of industries have managed to continue their activity through remote work (e.g. IT, legal sector) or through reinvention of the business approach (e.g. by being present more in online system. There were some restaurants who started making deliveries, supermarkets started to offer to clients the possibility of home delivery).

It is also true that other industries were negatively impacted (e.g. culture, tourism, hotels, publicity). If we look at the publicity sector in Romania, we remember that during the emergency state, the number of radio and TV commercials has decreased, not being presented anymore commercials with discounts at products sold by supermarkets or by fashion stores. Also, the street advertising (e.g. the posters placed on billboards) decreased, having in view that the freedom of movement was restricted, the shopping centres, restaurants, theatres and other places where the people could gather were closed.

However, in time, with the help of technology and people who put at free their research and who created devices to protect people from the virus, solutions were found for those industries to retake their activity. For example, the fashion industry moved more in online, TV commercials to online shops beginning to appear

more, the culture also moved in online, being possible to find lots of theatre plays or performances.

All of this was possible due to the creative mind of human beings which helped prior and during the pandemic with the development of our life standards.

1.1. Other pandemics that affected the humanity

It is not the first time when the humanity is facing a disease with rapid spread and with lots of victims who transforms into an epidemic or a pandemic. Along the history, „plagues and epidemics have ravaged humanity throughout its existence, often changing the course of history" and „at times, signalling the end of entire civilizations"[2]. However, people associate plagues, epidemics or pandemics with times long gone, considering that in the time they live in, it is not possible to happen something like that, just like the people from Albert Camus's novel "The Plague" because they are modern people with phones, trams, airplanes, internet, and "they are surely not going to die like the wretches of 17th century London or 18th century Canton"[3]. If we analyse the current times during Covid-19 pandemic and the times from Albert Camus's novel "The Plague", we realise that even if between the two events it is a great period of time, the Covid-19 pandemic also caught people unprepared, some of them do not believe that this virus exists or they believe that the virus is a normal cold and they continue with business, with making arrangements for travel, not observing the rules imposed by states, considering themselves free. This tells us that people forget history or that they did not learn anything from it.

The worst epidemics and pandemics in history are considered to be:

a) The prehistoric epidemic in China (approx. 3000 B.C.) which took place in a prehistoric village now called „Hamin Mangha" and which „ happened quickly enough that there was no time for proper burials"[4];

b) The plague of Athens (430 B.C.) which took place during the Peloponnesian War during which it is estimated that between 75,000 and 100,000 people (i.e. 25% of the population) died[5];

c) Antonine Plague (A.D. 165 - 180) which is believed to have appeared in Babylon, spread in Parthia and then in entire world, even in China, where it is attested in 173, 179 and 182 A.D.[6];

d) Plague of Cyprian (A.D. 250 - 270) which originated in Ethiopia, spread in Rome where it killed approx. 5,000 people per day, in Greece and Syria[7];

e) Plague of Justinian (A.D. 541 - 542) named after the Byzantine emperor Justinian I, arrived in Constantinople almost a year after the disease first made its appearance in the outer provinces of the Byzantine empire. It killed between a quarter and a half of the Mediterranean population and played a key role in the fall of the eastern Roman Empire[8];

f) The Black Death (1346 – 1353) which devastated Europe, killing approx. 25-30 million people. The disease originated in central Asia and entered Europe carried by rats on Genoese trading ships sailing from the Black Sea[9];

g) Cocoliztly epidemic (1545 – 1548) first appeared in Mexico and killed an estimated 45% of the entire Aztec population. Historical records suggest it was some type of haemorrhagic fever, but recent DNA evidence suggests the culprit might have been salmonella brought by European colonizers[10];

h) Great Plague of London (1665 – 1666) ravaged London, around 68,596 people dying during the epidemic, though the actual number of deaths is suspected to have exceeded 100,000 out of a total population estimated at 460,000. From London, the plague spread to many parts of England[11];

i) Great Plague of Marseille (1720 – 1723) was the last wave of plague that hit western Europe and affected the French region of Provence. Arrived from the Levant, the plague killed between 76,000 and

126,000 people in south-eastern France, taking as many as 45,000 lives in Marseille alone[12];

j) Russian Plague (1770 – 1772) was the last wave of plague that hit Europe, started when Russian troops that fought in Russo-Turkish war developed a feverish illness and swollen lymph nodes. The plague spread all the way to Moscow, and killing between 52,000 and 100,000 people in Moscow alone[13];

k) Philadelphia yellow fever epidemic (1793) was worst outbreak of Yellow Fever ever recorded in North America, approximately 11,000 people contracted it out of which 5,000 people, (i.e. 10 % of the city's population), died[14];

l) Flu pandemic (1889 – 1890) also known as the "Russian flu", appeared in November 1889 in St. Petersburg, Russia. Within four months, it had spread throughout the northern hemisphere, killing about 1 million people worldwide[15];

m) American polio epidemic (1916) started in June 1916 in a densely populated area of Brooklyn, New York, and soon spread to other communities across Northeast America. It lasted through October 1916 and claimed 6,000 lives and left 27,000 people paralyzed, 80% of the fatalities being children under 5[16];

n) Spanish flu (1918 – 1919) was first observed in Kansas, United States, and it was the most severe influenza outbreak of the 20th century. It affected 1/3 of the world population and killed between 25 and 50 million people worldwide. Just like Covid-19, it was transmitted from person to person through airborne respiratory secretions[17];

o) Asian flu (1957 – 1958) was caused by a virus known as influenza A subtype H2N2. It was first identified in February 1957 in East Asia and subsequently spread to countries worldwide. The estimated number of deaths was 1.1 million worldwide[18];

p) AIDS pandemic and epidemic (1981 – present) is caused by the human immunodeficiency virus (HIV) which targets the immune system and weakens people's defense against many infections and some types of cancer. First identified in 1981, AIDS continues to be a major global public health issue, having claimed almost 33 million lives so far and infected over 70 million worldwide[19];

q) H1N1 Swine flu pandemic (2009 – 2010) was first detected in spring of 2009 in the United States of America and spread quickly across the world. The disease was caused by a novel influenza A virus which contained a unique combination of influenza genes not previously identified in animals or people. It is estimated that 151,700 - 575,400 people worldwide died from A H1N1 virus infection during the first year the virus circulated[20];

r) West African Ebola epidemic (2014 – 2016) was the "largest, most severe and most complex Ebola epidemic" in history, according to the World Health Organization. More than 28,000 people were infected, and over 11,000 people died before the international public health emergency ended in June 2016. Most of the cases occurred in three countries: Guinea, Sierra Leone, and Liberia[21].

2. The impact of Covid-19 on Intellectual Property

If we analyse the goods that we use, eat, drink, dress in our daily life, we notice that all of them are the product of the IP. The IP started its life when people started to exist and to find ways to improve their life. The drawings in the caves, the tools for hunting, for agriculture, the wheel, the earliest examples of written literature are also part of the human creation and therefore of the IP.

Not only in normal times, but also in times of crisis, such as a pandemic, IP is more important than

ever, and its benefits are even greater[22] because it helps to progress and innovate to eradicate the pandemic. In addition, "the IP system recognizes at both the national and the international levels that emergencies and catastrophes may call for measures that may disrupt the normal functioning of the incentive framework upon which the IP system is based during the period of the emergency or catastrophe."[23] Such measures include compulsory licenses, licenses of right of patented technology embodied in vital medical supplies and medicines, the use of exceptions in relation to cultural and educational works to ensure the availability of vital data, information and knowledge for the purposes of combatting and containing the virus.

At the beginning of the crisis, starting with Italy and continuing with other states where the disease spread, the biggest problem encountered by states was the „scarcity of resources to fight and contain the virus", by resources meaning in principle the medical staff and including but not limited to „personal protective equipment, testing kits, ventilators, pharmaceuticals and healthcare products as well as other laboratory and medical equipment"[24]. In time, solutions were found, most of them coming from private sector which made available to the medical sector the missing equipment either on a voluntary basis, either obliged by governments.

There were many voices saying that the IP stands against the progress to eradicate the Covid-19 pandemic mischaracterising the IP rights as a "monopoly", claiming that "IP rights will thwart research and development and make vaccines and treatments unaffordable" and calling "for the suspension of IP rights to keep prices low and to address supply shortages, particularly in low and middle-income countries"[25]. But is this the case? Is IP standing against the needed innovation to fight the Covid-19? In our opinion "no" because there are multiple ways to use the IP such as:

a) free licenses granted online by the IP right holders to the general public, for example under Creative Commons;

b) free licenses granted by the IP right holders to specific persons under written agreements;

c) waiver by the IP right holders to act against the persons who infringe their rights;

d) compulsory licenses granted by competent authorities in the state where the IP right exist;

e) technology pools (i.e. agreements between at least two IP right owners to group their rights relating to a specific technology and to license the rights to use these rights to each other and to third parties, subject to certain conditions, such as the payment of royalties[26];

f) under emergency legislation adopted by the affected states which in most countries have the right to requisition goods and/or services necessary to fight against the crisis.

Also, in times of crisis, the IP is better valued and the businesses whose activity is based on IP have greater revenues.

It may be thought that from the IP systems, only the patent system is a key element of the system for innovation and dissemination of medical technologies since most of the drugs, medical devices, vaccines, and other health technologies are protected by patents. However, the copyright, trademarks, designs, and trade secrets are also key elements of the IP system which may help or already helped during the Covid-19 pandemic not only the medical system, but other industries also[27]. In addition, it is worth mentioning that drugs, medical devices, vaccines, and other health technologies may be protected by multiple IP systems at the same time. For example, a vaccine may be protected under the patent laws, but also under the trademark law. A medical device may be protected under the design law, but also under the trademark law and copyright law.

2.1. Copyright during Covid-19

As we know, for the copyright there is no need for any registration, the author having the right over his/her work since the moment of its creation, even if it is unfinished, under the condition that the work is original.

The Berne Convention for the protection of literary and artistic works as amended in September 1979 („**Berne Convention**") presents the object of „literary and artistic works" which is represented by „every production in the literary, scientific and artistic

[26] World Trade Organization, *The TRIPS Agreement and Covid-19. Information note*, 2020, p. 5, https://www.wto.org/english/tratop_e/covid19_e/trips_report_e.pdf (accessed on 19.03.2021).

[27] This aspect was also recognised by WTO. For more details, see World Trade Organization, *The TRIPS Agreement and Covid-19. Information note*, 2020, p. 2, https://www.wto.org/english/tratop_e/covid19_e/trips_report_e.pdf (accessed on 19.03.2021).

domain, whatever may be the mode or form of its expression, such as books, pamphlets and other writings; lectures, addresses, sermons and other works of the same nature; dramatic or dramatico-musical works; choreographic works and entertainments in dumb show; musical compositions with or without words; cinematographic works to which are assimilated works expressed by a process analogous to cinematography; works of drawing, painting, architecture, sculpture, engraving and lithography; photographic works to which are assimilated works expressed by a process analogous to photography; works of applied art; illustrations, maps, plans, sketches and three-dimensional works relative to geography, topography, architecture or science".

The World Trade Organization („**WTO**") Agreement on Trade-Related Aspects of Intellectual Property Rights (the „**TRIPS Agreement**") represents the most comprehensive multilateral agreement on IP and it makes the connection with the Berne Convention stipulating that computer programs, whether in source or object code, shall be protected as literary works under the Berne Convention.

The computer programs have a key role in making our life easier. It is said that prior to the Covid-19 pandemic, „the speed of technological change had already expected to be significant" taking into consideration the rollout of 5G, development of AI and big data[28], but after the pandemic started, we have „vaulted five years forward in consumer and business digital adoption in a matter of around eight weeks".[29] And if we think at all that changed around us we realise that this is true because many entities from many industries shifted in online using digital platforms for their activity (e.g. the courts, the grocery stores, the schools, the doctors who started delivering telemedicine, the theatres, the show organisers, etc.) or other industries, such as financial ones, increased their use of digital services (e.g. banks).

Also, in the cultural sector, "many right holders have taken steps to make their works easily available to schools, universities, libraries, research institutions and the general public. These steps include innovative licensing arrangements, free access to research related to SARS-CoV-2, the virus strain that causes Covid-19, free access to newspaper and media articles about Covid-19, free access to many educational texts, online learning platforms and e-books and the free transmission of concerts, operas, and other cultural works."[30]

Therefore, many right holders of copyright tried to help either with free licenses, either with better prices for their works. For example, at the beginning of the crisis, having in view the shortage of masks and other protective equipment Romanian and French Association of Standardization have made available for free:

a) in Romania, kit of free standards during the emergency state (i.e. March-Mai 2020);

b) in France, guides to produce masques for the population that there are still available for free and continuously updated and improved[31].

Other entities which made available their works protected by copyright are from different sectors, such as academic, corporative, intergovernmental organizations, non-governmental organizations, governmental organizations, and among them we mention:

a) Technology companies such as Microsoft, Amazon, IBM, Intel, Hewlett Packard, Facebook have committed to grant time-limited licenses for some of or all their IP for the purposes of ending and mitigating the Covid-19 pandemic32;

b) College de France, which offers more than 1000 online documents (courses, conferences, colloquium);

c) Harvard University, which offers some content freely available such as e-books, streaming video and music, images, theatre and Covid-19 resources;

d) Copyright Clearance Center, which has a list of publishers who have authorised the use of their materials in distance learning models and other uses;

e) Egypt Today, which lists governmental initiatives where cultural sectors began broadcasting and uploading their content on the internet;

f) Pearson, which is providing access to expert faculty, best practices and other online learning resources for people who are studying, teaching or working remotely;

g) European Committee for Standardization and the European Committee for Electrotechnical Standardization, which in collaboration with their members made freely available certain copyrighted European standards for certain medical devices and personal protective equipment.

Regarding the procedures for isolation, testing and treatment of every case of Covid-19[33], there were also developed and used contact tracing applications[34] and body temperature devices, which have played a major role in the prevention of the spread of the virus among the citizen of China, Singapore, and South Korea[3536]. Such applications and devices also started to be developed and used in other states, even in European Union, Canada, United States of America.

As previously mentioned, many businesses from many industries started to develop their activity remotely, through digital means in order to survive, the pandemic being therefore a wake-up call to businesses that have been slow to embrace digitalisation and to commercialise their intangible assets. In these times, the declaration of Margaret Vestager, EU Competition Commissioner, that "there are only two types of business: those that are digital and those that soon will be", is more applicable than ever that.[37]

Nowadays, "digitalisation and IP come hand in hand" taking into consideration that the technologies developed and used for remote activities are protected by copyright. Also, it is said that "governments should encourage businesses to embark on digitalisation, and should not only offer funding, but also make it easier for businesses to protect the IP rights created in the process of digitalisation."[38]

Even if the digitalisation has its positive aspects such as amplifying brand value, it also has negative aspects, such as making IP "more vulnerable to theft through greater ease of counterfeit and copying". Therefore, "understanding the value of IP assets and ensuring they are adequately protected will be essential for businesses going digital."[39]

2.2. Patents during Covid-19

According to art. 27 of the TRIPS Agreement, patents are available for any inventions, in all fields of technology under three conditions: (a) to be new, (b) to involve an inventive step and (c) to be capable of industrial application.

The first recorded patent in the world for an industrial invention was granted in 1421 in Florence to the architect and engineer Filippo Brunelleschi[40]. The patent gave him a three-year monopoly on the manufacture of a barge with hoisting gear used to transport marble. It appears that such privileged grants to inventors spread from Italy to other European countries during the next two centuries[41].

Patents are granted to incentivize innovation and "that incentive requires trust that those rights will be respected."[42]

Patents provide the IP right holder with a legal right to prevent other to making, using, selling, and importing that invention for a period of time and they are granted for inventions in any field of industry, but having in view the crisis we are facing, the patents in the medical field for devices, drugs, vaccines, and other health technologies are of most interest nowadays.

As we know, patent rights require public disclosure, and in the medical sector, they enable drug developers to identify partners with the right intellectual assets such as knowhow, platforms, compounds, and technical expertise. Without patents most of this valuable proprietary knowledge would be kept hidden as trade secrets, making it impossible for researchers to know what is out there.[43]

To support the inventors, many states have implemented accelerated patents examination

[33] Dr Tedros Adhanom Ghebreyesus, Director - General of World Health Organisation - speech opening remarks at the Media Briefing on COVID-19, 13 March 2020 said "You can't fight a virus if you don't know where it is. Find, isolate, test and treat every case, to break the chains of transmission. Every case we find and treat limits the expansion of the disease.".

[34] World Health Organisation defined the contact tracing as "the process of identifying, assessing, and managing people who have been exposed to a disease to prevent onward transmission. When systematically applied, contact tracing will break the chains of transmission of an infectious disease and is thus an essential public health tool for controlling infectious disease outbreaks. For contact tracing to be effective, countries need adequate capacity, including human resources, to test suspect cases in a timely manner." procedures, known also as „fast-track" procedures, among such states being[44]:

a) Brazil – for patent applications related to innovations that can be used to fight Covid-19 from 7 April 2020 to 30 June 2021;

b) United States - for applicants which qualify for small and micro-entity status with respect to applications that cover a product or process that is subject to US Food and Drug Administration approval for use in the prevention and/or treatment of COVID-19;

c) Russia - applications for inventions and utility models in the field of technologies for combating viruses and associated diseases (such as pneumonia) without charging an additional fee.

2.2.1. History of the vaccine

Most of the pharmaceutical companies, when making development, research and releasing new drugs, medical equipment or vaccines on the market want to protect their IP rights taking into consideration the high costs involved by those activities.

From a legal point of view, the vaccines are protected by IP through the patents system.

At this moment, there exists in the market multiple vaccines approved by the competent authorities against the Covid-19. However, like always, people are divided in two groups: one group entrusting the vaccines and agreeing to be vaccinated in order to acquire the immunisation to Covid-19, the other one not entrusting them and refusing the vaccination, even if according to World Health Organization, the vaccines in general (i.e. which protect against at least 20 diseases, such as diphtheria, tetanus, pertussis, influenza and measles) save the lives of up to 3 million people every year[45].

According to the Cambridge Dictionary, the term "vaccine" is defined as "a substance containing a virus or bacterium in a form that is not harmful, given to a person or animal to prevent them from getting the disease that the virus or bacterium causes"[46]. Most of the vaccines are given by an injection, but some are given orally (by mouth) or sprayed into the nose[47].

The word "vaccine" comes from the name for a pox virus—the cowpox virus, *vaccinia*[48].

Edward Jenner is considered the founder of vaccinology in the West in 1796, after he inoculated a 13-year-old-boy with vaccinia virus (cowpox), and demonstrated immunity to smallpox, after he noticed that milkmaids infected with cowpox, which manifested itself as a series of pustules on the hand and forearms, were immune to the smallpox epidemics that regularly attacked the residents of his parish[4950]. In 1798, the first smallpox vaccine was developed. Over the 18th and 19th centuries, systematic implementation of mass smallpox immunisation culminated in its global eradication in 1979[51].

However, it is said that "the story of vaccines did not begin with the first vaccine of Edward Jenner, but that it begun with the long history of infectious disease in humans, and in particular, with early uses of smallpox material to provide immunity to that disease", the evidence showing that the Chinese employed smallpox inoculation as early as 1000 AD, being practices also in Africa and Turkey.[52]

After the first vaccine of Edward Jenner in 1798, the following vaccines have been developed[53]:

a) 1885 – the vaccine of Louis Pasteur against rabies, who appropriated the word "vaccine", permanently stretching its meaning beyond its Latin word associations with cows and cowpox virus[54];

b) 1923 – the method of Alexander Glenn to inactivate tetanus toxin with formaldehyde;

c) 1926 - the method of Alexander Glenn was used to develop the vaccine against diphtheria;

d) 1938 – the vaccine against tetanus;

2.2.2. The role of the IP in innovation

Having in view the spread of the Covid-19, the vaccine is the only way for us to obtain the immunity against the virus and in the end to regain our freedom of movement and to start travelling again.

The WTO mentions in an information note from 15 October 2020 that „A full response to the Covid-19 crisis requires wide access to an extensive array of medical products and other technologies, ranging from protective equipment to contact tracing software, medicines and diagnostics, as well as vaccines and treatments that are yet to be developed. The way in which the IP system is designed – and how effectively it is put to work – can be a significant factor in facilitating access to existing technologies and in supporting the creation, manufacturing and dissemination of new technologies."[55]

The vaccine means innovation and for creating a vaccine many hours of research are invested, many researchers are involved, many technologies are used, many attempts and testing are made. Therefore, it results that creating a vaccine involves a lot of costs for the pharmaceutical companies, this being the main reason for which they want to protect it through the patents system. In addition, the protection under IP is the reward for the hard work of the people involved in research.

