THEORETICAL AND PRACTICAL ASPECTS REGARDING THE EUROPEAN INVESTIGATION ORDER

Alina ANDRESCU*

Abstract

The European Investigation Order (EIO) is the newest instrument of international judicial cooperation in criminal matters between the Member States of the European Union. The purpose of this paper is to analyse this new European initiative regarding an European Investigation Order (EIO) based on the principle of mutual recognition which shall facilitate the gathering and transmission of evidence in criminal matters between Member States. The author present the necessity of an EIO and analyse if it provides enough safeguards for the protection of the fundamental rights of the defendant and the differences between this proposed instrument and the European Evidence Warrant with shows the ECJ jurisprudence tendency. In the end, after presenting some relevant aspect regarding EIO, including the UK"s post-transition relationship with the EU, the paper ends with proposals for the ferenda law concerning the accomplishment of an adequate juridical framework and the application of the legal stipulation referring to international judicial cooperation in criminal matters.

Keywords: *the European Investigation Order, international judicial cooperation in criminal matters, mutual recognition.*

1. Introduction

At the same time with the opening of the frontiers, international criminality has achieved a bigger and bigger importance.

The new dimension of organized crime in the European space, the need for prevention and effective combating of this phenomenon at the regional level has required the improvement of judicial mechanisms cooperation and the development of instruments based on the principle of mutual recognition at European Union level and on the part of the Member States, stepping up their efforts to harmonize the legislation in the Union.

The founding treaties of the European Communities did not explicitly include criminal law in the mechanism of protection of economic integration.

According to the relevant European Union"s primary and secondary sources – including Directive 2014/41/EU – all Member States must provide for a minimum level of guarantees connected to the right of defence, irrespective of the specific judicial system in force in each country. In particular, in December 2009, following the entry into force of the Lisbon Treaty, The European Council adopts the Stockholm Programme, which aimed at reforming the "current patchwork of rules" and providing a single.

Article 82 of the Treaty on the Functioning of the European Union (TFUE) underlines the importance of the approximation of law and regulation, including those relating to such procedural rights, among Member States. This position is reiterated in Directive 2014/41/EU that explicity refers to Article 82 TFEU and to the main pillars of Judicial Cooperation in Criminal Matters, namely the principle of mutual recognition of judgments and that of mutual confidence between Member States. Accordingly, from Article 82 TFEU, and subsequently Directive 41, derives the necessity to provide minimum common rules in relation to the rights of individuals in criminal procedure.

According to Article 82 (1) TFEU, judicial cooperation in criminal matters in the Union is based on the principle of mutual recognition of judgments and judicial decisions.

Article 82 (2) of TFUE provides: "To the extent necessary to facilitate mutual recognition of judgments and judicial decisions and police and judicial cooperation in criminal matters having a cross-border dimension, the European Parliament and the Council may, by means of directives adopted in accordance with the ordinary legislative procedure, establish minimum rules. Such rules shall take into account the differences between the legal traditions and systems of the Member States. They shall concern: (a) mutual admissibility of evidence between Member States [...]"

With the intensification of European integration and the increase of mobility of people, goods, services and capital in the EC internal market, with the growing importance of the external dimension of the internal market, the growing need for a legal regime for judicial cooperation in criminal matters appropriate to the countries involved in the European integration process has become increasingly clear.

The purpose of judicial cooperation in criminal matters is to establish a common European space of freedom, security and justice responding to the mutual trust between the systems of criminal justice in the member states, being supported by the principles of freedom and of democracy of the legal state and respecting the basic rights guaranteed by the European

* PhD, Faculty of Law, "Nicolae Titulescu" University (e-mail: alina.andrescu@just.ro).

Convention for Protecting the Basic Human Rights and Freedoms.

The European Investigation Order repeals the Framework Decision establishing the European Evidence Warrant (EEW) and replaces the corresponding provisions of the Council of Europe mutual assistance Convention and its two protocols (Framework Decision on the Evidence Warrant and Stockholm Programme) as well as the EU Mutual Assistance Convention and its protocol and the relevant provisions of the Schengen Convention.

2. The European Investigation Order and its application

In 2009, when the Stockholm Programme was adopted by the European Council, the existing legal framework was fragmented and too complicated. Directive 2014/41/EU of the European Parliament and of the Council set up a new European judicial decision instrument, called the European Investigation Order [1].

An EIO aims to make legal cooperation between EU Members States easier; it sets up a comprehensive system for obtaining evidence in cases with cross-border dimensions.

It is to be issued for the purpose of having one or several specific investigative measures carried out in the state executing the EIO with a view on gathering evidence.

The instrument applies to all investigative measures aimed at gathering of evidence[2], as well as at obtaining evidence that is already in the possession of the executing authority (Article 1(1) of the EIO Directive).

The EIO Directive came into force on May 22, 2017, with the EU having allowed time for Member States, with the exception of Ireland and Denmark[3], to implement it into their national legislation.

An EIO is a judicial decision, issued or validated by a judicial authority of a Member State (the issuing state) for the purpose of having one or several specific investigative measures carried out in another Member State (the executing state) to obtain evidence. An EIO may also be issued for obtaining evidence that is already in the possession of the competent authorities of the executing state. The issuing of an EIO may be requested by prosecutors or judges, but also by the suspected or accused person as well as by lawyers on their behalf (within the framework of defence rights).

The EIO can be used in criminal proceedings, but also in those brought by administrative authorities, with judicial validation, when there is a criminal dimension.

The Directive 2014/41/EU on the European Investigation Order in Criminal matters obviously covers any other investigation measure except[4]: setting up of Joint Investigation Teams and gathering of evidence with such teams, expressly excluded from the EIO scope in according to Article 3 of the directive and - the freezing with a view of confiscation and the confiscation itself, taking into account that the existing legal basis for the latter is not replaced in accordance with Article 34 (1) of the directive.

Also, it does not apply to: service and notification of documents, on the one had because this is not an investigation measure per se, and, on the other hand, the "service by post" rule established in Article 5 (1) of the Convention of 29 May 2000 on mutual assistance in criminal matters between the Member States of the European Union.

In some situations an EIO might be issued for questioning the suspect via video link in order to determine whether or not to issue an EAW for the purposes of prosecuting him[5].

In Romania, the High Court of Cassation and Justice has decided that the European Investigation Order which has as object the hearing by video conference during the trial is executed by the Court of Appeal[6].

For instance, the order was transposed into the Romanian legislation, through the most recent changes of the Law no. 302/2004 concerning international judicial cooperation in criminal matters (following- "The Law") [7].

When acting as an issuing State, only Romanian judicial authorities have competence, namely the competent Prosecutor"s Office during the investigation phase or the competent court in the trial phase. No administrative authority has competence, as it is not considered investigating authority in criminal proceedings. Some investigative measures such as, surveillance methods including wire-tapping of communications or of any type of remote communications, accessing a computer system, obtaining data regarding the financial transactions of persons, use of undercover investigators and informants, controlled deliveries, etc., cannot be decided by a prosecutor, but only by a Judge of rights and liberties during the investigative phase or a Judge during the trial phase.

[7] Republished in the Official Romanian Journal, Part I, nr. 377 from 31 May 2011, completed through Law nr. 236 from 5 December 2017, published in the Official Romanian Jurnal nr. 993 from 14 December 2017.

When our country is the state of execution, recognition and execution of a European Investigation Order are within the competence of the prosecutor"s office or the court competent materially and according to the quality of the person according to Romanian law.

Territorial competence is determined according to the place where the measure is to be fulfilled the investigation[8].

The Law no. 302/2004 concerning international judicial cooperation in criminal matters does not stipulate which is the competent court in the situation, that have appeared in practice, hence the measures requested to be performed are within the competence of different prosecutor"s offices or courts.

It is necessary to complete the law indicated in the sense of specification the prosecutor"s office or the court that in these causes will rule on the EIO.

EIO"s concerning facts within the competence of Directorate for Investigation of Organized Crime and Terrorism (DIOCT) or National Anti-Corruption Directorate (NACD) is recognized and executed by them.

In the sphere of central authorities it is included the Ministry of Justice which receives a EIO reffering to the judicial activity or execution of judgement as well as the Public Ministry through the specialized structures in the case of European Investigation Orders that refer to the criminal investigation and investigation activity[9].

3. The European Arrest Warrant and the European Investigation Order

The EIO contained several innovations over existing procedures prior to its appearence. The EIO focuses on the investigative measure to be executed, rather than on the type of evidence to be gathered. The EIO has a broad scope – all investigative measures are covered, except those explicitly excluded. In principle, the issuing authority decides on the type of investigative measure to be used. However, flexibility is introduced by allowing, in a limited number of cases, the executing authority to decide to have recourse to an investigative measure other than that provided for in the EIO. Clear time limits are provided for the recognition and, with more flexibility, for the execution of the EIO. The proposal also innovates by providing the legal obligation to execute the EIO with the same celerity and priority as for a similar national case.

The Court of Justice, clarified that public prosecutors can adopt European Investigation Order pursuant to Directive 2014/41, even if there is a risk of the prosecutors being subject to individual instruction from executive branch. The Court has distinguished the role of prosecutors in the course of an EIO to the European arrest warrant, which reassures prosecutors, in line with the Court"s more recent case-law, to ensure standards of independence.

The cause stems from a criminal investigation for fraud initiated in Germany. Under Austrian law, a public prosecutor may not order investigative measures without prior court authorization, which was granted in the specific case at hand.

In decision[10] of the Court of Justice has decided the role of the prosecutor"s in the context of an EIO and a European Arrest Warrant by relaying on an interpretation of Directive 2014/41, which explicitly refers to public prosecutors as issuing authorities, but in the same time on the guarantees, including guarantees of judicial review ensured by Directive 2014/41. Court of Justice concludes that the EAW does not apply to a public prosecutor acting in the context of an EIO.

The Court of Justice held that „it follows from Article 2(d) of Directive 2014/41 that the procedure for executing a European investigation order may require a court authorization in the executing State where that is provided for by its national law. As is apparent from the order for reference, that is the case under Austrian law, which makes the execution of certain investigative measures, such as a request for disclosure of information relating to a bank account, subject to court authorization.

The EIO governed by Directive 2014/41 pursues, in the context of criminal proceedings, a distinct objective from the European arrest warrant governed by Framework Decision 2002/584. While the European Arrest Warrant seeks, in accordance with Article 1(1) of Framework Decision 2002/584, the arrest and surrender of a requested person, for the purposes of conducting a criminal prosecution or executing a custodial sentence or detention order, the aim of a European Investigation Order, under Article 1(1) of Directive 2014/41, is to have one or several specific investigative measures carried out to obtain evidence.

Except in the specific case of the temporary transfer of persons already held in custody for the purpose of carrying out an investigative measure, which is the subject of specific guarantees in Articles 22 and 23 of Directive 2014/41, the European investigation order, unlike a European arrest warrant, is not such as to interfere with the right to liberty of the person concerned, enshrined in Article 6 of the Charter".

The issue was raised into national judicial practice to what extent data generated or processed by Facebook by a public prosecutor without the court authorization.

There are several opinions regarding this issue, but the majority one was in the sense that the use of the EIO mechanism presupposes the fulfillment of the

[8] Article 330 paragraph 2 from the amended Law no. 302/2004.
[9] Article 330 paragraph 3 from the amended Law no. 302/2004.
[10] ECJ, C-584/19, A and Others, Judgenent of 8 December 2020, ECLI:EU:C:2020:1002.

procedures provided by the law of the reqesting states for obtaining the evidentiary instrument, respectively the judge"s authorization.

As well, in judicial doctrine[11] it was appreciated that when the EIO is issued by any other authority, and not by a judicial authority, could be capitalized principle developed by the Court of Justice of the European Union in a number of recent decision related to the European Arrest Warrant, in which denied the possibility that the Ministry of Justice of a Member State or prosecutor"s offices that are exposed to the risk of being subjected to orders from the executives power to be included in the scope of the notion of issuing judicial authority. Therefore, it was considering that it is for the executing judicial authorities to identify whether the issuing authority falls within those compatible with the meaning of the notion, as it is recognized by the Directive.

For the purpose of this paper, I looked into the jurisprudence of High Court of Cassation and Justice[12] which addresses issues related to both instruments of cooperation.

In the decision was retained that, in the procedure of execution of the European Arrest Warrant, the prosecutor to the Office of the Prosecutor near the Court of Appel has the competence to attend the court hearing, hether in the procedure for the execution of EIO concerning the facts contained in the European Arrest Warrant was attended by a prosecutor from the Directorate of Investigation of Crimes of Organized Crime and Terrorism.

It was also mentioned that execution of a EIO issued by the authorities of a Member State of the European Union, concerning the facts contained in the EAW issued by the authorities of the same Member State of the European Union not it determines the incidence of optional refusal of execution, regarding the hypothesis in which the request person is subject to a criminal procedure in Romania for the deed that motivated the European Arrest Warrant.

4. The national sovereignty of the States and supremacy of the European Union"s law

Criminal justice is a specific and unique field of law in each State. The negative attitude of the EU Member States towards the unconditional cooperation in criminal matters is still provided. It is an understandable position because the States, protecting their sovereignty, authenticity and independence, avoid unambiguous supporting of the aspiration, declared by the EU, on mutual recognition of the evidence, on which the EIO is also based. The Member States are aware of the significance of recognition of the mutual principle of international cooperation; on the other hand, some EU Member States perceive this principle in a certain sense as the dictatorship, which limited the autonomy of the domestic law[13].

It is important to note that the European Court of Justice (hereinafter referred to as the "ECJ") had an opportunity to pronounce on Council Framework Decision 2002/584/JHA, dated the 13nd of June of the year 2002 on the European arrest warrant and the surrender procedures between Member States, which is practically related to the EIO.

There are two causes, the Radu[14] and the Melloni[15] in which was examined the fundamental right and the mutual recognition[16].

The ECJ stated that the guarantees, foreseen in the national Constitutions of the Member States, have no influence upon the definite case though they foresee a softer regulation towards the convicted person. In this context, the ECJ stated that the guarantees, foreseen in the national Constitutions of the Member States, have no influence upon the definite case though they foresee a softer regulation towards the convicted person. The ECJ points to the supremacy of the European Union"s law against the national legislation.

So, if there are the substantial grounds for believing that execution of the investigative measure, indicated in the EIO, would result in a breach of the fundamental right of the person concerned and that the executing State would disregard its obligations concerning the protection of fundamental rights, recognized in the Charter, the execution of the EIO should be refused[17].

5. Brexit and its consequence for cooperation in criminal matters

5.1. The regime applicable during the transition period

With the UK"s withdrawal from the EU, the modalities of its cooperation with other EU Member States in criminal matters are bound to change.

On 23 June 2016 the United Kingdom voted to leave the EU and on 29 March 2017 the United Kingdom triggered Article 50 of the Treaty on European Union, the withdrawal clause. From that moment on, the EU and the United Kingdom carried

[17] Navickaitė S., The European Investigation Order: Achievents and Challanges, "Social Transformations in Contemporary Society", 2016 (4), ISSN 2345-0126 (online).

out negotiations on a withdrawal agreement (WA), which was agreed upon on 17 October 2019, delaying the date for the United Kingdom to leave the EU until 31 January 2020.

From 1 February 2020 until 31 December 2020 the United Kingdom was in a transition period, as agreed in the WA. During this period the United Kingdom was no longer an EU Member State but remained a member of the single market and the customs union[18]. On 30 December 2020, the EU and the United Kingdom signed a trade and cooperation agreement (TCA)[19], which became provisionally applicable as of 1 January 2021.

In same areas of criminal justice cooperation, the UK"s withdrawal has a limited impact, provided that the requests for cooperation are made before the end of the transition period. This is for instance the case regarding ongoing judicial cooperation proceedings. According to Article 63 of the Withdrawal Agreement, only a series of instruments of judicial cooperation, continue to apply. As the UK had previously tailored its participation in pre-and post-Lisbon EU criminal law instruments, these instruments represent the main ones for judicial cooperation in criminal matters and are for instance included the Framework Decision on the EAW - or the EIO Directive. The same can be said regarding instruments on law enforcement cooperation and exchange of information, as the main ones will remain applicable (Art. 63). The UK authorities also retain the possibility to continue their participation in joint investigation teams, and to share and request information from Eurojust. The main change concerns the participation in new EU criminal law measures, in respect of which two options apply. For proposals amending, replacing or building upon measures in which the UK previously opted in, the UK has the possibility to opt in. However, for new proposals, the UK does not have the right to opt in, and it may only be invited to cooperate with the EU Member States under the modalities foreseen for third countries[20].

There are some Member States decided to make use of the possibility provided for in Article 185 of the Withdrawal Agreement. This provision allows Member States, due to reasons related to fundamental principles of their national law, to declare that, during the transition period, their national executing judicial authorities may refuse to surrender its nationals to the United Kingdom pursuant to an EAW. This refers to the constitutional limits regarding the extradition to nationals outside the EU, which is for instance foreseen in Germany, where the Constitution limits the extradition of nationals to situations in which the request comes from an EU Member State and/or an international court. Only three Member States, namely Germany, Austria and Slovenia, made such notification by January 28th, and the United Kingdom has now one month to notify whether its executing judicial authorities may refuse to surrender its nationals to those Members States[21].

5.2. Modalities of cooperation between the UK and the EU after transition period

After the end of the transition period on 31 December 2020, the following no longer apply to the UK are the European Investigation Order (EIO) and the 2000 Convention and related Protocol on Mutual Assistance in Criminal Matters.

Therefore, an EIO can no longer be issued to obtain evidence located in the UK or to obtain evidence located in EU member states for use in UK criminal investigations or proceedings.

However, in line with the terms of the Withdrawal Agreement, EIOs received before 11 pm on 31 December 2020 will be processed as EIO"s. Any EIO received after this time will be processed as a mutual legal assistance (MLA) request, unless the requesting state objects.

Requests for MLA between the member states of the EU and the UK are now based on cooperation through the Council of Europe 1959 Convention on Mutual Assistance in Criminal Matters and its two additional protocols, as supplemented by provisions agreed in Title VIII of the EU-UK Trade and Cooperation Agreement[22].

An European Investigation Order received after the end of the transition period will be processed as an MLA request and the requesting state will be advised of the same, unless they object.

6. Conclusions

Lately, in addition to the possibility of gathering evidence with the help of instruments of judicial cooperation in criminal matters, which represents horizontal cooperation that is in a continuous development, there have been new forms of vertical cooperation in criminal matters. These are new institution of the European Union, such as the European Anti-Fraud Office and Eurojust, which have a role in gathering evidence without them being considered authentic legal authorities, and last but not least the European Public Prosecutor"s Office.

According to article 12 of the Law no. 6/2021[23], the European Public Prosecutor"s Office is a judicial authority within the meaning of the provision of article

2 paragraph d of Law no. 302/2004 on international judicial cooperation in criminal matters, republished, and will be notified as such as at international legal instrument relevant in the field of international judicial assistance in criminal matters which Romania is a party, as well as in case where, according to the EPPO Regulation, delegates European prosecutors may carry out international judicial cooperation activities under the applicable treaties.

The criminal legislation of the Member States of the European Union, including our country, is in a continous adaption in relation to the directives of the European Union and the needs of the times.

Therefore, I consider that it is necessary to give great importance to the harmonization of European legislation in general and criminal law in particular.

This desideratum can be achieved by elaborating a European procedural code that includes commons rules for all member states on the one hand, and on the other hand for the situation in which are involved the third states.

Also, in the same order of ideas, the new institution of the European Union must be taken into account, respectively the European Prosecutor"s Office with specific competencies.

THE RESPONSE OF THE SPANISH CRIMINAL LAW TO FORCED LABOUR PRACTICES IN TRANSNATIONAL CORPORATIONS

Demelsa BENITO-SÁNCHEZ*

Abstract

This paper aims at studying the criminal liability according to the Spanish law of transnational companies for imposing forced labour on citizens in other countries. The objective is to elucidate whether, under the Spanish law, it is possible to penalise Spanish companies that carry out these practices abroad, practices that are clearly harmful to fundamental rights. For criminal prosecution in Spain to be possible, certain requirements must be met. First, it is necessary that the Spanish Criminal Code acknowledges that legal persons can be held liable. This is a reality since year 2010, although there are a number of problems in attributing responsibility to the parent company for the conducts carried out abroad by the subsidiary. Second, it is required that the Spanish Criminal Code expressly provides that legal persons may be responsible for this type of offences (offences against workers" rights). This is not currently foreseen by the Spanish Criminal Code. Third, it is needed that the Spanish courts are able to prosecute extraterritoriality these criminal offences. This is not possible at the moment according to the current Spanish legislation. Given the situation described, this paper proposes the necessary legal reforms to make it possible to penalise Spanish companies that impose forced labour practices abroad since these practices entail violations of fundamental rights.

Keywords: *criminal responsibility, forced labour, slavery, Spanish Criminal Code, transnational corporations.*

1. Introduction

The aim of this paper is to study the criminal liability of transnational companies under Spanish law for the imposition of forced labour on citizens in other parts of the world[1]. It seeks to answer the question of whether, under Spanish law, criminal penalties can be imposed on Spanish companies that engage in these practices outside of the national borders. Three requirements must be met to make this possible. Firstly, the legal system must recognise that legal persons can be criminally liable. Unlike common law systems, the legal systems in continental Europe have not traditionally recognised this. However, several European and Latin American states have recently included this possibility in their legislation. In the case of Spain, the criminal liability of legal persons was incorporated into the Criminal Code through a reform carried out in 2010. Secondly, under Spanish law, the Criminal Code must expressly state which offences can be attributed to a legal person, as it is governed by a closed list (*numerus clausus*) principle. A major problem arises here, as the Spanish Criminal Code does not currently include violations of workers" rights in this list of offences. Thirdly, Spanish law would need to allow the extraterritorial prosecution of violations of workers" rights committed abroad by Spanish companies. While the current legislation does not allow for this, it makes it possible to prosecute human trafficking for exploitation (including labour exploitation). In other words, Spanish law is not totally foreign to the actual problem that exists at present, but it only provides a criminal law solution to a specific facet of this problem.

In light of the situation described above, this paper aims to offer a proposal *de lege ferenda*, for improving the law in the future, to make it possible to criminally sanction violations of workers" rights by Spanish companies in other countries under Spanish law. This is a response to a practice that is unfortunately common around the world today, as shown by the data that will be provided in the following section. With this proposal *de lege ferenda*, Spain would comply with the supranational mandates that have been developed in this area, such as, for example, the Guiding Principles on Business and Human Rights, adopted by the United Nations in 2011.

It is essential to ensure that national legal systems can address human rights violations such as forced labour and similar practices, as transnational corporations are not subject to international jurisdiction (e.g., the International Criminal Court). Therefore, it is for states to provide an effective response to this problem within their domestic laws[2]. In particular, the focus is on the home states of

transnational corporations since, as experts have pointed out, there may be corruption problems in the host state that allow multinationals to circumvent the rules and emerge unscathed from criminal proceedings if there is a prosecution[3].

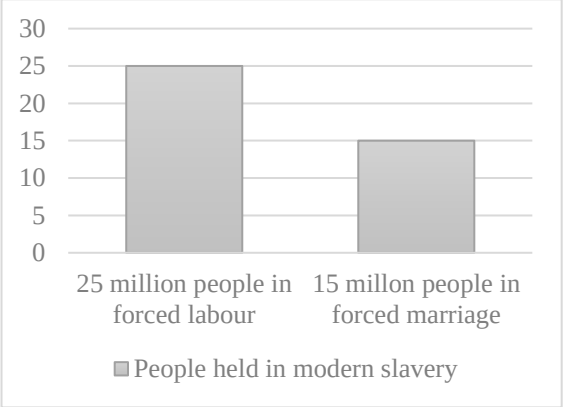
2. Conceptual framework. Some figures on forced labour worldwide

The term "modern slavery" has gained prominence in recent times. It has been used in numerous scientific studies[4], as well as in some national laws and regulations[5]. The International Labour Organisation (ILO) includes forced labour and forced marriage within this term. The term "forced labour" encompasses acts perpetrated either by the state or by the private sector, as well as the sexual exploitation of adults and children, whether in prostitution or pornography[6].

Forced labour was defined as early as 1930, in the ILO Forced Labour Convention (Convention No. 29). Article 2 defines this term as "all work or service which is exacted from any person under the threat of a penalty and for which the person has not offered himself or herself voluntarily". The Convention obliged ratifying States[7] to abolish all forms of forced labour (Article 1), a mandate that was repeated in the Abolition of Forced Labour Convention, adopted by the same organisation in 1957 (Convention No. 105)[8] and, more recently, in the Protocol to the Forced Labour Convention, 1930, adopted in 2014[9]. Slavery, however, has further implications. The 1926 Slavery Convention (as amended in 1953) defines slavery as "the status or condition of a person over whom any or all of the powers attaching to the right of ownership are exercised" (Art. 1) and requires its abolition (Art. 2).

Despite the supranational mandate for the abolition of forced labour practices and slavery, which began almost a century ago, the figures are still devastating today, even though they may not reflect the "unrecorded figures" on this type of crime because many of these practices, by definition, remain hidden from society. At present, the ILO estimates that just over 40 million people in the world (that is, more than twice the population of Romania), are held in conditions of modern slavery (see Graphic 1). This means that 5.4 people in every 1000 are victims of this type of practice. One in four enslaved persons are under the age of 18. Available data also show that slavery has a significant gender bias (see Graphic 2): 71% of victims are either women or girls. They account for 99% of victims in the sex industry sector, and 58% in all other sectors[10].

Graphic 1. People held in modern slavery around the world



Source: International Labour Office, Walk Free Foundation and International Organization for Migration (2017). *Global Estimates of Modern Slavery*. Ginebra

The phenomenon of modern slavery could be considered to be eradicated in Spain, a country with a well-established democracy and rule of law. In fact, the Spanish Constitution, approved in 1978, did not declare slavery abolished or prohibited, probably because at that time it was believed that slavery no longer existed. However, the Global Slavery Index estimates that 105,000 people in Spain are subjected to modern slavery, which means that just over 2 people out of every 1000 experience slavery conditions in Spain[11].

The above data show that slavery practices exist all over the world and that policies are needed to eliminate them. These policies include those that can be adopted in criminal law, although criminal law is certainly not the only way to combat these practices, and sometimes it is not even the most effective way. In fact, as early as 1930, the Forced Labour Convention set out that "the illegal exaction of forced or compulsory labour should be punishable as a penal offence" and penalties should be imposed by states accordingly (Article 25). The treatment of forced labour in Spanish criminal law is explained below.

3. Forced labour as a criminal offence in the Spanish Criminal Code

Title XV (Articles 311-318) of the Spanish Criminal Code regulates violations of workers" rights. It criminalises a wide range of behaviours such as imposing illegal conditions on a worker, simultaneously employing people without a work permit or without registering them with the Social Security authorities, certain behaviours related to labour discrimination, the infringement of health and safety rules that poses serious risk to workers" life or health, etc. (see Table 1). When these behaviours are less serious, they are sanctioned by administrative law[12], a less harming and stigmatising branch of law. Specifically, these sanctions are provided for in the *Law on Labour Offences and Sanctions*[13] outside of criminal law in Spain. However, recent decades have seen an expansion of punitive measures in various forms, both in Spain and elsewhere[14]. In particular, in the area of so-called criminal labour law, this expansion has been characterised by including in the punitive provisions some behaviours that are already sanctioned in non-criminal regulations. This poses a serious problem, because they have largely been incorporated without providing for any additional levels of harm, which would make it possible to distinguish an administrative infringement from a criminal offence.

Despite the fact that criminal labour law has undergone a notable expansion, there are certain truly serious conducts that are not expressly criminalised in the Spanish Criminal Code. These are slavery and forced labour practices. Admittedly, these practices would fall under Art. 311.1º of the Criminal Code, which reads as follows:

"Prison sentences of between 6 months and 6 years and a fine of between 6 and 12 months will be imposed on:

1. Those who, by means of deceit or abuse of a situation of need, impose working or Social Security conditions on the workers in their service that are detrimental to suppress or restrict the rights that are granted to them by law, collective bargaining agreements or individual contracts".

Even though these behaviours are covered by Article 311.1º above, the fact is that this provision includes wide-ranging practices in terms of their degree of harm to workers" rights. This is why the penalties are so broad (the prison sentence ranges from 6 months to 6 years). The inclusion of disparate violations in the same article means that the full extent of slavery and forced labour is little recognised, and legal provisions are not consistent with the situation of our time, as shown by the data in section 2 above. There is such lack of knowledge of the actual situation by the Spanish legislator that the concepts of slavery and forced labour are not even mentioned in these articles of the Criminal Code. Professor Terradillos has noted that there is an important paradox here, as the Criminal Code requires slavery and forced labour practices to be encompassed within more "minor" criminal offences such as the imposition of unlawful working conditions in Article 311.1º, and charged cumulatively with other offences such as offences against moral integrity, illegal detentions, and human trafficking for exploitation, among others. This allows for relatively long prison sentences being given, "but causes the boundaries of very serious crimes, namely, imposing slavery and forced labour, to be blurred"[15].

Table 1. Violations of workers" rights in the Spanish Criminal Code

Art. 311.1º	Imposing unlawful conditions
Art. 311.2º	Simultaneously employing a number of workers without registering them with the social security system or without a work permit
Art. 311.1º	Maintaining unlawful conditions
Art. 311.4º	Engaging in the above behaviours resorting to violence or intimidation
Art. 311bis	Repeated hiring of foreign nationals without work permits/Hiring of minors without work permits
Art. 312.1	Workers" trafficking (transfer, placement)
Art. 312.2 (I)	Recruiting or luring people out of employment by offering misleading or false employment or working conditions
Art. 312.2. (II)	Employing foreign nationals without a work permit under conditions that impair, suppress, or restrict rights
Art. 313	Promoting migration by simulating a contract or placement or similar deception
Art. 314	Engaging in serious discrimination and failing to restore equality under the law following a formal notice or administrative sanction
Art. 315	Preventing or limiting the rights to organise a union and take industrial action/Coercing to go on strike
Art. 316 - 318	(Intentional and reckless) violations of health and safety regulations

Source: Spanish Criminal Code

In addition to this situation, which makes it impossible to have an adequate appreciation of slavery or forced labour practices, there is another inconsistency in the Spanish Criminal Code. In 2010, human trafficking was incorporated into Spanish legislation as a separate criminal offence, pursuant to the applicable supranational regulations[39]. The new offence was inserted into Art. 177bis of the Criminal Code. It defines the human trafficking in the same way as supranational regulations do, including the well-known three elements:

- the conducts (inducing, transporting, etc.),
- the means (violence, intimidation, deception, etc.)
- and the purposes (exploitation of various kinds).

These purposes literally include "imposing forced labour or services, slavery or practices similar to slavery, servitude or begging" (Art. 177bis.1.a). This reference is incongruous insofar as these practices do not appear as such in any other provision of the Criminal Code. They could be included in the scope of Art. 311.1, but as mentioned above, it also includes other types of less severe conduct.

The crime against humanity was incorporated into the Spanish Criminal Code in 2003, as required by the Rome Statute of the International Criminal Court. It also punishes subjecting a person to slavery or keeping them in slavery, provided that the acts are perpetrated "as part of a widespread or systematic attack against the civilian population or a part thereof" (Art. 607bis of the Criminal Code). The same provision also sets out a definition of slavery as "the situation of a person over whom another person exercises, albeit de facto, all or some of the attributes of the right of ownership, such as buying, selling, lending, or exchanging such person". The same inconsistency is found here, since slavery as such is not criminalised elsewhere in the Spanish Criminal Code.

In view of the above, there is a certain lack of coherence on these matters in the provisions of the

[39] Protocol to Prevent, Suppress and Punish Trafficking in Persons Especially Women and Children, supplementing the United Nations Convention against Transnational Organized Crime (15 November 2000); Council of Europe Convention on Action against Trafficking in Human Beings (16 May 2005); Directive 2011/36/EU of the European Parliament and of the Council of 5 April 2011 on preventing and combating trafficking in human beings and protecting its victims, and replacing Council Framework Decision 2002/629/JHA (Official Journal L 101, 15 March 2011). See Pérez Cepeda, A. I. & Benito Sánchez, D. *Trafficking in Human Beings. A Comparative Study of the International Legal Documents.* Groningen/Amsterdam: Europa Law Publishing, 2014.

Spanish Criminal Code. It is therefore necessary to incorporate the offences of subjection to slavery and forced labour separately into the Criminal Code. This would be the starting point for holding Spanish companies accountable for such practices.

4. Corporate criminal liability for forced labour practices under Spanish law: unfinished business

Organic Law 5/2010 of 22 June 2010 introduced the criminal liability of legal persons into Spanish criminal law, in line with other legal systems and supranational requirements, especially those of the Organisation for Economic Co-operation and Development. Since the entry into force of the Organic Law, companies can be held liable for certain criminal offences if the requirements in Art. 31bis of the Criminal Code are met. Specifically, Art. 31bis encompasses two events:

1. A legal person can be criminally liable when the offence is committed by its legal representative or a person who individually or collectively has decision-making, organisational or controlling authority.
2. A legal person can be liable when the offence is committed by a person under the authority of the aforementioned.

In both cases, the offence must be committed in the name or on behalf of the entity, in other words, within the scope of duties of the subject in question, and it must be carried out for the direct or indirect benefit of the company. In the second case, a further requirement is that the offence must be enabled by a serious breach of the duties of supervision, monitoring and control by the persons referred to in point (1), considering the circumstances of the case. If the legal person is found guilty of a criminal offence, the applicable penalties are those mentioned in Table 2.

Table 2. Penalties applicable to legal persons under Spanish law

Art. 33.7 Spanish Criminal Code	a) Fine by quotas or proportional
	b) Dissolution of the legal person. The dissolution shall cause definitive loss of its legal personality, as well as of its capacity or act in any way in legal transactions, or to carry out any kind of activity, even if lawful.
	c) Suspension of its activities for a term that may not exceed five years.
	d) Closure of its premises and establishments for a term that may not exceed for five years.
	e) Prohibition to carry out the activities through which it has committed, favoured or concealed the felony in the future. Such prohibition may be temporary or definitive. If temporary, the term may not exceed fifteen years.
	f) Barring from obtaining public subsidies and aid, to enter into contracts with the public sector and to enjoy tax or Social Security benefits and incentives, for a term that may not exceed fifteen years
	g) Judicial intervention to safeguard the rights of workers or creditors for the time deemed necessary, which may not exceed five years.

Source: Spanish Criminal Code

Having explained the cases of attribution of liability to legal persons, it should also be borne in mind that legal persons cannot be liable for *any* of the offences provided for in the Spanish Criminal Code, but only for a closed list of offences (*numerus clausus*), which is shown in Table 3. It is therefore necessary to ensure that the Criminal Code expressly states that the legal person can be liable for the offence in question. This list of offences is essentially composed of so-called white-collar crimes, with one remarkable exception: violations of workers" rights, which do not appear in this list. This has been criticised by the doctrine[40] because the context in which workers" rights can be violated is typically within a corporation. Moreover, violating these rights undoubtedly benefits

[40] See, among others, Agustina Sanllehí, J.R. Delitos contra los derechos de los trabajadores. In *Lecciones de Derecho penal económico y de la empresa. Parte general y especial*, directed by J.M. Silva Sánchez.Barcelona: Atelier, 2020, 415; Gil Nobajas, S. Protección penal del trabajador y responsabilidad penal de personas jurídicas. In *Direitos Humanos e Mediaçao*. Carviçais. Corcoy Bidasolo y V. Gómez Martín (511-553). Valencia: Tirant lo Blanch, 2016.

the company, which is a requirement for the attribution of criminal liability to a legal person under the Spanish system, as mentioned above.

In summary, under Spanish law, companies cannot be held liable for criminal violations of workers" rights. There is an urgent need to reform the Criminal Code to ensure that criminal liability can be attributed to legal persons for this type of offences. It would be sufficient to insert a final paragraph to Art. 318 specifying this.

In addition to the above, further reform of the Criminal Code would be needed whereby it would expressly recognise that the parent company is responsible for what the subsidiary company does in terms of violations of workers" rights in the territory where it operates[41]. Under the current regulations, Spanish criminal law could not be applied to a subsidiary company whose registered office is in a different state and which has a different legal personality, as none of the principles for the application of Spanish criminal law on a territorial basis would be met, as will be discussed in the following section. To solve this, some authors[42] have proposed considering both parent and subsidiary as a single economic unit, as is already the case for the purposes of competition law penalties in the European Union. Ever since the Judgment of the Court of Justice of the European Union of 10 September 2009 was rendered (case C-97/08 for, Akzo Nobel and another v. Commission), where the subsidiary was wholly owned by its parent company, it has been possible to attribute liability to parent companies for infringements of antitrust rules committed by their subsidiaries. In other words, priority has been given to the financial situation rather than to the legal avenue to solve the problem.

Table 3. Offences attributable to a legal person under the Spanish Criminal Code

Art. 156 bis (trafficking in human organs),
Art. 177.7 bis (trafficking in human beings),
Art. 189 bis (child pornography),
Art. 197 quinquies (discovery and revelation of secrets),
Art. 251 bis (swindling),

"Hacia el fin de la impunidad…", *op. cit.*, 142, footnote 81.

5. The application of Spanish criminal law to offences committed by Spanish legal persons operating in other countries

The classic principle of application of a state"s criminal law is the principle of territoriality, which means that the courts of that state have jurisdiction to prosecute offences committed within its territory. Even when this principle was originally applied in modern liberal states it had some exceptions, such as, for example, crimes committed by a state"s national in another state (active personality principle). Additional principles were developed over time to address new situations such as transnational crimes (e.g., piracy) and crimes against the international community (e.g., genocide), in particular, the principle of universal jurisdiction.

In Spanish law, these matters are governed by Article 23 of the *Organic Law of the Judiciary* (hereinafter LOPJ)[43]. Under current regulations, even if violations of workers" rights were included in the list of offences for which a legal person can be held liable, it would not be possible to prosecute that legal person if the offence had been perpetrated in a different state, as is the case discussed in this paper regarding the imposition of forced labour on workers in a state other than Spain by Spanish companies. This is so because the principle of universal jurisdiction contained in Article 23.4 of the LOPJ is only applicable to a closed list of offences, which does not include violations of workers" rights.

In view of the above, in order for Spanish courts to be able to prosecute and eventually convict a Spanish company for violations of workers" rights perpetrated in a foreign territory, it would be necessary to extend the jurisdiction of Spanish courts[44]. Specifically, the legislative should amend Article 23.4 of the LOPJ that would incorporate the violations of workers" rights into this list of offences. Similarly to the provisions in paragraph m) of Article 23.4 of the LOPJ with respect to human trafficking, it should be noted that Spanish courts have jurisdiction to hear criminal cases related to offences committed by both Spaniards and non-Spaniards outside the national territory that could be classified as violations of workers" rights provided that "the proceedings are directed against a legal person, company, organisation, group or any other type of entity or group of persons whose headquarters or registered office are in Spain".

6. Conclusions

It can be concluded from the above that current Spanish legislation does not allow for criminal sanctions to be imposed on Spanish companies that engage in violations of workers" rights in other states. This means that these corporations go unscathed after committing serious human rights violations, such as the imposition of forced labour. This situation contradicts the supranational mandates that have been developed in recent years.

The lack of a supranational jurisdiction that could be responsible for addressing these serious human rights violations perpetrated by transnational corporations makes it necessary for states to take action in their domestic law. In the case of Spain, a number of legislative reforms would be necessary.

- Firstly, slavery and forced labour practices should be given an independent treatment in the Criminal Code, so as to enable the imposition of penalties that are proportional to the gravity of the offenders" crimes.
- Secondly, this type of offence should be expressly included in the list of offences that can be attributed to a legal person, since under Spanish criminal law, legal persons cannot be held liable for all the offences contained in the Criminal Code, but only for those expressly indicated.
- Thirdly, it would be necessary to consider that the Spanish parent company and its subsidiary form a single economic unit and therefore, the acts committed by the subsidiary abroad are attributable to the parent company, having fulfilled the rest of the requirements of Article 31bis of the Criminal Code.
- Finally, it would be necessary to extend the jurisdiction of the Spanish courts, regulated in the *Organic Law of the Judiciary*, to allow for violations of workers" rights committed by Spanish legal persons abroad to be prosecuted and criminal penalties imposed, as is the case for human trafficking crimes.

IS THERE ANY CONNECTION BETWEEN THE COMMANDAMENTS GIVEN BY GOD AND THE CRIMINAL LAW?

Ruxandra-Elena BRÂNCUȘ (TECOI)*

Abstract

Religion and law are two intertwining fields that aim at the supreme good of man and justice, both branches having common principles that often end up intersecting. In fact, from my point of view, law and religion are two areas that complement each other because law helps us guide in real life here on earth and religion leads us to discover the ideal of eternal life. We will notice that, in terms of religion, the first laws were formed; the first punishments and that all these took place from here. Looking at what is written in the Holy Scripture (the Bible) which presents man in the image and likeness of God, creator of all seen and unseen things.

Keywords: *religion, punishment, criminal law, Bible, God and human*.

1. Religion references

The first man was Adam, whom he placed in the Garden of Eden to work and guard.

The Lord God commanded Adam: "You can eat from any tree in the garden, but from the tree of the knowledge of good and evil you must not eat, because on the day you eat, you will surely die."

Thus God places him in space (the Garden of Eden), and then gives him the first law, he presents his rights and obligations (to work and guard them) and at the same time he presents the consequences that can occur in case of disobedience (not to eat from the tree of the knowledge of good and evil), namely the death penalty (you will surely die), which is the first and the harshest punishment that religion introduces to us.

Adam infringed God"s command and, as a result of disobedience, all his rights (eternal life) were taken away and he served his sentence. Following the above, we can observe that the first punishment attested from a religious point of view was the capital punishment.

We thus consider that the first law and the first punishment were created by God.

These laws were considered just because they came from the divine, creative force of man who possesses the supreme good. The death penalty means killing a person for serious crimes, governed by law, crimes for which he has been found guilty.

This is the harshest form of repression.

2. The begins of criminal law

If we look at the world and the roots of criminal law, we will see that it emerged from the time of the Sumerians, what is known today as Iraq, when they compiled the oldest but also the best known set of criminal laws. The code was created around the years 2100-2050 BC and it seems that, ever since, man needed a distinction between what is good and evil in terms of the actions and not only to distinguish between criminal and civil law but some clear rules to be established, known and respected by everyone for the common good of the society at that time.

Thus, the criminal law regulated since then the cases that were directed against a person or against the state.

One of the first documents attesting to criminal law in Europe appears after the year 1066 when the duke of Normandy William the Conqueror has invaded England. The European legislation begins to judge offenders in a court room in the XVIIth century. Later, the English government came up with a new concept denoted as common law and it was covering the problems in the civil right and from the criminal right and theoretically this concept included the two rights systems.

This innovative system was to come to fruition, even to America, following Christopher Columbus" voyage in 1492 when Europe began to establish colonies in America as a result, so as a result of these colonies British law ruled North America until the outbreak of the American Revolution. At the end of the war, America became an independent nation that adopted its own constitution, the Constitution of the United States, under the Supreme Law of the country.

And forth, the American law system borrowed from the English legislation, the common right which rules America.

In Romania, the first penal code has appeared in 1864 on the 30th of October and was applied on the 1st of May in 1865, named as: (Cuza"s Code) and provided sanctions for the corrupt public workers which aside from imprisonment they were also losing their job for the rest of their lives. The penal code has also constituted one of the reforms of Alexandru Ioan Cuza.

In 1937 The Penal Code of Carol the 2nd is adopted up until 1969, this was a new penal code which brings a lot of new elements to the old existing one:

* PhD Candidate, Faculty of Law, "Nicolae Titulescu" University, Bucharest; ANAF inspector (e-mail: ruxandraelenatecoi@gmail.com).

- for the first time, education for underage minors is introduced

- wrongdoing is split up into three: crimes, offenses, and contraventions.

- another differentiation from the old system is that the punishments were more severe.

With the change of the governing regime and the transition to socialist Romania, a series of changes took place, including the appearance of a new penal code in 1969, which define the notion of "crime" for the first time in Romania (the act of social danger, committed with guilt).

Other novelty elements that have been introduced are:

- plurality of crimes

- causes that remove the criminal character of the deed

This penal code underwent numerous changes, especially after 1989, but remained in force until 2014.

The Criminal Code governs the laws in which the incriminated deeds are described, the commission of the deeds (the only basis of criminal liability) described by the code attracts criminal liability and the punishment of the person who committed the crime.

According to the current criminal code, criminal law sanctions are

- punishments;

- safety measures;

- educational measures.

Punishments according to the Romanian penal code are of several types depending on the severity of the restriction of rights. Punishments are classified as follows: the main punishments, the accessory punishments and the complementary punishments (banning the exercise of certain rights, military degradation, publication of the sentence decision, dissolution of the legal person, closure of some working points of the legal person, banning the participation in the public procurement procedures, the placement under judicial oversight, the posting or publication of the conviction decision).

In Romania, the death penalty had been abolished since the time of Alexandru Ioan Cuza in 1865[1], being the first European country to abolish this punishment, but, in 1945 during the Second World War the death penalty was reintroduced by specific decrees given by the regime.

The death penalty was abolished by law decree no. 6 of January 7th, 1990[2], abolition reconfirmed by the Romanian Constitution in 1991.

According to BBC NEWS[3], there are 56 countries that keep the law on the death penalty worldwide, 28 countries still have this law in force but no one has been executed for at least 10 years, 8 countries allow the death penalty only for serious crimes in exceptional circumstances, such as those committed in time of war and in 106 countries the law does not allow the death penalty.

About 60% of the world"s population lives in countries where capital punishment still exists, countries such as Iran, Saudi Arabia, Indonesia, Egypt, Algeria, Libya. Belarus is the only country in Europe that has not abolished the death penalty.

Since 1991, about 300 death sentences have been implemented according to MediaFax.

3. God"s law

Another very important piece of evidence regarding the connection between the institution of law and religion is the DECALOGUE.

After man fell into sin, God considered the need of certain rules that would govern human behavior, rules that have accompanied people from then until now, which determined some of them not to make any mistakes, to lead a righteous life and even to have moral support.

From a religious point of view, the observance of God"s commandments represented the guarantee of eternal life. They have had an overwhelming importance in the evolution of the society as I am convinced that in ancient times and for a very long time most people knew and were guided by the evangelical precepts as very few people knew the laws.

At the time, the only person who could guide them was the given priest because the majority of the population was illiterate, not being able to document themselves from a legislative point of view.

The 10 commandments were written by God on two stone tablets and they were given to Moses. Although numerous historical documents attest to the fact that at that time the Jews had not invented the alphabet, many religious and historical sources support the theory that the 10 such commandments were dictated by God himself and written by Moses. Moses was chosen by God to bring the Jews out of Egypt and take them to the Promised Land, since leaving Egypt, Moses faced a multitude of problems on the part of the Jews who did not follow the rules imposed by God suffering in this way and making superhuman efforts to bring them on the right path every time. Every time he wanted to convey the decisions that God made, he called him to a certain place and he listened to what God said.

The 10 commandments written by Moses are[4]:

1. Thou shalt have no other Gods before me (You shall have no other Gods before me);

[1] https://adevarul.ro/locale/iasi/codul-penal-drastic-cuza-romaniei-moderne-facut-curatenie-sistemul-public-judecatorii-corupti-primeau-inchisoare-viata-1_55e0179cf5eaafab2cff2e42/index.html, last consulted on 12 May 2021.

[2] M. Of. no. 4 from 8 January 1990.

[4] See, for example, *https://ro.wikipedia.org/wiki/Cele_zece_porunci*, last consulted on 12 May 2021.

2. Thou shalt not make unto thee any graven image (You shall not make unto you any graven image);

3. Thou shalt not take the name of the Lord thy God in vain (You shall not take the name of the Lord thy God in vain);

4. Remember the Sabbath day and keep it holy;

5. Honour thy father and thy mother (Honour your father and your mother);

6. Thou shalt not kill (You shall not kill);

7. Thou shalt not commit adultery (You shall not commit adultery);

8. Thou shalt not steal (You shall not steal);

9. Thou shalt not bear false witness against thy neighbour (You shall not bear false witness against your neighbour):

10.Thou shalt not covet anything that is thy neighbour"s (You shall not covet anything that is your neighbour"s).

4. The connection between DECALOGUE and Criminal Law

We can see that some of the commandments in the Decalogue are found in the Criminal Code[5] and they describe exactly its main titles.

We find the commandment "You shall not kill" in the first title "Crimes against the person", chapter I "Crimes against life" all the crimes of this chapter refer to the person"s life, the most precious right that a man has, the right to life, also stipulated in the Romanian Constitution[6].

Looking at the religious side, life is considered to be given by God and only God is allowed to take it.

The crime of murder (art. 188 of (1) the murder of a person is punishable by imprisonment from 10 to 20 years and the prohibition of the exercise of certain rights.) It is one of the most severely punished crimes by the criminal code for all these crimes of murder, qualified murder ((1) The murder committed in any of the circumstances together: a) with premeditation; b) material of interest; c) to evade or to evade another from being held criminally liable or from the execution of a sentence; d) to facilitate or conceal the commission of another crime; e) by a person who has previously committed a crime of murder or an attempt at the crime of murder; f) on two or more people; g) on a pregnant woman;

h) By cruelty, it shall be punished by life imprisonment or imprisonment from 15 to 25 years and the prohibition of the exercise of certain rights.

(2) the attempt is punishable), the manslaughter (Art. 192: (1) The manslaughter of a person shall be punished by imprisonment from one to 5 years.

(2) The manslaughter as a result of the non-observance of the legal provisions or of the precautions for the exercise of a profession or trade or for the performance of a certain activity shall be punished with imprisonment from 2 to 7 years. When the violation of the legal provisions or of the precautions constitutes in itself an offense, the rules regarding the competition of offenses apply.

(3) If, by the committed deed the death of two or more persons was caused, the special limits of the punishment provided in par. (1) and par. (2) shall be increased by half.), Determination or facilitation of suicide, hitting or other acts of violence (Art.193: Hitting or other acts of violence (1) Hitting or any acts of violence causing physical suffering shall be punished by imprisonment from 3 months to two years or a fine.(2) The act of causing traumatic injuries or affecting the health of a person, the severity of which is assessed by days of medical care of not more than 90 days, shall be punished by imprisonment from 6 months to 5 years or a fine (3) The criminal action shall be initiated upon the prior complaint of the injured person.

The crime of murder is one of the most punishable offenses in the criminal code because all these crimes of murder: first degree murder, manslaughter, hitting or other acts of violence, personal injury, ill-treatment of minors, domestic violence all these crimes protect the physical integrity of a person.

In a brief conclusion of the first applied analysis regarding the similarity between the Criminal Code and the Decalogue, it is obvious that human life is a fundamental right protected since ancient times and coincidentally or not, the command given by God has come to be developed, analyzed and applied in all forms of life-threatening crimes and punished depending on the age of the injured person: children, pregnant women. In the case of these categories of people the punishments are much more severe reaching up to 30 years in a maximum security prison.

Analyzing further the commandments from the Decalogue, we find in "Title II" of "Crimes against property" the commandment number 7 "You shall not steal". This phrase includes all forms of crimes derived from it, such as: robbery, (Art. 228 of (1) Taking a movable property from the possession or detention of another, without his consent, in order to misappropriate it, is punishable by imprisonment from 6 months to 3 years or a fine.

(2) The deed also constitutes theft if the property belongs in whole or in part to the perpetrator, but at the time of committing the deed, the property was in the legitimate possession or detention of another person.

(3) Documents, electricity, as well as any other kind of energy that has economic value are considered movable property.

(Art. 229 Qualified theft (1) Theft committed in the following circumstances:

a) in a means of public transport;

[5] *http://legislatie.just.ro/Public/DetaliiDocument/109855*, last consulted on 12 May 2021.

[6] *https://www.constitutia.ro*, last consulted on 12 May 2021.

b) during the night;

c) by a disguised, masked or cross-dresser person

d) by burglary, climbing or by the unlawful use of a real key or a false key;

e) by decommissioning the alarm or surveillance system,

shall be punished by imprisonment from one to five years.

(2) If the theft was committed in the following circumstances:

a) on an asset that is part of the cultural heritage;

b) by trespassing or violation of professional headquarters;

c) by a person carrying a weapon,

the punishment is imprisonment from 2 to 7 years.

(3) Theft regarding the following categories of goods:

a) crude oil, gasoline, condensate, liquid ethane, gasoline, diesel, other petroleum products or natural gas from pipelines, warehouses, tanks or tank cars;

b) components of irrigation systems;

c) components of electrical networks;

d) a device or a signaling, alarming or alerting system in case of fire or other public emergency situations

e) a means of transport or any other means of intervention in case of fire, railway, road, naval or air accidents or in case of disaster;

f) safety and directing installations for railway, road, naval, air traffic and their components, as well as components of the related means of transport;

g) goods by which the safety of traffic and persons on public roads is endangered;

h) telecommunication, radio communication cables, lines, equipment and installations, as well as communication components, is punishable by imprisonment from 3 to 10 years.

Then, we can observe an element that includes both crimes against the person and those against the property, namely Chapter II:" Robbery and piracy".

Robbery is a complex crime that involves committing theft by violence or by keeping stolen property, the perpetrator having as a main purpose to commit theft. The violence and threats are only the means by which he achieves his purpose, which is why this crime is noted in the chapter that protects the person"s property and not in the chapter that protects the person"s life, because the difference between the two is the purpose for which, in the mind of the offender, it triggered both the intellectual and volitional act that led to the commission of the crime.

The legislator incorporated the two fundamental rights in the constitutive element of a single crime.

You shall not bear false witness against your neighbor. This commandment is generally valid for several branches of law not only the criminal but also the civil and administrative in all cases in which witnesses are heard (the act of the perpetrator who, in a criminal case, civil or in any other procedure in which witnesses are heard).

The false testimony is found in article 273, the difference between the commandment and the regulation in the code could be that it does not refer to any person but only to the human neighbor.

There is a risk that in the usual language this phrase will be misinterpreted, namely that there should be a certain degree of kinship between the perpetrator and the one against whom the false witness testifies, but God does not refer to a particular person but to any resemblance, because, before God we are all His sons. The Criminal Code also incriminates the determination of a person to testify falsely, as it extended the simple command to the one who tries to influence a person negatively and to determine him to lie, thus misleading the authorities.

The commandments in the Decalogue cover other areas of law such as family law, such as the commandment 7 " You shall not commit adultery" according to the dictionary definition, means the person who violates the proper limits of his morality. In this situation we find two institutions, that of law, which refers to Family Law, and in religion, the Institution of Marriage, the Sacrament of Marriage.

The sacrament of marriage, as we find in the Holy Scripture, represents first of all the spiritual union between man and woman (not only bodily) because before God the human soul and his good deeds matter, and this sacrament is fulfilled in the birth of babies. Both institutions want to protect the family to remind once again that the family primarily presupposes love according to religion and respect according to law, these two characteristics, that a family must have, help the peace and quiet of a home and the longevity of a family.

5. Conclusions

In conclusion of what is stated throughout this article, I believe that God has an essential role in human life, especially now in the modern world, when people are stress-tested, trials and many more temptations. We live in the century of speed and we find that everything happens with an almost imperceptible rapidity around us, so nowadays even more we must turn our attention to the perceptions given by God, because I am personally convinced that if man has with him The Decalogue and respects God"s word, he can face trials, he can live in communion with those around him and he can have a quiet life.

Before everything we read and helps us to develop intellectually, we must also lean towards the spiritual life and take care of our souls.

"LOVE MUST COME BEFORE REASON"

TAX EVASION. A CRIME THAT REQUIRES A MATERIAL RESULT OR ONLY A STATE OF DANGER?

Radu-Bogdan CĂLIN[*]

Abstract

Although tax evasion has been incriminated as a crime in Romania for almost 100 years, in the doctrine and judicial practice there are still presented contradictory points of view regarding the requirement result as constituent element of crime. The present study aims to carry out an in-depth analysis that provides an answer to the question of whether the crime of tax evasion require a material result or only a state of danger.

The study is divided into three sections, starts with an overview of the concept of tax evasion, of the line between lawful and illegal evasion and the history of legislation regarding tax evasion.

The next section presents various concepts and theories about the material result or the state of danger as constituent elements of crime, presented in national and international doctrine. The section continues with a presentation of the consequences of the classification of offenses, by reference to the result they produce.

In the last part of the study is presented an analysis of all variants of tax evasion, based on the theories and concepts set out in previous sections, which concludes that the tax fraud, apparently a crime that require a material result, is in fact a crime that require only a state of danger.

Keywords: *tax evasion, tax fraud, white-collar crimes, crime result, history of legislation regarding tax evasion, theories regarding the result of crime, concept of tax evasion, types of tax evasion crime.*

1. General considerations on tax evasion

1.1. The concept of tax evasion

In Romania, one of the main causes for economic problems is the size of the underground economy, representing a significant percentage of the gross domestic product.

The large size of the underground economy can be explained by the weak reaction of the authorities, and the evasion of taxes is caused by the pressure of taxation and by the fluctuation of law in the field of taxation.

The word "evasion" comes from the Latin "evasio, -onis" and from the French word "évasion", referring to the act of avoidance or evasion.

In a broad sense, the concept of tax evasion involves evading the fulfilment of one"s tax obligations, and it has either legal or illegal forms.

According to the literature[1], "both forms represent components of tax evasion, the evasion punishable by law, the fraudulent evasion is the illicit tax evasion; the legal tax avoidance is only a way of exploiting some "loopholes" in the law. Theoretically, the delimitation of the two seems simple; in practice there is a thin line between the two, an area so-called "avoision" (avoidance + evasion), which means the ability of an individual to manage his business in the sense of minimising their taxes, but doing it in an unclear way, a way in which it is difficult to distinguish between tax evasion and tax avoidance".

The modality in which authorities understood to combat this phenomenon varied from fiscal amnesties to administrative penalties/sanctions, the repressive measures culminating in criminal penalties/sanctions with high punishment terms and the adoption of a strategy to combat tax evasion, a matter of national security, by C.S.A.T. Decision from 69/2010.[2]

1.2. History of tax evasion incriminations

The crime of tax fraud was incriminated for the first time in the form of a closed form crime[3] in Romania by Law no. 661/1923 for the unification of direct contributions and for the establishment of the global income tax, being defined as any evasion from the payment of the tax, and was punished with a fine and a corrective punishment from 6 months to one year. Subsequently, in the content of Law no. 88/1933 for the unification of direct contributions and for the establishment of the global income tax, the term tax evasion was used for the first time, and in chapter VI were regulated measures against tax evasion and

[1] Olteanu Doina-Simona, Pascu Loredana-Mihaela, *Evaziunea fiscală şi corupţia – fenomene complexe ale societăţii româneşti*, WorkingPapes *ABC-ul lumii financiare*, nr. 5/2017 la adresa *http://www.fin.ase.ro/ABC/fisiere/ABC5_2017/18.pdf*.

[2] By CSAT Decision no. 69/2010 on preventing and combating tax evasion, *not published in the Official Gazette*, the Interinstitutional Working Group for preventing and combating tax evasion was set up at a strategic level.

[3] Acording to F. Streteanu, D. Nițu, *Drept penal. Partea generală*, vol. I, Ed. Universul Juridic, București, 2014, p. 282, in the case of closed form crimes, the legislator establishes a certain form, out of the possible actions likely to infringe the protected value, that the typical action must take, and in the case of free form crimes it is sufficient that the action be "causal" in relation to the expected result.

sanctions, which were divided into simple and aggravated administrative offences.

During the communist era, by Decree no. 202/1953 for the amendment of the Criminal Code of the Romanian People"s Republic, the non-payment of taxes or fees by those who have the possibility of payment, or evading such payment by concealing the excisable or taxable object or source, or destroying mandatory records were incriminated as tax offenses and punishable by correctional imprisonment for up to one year.

After the fall of the communist regime, the first regulation of tax evasion in the criminal area was made by Law no. 87/1994, when different forms of the crime were incriminated, respectively evading the payment of taxes, fees and contributions due to the state by not registering activities, by not declaring the taxable income, by concealing the taxable object or source, and by not registering the revenues in the accounting documents, or by registering expenses not based on taxable operations.

At present, Law no. 241/2005 is the seat in the field of combating and sanctioning tax evasion. The crime of tax evasion is regulated as a crime with alternative content, so that committing several different forms provided in the criminalisation norm does not generate concurrent offences and does not affect the unity of the crime.[4]

In order to carry out a scientific analysis of the immediate result in the case of the crime of tax evasion, it is necessary to first make an analysis of the immediate result of the crime requiring a material result and the crime requiring a state of danger / the crime of danger and the result crime.

2. Concepts and theories on the immediate result of crimes

2.1. Establishing the immediate result of the crime as a constitutive element

In the Italian criminal doctrine of the early 1970s there were two traditional views based on which the result/ prosecution of the crime was established. "According to the naturalistic view, the result/consequence is a natural effect of human behaviour, criminally relevant and linked to it through causation. Thus, the result/consequence is characterised by two elements: it is a modification of the external world and it is provided by the criminal law as a constitutive or aggravating element of the crime.

It follows that for a consequence of an action or inaction to be the immediate result, it must meet two conditions: it should change the external reality and it should be provided by the criminal law. The immediate result/consequence is a concept delimited by the action or inaction as an element of the crime, by delineating from the same temporally and spatially.

According to this view, the result/consequence does not exist in the case of any crime, but only in the case of those acts provided by the criminal law which have the ability to change the external reality, the change being susceptible to being perceived and evaluated. Starting from this assumption, the crimes can be classified as result crimes, in which case there is a result in the naturalistic sense, and pure conduct crimes in which case this result is missing.

The legal concept defines the result as an infringement of the interest protected by the criminal norm, materialised in the damage or endangerment of the protected social value. As the crime necessarily presupposes an infringement of the legal object, this distinction does not justify the distinction between conduct crimes and result crimes, because the result exists in the case of both categories of crimes"[5].

This same views have been maintained by the modern Italian criminal doctrine[6], but slightly nuanced. In the naturalistic view, the immediate result is the result or consequence of the action or inaction provided by the criminal norm. The change of the external world is: a) related to the action or inaction and to causation, but it is an entity different from the two from a logical and chronological point of view b) provided by the criminal law as a constitutive or aggravating element of the crime. The naturalistic view distinguishes between: 1) crimes of pure conduct, for which law requires the simple fulfilment of the action or inaction 2) material crimes, for the existence of which law requires that the action produce a determined change of the world. The first category includes most of the administrative penalties and offences/misdemeanours provided in the Italian Criminal Code, *tax evasion*, clandestine entry into military compounds, and the second category the most serious crimes, murder, bodily harm, blackmail, fraud.

According to the legal view, the immediate result is the harmful effect of the conduct, represents the damage of the interest protected by the criminal norm, and is logically linked to causation. The connection is a logical one and is not related to the temporal succession, if in the case of certain crimes the immediate result occurs at a certain time interval from the commission of the action or inaction, in the case of other crimes the damage of interests occurs simultaneously with the criminal action or inaction.

In the Romanian criminal doctrine, among the first authors who defined the generic content of the crime as being composed of an objective element, the consequences of the activity, the causation, was Mr.

[4] In this regard, see Decision no. 25/2017 by which the Supreme Court resolved in principle the legal issue "if the actions listed in art. 9 (b) and (c) of Law no. 241/2005 are distinct normative modalities for committing the crime of tax evasion or alternative variants of the material element of the single crime of tax evasion ".

[5] F. Antolisei, *Manuale di diritto penale*, Ed. Mvlta Pavcis, Milano, 1969, p. 229.

[6] F. Mantovani, *Diritto Penale*, Ed. CEDAM, Florenţa, 2015, p. 178.

Vintilă Dongoroz in 1939. The established author was the first to have a complex vision on the generic content of the crime and managed to structure it in three parts, introducing in the Romanian criminal doctrine *the concept of activity consequences.*

In the opinion of the established author[7], any crime involves *an evil*, and one of the constitutive elements of the crime is the consequence of the criminal activity. The result may consist of a state, which is the natural consequence of the dynamic process, i.e. the transfer of physical energy from one position to another, thus of the existence of physical activity itself, or of a result which is a substantial achievement of the dynamic process, ie a material transformation brought to the object on which the physical activity befell. The crimes where it is sufficient for the consequence to consist in a state are called formal crimes or crimes of attitude, while the offenses in which the consequence must consist in a result are called material crimes or result crimes. In order to differentiate, the author pursued aspects related to the way in which the criminal act was incriminated, respectively if the consequence consists in a state, it is not necessary to provide it in the content of the incrimination, and when the consequence consists in a result, the legislator must always indicate such a result, in an explicit or implicit manner.

The current Romanian criminal doctrine[8] has embraced the theory according to which the result of an act under the criminal law may consist of a material result, which is a perceptible change in reality or a state of danger for the value protected by the rule of incrimination, without a material consequence being caused. Based on this theory, the crimes were classified, according to the consequence produced, in result crimes and crimes of danger.

In the Romanian doctrine[9], the notions of material crime are usually used for result crimes, and formal crime for crime of danger. The use of these notions of material crime, formal crime respectively, is made in relation to the existence or non-existence of a material object as a constitutive element of the crime. If these terms were accepted, the theory according to which the result crime has always a material object would be accepted, and the crime of danger, having a formal character, has in no case a material object.

In reality, crimes of danger involving the existence of a material object have been identified, for example destruction and false signalling provided by Art. 332 (1) C.C.. and the disturbance of public order and tranquillity provided by Art.370 C.C. are crimes of danger - the immediate result consists in a state of danger for the safety of the railway traffic, the public order respectively, but they, however, have a material object. At the same time, there are result crimes which create a definite change in the outside world, but have no material object, as is the case of forgery[10].

Crimes of danger have been divided into crimes of abstract danger, when the state of danger for the protected value is presumed by the legislator, it being sufficient that the action or inaction provided by the criminalisation norm be committed, and crimes of concrete danger, when it is necessary that the state of danger provided by the incrimination norm effectively occur.

2.2. Consequences of classifying crimes as crimes of danger and result crimes

First of all, it is important that an offense fall into one of the two categories in order to determine when the offense is committed. In the case of result crimes, the crime is committed at the time of the actual change of reality, in the case of crimes of abstract danger, at the time of the action or inaction provided in the incrimination norm, and in the case of crimes of concrete danger, at the time of occurrence of the actual danger provided by the norm of incrimination.

Determining whether a crime is in the form of a committed crime or attempted crime is of particular significance, as there are consequences related to the sanctioning regime.

The moment of committing the crime is also relevant in order to determine the more favourable criminal law, the beginning of the prescription of criminal liability, the application of the criminal liability regime to the minor.

The inclusion of a crime in the category of crimes of danger or result crimes is also relevant with regard to the establishment of injured parties, passive subjects and with regard to the exercise of civil action.

In the opinion of some authors[11], the civil action cannot be exercised in the criminal procedure when the object of the case is a crime of danger.

We do not agree with this opinion, contradicted even by legal practice and we are of the opinion that civil action can be exercised in case of crimes of danger, for example threat, home invasion, blackmail, etc. In order for civil action to be exercised in criminal proceedings, it is not necessary for the crime brought before the court to produce a material result, but it is necessary for the damage to have been caused by committing the act provided by criminal law, even if the immediate result is a state of danger. Consequently, the state of danger produced by committing the action or inaction provided by the criminal law can cause moral damage, and even material damage in some cases.

In order to answer the question whether the crime of tax evasion is a crime of danger or a result crime, we shall proceed to analyse the immediate result by reference to each alternative variant.

3. Analysis of the forms of tax evasion crime in relation to the immediate result

3.1. The crime of tax evasion provided by Art. 9 (a) of Law no. 241/2005

The material element of the crime is represented by *the act of concealing the asset or the excisable or taxable source*. The action of concealment implies a concealment in the legal sense, which can take different forms, respectively the failure to register in accounting documents, drawing up false documents regarding the origin, ownership, or circulation of the asset. The essential requirement attached to the material element is that the action be carried out in order to evade the fulfilment of the tax obligations, but it is not relevant for the fulfilment of the constitutive elements of the crime if the evasion actually took place.

In legal practice[12] an example of hiding the goods is represented by the act of ordering the company"s accountant to record in the accounting records as deductible expense the value of unstamped cigarettes that had to be destroyed upon the imposition of the obligation to stamp such goods.

The immediate result of the act is the creation of a state of danger regarding the collection of tax obligations to the state budget. Considering the naturalistic view, it can be concluded that the development of the action provided by the incrimination norm does not produce a determined material change of the external world, a state of danger regarding the full collection of tax obligations to the state budget being created instead. It is not relevant for the constitutive elements of the crime if, by concealing the asset or the taxable source, a damage to the state budget is caused. Given that the rule of criminalisation provides that actions must be taken in order to evade the fulfilment of tax obligations and it is not necessary for the evasion to actually occur, the immediate result is not influenced by causing material damage consisting of legally due and unpaid tax obligations to the state budget.

However, even if it is a crime of danger, the state will be able to become a civil party with the tax obligations it has to recover, because for the exercise of civil action, the requirement is that material or moral damage be caused by committing the crime, which damage shall be recovered as a result of incurring legal liability based on tort.

As a consequence, the crime of tax evasion provided by Art. 9 (a) of Law no. 241/2005 is a crime of abstract danger, the state of danger being presumed by the legislator, and is consumed/effective at the time of committing the act provided by the incrimination norm, but can produce a material result as, by the concealment of the excisable or taxable asset or source, material damages to the state may be caused, consisting in the tax obligations legally due and not collected.

However, the material damage is not a constituent element of the crime, the latter is consumed regardless of whether or not the damage is caused.

3.2. The crime of tax evasion provided by Art. 9 (b) of Law no. 241/2005

The material element of the crime is represented by an inaction, respectively by the non-registration, in whole or in part, in the accounting documents or in other documents of the commercial operations performed, or of the revenues. The essential requirement attached to the material element is that the inaction be carried out in order to evade the fulfilment of tax obligations, but it is not relevant for the fulfilment of the constitutive elements of the crime if the evasion actually took place. The non-registration may consist in the non-preparation of supporting documents for the revenues or the non-registration of supporting documents in the accounting registers or in other supporting documents. In legal practice[13], a defendant was convicted for tax evasion because she did not record in the company"s registers the invoices with which she had bought certain products, and subsequently she did not record the revenues obtained from the sale of such products.

The immediate result of the act is represented by the state of danger regarding the collection of tax obligations to the state budget. Considering the naturalistic view, it can be concluded that the occurrence of the inaction provided by the incrimination norm does not produce a determined material change of the external world, a state of danger being created regarding the full collection to the state budget.

As a consequence, the crime of tax evasion provided by Art. 9 (b) of Law no. 241/2005 is a crime of abstract danger, the state of danger being presumed by the legislator, and is consumed at the time of committing the inaction provided by the incrimination norm. It is not relevant for the constitutive elements of the crime if the failure to register in the accounting documents of the financial operations causes a damage to the state budget. Given that criminalisation rule provides that the inaction must be undertaken in order to evade the fulfilment of tax obligations and it is not necessary for the evasion to actually take place, the immediate result is not influenced by causing material damage consisting of legally due and unpaid tax obligations to the state budget.

[12] C.S.J., secţia penală, decizia nr. 253/2003, nepublicată.
[13] C.Ap. Ploieşti, secţia penală, decizia nr. 610/2002, nepublicată.

However, even if it is a crime of danger, the state shall be entitled to become a civil party with the tax obligations it has to recover, because in order to exercise the civil action the requirement is that, by committing the crime, a material or moral damage is caused, which should be recovered by incurring legal liability based on tort, but the resulting outcome is not a constitutive element of the crime.

3.3. The crime of tax evasion provided by Art. 9 (c) of Law no. 241/2005

The material element of the crime is represented by the *act of recording in the accounting documents or in other legal documents some expenses that are not based on real operations, or of recording fictitious operations*. The registration of expenses that are not based on real operations means the preparation of false supporting documents for expenses not made, or recording fictitious operations in order to reduce tax obligations. The essential requirement attached to the material element is that the action be carried out in order to evade the fulfilment of tax obligations, but it is not relevant for the fulfilment of the constitutive elements of the crime if the evasion actually took place.

A well-known modus operandi is recording fictitious invoices in the accounting records, or simulating commercial transactions by interposing shadow companies, with huge debts to the general consolidated budget and which include/involve formal Managing Directors and homeless persons as members, having a precarious material situation, recruited by those who actually control the companies. The Supreme Court pointed out that "recording expenses that are not based on real operations means the preparation of false supporting documents for supporting expenses, and based on such false supporting documents unreal expenses are also operated in other accounting documents, with the consequence of decreasing income and implicitly, the tax obligation to the state" [14].

With regard to retaining as concurrent offences the crime of tax evasion prov. by Art. 9 (c) of Law 241/2005 with the crime provided by Art. 43 of Law no. 82/1991, the relevant decision is Decision no. 4 of January 21, 2008, by which the appeal in the interest of the law declared by the General Prosecutor of Romania was admitted; it has been established that the act of omission, in whole or in part, or the recording in the accounting documents or other legal documents of commercial operations performed or of revenues, or the recording in the accounting documents or in other legal documents of the expenses not based on real operations, or the recording of other fictitious operations constitutes the complex crime of tax evasion, provided by in Art. 9 (1) (b) and (c) of Law no. 241/2005. The High Court of Cassation and Justice retained that the examination of the content of the legal texts by which the two crimes are currently criminalised thus shows that the social values protected by them are at least complementary and have a common final purpose, as long as by the provisions of Art. 9 (1) (b) and (c) of Law no. 241/2005 aims to ensure the establishment of real tax situations, which should ensure a correct collection of taxes, fees, contributions and other tax obligations incumbent on taxpayers, and by Art.43 of Law no. 82/1991 aims at preventing any acts likely to prevent the correct reflection in the accounting records of the data regarding the incomes, expenses, financial results, as well as of the elements that refer to the assets and liabilities in the balance sheet. The comparative analysis of the component elements of the tax evasion crimes, provided by Art. 9 (1) (b) and (c) of Law no. 241/2003 and intentionally false statement, provided by Art. 43 of Law no. 82/1991, imposes, therefore, the conclusion that all these elements overlap, in the sense that the acts referred to in the last text of the law are found in the two ways of circumventing the tax obligations incriminated in the first crime, of tax evasion. As a result, the omission, in whole or in part, of recording in the accounting documents or other legal documents of the commercial operations performed or of the revenues, or recording in the accounting documents or in other legal documents of expenses not based on real operations, or recording other fictitious operations constitutes the complex crime of tax evasion, provided by Art. 9 (1) (b) and (c) of Law no. 241/2005 [former Art. 13 and, then, Art. 11 (c) of Law no. 87/1994], the provisions of Art.43 (former Art.40 and then Art. 37) of the Accounting Law no. 82/1991, in conjunction with Art. 289 C.C. (1969), such activities being included in the constitutive content of the objective side of the tax evasion crime.

The immediate result in the case of this crime is the state of danger for the collection of tax obligations to the state budget. Considering the naturalistic view, it is observed that by the action provided by the incrimination norm, there is not a determined modification of the external world, but a state of abstract danger presumed by the legislator. Although following the recording of the expenses that are not based on real operations in the accounting documents or other legal documents, or the recording of other fictitious operations, a material damage to the state budget is caused by not collecting tax obligations, this result not being a constitutive element of the crime. Consequently, the crime may exist regardless of whether or not it causes damage to the state budget.

3.4. The crime of tax evasion provided by Art. 9 (d) of Law no. 241/2005

The material element is alternate and may consist of three alternative actions of *alteration, destruction or concealment.* Destruction of accounting documents, memories/records of electronic tax registers or cash registers or other means of data storage means their

[14] I.C.C.J., secţia penală, decizia penală nr. 1113/2005, publicată online https://legeaz.net/spete-penal-iccj-2005/decizia-1114-2005.

abolition in order to evade tax obligations. Alteration means degradation so that the data contained in the accounting documents, memories/records of electronic tax registers or cash registers can no longer be read. Concealment involves physical or legal shelter so that it cannot be found or identified by the competent authorities. The essential requirement attached to the material element is that the acts provided by the incrimination norm be carried out in order to evade the fulfilment of the tax obligations, but it is not relevant for the fulfilment of the constitutive elements of the crime if the evasion actually took place.

This crime is a special variant of some destruction crimes provided by the Criminal Code and will not be retained as concurrent with them, being retained only the variant provided by tax evasion provided by special law, according to *lex specialis derogat legi generali*.

There are several opinions in the doctrine regarding the immediate prosecution of this crime. Some voices[15] consider that the immediate result consists in altering, destroying or concealing the accounting documents, memories/records of electronic tax registers or cash registers or other means of data storage, and from this point of view the crime is classified as a result crime. Other authors[16] consider that the immediate result is represented by the state of danger determined by the failure to ensure the full collection of tax obligations from taxpayers.

In this case, by carrying out the action provided by the norm of incrimination, the alteration destruction or concealment of the accounting documents or the means of data storage, two immediate results occur, a main and a secondary one.

The main result consists in the state of danger for the collection of tax obligations to the state budget. The result is categorised as the main one, as the purpose of the norm is to prevent and combat tax evasion. The main "evil" produced by the commission of the crime is represented by the state of danger for the collection of tax obligations to the state budget and not by the destruction or alteration of the accounting documents or storage means.

On the other hand, in addition to the state of danger, there is a result, a change in external reality, if the material element consists in the act of alteration or destruction.

As a consequence, the crime of tax evasion provided by Art. 9 (1) (d) of Law no. 241/2005 is a crime of danger, by reference to the main immediate result.

Even if, as a result of the alteration, destruction or concealment of the accounting documents or the means of storage, a material damage to the state budget is caused by not collecting the tax obligations, this result is not a constitutive element of the crime. Consequently, the crime may exist regardless of whether or not it causes damage to the state budget.

3.5 The crime of tax evasion provided by Art. 9 (e) of Law no. 241/2005

The material element of the crime is represented by the action of execution of double accounting records, an official one which is presented to the control bodies, and the other an occult accounting which represents the real accounting. The organization of double accounting records means the preparation and execution of such records in parallel with the official ones. The essential requirement attached to the material element is that the action of execution of double accounting records be performed in order to evade the fulfilment of tax obligations, but is not relevant for the fulfilment of the constitutive elements of the crime if the evasion actually took place.

The immediate result in the case of this crime is the state of danger for the collection of tax obligations to the state budget. Considering the naturalistic view, it is observed that the action provided by the incrimination norm does not produce a determined modification of the external world, but a state of abstract danger presumed by the legislator. Even if, following the execution of double accounting records, a material damage to the state budget is caused by not collecting the legally due tax obligations, this result is not a constitutive element of the crime. Consequently, the crime may exist regardless of whether or not it causes damage to the state budget.

The crime of tax evasion provided by Art. 9 (e) of Law no. 241/2005 is a crime of danger, by reference to the immediate result produced.

3.6. The crime of tax evasion provided by Art. 9 (f) of Law no. 241/2005

The material element of the crime may consist either in a *fictitious or inaccurate declaration action regarding the main or secondary registered offices, or in an inaction of non-declaration*. The essential requirement attached to the material element is that the action be carried out in order to evade the fulfilment of the tax obligations, but it is not relevant for the fulfilment of the constitutive elements, if the evasion actually took place.

The relationship between this crime and that of false statements is a relationship from genus to species and cannot be retained as concurrent when committed in the same circumstance.

With regard to the immediate result of the crime, some authors[17] consider that the consequence of the illicit action is of a material nature, consisting in the perpetrator evading from the financial, tax or customs verifications.

---

[16] E.Crişan, R.V. Nemeş, N. Nolden, *Ghid de bune practici în domeniul combaterii infracţiunilor de evaziune fiscală*, Patru Ace, Bucureşti, 2015, la adresa *http://www.inm-lex.ro/fisiere/d_1443/Ghidul%20combatere%20infractiuni%20de%20evaziune%20fiscala.pdf*.

[17] Al. Boroi, M. Gorunescu, I.A. Barbu, B. Vîrjan, *op. cit*., p. 178.

We do not embrace this opinion, as a result is material in nature when it produces a change in external reality, while the act of evading financial, fiscal or customs checks does not have a material existence.

The immediate result in the case of this crime is the state of danger for the collection of tax obligations to the state budget. Considering the naturalistic view, it is observed that by the action or inaction provided by the incrimination norm, no determined modification of the external world is produced, but a state of abstract danger presumed by the legislator.

It is not relevant for the constitutive elements of the crime, if by the action of evading the fiscal, financial or customs verifications in the modalities provided by the incrimination norm, a prejudice to the state budget occurs.

In order to fulfil the constitutive elements of the crime from the point of view of the subjective and objective side, it is necessary that the evasion from financial, fiscal or customs verifications take place, and the actions or the inaction provided by the criminalisation norm must be undertaken in order to evade the fulfilment of tax obligations, and it is not necessary that the evasion actually took place, the immediate result is not influenced by causing a material damage consisting in the tax obligations legally due and unpaid to the state budget.

3.7. The crime of tax evasion provided by Art. 9 (g) of Law no. 241/2005

The material element of the crime is alternative and may consist in *the action of substitution, degradation or alienation of the seized goods in accordance with the provisions of the Fiscal Procedure Code and the Criminal Procedure Code*. Substitution means the replacement of the legally seized good with one that has similar characteristics. Degradation involves affecting the good so that it loses some of its characteristics. Alienation means the transfer of the ownership or possession over the good to another person. The essential requirement attached to the material element is that the action be carried out in order to evade the fulfilment of tax obligations, but it is not relevant for the fulfilment of the constitutive elements of the crime if the evasion actually took place.

In the present case, by carrying out the action provided by the norm of incrimination for degradation or alienation of the seized goods, two immediate results occur, one main and one secondary.

The main result consists in the state of danger for the collection of tax obligations to the state budget. The result is categorised as the main one, as the purpose of the norm is to prevent and combat tax evasion. The main "evil" produced by committing the crime is represented by the state of danger for the collection of tax obligations to the state budget and not by the destruction of the seized goods. On the other hand, when the material element consists in the action of destroying the seized goods in addition to the state of danger, there is also a result, a change of the external reality, and this is a secondary result.

As a consequence, the crime of tax evasion provided by Art. 9 (1) (g) of Law no. 241/2005 is a crime of danger, by reference to the main immediate result.

3.8. The aggravating variants provided by Art. 9 (2) and (3) of Law no. 241/2005

The legislator provides two aggravating variants of the crime of tax evasion, respectively in case by the acts provided in paragraph (1) there was a damage higher than Eur 100,000, the punishment terms are increased by 5 years, and if there was a damage exceeding Eur 500,000, the punishment terms are increased by 7 years.

In this case, there is no transformation of a crime of danger into a result crime.

The occurrence of a result can be both a constitutive element of and an aggravating element a crime. In the case of aggravated tax evasion, causing the damage is not the essence of the typicality of the crime, in case the damage is not caused, the crime is still typical, but the aggravated form is no longer retained.

Professor Antolisei stated that the result is characterised by two elements: it is a change in the outside world and is provided by criminal law as a constitutive or aggravating element of the crime.[18] In the aggravated tax evasion, causing a damage higher than the amount of Eur 100,000 or Eur 500,000 is a consequence of the crime which constitutes an aggravating element of the crime.

Causing a damage higher than the amount of Eur 100,000 or Eur 500,000 does not influence the typicality of the act, the immediate result as a constitutive element of the aggravating crime representing the state of danger for the collection of tax obligations to the state budget.

We consider that causing a damage exceeding the amount of Eur 100,000 or Eur 500,000 represents an aggravating element of the crime of tax evasion, not a constitutive element of the aggravated variant, since it does not have an autonomous form.

In order to establish whether causing the damage is a constitutive element of the aggravated autonomous crime or a circumstantial element of the aggravating form, it is necessary to establish in advance whether Art. 9 (2) or (3) of Law no. 241/2005 regulates two autonomous crimes or an aggravated form of the basic variant regulated by Art. 9 (1) of Law no. 241/2005.

In the process of criminalising certain acts of conduct, the legislator regulates the content of the crime objectively and subjectively and provides the applicable punishments. A crime can have a standard, basic variant and mitigating and aggravated variants,

[18] F. Antolisei, *Manuale di diritto penale*, Ed. Mvlta Pavcis, Milano, 1969, p. 229.

which do not represent autonomous crimes, depending on the basic variant.

The norm provided in Art. 9 (1) of Law no. 241/2005, which incriminates the crime of tax evasion in its basic form is a complete norm, being composed of disposition as well as sanction and includes all the objective and subjective conditions that must be met cumulatively for the act to constitute a crime.

Unlike the provisions of Art. 9 (1), the text of Art. 9 (2) and (3) of Law no. 241/2005 does not provide typical conditions and does not draw a line of conduct, but only provides an aggravating circumstantial element, namely causing damage in excess of the amount of Eur 100,000 or Eur 500,000.

By the regulation modality, the provisions of Art. 9 (2) and (3) do not define a standard, independent crime, since the structure of the norm does not describe a distinct act, with its own configuration, but refers to the provisions and punishments contained in Art. 9 (1) of Law no. 241/2005, which regulates the crime of tax evasion in its basic version.

In addition, other arguments supporting the thesis that Art. 9 (2) and (3) of Law no. 241/2005 does not regulate autonomous crimes would be that the texts of law do not provide an alternative material element to the basic variant, do not protect different values, and Art. 9 (2) and (3) is in conjunction with Art. 9 (1) of Law no. 241/2005, not the other way around.

As a consequence, the norms contained in Art. 9 (2) and (3) do not regulate autonomous crimes, the mentioned articles of law do not incriminate any reprehensible act, and the references in paragraphs (2) and (3) to the provisions criminalising tax evasion in standard form make them dependent on it.

Also, the variants provided in Art. 9 (2) and (3) cannot be considered causes for the increase of the punishment, as they also provide for an aggravating circumstantial element, respectively causing a damage superior to the amount of Eur 100,000, Eur 500,000 respectively.

Consequently, considering that Art. 9 (2) and (3) of Law no. 241/2005 regulates aggravating variants of the crime of tax evasion, causing damage is not a constitutive element of the crime, but an aggravating circumstantial element.

4. Causes of reduction of punishments and impunity regulated by Law no. 55/2021 on the amendment and completion of Law no. 241/2005 for preventing and combating tax evasion

On April 1, 2021, Law no. 55/2021 on the amendment and completion of Law no. 241/2005 for the prevention and combating of tax evasion was published in the Official Gazette, which regulates two special causes of reduction of punishments and a cause of impunity.

The main legislative amendments concerned chapter III of Law 241/2005 "*Causes of reduction of punishment, prohibitions and revocations*", the other amendments having an accessory character and being necessary for the correlation of the legal provisions. A mandatory cause of reduction of punishment, an optional cause of reduction of punishment, and a cause of impunity were regulated.

The compulsory cause of reduction of the punishment regulated by the legislator in paragraph (1) the final thesis of Art. 10 of Law no. 241/2005, implies the application by the court of the penalty consisting of a fine, when by committing the crime of tax evasion a damage of up to Eur 50,000 was caused, which was covered before the court ruled a decision of conviction.

The legislator regulated three conditions that must be met cumulatively for the mandatory application of the penalty of fine, respectively it is necessary that the damage caused by committing the crime be up to Eur 50,000, the damage be fully recovered before the final conviction, and the perpetrator should not have committed a tax evasion offense for which he has benefited from this special cause of reduction within 5 years from the commission of the act. The process of judicial individualisation will consist only in the court establishing the number of fine-days and the amount corresponding to a fine-day.

The second cause for reduction of sentences, optional, assumes that the court has the option to apply either the fine or imprisonment.

The legislator regulated three conditions that must be met cumulatively for the court to be able to apply the penalty of the fine, respectively it is necessary that by committing the crime there was a damage of up to Eur 100,000, the damage must be fully recovered before ruling the final conviction decision, and the perpetrator has not committed an offense incriminated by Law no. 241/2005 for which you have benefited from this special cause of reduction within 5 years from the commission of the act.

In order to establish the damage caused, only the tax obligations will be taken into account, and not the interests or penalties.

In paragraph (1) of Art. 10 of Law no. 241/2005 which regulates the special causes for reduction of punishments, the legislator used the phrase "*damage caused*", resulting without a doubt the intention to refer only to the actual damage caused by non-payment of tax obligations, without taking into account interest and penalties. On the contrary, in paragraph (11) of Art.10 of Law no. 241/2005, the seat of the case of impunity, the legislator expressly mentioned that the damage caused by committing the act must be recovered, increased by 20% of the calculation basis, to which interests and penalties are added.

Consequently, from the theological and grammatical interpretation of the text of the law, it results that for the application of the fine punishment it is necessary to recover the damage actually caused by

committing the crime, without taking into account the interests and penalties.

When the cause of the special optional reduction is present, the individualisation process takes place in two stages. In a first stage, the court determines the type of the main punishment, either the prison sentence or the fine, and in the second stage it establishes the duration / amount of the punishment.

Regarding the application of the more favourable criminal law, the causes of reduction and impunity are applied retroactively only for crimes under trial, but do not apply in criminal proceedings in which a final conviction decision was pronounced prior to the entry into force of Law no. 55/2021.

However, the special case of reduction of sentence shall also take effect after the final judgment of the case, when the offense of tax evasion for which a conviction has already been ruled and a prison sentence has been applied, has caused damage to up to Eur 50,000, fully covered during the criminal investigation or trial.

In this sense, pursuant to Art. 6 (3) of the Criminal Code, regulating the application of the more favourable criminal law after the final judgment of the case, the applied prison sentence shall be replaced by a fine, which shall not exceed the maximum provided in the new law. In view of the term executed from the prison sentence, the execution of the fine will be eliminated in whole or in part.

The amendments to Law 241/2005 regulated also a special cause of impunity, which operates regardless of the amount of damage caused by committing the crime. In order to benefit from the cause of impunity, it is necessary to fully recover the damage caused by committing the act, increased by 20% of the calculation base to which the interests and penalties are added. If only one of the participants covered the damage, the cause of impunity will benefit all participants, even if they did not contribute to the damage coverage.

The legislator regulated only one condition to operate the special case of impunity, respectively the damage caused by committing the act should be fully covered before the final conviction, increased by 20% of the calculation basis, plus interest and penalties.

It is irrelevant if the perpetrator previously benefited from this special cause of impunity, as the legislator stipulates that only the special causes of reduction of the punishment regulated by paragraph (1) of Art.10 of Law 241/2005 do not apply if the perpetrator has committed another crime of tax evasion for which he benefited from the cause of reduction. This condition is not valid for the cause of impunity, as provided in paragraph (11) of Art.10.

Through this cause of impunity, the legislator regulated a form of civil sanction[19], so that the one who affected the integrity of the public budget will have to pay the damage actually suffered by the state budget, increased by 20%, to which interest and penalties shall be paid. This increase is a form of civil punishment which punishes deviation from the rules of law. Thus, given the nature of the violated social relations, namely those involved in fiscal finance, the legislator has a wide margin of appreciation in identifying the most appropriate solutions both in combating the evasion phenomenon and in recovering the damages suffered.

Even if, following the constitutionality examination, the constitutional court rejected the criticisms of intrinsic and extrinsic constitutionality invoked regarding the provisions of Law 55/2021, we cannot refrain from noting that the regulation of special cases of reduction of punishments and impunity can give rise to discriminatory situations. By way of example, an offender who has committed the crime of tax evasion by causing damage of EUR 100,001 and who does not objectively have the material means to cover the damage caused, shall be punished by imprisonment from 7 years to 13 years. However, another perpetrator who committed a tax evasion offense causing damage of EUR 10,000,000 and covering the damage caused by committing the act, increased by 20% of the calculation basis, to which the interest and penalties are added, will not be punished.

Given that the two crimes infringe on the same social values, creditworthiness and financial possibilities of the perpetrators, there are no objective justifications for applying such a different penalty treatment.

5. Conclusions

Following the analysis carried out in the previous sections, we can conclude that the crime of tax evasion, apparently a result crime, in all alternative forms is a crime of danger, a conclusion reached also by the Italian doctrinaires who categorize the crime of „*evazione fiscale*" as one of danger.

In order to meet the elements of typicality in terms of the subjective and objective side in the case of all alternative variants, it is necessary that the actions or inactions provided by the criminalisation rule be committed in order to evade the fulfilment of tax obligations. It is not the essence of typicality if the evasion is actually carried out, but it is necessary that the actions be committed for the purpose of evasion.

In certain forms of alternative variants, the development of the action provided by the incrimination norm may have two immediate results, a main one consisting in the state of danger for the collection of tax obligations to the state budget and a secondary one consisting in the destruction or alteration of accounting documents or storage means, or the degradation of seized assets.

By committing the crime of tax evasion, a material damage can be caused, consisting in the non-payment of the legal tax obligations due to the state

[19] CCR, decizia nr. 101/2021 (publicată în M. Of. nr. 295 din 24 martie 2021), paragraf 107.

budget, but the crime is consumed independently of the causing of damage.

The causing of damage can be a criterion of judicial or legal individualization of the punishment, and in some cases, if higher than the amount of Eur 100,000 or Eur 500,000, it is an aggravating circumstantial element.

Given the way in which the legislator described the verbum regens of the crime of tax evasion, not specifying in the content of the crime that it is necessary to cause material damage, we can conclude that the crime of tax evasion is a crime of danger, unlike the tax crime regulated by Decree no. 202/1953 for the modification of the Criminal Code of the Romanian People"s Republic whose material element consisted in the non-payment of taxes or fees by those who had the possibility of payment, and which automatically presupposed causing a patrimonial damage.

THE PROSECUTOR"S DISPOSALS AT THE HEARING IN A CRIMINAL PROCESS

Ioan-Paul CHIȘ*

Abstract

This paper examines the participation of a public prosecutor to a hearing, as the representative of the Public Ministry, as well as the manner in which he/she exercises his/her judicial attributions. We have found that the judicial actions carried out by the prosecutor can be conditioned or unconditioned and that a clear distinction between them and the prosecutor"s conclusions has to be made. It was therefore concluded that under no circumstances the prosecutor"s conclusions can be assimilated to the disposals that he/she can enforce.

Keywords: *the participation of the prosecutor at the hearing, the disposal act of the prosecutor, the prosecutor"s conclusions.*

1. Argumentation

With this study we wish to highlight the specific activities of the prosecutor and the forms they can take. The need for such an approach issued from the confusion that can be made by the practitioners between the prosecutor"s disposal acts and the conclusions that he/she draws during the hearings.

Thus, for example, through the judgment no. 10/03.07.2020 pronounced by the preliminary chamber judge within Sălaj Tribunal, final due to the failure to initiate a remedy, it was noted that the prosecutor from the Prosecutor"s Office attached to the Sălaj Tribunal has communicated to the judge, within the 5 days deadline stipulated by art. 345 par. (2) of the Criminal Procedure Code, that he/she maintains the order to proceed to trial according to the indictment issued. It was also held that the prosecutor had issued an order for the remedy of the irregularities found by the preliminary chamber judge, an order which was checked by the chief prosecutor from the Prosecutor"s Office attached to the Sălaj Tribunal.

At the hearing established by the judge, where the debates were resumed within the preliminary chamber procedure, the prosecutor has formulated conclusions saying that there still was an inconsistency between the facts and the *de jure* situation, given that the number of the material acts described in the *de facto* situation was not the same as the number of material acts found in the chapter „*de jure*" of the indictment. Under these circumstances, the prosecutor estimated that the object and the limits of the trial were not properly established; therefore the case had to be sent back to the prosecutor"s office.

Following the prosecutor"s conclusions, the preliminary chamber judge ordered the case to be sent back to the prosecutor"s office, according to art. 346 par. (3) lett. c) of the Criminal Procedure Code, estimating that the prosecutor had shown in his conclusions that he/she no longer maintained the order to proceed to trial and that he/she orally asked for the case to be sent back to the prosecutor.

2. The legal attributions of the prosecutor analysed from the perspective of the principles concerning the activity and the organisation of the Public Ministry

According to art. 131 and 132 from the Romanian Constitution, within its judicial activity, the Public Ministry represents the general interests of the society and protects the rule of law as well as the citizens" rights and freedoms. The Public Ministry also exercises its powers through prosecutors organised in prosecutor"s offices, who perform their activities according to the principles of lawfulness, impartiality and the hierarchical control, under the authority of the Minister of Justice.

The prosecutor"s attributions are stipulated by art. 63 in Law no. 304/2004, part of them being circumscribed to the procedural function of prosecution. Thus, the prosecutors conduct the criminal proceedings, they lead and supervise the activity of the criminal investigation bodies, they submit the cases to the criminal courts and they participate to the hearings within the trial.

The principles concerning the organisation of the Public Ministry and the prosecutors" activity relevant for this study are the subordination principle and that of the hierarchical control, as well as the principle of the consistent action. Furthermore, it should not be ignored the fact that the prosecutor is independent in ordering the solutions and the prosecutor"s conclusions presented to the court cannot be censured by the hierarchically superior prosecutor *(la plume est serve, mais la parole est libre).*

* Assistant Professor, PhD, Faculty of Law, "Nicolae Titulescu" University, Bucharest (e-mail: paul.chis@univnt.ro).

The hierarchical control principle stems from the hierarchical subordination principle so that these two principles must be analysed together.

Thus, the hierarchical subordination principles materialized in the fact that the prosecutors in every office are subordinated to the chief of that office, while the chief on his turn is subordinated to the chief of the hierarchically superior office. This principle is materialized through the hierarchically superior prosecutor"s right to issue mandatory directions to the subordinated prosecutors. Therefore, being in this position, the hierarchically superior prosecutor verifies *ex officio* or upon request, both the merits and the lawfulness of the decisions of the subordinated prosecutors, and when he/she finds them unfounded or unlawful he/she invalidates them providing reasons and he/she orders them to be redone.

Concerning the unitary direction of the Public Ministry, we note that all prosecutors act in the name of the Public Ministry exercising its powers as stipulated by the law, and the acts issued by the prosecutors have the legal effects of an act or measure issued under the power of the Public Ministry. This principle is materialized in the possibility of transferring the work of a prosecutor to another, of replacing a prosecutor working in the judicial sector with another prosecutor who would further participate to the hearings, in the possibility of performing the criminal proceedings acts in the same case by several prosecutors etc.

In exercising the judicial attributions, the prosecutor uses a series of material and procedural acts materialized in orders and acts through which they are fulfilled. The number and the content of the prosecutor"s acts are different according to each procedural stage, and, as natural, most of them are regulated for the criminal investigation stage. We say it is natural because these procedural means are regulated with a view to ensuring the exercise of the judicial function attributed by law to the judicial body, with the purpose of solving the case according to the law and truth.

In the activity performed in front of the court, the prosecutor exercises an active role for the finding of the truth and observing the legal rules, his/her participation to the court"s hearing being materialized through applications and conclusions, as well as raising exceptions.

Although these legal provisions are found in art. 363 of the Criminal Procedure Code, in the chapter concerning the general dispositions applicable in the trial stage, we estimate that they must be applied *tale quale* whenever the judicial activity involves the exercise of the jurisdiction function by the judge or the court.

3. The judicial means available to the prosecutor

The semantic difference material act –procedural act stems indirectly from the provisions in art. 200 of the Criminal Procedure Code[1]. Thus, material acts are the initiation of the criminal proceedings, the taking of preventive measures[2], the approval of evidence etc., the procedural acts being: listening a witness, the conduct of on crime scene investigation, the seizing of objects[3] etc.

From all this it follows that the material act means the acts through which the judicial bodies, the parties and the main actors in the trial, as well as other participants in the trial manifest their will, under the circumstances and forms stipulated by the law, concerning the initiation and evolution of the criminal trial. Therefore, the material act can be defined as the constitutive part of the criminal trial, stipulated by the law, by which the competent judicial body and the authorized person dispose directly, in the exercise of the procedural functions, of the conduct of the criminal trial in order to achieve the purpose of the criminal trial[4].

The procedural act, on the other hand, is the activity performed by the judicial bodies, the parties and the main actors in the trial, as well as other participants in the trial, through which a material act or measure is fulfilled or which registers the fulfilment and records the content of a material act or measure, or of a procedural act[5].

As shown, most of the prosecutor"s material and procedural acts are regulated for the criminal investigation stage because this is the only stage involving the solving of the case by the prosecutor. For the next stages of the criminal proceedings, the preliminary chamber procedure, the trial and the enforcement of the criminal decisions, the responsibility of solving the case does not lie with the prosecutor but with the judicial body, so that it is natural that the procedural means should be given to the judicial body called to give a solution – the judge or the court.

In the conduct of the judicial procedures, the Public Ministry is represented by the prosecutor who has the possibility to file applications, raise exceptions and submit conclusions. These are supplemented by the clarifications that the prosecutor can make in front of the court, such as the clarification of the appeal reasons

[1] A. Zarafiu, Procedură penală. Partea generală. Partea specială, CH Beck Publishing House, Bucharest, 2015, p. 279.

[2] The taking of material measures (for example, the taking of preventive measures, the taking of precautionary measures) is a *characterized* material act.

[3] The activity of presenting the already approved evidence, with all that it involves, the evidentiary procedures, the documents where they are recorded etc., are procedural acts performed within this activity.

[4] Gr. Theodoru, I.-P. Chiș, *Tratat de Drept procesual penal*, 4th edition, Hamangiu Publishing House, Bucharest, 2020, p. 565-566.

[5] *Idem.*

described in writing and which must be presented in front of the judicial review court[6].

However, closely related to the document instituting the proceedings and the evidence adduced during the criminal investigation, the law regulates certain disposal acts available to the prosecutor, both in the preliminary chamber procedure and in the trial stage or in the stage of the enforcement of criminal decisions.

Thus, for example, in the preliminary chamber procedure, when the preliminary chamber judge invalidates the criminal investigation acts or dismisses certain pieces of evidence, the prosecutor has the possibility to dispose of the solution of sending the case to trial by asking for the case to be sent back to the prosecutor"s office. The motivation of this legal solution is that following the invalidation of certain criminal investigation acts and after the exclusion of certain pieces of evidence adduced by the prosecutor, the representative of the Public Ministry must be granted the right to change his/her position towards the solution pronounced. The law establishes that the prosecutor who pronounced the solution of sending to trial has the right to rethink the solution either positively, by maintaining the sending to trial, or negatively, by asking for the case to be sent back to the prosecutor"s office.

Once received the answer of the prosecutor in the case, the preliminary chamber judge is not able to censor it. Thus, if there is a request for the case to be sent back to the prosecutor"s office, the judge will give the solution accordingly, otherwise the judge would substitute himself/herself to the prosecutor and would exercise de facto the prosecution function, a function absolutely incompatible with the jurisdiction function[7].On the contrary, if the prosecutor states that he/she maintains the sending to trial, the preliminary chamber judge is forced to pronounce the commencement of the trial[8].

For the trial stage, the prosecutor can waive the evidence he/she proposed, disposing of them. In this hypothesis, given that the principle of finding the truth in the criminal trial has been kept by the new legislator, the judge shall order for the evidence not to be adduced if he/she deems that it is no longer necessary for the finding of the truth in the case. In this case, it can be noted that the manifestation of will from the prosecutor is conditioned on the court"s finding of the uselessness of adducing the waived evidence.

As we have shown, for the next stages of the criminal trial, the legislator has sporadically regulated the disposal acts available to the prosecutor. In the judicial contexts implying the exercise of the jurisdiction function, the prosecutor"s participation to the hearing is often materialized through the conclusions he/she formulates.

The conclusions formulated in front of the jurisdiction bodies both by the prosecutor and by the rest of the participants to trial represent the statements and the views expressed during the hearing concerning the solution of the case submitted to trial. Essentially, the conclusions represent the result of the interpretation of the legal provisions, when the matter discussed is a question of law, or the interpretation of the evidence when the merits of the trial are discussed etc.

4. Instead of conclusions

We estimate that it is clearly visible which is our point of view on the object of this study.

Thus, starting from the working hypothesis, we estimate, along other authors, that in the situation where the preliminary chamber judge asks the prosecutor to express his/her will concerning the order of sending to trial in the direction of maintaining it or to the contrary, in that of withdrawing the document instituting the proceedings, only the prosecutor who issued the indictment or the replacing prosecutor can dispose of his own document instituting the proceedings[9]. Also, having regard to the effects of the negative disposal act, namely the sending back of the case to the prosecutor"s office, we estimate that the answer can be formulated by the prosecutor only in writing and shall be submitted to the preliminary chamber judge through the notice signed by the chief of the prosecutor"s office, obviously after his/her taking note of the manifestation of will of the subordinated prosecutor. We think that this should be the natural circuit of the document signed by the prosecutor of the case, because the withdrawal of the document instituting proceedings interferes with the initial verification of the indictment made by the chief of the prosecutor"s office.

Between these coordinates, it is obvious that during the hearing, the prosecutor is not entitled to decide the withdrawal of the document instituting the proceedings, as the preliminary chamber judge from the Sălaj Tribunal wrongly held, the prosecutor of the case being the only one able to make this assessment. However, this does not mean that the prosecutor has no other option besides the one expressed by the prosecutor in the case, an opinion he/she is of course, free to present to the judge.

We estimate however, that the principle of absolute independence of the prosecutor present at the hearing, as to the conclusions he/she can formulate must be interpreted in relation to the principle of consistent action, so that the prosecutor present at the

hearing should inform the hierarchically superior prosecutor about his/her intention to formulate conclusions in a different direction than the one expressed in writing by the prosecutor"s office. Otherwise, the principle of consistent action following from the representation of the same general interest by all prosecutors in the Public Ministry would be undermined, the inconsistency of the prosecutors placing in doubt both the credibility of the judicial body and the rigor of the activity where it was expressed.

ENFORCEMENT OF PUNISHMENT, MEASURES AND SANCTIONS IN THE UNITED KINGDOM – ENGLAND AND WALES

Cosmin Iulian CREŢU[*]

Abstract

As early as the 1970s, alternative measures to imprisonment began to be considered at EU level. This article analyzes the types of sentences and their enforcement in the United Kingdom – England and Wales, with emphasis on the particularities of the enforcement of the prison sentence and on alternatives to the prison sentence, as provided for in the relevant legislation of these states.

Keywords: *alternative measures to imprisonment, types of sentences, enforcement in the United Kingdom, enforcement of the prison sentence, alternatives to the prison sentence.*

1. Introduction

The issue of penitentiaries as institutions that produce crime by their very existence has been discussed at large in doctrine, in congresses of criminal law and criminology, constantly in the working groups of the Council of Europe for the elaboration of Recommendations in the European criminal and criminal enforcement field[1].

Thus, since the 1970s, alternative measures to imprisonment began to be considered at the level of the European Union, the first normative act in which these ideas materialized being a resolution adopted by the Council of Europe in 1965, namely the Resolution (65) 1 on suspended sentences, probation and other alternatives to imprisonment, followed by a resolution adopted by the Council in 1976, namely Resolution (76) 10 on certain alternative measures to imprisonment.

The first piece of legislation that provided a complete set of rules on the application and implementation of community sanctions was Recommendation R (92) 16 to Member States on the European Regulation on community sanctions and measures, adopted by the Committee of Ministers under Article 15 b of the Statute of the Council of Europe on 19 October 1992, on the occasion of the 482nd meeting of the Delegations of Ministers.

Through this paper we set out to investigate the types of sentences and their manner of enforcement in the legal system in the UK – England and Wales, focusing on the particularities of the manner of enforcing the prison sentence and on the alternatives to imprisonment, as provided for in the relevant legislation of these States.

2. Penalties, measures and sanctions applicable to individuals

All criminal law systems have a common commitment to acquitting the innocent and punishing the guilty. This common commitment gives them a single unifying goal that focuses on the institution of punishment. Without punishment and the institution meant to establish and execute the punishment, there is no criminal law[2].

In the United Kingdom, pursuant to the provisions of Criminal Justice Act 2003, the Magistrates" Court and the Crown Court can pass a range of sentences which we list in decreasing order of severity[3]:

a) custody – immediate/suspended;
b) community sentence;
c) fine/compensation order;
d) conditional or absolute discharge.

In order to determine an appropriate punishment for an individual over the age of 18, according to Section 142 of the Criminal Justice Act 2003, the court must take into account the purposes of sentencing, respectively:

a) The punishment of offenders;
b) The reduction of crime (including its reduction by deterrence);
c) The reform and rehabilitation of offenders;
d) The protection of the public; and
e) The making of reparation by offenders to persons affected by their offences.

Furthermore, in order to determine the appropriate punishment, the court must take into account the principle pursuant to which the punishment should not be harsher than what is necessary in relation to the seriousness of the crime committed. Thus, pursuant to Section 143 par. (1) of the Criminal Justice

[*] PhD Candidate, Faculty of Law, "Nicolae Titulescu" University of Bucharest (e-mail: avccretu@gmail.com).

[2] George P. Fletcher, Basic Concepts of Criminal Law, Oxford University Press Publisher, New York, 1998, page 25.
[3] Martin Hannibal, Lisa Mountford, Criminal litigation 2019-2020, Oxford University Press Publisher, Oxford, 2019, page 394.

Act 2003, the court shall determine the seriousness of the offence in relation to two essential aspects, respectively (i) the offender"s culpability in committing the offence and (ii) any harm which the offence caused, was intended to cause or might foreseeably have caused.

Sections 143-146 of the Criminal Justice Act 2003 comprise a number of aggravating factors that the court must take into account when determining the appropriate punishment. Thus, the court will hold an aggravating factor in case of previous convictions of the defendant that it considers relevant in relation to the nature of the crimes committed and the time elapsed from the date of their commission until present day. The commission of the crime during the period when the offender was released on bail, as well as the commission of the crime on grounds of race, religion, sexual orientation or disability are also aggravating factors that must be considered by the court when establishing the punishment.

Moreover, Section 144 par. (1) of the Criminal Justice Act 2003 provides a special case of reducing the punishment limits in case of concluding a guilty plea agreement with the offender.

In this respect, in order to determine the punishment to be applied to the offender who pleaded guilty, the court must take into account (i) the status of the proceedings in case of the offence in respect of which the offender has indicated his intention to plead guilty; and (ii) the circumstances in which this intention was manifested.

In case of a guilty plea agreement concluded with the offender, the punishment limits for the offence committed by the offender shall be reduced by one third. This reduction of the punishment limits is not expressly provided in the Criminal Justice Act 2003, but it is found in the Sentencing Council for England and Wales"s Guideline on the "Reduction in Sentence for a Guilty Plea".

The sentencing guidelines issued by the Sentencing Council for England and Wales, the Crown Court and the Magistrates" Court are binding on the courts and include guidance on the aspects that must be considered by the court and which may influence the punishment following to be applied. These guidelines provide different levels of punishment established depending on the damage caused to the injured party and the levels of guilt of the offender. The purpose of these guides is to ensure a consistent practice in England and Wales[4].

Discharge

A discharge may be ordered in case of minor offences, when the court finds that, in relation to the circumstances of the case, including the type of offence committed and the person of the offender, no punishment is required. If the court finds that the offender"s experience of appearing before the court during the trial is sufficient to correct him, the court may order an absolute discharge. Thus, in this case no punishment is applied to the offender, but his deed remains recorded in his criminal record.

However, if the court finds that, although the offence is of a lesser serious nature, the offender"s experience of appearing before the court during the trial is not sufficient to correct him, the court may order a conditional discharge, which entails discharge under the condition that the offender does not commit another offence for a period not exceeding three years as of the date of the ruling.

In case of perpetrating a new offence within the period for which the conditional discharge was ordered, the court may revoke this measure and try the offender both for the offence that was the subject of the conditional discharge and for the new offence committed within the said period.

Fine

In the legal system of England and Wales, the fine is the most common type of punishment in court decisions, being incidental to minor offences such as road traffic offences or theft. The amount of the fine is determined by the court depending on the seriousness of the offence.

Thus, pursuant to Section 164 par. (1) of the Criminal Justice Act 2003, before determining the amount of the fine to be imposed on the offender who is an individual, the court must inquire into his financial circumstances. The amount of the fine fixed by the court must reflect the seriousness of the offence [Section 164 par. (2) of the Criminal Justice Act 2003].

When fixing the amount of the fine to be imposed on the offender (whether an individual or legal entity), the court must take into account the circumstances of the case including, among others, the financial circumstances of the offender so far as they are known to the court [Section 164 par. (3) of the Criminal Justice Act 2003].

In this respect, before sentencing the offender to pay a fine, the court may issue a financial circumstance order in respect of him, which entails the obligation of the offender to make available to the court, within a certain period, a statement of his financial status.

A fine must not exceed the limit provided by law for the crime committed, limit that is established on levels. The maximum value is:

Level 1 (£250)
Level 2 (£ 500)
Level 3 (£ 1,000)
Level 4 (£ 2,500)

3. Custodial sentence

The custodial sentence is the harshest punishment under the law system from England and Wales and applies if the offence is "so serious that neither a fine

[4] See https://www.sentencingcouncil.org.uk/about-sentencing/about-guidelines/.

alone nor a community sentence can be justified for the offence" (Section 152 par. (2) of the Criminal Justice Act 2003). However, the court may order a custodial sentence if (i) the offender fails to express his willingness to comply with a requirement which is proposed by the court to be included in a community order and which requires an expression of such willingness (ii) the offender fails to comply with a pre-sentence drug testing order (Section 152 par. (3) of the Criminal Justice Act 2003).

In respect of the length of the custodial sentence, the court must opt for the shortest term in relation to the seriousness of the offence or offences committed (Section 153 par. (2) of the Criminal Justice Act).

However, this obligation shall not apply to sentences fixed by law or to indefinite sentences or to extended sentences provided by Sections 224- 229 of the Criminal Justice Act 2003.

Enforcement of the custodial sentence

Enforcement of the custodial sentence differs depending on the period for which it was ordered, the relevant provisions on this matter being found in Sections 237-268 of the Criminal Justice Act 2003.

Thus, in case of custodial sentences for a period of less than 12 months, half of this period is served in custody, while for the other half the offender is on unconditional license in the community.

On the other hand, in case of custodial sentences for a period of 12 months or more, except for dangerous offenders and those sentenced to an extended sentence, the offender shall serve half of that period in custody, and for the other half the offender is served on license in the community, subject to obligations recommended by the court. The probation service is not bound by the obligations recommended by the court through the sentence, and may establish other obligations or obligations in addition to those recommended by the court.

Breach of the obligations imposed by the probation service during the conditional licence will lead to the revocation of the conditional licence and to serving the remaining difference in custody. Revocation may also occur when the offender commits a new offence during the period of unconditional or conditional licence in the community. In this situation as well, the offender is to serve the difference in custody.

Supervision of offenders subject to custodial sentences for less than 2 years

Pursuant to Section 256AA of the Criminal Justice Act 2003, in case of custodial sentences for a period between one day and 2 years, offenders shall be subject to a period of post-sentence supervision. This period shall run from the time when the offender has served his sentence and shall end on the expiry of the period of 12 months as of the moment of his unconditional or conditional license in the community.

Thus, the offender will serve half of the sentence in custody and the other half in the community, and will be under supervision from the time the sentence is completed within the community as a result of his unconditional or conditional license and until the expiry of the term of 12 months from the moment of his license within the community. For example, in case of a 10 months custodial sentence, the offender will serve 5 months in custody, 5 months in the community and will be in post-sentence supervision for a period of 7 months.

Pursuant to Section 256AB of the Criminal Justice Act 2003, the offender may be subject to the following obligations during the period of post-sentence supervision:

- to be of good behaviour and not to behave in a way which undermines the purpose of the supervision period;
- not to commit any offence;
- to keep in touch with the supervisor in accordance with instructions given by the latter;
- to receive visits from the supervisor in accordance with instructions given by the latter;
- to reside permanently at an address approved by the supervisor and to obtain the prior permission of the supervisor for any stay of one or more nights at a different address;
- not to undertake work, or a particular type of work, unless it is approved by the supervisor and to notify the supervisor in advance of any proposal to undertake work or a particular type of work;
- not to travel outside the British Islands, except with the prior permission of the supervisor or in order to comply with a legal obligation (whether or not arising under the law of any part of the British Islands);
- to participate in activities in accordance with any instructions given by the supervisor;
- to take a drug test;
- to take a drug appointment.

If the offender fails to comply with the obligations imposed during the period of post-sentence supervision, the court may issue a summons or even a bench warrant for the offender. If the court finds that the offender has breached the obligations imposed in bad faith, it may order the offender (i) to serve a maximum of 14 days in custody, (ii) to pay a fine which may not exceed level 3 from the standard grid; or (iii) to an unpaid work requirement or to a curfew requirement.

Suspended sentence

Regimes for enforcing the suspended sentence around the world vary widely, but they can be broadly divided into two categories depending on the obligations that accompany the orders. Some versions only require people to refrain from committing new crimes and therefore have the same effect on all those convicted for the same period of time. Others allow courts to impose a number of obligations tailor-made for the specific risks and needs of the offender. The

current order in respect of the suspended sentence in England falls into the second category[5].

The relevant provisions regarding the suspended sentence can be found in Sections 181-195 of the Criminal Justice Act 2003. Thus, the court may opt for this type of punishment when sentencing a defendant to a prison sentence for a period between 14 days and 2 years, in case of deeds falling within the jurisdiction of the Crown Court, respectively between 14 days and 6 months, in case of deeds falling within the jurisdiction of the Magistrates"Court. The enforcement of the prison sentence can be suspended for a maximum of 2 years, a period that constitutes a supervision period for the convicted person. During the supervision period, the court may impose one or more of the following obligations on the convicted person:

- an unpaid work requirement;
- a rehabilitation activity requirement;
- a programme requirement;
- a prohibited activity requirement;
- a curfew requirement;
- an exclusion requirement;
- a residence requirement;
- a foreign travel prohibition requirement;
- a mental health treatment requirement;
- a drug rehabilitation requirement;
- an alcohol treatment requirement;
- an alcohol abstinence and monitoring requirement;
- attendance centre requirement.

If, during the supervision period, the convicted person fails to comply with the obligations imposed by the court or commits a new offence, regardless of whether for this crime the court follows to apply a prison sentence or not, pursuant to the provisions of Schedule 12 paragraph 8 of the Criminal Justice Act 2003, the court may revoke the suspension and (i) order that the suspended sentence is to take effect with its original term, (ii) order that the sentence is to take effect for a shorter term, (iii) order the offender to pay a fine of an amount not exceeding £2,500, (iv) amend the content of the community obligations initially established or the period for which they were imposed, (v) extend the period of supervision initially ordered.

4. Alternatives to imprisonment – community sentences

The use of probation in the United Kingdom can be traced back to 1840 when a Birmingham judge, Matthew Davenport Hill, drew up a register of probation counselors suitable for reforming juvenile offenders[6]. In 1841 Hill, a judge in Birmingham, in view of his experience in the courts of Warwickshire, began releasing minors into the care of persons who had undertaken to act as tutors. The practice of releasing people to prove their good intentions seems to form the center of the emerging idea of probation in both America and Britain between 1820 and the end of the nineteenth century[7].

The hopes of the Home Office for an independent probation body were met by the creation of the National Association of Probation Officers (NAPO) in 1912, at the suggestion of Sydney Edridge (deceased in 1934), Croydon Police officer and president of the association. The purpose of this association was to make progress in probation work, to facilitate contact between probation counselors and to stimulate thinking about the reintegration of offenders[8].

As the name suggests, a community sentence is served in the community. Courts are encouraged to use community-based sentences as alternatives to custody[9]. A community sentence combines some form of punishment with activities carried out in the community. It may include one or more of the 13 obligations for the offender. This could consist of up to 300 hours of unpaid work, for example removing graffiti or cleaning overcrowded areas[10].

Pursuant to Section 148 of the Criminal Justice Act 2003, a court must not pass a community sentence on an offender unless it is of the opinion that the offence, or the combination of the offence and one or more offences associated with it, was serious enough to warrant such a sentence. It cannot be ordered in case of an offence not punishable by imprisonment [Section150A of the Criminal Justice Act].

4.1. Obligations that may be imposed on the offender in the event of applying of a community sentence

Section 177 of the Criminal Justice Act 2003 provides that, when the court sentences a person over the age of 18, it may issue a community order imposing one or more obligations on the offender. The community order may be issued for a maximum period of 3 years and must provide an end date up until when the offender must observe all the obligations imposed. The following obligations may be imposed by the community order issued by the court:

- an unpaid work requirement;
- a rehabilitation activity requirement;
- a programme requirement;
- a prohibited activity requirement;

- a curfew requirement;
- an exclusion requirement;
- a residence requirement;
- a foreign travel prohibition requirement;
- a mental health treatment requirement;
- a drug rehabilitation requirement;
- an alcohol treatment requirement;
- an alcohol abstinence and monitoring requirement;
- an attendance centre requirement.

Moreover, in case of a curfew requirement and an exclusion requirement, the court must also impose an electronic monitoring requirement. In the following, we will make a brief presentation of the content of each of the obligations that may be imposed through the community order issued by the court.

4.2. An unpaid work requirement

This obligation is provided by Section 199 of the Criminal Justice Act 2003 and involves performance of 40 to 300 hours of unpaid work, under the supervision of a probation officer. The court can only impose this obligation if it considers that the offender is a suitable person to perform this type of work. Work is usually done in 8-hour shifts on weekends, but if the person is not employed, the work is done during normal working hours. The type of work varies depending on the locality and the probation service that deals with the program. Regular projects include cleaning public spaces, painting buildings or cleaning graffitis[11].

4.3. A rehabilitation activity requirement

This obligation is provided by Section 200A of the Criminal Justice Act 2003. The court must specify in the community order the maximum number of days on which the probation officer may order the offender to take part in various activities for his rehabilitation. The probation officer may order the offender to take part in specific activities or travel to a specific location and to follow the instructions given by the person leading that location. Activities may include restorative justice activities, (i) in which the offender and one or more injured parties may participate, (ii) aimed at making the offender aware of the impact that his criminal activity has had on the injured party; or (iii) which enable injured parties to discuss about the offence and the impact it has caused.

4.4. A programme requirement

This obligation is provided by Section 202 of the Criminal Justice Act 2003 and involves the offender"s participation in an activity programme accredited by the Secretary of State. Programmes fall into four categories: general offending, violence, sexual offending and domestic violence. These must be recommended by a probation officer at the point of sentence[12]. The aims of these programmes are to:

- make offenders accept responsibility for their offences;
- avoid further offending;
- attempt to resolve any difficulties linked to offending behaviour, for example homelessness, marital or relationship breakdown, unemployment, illiteracy, addiction[13].

4.5. A prohibited activity requirement

This obligation is provided by Section 203 of the Criminal Justice Act 2003. The court may prohibit the offender, by order, from taking part in certain prohibited activities on the days mentioned therein. The purpose of this obligation is to prevent the commission of other offences such as those committed by the offender. Possibilities include prohibiting the defendant from visiting a particular place, for example nightclubs, or undertaking a particular activity such as driving, drinking alcohol or attending football matches[14].

4.6. A curfew requirement

This obligation is provided by Section 204 of the Criminal Justice Act 2003. The person to whom this obligation applies must not leave a particular location or locations, specified in the court order, for a certain period of time or periods of time between 2 and 16 hours a day. The maximum period for which the curfew requirement can be imposed is 12 months. The order can be enforced with electronic tagging. Tags can only be issued if there is a monitoring system for curfew in their area[15]. A tag is attached to the offender"s wrist or ankle and is linked to a monitoring machine installed in the place where the offender is living. The machine is linked via a telephone line to a monitoring centre. Monitoring centre staff are made immediately aware if the curfew is broken[16].

4.7. An exclusion requirement

This obligation is provided by Section 205 of the Criminal Justice Act 2003. The person is prohibited from entering a certain location and for a certain period of time, mentioned in the order issued by the court. This obligation may be imposed for a maximum period of 2 years. The order may provide for the prohibition to operate in connection with the location and for the period specified therein, or it may provide that the

[13] Martin Hannibal, Lisa Mountford, Criminal litigation 2019-2020, Oxford University Press Publisher, Oxford, 2019, page 422.
[14] Martin Hannibal, Lisa Mountford, Criminal litigation 2019-2020, Oxford University Press Publisher, Oxford, 2019, page 422.
[15] Catherine Heard, Community sentences since 2000: How they work – and why they have not cut prisoner numbers, Centre for Crime and Justice Studies, London, 2015, page 14.
[16] Martin Hannibal, Lisa Mountford, Criminal litigation 2019-2020, Oxford University Press Publisher, Oxford, 2019, page 422.

prohibition shall operate in connection with the locations and for different periods.

4.8. A residence requirement

Through this obligation provided by Section 206 of the Criminal Justice Act 2003, the offender is required to reside in a certain location and for a certain period of time specified in the court order. Before issuing the community order imposing this obligation, the court must take into account the surroundings of the place where the offender is to live. On the recommendation of a probation officer, one may establish that the offender will reside in a hotel or other institution.

4.9. A foreign travel prohibition requirement

Through this obligation provided by Section 206A of the Criminal Justice Act 2003, the offender may be prohibited from traveling (i) to any other country or territory outside the British Islands mentioned in the court order, (ii) to any other country or territory outside the British Islands, except for a country or territory specified in the court order, or (iii) in any other country or territory outside the British Islands. This ban may be imposed for a maximum period of 12 months.

4.10. A mental health treatment requirement

This obligation is provided by Section 207 of the Criminal Justice Act 2003 and requires that the offender be treated by a doctor or psychologist in order to improve his or her health. It can only be imposed if the court is convinced that the offender is suffering from a mental illness and that he needs treatment, and the offender agrees to take part in such treatment.

4.11. A drug rehabilitation requirement

This obligation is provided by Section 209 of the Criminal Justice Act 2003. The offender will participate in a detox program to reduce or eliminate his or her drug addiction. The order will involve frequent drug testing and a high level of contact and supervision coupled with a regular monthly review by the courts[17].

This obligation can only be imposed if (i) the court is satisfied that the offender is addicted to drugs and needs treatment, (ii) has been recommended by a probation officer and (iii) the offender has given his or her consent to take part in such a detox program.

4.12. An alcohol treatment requirement

This obligation is provided by Section 212 of the Criminal Justice Act 2003. The offender will receive treatment to reduce or eliminate his alcohol dependence. The treatment period cannot exceed six months

The period of treatment must last at least six months[18].

This obligation can only be imposed if the court is convinced that the offender is addicted to alcohol and that he needs treatment, and the offender agrees to follow such treatment.

4.13. An alcohol abstinence and monitoring requirement

The alcohol abstinence and monitoring obligation provided by Section 212A of the Criminal Justice Act 2003 may be imposed for a maximum period of 120 days. The court may require the offender to either (i) refrain from consuming alcoholic beverages or (ii) not to consume alcohol so that at any time he does not have a higher blood alcohol value than that established by the order issued by the court.

This obligation may be imposed only if (i) the offender"s consumption of alcohol is a constituent element of the offence committed by him or the court is satisfied that such alcohol consumption was a contributing factor to the offence, (ii) the court is satisfied that the offender is not addicted to alcohol, (iii) the court does not impose an obligation on the offender to undergo treatment for alcohol addiction, and (iv) the court has been informed by the Secretary of State that the elements necessary to monitor the offender are available in the area where this obligation is to be fulfilled.

4.14. An attendance centre requirement

This type of obligation provided by Section 214 of the Criminal Justice Act 2003 can only be imposed on offenders under the age of 25. At an attendance centre, practical activities, including sport, can be run to occupy offenders for a certain number of hours to keep them out of trouble. This is often on Saturdays as attendance centres were originally set up for football-related offenders[19]. The centres must include social education and life-skills training to: increase employability; maintain physical and mental health (including being aware of the effects of alcohol and drugs); have successful relationships (including respect for parents/partners; parenting skills and social skills); and deal effectively with high risk situations (including first aid, risks of carrying weapons and "gang culture")[20].

The court may oblige the offender to take part in activities in a training centre for a number of hours between 12 and 36. However, the offender may not be obliged to take part in activities in a training centre for

[17] Martin Hannibal, Lisa Mountford, Criminal litigation 2019-2020, Oxford University Press Publisher, Oxford, 2019, page 423.
[18] Explanatory Note to Section 212 of the Criminal Justice Act 2003.
[19] Explanatory Note to Section 214 of the Criminal Justice Act 2003.
[20] Catherine Heard, Community sentences since 2000: How they work – and why they have not cut prisoner numbers, Centre for Crime and Justice Studies, London, 2015, page 14.

more than once a day or more than three hours on the same day.

The obligation to take part in activities within a training centre can only be imposed if there is a training centre easily accessible to the offender. The first appointment for participation in activities within the training centre will be made by the probation officer and will be communicated to the offender by the latter, and subsequent appointments will be made by the responsible person within the centre.

4.15. Breach of the community order and its consequences

Part II of Schedule 8 to the Criminal Justice Act 2003 provides the situation when the community order issued by the court is breached.

Thus, a breach of the community order occurs when, without a reasonable excuse, the offender fails to comply with the obligations imposed. In the event of a breach of the community order, the responsible officer is required to issue a warning to the offender. However, the warning may not be applied if the offender has received a warning for a breach of the community order within the previous twelve months or the responsible officer refers the matter to an enforcement officer. In these two situations, the enforcement procedure against the offender will begin, being referred to the court in this regard.

The warning must contain a description of the circumstances of the breach of the community order and inform the offender that the breach is unacceptable and that a further breach of the community order within the next 12 months will bring him before the court. According to the Explanatory Note to Schedule 8 to the Criminal Justice Act 2003, if the offender fails again to comply, within a 12 month period and without reasonable excuse, the responsible officer must start enforcement proceedings. The responsible officer institutes proceedings by laying an information before a magistrates" court or the Crown Court, depending on the order.

If the court is satisfied that the defendant breached, without reasonable excuse, any of the obligations contained in the community order under paragraph 9 of Schedule 8 to the Criminal Justice Act 2003, the court may:

- amend the terms of the community order by imposing more onerous requirements;
- order the offender to pay a fine of an amount not exceeding £ 2,500;
- revoke the community order and retry the case;
- if the crime is not punishable by imprisonment, but the offender knowingly and persistently breached the community order, the court may revoke the community order and impose a sentence of imprisonment up to 51 weeks.

4.16. Revocation of the community order

Part III of Schedule 8 to the Criminal Justice Act 2003 provides the situation of revocation of the community order issued by the court.

Thus, the offender or the responsible officer may request the revocation of the community order, taking into account the circumstances that have occurred since its issuance. According to paragraph 13 par. (3) of Schedule 8 to the Criminal Justice Act 2003, the circumstances in which a community order may be revoked include the case where the offender has made progress or has satisfactorily responded to supervision or treatment.

If the court finds that the request is grounded, it may (i) revoke the community order or (ii) replace the obligations under the community order with other less onerous obligations. The latter option involves the revocation of the community order and the issuance of a new community order in which the newly established obligations of the court will be found.

An example for the situation when the court opts only for the revocation of the community order would be when the offender has become very ill and is unable to complete the requirements[21]. On the other hand, the amendment of obligations comprised in the community order may occur, for example, if the offender or his responsible officer wanted to apply for a community order with different requirements, for example due to the good progress of the offender[22].

4.17. Amendment of obligations comprised in the community order

Part IV of Schedule 8 to the Criminal Justice Act 2003 provides the situations when the amendment of the content of the obligations comprised in the community order issued by the court may occur.

Paragraph 16 provides the situation when the content of the obligations comprised in the community order is amended on the grounds that the offender has changed residence. Thus, the court may amend the community order by replacing the jurisdiction relating to the original order with the jurisdiction relating to the change of the offender"s residence. The amendment of the community order becomes mandatory for the court if the request for a change of the offender"s residence is made by the responsible officer.

The court will not be able to amend a community order containing obligations that can only be complied with if the offender continues to reside in the original jurisdiction. For example, the court will not be able to amend a community order containing an obligation to participate in an accredited program unless the accredited program is also available in the jurisdiction relating to the change of the offender"s residence.

However, the court may cancel those obligations which cannot be complied with by the offender or may replace them with other obligations which may be

[21] Explanatory Note to Schedule 8 to the Criminal Justice Act 2003.
[22] Explanatory Note to Schedule 8 to the Criminal Justice Act 2003.

complied with in the event that the offender no longer resides in the original jurisdiction.

Pursuant to the provisions of paragraph 17, the offender or the responsible officer may request the court to amend the obligations contained in a community order not only when the offender changes residence.

Thus, the court may order the cancelation of any obligation contained in the Community order or may replace an obligation contained in the community order with another obligation of the same type. The court may not however add a new obligation or replace an obligation contained in the community order with a different obligation. The competent court may cancel or adjust an obligation, for example to change the hours when the offender must not leave a particular location or may replace one activity with another. It can also impose electronic monitoring onto any requirement of the order[23].

However, without the offender"s consent, the court may not amend an order imposing an obligation (i) a mental health treatment requirement, (ii) a drug rehabilitation requirement or (iii) an alcohol treatment requirement.

If the offender fails to give his consent, the court may revoke the community order and retry his case. If the court proceeds to retrial, it must take into account the extent to which the offender has complied with the obligations imposed by the community order, and may also sentence the offender to imprisonment, if necessary.

Paragraphs 18-20 of Schedule 8 to the Criminal Justice Act 2003 provide the possibility for the court to amend the community order under the following conditions:

- in case of a community order imposing a mental health treatment requirement, a drug rehabilitation requirement or an alcohol treatment requirement, when the medical practitioner considers that (i) the treatment of the offender should be extended beyond the period specified in the community order, (ii) the offender needs different treatment, (iii) the offender is not susceptible to treatment, or (iv) the offender does not require further treatment;
- in case of a community order imposing a drug rehabilitation requirement, with periodic review, the responsible officer may request the court that subsequent reviews be made without a hearing instead of at a review hearing, or vice versa;
- the competent court may, upon the request of the offender or a probation officer, amend a Community order by extending the period for which it was issued by a maximum of six months – this possibility does not exist in the case of a community order whose term has been extended;
- in case of a community order imposing an unpaid work requirement, upon the request of the offender or the responsible officer, the court may extend the period for which the order was issued beyond the 12-month limit provided by Section 200 of the Criminal Justice Act 2003, if, in relation to the circumstances that have occurred since its issuance, the court is of the opinion that this measure is in the interest of justice.

According to a report published in the British Journal of Community Justice[24], part of the obligations that may be ordered by the courts are very rarely used; the alcohol treatment requirement, mental health treatment requirement, the residence requirement, the exclusion requirement, the prohibited activity requirement and the attendance centre requirement are all in this situation. The unpaid work requirement and the curfew requirement began to be used more often, and the supervision and the programme requirement have decreased since 2005.

The probation officers interviewed during this study expressed confidence in the two community orders. They would have embraced the opportunity to use the programmed alcohol treatment requirement, mental health treatment requirement, but these options were often not available. With regard to the enforcement of community orders, certain probation officers were of the opinion that committing a new offence while subject to a suspended sentence should always lead to the application of a custodial sentence. Others expressed the wish to be able to punish breaches of obligations imposed by applying fines. The probation officers interviewed expressed concern about permanent organizational and legislative changes.

5. Conclusions

Recommendation R (92) 16 to Member States on the European Regulation on Community sanctions and measures was the first piece of legislation that provided a complete set of rules on the application and implementation of community sanctions, although alternative measures to imprisonment began to be considered at EU level as early as the 1970s.

The law system in the United Kingdom provides community sentences as alternatives to imprisonment and the courts in the United Kingdom are encouraged to use community-based sentences as alternatives to custody, the use of probation in the United Kingdom being traced back to 1840.

Although the community sentence may include one or more of 13 obligations for the offender, part of these obligations are very rarely used in practice, while others have shown a decrease in usage.

BUSINESS EMAIL COMPROMISE FROM THE CRIMINAL LAW PERSPECTIVE

Maxim DOBRINOIU[*]
Nicoleta GRATII[**]

Abstract

With nearly 85% of worldwide organizations being hit at least once, the Phishing attack has become one of the most significant cybercrime vectors that affect the business environment annually, with great loss in terms of money, assets, financial and personal data, confidential information and intellectual property rights. Hackers evolved both in sophistication and persistence of the methods they use in performing these attacks, while 97% of the users are still unable to roughly or properly recognize a simple phishing email. Amongst different types of Phishing, the Business Email Compromise variant represents one of the most employed tool by attackers for hacking human minds, and manipulate victims into performing various actions that eventually cause them loss. Most of the national legislations already have legal provisions to cope with this kind of menace, but the trend is to treat such scam as cyber-related offence or crime, based on the simple reason that it is performed by information technology means. While the judicial practice in this scenario is often ripped off by different interpretations of the existing legal provisions available, this material tries to come up with the most suitable criminal indictment solutions for this fraud, highlighting both technical and legal aspects that may help judges, prosecutors, lawyers, law enforcement agents and other legal practitioners in properly solving their cases.

Keywords: *business email compromise, fraud, scam, phishing, social engineering, criminal law, cybercrime, IT law, CEO fraud*

1. The concept of Phishing

Phishing has risen as a unique threat in the cyber environment, a menace that succeeds to bind together technology, psychology, sociology and communication skills, in exploiting the weakest link of the human defense and personal security: the mind.

Acting as a Social Engineering (SE) attack, Phishing is far more dangerous when directed to target a specific destination (individual, business, organization) – thus known as Spear Phishing.

Phishing itself is not intended to harm a computer system or data, as it hasn"t a malicious payload. Instead, it lures the victim to access its dangerous hyper-connections (known as "links") inserted in "to-good-to-be-true" email messages. Technically, the links are crafted to drive the user"s browsers to certain web pages (usually fake or in control of the offender). The human exploit is then realized as soon as the user is deceived and agrees to perform the offender"s will.

The COVID-19 pandemic offered a good opportunity to different bad actors (scammers, fraudsters, hackers) to target individuals and businesses alike, especially in the "work-from-home" scenarios.

Statistics of 2020[1] show that nearly 85% of the businesses have been hit by Phishing, while 97% of the Internet users do not have the capacity to recognize such an attack. On a regular basis, 30% of Phishing emails are opened by the users, and 12% of them further click on the links provided in the messages. Every month, 1.5 million new Phishing websites are created and used by fraudsters.

One particular thing is of a special attention: 96% of all targeted attacks are intended for intelligence-gathering[2]. Intelligence that is further used by the offenders in a reconnaissance activity with the intent to target a particular individual or business with the final aim to cause them loss of money or property. Such derived attack often comes as a scam, a swindle or a fraud, and it is known as Business Email Compromise (BEC).

According to government agencies[3], Business Email Compromise or Email Account Compromise (EAC) poses as a sophisticated scam targeting both large/medium/small businesses and sometimes individuals, frequently carried-out by an intruder breaking-in and taking-over an email account or just by spoofing an email address in order to determine an individual target to undertake financial transactions or transfers to bogus bank account or wire recipients.

While back in 2013, BEC scam was performed by simply creating a "just-like-the-original" fake email address (account) or by spoofing a genuine email address mostly belonging to a high rank official with a financial organization, a company or an organization (ex. CEO, CFO etc.), with the request of wire money transfer to be made to fraudulent locations, this kind of fraud evolved in the years after, both in technicity and

[2] Ibidem.
[3] https://www.fbi.gov/contact-us/field-offices/anchorage/news/press-releases/fbi-releases-2020-internet-crime-report.

sophistication, posing a far greater danger to businesses that regularly conduct electronic (wire) banking transactions, money transfer and payments.

In its 2020 IC3 Report[4], the FBI warns about a new trend in BEC/EAC scams, where has been observed an increase of using Identity Theft at a larger scale and (illegally obtained) funds being converted into cryptocurrencies.

Holding the 9th position in the 2020 top US Cyber Crime by Type, BEC/EAC has reached the Number 1 position in terms of financial loss, with a figure of nearly 1.9 billion USD (with 1.7 billion USD in 2019), a strong indicator of the criminal potential these scams reached to.

The industry alike, especially financial companies see BEC and EAC as a damaging form of cybercrime, capable of producing loss worth billions of USD a year, especially during the COVID-19 pandemic, when two factors contributed the most in escalation of the scams: new work-from-home business model and the increasing number of new foreign clients/suppliers/partners etc.

The experts warn that no industry is risk-free against BEC/EAC. In 2020, 93% of these attacks hit energy and infrastructure sector, while the overall rise reached 75% of the tracked business[5].

Banking sector has its own big concern about BEC/EAC, as recent statistics[6] show that 86% of the bank employees and representatives think that business email compromise and account takeover fraud are the greatest risks to their business. In response to that menace, 37% of the bank respondents intend to invest significantly in check fraud technology in the next 12 months.

At this level of industry, BEC/EAC are often perceived as "cyberattacks designed to gain access to critical business information or to extract money through email-based frauds", where the emails are just an attempt to convince an employee to reveal "critical business or financial information or process a payment request" that would never be done otherwise[7].

For all that, the companies admit that BEC/EAC may be something more complex than a simple email spoofing, especially when they are confronted with sophisticated "account takeover" attacks – with the attacker using intrusion tactics, techniques and procedures (TTP), such as (Spear) Phishing and Reconnaissance. While inside an email account, the attacker may find very useful information, like personal data of the victim"s contacts (vectors for new BEC/EAC attacks), calendar events, as well as the content of the electronic correspondence which is of a great importance when the attacker need to study the victim"s profile (as an employee or a boss), especially the payment habits or financial recurrences (both business and personal).

The success of an BEC/EAC attack rely on both technical aspects and human (victim) behavior.

According to cyber-security specialists at CSO Online[8] the technical flaws in confronting BEC/EAC may include:

- Desktop email client and web interface (e.g. Gmail, Yahoo) not synchronized and run the same version;
- Not establishing multi-factor authentication (MFA) for business email accounts;
- Not forbidding "automatic forwarding" of emails to external addresses;
- Not properly monitoring email Exchange servers for changes;
- Not often reviewing the use of legacy email protocols (IMAP, POP3);
- Not logging the changes to mailbox login and settings for at least 90 days;
- Not enabling security features to block malicious emails.

While the human (mis)behavior consists of:

- Not being attentive (aware) of "last-minute" change of email address of domain name of the contacts the employee often exchanges messages with;
- Not checking the misspelling in email address (often, the attackers switch the letters like "O" or "I" with figures like "0" and "1", or just eliminate certain letters of figures);
- Not adding banners in inbox to messages received outside the organization;
- Not reporting suspicious payment requests;
- Not setting-up alerts for suspicious behavior in exchanging messages with other contacts.

Despite the use of (even highly) sophisticated tactics, techniques and procedures, BEC/EAC scams, usually known as CEO Frauds or Man-in-the Email scams, ultimately target individuals in a way that succeed to manipulate them and determine (or persuade) to perform different actions that otherwise they probably would have not done.

So, they appear to be more like social engineering (SE) type "confidence tricks", than real computer fraud, while in both scenarios the aim is the money, as more and more specialists tent to admit[9].

In such way, dealing mostly with human (brain) hacking, and not computer hacking, the legal system has fallen apart in identifying the most appropriate way to bring down to justice and press charges against the perpetrators.

But, what is really there, from the criminal law perspective?

2. Doctrine views on scam/fraud

When it comes to law enforcement, it is of a great importance to define the terms, and rely on the most appropriate meaning in order to get the best from a variety of possible criminal charges.

Either is about Advance Fee Schemes or BEC/EAC, Business Fraud, Charity and Disaster Fraud, Credit Card Fraud, Elder Fraud, Identity Theft, Internet Fraud, Investment Fraud, Nigerian Letter (or "419 Scam") Fraud, Letter of Credit Fraud, Money Mules, Non-delivery of Merchandise, Ponzi Schemes, Pyramid Schemes, Romance Schemes or Sextortion, they all have one thing in common: human hacking (brain hacking) or human manipulation.

National criminal legislations usually drive on slippery slopes when about to differentiate among the above-mentioned illegal activities, and thus don"t make strong and clear difference between scam and fraud.

In the English-speaking countries" law, the term "fraud" is rather a concept, although not a crime in itself, it exists at the core of a variety of criminal statutes[10]. According to author Ellen S. Podgor, "one finds generic statutes, such as mail fraud or conspiracy to defraud being applied to an ever-increasing spectrum of fraudulent conduct", while "in contrast, other fraud statutes, such as computer fraud and bank fraud present limited applications that permit their use only with specific conduct".

Other English Law based authors[11] defined fraud as "an intentional or deliberate misrepresentation of the truth for the purpose of inducing another, in reliance on it, to part with a thing of value or to surrender a legal right". Fraud, then, appears to be "a deceit which, whether perpetrated by words, conduct or silence, is designed to cause another to act upon it to his or her legal injury".

"Fraud", as well as "fraudulent" are terms united by a common sense: deceit[12], and both has the meaning of a conduct with a purpose to deceive in order to get hold of something. That is why in some legislation (ex. UK) "fraud" is the short name for the crime of "fraud by false representation".

"Scam", however, has the meaning of a fraudulent business scheme, a stratagem for a gain or a swindle[13]. But in any case it involves human manipulation through deceiving.

Although there seems to be little or no difference between "fraud" and "scam", the general perception is that "scam" always involves money, whereas "fraud" may incur more other losses (apart from money).

Fraud is a term also used in the rest of the world criminal legislation, depicting various instances of criminal activity where deceit is often used to manipulate a person or to evade (bypass) state regulations for a personal gain.

More or less, the crimes having fraud as a drive, are usually gathered under the same title (or section) within the nations" criminal codes, such as "crimes against property".

3. Doctrine views on computer-fraud

Based on the legal provisions of the Council of Europe "Budapest" Cybercrime Convention of 2001[14], most of the European countries created, modified, or updated their own criminal laws including different crimes against confidentiality and integrity of data and computer systems, as well as the so-called "computer-related crimes" (computer-related forgery and computer-related fraud).

Article 8 of the CoE Convention on Cybercrime provides Member States with a model for criminalization of a behavior against the trust and the property by the means of computer data and computer systems, as follows:

"Computer-related fraud – Each member state shall adopt such legislative and other measures as may be necessary to establish as criminal offences under its domestic law, when committed intentionally and without right, the causing of a loss of property to another person by:

- any input, alteration, deletion, or suppression of computer data,
- any interference with the functioning of a computer system,

with fraudulent or dishonest intent of procuring, without right, an economic benefit for oneself or another person".

Currently, the CoE Convention on Cybercrime has been ratified by 47 members of the Council of Europe and adopted by another 31 non-European countries, with most of its legal provisions being implemented into national criminal legislation on cybercrime.

And thus, having a rising trend in technology and with a new (or reshaped) criminal provision in place, a new form of fraud offence emerged – the computer-related fraud, usually with slightly harsh punishment with imprisonment (comparing to different other types of fraud or scams).

Analyzing the legal provision promoted in Article 8 by the CoE Convention on Cybercrime, one can notice that there is no mention of the "deceiving a person", "misleading" or "turning a person of doing something".

It is all about interfering with (or acting upon) computer data and computer systems, with "fraudulent or dishonest intent" of (just) the perpetrator on its way to procuring an economic benefit, while causing a loss of a property (that includes other values, such as money) to a person (the victim).

In some criminal legislations (in Romania, for example), the computer-related fraud was long time considered as a special provision, thus being preferred by the law enforcement, prosecutors and judges to be used in pressing criminal charges against individuals suspected for the commission of various scams especially on the online markets, like eBay, Amazon and so.

Even the cases of BEC/EAC are usually being "solved" by referring to computer-related fraud as the best option for a criminal charge, merely due to an increased penalty and the scope for a better prevention against this kind of misconduct.

4. Business Email Compromise at the crossroads between traditional fraud and computer-fraud

As we have showed, BEC/EAC is a type of scam or fraud that implies different tactics, techniques and procedures, with the use of computer data and systems or other means of electronic communications.

But, apart from using computer systems and data (mostly email messages), BEC/EAC is more about the perpetrator taking advantage of multiple bad habits of the victims in using electronic means of communication, and the manipulation of their behavior in order to give up sensitive information (personal, confidential etc.) and, more important, to perform certain acts that eventually result in loss of money or property (for the benefit of the fraudster/scammer)[15].