However, prior to having approved the vaccines against Covid-19, multiple international organizations, or non-governmental organisation wondered if the IP represented a barrier to access to the vaccines, especially in cases where "the innovation produces effective results, and (…) the countries are not able to obtain the innovation on appropriate and affordable terms"[56].

A response to the above situation is that one of the many roles of IP, especially in crisis, is "to provide an incentive framework in which innovation can be encouraged and provided with a safe passage through the many, often perilous, stages from invention to commercial product or service"[57], in other words the reward for the people making the hard work and on which the entire world counts on. We understand therefore the CEO of AstraZeneca who stated that: "I think IP is a fundamental part of our industry and if you don't protect IP, then essentially there is no incentive for anybody to innovate."[58] IP rights support the investments in research and development by giving the opportunity of a return.

2.2.3. Compulsory and voluntary licenses

Governments cannot simply cancel the patent rights, but in some situations, like crisis situations, there are legal possibilities to make available the patents to overcome that crisis.

Article 7 of the TRIPS Agreement describes the objectives of the IP system in terms of a balance of rights and obligations. The objectives refer to the protection and enforcement of IP rights in a manner which contributes to „the promotion of technological innovation", „the transfer and dissemination of technology" to the mutual advantage of both „producers and users of technological knowledge", and also „social and economic welfare". Article 8 states that members may adopt measures necessary to protect public health and nutrition and to promote the public interest in sectors of vital importance to their socio-economic and technological development that are consistent with the provisions of the TRIPS Agreement"[59].

With application to a crisis such as the Covid-19, art. 30, 31 and 31bis of the TRIPS Agreement provide the member states with three situations in which patents rights may be restricted.

The first one regulated by art. 30 provides members states with the possibility to establish limited

exceptions to the exclusive rights conferred by a patent, under two conditions (a) that such exceptions do not unreasonably conflict with the normal exploitation of the patent and (b) do not unreasonably prejudice the legitimate interests of the patent owner, taking account of the legitimate interests of third parties. Such situation may refer to[60]:

a) The exception for research and experimental – in such a case, the use of the patented product for scientific experimentation, during the term of the patent and without consent, is not an infringement. This exception enables researchers to examine the patented inventions and to conduct research on improvements without having to fear that they are infringing the patent;

b) The exception for regulatory view – which allows potential competitors to use a patented invention during the patent term without the consent of the patent owner for the purpose of obtaining marketing approval for a prospective generic product.

The second situation is regulated by art. 31 of the TRIPS Agreement and provide the member states with the possibility to allow the use of a patent without the authorisation of the right holder, including use by the government or third parties authorised by the government if the following conditions are cumulatively accomplished:

a) authorization of such use shall be considered on its individual merits;

b) in case of a **national emergency** or **other circumstances of extreme urgency** or in cases of public non-commercial use;

c) the scope and duration of such use shall be **limited to the purpose for which it was authorized**, and in the case of semi-conductor technology shall only be for public non-commercial use or to remedy a practice determined after judicial or administrative process to be anti-competitive;

d) such use shall be non-exclusive;

e) such use shall be non-assignable, except with that part of the enterprise or goodwill which enjoys such use;

f) any such use shall be authorized predominantly for the supply of the domestic market of the state authorizing such use;

g) authorization for such use shall be liable, subject to adequate protection of the legitimate interests of the persons so authorized, to be terminated if and when the circumstances which led to it cease to exist and are unlikely to recur. The competent authority shall have the authority to review, upon motivated request, the continued existence of these circumstances;

h) the right holder shall be paid adequate remuneration in the circumstances of each case, taking into account the economic value of the authorization;

i) the legal validity of any decision relating to the authorization of such use shall be subject to judicial review or other independent review by a distinct higher authority in that state;

j) any decision relating to the remuneration provided in respect of such use shall be subject to judicial review or other independent review by a distinct higher authority in that state;

k) where such use is authorized to permit the exploitation of a patent („the second patent") which cannot be exploited without infringing another patent („the first patent").

Such possibility is known as "compulsory license" which "allow rival companies to manufacture and sell generic versions of a patented drug, thus breaking the inventor's monopoly and keeping prices as low as possible."[61]

For example, the Romanian law on patents[62] offers in cases of national urgency, circumstances of extreme urgency (such as the pandemic of Covid-19) or in circumstances of public utility for non-commercial purposes the possibility that the Bucharest Court to grant a compulsory license at the request of any interest person if the following conditions are accomplished:

a) the license to be granted at the expiry of a four-year term from the filing date of the patent request or of a three-year term from the granting of the patent, being applicable the term which expires the latest – this means that compulsory licenses will only be relevant for older registered inventions which prove to be useful against Covid-19[63];

b) the granted license is non-exclusive;

c) the remuneration of the right holder is established based on the commercial value and granted licenses.

d) However, even if such possibility exists, Romania did not offer yet such compulsory license.

If we analyse the list created by the World Intellectual Property Organization[64], we will see that such possibility exists in many states, however only three states having granted them:

---

[63] Christopher Stothers, Alexandra Morgan, *op. cit.*, p. 590.

[64] WIPO, *Covid-10 IP Policy Tracker*, https://www.wipo.int/covid19-policy-tracker/#/covid19-policy-tracker/access (accessed on 19.03.2021).

a) Colombia, which through a Decree issued in March 2020 declared of public interest the drugs, medical devices, vaccines, and other health technologies that are used for diagnosis, prevention and treatment of Covid-19;

b) Israel, for the importation of generic versions of Abbvie's patents associated with lopinavir/ritonavir, branded as Kaletra;

c) Russia, for inventions related to the production of Remdesivir.

Among the entities which offered for free their patents we mention[65]:

a) the company Abbvie which voluntarily requested in Chile the cancellation of six of its patents related to the drugs Norvir (ritonavir) and Kaletra (ritonavir/lopinavir)[66];

b) Moderna, which announced that it will not enforce during the pandemic the patents for the vaccine against Covid-19 based on a messenger RNA[67];

c) Amazon Corporation, which announced that it will collaborate with the World Health Organization to supply advanced cloud technologies and technical expertise to track the Covid-19 virus, understand the outbreak, and better contain its spread;

d) Hewlett Packard Enterprise, which granted free access to all its patented technologies for the purpose of diagnosing, preventing, containing and treating Covid-19, including to supercomputing software and applications and compute and storage systems to advance diagnosis or treatment of Covid-19;

e) Novartis Corporation, which has made available a set of compounds from its libraries that it considers suitable for in vitro antiviral testing.

There are also companies which explored various forms of collaboration to speed up vaccine development, such as Pfizer who entered into a partnership with biotech company BioNTech, Sanofi who has teamed up with GSK to share technologies[68].

The third situation is regulated by art. 31bis of the TRIPS Agreement and provide that the condition regarding the use in the national market of the patent shall not apply for the purposes of production of a pharmaceutical product(s) and its export to another state which is least-developed or to another state that has made a notification of its intention to use this possibility, for example only in the case of a national emergency or other circumstances of extreme urgency or in cases of public non-commercial use. Therefore, it is ensured „a legal pathway for a country to permit the manufacturing of patented medicines under compulsory licence exclusively for export to countries with insufficient or no local manufacturing capacities in the pharmaceutical sector."[69]

Regarding the compulsory licenses, as usual, there are two groups: one supporting them, meaning the publication for free of the patent related to drugs, medical devices, vaccines, and other health technologies that are used for diagnosis, prevention, and treatment of Covid-19 and the other being against such idea. Among those supporting the free, compulsory licenses, we found the WTO, Costa Rica[70], India.

The group being against the waiving of the IP rights for drugs, medical devices, vaccines, and other health technologies that are used for diagnosis, prevention, and treatment of Covid-19 is arguing that:

a) "IP has not been an impediment to the common goal of ending this pandemic and rather has enabled the development of several medicines and vaccines that are now being tested for additional use in the fight against the COVID-19," and "we have never needed innovation so much as now"[71];

b) "this is probably the worst possible time to weaken IP, when biopharmaceutical companies are investing significantly and are taking many risks without any guarantee that their medicines or vaccines will make it past the finishing line"[72];

c) "far from being a barrier, IP is part of the solution", allowing "the innovator to control which partners manufacture the product, ensuring high quality

[69] World Trade Organization, *The TRIPS Agreement and Covid-19. Information note*, 2020, p. 10, https://www.wto.org/english/tratop_e/covid19_e/trips_report_e.pdf (accessed on 19.03.2021).

[70] Sarah Newey, *op. cit.*

[71] James Bacchus, *An unnecessary proposal. A WTO waiver of Intellectual Property Rights for Covid-19 Vaccines*, Free Trade Bulletin, 2020, no. 78, p. 3, https://www.cato.org/free-trade-bulletin/unnecessary-proposal-wto-waiver-intellectual-property-rights-covid-19-vaccines (accessed on 19.03.2021).

[72] Abi Millar, *op. cit.*

supplies, and to maximise low-cost access for low and middle-income countries.", the TRIPS waiver, being the "wrong approach" because COVID-19 therapeutics and vaccines are complex biological products in which the main barriers are production facilities, infrastructure, and know-how. "IP is the least of the barriers"[73];

d) "every researcher, scientist, business owner relies on a patent to put a great idea on paper. Patents also have many benefits: They prevent good ideas from being stolen; they help formalize developing economies by encouraging cooperation between government and the private sector; they encourage increased investments in biomedical and biopharmaceutical research; and they reward the hard work of inventors and creators everywhere ensuring (…) that better medicines are on the way"[74];

e) "the private research and development business model, underpinned by IP rights, has been foundational to most of the existing treatments that are now being tested for coronavirus. It has also enabled companies to make bold investments in research and development for new products;

f) "generally speaking, nearly 70% of research and development is funded by the commercial sector, while around 30% is funded by the State. Around 70% of research and development is also performed by the commercial sector and 30% by the State. An effective strategy or approach to encouraging innovation must ensure that the right incentives are in place to encourage the major funders and performers of research and development to deliver results. IP is a central part of those incentives."[75]

In addition, others mention that „With the belief that medicines should be "public goods," there is literally no support in some quarters for the application of the WTO TRIPS Agreement to IP rights in medicines. Any protection of the IP rights in such goods is viewed as a violation of human rights and of the overall public interest. This view, though, does not reflect the practical reality of a world in which many medicines would simply not exist if it were not for the existence of IP rights and the protections they are afforded."[76]

After vaccines against Covid-19 were created and were in process of authorization, as of 21st December 2020 existing 219 vaccines[77], the group supporting the IP rights concluded that "this major achievement is a testament to how well the IP system has worked during the pandemic" and that "the existence of multiple vaccines means there is no Covid-19 vaccine "monopoly", and minimal risk of premium pricing."[78]

2.3. Designs during Covid-19

The designs are also important IP rights, including during Covid-19, when lots of products used by medical staff are protected under the design system.

Just like in case of works protected by copyright and products protected by patents, the creators of designs also made available for free their creation for fighting against Covid-19. For instance[79]:

a) an anaesthesiologist from Taiwan, designed an "aerosol box" to protect medical personnel when performing endotracheal intubations and made his design available for use by others under a Creative Commons license, being free of charge to the public on condition that it is not used for commercial purposes and be properly attributed to the inventor[80];

b) producers from fashion industry from Taiwan made a design for a protective suit to be used by medical personnel and made it accessible for replication by uploading it online, being after that used in Australia, Egypt, Mexico, Morocco, Botswana, Thailand, etc.[81];

c) Medtronic Corporation, which made freely available the design specifications and software for their ventilator under the trademark Puritan Bennett 560 (PB560)[82];

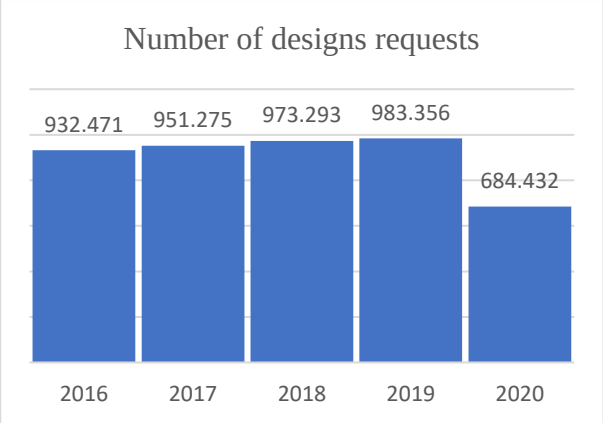
d) General Motors, which made available its designs specifications for masks to the Original Equipment Suppliers Association and the Michigan Manufacturers Association;

e) Smiths Technology, which has made available one of its ventilators for other manufacturers to produce as part of a coordinated attempt to tackle a shortage of live-saving equipment as Covid-19 spreads.

To make an analysis of the impact of Covid-19 on design rights, we will present the situation of design applications during the period 2016 – 2020, which is the following[83]:



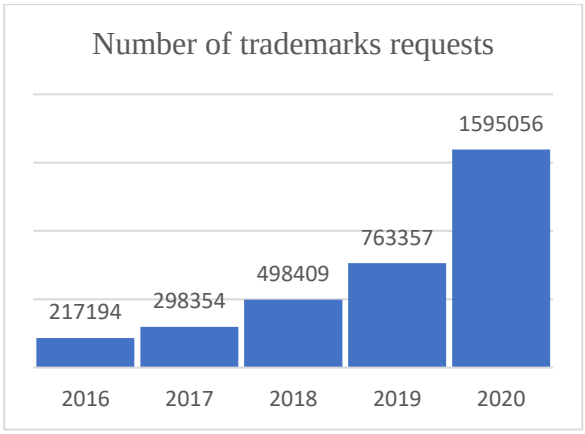
Analysing the above situation, we may notice that in the years prior to Covid-19 pandemic, the number of designs applications was constant, while in 2020, the year when the pandemic started, the number of designs applications decreased with 30,39% compared to 2019.

2.4. Trademarks during Covid-19

According to art. 15 of the TRIPS Agreement, a trademark is represented by any sign, or any combination of signs, capable of distinguishing the goods or services of one undertaking from those of other undertakings.

The first recorded trademark in the world is the Czech beer trademark PILSNER from 1859 which is still in force and since then until 23.03.2021, there were 28.418.372 registered trademarks all over the world[84].

Regarding the applications of trademarks during the period 2016 - 2020, the situation is the following[85]:



Analysing the above situation, we may notice that in the years prior to Covid-19 pandemic, the number of trademarks increased year-on-year with less than 50%, but the biggest increase was in 2020, the year when the pandemic started, when the number of trademarks applications increased by more than 100% compared to 2019.

According to the European Union Intellectual Property Office database, 90.567 applications out of the total number of applications in 2020 were for pharmaceutical products.

According to WTO[86], to monitor Covid-19-related trademark applications, some members have introduced guidance for IP offices, other members are offering assistance to trademark registration applicants. For example:

a) Australia –implemented the Trade Mark Covid-19 Helpline which supports and assists small to medium Australian businesses that are having to quickly adapt to changing circumstances due to Covid-19;

b) China - introduced guidance to increase the monitoring or investigation of certain trademark applications related to Covid-19;

c) Chinese Taipei - produced a list of the names of pandemic prevention products and services and is offering a fee reduction with respect to trademark applications which designate goods or services identical to those on the list. In addition, the IP office launched a trademark consultation hotline in order to assist applicants with trademark searches;

d) United States - launched the Prioritized Examination Program for certain trademark and service mark applications, which allows COVID-19-related

[83] The data is filled by using the Design View database kept by the European Union Intellectual Property Office to which 71 IP Offices are members.

[84] The data is filled by using the TM View database kept by the European Union Intellectual Property Office to which 71 IP Offices are members.

[85] The data is filled by using the TM View database kept by the European Union Intellectual Property Office to which 71 IP Offices are members.

[86] World Trade Organization, *The TRIPS Agreement and Covid-19. Information note*, 2020, p. 7, https://www.wto.org/english/tratop_e/covid19_e/trips_report_e.pdf (accessed on 19.03.2021).

trademark applications to be prioritized and immediately assigned for examination.

There are voices which suggest that big clothing manufacturers (or fashion companies) must take a step to comply with their duty obligation in a way of not relying anymore on force majeure and not to exit from agreements with companies located to low-cost developing countries having in view that the big clothing manufacturers "rely on trademark licensing to outsource the manufacturing of their garments to low-cost developing countries"[87].

2.5. Measures taken by the IP Offices

To support the applicants in the process of trademark, design, patents registration, but also the holders of registered trademarks, designs, patents during the Covid-19 crisis in 2020, the governments have issued regulations extending the time limits, the deadlines for payment of fees and also have started to work remotely and received online applications[88]. For example, WIPO adapted its work process to ensure continued delivery of its IP services, the official meetings being moved to hybrid and virtual modes and offering a wide range of webinars with information about its services and IP in general[89].

3. Conclusions

This study had the purpose to present how the Covid-19 affected the IP and if people (e.g. individual creators, businesses) remained interested in protecting and defending their rights related to their creations.

Our conclusion is that even if the humanity is facing a pandemic, lockdowns having and still being instated in many countries, we may see that the IP remained alive, still making part of our lives and the rights related to it being also in force, in principle due to the efforts of many people involved in research and development, in creative industries, in technology industries and who try every day to defend and to keep applicable the rights related to IP.

TRADE NAMES IN THE TRADEMARK REGIME: COMEBACK OF THE FORGOTTEN TWIN?

Paul-George BUTA*

Abstract

Just like Venus, once considered Earth's twin and largely forgotten for more than 50 years, was back in the spotlight after an unexpected discovery, trade names, left in the shadows by their more successful 'twin' – trademarks, are surprisingly mentioned in the latest EU trademark Directive. Could this be the premise for a comeback of the forgotten right? We briefly analyze the position of trade names in the trademark regime before the new trademark Directive and the changes brought by the new EU act. Looking at the case-law and literature related to the previous regime, we argue that the premise the new regime was based on (in what concerns the interference between trade names and trademarks) is not accurate and that, as a consequence, an imbalance in the relative protection of these rights has been created. We propose that the appropriate remedy is the adopting, at the national level of the EU Member States, of specific legislation concerning the protection of trade names. Fortuitously, this would also allow some EU Member States to discharge an international obligation neglected for over a century.

Keywords: *trade name, trademark, industrial property, overlapping rights, interference of rights, EU law, Paris Convention.*

1. Introduction

"Every time the long-forgotten people of the past are remembered, they are born again!" ― Mehmet Murat Ildan

1.1. The Forgotten Twin

On 14 September 2020, news that phosphine (PH3), an organic compound "only associated [on Earth] with life that does not need oxygen to survive (anaerobic microbes)",[1] was detected in the clouds on Venus[2] has prompted a flurry of interest in developments related to our planet's closest neighbor.[3]

This was unusual because general interest in Venus had waned since the 80s.[4] This happened because while Hollywood movies in the 60s (among the last of which was Curtis Harrington's 1965 film, "Voyage to the Prehistoric Planet", a rip-off of the Soviet 1962 film "Planeta Bur", with Harrington's film itself being remade into Peter Bogdanovich's 1968 "Voyage to the Planet of Prehistoric Women", featuring a bikini-clad Mamie van Doren as leader of the Venusians) revealed a general perception of Venus as a jungle-covered planet, the Soviet Venera 3 probe of 1965 and the NASA Mariner 5 mission of 1967 revealed a surface temperature of 460 degrees Celsius which clearly excluded any type of life on the surface of Venus.[5]

Previously dubbed "Earth's twin", Venus had become just a non-interesting uninspiring hot rock with no chances of supporting extraterrestrial life and consequently was, for a long time, forgotten to all but a handful of scientists who continued to look to Venus to find out why the planet has evolved in the way it has and what implications they can draw from that with regard to the evolution of conditions on Earth.

1.2. The Forgotten Right

Trade names were, just like Venus in the 60s, of significant interest at the end of the 19th century.

Although some legal provisions for the protection of trade names had been instituted in some countries in the mid-1800s (notably in France where a special law for the protection of the manufacturer's name had been adopted in 1824), a protection of trade names at the international level was felt to be needed.[6]

In fact, at that time, trade names were argued to be "first among trademarks",[7] subject to a "special property right", governed by natural international law, unlimited in time, not subject to any kind of estoppel and protected without need for any deposit or other formality.[8]

Thus, it is not surprising that trade names were on the agenda of international industrial property law protection ever since the principles that would ground the first ever international agreement on the subject (the 1883 Paris Convention for the Protection of Industrial Property) were drafted at the 1878 Trocadero Congress.[9]

Equally unsurprising is the fact that said Convention specifically provided for the international protection of trade names by means of article 8, which reads: "A trade name shall be protected in all the countries of the Union without the obligation of filing or registration, whether or not it forms part of a trademark."

What is surprising, on the other hand, are the fact that this provision has suffered no major amendment in nearly 140 years[10] and that, in those 140 years, little research seems to have been undertaken in respect of this "first among trademarks" right relative to the significant interest raised by its 'twin' right, i.e., the 'regular' trademark right.

Just like Venus became uninteresting when the expectations as to how the planet was like were contradicted by the scientific findings, trade names have been relegated to the far background of the industrial property law debate when trademarks have become the better preferred means of securing protection for the purpose of distinguishing the economic output and activity of traders worldwide.

2. Trade names in the trademark regime

2.1. Trade names and trademarks prior to the new Trademark Directive

Trade names were not mentioned as such in the First Trademark Directive[11] nor in the 2008 Trademark Directive.[12]

The interferences between prior trade names and trademarks were dealt with under article 4 par. (4), letters (b) and (c) of the two Directives,[13] and, with regard to maintenance of prior use of "an earlier right which only applies in a particular locality" in article 6 par. (2).

In the parallel system of the Community Trademark (as it then was), these provisions were mirrored by article 8 par. (4)[14] and article 53 par. (2) of Regulation 207/2009[15] while the maintenance of prior use was dealt with in article 111. Important mention should be made of the fact that, under the CTM system, the prior right to a sign "used in the course of trade of more than mere local significance" could only be

[12] The text was substantially identical in the two directives: „4. Any Member State may, in addition, provide that a trade mark shall not be registered or, if registered, shall be liable to be declared invalid where, and to the extent that: [...] (b) rights to a non-registered trade mark or to another sign used in the course of trade were acquired prior to the date of application for registration of the subsequent trade mark, or the date of the priority claimed for the application for registration of the subsequent trade mark, and that non-registered trade mark or other sign confers on its proprietor the right to prohibit the use of a subsequent trade mark; (c) the use of the trade mark may be prohibited by virtue of an earlier right other than the rights referred to in paragraph 2 and point (b) of this paragraph and in particular: (i) a right to a name; (ii) a right of personal portrayal; (iii) a copyright; (iv) an industrial property right;"

[13] Directive 2008/95/EC of the European Parliament and of the Council of 22 October 2008 to approximate the laws of the Member States relating to trade marks, *OJ* L 299/8.11.2008.

[14] With the amendment that the sign opposed be "used in the course of trade of more than mere local significance".

[15] Council Regulation (EC) No 207/2009 of 26 February 2009 on the Community trade mark, *OJ* L 78/24.03.2009 which codified the first Community Trademark Regulation, Council Regulation (EC) No 40/94 of 20 December 1993 on the Community trade mark, *OJ* L 11/14.01.1994, p. 1 which contained the same provisions with the same numbering, except for the maintenance of prior use which was provided for in article 107 in the initial Regulation.

invoked in trademark annulment proceedings and not in opposition proceedings.[16]

EU courts have established that the "use in commerce" and "more than of mere local significance" (where applicable) are to be evaluated according to Community law standards while the "anteriority" and "right to prohibit use of the mark" conditions are to be assessed by reference to applicable national law.[17] In respect if which is the applicable national law, the EU court has indicated that this refers to the "law governing the sign relied on."[18] Without going into details, by application of article 8 of the Paris Convention, in respect of the existence and anteriority of the right to the trade name, the law of the state where the right is claimed to have been born should be applied while, in respect of the possibility that, claiming under such right, a prohibition of use of the mark is possible, application of the law of the state where protection is sought ought to apply. Mention should also be made of the fact that article 8 of the Paris Convention does not have direct horizontal effect between parties in the same Member State.[19]

Though the condition for the trade name to be used in commerce (mention should be made that the assessment of the conditions is made by reference to the deposit/priority date of the posterior trademark concerned)[20] is not subject to the strenuous test of the "effective use" for trademarks,[21] the "attempt to obtain an economic advantage" criterion requires more than use in income statements and invoices unrelated to the sale of goods or services to customers.[22]

The condition (only applicable under the CTM Regulation) that the sign be of more than mere local significance requires an *in concreto* assessment of the geographic scope of use (which needs to not be limited to a reduced part of the relevant territory, from the perspective of interested third parties)[23] and of the economic dimension of the use (showing the impact of that sign on the territory where used as a distinctive sign),[24] mere fact that the right is protected on a national scale or that it is used for a mail order business or proof of registration with the Trade Registry and use in catalogues is not sufficient *per se* to satisfy this condition.[25]

Anteriority of the trade name is, usually, closely linked with its use (also on account of the application of article 8 of the Paris Convention) and its birth is assessed by reference to the law of the state where such trade name is first protected.

Meeting the last condition (prior right allows the owner to prohibit use of posterior trademark) seems to be the most difficult to meet since this condition (when involving trade names) relies on the national law of the state where protection is sought (in what CTMs are concerned, due to their unitary character, this is usually the same state where protection was obtained, if an EU Member State). The EU Courts have held that, for such condition to be met, the owner would need to show that "the sign at issue is within the scope of the law of the relevant Member State and that it allows prohibiting use of the more recent trademark",[26] thus requiring proof "not only that this right arises under the national law, but also the scope of that law."[27] Therefore the owner

of the prior right to a trade name would need to provide "not only with particulars showing that he satisfies the necessary conditions, in accordance with the national law of which he is seeking application, [...], but also particulars establishing the content of that law."[28]

Moreover, in order to use the trade name as a prior right to bar registration to a more recent trademark, use in commerce of the trade name ought to be proved for all products or services for which the bar is sought.[29]

Where the reliance on applicable national law is proven, the test provided for in that law is applied.[30] This is usually a risk of confusion test[31] but can also be a passing off test.[32]

The lack of specific national law provisions with regard to protection of trade names and the unclear protection conferred by article 8 of the Paris Convention (cumulated with the doubts as to the horizontal effect of the latter's provisions) has proven a high hurdle in the willingness to oppose prior trade names to the registration of later trademarks.

Thus, although the interpretation on assessment of the use in commerce and priority conditions seem to give trade names an advantage over trademarks, the "more than of mere local significance" criterion (only applicable where CTMs are concerned) and, even more so, the possibility to prohibit use of a later trademark criterion, seem to have deterred only but the most resolute from basing their attacks on trademarks on prior trade names.

It is equally true that the reverse also holds true: cases where owners of a prior trademark have sought to prohibit use of a later trade name appear to have been even more rare.

Also, neither the two Directives nor the two CTM Regulations have provided, expressly, that the rights conferred by the trademark would allow its owner to prohibit use of a later trade name.

The Court of Justice of the European Union was very clear in its analysis of the interference in this direction when, in *Céline*,[33] it held that such interference would fall under the 'regular' scope of the rights of the trademark owner, provided by article 5 par. (1) of the Directives (corresponding to art. 9 par. (1) of the CTM Regulations), with four conditions to be cumulatively met: (1) the trade name was used in commerce; (2) the trade name was used without the consent of the trademark owner; (3) the trade name was used for products/services identical[34] to the ones the trademark was registered for; and (4) use of the trade name affects/is likely to affect the functions of the trademark, especially its essential function of guaranteeing to consumers the commercial source of the products/services.

"Use for products/services" was considered to include application of the trade name to products but also use in such a manner so as to establish a link between the trade name and the products/services marketed by the owner of the trade name.[35] The court did point out, however, that use for purposes other than distinguishing between products/services would fall under the provisions of article 5 par. (5) of the Directives.[36]

Where article 5 par. (5) is deemed applicable, the EU courts have held that national law is wholly responsible for providing whether trademark proprietors can obtain redress from such use being made of later trade names.[37] AG Sharpston has argued, in her conclusions in *Céline*, that such protection can however only be afforded under national law "where use of the sign is without due cause and takes unfair advantage of, or is detrimental to, the distinctive character or the repute of the trade mark."[38]

The above seem to show that, under the previous EU harmonized trademark regime, the possibility of a prior trademark owner to prohibit later use of a trade name was limited to situations where the trade name was used as a trademark (and therefore infringement was assessed under the 'regular' scope of trademark rights as per the provisions of article 5 par. (1)) or, if not the case, was wholly dependent upon specific

[38] Opinion of AG Sharpston in CJEU, *Céline SARL v Céline SA* (C-17/06), Opinion of 18 January 2007, par. 41.

additional protection being granted under national law, itself limited to those situations where use of the trade name was deemed to be made "without due cause" and "taking unfair advantage or being detrimental to the distinctive character/repute of the trademark".

One could conclude that, under the previous trademark regime, interferences between trade names and trademarks were exceptional as a result of both law and practice and therefore trade names could be mostly left to the realm of theoretical research.

2.2. Trade names and trademarks in the new Trademark Directive

Given the above, publication of the new Trademark Directive[39] was akin to the finding of phosphene on Venus. Preamble 27 of the Directive includes the following statement: "In order to create equal conditions for trade names and trade marks against the background that trade names are regularly granted unrestricted protection against later trade marks."

While the statement could hold true in theory (meaning that, should national law of the Member States provide for such protection, this would not be restricted under EU law), the statement by itself seems to suggest that, somehow, trade names had regained their "first among trademarks" status and became a strong right trademark applicants were facing against.

We could not identify the evidence for this in the *travaux preparatoires* of the Directive. In fact, the very identical proposition exists ever since the Proposal for the Directive was adopted by the European Commission on 27 March 2013.[40] The Commission indicates at its "Detailed explanation of the proposal" that, given the judgment of the CJEU in *Céline*, which held that "Article 5(1) of the Directive is applicable where the public considers the use of a company name as (also) relating to the goods or services offered by the company", "It is therefore appropriate to treat trade name use of a protected trade mark as an infringing act, if the requirements of use for goods or services are met."

Preamble 20 of the Proposal then goes on to state that "Infringement of a trade mark should also comprise the use of the sign as a trade name or similar designation as long as the use is made for the purposes of distinguishing goods or services as to their commercial origin." Preamble 25 continues to the effect that "The exclusive rights conferred by a trade mark should not entitle the proprietor to prohibit the use of signs or indications which are used fairly and in accordance with honest practices in industrial and commercial matters. In order to create equal conditions for trade names and trade marks against the background that trade names are regularly granted unrestricted protection against later trade marks, such use should be considered to include the use of one's own personal name."

The text of the Directive itself was proposed to be amended so as to specifically include "using the sign as a trade or company name or part of a trade or company name" as one of the infringing acts which can "in particular" be prohibited by the trademark proprietor and the amendment of the provisions on limitation of the effects of a trademark in what concerns use of the "own name" to specifically only apply in respect of the "personal name".

These proposals were unchallenged during the legislative procedure and were incorporated with only minor alteration in the final text of the new Directive. One change that is notable (personal name was finally enacted as name of the third party, where that third party is a natural person) is the elimination of the reference to "distinguishing goods or services as to their commercial origin" in preamble 20, which has lost, in its final version, the "as to their commercial origin" part, thereby potentially opening the door to the finding of infringement where trademark functions other than the indication of commercial origin are deemed affected by use of the trade name. We believe that this possibility already existed, at least in theory, after *Céline*, as the fourth condition under the test there provided for required that use of the trade name affects/is likely to affect the functions of the trademark, *especially* its essential function of guaranteeing to consumers the commercial source of the products/services.

The Directive therefore appears to have codified existing case-law (the *Céline* criteria) in respect of the possibility of trademark owners to pursue use of later trade names where these later trade names are used (1) without the trademark proprietor's consent, (2) in the course of trade, and (3) in relation to goods or services, provided that the additional conditions under article 10 par. (2) are also met.

The new Directive also makes clear that protection is also conferred vis-à-vis identical and similar trade names where the trade name is used for products/services that are identical, similar or different from those for which the trademark is registered but, in the latter case, only where the prior trademark "has a reputation in the Member State", (2) use of that trade name is without due cause, and (3) that use takes unfair

[39] Directive (EU) 2015/2436 of the European Parliament and of the Council of 16 December 2015 to approximate the laws of the Member States relating to trade marks, *OJ* L 336/23.12.2015.

[40] European Commission, Proposal for a Directive of the European Parliament and of the Council to approximate the laws of the Member States relating to trade marks (Recast), (COM/2013/0162 final), 27 March 2013.

advantage of, or is detrimental to, the distinctive character or the repute of the trade mark.

The change to the limitations to the effects of trademarks is, however, a roll-back on the findings of the CJEU in *Anheuser-Busch*[41] where the court held the limitation to also cover use of a trade name.

This has left, as literature has stated, a narrow, if at all existent space, for the holder of a trade name "to use the sign in an area where conflicts may occur."[42]

The modifications were also mirrored by the new European Union Trademark Regulation.[43]

The changes reflect an enhancement to the position of earlier trademarks when in conflict with later trade names,[44] with some commentators also arguing that the inclusion of article 9 (3) d) to the EUTM Regulation would allow trademark proprietors to overcome the hurdle (which is said to have been common in practice) of having their claims dismissed because the trademark was not affixed to the infringing products/services.[45]

No changes were however made to the position of earlier trade names when in conflict with later trademarks, probably stemming from the position reflected in the preambles that trade names were already "regularly granted unrestricted protection against later trade marks."

As we believe that proposition to not reflect the situation in practice, we consider that the new harmonized regime has created an imbalance between trade names and trademarks by only enhancing the protection of earlier trademarks against later trade names and not also that of earlier trade names against later trademarks.

This imbalance can be corrected either by legislative action (i.e. by specifically regulating under national law proper means of protection of the right to trade names) or jurisprudentially (by limiting the scope of application of article 10 of the Directive, in its national transposition form).

Needless to say that the preferred option should be the former, given that limiting application of article 10 would be of little effect (the *Céline* test has already been applied as such by national courts and a limiting interpretation would go both against the text of the Directive and the clear intention of the legislator), could be unjustified when considered in relation to rights other than those to a trade name, and would do nothing to address the imbalance created by the exclusion of trade names from the application of article 14. Last, but not least, it would be the expression of a negative creation of an equilibrium (i.e. it would bring trademark protection down in order to limit the imbalance between owners of trademarks and owners of trade names).

Legislating specific protection for trade names would create the desired level of protection for trade names with no encroachment on EU law, would leave protection of earlier trademarks at the enhanced level wished by the European legislator, would allow for unitary application of the law in practice and would create a positive equilibrium, by enhancing the level of protection of earlier trade names up to a position closer to that of earlier trademarks.

3. The comeback

We've shown how trade names, once deemed the 'better twin' of trademarks, have lost their mainstream appeal in the last century.

Never mentioned in the main pieces of EU trademark law, trade names have only exceptionally surfaced in the core case-law of the EU courts and in the main debates on industrial property. The courts seem to have been intent on keeping the interference between trade names and trademarks to a minimum which has also contributed to the relegation of trade names to the far background of the industrial property law debate of late.

Starting from an assumption that appears strange when considered in practice, the new EU trademark package enhances the protection of trademarks vs. trade names.

This enhancement was neither contested nor discussed in the procedure for the adoption of the new EU trademark laws.

The normal and best way to remedy such imbalance would be to specifically address trade name protection at the national level of the EU Member States. Specifically legislating the protection afforded to trade names is an obligation that most EU Member States have arguably undertaken by joining the Paris Union and then tacitly neglected for over 100 years. Maybe the transposition into national law of new EU trademark Directive will provide those states with the occasion to do so. Perhaps the long-forgotten twin of trademarks will make a comeback and retake its place.

Pessimists will say it's more likely that Venus become the focus of our planetary interests than Member States legislating trade name protection but then again, before phosphine was thought to have been found less than a year ago, Venus hardly ever came up in discussions in the previous 50 years, so we could yet be surprised.

GEOGRAPHICAL INDICATIONS, DESIGNATION OF ORIGIN VERSUS EUROPEAN UNION TRADEMARK – CONFLICT OR CO-EXISTENCE?

Adrian CURELEA*

Abstract

The study aims to highlight the situations that may arise in the context of the registration of a European Union trademark that refers to the same type of product for which a system of protection by geographical indication or designation of origin is established.

After brief introductory considerations, there will be approached the definitions given to geographical indications, designations of origin and trademarks in the European Union legislation, highlighting the similarities and differences between them, an approach that the study proposes in order to precisely delimit the boundaries between the three notions.

Being thus clarified these aspects, there will be identified in the European legislation the conflict situations that may arise between the geographical indications and designations of origin on the one hand and the European Union trademark on the other hand, as well as the modalities in which they may coexist, being finally analysed the relevant aspects in this matter in the jurisprudence of the Court of Justice of the European Union.

Keywords: *geographical indication, designation of origin, European Union trademark, generic mentions, use in trade, evocation, imitation, usurpation.*

1. Introduction

In a society where symbols predominate and where the development of trade offers many alternatives on the existing consumer market, there is a tendency for consumers around the world to appreciate products whose origin is determined, due to the fact that they bear an obvious imprint of the area and the conditions from which they come or of their characteristics and qualities.

More and more consumers give more importance to the quality of products they consume than to the quantity, which generates a demand for products whose geographical origin is specified.

However, it is possible that neither the origin nor the basic characteristics of a product are the only elements on which consumers base their decisions but also its authenticity, a context in which it is necessary to properly differentiate the label of the product which benefits from "added value".

If in the past the production and consumption of foodstuffs and not only took place locally, in recent years it has been found that they have exceeded the boundaries of a given territory, so that now the two processes take place in different territories (production in one territory and consumption in one or more territories other than the place of production).

That is why it was necessary to establish a protection system in order to give efficiency to the connection between the products and the quality given by the reputation of a country, region and territory.

Products identified by a geographical indication or designation of origin are certainly the result of traditional processes and knowledge passed down from generation to generation by a community from a given region.

The issue of protection of designations of origin of foodstuffs arose for the first time when signing the 1958 Lisbon Agreement on the international protection and registration of designations of origin[1], the contracting parties being obliged to protect on their territories the designations of origin of the products of other contracting parties recognized and protected as such in the country of origin and registered with the International Bureau of WIPO, unless they declare within one year from the application for registration that they cannot provide protection.

The Geneva Act of the Lisbon Agreement on designations of origin concluded in 2015 extends the Lisbon system also for the geographical indications (until then it referred only to designations of origin) and makes, in Article 6, the mention that the (Member) States undertake to "*protect the designations of origin and the geographical indications"* in accordance with their own legal system and practice and that *"the contracting parties which do not distinguish, in their national or regional laws, between the designations of origin and the geographical indications are not*

[1] The Lisbon Agreement (Arrangement) on the protection of designations of origin and their international registration was signed in Lisbon on October 31, 1958; it was revised in Stockholm on June 14, 1967.

required to make such a distinction in their national or regional legislation."

According to the Agreement, the geographical indications are defined as indications that identify a good as originating in the territory of a Member State, or a region or locality in that territory, where a certain quality, reputation or other characteristic of it can be attributed to its geographical origin and provides additional protection of geographical indications for wines and spirits.

Evidence that particular importance has been given to the specification of origin and of commercial origin of products and that the Member States undertake to protect in their territories the designations of origin of products from other countries is represented by the fact that the Agreement on Trade-Related Aspects of Intellectual Property Rights (TRIPS) of April 15, 1994[2], a separate chapter has been allocated to them, and by Article 22 paragraph 1there was provided a definition of the geographical indication as being any indication identifying a product as originating in the territory of a third Member State, or from a region or locality in that territory, in case a quality, reputation or other characteristic of that product can be attributed, in essence, to that geographical region.

Following the adoption of TRIPS in 1994, the right on geographical indications has been of interest to a large number of political class officials, traders and producers, so it can rightly be said that this Agreement has been the source of the success for the geographical indications in a considerable number of countries.

The protection of the designations of origin and the geographical indications is essentially intended to guarantee to the consumers that the agricultural products bearing a registered geographical indication have certain specific characteristics due to their origin in a given geographical area and therefore offer a quality assurance due to their geographical origin, in order to allow operators who have agreed to make real qualitative efforts to obtain higher revenues in return and to prevent third parties from abusively taking advantage of the reputation arising from the quality of these products.

The trademarks are signs used to distinguish products or services on the market; inform the consumers about the origin of a product or service and allow the association of a product or service with a specific undertaking, due to the precise quality or reputation provided by the available information of the manufacturer who manufactures or proposes it.

Therefore, the sign symbolizing the geographical origin or commercial origin of the product has a considerable impact on the purchase of that product.

As such, given the diversity of products placed on the market and the abundance of information about them, the consumer must, in order to make a better choice, have clear and concise information on the origin of the product.