Although it may look like the same, fraud and computer-related fraud are two individual offences with different approach from the national criminal legislations.

The common things that seem to bind them are:

- they both target property (in general) and money (in particular) of another (individual or organization)
- they both produce or intend to produce loss
- they both use tactics, techniques and procedures from the cyberspace (email, short messages, instant chat, computers, smartphones etc.)

The differences are somehow essential.

The first difference consists of who/what the perpetrator (fraudster) is acting upon:

a) in the case of a simple fraud (scam/swindle – for example BEC/EAC), the criminal actor uses deceit as his principal weapon against the victim. Deceit is successful if the offender and the victim don"t actually meet in person, but communicate via email (or other means). Deceit works especially when the factual data (the misrepresentation) presented by the offender contains enough "truth" that determine the consciousness of the victim to lay down the psychological barriers, to enter in a "comfort status" in the relationship with the ideas provided by offender and finally to get into the "trust status" thus accepting the offender data input as "worth to be followed". And, this is the moment when fraudster takes advantage of the victim"s "trust status" and further conduct manipulation against her.

b) in the case of a computer-related fraud, the offender creates, modifies, deletes or suppresses computer data, and even interferes with the functioning of a computer system in order to cause loss (of property or money), thus no relying on the victim"s behavior and not trying to manipulate her at all. The victim simply does not have any role in being defrauded or losing her property or money.

In the BEC/EAC scams, the funds are consciously authorized or handed-over to the offender by the victim herself, while in the computer-related fraud scenarios, the victim is not participating at all, and just finds out, discovers or is noticed about the result of the fraud/scam: loss of her property.

Such conclusions are also shared by other authors. In one opinion[16], computer data and computer systems are the target of the offender in the case of computer-related fraud, whereas in the case of simple fraud (scam/swindle), they are just means by which the offender is deceiving the victim.

In the simple fraud (scam, swindle), if the offender relies on false computer data (through input, alteration, deletion or suppression of data – resulting in non-authentic data with the aim to be considered to legal purposes) in order to create a misrepresentation of the truth and manipulate the victim, along with the crime of fraud, a computer-related forgery crime should also be considered as a valid criminal indictment.

Another perspective[17] that we embrace is that, in the legal relationship between the traditional fraud (scam, swindle) and the computer-related fraud, there is no possibility of a legal concurrence of offences. This is merely a conflict of legal provisions, that usually requests the legal practitioners to choose the one that is the most applicable for a given scenario.

5. Conclusions

For all that we have said and demonstrated in this paper, we came to the conclusion that in the case of traditional fraud, performed by the means of electronic

communications or computer data (e.g. BEC/EAC scam, swindle), the following offences shall be considered (given the tactics, techniques and procedures, as well as the technology used):

- illegal access to a computer system (with regard to the email account of the victim, that the offender breaks-in)
- unauthorized transfer of computer data (if the offender gets data – personal, financial, confidential – out of the email account)
- computer-related forgery (if the offender interferes with computer data thus resulting unauthentic information to be used in deceiving the victim prior to manipulate her to surrender the property or money)
- traditional fraud (scam, swindle) by the means of electronic communications or computer data

all together in a legal concurrence of offences.

EXECUTION OF CUSTODIAL AND NON-CUSTODIAL EDUCATIONAL MEASURES IN LIGHT OF LAWS 253/2013 AND 254/2013

Elena-Aurora DOGARU*

Abstract

With the new education policy for juveniles committing criminal offenses, it is necessary to analyze the rules for implementing non-custodial and custodial measures, as well as changes in their replacement or extension. Analysis of transient situations. The regime of execution of the educational custodial and non-custodial measure in the case of a minor at the date of committing the criminal act, of age at the date of committing the crime.

Keywords: *principles, purpose, execution regime, educational centers, detention centers, probation services.*

1. Theoretical highlights

According to the new Criminal Code adopted by Law 286/2009[1], juveniles who commit crimes and are criminally liable are subject to non-custodial or custodial educational measures. There is a rethinking of the sanctioning treatment applicable to juvenile offenders, based on their social reintegration, as opposed to the old criminal law, according to which punishments could be applied to minors if it was considered that an educational measure is not sufficient to correct the minor"s behavior.

The new criminal policy adopted by the Romanian legislator took into account the international regulations[2] on the sanctioning of minors who commit criminal acts, aiming, in particular, at their recovery, social reintegration, in order to prevent other criminal acts.

Thus, non-custodial or custodial educational measures are applied to juveniles who commit criminal acts and are criminally liable, depending on the provisions of the law. Thus, according to art. 114 para. 1 of the Criminal Code, a non-custodial educational measure shall be taken against the minor who, at the date of the crime, was between 14 and 18 years old. It is thus found that the rule regarding the sanctioning of minors who commit criminal acts is the application of a non-custodial educational measure.

Exceptionally, in accordance with the provisions of art. 114 para. 2 of the Criminal Code, juveniles who commit criminal acts may be applied custodial educational measures in the following cases:

a) if he has committed another crime, for which an educational measure has been applied that has been executed or whose execution has started before the commission of the crime for which he is tried;

b) when the punishment provided by law for the crime committed is imprisonment of 7 years or more or life imprisonment.

Therefore, against the minor who commits a criminal act and is criminally liable, and previously he has not committed another crime for which another educational measure has been applied, and the punishment for the crime committed is less than 7 years, the court is obliged to take a non-custodial educational measure.

Compared to the express provisions of art. 114 para. 1 of the Criminal Code, it is found that custodial or non-custodial educational measures may also be ordered if, at the date of the judgment, the offender had turned the age of 18, as the date of the crime is important.

The non-custodial educational measures are, according to art. 115 para. 1 item 1 Criminal Code: civic training, supervision, weekend recording and daily assistance.

The custodial educational measures are, according to art. 115 para. 1 item 2 Criminal Code: hospitalization in an educational center and admission in a detention center.

The choice of the educational measure to be ordered against the minor who committed a crime and who is criminally liable[3] is made under the conditions of art. 114, according to the criteria of judicial individualization provided by art. 74 Criminal Code. The court, in order to evaluate the minor according to these criteria, will request the probation service to draw

[3] Article 113 para. 2 of the Criminal Code, stipulates that the minor who is between 14 and 16 years old is criminally liable only if it is proved that he committed the deed with discernment, and according to para. 3, the minor who has turned 16 is criminally liable according to the law.

up a report, which will include reasoned proposals regarding the nature and duration of the social reintegration programs that the minor should follow, as well as other obligations that may be imposed on him by the court[4].

After the trial of the case, the non-custodial or custodial educational measure is executed in accordance with the provisions of art. 511, art. 514 and art. 515 Code of Criminal Procedure

2. Execution of non-custodial educational measures

The headquarters of the matter is Title IV of Law 253/2013 on the execution of sentences, educational measures and other non-custodial measures ordered by the judiciary during criminal proceedings.

According to the provisions of art. 63 of Law 253/2013, the non-custodial educational measures are executed in the community, during their execution ensuring the maintenance and strengthening of the minor"s ties with the family and the community, the free development of the minor"s personality, as well as his involvement in the programs carried out for the purpose of his training in the spirit of responsibility and respect for the rights and freedoms of others. It is therefore established that it is intended that the minor to whom a non-custodial educational measure has been applied should not be removed from the family environment.

Specifically, the manner of execution of non-custodial educational measures is established according to the age, personality, health condition, family and social status of the minor.

The central role in the organization, supervision and control of the execution of non-custodial educational measures belongs to the probation services.

In accordance with the provisions of art. 65 of Law 253/2013, after the finality of the decision by which a non-custodial educational measure was taken, the judge delegated with the execution sets a deadline, orders the bringing of the minor and the summoning of the legal representative, the representative of the probation services for the execution of the measure taken and the persons designated under their supervision.

2.1. Execution of the educational measure of the civic training stage

The execution of this educational measure provided by art. 117 Criminal Code aims to support the minor to understand the legal and social consequences to which he is exposed in case of crimes and to make him responsible for his future behavior.

The civic training internship consists of a program organized in the form of continuous or regular sessions, conducted over a period of no more than 4 months, and includes one or more modules of a theoretical or applied nature, adapted to the age and personality of the minor and taking into account, as far as possible, of the nature of the crime committed, for 8 hours per month of civic training[5], under the supervision of the probation counselor within the probation services in whose constituency the minor resides.

2.2. Execution of the educational measure of supervision

According to the provisions of art. 118 Criminal Code, the educational measure of supervision consists in controlling and guiding the minor in his daily program, for a period between two and six months, under the coordination of the probation services, to ensure participation in school or vocational training and prevention activities or getting in touch with certain people who could affect the process of correcting it.

The purpose of this educational measure is for the minor to participate in school activities, vocational training courses, prevention of activities and not to get in touch with certain people who could influence the process of correcting him[6].

The main role in the execution of this educational measure belongs to the parents of the minor, to the adopters or to the guardian. If these persons are unable to provide for effective supervision, the court will order the entrustment of the supervision of the minor, for the same period of time, to a trusted person, preferably a close relative, at his request. If this person is no longer able to exercise supervision, the judge delegated with the execution, in consultation with the probation counselor, shall appoint another person to exercise supervision.

The probation counselor exercises control over the execution of the educational measure and the performance of the duties by the person exercising supervision.

The minor"s parents, guardian or foster parent shall verify that he or she is complying with his or her obligations under his or her family, school or professional status.

If the court ordered in the content of the educational measure of supervision the participation of the minor in a school or vocational training course, and the minor is not enrolled in such a form of education, the probation counselor within the probation service in whose constituency resides the minor decides, on the

[4] Article 113 para. 2 of the Criminal Code, stipulates that the minor who is between 14 and 16 years old is criminally liable only if it is proved that he committed the deed with discernment, and according to para. 3, the minor who turned 16 is criminally liable according to the law.

[5] Law 253/2013, art. 66 para. 5.

[6] Art. 67 para. 1 of Law 253/2013.

basis of the initial assessment, the course to be taken and the institution in the community where it is to take place. The supervision and control of this obligation is carried out by the competent probation service.

The enforcement of the educational measure of supervision is done by the judge delegated with execution, who will set a deadline for when it is ordered to bring the minor, call the legal representative, the representative of the probation service, as well as the persons designated with supervision[7], and the exercise of the supervision starts within 30 days as of this time.

2.3. Execution of the educational measure of recording at the end of the week

The educational measure of recording at the end of the week is provided by art. 119 of the Criminal Code and consists in the obligation of the minor not to leave the home on Saturdays and Sundays, for a period between 4 and 12 weeks, unless, during this term, he has the obligation to participate in certain programs or carry out certain activities imposed by the court.

The purpose of this educational measure is to avoid the contact of the minor with certain persons or his presence in certain places that would predispose him to the manifestation of a criminal behavior.

Under this educational measure, the minor is forbidden to leave the home from 0.00 on Saturday until 12.00 p.m. on Sunday and is executed during consecutive weekends. As an exception, the court or the judge delegated with enforcement may establish another order, at the proposal of the probation counselor. Supervision of compliance with this obligation rests with the adult with whom the minor lives or with another adult designated by the court.

The probation counselor in the probation service in whose constituency the minor or the person designated by him or her in a community institution resides, exercises control over the execution of this educational measure and control over the performance of the duties by the person exercising supervision. To this end, the minor who lives alone or, as the case may be, the adult with whom he lives or appointed by the court has the obligation to allow the person designated with control of execution and supervision to make scheduled or unannounced visits to the minor"s home, on days when the minor must be in that space according to the court decision.

The educational measure of recording at the end of the week is executed under the conditions of art. 511 Code of criminal procedure, within maximum 15 days as of presentation of the minor and of the person designated with supervision before the judge delegated with the execution.

2.4. Execution of the educational measure of daily assistance

Daily assistance is the non-custodial educational measure provided by art. 120 of the Criminal Code and consists in the obligation of the minor to respect a program established by the probation service, which contains the schedule and conditions of deployment of activities, as well as the prohibitions imposed on the minor, for a period between 3 and 6 months. The supervision of the execution of this educational measure is done under the coordination of the probation service.

The execution of the educational measure of daily assistance is regulated by the provisions of art. 69 of Law 253/2013.

The supervision of the execution of this educational measure is carried out by the probation counselor or, as the case may be, by the person designated by his decision, within a community institution.

The parents, guardian or other person in whose care is the minor set together with the probation counselor the daily program that the minor shall observe and the activities that he must carry out. In case of disagreement, the program shall be established by the judge delegated with the execution, by reasoned decision, after hearing the concerned parties. The conclusion of the judge is not subject to any appeal.

The minor"s program will include school training activities, vocational training, obligations and prohibitions imposed during the execution of the measure and will take into account his identified needs, his social and professional status. At the same time, the program aims at the harmonious development of the minor"s personality, by involving him in activities that imply social relationships, organizing leisure and capitalizing on his skills.

The arrangement of the daily program is made within maximum 30 days from the time of the minor"s presentation before the judge delegated with the execution, under the conditions of art. 511 Code of criminal procedure, and daily assistance begins no later than 5 days after the establishment of the program.

When the daily assistance measure replaced a custodial educational measure, the establishment of the daily program shall be made no later than 15 days after the release.

3. Execution of custodial educational measures

According to the principle of legality, the execution of custodial educational measures is carried out in accordance with the provisions of the Criminal Code, the Code of Criminal Procedure and Law 254/2013.

Custodial educational measures shall be enforced only on the basis of a final judgment.

The principle of respect for dignity, the prohibition of torture, inhuman or degrading treatment

[7] Art. 511 Code of criminal procedure.

or the submission to ill-treatment shall also govern the enforcement of custodial educational measures.

The purpose of custodial educational measures is the reintegration into society of internees and their accountability, in order to take their own actions and prevent new crimes.

The essential difference between the purpose of punishment and the purpose of educational measures is represented by the multitude of activities established by the "Educational Project of the Center", which promotes through progressive accumulations and a regime with fewer constraints, the preparation of the minor for his return to the community from which he left, with a balanced physical and mental health, with a more developed sense of responsibility, with skills and competencies that will help him find a place in society and stop committing criminal acts[8]**.**

In the statement of reasons that accompanied the draft of the new Criminal Code, it is shown that the waiver of punishments in the case of minors and the execution - in most cases - of such educational measures of custody in specialized institutions, provides the premises for obtaining optimal results in education and the social reintegration of minors. The existence of specialized institutions allows the organization of educational and professional training programs appropriate to the age of these criminals, the contact of minors with major criminals during execution is avoided, etc.

The provisions of the Recommendation (2008) 11 of the Committee of Ministers state in principle that the deprivation of liberty of a juvenile delinquent shall be deemed as a last resort measure and shall be applied for a short period of time. In full agreement with the European provisions, the Romanian legislator establishes through the provisions of art. 114 of the Criminal Code, that the custodial educational measures have an exceptional character that can be applied only in compliance with special conditions. The seat of the matter of custodial educational measures is represented by Chapter III of Title IV of the Criminal Code, which regulates them in ascending order according to their severity, namely admission in an educational center and admission in a detention center.

By the provisions of art.124 Criminal Code a custodial educational measure is regulated with an educational-preventive effect that may be ordered against minors with deviant behavior who, through their actions or inactions, commit criminal acts of increased gravity. Also, as highlighted in the literature, admission in an educational center may be imposed on juvenile offenders when it is considered that non-custodial educational measures cannot lead to their re-education.

According to art. 124 of the Criminal Code, the educational measure consists in the admission of the minor in an institution specialized in the recovery of minors, where he will follow a program of school training and professional training according to his skills, as well as social reintegration programs. The admission is ordered for a period between one and 3 years [art. 124 para. (2) Criminal Code]. The educational center is the institution specialized in the social recovery of the admitted persons, where they attend school training and professional training programs, according to their skills, as well as other activities and programs meant for social reintegration.

The educational measure of admission in a detention center, regulated by art. 125 of the Criminal Code, consists in the admission of the minor in an institution specialized in the recovery of minors, with guard and supervision, where he will attend intensive programs of social reintegration, as well as school training and vocational training programs according to his skills. This educational measure is ordered for a period between 2 and 5 years, unless the penalty provided by law is imprisonment for more than 20 years or life imprisonment, when admission is taken for a period between 5 and 15 years.

Thus, admission in a detention center is a measure with an educational-preventive effect that may be ordered as a last resort when it is deemed to commit acts of excessive gravity. The distinction between the educational center and the detention center lies in the surveillance and guard regime and the intensive social reintegration programs.

The execution of custodial educational measures is regulated by Title V of Law 254/2013.

Detention measures are carried out in educational centers or detention centers.

During the execution of the custodial educational measures, the maintenance and development of the inmate"s ties with the family and the community is ensured, as well as the performance of some recovery measures adapted to his psychosomatic needs and personal development needs[9].

The educational centers and the detention centers are institutions specialized in the social recovery of the admitted persons, which are established by a decision of the Government, have legal personality and are subordinated to the National Administration of Penitentiaries.

Every person admitted in an educational center or detention center has the right to education, according to his needs and skills, as well as to an adequate professional training.

During the execution of the educational measures, the person against whom the measure was applied is provided, in an institution specialized in the recovery of minors, with the possibility to attend both school and professional training programs, as well as social reintegration programs.

Educational and detention centers have adequate spaces for accommodation, food preparation and

[8] Regulation for the application of Law 254/2013, art. 287.
[9] Art. 137 of Law 254/2013.

serving, school training and vocational training activities, social and psychological assistance, educational, moral-religious, cultural, sports, recreational activities, for providing assistance and medical treatments and for receiving visits.

The educational and detention centers have specialized staff for educational, moral-religious, cultural, sports, recreational activities, specific psychological and social assistance, medical staff, security, supervision and accompanying.

The Ministry of National Education, through the county school inspectorates, provides specialized personnel for school training activities in educational and detention centers.

The activity of social recovery of the admitted person is organized and carried out based on **an educational project** and a **recovery intervention plan**.

The educational project structures the organization and development of educational, psychological assistance and social assistance to inmates, according to individual needs and pursues with priority the following objectives: ensuring a climate conducive to personal development, providing usefulness for admission, reducing psychological and social vulnerability and the assimilation of knowledge and the formation of skills necessary for social reintegration[10].

Based on the Educational Project, for each admitted minor a "Recovery Intervention Plan" is made in which the educator responsible for the case is established, the customized activities to be carried out individually with each minor, the formulation of proposals for measures for the positive evolution of the person internally from an educational, psychological and social point of view[11].

The recovery intervention plan establishes the duration and the regime of execution of the educational measure, the activities and programs of school training and professional, educational, cultural, moral-religious, psychological and social assistance in which the inmate is included, after due consultation.

Regarding the **regime of execution**, it is distinct depending on the educational measure, respectively admission in an educational center or admission in a detention center.

In the educational centers, the regime of execution is common to all the admitted persons, individualizing themselves from the point of view of the recovery approaches meant for them, in order to respond to the needs of physical and mental development. Thus, the persons admitted in this regime are accommodated together, may move unaccompanied in spaces inside the center, carry out school training and vocational training, educational, cultural, moral-religious, specific social and psychological assistance and provide work, in groups, both inside the center and outside the box, without supervision.

Instead, the regime of execution of the measurement of admission in a detention center is based on the progressive and regressive systems, the admitted persons being entitled to move from one regime to another, subject to the conditions provided by law and good conduct.

Within the educational center, the execution regime is established by the educational council, which is set up at the level of each center.

With regard to detention centers, the enforcement regime, which may be opened or closed, shall be established by the commission for the establishment, individualization and change of the enforcement regime set up at the level of each center.

The closed regime applies to the admitted person for a period longer than 3 years[12] .

Persons admitted in this regime are usually accommodated together, carry out school training and vocational training, educational, cultural, moral-religious, specific social and psychological assistance and perform work, in groups, inside the center, under supervision.

The open regime applies to admitted persons for a period of less than 3 years. Within this regime, the admitted persons are accommodated jointly, they may move unaccompanied in areas inside the center established by the internal regulations, carry out specific school training and professional, educational, cultural, moral-religious, psychological and social assistance activities and performs work in spaces inside the center, which remain open during the day.

Educational, psychological and social assistance enables the admitted person the opportunity to acquire skills that lead to the adoption of a constructive, autonomous and responsible behavior in the community, with the aim of reintegration and social responsibility.

The reception of the convicted person in an educational and detention center is made based on the final court decision. Within 3 days from the reception in the center, the family or the legal representative are informed in writing about the possibilities of visiting and about the ways to support the social reintegration process carried out in the center. After being admitted to the center, the admitted person is kept in quarantine and under observation for 21 days.

In addition to the rights that a convicted adult has in the penitentiary, in the case of the juvenile detainee, special emphasis is placed on ensuring education, according to his needs and abilities.

The admitted person is obliged to complete his / her compulsory general education. Minors should be provided with 8 hours of sleep a day. The right to an intimate visit is granted only to the married person or who has the legal right to marry.

[10] Law 254/213, art. 142.
[11] Ioan Chiș, *Execution of criminal sanctions*, Bucharest, Universul Juridic Publishing House, 2015, page 605.
[12] Law 254/2013, art. 149.

During the execution of the educational measure, the admitted person can work only with the approval of the doctor from the center, but work is not allowed during the night.

The money obtained from the work performed is distributed as follows: 50% belongs to the inmate who can use 90% of them during the execution and 10% are recorded in his name at the State Treasury, to be collected at the time of release. The remaining 50% goes to the center"s administration.

Unlike the convicted adult, the minor can conclude an insurance contract regarding the contribution to the state social insurance budget for the income from the work performed, the contribution being covered from the 90% obtained during the execution of the measure.

The admitted person can also obtain income from the capitalization of the works carried out within the occupational workshops. The income thus obtained reverts entirely to the admitted person, after deducting the expenses necessary to carry out the works.

Regarding the rewards, the admitted person benefits from them if they show interest in the educational process, for the active participation in the organizational activities in the center and if they have an adequate behavior towards the other people in the center.

For admitted minors there is a number of specific rewards, such as: sending to camps or trips organized by the center or in collaboration with other institutions; agreeing for a maximum of 24 hours in the locality where the center is located; agreeing at the weekend for a maximum of 48 hours in the place of residence, family appointments, during school holidays, for 15 days, but not more than 45 days per year; consent for humanitarian reasons for a maximum of 10 days.

The humanitarian reasons for which consent can be given are: the death of a close relative or a person with whom the minor has strong emotional ties, solving social and medical problems, supporting the family or in case of disaster.

The obligations and interdictions, the disciplinary violations of the admitted minors are the same as for the convicted adults.

For admitted minors, in addition to the first 4 disciplinary sanctions applicable to the convicted person of age[13] the sanction of separation from the team can be applied for 4 hours a day, but not more than 5 consecutive days.

The execution of the educational measure of hospitalization in an educational center is done in accordance with the provisions of art. 514 Code of criminal procedure, and the execution of the measure of admission in a detention center is done according to art. 515 of the same code.

4. Conclusions

As mentioned in the preamble to this paper, the system of sanctioning juveniles who commit criminal acts was rethought by the national legislature, which eliminated the penalties, based on international regulations, pursuing the new criminal policy, in particular, their recovery, their social reintegration, in order to prevent the commission of other criminal acts.

However, I deem that the non-custodial educational measures as regulated by the legislator have not taken into account minors who commit criminal acts and who do not have parents, do not have a home, are not institutionalized ("street children") and against whom these measures have no practical effectiveness.

This conclusion follows from the economy of the provisions of art. 63 of Law 253/2013, according to which the non-custodial educational measures are executed in the community, during their execution ensuring the maintenance and strengthening of the minor"s ties with the family and the community, the free development of the minor"s personality, as well as his involvement in programs for training in a spirit of responsibility and respect for the rights and freedoms of others.

De lege ferenda, non-custodial educational measures should be rethought so as to take into account the situation of no family, homeless and uninstitutionalized minors.

CONSIDERATIONS ON YOUNG PRISONERS – BETWEEN SOCIAL REINTEGRATION AND RECIDIVISM

Cristina DUMITRAN*

Abstract

The article presents some consideration on the efficiency of the social reintegration policies of young detainees, as part of the multidimensional evaluation process. Even though there have been elaborated policies for reducing the causes which generate criminality and relapse, their efficiency has not been evaluated until now, the only mean through which this has been done being the statistical one. Contrary to the expectancies, statistically, the relapse rate of Romania is constant in recent years. In the analysis, recidivists and non-recidivists" convicts aged from 16 to 29 who fit the NEET criteria (Not in Education, Employment or Training) have been taken into account. The article highlights the social problems encountered by those who have gone through imprisonment and those who have benefited from social services and social reintegration programmes ran in the penitentiary and from post-incarceration services. The conclusion is that Romania has the means of reducing the relapse, but they are not well enough lawfully integrated in a coherent and constant process.

Keywords: *youth, social reintegration policies, criminality, recidivism.*

1. Introduction

Crime and increasing the recidivism rate in particular, are one of the most acute problems of the 21st century. With the evolution of society (economic, cultural, industrial, technological, etc.) and with the positive effects transposed in terms of progress, inevitably appear the negative effects, among which are the increase of crime, the decrease of the security degree of citizens, the decrease of the authority of social control institutions, the appearance of a subculture of crime. Even though there have been developing policies to reducing the causes which generate crime and recidivism, their efficiency has not been evaluated until now, the only mean through which this is the statistical one. Contrary to the expectancies, statistically, the relapse rate of Romania is constant in recent years.

There is recidivism when, after the final Coupled with the statistical situation of age related crimes, it is noted that currently, in the custody of the penitentiary system:

- 1,07% are minors aged between 14 to 18 (236 minors, being 17 less now than in 2019);
- 3,44% are young people aged between 18 to 21 (759 young people, 90 less than in 2019) – according to the age delimitation from the low on the execution of sentence no.. 254/2013[1];
- 23,61% are adults aged between 21 and 30 (5198 inmates, compared to 5515 in the custody of the penitentiary system in 2019); - 32,82% are adults aged between 31 and 40 (7224 detainees, increasing by 588 compared to 2019).

Linking the state of recidivism with present ages, it is inferred that the share of recidivists is found among people aged in the two groups: 21-30 years old and 31-40 years old. Thus, the probability of producing the first deed was at a young age, as defined in the Law no. 350/2006– Youth Law, art. 2.

Taking into account only the statistical data, it appears that the young people we refer to (18-29 years old), they once again lived the experience of incarceration and the same time they also benefited from the social services, from the educational programs and approaches of social reintegration carried out in the penitentiary and from the services specific to the post-detention period. The reality that these young people have relapsed in an increased percentage, raises issues of reflection on the effectiveness of strategies and policies for the social reintegration of detainees, making it necessary to critically analyze and rethink policies.

The research was limited to this age group not only from the perspective of its importance as a category for the future of any society, but also, because from a legal point of view, with the implementation of the new Criminal Code in 2012, legal frameworks of same facts have changed and the research would no longer be relevant.

Additionally, it was taken into account, as a reference to the current situation - the year 2019, when the law of the compensatory appeal (how is knows in public space)[2] was abrogated by Law no. 240/2019, because the effects it produced in the period 2017-2019 are still felt today. decision of a sentence of imprisonment of more than one year and until rehabilitation or the fulfillment of the rehabilitation term, the convict again commits an intentional or

* PhD Candidate, Romanian Academy, Quality Of Life Research Institute, Bucharest, Romania (e-mail dumitranc@yahoo.com).

[1] According to the art. 42, Law no. 254/2013, "young people are convicted persons under the age of 21".

[2] Law no. 169/2017 - law of the compensatory appeal, for the amending and completion of Law no. 254/2013 regarding the enforcement of punishments and freedom-privative measures laid out by judiciary bodies during the criminal cause.

outdated offence, for which the law provides for imprisonment of one year or more.

Society"s perception over the phenomenon of recidivism is an indicator of the failure of the justice system, which endangers security and public order. Studies have shown that the onset of delinquency occurs, in most cases, in early adolescence.

According to the statistical data provided by the database of the National Administration of Penitentiaries, the structure of detainees by to the criminal category, is as follows: of the 22,010 detainees (increasing by 6,06% compared to 2019):

- 37,75% are recidivists (slightly lower by 1,2% compared to 2019) and
- 27,05% non-recidivists with a criminal record (increasing by 2,2% compared to 2019).

In the Criminal Code, crimes during the period of the minor are not considered as recidivism. In this way, about the 27,05% non-recidivists with a criminal record can be considered to have committed crimes during the period of the minor or deeds for which they received the suspension of the sentence and supervision.

In this context, it was initiated a specific analyze within the Project co-funded from Human Capital Operational Program 2014-2020, POCU/380/6/13/125031 - "Support for doctoral candidates and post-doctoral researchers: *DECIDE - Development through entrepreneurial education and innovative doctoral and post-doctoral research*".

2. Content

According to the art. 3, Law no. 254/2013 *"(1) The purpose of the execution of sentences and educational measures constraining liberty is to prevent the appearance of new crimes.(2) The execution of sentences and educational measures depriving of liberty is aimed at forming a correct attitude towards the rule of law, towards the rules of social coexistence and towards work, in order to reintegrate detainees or interned persons into society*[3] *"*.

Preparation for the release of detainee begins on the first day of detention. Therefore, the chances of its inclusion in society depend on the quality of social reintegration services provided in the prison.

In the specialized literature, the phrase *social reintegration* means restoring the person to a state of functional balance before conviction[4].

If we take into account the factors that generate crime:

- poverty,
- low level of education,
- lack of a qualification and a job,
- lack of shelter,
- the entourage,
- genetic factors, etc[5],

the social reintegration of the detainee in the pre-detention environmental condition is not exactly optimal, but will be used by virtue of generalizing its meaning and assimilating it with the process of social inclusion, which "represents the set of multidimensional measures and actions in the fields of social protection, employment, housing, education, health, information-communication, mobility, security, justice and culture, aimed at combating social exclusion and ensuring the active participation of people in all economic aspects, social, cultural and political aspects of society". The social and criminal approaches and policies that are carried out with the detainees in detention to achieve this goal, were set out in the diary of the previous edition of the conference. However, although Romania has made progress in involving all parties responsible for reducing crime, few successful stories have been reported.

For example, the keystone was in the period 2017-2019, when, following Law no. 169/2027, the prison population reached unique negative levels in history. Thus, if in 2013 the number of detainees was 33,424, in 2019 there were months when their number was 18,900 detainees. The decrease in the number of detainees is not directly correlated with the decrease in the number of crimes and the reduction of crime.

According to Law no. 169/2017, it is stated that when calculating the executed punishment, regardless of the regime of executing the punishment, it should be taken into consideration, as a compensatory measure, the execution of punishment in improper conditions, a case in which, for every 30 days of detention in improper conditions, even if these are not consecutive days, 6 more days are added and considered executed.

Releases from prison as a form of compensation for poor detention have generated much controversy, including from human rights organizations: "*Both full-term release, much too hasty as a result of the enforcement of the compensatory appellate law, and the conditional release of convicts who had not proven themselves rehabilitated or ready to be reinserted, an excess stimulated by the lack of sufficient detention space, do nothing but encourage the criminal phenomenon. The availability of this release option induces the idea that offenders might easily escape after committing a crime, no matter how serious the crime may be. Thus, they end up committing new crimes, in fact more and more serious crimes, having more new victims as a result of these crimes, and finally, returning to prison after their much sooner release, without the chance to be fully rehabilitated and socially reinserted. Accordingly, it is quite likely*

[3] Law no. 254/19.07.2013 on the execution of penalties and the custodial measures ordered by judicial bodies during the criminal trial, Official Gazette of Romania no. 514/14.08.2013.

[4] According Social Assistance Law no. 292/2011, art. 6, alin dd), the *process of social integration* represents the interaction between the individual or group and the social environment, through which a functional balance of parties is achieved.

[5] C. Dâmboeanu, "*Fenomenul recidivei în România*". Calitatea vieții, XXII, nr. 3, București 2011, p. 295-312.

that prisons will be overcrowded as a direct result of hasty early release".

By applying Law no 169/2017, there were many situations in which detainees were released prematurely, without having achieved the objectives set at the beginning of the sentence. These objectives were specifically focused on the process of re-education, change and building new values. Thus, they did not have the necessary resources for integration into society. In this case, we are talking about integration into a society in which each individual complies with the rules and contributes to collective well-being through his actions.

According to the enforcement law, each detainee is assessed during detention, in order to identify intervention needs and vulnerabilities. Depending on the results obtained, an individualized plan of measures shall be drawn up.

These are prioritized according to risk, in the three areas: educational, psychological and social domain. The steps are staggered in time, throughout the execution of the sentence. In this way, if the detainee goes through all the steps in the years he spends in the prison, it is assumed that at the end of the sentence, the risks of recidivism are diminished.

So, from the 14,000 inmates who benefited from early release based on the enforcement of this law, more than 900 of them returned behind bars for committing serious violent offences - murders, rapes and robberies, in the same period: 2018-2019.

The vicious circle appears: no completed studies, no qualifications, no prospect of a job that will ensure a decent living, without developed skills and abilities, without a work education (discipline), stigmatized by society, sometimes without a family or its support, the only chance for released prisoner is to return to the environment in which he started his criminal career and obtained material benefits easily.

An analysis of the educational level of inmates revealed serious problems[6]:

- 3,49% have completed higher education studies;
- 0,64% have post highschool;
- 8,62% have attended highschool (9-12 school years);
- 10,44% have a qualification in a profession (92,1% of them being in the age group 30-60 years, so that only 7,9% of detainees under 30 years old have a qualification);
- 62,66% of them did not have a job upon arrest, while only 22% were involved in different domains of activity.

Some young detainees allege that they did not work during their detention, although they wanted to do it.

According to the enforcement law, "work" in the penitentiary is a right, not an obligation. Being a right that they can access or not, the specialists show that statistically, over 50% of detainees eligible to work in prison, refuse, understanding that legally, they have the right to accept or not this activity. Thus, those who are individualized in the maximum safety or closed regime, where the freedom of movement/exit from the rooms is restricted, appreciate work as a way to overcome these limits. When they reach semi-open or open regimes, where freedom of movement is increased, interest in work decreases in direct proportion. They consider it degrading to work, follow a schedule and have discipline in this regard and claim that they have never done so before. From this point we can talk about the" subculture" of prison, about models, values and interests that are specific to this environment.

As a benchmark for understanding the perpetuated stances through patterns of detainees, we show that:

- 59,68% did not complete the gymnasium cycle, being in the I-VIII classes segment (out of the 13151 detainees in this situation, 4323 are under 30 years old, representing 72,57% of the young detainees);
- 6,74% are illiterate.

The statistical radiograph shows the low interest of young people in school and qualifications, sine-qua-non conditions in accessing a satisfactory job and increasing employment opportunities.

35% of those released prematurely under Law 169/2017, were enrolled in penitentiary school (primary and secondary school) but did not finish. Studies on samples of detainees show that those who had the highest chances of re-integration into society are those who benefited from social capital: family, friends, well-meaning people, who offered them support and employment, work.

On the other hand[7], specialists highlighted the difficulties that young liberated people face: stigmatization (society was not prepared to repress them and give them "*a second chance*"), low education level, disinterest, background, lack of material resources necessary for subsistence until the moment of employment, the lack of a domicile and the necessary documents for the employment file.

The specialist said that the chances of re-integration increase if: the detainee has a qualification, wants to change himself, has the capacity for self-control, has a middle age, is physically and mentally healthy, maintains contact with the family, is not recidivist, has a previous work experience, worked in detention and has a permanent residence.

In this context, the chances of reintegration are difficult to predict.

One of the most recent directions of analysis of recidivism is that of "the criminal career" that begins in youth, develops and consolidates in detention and

[6] Statistical situation at 01.03.2021, effectively detaine: 22,010.

[7] Țica, Gabriel, "*Recidivism și excluziune socială*", Editura Universității din Oradea, Oradea, 2016, p. 201-2014.

provides a dynamic picture of an individual"s criminal activity by analyzing its trajectories, frequency, duration, stability over time and, finally, its cessation. Also in this context, it is talking about *"self-fulfilling prophecy*" who is a concept in the social sciences, which defines the situation in which someone expects, based on a hypothesis or an intuition, an event, usually negative, changes their behaviour depending on his/her beliefs, the result is that the "prophecy" is fulfilled. Thus, if the detainee does not believe in the possibility of reintegration into society, this will happen, regardless of the favorable context that would be created.

3. Conclusions

In fact, the reality is that it is not known exactly who are those offenders which will relapse and what are the factors that cause them to repeatedly deviate from the law.

In the prison system, a tool to assess the risk of recidivism of detainees has been implemented, but in present it is not relevant for making decision on psychological, educational and social interventions or for conditional release.

The minimum package of social reintegration programs held in prisons for periods of 3-6 months" maximum and does not ensure person-centrated intervention and change.

Another aspect that raises issues in addition to the duration of intervention, is related to the moment when the detainee is included in the program. Thus, if the detainee has to execute a sentence of 7 years for rape and in the first year is included in the program for sex offenders (which has 24 sessions – 6 months), by the end of the 7 years, it loses its efficiency.

On the other hand, the detainees claim that the social reintegration programs don"t help them at all, the only reason they participate is to get credits, rewards and early release, the motivation being extrinsic.

In conditional release commissions, the detainee"s presence at these programs and activities is taken into account, but the progress he has made as a result of his participation is not evaluated. One of the questions that should be asked would be "what change has occurred since the program?"

Released, in most cases, the detainee has the same problems as before imprisonment, but exacerbated, with a network of friends formed in the prison and, eventually, with consolidated skills and knowledge for practicing new crimes.

The lack of unified database for institutions, in which these elements are centralized, is the main obstacle in achieving an overview of individuals, predicting the risk of recidivism and assessing the effectiveness of how criminal and social policies respond to crime.

Given the above elements and statistical data on juvenile delinquency, we can appreciate that the purpose of the execution of the prison sentence is only partially achieved: preventing new crimes (during detention). The achievement a correct attitude towards law and order and social reintegration of ex-offenders remains a goal.

CRIMINAL INTERVENTION AND RISKS OF CURRENT SOCIETY: MANIFESTATIONS AND PROBLEMS OF PUNITIVE EXPANSION IN NEW AND TRADITIONAL AREAS OF CRIMINALITY

María Soledad GIL NOBAJAS*

Abstract

The exchange of global economic flows and the high degree of development of technological processes have turned globalisation and technical progress into the current pillars of our society. The advantages and opportunities they offer are twofold, since they can both improve the quality of life and serve as an opportunity for unlawful and, specifically, criminal conduct.

The concept of risk has consequently assumed a leading role in shaping the social model of advanced modernity. At the same time, it has given rise, as a normative reaction, to a demand for security on the part of citizens, which in the sphere of Criminal Law is manifested in an expansive tendency in its scope of intervention.

However, the risks we are currently facing have different origins and characteristics, so that the expansive response of Criminal Law is neither unified, nor does it pose the same problems. Thus, based on the characteristics of today"s society and the risks that threaten it, this paper is based on the differentiation of the expansive currents of Criminal Law developed on the basis of new preventive needs. Specifically, it is possible to identify two punitive trends: one, whose function is to respond to new forms of criminality arising in the light of technical and scientific progress; the other, which affects and intensifies criminal intervention in traditional areas of delinquency, linked to marginalisation and social exclusion. Having set out this framework, we will analyse some of the main manifestations of both currents in the Spanish Criminal Code and the problems of legitimisation and attribution of criminal responsibility that they raise.

Keywords: *Criminal Law, social model, risks, punitive intervention, Criminal Policy*.

1. Introduction

This paper addresses the protection that Criminal Law currently grants to society. Its objective is to analyse the political-criminal discourse that has developed on the current social bases and present some of the problems posed by the penal regulation that has given recognition to this Criminal Policy since the adoption of the Spanish Criminal Code in 1995 and the successive reforms that have been expanding its content[1]. Criminal Law is attributed a crime-preventive purpose to protect society. It is, in essence, an instance of social control that establishes its mechanisms for controlling social conflicts. However, it differs from other instances of social control (family, education, social networks, etc.) due to its high degree of formalisation. Criminal offence is a conduct that expresses intolerable social harm and, consequently, requires the most severe state response in terms of affecting the rights and freedoms of citizens, fundamentally personal freedom.

Historically, Criminal Law has found its main object of protection in interests of an individual nature, derived from its development within the framework of the Liberal State of the 19th century (life, health, physical integrity, property, honour...). This has conditioned both the criminal policy of its time and the nature and structure of the offences whose commission harms or endangers these legal interests. However, if Criminal Law fulfils a social protection function, it is easy to deduce that it is the specific model of society that will define the scope of protection for the maintenance of peaceful coexistence. Obviously, the characteristics that define the societies of post-industrial countries are very different from those on which classical Criminal Law was based at that time. We are witnessing an unprecedented economic, technological, political, cultural, and social revolution that has put existing legal mechanisms to the test in the face of new realities and, in particular, in the face of the conflicts that arise in this remodelled society. However, as the characteristics of the current social model give rise to new areas of protection, there are growing doubts as to whether criminal intervention is still compatible with the principles that legitimise it.

Within the framework of these considerations, this paper will start with the main defining features of the post-industrial social model and the factors that contribute to the formation and entrenchment of the public"s perception of insecurity or fear. This will lay the necessary foundations for analysing how they have been translated into a political-criminal discourse differentiated according to the origin of the risk and its specific characteristics, which has conditioned Spanish criminal legislative policy too. Some of the examples

* Lecturer, PhD, Faculty of Law, University of Deusto, Bilbao (e-mail: sgil@deusto.es).

[1] This paper is one of the results of the research project "Hacia un modelo de justicia social: alternativas político-político criminales" ("Towards a model of social justice: criminal policy alternatives"), granted by the Ministry of Science, Innovation and Universities of the Government of Spain, refence RTI2018-095155-A-C22.

in which this Criminal Policy is manifested will allow us to expose the main problems faced by Criminal Law in the 21st century. In doing so, this work contributes to the open debate in the specialized doctrine on the legitimacy of criminal expansion in each case, and its compatibility with the indispensable principles and guarantees of any criminal intervention.

2. Some keys to understanding today"s society

2.1. Risk society, knowledge society and exclusion society

As stated in the introduction, it is not possible to understand the Criminal Policy that has guided the reforms of the Spanish Criminal Code over the last 25 years without considering the social scenario in which it has developed. This is the result of the profound changes that have shaped the way we understand and relate to the world.

Briefly, the exchange of global economic flows and the development of technological processes have enabled the development of weightless and intangible activities characteristic of the global economy[2]. This produces both benefits and opportunities, as well as generating risks, new or more potentially damaging than those known in the past. Consequently, we live in a "risk society", where the processes of globalisation and technological progress affect the way we understand interpersonal relationships and the physical-spatial space in which they unfold[3].

Derived from above, today"s society is also set up as a "knowledge society", due to the leading role that new information and communication technologies play in it. ICTs are fundamental tools for social development that aspire to the global democratisation of knowledge. A paradigm of this is the Internet, the global network, where space and physical barriers disappear, and access to information is instantaneous, despite the physical distance between the event or sender of the information and its receiver. We live in the physical world, but also in the virtual world, which is as real as the physical world[4].

There is another facet of the current social model, which defines it as a society of exclusion or a "two-tier society"[5]. The positive effects of the opening up of economic networks, favoured by new technological channels, have a well-defined geographical scope. But they maintain, or even aggravate, social inequalities between countries and within their borders. The outbreak of the 2008 economic crisis is a good example of what the global economic order based on the rules of neoliberalism has led to and what it has meant in social terms. Today, the health crisis caused by Covid-19 has also shown that those who are suffering the most from the economic and health consequences are the most disadvantaged groups, as well as the poorest countries in terms of access to vaccines.

2.2. The birth of the insecurity society or fear community

The social scenario that has just been synthetically described is the basis for understanding another defining feature of the social system of our time. Economic development and technological progress are giving rise to risks that may even threaten the whole of humanity. They are latent risks, since it is difficult to specify when they will be translated into concrete damage, their magnitude and place of production, as they are not subject to physical limits[6]. It is also complex to establish a direct relationship between the victim and the origin of the damage, given the complexity of the production and management processes, as well as the exact mechanism and cause of the damage. Given these factors, the citizen acquires the impression of invisibility in the face of the danger, its agent and the extent of its repercussions[7].

Thus, the "community of fear"[8] or the "society of felt insecurity"[9] emerges. Obviously, the insecurity that a society manifests depends on the extent to which it is at the mercy of these "modern" risks. But it is also profoundly conditioned by citizens" subjective perception of risk, which influences what they are willing to tolerate[10]. What factors contribute to the formation and entrenchment of the social sense of insecurity?

First, the knowledge and information society contains a paradox of its own. The generation of

[10] Colina Ramírez, E.I. *Sobre la legitimidad del Derecho penal*…, op. cit., 36.

scientific knowledge, subject to strict rules of testing and verification, gives rise to new areas of ignorance and potential risks[11]. Knowledge offers security, but also uncertainty. On the other hand, the danger of the introduction of false or insufficiently verified news or information into the global network has devastating effects on citizens" perception of risk. Today"s society is a society of information and communication, but this does not determine either the quality or the veracity of its content.

Second, changes in everyday life occur at a dizzying speed, leaving the individual with little time, and sometimes capacity, to adapt and assimilate them. This heightens the sense of fear about the repercussions on their professional work, private life, or leisure time[12].

Thirdly, the media play a very important role in shaping people"s perception of reality. The proliferation of programmes that magnify the dangers we have to live with and the sensationalist way of dealing with the news widen the gap between objective risk and people"s subjective feeling of fear.

Fourth, economic power groups have a strong influence on the generation and dissemination of information through their control of the media. For their part, political parties also contribute to shaping public opinion, since the discourse of the power groups is ascribed to a certain political ideology. But political parties are also recipients of public opinion. The demand for security appeals to the political power for quick and apparently effective action, which is introduced into the political agenda of all parties as a fundamental electoral weapon.

The variables analysed are key to establishing the equation between risks and citizens" perception of security/insecurity, as we have seen. However, the social significance of the risks derived from globalisation and technological progress, on the one hand, and the existence of social inequalities and exclusion, on the other, is quite different. And it could be said that some of the influencing variables described above would have a greater impact on the latter social aspect. In the latter case, we are dealing with the citizen"s fear of being a direct victim of crime, in the framework of a political, economic, and social context that is already very agitated by essential issues (employment, access to health care, social benefits, housing, etc.). It is not the insecurity generated by the secondary or collateral consequences of technical, scientific or financial progress, but the insecurity that arises as a direct result of these processes in the generation and stratification of poverty and marginalisation. The risk arises from the "other" who is not the same as us, because he or she is a non-included in the system. The fog surrounding the perpetrator/victim and cause/harm relationship in a complex web of tasks, functions and chains of responsibility clears to make way for a face-to-face between the citizen and this visible and easily identifiable "other". And so, the citizen is less willing to tolerate these dangers with which he or she has to live.

It is enough to review the selection of daily news items to see which ones capture the attention of the media and, in their role of shaping public opinion, of the public. They are particularly violent and bloody, with an excessive use of drama, morbidity, and even bad taste[13]. This emphasises the apparent seriousness of the situation and the need to act forcefully in the face of it. To a greater or lesser degree, the citizen internalises the language of communication, which introduces value judgements from the moment a news item is selected[14]. The importance of the role of information in this area lies in instilling in citizens a certain perception of the phenomenon of crime, modulating their attitude towards it[15], regardless of its real incidence according to seriously elaborated statistics[16]. Moreover, it consolidates the impression that the apparent increase in crime is caused by someone different or alien to the majority of citizens[17], especially immigrants, drug addicts, the unemployed, beggars, the socially maladjusted, the mentally ill, etc., who are socially identified as the culprits of public fear. The above discourse is once again used by the power groups and political parties to support their political action programmes, in the same terms as mentioned above. Security is demanded and consequently security is offered, a balm for social fear and the key to political success.

3. Risk, security, and Criminal Policy

On the basis of the social mosaic presented, an analysis will be made of the political-criminal trends that have been the basis of the reforms of the Spanish Criminal Code since its promulgation in 1995. It is possible to identify two main trends: one, oriented

[17] Fuentes Osorio, J. "Los medios de comunicación…", op. cit.,17.

towards the "modern" risks of today"s society; the other, focused on the punishment of poverty and marginality.

3.1. The expansion of "modern" criminal law in the face of risk society

The binomial of risks derived from progress/citizen insecurity has brought the implementation of preventive policies by the State into the social and political landscape. Obviously, the greater the distortion between objective risk and subjective feeling of insecurity, the greater the demand by citizens for public action to avoid the actual harm of a possible threat. Even ahead of the birth of the threat of harm itself. A "preventive State" or a "vigilant State"[18] appears, which anticipates the danger in order to prevent it from arising[19].

In the field of Criminal Law, previous public policies have given rise to the so-called phenomenon of the "expansion of Criminal Law". In fact, this phenomenon spills over into other areas of criminal intervention, but here the approach is as follows: economic and technical development produces new areas of risk that affect new interests of protection or interests that were previously protected but are threatened by new forms of aggression. It is justified, then, that Criminal Law should review its contents and adapt them to the circumstances of a world that is very different from that of barely half a century ago.

According to the above, several areas of criminal expansion can be identified in relation to the "modern" risks of the globalised and technified society[20].

A first group focuses on the phenomenon of the globalisation of criminality in the commission of crimes. Here the "risk" lies primarily in the transnational or aterritorial nature of its commission, as well as in the greater material resources offered by the organisation for the perpetration of the offence. In addition to the increased penalties for certain offences when committed within the framework of a criminal organisation, the main manifestations of this group of expansion are, in my opinion, two: the criminalisation of the offences of belonging to an organisation and criminal group (Articles 570 bis and 570 ter, respectively), and the provision for the criminal liability of legal persons (Article 31 bis) and other groups without legal personality (Article 129).

A second group brings together a catalogue of offences in which very different legal interests are protected. However, they share common elements: a) in general, the collective or supra-individual nature of the protected legal interests and its protection against conduct that endangers them, without the need to actually harm them; b) the subsidiary nature of criminal protection compared to the protection offered by other legal sectors; c) the gradual assumption in criminal typification of the administrative mode of management, i.e., preventing conduct that only cumulatively generates damage[21]. A large part of the content of economic Criminal Law belongs to this heterogeneous group. Among others, offences relating to the market and consumers (Articles 278 to 288 of the Criminal Code), corporate offences (Articles 290 to 297), environmental protection (Articles 325 to 331), offences relating to the protection of flora and fauna (Articles 332 to 227), or urban planning offences (Articles 319 and 320).

A third group of offences incriminate the dangers arising from technical and scientific progress: genetic manipulations (Articles 159 to 162), use of nuclear energy and ionising radiation (Articles 341 to 345) and some offences against public health (Articles 364 and 365). In addition to these offences affecting health and/or the very existence of mankind, cybercrime can also be included in this group[22]. In a broad sense, it covers a wide range of situations of criminal relevance. In some cases, due to the fact that the use of computers or ICTs offers a new channel for committing traditional offences (fraud, coercion, threats, disclosure of secrets, harassment, child pornography, crimes against intellectual property, terrorism, hate speech, etc.) in which different legal interests are protected, mostly of individual nature (property, personal freedom, sexual freedom, privacy, etc.). In other cases, what is incriminated is a new criminogenic reality, in which Criminal Law assumes the protective role of the computer resource itself. An example of this are the offences of computer damage (Article 264) and denial of service (Article 264 bis). Also, the offences of hacking, computer intrusion or interception of data (Articles 197 bis and 197 ter), in which a new type of legal interest is protected, namely computer freedom.

Many of the incriminations representative of the modernisation of Criminal Law that have been highlighted have their origin in an international normative instrument that seeks the approximation of national criminal laws. Initially, the attempts by states to seek a common response to common problems are to be welcomed. But it also opens up the debate as to whether the expansion of criminal law into new areas or areas that have traditionally been alien to it is not affecting the foundations of its own legitimacy. Added to this are the specific substantive and procedural problems particularly posed by the crimes that guide

[18] Silva Sánchez, J.M., *La expansión del Derecho Penal*…, op. cit., 138-139.

[19] Mendoza Buergo, B. "Gestión del riesgo y política criminal…", op. cit. 75.

[20] It is not possible to draw a clear dividing line in each case, but the initial systematisation proposed by Mendoza Buergo is followed here (*El Derecho Penal en la sociedad del riesgo*, Madrid: Civitas, 2001, 41-42), complemented by this paper´s author with provisions introduced in the Spanish Criminal Code following successive reforms.

[21] Martínez-Buján Pérez, C. *Derecho Penal Económico y de la empresa. Parte General*. 5ª edición. Valencia: Tirant lo Blanch, 2016, 88.

[22] Cybercrime also fits into the two previous groups, since the use of ITC´s can serve as channel or instrument for the commission of the offence.

"modern" Criminal Law, such as that relating to the determination of the applicable Criminal Law when it is not possible to apply the principle of territoriality in the face of borderless crime.

In accordance with the principle of proportionality, criminal intervention is legitimised to the extent that it is an *ultima ratio* response for the protection of legal interests. According to this principle, the criminal protection afforded to legal interests of a collective nature, far from the individual referent on which liberal Criminal Law was built, raises the question of whether genuine criminal legal interests are really being protected, or on the contrary certain institutional functions traditionally protected by Administrative Law[23]. This is where the discourse on the legitimacy of a large part of economic and business Criminal Law comes into play. In addition to this, precisely, the subsidiary nature of criminal intervention and the coexistence of sanction regimes, with the consequent possibility of incurring in a *bis in idem* or a double sanction prohibited for the same conduct in the criminal and administrative spheres.

Even recognising the need to protect social realities of collective nature previously outside the scope of Criminal Law (environment, reasonable use of land...), the equalisation of the penalties to which the legislator sometimes resorts to punish situations with different effects on the protected legal interest is questionable. Thus, for example, certain conducts affecting the environment are punished with the same penalty whether they cause actual damage or "may cause damage" (Articles 325.1 and 326.2, 326 bis). This can only be understood from the perspective of the precautionary principle that guides Administrative Law, which has a wider scope of application than criminal prevention. There are also cases in which the same penalty is applied to the completion of the offence and to certain preparatory acts for the subsequent commission of the offence, such as the protection of computer freedom (Article 197 ter), computer-related damage (Article 264 ter), child grooming (Article 183 bis) or the counterfeiting of non-cash means of payment (Article 400), among others. On the other hand, the criminalisation technique followed in some cases clashes with the rule of law, in particular with the mandate of clarity or specificity of criminal legislation, due to the frequent use of normative elements or blank criminal laws, which require a strict standard of constitutionality to be met.

3.2. The expansionist punitive trend in the face of social exclusion and marginalisation

Criminality that has its origins in poverty and, on a larger scale, in social marginalisation, is not new. What is really "new" in relation to the apparent "risks" generated by the exclusion society is the current way of perceiving and understanding this criminality, in accordance with the influencing factors outlined previously. Security is demanded and security is offered. And what is the better way to achieve both objectives than through the criminal justice system, the State"s most repressive instrument. The current political-criminal trends in citizen security in Spain and other countries, focused mainly on the popular vote, fit into this context.

The content of these political-criminal guidelines is a faithful reflection of the "law and order" and "zero tolerance" policies that began in the United States in the early 1990s and rapidly spread to other countries[24]. The basis of these policies lies in the gradual destruction of the welfare State following post-industrial and neoliberal postulates. Thus, the progressive widening of the economic inequality gap and the social insecurity it generates find their counterpoint in the criminalisation (or rather, re-criminalisation) of poverty and marginalisation. The priority action of the public authorities therefore consists of repressing the disturbances of the "populace" through a policy of uncompromisingly dealing with the delinquency that disturbs the tranquillity of the middle and upper classes, since the latter make up the bulk of the electoral body.

This drift towards a progressive hardening of the criminal response in traditional areas of delinquency linked to poverty and social exclusion can be clearly seen in the successive reforms of the 1995 Spanish Criminal Code. The common element in all of them is the introduction of legal provisions that seek to isolate the offender from society for as long as possible. Examples of this are: (a) the introduction of revisable permanent imprisonment (2015 reform); (b) the reduction of the minimum limit of the custodial sentence from six months to three months (2003 reform), despite the null preventive effectiveness they exert; (c) the incorporation of the aggravating circumstance of qualified recidivism, which allows the sentence to be increased by one degree regardless of the concurrence of another or other aggravating circumstances (2003 reform); d) the provision of a regime of aggravating penalties for habitual and repeated offences (2003 and 2010 reforms), and subsequently for minor offences of minor theft and minor theft of use of motor vehicles or mopeds (2015 reform).

Apart from these legal provisions, the policy of law and order and zero tolerance can also be seen in the abolition of misdemeanours that took place with the 2015 reform. The LO 1/2015, of 30 March, repealed Book III of the Criminal Code, where misdemeanours were defined. The suppression was apparently justified

[23] Silva Sánchez, J.M. *La expansión del Derecho Penal*…, op. cit.,123, 138-141.

[24] See, mainly, Wacquant, L. *Las cárceles de la miseria*. Buenos Aires: Manantial, 2000,101-156. See also Wacquant, L. "La tormenta global de la ley y el orden: sobre neoliberalismo y castigo". In *Teoría social, marginalidad urbana y Estado penal. Aproximaciones al trabajo de Loïc Wacquant*. Edited by I. González Sánchez (203-228). Madrid: Dykinson, 2012.

by the legislator for reasons of minimum intervention, but in reality it has produced a generalised hardening of the criminal response, particularly in relation to small-scale property crime[25]. The 2015 reform has consolidated a particularly repressive and detailed regulation of minor theft, the prototype of petty crime, increasing the penalty for petty minor theft[26] (heir to the old misdemeanour) and incorporating new aggravations of the penalty that have also increased the penalty. The same fate has befallen street vending, in the context of offences against intellectual and industrial property. Moreover, in this case, the legislator has displayed a deficient legislative technique. In consideration of the characteristics of the perpetrator and the small amount of profit obtained, an alternative penalty is provided for to the attenuated or mitigated criminal offence (one to six months" fine or community service of thirty-one to sixty days). However, depending on the penalty imposed, the offence will be minor or less serious according to the classification established in Article 33 of the Spanish Criminal Code, with the substantive and procedural consequences resulting from it[27].

The political-criminal ideology that underlies the previous regulation has long opened up a heated debate in the specialised doctrine as to whether the legislative reforms of the last two decades have given rise to a Criminal Law focused on fighting against another who is not a citizen, but an enemy. Thus, there is talk of a Criminal Law of the enemy, which is largely rejected by the specialised doctrine. From the set of legal provisions that have been highlighted above, one can observe an intensification of the use of custodial sentences with a primary purpose of neutralising the offender, sometimes with neo-retributionist roots according to the (subjective) general opinion of the citizen. This calls into question whether this type of penal regulation is compatible with the resocialising orientation of custodial sentences in Article 25.2 of the Spanish Constitution.

Furthermore, these legal provisions go down the dangerous path of forgetting the *ultima ratio* nature of *Ius Puniendi* and the criterion of proportionality that legitimises it. Solving the problem of social differences caused by the global society by re-criminalising poverty does not seem to be the right way to go, and appropriate preventive social policies should be adopted for this purpose. The Spanish criminal legislator has distanced itself from this idea, since the progressive dismantling of the Welfare State has been accompanied, in an inversely proportional relationship, by an extensive and intensive punitive interventionism that does not produce dissuasive or resocialising effects. What it does produce is a placebo effect on the citizen, since it conveys the impression that something is being done to solve the structural problem behind the discourse of citizen security, above all because of the electoral advantage it offers.

4. Conclusions

This paper concludes that the Criminal Policy of a given historical moment can only be understood from the social foundations on which it is developed. In this sense, it has been analysed that the risks arising from the social fabric of post-industrial countries do not have the same meaning and characteristics. Nor do the set of factors that condition the citizen"s perception of insecurity have the same impact. Thus, the aim of this paper has been to show the double face of citizen insecurity and the risks that have caused it.

First, the risks that have genuinely driven the development of a "modern" Criminal Law are those deriving directly from the productive processes of economic globalisation and technological progress. This is the area in which Criminal Law has taken on a necessary extensive role, not without difficulties and problems that arise when it comes to making the protective function of Criminal Law compatible in the light of a society that is different from the one on which classical Criminal Law was based. The compatibility of criminal incrimination with the principles of legality, proportionality and culpability that determine the canon of constitutionality of criminal intervention is one of the fundamental challenges facing specialised doctrine and the work of judicial bodies.

Secondly, social threats rooted in marginalisation and social exclusion have emerged as a perverse effect of the above processes. However, they do not represent new risks for Criminal Law. What is new in the political-criminal discourse that responds to them is the gradual hardening of repression in this area, with an extension and intensification of custodial sentences. This punitive interventionism is dominated by "more of what is already known", with a clearly neutralising purpose, to the detriment of the aspiration of re-socialisation proclaimed in Article 25.2 of the Spanish Constitution. This is not the modernisation of Criminal Law to which we should aspire, that is difficult to fit into the framework of a Social and Democratic State under the Rule of Law such as Spain.

BRIEF REMARKS ON THE IMPORTANCE OF THE MATERIAL OBJECT IN A CRIMINAL OFFENCE

Lamya-Diana HĂRĂTĂU[*]
Ioan Mircea DAVID[**]

Abstract:

In preparing this particular research, we aimed to put under scrutiny the concept of the material object by analysing it in special given situations, in connection to the criminal offences that are most frequently encountered in practice, and thus to underscore the importance of this concept as a factor in the evolution of the legal framework. The challenges that appear to be inherent when categorising criminal offences into conduct crimes and result crimes do not constitute a novelty in the works of legal scholars, and even less so in practice, but in order to submit them to a proper analysis, it proves imperative that we possess a good grasp of the material object of the criminal offence, in order to establish the perpetrator"s level of criminal intent, as well as the manner in which criminal liability can be triggered.

Keywords: *conduct crime, result crime, blackmail, bribery, abandonment, pre-existing material object.*

1. Theoretical perspectives on the material object of a criminal offence

One of the key elements that need to be analysed when we consider specific provisions of the criminal law is the material object of the criminal offence. Several definitions for this concept have been so far proposed, inevitably affording it an increased level of importance in the process of examining criminal regulations.

The material object of a criminal offence can be defined as the „material entity (either an object or a thing of any sort, an animal, the body of a person) towards which the overt act of criminal conduct is directed, its physical energy, thus menacing to bring material harm to it or effectively causing such harm"[1] or it can be regarded as a „thing, asset or any other social value or commodity (subject to monetary valuation or not) upon which the criminally prohibited action or omission falls directly or it is thus effected and in relation to which the socially harmful effects of the criminal conduct become manifest" [2].

None the less, the material object needs not be mistaken for the instruments by which the offence was perpetrated or even less so for the fruits of the crime[3]. A relevant example in this respect is the crime of tampering with official documents, regulated under section 320 of the Romanian Criminal Code. Every time an official document is subject to an act of forgery, regardless of the manner in which the active subject chooses to perform such forgery, it would be wrong to claim that the resulting document represents the material object of the offence, according to the opinions[4] of certain scholars. Other writers[5] fine-tuned this vision in regard to the crime of tampering with official documents, claiming that, in principle, this offence does not involve a material object, but admitting that there can be certain situations – in the case of „counterfeiting", when the material object is represented by a standard form that will be filled out by a person who lacks the capacity to do so.

Apart from the two aforementioned opinions expressed in regard to the material object pertaining to the offence of tampering with official documents, the hypothesis in which the said violation could involve a material object was analysed in a different variant of perpetration, one where the material element is not „counterfeiting", but where this offence is committed my means of material alteration, in which case the material object is represented by the official document that pre-existed the act of alteration[6].

We notice that, notwithstanding the age in which the concept of *„material object of an offence"* was defined and excluding any social or political influences, the central idea of this concept encompasses a material object that the lawmaker took into consideration when drafting the provisions of the criminal law.

It is easily noticeable that the elements defining the material object of a criminal offence are based on

[5] C. Rotaru, A.R. Trandafir, V. Cioclei – Drept penal. Partea specială II. Curs tematic, ed. 4 revizuită și adăugită, Ed. C.H.Beck, București, 2020, pp. 378 – 379.
[6] M. Udroiu – Sinteze de drept penal. Partea generală, Ed. C.H. Beck, 2020, București, p. 101.

the distinction between conduct crimes and result crimes. Thus, the material object (also named immediate object[7]) is easily identified in the case of result crimes, and it consists in a movable asset, a written record or even in the body of a person, as opposed to conduct crimes, where legal scholars assessed in their works that the material object is of „an organisational, political or moral nature[8]".

Moreover, we estimate that a thorough analysis on the topic of the material object pertaining to a criminal offence does not only contribute to identifying the underlying differences between conduct crimes and result crimes, but also contribute to a higher level of understanding of the criminal law and its provisions – such as they are prescribed in the Special Part of the Romanian Criminal Code, as well as in other pieces of legislation.

While the existence of an individual or public interest that requires protection is an essential prerequisite for our being in the presence of a criminal provision under the law, the material object is not regarded, nor is it regulated, at the same tier of importance, so long as some offences can exist and are repressed even in the absence a material object, and this detail will be taken into closer consideration within the pages of this research.

In such a situation, however, we can ascertain that the endangerment or substantial harm afflicted on the material object brings injury to the safeguarded social relations contemplated by the law, and we can also retain that the absence of the material object (in the case of conduct crimes) negates the existence of the criminal offence[9].

Notwithstanding these, one opinion[10] among scholars points out to the existence of a material object even in the case of conduct crimes. It is also true that this opinion is founded on the existence of criminal provisions that are no longer prescribed under the current arrangements, and they refer to the offence of criminal insult aimed at a person. According to this theory, should the active subject bring insults to the passive subject, thus perpetrating a conduct crime, there could arise the possibility that a material object may exist and that harm may be caused to it when the offensive act of insulting is committed through the destruction of a piece of property representing the victim"s dignity – for example, a representative work thereof.

Under the current arrangements, we consider that such an act from the part of the active subject cannot be consistent with the elements of a conduct crime, but instead it will be materialised as a result crime. Through the destruction of a work product that belongs to the passive subject, apart from the state of discontent that it could instil in the latter, we conclude that we would be in the presence of a genuine case of aggravated criminal destruction of property – thus entering the realm of offences whose existence is dependent on the presence of a material object.

Equally, we cannot neglect the role of the material object in the process of accurately classifying an offence, of assessing the degree of threat that such prohibited conduct may generate, and of circumstantiating the moral factor of criminal intent[11]. One relevant example is represented by, say, a series of low-intensity physical aggressions effected by the active subject on a new-born baby[12], thus causing the infant to suffer traumatic damage that is incompatible with life, albeit the same trauma would have not endangered the life of an adult.

The assessment of such acts of battery, with consideration to the age of the passive subject, brings a considerable contribution to the process of ascertaining the level of criminal intent under which the offence was committed. In a situation similar to the one aforementioned, we could not assent to the claim that the active subject lacked full representation of their actions and that they could not foresee the possibility of inflicting traumatic lesions incompatible with life upon the passive subject.

2. The material object in conduct crimes and in result crimes

In examining the material object, we consider it is useful to make a clear distinction between what constitutes a conduct crime and what represents a result crime. One such expert opinion[13] has been expressed in regard to the practical importance of a good grasp of the material object – because the accurate classification of the criminal act consists in precisely this, and by so doing we acquire a good grasp of the safeguarded individual or public interest and of the safeguarded social relations – that constitute the subject matter of the criminal offence.

Even more so, a good grasp of the material object significantly contributes to the process of circumstantiating the level of criminal intent that the subject reaches at the time when the offence is committed. Another theory[14], under which the material object is instrumental in the correct assessment of the material damage incurred by the perpetration of an act covered by criminal law, is definitely not without importance.

[14] F. Streteanu, D. Nițu – Drept penal. Parte generală vol. I, Ed. Universul Juridic, București, 2014, p. 271.

It becomes manifest, in a situation such as this, that the most eloquent example we are able provide is one in which we would examine the material object in the case of a theft, where it is easy to identify the material object taken by the active subject from the possession or control of the passive subject.

However, we consider that in the case of offences against property, the role of the material object can be regarded, and it can also be approached, in a manner that differs from the aforementioned academic opinion. For instance, in the case of a robbery, we are compelled to consider two distinct material objects: on the one hand, the material object represented by the movable asset belonging to the passive subject, and, on the other hand, the body of the passive subject upon which violence was exerted.

If we are to examine the provisions of section 233 of the Romanian Criminal Code and thus to analyse the material object from the perspective of the offence"s material element, we also arrive at the conclusion that the active subject of a robbery offence can bring manifest harm to one single material object, notwithstanding that we are in the presence of a complex criminal offence.

Thus, should the crime of robbery be committed by means of threats under which the passive subject yields and surrenders to the active subject all of the movable assets found in their possession, we notice that the immediate consequence is harm perpetrated against the property of the passive subject and, inherently, against the psyche thereof, but the harm caused to the psyche by the use of threats does not in itself constitute a result crime - on the contrary, it is a conduct crime.

Apart from the intrinsic examination of the section that incriminates robbery, we consider that such an interpretation does in no way influence the type and extent of penalties prescribed by the lawmaker in the provisions of section 233 of the Criminal Code.

A summary analysis of the criminal provisions allows us to conclude that the presence of the material object leads, on the one hand, to the classification of certain offences in the category pertaining to result crimes, while the absence thereof will classify offences in the category of conduct crimes, and on the other hand the same reasoning leads to the differentiation of criminal offences into two other categories: material crimes and formal crimes.

A material crime is defined as the „act characterised by the existence of a material object, upon which the action or omission is directed"[15], as opposed to a formal crime, that does „not provide for the prerequisite condition of a material object to exist […] not being closely connected to a certain thing[16]".

One first criminal offence that can be the object of this research is the crime of blackmail, regulated under section 207 of the Romanian Criminal Code and pertaining to the category of crimes against a person"s individual freedom. The crime of blackmail is recognised as a genuine result crime, albeit it lacks a material object[17], and its immediate consequence is the menace exerted against the mental freedom of the passive subject. In another opinion[18], it was also found to be true that the property of another that is obtained as a consequence of this offence being committed does not represent the material object, but the fruit of the crime.

We express our support for this classification, but we think it"s useful to point out several details leading to the conclusion that the crime of blackmail can have a material object, and that the said object can be represented by the body of the passive subject, without the need to consequently qualify this offence as a conduct crime.

The conclusion that we reached involves, as a preliminary phase, the examination of the material element regulated by the lawmaker under section 207 par. (1) of the Romanian Criminal Code, namely the act of „coercion" by the active subject exerted against the passive subject, aimed at compelling the latter to give, to perform, to refrain from or to suffer something. This coercion has been interpreted[19] as designating both moral and physical duress. Determining a person to perform a certain act by physical constraint implicitly requests the presence of a secondary material object, this being the body of the person upon which the violence is being effected.

In this respect, some authors[20] analysed the notion of „coercion" included by the lawmaker in the provisions of section 207 of the Romanian Criminal Code, and they concluded that the exertion of acts of physical violence, that fully attain the constitutive elements specific to the crime of battery, will end up being absorbed in the constitutive elements that characterise the crime of blackmail. Starting from this analysis, we conclude that an act of physical duress exerted by the active subject upon the passive subject, in an unwarranted manner, in order to obtain a gain of no monetary valuation, that would cause the latter a severe and permanent mutilation or disfigurement, would be classified as a genuine crime of mayhem, regulated under the provisions of section 194 par. (1) subpar. c) of the Romanian Criminal Code, as a

[19] S. Bogdan, D.A. Șerban – Drept penal. Partea specială. Infracțiuni contra persoanei și contra înfăptuirii justiției, ed. a II-a revizuită și adăugită, Ed. Universul Juridic, 2020, pp. 256–257.
[20] Idem, p. 257.

concurrent offence to be prosecuted along with the crime of blackmail[21].

However, in the event of a perpetrator attempting, by the use of physical constraint, to subdue the passive subject into performing a certain act, followed by the latter"s refusal to comply to the coercion, the result is not the same as the one prescribed in the provisions of the incriminating norm found in section 207 of the Romanian Criminal Code. In such a situation, what is the violation for which the active subject will be held liable? The answer is that the active subject will be held criminally liable for the offence of blackmail, since the consummation of this crime intervened at the time when the threat towards the passive subject"s mental freedom was thus created[22].

Indeed, the lawmaker prescribed that one of the constitutive elements that condition the existence of blackmail is that the obtaining of the contemplated gain must be achieved in an unwarranted manner, a provision that rules out the *per a contrario* interpretation according to which the perpetrator who aims to unwarrantedly obtain a legitimate gain will not be committing the crime of blackmail, because in such a situation we would be validating the enforcement of a right by means of unwarranted violence[23].

Another relevant example, one pertaining to the category of crimes that involve the trafficking and the misuse of vulnerable persons, is the exploitation of beggary – a crime regulated under section 214 of the Romanian Criminal Code. We construed this offence to be another conduct crime, but, contrary to the initial distinction between the two classifications, in certain situations this one involves a material object.

„The act of an individual who causes […] repeatedly", which constitutes the material element of this offence, exacts some debate, since it is susceptible of being effected by means of physical duress, thus compelling the passive subject (the underage person or the physically/mentally disabled person) to resort to the pity of the general public. Therefore, we draw attention to the fact that, when examining the exploitation of beggary, we find that there is no material object, since the safeguarded social value that is protected by law is the person"s liberty and dignity, but when the body of the passive subject is involved, by submitting a person to physical constraint, we can discuss of a conduct crime whose material object is fully manifest.

Also pertaining to the category of crimes against property, and distinct from the initial example, where we tried to examine the material object of robbery, we analysed the offence of diversion of public tenders, regulated under section 246 of the Romanian Criminal Code. In this case, too, many authors[24] have expressed an opinion supporting the non-existence of a material object, but even so, this offence is a result crime.

At a first glance of the section indicated above, we conclude that the active subject in the diversion of public tenders aims to distort the final sale price in a public procurement procedure, which is correct, but we must not overlook the fact that this initiative is never manifest in the form of a material object. In the case of this particular regulation, too, some of the doctrine[25] considers that when the diversion is achieved by means of physical duress, we are in the presence of a result crime, one that involves a secondary material object – represented by the body of the person upon which the coercion is being effected.