In other words, when faced with a variety of foodstuffs, the consumer must know in particular and distinguish the products which have a particular origin or which belong to a particular trader, in order to finally choose the product which possesses certain characteristics and whose place of origin is clearly known to him and to avoid the risk of misleading regarding the characteristics or geographical or commercial origins of the products purchased.

2. Geographical indication, designation of origin and European Union trademark

Without going into detail about the registration procedures, the acquisition of protection and the modalities in which the protection of the rights to these signs is lost, which are not the subject of this study, there will be identified the definitions given to the geographical indications, the designations of origin and the European Union trademark by different normative acts, following to highlight the similarities and differences between them as well as the specific functions of each, in order to more easily understand situations of conflict or coexistence between designations of origin and geographical indications on the one hand and the European Union trademark on the other.

The EU Regulation no. 1151/2012 on systems in the field of quality for agricultural products and foodstuffs[3], defines the designation of origin as a designation identifying a product originating in a particular place, region or, in exceptional cases, country whose characteristics are mainly or exclusively due to a certain geographical environment with its own natural and human factors and whose production stages all take place in a delimited geographical area (Article 5 paragraph 1).

The same Regulation defines in Article 5 paragraph 2 the geographical indications as a name that

[2] The Agreement on Trade-Related Aspects of Intellectual Property Rights (TRIPS) of 15 April, 15, 1994 constitutes Annex 1C to the Agreement establishing the World Trade Organization (WTO), signed in Marrakech and approved by the Decision 94/800/ EC of the Council of December 22, 1994 concerning the conclusion, on behalf of the European Community, in the fields of its competence, of the agreements reached during the multilateral trade negotiations in Uruguay Round (1986-1994), published in OJ L 336, p. 1, Special Edition, 11/vol. 10, p. 3.

[3] Regulation (EU) No 1151/2012 of the European Parliament and of the Council of November 21, 2012 on quality systems for agricultural products and foodstuffs, published in OJ L 343, 14.12.2012, p.1-23.

identifies a product originating from a certain place, region or country, in which case a certain quality, reputation or other characteristic can be attributed mainly to the geographical origin of the product and when at least one of the production stages takes place in the defined geographical area.

In the wine sector there are relatively similar definitions of the geographical indications and the designations of origin that describe products that must meet the requirements of Article 93 paragraph 1 letters a and b of the EU Regulation No. 1308/2013[4], namely to hold a quality which is mainly or exclusively due to a certain geographical environment with its own natural and human factors or which can be attributed to a certain geographical area.

In other words, in the case of the designation of origin there must be elements to establish the link between the quality or characteristics of the product and the geographical environment as described in Article 5 paragraph 1, and in the case of the geographical indication elements to establish the link between a certain quality, reputation or other characteristic of the product and the geographical origin mentioned in Article 5 paragraph 2 of the Regulation.

Trademarks of products or services registered under the conditions and according to the norms provided by the EU Regulation no. 2017/1001[5] are called "European Union trademarks".

According to Article 4 of the EU Regulation no. 2017/1001 may constitute an EU trademark any sign, especially words, including names of persons, or drawings, letters, numbers, colours, the shape of the product or its packaging or sounds provided that such signs are capable of distinguishing the goods or services of one undertaking from those of other undertakings and are represented in the Register of the European Union Trade Marks, in such a way as to enable the competent authorities and the public to determine clearly and precisely the object of the protection conferred to the holder of that trademark.

An EU certification trademark is according to the definition given by the provisions of Article 83 of Regulation 2017/1001, an EU trademark designated as such on the date of submitting the trademark application and which is able to distinguish, on the one hand, the products or services for which the material, the manner of manufacture of the goods or the provision of services, the quality, accuracy or other characteristics, except geographical origin, are certified by the trademark holder and, on the other hand, the goods and services which do not benefit from a such certification.

In this context, it has been appreciated in the doctrine that only the collective trademark can be geographically descriptive, it can be confused in some cases with the individual trademark that involves a geographical name used in an arbitrary manner[6].

However, the European legislature has expressly recognized by Directive (EU) 2015/2436[7] that the Member States may register collective trademarks or descriptive geographical certification trademarks, stipulating that by way of derogation from Article 4 paragraph (1) letter (c), the Member States may provide that signs or indications which may be used to designate, in trade, the geographical origin of products or services may constitute guarantee/certification trademarks (Article 29 paragraph 3 of the Directive) or collective trademarks (Article 30 paragraph 2 of the Directive).

Protected designations of origin and geographical indications may be used by any operator trading a product in accordance with the specifications, and in the case of products originating in the Union and traded under a protected designation of origin or a protected geographical indication, the Union symbols associated with them appear on the labels; representations of the geographical area of origin may also appear on them, as well as representations in the form of text, graphic representations or symbols relating to the Member State and/or region in which the geographical area of origin is located.

In other words, the rights on geographical indications and designations of origin are always collective rights, which are exercised by an association or a group of producers located in a certain area and cannot be transferred to other persons.

Unlike geographical indications and designations of origin, trademarks may pass freely into the patrimony of another manufacturer, and it is not mandatory that for the use the trademark the

manufacturer prove the connection with a particular region and traditional manufacturing methods[8].

It should be mentioned that since the early 1970s, the Court of Justice of the European Union (CJEU) has specified the function of the protected designation of origin, that of informing and ensuring that the designated product has qualities and characteristics due to its geographical location; the existence of a spatial and qualitative connection was required[9].

The geographical function has as essential function that of guaranteeing the identification by the public of the geographical origin and/or of certain characteristics specific to the product.

The rights conferred to the holder of a registered trademark are intended to enable it to exercise its essential function of indicating the origin and to play an essential role of the competition system, those rights may be maintained only if the function for which they were assigned is actually exercised on the market[10].

3. Conflict or co-existence between geographical indications, designations of origin and the European Union trademark. Evocation, imitation, usurpation, commercial use

So, we have seen what a geographical indication, a designation of origin as well as a trademark mean and how they are regulated in the European Union legislation, obviously the natural question is whether a product can be covered simultaneously by various legally protected distinctive signs, such as trademark, designation of origin and geographical indication and whether a sign can simultaneously protect several titles such as trademark, designation of origin and geographical indication?

In order to provide an answer to both questions and to determine the conditions under which a product may be covered simultaneously by various legally protected distinctive signs and whether a sign may simultaneously protect several titles as those covered by this title and to determine whether this is appropriate, we consider relevant the provisions of Article 7 paragraph 1 letter j of the EU Regulation no. 2017/1001 which establishes an absolute reason for refusal to register the trademarks that conflict with trademarks that are excluded from registration under the Union legislation, of national law or of international agreements to which the Union or the Member State concerned is a party, which provide the protection of the designations of origin and of the geographical indications.

These provisions should be linked to the provisions of other regulations applicable to geographical indications and designations of origin in order to establish the manner of interference and possible situations which might arise in case of conflict between the signs which are the subject of this study.

Thus, in the case of a conflict between the geographical indications and the designations of origin on the one hand and trademarks on the other hand, their regime is governed by the provisions of Article 13 paragraph 1 letters a-d of the EU Regulation no. 1151/2012.

Similar regulations can be found in Article 103 paragraph 2 of the EU Regulation no. 1308/2013 regarding wines, Article 20 paragraph 2 of the EU Regulation no. 251/2014[11] regarding the aromatized wine products, as well as in Article 16 of the EC Regulation no. 110/2008[12] regarding spirits.

The protection conferred by the stated texts must be interpreted in relation to the objective pursued by the registration of the latter, namely to enable the products to be identified as having their origin in a given territory, where a certain quality, reputation or other characteristic of those products may be essentially attributed to their geographical origin.

The first situation described provides direct or indirect use modalities and the comparable different products in respect of which the protection afforded by the Protected Designation of Origin (PDO) and the Protected Geographical Indication (PGI) must be opposed, while the other situations refer to certain abusive behaviours from which the PDO and PGI holders may defend themselves, in the case of such uses the intention to exploit that reputation shall be presumed.

First, the registered names shall be protected against any direct or indirect commercial use of a registered name for products which are not covered by the registration, if those products are comparable to

[11] Regulation (EU) No 251/2014 of the European Parliament and of the Council of 26 February 2014 on the definition, description, presentation, labeling and protection of geographical indications of aromatised wine products and repealing Council Regulation (EEC) No 1601/91, published in OJ L 84, 20.03.2014, p. 14-34.

[12] Regulation (EC) No 110/2008 of the European Parliament and of the Council of 15 January 2008 on the definition, designation, presentation, labeling and protection of geographical indications of spirit products and repealing Council Regulation (EEC) No 1576/89, published OJ L 39, 13.2.2008, p. 16-54.

those registered under that name or if by a such use is exploited the reputation of the protected name, including where those products are used as ingredients.

The direct and indirect use of a designation of origin or of a geographical indication did not pose particular problems. The trademark which is disputed that it flagrantly reproduces a protected name: „Ibiza Flirt"(Spanish protected designation of origin „Ibiza")[13], „Tres toros" (Spanish protected designation of origin „Toro")[14], „Tempos Vega Sicilia"(Italian protected designation of origin „Sicilia")[15], „Domaine de l'île Margaux" (French protected designation of origin „Margaux")[16], „Carlos Serres" (Greek protected designation of origin „Serres")[17], „Manzanilla Gonzales Pallacios" (Spanish protected designation of origin „Manzanilla")[18], „Duque de Villena"(Spanish protected designation of origin „Villena")[19] were all censored without much difficulty in the European jurisprudence.

In case of comparable products, PDOs and PGIs must be opposed when they do not comply with the specifications, while in the case of non-comparable products it must be proved that they exploit the reputation of the PDO or PGI[20].

The use of the expression "direct or indirect commercial *use* of a registered geographical indication" implies the use of the indication in question in the form in which it was registered or, at least, in a form which has such close links with it, that the term „*use*" requires, by definition, the very use of the protected geographical indication, which must be present identically or at least similarly, phonetically and/or visually, in the sign in dispute[21].

Unlike "direct" use, which requires that the protected geographical indication be applied directly to the product concerned or its packaging, an "indirect" use means that this indication is included in the additional vectors of marketing or of information, such as an advertising for the product concerned or documents relating to it[22].

The Court has already established defining elements regarding the notion of "direct" use, acknowledging that it may be the use of a mark containing a geographical indication or a term corresponding to that indication and its translation for products which do not meet the appropriate specifications, as it was the case of figurative marks which were the subject of the main proceedings.

Thus, the situation referred to in letter a expressly prohibits other operators from using for commercial purposes a registered geographical indication for products which do not meet all the required specifications, in particular in order to take undue advantage of the reputation of that geographical indication.

Second, the registered names are protected against any misuse, imitation or evocation, even if the true origin of the products or services is indicated or if the protected name is translated or accompanied by words such as "gender", "type", "method", "as prepared in", "imitation" or other similar words, including when those products are used as ingredients.

It is noted that three distinct notions are used, namely: evocation, imitation and usurpation which are not defined by any of the Regulations relating to geographical indications and designations of origin[23].

As such, the doctrine has suggested that the three notions should be distinguished according to the intentional element of reproduction; evocation refers to a simple connection of image or perception in the mind of the consumer that is really much less powerful than the usurpation or imitation[24].

The wording of the letter b in question does not contain any element which would enable the precise definition of the meaning of the concept of evoking a protected geographical indication. At most, an analysis in the context in comparison with the other two hypotheses mentioned earlier in that provision, namely "usurpation" and "imitation", allows to consider that the concept of "evocation" is somewhat similar to the geographical indication in question, even if it seems to

assume the lowest degree of similarity of the three notions[25].

The notion of "evocation" is an objective notion which does not require the proof of the intention of the trademark holder to evoke a PDO or PGI[26].

The cases of evoking a protected name are complex, its disguise being very subtly made, aspects that are to be highlighted in the light of the jurisprudence of the Court of Justice of the European Union (CJEU).

The concept of "evocation" covers the case where the term used to designate a product incorporates part of a protected name, so that the consumer, in the presence of the product name, is induced, as a reference image, the goods benefiting from that name[27].

By the decision pronounced in Case C-614/17[28], the Court of Justice of the European Union examined the protection of designations of origin in relation to the graphic representations which might suggest a link between a product and the protected geographical origin by a designation of origin and established that the use of figurative signs evoking the geographical area with which a designation of origin is associated may constitute an evocation of the latter and may therefore be prohibited even if those figurative signs are used by a manufacturer established in that region, but whose products, similar or comparable to those protected by that designation of origin, are not covered by it.

The Court also ruled that in order to determine the existence of an "evocation", the national court must take into account the presumed expectation of an average consumer, normally informed, sufficiently attentive and informed, including the consumer in the Member State where the product is manufactured, which gives rise to the evocation of the protected name and in which it is consumed mainly in order to determine whether the figurative signs are capable of inducing them directly, as a reference image, the authenticity of the products benefiting from that name[29].

In the context in which, according to the relevant regulations, a protected designation of origin can only be represented by words and not by images, what brings new in the jurisprudence of the Court the Queso Manchego decision is the fact that the legal protection of the designation of origin involves the prohibition of some graphical representations that could suggest to the consumer a link between the product and the protected designation of origin.

In its jurisprudence, the Court has also examined the situation of phonetic or visually similar product names with a PDO or PGI for similar products, ruling that in order to assess whether this constitutes an "evocation", the referring court must take into account the phonetic and a visual similarity of these names, as well as any elements which may indicate that such a resemblance is not accidental, so as to verify whether, in the presence of a product name, the average European consumer, normally informed and sufficiently attentive and knowledgeable, is induced, as a reference image, the product benefiting from the protected geographical indication[30].

There is also an "evocation" of a protected designation of origin when, in the case of products with visual analogies, the sales names bear a phonetic and visual[31] similarity, such a resemblance is obvious if the term used to designate the product in that case it ends in the same two syllables as the protected name and comprises the same number of syllables as it; in the analysis of the existence of an evocation, account must be taken of any elements which may indicate that the phonetic and visual similarity between the two names is not accidental.

There may also be an "evocation" even in the absence of any risk of confusion between the products in question[32], being especially important not to create in the public perception an association of ideas about the origin of the product, nor to allow an operator to obtain undue benefits from the reputation of a protected geographical indication.

In the consumer's perception, the link between the manufacturer's reputation and the quality of the

products depends on the belief that the products sold under the designation of origin are authentic[33].

The jurisprudence of the Court has also ruled that the notion of "evocation" covers the case where the term used to designate a product incorporates part of a protected name, so that the consumer, in the presence of the product name, is induced as a reference image the product benefiting from that name[34].

It should be noted that the ban on evocation is not necessarily linked to the existence of real public confusion; it is not necessary for a consumer to consider that the evocative mark covers what the PDO protects.

Thirdly, the registered names are protected against any false or misleading indication as to the provenience, origin, nature or essential qualities of the product, which appears on the inside or outside of the packaging, in the advertising material or documents relating to the product concerned, and against packaging the product in a packaging likely to create an erroneous impression as to its origin.

Thus, in order to establish the existence of a "false or misleading indication" prohibited by that provision, no additional information must be taken into account with the sign in question in the designation, presentation or labelling of the product concerned, in particular as regards the real origin of the latter.

It is sufficient for a false or misleading indication to be present on one of the three supports referred to in that provision, namely "in the designation, presentation or labelling" of the product in question, to be considered "likely to give a false impression regarding its origin", within the meaning of that provision[35].

Finally, the registered names are protected against any other practice which could mislead the consumer as to the true origin of the product.

In addition to the three cases presented above, the fourth situation evokes other practices which are not considered by the three and which could mislead the consumer as to the true origin of the product.

In the context of the interference of a trademark containing geographical connotations and indications that take into account the same region, country, place, the situation that may arise is governed by the provisions of Article 14 of EU Regulation No. 1151/2012, according to which, if a designation of origin or geographical indication is registered under the Regulation, the registration of a trademark the use of which would be contrary to Article 13 paragraph 1 and relating to the same type of product must be refused if the trademark application is submitted after the date of submission with the Commission of the application for registration in respect of the designation of origin or the geographical indication.

According to Article 6 paragraph 4 of the Regulation, a name proposed for registration as a designation of origin or geographical indication is not registered if, given the reputation and name of a trademark, as well as its duration, the registration of the proposed name as a designation of origin or geographical indication is likely to mislead the consumer as to the true identity of the product.

Also relevant are the provisions of Article 7 paragraph 1 letter g of Regulation no. 2017 / 1001, according to which the registration of trademarks that are likely to deceive the consumer public is rejected, for example on the nature, quality or geographical origin of the product or service.

A trademark may be registered only if it is established that, by its use, it acquired a distinctive character in that part of the Community in which it had a distinctive character *ab initio*.

As such, it is sufficient for a trademark to be devoid of any distinctive character in a single Member State in order to block registration at Community level; on the contrary, once the trademark whose Community registration is sought acquires that distinctive character in the territory in which it was devoid of any distinctive character, the ground for refusal is no longer applicable.

The use of a trademark must take place exclusively in the context of a commercial activity aimed at an economic advantage and not in the private sector.

In order to establish the existence of a commercial use, the territory in which the protection of the sign is invoked must be taken into account; aspect that derives especially from the principle of territoriality.

An application of registration for a Community trademark may be refused only if it is put to serious use in the territory of the Member State in which it is protected.

The relevant territory for examining the scope of these exclusive rights is the one on which is applicable each of these legal rules in which those rights originate[36].

The trademark must be used as a distinctive element in the sense that it must enable the identification of an economic activity carried on by its holder.

A distinction must be made between the scope of the sign and the extent of its use; a sign whose geographical extent of protection is only local has a local scope only.

[36] Judgement TUE 24.03.2009 Moreira da Fonseca General Optica T-318/06, T-321/06, Rep. P.II-649, point 40.

The scope of a sign cannot depend solely on the geographical extent of its protection.

In order to be able to prevent the registration of a sign, the one invoked in support of the opposition must be effectively used in a sufficiently significant way in trade and have a geographical extent that goes beyond the local domain; in other words, the use should take place on an important part of the respective territory.

In order to establish this aspect, account must be taken of the duration and intensity of the use of that sign as a distinctive element for its recipients, who are buyers and consumers, as well as suppliers and traders.

The use of the sign made exclusively or for the most part between the date of submitting the Community trademark application and the publication of this application will not be sufficient to establish that this sign has been used commercially in order to demonstrate that it has not a sufficient scope (see the device Judgement CJUE 29.03.2011, C-96/09-Budvar).

There is the possibility of invocation within an opposition to the registration of a Community trademark of other signs which are not registered trademarks or well-known trademarks and which have been the subject of prior registration, such as geographical indications, but there have to be excluded the geographical indications which have been registered at community level; only those that benefit from protection at national level are targeted.

Finally, it should be mentioned that the geographical indications may coexist with the trademarks, Article 13 of the Geneva Act of the Lisbon Agreement explicitly recognizing the coexistence of the designations of origin or the geographical indications with earlier rights conferred by the trademark. Thus, the text allows the contracting parties to grant limited exceptions to the rights conferred by a trademark in the sense that such an earlier trademark may not, in certain circumstances, entitle its holder to prevent the granting of protection or the use in the contracting party of a designation of origin or registered geographical indications.

Moreover, the provisions of Article 14 paragraph 2 of EU Regulation no. 1151/2012 stipulate that a trademark whose use is contrary to Article 13 paragraph 1 of the Regulation and which has been requested, registered or established by its use in good faith in the territory of the Union, if this possibility is provided for by the legislation in question, before the date on which the application for protection of the designation of origin or geographical indication is sent to the Commission, may continue to be used or renewed for that product, despite the registration of a designation of origin or geographical indication, if the trademark does not fall within the grounds for cancellation or revocation provided for in the Community Trademark Regulation; in such cases, the use of the protected designation of origin, the protected geographical indication and the relevant marks is permitted.

These issues were also noted by the CJEU in Bavaria I[37], namely that the acquisition of the status of protected geographical indication does not have the effect of restricting the rights to similar trademarks, previously registered in good faith, unless there are good grounds for cancellation or revocation of the trademark, in the present case not being identified an impediment to the coexistence of the trademark with the protected name, the trademark "Bavaria" being prior to the protected name, the Court establishing that the relative presumption of good faith has not been overturned.

This decision is relevant in the light of the analysis of the coexistence of geographical names and similar trademarks, which appear on the same market and in respect of the product from the same range.

Thus, the continued use of a trademark in conflict with a PGI or a PDO is possible only if, in the first place, the trademark was registered in good faith before the date of submitting the application for registration of the designation of origin or geographical indication and, secondly, that the mark is not affected by the grounds for invalidity or forfeiture provided for.

If the earlier trademark was not registered in good faith or, even if it was registered in good faith, even if that mark may be affected by grounds for invalidity or revocation, protection of the registered designation of origin or geographical indication shall prevail on the earlier mark.

In the context of the above regarding the conflict between trademarks, the question arises as to the legal regime of generic names, in this sense taking into account the provisions of Articles 6 and 7 of paragraph 1 of the Lisbon Agreement on the protection and designation of their origin and international registration provide that the designation of origin registered under the Arrangement cannot be considered generic as long as it is protected as a designation of origin in the country of origin.

It is considered that the generic names cannot be registered, just as the protected names cannot become generic, and the generic elements of a registered name cannot be protected.

It is common ground that a geographical name could, in so far as it is used, become a generic name, in the sense that it could be regarded by the consumers as an indication of a particular type of product rather than as an indication of the geographical origin of the product, an example in this sense being the names "Camembert" and "Brie".

[37] Judgement Bavaria NV, Bavaria Italia Srl v. Bayerischer Brauerbund eV, C-343/07, ECLI:EU:C:2009:415, point 119.

Thus, in assessing the generic nature of a name, account must be taken of the places where that product was produced both inside and outside the Member State which obtained the registration of that name, the consumption of that product and how this name is perceived by consumers inside and outside the Member State concerned, the existence of special national legislation on the product in question and how that name has been used in accordance with Community law[38].

The Court was called upon to rule on this issue in Bavaria I[39], ruling that a name becomes generic only if it disappears the direct link between, on the one hand, the geographical area of the product and, on the other hand, a specific quality of this product, its notoriety or any other characteristic of it which may be attributed to that origin, and the name merely describes a genus or a type of products.

4. Conclusions

It is common ground that the association of a trademark with a geographical indication or designation of origin confers economic advantages to its holder and offers a high degree of legal protection.

Trademark recognition is an essential element of trade and the geographical indications and designations of origin play a key role in highlighting brands for products whose quality is given by the place of origin, in other words, the geographical indications can add value to a region, they can help to create a "regional brand".

I have seen that the protection afforded by the Union regulations does not apply to all designations of origin or geographical indications, but only to those defined in those regulations.

The system of protection of registered names in the European Union is based on the principle that the registration of a name containing more than one term confers protection on both the constituent elements of the compound name and its composition as a whole, unless that element is the name of an agricultural product or foodstuff considered a generic name.

It is necessary to differentiate between value-added products due to the characteristics of the product related to its geographical origin and products bearing the mark of a particular producer, in order to prevent malicious practices, to achieve market transparency and fair competition, all with the common denominator of consumer protection against misleading practices.

The provisions governing situations of conflict between trademarks and registered names, as analysed in the light of the jurisprudence of the CJEU, indicate that the first situation is limited to acts of use of a protected geographical indication / designations of origin, the second situation is limited to acts of usurpation, imitation or evocation, so that the third situation extends the scope by including the "indications" (for instance information provided to consumers) that appear in the designation, presentation or labelling of the product in which, although they do not really evoke the protected geographical indication, are classified as 'false or misleading' as to the links which the product has with the latter, the latter referring to any other practice which might mislead the consumer regarding the true origin of the product.

The purpose of these regulations is to protect the geographical indications and designations of origin, both in the interests of the consumers, who must not be misled by misleading indications, and in the interests of the economic operators who incur higher costs to guarantee the quality of products and who must protect against acts of unfair competition.

Although more difficult to accept, I have noticed that protected names may coexist with trademarks, the provisions of Article 13 of the Geneva Act of the Lisbon Agreement and Article 14 paragraph 2 of EU Regulation no. 1151/2012 recognizing explicitly the coexistence of designations of origin or geographical indications with the earlier rights conferred by trademarks.

THE NICE CLASSIFICATION – EVOLUTION AND INTERPRETATION

George-Mihai IRIMESCU*

Abstract

In the attributive system, an important element of the trademark registration procedure is the designation by the applicant of the goods and services for which it wishes its trademark to be protected. If in the declarative system the extent of trademark protection is given by the goods and / or services for which the trademark is actually used, therefore by an element of fact, in the attributive system the extent of protection is dictated by the applicant's expression of will, by choice, when filing a trademark application. As such, one of the main criticisms of this trademark protection system was that applicants may abuse the registration procedure in order to obtain protection for a wider range of products and / or services than those for which the trademark is, in fact, used. In this context, the Nice Classification is an essential tool accepted and used in most countries of the world for the designation of goods and services. Its wide spread use is determined, at a practical level, by the need for unitary cross-border protection of rights. At a legislative level, it was mainly imposed through international agreements. However, we will see below that European case law has sought to reduce the shortcomings of the attributive protection system, where the use of the Nice Classification is of essence, by encouraging trademark owners to seek protection for specific products and services, in full congruence with the use of those marks on the market.

Keywords: *Nice Classification, attributive system, declarative system, IP Translator, SkyKick.*

1. Introduction

In the attributive system, an essential legal instrument in the trademark registration procedure is the Nice Classification. Using this classification, the applicant chooses those goods and services for which he wants his trademark to be registered.

As such, this choice dictates which are the goods and / or services in relation to which the proprietor will hold exclusive rights in respect of his trademark. Therefore, the designation by the proprietor of the goods and / or services for which it seeks protection formally replaces the public use of the mark in the from the declarative system. In other words, if in the system of priority by use the scope of protection is more or less obvious, in the attributive system the scope of protection is "chosen" by the applicant. However, as we will see below, trademark laws and the practice of courts and intellectual property offices have made efforts to balance the reality of registers with that of the market, and to eliminate possible abuses by applicants, as a result of their ability to freely choose the goods and services for which they seek protection.

Thus, given the need to designate goods and services in the trademark applications, and given that trade relations often extend across borders, so that trademark proprietors become entitled to registered rights in many jurisdictions, it was necessary that the trademark registration procedures be standardized in relation to designating goods and services.

To this end, according to the World Intellectual Property Office (hereinafter "WIPO"), "*use of the Nice Classification by the competent trademark offices has the advantage of filing trademark registration applications with reference to a single classification system. The drafting of applications is thereby greatly simplified as the goods and services to which a given mark applies will be classified in the same way in all countries that have adopted the Classification. Moreover, as the Classification exists in several languages, applying the indications of goods and services of the alphabetical list can save applicants a considerable amount of translation work when filing a list of goods and services in a language other than that of the office of origin*".[1]

Although the above-listed advantages are, without doubt, a reality, as we will see below, the road to a uniform practice with respect to the designation of goods and services did meet obstacles and difficulties.

2. Historical considerations regarding the Nice Classification

Historically, the doctrine notes that the Nice Agreement Concerning the International Classification of Goods and Services for the Purposes of the Registration of Marks, concluded at the Nice Diplomatic Conference on June 15, 1957, came in

* PhD Candidate, Faculty of Law, "Nicolae Titulescu" University of Bucharest (e-mail: georgemihai.irimescu@gmail.com).

[1] Frequently Asked Questions: Nice Classification, section available on the WIPO website at the following link: https://www.wipo.int/classifications/nice/en/faq.html, accessed on April 10, 2021, at 21:31.

support of trademark applicants because it aimed to harmonize the practice with respect to designating goods and services in trademark applications, in different jurisdictions. To this end, the agreement created a system for classifying goods and services available to national intellectual property offices, in order to try to create a level of coherence in the classification of goods or services designated in the registration procedures. A uniform classification would make it easier for trademark proprietors to apply for trademarks in several jurisdictions and also to enable states which adopt such a classification to organize and administer their own trademark registers.[2]

The Nice Classification was revised in 1967 in Stockholm, in 1977 in Geneva and then amended in 1979. According to the agreement, each party has the obligation to apply the Nice Classification in connection with the registration of trademarks, either as the principal classification or as a subsidiary classification, and must include in the official documents and publications relating to its registrations the numbers of the classes in the classification to which the goods or services for which the trademark are registered belong. With respect to its content, the Nice Classification is based on the classification prepared by the United International Bureaux for the Protection of Intellectual Property (BIRPI) - the predecessor of WIPO - in 1935. It initially consisted of a list of 34 classes and an alphabetical list of goods, which was adopted under the Nice Agreement and later expanded to include eleven classes of services. The Nice Agreement provides for the establishment of a committee of experts in which all countries parties to the agreement are represented. The Committee of Experts shall decide on any changes to the classification, in particular the transfer of goods and services between different classes, the updating of the alphabetical list and the introduction of the necessary explanatory notes. The Committee of Experts has held numerous sessions since the entry into force of the Nice Agreement on 8 April 1961 and, among its most notable achievements, we note the general revision of the alphabetical list of goods and services in terms of form (in the late 1970s), substantial changes in general remarks, class headings and explanatory notes (in 1982), introduction of a "base number" for each good or service in the alphabetical list (in 1990), a number that allows the user to find the good or the equivalent service in the alphabetical lists of other language versions of the Classification, and the revision of services class 42 by creating classes 43-45 (in 2000). [3]

Currently in force is the 11th edition of the Nice Classification, updated in 2021, and all editions, including the current one, can be consulted on the website of the World Intellectual Property Office.[4]

The Nice Classification has also been adopted by supranational offices or other international treaties: by the International Bureau of WIPO, under the Madrid Agreement and Protocol, by the African Intellectual Property Organization, by the African Regional Intellectual Property Organization, by to the Benelux Intellectual Property Office and by the European Union Intellectual Property Office (EUIPO).[5] Naturally, if we take into account the fact that this classification is indispensable for procedures such as invoking the conventional priority, conversions or transformations of European or international trademarks etc.

It should be noted, however, that the purpose of the Nice Classification was never fully achieved, in the sense that it did not lead to a perfect harmonization of the practices of the states or jurisdictions that adopted it. Although there is this common tool that Member States use to designate goods and services in trademark applications of proprietors, divergent practices continue to exist because of different interpretations, in different jurisdictions, of the list of goods and services designated by a trademark and their scope of protection.

From this point of view, the practice has identified a number of shortcomings due to either a too generous interpretation of the lists of designated products or services, which could lead to an unjustifiably wider protection offered to holders in relation to the goods or services for which the trademark is, in fact, used, or due to the lack of clarity of certain terms that constitute the Nice classification.

Thus, there are numerous initiatives and materials that have been created in order to contribute to the efforts to reach a uniform interpretation of the Nice Classification, carried out either by the European office, or by international associations. An example of this is a paper by the International Classification Subcommittee (2018–2019 Term), a subcommittee of the Harmonization of Trademark Law Practice Committee of INTA (International Trademark Association), which deals with the different interpretation of retail services and of those wholesale

in different jurisdictions.[6] This study serves as a perfect example on how even one of the most basic of commercial activities may lead to different interpretations, when it comes to trademarks designating this type of services.

3. The Madrid Agreement and Protocol - catalysts for the standardization of practices concerning the Nice Classification

As shown above, the main role of the classification was to determine a unitary practice regarding the designation of goods and services by the trademark applications. Undoubtedly, the Madrid Agreement and Protocol, designed to make it easier for trademark holders to break through the territorial limits of trademark protection, have to a large extent contributed to the spread of this classification system. However, they also highlighted the situations where the harmonization of practices regarding the designation of goods and services encountered difficulties due to local practices. We consider two examples eloquent in this regard.

For example, the American doctrine emphasizes that one of the reasons why the United States was hesitant to join the Madrid Agreement system was the different practices regarding the extent of trademark protection. Thus, in the United States, the practice has led applicants to adopt lists of goods and services that are very specific in terms of the scope of protection. However, given that, through the Madrid System, applicants did not have the opportunity to extend in designated contracting parties the scope of protection of their basic applications or registrations, they were at a disadvantage in those markets where the scope of protection benefited from a much broader interpretation. In other words, the disadvantage came from the fact that local national trademarks, designating more general specifications, benefited from a larger scope of protection. The American local practice has, in fact, been determined by the fact that in the United States the trademark registration process is strictly dependent on its use.[7] As such, trademark owners have sought to designate highly detailed and specific goods or services in order to obtain coverage consistent with the actual use of their trademarks. From this point of view, it is important to note that until 1973, the United States used its own classification system for goods and services, the Nice Classification being applied to trademark applications filed starting with 1 September 1973.[8]

Another conclusive example from this point of view is Canada. In this jurisdiction, in 2019, two major changes took place: Canada became part of the Madrid Protocol and, we believe, as a consequence, it adopted the Nice Classification as a system for classifying designated goods and services.[9] Until then, Canadian applicants had the option of simply naming the goods and services for which they sought protection in "*ordinary commercial terms*". This system, however, causes applicants to choose, again, very specific goods or services. By way of example, offered by practice, an applicant could not simply identify his goods as "headrests"; but it had to indicate whether they were, for example, "vehicle seat headrests", "surgical operating table headrests" and so on.[10]

From the above, we can draw the following conclusions: firstly, the Nice Classification is an important tool in the implementation of international treaties on trademarks, thus helping to facilitate the means of obtaining cross-border protection. Second, the purpose of the Nice Classification, namely to standardize international practice regarding the designation of goods and services, has had to confront the realities and practices of other jurisdictions, such as the United States and Canada, which, either because obtaining protection through use was fundamental, or because the classification of products or services was never regulated, they had a stricter, more detailed, and perhaps more thorough approach with respect to determining the scope of trademark protection.

4. What are those considerations for which a good choice of designated products and services is essential, and why the interpretation regarding the scope of protection matters so much

The main importance of using the Nice Classification is undoubtedly the fact that, by designating the goods and services for which registration is sought, the proprietor defines the scope of his trademark protection. However, this leads to a number of procedural consequences.

As such, some of the absolute grounds for refusal are examined in relation to the goods and services designated by the trademark. In that regard, we consider the absolute grounds for refusal relating to the distinctiveness of the trademarks: "*Again, according to settled case-law, such distinctiveness can be assessed only by reference, first, to the goods or services in respect of which registration is sought and, second, to the relevant public's perception of that sign (Procter & Gamble v OHIM, paragraph 33; Eurohypo v OHIM, paragraph 67; and Audi v OHIM, paragraph 34).*"[11] As such, naturally, the descriptiveness of a trademark, as a particular situation of lack of distinctive character, is also analysed in relation to the designated goods or services. Furthermore, the ground for refusal relating to signs or indications which have become customary in the current language or in the bona fide and established practices of the trade shall, in turn, be considered in relation to the designated goods or services: "*Article 3(1)(d) of First Council Directive 89/104/EEC of 21 December 1988 to approximate the laws of the Member States relating to trade marks must be interpreted as only precluding registration of a trade mark where the signs or indications of which the mark is exclusively composed have become customary in the current language or in the bona fide and established practices of the trade to designate the goods or services in respect of which registration of that mark is sought.*"[12] Finally, for the following absolute grounds for refusal, the reporting of the analysis to the designated goods and / or services clearly results from the actual text of the legal provisions: "*A trade mark shall not be registered or, if registered, shall be liable to be declared invalid, for the following absolute grounds: (...) d) trade marks which consist exclusively of signs or indications which may serve, in trade, to designate the kind, quality, quantity, intended purpose, value, geographical origin, or the time of production of the goods or of rendering of the service, or other characteristics thereof; e) signs which consist exclusively of the shape, or another characteristic which results from the nature of the goods themselves or which is necessary to obtain a technical result or which gives substantial value to the goods; f) trade marks which are of such a nature as to deceive the public, for instance, as to the nature, quality or geographical origin of the goods or service;*"[13].

Further, Law no. 84/1998 provides that some of the absolute grounds for refusal regulated at letters (b), (c) and (d) may be overcome in so far as the applicant proves the distinctive character acquired by its trademark as a result of its use on the market.[14] This is another reason why the choice made by the applicant is important because, in the scenario described by this article of law, it will acquire protection only for those or goods for which the trademark has been used in such a way as to conclude the acquisition of character distinctive.

Furthermore, the choice of products or services is also relevant from the perspective of avoiding conflict with other earlier trademarks. Indeed, with the exception of the special situation of conflict with earlier trademarks enjoying reputation, the principle of the specialty of trademarks requires that similar or identical marks may coexist in different markets. In other words, "*The right of the owner of a mark to prevent third parties from using that mark in trade is subject to the principle of specialty, according to which this right can only be asserted with regard to those goods and services in respect of which the trademark is protected, usually as a result of registration. In principle, other traders may use an identical trademark for dissimilar goods or services, provided that no risk of confusion, association or dilution is caused.*"[15]

Last but not least, the way in which the designated goods and services are chosen protects the trademark owner or, on the contrary, exposes him to the risk of loss or subsequent limitation of his rights, if the revocation of his trademark is caused due to not being used. In such a context, the case-law has shown that the applicant is not only in danger of losing the designation of those goods or services for which his trademark is not used, but also of suffering the limitation of a larger

https://www.wipo.int/edocs/mdocs/sct/en/sct_17/sct_17_3.doc, accessed on March 28, 2021, at 19:12.

category of goods or services: "*Second, as the Advocate General noted in point 52 of her Opinion, with regard to goods or services in a broad category of goods, which may be sub-divided into several independent subcategories, it is necessary to require the proprietor of the earlier mark to adduce proof of genuine use of that mark for each of those autonomous subcategories. Indeed, if the proprietor of the earlier mark has registered his trade mark for a wide range of goods or services which he may potentially market, but which he has not done during the period of five years preceding the date of publication of the trade mark application against which it has filed an opposition, his interest in enjoying the protection of the earlier mark for those goods or services cannot prevail over his competitors' interest in registering their trade mark for those goods or services.*"[16]

Consequently, the choice of the designated goods and services must take into account at least three essential elements: their relation to the sign chosen as trademark, in so far as they may give rise to an absolute ground for refusal, possible conflicts with other earlier rights and, last but not least, the reality of the market, namely which are those products or services for which the trademark is actually used.

5. The IP Translator judgment

As we have seen above, the interpretation of the scope of trademark protection, either in the registration or post-registration procedure, is essential. Nevertheless, one of the reasons that brought inconsistency with respect to the interpretation of the scope of protection for trademarks was the structure of the Nice Classification itself. As we know, the Nice Classification consists of a class heading, explanatory notes and an alphabetical list of goods and / or services. In practice, applicants use wordings from all three elements, and also descriptions that are not enclosed in the classification, when it comes to designated the desired specifications in their trademark applications.

As such, one of the most debated elements of interpretation regarding the Nice Classification, which benefited from different solutions at the level of the Member States of the European Union, and which was to be decided by European jurisprudence, was to determine the scope of protection for the trademarks designating the class headings contained in the Nice Classification.

At a practical level, this type of designation could allow three interpretations: either that the applicant wanted to obtain protection exclusively for those goods or services described in the class heading, strictly related to their meaning, or that his intention was to designate all goods or services designated in the alphabetical list of that class or, in general terms, the fact that the applicant has considered all the goods or services that could be included in that class. However, given the importance of understanding the designated products and services and the continuing dynamism of that classification, the above interpretations undoubtedly showed significant differences.

It is also worth mentioning that the structure of the class headings does not follow the same patterns. Some class headings, such as those of classes 15 or 25, consist of general indications that are able to cover all the goods or services they cover. Other classes, and from this standpoint class 9 is the best example, include both general and very specific indications. Consequently, especially for these types of classes, the interpretation approach is of high importance.

Moreover, in our opinion, the more generous the interpretation of the scope of protection for the trademarks designating these class headings is, the more we believe that it is moving further and further away from the reality of the market, namely the goods and services for which the trademark is actually being used.

In this context, the IP Translator judgment was issued, where the European jurisprudence established the following guidelines in interpreting the extent of the protection offered by class headings:

"*Directive 2008/95/EC of the European Parliament and of the Council of 22 October 2008 to approximate the laws of the Member States relating to trade marks must be interpreted as meaning that it requires the goods and services for which the protection of the trade mark is sought to be identified by the applicant with sufficient clarity and precision to enable the competent authorities and economic operators, on that basis alone, to determine the extent of the protection conferred by the trade mark.*

Directive 2008/95 must be interpreted as meaning that it does not preclude the use of the general indications of the class headings of the Classification referred to in Article 1 of the Nice Agreement Concerning the International Classification of Goods and Services for the Purposes of the Registration of Marks, concluded at the Nice Diplomatic Conference on 15 June 1957, last revised in Geneva on 13 May 1977 and amended on 28 September 1979, to identify the goods and services for which the protection of the trade mark is sought, provided that such identification is sufficiently clear and precise.