There are also situations, in the case of crimes relating to the administration of justice, where the absence of a material object causes confusion in regard to the correct classification of an offence in either the category of result crimes or in that of conduct crimes. Such a situation can be encountered in the case of the criminal failure to report, an offence regulated under section 266 of the Romanian Criminal Code.

Some authors[26] claim that a material object is non-existent in this case, since the safeguarded social value thereby protected bears an abstract nature, which leads to the conclusion that failure to report, regulated under section 266 of the Romanian Criminal Code, is a conduct crime, but a contrary opinion[27] has also been expressed, supporting the conclusion that the material object of the crime that went unreported also constitutes, in reality, the material object of the criminal failure to report.

The controversial debate over the existence of a material object in the case of result crimes and the absence thereof in the case of conduct crimes seems to re-emerge when discussing crimes that pertain to the category of corruption and offences in public positions – more precisely, in the case of taking a bribe, an offence regulated under the provisions of section 289 of the Romanian Criminal Code.

Following an analysis of the judicial practice both before and after the enactment of the New Criminal Code, the doctrine reached a unanimous conclusion over the fact that the offence of taking a bribe is a conduct crime, while the same level of certainty was not expressed in regard to the existence or the non-existence of the material object[28].

[28] Idem, pp. 468–469.

3. The material object in special circumstances

Apart from the theoretical and practical importance afforded to the material object of criminal offences, from the perspective of their classification, we consider that the material object also represents an element of utmost importance in those situations where the presence or the absence thereof leads to an amendment of indictment and implicitly triggers a distinct criminal liability.

For example, in the case of harassment, regulated under the provisions of section 208 of the Romanian Criminal Code, some authors[29] reached the conclusion that this is a conduct crime which does not involve a material object. This being a crime that brings harm to a person`s mental freedom, harassment has often been considered similar in certain situations with an „insidious form of threats"[30], which requires certain comments, once it is encountered in the practice of courts.

Pursuant to this regulation, the material element of harassment consists in the unwarranted pursuit or surveillance of a person, an act whose immediate consequence is represented by the state of fear that is instilled in the victim. However, the body of the person in which fear is insinuated can represent the material object of an offence that derives from the crime of harassment.

If the unlawful surveillance perpetrated constantly and persistently will determine the passive subject to commit suicide, for fear of worse consequences that they may have to endure from the part of the active subject, we will find ourselves in the presence of another offence – a result crime, one whose material object undoubtedly exists.

Should a direct connection be established between the offence of harassment and the suicidal act of the passive subject, we can be contemplating the case of a murder committed knowingly, so long as the perpetrator *foresees the result of their actions and, although they do not pursue it, they accept the possibility that it may occur*.

In such an event, a conduct crime (lacking a material object) that harms the mental freedom of the passive subject converts into a result crime whose material object is constituted by the very body of the passive subject.

Another example is the crime of abandonment – regulated under the provisions of section 378 of the Romanian Criminal Code, one also considered by the literature as an offence that does not involve a material object[31], albeit in some practical situations that view is susceptible to change.

The prerequisite situation from whence to begin examining the crime of abandonment is represented by the existence of a legal obligation of maintenance, one that the perpetrator can also breach in the variants of the material element prescribed under section 378 par. (1) subpar. a) of the Criminal Code: „forsaking, banishment or leaving in distress", thus exposing the victim to physical and moral suffering.

In the context of a family, where the perpetrator is one of the parents, and the passive subject is an underage child, let us suppose that the parent repeatedly imposes physical correction on the child by exposing the minor to cold, every time the minor miscalculates one of the arithmetical operation they have to solve as homework. After repeated exposure to low temperatures, the child suffers a mild stroke and requires medical attention, without having their life endangered. In this case, too, we consider that the crime of abandonment, that has no material object, converts into another violation that does have a material object, one likely to also cause an amendment of indictment from abandonment to ill-treatment of a child, an offence regulated under the provisions of section 197 of the Romanian Criminal Code.

To conclude, the consequences generated by the perpetration of a criminal offence do not stop at the amendment of the indictment, but they also involve the examination of the existence or of the non-existence of a material object that has been subject to injury or harm.

4. Conclusions

As a consequence of the theoretical and of the practical correlations that we exposed in detail throughout the present research, we consider that the material object of the crime represents one of the most important elements when the examination of an incrimination norm is needed.

Its presence, the way in which it is characterised in dependence of the material element, but also in dependence of the level of criminal intent that is specific to each criminal offence, all constitute aspects that could lead to an amendment of indictment, thus generating legal consequences in the area of criminal liability, which sometimes can even be excluded.

Last, but not least, the analysis performed on the material object of the criminal offence also bears relevance in relation to the assessment of the level of intent under which the crime was committed. The actions or the omissions from the part of the active subject, effected on a certain material object, can prove instrumental in ascertaining the basic intent, the intent or the oblique intent of the perpetrator.

THE HUMANISM OF CRIMINAL LAW

Mihai Adrian HOTCA*

Abstract

The humanism of criminal law is a principle of criminal policy and postmodern criminal law. It is listed in numerous internal and external sources. An international treaty based on the principle of humanism is the Convention against Torture and Other Inhuman or Degrading Treatment or Punishment, adopted in New York in 1984. The European Court of Human Rights has a rich jurisprudence that sanctions violations of the European Convention (see art. 3) in the field of human rights protection, including in terms of humanism of criminal law.

Keywords: *humanism, criminal law, human rights, torture, criminal policy, inhuman punishments, degrading punishment.*

1. Introduction

The word „humanism" comes from the Latin word *humanitas* and means benevolence or humaneness, and currently it designates a true social and cultural movement, too. Humanism is a doctrine that places the human being, his welfare and the trust in human reason at its centre.

According to the Amsterdam Declaration (2002), humanism supports, *inter alia*, democracy and human rights, and emphasizes that individual freedom must be harmonised with social responsibility.

In the field of criminal law, humanism can be associated with the classical thinkers. The classical doctrine has opposed to the cruelty of penalties and has taken a stance against the death penalty, the inhuman, degrading and infamous punishment. We can safely say that the representatives of the classical school of thought in Criminal Law have advocated the humanism of Criminal Law[1].

The classical doctrine[2] of Criminal Law has appeared in the third quarter of the 18th century, and the father of this doctrine is deemed to be Cesare Beccaria, who has written the unsurpassed (appreciated especially *illo tempore*) work „*Dei delitti e delle pene*" in 1764[3]. A very probable reason for the birth of the classical doctrine of Criminal Law has been the conflict between the bourgeoisie and the feudal lords. The work of Beccaria is remarkable and, at the same time, fundamental for criminal law, whereas it is the only work of that time that deals with the essential topics of criminal law[4].

Cesare Beccaria has sketched the lines of modern criminal law. His ideas, together with those of Montesquieu and of other academics of that time, have been taken over and developed by the thinkers that followed him, have been included in the documents of the 1789 French Revolution, and some are enshrined in the contemporary criminal laws[5].

When we talk about the humanism of criminal law, we must not ignore that the criminals are, at least to some extent, a product of society. The idea of eradication of the criminal phenomenon is a regularly recurrent one and we find it including in formal legal documents, national or supra-national (strategies, recommendations, action plans, policies, etc.). This goal - the eradication of the criminal phenomenon - is a beautiful hope or a superb illusion, that feeds the social morale, thus helping many people not to resign and to find the motivation to progress.

2. The content of the principle of humanism of criminal law

Brevitatis causa, the humanism of criminal law is the obligation of the legislator and of criminal law enforcers to observe the fundamental human rights and freedoms. In other words, the humanism of criminal law is an indispensable requirement for the creation and the enforcement of criminal law.

Humanism is not only a principle of criminal law, but also a principle of criminal policy, because the state is bound to find the instruments or the means able to re-socialize the criminal offenders and to protect those who become the victims of crimes. Indeed, from a different perspective, the state is bound to create the optimal legal framework for successfully re-inserting into the society those who commit anti-social acts and

* Professor, PhD. Faculty of Law, "Nicolae Titulescu" University of Bucharest (e-mail: mihaihotca@univnt.ro).

[2] For an in exteso presentation of the main schools of thought in criminal policy, see C. Duvac, N. Neagu, N. Gamenț, V. Băiculescu, op. cit., p. 42 et seq.

[3] The name of classical school was given by Enrico Ferri.

[4] The other titans of Illuminism - Rousseau, Montesquieu, etc.- have dealt more with the issues of general legal policy and less with those of criminal policy.

[5] M.A. Hotca, Criminal Law. General Part, Universul Juridic Publishing House, 2nd edition, Bucharest, 2020, p. 30.

for granting the necessary protection to the victims of crimes. In order to achieve this policy, the state is bound to adopt assistance measures aimed at the detained persons and their victims.

The principle of humanism is enshrined in both internal sources and international treaties. The Convention against Torture and Other Cruel, Inhuman or Degrading Treatment or Punishment was adopted in New York, in 1984. Our country has adhered to this treaty in 1990, by the Law No.19/1990[6].

According to Article 3 of the European Convention on Human Rights: „*No one shall be subjected to torture or to inhuman or degrading treatment or punishment*."

The principle of humanism is also found in Article 22 paragraph (2) of the Fundamental Law, in a wording similar to the one of the Convention. According to this constitutional provision: „*No one shall be subjected to torture or to any kind of inhuman or degrading punishment or treatment*."

Torture means to deliberately inflict severe physical or mental pain in order to obtain confessions, information or testimonial depositions. Inhuman treatment means to inflict less severe physical or mental pain. Degrading treatment means a humiliation of the natural person aimed at weakening or breaking her mental strength.

The criminal offender, as a member of the society, with which he has come into conflict, must benefit from certain rights, inherent to the human being. He has to be brought back to the society of which he is part by measures aimed at changing his conduct. If an officer uses an inhuman or degrading treatment on a person, he shall be liable for the criminal offence of ill-treatment.

The Strasbourg Court has ruled that flogging or physical exercise is a degrading punishment[7], while spanking the hands of some Scottish pupils with a belt is not inhuman or degrading treatment[8]. On the other hand, the Court has ruled that the expulsion of an 18-year-old, at the time of the facts, to the US in order to be sentenced to death, is contrary to Article 3 of the Convention, because the suffering caused by the wait in death row (the death row syndrome), given the situation of the person in question, is able to put in danger the equilibrium between the general interest and the private one[9].

The European Court has also found the violation of Art. 3 of the Convention in the cases where the state bodies have used the physical force (electric shocks, for example) or mental pressure (blindfolding or detention in dark places, etc.)[10].

The last important legal document, that legally enshrines the principle of humanism of criminal law at the level of the European Union is the Charter of the Fundamental Rights of the European Union, which stipulates in Art. 4 that: „*No one shall be subjected to torture or to inhuman or degrading treatment or punishment*."

The principle of humanism is twofold: the protection of the natural or legal person by prohibiting the actions dangerous to the social values; the observance of the criminal offender"s dignity and rights.

The principle of humanism opposes to the adoption of criminal penalties, inhuman or degrading. Also, the aim of enforcement of penalties has to be the re-education and the social reinsertion of criminal offenders.

According to this principle, the legislator and the law enforcement bodies are bound to regulate individualisation criteria and to adapt criminal sanctions to the particular case of criminal offenders respectively.

The principle of humanism of Criminal Law has another side, which involves, besides the protection of criminals" rights, the safeguarding of victims of crimes who should not be ignored from the legal equation of the criminal conflict relationship, due to the concerns regarding the criminal offenders.

Throughout the resolution of the criminal conflict relationships, the victim must enjoy at least the same degree of attention and protection as the criminal offender, otherwise criminal law would be adrift and

[6] Thus, the preamble of the New York states:

Considering that, in accordance with the principles proclaimed in the Charter of the United Nations, recognition of the equal and inalienable rights of all members of the human family is the foundation of freedom, justice and peace in the world,

Recognizing that those rights derive from the inherent dignity of the human person,

Considering the obligation of States under the Charter, in particular Article 55, to promote universal respect for, and observance of, human rights and fundamental freedoms,

Having regard to article 5 of the Universal Declaration of Human Rights2 and article 7 of the International Covenant on Civil and Political Rights, 3 both of which provide that no one shall be subjected to torture or to cruel, inhuman or degrading treatment or punishment,

Having regard also to the Declaration on the Protection of All Persons from Being Subjected to Torture and Other Cruel, Inhuman or Degrading Treatment or Punishment, adopted by the General Assembly on 9 December 1975, desiring to make more effective the struggle against torture and other cruel, inhuman or degrading treatment or punishment throughout the world (...)".

[7] Ireland v. United Kingdom; Tyrer v. United Kingdom.

[8] Campbell and Cosans v. United Kingdom. The recitals of the Convention stipulate that the UK law (common law) allows the use of physical punishment on children by parents and educators, provided that they are not excessive and do not inflict mental or physical harm (humiliation, degradation). However, in our opinion, the Court's solution (in the case X, Y v. the Netherlands), according to which forcing a minor over 16 years, with serious mental disorders, to have sexual relationships, does not represent inhuman treatment, is questionable. The Court has considered that the gaps of the Dutch laws in these cases, in the sense that the start of the criminal investigation is made subject to the preliminary complaint of the injured person, are not enough to entail the application of the Convention.

[9] Soering v. United Kingdom.

[10] Takin v. Turkey; Ribitsch v. Austria. If the wounds are attributable to the accused, who has opposed to the arrest, Art.3 of the Convention is not violated (Klas v. Germany).

failure would be implacable. The immediate beneficiary of the act of justice has to be the one who has become the victim of the illegal act, although on another, more abstract level, the effects of justice radiate more or less on all members of the society.

Criminal law and the other criminal sciences must also deal with the passive side of the crime, the *victimicy* respectively. If crime, in general, means all the criminal offences committed during a certain period in a defined territory, *victimicy* means all the persons who have become the victims of criminal offences during a certain period in a defined territory. In a wider sense, victimicy can mean both the completed side (the real victimicy), and the potential side (the virtual or the possible victimicy). The real victimicy or the actual victimicy is composed of the persons who have become the victims of criminal offences, and the virtual or potential victimicy is represented by all the persons who can become victims of criminal offences, as they have an increased victim risk[11].

Like any other form of justice or maybe more than any other, the criminal justice involves, on the one hand, an increased attention to the person harmed by the criminal offence and, on the other hand, it involves, at the same time, the prominent contribution of state bodies. It is noted that, in comparison to the extra-criminal justice, mainly the one of private law, the criminal justice insists more on safeguarding, both as regards the private interest, and as regards the general interest, and it can be said that the act of criminal justice equally includes individual and public interests, but the state is bound to protect them both, even though the private ones are safeguarded only by taking into consideration the specificity of the injured party. Of course, that the private interest of the crime victim is included in the general one, as the safeguarding of crime victims exceeds the individual needs and interests, although it entails to take them into consideration[12].

Like all the principles of criminal law, the principle of humanism of criminal law is applicable both in the field of substantive criminal law, and in the field of criminal procedural law. Also, the humanism must also apply in the field of criminal enforcement law[13].

The first decision of the Convention, in a case concerning the detention conditions, brought before Romania, was given in December 2007. It is the case *Bragadireanu v. Romania*.

Without insisting here on the detention conditions, as this is a notorious issue, the minimum European standards applicable to persons deprived of their liberty are far from being met in Romania.

Between 2007-2012, the Court has given several decisions against Romania for violations of Article 3 of the European Convention on Human Rights, and found prison overcrowding and inappropriate material detention conditions both in penitentiaries, and in the detention and provisional detention facilities[14].

In July 2012, in the case *Iacov Stanciu v. Romania*, the Court has held that there was a structural problem in the field of material detention conditions.

In this decision, the Court has specified that it was necessary to create an internal appeal allowing the effective remediation of the damages suffered as a result of inappropriate detention conditions, including through compensation. After 2012, the number of cases pending before the Court has constantly increased[15].

In 2016, in the case *Muršić v. Croatia,* the Court has stated that the deprivation of liberty for 27 days in a personal area of less than 3 m^2 is an inhuman and degrading treatment, being applicable the provisions of Art.3 of the European Convention on Human Rights[16].

As regards the cases in which the minimum detention conditions are not provided, the President of the Strasbourg Court, Guido Raimondi, has recently declared that: „*these are priority cases, because they fall under the scope of Article 3 of the Convention, but these are recurrent cases, which reflect systemic or structural difficulties and require internal solutions*"[17].

On 25 April 2017, the ECHR has given a pilot decision in the case *Rezmiveş and others v. Romania*[18].

---

[11] The academic literature considers that the victimicy of a certain person is the" pre-disposition", more specifically, the capacity to become, under certain circumstances, the victim of the crime committed through the criminal act or the inability to avoid the danger in the case where the latter could be prevented. The real victimicy cannot be clearly established, whereas its content includes not only the victims of known criminal offences (the revealed, discovered, apparent victimicy), but also the victims the unknown criminal offences (the black figures of victimicy).

[13] Al. Boroi, Gh. Nistoreanu, Criminal Law. General Part, 4th edition, All Beck Publishing House, 2004, p.14.

[14] The lack of hygiene, the insufficient airing and natural light, the inoperative sanitary facilities, the insufficient or inappropriate food, the limited access to showers, the presence of rats and insects in the prison cells. See R. Pașoi, D. Mihai, The pilot decision in the case Rezmiveș and others v. Romania in the field of detention conditions (available on www.juridice.ro).

[15] For more data, see R. Pașoi, D. Mihai, op.cit.

[16] By the decision of the Great Chamber of ECHR in the case Muršić v. Croatia of 20 October 2016, the Strasbourg Court has confirmed that 3 m^2 of personal area for a prisoner in a collective cell is the minimum rule applicable in respect of compliance with Art. 3 of the Convention.

[17] According Mediafax, he said:" First of all, in the case of Hungary and Romania, where the number of cases has increased by 95%, 108% respectively, in 2016 (of the complaints brought before ECHR – the author's note), this situation concerns cases related to the detention conditions. Undeniably, these are priority cases, because they fall under the scope of Article 3 of the Convention, but these are recurrent cases, which reflects systemic or structural difficulties and require internal solutions" (http://www.mediafax.ro/externe/seful-cedo-guido-raimondi-numarul-cazurilor-legate-de-conditiile -de-detentie-din-romania-a-crescut-cu-108-in-anul-2016-16136759).

[18] The pilot decision procedure is a form of cooperation between the ECHR and the defendant states, aimed at adopting general measures able to solve the systemic problem in question, acceptable instruments or means from the standpoint of the jurisprudence of the Strasbourg

The Court has reiterated the existence of structural problems in respect of the overcrowding of Romanian detention facilities and, although it has confirmed some progress, it has recommended additional measures from national authorities, concerning the logistics, the criminal policy, and the introduction the preventive and compensatory remedies for the persons in such situations.

The Court has granted the Romanian authorities a period of six months from the moment the decision has become final in order to present, in cooperation with the Committee of Ministers of the Council of Europe, an action plan identifying the additional measures and the timeline of their adoption[19].

Disappointing and even indignant is the fact that this situation has not been solved by now (May 2021) by the Romanian authorities.

3. Conclusions

Humanism is both a principle of criminal Law, and a principle of the criminal policy, whereas the state is bound to find to instruments and means able to re-socialize those who commit crimes and to protect those who become victims of crimes.

From a different perspective, the state is bound to create the optimal legal framework for the successful reinsertion into the society of those who commit antisocial acts and for providing the necessary protection to the victims of crimes. In order to achieve this policy, the state is bound to adopt assistance measures aimed at the detained persons and their victims.

The principle of humanism is enshrined in both internal sources and international treaties.

In comparison to the extra-criminal justice, mainly the one of private law, the criminal justice insists more on safeguarding, both as regards the private interest, and as regards the general interest, and it can be said that the act of criminal justice equally includes individual and public interests, but the state is bound to protect them both, even though the private ones are safeguarded only by taking into consideration the specificity of the injured party. Of course, the private interest of the crime victim is included in the general one, as the safeguarding of crime victims exceeds the individual needs and interests, although it entails to take them into consideration[20].

Like all the principles of criminal law, the principle of humanism of criminal law is applicable both in the field of substantive criminal law, and in the field of criminal procedural law. Also, the humanism must also apply in the field of criminal enforcement law.

The hope to bring the crime between reasonable (controllable) limits for the society is a goal that can be reached within a relatively close time horizon, if the people are educated, the laws harmoniously cover all social interests, including the individual ones, and those contributing to their enforcement act professionally.

MORE ABOUT THE TRIAL AND DISPOSAL OF CASES WITHIN REASONABLE TIME UNDER THE BULGARIAN CRIMINAL PROCEDURE CODE

Lyuboslav LYUBENOV[*]

Abstract

In the Bulgarian theory of criminal procedure, the issue of trial and disposal of cases within reasonable time has emerged as relevant. In the first place, therefore, the lack of an objective and thorough study of it testifies. Secondly, it must be said that where it is concerned, this is in so far as it expresses different views on the progress of the process. With all this, however, it is not possible to reach the essence of the question and answer whether the consideration and resolution of cases within a reasonable time is a normative requirement or a principle of criminal proceedings. For this reason, with this report an attempt is made to check theoretically the possibility regulated in Art. 22 of the Bulgarian Criminal Procedure Code to be raised in an independent principle of the Bulgarian criminal proceedings. To achieve this goal, a critical analysis has been made for the compatibility of the envisaged situation, both with some of the main principles of the criminal process and with its tasks, including those institutions that shape its modern democratic image.

Keywords: *criminal proceedings, reasonable time, right of protection, European court of Human right, case-law, criminal law.*

1. Introduction

In the new Criminal Procedure Code of the Republic of Bulgaria (CPC)[1], the legislator enriched (expanded) Chapter Two - "Basic Principles". It also regulated the requirement to resolve criminal cases within a "reasonable time". Thus, according to Art. 22, para. 1 of the CPC: "The court shall try and dispose of the cases within „reasonable time". In para. 2 of Art. 22 of the CPC, it is explicitly stated that: "the prosecutor and investigative bodies shall be obligated to secure the conduct of pre-trial proceedings within the time limits set forth in this code." This amendment of the procedural law continues to give grounds to some established in the Bulgarian procedural theory authors to treat the requirement for "reasonable time" as a principle of modern criminal proceedings. Here is what Margarita Chinova shares on the issue, for example: "… the obligation to consider cases within a reasonable time is so significant that it is raised in a basic leading procedural position - the principle of criminal proceedings."[2] A similar opinion is expressed in the case law of the Constitutional Court of the Republic of Bulgaria. In Decision №10 of 28.09.2010 of the Constitutional Court the following was reproduced: „… the current CPC with Art. 22 assigns respective responsibilities to the bodies of the criminal process, raising the consideration and resolution of the criminal cases within a "reasonable time" as a basic principle of the criminal process. Most involved in the problem are those bodies that perform the functions of supervision at the relevant stage of the process - the prosecutor in the pre-trial phase and the court in the judicial phase…

2. Content

The perception of the obligation to resolve criminal cases within a "reasonable time" as a principle of the Bulgarian criminal process, in a sense has a legal basis in terms of the systematic place of Art. 22 of the CPC, namely, Chapter Two, which lists the basic principles. However, the systematic place of a provision does not always (automatically) reveal its essence. It is by nature an indication (direction) for this, therefore as an argument the systematic place appears - formal and insufficiently convincing in itself! For this reason, it is imperative that the proclamation of a given legal position as a principle be justified ideologically and conceptually, and not pro forma - by placing it among other (already) established in jurisprudence legal principles. The opinions cited above in favor of the principled character of Art. 22 of the CPC take into account, on the one hand, namely its systematic place in the code, and on the other hand, the notion that in this way the Bulgarian CPC is fully and in the most satisfactory way synchronized with the rule for hearing criminal cases within a "reasonable time" under Art. 6, item 1 of the ECHR.[3] It is worth mentioning here that this publication does not discuss the need and usefulness of such synchronization with the provisions of the ECHR, but only - how logical, effective and justified it is to do so by raising the "reasonable time" requirement in principle in the Bulgarian criminal trial!? In other words, it is not disputed whether, *de lege lata*, the resolution of criminal cases within a "reasonable time" is conceived and explicit as a

principle, but whether this does not overestimate and favor the idea of ending criminal proceedings a case in an indefinite, but definable (reasonable) procedural term before the idea for the qualitative (correct) completion of the criminal proceedings. Moreover, there are many theoretical obstacles to the provision of Article 22 of the Criminal Procedure Code to manifest and develop as a classical legal principle of the system of basic principles of the Bulgarian criminal process. The main arguments in this direction are set out and developed below.

First of all, emphasis must be placed on the fact that the legislator puts different content into the requirement of a "reasonable time" depending on the addressee to whom it applies. According to Art. 22, para 1 of the CPC, the court must consider and decide the case within a "reasonable time". According to paragraph 2 of the same article, the prosecutor and the investigative bodies are obliged to ensure the conduct of the pre-trial proceedings within the terms provided for in the CPC. Therefore, in the first case, the work of the court is bound by a "reasonable time", which is clearly not defined, neither in absolute nor in relative terms, nor according to any legal criteria. And in the second case, the bodies of the pre-trial proceedings should be guided by the clear and explicitly fixed in the CPC deadlines, i.e. the term deliberately described in the law is preferred to the ad hoc "reasonable time". It is also not clear whether the deadlines set for the pre-trial proceedings in the Criminal Procedure Code are "reasonable" *in facto*. Another thing, however, is clearly absurd, the same legal principle leads to two opposites in meaning and content results!

It is no coincidence that the requirement to conduct criminal proceedings within a "reasonable time" under the ECHR is regulated as a subjective right of the accused and not as a legal principle. Thus, it turns out to be a recognized and guaranteed by the Convention possibility of the accused to possess, and to require observance of a certain counter-behavior by the state. It is in this way that uncontroversial regulation of public relations concerning the duration of criminal proceedings is ensured. Therefore, human rights theory assumes that the purpose of the "reasonable time" guarantee in criminal cases is to "avoid a situation in which a person with pressed charges has remained in a state of uncertainty for too long about his or her destiny."[4] Consequently, the right to have criminal cases heard within a "reasonable time" is part of the accused"s right to a defense, and in particular one of his rights of defense. The inclusion of this right in Art. 6, item 1 of the ECHR represents the strengthening of the principle of protection of the accused, and not the implementation of some new and independent principle of the criminal process!

From the literal interpretation of Art. 22 of the CPC, it is clear that the legislator does not define the term "reasonable time". There are no clear criteria by which participants in the process can assess and verify whether and to what extent a given deadline is "reasonable". Then, for what reason does a vague situation arise in principle of the criminal process, i.e. in a leading idea for constructing and developing the institutes of criminal procedure? The question is rhetorical! The role of legal principles in the continental legal system is also essential for law enforcement as an activity. In the absence of a law, or in the presence of an unclear law (in interpretation), the judge is obliged to resolve the legal dispute in a way that best corresponds to the basic principles of law.[5] Hence, Article 22 of the Criminal Procedure Code cannot (effectively) serve to fill in and overcome any ambiguities in the course of criminal proceedings, since it is itself unclear. Then where is his principled character?

The guiding criteria for determining the reasonableness of a procedural time-limit have been developed in the case law of the Strasbourg Court. In „König v Germany "[6], the reasonableness of the length of the proceedings was considered to be determined by the following three factors: the complexity of the case, the behavior of the person concerned (the accused) and the behavior of the competent public authorities. The reasonableness of the term ipso jure is always a function of specific factual and legal circumstances, and the more complex and diverse these circumstances are, the more extensible the "reasonable time" can be, and vice versa. Another issue is that the assessment of the existence and complexity of the mentioned circumstances is relative and depends on the experience, knowledge and professionalism of the state bodies involved in the criminal proceedings. Such a direct connection with the discretion of the competent procedural authorities reveals a risk of arbitrariness, both in determining the amount of the "reasonable" time limit and in resolving the issue of its expiration, respectively violation. It turns out that there is no obstacle for the same subject to lead the process (to accuse) and to define which term is "reasonable", i.e. to decide whether the right of the accused to a trial within a "reasonable time" has been violated in the absence of a legal template for this! It is here that it is appropriate to point out that the ECHR is interpreted and applied not arbitrarily and literally, but in compliance with a reasonable ratio of proportionality between the means used and the objective pursued.[7] It should also be borne in mind that the practice of the ECtHR is ambiguous. In a number of cases with a similar subject matter, the court has rendered radically different court decisions. The borrowing of institutions and practices indefinite in content is dangerous because it makes the Bulgarian

criminal process eclectic. On this occasion, it is worth paying serious attention to the following statement of Ivan Salov: "The main defect of our current criminal procedure system is its uncertainty and, accordingly, its opportunistic development and eclecticism..."[8] Here is an example that confirms the above. According to M. Chinova: "… in its case law, the European Court of Human Rights first determines the length of the relevant period by determining the starting and ending point, and then decides whether this period is reasonable. Reasonableness is assessed not in the abstract, but in view of the circumstances of the particular case."[9] It is clear from the citation that the uncertainty in the content of the concept of "reasonable time" leads to its confusion with the concept of relevant period of time. The term is always a numerically defined period of time for the realization of something. According to the author, however, the duration and reasonableness of the period are determined separately for each case, but not with the help of numbers, but by the circumstances of the case, i.e. it is not exactly a term, but a time. So, in fine the vague period of time becomes reasonable, if it is reasonable! In practice, we come to a useless tautology - "reasonable time" is "reasonable" because it is "reasonable"!

Furthermore, it follows from the fact that under the Convention the examination and resolution of criminal cases within a "reasonable time" is the right of the accused, that both its existence and its content are not judged presumably or by the conduct of public authorities, as is the case under Bulgarian law. As a general rule, subjective rights are provided for and determined by volume in the law and by the legislator. And their exercise depends on the will of the subject who owns them. The right to defense of the accused must also be implemented in the law by the legislator, for fear of being left objectively unrecognized and unsecured. Nowadays, in Art. 55 of the Criminal Procedure Code, which lists the rights of defense of the accused, the right to criminal proceedings cannot be found within a "reasonable time"! The accused is nevertheless able to derive this right directly from the Convention by invoking Art. 5, para 4 of the Constitution of the Republic of Bulgaria. In this sense, it is untenable to claim that as a principle Art. 22 of the CPC may give rise to subjective rights, resp. legal obligations.[10] It is sufficiently to remind that no legal principle, including that expressed in Art. 22 of the CPC, cannot have a decisive role as a source of subjective rights. The legal principle is first of all a way of arguing. It "expresses an idea, not a norm "[11], i.e. does not describe specific behavior that can / should be performed in a specific factual situation.

For greater objectivity, it should be mentioned that the ECtHR is inclined to treat the requirement of a trial within a "reasonable time" not only as a subjective right of the accused, but also as a legal guarantee. According to him, the requirement "emphasizes the importance of justice without delay, which could threaten its effectiveness and reliability."[12] From the views of the court it is easy to be left with the impression that faster a proceeding is more efficient and reliable it is! In other words, there is a tendency in jurisprudence to equate reasonableness with rapidity. In my opinion, raising such "reasonableness" in principle is harmful because it exaggerates the benefits of procedural economy and infiltrates rapidity among the tasks of the process. The pursuit of rapidity "stakes" the procedural error and "poisons" the need for a proper conclusion of the criminal case. In the same sense, Simeon Tasev states: "… procedural economy and rapidity in the proceedings should not be in conflict with the ultimate goal of the process - a lawful and fair process."[13] Making the requirement for a trial within a "reasonable time "in principle is subject to criticism in several other aspects.

First, the idea of "reasonable" (fast) proceedings does not correspond to the immediate task of criminal proceedings. According to Art. 1, para 1 of the CPC in each criminal case must be ensured the disclosure of the crimes, exposing the guilty and proper application of the law. Nowhere is it a question of quick (reasonable) detection of the crime, quick (reasonable) exposing of the guilty and quick (reasonable) application of the law. This is because in the criminal process the unconditional disclosure of the objective truth and the correct application of the law is a main priority! Therefore, any principle of criminal procedure should be in line with this priority. Not coincidentally, Stefan Pavlov points out that: "… according to the concept lying down in the Criminal Procedure Code, the basic principles of the criminal process are the basic guidelines on which the entire procedural system is built in order to ensure the implementation of its tasks."[14] From all that has been said so far, it can be summarized that it seems more logical and legally argumented not to set the timely completion of the criminal case as a principle, but as a practical result in the pursuit of the tasks of the process. Nikola Manev takes a similar position, arguing that: "it should not be forgotten that rapidity, a reasonable time for hearing the case is not so much a goal or principle in the criminal process but a result of the action of a well-worked state machine, criminal law enforcement and criminal justice… "[15]

[15] Н. Манев, Развитие на реформата на наказателния процес, С., „Сиела", 2018 г., с. 73

Secondly, the basic principles of the criminal process of the Republic of Bulgaria are built in a complete system, in which they are mutually secured and conditioned. That is why, it is accepted in theory that they function in organic unity,[16] i.e. without contradicting each other. Therefore, if it is accepted that the resolution of criminal cases within a "reasonable time" is a principle, it must be accepted, and that it is organically compatible with the other principles of Chapter Two of the Criminal Procedure Code. The implementation of a comparative verification, however, convinces otherwise. For example, there is no organic compatibility between the principle of objective truth and that of resolving criminal cases within a "reasonable time". According to Art. 13, para 2 of the CPC, the disclosure of what has actually happened / occurred in the objective reality is not made dependent on any procedural term, even on a "reasonable" one. The objective truth must be established regardless of the expiry of the procedural time limits, as long as the statute of limitations for criminal prosecution has not expired. The Bulgarian CPC does not recognize the termination of the criminal proceedings due to the expiration of a "reasonable" procedural term - arg. Art. 24 CPC. In my opinion, the court is obliged to decide the criminal case and when the proper procedural deadlines have expired, the opposite will mean a denial of justice! Moreover, some of the criteria for a "reasonable time" *de lege lata* apply as preconditions for extending the time-limits. For example, the factual and legal complexity of the case is grounds for extending the term for pre-trial investigation - arg. Art. 234, para 3 of the CPC.

Thirdly, the theory confirms the understanding that the principles of the criminal process are applied "through the organization of the separate procedural stages and institutes determined by them ". Therefore, if it is assumed that in Art. 22 of the CPC contains a principle, it must, in order to be applied, should model certain stages and institutes of the CPC. Even the most superficial review of the law denies the veracity of such a statement. Where the regulations of the pre-trial proceedings provide deadlines, they are in a pre-determined amount by the legislator, and it is not a question of a "reasonable term" - arg. Art. 234; Art. 242, para 4; Art. 243, para. 4 and para 5 of the CPC. The same applies to the court phase - arg. Art. 247 a, para. 2, item 1; Art. 308; Art. 318 of the Criminal Procedure Code, etc. It is interesting to note that the requirement of a "reasonable time" does not determine the appearance of even section two of Chapter Fifteen of the CPC, which regulates: the calculation of time limits, compliance with time limits, extension of time limits and their recovery. The legislative approach to use a fixed ex lege period with the possibility of extension if necessary deserves support because, except bringing clarity, it disciplines and motivates the competent state authorities.

3. Conclusions

In conclusion, the following five conclusions can be made:

- firstly, the place of Art. 22 of the PPC in the system of basic principles is controversial and problematic;
- secondly, it is imperative the legislator to clarify the concept of "reasonable time";
- thirdly, understood as a guarantee against unjustified delay of the criminal proceedings, the requirement for a "reasonable term" has a place in the Criminal Procedure Code as a subjective right of the accused, respectively a legal obligation of the competent procedural bodies;
- fourthly, it is not always possible to equate the fast (reasonable) criminal process with the productive (lawful) criminal process;
- fifthly, a reasonable criminal trial is not one that ends quickly, but one that ends with a criminal conviction fully consistent with the objective truth and the law.

What has been said in conclusion can serve de lege ferenda as a ground for revoking Art. 22 of the CPC. Simultaneously, and as a presumption to supplement Art. 55 of the Criminal Procedure Code with a new right of the accused to a trial within a "reasonable time".

DETENTION CONDITIONS IN ROMANIAN PENITENTIARIES. COMPENSATORY APPEAL AND RECOVERY OF DAMAGE SUFFERED BY CONVICTED PERSONS DUE TO NON-COMPLIANCE WITH MINIMUM DETENTION CONDITIONS

Dantes MARCOVICI[*]

Abstract

Considering the debates in the public space regarding the detention conditions in the Romanian penitentiaries, in the present study I set out to analyze the way in which the detention conditions in the Romanian penitentiaries are ensured.

Thus, I will present the regulation in the national legislation of the minimum standards that must be observed, with emphasis on overcrowding of places of detention, but also compensation in case of accommodation in inappropriate conditions, with reference to the compensatory appeal, as regulated by Law 169 / 2017.

At the same time will be analyzed the ways in which the moral and material damage suffered by the convicted persons can be repaired, following the non-observance of the minimum conditions of detention, including the jurisprudence of the European Court of Human Rights, considering that the number of requests exceeded the figure of 3000 at the time of drafting of Law no. 169/2017.

Keywords: *detention conditions, convicted persons, compensatory appeal, Law no. 169/2017*.

1. Introduction

Given the acute lack of space in the detention rooms of Romanian penitentiaries, compliance with the minimum standards for the execution of custodial sentences must be analyzed in particular by Romanian courts, when analyzing the complaints or requests of the convicted persons.

I also presented the way in which it is possible for the national courts to repair the moral and material damage suffered by the convicted persons and I showed the problems generated by the application of Law 169/2017, regarding the commission of other offenses by parolees following the application of the provisions of the compensatory appeal as well as legislative changes following these issues.

2. Regulation in the national legislation of the minimum standards that must be observed, with emphasis on the overcrowding of places of detention

With regard to the execution of custodial sentences, given the acute lack of space in the detention rooms of Romanian penitentiaries, compliance with the minimum standards must be examined in particular by the judge supervising deprivation of liberty and by the Romanian courts, at the time of analyzing the complaints or requests of the convicted persons.

At the same time, according to the provisions of art. 1 para. 1 of the Annex of the Order of the Minister of Justice no. 433/2010 (in force until 2017), the spaces intended for the accommodation of persons deprived of liberty must respect human dignity and meet the minimum sanitary and hygiene standards, taking into account the climatic conditions and, in particular, the living space, air volume, lighting, heating and ventilation sources. Regarding the living area, the art. 3 letter b of the same normative act stipulates that in the accommodation rooms from the existing penitentiaries at least 4 square meters must be provided for each person deprived of liberty, employed in the closed regime or of maximum security.

Also, the Romanian courts, invested with solving some complaints or requests from the convicted persons, have the obligation to establish if the detention conditions can be considered degrading, including from the perspective of art. 3 of the European Convention on Human Rights.

Article 3 of the Convention enshrines one of the most important values of democratic societies, categorically prohibiting torture or inhuman or degrading treatment and punishment. In order to be incidental, the applied treatments must meet a minimum severity threshold, and in this context, the state has two types of obligations: a negative and general one not to subject a person under its jurisdiction to treatments contrary to art. 3 and a substantially positive obligation to take preventive measures to ensure the bodily and moral integrity of persons deprived of their liberty, such as the provision of minimum conditions of detention and adequate medical treatment.

Thus, in the Kalashnikov v. Russia case, the detention room was permanently overcrowded. Each person had at his disposal only 0.9 - 1.9 m2, two or three people had to share the same bed, so they could lie down only one at a time. The detention room was lit

[*] PhD Candidate, Faculty of Law, "Nicolae Titulescu" University, Bucharest (e-mail: danmarcovici@yahoo.com).

during the day and night. The 18-24 people deprived of their liberty were constantly making noise, smoking was allowed, there was no ventilation system, and the detainee was allowed to spend only two hours a day outside the detention room. At the same time, the sanitary endowment was deficient, there was no disinfection, and in the four years of detention in this condition, a substantial worsening of his health was found.

In view of these aspects, the Court considered that this was a degrading treatment within the meaning of Article 3 (ECHR, 15 October 2002, Kalashnikov./Russia, no. 47095/99, paragraphs 92 to 103).

At the same time, the Court ruled in the case of Iacov Stanciu against Romania, application no. 35972/05, paragraph 166, that custodial measures applied to the person may sometimes involve an inevitable element of suffering or humiliation but, nevertheless, the suffering and humiliation involved must not exceed that inevitable element of suffering or humiliation related to a certain form of legitimate treatment or punishment.

With regard to persons deprived of their liberty, the Court has already emphasized in previous cases that a prisoner does not lose, by the mere fact of his imprisonment, the defense of his rights guaranteed by the Convention. On the contrary, the detained persons have a vulnerable position, and the authorities have the obligation to defend them, and pursuant to art. 3, the state must ensure that a person is detained in conditions compatible with respect for his or her human dignity, that the manner and method of execution of the measure does not subject him to stress or difficulties that exceed the inevitable level of suffering in detention and given the practical needs of detention, health and well-being are adequately ensured.

The Court emphasized the exemplary judgments in Torreggiani and Others v. Italy (Applications Nos. 43517/09, 46882/09, 55400/09, 57875/09, 61535/09, 35315/10 and 37818/10), final to 27/05/2013, as a result of which pecuniary and moral compensations had been granted to the detainees forced to stay in a 3m² cell or in an insufficiently lit and ventilated space, without access to hot water.

Relevant is the fact that before the European Court for the Defense of Human Rights were registered 4 requests directed against Romania, through which four nationals of this state, the plaintiffs Daniel Arpad Rezmiveș, Laviniu Moșmonea, Marius Mavroian, Iosif Gazsi notified the Court on September 14, 2012, June 6, 2013, July 24, 2013 and October 15, 2013, pursuant to art. 34 of the Convention for the Protection of Human Rights and Fundamental Freedoms.

The object of the requests was, among others, the violation of the provisions of art. 3 of the Convention, on the conditions of detention in various penitentiary units or detention and pre-trial detention centers of the police in various localities, in which the petitioners also complained about cell overcrowding, inadequate sanitation and poor hygiene, poor food quality , the validity of the materials received, as well as the presence of rats and insects in the cells).

In its pilot judgment of 25 April 2017, the Court requested the Romanian State, within six months from the date of final judgment, to provide, in cooperation with the Committee of Ministers of the Council of Europe, an exact timetable for the implementation of appropriate general measures. capable of resolving the problem of overcrowding and inadequate conditions of detention, in accordance with the principles of the Convention as set out in the pilot judgment. The Court also decided to postpone similar cases that had not yet been communicated to the Romanian Government until the adoption of the necessary measures at national level. The Court considered that, although the measures taken by the authorities up to that date could contribute to the improvement of living and sanitary conditions in Romanian prisons, coherent and long-term efforts, such as the adoption of additional measures, should be made to achieve compliance with the Articles 3 and 46 of the Convention.

The Court also considered that, in order to comply with the obligations arising from its previous judgments in similar cases, an appropriate and effective system of internal remedies must be established.

The Court noted at the time of the judgment that the applicants" situation could not be dissociated from the general problem which is caused by a structural dysfunction characteristic of the Romanian penitentiary system, which has affected and may continue to affect many people in the future. Despite internal, administrative and budgetary measures taken, the systemic nature of the problem identified in 2012 persists and the situation is therefore a practice incompatible with the Convention.

According to the decision, the measures expected from Romania were structured on two levels: measures of an administrative nature, which would reduce overcrowding and improve material conditions of detention and measures of a legislative nature to ensure an effective remedy for the injury suffered, of the nature of the preventive appeal and of the specific compensatory appeal.

The Court cited by way of example a number of additional measures that could be considered by the Government in order to address the problem of detention conditions such as improving the probation system and simplifying the procedure for access to parole.

3. Compensatory appeal, as regulated by Law 169/2017 and secondary legislation

In 2017, compared to the signals received from the ECHR and reiterated by its president, Guido Ramondi, who recommended Romania and Hungary to adjust their logistics and criminal policy in order to stop the precarious conditions in penitentiaries, was adopted

the Law no. 169/2017 for amending and supplementing Law no. 254/2013 on the execution of sentences and custodial measures ordered by the judiciary during criminal proceedings, which provided a compensatory mechanism for persons deprived of liberty accommodated in inappropriate conditions of detention, by reducing the sentence, as a general measure to relieve penitentiaries.

According to art. 55/1 of this normative act, when calculating the sentence actually executed, regardless of the regime of execution of the sentence, as a compensatory measure, the execution of the sentence in inappropriate conditions is taken into account, in which case, for each period of 30 days executed in inappropriate conditions, even if they are not consecutive, are considered executed, in addition, 6 days of the sentence applied.

For the purposes of this normative act, accommodation in any of the following situations is considered the execution of the punishment in inappropriate conditions:

a) accommodation in an area less than or equal to 4 sqm / detainee, which is calculated, excluding the area of toilets and food storage spaces, by dividing the total area of detention rooms by the number of persons accommodated in the respective rooms, regardless of the endowment of the space in question;

b) lack of access to outdoor activities;

c) lack of access to natural light or sufficient air or availability of ventilation;

d) lack of adequate room temperature;

e) lack of the possibility to use the toilet in private and to observe the basic sanitary norms, as well as the hygiene requirements;

f) the existence of infiltrations, dampness and mold in the walls of the detention rooms.

The provisions also apply accordingly to the calculation of the sentence actually served as a preventive measure or punishment in detention and pre-trial detention centers in inappropriate conditions.

In order to apply the compensation established by law for the execution of the sentence in inappropriate conditions, was adopted the Order of the Minister of Justice no. 2773 / C / 2017 for the approval of the Centralized Situation of the buildings that are unsuitable from the point of view of the detention conditions, published in the Official Gazette no. 822 of October 18, 2017, which establishes the categories of buildings, identified by the inventory number, which were classified as unsuitable in terms of detention conditions, taking into account the criteria established by Law no. 169/2017, but also by the landmarks established by this normative act which does not impose a centralization of the rooms that ensure inadequate detention conditions, but the elaboration of a centralized situation of the buildings intended for the accommodation of persons deprived of liberty. Their situation is updated annually or whenever changes occur that could generate a reclassification of accommodation.

It should be noted that the notion of "compensatory appeal" does not exist as such in the legislation, and both in Law no. 254/2013, as well as in Law no. 169/2017, which amended it, there are the terms "compensation" and "compensatory measure". The advantage of the convict who benefits from the "compensatory measure", introduced by this normative act (which applies retroactively, starting with July 24, 2012), is that he can appear faster than usual before the court, which can order conditional release. Also, for some convicts, the application of the compensatory measure meant that the entire sentence applied was considered executed, so that they were released on time, immediately, without the need to request parole.

4. The reparation by the national courts of the moral and material damage suffered by the convicted persons

Countless times, the persons deprived of their liberty addressed the national courts in order to obtain compensation for the execution of sentences in inappropriate places.

Regarding the observance of the rights of convicted persons, the courts found the incidence of the provisions of art. 1349 paragraph (1) of the Civil Code, according to which any person has the duty to respect the rules of conduct imposed by law or local custom and not to infringe, through his actions or inactions, the rights or legitimate interests of other persons, and according to art. 1357 paragraph (1) of the Civil Code, the one who causes damage to another through an illicit deed, committed with guilt, is obliged to repair it.

These provisions establish the conditions of tortious civil liability for one"s own deed, respectively to have an illicit deed, this to be committed with guilt, to produce a damage, and to have a causal link between the illicit deed and the occurrence of the damage.

The courts found that art. Article 3 of the European Convention on Human Rights enshrines one of the most important values of democratic societies, categorically prohibiting torture or inhuman or degrading treatment or punishment. In order to be incident the art. 3 of ECHR, the treatments applied must meet a minimum severity threshold. In this context, the state has two types of obligations: a negative, general one, not to subject a person under its jurisdiction to treatments contrary to art. 3 and a substantially positive obligation to take preventive measures to ensure the bodily and moral integrity of persons deprived of their liberty, such as the provision of minimum conditions of detention and adequate medical treatment.

Although deprivation of liberty applied to the person may sometimes involve an inevitable element of suffering or humiliation, the suffering and humiliation involved must not exceed that inevitable element of suffering or humiliation related to some form of legitimate treatment or punishment.

According to art. 1357 paragraph 2 of the Romanian Civil Code, the national courts have established that the perpetrator is liable for the slightest fault, and regarding the occurrence of the damage, that the damage is fully repaired, unless otherwise provided by law, and as a rule, regarding the granting compensation for moral damage suffered by non-compliance with the minimum conditions of detention, the national court was guided by the recommendations made by the European Court of Human Rights at the end of the judgment in Ivanov Stanciu v. Romania (see civil judgment no.2287 / 16.03.2018 of the Court Sector 5 Bucharest, remained final by civil decision No. 3505 / A / 23.10.2018 of the Bucharest Tribunal, in file No. 6216/302/2016).

At the same time, it was pursued that the level of compensations granted for the moral damage by the national courts in case of finding the violation of art. 3 must be reasonable, taking into account the fair reparations granted by the Court in similar cases and the right not to be subjected to inhuman or degrading treatment is so important in the human rights defense system, that the authority or court dealing with it must present convincing and serious reasons for justifying the decision to award less compensation or not to award any compensation for moral damage.

5. The problems generated by the application of Law 169/2017 and the legislative amendments that led to the repeal of the law

Although it temporarily solved the problem of overcrowding in places of detention, following the introduction in Romanian law of the "compensatory appeal", one of the visible effects of the law, which created a growing concern among public opinion was the massive increase in the number of those released on time by reducing the duration of the sentence that had to be actually executed: from an average of about 900 people / year, in the period 2014-2016, it reached an average of about 1800 people / year, in the period 2017-2018.

Both the release on time, much faster following the adoption of the law of "compensatory appeal", and the conditional release of some convicts who did not correct their behaviour and can not be reintegrated, stimulated by the fact that there are not enough places of detention, it only encouraged the criminal phenomenon.

As a result, new crimes were committed, some of them very serious, it led to new victims of the new crimes and, eventually, the return to prison of some of the released prisoners without them being able to reintegrate to society.

In the case of such offenses, such as in particular, those against life, against bodily integrity or health, offenses of trafficking and exploitation of vulnerable persons or against sexual freedom and integrity, the Criminal Code may provide for certain legislative measures such as an increase in the number of penalties that must be effectively executed in the case of serious crimes, or the amendment of the Criminal Code in the sense that for serious crimes the conviction can be ordered without the possibility of conditional release.

Thus, during 19.10.2017-21.06.2019, a number of 18,849 persons were released from the units subordinated to the National Administration of Penitentiaries, by granting the compensatory benefits provided by Law no. 169/2017.

Of these18,849 persons, 840 persons were convicted for the crime of murder, 73 were convicted for the crime of aggravated murder, 81 persons were convicted for the crime of hitting and causing death, and 355 were convicted for the crime of hitting or other violence.

According to the data provided by the Romanian Ministry of Justice in a response to an interpellation formulated by the deputy Florin Roman, according to the latter"s statement dated 2.11. 2019 revealed that from 19.10.2017 to 18.09.2019 there were 21,049 releases, as a result of the application of the provisions of Law no. 169/2017. Of these, 634 were convicted of rape and 1,670 for aggravated robbery, and in the mentioned period, out of the total releases, 1,877 re-incarcerations were registered. Of these, 47 were rape, 226 robbery and 36 murder.

In this context, it should be emphasized that parole is only a vocation and not a right of the convicted person, and the court invested with a request for parole may or may not order the release of a convict, not being obliged to release automatically anyone who requests release conditioned. Moreover, the Criminal Code provides, in art. 99-100, that parole can be ordered only if "the court is convinced that the convicted person has straightened up and can reintegrate into society."

In relation to the consequences of the law, through the legislative proposal registered at the Chamber of Deputies under no. Pl-x no. 281/2019, it was proposed to repeal Law no. 169/2017 for amending and supplementing Law no. 254/2013 on the execution of sentences and custodial measures ordered by the judicial bodies during the criminal process, amending and supplementing Law no. 286/2009 on the Criminal Code, amending Law no. 254/2013. The explanatory memorandum showed that the criminal phenomenon in Romania, unfortunately, is out of control. The social reactions caused by the peculiarities of this phenomenon are particularly intense, especially in the last period of time, the public opinion being particularly concerned about recidivism and crimes committed by acts of violence, and recidivism is at alarming levels in Romania, whether we are talking about the actual recidivism, or the common recidivism, i.e. the criminal record. If the actual recidivism occurs among convicts in the proportion of about 40%, probably the highest rate in the EU, the criminal record - improper recidivism - reaches levels exceeding 60%. These are data that prove that the main purpose of the

punishment, namely that of social reintegration and avoidance of recidivism by criminally convicted persons is not achieved in Romania.

Also, the social reaction consisting of concern and revolt could not be ignored, the citizens losing their confidence that the criminal policies, the way in which these policies are implemented regarding the punishment and the execution of the punishment in case of committing criminal acts, especially of acts committed with violence, are in line with the social security need of the citizen. The distrust - that the punishment and, in particular, the execution of the punishments would reach its general purpose of discouraging the commission of serious antisocial acts - is generated by the way in which the execution of the punishment is regulated today by Law no. 169/2017, through the amendments brought by this law of the "compensatory appeal" to the legislation regarding the execution of punishments from Law no. 254/2013 and the Criminal Code.

The amendments aimed at returning to the situation from 2016 regarding the reduction of the sentence which is considered as executed, so that in the Official Gazette no. 1028 / 20.12.2019, was published the Law no. 240/2019 regarding the abrogation of Law no. 169/2017, as well as for the amendment of Law no. 254/2013 on the execution of sentences and custodial measures ordered by the judicial bodies during the criminal proceedings.

By the new law, were repealed the articles II-VIII of Law no. 169/2017, which provided for the establishment of a Commission for the evaluation of detention conditions for the application of the provisions regarding compensation in case of accommodation in inappropriate conditions and the application of these provisions. It was also repealed the art. 551 of Law no. 254/2013 on the execution of sentences and custodial measures ordered by the judicial bodies during the criminal proceedings, which regulated the compensatory appeal.

At the same time, has been modified the method of calculating the sentence that is considered to be executed on the basis of the work performed or of school training and professional training, in order to grant conditional release. Thus, if a paid job is performed, 5 days are considered executed for 4 working days; in case of unpaid work, 4 days are considered executed for 3 days of work; if the work is performed during the night, it is considered 3 days executed for two nights of work.

6. Conclusions

Although the Action Plan of 25.01.2018 of the Government of Romania (see https://sgg.gov.ro/new/wp-content/uploads/2020 /11/ PLANUL-DE-ACTIUNE-.pdf) speaks of changes at the strategic level, of the improvement of the probation service, of the preparation, at the legislative level of an amendment of Law 254/2013, and by the document sent by the Romanian authorities on 23.04.2019 to the Committee of Ministers of the Council of Europe (page 5), containing information about this plan in the case of Bragadireanu and Rezmives and others v. Romania, accessible on the website www.rm.coe.int, requested the Council of Europe Development Bank to allocate an amount of 177 million euro for the creation of 5,110 additional places of detention in the period 2019-2023 it can be stated that the law on compensatory appeal has only partially solved the problem of agglomeration in places of detention.

Thus, on 19.01.2021, according to official figures (http://anp.gov.ro/blog/lnk/ statistici), the penitentiary system had a total capacity of 18,245 places and housed 21,854 detainees (a level of occupancy of about 120% and a rate of one detainee per 1,000 inhabitants, similar to France which has, however, completely different criminological premises), reason for which it can be concluded that the compensatory appeal decongested the penitentiaries to some extent, but after its repeal without the change in criminal policy, the overcrowding trend has resumed.

SOME CONSIDERATION REGARDING THE SCOPE OF MEDICAL SAFETY MEASURES IN THE CASE OF NON-TRIAL ORDINANCES

George Octavian NICOLAE[*]

Abstract

The medical hospitalization and medical treatment are medical safety measures can be taken across the duration of criminal cases and aim to remove a state of danger and prevent the illicit acts provided by the criminal law. In accordance with GEO number 80/2016, the legislator introduced the possibility of taking these safety measures of a medical nature both in situations where a solution of non-prosecution, respectively filing or waiving the criminal investigation is ordered.

Thus, from the corroborated interpretation of the provisions of art. 315 para. 2 lit. a, of the C.p.p. and art. 318 para. 8 of the C.p.p., it appears that the ordinances by which the prosecutor orders a solution of non to send to court may include provisions regarding the notification of the judge of the preliminary chamber in order to take, confirm, replace or terminate said medical safety measures.

Regarding the prosecutor"s request through the order of dismissal or waiver of criminal prosecution of the judge of the preliminary chamber to decide on a medical safety measure, the specialized doctrine and the judicial practice have outlined two opinions.

In a first opinion, it is considered that the notification of the judge of the preliminary chamber in order to take a safety measure of a medical nature must be made only after the non-trial solution remains final.

According to the second opinion, the prosecutor is not obligated by any procedural condition to respect a specific term when he notifies the judge.

The present paper aims to analyze the arguments of the two opinions by means of analysing the legal doctrine, the relevant jurisprudence in the matter, but also to the standards imposed by the EDO Convention.

Keywords: *medical hospitalization, medical treatment, non-litigation solutions, prematurity, social danger.*

1. Introduction

The medical safety measures are ordered in a criminal trial against a person who has committed an unjustified act prohibited by the criminal law and who poses a danger to society.

In order to order a medical safety measure, it is not necessary for the perpetrator to have committed a crime, since it is sufficient for him to commit an unjustified act provided by the criminal law, and to present a danger to society due to a mental illness or infectious disease or as a result of the chronic consumption of alcohol or psychoactive substances.

Thus, beyond the situation of taking a medical safety measure by the decision to convict the person accused of committing the crime, in the judicial practice we encounter more and more cases in which the obligation to medical treatment or hospitalization are requested by the prosecutor and ordered by judge after non-court solutions.

This study aims to present the procedural steps to be followed in this procedure and to analyze the issues and difficulties involved.

We are going to analyze the two existing opinions in the judicial practice regarding the moment of notifying the judge of the preliminary chamber with the proposal to order a medical security measure, by reference to the purpose and meaning of the applicable criminal procedural norms.

2. Content

Medical safety measures have both an immediate purpose, that of removing a state of danger, and a mediated purpose[1], namely the prevention of illicit acts.

By their nature, medical safety measures presuppose the interference with the rights of individuals.

Medical hospitalization is a real deprivation of liberty, and the conditions of its disposal must be in accordance with the provisions of the E.C.H.R..

The nature of the institution of medical hospitalization - a safety measure of a medical, curative nature, implies a deprivation of liberty, as implied in the jurisprudence of the E.C.H.R. in the matter[2], notwithstanding the fact that such a measure can only be taken if at least three conditions are met.

Thus, the illness (alienation) must have been clearly established; second, the disorder must be of such magnitude as to justify hospitalization; third, hospitalization can be extended only if the persistence of this medical condition is proven.[3]

[*] PhD Candidate, Faculty of Law, "Nicolae Titulescu" University of Bucharest (e-mail: nicolae.georgeoctavian@yahoo.com).

[1] Mihail Udroiu, Drept penal. Partea generală, Ediția a 3-a, Editura C.H. Beck, București, 2016, p. 419.

[2] Case of Filip c. Romania, ECHR rulling 14.12.2006.

[3] Case of Johnson c. United Kingdom, ECHR rulling 24 octombrie 1997.

The jurisprudence of the E.C.H.R. has established that not only violent behavior poses a danger to society, but any action or inaction that infringes on the social values protected by the criminal law, namely any act infringing on its provisions.

The E.C.H.R. considers that no deprivation of liberty of an alienated person can be considered in accordance with Article 5 para. 1 e) if it was decided without taking into consideration the opinion of a medical specialist.

The deprivation of liberty, in the form of hospitalization, is such a serious measure that it is only justified if the less severe measures have been considered as insufficient to ensure the protection of both the personal or public interest.

It must therefore be held that the deprivation of liberty of the person concerned is indispensable on the basis of the particular circumstances of the case.[4]

Thus, from the perspective of the standards imposed by the E.C.H.R. and the consistent jurisprudence of the E.C.H.R. on the medical security measures (especially those of deprivation of liberty) it is essential that prior to ordering such a measure an expertise be performed to ascertain the health of the individual.

Regarding the procedural moment of taking said medical safety measures, it is found that they can be taken either provisionally, during a criminal trial, or definitively, at the end of the criminal trial, by the decision to convict, acquitt, terminate the criminal trial or by the order of waiver of the criminal investigation.

In essence, the medical safety measures, taken both during the criminal process and those ordered at the end of it, are temporary procedural measures, the duration of which is influenced by the evolution of the medical situation of the person.

The main difference is that the temporary medical safety measures produce are in effect only during the criminal trial, whereas those taken by means of the final decision in the case or after a solution of non-prosecution, remain in force until the perpetrator recovers, regardless of the evolution of the criminal process.

According to art. 245 para. 1 of the Criminal Procedural Code, the judge of rights and freedoms during the criminal investigation, the judge of the preliminary chamber, during the preliminary chamber procedure or the court, during the trial, may order the measure of obligation to medical treatment or medical hospitalization, according to art. 109 or art. 110 of the Penal Code.

The medical safety measure provided for in Article 109 of the Criminal Code consists in obliging the suspect or defendant to regularly follow the medical treatment prescribed by a specialist.

As to the measure mentioned in Article 110 of the Criminal Code, it consists in the involuntary admission of the suspect or defendant to a specialized medical care unit.

Both measures shall be in effect until the person recovers or until an improvement in his health occurs, sufficient to remove the state of danger.

If a medical safety measure has been taken provisionally, at the time of completion of the criminal proceedings it will again be subject to review by a judge.

In the situation of pronouncing a criminal decision, according to art. 404 para. 4 lett. d. of the Criminal Code, the court is obliged to rule on the needed security measures, including on a medical one.

In the phase of the criminal investigation, the provisions of art. 246 para. 13 in accordance with art. 248 para. 14 of the Criminal Procedural Code, which stipulates that in case of ordering a non-court solution, the prosecutor will notify the judge of the preliminary chamber for confirmation or, as the case may be, replacement or termination of the medical security measure.

In order to prevent situations in which, although it is necessary to undergo a medical safety measure, due to the intervention of a non-prosecutorial solution, it is no longer be possible to order the provisional application of such measures, the legislator allows a request to the judge of the preliminary chamber.

Thus, according to the provisions of art. 315 para. 2 letter e, of the Criminal Procedural Code, the non-prosecutorial ordinance should mention provisions expressed in art. 286 para. 2, as well as provisions regarding the notification of the judge of the preliminary chamber with the proposal of ending the security measures provided by art. 109 or 110 of the of the Penal Code, in full accordance with provisions of art. 246 para. 13.

Also, according to art. 318 para. 8 of the Criminal Procedural Code, the ordinance ordering the renunciation of the criminal investigation should include both the aspects provided by art. 286 para. 2 of the Criminal Procedural Code, as well as the provision provided by art. 315 para. 2 lett. E of the Code of Criminal Procedure regarding the notification of the judge of the preliminary chamber regarding the taking, confirmation, replacement or termination of medical safety measures.

According to art. 246 para. 13, in case of a solution of not to send to court, the prosecutor notifies the judge of the preliminary chamber for the confirmation or, as the case may be, the replacement or termination of the measure.

The latter, in the council chamber, with the participation of the prosecutor, listens, if possible, to the person subject to the provisional measure, in the presence of his lawyer, and, after performing a forensic examination, decides by means of a reasoned rulling. An appeal may be lodged against the decision, within 3 days of the ruling, which shall be resolved by the

[4] Case of Litwa c. Poland, no. 26629/95, § 78, ECHR 2000-III.

judge of the preliminary chamber of the hierarchically superior court to the notified one or, as the case may be, by the competent panel of the High Court of Cassation and Justice.

In the judicial practice and in the specialized literature, the issue of the moment when the notification of the judge of the preliminary chamber was made with the proposal to take a medical security measure, according to the provisions of art. 315 para. 2 lett. e of the Criminal Procedural Code and art. 318 para. 8 of the Criminal Procedural Code.

According to one opinion[5], the judge of the preliminary chamber invested with the proposal to take the measure of the medical hospitalization or the obligation to medical treatment must immediately rule on the request of the Public Ministry, even if the solution of non-prosecution is not yet final.

This hypothesis is encountered in situations where the request is made:

- by a classification ordinance against which a complaint was filed in the procedure provided by art. 340-341 of the Criminal Procedural Code;
- by a filing ordinance that can still be challenged within 20 days from the communication, according to art. 339 para. 4 of the Criminal Procedural Code;
- by an ordinance of renunciation of the criminal investigation which has not yet been confirmed by the judge of the preliminary chamber, according to art. 318 para. 15 of the Criminal Procedural Code

The supporters of this jurisprudential orientation appreciate the fact that since by modifying art. 315 para. 2 lett. R of the Code of Criminal Procedure, the legislator established the possibility for the prosecutor to notify the judge of the preliminary chamber to take the medical safety measure, provided by art. 109 and art. 110 of the Criminal Code, irrespective of the definitive or non-definitive character of the solutions for filing or waiving the criminal investigation.

In this opinion it is argued that the provisions of article 315 par. 2 lett. E of the Criminal Procedural Code allow a notification of the judge of the preliminary chamber, without conditioning the admissibility of the notification of any procedural conditions, the judge being allowed to analyze the substantive conditions for ordering such a measure.

It is noted that a contrary interpretation, in terms of waiting for the finalization of the solution of classification or waiver of criminal prosecution, would be excessive, unforeseen by law and sometimes likely to perpetuate a state of danger that must be removed immediately and not after finalizing the non-litigation solution[6].

The second opinion states that the judge of the preliminary chamber can rule on the request to take a medical security measure only after the solution mentioned earlier remains final, respectively after the 20 days term from the moment it reached the recepient; after the rejection of the complaint against it; after the admission of the complaint, but with the change of the classification ground; after the confirmation of the solution of the waiving of the criminal investigation by the judge.

It should be noted that in the case of admission of the complaint in the procedure mentioned in art. 341 para. 6 lett. c, para. 7 lett. d of the Criminal Procedural Code, it is mandatory that the new ground retained by the judge of the preliminary chamber should constitute an unjustified act incriminated by the criminal law, without it being absolutely necessary to constitute a crime.

If the prosecutor requests a medical safety measure after the closing a case, in, for example, one of the cases provided by art. 16 para. 1 of the Code of Criminal Procedure regarding the non-existence of the deed, the lack of evidence of the deed[7], the lack of incrimination of the deed in the criminal regulation or the existence of a justifying cause, the request should not be admitted.

Medical safety measures may be taken, in accordance with art. 107 para. 2 Code of Criminal Procedure only against that person who committed an unjustified act incriminated by the criminal law,.

Regarding the waiver of the criminal investigation, ordered by the prosecutor by ordinance or by the indictment act of other participants, the medical measure becomes final when the request for confirmation of the solution by the judge of the preliminary chamber is granted, in accordance with the procedure provided by art. 318 of the Criminal Procedural Code.

As far as we are concerned, we agree with the second opinion expressed in the legal doctrine and in the judicial practice regarding the moment of the possibility of analyzing the proposal to take a medical safety measure, namely after a final solution of classification or waiving of the criminal investigation.

Thus, the moment of formulating the request for notifying the judge regarding the taking of a medical safety measure must be only when the non-referral solution remains final.

A contrary interpretation, which would allow a definitive security measure to be taken before the final clarification of the fact that the criminal action has been extinguished, cannot be accepted.

It is particularly important to distinguish between the two categories of medical safety measures, namely provisional and definitive measures.

By reference to art. 245 para. 2 of the Criminal Procedural Code and art. 247 para. 2 of the Criminal Procedural Code, both types of medical safety measures have a limited duration in time, namely until the recovery of the individual, the improvement of his

[5] Penal Decision no. 8 of 07.01.2021, of the Prahova Tribunal, unpublished; Penal Decision no. 471 of 31.12.2021, of the Prahova Tribunal, unpublished.

[6] Penal Decision no. 471 of 31.12.2021, of the Prahova Tribunal, unpublished.

[7] Criminal sentence no. 17/22.02.2021, of Câmpina District Court, unpublished.

health or the when the state of danger that led to the measure has passed.

If in this respect the two types of medical safety measures are similar, the main difference between them should be noted.

Provisional security measures have their effects only within the limits of the criminal process and can be applied only while the person is a suspect or defendant in a criminal case.

The temporary medical hospitalization and temporary obligation to medical treatment join can be viewed as accessory measures to the criminal process, their existence being limited to its duration.

As soon as the criminal proceedings are completed, regardless of the procedural stage they have reached, these provisional measures shall be subject to a new judicial review.

From the interpretation of art. 246 para. 13 in accordance with art. 248 para. 14, after a decision not to prosecute, the prosecutor is obliged to refer the matter to the preliminary chamber judge in order to decide on the confirmation, replacement or termination of the measure.

After the judge is notified regarding the confirmation, replacement or termination of the security measure that was already provisionally ordered, the request is to be analyzed in accordance with the procedure provided by art. 246 para. 13.

The judge will hear, if possible, the person subject to the provisional measure, in the presence of his lawyer, and after performing a forensic examination, will rule by reasoned decision.

Corroborating this text with art. 246 para. 2 of the Criminal Procedural Code and art. 248 para. 2 of the Criminal Procedural Code we find that in most cases, an expertise has already been undertaken at the time of the provisionally security measure.

However, in order to have a more recent perspective on the evolution of the health of the subject to the medical safety measure, in practice a new forensic examination is often undertaken.

In order for the security measures to remain definitive, these steps shall be taken after the criminal process is completed with a solution of non-prosecution.

We recall that the reason why the temporary medical hospitalization and temporary obligation to medical treatment are not definitive (without including in this reasoning the time-limited nature of medical safety measures in general) is the very fact that they were ordered within the confines of the criminal process and their duration cannot exceed the moment the criminal process is finalized.

At that moment, if it is considered that the substantive conditions are met (the respondent commits an unjustified act incrimined by the criminal law, the existence of a state of danger that originates from an illness, etc.) the judge of the preliminary chamber will decide, this time definitively, on the confirmation, replacement or termination of the medical safety measure.

Under the same conditions, stemming from the interpretation of art. 315 para. 2 lett. e of the Criminal Procedural Code, the judge of the preliminary chamber will analyze and will also rule on a firstly requested proposal when the requested measures have not already been taken during the criminal investigation.

However, in these conditions, we consider that the notification of the preliminary chamber judge is a subsidiary provision to the solution of dismissal or waiver of criminal prosecution, its existence being totally dependant on the principal solution, which is necessary to become "*final*".

That is why, in general, prosecutor"s offices send files to the preliminary chamber judge for medical security measures (as well as for ordering the special confiscation or revocation of a certain document), after the solution of waiving the criminal investigation has been confirmed or the complaint against the filing solution was rejected, or no complaint was filed within the legal deadline.[8]

The medical safety measure depend symbiotically on the legality and validity of the solution of classification or waiver of criminal prosecution.

Otherwise, should the classification solution be annulled by the hierarchically superior prosecutor or by the judge of the preliminary chamber, and the criminal investigation continues its course, the provisions of art. 315 para. 2 lett. e, of the Criminal Procedural Code may be breached.

By analyzing the instances when the medical security measure is taken before the non-trial solution becomes final, we could encounter situations in which these are indefinite, irrespective of the completion of the criminal process.

We could also encounter the situation in which, according to art. 341 para. 7 lett. C of the Criminal Procedural Code, the judge would admit the complaint against the dismissal, would annul the solution and would order the beginning of the trial, while a final medical security measure is still ongoing.

The judge may consider that the reason that was the basis of art. 549 index 1 of the Criminal Procedural Code (procedure in which it is necessary to finalize the classification solution) must be transposed by analogy also in the case of a medical safety measure.

In support of this opinion we also mention the fact that unlike the confiscation procedure in case of classification, regarding the paradigm of the medical security measures which may last until the end of the criminal investigation, the prosecutor can use art. 245-248 of the Criminal Procedural Code which clearly underline the provisional character of the obligation to

[8] Minutes of the Meeting of the Presidents of the Criminal Sections of the High Court of Cassation and Justice and of the Courts of Appeal - 18.12.2020, p. 50, accessed at *http://inm-lex.ro/wp-content/uploads/2021/03/Minuta-intalnire-presedinti-sectii-penale-18-decembrie-2020.pdf.*

medical treatment or temporary medical hospitalization.

With regard to the argument put forward in support of the first case-law, namely the existence of a delay in taking a measure designed to remove a state of danger, we consider that this is precisely the role of the provisional safety measures, to remove the state of danger, provisionally, until the non-litigation solution is final.

Thus, we consider that it is imperative to finalize the classification solution, so that, at the time when the preliminary chamber judge is notified, the deadline for filing the complaint against the classification order has expired or the complaint has been rejected, or admitted, with the confirmation of the solution but with a different basis, since in the latter case the criminal investigation is definitively completed and the basis of the solution is foreseeable.

Given the deprivation of liberty involved in the measure of hospitalization, the judge would consider that the notification must be made as soon as possible after the finalization of the dismissal solution.

We consider that it is necessary for the dismissal order to remain final prior to the notification, because even if it remained final between the time of the notification and the time of the decision, the procedural rights of the suspect or defendant would be harmed, since he would no longer effectively benefit from the double degree of jurisdiction conferred by law.

3. Conclusions

In conclusion, in the judicial practice and in the doctrine there are different orientations regarding the moment when the judge of the preliminary chamber should be invested with the claim to take some medical safety measures.

Taking into the to the scope of establishing the right to notify the judge of the preliminary chamber according to art. 315 para. 2 lett. E of the Criminal Procedural Code, and the nature of the two types of medical safety measures, we consider that the judge of the preliminary chamber can rule on the request to order the taking of the measure of medical hospitalization or the obligation to medical treatment **only after the non-litigation solutions remain final**.