An applicant for a national trade mark who uses all the general indications of a particular class heading

[16] Para. 43 of the Judgment of the Court of July 16, 2020 in the matter C-714/18 P, in the proceedings ACTC GmbH vs. the European Union Intellectual Property Office (EUIPO) and Taiga AB.

of the Classification referred to in Article 1 of the Nice Agreement to identify the goods or services for which the protection of the trade mark is sought must specify whether its application for registration is intended to cover all the goods or services included in the alphabetical list of that class or only some of those goods or services. If the application concerns only some of those goods or services, the applicant is required to specify which of the goods or services in that class are intended to be covered. "[17]

As such, the IP Translator judgment raised two key issues. First, it emphasized the need for the designated goods and services to be clear and precise enough to establish the extent of protection, without ambiguity and without the need for further research. However, we are of the opinion that this requirement brings the attributive system closer to the declarative one, in the sense that, if in the case of the latter the scope of protection is established without a doubt, by simply observing the goods or services for which the trademark is being used, in the attributive system the applicant, who has the prerogative to choose the designated goods and services without being able to be censored, has nevertheless the obligation to make this specification in a manner that does not give rise to ambiguity regarding the scope of protection.

However, the main novelty brought by this judgment concerns the interpretation of the class headings of the Nice Classification. The practice of class headings covering a wide range of goods or services remains in place, but two amendments are made: first, the interpretation of the scope of protection for these class headings in general, for the "entire class" is excluded, and its maximum extent can be represented by the "*alphabetical list of the Nice Classification*". A list that, although very generous, does not include a multitude of goods or services that would naturally be classifiable in certain classes. Secondly, for such an extensive interpretation, the applicant needs to make an express statement to the effect that this was his intention at the time the trade mark application was filed.

It should be noted, however, that the solution adopted by the Court seems to be, rather, a compromise solution. In that regard, we note that, in his view, Advocate General Yves Bot recommended that the Court should conclude in the sense that „*Communication No 4/03 of the President of the Office for Harmonization in the Internal Market (Trade marks and designs) (OHIM) of 16 June 2003 concerning the use of class headings in lists of goods and services for Community trade mark applications and registrations, by which the President indicates that OHIM does not object to the use of any of the general indications and class headings as being too vague or indefinite and that the use of those indications constitutes a claim to all the goods or services falling within the class concerned, does not guarantee the clarity and precision required for the purposes of the registration of a trade mark, whether a national or a Community trade mark*".[18] However, the court did not follow this recommendation, but neither did it encourage the practice of designating, through class headings, a wider range of goods or services. It chose what appears to be a middle ground.

Thus, the European practice tends to restrict the scope of protection afforded by the use of class headings, encouraging applicants to adopt brief, clear and precise classifications that describe only those goods or services for which they intend to actually use the trademark.

6. Common communications following the IP Translator judgment and the approach of the New Directive

But what were the practical consequences of this decision?

A first step was the review by some EU Member States of how they interpret the designation of class headings by applicants. The Romanian Office - OSIM - is one of the offices that, taking note of this decision, modified its own practice. According to the Common Communication on the Implementation of 'IP Translator' v1.2 of 20 February 2014, for trademarks filed after the IP Translator ruling containing full class headings of the Nice Classification, OSIM will interpret the scope of protection of these classes as follows: "*Class headings cover the literal meaning of the class headings plus the alphabetical list of the edition of Nice at the time of filing*"[19], practice showing that the choice of one of the two options is made by the applicants at the time of filing the trademark application.

The next step was to establish the interpretation offered by IP Translator judgment the at legislative level. Thus, unlike its predecessor, the New Directive devotes a special article to the interpretation of the

[17] Operative part of the Judgment of the Court of June 19, 2012 in the matter C-307/10, in the proceedings concerning Chartered Institute of Patent Attorneys vs. Registrar of Trade Marks.

[18] Opinion of Advocate General Bot delivered on November 29, 2011, in the matter C-307/10, in the proceedings Chartered Institute of Patent Attorneys vs. Registrar of Trade Marks.

[19] *Common Communication on the Implementation of 'IP Translator' v1.2 of 20 February 2014*, p. 5, available on the Romanian PTO's website at the following link: https://osim.ro/wp-content/uploads/2017/12/RO-Common-Communication-1-updated-v1-2.pdf, accessed on April 18, 2020, at 20:50.

classification of goods and services covered by a trademark[20]. Thus, the directive focuses on the principles set by the *IP Translator* judgment as described above, and which were analyzed in the subsequent common communications of February 2014. The directive sates that „*The use of general terms, including the general indications of the class headings of the Nice Classification, shall be interpreted as including all the goods or services clearly covered by the literal meaning of the indication or term. The use of such terms or indications shall not be interpreted as comprising a claim to goods or services which cannot be so understood*". At the same time, the Regulation (EU) 2017/1001 of the European Parliament and of the Council of 14 June 2017 on the European Union trade mark established the following: "*Proprietors of EU trade marks applied for before 22 June 2012 which are registered in respect of the entire heading of a Nice class may declare that their intention on the date of filing had been to seek protection in respect of goods or services beyond those covered by the literal meaning of the heading of that class, provided that the goods or services so designated are included in the alphabetical list for that class in the edition of the Nice Classification in force at the date of filing.*"[21] This practice was adopted by numerous national legislations at the time of the implementation of the New Directive, including by the Romanian legislator.[22]

It should be mentioned that such a practice is indeed desirable, in order to align the interpretation with respect to the scope of protection for trademarks filed before the IP Translator decision and before implementing the New Directive, with that of more recent trademarks. However, in our opinion, the time-window offered by the Romanian law (of approximately 2 months and a half) to trademark owners to file such declarations was unreasonably constraining. For trademark owners with significant portfolios, the need to file the declaration was more of a race for trying to meet the deadline, instead of an effort to make an informed and calculated decision. Time-wise, we believe the Finnish legislation found the right solution to this problem, where "*the owners of trademark registrations must specify their list of goods and services by the renewal of the respective trademark registrations at the latest to ensure that they follow the new classification provisions. However, if the last date for the renewal of a trademark is within six months of the law's entry into force, such specification may be submitted within six months from the entry into force of the new act*".[23]

7. The SkyKick Judgment

Also in the sense of encouraging trademark owners to limit their list of designated goods and services to restricted categories, which they actually use in the market, we mention the judgment in the SkyKick case.

This case aroused great interest when Advocate General Evgeni Tanchev launched his opinion, as follows: "(…) *if registration can be obtained too easily and/or too widely, then the result will be mounting barriers to entry for third parties as the supply of suitable trade marks is diminished, increasing costs which may be passed on to consumers, and an erosion of the public domain; (...)If terms which are not applicable, but which anyway appear in the register, are vague and uncertain, then this will also lead to a dissuasive effect on competitors considering entering the market, in so far as a company such as Sky will appear larger on the market than it is in reality; (...) In certain circumstances, applying for registration of a trade mark without any intention to use it in connection with the specified goods or services may constitute an element of bad faith, in particular where the sole objective of the applicant is to prevent a third party from entering the market, including where there is evidence of an abusive filing strategy, which it is for the referring court to ascertain.*"[24].

This opinion has caused a great deal of controversy, creating the expectation of a radical court decision. Finally, the Court ruled as follows: "*1. Articles 7 and 51 of Council Regulation (EC) No 40/94 of 20 December 1993 on the Community trade mark, as amended by Council Regulation (EC) No 1891/2006 of 18 December 2006, and Article 3 of First Council*

[24] Opinion of Advocate General

Tanchev of October 16, 2019, in the matter C-371/18 Sky plc., Sky International AG, Sky UK Limited vs. SkyKick UK Limited, SkyKick Inc., para. 62, 72, 143, consulted on the Curia website at the link:

http://curia.europa.eu/juris/document/document.jsf?text=&docid=219223&pageIndex=0&doclang=RO&mode=req&dir=&occ=first&part=1&cid=7381341 on December 14, 2019, at 15:23.

Directive 89/104/EEC of 21 December 1988 to approximate the laws of the Member States relating to trade marks must be interpreted as meaning that a Community trade mark or a national trade mark cannot be declared wholly or partially invalid on the ground that terms used to designate the goods and services in respect of which that trade mark was registered lack clarity and precision.

2. Article 51(1)(b) of Regulation No 40/94, as amended by Regulation No 1891/2006, and Article 3(2)(d) of First Directive 89/104 must be interpreted as meaning that a trade mark application made without any intention to use the trade mark in relation to the goods and services covered by the registration constitutes bad faith, within the meaning of those provisions, if the applicant for registration of that mark had the intention either of undermining, in a manner inconsistent with honest practices, the interests of third parties, or of obtaining, without even targeting a specific third party, an exclusive right for purposes other than those falling within the functions of a trade mark. When the absence of the intention to use the trade mark in accordance with the essential functions of a trade mark concerns only certain goods or services referred to in the application for registration, that application constitutes bad faith only in so far as it relates to those goods or services.

3. First Directive 89/104 must be interpreted as not precluding a provision of national law under which an applicant for registration of a trade mark must state that the trade mark is being used in relation to the goods and services in relation to which it is sought to register the trade mark, or that he or she has a bona fide intention that it should be so used, in so far as the infringement of such an obligation does not constitute, in itself, a ground for invalidity of a trade mark already registered."[25].

In reaching that conclusion, in paragraph 66 of the recitals, the Court held that "*In that regard, it suffices to note that the concept of 'public policy', (...), cannot be construed as relating to characteristics concerning the trade mark application itself, such as the clarity and precision of the terms used to designate the goods or services covered by that registration, regardless of the characteristics of the sign for which the registration as a trade mark is sought.*"[26].

Regarding the aspect of bad faith, the literature notes that in this context it can be retained if objective evidence can be provided regarding the applicant's intention to undermine the activity of third parties. However, as one of the practitioners called to comment on this decision very well points out, it remains to be seen how these conditions will be analysed, related to the subjective attitude of the applicant.[27]

As far as we are concerned, we agree that the mere fact of registering a trademark for goods or services for which it is not used does not automatically lead to the conclusion that there is conduct in bad faith. No one can assume that the applicant did not intend to use the trademark for all designated goods or services, as long as the law generally gives him a five-year grace period to use the trademark for those goods or services. We therefore agree that bad faith must be proved, which, according to the case law of the court, "*presupposes the presence of a dishonest state of mind or intention*".[28].

The above-mentioned judgment made the literature write "*SkyKick: the Disappointment of the Decade*", considering that following this decision the trademark owners will continue to agglomerate the trademark register with trademarks designating goods or services they do not actually use, and the specifications will not become shorter. However, the quoted author argues that, at some point, this practice will be discontinued, and other approaches or lobbies will have to be found to change the applicants' practice.[29]. In another article, from the same publication, the article describes this judgment as "*a disappointing end to an exciting series of events*".[30] However, without commenting on the issue brought before the court, namely whether the software goods are indeed sufficiently clear and precise, we agree that too broad an interpretation of the grounds for annulment of a trade mark may trigger a subsequent non-uniform practice. Also, even if it did not have the result expected by some practitioners, this judgment is intended to call into question the need for applicants to choose more carefully the goods and services designated under their trademark applications. The

reactions to this decision, as exemplified above, show just that. Furthermore, we consider that this judgment is intended to increase the examiners' attention in the preliminary examination procedure of the trademark applications, and thus the echoes aroused by this decision are not without consequences.

In this, we mention the conclusion of Léon Dijkman, which we consider brief and correct. He notes that "*from a systematic point of view, the CJEU's decision in Sky is convincing*" in the sense that legal certainty would be rather infringed if the cancellation of a trademark were accepted for a legally unforeseen express reason, or if other reasons would be "forced" to cover the situation of unclear and imprecise specifications. The problem of these specifications, however, remains unresolved. Therefore, the quoted author concludes, probably the solution at this time is to make the trademark offices stricter at the time of registration, in order not to allow the registration of trademarks for such terms.[31].

8. Conclusions

The choice of the goods and services designated by a trademark application is of particular importance, both for the registration procedure and for subsequent procedures in which the trademark may be involved during its validity.

The Nice Classification has been a fundamental instrument in tayloring the practice around concerning the designation of goods and services at international level. However, in time, the use of the Nice Classification lead to intepretations of the scope of trademarks' protection that were inconsistent with the realities on the market.

In this context, the tendency of European case law is to direct applicants to choose designations that are as clear, precise and as specific as possible, in order to avoid trademark protection for those goods and services for which it is not actually used.

Thus, even if the SkyKick judgment was not, perhaps, as courageous as some practitioners wanted, it came in addition to the IP Translator judgment, which has already outlined a series of principles in this regard. The SkyKick judgment certainly drew attention to the need for trademarks to designate goods or services that are clear, precise, specific, and that express as accurately as possible the intention to use of the applicant or of their proprietor.

COPYRIGHT AND RELATED RIGHTS INJUNCTIONS

Ana-Maria MARINESCU *

Abstract

The national general copyright legislative framework, in particular, the national laws transposing the EU acquis related to online copyright infringement and enforcement procedures (IPRED, InfoSoc Directive, Conditional Access Directive, E-Commerce Directive, Rental Rights Directive, etc.), is providing, in case of copyright and related rights infringements, the possibility for the Courts to take measures against the infringers, especially injunctions. We can distinguish between interlocutory injunctions like provisional and precautionary measures and injunctions following a decision on case merits like blocking and take-down injunctions, including forward-looking, live and dynamic injunctions which are being increasingly applied to certain types of online rights infringements. The article will underline the national legal framework in the field and Romanian, European and international case-law.

Keywords: *online copyright infringements, enforcement procedures, injunctions, interlocutory injunctions, injunctions following a decision on case merits, European Directives in the field, case-law.*

1. Introduction

The Romanian legal framework on copyright and related rights enforcement is set up by the Law no. 8/1996 on copyright and related rights. The law was subsequently amended, revised and modified, including for transposing into the national legislation the EU Directives in the field (for example, the Directive 2001/29/CE on the harmonization of certain issues of copyright and related rights in the information society[1] was transposed starting from 2004 by Law no. 285 for modifying and supplementing Law no. 8/1996 and the Directive 2004/48/CE on the enforcement of intellectual property rights was transposed starting from 2005 by the Government Ordinance no. 123 for modifying and supplementing Law no. 8/1996). The Law no. 8/1996 was republished in 2018 and its last amendment took place in 2020 by Law no. 8. In this article I will refer to Law no. 8/1996 on copyright and related rights, republished, with modifications and completions as Law no. 8/1996 on copyright and related rights or Law no. 8/1996.

The special enforcement dispositions regulated in Law no. 8/1996 on copyright and related rights, especially the procedural provisions, are completed with the general ones (common law) provided by the Civil and Procedure Code and Criminal and Procedure Code.

The Law no. 8/1996 on copyright and related rights dedicates a whole section to the enforcement of copyright: Section II 'Procedures and sanctions' in Chapter III 'Measures of protection, proceedings and sanctions' of Title III 'Management and Protection of Copyright and Related Rights'. 14 articles are regulating the enforcement of copyright and related rights: article 187 to article 200.

Mainly, the regulatory texts are the following and they will be detailed further: provisional and precautionary measures (art. 188 par. 3-6); measures for preserving evidence (art. 188 par. 7-9); claims and measures (art. 188 par. 10-15); contraventions (art. 190 letters f) and g), art. 191-192); and criminal offences (art. 193 - art. 200).

According to the Law no. 8/1996 on copyright and related rights the copyright infringements can involve: civil, contravention or criminal liability, as the case may be. By consequence, the protection of copyright and related rights is made by administrative, civil and criminal law measures.

The rightholders may request to the Courts or other competent bodies, as the case may be, the acknowledgment of their rights and the establishment of the infringing thereof, and may claim damages for the redressing of the prejudice caused. The same requests can be lodged on behalf and for the rightholders by the collective management organizations, by the associations fighting against piracy or by the persons authorized to use the rights protected by the Law no. 8/1996 on copyright and related rights, according to the mandate given for this purpose. When the rightholder has started an action, the persons authorized to use the rights protected by the Law no. 8/1996 on copyright and related rights can intervene in the lawsuit, claiming the remedy of the prejudice caused to them.

* PhD Candidate, "Nicolae Titulescu" University, Bucharest, Romania; Director General Romanian Authors and Publishers Society for Scientifically Works – PERGAM (e-mail: amm_marinescu@yahoo.com).

[1] Directive 2001/29/EC of the European Parliament and of the Council of 22 May 2001 on the harmonisation of certain aspects of copyright and related rights in the information society, https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=celex%3A32001L0029.

2. Content

As regards the provisional and precautionary measures, if the rightholder or the collective management organizations, the associations fighting against piracy or the persons authorized to use the protected rights, according to the mandate given for this purpose, credibly proves that the copyright is subject-matter of an illicit action, present or imminent and that this action risks to create a prejudice difficult to repair, it may request the Court to take provisional measures. The Court may decide in special:

a) forbidding the infringement or its provisional cease;

b) ordering the measures to be taken for conserving the probes;

c) ordering the measures to be taken for ensuring the remedy of the damage; for this purpose, the Court can order the ensuring measures to be taken on the movable and immovable assets of the person presumed to have infringed the protected rights, including the blocking of his/her bank accounts and other assets. For this purpose, the competent authorities can order the communication of the banking, financial or commercial documents or adequate access to the pertinent information;

d) ordering the taking or handing over to the competent authorities of the goods in connection with which suspicions exist on the violation of a protected right in order to prevent their introduction in the commercial circuit.

In this case, the applicable procedural disposals are provided for in the Civil Procedure Code related to IPR provisional measures.

The same measures can be requested, under the same conditions, against an intermediary whose services are used by a third party for the infringement of a protected right.

The above-mentioned measures can include the detailed description with or without the sampling of the specimen, or the real seizure of the goods under dispute and, as the case may be, of the materials and instruments used to produce and/or distribute such goods, as well as the documents thereof. Such measures shall be taken into account in the enforcement of Criminal Procedure Code provisions (art. 169-171).

In respect the measures for preserving evidence, article 6 [2] of the IPRED Directive[3], namely 'Evidence' was transposed in Law no. 8/1996 on copyright and related rights in art. 188 par. 7 as it follows: 'The Court may authorize the taking of objects and documents that constitute evidences of the infringing of copyright or related rights, in original or in copy, even when they are in the possession of the opposite party. In case of infringements committed on commercial scale, the competent authorities can also order the communication of banking, financial or commercial documents or adequate access to the pertinent information'.

For the adoption of the above-mentioned measures, subject to the insurance of confidential information protection, the Courts shall request for the plaintiff to provide any element of evidence, reasonably accessible, in order to prove, with sufficient certainty, that his right was infringed, or that such an infringement is imminent. It is considered as a reasonable evidence the number of copies of a work or of any other protected object, at the Court appreciation. In this case, the Courts can request for the plaintiff to deposit a sufficient bail to ensure the compensation of any prejudice that might be suffered by the defendant (art. 188 par. 8).

The insurance measures for evidences or to ascertain a fact-finding disposed by the Court are applied through a bailiff. The rightholders of the rights supposed to be infringed or to which there is the danger to be infringed, as well as their representatives, have the right to take part at the application of the measures for evidence conservation or for ascertain a fact-finding.

Article 13 [4] of the IPRED Directive, namely 'Damages' was transposed in Law no. 8/1996 on copyright and related rights as it follows:

---

[2] *Article 6* Evidence

1. Member States shall ensure that, on application by a party which has presented reasonably available evidence sufficient to support its claims, and has, in substantiating those claims, specified evidence which lies in the control of the opposing party, the competent judicial authorities may order that such evidence be presented by the opposing party, subject to the protection of confidential information. For the purposes of this paragraph, Member States may provide that a reasonable sample of a substantial number of copies of a work or any other protected object be considered by the competent judicial authorities to constitute reasonable evidence.

2. Under the same conditions, in the case of an infringement committed on a commercial scale Member States shall take such measures as are necessary to enable the competent judicial authorities to order, where appropriate, on application by a party, the communication of banking, financial or commercial documents under the control of the opposing party, subject to the protection of confidential information.

[3] Directive 2004/48/EC of the European Parliament and of the Council of 29 April 2004 on the enforcement of intellectual property rights, https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=CELEX:32004L0048R(01)&from=EN.

[4] *Article 13* Damages

1. Member States shall ensure that the competent judicial authorities, on application of the injured party, order the infringer who knowingly, or with reasonable grounds to know, engaged in an infringing activity, to pay the rightholder damages appropriate to the actual prejudice suffered by him/her as a result of the infringement.