THEORETICAL AND PRACTICAL CONSIDERATIONS REGARDING THE INTERRUPTION OF THE STATUTE OF LIMITATIONS PERIOD FOR PENAL LIABILITY IN LIGHT OF THE DECISION NO. 297 OF 2018 OF THE CONSTITUTIONAL COURT OF ROMANIA

Alin-Sorin NICOLESCU[*]
Mircea-Constantin SINESCU[**]

Abstract

The authors intend to present in this article a series of theoretical and practical aspects with regard to the application of the Decision of the Constitutional Court of Romania no. 297 of 2018, declaring the unconstitutionality of the dispositions under art. 155 par. (1) in the New Penal Code, and the problems showed by the practice of the Romanian courts, in the meaning of non-uniform application of such decision. We shall attempt hereinafter to present, subject to our own conscience, a series of theoretical and practical aspects regarding the correct interpretation of the decision aforementioned and of the effects it causes, given that the legislator did not intervene in any manner on the law text declared unconstitutional, as provided by the dispositions under art. 147 in the Romanian Constitution.

Keywords: *Statute of limitation, judicial practice, non-uniform practice, communication of procedural acts, constitutionality*

1. Introductory Aspects

The New Penal Code of Romania entered into force on 1 February 2014. As of that date, the Constitutional Court of Romania has successively intervened, declaring the unconstitutionality of some articles, while, on the other hand, the High Court of Cassation and Justice settled some interpretation problems, through the stipulations provided under art. 471 *et seq*. and art. 475 *et seq.*, namely, the Appeal in the interest of law and pronouncing a preliminary decision for solving some law matters.

Without describing the entire activity of such courts, in this article, we will focus on the law matter notified to the Constitutional Court of Romania by the Oradea Court of Appeal with regard to the unconstitutionality of the dispositions under art. 155 par. (1) in the Penal Code, in relation to which the authority controlling the constitutionality of normative acts admitted the objection to constitutionality, and established that the legislative solution providing for the interruption of the statute of limitations period for penal liability, by fulfillment of „any procedural act in the case", in the dispositions under art. 155 par. (1) in the Penal Code, is unconstitutional.

The interruption of the statute of limitations period for penal liability consists of losing the benefit of the time passed until the performance of any procedural act in the case (a procedural act that, according to the penal process law, may be a prosecution act or an adjudication act, fulfilled until the pronouncement of the final judgment), a moment as of which a new statute of limitations period starts to pass.

In the old regulation, the stipulation of interruption of the statute of limitations period for penal liability was provided in the dispositions under art. 123 in the Penal Code:

„The statute of limitations period provided under art. 122 is interrupted by the fulfillment of any act that, according to law, should be communicated to the accused or the defendant during the penal trial."

In the new regulation, the stipulation of interruption of the statute of limitations period for penal liability is provided in the dispositions under art. 155 in the Penal Code:

„The statute of limitations period for penal liability is interrupted by the fulfillment of any procedural act in the case."

By this new regulation, the legislator proposed a legislative solution inspired from the French and Spanish law. In these two national law systems, the interruption of the statute of limitations periods is not conditional upon serving the process documents to the suspect or the defendant.[1] On the other hand, in countries such as Estonia, Finland, France, Germany, Italy, Malta, The Netherlands, Portugal and Slovakia, the interruption of the statute of limitations period for penal liability is performed through the fulfillment of process acts that are communicated to the suspect or

the defendant, or which involve the latter"s presence before the judiciary authorities, or through acts that concern directly the settlement of the conflicting penal legal relationship.

We notice that the fundamental difference between the two law texts reviewed arises mainly with regard to the need for communicating the act that should be fulfilled for complying with the dispositions regarding the interruption of the statute of limitations period for penal liability.

Thus, in the old regulation, the condition of the act fulfilled for the occurrence of the interruption of the statute of limitations period concerned an act that, according to law, had to be communicated, while the new regulation loosened such condition in the meaning of fulfillment of any procedural act in the case.

The new regulation was subject to the checks performed by the Constitutional Court of Romania for the purpose of assessing the constitutional character of the phrase „*any procedural act in the case*", establishing that the legislative solution in the dispositions under art. 155 par. (1) in the New Penal Code is unconstitutional.

In relation to this aspect, it is absolutely necessary to perform an analysis of the manner in which the stipulation reviewed was applied, in the context of the declared unconstitutionality and its statement of reasons in which, among others, the constitutional control authority mentions that „**the previous legislative solution, provided under art. 123 par. (1) in the Penal Code of 1969, fulfilled the predictability conditions** prescribed by the constitutional dispositions reviewed, given that it provided the interruption of the statute of limitations period for penal liability only through the fulfillment of an act that, according to law, had to be communicated, in the case in which the person concerned acted as an accused or defendant"

Given that, within 45 days since the publication of the decision in the Official Gazette, as otherwise did on a regular basis, the legislator failed to fulfill their obligation to intervene on the law text declared unconstitutional, the effects generated were challenged in practice.

2. Modes of interpretation of art. 155 par. (1) in the Penal Code, determined by the Decision of the Constitutional Court of Romania no. 297/2018

A first case law **interpretation**[2] (in minority), the Decision of the Constitutional Court of Romania „is not an interpretative one, but one declaring the unconstitutionality of a part of art. 155 par. (1) in the Penal Code", while the phrase through the fulfillment of any procedural act in the case was lawfully suspended, as a consequence of the legislator"s passivity, therefore it ceased to be effective.

Such first interpretation, whereby the decision of the Constitutional Court is granted a plain and not an interpretative effect, was used before by other Romanian courts, too[3] establishing that „**at present, there are no regulated causes for interruption of the statute of limitations period for penal liability**, because, under the Decision of the Court, the court for constitutional disputes declared as unconstitutional the dispositions under art. 155 par. (1) in the Penal Code, which provided the causes for interruption of the statute of limitations period (...)"

It was underlined that this aspect does not amount to such Decision acquiring an interpretative character, given that:

a) the operative part of the Decision is very clear, and should the constitutional control forum wished to provide an interpretation of the relevant legislative solution in compliance with the Constitution, it would have provided the explanations required by means of reasons;

b) The Constitutional Court may not proceed to an interpretation reactivating the old regulation, because, in such a case, it would subrogate the legislator, a fact that is prohibited by art. 61 par (1) in the Constitution, according to which „The Parliament is the sole legislating authority of the country." The Court itself, in paragraph no. 23 in the Decision no. 629/2014, established that: „it has constantly stipulated in its case law that it has no jurisdiction to get involved in legislating matters and in the penal policy of the state, any contrary attitude being interference in the jurisdiction of other constitutional authorities".

This opinion was stated also by other authors of specialist literature, in the meaning that „the phrase through any procedural act performed in the case came from the active source of penal legislation, the legislator failing to introduce another phrase in its place; otherwise, the decisions of the Constitutional Court declaring the unconstitutionality of some legal dispositions amount to repealing laws (...) a repealed legal disposition may never be reinterpreted or applied again and, mutatis mutandis, neither may do so a decision of the Constitutional Court. To do otherwise would mean, by judiciary means, to keep in force a text that was removed from the active legislation by establishing its unconstitutionality"[4].

According to the second case law **interpretation** (in majority), it was showed that the Decision of the Constitutional Court no. 297/2018 is a

[2] Penal Decision no. 1348/A/2018, of 19 November 2018 of Cluj Court of Appeal. Decision rescinded by appeal in cassation - Decision no. 174/RC of 15 May 2019 of the High Court of Cassation and Justice.

[3] Penal Decisions no. 1208/2018 and 1209/2018, of 31 October 2018 of Timișoara Court of Appeal.

[4] An opinion stated by the Faculty of Law within „Nicolae Titulescu" University of Bucharest, on the occasion of the petition filed by Constanța Court of Appeal – Penal Section for minors and family cases, in the penal case no. 18.348/212/2016 – Decision no. 5/2019 of the High Court of Cassation and Justice.

decision provided in **the interpretation of art. 155 par. (1) in the Penal Code**, its effects being mandatory as regards both the operative part and the reasons.

For these purposes, it was assessed that the unconstitutionality of the legislative solution does not involve the unconstitutionality of the dispositions under art. 155 par. (1) in the New Penal Code in their entirety, as showed by the considerations of the decision of the court for constitutional disputes, which mention that the regulation under art. 123 par. 1 Penal Code of 1969 – interruption of the statute of limitations period for penal liability through fulfillment of an act that, according to law, should have been communicated to the accused or the defendant – met the predictability conditions prescribed by the constitutional dispositions reviewed.

As regards the characteristics of the act interrupting the statute of limitations period, the Constitutional Court mentioned that only a procedural act procuring that the person has the possibility to be aware of the aspect of interruption of the statute of limitations period for penal liability and of the start of a new statute of limitations period warrants the predictable character of the dispositions under art. 155 par. (1) in the New Penal Code (par. 28).

In other words, the court for constitutional disputes has established that a new statute of limitations period may not pass prior to guaranteeing the person concerned the right to become aware of the aspect of interruption of the statute of limitations period for penal liability and of the start of a new statute of limitations period.

In its turn, in the reasons of the Decision no. 25/2019, the High Court of Cassation and Justice „established that the interruption of the statute of limitations period may be performed only by fulfilling an act which, according to law, should be communicated, in the case within which the person concerned acted as an accused or defendant, as expressly stipulated by the Constitutional Court."

The facts stipulated by the High Court of Cassation and Justice were reviewed also by the National Institute of Magistrates, which mentioned that „based on the reasons of the decision no. 297/2018, we may draw the conclusion that the present regulation is prone to prejudice the suspect or the defendant through the state of perpetual uncertainty this is in, taking into account that this was not informed, through interruption documents, that the penal deed committed by them has not lost its social significance that it had when it was committed".[5]

According to the opinion of the National Institute of Magistrates, the regulation regarding the interruption of the statute of limitations period for penal liability in the previous Penal Code was resumed.

In line with the High Court of Cassation and Justice is both the specialist literature and national case law, which assess that the effect interrupting the statute of limitations period occurs as of the date when the act is communicated, or as of the date when this is performed in the presence of the suspect or of the defendant, as we will show hereinafter:

In the Penal Decision no. 907/21.06.2019, the Bucharest Court of Appeal established: „the interruption of the statute of limitations period for peal liability means the cessation of that period through the fulfillment by the judiciary authorities with jurisdiction, before the expiry of the statute of limitations period, of any act that, according to law, should be communicated to the defendant (summons, notice of charge, initiation of penal action, hearing, confrontation, etc.) and that these acts should be communicated to the defendant or performed in its presence."

In the Penal Decision no. 368A/10.08.2018, Oradea Court of Appeal has established that: „with regard to the Decision no. 297/26.04.2018 pronounced by the Constitutional Court, it shall establish that the statute of limitations regarding penal liability of the defendants with regard to committing the crimes (...) occurred, as a consequence of the fact that, since the moment when the deed was committed, that is 06/07.06.2004, and until the moment of performance of some penal procedural acts that should be communicated to the defendants (...)"

In another case, the court of law[6] proceeded to reviewing the effects of the Decision no. 297/2018 on the defendants" situation, in light of the last act performed in the case, prone to interrupt the penal statute of limitations period.

Therefore, in the absence of a procedural act that should be communicated according to law to the suspect or the defendant, the interruption of the statute of limitations period for penal liability may not be carried out, considering the dispositions under art. 155 par. (1) in the Penal Code, as construed considering the Decision of the Constitutional Court no. 297/26 April 2018.

3. Practice of the High Court of Cassation and Justice

Up to the present, the High Court of Cassation and Justice has dismissed as inadmissible both a petition requesting to pronounce a preliminary decision for solving in principle some law matters, and the appeal in interest of the law filed by the Attorney General of the Prosecution Office by the High Court of Cassation and Justice, both regarding the interpretation and application of the dispositions under art. 155 par. (1) in

[5] Meeting of the Presidents of penal sections of the High Court of Cassation and Justice and of courts of appeal, conducted at the Bucharest Court of Appeal in the period 16-17 May 2019.

[6] Penal Sentence no. 1923/2018 pronounced by Medgidia Trial Court.

the Penal Code, following the Decision of the Constitutional Court of Romania no. 297/2018.

As regards the petition aforementioned, which was dismissed as inadmissible by the Panel for solving some law issues in penal matters, the High Court of Cassation and Justice stated its opinion in line with the case law of the Constitutional Court[7] according to which „The High Court of Cassation and Justice has no jurisdiction to pronounce itself on the effects of the decision of the Constitutional Court, or to provide mandatory solutions contravening to the decisions of the Constitutional Court".

The appeal in the interest of law was in its turn dismissed as inadmissible, the panel for adjudication of appeals in the interest of law, based on the case law of the Constitutional Court of Romania and also of the High Court of Cassation and Justice, „establishing that the law issue on which the courts pronounced themselves differently goes beyond the jurisdiction of the supreme court, the Constitutional Court being the only one that may stipulate on the effects of the decisions pronounced"[8].

After reviewing most of the judgments provided by the High Court of Cassation and Justice, we have not been able to identify any judgments by which it followed the minority interpretation of the effects of the decision of the Constitutional Court aforementioned. However, given that, at a national level, we have identified a trend of non-uniform practice, the problem should be solved by a decision with a mandatory effect on courts, whether we speak about an appeal in the interest of law, or we speak of a preliminary decision for solving some law matters, given the importance of the stipulation reviewed.

4. The phrase „that should be communicated" and the interruption of the statute of limitations period

With regard to the acts that lead to the interruption of the statute of limitations period for penal liability and with regard to the moment when such interruption becomes effective, most judiciary doctrine and practice assessed that a new statute of limitations period starts to pass starting from the date when the act was communicated, or the date when the act is performed in the presence of the suspect/ defendant.

The following are prosecution acts that should be communicated to the defendant: continuation of prosecution of a person, initiation of the penal action, preventive arrest, etc. The following are process documents that should be served on the defendant: summons, decisions made during adjudication, etc. We shall consider as acts communicated to the defendant also the procedural acts performed before them (interrogation, confrontation) or the acts performed in their presence (searches, investigation on site). The date when a new statute of limitations period starts to pass is, as the case may be, either the date when the act was communicated to the defendant, or the date when the act was performed in the presence of the accused or of the defendant, that is the date when the procedural act interrupting the statute of limitations period was fulfilled.[9]

Without reiterating the aspects presented previously, we consider that three conditions are required for the interruption of the statute of limitations period:

1. fulfillment of a process or procedural act;

2. the act interrupting the statute of limitations period should be communicated according to law. In other words, the law provides what the (process or procedural) acts are that should be communicated to the defendant; in general, these are related to guaranteeing their rights during the penal trial, but also related to their obligations arising from the penal legal relationship, given that the accused or the defendant is held liable for the penal deed committed.

3. the act, according to law, should be communicated to the suspect or the defendant during the penal trial and not only should it be among the ones that should be communicated. The communication should be carried out effectively.[10]

5. Conclusions

We consider that, pursuant to the provisions under art. 147 par. (1) in the Romanian Constitution, according to which „The dispositions in the laws and ordinances in force, as well as the ones in regulations, found as being unconstitutional, cease their legal effects within 45 days since the publication of the decision of the Constitutional Court if, during such interval, the Parliament or the Government, as the case may be, do not align the unconstitutional provisions to the dispositions in the Constitution. During such term, the dispositions found as being unconstitutional are lawfully suspended", the Decision no. 297 of 26 April 2018 of the Constitutional Court of Romania is effective *ex nunc*, more precisely starting from 25 June 2018, the date of its publication in the Official Gazette.

Given the legislator"s failure to intervene in order to amend the unconstitutional provisions, we consider that the interruption of the statute of limitations period for penal liability occurs in the conditions established in paragraph 34 in the Decision no. 297/2018, namely only „through the fulfillment of an act that, according to law, should be communicated to the suspect or the

[7] Decision of C.C.R. no. 454/2018, of 4 July 2018.

[10] H. Dumbravă, Penal Liability, Interruption of Statute of Limitations Period, in R.D.P. no. 1/2000, p. 62-64.

defendant during the penal trial", similarly to the previous legislative solution, provided under art. 123 par. (1) in the Penal Code of 1969, which, in the constitutional judge"s opinion, „met the predictability conditions prescribed by constitutional dispositions".

In our opinion, by agreeing on the majority interpretation, namely based on the old regulation (according to par. 34 in the Decision of the Court), one of the basic rules of the penal trial, that is guaranteeing the right to defend oneself, is supported. Otherwise, we could found the dissolution of a fundamental principle, a fact that is incompatible with the right to a fair trial in the meaning of art. 10 in the Penal Procedure Code and art. 6 in the European Convention of Human Rights (the right to a fair trial).

THE PERSON DEPRIVED OF LIBERTY AND THE RESTORATIVE JUSTICE

Simona Cireșica OPRIȘAN*

Abstract

The concept of restorative justice offers a new way of approaching and understanding all the concepts with which professionals in the field of criminal law work: crime, offender, victim, criminal trial, criminal sanction, imprisonment, etc.

Restorative justice aims to balance the problems of the victim and the community, as well as the need for social reintegration of the offender, to assist the victim in the recovery process and to give all parties the right to be present and to be actively involved in justice. caused by the commission of an offense, based on an approach involving not only the parties but also the community at large, in close liaison with specialized institutions in the field.

Starting from the hypotheses according to which the crime has its origins in social conditions and community relations, that crime prevention depends on the assumption by local and central authorities of responsibilities related to social policy to remedy the conditions that cause crime, the consequences of the crime can not be fully resolved for the parties without their personal involvement, the main objectives of restorative justice are:

- to respond to the needs of the victims - material, financial, emotional and social needs (including those close to the victim, who may also be affected);

- to prevent recidivism by reintegrating criminals into the community;

- to determine the criminals to actively assume responsibility for their deeds;

- to create a community that supports the rehabilitation of criminals and victims and that is active in crime prevention;

- to provide some means of avoiding the burden of the criminal system, costs and delays, but also the abandonment by society of passive roles in traditional retributive, rehabilitative justice..

Keywords: *offender, victim, compensation, mediation, enforcement.*

1. Introduction

Initiated in North America in the 1970s[1], this criminal philosophy is based on programs aimed at reconciling the victim and the offender and identifying appropriate solutions to repair the harm caused by the crime, developing as an alternative to the retributive criminal system.

In 1996, the British criminologist Tony Marshall[2] offered the world a definition of the concept of restorative justice, a definition recognized as valid by the entire world movement in this field: *Restorative Justice is a process whereby parties with as take in a specific offence collectively resolve how to deal with the aftermath of the offence and its implications for the future.*

In his opinion, Restorative Justice is based on the following *assumptions*:

- that crime has its origins in social conditions and relationships in the community,
- that crime prevention is dependent on communities taking some responsibility (along with local and central governments responsibility for general social policy) for remedying those conditions that cause crime,
- that the aftermath of crime cannot be fully resolved for the parties themselves without facilitating their personal involvement,
- that justice measures must be flexible enough to respond to the particular exigencies, personal needs and potential for action in each case,
- that partnership and common objectives among justice agencies, and between them and the community, are essential to optimal effectiveness and efficiency
- that justice consists of a balanced approach in which a single objective is not allowed to dominate the others.

2. Approaching and interpreting the concept of restorative justice

From the perspective of international documents[3], the interest of specialists in implementing the ideas of

* PhD Candidate, Faculty of Law, „Nicolae Titulescu" University of Bucharest (e-mail: nsimona51@yahoo.com).

[1] The name of Restorative Justice comes from the English language, which demonstrates the Anglo-Saxon origins of the concept that was first applied in 1974 when two Canadians, Mark Yantzi and Dave Worth, asked a judge in Kitchener, Ontario, to allow them to try a different approach in the intervention of justice on two young criminals arrested for destroying property. The idea was to allow the victim and the offender to play a leading role in deciding on the most appropriate method of responding to the harm done. *Apud* Elena Bedros in the article *Conceptul de justiție restaurativă și legătura acestuia cu tendințele moderne de dezvoltare a procesului penal*, p.39, available on line: http://www.legeasiviata.in.ua/archive/2014/6/8.pdf, consulted on 04.03.2021, 04:56 hour.

restorative justice in judicial practice in more and more countries around the world, as well as the introduction of restorative practices that meet high methodological requirements, but also take into account the particularities of each state, has materialized in the elaboration of international documents regarding the basic principles of restorative justice in criminal matters.

One of the basic international documents in the field of restorative justice is *ECOSOC Resolution 2012/12 Basic principles on the use of restorative justice programmes in criminal matters*, adopted on 37th plenary meeting 24 July 2002 which, in art. 2 of the Annex defines the restorative process as means any process in which the victim and the offender, and, where appropriate, any other individuals or community members affected by a crime, participate together actively in the resolution of matters arising from the crime, generally with the help of a facilitator. Restorative processes may include mediation, conciliation, conferencing and sentencing circles.

The same document, in art. 3, defines the "Restorative outcome" as means an agreement reached as a result of a restorative process. Restorative outcomes include responses and programmes such as reparation, restitution and community service, aimed at meeting the individual and collective needs and responsibilities of the parties and achieving the reintegration of the victim and the offender.

Restorative outcomes[4] include responses and programs such as reparation, restitution, and community service to meet individual and collective needs, offender reintegration, family and community reconciliation, individual and group counseling in prisons, mediation actions between the offender and the victim, various educational programs in the field of communication, literacy, schooling, professional qualification, moral education, special programs for preparation for release, with the active participation of the detainee, family and community in which will return.

The model of restorative justice was one of the topics addressed at United Nations congresses, such as: the 11th Congress in Bangkok, April 18-25, 2005, and the XIIth Congress in El Salvador (Brazil), between April 12-19, 2010.

The work of both congresses focused on the need to reform the criminal system and by implementing the model of restorative justice, as an alternative to the traditional criminal system, to avoid the harmful effects of incarceration, in order to reduce the workload of courts, emphasizing the need for Reintegrate alternatives to incarceration, which may include community service work, restorative justice, electronic surveillance, and the need to support rehabilitation and reintegration programs, including those aimed at correcting criminal behavior, along with educational programs and vocational for convicts[5].

The approach and interpretation of the concept of restorative justice have also been established on the European continent[6] because the most vulnerable persons are those who find themselves in particularly exposed situations, such as persons subjected to repeated violence in close relationships, victims of gender based violence, or persons who fall victim to other types of crimes in a Member State of which they are not nationals or residents, are in need of special support and legal protection. Victims of terrorism also need special attention, support and social recognition. An integrated and coordinated approach to victims is needed, in line with the Council conclusions on a strategy to ensure fulfilment of the rights of, and improve support for, persons who fall victims of crime.

Emphasizing, as a matter of priority, the support and recognition of the rights of all victims, so that they receive adequate support to facilitate their recovery and to have sufficient access to justice, *Directive 2012/29/EU Of The European Parliament and of the Council of 25 October 2012, establishing minimum standards on the rights, support and protection of victims of crime, and replacing Council Framework Decision 2001/220/JHA*[7], in art.12 provide that Member States shall take measures to safeguard the victim from secondary and repeat victimisation, from intimidation and from retaliation, to be applied when providing any restorative justice services. Such measures shall ensure that victims who choose to participate in restorative justice processes have access to safe and competent restorative justice services.

In this spirit, as the terminology of „restorative justice" developed around the globe[8], Emphasizing the benefits of such a way of compensating for damage caused by crime, as well as the limitations that characterize traditional approaches to criminal justice, having regard to the provisions of Directive 2012/29 /EU, Recommendation CM/Rec(2018) 8 concerning

restorative justice in criminal matters[9] updated the list of international documents and agreements considered and placed greater emphasis on the principles of restorative justice and recent advances in studies in this field, adding in due course to the growing number of international instruments working in the field of use and evolution of restorative justice. The recommendation reflects the idea that restorative justice should be regulated only to the extent necessary and that restorative justice services should be independent in carrying out their mission. The Recommendation also calls on the Member States to strengthen the capacity to exercise restorative justice in all geographical areas under their jurisdiction, for all offenses and all stages of criminal proceedings.

In the Romanian criminal system, most part of this directive are already transposed, especially by the provisions of the Code of Criminal Procedure, and of Law no. 211/2004[10] on certain measures to ensure the protection of victims of crime.

However, there are also a number of provisions of the directive that require adaptation to domestic law by creating a legislative framework to amend and supplement Law no. 211/2004 and Law no. 192/2006[11] on mediation and organization of the mediator profession.

By Law no. 97 of April 27, 2018[12] on some measures to protect victims of crime, the provisions have been transposed the provision of art. art.3 para. (3), art. 4 para. (1) leter i and j, art. 5 para. (1) and (3), art. 12 para.(1) letter c and art. 19 para. (2) of Directive 2012/29 / EU, in order to ensure that victims are treated with respect and to enable them to make informed decisions about their rights, as well as their participation in the mediation procedure.

These provisions must be correlated with the provisions of Criminal Procedure Code which in art.16 para.1, letter g (concluding a mediation agreement being one of the cases that prevent the initiation and exercise of criminal proceedings), art. 23 para. 1 (the transaction, mediation and recognition of civil claims), art.81 para.1, letter i (right of the injured person to resort to a mediator), art. 83 para.1 letter g (right of the defendant to appeal to a mediator), art. 108 para. 4 (communication of rights and obligations), art. 111 para.1, letter b (the manner of hearing the injured person), art. 313 para.3 (mediation is one of the cases of suspension of the criminal investigation), art. 318 para.4 (waiving the criminal investigation), art. 483, para.3 (submission by the prosecutor to the court of the plea agreement, accompanied by the transaction or the mediation agreement), art. 486 (settlement of the civil action), recognizing both the injured person and the defendant the right to appeal to a mediator in the cases provided by law.

By forming the „victim-offender-community triad" [13] this new criminal philosophy differs from that of traditional justice in that restorative justice focuses on repairing harm caused by crime, while traditional justice focuses on punishing a crime; then, restorative justice is characterized by dialogue and negotiation between the parties, while traditional justice is based on the principle of adversarial proceedings, and, thirdly, restorative justice requires members of the community or organizations to take an active role, to take responsibility for both sanctioning, as well as for the recovery of the delinquent, while for traditional justice, the "community" is represented by the state[14].

Payment of damage to the victim, requirement for parole

Mediation, in the criminal trial, as an alternative method of resolving conflicts, is applied both on the criminal side and on the civil side of the criminal trial. On the criminal side , the provisions on mediation apply only in cases of offenses for which, according to the law, the withdrawal of the prior complaint or reconciliation removes criminal liability[15].

The law does not limit, in relation to the type of crime committed, the possibility of resorting to mediation to resolve the civil side of the case, therefore recognizing the right to appeal to a mediator to resolve the civil side of any criminal trial.

However, the exercise of this right may be restricted in certain situations, such as taking a preventive measure against the defendant which involves, *inter alia*, a ban on approaching of the injured person and communicating directly with this person or

[15] Art.II paragraph 2, thesis II of the Law no.97 / 2018 on some measures for the protection of victims of crime, the conclusion of a mediation agreement in the criminal side, under the conditions of this law, may occur until the reading of the act of notification of the court. By Decision no. 397/15 June 2016 of the Constitutional Court, following the debate on the exception of unconstitutionality of the provisions of art. 16 par. (1) lit. g) the final thesis Criminal Procedure Code and of art.67 of Law no.192 / 2006 on mediation and organization of the mediator profession, the exception of high unconstitutionality was admitted and it was established that these provisions are constitutional insofar as the mediation agreement on the offenses for which the reconciliation may occur produces effects only if it takes place until the reading of the act of notification to the court..

a reasonable suspicion that the defendant is trying to fraudulent deal with injured person. However, the parties of the criminal dispute, both on the criminal side and on the civil side, may give special power of attorney to another person to conclude the mediation contract, thus having the possibility to avoid direct contact between the subjects of the crime[16].

Restorative justice is in the criminal code a new condition imposed by law the persons deprived of liberty until the date of analysis in the parole board. We note in practice that at the level of parole board there is intransigence regarding this criterion, the presentation of payment receipts being mandatory.

However, some inmates, although they have been serving a long period of imprisonment, during which time they have spent large amounts of money deposited by relatives in the penitentiary account, far beyond their needs in detention, did not show any interest in paying these expenses to the civil parties, to the state (in this case National Agency for Fiscal Administration-ANAF), considering themselves persons without income from work, justifying their disinterest by the fact that, being several participants in the crime, they have joint and several obligations in the damages payment, so it is not known who would be the share of each defendant in these payment, that he cannot contact the other defendants because they are out of the country or are imprisoned in other prisons and also lack financial means, that the injured person no longer lives at the address known to the detainee in an attempt to make a payment agreement with this person, that the injured person wishes to be paid in full the amount due by the beneficiary of the damages payment, etc.

We consider as correct the practice adopted by the parole board to order the postponement of the analysis of the situation of the inmates who does not met the condition of full payment of damages (art. 99 para. Letter c and art. 100 para. 1 letter c of Criminal Code), until the intervention of one of the following situations:

- full payment of damages;
- proof that the detainees has made every effort to pay the damages, i.e. payment agreements concluded between the detainee and the legal persons of the civil parties (e.g. Ambulance Service, Emergency Reception Unit, etc.) or between him and the injured persons, agreement authenticated by a notary in the latter situation, from wich to result an agreement on the payment schedule, the opening an account at CEC Bank in the name and at the disposal of the injured person in which to transfer the amounts due to the latter, until full payment, requests made by the detainees addressed to the Financial Service, requesting the retention of a percentage of the amounts from the account or in order to pay the damages or proof of extinction of the obligation by compensation (deed regarding the transfer in order to extinguishment of the payment obligation);
- or proof that the injured person has expressly waived compensation.

We cannot agree with the statements of the detainees who are dissatisfied with the fact that the discussion of their situation in the parole board has been postponed precisely because of non-payment of damages, which would, in their view, be an abusive decision of parole board, the detainees considering that if they show a certificate from ANAF that they do not appear with income, it means that they are unable to pay the damages, even if during the execution of the custodial sentence they spent thousands lei from their account, much more than had to pay to the civil parties, and did not take the slightest step in order to pay these damages, which proves the bad faith on the part of the convict.

The Constitutional Court[17] ruled that the premise that the criticized provisions exclude from the right to obtain conditional release those detainees who do not have the means to pay compensation is wrong.

Thus, from the very way of regulating the provisions of art. 99 para.1 letter c) Criminal Code, it results that the full fulfillment of the civil obligations established by the conviction decision is circumstantial, precisely from the perspective of the individual financial possibilities, the convicts having the possibility to prove the fact that they did not have the material resources required to fulfill the civil obligations. Thus, the non-fulfillment of this condition can be found only if the convicted person, who requests parole, does not fulfill in bad faith the civil obligations established by the conviction, and not in all cases, regardless of the existence or not of material resources.

Given that the proof of the impossibility of voluntary payment of civil obligations can be made by certifying the lack of income or by a certificate issued by the City Hall (especially in the case of detainees from rural areas) that the person does not own properties, by correlating this information with those resulting from the analysis of the amount in the personal account, we ask ourselves, what about the victim"s right to be compensated?

Does the impossibility of the convict's voluntary payment of civil obligations mean the disappearance of the obligation to repair the damage? Or can the prescription of the right of the civil parties to request the forced execution it can be considered as a tacit, virtual waiver of damages?

The answer can only be negative, the person deprived of liberty will not be exempted from the payment of civil obligations because the civil party did not enforce the decision, and thus his right to request enforcement was prescribed.

---

[16] N.Volonciu (scientific coordinator), Codul de procedură penală comentat, p.236, Editura Hamangiu, Bucureşti, 2017.

[17] Decision of the Constitutional Court nr.57 on February 2, 2017, pct. 20, regarding the exception of unconstitutionality of the provisions of art. 100 para. (1) lit. c) of the Criminal Code and the provisions of art. 97 para. (3) lit. c) of Law no. 254/2013 on the execution of sentences and custodial measures ordered by the court during the criminal trial, published în Official Gazette, Part I, nr. 366/May 17, 2017.

The text of the law was established precisely to verify the attitude of the person deprived of liberty towards the obligations imposed by the court, as well as to protect the interests of civil parties, so that the prescription of the right of civil parties to enforcement cannot be considered tacit waiver, as long as an express manifestation of the will of the civil party is required.

The essential condition imposed by Art. 99 para.1 letter c) of the Criminal Code, the second thesis, that of being a debtor in good faith, i.e. to prove that, despite all his efforts, it was impossible for him to fulfill his obligations is not fulfilled if the convict avoided the execution of civil damages, waiting until expiration of the right of the civil party to request enforcement.

The prescription[18] concerns only the forced pursuit of the execution of the claim resulting from the conviction decision, without affecting in any way the validity of the obligation, according to art. 707 para (2) Code of Civil Procedure, reason for which, if the debtor pays the obligation after the expiration of the limitation period, he can no longer request the refund. However, if the statute of limitations does not affect the claim itself, it is natural that the person deprived of liberty should be obliged to pay it in order to be offered parole.

The reason for the condition examined does not consist in forcing the convict to pay compensation, which could no longer be achieved as a result of the intervention of the statute of limitations, but in that his efforts to repair the damage caused by the crime show a subjective position on the consequences and an element of appreciation of the extent to which he has become a responsible person, the discharge of civil obligations being precisely the means by which this is established.

We consider that it is necessary *de lege ferenda* to amend Art. 99 para.1 letter c) and art.100 para.1 letter c) of the Criminal Code, by introducing in their body as a way of extinguishing the civil obligations, the express waiver of the civil party to the compensations due to him, following that the text of the law should have the following content: "the convicted person has fully fulfilled the civil obligations established by the conviction, unless he proves that he had no possibility to fulfill them or the civil party he expressly waived the compensation".

3. Conclusions

Parole is a privilege, not a constitutionally protected right, being a „commitment" made by the detainee to the community through its ability to manage interpersonal relationships, by setting significant goals in education or training, through involvement in the activity self-improvement and therapy, using available resources (dwelling house, financial stability, family support) will overcome the recognized problems and help the offender to continue to serve in his efforts to reintegrate the community and within his family unit as useful productive individual.

Compared to the way of regulating the parole institution, we note the emphasis placed by the legislator on proving by the detainee good faith only in terms of payment the civil expenses to which he was obliged by the court decision, not in respect of other expenses the detainee was obliged by the court during the execution of the sentence, for example the judicial expenses to the state as a result of the rejection of some requests, so that their non-payment will not influence in any way the decision of the parole board, as long as the civil expenses of the sentence were paid.

Considering the fact that the lack of obligations constitutes one of the proofs of good faith, we consider that another proposal *de lege ferenda* would be welcome, consisting in the introduction of a new condition at Art. 99 par.1 letter c) and art.100 par.1 letter c) of the Criminal Code, that of ordering the deprivation of persons deprived of liberty to pay of legal expenses due to the state during detention, in the sense that "the convicted person has fulfilled his established civil obligations required by the court in which case he proves that he has no possibility of fulfilling them".

THE RESTORATIVE JUSTICE PROCESS IN THE WAKE OF THE GLOBAL PANDEMIC

Nagore PÉREZ HIERRO[*]

Abstract

The COVID-19 pandemic has completely changed the way we relate, both personally and socially, and at work. Isolation, confinement, restrictions or fear of contagion have led to the need to adapt to a virtual reality. And so, although many sectors have been paralyzed, many others are experiencing an express maturation thanks to the phenomenon of the Internet.

In the field of justice, it has also been proposed to implement the judicial processes in a telematic way. However, the Spanish system is not yet ready to face virtual reality. Spain is suffering a significant collapse in the courts, due to the unprecedented health crisis. It is therefore necessary to promote alternative processes of conflict resolution, embodied in restorative justice, as an expeditious and effective way out of this saturation of the judicial system. To this end, it is vital to have sufficient regulatory support to regulate such reparation processes, such as criminal mediation, which lacks systematic regulation in our legal system, as well as to enable online sessions in order for us to embrace the new virtual reality defined after the pandemic.

Keywords: *Restorative Justice, repair, pandemic, mediation, virtual reality.*

1. Introduction

This research work is about criminal mediation, an institution of great importance incardinated in Restorative Justice, which is opposed to Retributive Justice, and whose objective is the satisfaction of all parties to the process, that is, from the point of view of the victim of the crime as well as from the point of view of the rehabilitation of the perpetrator.

The interest that it arouses is none other than the lack of an express regulation in Spain that recognizes this institution in the field of criminal law, unlike other countries of the European Union that do regulate in a satisfactory way the criminal mediation.

It must be said that, for the study of research, it is at least necessary to refer to European legislation in order to determine how Restorative Justice is inserted into the different legal systems of the Member States, and analyze how it could be done in Spain.

It is true that many authors have delved into the application of alternative conflict resolution processes and, especially, on mediation. However, in the field of criminal law, it does not take off.

2. Content

It is a reality that in recent years the Spanish judicial system has been especially collpased. The high litigation present in Spanish society is a well-documented fact. The General Council of the Judiciary (CGPJ) has already highlighted on numerous occasions the existing congestion in the courts and tribunals of the country. That defendants wait many years to receive a judgment or for it to be carried out is the harsh reality of the Spanish judicial system. And unfortunately it seems that the Spanish are going to continue condemned to have a slow and absolutely saturated judicial system.

Improving the functioning of the Administration of Justice is the key in a State of Law, as the UN assures, and although it should have already been dealt with urgently by the authorities, the need increases even more in this current context of global health crisis produced by COVID-19 in which we find ourselves.

The justice has been and continues to be the great forgotten by the State and, after the pandemic, it has been retested. The Administration of Justice is suffering a significant slowdown due to this unprecedente health crisis. The collapse of the courts, the delay in the issuance of judicial decisions, the lack of confidence of citizens in a system where they see neither the right to an effective judicial protection nor the right to obtain a judicial response without unacceptable delay; together with the increase in litigation after the confinement, leads us to think about the need to promote alternatives conflict resolution systems.

It is at least a priority to encourage other procedures that manage to resolve conflicts between the parties from a higher quality of Justice. An agile way out of this saturation of the traditional judicial system is, without a doubt, mediation.

The resource of mediation, along with other figures such an arbitration or conciliation, were erected as substitute instruments for the ordinary process, whose main objective was none other than to lighten the weight borne by the courts.

[*] PhD Candidate, Economic and Business Law, Deusto University, Spain (e-mail: n.perezhierro@gmail.com).

It is true that these strategies have been reaching greater diffusion over the years. An example of this is the approval of the report on the draft law to promote mediation. However, this practice has not yet taken off.

Perhaps the lack of knowledge, the lack of mediators or the lack of confidence in the effectiveness of these methods are the causes that impede their growth process and that can explain the limited success of mediation in Spain.

In the criminal sphere, the lack of security of the crime victim that the mediation procedure does not entail a danger to her security or a risk of suffering further material or moral damage has to be added.

However, and bringing up the data provided by the Judicial Statistics Section of the General Council of the Judiciary on mediations, the resolution rate, which relates the volumen of income wih the resolution capacity, is encouraging. For this reason, it is considered vital a modernization of the Administration of Justice, which bets more on these alternative dispute resolution mechanisms.

In this line, and supporting the idea of promoting these procedures, three possible proposals are worth highlighting: favoring criminal mediation and betting on an express regulation; firstly; including mediation in the content of the Free Legal Assistance, secondly; and, finally, promoting the sessions electronically.

Regarding the first proposal, the legislator has dedicated and focused his attention on developing mediation especially in civil and commercial sphere. And it seems that he has forgotten about criminal mediation.

We found an isolated sentence such as the one issued by the provincial Court of Madrid, Section 17, 621/2015, of September 16 (Appeal 6037/2013), which transversely contemplated the criminal mediation procedure. Nevertheless, the reality is that, despite a theoretical basis is placed, there is a lack of a true legal regulation of the institution in Spain.

The reform of the Penal Code has already allowed the legislative entry of mediation, but there is still a long way to go before the judicial authorities consider it a legitimate, adequate and effective figure.

We are witnessing how European legislation (the Framework Decision of the Council of the European Union of March 15 /2001/220/JAI, regarding the status of the victim in criminal proceedings; and then Directive 2012/29/EU of the European Parliament and the European Council of October 25, 2012, which stablishes minimum standards on the rights, support and protection of crime victims, which has set a serie of guidelines for the implementation of Justice Restorative in the members countries of the European Union) has already endowed mediations with a specific regulation (Italy, Germany or Netherlands, among others), and it is undoubtedly that it's a key instrument for society and the fabric of the judicial system.

Not only does it manage to minimize the criminal response, but it also contributes to the task of Restorative Justice: it facilitates the rehabilitation of the culprit and the compensation of the victim.

Therefore, it can be considered necessary to give greater visibility to this practice and face an express regulation of criminal mediation, which ensures the safety of the crime victim and promotes the principles that allow to achieve the guarantees of Modern Criminal Law.

Regarding the second proposal, it is vital that mediation is going to be included within the content of Free Legal Assistance (AJG), which is already regulated in Law 1/1996, of January 10, on Free Legal Assistance.

As well is established in its Statement of Motives, the objective of this law in none other that to regulate a free justice system that allows citizens who prove insufficient resources to litigate, to provide themselves with the necessary professionals in order to access to the effective judicial protection and see their rights and legitimate interests adequately defended.

Article 119 of the constitutional text provides that Justice will be free when the law so provides and, in any case, with respect to those who prove insufficient resources to litigate. Our Supreme Norm designs a regulatory framework for the right to judicial and effective protection in which integrates a service activity aimed at providing the necessary means to make this right real for all the citizens.

Within the content of this right, article 6 of mentioned law refers to the advice and guidance prior to the initiation of the process, the defense and representation by a lawyer, expert assistance, the substantial reduction of the cost for obtaining deeds, notarial documents, custom duties and those who emanating from the Public Registries, which may be accurate for the parties in the process.

However, if we star from dispensering the same treatment of the judicial process to alternative dispute resolution systems, making these and equally valid option, it will soon be necesssary to expand the material content of the AJG. Since the defendants who opt for the mediation ressource will also have to face those amounts that this system inevitably entails, such as the mediators" fees, management or administration expenses, among others, despite the fact that the cost of the process is cheaper than the judicial procedure.

The Court of Justice of the European Union in the judgement of June 14, 2007 (case C-75/16, Livio Menini and Maria Antonia Rampanelli / Banco Popolare Società Cooperativa), established that for the mediation to be compatible with the principle of effective judicial protection, among other conditions, should not cause expenses or, in any case, they must be scarcely significant.

Nevertheless, however small they are, they can be an obstacle to the parties with insufficient resources from exercising the right to the protection of their legitimate interests. For this reasons, the insertion of mediation in the content of the law is more than justified.

Finally, and in relation to conflict resolution systems, it can be proposed the promotion of these tools in their online mode.

The COVID-19 pandemic has completely changed the way we interact with each other, both personally and socially, as well as in the work field. Isolation, confinement, restrictions or fear of contagion have led to the need for us to adapt to the virtual reality.

And for this reason, although many sectors have been paralysed, many others are experiencing an express maduartion thanks to the Internet phenomenon. In the field of Justice, it has been also proposed to carry out judicial processes electronically. However, the Spanish system is not yet ready to face virtual reality.

The fact is that, if we do not have the means to ensure a trial with all the guarantees, not only would the defense rights of the defendants be violated, but the online practice would turn out to be counterproductive. That is why it is essential to modernize the Spanish judicial system to new information technologies, as well as the alternative dispute resolution systems, emphasizing the rights of all the parts of the process.

3. Conclusions

For all the exposed, it should be noted that mediation stands as an economic and agile resource, which requires an active participation of the interested parties themselves, and generates a high dose of satisfaction in those who they come to it. Therefore, it is worth highlighting the need for the Spanish legal system to opt for a systematic and complete regulation of the institution of mediation, extending to the criminal field, given the undeniable benefits that its exercise entails, both for the State with respect to relief the workload for judges and courts, as for the parts, who save time and money.

In addition, it can be emphasized the possible insertion of mediation in the free justice content, given the equality of the judicial procedure with respect to the disbursements that may derive from its application, in order to avoid this flagrant discrimination among those defendants who choose the judicial process and those who decide to submit to mediation.

Finally, it can be said that it is important for society to adapt to new social reality defined after the pandemic, and, along the same lines, it is vital that the Administration of Justice itself do so, so as to achieve a proliferation of alternative systems for solving problems by a telematic way. Telecommunication networks have become more relevant than ever, and they are vital in this era of digitalization. Therefore, the need to bet on true digital justice is more than evident, as well as the promotion of the telematic use of alternative systems, that ultimately suppose an absolute support for the judicial process.

DISTINCTION BETWEEN THE OFFENCE OF TRADING IN INFLUENCE AND THE OFFENCE OF DECEPTION/FRAUD

Georgian Mirel PETRE[*]

Abstract

On the occasion of the research for the elaboration of this scientific paper, I plan to treat the constituent elements of the criminal offences of deception and trading in influence succinctly, in order to neatly lay off their defining characteristics.

Based on the above, I believe that the analysis of the two offences separately is highlighted for a better understanding, but also by the way of comparing their material elements.

Due to the similarities between the offence of deception and the offence of trading in influence in the "let it be believed" way, the literature has the obligation to provide the necessary clarifications in order to eliminate any existing doubt.

Keywords*: offence of trading in influence, fraud, distinction, offence of deception, similarities, differences.*

1. The offence of deception

1.1. Assessment of the constituent elements

The offense of deception is provided for in the Criminal Code, the Special Part in Title II (offenses against property), Chapter III (offenses against property by disregarding trust), being dedicated in Article 244.

It presents a standard variant, which incriminates as a crime "misleading a person by presenting as true a false deed, or as false a true deed, in order to obtain for himself/herself or for another an unjust patrimonial benefit and if damage is caused, is punishable by imprisonment from six months to three years"[1].

In the second paragraph of Article 244, the Romanian legislator states an aggravated variant of the offence of deception, enacting "deception committed by using false names or capacities or other fraudulent means is punishable by imprisonment from one to five years." If the fraudulent means constitute in itself an offense, the rules on concurrent offences shall apply"[2].

The criminal action in the case of the offence of deception is initiated *ex officio*, regardless of the criminal modality or the aggravated variants, as the Criminal Code does not make a distinction between the standard variant and the other more serious forms of the offence.

The norm of incrimination expressly provides that reconciliation removes criminal liability [Art. 244 (3)], the provisions regarding this institution provided in the provisions of Art. 215 of the previous criminal code being maintained.

By O.U.G. no. 18/2016, a new aggravated variant of the offence of deception was introduced for the hypothesis in which the commission of the crime results in particularly serious consequences (Art. 256[1] Criminal Code), the latter consisting in a material damage exceeding Ron 2,000,000 (Art. 183 Criminal Code).

Also, Article 248 of the Criminal Code expressly states that the attempt to commit the offense provided for in Article 244 of the Criminal Code is punishable, regardless of the form of the attempt (perfect, imperfect, relatively inappropriate), this being both possible and incriminated.

The special legal object of the offence of deception consists in the protection of social relations regarding the patrimony by disregarding trust.

The generic legal object consists in the protection of the social relations regarding the patrimony.

In the case of deception, the material object of the crime is any tangible movable property having an economic value[3] or immovable property.

1.1.1. The subjects of the offence

The active subject of the offence of deception can be any natural or legal person with criminal capacity, the criminal participation being possible in all its forms.

The passive subject of the crime can be any natural or legal person against whom the material elements of the offence of deception have been carried out.

As well stated in the specialised legal literature/ legal scholarship[4], in the event that there is no identity between the injured person and the misled person, the person misled in the legal relationship of conflict will appear as a secondary passive subject.

1.1.2. The objective side/point of view

The material element consists in misleading a person, both by an action and by omission, by presenting a false deed as true, or a true deed as false,

[4] Ibidem.

capable of distorting objective reality and creating for the passive subject an erroneous perspective on it.

It was also rightly held in the specialised legal literature[5] that error must be invincible in the sense that distorted, erroneous or false representations of reality, which produce effects on the victim"s decision-making process[6] must not be such as to produce only a doubt in the psyche of the passive subject, but must be apt by reference both to the deceitful ways used by the perpetrator, as well as to the intellectual factor of the passive subject of the crime, to overcome any doubt of the latter.

If the actions or inactions of the perpetrator do not lead to the elimination of any doubt, and the passive subject, knowingly, diminishes his/her patrimony by enriching that of the perpetrator, I consider that we are not in the hypothesis in which criminal liability could be engaged for committing the offence of deception, but the civil offense if the conditions for making such a claim are met.

The immediate consequence of the offence of deception consists in diminishing the patrimony of the passive subject of the crime (main / secondary passive subject - as we have showed above) and the correlative enrichment of the perpetrator"s patrimony.

In other words, a damage is committed to the property of the passive subject person, a damage (*damnum emergens*) which is an essential condition of the offence of deception, which must exist at the time of the crime, while not the unrealized benefit (*lucrum cesans*), which is taken into account in the analysis of the civil action[7].

Causation is the cause-effect relationship between the material element and the immediate consequence, a relationship that must be proven.

1.1.3. The subjective side/point of view

The offence of deception can be committed only with direct intent qualified by purpose, the form of guilt not being expressly specified in the incrimination rule, this being deduced from the wording used by the legislator in the constitutive content of the crime.

In my opinion, the only form of guilt accepted by the conditions enacted in Article 244 of the Criminal Code is direct intent, because it is qualified by purpose, a purpose that cannot be called into question in the case of an indirect intent incidence by which the perpetrator predicts the result of his deed, ***although it does not seek to obtain it***, accepts the possibility of its outcome.

Therefore, the purpose provided in Article 244, as well as the intellectual factor of the perpetrator in achieving the criminal resolution are likely to limit the subjective side only under the conditions of direct intention, under the conditions of Art. 16 Criminal Code.

In other words, the perpetrator seeks to obtain an unfair patrimonial benefit for himself/herself or for another, by using fraudulent methods, the determining motive for committing the crime being irrelevant.

1.2. The aggravated variant

The aggravated variant of the offence of deception consists in the use of false names or capacities or other fraudulent means - Art. 244 (2) Criminal Code.

The fraudulent means are mentioned in the aggravated version, because they represent much stronger deceitful ways on the psyche of the injured person/party.

By the decision of the Constitutional Court no. 49/2019, the Court considered the phrase "***or of other fraudulent means***" from the content of the aggravated variant of the offence of deception satisfies the standard of clarity and predictability. The same held that "in the standard version of the crime, the concrete means and ways in which the active subject makes the passive subject believe the untruths presented, i.e. the former misleads or maintains the latter in error or produces the illusion of truth, can be very different, as for example: craftiness, slyness, schemes, ploys, ruses, mystifications, dissimulation, seductions, deceptions, tricks, intrigues, etc. Therefore, these means or ways of misleading the passive subject can only be in the form of simple lies, because if they are fraudulent, i.e. supported or strengthened by other means, such as names, capacities, documents, staging of deeds, etc., so that the lie is more convincing, the deed shall be included in the aggravated version.

The latter variant of the offence of deception differs from the standard variant only by the means by which the offence of deception was committed, the misleading of the passive subject, and which are likely to ensure the success of this action more easily.

The fact that in the text of Art. 244 (2) of the Criminal Code for the designation of such fraudulent means, the expression "fraudulent means" is used, giving as an example "false names or capacities", does not mean they are exhaustive.

The criticized legal provisions are clear and unequivocal, as the recipient of the criminal norm of incrimination has the possibility to foresee the consequences deriving from its non-observance, meaning that he can adapt his/her conduct accordingly. In this regard, the Constitutional Court has ruled in its jurisprudence (i.e., Decision no. 1 of 11 January 2012, published in the Official Gazette of Romania, Part I, no. 53 of 23 January 2012) that, in principle, any regulatory act must meet certain quality conditions, including predictability, which means that it must be sufficiently precise and clear to be applicable; thus, the sufficiently precise wording of the regulatory act allows the interested persons - who may, if necessary, seek the advice of a specialist - to foresee to a reasonable extent, in the circumstances of the case, the

[5] G. Fiandaca, E. Musco, Diritto penale. Parte speciale, I delitti contro il patrimonio, vol. II, Zanichelli Editore, 2015, page 186.
[6] M. Udroiu, Sinteze de drept penal, Partea specială, op. cit., page 429.
[7] Idem, page 436.

consequences that may result from a given act. Of course, it can be difficult to draft laws of total precision and a certain flexibility may even prove desirable, flexibility which must not affect the predictability of the law (see, in this regard, the Constitutional Court Decision No. 903 of 6 July 2010, published in the Official Gazette of Romania, Part I, No. 584 of 17 August 2010, and Decision of the Constitutional Court No. 743 of 2 June 2011, published in the Official Gazette of Romania, Part I, No. 579 of 16 August 2011). (...) Therefore, the argument that the addressees of the criticized legal provisions cannot adapt their conduct according to their content, because they are sufficiently clear and predictable cannot be accepted, in the way that the Court finds that the wording of the law is not likely to generate difficulties of interpretation, the term "fraudulent" not being susceptible to different interpretations. Moreover, it is often used in criminal law, without difficulties of interpretation, the legislator seeking to punish more severely the commission of an act of deception by means which themselves involve acts of bad faith, in violation of the law. (...) At the same time, by Decision no. 676 of November 6, 2018, published in the Official Gazette of Romania, Part I, no. 1,115 of December 28, 2018, paragraph 23, and following, and Decision no. 50 of February 14, 2002, published in the Official Gazette of Romania, Part I, no. 144 of February 25, 2002, the Constitutional Court ruled that an aggravated variant of the offence of deception is committed when the deception is committed through the use of false names or capacities or by other fraudulent means. The note in the second sentence of the paragraph, according to which, if the fraudulent means constitutes by itself a crime, the rules regarding the concurrent offences are applied, it does not contradict the provisions of Art. 4 item 1 of the Protocol no. 7 of the Convention for the Protection of Human Rights and Fundamental Freedoms, provisions prohibiting the prosecution or punishment of a person who has previously been convicted or acquitted, by a final judgment, of the same acts. The fact that it is retained in all cases a qualified deception, including when the use of the fraudulent means constitutes in itself an offense, does not mean the double sanctioning of the offense. The fraudulent means used by the perpetrator can be a variety of illegal acts. Their mere existence, regardless of their number or gravity, gives the offence of deception a qualified character, being necessary, according to the will of the legislator, a harsher sanctioning of this category of offenders. The fact that the fraudulent means is in itself a crime cannot change the aggravating nature of the incrimination. To put on the same level the swindler who uses fraudulent means which are not crimes with the one who uses such means, but which in themselves constitute crimes, means to grant impunity to the latter for such crimes, which is inadmissible. The existence of plurality of offenses in this situation does not mean a plurality of sanctions established contrary to the provisions of Art. 4 paragraph 1 of Protocol no. 7 of the Convention for the Protection of Human Rights and Fundamental Freedoms, but the application of a principal punishment established in accordance with the rules on concurrent offences.[8]

By the phrase "false names" from the content of article 244 (2) Criminal Code, we mean the use of real or unreal names which do not belong to the perpetrator, for the purpose enacted in Art. 244 (1) Criminal Code.

By the phrase "false capacities", we mean the use of any capacities the perpetrator understands to use to reach the desired criminal resolution, a way that can attract criminal liability for other crimes as well (i.e. unlawful impersonation of a person or an authority), in the event that the capacity used implies the exercise of state authority and is accompanied or followed by the performance of an act related to it.

1.3. The punishability of attempt

Article 248 of the Criminal Code expressly establishes that the attempted offense provided for in Article 244 of the Criminal Code is punishable, regardless of the form of the attempt (perfect, imperfect, relatively inappropriate), which is both possible and incriminated.

However, the legislator does not distinguish between the standard variant and the aggravated form, which is why the attempt is possible for both forms.

1.4. Judicial practice

However, regarding the offence of deception - in the sense that the defendant A. obtained as a result of these fraudulent steps and manoeuvres a court decision inconsistent with the factual and legal reality, respectively the Civil Decision no. 1210 of September 26, 2011 of Suceava Tribunal, civil section, it cannot be legally established that a court was deceived.

The appellate court refers to the constant judicial practice in the matter, which shows that the legal object regulated by law for deception cannot be violated by such a concrete activity, as the judges cannot be harmed by committing the respective act (by way of example, Decision No. 449 / A / 2015 ruled by the High Court of Cassation and Justice or, the criminal sentence No. 51 of February 24, 2009 of the Bucharest Court of Appeal).

Therefore, the false presentation of certain factual or legal aspects before a judicial authority falls outside the scope of these relations protected by the criminalisation of deception, and may be protected in the strict framework of crimes against the administration of justice, which has not been called into question. The use of forged documents in court is an activity subsumed to the offence of forgery or using a false instrument/ forgery of administrative documents and trafficking therein and not to the offence of deception.

[8] Decision of the Romanian Constitutional Court no. 49/2019.

Consequently, the act is not provided by the criminal law, as it cannot be committed with respect to the members of the court panel, whose property was not affected by committing this act of alleged deception *(High Court of Cassation and Justice, criminal section, decision no. 407/23.11.2017, www.scj.ro)*.

The controversial fact in question is the real or fictitious nature of the legal aid contracts concluded, as well as the evidence proving the payment of fees, the defendants claiming, contrary to the accusation, that they certify real operations, stating that the purpose was to determine the civil party to respect the rights of the defendant A. in the future over the real estate in question, which constitutes in their opinion an abuse of right/ abusus juris, and not the offence of deception.

Prior to any analysis of the fictitious or simulated nature of the mentioned documents, the High Court of Cassation and Justice finds that the facts, as described in practice, do not realize the typicality of the offence of deception, a crime against property, the specificity of which is that, by deceitful manoeuvres of the perpetrator or by resorting to other fraudulent elements, the victim of the misleading act engages in prejudicial conduct.

The essence of this crime is that the perpetrator deceives, disregards the trust given in relations with the patrimonial content, or, the deed underlying the accusations brought against the defendants consists in the fact that they used, by filing in enforcement files, contracts of legal assistance and receipts which do not certify real operations, the civil party being enforced even for amounts that represent allegedly fictitious legal fees.

The false presentation of certain factual or legal aspects before a judicial authority falls outside the scope of these relations protected by the incrimination of deception (Art. 244, Title II), but is protected in other crimes such as forgery (Title VI), against the administration of justice (Title IV) etc. Thus, the "misleading" of an authority brings into question other types of disregarded social relations and other incidental incriminations, those that protect the authority, such as false statements, false testimony, false identity, presentation to the customs authority of forged documents etc.

The use of forged documents in an enforcement case which is subject of a levy of execution/enforcement could constitute an act provided by the criminal law subsumed to the offence of forgery and / or using a false instrument, and not to the offence of deception. The conclusion results from the fact that the legal object of the offence of deception is the protection of patrimonial social relations based on trust, while the legal object of the offence of forgery is different and refers to the protection of social relations in relation to the value of public trust granted to certain categories of documents. In the same sense, in the practice of the supreme court, it was ruled that the lawyer"s act to submit to the court, in a trial, forged receipts that unrealistically certify the collection of sums of money as a fee, in order to get the opposing party ordered by the court to pay legal expenses, does not meet the constitutive elements of the attempt at the offence of deception, prov. by Art. 32 Criminal Code in ref. to Art. 244 (1) and 2 of the Criminal Code, but only the constituent elements of the criminal offence of forgery of documents under private signature, since the offence of deception constitutes a crime against property by disregarding trust in relations with patrimonial content, and misleading an authority is not included in the sphere of the relations protected by the criminalisation of deception (decision no. 449/A of December 8, 2015, published on the website www.scj.ro).

Moreover, in the case of the offence of deception, the property constituting the unjust material benefit leaves the possession or detention of the passive subject and falls within the scope of the perpetrator as a result of misleading the former, who is thus forced to take a damaging property order. Or, in this case, the damage does not appear as a direct effect of the deception, it does not come from an act of will of the bailiff/enforcement officer or the civil party - debtor in the enforcement procedure, but from the abusive manner in which the defendants exercised their rights in this phase of the civil lawsuit.

Thus, the defendant A. submitted in the execution files receipts attesting the allegedly uncollected fees for the execution to bear on their payment as execution expenses. Or, according to the provisions of Art. 6 of Law 188/2000 "Bailiffs cannot refuse to perform an act given in their competence except in the cases and under the conditions provided by law.", provisions which corroborated with those prov. by Art. 56 of the same regulatory act, according to which the refusal to fulfil the attributions provided in Art. 7 (b) –(i) shall be motivated, if the parties insist in their request for fulfilment thereof, it results that the enforcement of an enforcement order, attribution prov. for in Art. 7 (a) cannot be the object of a refusal.

In accordance with Art. 622 (3) Code of Civil Procedure, the enforcement takes place until the realisation of the right recognised by the enforcement order, as well as of the enforcement expenses, the lawyer"s fee in the enforcement phase, being one of the expenses expressly listed by Art. 669 (3) Code of Civil Procedure. Also, Art. 669 (4) Code of Civil Procedure states that:

"The sums due to be paid shall be determined by the bailiff, in conclusion, on the basis of the evidence filed by the interested party, in accordance with the law. Such amounts may be censored by the enforcement court, by way of the enforcement appeal filed by the interested party and taking into account the evidence administered by the same ... ".

As such, the act, as described in the document instituting the proceedings, which is the object of the trial as defined by Art. 371 Code of Criminal procedure, is not provided by the criminal law. The conduct of the defendant A. could be subsumed to the

offence of forgery of documents under private signature, but the analysis of the factual and legal elements regarding the imposition of criminal liability for this exceeds the object of the trial, in the context in which the accusation was formulated explicitly only in terms of misleading through the use of fraudulent means, without a separate accusation in terms of forgery of documents under private signature, used to produce a legal consequence. Or, art. 244 (2) final thesis Criminal Code expressly mentions:

"If the fraudulent means is in itself a criminal offense, the rules on concurrent offences shall apply", the offence of forgery being an autonomous offence for which the prosecutor did not exercise the criminal action in this case, so that any other analysis regarding the real or fictitious character of those recorded in the documents submitted in the enforcement procedure exceeds the object of the trial and would necessarily imply a complete, substantive change of the factual situation, which would violate the right to defence, a component of the right to a fair trial. The principle of separation of judicial functions prohibits the court from determining the possible criminal act committed in a manner that modifies the object of the trial by a change of the legal classification in question from the offence of deception to the offence of forgery of documents under private signature *(High Court of Cassation and Justice, criminal section, decision no. 156/2018, www.scj.ro).*

2. The offence of trading in influence

2.1. Assessment of the constituent elements

The offence of trading in influence is found in Title V (offenses of corruption and crimes committed while in office), Chapter I (offenses of corruption), which is regulated by Article 291 of the Criminal Code.

The legal object of trading in influence offence consists in the protection of social relations related to the development of service relations in good faith.

In other words, the offence of trading in influence is a guarantee offered by the legislator to subjects of law, a guarantee likely to protect social relations of office, in the sense that no one is above the law, we are all equal before it and no person can abuse for his/her own interest to the detriment of the general interest.

These guarantees are offered even by the Fundamental Law of the state, being consolidated by rendering punishable as criminal offences some objective situations capable of violating the constitutional principles.

Therefore, the duties of service must be exercised in good faith, for the purpose and the limits for which they were created, without prejudice to the social values protected by criminal law.

We are in the presence of a crime that lacks a material object, an aspect resulting from the analysis of the provisions of Art. 291 Criminal Code.

I consider that the offence of trading in influence is *not* an indirect form of discrediting the officials or the persons provided in Art. 308 of the Criminal Code, as specified in the specialised legal literature[9], but a substantial remedy and a guarantee offered by the legislator, for the purpose of the good development of labour relations, under the conditions of Art. 308 Criminal Code.

2.1.1. The subjects of the offence

The active subject of the offence of trading in influence can be any natural or legal person who has criminal capacity, who can have, has or is believed to have influence over an assimilated or private public official.

Criminal participation is possible in all its forms: co-authorship, complicity, or instigation.

As is well stated in the literature[10], it is possible for a person to be an accomplice to both the offence of trading in influence and the offence of buying influence, if he/she supports the acts of the influence trader/ peddler and the acts of the influence buyer.

The main passive subject of the offence of trading in influence is represented by the public authority, public institution, the institution or the public / private benefit corporation in which the public official operates and exercises his/her duties, the secondary passive subject being the one on which it is claimed the influence will be trafficked.

2.1.2. The objective side

The material element of the offence of trading in influence consists only in an action which cannot be committed by omission, and the material element can be achieved by claiming, receiving or accepting the promise of money, goods or other benefits, directly or indirectly, for oneself or for another, claiming to have influence, or suggesting that he/she has influence over a public official, promising to cause the latter to perform, not to perform, to hasten or delay the performance of an act falling within his/her service, or perform an act contrary to such duties.

These modalities listed above (claim, receipt or acceptance) represent the only execution possibilities of the material element of trading in influence.

In the event that the offence is committed in other ways than those mentioned above, the conditions provided in legal texts are not met, the deed not being typical, it will not constitute a crime.

Similar to the offence of bribery, the term payments or other benefits has the classic meaning corresponding to the crimes of corruption (both bribery, and trading in / buying influence).

[9] S. Bogdan, D.A. Șerban, Drept penal, partea specială, infracțiuni contra patrimoniului, contra autorității, de corupție, de serviciu, de fals și contra ordinii și liniștii publice, Universul Juridic Publishing House, Cluj-Napoca, mai 2020, page 302.

[10] M. Udroiu, Sinteze de drept penal, Partea specială, op. cit., page 719.

An intriguing problem arises in the specialized legal literature[11] in the sense that some authors consider a doubt in the hypothesis of obtaining benefits of a sexual nature.

In my opinion, the Romanian legislator in Article 291 of the Criminal Code by the phrase "other benefits", does not limit in any way the possibility of the perpetrators to obtain any type of benefits, including in the previously mentioned situation.

I am of the opinion that the intention of the legislator is to include (by the phrase "payments or other benefits") any type of "reward" of the influence trader by the buyer, and no limits are established to exclude sexual benefits, this being one among the particular ways of realising the material element.

In this regard, the judicial practice agrees with this approach, the courts noted that we are discussing trading in influence in the event that the defendant, a university professor, claimed sexual favours to traffic his influence in relation to a colleague, in order to facilitate the passing of exam[12].

The Constitutional Court by Decision no. 650/2018 (Official Gazette no. 97 of February 7, 2019) considered that "By conditioning the material element of the crime by the material benefits claimed / received / accepted, an impermissible restriction of the conditions for criminalising trading in influence is found, as long as the intangible - non-patrimonial benefits are excluded. It leads to the evasion from the sphere of incrimination of an act of corruption, which is contrary to Art. 1 (3) of the Constitution".

It does not present a relevant aspect if the goods are actually handed over, the criminal liability not being conditioned in this sense by the incrimination norm.

In the event the influence peddler who is a public official and has powers in connection with the act for which the fulfilment, non-fulfilment, urgency, delay trades the influence, concurrence of bribery and trading in influence shall be retained[13].

Also, in the event the influence trader, in order to reach the desired result, offers payments or other undue benefits to the public official for the fulfilment, non-fulfilment, urgency, delay of the duties, or for the fulfilment of an contrary act, concurrence of bribery and trading in influence shall be retained.

The immediate consequence of the offence of trading in influence is represented by the state of danger generated by the perpetrators (the influence buyer and peddler), a state of danger that may endanger the good development of the service relations in which operates the one over whom the influence is trafficked.

The causal link results *ex re*, from the materiality of the deed, this being an offense of abstract danger.

2.1.3. The subjective side

The offence of trading in influence can be committed only with purpose qualified direct intent, the form of guilt not being explicitly specified in the criminalisation rule, but being deduced from the constitutive content of the crime.

In my opinion, the only form of guilt, as I have shown in the case of the offence of deception, accepted by the conditions enacted in Article 291 of the Criminal Code, is direct intention, because it is qualified by purpose, a purpose that cannot be called into question in the case of the incidence of an indirect intention by which the perpetrator foresees the result of his deed, ***although he does not pursue it,*** accepts the possibility of its occurence.

Therefore, the purpose provided for in Article 291, as well as the intellectual factor of the perpetrator in carrying out the criminal resolution are likely to limit the subjective side only to the conditions of direct intent.

In other words, the perpetrator seeks the trading of influence over a public official so that the latter fulfils, does not fulfil, speeds up or delays the performance of an act part of his/her duties or performs an act contrary to such duties.

2.2. The aggravated variant

In the event the offence is committed by a person exercising a function of public dignity, a judge, prosecutor, criminal investigation body or has responsibilities for finding or sanctioning contraventions, or based on an arbitration agreement are called to rule with regard to a dispute that is given to them for settlement by the parties to this agreement, regardless of whether the arbitration procedure is carried out under Romanian law or under another law (Art. 293 Criminal Code, Art. 7 of Law no. 78/2000).

For the aggravated variant, the punishment is imprisonment from two years and eight months to nine years and four months.

2.3. The mitigated variant

The Criminal Code establishes a mitigated variant of the offence of trading in influence, incriminating the typical act that is committed in connection with private officials, i.e. persons who exercise, permanently or temporarily, with or without remuneration, a task of any kind in the service of a natural person, as provided in Art. 175 (2) Criminal Code (natural person exercising a service of public interest for which he/she

[11] S. Bogdan, D.A. Șerban, Drept penal, partea specială, infracțiuni contra patrimoniului, contra autorității, de corupție, de serviciu, de fals și contra ordinii și liniștii publice, op. cit., page 303.

[12] The word "benefit" is defined as a moral or material gain. Judicial practice has also ruled in this regard, considering that, for example, sexual favours (non-pecuniary benefits) can be considered undue benefits, the scope of undue benefits that can be obtained by the perpetrator is very wide, including not only material benefits, of patrimonial nature, such as money, goods, or material advantages, but also the so-called moral advantages, so that sexual favours may also be included in the scope of the notion of other undue benefits. (C.A. Timișoara, dec. no. 550/2016; Trib. Mehedinți, Sent. Pen. 117/2016; CAB, Dec. Pen. 925/2017; ICCJ, Dec. Pen. 118/A/2019).

[13] M. Udroiu, Sinteze de drept penal, Partea specială, op. cit., page 718.

has been invested by public authorities or who is subject to their control or supervision regarding the performance of such public service) or within any legal person[14].

For the mitigated option, the punishment is imprisonment from one year and four months to four years and eight months.

2.4. The punishability of attempt

In the situation of the offence of trading in influence, the attempt is not incriminated, this being assimilated by law to the consumed act (the crime involving anticipated consumption).

2.5. Judicial practice

The existence of the offence of trading in influence does not imply a real influence of the defendant over an official in order to determine the latter to do or not to do an act that falls within his/her duties, but it is necessary that the influence the perpetrator has or lets be believed that has, regards an determined official or indicated generically by the nature of the influence to be exercised, who has attributions in fulfilling the act for which the perpetrator received or claimed payment or other benefits. Consequently, there must be a causal link between the receipt of such benefits and the promise to exercise influence, whether claimed or actual. If the receipt of goods is made prior to the request for intervention, unrelated to the requested intervention, the conduct of the accused, no matter how immoral it may be, does not fall within the objective side of the offence of trading in influence .

The offence of trading in influence is consumed by committing any of the typical actions provided alternatively in the rule of incrimination (receiving or claiming payments or other benefits or accepting promises, gifts, committed by a person who has influence or suggests that has influence over an official, in order to determine the latter to do or not to do an act that falls within his/her duties.

Although it is irrelevant whether the claim for benefit has been satisfied, nor whether the acceptance of the promise of benefits has been followed by their provision, for the existence of the criminal offense it is necessary to prove from the objective point of view:

1. the act which the defendant was to determine by his/her influence;

2. the receipt or acceptance of benefits in connection with the exercise of influence;

3. the connection between the exercise of the claimed or real influence and the claim / receipt / acceptance of the benefits

From the subjective point of view, it is necessary to prove the facts which lead to the conclusion that the accused person sought to receive benefits by having or suggesting that he/she has influence over an official so that the latter would exercise his/her duties in a certain way.

If the receipt or acceptance of benefits takes place prior to the request for the exercise of influence, the evidence must indicate the anticipation of the invocation of influence, in a certain case, by the defendant. The guilt of the defendant is proved in relation to his own conduct. The guilt of the defendant cannot be inferred exclusively from the reason for which the injured party gave the respective benefits, unless there is an act of conduct of the defendant confirming that the injured party was entitled to believe that the defendant would exercise his/her influence. The receipt of the benefits the injured party gives for a possible future, general, indeterminate protection (if necessary), does not fall within the objective side of the offence of trading in influence .

In conclusion, although it is not relevant whether or not the intervention took place, or whether it is real or not, or when it was carried out in relation to the time when one of the actions constituting the material element of the crime was committed, for the existence of the objective side of trading in influence. it is necessary for the evidence to indicate the influence that the defendant had or allowed to be believed to have on an official and what is the act that falls within the duties of an official that the defendant was to determine to do or not to do, and from the subjective point of view, the facts which lead to the conclusion that the accused person sought to receive benefits by having or suggesting that he/she has influence over an official in order for the latter to exercise his/her duties in a certain way. Invoking influence, directly or indirectly, must be decisive for receiving the benefits *(High Court of Cassation and Justice, criminal section, decision no. 676/2013, www.scj.ro)*.

From the perspective of the legality of the judgment, the appellate court finds that, compared to the factual situation retained by the courts, based on the evidence, the deed of the defendant who, during June 2010, claimed from the witness-complainant S.I.A. the amount of Eur 50,000, representing a percentage of the value of some works, to ensure the latter, through the influence he has on some officials in the administrative apparatus, would win tenders worth Eur 5 million, and from the witness-whistleblower M.P. the amount of Eur 100,000, before signing a contract, assuring the whistleblower of winning the tender for the award of works worth RON 50 million, as he would have known influential people from the Ministry of Agriculture, where he claimed to work; on November 30, 2010, he claimed from the witness- whistleblower C.P. the amount of Eur 50,000, for the intervention before a court-appointed administrator in order for the whistleblower to win a tender having as object real estate located within the municipality of Bucharest; on December 7, 2010, he claimed from the said K.L. 3% of the value of a work of about USD 100 million, as

[14] M. Udroiu, Sinteze de drept penal, Partea specială, op. cit., page 738.

advisory fee (representing, in fact, part of the price of trading in influence) and the amount of Eur 100,000 cash, claiming to have influence over officials at the Ministry of Foreign Affairs, respectively a person who works in this ministry in the Libyan area, in order to determine the award of the works to the company of the Turkish citizen, meets the constituent elements of the offences of trading in influence *(High Court of Cassation and Justice, criminal section, decision no. 1004/2014, www.scj.ro)*.

3. Distinction between the offence of trading in influence and the offence of deception. Conclusions

Starting from the legal object of the two crimes, we can observe that the offence of trading in influence has as LO the social relations regarding the good development of service relations, and the offence of deception the protection of the social relations regarding the property.

Since their regulation, the legislator has been considering the separation of offences, even if they involve similar issues in some cases, in crimes against property (deception/fraud/swindling) and crimes of corruption and crimes committed while in office (trading in influence).

Apparently, there is similarity between the two offences, which consists in misleading a person in the normative version of the material element of the offence of trading in influence by the phrase „ ... or suggests that he/she has influence over a public official" given that the other normative variant of the offence of trading in influence assumes that the perpetrator has influence, especially when the buyer of influence has a criminal initiative.

In the event that he/she "lets to be believed", the perpetrator is the one who proposes to the buyer of influence to exercise his/her influence over a public official for the purpose provided in Article 291 of the Criminal Code.

Therefore, the influence peddler may be in two situations:

1. the situation in which the perpetrator *has* influence over the public official, influence capable of producing legal consequences;

2. the situation in which the author *has no* influence over the public official, but "let other believe that he/she has influence".

However, if the buyer of influence agrees to give, promise, offer money, goods or other benefits for the purpose of trading in influence, there is no question of retaining the offence of deception "by misleading", as the buyer buys the influence from the influence trader and diminishes his/her patrimony consciously and voluntarily, his consent not being vitiated, the purpose pursued by the two being different, and the consequences produced being of a criminal nature both for the buyer and for the peddler.

Even if the influence trader does not have influence over the public official, but "lets it be believed so", the buyer of influence has a criminal attitude unlike the person injured by the offence of deception.

From the above, it results that the person against whom the offence of deception is committed is innocent, being a person injured by the commission against him/her of an act provided for by the criminal law.

In the case of the offence of trading in influence, both the perpetrator and the one buying influence, has a criminal character, the purpose of the two being the purchase-trading in influence.

In concreto, the influence buyer appeals to a person – the influence trader - who has, may have or lets it be believed to have influence over a public official in order to distort the latter"s employment relationships.

Thus, both attitudes, of the buyer and of the peddler, are criminal.

In comparison to the offence of deception, the one on whom the material element of the crime is committed is an innocent person, the perpetrator distorting reality by deceitful methods, in order to obtain an unfair patrimonial benefit for himself or for another.

The essence of the offence of deception is for the perpetrator to exercise acts of misleading on the injured person, and for the passive subject to be induced an invincible error in relation to which he/she fulfils the essential features of an injured person by committing an act against him, provided for by criminal law.

If an attempt is made to mislead the buyer of influence in the regulatory version of "letting it be believed that he/she has influence", and the buyer is not convinced of the possibility of the influence trader, refusing the offer of trading in influence, apparently committing the offence of deception may be called into question, but only in an attempted form.

An important criterion is found even in the provisions of Article 291, second thesis Criminal Code "and who promises to determine him/her", a criterion which, if fulfilled, one no longer speak of an attempt at the offence of deception, but of a consumed offence of trading in influence.

The rule of 291 of the Criminal Code penalises the behaviour of a person who, in order to unjustly acquire money, goods or other benefits, commits acts of corruption so that, whenever it is found that a possible misleading of the potential buyer of influence who does not agrees to buy the influence, since the action is placed in relation to the duties of some public officials, is always retained the offence of trading in influence, this being considered a priority ("special") rule over the rule regulated in Article 244 Criminal Code which incriminates acts of misleading unrelated to the duties of public officials.

Therefore, whenever it is a question of misleading a potential buyer of influence by promising the

intervention of the peddler on a public official, the offence of trading in influence will be unequivocally held, and not that of deception.

As we have shown in the analysis of the constituent elements of crimes, they are fundamentally different, in the sense that the legislator understood to place them in different spheres of protection, with distinct purposes, as well as attitudes of participants and criminal resolutions.

In the event the influence peddler misleads the buyer through the normative method "lets it be believed", but the peddler does not promise to intervene before the public official, and the benefits are not remitted to him, we are only in the presence of an attempted form of deception.

In conclusion, the two crimes have similar aspects, but the constituent contents differ and delimit the material elements in a natural and simple way, these delimitations being likely to differentiate in a direct way the offence of trading in influence from the offence of deception.

Abstract

May a court decision be considered as a work of intellectual creation? The question is likely to generate a lot of controversy. An affirmative answer would be criticizable from the perspective of the definitions given to the work by the Berne Convention and of those generally accepted in the specialized doctrine. A negative answer risks ignoring the fact that in some cases, the interpretation of the law or the principles of law by the judge is an act of intellectual creation whose originality cannot be questioned.

However, the answer should be affirmative. Judgment is a work of intellectual creation, which can sometimes meet the condition of originality. It will not in any case be the subject of copyright, being expressly excluded from protection by the provisions of Art. 9 let. b) of Law no. 8/1996 on copyright and related rights. Being excluded from copyright protection and taking into account that this exclusion is determined by the nature and purpose of these judicial texts, judgments enter the public domain from the perspective of intellectual property rights, are accessible to anyone, and logical-legal reasoning included in them they can be used freely, without restrictions.

Keywords: *court decisions, judgement, work of intellectual creation, scientific value.*

1. Introduction

May a court decision be considered as a work of intellectual creation? The question is likely to generate a lot of controversy. An affirmative answer would be criticizable from the perspective of the definitions given to the work by the Berne Convention and of those generally accepted in the specialized doctrine. A negative answer risks ignoring the fact that in some cases, the interpretation of the law or the principles of law by the judge is an act of intellectual creation whose originality cannot be questioned. Moreover, it is not uncommon for magistrates involved in solving cases that raise problems of interpretation of the law, develop logical-legal reasoning in articles, monographs or other such works that can not be denied the quality of work and can is the subject of copyright.

In order to achieve a satisfactory answer to the above question, we will proceed to an analysis of the meaning of the notions of "work of intellectual creation" and "judgment", respectively, and will examine the issue of legislative, national or foreign texts.

1.1. The meaning of „work of intellectual creation"

The Berne Convention of 1886 for the Protection of Literary and Artistic Works completed in Paris on 4 May 1896, revised in Berlin on 13 November 1908, completed in Bern on 20 March 1914, revised in Rome on 2 June 1928, revised in Brussels on 26 June 1948, revised in Stockholm on 14 July 1967 and in Paris on 24 July 1971 and amended on 28 September 1979[1], has, according to Article 2 (1), as its object of regulation the protection of "works", which are defined indirectly by associating them with the literary, scientific or artistic fields, whatever the form of expression and in a way that is not intended to be exhaustive, by enumerating the ways of their concretization, respectively: the books, brochures and other writings; conferences, speeches, sermons and other works of the same nature; dramatic or dramatic-musical works; choreographic works and pantomimes; musical compositions with or without words; cinematographic works, to which are assimilated the works expressed through a process analogous to cinematography; works of drawing, painting, architecture, sculpture, engraving, lithography; photographic works, to which the works expressed by a process similar to photography are assimilated; works of applied art; illustrations, geographical maps; plans, sketches and works of art relating to geography, topography, architecture or science.

Using a similar legislative technique, the Romanian legislator provides by art.1 of Law no.8 /

* PhD Candidate, Faculty of Law, „Nicolae Titulescu" University of Bucharest (e-mail: andreiclaudiurus@yahoo.com).

[1] To which Romania acceded by Law no. 77/1998 for Romania's accession to the Berne Convention for the Protection of Literary and Artistic Works of September 9, 1886, in the form revised by the Paris Act of July 24, 1971 and amended on September 28, 1979, published in the Official Gazette, Part I no. 156 of April 17, 1998.

1996[2] on copyright and related rights that the copyright on a literary, artistic or scientific work and on other works of intellectual creation is guaranteed and recognized under the conditions of this normative act. Article 7 of the same normative act also proceeded in a manner that is not intended to be exhaustive, to the enumeration of works of intellectual creation in the literary, artistic or scientific field that constitute the object of copyright, whatever the method. of creation, the mode or form of expression and independent of their value and destination, being added the condition of their originality.

Thus, according to Law no. 8/1996, the object of copyright is represented by the original works of intellectual creation, and the protection conferred by it includes moral or patrimonial attributes, from the moment of their realization, even in unfinished form. It is observed that the Romanian legislator tried to define the notion of "work" that falls under copyright both by associating it with the phrase "intellectual creation" and by listing the mode or form of expression, explicitly adding the condition of their originality.

In the absence of a definition given by law, the doctrine has shown that the works, creations, products of human spiritual activity are the result of a conscious approach, the intentional approach being the common denominator for any act or creative fact. Starting from this finding, it was shown that "the work (...) can be defined as the product of the spiritual activity carried out with the will to achieve something that did not exist before, to modify the existing reality, the product of that activity from which a creation of the spirit or, in an even more general sense, to include technical creations in the definition, an object over which the creator is granted an intellectual property right "[3].

2. The meaning of „judgement"

Regarding judgment, this is one of the main duties of magistrates and a requirement that accompanies the right to a fair trial, guaranteeing the parties that their defenses were "heard" by the judge and are protected against arbitrariness. In a broader sense, to these are added the decisions by which the supreme national court rules on controversial issues of law, within the mechanisms of unification of judicial practice, such as preliminary rulings for the settlement of legal issues or those for the settlement of appeal in the interest of the law and which have binding effect for all courts regardless of the level of jurisdiction. Although it does not constitute a court decision in its own sense, from the perspective of the object of this study we believe that the analyzed category may include decisions rendered by the constitutional court and judgments handed down by supranational courts, which in turn have binding effects *erga omnes* for jurisdictions of the States which have acceded to the treaties or conventions under which they were established. The decision of a court usually finds its definition in relation to its legal effects and its importance in a system of law, national or supranational. Although it is indisputably the result of a magistrate"s own reasoning that interprets a rule of law and sometimes may have scientific value, thus contributing to the evolution of legal sciences, rarely will the judgment be defined as an act of intellectual creation and to be recognized originality.

In the technical terms imposed by the norms of legislative technique[4], the court decision is "defined" by the provisions of art. 370 of the Code of Criminal Procedure as the decision by which the case is resolved by the first court or by which it disinvests without resolving the case or by which the court rules on the appeal, recourse in cassation and appeal in the interest of the law. Similarly, the provisions of art. 403 of the Code of Criminal Procedure provide that the decision must include, among others, the motivation of the solution regarding the criminal side, by analyzing the evidence that served as a basis for it and those that were removed and the motivation the solution regarding the civil side, as well as the indication of the legal basis that justifies the solutions given in question. Things are not different in non-criminal matters, the provisions of art. 425 of the Code of Civil Procedure stipulating that the decision must show, among other things, the factual and legal reasons on which the solution is based, they admitted, as well as those for which the parties" claims were withdrawn.

Although the evoked norms do not expressly mention, "showing the legal basis" should not be understood as a simple evocation or enumeration of incidental legal texts, but an exposition of the legal reasoning / legal syllogism of the judge, who is the one who attributes to the court decision the value of an act of intellectual creation.

It should be noted here that only legal reasoning, interpretation of legal rules or principles of law can have such value, since the facts and elements of fact which the magistrate has to examine in a case are a "given", they pre-exist. and they are not the fruit of the judge"s own thinking activity, he being only required to establish them on the basis of the evidence administered.

The situation is somewhat similar with regard to the judgments of the European Court of Human Rights, the provisions of Article 45 of the European Convention for the Protection of Human Rights and

[2] Published in the Official Gazette. no. 60 of March 26, 1996; Following successive amendments, the law was republished in the Official Gazette. no. 268 of March 27, 2018, giving the texts a new numbering.

[3] V. Roş, A. Livădariu; "The condition of originality in scientific works", in the Romanian Journal of Intellectual Property Law, no. 2/2014.

[4] Law no. 24/2000 on the norms of legislative technique for the elaboration of normative acts, republished, published in the Official Gazette. Part I no. 260 of April 21, 2010.

Fundamental Freedoms[5] providing that "judgments and decisions declaring applications admissible or inadmissible shall state the reasons" and art.74 of the Rules of Court, judgments must include, among others, the legal reasons underlying the adoption of solutions.

With regard to the judgments of the Court of Justice of the European Union, regardless of whether they seek the annulment of some legislative acts of the U.E. or the interpretation of European law by means of preliminary rulings or other types of actions submitted to it, the Treaty on the Functioning of the European Union[6] does not contain any reference to decisions of this judicial authority, and the Statute of the C.J.U.E. it simply stipulates in art.36 that "judgements shall state the reasons on which are based". However, the Court"s judgments always include an extensive analysis of the general principles specific to European law and of the provisions which need to be interpreted, in such a way that the character of intellectual creation and originality cannot be denied.

3. The court decision – a work of intellectual creation according to Law no. 8/1996?

Considering the definition we referred to earlier, we believe that court decisions can be considered, at least in some cases, as works of intellectual creation, being the result of a conscious approach, of an intellectual activity to achieve something that it did not exist before, for creative purposes. We refer here to situations in which the judge, solving a given case, makes an interpretation through a logical-legal reasoning of a legal rule or principles of law, sometimes the result of recent legislative changes and thus, "creates law". Such reasoning, beyond the fact that under certain conditions or systems of law will be imposed by force whenever the same issue of law will be analyzed in other cases, may form the basis for various articles, studies, monographs or other in-depth studies in field, contributing to the evolution of legal sciences.

However, regardless of the scientific value that a court decision may have, it will not be the subject of copyright in any situation, being excluded from protection by the provisions of art. 9 let. b) of Law no. 8/1996 on copyright and related rights.

The doctrine[7] has shown that the Berne Convention does not categorically exclude such texts from protection, leaving Member States the right to determine the protection to be given to official legislative, administrative or judicial texts and official translations of such texts, as well as the right to exclude, in whole or in part, from protection political speeches and speeches delivered in judicial debates. Thus, Article 2 paragraph (4) of the Convention provides that "the law of the countries of the Union reserves the right to determine the protection to be accorded to official texts of a legislative, administrative or judicial nature, as well as to official translations of such texts", and in Article 2 bis paragraph (1) that "the legislation of the countries of the Union reserves the right to exclude, in part or in whole, from the protection provided in the previous article political speeches and speeches delivered in judicial debates".

Despite these reservations, some EU member states and signatories to the Berne Convention have opted to exclude from protection all official texts of a legislative or judicial nature. For example, German law on copyright protection (Urheberrechtsgesetz) provides in Article 5 that "official laws, ordinances, edicts and notifications, as well as officially developed decisions and guidelines for decisions, are not protected by copyright." Also, in Spain, the law of copyright (La ley de property intelectual) provides by art.13 that are not subject to intellectual property "legal or regulatory provisions and their corresponding projects and decisions of courts ...". In Italy, the relevant normative act (Legge 22 aprile 1941 n. 633 Protezione del diritto d"autore e di altri diritti connessi al suo esercizio) provides by art. 5 that "the provisions of this law do not apply to the texts of official acts of the state and of public administrations, both Italian and foreign". On the other hand, the French law on copyright (Code de la propriété intellectuelle), although it lists conferences, speeches, sermons, pleadings and other works of the same nature in the category of protected works (Article L112-2), does not expressly provide for an exemption from official texts of a legislative or judicial nature from protection.

The Romanian legislator chose to exclude from protection of all official texts of a legal and judicial nature, providing by the provisions of art. 9 let. b) of Law no. 8/1996 that the official texts of a political, legislative, administrative, judicial nature and their official translations cannot benefit from the legal protection of copyright. By using the phrase "nature", the legislator thus excludes from protection all official texts that are limited to judicial proceedings.

It is to be observed here the special nature of the provision from Art. 9 let. b) of the law compared to the provision of art. 7 let. a) of the same normative act, which includes the pleadings in the sphere of works that benefit from protection. Starting from the general meaning of the term, the plea represents a defense, oral or written support of a case, an idea, thesis, etc., and in particular means an oral presentation made by a lawyer before a court to defend the case of a between the parties involved in the law case[8]. Consequently,

[5] Adopted on November 4, 1950, entered into force on September 3, 1953 and ratified by Romania by Law no. 30/1994 published in the Official Gazette. Part I no. 135 of May 31, 1994.

[6] Available on the website https://eur-lex.europa.eu/legal-content/.

[7] V. Roş, Intellectual Property Law, Bucharest, Ed. C.H. Beck, 2016, pp. 183.

[8] According to DEX.

pleadings in the general sense of the term will not be excluded from copyright protection, while a lawyer"s plea in court proceedings will not benefit from such protection, and may be freely reproduced, including by its taking over in the content of the court decision.

The conclusion deriving from the legislative technique used by the legislator is that the quality of an intellectual creation work of a plea is recognized, including that of a lawyer and exposed before a court, but the latter is excluded from copyright protection not from the cause of the lack of value, originality or other such criteria, but because it is limited to a judicial procedure in which justice is administered. A similar reasoning can be applied with regard to judgments, the only difference being that judgments cannot be pronounced outside judicial proceedings. The recognition by law of an exception, in the sense of inclusion in the category of works protected by copyright is thus prevented by the fact that they are in all cases limited to judicial proceedings and the administration of justice.

The exclusion from copyright protection of court decisions of national, foreign or supranational courts, together with the texts of national and foreign normative acts lies in the reason for their existence and purpose.

If, as regards normative acts, they enshrine legal norms defined as general and obligatory rules of conduct, the purpose of which is to ensure social order and which can be enforced by the state, by coercion[9], they form the basis of the normative order. in law, establishing the rules of conduct to be followed in the relations between individuals and / or legal persons, as well as the sanctions in case of their violation, the court decisions represent the means by which justice is administered by the courts. In both cases, both the law and the judgment are intended for all persons, either by establishing a presumption of their knowledge (*nemo censetur ignorarem legem*), or by establishing a general obligation to respect their authority. Also, normative acts, national or foreign, do not have a known author, in the proper sense of the word, their paternity being assumed in an impersonal way by the issuing institutions.

Judgments cannot fall into the category of works protected by copyright for the simple reason that through them, in the name of the law (art. 124 para. (1) of the Romanian Constitution), courts administer justice (art. 126 para. (1) of the Romanian Constitution). Given that according to the Constitution, justice is unique, impartial and equal for all, the conclusion that justice is a public service, which is performed in the name of the law and is guaranteed to any person, is justified.

The consequence of the public service nature of justice, as well as the fact that it is guaranteed to everyone and accessible to all, is that everything that is limited to the administration of justice and judicial procedures is part of the public domain, is not appropriate and can be used without restrictions. Moreover, the public character and accessible to anyone of the judicial procedure extends to its content, with certain limitations, the provisions of art.35 paragraph (1) letter. a) of Law no. 8/1996 allowing the reproduction of a work in judicial, parliamentary or administrative proceedings or for public safety purposes, previously brought to public knowledge, without the consent of the author and without payment of any remuneration, provided that they comply good customs, not to contradict the normal exploitation of the work and not to prejudice the author or the holders of the rights of use.

Thus, regardless of the scientific value of a logical-legal reasoning by which the judge interprets the law, as long as it is contained in a court decision, it enters the public domain, being accessible to any person and can be used without invoking any right of author.

However, if the magistrate who drafted the court decision or another person will present the same reasoning in an article, specialized paper or other such forms, by taking over *ad literam* those contained in the decision, but without specifying this fact, the paper to constitute a work of intellectual creation that meets the condition of originality and will benefit from the protection of copyright under the conditions of Law no. 8/1996? And, especially, in these conditions can we talk about an autoplagiarism or a plagiarism?

The condition of originality, explicitly provided by the provisions of art.7 of Law no.8 / 1996 in order to be the object of copyright, does not necessarily refer to the novelty of the work (objective criterion), but is given by the personal imprint that the author gives it to his work, the unique way, the particular way, proper to each of the creators (subjective criterion)[10]. However, the lack of originality of a work does not necessarily mean plagiarism or self-plagiarism, but can express the lack of personal creative contribution of the author and which can lead to a lack of value of his creation.

Although Law no. 8/1996 on copyright and related rights does not include a definition of plagiarism, according to art. 4 let. d) and e) of Law no. 206/2004 on good conduct in scientific research, technological development and innovation[11], plagiarism is the exposure in a written work or oral communication, including in electronic format, of texts, expressions, ideas, demonstrations, data, hypotheses, theories, results or scientific methods extracted from written works, including in electronic format, of other authors, without mentioning this and without referring to the original sources; and self-plagiarism, the presentation in a written work or oral

[9] N. Popa (coord.), E. Anghel, C.B. Ene-Dinu, L. Spătaru Negură; General theory of law: seminar notebook; Bucharest, Ed. C.H. Beck, 2017, pp. 109.

[10] V. Roș, op.cit., P. 212.

[11] Published in the Official Gazette, Part I, no. 505 of June 4, 2004.

communication, including in electronic format, of texts, expressions, demonstrations, data, hypotheses, theories, results or scientific methods extracted from written works, including in electronic format, of the same author, without mentioning this and without referring to the original sources.

Law no. 206/2004 qualifies plagiarism and self-plagiarism as deviations from the norms of good conduct in the activity of communication, publication, dissemination and scientific popularization and Law no. 8/1996 provides through art. 197 para.(1) as a criminal offence the action to appropriate without any right, in whole or in part, the work of another author and presents it as his own intellectual creation. Thus, plagiarism is an act which infringes the patrimonial or moral rights of the author of the original work and which is likely to attract the liability, including criminal, of the one who is guilty of committing it. On the other hand, self-plagiarism is not likely to infringe the rights of another person, which is why its consequences will consist in the lack of originality of the work or even its lack of scientific value.

Consequently, if plagiarism is conceived and regulated as a mechanism that accompanies copyright protection, being likely to attract academic, civil or even criminal liability, autoplagiarism seems to be regulated as a protection mechanism against the lack of originality of a work. In both cases, however, the essential condition is that of the pre-existence of a work of intellectual creation that may constitute an object of copyright and which is infringed by reproduction without right.

Or, as previously shown, official texts of a legislative or judicial nature are expressly excluded by the provisions of art. 9 of Law no. 8/1996 on copyright protection, their reproduction may be made freely, without restrictions.

Consequently, the reproduction of a normative act or part of the content of a court decision will not be able to constitute plagiarism or self-plagiarism under any circumstances. Instead, the reproduction of such a part of the content of the court decision, by presenting a logical-legal reasoning or new concepts of interpretation of the law or the principles of law as the fruit of an activity of own creation and its consecration in a form likely to benefit the copyright protection will result in the lack of originality of the work, the sanction being rather a moral one.

4. Texts of national and foreign normative acts

We consider that, for the same reasons related to their nature and destination, regarding the normative acts and official texts of a judicial nature, the citation rules within the meaning of art. 35 of Law no. 8/1996 are not applicable either. The text imposes a copyright restriction on the use of a work previously made public, without the consent of the author and without payment of any remuneration, provided that it is in accordance with good practice and does not run counter to the normal operation of the work; and not to prejudice the author or the holders of the rights of use, in the cases listed by the evoked legal text. Obviously, however, this limitation can only concern a work that is the subject of copyright. However, as has been pointed out, texts of a legislative or judicial nature do not constitute an object of copyright, so that there is not even a right to be restricted. Mentioning the source of a legal reasoning or a way of interpreting the norms of law, by indicating the court decision, is not equivalent to the right of summons referred to in art. 35 of Law no. 8/1996 for the protection of copyright and related rights , but rather a way of avoiding the false originality of the intellectual creation and, in relation to the professional authority of the members of the professional body of that court, a validation of the argument contained in that judgment.

The capitalization of such texts, not protected by copyright, in doctoral theses raises in principle the same problems regarding the lack of originality or scientific value of the paper.

Starting from the principles deriving from the content of Law no. 206/2004 on good conduct in scientific research, technological development and innovation, through H.G. no. 681/2011 was approved the Code of doctoral studies, in which the doctoral thesis is defined as the original scientific paper developed by a doctoral student in doctoral studies, legal condition for obtaining a doctorate, the problem the originality of the thesis being resumed in the normative act, with the establishment of the obligation to mention the source for any material taken over.

In the case of doctoral theses in the legal field, the methodology will consist in using the research methods established in the field. In the literature it has been shown that legal scientific research is based on the use of a methodology, a set of methods and procedures with which the study of law in all its complexity takes place[12], and the most common are the comparative, historical, logical, sociological and quantitative[13].

Comparative and quantitative methods can be used to study the legal systems of different states with regard to certain legal institutions, which involves an analysis of the relevant case law and its systematization. In this context, the taking of reasoning contained in court decisions is inevitable, without this raising issues of originality, and the conclusions drawn may have some scientific value and may contribute to the improvement of national law. The historical method will also inevitably involve the taking over and exposing, at least in part, of the content of normative acts, national or foreign, in order to analyze the evolution of the jurisprudence of national or

[12] Ș. Deaconu, Legal Methodology, Hamangiu Publishing House, Bucharest 2013, p.16.
[13] N. Popa (coord.), E. Anghel, C.B. Ene-Dinu, L. Spătaru Negură, op.cit., P. 15.

supranational courts regarding the principles of law applicable in a matter. what logical method will be used to analyze the points of view expressed in the doctrine, as well as to present the author"s own conclusions.

Thus, the capitalization in doctoral theses of the texts not protected by copyright, respectively of the court decisions pronounced by national, foreign or supranational courts, as well as of the official texts from national and foreign normative acts will be able to be realized under a first aspect within the examination comparison of the different legal systems and jurisprudence of the courts belonging to them, as modeled by the effects of judgments handed down by supranational courts. In such a situation, it is essential to indicate the sources for each of the results of the analysis performed in order to verify the accuracy of the data obtained and the veracity of the conclusions presented, given that the lack of authenticity of the information presented risks a serious deviation from the rules the scientific research activity according to art. 2^1 of Law no. 206/2004.

Also, the capitalization of official texts of a legislative or judicial nature will be possible in the process of analysis and interpretation of the provisions contained in the incidental legal provisions and corroborated with the points of view expressed in the doctrine. In this case, too, the indication of the sources for the logical-legal reasoning or the interpretation of the various legal institutions contained in court decisions, either to strengthen an argument or to be challenged, appears to be mandatory, since, even if not enters the object of copyright and can be used freely, without restrictions, the condition of the originality of the doctoral thesis is an explicit one (art. 4 letter e) of the GD no. 681/2011 on the approval of the Code of doctoral studies) and may condition its scientific value. Taking over reasoning or interpreting various legal provisions or principles of law from court decisions and presenting them as the fruit of an intellectual activity of one"s own creation undermines the own contribution of the author of the doctoral thesis and his work lacks originality.

5. Conclusions

We consider that the judgment, at least the legal reasoning of the court decision, may be considered as work of intellectual creations, which sometimes meet the condition of originality. However, it will not in any case be the subject of copyright, being expressly excluded from protection by the provisions of Art. 9 let. b) of Law no. 8/1996 on copyright and related rights. Being excluded from copyright protection and taking into account that this exclusion is determined by the nature and purpose of these judicial texts, judgments enter the public domain from the perspective of intellectual property rights, are accessible to anyone, and logical-legal reasoning included in them they can be used freely, without restrictions.

However, the taking over in the doctoral theses of the reasoning from court decisions, either without indicating their sources or with such an indication, but in excess, will lead to a lack of originality of the doctoral thesis or will lack the work of the contribution. own of the author. In this context, another observation is required. Judgments do not have and cannot have scientific value, as they are not the result of an activity based on the methodology of scientific research in the field of legal sciences, but the result of an interpretation and application of legal provisions by the judge in relation to facts. However, this does not lead to a lack of scientific value of doctoral theses or other papers in which the object of research also involves an approach to jurisprudence in the field. The use of judgments, whether they belong to national or supranational courts, alone or as part of a consolidated case law, may confer scientific value on doctoral theses, insofar as the premises analyzed and the results obtained, subject to their validation, constitute an application of legal scientific research methodology.

PROBATIVE VALUE OF HIGHER FORENSIC MEDICAL BOARD"S OPINIONS

Alina-Marilena ŢUCĂ*

Abstract

There are situations in which the judicial bodies need the opinion of an expert in order to ascertain, clarify or assess facts or circumstances that are important for finding out the truth.

Forensic expert examinations fall into a specific category relative to other types of examinations as they can be carried out only by forensic medical institutions subordinated to the Ministry of Health.

The supreme scientific authority in the field of forensic medicine is the Higher Forensic Medical Board attached to the "Mina Minovici" Forensic Medicine Institute in Bucharest.

The mission of this board is to verify, assess, analyse and endorse from a scientific point of view, upon the request of judicial bodies, the contents and conclusions of various forensic medical documents performed by other subordinate public institutions, authorised by law to carry out fact-finding and expert examinations.

This article aims at clarifying the probative value in criminal proceedings of the opinions issued by this supreme authority, because there have been and are situations in judicial practice in which higher probative value has been rendered to such opinions, as well as situations in which its conclusions have been disregarded in a reasoned manner.

Keywords: *forensic medical expert examinations, opinions, Higher Forensic Medical Board, probative value, the expert examination reports.*

1. Introduction

Evidence is any element of fact which serves to establish the existence or non-existence of a crime, to identify the person who committed it and to know the circumstances necessary for the fair settlement of the case and which contributes to finding out the truth in criminal proceedings [article 97, paragraph (1), Code of Criminal Procedure]. Moreover, according to paragraph (2) of the aforementioned article, evidence is obtained in criminal proceedings by the following means: statements of the suspect or defendant, statements of the injured person, statements of the civil party or the party incurring civil liability, statements of witnesses, documents, expert examination reports or fact-finding reports, minutes, photographs, material evidence and any evidence that is not prohibited by law.

We notice that the evidence expressly referred to in the Code of Criminal Procedure also includes the expert examination reports. The performance of an expert examination is ordered when the opinion of an expert is required as well in order to achieve ascertainment, clarification or assessment of facts or circumstances that are important for finding out the truth in a case.

2. Forensic medical examinations

The regime of these examinations is regulated by Government Ordinance no. 1/2000[1] regarding the organisation of the activity and the operation of forensic medical institutions, as well as by the Regulation for the implementation of Government Ordinance no. 1/2000 regarding the organisation of the activity and the operation of forensic medical institutions, approved by Government Ordinance no. 774/2000[2]. Forensic medical examinations are carried out on living persons, corpses, biological products and *corpora delicti* in order to establish the truth in cases of crimes against life, bodily integrity and health of persons, or in other situations provided by law.

Forensic medical examinations are performed within forensic medical institutions and other structures with responsibilities in the field of forensic medicine, subordinated to the Ministry of Health, namely: forensic medical practices, county forensic medical services, forensic medical institutes.

If the judicial body that orders the expert examination finds that the forensic medical examination is incomplete, an order may be issued either to hear the forensic doctor who performed the expert examination or to carry out an additional examination. Furthermore, the criminal investigation bodies or the courts may request the endorsement of the expert report by the forensic medical document endorsement and control boards which operate within the institutes of forensic medicine. These boards verify, assess, analyse and endorse from a scientific point of view the contents and conclusions of the various forensic medical documents performed by the county

[2] Published in the Official Gazette, Part I, no. 459 of 19 September 2000.

forensic medical services[3], as laid down by the provisions of article 19 of the Regulation for the implementation of Government Ordinance O.G. no. 1/2000. If the conclusions of the forensic medical expert examination are contradictory, the endorsement and control board rules thereon and may formulate certain clarifications or completions. Moreover, in the event that the conclusions of the medical documents cannot be endorsed, the endorsement and control board recommends their total or partial redo and puts forward proposals in this respect or its own conclusions. After obtaining the endorsement of this board, new forensic medical examinations may be requested by the hierarchically lower forensic medical units only if the endorsement and control board has expressly recommended it where new medical or investigative data has come up which did not exist as at the date of the previous expert examinations.[4]

3. Higher Forensic Medical Board"s opinions

The supreme scientific authority in the field of forensic medicine is the Higher Forensic Medical Board attached to the "Mina Minovici" Forensic Medicine Institute in Bucharest. It is composed of several permanent members, namely: the general director and deputy director of the "Mina Minovici" National Institute of Medicine in Bucharest, the directors of forensic medical institutes in university medical centres, the heads of specialist departments within accredited faculties of university medical centres, the head of the morphopathology department at the "Carol Davila" University of Medicine in Bucharest and 4 consultant forensic doctors with specialist expertise, appointed at the proposal of the general director of the "Mina Minovici" National Institute of Forensic Medicine in Bucharest. The mission of this board is to verify, assess, analyse and endorse from a scientific point of view, upon the request of judicial bodies, the contents and conclusions of various forensic medical documents performed by other subordinate public institutions, authorised by law to carry out fact-finding and expert examinations. The Higher Forensic Medical Board can rule by verifying and endorsing from a scientific point of view also in the situations in which new expert medical examinations[5] have been performed or opinions have been issued by the endorsement and control boards having territorial jurisdiction.

If the Higher Forensic Medical Board finds the existence of contradictory conclusions between the first and the subsequent expert examination or other forensic medical documents, it may endorse, in whole or in part, the conclusions of either the former or the latter, and may formulate certain clarifications or completions. If the conclusions of the forensic documents cannot be endorsed, the Higher Forensic Medical Board recommends the total or partial redo of the works by putting forward proposals in this respect or own conclusions [article 27, paragraph (1) and paragraph (2) of the Regulation for the implementation of Government Ordinance no.1/2000[6]].

An important effect of the issuance of an opinion by the Higher Forensic Medical Board is the fact that the judicial bodies may not request the performance of other forensic medical examinations by the institutions that are hierarchically subordinated to it, unless new medical or investigative data has appeared.

Although it operates with the term of "opinion", where the Higher Forensic Medical Board may formulate its own conclusions and quash all other forensic medical documents drawn up by subordinated institutions and although the issuance of such an opinion results in the impossibility to carry out another expert examination, neither Government Ordinance no. 1/2000 regarding the organisation of the activity and the operation of forensic medical institutions, nor the Regulation implementing this ordinance makes any reference to the form of the opinions in question or to any mandatory information that should be included. The only regulatory act where we find a definition of this opinion is the Rules regarding the procedure for performing forensic medical examinations and other forensic medical documents[7] which in article 9, letter e) stipulates that *"forensic medical opinion means the document prepared by the Higher Forensic Medicine Board, as well as by the medical document endorsement and control boards, upon the request of judicial bodies, whereby the contents and conclusions of forensic medical documents are approved and recommendations are made to carry out new expert examinations or own conclusions are formulated."* However, these rules do not provide for the form of these opinions either. This legislative shortcoming has led to the (repeated) issuance by this Higher Forensic

[3] Article 25 of Government Ordinance. no. 1/2000 stipulates that these endorsement and control boards examine and endorse: a) fact-finding or forensic medical expert examination documents performed by the county forensic medical services in cases where the criminal investigation bodies or courts consider the endorsement; b) documents of the new expert examinations performed by the county forensic medical services before being sent to the criminal investigation bodies or to the courts.

[4] See in this respect the provisions of article 22 of the Regulation for the implementation of Government Ordinance no. 1/2000 regarding the organisation of the activity and the operation of forensic medical institutions.

[5] It is ordered to carry out a new expert examination report in case deficiencies, omissions and/or contradictory issues are found in previous expert examinations, as well as in the situation where the forensic medical document endorsement and control board recommends a new expert examination. The conclusions of a new expert examination are prepared on the basis of previous forensic medical findings or examinations, of the evidence placed on the case file, of the specifics of the case, of the new evidence included in the case file, as well as of the objections raised by the judicial bodies.

[6] Article 24, paragraph (1) and paragraph (2) of Government Ordinance no. 1/2000 stipulate provisions in the same regard.

[7] Published in the Official Gazette no. 459 of 19 September 2000.

Medical Board of opinions that completely quashed the conclusions of previous medical documents (fact-finding reports, expert reports, new expert reports), without too much explanation and without a concrete objective-scientific review of the analysed situation. The issuance of such opinions has also led the European Court of Human Rights to hold that the provisions of article 2 of the European Convention on Human Rights have been violated by the Romanian state. Thus, in the case of Eugenia Lazăr v. Romania the Court held in paragraphs 83 to 84 that the *Higher Board failed to reproduce the questions to which it was supposed to answer, failed to describe the operations that were supposed to be carried out as part of its control and failed to specify the specific reasons on which it relied to reach its conclusions*. Moreover, it pointed out that in the situation where the obligation to state the reasons for forensic medical documents was incumbent only on the institutions in charge of preparing the first findings and expert reports, not on the control boards, such approval aimed at strengthening the credibility of opinions and the efficiency of the entire forensic expert examination system was useless, because they had the power to completely change the conclusions of the institutions concerned. The Court took the view that the obligation to state the reasons for scientific opinions was all the more important in the case at hand, as the formulation of such an opinion by the supreme national authority in the field prevented lower-ranking institutes from carrying out new expert examinations and supplementing those that had already been carried out.[8]

The issuance of such opinions has also created problems in judicial practice at the national level. Thus, there have been situations in which the criminal investigation bodies or even the courts have given higher probative value to this opinion and the reason was that the document was issued by the highest national authority in the field of forensic medical expert examinations. Other criminal investigation bodies and courts have disregarded the conclusions of these opinions in a reasoned manner, taking into account the provisions of article 103 of the Code of Criminal Procedure, which enshrines the principle of free assessment of evidence.

In agreement with the latter judicial bodies, we, too, consider that these opinions issued by the supreme authority in the field of forensic medical expert examinations do not have a higher probative value than the other scientific evidence examined in a case. Thus, the judicial bodies may uphold in a reasoned manner any of the conclusions of the expert reports carried out in a case, regardless of whether they have been endorsed or not by the Higher Forensic Medical Board and implicitly to disregard such opinions. The provisions of article 103, paragraph (1) of the Code of Criminal Procedure supports this point of view and states that *the evidence does not have a value established beforehand by law and is subject to the free assessment of the judicial bodies following the evaluation of all the evidence examined in the case*. It follows from the aforementioned legal text that the assessment of evidence in criminal proceedings is governed by the principle of free assessment of evidence, according to which "judicial bodies have the right to freely assess both the value of each piece of evidence legally examined (relative to others) regardless of the procedural stage in which they are examined, as well as their credibility; the evidence does not have an a priori value established by the legislator, as its importance results from its assessment by the judicial bodies following the analysis of all the evidence legally and fairly examined in a case."[9]

Furthermore, as already shown, there are situations in which these opinions issued by the Higher Forensic Medical Board are incomplete and vague, without an objective-scientific analysis of the situation on which it must rule and without a concrete statement of reasons for its conclusions. Thus, the judicial bodies have the obligation all the more so to assess in concrete terms the scientific value of each medical document in a case. We consider that only a detailed, scientifically proven report, containing a reasoned solution in relation to possible contradictions between the other documents issued by lower-ranking institutions and answering in a detailed and reasoned manner all questions asked by the judicial bodies, is likely to be used as evidence in criminal proceedings.

The jurisprudence of the European Court of Human Rights also supports this view. Thus, in the case of Eugenia Lazăr v. Romania, in paragraphs 77-80, the European court held that "the court that ruled in the last instance gave credence to the opinion delivered by the Higher Board - although the judges of first instance considered it incomplete and requested a new opinion - on the ground that this document emanated from the highest national authority in the field of forensic medical expert examinations and that the latter, in the circumstances of the case, was prevented by the special law governing the activity of forensic medical institutes from carrying out a new expert examination in the absence of new elements. It necessarily follows from the reasoning pursued by the latter court that a piece of evidence acquires probative force when a new element cannot be substituted for it or when it cannot be countered by another piece of evidence having the same scientific value. ***Such a conclusion is in total contradiction with the procedural obligation implicitly contained in article 2 of the Convention, which specifically requires national authorities to take measures to ensure the gathering of evidence capable of providing a full and accurate account of the facts and an objective analysis of clinical findings, in particular of the cause of death***. Any deficiency in

[8] Within the same meaning see ECHR, decision of 7 June 2011 in the case Baldovin v. Romania, paragraphs 23-26.
[9] Mihail Udroiu, Procedură penală-Partea generală, C.H.Beck Publishing House, Bucharest 2018, p. 318.

the investigation that weakens its ability to establish the cause of death or responsibility risks leading to the conclusion that it does not meet this standard (see, mutatis mutandis, Slimani v. France, no. 57671/00, § 32, ECHR 2004-IX (extracts); McKerr v. United Kingdom, no.28883/95, § 113, ECHR 2001-III and Paul and Audrey Edwards cited above, § 71). Admittedly, by virtue of the principle of the free assessment of evidence which governs Romanian criminal proceedings, courts can disregard a piece of evidence which does not appear to them to be credible or conclusive. Such a possibility remains nevertheless purely theoretical if the judicial authorities are prohibited from ordering the performance of an expert examination outside the network of forensic medical institutes authorised by law and whose opinions are the only ones admissible as evidence in the context of a criminal trial or to ask these institutes *to reconsider their conclusions when they appear to them as being incomplete or insufficiently clear to enable them to make an informed choice and help them to make their decision*. Whether the present case constitutes an isolated case or whether it reflects a current practice of the "Mina Minovici" forensic medical institute of avoiding requests made to it by the judicial authorities in order to obtain the information they need in order to make objectively founded decisions in full knowledge of the facts, the Court considers that the very existence in the national legislation of provisions authorising the forensic medical institutes having competence to deliver opinions that avoid the requests of the judicial authorities and thus refuse cooperating with them whenever the needs of the investigation so require is hardly compliant with the primary duty of the state to guarantee the right to life by putting in place an effective legal and administrative framework capable of establishing the cause of death of an individual who was under the responsibility of health professionals."

Moreover, in the case *Baldovin v. Romania*, the European court concluded that the legislative framework established by the state to regulate the forensic medical activity did not have sufficient guarantees against arbitrariness to strengthen the trust of parties to proceedings in the act of justice and the credibility of the system as a whole.

Although the aforementioned cases were handled in 2010 and 2011 respectively, the Romanian state failed to fulfil its positive obligation to amend the legislative framework in accordance with the requirements of the jurisprudence of the European Court of Human Rights, therefore, the legislation applicable to these cases is currently the same.

The existence of a legal framework in the field of forensic medical expert examinations likely to allow the issuance of opinions by the supreme scientific authority in the field of forensic medicine which avoid the requests of judicial bodies and refuse cooperating with them whenever the needs of the investigation so require may lead to the occurrence of situations in which the clarification or assessment of facts or circumstances that are important in seeking the truth becomes impossible, thus diverting the criminal proceedings from its purpose, namely that any person who has committed a crime should be punished according to their guilt and that no innocent person should be held criminally liable.

In such a situation, we take the view that the regulatory acts regulating the activity of forensic medicine should stipulate what form the opinions issued by the highest national authority in the field of forensic expert examinations should take and what their concrete contents should be so that the judicial bodies can make a clear choice in assessing the evidence and help them make the right decision. In this respect, we consider that since such opinion can include own conclusions which differ from the conclusions of previous medical acts subject to assessment, it should take the form of an expert examination report, as provided by article 178, paragraph 4 of the Code of Criminal Procedure, namely ***introductory part***, which shows the judicial body that ordered the expert examination, the date when it was ordered, the last name and first name of the expert, the objectives to which the expert should answer, the date on which it was performed, the material on the basis of which the expert examination was performed, the proof of notification to the parties if they participated therein and gave explanations during the expert examination, the date of preparation of the expert examination report; ***expository part***, which describes the expert examination operations, methods, programmes and the equipment used; ***conclusions***, which answer the objectives set by the judicial bodies, as well as any other clarifications and findings resulting from the performance of the expert examination in connection with the objectives of the expert examination.

4. Conclusions

The criminal proceedings are governed by the principle of free assessment of evidence, which means that the evidence has no probative value established beforehand by the legislator and that there is no evidence that has the title of "queen", regardless of the authority from which it emanates. Therefore, the opinions issued by the supreme scientific authority in the field of forensic medicine do not have a probative value higher than the other scientific evidence examined in a case. Consequently, the judicial bodies may uphold any of the conclusions of the expert examination reports carried out in a case in a reasoned manner, regardless of whether they have been endorsed or not by the Higher Forensic Medical Board and implicitly to disregard such opinion in a reasoned manner.

STAY OF EXECUTION OF SENTENCE - THEORETICAL AND PRACTICAL APPROACH

Alina-Marilena ŢUCĂ*

Abstract

The completion of the activity of achieving the criminal justice goals involves immediate execution of final criminal judgments and continuity in the enforcement activity. However, there are also exceptional situations, where criminal enforcement is suspended as a result of the intervention of some impediments in the execution of the sentence.

The stay of execution of prison or life imprisonment sentence is precisely such a situation, as regulated by Section II, Chapter III "Other provisions regarding execution", Title V "Execution of criminal judgments" of the Code of Criminal Procedure.

The stay of execution of sentence is not a removal of the penalty applied to the convict, but merely a postponement of the moment from which it should begin, making up an exception to the rule of immediate execution of the criminal judgment. In order to avoid situations of unjustified stay of execution of sentence or even removal of execution of sentence, the legislator expressly and restrictively laid down the instances and conditions in which the convicted person may obtain the stay of execution of sentence.

Without claiming to be exhaustive, this study may serve as a basis for certain legal or practical clarifications in connection with the institution of stay of execution of prison or life imprisonment sentence.

Keywords: *sentence, stay of execution, convicted pregnant woman, state of illness, revocation of stay of execution*.

1. Introduction

"The criminal enforcement under the law begins with the determination of the sanction for the convicted person and takes place during the execution of the content of the criminal sanction, until it has been completely served or until it is considered executed under the conditions set out in the law. [...] The criminal enforcement is characterised by the fact that it is imposed by the state by the law of execution of sentences, under which the parties have an equal position only with regard to the exercise of rights, obligations and prohibitions established during the execution of criminal sanctions and during such time when, after the execution of the sanctions, the convicted persons must bear the effects of the sanctions."[1]

The completion of the activity of achieving the criminal justice goals involves immediate execution of final criminal judgments and continuity in the enforcement activity. However, there are also exceptional situations, where criminal enforcement is suspended as a result of the intervention of some impediments in the execution of the sentence. The stay of execution of prison or life imprisonment sentence is precisely such a situation, as regulated by Section II, Chapter III *"Other provisions regarding execution"*, Title V *"Execution of criminal judgments"* of the Code of Criminal Procedure.

This procedure takes place after a court decision sentencing a person to imprisonment in a detention facility or to life imprisonment remains final, until the actual start of execution of sentence, while after the start of the execution of sentence another institution operates, namely the interruption of execution of sentence. Moreover, the provisions of article 519 of the Code of Criminal Procedure point to the possibility of staying the execution and of putting into place custodial educational measures for minors, consisting in admission to an educational establishment or a detention centre.[2]

There cannot be an order to postpone the execution of a penalty that is not likely to be enforced. In judicial practice it has been decided that, as long as the decision to convict the defendant is not final as at the date of formulating and hearing the application for stay of execution of sentence, the application being dismissed, there are no grounds for quashing the judgment, which is legal relative to the time of its delivery, even if in the meantime the conviction has become final.[3]

The stay of execution of sentence is not a removal of the penalty, but merely a postponement of the moment from which it should begin. Making up an exception to the rule of immediate execution of criminal judgments, the legislator expressly and

restrictively laid down the instances in which the convicted person may obtain the stay of execution of sentence, precisely in order to avoid unjustified postponement or even the removal of execution.

2. Cases in which the execution of a prison or life imprisonment sentence may be stayed

As mentioned above, in order to avoid situations of unjustified stay of execution of sentence, the legislator has expressly provided for the cases in which this institution can operate. Thus, according to article 589 of the Code of Criminal Procedure, the stay of execution of prison sentence may take place in the following two situations: a) when it is found that the convicted person suffers from an illness, under the conditions of article 589, paragraph 1, letter a) and article 589, paragraph 2 of the Code of Criminal Procedure; b) if it is found that the convicted person is pregnant or has a child under the age of 1.

Unlike the previous criminal procedure code, according to the current regulation, the possibility to benefit from the stay of execution of sentence has been restricted, namely only two cases are provided, without recasting the third case provided by article 453, paragraph 1, letter c) of the 1968 Code of Criminal Procedure, referring to a situation in which the immediate execution of the penalty would have had serious consequences for the convict, the family, or the employer. This option of the legislator has been substantiated in the explanatory statement to the regulatory act based on the fact that this case is no longer consistent with the practical realities, since almost all court decisions for such applications have ordered their dismissal, and the current organisation of the activity of the National Administration of Penitentiaries allows to move detainees in special situations outside the place of detention by means of an administrative order.

2.1. State of illness of the convict

The first case in which the stay of execution of sentence may be ordered is stipulated by article 589, paragraph 1, letter a) of the Code of Criminal Procedure and considers the assumption in which, based on a forensic examination, it is ascertained that the convicted person suffers from an illness that cannot be treated within the healthcare network of the National Administration of Penitentiaries and that makes it impossible for the sentence to be immediately executed, if the specific characteristics of the illness do not allow its treatment in conditions of provision of permanent guard within the healthcare network of the Ministry of Health and if the court takes the view that the stay of execution and release do not pose a danger to public order. Moreover, paragraph 2 of the same article further provides that the stay of execution of sentence in case of illness cannot be ordered if the convicted person" illness is self-inflicted by refusing medical treatment or surgery, by self-aggression or other harmful actions, or if they evade the forensic examination.

The conditions that must be met in order for this instance of stay of execution of sentence to apply result from the aforementioned legal texts, more specifically:

a) to ascertain on the basis of an expert examination that the convicted person suffers from an illness[4];

b) the illness makes it impossible for them to execute the sentence immediately;

c) the illness cannot be treated within the network of the National Administration of Penitentiaries nor under permanent guard within the network of the Ministry of Health;

d) the illness is not inflicted by the convicted person by refusing medical treatment or surgery, by self-aggression or other harmful actions;

e) the convict has not evaded the forensic examination;

f) the release of the convict does not pose a danger to public order.

The circumstance that justifies the stay of execution of sentence may be ascertained only on the basis of a forensic examination carried out by the competent forensic service, however, the merits of the application cannot be assessed only on the basis of a forensic record or other medical document, even by specialist physicians or by physicians within the penitentiary healthcare network, but they can be considered when performing the expert investigation. In the judicial practice prior to the current Code of Criminal Procedure - practice which is still relevant - it was established that "the court may rule on the application to interrupt the execution of the prison sentence only on the basis of a mandatory forensic expert examination determining whether the illness from which the convicted person suffers makes it impossible for them to execute the sentence. If the convict refuses to appear for the forensic examination, the court may not order the interruption of the execution of the prison sentence on the basis of other medical documents."[5]

Furthermore, the convict"s state of health will be assessed upon hearing the application, so that a previous expert investigation carried out in another case, having the same subject matter, cannot be taken into account when solving the new case, since it is possible that their state of health changes and that new medical documents are submitted, so that a complete assessment of the convict"s health is required. To this end, in judicial practice it has been shown that "in order

[4] In the old regulation, the stay of execution of sentence could be ordered only in the situation where the illness from which the convict suffered was *serious*. The legislator's option to no longer use the term "serious" is justified, since it is not the seriousness of the illness that is relevant, but the finding of the impossibility of immediate execution of the sentence.

[5] High Court of Cassation and Justice, Criminal Division, *decision no. 5519/2005*, www.legalis.ro.

to solve the application for stay or interruption of the execution of the sentence on the ground that the convicted person suffers from an illness that makes it impossible for them to serve their sentence, a forensic expert examination must be carried out after bringing such application to court, during its hearing; a decision by which the ruling is delivered on the basis of a previous expert investigation carried out in another case concerning the same convict is against the law."[6]

If the convict applying for the stay of execution of sentence is unable to bear the costs of the expert investigation, where that is the only method provided by the legislator, whereby it can be verified whether the petitioner suffers from conditions that make it impossible for them to serve their sentence, we consider that the court should order the payment of the related fee from the funds of the Ministry of Justice, and that, if the application is rejected, they should be ordered to pay the amount. For this same purpose, the judicial practice points out that "the amount of the legal expenses advanced by the state to be borne by the convict whose application to interrupt the execution of the sentence has been dismissed includes the expenses incurred in carrying out the forensic examination."[7]

The expert investigation will be performed according to the Procedural rules regarding the performance of expert investigations, findings and other forensic work[8], which in article 30 stipulate that the forensic expert examination for staying the execution of the custodial sentence on medical grounds is carried out only by direct examination of the person by a committee composed of: a forensic doctor, who chairs the committee; one or more physicians who are at least specialist physicians depending on the conditions from which the examined person suffers, physician/physicians who will establish the diagnosis and therapeutic advice; a physician, representative of the healthcare network of the penitentiary department who, knowing the treatment possibilities within the network to which the representative belongs, determines together with the forensic doctor where to have the treatment applied for the condition concerned: within the healthcare network of the penitentiary department or within the healthcare network of the Ministry of Health. After performing a new expert investigation at the "Prof. Dr. Mina Minovici" Institute of Forensic Medicine in Bucharest for the stay or interruption of execution of custodial sentence on medical grounds, it is not possible to request or perform a new expert investigation at another hierarchically lower forensic unit.

If the committee that performs the expert investigation is not established in accordance with the aforementioned legal provisions, we consider that the expert report is unlawful and that a redo of the report is required. The previous jurisprudence has also ruled in this very sense, stating that "The committee that prepared the forensic report did not include a cardiologist, although a cardiologist"s participation was necessary given the nature of the numerous heart conditions mentioned in the appellant"s medical file. Consequently, it is necessary to carry out a new forensic expert investigation by having the convict and the medical documents examined by a cardiologist, then the expert investigation should conclude whether it is possible for the convict to execute the sentence, which is why the appeal is admitted by referring the case to the first court for retrial."[9]

The expert committee will determine whether the convicted person suffers from the illness mentioned in the application for stay or from another illness and if that makes it impossible for them to execute the sentence immediately. "The law does not distinguish between curable and incurable, mental or physical illnesses, nor does it impose the condition that the illness endangers the life of the convict, as established in practice, but only to render them unable to proceed to the immediate execution of the sentence."[10] If the expert report states that the illness found does not make it impossible to immediately serve the sentence, the application for stay appears to be unfounded and will be dismissed. Moreover, the same ruling is required where it results from the forensic report that the convicted person"s illness can be treated, while under permanent guard, within the network of the Ministry of Health. As stated in the doctrine, in this case "the decisive element is to ascertain the possibility of procuring that the convict is under permanent guard while in the public healthcare system, and then to allow the application to stay the execution of the sentence or life imprisonment if it is found that the illness cannot be treated under permanent guard within the healthcare network of the Ministry of Health."[11] For example, serious oncological diseases the treatment of which is incompatible with ensuring permanent guard given the

specificity of the healthcare unit which should provide a sterile environment may fall under this category.

It has been correctly assessed in the national judicial practice that it is not enough to ascertain that an illness can be treated, from a theoretical point of view, in the healthcare network of penitentiaries and that it is necessary to verify if there are practically optimal conditions for treatment and therapy at the place of detention, giving precedence to article 3 of the European Convention on Human Rights. Thus, it was held that "The court of first instance made a fair assessment of the convict"s situation and by referring to article 3 of the European Convention on Human Rights it gave precedence to the compliance with those rules. It is found that the execution of the sentence must be stayed in order to give the convict a real chance to benefit from the cytostatic treatment, which is absolutely necessary to improve their health and to therefore prevent irreversible and serious consequences on their physical integrity."[12]

Also relevant in this regard is the jurisprudence of the ECHR whereby it was held that the detention of a person who is ill "may raise issues under article 3. Although this article cannot be construed as laying down a general obligation to release detainees on health grounds, it nonetheless imposes an obligation on the state to protect the physical well-being of persons deprived of their liberty by, among other things, providing them with the requisite medical assistance. A lack of appropriate medical care, and, more generally, the detention in inappropriate conditions of a person who is ill, may in principle amount to treatment contrary to article 3."[13] According to the jurisprudence of the same court, it was also ruled that "the state of health ... was a factor that had to be taken into account under article of the Convention with regard to custodial sentences. Although there was no general obligation to release prisoners suffering from ill health, article 3 required states to protect the physical integrity of persons who had been deprived of their liberty, notably by providing them with any necessary medical assistance."[14]

The state of illness must not be self-inflicted by the convicts themselves by refusal to undergo medical treatment or surgery, by actions of self-aggression or by other harmful actions, as provided by article 589, paragraph 2 of the Code of Criminal Procedure. This condition was not expressly provided by the prior regulation, but the need for such a provision was previously emphasised in the doctrine,[15] being inadmissible for the convicted person to self-inflict a state of illness or to worsen their condition specifically for the purpose of not serving the sentence.

Furthermore, if the convicted person evades the expert examination, the court may return to this evidence, in which case the application is rejected as unfounded, as expressly provided by the legislator, thus enshrining the previous rulings in the judicial practice in legislative terms as well.[16]

The ascertainment of the illness, as characterised by the features presented above, is not enough per se to order the postponement of execution of penalty, since the court is under the obligation laid down by the legislator to verify that the release of the convict will not pose a danger to public order. Although it operates with this notion, the legislator did not provide a legal definition of this concept, so we take the view that said danger is to be assessed by reference to the seriousness of the crime for which the conviction was ordered, the criminal history of the convict, their behaviour in society, family. Moreover, even in a situation where the court should consider that the release would cause concrete danger to public order, the provisions of article 3 of the ECHR, as well as the constant jurisprudence of this court must be taken into account, as we have shown above, where according to the ECHR, in certain situations, keeping a person who is sick in detention may constitute inhuman treatment. In most cases, the lack of concrete danger to the public order will implicitly result from the ascertainment of the convicted person"s illness. Thus, it was shown in the doctrine that "if the forensic report concludes that the convicted person suffers from an illness that makes it impossible for them to execute the sentence and cannot be treated in the healthcare system of the penitentiary or the Ministry of Health (in this case under permanent guard), the seriousness of the illness from which the convict suffers and which will prevent them from being capable of endangering public order is obvious."[17]

Regarding this condition (that the court should determine that the stay of execution of sentence and the release do not pose a danger to public order), the Constitutional Court of Romania also ruled by Decision no. 323 of 29 March 2007[18] delivered in settling an exception of unconstitutionality relied on before the Bucharest Tribunal, whereby it held that the criticised legal text was not contrary to the constitutional provisions enshrining the right to the protection of health and the right to physical and mental

[16] Judgement no. 1665 of 7 December 2007 delivered by Bucharest Tribunal, First Criminal Division (in R.D.P., no. 3/2009, p. 106-107), ruled that "the forensic expert investigation can be carried out only after the direct examination of the person concerned. Having regard to the conduct of the convict who evades the service of the sentence and has failed to appear on any court date, as well as to the fact that the documents submitted by him through his lawyers fail to prove an objective impossibility to appear before the court, it can be assessed that this evidence cannot be examined, because with his visit at the forensic unit the convict would reveal his location."

[17] Ion Neagu, Mircea Damaschin, op. cit. p. 625.

[18] Published in the Official Gazette no. 283 of 27 April 2007.

integrity of the person. In stating the reasons for its decision, the Court pointed out that, in the specific situation of the criticised legal text consideration was given to the possibility for the judge to weigh, on the one hand, the evidence requesting the protection of the convicted person"s health and physical integrity and, on the other hand, the need to protect the general interest from a possible danger which the postponement of the execution of the sentence could have generated, a danger materialised either by committing new crimes or by trying to evade the execution of the penalty or even by the reaction of the population who could have attempted to take revenge on the convict, beyond the bounds of justice.

If the application for the stay of execution of sentence is accepted for this case, the stay will be ordered for a fixed period of time, as expressly provided by the legislator, until the convict"s health improves and the sentence can be enforced. The expert report sometimes mentions the time interval considered necessary for the improvement of the health and the application of the treatment, therefore, in our opinion, in these situations it is necessary to postpone the execution of the sentence for that period of time. The period for which the stay will be ordered must be expressly mentioned in the operative part of the decision, so as to enable the enforcement court to take measures for issuing the warrant of execution of sentence at the end of the period, and if the warrant has been issued, to take measures for its carrying out, as set out in the provisions of article 591, paragraph 6 of the Code of Criminal Procedure, since the stay of execution of sentence cannot turn into a cause of total removal of the sentence. However, it is possible to admit several successive applications if the legal conditions are met. If the execution of the sentence has been previously stayed and the convicted person brings a new application for stay during the stay period and the court accepts it before the previous stay has expired, the subsequent stay will be ordered from the expiry date of the previous stay, not from the date when the decision becomes final.[19]

If the decision rendered does not set a period for which the postponement of execution of the sentence is ordered, according to article 591, paragraph 6 of the Code of Criminal Procedure, the judge designated for enforcement purposes is required to notify the enforcement court with a view to verifying the actuality of the grounds for stay. The Code of Criminal Procedure does not stipulate the obligation to have a forensic report prepared in this procedure, therefore, we estimate that it is possible to ascertain that the health has improved by means of medical documents.[20] If the enforcement court finds that the ground for stay has ceased, the judge in charge of enforcement is under the obligation to take measures for the issuance of the warrant of execution or for its carrying out.

2.2. Female convict"s state of pregnancy. Existence of a child under the age of 1

The second case provided by law to order the postponement of execution of the prison or life imprisonment sentence refers to a female convict who is pregnant or has a child under the age of 1 [article 589, paragraph (1), letter b) of the Code of Criminal Procedure].

The provisions of article 1, letter b) of the Code of Criminal Procedure, were subject to an a posteriori constitutional review in which the court of constitutional review allowed the exception of high unconstitutionality and ruled that the legislative solution contained in the provisions of article 589, paragraph (1), letter b), first phrase, second sentence of the Code of Criminal Procedure, which excluded a male convict who had a child under the age of 1 from the possibility of postponing the service of prison or life imprisonment was unconstitutional[21].In the recitals of the decision, the Constitutional Court found that, from the perspective of the right to care for their child - a fundamental component of the right to respect for family life enshrined in the provisions of article 26, paragraph (1) of the Constitution - a male convict who had a child under the age of 1 was in a situation similar to that of a female convict who had a child of the same age and that the difference in treatment between the two categories of convicted persons, in terms of recognition of the possibility to stay the execution of a prison or life imprisonment sentence, had no objective and reasonable justification. The court of constitutional review also held that by the Judgment of 3 October 2017, delivered in Alexandru Enache v. Romania, the European Court of Human Rights found that - although the institution of staying the execution of a custodial sentence, being of a criminal nature, is essentially different from parental leave, which is a measure under employment law - in the question of whether, during the first year of a child"s life, an imprisoned father was in a similar situation to that of an imprisoned mother, the criteria which had been set out in the cases of Petrovic v. Austria and Konstantin Markin v. Russia were fully applicable to the instant case. Indeed, the stay of execution of a custodial sentence has the primary aim of safeguarding the best interests of the child in order to ensure that it receives the appropriate care and attention during the first year of its life. However, even though there may be differences in their relationship with the child, both the mother and the father can provide such attention and care. Moreover, the Strasbourg Court observed that the entitlement to a stay of execution of sentence continued until the child reached the age of one year old, and therefore extended beyond the period following the mother"s pregnancy and birth.

[19] High Court of Cassation and Justice, Criminal Division, *decision no. 2661 of 24 May 2002*, www.scj.ro.
[20] Within the same meaning, I. Neagu, M. Damaschin, op. cit. p. 625.
[21] Romanian Constitutional Court, *decision no. 535 of 24 September 2019*, published in the Official Gazette no. 1026 of 20 December 2019.

Having regard to the decision of the Constitutional Court, the stay of execution of sentence for the care of a child under the age of 1 may currently be ordered also for imprisoned men, regardless of whether or not they are sole earners with respect to the minor.[22]

Unlike the first case of stay of execution of sentence, for the finding of which the legislator stipulates the obligation to carry out a forensic examination, for the stay of execution of sentence based on this ground the legislator did not stipulate the mandatory performance of an expert examination as the state of pregnancy can be demonstrated by any medical document issued by a specialised body. The existence of the child under the age of 1 of the convicted person can be demonstrated by the birth certificate showing that the convicted person is the mother of the child.

The nature and seriousness of the crime for which the conviction is ordered are not of interest for determining the applicability of this instance of stay, since a requirement is that the convicted person is not subject to the denial of the exercise of parental rights as accessory punishment in case the convicted person has a child under the age of 1, as this instance of stay is put into place solely in the interest of the minor, in order to ensure its right to be raised and protected by its mother in the first year of its life. Therefore, if the evidence examined in the matter at hand shows that this measure is not in the interest of better care for the child, the court is under no obligation to order the stay or interruption of execution of the sentence.[23]

The stay of execution of sentence will take place, in the case of the pregnant female convict, until the child is born or until the minor reaches the age of 1 year old respectively, assuming that the application relies on the provisions of article 589, paragraph (1), letter b), second sentence of the Code of Criminal Procedure. In the case of a pregnant female convict, it cannot be ordered from the beginning to stay the execution of the sentence until reaching the age of 1, since such order is issued after the birth of the child, where the female convict will have to make a new application for stay in this regard as the postponement does not operate automatically.

Upon the expiry of the period for which the execution of the sentence has been postponed, the enforcement court will take measures for issuing the warrant of execution of sentence or for carrying it out if the warrant has been issued. If no period of time has been set for stay in the situation of the pregnant female convict, the judge designated for enforcement purposes will carry out checks and will find out if the pregnancy ended by birth or miscarriage and will consequently take measures for issuing the warrant of execution or for its carrying out.

3. Procedural issues

3.1. Owner of the application

According to article 590 of the Code of Criminal Procedure, the application for stay of execution of sentence or life imprisonment may be made by the prosecutor and the convict. In the case of the convict, it can be made by him personally or through a lawyer.

If the application is made by a person other than the convict, we consider that the court should not reject it as being made by a person without standing to do so, without asking the convict they endorse it and if they do, the court will have to proceed to solving it.

The application may be withdrawn by the person who lodged it.

3.2. Court having jurisdiction

Article 590, paragraph 1 of the Code of Criminal Procedure provides that the court having jurisdiction to rule on the stay of execution of sentence is the enforcement court.[24]

If during the hearing of the application, the convicted person is arrested and placed in a penitentiary located within the territory of another court, the court having jurisdiction for handling the application is still the notified enforcement court. In this case, the application will be qualified as application for interruption of execution of sentence, but the enforcement court will remain competent to solve it as the first court notified.[25]

In the case provided in article 589, paragraph 1, letter a) of the Code of Criminal Procedure, the application for stay of execution of sentence on medical grounds is submitted to the judge designated for enforcement, along with medical documents. The judge in charge of enforcement verifies in closed session whether the court has jurisdiction, without summoning the petitioner and without the participation of the prosecutor, and orders, as the case may be, by means of a ruling, the decline of the jurisdiction over the matter or the performance of a forensic expert examination. After the forensic report has been received, the case is solved by the enforcement court. In accordance with the opinion previously expressed in

[22] The possibility for a father caring for a minor child up to the age of 1 to apply for the stay of execution of sentence is not found in the legislation of other states, since this right is mainly recognised to the mother. Therefore, in countries such as Italy, Austria, the Czech Republic, Finland, Estonia, Bulgaria, Slovakia, Lithuania, Liechtenstein, the possibility of staying the execution of a sentence can be granted only to a pregnant female convict or the female convict caring for a small child whose age differs from one state to another.

[23] High Court of Cassation and Justice, Criminal Division, *decision no. 1220 of 11 March 2003*, www.scj.ro.

[24] In accordance with the provisions of article 553, paragraph (1) of the Code of Criminal Procedure, enforcement court means the first court that tried the convict, regardless of whether the punishment was applied by this court or by the court of judicial review. Paragraph 2 of the same article stipulates that the decisions delivered in the first instance by the High Court of Cassation and Justice shall be executed, as the case may be, by the Bucharest Tribunal or the Military Tribunal.

[25] Supreme Court of Justice, Criminal Division, *decision no. 1794 of 3 April 2002*, www.scj.ro.

the doctrine[26], we consider that the application for stay of execution of sentence can be heard by the very person who acted as judge in charge of enforcement, as they are not in any situation of incompatibility.

The legislator no longer provided for a procedure by which the judge designated for enforcement should be notified in the situation where the application for stay of execution of sentence is based on the provisions of article 589, paragraph (1), letter b) of the Code of Criminal Procedure, in which case the enforcement court is notified directly. In case a court lacking jurisdiction is notified, the decline of jurisdiction will be made by means of a judgment following the public hearing with the summoning of the convict and the participation of the prosecutor.

3.3. Procedure for solving the application for stay of execution of sentence

As shown above, in case of stay of execution of sentence on grounds of illness, there is a preliminary procedure in which the judge in charge of enforcement verifies the provisions regarding the jurisdiction of the enforcement court and orders the forensic examination.

After the expert examination has been carried out, the judge designated for enforcement purposes will notify the court in order to solve the application.

This preliminary procedure is not applicable in the case of an application for stay of execution of sentence where the state of pregnancy or the existence of a child under the age of 1 is relied on, in which case the application is submitted directly to the enforcement court.

The procedure for solving the application for stay of execution of sentence is carried out in a public hearing, with the summoning of the convict and the mandatory participation of the prosecutor, in accordance with the provisions of article 597 of the Code of Criminal Procedure. The legal text also stipulates that the judge presiding over the court panel will take measures to have a court-appointed counsel designated in the cases set out in article 90 of the Code of Criminal Procedure.[27]

The judgement by which the court rules on the application for stay of execution of sentence may be appealed to the hierarchically higher court within 3 days from the communication thereof. The appeal is heard in public session, with the summoning of the convicted person and the mandatory participation of the prosecutor. The decision of the court solving the appeal is final.

3.4. Effects of the decision to accept the application

The decision to accept the application for stay of execution of sentence results in the release of the convicted person for the period set by the court, where the judgment is enforceable. If the warrant of execution of sentence has been issued, it remains valid, as the stay is not a cause for annulment or suspension of execution. The admission of the application for stay of execution of sentence does not have effects on the other provisions of the judgment, so that the other provisions can be enforced (for example the provisions on court expenses, special confiscation, civil obligations). During the stay of execution of sentence, the accessory punishment will be executed, considering that the provisions of article 65, paragraph 3 of the Criminal Code stipulate that "the accessory punishment of the prohibition of exercising certain rights shall be executed from the moment when the conviction becomes final until the main custodial sentence is executed or considered as having been executed."

The stay of execution of sentence constitutes a reason for suspending the course of the limitation period of sentence execution.

If, during the stay of execution of sentence, another warrant of execution of the prison sentence is issued to the convict"s name, it cannot be enforced before the stay period set by the court expires, or, as the case may be, before the cause of the stay has ceased [article 589, paragraph (6) of the Code of Criminal Procedure].

Furthermore, where the application for stay of execution of sentence is allowed, the court must impose on the convicted person the observance of several obligations. In this regard, article 590, paragraph 1 of the Criminal Code stipulates that during the stay of execution of sentence, the convict must comply with the following obligations:

a) not to go beyond the territorial limit set except under the conditions established by the court;

b) within the time limit established by the court to contact the police body designated by it in the decision to stay the execution of the prison sentence in order to be registered and to agree on the means of permanent communication with the supervisory body, as well as to appear before the court whenever summoned;

c) not to change their home without prior notice to the court that ordered the stay;

d) not to possess, not to use and not to carry any category of weapons;

e) for the case provided in article 589, paragraph (1), letter a), to report immediately to the healthcare unit where they are to undergo treatment, and for the

[26] Mihail Udroiu, *Procedură penală, Partea specială*, fifth edition, C.H.Beck Publishing House, Bucharest 2018, p. 753.

[27] Article 90 stipulates that legal assistance is mandatory: a) when the suspect or defendant is a minor, admitted to a detention centre or an educational establishment, when detained or arrested, even in a different case file, when the safety measure of medical admission was ordered relative to the same, even in a different case file, as well as in other cases provided by law, b) if the judicial body considers that the suspect or defendant could not defend himself, c) during the preliminary chamber proceedings and during the trial in cases where the law provides life imprisonment or imprisonment for more than 5 years for the committed crime.

case provided in article 589, paragraph (1), letter b), to care for the child under the age of 1.

Also, according to article 590, paragraph (2), the court may impose on the convict the compliance with one or more of the following obligations:

a) not to attend certain places or certain sporting, cultural or other public gatherings, as determined by the court;

b) not to communicate with the injured person or with their family members, with the persons with whom they have committed the crime or with other persons, as determined by the court, or not to approach them;

c) not to drive any vehicle or certain specific vehicles.

4. Revocation of the stay of execution of sentence

During the stay of execution of sentence, the convict is required to comply with the obligations imposed by the sentence by which the application was allowed. In connection with such obligations, the legislator also laid down sanctions in case of their breach. Thus, article 591, paragraph (4) of the Code of Criminal Procedure stipulates that in case of breach in bad faith of the established obligations, the enforcement court revokes the stay and orders the execution of the custodial sentence.

The police body designated by the court in the decision as being in charge of the supervision of the person relative to whom the execution of the sentence was stayed regularly verifies that the convict complies with their obligations and draws up a monthly report in this respect for the enforcement court.

The procedure for handling the revocation application is carried out according to the general rules regarding the execution provided by article 597 of the Code of Criminal Procedure, more specifically in public hearing and adversarial proceedings, with the summoning of the convict, the participation of the prosecutor and the designation of a court-appointed lawyer in cases of compulsory legal assistance, as set out in article 90 of the Code of Criminal Procedure.

The enforcement court rules by its judgment and may dismiss the application if it is found that the obligations have not been breached, or that they have been breached but not in bad faith, or may allow the application if the obligations have been breached in bad faith.

An appeal may be lodged against the judgment by which the application for revocation is handled within 3 days from communication. The hierarchically higher court rules on the appeal by final decision.

5. Comparative law issues

The **Italian Criminal Code** provides for two categories of stay of execution of sentence. Particularly, article 146 provides for the situations in which the stay of execution of penalty is mandatory, whereas article 147 provides for the cases of optional stay of execution of sentence.