When the judicial authorities set the damages:

'In establishing the damages, the Court takes into account (art. 188 par. 2):

a) either criteria such as the negative economic consequences, particularly the non-earned benefit, the benefits earned unlawfully by the offender and, as the case may be, other elements besides the economic factors, such as the moral damages caused to the rightholder;

b) either granting of damages representing the triple of the amounts that would have been lawfully owed for the type of utilization that made the object of the illicit deed, in the case when the criteria provided under letter a) cannot be applied'.

The Court may authorize measures for preserving evidence, provisional and precautionary measures and establish the damages taking into account, on one hand, the economic factors: the rightsholder's non-earned benefit and the benefits earned unlawfully by the offender and, on the other hand, the moral damages caused to the rightholder.

Under the Romanian legislation, the conditions for civil offence liability are: the existence of an illicit deed, the existence of a prejudice, the existence of connection between the illicit deed and the prejudice and the existence of guilt.

For claims and measures, the owners of the infringed rights may claim to the Court for ordering the enforcement of any of the following measures:

a) remittance, in order to cover the prejudices suffered, of the income resulted from the unlawful deed;

b) destruction of the equipment's and means belonging to the offender that were solely or mainly intended for the perpetration of the unlawful deed;

c) removal from commercial circuit by seizure and destruction, of the illegally made copies;

d) dissemination of information referring to the Court's decision, including the posting of the decision as well as the integral or partial publication of it in the mass media at the expense of the offender; under the same conditions the Courts may order additional publicity measures adapted to the particular circumstances of the case, including an extensive publicity.

The Court orders the enforcement of the above measures at the expense of the offender, except the case when well-grounded reasons exist for, and the offender will not bear the expenses. The measures provided for under letters b) and c) may be ordered also by the prosecutor with the occasion of classifying or renouncing to prosecuting.

In ordering the above-mentioned measures the Court shall respect the principle of proportionality with the seriousness of the protected rights infringement and it shall take into account the interests of third parties susceptible for being affected by such measures.

Legal authorities shall communicate to the parties the solutions adopted in the cases of copyright and related rights infringement.

Government of Romania, through the Romanian Copyright Office supports the preparing, by the professional associations and organizations, of the ethics codes at the Community standard, intended to contribute to the ensuring of the copyright and related rights observance, particularly with respect to the utilization of the codes that allow the identification of the manufacturer, affixed on optical disks. Also, the Government of Romania supports the delivery to the European Commission of the ethics codes drafts at the national or Community level and of the appraisals referring to the enforcement thereof.

The following infringements are considered contraventions/offences:

- fixation, without the authorization or consent of the rightholder of the performances or of the radio or television broadcasts (art. 190 letter f);

- communication to public, without the consent of the rightholder of works or related rights products (art. 190 letter g);

- the deed of the legal or authorized natural persons for permitting the access in the spaces, to the equipment, means of transport, goods or own services, with a view to committing, by another person of a contravention provided for by the Law no. 8/1996 on copyright and related rights (art. 191 par. 1).

The above-mentioned contraventions are established and applied by the persons empowered by the Romanian Copyright Office Director General or by the police officers or agents within local police or the Ministry of Interior Affaires with competences in the field.

The sanctions for the above-mentioned contraventions are applying also to the legal persons. If the contravener, legal person, is carrying out activities that involve, according to its object of activity, communication to the public of works or related rights products, the limits of the contravention fines are twice increased.

---

a) they shall take into account all appropriate aspects, such as the negative economic consequences, including lost profits, which the injured party has suffered, any unfair profits made by the infringer and, in appropriate cases, elements other than economic factors, such as the moral prejudice caused to the rightholder by the infringement;

or

b) as an alternative to (a), they may, in appropriate cases, set the damages as a lump sum on the basis of elements such as at least the amount of royalties or fees which would have been due if the infringer had requested authorisation to use the intellectual property right in question

2. Where the infringer did not knowingly, or with reasonable grounds know, engage in infringing activity

The contravener may pay, within 48 hours from the date of the reception of the document establishing the contravention, half from the minimum fine provided.

The provisions of Government Ordinance no. 2/2001 regarding the legal regime of contraventions, approved with modifications and completions by Law no. 180/2002, with subsequent amendments and completions are applying to the contraventions provided in Law no. 8/1996.

According to the Law no. 8/1996 on copyright and related rights the following infringements are considered criminal offences:

- making of pirate goods, for the purpose of the distribution (art. 193 par. 1 letter a); placing of the pirate goods under a final import or export customs regime, under a suspensive customs regime or in free zones (art. 193 par. 1 letter b); any other modality of introducing the pirate goods on the domestic market (art. 193 par. 1 letter c); offering, distribution, possession, or storage and transportation of pirate goods, for the purpose of distribution (art. 193 par. 2); the promotion of the pirate goods through any means and in any modality, including the utilization of public announcements or electronic means of communication, or through the exhibiting or presentation to the public of the lists or catalogues of products or through any similar means (art. 193 par. 5);

In these cases, shall not be punished the person who, before starting the criminal proceedings, denounces to the competent authorities its participation in an association or agreement with a view to committing one of the above-mentioned criminal offences, thus allowing for the identification and criminal accountability of the other participants.

Also, the person that has committed one of the above-mentioned criminal offenses and who, during the criminal proceedings, denounces and facilitates for the identification and criminal accountability of other persons who have committed offences connected to pirated goods or to pirated access control devices, benefit from the reduction by half of the punishment limits.

- making available to the public, including through the Internet or other computer networks, without the right, of works or related rights products or products involving *sui generis* rights of the databases makers or copies thereof, regardless of their support, so that the public may access them from any place and at any time individually chosen by them (art. 194);

- unauthorized reproduction on computer systems of computer programs in any of the following modalities: installation, storing, running or execution, display or transmission in the domestic network (art. 195);

- the following deeds committed without the authorization or consent of the rightholders: reproduction of works or related rights products (art. 196 par. 1 letter a); distribution, rental or import, on domestic market, of works or related rights products, other than the pirate goods (art. 196 par. 1 letter b); broadcasting of works or related rights products (art. 196 par. 1 letter c); cable retransmission of the works or related rights products (art. 196 par. 1 letter d); making of derivative works (art. 196 par. 1 letter e); fixation for commercial purpose of performances or radio or television broadcasts (art. 196 par. 1 letter f);

- the deed of a person to assume, without right, totally or in part, the work of another author and to present it as his own intellectual creation (art. 197 par. 1);

- production, import, distribution, possession, installing, maintaining or replacing in any way, access control devices, either original or pirate ones, used for conditional access programs services (art. 198 par. 1); the deed of a person who unlawfully connects to or unlawfully connects another person to conditioned access programs (art. 198 par. 2); using public announcements or of electronic communication means for the purpose of promoting the pirate access control devices to the conditioned access programs services, as well as the exhibiting or presentation to the public in any mode, unlawfully, of the information needed for making devices of any sort, capable to ensure the unauthorized access to the said conditioned access programs services, or intended for the unauthorized access in any mode to such services (art. 198 par. 3); sale or rental of the pirate access control devices (art. 198 par. 4);

- the deed of a person that, unlawfully, produces, imports, distributes or rents, offers, in any way, for sale or rent, or possesses for selling purposes, devices or components that allow the neutralization of the technological protection measures or performs services which lead to the neutralization of the technological protection measures, including in the digital environment (art. 199 par. 1);

- the deed of a person who, without right, removes, for commercial purposes, from the works or other protected products or modifies on them, any information under electronic form, on the applicable copyright or related rights regime (art. 199 par. 2).

In case the persons that have committed the above-mentioned criminal offences repaired, until the end of the first Court inquiry, the prejudice done to the rightholder, the special limits of the punishments are half reduced.

As regards the online infringements, some considerations regarding the criminal offence regulated in art. 194 of Law no. 8/1996 on copyright and related rights need to be made on making available to the

public right, including through the Internet or other computer networks, without the right, of works or related rights products or products involving *sui generis* rights of the databases makers or copies thereof, regardless of their support, so that the public may access them from any place and at any time individually chosen by them

The making available right is a part of communication to the public right regulated in art. 20 of the law as any communication of a work, directly or by any technical means, made in a place opened for public or in any other place where a number of persons exceeding the normal circle of a family members and of its acquaintances assemble, including stage performance, recitation or any other public form of performance or direct presentation of the work, public display of plastic art works, of applied art, of photographic art and of architecture, public projection of cinematographic and of other audiovisual works, including of digital art works, presentation in a public place, by means of sound or audiovisual recordings, as well as presentation in a public place, by any means, of a broadcast work. Any communication of a work by wire or wireless means, including by making the works available to the public, via Internet or other computer networks, so that any member of the public to have access to it, from anywhere or at any moment individually chosen, shall also be considered as communication to the public.

The right to authorize or prohibit communication to the public or making available to the public of the works is not subject to exhaustion by any act of communication to the public or of making available to the public.

The making available right is regulated as an exclusive right – to authorise or to prohibit – of the copyright and related rights holders: art. 13 lit. f) for authors; art. 96 par. 1 letter i) for performers; art. 106 par. 1 letter g) for phonograms producers; art. 110 par. 1 letter g) for audiovisual recordings producers; and art. 129 letter i) for broadcasters.

The deed of making available to the public is made without right which includes the cases done without the authorisation of the rightholder and also the ones made by third parties.

The material element of the criminal offence is making available to the public, including through the Internet or other computer networks, without the right, of works or related rights products. Even that the provisions are stipulating the nouns' plural, the offence' material object is emphasizing also only one work or related rights product or (a) fragment(s) or (a) part(s) of a work or a related right product[5].

The criminal offences are not differentiated depending on acting for profit. The infringement is considered as a criminal offence no matter if the deed is made with or without the purpose of obtaining profit. The deeds regulated as infringements are in fact, in the majority of the cases, made with the scope of obtaining profit. Still, acting for profit can be considered by the Courts in establishing the punishment.

The subjective part of the criminal offences is the intent. When the criminal offence is made with the purpose of obtaining profit, the intent is qualified by its scope.

In this case, the Law no. 8/1996 on copyright and related rights is defining the notion of 'commercial purpose' as aiming to obtain, directly or indirectly, of an economic or material benefit (art. 193 par. 7). The only criminal offence for which the law is express stipulating the 'commercial purpose' is the one provided in art. 199 par. 2 (the deed of a person who, without right, removes, for commercial purposes, from the works or other protected products or modifies on them, any information under electronic form, on the applicable copyright or related rights regime).

All the criminal offences regulated in the Law no. 8/1996 on copyright and related rights are sanctioned with imprisonment or fines. So, the law is providing an alternative way for sanctioning the criminal offences. The fines' quantum is not regulated in the Law no. 8/1996 on copyright and related rights and there are two major categories of imprisonment: 6 months to 3 years and 3 months to 2 years. For only two infringements the level of imprisonment is higher: 2 to 7 years if the deeds provided in art. 193 par. 1 and par. 2 are made for commercial purpose and 1 year to 5 years for the sale or rental of the pirate devices for access control (art. 198 par. 4), and for only one infringement a lower level, respectively 1 month to 1 year for using public announcements or of electronic communication means for the purpose of promoting the pirate access control devices of the conditioned access programs services, as well as the exhibiting or presentation to the public in any mode, unlawfully, of the information needed for making devices of any sort, capable to ensure the

[5] C. Lazăr, *Infracțiuni contra drepturilor de proprietate intelectuală*, (*Intellectual Property Rights Criminal Offences*, Lumina Lex Publishing House, Bucharest, 2002, page 48); B. Florea, *Unele considerații privind modificările aduse asupra infracțiunii prevăzute de art. 139 ind. 8 din Legea nr. 8/1996 prin legea nr. 187/2012 pentru punerea în aplicare a Legii nr. 286/2009 privind Codul Penal*, în Revista Română de Dreptul Proprietății Intelectuale nr. 1/2015, p. 48 (*Some considerations regarding the changes brought on the criminal offence provided by art. 139 ind. 8 of Law no. 8/1996 by law no. 187/2012 for the implementation of Law no. 286/2009 regarding the Criminal Code*, in Romanian Journal of Intellectual Property Law no. 1/2015, page 48).

unauthorized access to the said conditioned access programs services, or intended for the unauthorized access in any mode to such services (art. 198 par. 3).

As mentioned before, in case the persons that have committed the criminal offences regulated in the Law no. 8/1996 on copyright and related rights repair, until the end of the first Court inquiry, the prejudice done to the rightholder, the special limits of the punishments are half reduced.

The criminal proceedings are applying for all the criminal offences regulated in the Law no. 8/1996 on copyright and related rights.

All the criminal offences are committed with direct or indirect intent. Committing the offences from indirect intent/negligence is not regulated in our national law. Also, the active subject of these criminal offences isn't circumstantiated, thus they can be committed by any natural or legal person without the need to prove any special quality. All the criminal offences infringe intellectual property rights, with their specificity, generally being exclusively patrimonial economic rights. The passive subject of the criminal offences is the rightholder, being essential to proof the existence and validity of the alleged infringement. Most criminal offences have alternative forms (sanctioned as a contravention, if is not a criminal crime and sanctioned with imprisonment or fine) and aggravated forms in relation to their purpose (commercial purpose).

The competence to judge cases having as object offenses under the IPR regime belongs to the courts, according to the provisions of the Criminal Procedure Code, and the police is carrying out the criminal investigation for any crime that is not given, by law, in the competence of the special criminal investigation bodies or to the prosecutor according also to the provisions of the Criminal Procedure Code. The notice methods are also provided by the Criminal Procedure Code: complaint, denunciation, ex officio notification and acts concluded by other finding bodies provided by law.

Carrying out the criminal investigation involves the administration of evidence that serves to establish the existence or non-existence of the criminal offence, to identify the person who committed it and to know the circumstances necessary for the just solution of the case and which contributes to finding out the truth in the criminal proceedings.

The criminal activity that takes place through a site can be prove by any means of proof provided in the Criminal Procedure Code, for example, screenshots, minutes, documents etc., whether they are filed with the complaint by the injured party or whether they are administered by the judicial officer. Given that the offenses which are provided by law as infringements of intellectual property rights are committed without the consent of the right holder, in all cases the judicial officer should check the rightholder lack of consent. Also, the judicial officer should take measures for conserving the site content and data information traffic. These measures are applying in relation with the internet service provider.

The prejudice is not an element of IPR criminal offences, thus the existence and dimension of the prejudice it is a proof that has to be pointed by the civil part, that is claiming the civil action within the criminal one.

There were identified more steps for investigating an IPR crime like[6]: identifying the rightholder/s, checking the existence and functioning of the site, site domain location (national or foreign), identifying the site administrator or the person that registered the domain (natural or legal persons), identifying profiles on the social networks, identifying methods for paying on the site (if there are), IP location, etc.

In order to transpose Article 5 [7] of the Directive 98/84/EC of the European Parliament and of the Council of 20 November 1998 on the legal protection of services based on, or consisting of, conditional access (Conditional Access Directive)[8], Law no. 8/1996 on copyright and related rights regulates the following infringements as criminal offences:

- production, import, distribution, possession, installing, maintaining or replacing in any way, the devices for the control of the access, either original or pirate ones, used for the conditioned access programs services (art. 198 par. 1) – the sanctions are imprisonment from 6 months to 3 years or fine;

- the deed of a person who unlawfully connects to or unlawfully connects another person to conditioned access programs (art. 198 par. 2) - the sanctions are imprisonment from 3 months to 2 years or fine;

- using public announcements or of electronic communication means for the purpose of promoting the pirate access control devices of conditioned access programs services, as well as the exhibiting or

[6] http://www.inm-lex.ro/fisiere/d_1443/Ghid%20de%20investigare%20a%20infractiunilor%20de%20proprietate%20intelectuala%20savarsite%20in%20mediul%20digital.pdf - site accessed on 20 March 2021.

[7] *Article 5* Sanctions and remedies:

1. The sanctions shall be effective, dissuasive and proportionate to the potential impact of the infringing activity.

2. Member States shall take the necessary measures to ensure that providers of protected services whose interests are affected by an infringing activity as specified in Article 4, carried out on their territory, have access to appropriate remedies, including bringing an action for damages and obtaining an injunction or other preventive measure, and where appropriate, applying for disposal outside commercial channels of illicit devices.

[8] https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=CELEX%3A31998L0084

presentation to the public in any mode, unlawfully, of the information needed for making any sort of devices, capable to ensure the unauthorized access to the said conditioned access programs services, or intended for the unauthorized access in any mode to such services (art. 198 par. 3) - the sanctions are imprisonment from 1 month to 1 year or fine; and

- sale or rental of the pirate access control devices (art. 198 par. 4) - the sanctions are imprisonment from 1 year to 3 years or fine.

The Law defines the pirate access control devices as any device of whose making has not been authorized by the rightholder in relation to a certain service of conditioned access television programs, made to facilitate the access to that service (art. 198 par. 5).

Within an action referring to the infringement of the rights protected under the Romanian Law on copyright and related rights and as a response to a justified application, the Court is entitled to demand supplementary information about the origin and distribution networks of the goods or services prejudicing a right provided for in the law either from the offender and/or from any other person that, among other, was using for commercial purposes, services through which the protected rights were infringed (art. 187 par. 2 letter b); was submitting, for commercial purposes, goods or services used in activities through which the protected rights were infringed (art. 187 par. 2 letter c); and was indicated, by any of the persons mentioned before, as being involved in the production, execution, manufacturing, distribution or rental of the pirate goods or of the pirate access control devices or in the supplying of the products or services through which the protected rights were infringed (art. 187 par. 2 letter d).

According to art. 187 par. 3, the above-mentioned information includes, as the case may be:

a) name and address of the producers, manufacturers, distributors, suppliers and of the other previous holders of the goods, devices or of the services, transporters included, as well as the consignee wholesalers and of the retail sellers;

b) information regarding the quantities produced, manufactured, delivered or transported, received or ordered, as well as the price obtained for the respective goods, devices and services.

The provisions mentioned before shall apply without prejudicing other legal provisions, which:

a) grant to the owner the right to receive more extensive information;

b)provide for the use, in the civil or criminal cases, of the information communicated according to this disposition;

c) provide for the abuse of liability information right;

d) give the possibility to reject the supplying of information that could constrain the person for which is applying the civil, administrative or criminal liability to admit its own participation or the one of its close relatives in an activity through which the protected rights are infringed;

e) provide for the confidentiality protection of informing sources or for processing of the personal character data.

The Law no. 8/1996 on copyright and related rights transposes Articles 6 and 8 of Directive 2001/29/EC of the European Parliament and of the Council of 22 May 2001 on the harmonisation of certain aspects of copyright and related rights in the information society (InfoSoc Directive). Art. 6 of the Directive is referring to obligations as to technological measures, and art. 8 to sanctions and remedies.

The technological measures are defined as the use of any technology, of a device or component that, in the course of its normal operation, is destined to prevent or restrict the acts, that are not authorized by the rightholders (art. 185 par. 2). The technological measures can be put in place by the author of a work, performer, phonograms or audiovisual recordings producer, radio or television broadcasting organizations or the database maker (art. 185 par. 1). Even that the regulatory text is enumerating the persons that can institute technological measures, there is no interdiction that other persons, meaning other rightholders, to put in place such measures[9].

The technological measures are considered effective where the use of a protected work or other subject-matter of protection is controlled by the rightholder through application of an access control or protection process, such as encryption, coding, scrambling or other transformation of the work or other subject-matter or a copy control mechanism, if the measures fulfil the assuring protection objective (art. 185 par. 3).

The rightholders that have instituted technical protection measures have the obligation to make available to the beneficiaries of the exceptions provided for in art. 35 par. (1) letters a), c) and e), art. 35 par. (2) letters d) and e) and art. 39 of Law no. 8/1996 the necessary means for the legal access to the work or any other protection object (art. 185 par. 4). They have also the right to limit the number of copies made under the

[9] B. Florea, *Contribuţii la analiza infracţiunilor prevăzute în art. 143 din Legea nr. 8/1996 privind dreptul de autor şi drepturile conexe, astfel cum a fost modificat prin Legea nr. 187/2012*, în Revista Română de Dreptul Proprietăţii Intelectuale nr. 3/2015, p. 30 (*Contributions to the analysis of the offenses provided in art. 143 of Law no. 8/1996 on copyright and related rights, as amended by Law no. 187/2012*, in Romanian Journal of Intellectual Property Law no. 3/2015, page 30).

aforementioned conditions (art. 185 par. 5). These provisions are not applied to the protected works made available to the public, according to the contractual clauses agreed between the parties, so that the members of the public to have access to them in any place and at any time chosen, individually (art. 185 par. 6).