In accordance with article 146 of the Italian Criminal Code, the execution of a non-monetary penalty is postponed: if it refers to a pregnant woman, if it refers to the mother of a child up to the age of 1, if it refers to a person proven to suffer from AIDS or a serious immune condition acknowledged according to article 286-bis of the Code of Criminal Procedure or another extremely serious illness due to which their state of health is incompatible with the state of detention, when the person is in a stage of the illness so advanced that they no longer respond to treatments and therapies provided in the penitentiary. The Italian legislator provided that the stay would not be ordered, or if ordered, would be revoked, in case the pregnancy is interrupted or the mother is declared deprived of her parental rights over the child, or if the minor dies, is abandoned or entrusted to others.

Unlike national law, the Italian Criminal Code also provides for certain optional cases of ordering the stay of execution of sentence. Consequently, article 147 of the Italian Criminal Code stipulates that the execution of the penalty may be postponed:

a) if an application for pardon has been submitted and the execution of the sentence must not be postponed according to article 146;

b) if a custodial sentence must be applied against the person who is in a state of physical infirmity;

c) if a custodial sentence must be applied against the mother of a child up to the age of 3.

In the latter case, if the mother is declared deprived of her parental rights over the child, or the child dies, is abandoned or entrusted to other persons, the revocation of the stay of execution of sentence will be ordered.

In **Spain**, the serious incurable disease of the convicted person is a reason for conditional release, without requiring the fulfilment of other conditions necessary to order the release, not even the execution of a certain fraction of the sentence, while being necessary to draw up a forensic report on to the condition of the convicted person.

In **Greece**, too, the convict"s illness is a reason for conditional release, without the need to meet the other conditions required for release. Thus, article 110 A of the Greek Criminal Code stipulates that conditional release is ordered regardless of whether or not the conditions laid down by article 105 and article 106 are met if the convict suffers from an acquired immunodeficiency syndrome or chronic renal failure and undergoes regular haemodialysis, or from drug-resistant tuberculosis or is tetraplegic or has undergone liver, bone marrow or heart transplantation, or from terminal stage malignant neoplasm, or from liver cirrhosis with disability of more than 67%. Moreover, the same code stipulates that release will be ordered for

convicted persons who are in a state of disability of more than 50% if the view taken is that detention in penitentiary would be extremely burdensome due to their inability to self-care. The fulfilment of the aforementioned conditions will be verified upon the request of the convict by carrying out a special expert investigation. If it is found that the convicted person suffers from one of the illnesses mentioned above, they will be conditionally released and the period elapsed from the date of release is calculated as actual time of execution of sentence.

In **Slovakia**, the Code of Criminal Procedure provides that the execution of a prison sentence may be postponed in the case of a pregnant woman or a woman who has a child under the age of 1. The law allows for the stay of a prison sentence by up to one year for other serious reasons as well, but a stay of more than 6 months is possible only in exceptional circumstances, especially if the service of sentence could have particularly serious consequences for the convicted persons or their families, which is assessed individually.

6. Conclusions

The completion of the activity of achieving the criminal justice goals involves immediate execution of final criminal judgments and continuity in the enforcement activity. However, there are also exceptional situations, where criminal enforcement is suspended as a result of the intervention of some impediments in the execution of the sentence. The stay of execution of prison or life sentence is precisely such a situation.

The stay of execution of sentence is an expression of the humane character of law, an institution whereby the legislator aims at addressing the issue of people in special situations, in situations of inferiority or helplessness, so that immediate deprivation of liberty does not cause serious consequences on the health of the convicted person or the child up to the age of 1.

The stay of execution of sentence is not a removal of the penalty applied to the convict, but merely a postponement of the moment from which it should begin. In order to avoid situations of unjustified stay of execution of sentence or even removal of execution of sentence, the legislator expressly and restrictively laid down the instances and conditions in which the convicted person may obtain the stay of execution of sentence.

The legislator also provided how the convicted person should be supervised, the obligations that they must comply with, as well as the sanctions that incur in case of non-compliance in the event that the stay of execution of sentence is ordered.

THE LEGAL REGIME OF POSSESSION IN ROMAN LAW

Alina-Monica AXENTE*

Abstract

Unlike modern legal doctrine, the Romans, practitioners by definition, saw in their possession an independent legal title. According to the Roman conception, subjective rights and states of affairs are not synonymous, and possession was a state of affairs (legally protected since the time of the republic.). As a result, they never perceived possession as an attribute of property, instead considering it only an outward sign of it. Being a simple state of affairs, in the first centuries of the Roman state the possession was deprived of legal protection. In time, however, with the evolution of the procedural realm, the legal protection of possession began to be guaranteed by the interdicts of the possessor who could place the possessor in a privileged position even towards the owner. In this sense, we mention that in the case of an action in claim, the possessor had the quality of defendant, and the owner had the quality of plaintiff. As the burden of proof fell on the plaintiff, the possessive defendant could defend himself by stating only: I possess because I possess. The article aims to follow the evolutionary path of possession from a simple state of affairs to an independent legal title whose legal protection has gained a wide scope.

Keywords: *possession, legal regime, state of affairs, attributes of property, Roman law.*

1. Introduction

In modern law, possession has a wide doctrinal exposition. The luxury of knowing the depths of this legal institution is due to a solid pre-existing construction that bears the signature of the Roman people. Contemporary jurists have assumed the role of adapting to the context of the era an already elaborated legal system. For this reason it is vital to analyze the extraordinary dimension of the Romans' creative effort to mould all these concepts, principles and institutions that underlie contemporary civil law and implicitly possession.

The specificity of the Roman law system consists in the fact that its very construction is the product of a long process of reporting to the needs of society. Roman law was an eminently procedural law, developed in permanent accordance with the requirements of practice, the legal innovations not having a legislative character. The protagonists of the process of elaborating the Roman law system were praetors, judicial magistrates who, based on the principles of fairness and good faith, in the absence of their legislative consecration, sanctioned new subjective rights, using procedural means, whenever they found that the plaintiff had a legitimate claim.

The architects of the Roman law system concentrated their creative resources around the idea of power. We can say that the very essence of Roman legal constructions was the representation of dominion in the legal realm. But the nuances that dominion endured in Roman times go beyond both the historical dimension and the matter of real estate rights.

Indeed, the Roman Empire imposed itself globally as an unstoppable military force and yes, they had a very clear representation of the concepts of ownership, possession, detention, but the materialization of power is not limited to these spheres. On the contrary, on closer inspection it can be seen that even interpersonal relationships revolved around the idea of power.

In this sense we mention the way in which the Romans defined, in ancient times, the family as the totality of goods and persons that were under the power of the same master (*pater familias*). Moreover, depending on the person or object on which it is exercised, the power of the head of the family had a different name. Thus: the power of the man over the woman was called *manus*, the power of the father over the descendants was called *patria potestas*, that of the master over the slaves *dominica potestas* and that of the master over other goods besides slaves, *dominium*[1]. There even was a type of power that the buyer exercised over the son sold by the *pater familas*, known as *mancipium*. For a long time, the rights that pater familias had over family members could be confused with the rights of the owner over his property. More precisely, just as the owner's right over his property had an absolute character, so could the *pater familias* dispose of the fate of those under his power according to his own will, and this included even the right of life and death over them.

Another example of the relevance that the idea of power had is portrayed in the matter of inheritance. Initially, the Romans did not accept the idea of transmitting the patrimony *mortis causa*, as the size of a person's patrimony meant the expression of his power in the community, and in these conditions, the power itself had an individual, non-transmissible character. Naturally, the non-transferability of power principle could not last, because it came in opposition to the principle according to which there can be no patrimony

* Lecturer, PhD, Faculty of Law, "Titu Maiorescu" University of Bucharest (e-mail: alina.axente@prof.utm.ro); Lecturer, PhD, Faculty of Law, "Nicolae Titulescu" University of Bucharest (e-mail: alina.axente@univnt.ro).

[1] Gaius, Institutiones, 1.49.; Emil Molcuț, Drept privat roman, Ed. Universul Juridic, București, 2011, p. 95.

without a holder. As a result of this contradiction, the Romans had to admit the transmission of the patrimony *mortis causa* and to create the systems of legal and testamentary succession. Regarding the legal succession (*ab intestat*) we mention the fact that the very name of the successor (*heres*) springs from the idea of power, *herus* meaning master[2]. The will also appeared as an expression of the unlimited power of the head of the family over the persons and goods under his power, as a legal act meant to ensure the transmission of the power of the pater familias to his descendants and the perpetuation of the property-power principle[3].

Returning to the subject of possession, its regulation also mirrors exactly the phenomenon of diversification of forms of domination. Currently, we find that possession is (both in law and in legal doctrine) grafted onto the property law, being often perceived as an attribute of ownership. Thus, in art. 916, the Romanian Civil Code defines possession as being the exercise in fact of the prerogatives of the property law over a good by the person who owns it and who behaves like an owner. Unlike modern legal doctrine, the Romans, practitioners by definition, saw in their possession an independent legal title. According to the Roman conception, subjective rights and states of affairs are not synonymous, and possession was a state of affairs (legally protected since the time of the republic.). As a result, they never perceived possession as an attribute of property, instead considering it only an outward sign of it.

Through this article we aim to follow the evolution of possession in Roman law, and how it has been in a perpetual adaptation to the requirements of practice, traversing a millennial trajectory from state of affairs, to state of affairs protected by law and even to a distinct legal title from that of ownership.

2. Content

2.1. Origins

Although the great Roman jurists often pointed out that the difference between ownership and possession is a fundamental one (*separata esse debet possessio a proprietate*[4]*; nihil commune habet proprietas cum possessione*[5]), we must not understand from this that there is no connection between the two concepts, but only that ownership and possession were, in the conception of the Romans, two distinct legal titles.

The fact that possession has evolved closely connected with ownership is undeniable. As an expression of the idea of power, the first concept elaborated by the Romans was that of property. Although it has been repeatedly stated that private property (ownership) has been the symbol of the individualistic spirit of the Romans since the beginning, in reality, for centuries, the Romans knew only collective property, either in the form of collective ownership of the gens or in the form of family property. Only after the founding of the Roman state, two new forms of property appear, namely the *collective property of the state* and the *quiritary property*, as expressions of the property-power. In the classical era, *provincial property* and *pilgrim property* were formed, and in the postclassical era, Emperor Justinian achieved the unification of the legal regime of property and thus a unique form of property was born, called *dominium* or *proprietas*[6].

The evolution of the institution of possession was synchronized with the transformations that took place in the matter of ownership, dissociating in time from it and acquiring its own identity. Thus, the genesis of possession is marked by the emergence of collective ownership of the state. The goods that became the property of the state were called *res extrapatrimonium* precisely because they could not be the object of private property[7]. In addition to the goods used by all the inhabitants of the state (*res publicae*), this category also included the territories conquered from enemies, known as *ager publicus*.

In order for these vast lands to prove their usefulness, the Roman state attributed them, for use, to the families of patricians (sometimes free of charge, sometimes in exchange for sums of money). Initially, the relationship between the state and the patricians who benefited from the use of these lands was as clear as possible, as each family received in use an area of land proportional to the labor force they could provide through its own members. In time, however, the size of the lands allotted to the patricians had expanded to such an extent that their cultivation by their own means had become impossible. For this reason, their sub-concession has become a common practice. These sub-concessions led to the emergence of new subjects of law in the reports concerning ager publicus, namely customers. As a result, serious problems arose and with them the need to regulate in detail the legal relations between the state, patrons and customers. The problems we are referring to concern the bad faith of customers who refused to leave the sub-conceded land. In the absence of concrete regulations on the legal relationship between them, the patrons were defenseless faced with the abuses committed by customers. To help patrons, praetors created a legal instrument called the *precarious interdict*. In this context, the term *possessio* is mentioned for the first

time, as a state of fact protected by law[8]. Since the analysis of the legal protection of possession is the subject of a subsequent individual section, we consider it necessary to *a priori* establish the coordinates of the Roman possession.

2.2. The concept of possession and its constituent elements

Possession designates a state of affairs consisting in the material dominiom of an object, dominiom that enjoys legal protection[9].

Possessio civilis, or as the Romans called it, the true possession (thus delimiting the possessor from the holder), was that possession which met the two constitutive elements, namely *animus* and *corpus*.

Through the volitional element *animus*, the Romans designated the intention to keep a good for themselves[10]. But also in this aspect the Romans distinguished between the intention of the possessor to own the good exactly like an owner, which they called *animus domini* and the intention to possess a certain good without wanting to become the owner of it, which they called *animus possidendi*[11]. *Animus possidendi* has a wider scope than *animus domini*. Thus, the persons who had *animus possidendi* were: the owner, the possessor in good faith, the possessor in bad faith, the long-term tenant, the pledge creditor, the lessee and the seizure-depositor. Animus domini instead had only the owner and possessor of good or bad faith. As the intention to rule implies the existence of legal capacity, naturally, the incapable did not have the aptitude to be appointed owners.

Corpus was the material element of possession as it designated the totality of material acts by which the possessor used a good. By the *corpus*, the Romans understood not only the taking possession of the good, but also the establishment of the deeds by virtue of which the possessor was entitled to behave as an owner towards that good (deeds that could vary from the remote indication of the purchased fund to the handover of the keys to the acquired property)[12].

Although the possession was usually acquired personally by the person who met the two constituent elements, there were also situations in which one person could acquire possession for another person. Such situations concerned the possession *ex peculiariari causa*, acquired by the sons of the family or the slaves of the pater familias for him[13].

Over time, the issue of admitting the gaining of possession with the help of people outside the family has arisen. Initially, the refusal was categorical, as Gaius stated that *per extraneam personam nobis adquiri non posse*[14]. Since the classical era, the acquisition of possession through representation has become widespread, a number of people such as prosecutors, legal representatives of legal entities, guardians and curators can acquire possession for others. Moreover, at the end of the classical era, it was allowed to conclude a special mandate having as legal object the acquisition of possession of a good by the agent in the name and for the person of the principal.

2.3. Possessory interdicts. The legal protection of possession

What must be understood about the Romans is that in the elaboration of law process, theorizing occupied the last position. For this reason, the whole theoretical evolution of possession (from the various types of possession to the effects produced) expressed nothing but the result of the practical reforms carried out in the field of its legal protection. And when we talk about legal protection of possession, we refer especially to the *possessory interdicts*. Depending on the purpose, these possessory interdicts were of three kinds: to obtain, to retain or regain possession (*Sequens divisio interdictorum haec est, quod quaedam adipiscendae possessionis causa comparata sunt, quaedam retinendae, quaedam recuperandae*)[15].

- *Recuperandae possessionis causa* interdicts

Since these interdicts were issued in cases where the possession was a defective one (obtained precariously, clandestinely or by violence), they were of three kinds: the precarious interdict, the *clandestina possessione* interdict and the *unde vi* interdicts[16].

The *de precario* interdict represented the legal means by which the owner recovered possession of his property from the precarious holder (who had received the property as a loan). If the precarious holder refused to return the property upon request, the owner addressed the praetor in order to command the holder to hand over the good.

We began displaying the possessory interdicts with the *de precario* interdict because the very idea of legal protection of the state of affairs called possession is due to it. As it was said, the conceptualization of possession as well as the need to protect it arose in close connection with the lands conquered from enemies, lands called *ager publicus*. The *patrons*, persons to whom the state assigned land owned by the state as possessions, sub-granted them to the customers. As the patrons did not own those lands, they depended on the good faith of the customers regarding their recovery.

However, if the latter were in bad faith, they could easily refuse to leave the land at the request of the patrons, and they had no legal instrument to oblige them. This was until the creation of the precarious interdict by which, with the help of the state, the praetor ordered the client to restore the ownership of the land to the patron.

Although in modern doctrine only the function of protecting the possessor-owner that this interdict fulfilled was taken over, the reality is completely different. We see how the precarious interdict was created in order to protect the patron (a possessor, not necessarily an owner) from the potential abuses of the holders. The genesis of the legal protection of possession also contradicts an idea taken over by contemporaries, namely that Roman possession is confused with an attribute of private property. The *de precario* interdict not only arose in connection with public property but the possessory legal protection of the owner was later enshrined in classical law. The interdict ignited a series of procedural reforms, which in order to meet the requirements of the practice implicitly led to the extension of the scope of possession and the diversification of its forms to the point that it acquired a physiognomy similar to that of real estate rights[17].

The *de clandestinea possessione* interdict sanctioned that possession acquired secretly, in the ignorance of the owner. Although it did not have an extensive exposure in Roman jurisprudence, this interdict deserves its mention because it allowed the exercise of possession only by *animus*, in absence of *corpus*[18].

- The *unde vi* interdicts were the legal instruments through which the person deprived of the good by violence could address the praetor to regain both the good from which he was expelled, and its accessories[19]. As such, the expected effect of these interdicts was not only to restore the previous situation, but also to obtain the fruits of the good or damages[20]. Depending on the nature of the violence through which the dispossession was carried out, the Romans distinguished between the *unde vi cottidiana* interdict (characterized by the use of ordinary means of violence), subject to a limitation period of 1 year and the *unde vi armata* interdicts (meaning dispossession by violence committed by a group of armed men) who were not subject to this term of extinctive prescription.
- *Retinendae possessionis causa* interdicts

Addressed to both parties (both were equally plaintiffs and defendants to each other), the interdicts on the preservation (retaining) of an existing possession had a prohibitive character. In real estate, the interdict used was called *uti possidetis* and the one through which the possession of movable property was protected was called the *utrubi interdict*.

By the *uti possidetis* (as you possess) interdict the one who was in possession of the good at the time of issuing the interdict maintained his possession until (at least) the settlement of the action in claim. The condition for him to maintain his possession, however, was that the possession exercised by him should not be vitiated, i.e. obtained by violence, clandestinely or precariously. Otherwise, the opponent could easily oppose a *vitiosae possessionis* exception by overturning the grant of possession.

The *utrubi* interdict individualises itself from the *uti possidetis* interdict also by the moment when the possession was related. Thus, although both interdicts protect the unblemished possession, the one protected by the *utrubi* interdict is not necessarily the one who possesses the good at the moment of issuing the interdict, being able to be either one of the two opponents[21]. This is because the dominion was attributed to the one who had it in his possession for the longest period in the year before the interdiction was issued.

- *Adipiscendae possessionis causa* interdicts

Examples of such interdicts aimed at acquiring a possession that did not yet exist were the *Salvianum* interdict, the *sectorium interdict*, and the *quorum bonorum* interdict[22]. Through the Salvianum interdict, the owner of an estate could acquire possession of the things left behind by the settler as collateral for the payment of the rent. Through the *quorum bonorum* interdict the praetorian heir acquired possession of the succesion assets and the *sectorium* interdict came to the aid of the buyer of goods subject to forefeiture.

Typical of all the possessory interdicts was the fact that they had a temporary character, the recognition of the rights of the parties gaining a definitive character only by solving the in claim legal action.

2.4. Various types of possession

Depending on the legal protection they benefited from, the object on which they wore or the effects they produced, the Romans distinguished between several types of possession, as follows: *possessio civilis, possessio ad interdicta, possessio ad usucapionem, iusta possessio, bonae fidei possessio, possessio iniusta and possessio iuris*[23].

Possessio civilis is a concept detached from that of *possessio* with the takeover of the idea of legal protection of a state of affairs from public law to private law. This enshrines the very notion of domination in fact exercised over the property of a person, and not over the property of the state. This type of possession

leads to the acquisition of ownership by acquisitive prescription, as opposed to *possessio naturalis* of the holder who can never strive for such an acquisitive prescription. Specific to civil possession is that it has its origins in the sources of Roman civil law, and not in Praetorian law, which for a long time led to the exclusion of *ad interdicta* possession from its content.

Possessio ad interdicta meant possession protected by interdicts. Starting from the *de precario* interdict of the old era, in time, the legal protection of the possessors extended to the private domain. The possessory interdicts guaranteed the undisturbed possession. Thus, in the event that a third party, by his actions, inhibited or inconvenienced the possessor in exercising his possession over the good, the latter requested the praetor to issue on behalf of the third party an injunction ordering the cessation of any action in that direction.

Why were such interdicts seen as blessings for possessors? If we start from the premise that all owners are possessors, why not simply appeal to the legal action in claim? The answer is simple: the one who brought an action in claim was obliged to *probatio diabolica*, which meant that he had to prove the title deed of all those who previously owned the property. Such a burden proved itself to be cruel to the applicant. By appealing to the possessory interdicts on the other hand, the applicant was not subject to such harsh steps. In addition, if the owner himself was the defendant, he could simply defend himself by *saying I possess because I possess (possideo quia possideo),* without having to prove whether he was the owner or explain how in which he came into possession of the good.

The doctrine has rightly raised the question: how fair is the legal protection of possession as a legal title in its own right, given that the advantages of interdicts could benefit the possessor even if he is the one who stole a good?

In the effort to elucidate this dilemma, two theories were distinguished. The author of the first theory, Savigny[24], argued that through the mechanism of legal protection of possession was in fact protected the very social order consolidated on the idea of domination. Indeed, for a long time the Romans correlated the power of a person in society with the dominion that person exercised over things. In this context, depriving man of his goods or forcing him to justify his control over the goods were real attacks on the social position. It can be seen how possession was associated as an extension of personality, and the attack on possession was in fact an attack on the personality of the possessor. Precisely for this reason, Savigny said, the praetor was obliged to intervene in order to maintain social order to protect possession as a matter of fact (state of affairs).

Jhering[25] contradicts Savigny and argues in the second theory that possessory interdicts were not created to protect the personality of the possessor, who could ultimately be the thief himself, but to protect the legal right to property. It may seem a paradox: the right to property should be protected by the very lack of obligation to be proven by the owner. But it is not. From a statistical point of view, it is presumed (justifiably) that the number of possessors who are at the same time owners of the property is much higher than those possessors who stole the property from the ownership of a proprietor. Jhering therefore takes into account a presumption of lawful acquisition of property. According to Jhering, the same principle led to the legal protection of Roman possession. A contrary presumption would have tragic procedural effects: anyone could be accused at any time of stealing the property they own and the defendants would have to constantly prove their innocence in court by presenting evidence of legal acquisition of property. For these reasons, the Romans considered that it is not natural to oblige the one who owns a patrimony to be always ready to prove his quality of ownership in front of any accuser. All the more so as it was often extremely difficult, if not impossible, to prove the legal path taken by that property to its present dominion. Much more justified is the attribution of the burden of proof to the accuser (the plaintiff). Besides, due to the intervention of the praetors, the injust possession did not benefit of legal protection. Being procedurally consecrated, *possessio ad interdicta* was not included in the category of *possessio civilis*, until the time of Emperor Justinian who recognized it as legal possession.

Possessio ad usucapionem. As the name suggests, it was the possession that could lead to the obtaining of the legal right of ownership through acquisitive prescription. Of course, for such a result, in addition to the actual possession, it was necessary to meet all the other conditions of *usucapionem* (the good to be susceptible to such an acquisition, just cause, good faith and the fullfilment of the term).

Iusta possessio, iniusta possessio and *bonae fidei possessio* must be regarded as different sides of the same coin. *Iusta possessio* was civil possession, recognized by positive law and of course also benefited from legal protection[26]. At the opposite pole is *iniusta possessio*, as flawed possession (acquired by violence, clandestinely or precariously). This had the effect of lifting the legal protection of that person's possession. *Bonae fidei possessio* emerges from the legal conditions of civil possession, promoting the good faith of the possessor as an important element in the recognition of his mastery. Thus, possession in good faith is that in which the possessor is convinced that he has acquired the good from the owner or from a person capable of transmitting it by contract. Moreover, in the

[26] G. May, Elements de droit romain, Recueil Sirey, Paris, 1925, p. 257.

category of bona fide possessors were also included the persons who occupied abandoned goods[27].

Possessio iuris or *quasipossessio* expresses the extension of the scope of possession from tangible property to property rights (patrimonial legal rights)[28]. Indeed, until the classical era, such a thing was inadmissible, since in the conception of the Romans only tangible goods could be susceptible of *corpus*. With the theorizing abstracting of real estate rights and especially of the right of servitude, the adaptation of the institution of possession to the new legal realities was necessary. Thus, through *quasipossessio*, the Romans admitted the possibility of exercising possession over some patrimonial legal rights.

3. Conclusions

Although it has never been confused with the legal right of ownership, we cannot deny that the legal regime of possession has evolved in close connection with the changes that have taken place in the matter of property. Thus, the word *possessio* was used for the first time in connection with the collective property of the state, out of the need to somehow protect the state of affairs in which the patrons found themselves in a legal relation to the customers.

Then, in relation to the *quiritary property*, the possession expressed the external form of the ownership. For this reason, it could sometimes be confused with the attributes of property (*usus, fructus* and *abusus*). However, this confusion can be easily dismantled. First, possessio being a state of affairs, could not be classified as an attribute of civil property, a state of law with a well-defined legal content[29]. Secondly, the proof of the fact that the Romans regarded the possession as a distinct legal title lies precisely in the equal manner of legal protection of the non-owner-possessor with that of the owner-possessor[30].

There existed an almost fraternal relationship between good faith possession and Praetorian property. The praetors recognized to the *bonae fidei possessors*, through the *actio publiciana*, a praetorian property right even when the acquisition was not made from the owner, assimilating this possessor with the one who obtained the property through acquisitive prescription[31]. Finally, even the *provincial property* was characterized by the attribution of a possession over lands in the provinces of the state to non-citizens.

In modern doctrine, possession may no longer be a major subject of interest, being seen rather as an instrument in understanding and deepening the legal right of ownership, but for the Romans this was not the case at all. Being flawless practitioners, without having too many theoretical concerns, they have dedicated themselves to shaping an identity specific to the concept of possession and this can be seen from the very path taken by it: from simple state of affairs, state of affairs protected by law , to a distinct legal title that in the time of Emperor Justinian acquired a physiognomy similar to that of real rights.

ROMANIAN REGULATIONS ON DISCRIMINATION: A CRITICAL OVERVIEW

Felicia BEJAN[*]

Abstract

Discriminatory behaviour is often considered normality in the Romanian society and its consequences are easily accepted or ignored. Compared to other Member States of the European Union that have a tradition in respecting the principle of human dignity and the principle of equality of treatment, Romania still faces difficulties with regard to assimilating the importance of these principles and integrating their non-discrimination dimension. Despite the fact that Romanian law has implemented European norms in the matter of non-discrimination, the existence of a legal framework didn't come with achieving the purpose for which they have been introduced. In the absence of an effective enforcement mechanism and of a social context in this respect, the law hasn't brought the necessary changes regarding equality and dignity rights and, implicitly, to the personal and social life's dynamic. The article aims to present some critical analysis of the extent to which Romanian law contains sufficient, articulated and coherent legal rules in the field, applicable to both those protected and those having obligation to protect, to identify the aspects with regard to which the domestic legislative framework requires to be modified and to propose the lege ferenda amendments, so that its provisions would be a consistent support for the purpose of non-discrimination in Romania.

Keywords: *discrimination, dignity right, equal opportunities expert /technician, law, education.*

1. Introduction

In the context of Romania's accession to the European Union, the Council Directive 2000/43/EC of June 29th, 2000 implementing the principle of equal treatment between people irrespective of racial or ethnic origin[1] and the Council Directive 2000/78/EC of 27 November 2000 establishing a general framework for equal treatment in employment and occupation were transposed in the national legislation.[2]

The Government Ordinance no. 137/2000 on the prevention and sanctioning of all forms of discriminations[3] and the Law no. 202/2002 on equal opportunities and treatment for women and men[4] are the main national normative acts adopted in order to prevent violation of the equality and dignity rights through discrimination.[5]

The Romanian society was not really prepared for such novelties in the year 2000 and now, after twenty years, even the national legislation provides for a certain level of protection of each human being's dignity, the respecting of the principle of equality of treatment, the mentality didn't evolve in a significant manner.

School, family, work, society in general are places where vulnerable persons' rights are ignored and infringed. In a lifetime, from bullying in schools to discrimination on various criteria in different social domains, including moral harassment at the workplace, to the inadequate treatment of seniors, infringements of the dignity are common. The discriminatory behaviour is accepted by the society, paradoxically often by those whose dignity has been violated.

The Government Ordinance no. 137/2000 and the Law no. 202/2002 have been modified, motivated by the legislator's will to improve the discrimination concept, to regulate special measures for promotion and protecting human being's rights, to stress the role of public institutions having competence in the domain and to impose more severe sanctions for the contraventions committed by the natural and legal persons who violate the legal rules that prohibit the discrimination. The last amendments were recently adopted through Law no. 167/2020, entered into force on 10 August 2020[6], which is the first Romanian regulation on discrimination in its form of moral harassment at the workplace, reshaping the relationships between employees, between employers

[2] Published in The Official Journal of European Communities (OJEC) L series, no. 300 from December 2nd, 2000. The Treaty establishing the European Economic Community (1957 -1958) was the first community act which regulated the principle of equal pay for men and women for equal work or work of equivalent value: Article 119 of the Treaty. It is worth noting that the gender equality regulation has begun with this Article 119 and has evolved over the years on the legal base granted by this only one principle applicable at work. Moreover, starting with the gender equality in the labour domain, the non-discrimination as a general issue in various fields and on different criteria has becoming of particular concern for the European legislative bodies.

[3] Republished in The Official Gazette, Part I, no. 166 from March 7th, 2014.

[4] Republished in The Official Gazette, Part I, no. 326 from June 5th, 2013.

[5] In the labour field, where the discriminatory behaviour is regularly manifested, the European law has been implemented and a numerous number of normative acts, including legal rules on the discrimination prohibition, have been adopted.

[6] Published in the Official Gazette no. 713/7 of August 2020.

and employees at work, based on the respect of the dignity right[7].

The aim of our study is to analyse the extent to which the above mentioned normative acts guarantee their goals' achievement and to find out parts of the legislation that may be modified in order to safeguard the protected rights.[8] Beyond a general analysis of the legal framework, the article aims to emphasise the long way from the rules of law to the real life and to design some possible solutions to connect theory with practice.

2. Aspects of Romanian legislation on discrimination: *equal opportunities experts/ technicians*

2.1. The current legal framework

In our day by day life, we are witnesses or even subjects to discrimination on gender, meaning that a man or a woman are treated less favourable or in a disadvantageous way with the violation of their dignity.

Contrary to the collective perception, it is important to underline that subject to discrimination may be a woman, as well as a man. The Law no. 202/200 is addressed equally to them being intended to regulate the equality of opportunities and treatment between women and men.

In the meantime, discrimination against women is one of the most frequent and visible types of discrimination. The discrimination of women is a phenomenon, despite of the existence of European and national regulations having as purpose to protect their rights.

In the juridical literature, the role of legislation in changing the women's lives was very suggestively expressed. At the end of a very consistent research of a numerous European and domestic regulations regarding women's rights and equal treatment in the labour domain[9], two of the author's[10] legitimate questions are: "what role ought the law fulfil: to make women's "*double work norm"* easier, to create better conditions for doing the same family activity which is unpaid and peripheral to the labour market, to emphasize and perpetuate the stereotypes regarding the predilection of women for domestic life? Or instead to completely change this state of affairs, enshrining not false equal opportunities, which the majority of women cannot exploit as long as taking care of their family is considered their "*natural obligation*", but a real equality, based on real opportunities? *"*

The author considers that "the difficulty of finding an answer comes from the maintaining of the unbalanced distribution of domestic and household tasks within the family, from the type of education women receive from a young age, from the cultural pattern they are exposed to and from the expectations of society, which still differ by a wide margin regarding women and men. The role of legislation seems only secondary in relation with other parts of social life, especially education ."

As what we are concerned, we totally agree with the points of view above.

In our opinion, the legal framework in the domain, even if it could be substantially improved, grants to a certain extent legal tools against discrimination. Education, family, balance, roles are key words in order to go forward in real life with the existing legal framework. In other words, the respecting of the right to dignity and of the right to equal treatment is not necessary weakened by a law level of regulation, but by a law level of awareness, respecting and application of the legislation in force. Holders of rights and obligations from the juridical point of view, each of us must acknowledge that every human being has the right to dignity and the right to equal treatment, what these rights consist of, why it is demanding to observe the other's rights, why to expect our own rights be recognized and how to defend ourselves in case these rights are infringed.

Taking into consideration the particularities of the rights protected through non-discrimination regulations, their efficiency is dependent on the legal measures and actions promoting and applying equal opportunities and equal treatment.

De lege lata, a solution was granted by the Romanian legislator through the *Law no. 178/2018[11] that amended the Law 202/2002.*

The *Law no. 178/2018 has introduced in the field of* equality of chances and treatment between women

[7] See Bejan, Felicia The First Romanian Regulations on Moral Harassment, Agora International Journal of Juridical Sciences, vol. 14 No 2/2020, p. 32 and the following.

[8] Regarding some particular aspects of discrimination, see Anghelescu, Carla Alexandra, Boroi, Gabriel, The prohibition of discrimination of art. 14 of the European Convention of human rights in matters of inheritance and affiliation regarding the provisions of the New Civil Code Challenges of the Knowledge Society, CKS-eBook, Nicolae Titulescu University Editorial House, Bucharest, 2013, p. 153 and the following and Bejan, Felicia, Equal Treatment of Young People and Seniors: "Pleading" for a Special Law on Age Discrimination, Challenges of the Knowledge Society, CKS-eBook, Nicolae Titulescu University Editorial House, Bucharest, 2018, p. 197 and the following.

[9] The Labour Code regulates under the paragraph 2 of the Article 5 a general prohibition of discrimination: „any direct or indirect discrimination towards an employee, discrimination by association, harassment and victimization, based on race, national origin, ethnic origin, colour of the skin, language, religion, social origin, genetic characteristics, sex, sexual orientation, age, political options, disability, non contagious chronic disease, HIV infection, political options, family conditions or responsibilities, union membership or activity, belonging to a disfavoured category criteria shall be prohibited." The paragraph 5 of the same article specifies that discrimination is defined as being „any type of behaviour based on one of the criteria stipulated in the paragraph 2, aiming to or resulting in the violation of dignity, creating an intimidating, hostile, degrading, humiliating or offensive environment."

[10] Dimitriu, Raluca, The presence of women in the labour market, Universul Juridic, 19 of December 2017, p. 2, https://www.universuljuridic.ro/, accessed on March 2021.

[11] Published in the Official Gazette no. 627/ 19 of July 2018. Law no. 178/2018 introduces also a new concept in the field, respectively gender violence – act of violence directed against a woman or, as the case may be, a male, based on gender.

and men, *two aspects that may generate changes in mentalities and practices:*

a) *there were created two special occupations in the field: expert in equality of chances* and *technician in equality of chances;*[12]

b) the law provides that public authorities and institutions, as well as private companies having more than 50 employees have the possibility to hire an *expert in equality of chances* or a *technician in equality of chances* or may assign to an existing employee certain related attributions, in order to promote and ensure the applicability of the non-discrimination and equality legislation at the work place.[13]

According to Article 2 paragraph 5 of the Law no. 202/2002, as it was modified by the Law no. 178/2018, the main attributions corresponding to *expert/technician in equality of chances* occupation are*:*

a) shall analyze the context within which the gender discrimination phenomenon occurs and evolves, as well as non-compliance with the principle of equal opportunities between women and men and recommends solutions that lead to the compliance with this principle, in accordance with the law;

b) shall make recommendations/ observations/ proposals with the purpose of preventing/ managing/ remedying the context of risk which might lead to the non-compliance of the equal opportunity and treatment principle between women and men, while respecting the principle of confidentiality;

c) shall propose measures ensuring equal opportunities and treatment between women and men, evaluates their impact on women and men;

d) shall elaborate action plans regarding the implementation of the equal opportunity principle for women and men which will include at the very least active measures to promote equal opportunities and treatment between women and men and the elimination of both direct and indirect discrimination by the gender criterion, measures to prevent and fight work place harassment, measures regarding the equality of treatment in the case of remuneration policy, promotion and filling decision-level roles within a company;

e) shall elaborate, evaluate and implement programs and projects in the domain of equal opportunities and treatment between women and men.

Moreover, Methodological Norms for application of the Law 202/2002, as it was modified by the Law 178/2018,[14] were approved by Romanian Government in 2019.

The implementing norms lay down active prevention measures and action plans[15] which the employers have the obligation to develop.

2.2. A more effective legal regime: *de lege ferenda* proposals

The Romanian legislator's *will to create occupations as experts and technicians in equality of chances has the potential to play a key role in changing the* perspective regarding *"protection*" of women.

As it was shown in the doctrine[16] "women have been the constant subject of "*protection*". They are often offered social assistance, helped through charities, living through an experience of being treated as helpless beings [...], experience whose nature increases and reproduces their disadvantageous position, instead of contributing towards a real partnership in developing values and society along men. "*Protective*" politics, which emphasize the women's position as a victim, and not as a partner, end up in perpetuating the stereotype that envisions women as belonging to the social group who needs assistance, who consume resources without producing anything, who are rather inclined to request help from their community rather than offer it."[17]

What the Law 178/2018 brings new is *"the possibility"* to have concrete measures to prevent, combat and eliminate all forms of gender discrimination in some spheres of public life in Romania.

In our opinion, the impact of the provisions of the *Law no. 178/2018 in terms of results could be significantly increased if some amendments will be adopted.*

Thus, *de lege ferenda the Article 2 paragraph 4 should be modified as follows:*

"*the central and local* public authorities and institutions, civil and military, as well as private companies *having more than 50 employees have the obligation* to identify an existing employee and to assign certain attributions in the domain of the equal opportunity and treatment principle between women and men through the job description, on the basis of their knowledge *and* training in the field.

Within the existent budget, the employer *may choose to fulfil this obligation* by hiring an *expert* or a *technician in equality of chances*.

The employers *having less than 50 employees may have the possibility* to assign certain related

[12] Regarding the occupation of expert in equal opportunities, it is considered that is necessary to implement rigorous regulations on professional standards which those experts ought to fulfil such that their expertise be real.

[13] Article 2 paragraph 3 and paragraph 4 of the Law no. 202/2002.

[14] Published in the Official Gazette no. 333/ 2 of May 2019.

[15] According to the Article 3 paragraph 1 of the Methodological Norms the action plans "will be developed by the designated person empowered in the field of equal opportunities and treatment between women and men or, where appropriate by the expert/technician in equal opportunities, in consultation with the human resources department. Finally, they will get approval from the trade unions in case that they are formed at the level of the entity, and later on will be forwarded to management for approval." The Methodological Norms also provides that, in case of designating of an existing employee to carry out these duties "the employer shall consider the need to identify training opportunities, within the limit of the existing and approved budget for expenditure on this destination."

[16] Dimitriu, Raluca, ibidem, p. 2.

[17] Dimitriu, Raluca, ibidem, p. 2.

attributions to an existing employee or may hire an *expert or technician in equality of chances* in order to promote and ensure the applicability of the non-discrimination and equality legislation at the work place, on the basis of their knowledge *and* training in the field".

Our legislative proposals are based on the following reasons:

- although more than two years have passed from the coming into force of the legal rules stipulating the possibility of having an employee or an expert/technician in the field, few companies and institutions choose to integrate this into their organization; we consider this reaction time could be shortened through stipulating an imperative obligation for employers in this regard, within a special period of time;

- the most decision-making positions in institutions and companies are occupied by men, especially in the public institutions; the women's *under-representation can justify poor application of the legal provisions, as their interests are not represented*[18] *until an inclusive and diverse leadership will be achieved, an imperative character of the analyzed legal rules is required;*

- the proposal does not necessarily exceed the annual budget, taking into consideration that the law shall allow the employers to assign these competences to an existing employee, after completing a specialization training in the domain; on the other hand, the amount of money invested for this purpose *by the employers is worth its value: will improve the work conditions and the working relations, will have important* social and economic consequences**,** *reflected in the results of the activity, whether financial or otherwise;*

- it is compulsory for the expert/technician /existing employee, as the case may be, to fulfil high professional standards, based on specialized studies/experience in the field;

- the proposals stipulate a different legal regime on the base of the number of employees, the expert/technician or similar being compulsory for employers having more than 50 employees and voluntary for employers having less than 50 employees.

Apart from the advantage of safeguarding the rights of women and men without discrimination, another benefit of a new legislative framework in this respect is the educational side. Implicitly, the mentality of the employers and of the employees will evolve, taking a serious equality path. Otherwise, our society will lose the opportunity to make real changes, remaining in the half-measurement area.

Studying the application of the analyzed legal provisions between 2018-2021 and relating this study to the objective of the legislator, those to mitigate and eliminate the discrimination between women and men, the adoption of imperative legal rules in domain is the most realistic legislative answer in order to guarantee the law's goals fulfilment.

Furthermore, in order to achieve a society *"free of discrimination*", the model of experts can be extended from labour to education, health, culture and information, policy, participation in decision making, supply and access to goods and services and other social fields regulated by special laws[18] and to all criteria provided for by the national legislation in force.[19]

3. Conclusions

Women represent more than half of the World's population, reduced most often to the family role and responsibilities, irrespective of their capacities, studies, skills, efforts, merits, creativity, needs or aspirations.

Against this background, their professional life, independence, social relationships, family relationships, life quality are severely affected. The discrimination issue is about dignity and equal opportunity, and about economic life, social life, own development, choices and decisions, as well.

In the Commission Communication *A Union of Equality: Gender Equality Strategy 2020-2025* it is pointed out that "44% of Europeans consider that the most important role of a women is to take care of her home and family" and that "women in the EU spend 22 hours per week on care and house hold work, while men spend only 9 hours"[20] Also, women's incomes in Europe are lower on average by 16% compared to men and they have difficulties in accessing and maintaining jobs.

Despite of the slow progress, The European Union's representatives have an optimistic look toward the future of equality, being decided to integrate it in all of its activities.[21]

As far as our country is concerned, although Romania has implemented European Directives,

[18] According to the Communication from the Commission to the European Parliament, the Council, the European Economic and Social Committee and the Committee of the Regions -Union of Equality: Gender Equality Strategy 2020-2025, "women are 7,5% of board of chairs and 7,7% of CEO's in the EU's larger listed companies, p. 14.

[18] The Law no. 202/2002 on equal opportunities and treatment between women and men, republished, as it was amended, provides for the measures to promote equal opportunities and treatment between women and men in all spheres of public life in Romania, the labour market, participation in decision making, education being areas which general legal regime is laid down in special chapters.

[19] The discrimination criteria are stipulated by the Article 2 of paragraph 1 of the Ordinance no 137/2000: „discrimination is understood as any distinction, exclusion, restriction or preference based on race, nationality, ethnicity, language, religion, social status, belief, sex, sexual orientation, age, disability, non-contagious chronic disease, HIV infection, membership of a disadvantaged group and any other criteria which has the purpose or the effect of restriction, elimination of recognition, use or exercise of fundamental human rights and freedoms or of rights recognized by the law in the political, economic, social or cultural field or in any other field of public life."

[20] The Commission Communication- Union of Equality: Gender Equality Strategy 2020-2025, ibidem, pp. 6-12.

[21] In accordance with the Article 8 of the Treaty on the Functioning of European Union.

women's discrimination persists and there is still a long way to go. To prevent and eliminate it in social, political, economic, cultural fields, focused measures and actions are needed, aimed at changing attitudes, opinions, mentalities.

A new behaviour comes with education. To have trained experts in equality and non-discrimination or similar is, in our opinion, the *sine qua non* condition in succeeding the practice of equality.

MALPRACTICE AND CIVIL LIABILITY OF THE HEALTHCARE PROFESSIONALS

Cristian-Răzvan CERCEL[*]

Abstract

The issue of the medical malpractice and the liability of the healthcare professionals is more current than ever, given that the medical activity has been put to the test in the context of the COVID-19 pandemic. Thus, taking into account that the treatment and the medical interventions are exercised directly on the patient, it is necessary to establish the type of liability of the healthcare professionals and whether there are certain limits of the liability for the application of innovative treatment or whether, on the contrary, the application of other treatment schemes than those approved by the international medical forums is likely to attracts the liability of the healthcare professionals.

At the same time, this paper aims to present the national legal framework that defines the essential requirements and limits of liability of the healthcare professionals. At the same time, in relation to the case law and doctrine, this paper will seek to establish the main obligations of the healthcare professionals to patients and the nature of these obligations.

In the end, the opinions expressed over time in the doctrine regarding the basis of liability of the healthcare professionals, whether it is a contractual liability or a non-contractual liability, or a special liability, are presented comparatively.

Keywords: *malpractice, non-contractual civil liability, healthcare professionals, harm, health unit.*

1. Introduction

The medical law, in a general sense, can be defined as a branch of the law consisting of legal rules of domestic, European and international law, which regulated the patrimonial or non-patrimonial social relations that are established between the subjects of medical law, usually between the healthcare professionals (doctor, pharmacist, dentist etc.) or public or private health units and patients.

In the doctrine[32], the medical law has been defined as: 'discipline of thinking between medicine and law, supports the realisation of the right to health of the human, based on the fact that the human being is intangible, and the respect for life goes to the respect for death. The medical law becomes a meeting place for the ideal legal, moral or technical rules, with the concrete medical realities'. The work of the doctor involves the protection of the patient's life, while respecting their rights, especially regarding their dignity. Thus, there was a need to enact rules to protect the patient for situations in which the healthcare professionals or the health units, due to a professional error committed in the exercise of the medical act, cause harm to the patient.

One of the most controversial issues, widely debated, both in doctrine and in national or French case law is related to the legal nature of the medical liability.

Many authors consider that this is a contractual liability, others that it is about a non-contractual eminent liability, and other others consider that we may be close to a contractual or non-contractual civil liability, depending on the contractual circumstances of the case.

In any case, as a rule, the legal relationship between doctor and patient is governed by the principle of *intuitu personae*, because the patient has the right to freely choose their doctor, but also the health unit in which to be cared for.

Last but not least, a special importance is also represented by the liability of the health units for the acts of the healthcare professionals, based most of the times on the liability of the principal for the act of the agent.

For starters, the main applicable national legal provisions will be analysed, and then the issues related to malpractice and medical liability will be presented in detail.

2. Legislation applicable to the medical legal relationship

2.1. National legal framework

The domestic legislation related to the medical law has been codified from the level of the Romanian Constitution. The right to health protection is guaranteed by the Constitution, and according to Art. 34 of the fundamental law *the State is obliged to take measures to ensure hygiene and public health, and the organisation of the health care and social insurance system for illness, accidents, maternity and recovery, control of medical professions and paramedical activities are established by law*.

Then, by Law No. 95/2006 *on the reform in health care*[33] ('***Law 95/2006***') a title that is distinct from the civil liability is enshrined, namely Title XVI, entitled '*Civil liability of the healthcare professionals*

[*] PhD Candidate, Faculty of Law „Nicolae Titulescu" University of Bucharest (e-mail: ccristianrazvan@gmail.com).

[32] A.T. Moldovan, *Dreptul medical – ramură distinctă de drept*, in '*Dreptul*' nr. 7/2006, p. 139.

[33] Published in the Official Gazette of Romania No. 372 of 28th April 2006 with the subsequent amendments and supplements.

and providers of medical, sanitary and pharmaceutical products and services'.

At the same time, another normative act of special importance is represented by Law No. 46/2003[34] *on the right of the patients* ('***Law 46/2003***'). Law 46/2003 is considered '*the central pillar of the legal construction on professional malpractice, a true axiological summum of the noblest ideals that guide the activity of every practitioner in the medical field*[35]'.

At the level of the common law, the Civil Code provides in Art. 1357-1371, the civil liability for one's own action, and in Art. 1373, the liability of the principal for the act of the agent, for those situations in which the liability of health unit for the action of the employed health care professional may be involved.

2.2. The legal relationship of medical law

Like any other legal relationship, the medical legal relationship includes the three structural elements: content, object and subject. The structural elements of the medical legal relationship represent certain particularities depending on the applicable legal rule; criminal, administrative or civil.[36] Given the research material of this paper, the rules of civil law will be considered below.

2.2.1. General aspects

The medical legal relationship is a social, volitional legal relationship that is established between persons who have a special quality and to whom the law imposes a certain conduct, without which the legal relationship could not exist.

'*The main objective of the relationship between doctor and patient is to provide medical care, perform interventions or treatment appropriate to the established diagnosis, which involves a high level of professional and scientific trust, patience, discretion, but also respect for their rights to information, security, confidentiality*'[37].

2.2.2. The content of the medical legal relationship

In general terms, the content of the civil legal relationship is given by all the subjective civil rights and civil obligations that the parties to that legal relationship have[38]. Thus, the medical legal relationship also includes all the rights and obligations that the parties to the legal relationship have or are held, regardless of whether or not they arise from the legal rules of the domestic or international medical law.

For example, the main rights of the patients are contained in Law No. 46.2003. We will present below, by way of example, a number of the rights and obligations of the patients and the healthcare professionals.

Rights of patients: the right to medical information, the right to receive the best quality medical care, without any discrimination, the right to confidentiality of information etc.

Obligations of patients: the obligation to inform correctly and completely the healthcare professionals about the symptoms or disease, the obligation to inform the healthcare professionals about any changes in connection with the disease for which treatment is offered, the obligation to follow exactly the doctor's recommendations, the obligation to respect the dignity of the healthcare professionals, the obligation to pay the contributions to the health insurance fund etc.

Rights of healthcare professionals: the right to exercise the professional freely and independently, the right to refuse a patient, when the law allows it, the right to establish medical treatment according to his/her knowledge, the right to remuneration etc.

Obligations of healthcare professionals: the obligations to maintain professional secrecy, the obligation to respect the dignity of the patient, the obligation to inform the patient about the real health status and on the risks of the prescribed treatment etc.

2.2.3. The object of the medical legal relationship

The object of the medical legal relationship is the conduct of the parties, i.e. the concrete action or inaction to which the parties are entitled or which they must comply with.

2.2.4. The subjects of the medical legal relationship

One of the subjects of the medical legal relationship is the **patient**. According to Art. 1 letter a) of Law 46/2003, the patient is a healthy or sick person who uses health services.

On the other hand, the subjects of the medical relationship are also the individuals who provide medical services, respectively the doctor, the dentist, the pharmacist, the nurse, the midwife, etc. or legal persons directly or connectedly involved in the provision of medical care and services, such as public or private health units, as providers of medical services, manufacturers of medical equipment, medicinal substances and medical materials etc.

2.3. Obligation of means or obligation of result

The legal relationship between the doctor and his/her patient is the classical example of obligations of means. The obligations of means are the obligations which consist in the duty of the provider to make every effort to achieve a certain result, without committing to the intended result in itself.[39].

If has also been shown that '*starting from the adage Non est in medico semper relentur ut aeger (no doctor can always guarantee that his/her patient will recover), the qualification of the doctor's obligations as obligations of means appears to be obvious*'[40].

Specifically, the healing of the patient does not depend exclusively on the science, skill or diligence of the doctor, being often determined by factors and circumstances that are not covered by the actions of the healthcare professionals, such as: insufficient evolution of medicine to establish the exact diagnosis, the medication assigned to the patient does not produce the expected result.

However, both in practice and in doctrine, the opinion was outlined in the sense of the need to divide the obligations of the doctor into obligations of means and obligations of result. Thus, it is estimated that '*whenever the doctor assumes a certain provision, the result of which does not depend on the relativity of the medical act, then the generic obligation of care will be the result*'.[41] The examples are: the obligation to make a dental prosthesis or orthosis, the obligation of the doctor to draw up the consultation sheet/record of the patient, as well as the obligation to make a test: blood, urine, etc. In such hypotheses where the desired result is obtained without risk, without the intervention of random external factors, the expected result is the exclusive responsibility of the debtor, therefore, of the healthcare professionals.

Regarding two of the obligations of the doctor, the doctrine outlined opposing opinions, meaning the obligation of security and the obligation to inform the patient.

On the other hand, some authors considered that the obligation of information and the obligation of security are predominantly obligations of result[42], and on the other hand, other authors considered that they are predominantly obligations of means[43].

2.3.1. Obligation of security

The content of this obligation includes the duty, to preserve during the medical act the physical and mental integrity of the patient, by his/her doctor.

Although the nature of this obligation has long been debated, especially in the French doctrine, in the sense that there have been authors who have stated that it is not a real obligation, but a component of the obligation to care for the patient, as far as we are concerned, we consider that the obligation of security is an autonomous obligation, but ancillary to the obligation to care for the patient.

Without initiating the issue of the explicit or not reference of this obligation, we appreciate that it cannot have as source the Government Ordinance No. 21/1992 *on consumer protection*[44] ('***GO 21/1992***') unless we admit that the legal relationship between doctor and patient is contractual, and the patient is a consumer, and the doctor is a service provider.

However, we appreciate that we cannot equate the medical contract with a real consumer contract.

As mentioned above, the obligation of security is ancillary to the obligation to care for the patient, and by virtue of the principle *accesorium sequitur principallem*, we consider that the obligation of security is in principle and obligation of means. Although the obligation is performed by a professional, it cannot be qualified as an obligation of result, because random factors in the medical activity must be taken into account, which can aggravate the health status of the patient. Consequently, the fault of the professional in fulfilling the obligation must be proven, because the healthcare professionals cannot guarantee the preservation of the physical and mental integrity of the patient. In fact, this solution is also natural, because a random factor is related to the behaviour of the patient that can contribute to the unfavourable evolution of his/her health status.

Finally, certain nuances must be admitted in relation to those set out above. The obligation of security may acquire the valance of an obligation of result when the healthcare professionals show recklessness, incompetence, inability or ignorance, by disregarding risks unanimously known and accepted at the level of the medical community or at the current level of scientific research.

At the same time, even in case of improper use of medical devices, sanitary materials or medical products, it can be noted that the obligation of security is a result.

2.3.2. Obligation of information

Perhaps one of the most important obligations of the healthcare professionals, especially of the doctor, is the obligation of information. In the literature, the obligation of information is perceived as an obligation inherent in the exercise of a profession, therefore a professional one.

The healthcare professionals must inform the patient exhaustively, in relation to the level of knowledge existing at that time, about the various investigations, treatments or preventive actions to be carried out. At the same time, the healthcare professionals have the role, based on this obligation, to

[43] F.I. Mangu, *op. cit.*, p. 6.

[44] Published in the Official Gazette of Romania No. 212 of 28th August 1992 with the subsequent amendments and supplements and republished.

inform the patient about the urgency of an intervention, as well as the consequences or risks to which they are exposed in case of a refusal.

Of course, the obligation of information will be made in relation to the known or objectively predictable risks, assumed by a certain medical procedure, and not on the fortuitous risk, i.e. accident, unpredictable at the date of information and unknown by the doctor[45].

Moreover, this obligation is not limited to the initial time of the consultation, for example, but must be fulfilled throughout the relationship between doctor and patient. In other words, the healthcare professionals must keep the patient informed of the evolution of their health status throughout the monitoring and inform them of any changes that occur.

The obligation to inform the patient in order to obtain the consent for performing certain medical acts is stipulated in Law 95/2006. However, simply signing the consent is not enough to consider that the obligation has been fulfilled.

The healthcare professionals must ensure that the patient understand the information provided. Therefore, according to Art. 660 para. (2) of Law 95/2006, '*the doctor, the dentist, the nurse/midwife are obliged to present to the patient the information at a scientifically reasonable level for their understanding*'. Specifically, the information must be correct, clear and appropriate to the level of knowledge of the patient.

In principle, it has been expressed in the French doctrine the opinion that the obligation to inform is an obligation of means, the healthcare professionals having the obligation to make every effort to inform the patient about the risks of the medical procedures to be applied, in which case the doctor, for example, will be absolved of liability.

As far as we are concerned, we appreciate that the result of which the doctor is bound to is to obtain the informed consent of the patient, given in full knowledge of the facts.

This, the liability of the healthcare professionals will be engaged in the situation where the patient has not been informed in any form in advance, as well as in the situation where the information was not correct, clear and adequate.

In the event of a dispute, the healthcare professional or health unit must prove that the information has been provided correctly. The proof can be made by any means of proof.[46] Therefore, the obligation of information is a relative obligation of result.

Usually, the non-fulfilment of this obligation leads to a specific moral harm, which is based on the inadequate psychological training of the patient. This can be combined with the harm consisting in the loss of a chance to avoid the harm resulting from the realisation of the risk of the medical act[47].

3. Malpractice

According to Art. 653 paragraph 1 letter b) of Law 95/2006, the act of malpractice is 'the professional error committed in the exercise of the medical or medical and pharmaceutical act, generating harm to the patient, involving the civil liability of the healthcare professionals and the provider of medical, sanitary and pharmaceutical products and services'.

The fault is the one that characterises, from the point of view of form, the guilt with which the medical malpractice is objectified, the legislator speaking about professional error, negligence or recklessness.

The error can be committed either by action or omission, and the burden of proof lies with the harmed party. The simple error without patrimonial or non-patrimonial consequences cannot be classified as an act of malpractice. For example, the mere misdiagnosis is not in itself an error, but if this leads to improper treatment of failure to perform surgery, then the error may be an act of malpractice.

4. The legal nature of medical liability

When the legal conditions are met, the liability of the doctor, dentist, pharmacist, nurse and midwife may be jointly and severally, if applicable, with what of the health unit in which they operate, being applicable the provisions of the Civil Code regarding the liability of the principal for the act of the agent.

The issue of the classification of civil liability for medical malpractice has been and is discussed in direct relation to the opinions regarding the nature of the legal relationship between the patient and the healthcare professionals and sometimes between the patient and the health unit where they work.

Several opinions have emerged in the literature. In a first opinion, it was considered that the civil liability of the healthcare professionals can be either contractual or non-contractual, depending on the health network (public or private) where they work. In a second opinion, it was shown that the medical civil liability is always a non-contractual liability, and in the end there were authors who considered, without distinguishing between the public or private health unit[48], that the liability is strictly contractual[49].

4.1. Contractual liability

As we have shown in the previous paragraphs, in classifying the legal nature of the medical liability as a

[45] F.I. Mangu, *op. cit.*, p. 7.
[46] L.B. Luntraru, *op.cit.*, p. 185.
[47] *Ibidem.*
[48] I. Anghel, F. Deak, M. Popa, *Răspunderea civilă*, Ed. Științifică, Bucharest, 1970.
[49] V. Fl. I. *Malpraxisul medical. Răspunderea civilă medicală*, Wolters Kluwer, Bucharest, 2010, p. 116-245; I. Turcu, *Dreptul sănătății. Frontul comun al medicului și juristului*, Wolters Kluwer, Bucharest, 2010, p. 158, in L. Pop, I.F. Popa, S.I. Vidu, *op. cit.*, p. 400.

contractual liability, some authors make the distinction according to whether the healthcare professionals is part of the public or private health network.[50]. Thus, it was unjustifiably considered that, in the case of private forms of practicing medicine, the liability is a contractual one, and in the rest of the cases, it is a question of non-contractual liability.

On the other hand, there were authors who considered that '*the rule on the provision of healthcare/medical care is, from a legal point of view, the contract of healthcare/medical care concluded between doctor, dentist and patient, regardless of the system in which the doctor carries out his/her activity, publicly or privately*'[51]. Consequently, it is considered that the healthcare professionals will be held liable according to the rules of the contractual civil liability in any situation.

In support of this opinion, it was appreciated that the legal obligation to provide medical care or specialised care is conditioned by the meeting of the agreement of the patient with that of the competent healthcare professional, and thus the healthcare contract is established.

However, two exceptions are known within this concept, when the liability of the healthcare professionals towards the harmed patient will be of a non-contractual nature. The first hypothesis concerns the situation of the patient who is in a state of clinical emergency, being unconscious, therefore unable to express his/her consent, and the second, when the patient does not have the necessary discernment to express a valid consent.

We cannot agree with this opinion, because the choice of the doctor and the expression of informed consent is only an individual act of acceptance of the medical decision. Thus, the obligations of the healthcare professionals are not contractual obligations, but legal obligations expressly and imperatively provided by law.

At the same time, we appreciate that the liability could not be a contractual one, because the violated obligation is a legal obligation, of a general nature, which belongs to all persons in the health system and not only to a certain doctor or persons. Moreover, the obligations of the healthcare professionals are imperative from which they cannot be derogated, or in the case of contractual civil liability, the non-liability clauses as allowed, as a rule. Thus, it would be difficult to conceive that these non-liability clauses would be allowed in terms of the relationship between doctor and patient. The rules established by law in the field of medical law protect a general interest to protect the entire population from those diseases that could pose a danger to public health.

4.2. Non-contractual liability

It has traditionally been held in doctrine and case law, rightly, that the relationship between the healthcare professionals and the patient is an extra-contractual relationship, and in case of non-fulfilment of obligations by the healthcare professionals, the non-contractual liability will be engaged. This conception is based on the argument that life, health, physical and mental integrity cannot be the subject of a convention, being null and void.

4.3. Professional liability

Last but not least, the idea that the medical civil liability is neither non-contractual nor contractual, but a specific professional liability of the healthcare professionals, which intervenes for harms caused by a professional error, has emerged relatively recently[52].

The opinion is also shared by other authors[53] who consider that the liability regime for medical malpractice transcends the classic distinction between non-contractual liability and contractual liability, because we are witnessing a process of decontractualisation of these obligations, being, therefore, a liability of the professionals called medical civil liability.

5. Exemptions from liability

Finally, regardless of the type of liability (contractual, non-contractual, professional), the provisions of Art. 654 paragraph 2 letters a) and b) exhaustively provide for the exonerating causes of liability:

- when the working conditions in which the healthcare professionals carry out their activity are non-compliant, respectively if they have had an insufficient endowment with the diagnostic and treatment equipment or a nosocomial infection has occurred;
- random factors that have led to complications and risks in the techniques used or adverse effects;
- hidden defects of the sanitary materials, medical equipment and devices, medical and sanitary substances used;
- when the healthcare professionals act in good faith in emergency situations, as long as the competencies granted are respected.

6. Conclusions

In the current context, the medical liability is still a topical issue. The national and international doctrine and case law is constantly evolving, bringing new arguments to support the nature of the medical legal relationship. As we have shown in detail in this paper,

[50] V.I. Albu, *Răspunderea civilă contractuală pentru prejudiciile nepatrimoniale (daunele morale)*, Dreptul nr. 8/1992, p. 32; I.F. Popa, Răspunderea civilă medicală, in Dreptul nr. 1/2003, p. 46, in *ibidem*.

[51] F.I. Mangu, *op. cit.*, p. 3.

[52] L.R. Boilă, *Răspunderea civilă delictuală subiectivă*, Ed. C.H. Beck, Bucharest, 2009, p. 326.

[53] L. Pop. in L. Pop, I.F. Popa, S.I. Vidu, *op. cit.*, p. 403.

we appreciate that the legal relationships between patients and healthcare professionals are extra-contractual relationships resulting from the law and not from a convention concluded between the subjects of the legal relationship.

Moreover, the national case law leans towards the same solution, taking into account the regulations in force.

The acts of medical malpractice are among the most diverse, and the settlement of disputes aimed at awarding damages resulting from these medical errors is a real challenge for the courts. This is also due to the constant evolution of medicine.

Therefore, we are convinced that both the current regulations at national and international level, as well as the regulations that will appear, will lead to the creation of medical law as a distinct branch of law.

THE EFFECTS OF THE ASSIGNMENT OF THE DEBT WITHIN THE FORCED EXECUTION

Georgiana COMAN[*]

Abstract

Enforcement, considered as a component part of the civil process, must provide the participants with the guarantees they benefit from at the trial stage, obviously, adapted to the context and specificity of this procedure. The enforcement appeal represents the legal mechanism through which both the creditor and the debtor can submit to the analysis of the court, more precisely, the enforcement court, the irregularities produced in this procedural stage. The assignment of the claim that is the object of the forced execution produces specific effects in this procedural stage considering also the special regulations existing in this matter, determined by the specifics of the enforceable title underlying the request for enforcement.

Taking into account the fact that the assignment of the claim determines the change of the creditor's person, it is understandable that the effects produced are major for the debtor, but also for the forced execution, viewed as a whole. Next, the institution of the assignment of the debt, as it is regulated by the Romanian Civil Code, will be briefly presented, but also its effects, in forced execution, by reference to the time when the assignment takes place and by reference to the notification or non-notification of the debtor regarding the assignment, in one of the ways provided by law.

Keywords: *assignment, debt, notification, execution, enforcement.*

1. Introduction

The Civil code regulates in the content of article 1566 assignment of the claim as a way of transmitting the claim. Thus, the assignment of a claim is the agreement by which the assigning creditor transmits to the assignee a claim against a third party, the debtor. Being a contract, the assignment of a claim must meet the general conditions of validity of any contract.[1]

Following an assignment of a claim, according to art. 1568 Civil Code, the following are transferred to the assignee: a) all the rights that the assignor has in connection with the assigned claim; b) the guarantee rights and all the other accessories of the assigned claim. Therefore, although apparently, in the case of the assignment of a claim, only the active subject of the legal relationship changes, as will be shown below, effects may also occur on the object of the assignment when it concerns a claim arising from a credit agreement with a consumer.

2. Opposability of the assignment to the debtor

The legislator provided a condition to ensure the enforceability of the assignment to the debtor, taking into account the fact that the debtor is not a party to the contract by which the claim was transmitted.

According to art. 1578 Civil Code, the debtor is required to pay the assignee from the moment he either accepts the assignment by a document with a certain date, or receives a written communication of the assignment, on paper or in electronic format, showing the identity of the assignee, identifies reasonably assigned the assigned claim and the debtor is required to pay the assignee. In the case of a partial assignment, the extent of the assignment must also be indicated. Before accepting or receiving the communication, the debtor can only be released by paying the initial creditor.

The acceptance of the assignment by the debtor, through a document with a certain date, or the notification of the debtor regarding the assignment of the receivable occurred, determines the effects of the assignment also towards the debtor, and not only towards the parties of the assignment contract. Before carrying out the formalities of opposition, according to art. 1575 Civil Code, the assignment of debt produces effects between the assignor and the assignee, and the latter can claim everything that the assignor receives from the debtor. It should be noted that the transferee cannot claim payment from the assigned debtor directly, but has the possibility to request from the transferor everything he receives from the assigned debtor, in theory, the voluntary payments made by the debtor. The latter conclusion follows from the fact that, as regards the relationship between the transferor and the transferee, the effects occur from the time the transfer is concluded, so that after that time the transferor could no longer request a possible enforcement of the debtor.

Following the completion of the aforementioned enforceability formalities, the debtor may oppose to the assignee all the means of defense that he could have invoked against the assignor. Thus, he can oppose the payment made to the assignor before the assignment has become opposable to him, regardless of whether or

[*] PhD Candidate, Faculty of Law, "Nicolae Titulescu" University of Bucharest (e-mail: georgiana_mail@yahoo.com).

[1] Gabriel Boroi, Mona-Maria Pivniceru, Carla Alexandra Anghelescu, Bogdan Nazat, Ioana Nicolae, Tudor-Vlad Rădulescu, Civil Law Files, 3rd Edition, Hamangiu Publishing House 2018, Bucharest.

not he is aware of the existence of other assignments, as well as any other cause of extinction of obligations occurred before that moment (art. 1582 Civil Code).

3. Assignment of a claim occurred prior to the start of the enforcement procedure

The assignment of a debt can take place both before the beginning of the debtor's forced execution, but also after. In the first case, respectively of the assignment of the claim prior to the beginning of the forced execution, in the national jurisprudence it is often encountered the case when, by way of contesting the execution, the debtor invokes the lack of creditor quality of the assignee. In such situations, two opinions emerged. Before submitting to the attention of the two opinions, as a preliminary point, it must be pointed out that contesting the lack of creditor status of the assignee, in relation to the lack of enforceability, is equivalent to contesting the enforcement itself, and the deadline for filing the enforcement appeal is the one provided by art. 715, paragraph 1, Code of Civil Procedure[2].

Returning, the first of the opinions materializes in the rejection as unfounded of this criticism considering the arguments that will be presented below. Thus, it is considered that, without requesting the annulment of the assignment of a claim, between the assignor and the assignee it is valid and produces its effects, the main effect being that of transferring the claim from the assignor's assets to that of the assignee. Therefore, since the transfer of the claim has taken place, the new creditor is the transferee. Reference is also made to the fact that the non-opposability of the assignment to the assigned debtor does not amount to the non-existence or invalidity of the assignment. Considering that according to art. 645 paragraph 1 of the Code of Civil Procedure, the debtor and the creditor are parties in the enforcement phase, it is unfounded to invoke the annulment of enforcement acts performed based on the enforcement request made by the current creditor, even in the absence carrying out the formalities of opposability of the assignment of claim against the debtor. Furthermore, also as an argument in the sense of rejecting the enforcement appeal for this reason, respectively the lack of creditor status of the transferee, are the provisions of art. 704 Code of Civil Procedure, according to which failure to comply with the enforcement itself or any act of execution attracts the nullity of the illegal act, as well as of the subsequent execution acts, the provisions of art. 174 and the following being applicable accordingly. According to art.175 paragraph 1 of the Code of Civil Procedure The procedural act is struck by nullity if by non-compliance with the legal requirement an injury has been brought to the party which cannot be removed except by its abolition. In most cases, the debtor cannot prove an injury caused by the failure to carry out the formalities opposable the assignment, prior to the start of the enforcement procedure, given that he does not prove that he wished to pay or paid the outstanding debt to the initial creditor, respectively, to the assignor. According to art. 1578 Civil Code, before accepting or receiving the communication, the debtor can only be released by paying the transferor. Moreover, even if the debtor proves such payment of the debt to the assignor, he could invoke by way of the enforcement appeal the provisions of art. 1582 paragraph 1 of the Civil Code, whose provisions have been seen previously.

It should be mentioned that, within this opinion, there is not considered to be a case of nullity, unconditioned by the existence of an injury, among those provided in art. 176 Code of Civil Procedure

In this situation it should be pointed out that according to art. 1580 Civil Code, when the assignment is communicated together with the action filed against the debtor, he cannot be ordered to pay the costs if he pays by the first term, unless, at the time of the assignment, the debtor was already late. Based on this principle, it could be concluded that if the debtor is communicated for the first time the assignment of the claim together with the enforcement documents[3], and the debtor pays within a reasonable time at this time, he could no longer be obliged to the eventual execution expenses incurred, a conclusion which is in contradiction with the provisions of art. 670 of the Code of Civil Procedure, which, in essence, does not absolve the debtor from the payment of enforcement costs even if he has executed the obligation immediately or within the term granted by law. It should be noted, however, that in the latter situation, the legislator provided that the debtor will be required to bear only the expenses for the enforcement acts actually performed, as well as the

[2] According to art. 715 Code of Civil Procedure, Unless otherwise provided by law, the appeal regarding the actual enforcement may be made within 15 days from the date when:

1. the appellant has become aware of the enforcement act he is challenging;

2. the interested party has received the communication or, as the case may be, the notification regarding the establishment of the seizure. If the attachment is established on periodic income, the term of appeal for the debtor begins at the latest on the date of the first withholding of this income by the seized third party.

3. the debtor contesting the enforcement itself has received the enforcement order or the summons or from the date on which he became aware of the first enforcement order, in cases where he has not received the enforcement order and the summons or enforcement is made without summon.

[3] According to art. 667 and art. 668 Code of Civil Procedure 1) If the request for execution has been approved, the bailiff will communicate to the debtor a copy of the conclusion given under the conditions of art. 666, together with a copy, certified by the executor for conformity with the original, of the enforceable title and, unless the law provides otherwise, a summons (2) Communication of the enforceable title and summons, unless the law provides that the execution is made without summons or without communication of the enforceable title to the debtor, it is provided under the sanction of nullity of execution. The debtor will be summoned to fulfill his obligation, immediately or within the term granted by law, with the indication that, otherwise, enforcement will continue.

fee of the bailiff and, if applicable, the creditor's lawyer, in proportion to the activity of these.

In the second outlined opinion, it is noted that the lack of enforceability before the start of enforcement, does not give the transferee the right to request enforcement of the debtor, lacking the status of creditor. Therefore, not being a creditor, the transferee does not have a certain, liquid and due claim against the debtor on the basis of which to request enforcement. Also, in the enforcement appeal is invoked, in many cases, the nullity of the decision approving the forced execution based on art. 666 paragraph 5 point 4 or 7 of the Code of Civil Procedure, the impediment consisting precisely in the lack of the quality of creditor of the one who formulated the request for forced execution. Considering the chronological order of solving the request for approval of the forced execution, respectively, of a possible contestation to the execution, obviously, if the court invested with the request for approval of the forced execution rejects the request in the absence of proof of communication of the assignment of the claim to the debtor, this aspect could no longer be the subject of the enforcement appeal for the simple reason that in the absence of the approval of the enforcement it is not possible to proceed with the procedure, the debtor not being notified about the start of the enforcement. On the other hand, if the court of execution admits the request for approval of the forced execution, this fact does not determine an inadmissibility of the invocation of the lack of creditor quality of the one who initiated the forced execution, by way of contesting the execution, the provisions of art. 712 par. 3 Civil Procedure Code[4], being edifying in this case.

Regarding the fact that the enforcement court invested with solving the request for approval of enforcement could analyze whether the debtor was notified of the transfer, during the Meeting of the presidents of the civil sections of the courts of appeal - Court of Appeal Cluj, 13-14 October 2016 and the meeting of the representatives of the Superior Council of Magistracy with the presidents of the civil sections of the High Court of Cassation and Justice and the courts of appeal - Pitești, November 14-15, 2019, it was established that the enforcement court is obliged to verify the assigned debtor, under the sanction of rejecting the application for approval pursuant to art. 666 paragraph (5) § 4 C. proc. civ., at least in the event that the assignment of the debt was concluded after the entry into force of the new Civil Code. The right to claim payment from the assigned debtor cannot be justified in the transferee's patrimony, as a right really relative to the assigned debtor, in the absence of a prior communication, reason for which, in case of an assignment before the bailiff, the proof of communication the assignment must be submitted to the enforcement file. In its turn, the enforcement court, in order to ascertain the quality of the assignee of the current creditor of the assigned debtor, must have it at its disposal, in the file formed for the approval of the forced execution, together with the enforcement request, the enforceable title and the assignment. In the absence of notification to the debtor, not having the right to claim payment, although the claim was assigned to him, the assignee has even less the right to claim a forced payment, through the enforcement procedure initiated by notifying the bailiff.