The exceptions mentioned before are referring to the following:

Uses of a work already disclosed to the public shall be permitted without the author's consent and without payment of a remuneration, provided that such uses conform to proper practice, are not contrary with the normal exploitation of the work and are not prejudicial to the author or to the exploitation rights owners:

- art. 35 par. (1) letter a) - the reproduction of a work in connection with judicial, parliamentarian or administrative procedures or public security purposes;

- art. 35 par. (1) letter c) - the use of isolated articles or brief excerpts from works in publications, television or radio broadcasts or sound or audiovisual recordings exclusively intended for teaching purposes and also the reproduction for teaching purposes, within the framework of public education or social welfare institutions, of isolated articles or brief extracts from works, to the extent justified by the intended purpose;

- art. 35 par. (1) letter e) - specific acts of reproduction made by publicly accessible libraries, educational establishments or museums, or by archives, which are not made for direct or indirect economic or commercial advantage.

In the conditions provided above, the reproduction, distribution, broadcasting or communication to the public, with no direct or indirect commercial or economic advantage, are allowed:

- art. 35 par. (2) letter d) - of works, for the sole purpose of illustration for teaching or scientific research;

- art. 35 par. (2) letter e) - of works, for the benefit of people with disabilities, which are directly related to that disability and to the extent required by the specific disability.

Art. 39 is regulating the broadcasting right assignment of a work to a radio or television broadcasting organization that shall entitle it to record the work for its own broadcasts needs with a view to a single authorized broadcast to the public. A new authorization from the authors shall be required in case of any new broadcast of the work so recorded, against a remuneration that cannot be waived. If no such authorization is requested within 6 months as from the broadcast, the recording must be destroyed. In the case of ephemeral recording of particular works made by the radio or television broadcasting organizations and by their own means for their own broadcasts, the preservation of these recordings in official archives is permitted if the recording has a special documentary value.

Also, for transposing the articles 6 and 8 of InfoSoc Directive, the Romanian copyright law regulates that the rightholders may provide, in electronic format, associated to a work or any subject-matter of protection, or in the context of their communication to the public, rights-management information (art. 185 par. 1).

The rights-management information is defined as any information provided by the rightholders which identifies the work or other subject-matter of protection, of the author or of other rightholder, as well as the conditions and terms for using the work or any other subject-matter of protection, as well as any number or code representing such information (art. 185 par. 2).

The infringements of the above-mentioned provisions are sanctioned as criminal offences as it follows:

- the deed of a person that, unlawfully, produces, imports, distributes or rents, offers, in any way, for sale or rent, or possesses for selling purposes, devices or components that allow the neutralization of the technological protection measures or performs services which lead to the neutralization of the technological protection measures, including in the digital environment (art. 199 par. 1);

- the deed of a person who, without right, removes, for commercial purposes, from the works or other protected products or modifies on them, any information under electronic form, on the applicable copyright or related rights regime (art. 199 par. 2).

As mentioned before, the rightholders and the other persons entitled may request to the Courts or other competent bodies, as the case may be, the acknowledgment of their rights and the establishment of the infringing thereof, and may claim damages for redressing the caused prejudice. The Courts may take provisional and precautionary measures and, also, measures for preserving the evidence. Respecting the principle of proportionality, at the request of the infringed rights holder, the Courts may apply the following enforcement measures: the remittance, in order to cover the prejudices suffered, of the income resulted from the unlawful deed, destruction of the equipment's and means belonging to the offender that were solely or mainly intended for the perpetration of the unlawful deed, removal from commercial circuit by seizure and destruction, of the illegally made copies and dissemination of information referring to the Court's decision, including the posting of the decision as well as the integral or partial publication of it in the mass media at the expense of the offender.

A special emphasise has to made regarding Articles 12 to 15 (liability of intermediary service

providers) and Articles 16 to 20 (implementation) of Directive 2000/31/EC on certain legal aspects of information society services, in particular electronic commerce, in the Internal Market (E-Commerce Directive)[10], which are transposed into Romanian legislation by the Law no. 365/2002 on the e-commerce and the Methodological Norms from 20 November 2002 for applying the Law no. 365/2002 on the e-commerce approved by the Government Decision no. 1308/2002.

Art. 11 of Law no. 365/2002 on the e-commerce is regulating the general principles regarding the service providers liability. The title of Directive 'Liability of intermediary service providers' was incorrect translated, because Law no. 365/2002 is mentioning the 'Liability of service providers. This incorrect translation can create juridical incertitude since the services providers are defined as any natural or legal person who provides/makes available to a fixed or indefinite number of persons with society services information (art. 1 point 3).

The general principles are referring to the fact that civil, criminal and contravention liability is applying to the service providers; service providers shall be responsible for information provided by themselves or on their behalf; and the service providers are not responsible for the information transmitted, stored or to which they facilitate access, under the conditions provided in art. 12-15. So, the general liability principle of service providers is that they are responsible only for the information provided by themselves or on their behalf (their liability can be put in place in any field, including copyright and related rights), and the liability exceptions are limited provided by the law in articles 12-15.

Art. 12 of Law no. 365/2002 on the e-commerce, regulating the 'Mere conduit'[11], is reproducing merely identically the dispositions of art. 12 par. (1)-(2) of the E-Commerce Directive. The same mention is done also for art. 13 of Law no. 365/2002 on the e-commerce which is regulating the temporary storage of information, caching-storage[12].

Art. 14 of Law no. 365/2002 on the e-commerce is regulating the permanent storage of information, hosting-storage[13]. Comparing the text of the Romanian Law with the one of the Directive, results that art. 14 par. (1) of the law is reproducing merely identically the dispositions of art. 14 par. (1) letter a) first thesis of the E-Commerce Directive, but the second thesis of the same article is translated differently.

As for the Romanian law the liability exemption takes place only in the cases in which the service provider doesn't have effective knowledge that the activity or information stored is illegal or facts and circumstances which show that the activity or information in question could harm the rights of a third party. The exemption is not applying in cases in which the service provider had the possibility to find out the character of these facts.

The distinction between 'having knowledge' and 'have the opportunity to have knowledge' wasn't applied nor for art. 14 par. (1) letter b) of the E-

[10] https://eur-lex.europa.eu/legal-content/EN/ALL/?uri=CELEX%3A32000L0031.

[11] (1) If an information society service consists in transmitting in a communications network the information provided by a recipient of that service or in ensuring access to a communications network, the provider of that service shall not be liable for the information transmitted if the following conditions are cumulatively fulfilled: a) the transmission was not initiated by the service provider; b) the choice of the person receiving the transmitted information did not belong to the service provider; c) the content of the transmitted information has not been influenced in any way by the service provider, in the sense that neither the selection nor any possible modification of this information can be attributed to it.

(2) The transmission of information and ensuring access, mentioned in par. (1), shall also include the automatic, intermediate and temporary storage of the information transmitted, in so far as this operation takes place solely for the purpose of transiting the communications network and provided that the information is not stored for a period exceedingly unjustifiably the time required for its transmission.

[12] If an information society service consists in the transmission in a communications network of information provided by a recipient of that service, the provider of that service shall not be liable for the automatic, intermediate and temporary storage of the transmitted information, in so far as this operation takes place exclusively in order to make the transmission of information to other recipients more efficient, at their request, if the following conditions are cumulatively met: a) the service provider does not make changes to the information transmitted; b) the service provider meets the legal conditions regarding the access to the respective information; c) the service provider complies with the rules or customs regarding the updating of information, as they are widely recognized and applied in the industry; d) the service provider does not prevent the legal use by any person of technologies widely recognized and applied in the industry, in order to obtain data on the nature or use of information; e) the service provider acts swiftly in order to delete the information it has stored or to block access to it, from the moment it has actually known that the information originally transmitted has been removed from the communications network or that access to it has was blocked or the fact that the removal or blocking of access took place as a result of a public authority decision.

[13] (1) If an information society service consists in storing the information provided by a recipient of that service, the provider of that service shall not be liable for the information stored at the request of a recipient, if any of the following conditions are met:

a) the service provider is not aware that the activity or information stored is illegal and, as regards actions for damages, is not aware of facts or circumstances which show that the activity or information in question could harm the rights of a third party;

b) having knowledge of the fact that the activity or information is illegal or of facts or circumstances which show that the activity or information in question could harm the rights of a third party, the service provider acts quickly to eliminate or block access to it.

(2) The provisions of par. (1) do not apply if the recipient acts under the authority or control of the service provider.

(3) The provisions of this article shall not affect the possibility for the judicial or administrative authority to require the service provider to cease or prevent data breach and shall also not affect the possibility of establishing government procedures to limit or interrupt access to information.

Commerce Directive. This implementation particularity has probative consequences, in the sense that, in order to apply the provider's liability, based on Romanian law, it must be proved that the provider was actually aware of the illegal facts.

Regarding these dispositions of the Law no. 365/2002 and Law no. 8/1996, it was identified the following case – law.

In 2009, the Bucharest Tribunal was notified of the lawsuit filed by the Romanian Music Industry Association (named AIMR)[14] against the website www.trilulilu.ro and the hosting provider Hostway requesting their obligation to pay damages, stopping use of phonograms and videograms from the AIMR repertoire and the establishment of technical protection measures by digital fingerprinting. The dispute was resolved through a transaction through which Trilulilu assumed the responsibility to implement the technical measures required by the action and to conclude license agreements with all AIMR members for the use of phonograms and videograms from their repertoire on the website www.trilulilu.ro.

In 2013, the same association AIMR notified Clax Telecom, a hosting service provider, to remove pirated content or suspend hosting services for sites with pirated content: www.muzicalove.ro, www.mp3alese.info, www.muzica.onlinefree.ro, www.netxplor.ro, www.vitanclub.net, www.allmuzica.com, www.muzicazu.net, www.muzicmp3.ws. These sites promoted national and international music repertoire, without paying the rights due to the production companies. Following the company's refusal to comply with the law, AIMR sued Clax Telecom, requesting the payment of the damage caused by the refusal to eliminate the pirated hosted content. The Bucharest Court of Appeal ordered Clax Telecom to pay damages and Court costs for its refusal to remove pirated content at the request of AIMR. The liability of the hosting service provider was analysed in relation to the provisions of Law no. 365/2002 on e-commerce and Law no. 8/1996 on copyright and related rights. The Court decided that according to art. 14 of Law no. 365/2002 a hosting service provider, following the notifications from the rights holders, is obliged to eliminate the hosted pirated content or to suspend the hosting service of the respective site[15].

The case-law regarding Peer-to-peer and BitTorrent indexing websites is referring to The Pirate Bay - ThePirateBay.org – and is emphasising blocking and dynamic injunctions (main site and proxy sites) established by the Court. In the Bucharest Tribunal case no. 28072/3/2017 – judgement no. 2229 on 05.11.2018 – the international film production companies: TWENTIETH CENTURY FOX FILM CORPORATION, UNIVERSAL CITY STUDIOS PRODUCTIONS LLLP, UNIVERSAL CABLE PRODUCTIONS LLC, WARNER BROS. ENTERTAINMENT INC., PARAMOUNT PICTURES CORPORATION, DISNEY ENTERPRISES, INC., COLUMBIA PICTURES INDUSTRIES and SONY PICTURES TELEVISION INC. have obtained in Court the access blocking of internet service providers: RCS & RDS S.A., TELEKOM ROMANIA COMMUNICATIONS S.A., UPC ROMANIA SA, DIGITAL CABLE SYSTEMS S.A., AKTA TELECOM S.A. and NEXTGEN COMMUNICATION S.R.L. users to pirated movie sites:

- www.filmehd.net, that can be accessed to the following on-line location: www.filmehd.net;
- www.filmeonline2013.biz, that can be accessed to the following on-line location: www.filmeonline2013.biz;
- www.thepiratebay.org, that can be accessed to the following main on-line location: www.thepiratebay.org ; and the following on-line proxy locations: http://bay.maik.rocks, http://bayproxy.net , http://piratebay.click, http://piratebay.red, http://piratebayblocked.com, http://pirateproxy.click and http://ukpirate.click .

In April 2020, the largest Romanian torrent site, hosting dozens, perhaps hundreds of terabytes, of movies, games, music, software and pirated books, was closed by High Court of Cassation and Justice prosecutors. When accessing the old address, www.filelist.ro , a message signed by the Ministry of Justice appears: 'This domain name is seized in accordance with the provisions of art. 249 from the Criminal Procedure Code. This domain name is the subject of a criminal offence proceeding'[16]. Just a few days after the site was shut down, it is back online, but on the .io domain, dedicated to the British Indian Ocean Territory[17]. The anonymous representatives of the torrent site published a message as a result of what happened, showing that they know nothing more than that the .ro domain was seized without further notice and that the site protection systems prevent the user's identification.

Art. 15 of Law no. 365/2002 on the e-commerce is regulating information search tools/search engines

[14] https://www.aimr.ro/- site accessed on 20 March 2021.
[15] https://www.aimr.ro/furnizorii-de-servicii-de-hosting-sunt-raspunzatori-de-continutul-pirat-gazduit/ - site accessed on 20 March 2021.

[17] https://filelist.io/login.php?returnto=%2F - site accessed on 20 March 2021.

and links to other web pages/hyperlinks[18]. This exception is not regulated in the Directive, it is a particularity of the Romanian legislation and to other EU Member States (e.g., Spain).

Comparing art. 15 of the Law no. 365/2002 on the e-commerce with art. 14 of the same law, results that the liability of services providers under art. 15 is the same as for hosting (art. 14), still in the Romanian practice/jurisprudence there are no cases for applying or/and interpret art. 15 of Law no. 365/2002 on the e-commerce.

The Directive (EU) 2019/790 of the European Parliament and of the Council of 17 April 2019 on copyright and related rights in the Digital Single Market and amending Directives 96/9/EC and 2001/29/EC (DSM Directive)[19] has not been transposed yet into the Romanian legislation, thus we cannot indicate the measure in which the injunctions procedures regarding copyright and related rights will be transformed.

At the present, there is an ongoing process for amending the Law no. 8/1996 on copyright and related rights on two subjects. The first subject is referring to the transposition of the DSM Directive and the Directive (EU) 2019/789 of the European Parliament and of the Council of 17 April 2019 laying down rules on the exercise of copyright and related rights applicable to certain online transmissions of broadcasting organisations and retransmissions of television and radio programmes, and amending Council Directive 93/83/EEC into the Law, and the second to the revision of the current dispositions of the Law. On December 15, 2020 a working group for revising the Law no. 8/1996 on copyright and related rights, was created by Ministry of Culture decision [20]. The decision raised now a-days a lot of controversies in Romania, in fact the structure of the working group, because the structure is not containing the representatives of all the collective management organisations in Romania nor the representatives (e.g., associations) of all the rightholders (e.g., broadcasters, cable retransmission operators, etc.).

Taking into account the above-mentioned legal provisions, we can conclude that Law no. 8/1996 on copyright and related rights is regulating the injunction procedures as transposing the dispositions of the IPRED Directive.

The injunctions are divided in two main forms:

The first form is the interlocutory injunctions provided for in art. 188 par. 3 and referring to:

a) forbidding the infringement or its provisory cease;

b) ordering the measures to be taken for conserving the probes;

c) ordering the measures to be taken for ensuring the damage remedy; for this purpose, the Court can order the ensuring measures to be taken on the movable and immovable assets of the person presumed to have infringed the rights acknowledge by the law, including the blocking of his/her bank accounts and other assets. For this purpose, the competent authorities can order the communication of the banking, financial or commercial documents or adequate access to the pertinent information;

d) ordering the taking or handing over to the competent authorities of the goods in connection with which suspicions exist on the violation of a right provided for by the law to prevent their introduction in the commercial circuit.

The interlocutory injunctions against intermediaries are available under the same conditions (art. 188 par. 5), thus any third party that uses in an unauthorized way in the commercial activity the IP right (including the transporters, Internet Service Providers, online shopping sites) may be subject to a preliminary proceeding initiated by the injured party.

Also, the Courts may order the precautionary seizure of the movable and immovable property of the alleged infringer in respect of infringements (art. 188 par. 6).

The measures for assuring the evidences or to ascertain a fact-finding disposed by the Court are applied through a bailiff. The rightholders of the rights supposed to be infringed or to which there is the danger to be infringed, as well as their representatives, have the right to take part at the application of the evidence conservation measures or for ascertain a fact-finding (art. 188 par. 9).

[18] (1) The provider of an information society service that facilitates access to information provided by other service providers or by recipients of services provided by other providers, by providing its service recipients with information retrieval tools or links to other web site pages, is not responsible for the information in question, if any of the following conditions are met:

a) the provider is not aware that the activity or information to which it facilitates access is illegal and, as regards actions for damages, is not aware of facts or circumstances which show that the activity or information in question could harm the rights of a third party;

b) being aware of the fact that the activity or information in question is illegal or of facts or circumstances which show that the activity or information in question could harm the rights of a third party, the provider acts quickly to eliminate the possibility of access or block its use.

(2) The service provider shall be liable for the information in question where its illegality has been established by a decision of a public authority.

(3) The provisions of par. (1) shall not apply if the recipient acts on the order or under the command of the service provider.

[19] https://eur-lex.europa.eu/eli/dir/2019/790/oj.

[20] http://www.cultura.ro/infiintarea-grupului-de-lucru-pentru-modificarea-legii-81996-privind-dreptul-de-autor-si-drepturile - site accessed on 20 March 2021.

The second main form is related to the injunctions following a decision on case merits. In this case, the Court may issue, by the final decision on case merits establishing an IPR infringement, an injunction aimed at prohibiting the infringement from continuing against the infringer and/or the intermediaries whose services are used by a third party to infringe the IPR, if the case may be. Also, the Court may dispose the following measures:

a) remittance, in order to cover the prejudices suffered, of the proceeds obtained from the unlawful deed;

b) destruction of the equipment's and means belonging to the offender that were solely or mainly intended for the perpetration of the unlawful deed;

c) removal from commercial circuit by seizure and destruction, of the illegally made copies;

d) dissemination of information referring to the court's decision, including the posting of the decision as well as the integral or partial publication of it in the mass media at the expense of the offender; under the same conditions the courts may order additional publicity measures adapted to the particular circumstances of the case, including an extensive publicity.

All these injunctions were exemplified in the case law presented before.

The blocking injunctions can be used and issued in the conditions and according to the above-mentioned procedure. Even that the law provides the measures ensuring that ISPs block access to copyright-infringing websites, in Romania blocking injunctions are used in an insignificant proportion, thus on-line and broadcast piracy remains a challenging copyright enforcement issue. The lack of the effective enforcement could be redressed by prioritising investigations and prosecution of significant IP cases, with a special focus on cases involving online piracy; providing to specialized police and local law enforcement with adequate resources, including necessary training, and instruct relevant enforcement authorities to prioritize IP cases; and awareness campaigns on the risks and damages done by online piracy.

Dynamic and de-indexing injunctions could be used as Romania implemented E-Commerce Directive and IPRED Directive. In fact, none of these injunctions' types were used in practice for online piracy. From the case-law presented before, results that the blocking and dynamic injunctions are the most used in practice regarding illegal online content.

Dynamic injunctions could be a powerful tool to fight against on-line piracy, especially for live sports events, since they allow rightsholders to require ISPs to block both primary domain name and IP address of piracy websites, but also any subsequent domains they shift to (proxy sites). In these cases, it can be distinguished between blocking dynamic injunctions and live injunctions. Specially for sports the dynamic and live injunctions should be extended for the period in which the competition/event takes place (e.g., the Olympic games, UEFA's EURO).

For these types of injunctions, it should be mentioned the recent developments which were described as innovative, adapting the legal tools to keep up with ever adapting digital pirates[21]. Thus, fighting the latest evolution of piracy involves two new tools: live blocking and dynamic injunctions. Live blocking entails requiring Internet service providers (ISPs) to block users' access to servers hosting infringing streams of live events (used in Ireland and the United Kingdom). Dynamic injunctions allow rightsholders to require ISPs to block both primary domain name and IP address of piracy websites, but also any subsequent domains they shift to (used in Australia[22], India[23], Singapore[24], and the United Kingdom[25]). As note by the EU Commission in its 2017 Guidance on certain aspects of Directive 2004/48/EC, dynamic blocking injunctions are: 'injunctions which can be issued for instance in cases in which materially the same website becomes available immediately after issuing the injunction with a different IP address or URL and which is drafted in a way that allows to also cover the new IP address or URL without the need for a new judicial procedure to obtain a new injunction'.

In August 2019, the Federal Court in Sydney[26] enacted Australia's first dynamic injunction, targeting a list of 35 torrent, streaming, and related proxy sites. It was also the first time that a rightsholder had directly targeted proxy sites due to a 2018 change in Australia's copyright law[27] that allowed both dynamic injunctions