4. Assignment of a claim during enforcement

In the second situation analyzed, the assignment of the claim occurs during the enforcement, the hypothesis being that in which the original creditor started the enforcement, and subsequently the assignment of the claim occurred, the assignee taking over as creditor. In this case more clarification is needed. Thus, if the approval of the enforcement was admitted in relation to the original creditor, respectively the assignor, a new approval of the enforcement would not be necessary, taking into account the person of the transferee, without any legal provision imposing this. Moreover, High Court of Cassation and Justice, by a decision of the panel for the resolution of certain legal issues[5], established that the amendment of the original parts of the legal act constituting an enforceable title does not affect the substance of the enforceable title, the assignee's position being that of a true private successor, which thus takes over all the rights that the assignor had in connection with the claim.

However, the opposite opinion was also presented in the doctrine, in the sense that it is necessary to approve the forced execution also in relation to the new creditor[6].

On the other hand, with regard to the possible formulation of an enforcement appeal requesting the annulment of the enforcement acts performed in relation to the person of the transferee, it should be noted that the formulation period will start to run from the moment the debtor will be notified of the first enforcement acts in which the new creditor is mentioned. This conclusion is undoubtedly clear from the provisions of art. 715 Code of Civil Procedure. Even if this ground of appeal concerns enforcement itself, it cannot be ignored that the debtor was not notified of the change of the person of the previous creditor.

[4] Also, after the beginning of the forced execution, those interested or injured can request, by way of the contestation to the execution, also the annulment of the conclusion by which the request for approval of the forced execution was admitted, if it was given without fulfilling the legal conditions.

[5] HCCJ, Panel for resolving legal issues, Decision no. 3/14.04.2014 (Official Gazette No. 437/16.06.2014).

[6] Curierul Judiciar Magazine, no. 11/2019, Assignment of bank receivables in the forced execution phase of debtors. The need to go through a new procedure for approving the forced execution by the new creditor, Asist. univ. dr. Răzvan Scafeș, Faculty of Law, University of Craiova.

Another aspect is to establish whether the opposability of the assignment is achieved through the very notification issued by the bailiff and in which the name of the assignee is mentioned. Considering the provisions of art. 1578 paragraph 1 letter b) of the Civil Code, it is noted that from the notification it is necessary: to be able to identify the entity of the assignee and, reasonably, the assigned claim and to ask the debtor to pay the assignee. Therefore, if the notice issued by the bailiff contains all these elements and is sent in writing to the debtor, even if the summons does not emanate from the creditor, it could produce the effects of a notification on the assignment of the claim, respectively the opposability of the assignment to the debtor. However, the aspects previously analyzed in the case of the assignment before the start of the forced execution, are valid, in the sense that in this case at least one execution act was issued, respectively the summons / notification of setting up the seizure, and at the time of issuance, the assignment was not opposable to the debtor.

If the writ of execution consists of a credit agreement for consumers and the provisions of Emergency Ordinance no. 50/2010 are applicable, there are other effects and rules for notification of the assignment of the claim resulting from this contract, rules presented in Article 70[7]. Therefore, the rules in the case of the assignment of a claim arising from a credit agreement granted to a consumer are different, precisely for the purpose of effective consumer protection. First of all, it is noted that the legislator has established who can be the assignee, only receivables resulting from non-performing credit agreements for which the creditor declared the early maturity or initiated the foreclosure procedure, can be assigned to entities carrying out the activity of debt recovery. Therefore, if the assignment of a debt occurred during the forced execution, then the assignee may also be an entity whose object of activity is the recovery of receivables. Also regarding the entities having as object the activity of debt recovery, the legislator established the fact that it is forbidden to charge commissions, interest and penalty interest, except for the legal penalty interest, by them[8].

Regarding the notification of the assignment of a debt to the debtor, there are special rules resulting from the provisions set out above. All these rules are issued in order to protect the consumer. Infringement of any of the above rules may be invoked by way of an enforcement appeal in support of the assignee's lack of creditor status.

It should also be mentioned that although according to art. 713 second paragraph of the Code of Civil Procedure[9], regarding the forced executions started after the entry into force of Law no. 310/2018 by which amendments were made to the Code of Civil Procedure, in principle, no criticism can be made on the merits of the right contained in the writ of execution, this does not mean that the debtor could not invoke the lack of creditor status of the assignee because the writ of execution is not represented by the assignment contract.

5. Conclusions

The assignment of the claim that is the object of the forced execution produces effects both on the level of the material law, but also on the level of the procedural law, if the forced execution was started for the recovery of the claim and if a possible opposition to enforcement was formulated. Compliance with the formalities of opposability of the assignment of debt to the debtor is necessary both to respect the rights of the

[7] (1) In cases where the credit agreement itself or only the receivables resulting from a credit agreement are assigned, the consumer has the right to invoke against the assignee, any means of defense to which he could resort (2) Credit agreements and receivables resulting from them may be assigned only to creditors, as defined in art. 7 pt. 5. (3) By exception from the provisions of par. (2), receivables resulting from credit agreements may also be assigned to entities whose object of activity is the issuance of securitized financial instruments based on a portfolio of receivables, in accordance with the provisions of Law no. (4) By exception from the provisions of par. (2), the receivables resulting from the non-performing credit agreements, for which the creditor declared the early maturity or initiated the enforcement procedure of the consumer, may be assigned to entities carrying out the debt recovery activity, as defined in art. 7 pt. 17. Further, according to art. 71 (1) The consumer is informed about the assignment provided in art. 70. The assignment, individually or within a receivables portfolio, becomes opposable to the consumer by the notification addressed to him by the assignor. (3) The assignment shall be notified by the assignor to the consumer, within 10 calendar days from the conclusion of the assignment contract, by registered letter with acknowledgment of receipt. (4) The notification shall be written in writing, in a clear, visible and easy-to-read language, the font used being Times New Roman, minimum size 12, on paper, and shall mention at least the following: a) name and contact details , including the telephone number, fax, e-mail of the creditor, of the entity that will collect from the consumer the amounts for the repayment of the credit after the assignment, as well as and, as the case may be, of its representative in Romania, b) the name of the original creditor from whom the claim was taken over, c) the date on which the assignment was made; d) the amount of the amount due and the documents attesting this amount, e) the accounts in which the payments will be made. (5) In addition to the obligations provided in par. (4), the entities carrying out the debt recovery activity shall warn the consumer about: a) the term in which the consumer contacts the entity carrying out the debt recovery activity. This period may not be less than 5 working days from the date of receipt of the notification by the consumer, b) the consumer's right to send to the entity carrying out the debt recovery activity a complaint of the existence of the debt or its amount within 30 calendar days c) the consumer's right to receive a reply within 15 calendar days to the appeal, d) the consumer's right to go directly to court if he disputes the existence of the debt or its amount; that the non-challenge by the consumer, within 30 calendar days, of the debt does not constitute an acknowledgment of the amount by him and does not deprive the consumer of the right to go to court (6) Representatives of the entities carrying out the activity of debt recovery declines its identity and, where appropriate, legitimizes itself when addressing consumers.

[8] Art. 71² letter b) Emergency Ordinance no. 50/2010: It is prohibited: b) the collection of commissions, interests and penalizing interests, except for the legal penalizing interests, by the debt recovery entities.

[9] If enforcement is effected on the basis of an enforceable title other than a judgment, grounds of fact or law regarding the substance of the right contained in the enforceable title may be invoked in the enforcement appeal only if the law does not provide in relation to that enforceable title a procedural way for its abolition, including a common law action.

assigned debtor, but also to avoid legal action, especially enforcement appeals, which generate other costs for the parties, but also, possibly, the delay in clarifying the legal situation between the parties.

TRANSMISSION OF JUDICIAL DOCUMENTS ABROAD

Georgiana COMAN[*]

Abstract

Due to the multitude of legal relationships involving parties domiciled in different countries, it has been necessary to regulate the way in which summonses and procedural documents are to be transmitted in the event of disputes. Thus, in order to create the appropriate means for judicial and extrajudicial documents to be served or transmitted abroad to reach their addressees in a timely manner, at global and, later, european level, regulations and conventions have been adopted that established the way of transmitting the procedural documents to the party domiciled in a country other than the one in which the trial takes place. There are also express provisions in this regard at national level in the Code of Civil Procedure. All these steps were necessary to respect the right to free movement of persons, and procedurally, to respect the principle of adversarial proceedings and the right of defense of the parties. It is necessary to analyze the situation of summoning the parties and transmitting to them the procedural documents, in a civil litigation (in its broad sense), pending before the Romanian courts, in which at least one of the parties has established its domicile abroad, in view of the Regulation (EC) No 1393/2007 and the 1965 Hague Convention.

Keywords: *abroad, transmission, Regulation (EC) no. 1393/2007, judicial, documents*.

1. Introduction

The need to ensure the right of defense for all parties to the process also implies their legal summons, as well as the transmission of all procedural documents. At the level of the European Union, at present, there is Regulation (EC) no. 1393/2007 on the service in the Member States of judicial and extrajudicial documents in civil or commercial matters (hereinafter referred to as the Regulation). At the international level, the 1965 Hague Convention[1] (hereinafter referred to as the Convention) is the main act adopted in the field of the communication of judicial documents to parties domiciled in another country. Also, if there are no conventional links between the two countries between which the notification procedure is to take place, international legal assistance in civil and commercial matters may be granted on the basis of international courtesy, subject to the principle of reciprocity.

In Romania, the law no. 189/2003 regarding the international legal assistance in civil and commercial matters was adopted, art. 2 paragraph 2 of the normative act indicating that the provisions of this law do not prejudice the provisions of European Union law, bilateral or multilateral conventions to which Romania is a party, completing the situations not regulated by them.

2. Transmission of judicial documents according to Regulation (EC) no. 1393/2007

2.1. Field of application

Article 1, paragraph (1) of the Regulation sets out its scope, whether in civil or commercial matters, where a judicial or extrajudicial document must be transmitted from one Member State to another in order to be served. It does not apply, in particular, to tax, customs or administrative matters, nor to the State's liability for acts or omissions in the exercise of official authority (*acta iure imperii*). Also, the Regulation does not apply if the address of the person to whom the document is served is not known. This last provision is an important one, but it should not be assimilated to the situation in which the address of the addressee of the act is indicated, but it is no longer current or incomplete. In my opinion and taking into account the provisions of Article 7 (2) of the Regulation, I believe that the receiving agency should take all necessary steps to identify the addressee as soon as possible, according to the means at its disposal.

With regard to the temporal application of the Regulation, it should be mentioned that it will apply until 1 July 2022, when it will be replaced by Regulation (EU) 2020/1784.

[*] PhD Candidate, Faculty of Law, "Nicolae Titulescu" University of Bucharest (e-mail: georgiana_mail@yahoo.com).

[1] Signatory states: Albania, Andorra, Argentina, Armenia, Australia, Austria, Azerbaijan, Belarus, Belgium, Bosnia and Herzegovina, Brazil, Bulgaria, Burkina Faso, Canada, Chile, China, People's Republic of , Costa Rica, Croatia, Cyprus, Czech Republic, Denmark, Dominican Republic, Ecuador, Egypt, Estonia, European Union, Finland, France, Georgia, Germany, Greece, Hungary, Iceland, India, Ireland, Israel, Italy, Japan, Jordan, Kazakhstan, Korea, Republic of, Latvia, Lithuania, Luxembourg, Malaysia, Malta, Mauritius, Mexico, Monaco, Montenegro, Morocco, Namibia, Netherlands, New Zealand, Nicaragua, Norway, Panama, Paraguay, Peru, Philippines, Poland, Portugal, Republic of Moldova, Republic of North Macedonia, Romania, Russian Federation, Saudi Arabia, Serbia, Singapore, Slovakia, Slovenia, South Africa, Spain, Sri Lanka, Suriname, Sweden, Switzerland, Thailand, Tunisia, Turkey, Ukraine, United Kingdom of Great Britain and Northern Ireland, United States of America, Uruguay, Uzbekistan, Venezuela, Vietnam, Zambia.

2.2. Purpose of the Regulation

An important objective considered in the adoption of the Regulation and resulting from it is that the service of documents must be effected as soon as possible from the moment of the receipt of the request by the receiving agency (for example, the art. 7 of the Regulation[2]). Also in connection with the need to ensure the communication of judicial documents as soon as possible, Article 6 paragraph (1) of the Regulation provides that on receipt of the document, the receiving agency shall send an acknowledgment of receipt to the transmitting agency as soon as possible. within seven days of receipt, by the fastest means of transmission, using the standard form set out in Annex I. Therefore, the speedy communication of judicial documents, but also the knowledge as soon as possible of the situation and stage of communication of documents by the transmitting agency is vital for the functioning of this form of cooperation between Member States.

2.3. How to apply the Regulation

The Regulation provides for several means of communication between Member States. Thus, a first way of communication, and which will be emphasized in this paper, is through transmission agencies and receiving agencies (art. 4-11). According to art. 2 paragraphs 1 and 2 of the Regulation, each state has the obligation to designate the transmitting and receiving agencies involved in the procedure for transmitting / receiving the documents to be notified[3]. In the case of Romania, the courts of first instance are the receiving agencies, and the transmitting agencies can be any court. Identification of the competent receiving agencies can be done by accessing the portal https://e-justice.europa.eu/home.do.

Other means of communication provided for in the Regulation are the following:

• by consular or diplomatic route (art. 12);
• through diplomatic or consular agents (art. 13);
• through courier services (art. 14);
• notification or direct communication (art. 15).

Considering the hypothesis in which, in a litigation pending before the Romanian courts, one of the parties is domiciled in another state of the European Union and it is necessary to communicate the summons and the procedural documents to this party (request for summons, documents filed in evidence by the other party), the court has several possibilities. According to the Code of Civil Procedure[4], persons who are abroad, if they have their domicile or residence known, will be summoned by a written summons sent by registered letter with declared content and acknowledgment of receipt, receipt of delivery of the letter to the Romanian Post, in the content of which will be mentioned the documents to be sent, taking the place of proof of fulfillment of the procedure, unless otherwise provided by international treaties or conventions to which Romania is a party or by special normative acts. If the domicile or residence of those abroad is not known, the summons is made according to art. 167[5]. In all cases, if those abroad have a known representative in the country, only the latter will be summoned. Article 14 of the Regulation also provides that each Member State is free to serve documents directly by courier to persons residing in another Member State, by registered letter with acknowledgment of receipt or equivalent. Therefore, the manner of communication of summonses and procedural documents is left to the discretion of each court.

Specifically, in the event that the court, as the transmitting agency, wishes to communicate the procedural documents through the receiving agency of the country in whose territory the addressee resides, it will transmit the documents, accompanied by a request drafted using the standard form provided in Annex I to the Regulation (art. 4). The form shall be completed in the official language of the Member State of destination or, if there are several official languages in the Member State concerned, in the official language or one of the official languages of the place where the notification or communication is to be made, or in another language which the Member State concerned has indicated that it

[2] 1. The receiving agency shall itself serve the document or have it served, either in accordance with the law of the Member State addressed or by a particular method requested by the transmitting agency, unless that method is incompatible with the law of that Member State. 2. The receiving agency shall take all necessary steps to effect the service of the document as soon as possible, and in any event within one month of receipt. If it has not been possible to effect service within one month of receipt, the receiving agency shall: (a) immediately inform the transmitting agency by means of the certificate in the standard form set out in Annex I, which shall be drawn up under the conditions referred to in Article 10(2); and (b) continue to take all necessary steps to effect the service of the document, unless indicated otherwise by the transmitting agency, where service seems to be possible within a reasonable period of time.

[3] 1. Each Member State shall designate the public officers, authorities or other persons, hereinafter referred to as 'transmitting agencies', competent for the transmission of judicial or extrajudicial documents to be served in another Member State. 2. Each Member State shall designate the public officers, authorities or other persons, hereinafter referred to as 'receiving agencies', competent for the receipt of judicial or extrajudicial documents from another Member State.

[4] Article 155 (1), point 13.

[5] Art.167 Code of Civil Procedure-Summons by advertising:

(1) Where the plaintiff considers, with reasons, that, although he did everything in his power, he was unable to find the defendant's domicile or other place where he could be summoned according to law, the court may approve his summons by publicity. 2) The summons by publicity is made by displaying the summons at the door of the court, on the portal of the competent court and at the last known address of the summoned person. In cases where it deems it necessary, the court shall also order the publication of the summons in the Official Gazette of Romania or in a widely circulated central newspaper. (3) Once the summons is approved by publicity, the court shall appoint a curator from among the bar's lawyers. art. 58, which will be summoned to the debates for the representation of the defendant's interests. (4) The procedure is considered fulfilled on the 15th day from the publication of the summons, according to the provisions of par. (5) If the summoned person appears and proves that he was summoned by publicity in bad faith, all procedural documents that followed the approval of this summons shall be annulled and the plaintiff who requested the summons by publicity shall be sanctioned. according to the provisions of art. 187 para. (1) pt. 1 lit. c).

accepts. It should be noted that the documents and all documents submitted are exempt from legalization, as well as from any other equivalent formality.

If the transmitting agency wishes a copy of the document to be returned to it, together with the certificate provided for in Article 10, it shall send the document to be served in duplicate.

Regarding the advantages of communication through the Regulation, they cannot be ignored because they aim at the certainty of receipt of the documents by the addressee. Unlike the transmission of documents by postal / courier services, the transmission of documents with the help of the receiving agency should ensure either the transmission of documents or the reasons why transmission was not possible, in any case being necessary to complete the form annexed to the Regulation. On the other hand, in the form for carrying out the transmission procedure, the receiving agency will have to complete the way in which the procedure for transmitting the documents was carried out. In this connection, it should be noted that in turn, the transmitting agency, when issuing a request for transmission of documents to the receiving agency, will have to indicate how it wishes to transmit with the choice between several variants: according to the legal provisions in force in the state in which the documents are to be transmitted, according to the legal provisions in the state of origin or according to another modality, this being to be specified (art. 7).

With regard to the disadvantages of transmitting legal acts through the Regulation, the costs of such a procedure could be included, with each Member State to which the Regulation applies having the possibility to charge its own costs. These costs are obviously borne by the interested party, in particular the applicant. Although, according to art. 11 paragraph 1 of the Regulation, the service of judicial documents from a Member State may not result in the payment or reimbursement of taxes or expenses incurred for the services provided for this purpose by the receiving Member State, according to the second paragraph the claimant shall pay / reimburse other costs occasioned by:

• recourse to a judicial officer or a competent person in accordance with the law of the Member State addressed;

• the use of a particular method of service.

Therefore, in countries where the receiving agency are certain judicial officials (such as France, Belgium, the Netherlands), there is a possibility for them to charge certain costs for carrying out the procedure for transmitting the documents, costs which will have to be advanced with the service request. A possibility to sanction the plaintiffs who do not understand to cover the costs generated by the transmission to the defendant of the procedural documents, is contained by the provisions of art. 242 paragraph 1 of the Code of Civil Procedure, according to which the court may order the suspension of the trial.

If the case is still in the preliminary proceedings, a trial date may be established for which the applicant shall be ordered to pay these costs, and if not, the trial shall be suspended. I consider that the summons could not be annulled accordingly to the provisions of art. 200 of the Code of Civil Procedure, not being an irregularity of the summons. It should also be mentioned that the choice of the method of transmission of the procedural documents to the party located on the territory of another country, belongs to the court, the plaintiff cannot dispute this aspect and imposes another method.

Another disadvantage could be that, although the receiving agencies have at their disposal the possibility of automatically translating the forms (receiving the application or performing / not performing the procedure) into one of the official languages of the State from which the transmitting agency originates, it often happens that they do not translate those forms and thus make it difficult for the transmitting agency to use translation services to see if the documents have been communicated or, on the contrary, to find out why the documents were not communicated.

It is also necessary to pay attention to the provisions of Article 19 of the Regulation[6], so that if the court orders the transmission of documents in accordance with the provisions of the Regulation, if the

[6] Where a writ of summons or an equivalent document has had to be transmitted to another Member State for the purpose of service under the provisions of this Regulation and the defendant has not appeared, judgment shall not be given until it is established that: (a) the document was served by a method prescribed by the internal law of the Member State addressed for the service of documents in domestic actions upon persons who are within its territory; or (b) the document was actually delivered to the defendant or to his residence by another method provided for by this Regulation; L 324/84 EN Official Journal of the European Union 10.12.2007 and that in either of these cases the service or the delivery was effected in sufficient time to enable the defendant to defend. 2. Each Member State may make it known, in accordance with Article 23(1), that the judge, notwithstanding the provisions of paragraph 1, may give judgment even if no certificate of service or delivery has been received, if all the following conditions are fulfilled: (a) the document was transmitted by one of the methods provided for in this Regulation; (b) a period of time of not less than six months, considered adequate by the judge in the particular case, has elapsed since the date of the transmission of the document; (c) no certificate of any kind has been received, even though every reasonable effort has been made to obtain it through the competent authorities or bodies of the Member State addressed. 3. Notwithstanding paragraphs 1 and 2, the judge may order, in case of urgency, any provisional or protective measures. 4. When a writ of summons or an equivalent document has had to be transmitted to another Member State for the purpose of service under the provisions of this Regulation and a judgment has been entered against a defendant who has not appeared, the judge shall have the power to relieve the defendant from the effects of the expiry of the time for appeal from the judgment if the following conditions are fulfilled: (a) the defendant, without any fault on his part, did not have knowledge of the document in sufficient time to defend, or knowledge of the judgment in sufficient time to appeal; and (b) the defendant has disclosed a prima facie defence to the action on the merits. An application for relief may be filed only within a reasonable time after the defendant has knowledge of the judgment. Each Member State may make it known, in accordance with Article 23(1), that such application will not be entertained if it is filed after the expiry of a time to be stated by it in that communication, but which shall in no case be less than one year following the date of the judgment. 5. Paragraph 4 shall not apply to judgments concerning the status or capacity of persons.

defendant summoned in this manner does not appear, the case may be delayed.

If the domicile of the party is not known, then the court will proceed within the meaning of the provisions of art. 167 Code of Civil Procedure, in the sense of appointing a curator according to the provisions of art. 58 Code of Civil Procedure and summoning the party by posting at the court door, on the court portal and possibly by publishing the summons in the Official Gazette of Romania or in a widely circulated central newspaper. If the last address is known, then the part is to be cited at that place as well. Although the summons is intended to make known to the defendant the existence of the dispute, if he has an unknown domicile in another country, the question arises as to how effective those measures are.

However, the provisions of art. 156 of the Code of Civil Procedure, according to which the persons who are abroad, cited according to art. 155 para. (1) points 12 and 13, for the first trial term, will be notified by summons that they have the obligation to choose a domicile in Romania where all the communications regarding the process will be made to them. If they do not comply, the communications will be made to them by registered letter, the delivery note to the Romanian post of the letter, in which the documents to be sent will be mentioned, taking the place of proof of fulfillment of the procedure. I thus consider that, regardless of the manner of communication of the first summons to the party abroad, through the Regulation or directly according to the provisions of art. 155 paragraph 1 point 13 of the Code of Civil Procedure, if the provisions of art. 156 of the Code of Civil Procedure, then, the following summons may be sent by registered letter, the delivery note to the Romanian Post of the letter, in which the documents to be sent will be mentioned, taking the place of proof of fulfillment of the procedure. Therefore, any costs determined by transmission the summons or procedural documents to the foreign party may be limited. Also in connection with the eventual costs generated by the summoning and transmission of the procedural documents according to the Regulation, taking into account the provisions of art. 451 paragraph 1 of the Code of Civil Procedure[7], they may be included in the category of court costs, and in the event of finding the procedural fault of the party abroad, it may be ordered to pay these costs.

On the other hand, as regards the transmission of judicial documents through the Regulation, it also provides protection for the addressee. Thus, according to Article 8 of the Regulation, the receiving agency informs the addressee (using the standard form set out in Annex II) that he may refuse to accept the document to be served at the time of service or by returning the document to the receiving agency within one week if it is not written in, or accompanied by a translation into a language which the addressee understands or into an official language of the Member State of destination. When the receiving agency is informed that the addressee refuses to receive the document, it shall immediately inform the transmitting agency by means of the certificate referred to in Article 10 and return the application and the documents whose translation is requested. It should be noted that the receiving agency cannot refuse to send the documents to the addressee taking into account the reason that they are not translated into one of the languages indicated in Article 8 of the Regulation, but has the obligation to inform the addressee about the possibility of refusing receipt their.

If the service of documents has been effected or, on the contrary, could not be effected, the receiving agency shall draw up a certificate of completion of these formalities using the standard form set out in Annex I, which shall be sent to the transmitting agency together with a copy of the act notified or communicated, where Article 4 (5) applies.

As regards the possibility for courts to choose how to communicate judicial acts, the Court of Justice of the European Union has ruled, with reference to Regulation (EC) No 1348/2000, that, in view of its purpose, in order to ensure the effective communication of documents, one or more of the means of communication provided for in this Regulation (repealed by Regulation (EC) No 1393/2007) may be used[8]. It was also noted that there is no hierarchy between the means of communication provided by the Regulation

3. Service of judicial documents in accordance with the 1965 Hague Convention

3.1. Field of application

According to Article 1 of the Convention, it applies in civil or commercial matters, in all cases where a judicial or extrajudicial document must be transmitted for service abroad. The Convention does not apply if the address of the addressee of the document is not known. In the case of States which are, at the same time, both signatories to the Hague Convention and also to which the Regulation applies, in accordance with Article 20 (1) of the Regulation, in matters falling within its scope, it shall prevail.

Romania acceded to the Convention by adopting Law no. 124/2003.

3.2. How to apply the Convention

Unlike the Regulation, in the case of the Convention each state has the obligation to designate a

[7] The court costs consist of the judicial stamp duties and the judicial stamp, the fees of the lawyers, of the experts and of the specialists appointed under the conditions of art. 330 para. (3), the amounts due to witnesses for travel and losses caused by the need to be present at the trial, the costs of transport and, where appropriate, accommodation, as well as any other expenses necessary for the proper conduct of the proceedings.

[8] Case C-473/04 Plumex v Young Sports NV.

central authority to deal with the receipt of requests for notification and transmission and to proceed with their execution. At national level, according to art. 2 of Law 124/2003, the Ministry of Justice is the central authority designated to receive and transmit requests for notification or communication abroad of judicial or extrajudicial acts in civil or commercial matters. Therefore, if it is desired to transmit certain judicial documents to a party located in the territory of a Member State to the Convention, the court will request the Ministry of Justice to transmit the documents to the central authority of the other Member State. In this case, the requesting agencies and the requested agencies do not have a direct interaction, as in the case of notification made under Regulation (EC) No 1393/2007.

If the court orders the transmission of judicial documents according to the Hague Convention, then it will send to the Ministry of Justice a request in accordance with the model form annexed to the convention, without the need to over-legalize the documents or any other equivalent formality. The request must be accompanied by the document to be served or a copy thereof. The request and the document shall both be furnished in duplicate.

According to Article 5 of the Convention, the central authority of the requested State shall itself serve the document or shall arrange to have it served by an appropriate agency, either – a) by a method prescribed by its internal law for the service of documents in domestic actions upon persons who are within its territory, or b) by a particular method requested by the applicant, unless such a method is incompatible with the law of the State addressed. It is also provided that the document may at any time be handed over to the addressee who voluntarily accepts it.

In connection with the language in which the document to be communicated is to be drafted, the central authority may request that the document be drafted or translated into the language or one of the official languages of its country.

Once the document has been communicated to the addressee, the requested authority shall complete a certificate in the form of the model annexed to the Convention, which it will send to the requesting authority and indicate the form, place and date of fulfillment and the person to whom it was delivered, the reasons which have prevented service (art. 6).

4. Conclusions

Summoning the parties and transmitting the procedural documents to them is a vital component of a process. Therefore, regardless of the legal way of transmission that the court chooses, it must be an effective one, in order to ensure the parties the right to defense and the settlement of the process in an optimal and predictable term. To this end, in order to meet the current needs of European justice systems, Regulation (EU) 2020/1784, which will repeal Regulation (EC) No 1393/2007, will establish a framework for judicial cooperation aligned with the digital strategy of the single market. of the EU, the documents to be transmitted between the receiving and transmitting agencies through a secure and reliable decentralized IT system.

FISCAL MEASURES ADOPTED BY ROMANIA IN THE COVID-19 CONTEXT IN ORDER TO HELP COMPANIES AVOID INSOLVENCY

Corina Georgiana COSTEA (CIOROIU)*

Abstract

The Covid-19 pandemic has been affecting for more than a year all countries' economies, by generating an overall sanitary crisis. In order to prevent the spreading of the Covid-19 virus, countries across the world have limited or even forbidden temporarily several economic activities, which has led to a financial blockage in some industries, especially in the touristic industry. In response to the devastating economic effects, the Romanian Government has adopted several measures and fiscal mechanisms for companies, aiming at preventing their insolvency and therefore revitalizing the national economy.

Keywords: *fiscal measures, insolvency, COVID-19 pandemic, national economy, global economy*.

1. Introduction

The COVID-19 pandemic has generated a sanitary crisis across the world. Therefore, public authorities have been constrained to adopt several measures in order to limit the impact of the COVID-19 virus spreading. Each country has developed its own policy of measures depending on the severity of the pandemic. Because of the necessity of limiting the pandemic's consequences, countries across the world have been limiting social activities, imposing national and regional quarantines. These national policies have had a strong impact on the economy since some of the measures have included limitations or even temporary bans of some economic activities. Whilst these measures have helped the prevention of the virus' spreading, they have also severely affected the economy and the business environment. This paper analyses the measures adopted by the Romanian Government to limit the pandemic's impact upon the national economy and help companies avoid imminent insolvency. The importance of this matter could be justified by the fact that these measures support the efforts made by struggling businesses to overcome their financial distress or state of insolvency. The lack of measures adopted by the Romanian Government could result in a general economic blockage and could easily cause the "death" of the majority of small and medium businesses. This paper also intends to analyse effective measures that have been adopted by other countries and therefore identify the best practices that have had a positive impact. All measures adopted by the Romanian government in order to limit the spreading of the COVID-19 virus have affected, directly or indirectly, a large majority of businesses, which have been unable to keep up with claims' payment, including budgetary claims. As a consequence, the Romanian fiscal authorities have collected a lower rate of taxes. In relation to this matter, a set of measures has been needed not only to support businesses, but also to increase the rate of tax collection.

2. Measures adopted by the Romanian Government to support companies during the established state of emergency

The Romanian legislator has adopted numerous mechanisms and measures in response to the devastating effects upon the economy. However, this paper shall only analyze the measures that are relevant regarding preventing companies' insolvency, especially the fiscal measures and mechanisms, since fiscal authorities are the permanent creditor of every business.

2.1. The Emergency Situation Certificate (ESC)

The state of emergency has been established in Romania by the Decree no. 195 of 16th of March 2020[1], which has only mentioned the possibility of affected companies to obtain the ESC. The Government Emergency Ordinance no. 29/2020 regarding some economic and fiscal-budgetary measures[2] had provided clarifications upon the utility of the ESC and the entities that could request its release. Therefore, the ESC is a document issued by the Ministry of Economy, Energy and Business Environment, at the request of economic operators whose activity had been totally or partially interrupted based on decisions issued by the competent public authorities. It must be mentioned that the authorities had issued several military ordinances, interrupting totally or partially several economic activities, such as: (i) educational institutions, units whose activity is the serving and consumption of food and alcoholic / non-alcoholic beverages, (ii) the activity of every entity organizing events that involve the participation of over 100 persons in open spaces, (iii)

the activity of dentals clinics, (iv) retail sale of goods and services in shipping centers (with few exceptions), (v) cultural, scientific, artistic, religious, sporting, entertainment or gambling activities, (vi) transport services, (vii) entities that organize collective physical activities, (viii) any other entities that organize and carry out activities involving the formation of groups of more than 3 persons. The ESC had been issued in two forms: (i) Type 1 (blue), issued for the entities mentioned above, whose activity had been totally or partially interrupted, as a result of decisions adopted by the competent public authorities during the declared state of emergency and (ii) Type 2 (yellow), issued for applicants who, based on their declaration on own responsibility, show that they recorded a decrease of income of at least 25% in March 2020 compared to the average income recorded in the two previous months. The type 2 ESC had been issued for companies which were indirectly affected by the COVID-19 pandemic. One of the main advantages of the ESC is the fact that, according to article X of the Government Emergency Ordinance no. 29/2020, entities which have obtained it have had the possibility to postpone payments for utility services (gas, electricity, water, telephone and internet services etc.), and also rental payments for registered offices and secondary offices. However, these measures had been limited to a period equal to the established national emergency state, which has lasted for two months, until the 16th of May 2020. The timeframe granted by the authorities to obtain the ESC had been limited and it cannot be obtained in this moment, but its utility is not limited in time, since it is required for accessing several other benefits, such as facilities for loans granted by financial institutions. Nevertheless, the biggest advantage of obtaining an ESC is the fact that it could be used by its holders to invoke the *force majeure* in ongoing contracts. To the author's knowledge and research, no other state has adopted this measure in this form. One particularity derives from the fact that the simple ownership of an ESC is sufficient to create a *relative presumption of force majeure*. The civil law in Romania does not regulate a *presumption* of force majeure. According to art. 1.351 para. (2) of the Civil Code[3], "*Force majeure is any external event, unpredictable, absolutely invincible and inevitable*" and according to para. (1), "*Unless the law or the parties don't stipulate otherwise, liability shall be removed when the damage is caused by force majeure or fortuitous case*". "The effect of the case of force majeure consists in the total elimination of the civil liability for the damages caused by the non-execution of the (contractual – n.n.) obligations due to the force majeure event."[4] However, the *presumption* of a case of force majeure does not operate in every contractual relationship, since the Romanian law regulates that the contractual parties are able to exclude or limit the cases of force majeure. This is the main reason why owning an ESC generates a *relative presumption* of a force majeure case and not an *absolute presumption.* Also, according to art. 1.634 para. (1) of the Civil code, "*The debtor is liberated when its obligation cannot be executed due to a case of force majeure (…) occurring before the debtor is put in delay*." In order to establish if the relative presumption of force majeure case operates in a certain case, the party that invokes the pandemic as a force majeure case should clarify if the contract excludes the removal of liability in such cases and if it stipulates limits in time or events. Except the facility granted by the authorities regarding the request of an ESC, companies have the possibility of requesting a notice of force majeure from the Chamber of Commerce, in accordance with art. 4 para. (1) letters j) and i) from the Law no. 335/2007 of Chambers of Commerce from Romania[5]. "However, the two documents should not be confused, being issued by different authorities, under different conditions and having different scope and legal effects."[6] The Romanian jurisprudence has shown that "For the exoneration of liability to occur, it is not sufficient that the event is external to the will of the parties and unpredictable, but it also must not have been reasonably prevented and overcome."[7] The european jurisprudence has shown that "The notion of force majeure contains an objective element and a subjective element. The objective element concerns unusual and foreign circumstances to the person concerned, while the subjective element is related to the obligation of the person concerned to protect himself from the consequences of the event, taking appropriate measures, without accepting excessive sacrifices."[8] The possibility of obtaining a notice of force majeure is regulated across many countries. "The force certificate is thus mainly used to demonstrate to the other party the existence of certain factual difficulties that hamper performance and seek understanding to privately settle the dispute. If the disputes are brought to the court, the court should consider whether the outbreak and the relevant emergency measure constitute force majeure events pursuant to the governing law, treating the force majeure certificate as evidence of fact."[9]

2.2. Providing facilities for loans granted by financial institutes to certain categories of debtors

Another measure adopted by Romania in response to the effects of COVID-19 pandemic, which has affected many small and medium entreprises, is the adoption of the Government Emergency Ordinance no. 37/2020 on granting facilities for loans granted by credit institutions and non-banking institutions to certain categories of debtors.[10] While these measures also apply to natural persons (consumers), authorized natural persons, liberal professions and other categories of debtors, this subsection shall only approach small and medium enterprises. According to this normative act, debtors, as they are defined by Article 1 letter b), may request the suspension of due claims related to loans, representing installments of capital, interest and commissions, for up to 9 months, but no longer than the 31st of December 2020. Consequently, the maximum credit period may be exceeded by a period equal to the duration of the suspension of the payment obligation. The interest due by debtors corresponding to the due amounts whose payment is suspended according to art. 2 shall be capitalized at the balance of the credit existing at the end of the suspension period. The capital thus increased shall be paid in installments for the remaining period until the new maturity of the loans, after the suspension period. The normative act, in its first version, requested that debtors should justify their financial difficulties by providing an ESC issued by the authorities, which was the main condition that debtors, other than natural persons (consumers), should had fulfill, along with the condition of not being the subject of an insolvency proceeding. However, since the effects of the COVID-19 pandemic upon the business environment have lasted an unexpected amount of time, causing a systemic risk of insolvencies, the Government has issued the Ordinance no. 227/2020 for the modification and the completion of the Government Emergency Ordinance no. 37/2020[11], which has prolonged the timeframe of this facility until the 15th of March 2021. Because the ESCs have been issued for a limited period of time, debtors had been required to present a declaration on own responsibility instead of an ESC. For these debtors to benefit from the facilities regulated by GEO no. 37/2020, as modified by GEO no. 227/2020, certain conditions must be fulfilled by the requestors: (1) to send a written request to the credit institution or to the non-banking institutions; (2) to present a declaration on own responsibility regarding the decrease of by at least 25% of the average monthly income from the last 3 months prior to the request for suspension of payment obligations by reference to the similar period of 2019 or 2020; (3) the debtor shall not be the subject of an insolvency proceeding ; (4) the loan has not reached its maturity and the credit / non-banking institutions has not declared the early maturity at the 30th of December 2020; (5) debtors requesting the facilities shall not be in arrears on the date of their request. Debtors who have initially benefited from this facility were able to file another request, if both requests did not surpass the maximum period of 9 months of payment suspension. Similar measures have been adopted by countries across the world. For instance, according to the International Monetary Fund research[12], most countries which regulated moratoriums have extended this facility to a maximum period of 6 months: Bulgaria (6 months), Croatia (3 months), Czech Republic (6 months). Countries such as Italy and Cyprus have extended the moratoriums for a larger period, which is justified by the fact that the effects of the COVID-19 pandemic were more severe due to the impact on tourism. This facility regulated by most countries is especially important for businesses having a reduced rate of liquidity. "The slowdown of economic activity caused by the COVID-19 outbreak and related lock-down measures implemented to tackle the health crisis have led to severe difficulties for companies to meet their financial obligations."[13] By stimulating companies' liquidity through measures suitable for different types of difficulties, fiscal authorities are able not only to support the business environment overall, but also collect a higher rate of taxes, helping to avoid the systemic risk of insolvency.

3. Fiscal mechanisms adopted in order to help companies avoid financial distress and insolvency

One of the most important measures adopted by the Romanian Government in order to avoid the systemic risk of insolvency are found in Article VII of the Government Emergency Ordinance no. 29/2020. According to Article VII para. (1), for the fiscal obligations due starting with the 21st of March 2020 and not paid until the 25th of December, authorities have not calculated and instituted interest and penalties for the delay, by derogation from the Fiscal Procedure Code, approved by Law no. 207/2015[14], with subsequent amendments and completions. Furthermore, according to para. (2), unpaid fiscal obligations in this period of time have not been considered to be due. This measure has been extremely helpful, especially for companies whose activities have been restricted, most of them

having faced the risk of insolvency. The Romanian law considers a company to be in a state of insolvency when it has an insufficiency of available cash to pay its undisputed, liquid and enforceable debts. By postponing the due date of fiscal obligations up until the 25th of December 2020, Romania has achieved the direct avoidance of small and medium enterprises. In the meantime, since the due date of fiscal claims had been delayed, fiscal authorities had also suspended or delayed the enforcement of budgetary claims. However, these safeguard measures are no longer applicable in this very moment, and the pandemic does not seem to end soon. "Smaller firms tend to face more severe financial constraints during COVID-19 even in advanced countries."[15] This is why, starting with the date on which these facilities were no longer in force, authorities have had to regulate new mechanisms to come in distressed companies' support.

3.1. Simplified rescheduling of budgetary obligations

Since the instauration of the state of emergency in the 16th of March 2020 in Romania, small and medium enterprises have faced difficulties in paying budgetary taxes. The authorities have raised the issue that these companies also face the risk of accumulating new debts, which could bring them in a state of insolvency. Therefore, in order to provide opportunities for an economic recovery, the Government Emergency Ordinance no. 181/2020 on some fiscal-budgetary measures, for amending and supplementing some normative acts, as well as for extending certain deadlines[16] has been issued. This normative act allows debtors to reschedule their budgetary debts for a period of maximum 12 months, without providing any guarantees, as long as the due date of these debts begins with 16th of March 2020. According to Article 1 para. (1), both main and accessory fiscal obligations may constitute the subject of simplified rescheduling. However, debtors intending to access this fiscal mechanism need to fulfill several conditions: (1) to file a request until the 30th of September 2021; optionally, debtors may propose a rescheduling program; (2) to not be the subject of an insolvency proceeding; (3) to not be dissolved; (4) to not have budgetary debts that were due before the date on which the national emergency state was instaured; (5) to not have been held liable according to insolvency and fiscal regulations; (6) to have filed all fiscal declarations. It needs to be mentioned that the possibility of rescheduling budgetary claims has been regulated in the Code of fiscal procedure since 2015; however, the classic rescheduling of budgetary claims regulates debtors' obligation to provide guarantees when the claims surpass an amount of 20.000 lei (approx. 4.000 euros). The mechanism of simplified rescheduling of budgetary claims does not require debtors to provide guarantees. Moreover, one of the greatest advantages of this facility is the fact that debtors may request a differentiated payment of the installment rates. This possibility is especially suitable for seasonal businesses, whose repayment capacity is higher in certain periods of the year. However, each monthly rate must be at least equal to 5% of the total amount due. The fiscal authorities analyze the debtor's request in 5 business days from the date of its registration, issuing a decision of payment rescheduling or a decision of rejection of the debtor's request, as the case may be. If the debtor's request is approved, the decision of payment rescheduling shall establish the amount and terms of payment of the installment rates. Since the installments' due date is modified by the fiscal authorities' decision, for the amounts that are subject of the rescheduling, the enforcement proceedings shall not begin or shall be suspended, as the case may be. However, debtors are still obliged to pay current fiscal claims, along the debts that are rescheduled. This fiscal mechanism has helped debtors to stabilize their financial state and to consolidate their business' ongoing concern principle, reducing the risk of systemic insolvencies. Several countries have adopted a similar fiscal mechanism, or have even extended the suspension of tax payments. For example, Hungary has regulated a fiscal mechanism that allows debtors to reschedule or even extend deferred payments.[17] In Latvia, the tax administration is entitled to reschedule or postpone the performance of the delayed tax payments for a period of up to three years.[18] According to the author's research, countries across the world have adopted fiscal facilities that were available for a limited amount of time, but were subsequently prolonged.

3.2. Restructuring of budgetary claims

One of the most complex fiscal mechanism adopted by the authorities consists of a restructuring of budgetary claims, based on the Government Emergency Ordinance no. 6/2019 on the establishment of fiscal facilities.[19] Initially, in 2019, authorities had issued this normative act for debtors who registered budgetary debts of more than 1.000.000 lei (approx. 200.000 euros), and that were due on the 31st of December 2018. However, this fiscal facility had been available for a very short time, starting with the 8th of August 2019, until the 25th of September 2019. The deadline for submitting an intention of restructuring budgetary claims by debtors has then been extended to the 31st of October 2019. Concerns of a new virus spreading rapidly worldwide had already began at that

[18] Ibidem.
[19] Published in the Official Journal no. 648/05.08.2019.

point. Thus, the fiscal facility had been once more extended to an amount of time, starting with the 1st of February 2020 until the 31st of July 2020, the latter date being furtherly extended until the 30th of September 2020. The pandemic and the length of the restrictions imposed by authorities had generated the need for the repeated extension of the deadline of this particular fiscal mechanism. At this time, the deadline for debtors intending to access this mechanism is the 30th of September 2021, but may be extended once more, depending on the evolution of the sanitary crisis. Initially, this fiscal mechanism had been applied to companies owing more than 1.000.000 lei that were due. However, because small and medium enterprises had also needed alternatives to restructure their budgetary debts, the simplified rescheduling of debts not providing enough time for some SMEs, the authorities have eliminated the limit of at least 1.000.000 lei in budgetary debts and therefore the scope of the law had extended to any debtor, regardless of the amount of due budgetary claims. According to Article 1 para. (1), the purpose of the law is avoiding the opening of insolvency proceedings of certain categories of debtors, except for public institutions. Of course, several conditions must be fulfilled by debtors in order to access this fiscal mechanism: (1) to not meet the conditions to access the classic payment rescheduling regulated by the Code of fiscal procedure; (2) to present a restructuring plan and a private creditor test, prepared by an independent expert; (3) to not be the subject of an insolvency proceeding; (4) to not be dissolved; (5) to have submitted all fiscal declarations, according to their fiscal vector; (6) to fulfill the private creditor test, in accordance to this normative act. The private creditor test is also defined in the Law no. 85/2014 on pre-insolvency and insolvency proceedings, according to which it is a method to compare the manner in which budgetary claims may be satisfied by reference to a diligent private creditor in a pre-insolvency or reorganization proceeding and the manner in which they may be satisfied in a bankruptcy procedure; this comparison is based on a valuation report prepared by a chartered valuator, member of ANEVAR (Romanian National Association of Chartered Valuators), appointed by the budgetary creditor, and addresses inclusively the duration of a bankruptcy proceeding by comparison to the proposed payment schedule; the event in which the private creditor test confirms that the amounts which the budgetary creditor would receive in a pre-insolvency or reorganization proceeding are higher than the amounts it would receive in a bankruptcy proceeding, shall not be deemed to be an event of state aid (Article 5 point 71). The GEC no. 6/2019 however provides a slightly different definition of the private creditor test, since the subject of a restructuring plan should not simultaneously be in an insolvency proceeding. Therefore, in the fiscal perspective, the private creditor test is an independent analysis, performed based on the premises considered in the debtor's restructuring plan, which shows that the state behaves similarly to a private creditor, sufficiently prudent and diligent, which would obtain a higher recovery degree of receivables in the version of restructuring compared both with the version of enforcement and the opening of the bankruptcy proceeding. If debtors fulfill all the requirements, they need to file a notification regarding their intent to benefit from this fiscal mechanism, and to address an independent expert drafting the restructuring plan and the private creditor test. After receiving the debtor's notification, the competent fiscal body verifies if the debtor has fulfilled its declarative obligations according to the fiscal vector until the respective date, performs the settlements, compensations, and any other operations necessary in order to establish with certainty the budgetary obligations that may be subject to restructuring. This particular fiscal mechanism presents numerous similarities with the insolvency proceedings and with the judicial reorganization proceedings, in means of filing an intention to benefit from these mechanisms, fulfilling the private creditor test in some cases, the suspension of enforcements proceedings, applying the so-called *haircuts* translated in cutting a part of the due debts, under the condition of successfully executing the restructuring plan and, of course, the restructuring plan itself. However, the restructuring plan prepared by the debtor needs to approach and detail information regarding: (1) the causes and the extent of the financial difficulty, as well as the measures implemented to overcome them; (2) its patrimonial state; (3) information regarding the causes why the debtor cannot benefit from the classic payment rescheduling in accordance with the Code of fiscal procedure and (4) presenting planned restructuring measures having clear deadlines, ways to restructure budgetary claims, as well as relevant economic-financial indicators to demonstrate the debtor's viability restoration. The normative act exemplifies several restructuring methods which may be integrated in the restructuring plan. One of the greatest advantages provided by this fiscal mechanism is the fact that the restructuring plan may establish a reimbursement period of 7 years which, in some conditions, may be extended with 3 more years, reaching a total of 10 years. Moreover, the restructuring plan may also establish a cancellation of up to 50% of the main budgetary claims, under some conditions, except those concerning the main budgetary and ancillary obligations representing State aid to be recovered. The independent expert drafting the restructuring plan also needs to supervise the debtor's activity and the execution of the plan, periodically drafting and submitting reports to the debtor and the fiscal body. Also, the head of the competent tax authority may designate one or more persons to carry out the supervision of the plan's execution; in the author's opinion, the other person besides the independent expert drafting the restructuring plan could be the members of the management and / or supervisory bodies in the company that is subject of the fiscal

restructuring proceeding. During the restructuring plan's unfolding, if the supervisors find that the debtor has not fulfill an obligation in due time, they shall notify the debtor, granting a reasonable amount of time for adjustment which may be extended for justified reasons, but no longer than 6 months. If debtors face yet again difficulties during the restructuring plan's unfold, they may modify the initial restructuring plan but under some conditions such as to do so before the unfulfillment takes place and to present an adjusted restructuring plan and a private creditor test. For the budgetary obligations contained by the restructuring plan, the competent fiscal authorities shall suspend or shall not begin enforcement proceedings. Clearly, this fiscal mechanism is highly flexible and consists of a valuable instrument for the business environment. Nevertheless, as considered in the insolvency law, the claims that are subject of the restructuring plan are considered to be historical claims and, since this fiscal mechanism ensures the debtors' ongoing concern principle, debtors will likely generate current claims, which are to be paid according to the documents they derive from and at specific terms, which means that debtors should have a high reimbursement capacity or liquidate a part of its patrimony, in order to be able to meet all assumed obligations. In cases in which debtors may not carry out the restructuring plan as foreseen, the fiscal restructuring plan shall fail. The plan's failure generates the fiscal authorities' obligation to file a request of opening the insolvency proceeding against the debtor. This provision of the law may be considered as a sanction applied upon the debtor for the restructuring plan's failure, since the debtor itself had suggested its planned recovery measures in the first place. Even if the debtor would become the subject of an insolvency proceeding in this scenario, it may notify its intent of accessing the judicial reorganization proceeding, having one last chance to try to recover from financial distress. However, the judicial reorganization proceeding is extended to an initial period of 3 years, without having the possibility to surpass a total period of 4 years, while this fiscal mechanism provides an initial period of maximum 7 years, which may extend up to a total of 10 years. Considering these aspects, it is without a doubt that the fiscal mechanism of restructuring budgetary obligations is more flexible and could ease the debtor's financial distress, meaning that if the debtor may not execute the restructuring plan, its recovery chances are uncertainly low in the scenario of converting to the judicial reorganization proceeding.

4. Conclusions

This paper has analysed some of the mechanisms adopted by Romania in order to avoid systemic insolvency among small and medium enterprises, greatly affected by the COVID-19 pandemic and numerous measures of businesses' activity limitation or restriction. Since the pandemic has had a worldwide impact, each country has adopted an economic policy in response to the negative effects upon the business environment. In the author's opinion, Romania has been adopting economic and fiscal mechanisms that are suitable to each type of business, regardless of its size. These mechanisms concerned debtors' temporary incapacity of fiscal obligations and loans' reimbursement, the situation of their ongoing contracts, as well as other aspects which may have consisted of a difficulty risking becoming a state of insolvency. The author believes that the effects of the COVID-19 pandemic upon the economy are yet to unfold but, when the fiscal mechanisms presented in this paper (any many others) shall no longer apply, numerous businesses would file for insolvency. This is why the author believes that these mechanisms should apply for an extended period of time, calculated in years. It is yet uncertain how long will the pandemic last and, even if it comes to an end in the near future, its effects upon the economy would last for years, which is why the fiscal mechanisms presented in the second section of this paper should become permanent. Another reason would be the fact that the mechanism of budgetary obligations' restructuring is perfectly compatible with the preventive composition, a special proceeding aiming at the prevention of the state of insolvency. Of course, in addition to the mechanisms presented in this paper, Romania has adopted numerous other measures and mechanisms for businesses affected by the effects of the COVID-19 pandemic, which may form the subject of further research work given the fact that corporate recovery from financial distress or insolvency is a general topic of interest.

ASSIGNMENT OF THE CONTRACT. A SPECIAL CASE IN THE MATTER OF THE INSURANCE CONTRACT

Ștefan Matei DĂNILĂ*

Abstract

Special situations may arise in the relations between the contracting parties, which may lead to a substitution of the party in the insurance relations - the assignment of the insurance contract

With regard to the assignment of the insurance contract, each party may substitute a third party for its insurance relations. The general provisions on assignment, namely those provided by Art. 1315 and Art. 1316 of the Civil Code and those of Art. 1566-1586 Civil Code on the assignment of debt, the special provisions of Art. 2212 Civil Code in the matter of the insurance contract, together with the provisions of the special legislation, such as Law no. 190/1996 on the mortgage contract for real estate investments, provide the regulatory framework necessary to carry out the operation.

In terms of insurance, in accordance with the provisions of Art. 2212 of the Civil Code – "Assignment of insurance", the insurer may assign the insurance contract only with the written consent of the insured.

The doctrine has shown that the assignment contract inserted in an insurance contract can be consensual, but it is necessary, ad probationem, that the agreement of the other party regarding the assignment take the written for

The concrete legal conditions under which the assignment of the insurance contract may occur will be analyzed subsequently, with various solutions of the courts being commented upon in context.

Keywords: *assignment of insurance, insurance contract, insurance indemnity, written consent, substitute a third party*.

1. Introduction

The purpose of this work is to provide an overview of the institution of the assignment of the contract.

The general and special legal provisions governing the institution of the assignment of the contract and the insurance allowance, the legal nature of the assignment operation, the formal conditions of the contract and legal conditions such as the inalienability clause or the need for the indemnity beneficiary s consent, will be reviewed and commented on.

Some of the particularities of judicial doctrine and practice will be brought up in a predominantly jurisprudential approach.

Finally, without the pretence of exhausting the subject, some conclusions will be drawn, based mainly on the judicial practice analyzed.

1.1. Gouverning rules

In carrying out this legal operation, general provisions regarding the assignment will have to be taken into account, respectively those provided by Art. 1315-1316 of the Civil Code (assignment of the contract), those of art. 1566-1586 of the Civil Code (assignment of debt), as well as the special provisions regarding the insurance contract included in Art. 2212 of the Civil Code - provisions, which restate and reinforce some of the already in force provisions in general matters regarding the assignment.

Under the provisions of Art. 1315 of the Civil Code on the assignment of a contract, a party may substitute a third party in the relations arising from a contract only if the services have not yet been fully performed, and *the other party agrees* to it. There are exempted specific cases provided by the law. The assignment contract must be concluded in the form required by the law for the validity of the pre-existing legal act. (art. 1316 Civil Code).

The assignment of the debt is regulated, as a general rule, by the provisions of Art. 1566-1586 of the Civil Code.

In terms of insurance, in accordance with the provisions of Art. 2212 of the Civil Code – "Assignment of insurance", the insurer may assign the insurance contract *only with the written consent of the insured.*

In what follows we ll referr to som proof for and form of assignment contracts, some courts decided that, in the absence of a receivable assignment contract effectively concluded, other documents may not stand for such agreement. Such documents may have the effects of a contract on behalf of a third party beneficiary but, in the absence of a specification of such *de jure* ground for an action, courts may not exceed the limits of their mandate. At the same time, the filing of an indemnity claim in which the indemnity beneficiary specifies the payment manner is not equivalent to o receivable assignment, since there is no legal relationship between the service unit and the insurer. The (partial) payment by the beneficiary indicated in the indemnity claim can be equivalent to a receivable assignment. If the receivable assignment is a liberality, it must meet the requirement of authentic form. If the receivable assignment is a sale and purchase operation, in order to be valid, it should have been performed in exchange for a price set in money. Otherwise, the

* PhD Candidate, Faculty of Law, "Nicolae Titulescu" University of Bucharest (e-mail: mstdanila@gmail.com).

contract is absolutely null, at least in terms of the sale and purchase, since it lacks an essential element in relation to which the parties need to reach an agreement (Art. 1295 of the 1864 Civil Code).

1.2. Legal nature. Assignment or subrogation?

In the doctrine, in a relatively recent study on the assignment of a debt, it was highlighted that the valences of the conventional subrogation clauses inserted in an insurance contract represent a controversial aspect[1]. Taking some opinions previously expressed in the doctrine, it has been shown that, in addition to the legal subrogation, the insurer can agree with the insured that a conventional subrogation is made, even before the payment of the indemnity[2]. On the other hand, it has been disputed that such an agreement concluded prior to the payment of the indemnity would have the value of a conventional subrogation, and it has been argued that such a legal act is, in fact, an assignment of a debt[3]. Finally, it was concluded that such a stipulation, which occurred prior to the payment, could only constitute a *possible assignment of a debt or a promise of subrogation*[4].

In the judicial practice it was considered that the legal nature of the agreement concluded by the plaintiff and the intervener, prior to the promotion of the action, is a subrogation agreed by the creditor, under Art. 1594 para. 1 of the Civil Procedure Code. It has thus been stated, by case-law, that the plaintiff, being the beneficiary of the insurance under the subrogation agreed by the creditor, is the one entitled to compensation as a result of the occurrence of the insured event, a solution justified also by the fact that the transferee mentioned that he had no longer a reason to appeal to the policy transferred in his favour, communicating to the transferor a notification by which he had agreed to subrogate it to his rights in respect of the collection of the insurance indemnity[5].

1.3. The condition of the written form

In the case of the insurance contract, its conclusion by simple agreement of will is valid, but *the written form* of the contract is required *ad probationem*.

Starting from this legal reality, the doctrine has shown that the assignment contract inserted in an insurance contract can be consensual, but it is necessary, ad probationem, that the agreement of the other party regarding the assignment take the written form[6].

1.4. Assignment of the contract by the insurer

The assignment of the contract by the insurer is possible under the conditions of Art. 2212 of the Civil Code, respectively only with the written consent of the insured.

The insurance contract was concluded by the insured, who had the option of choosing the insurer, an option that he must keep and whose modification depends on the consent of the insured. Therefore, the provision of Art. 2212 of the Civil Code - in the meaning of the need for the written consent of the insured to operate the assignment - is fully justifiable.

The exception to the rule is contained in the provisions of Art. 2212 para. 2, in the sense that the written agreement is not required when an assignment of insurance portfolios occurs between insurers, an operation subject to special regulations.

1.5. Assignment of the contract by the insured

According to the content of Art. 2112 of the Civil Code - special provision in the matter of the insurance contract - there is no possibility of the assignment of the insurance contract by the insured.

In relation to the general legal provisions on the assignment of the contract, however, the operation is possible in the event of a written agreement of the contracting parties in this regard. The written agreement is claimed by the corroborated provisions of Art. 1315 and 1315 of the Civil Code, which impose the double condition that the services have not been fully executed, and that the other party consents to the transfer.

Although not expressly provided for in the Civil Code in the matter of the insurance contract, the institution of the assignment of the insurance contract at the initiative of the insured is stipulated in other special legal provisions[7].

Thus, Art. 16 of the Law no. 190/1999 on the mortgage loan for real estate investments stipulates that, in case of mortgaging a building, the borrower (the insured - in our case) will conclude an insurance contract covering all its risks, a contract in which the lender will appear as the beneficiary of the insurance policy. The rights of the insured arisen from the insurance contract will be assigned in favour of the mortgagee for the entire period of the loan for real estate investments, following that, if the compensations granted exceed the amount of the remaining mortgage to be repaid and the other amounts due to the lender, the difference is granted to the beneficiary of the loan or his heirs. In accordance with the provisions of Art.

18 of the same regulatory document, the insurance contracts provided for in Articles 16 and 17 shall be concluded with an insurance company, and the lender shall not have the right to impose on the borrower a specific insurer.

Regarding the issue of taxation of the insurer, the judicial practice, with some exceptions, seems to make the provisions of the above-mentioned Art. 18 effective. Thus, in judicial practice it was also decided that the clause contained in a loan agreement, according to which the borrower has the obligation to conclude an insurance contract with an insurance company approved by the bank, is not abusive. The Borrower had challenged the validity of that clause, stating that it violated the provisions of Art. 18 of the Law no. 190/1999, the law forbidding the bank to impose on the borrowers the insurance company, all the more so to choose it. The borrower also claimed that, given that a party of the insurance contract is the debtor, as well as that all insurance costs are borne by him, he must freely choose his insurance company.

In a broader comment on that judgment[8], it is stated that the court asked to examine the validity of the clause found that "that clause - a clause contained in *an insurance of credit, guarantees and financial risks* - is only the application of the legal text provided for by Art. 16 of the Law no. 190/1999. Thus, according to Art. 16 para. (1) of the Law no. 190/1999, "*in case of mortgaging a construction, the borrower will conclude an insurance contract covering all the risks related to it. The insurance contract will be concluded and renewed, so as to cover the entire duration of the credit*". Next, para. (2) of the same article states that "*The rights of the insured arising from the insurance contract provided for in para. (1) shall be assigned in favour of the mortgagee for the entire period of validity of the mortgage loan agreement for real estate investments.*" The court also found that "the provision of Art. 12.2 of the contract does not violate the provisions of the Law no. 193/2000 and is not abusive, as it does not impose an excessive obligation on the consumer. This is because the plaintiffs have a legal and contractual obligation to conclude *an insurance policy*, and it is assigned to the Bank precisely in order to benefit from any sums of money that would be paid in case of a *force majeure event* that would lead to the destruction or serious damage of real estate. *The mortgage loan agreement* without securing the mortgaged real estate by concluding an insurance policy, would no longer have the same efficiency for the protection of the only guarantee received by the Bank. In the event of a possible accident, the amount collected by the transferee insured (bank) will take the place of the real estate, and, in case of non-payment, it will go to the insured amount in order to satisfy the guarantee. The court dismissed the arguments of the parties regarding the abusive nature of this contractual rule, as the debtor's lack of a guarantee was irrelevant in this situation. Under loan agreements, the bank's obligation to hand over the amount of the borrower exists and is executed even from the beginning of the contract, and, therefore, there is also the risk of non-payment by the borrower. This is also the reason for establishing the guarantees in the borrower's patrimony, respectively the recovery of the borrowed money. The contractual balance referred to by the plaintiff must also be related to the specifics of the *mortgage loan agreement*. Thus, the plaintiff states that she does not benefit of any protection in the event that the insured risk occurs, the bank benefiting entirely from the insurance, even though the plaintiff pays the insurance premium. It is true that, in this situation, the bank benefits from the insurance, but the court must take into account the very contract concluded between the parties, namely the mortgage loan contract. Under this contract, the lender lends the borrower *only* as a result of securing the contract by mortgaging a real estate. Or, if that real estate is destroyed, then the guarantee remains without effect. This is precisely the reason why the bank is required to conclude a real estate insurance contract. It is the lender's method of securing the investment as best as possible"[9].

The solutions are not yet uniform, and there is a practice to the contrary. Thus, in a case involving *credit insurance, guarantees and financial losses*, the court gave effect to the insured's claim and found the abusive nature and the partial *nullity* of the clause included in the credit agreement regarding the borrower's obligation to conclude an insurance contract with a company approved by the bank[10].

1.6. Assignment of the insurance indemnity

Pursuant to the provisions of Articles 1566-1586 of the Civil Code regarding the assignment of a debt, in the absence of a clause expressly stipulated in the insurance contract prohibiting such assignment or making it conditional on compliance with a certain procedure for exercising the rights arising from the assignment, the assignment of rights carried out by the insured may occur. The provisions of Art. 1568 paragraph (1) of the Civil Code stipulate that the assignment of the debt transfers to the assignee all the rights that the assignor has in relation to the assigned debt as well as the guarantee rights and all other

[8] Art. 12.2 of the respective contract provided the following: "The insurance policy will be assigned in favour of the Bank and its original will be deposited at the Bank's office mentioned in the first paragraph of the Contract. The assignment can be made by mentioning by the insurance company of the expression "*full assignment in favour of the Bank*" on the policy or by written notification from the Insurer certifying the assignment".

[9] In this regard, see the Civil Decision no. 17519 of December 8, 2014 delivered by the Timișoara Court, Second Civil Section, available on idrept.ro.

[10] For such a solution of judicial practice see Civil Decision no. 309 of February 16, 2017, delivered by Bucharest Court of Appeal, the 5th Civil Section, published on idrept.ro, a practice solution quoted also in "Civil and Commercial Contract Law. Theory, Caselaw, Models", authors Vasile Nemeș, Gabriela Fierbințeanu, Hamangiu Publishing House, version 2020, p. 673.

accessories of the assigned debt, the legal procedure for the assignment of this debt being notified to the defendant for payment. Pursuant to Art. 1570 of the Civil Code, the assignment that is prohibited or limited by the agreement with the debtor does not produce effects regarding the debtor, unless: a) the debtor has consented to the assignment; b) the interdict is not expressly mentioned in the document establishing the debt, and the assignee did not know and should not have known the existence of the interdict at the time of the assignment, c) the assignment regards a debt that concerns a sum of money. In the event of an assignment of a future debt, the document must include the elements enabling the assigned debt to be identified. The debt shall be deemed to have been transferred from the time the assignment contract is concluded (Art. 1572 of the Civil Code).

1.7. The agreement in the case of insuring the good that is subject of a mortgage loan agreement or a leasing contract

In the case of assignment of rights from the insurance contract to the mortgagee, the payment of compensation to the insured is conditioned by the agreement of the bank, a provision that is usually found as a standard clause in property insurance contracts.

The legal practice has confirmed that, in the case of a clause for the assignment of rights regarding the compensation, in order to legitimize its legal standing and, at the same time, to be able to obtain the compensation for himself, the insured must present the written consent of the beneficiary regarding the right to compensation arising from the contract.

Thus, in a solution of judicial practice it was noted that, "as long as the insurance contract provides for a beneficiary designated by the insured to receive the compensation, the respondent may not pay any compensation without the express written consent of the beneficiary .... Since the written agreement of the banking unit in favour of which the compensation rights are assigned has not been submitted to the case file, it cannot be argued that in this case C.B. appropriated the action of the insured plaintiff ..... Given that the plaintiff has not proved her legal standing in this case, even if she is a party to the invoked insurance contract, the rights arising from it are assigned in favour of C.B., so that the court will reject the appeal declared by the judicial liquidator"[11].

However, there have also been contrary solutions, considering that "the insertion of the bank into the insurance policy as beneficiary gives active procedural legitimacy to claim compensation only to it and not to the plaintiff in the case in question (the insured), even if there were notifications, submitted to the case file, concerning the bank's agreement to pay the plaintiff directly. As the legal conditions provided for in Art. 36 of the new Code of Civil Procedure for bringing this action to court were not met, the courts of first instance and appeal, in relation to the statements from the insurance policy, and the general conditions of the contract, held that the plaintiff did not have legal standing in the case, the beneficiary of the payment being expressly indicated as U.C. T Bank and dismissed the action on this plea"[12].

1.8. Status of assignment of mortgaged and privileged debts – except insurance agreement

A case in which the validity of the assignment of rights arising from the credit insurance contract for real estate investments is not conditioned by the will of the contracted insurance company, is that of the assignment provided by the provisions of Art. 24 of the Law no. 190/1999. Art. 24 of the Law no. 190/1999 on mortgage credit for real estate investments regulates the possibility of assigning mortgaged and privileged debts, from the portfolio of an institution authorized by law, to another financial institution authorized to operate on the capital markets. The assignment will only concern the mortgaged debts in the portfolio held, which have common features regarding their nature, origin and risks. The notification of the assignment will be made for opposability and not for its validity. As a result of this operation, the transferee acquires, in addition to the mortgage right related to the mortgage loan for the real estate investments, also the rights arising from the insurance contract for the property that is subject to this mortgage. The opposability of the assignment of the rights arising from the insurance contract is carried out, towards third parties, by registration in the Electronic Archive for Security Interests in Movable Property, and towards the insurer, by letter with acknowledgement of receipt or through bank collecting officers agent or legal receivers.

1.9. Inalienability clause. Case-law approaches

In judicial practice, the courts have been referred to in countless cases with sue petitions in which the compensation was requested by the transferee. Specifically, the insured, who was the holder of a casco insurance contract, proceeded to assign the debt to the service unit repairing the vehicle damaged in a car accident and for which the insurance company had opened a claim for damages file and owed compensation.

To the extent that in the insurance contract there was a contractual provision regarding the prohibition of the assignment of the debt or its conditioning by the agreement of the insurer, the solutions of the courts varied.

1.10. The conditions provided by Art. 1570 paragraph 1 of the Civil Code. Interpretation

The judicial practice has also stated that the situations inserted in the content of Art. 1570 para. 1 of

[11] In this regard, see the Civil Decision no. 13 of 13.01.2015 delivered by the Cluj Court of Appeal, second Civil Section, available on www.rolii.ro.

[12] In this regard, see the Civil Decision no. 43 / 04.02.2015 delivered by the Iași Court of Appeal, the Civil Section, available on www.rolii.ro.

the Civil Code are independent, and do not constitute conditions that must be met cumulatively. Consequently, although the assignor carried out the assignment without first seeking the debtor's consent, it was stated that the assignment would produce effects in respect of the debtor. In that case[13], regarding the inalienability clause, it was shown that the provisions of Art. 1570(1)(c) of the Civil Code are applicable, so that the assignment produces effects towards the debtor, since at issue is a debt that concerns sums of money. The situations inserted in the content of Art. 1570 para. 1 are independent, not constituting conditions that must be fulfilled cumulatively. Consequently, although the assignor has made the assignment without first seeking the debtor's consent, the assignment will produce effects with respect to the debtor, according to the above-mentioned legal grounds. In that case, the provision of Art. 38.1 of the Insurance Conditions regarding the interdict of assignment, does not constitute an inalienability clause as set out in Art. 1570 of the Civil Code, because in the light of the latter article, the legislator establishes which are the three cases/situations that are not subject to the inalienability clause of the debt. In other words, the given situation involves the assignment of a debt, which consists of a sum of money that the insured assignor sends to the assignee and has to collect it from the debtor (insurance company and defendant in this case). Thus, from the interpretation of the wording of Art. 1570 para. 1, it results that the assignment of debt produces effects towards the debtor and is valid, because it fits perfectly in one of the conditions/situations laid down in Art. 1570 of the Civil Code (respectively in the one set out in letter c) and is opposable to the debtor. It is also shown that the legislator, by art. 1570 of the Civil Code, does not establish conditions but establishes cases, situations or, more precisely, exceptions from the rule of non-enforceability of the assignment prohibited or limited by the agreement of the assignor with the debtor. In order to be able to speak of cumulative conditions, the legislator had to expressly provide for this, using the phrase: "unless the following conditions are cumulatively met: (...)" ... The debtor may have an interest in maintaining contractual relations with a particular creditor, by inserting in the contract, for this purpose, a clause of inalienability of the debt or stipulating limits of the assignment. However, the assignment of debt is an extremely important mechanism in a modern economy, through its ability to promote the movement of capital and, therefore, limiting the effects of such an inalienability clause is not only natural, but also necessary. According to the concept of the new Civil Code, inspired by the Unidroit Principles (art. 9.1.9), the transfer of the right of claim may be opposed by the assignee to the debtor, even in the presence of non-assignable or conventional limitations, if the debtor has consented to the assignment or if the prohibition or the limitation, which does not appear in the text of the ascertaining document, could not and should not have been known by the assignee at the time of the assignment. Also, the inalienability clause does not produce effects towards the assignee, if the assignment concerns a pecuniary claim, regardless of whether or not it was recorded in the ascertaining document. The law, thus, gives preference to the need for credit and the use of monetary claims as a tool for financing economic activity. In this regard, the Timiș Tribunal also ruled, by the civil decision of 26.03.2013, in a similar case, following the verification of the legality and validity of another decision delivered in a case settled by the Timișoara Court. By this decision, the Tribunal found the defendant's appeal versus the respondent to be groundless, and consequently found legal and valid the decision by which it was obliged to pay the compensation that was the subject of the assignment contract concluded with its insured. In relation to all these arguments, the appellate court ruled that the provisions of Art. 38.1 of the Insurance Conditions, do not constitute an inalienability clause as provided for in Art. 1570 Civil Code, because in the light of the latter article, the legislator establishes which are the three cases/situations that are not subject to the inalienability clause of the debt".

1.11. Requirement for the indemnity beneficiary's consent in case of an inalienability clause

In other cases, it has been decided otherwise, in the sense that the assignee could not receive the indemnity, because the provisions of the insurance contract, which prohibited the assignment of the right to indemnity without the insurer's consent, were not observed. Following an examination of the case documents and works, the court decided that the objection raised to the plaintiff's lack of standing capacity to sue was founded, based on the following reasons: "According to the provisions of Art. 36 of the new Civil Procedure Code, the standing capacity results from an identity between the parties and the subjects of a litigious legal relationship, as referred to the court. Hence, the standing capacity to sue requires an identity between the person of the plaintiff and that of the holder of the right referred to the court. In the case, the plaintiff vested the court with a claim based on an optional insurance contract for fire and other risks concluded between the parties. According to the "Special Provisions" clause of the insurance policy "Insurance rights are assigned in favor of Raiffeisen Bank. The property (stocks, equipment etc.) subject to insurance is mortgaged in favor of Raiffeisen Bank SA. The amounts due as insurance indemnity will be paid to a separate bank account opened with Raiffeisen Bank in the name of the policyholder, an account that will be available to Raiffeisen Bank". According to clause 6.5

[13] In this regard, see the Civil Decision no. 351/22.04.2013 delivered by the Timiș Tribunal on appeal. The court decision is available on www.rolii.ro.

of the insurance contract " (1) In the case of insurance contracts concerning assets mortgaged or pledged in favor of a creditor, the rights/receivables set forth by the insurance contract will be assigned by the policyholder to the relevant creditor up to the concurrence of the value of its right, by notifying the policyholder in writing about this, while the policyholder will receive only the difference. (2) Based on the express consent of the creditor, the indemnity may be paid to the policyholder". Based on these contractual provisions, the court established that the right of the policyholder-plaintiff to indemnity deriving from the insurance contract on which its claim is based was assigned in favor of a third party beneficiary - Raiffeisen Bank. As a result, even though, under the insurance contract, the plaintiff is the policyholder, due to the fact that the policy beneficiary is a third party, only the latter may request for the indemnity payment. Based on the aspects mentioned above and on the fact that the consent of the insurance third party beneficiary was not proven, in order to enable the indemnity payment to the plaintiff (the policyholder), the court will admit the objection raised to the lack of standing capacity to sue and, as a result, will dismiss the sue petition as being filed by a person lacking such standing capacity to sue" [14].

1.12. Requirement regarding the existence of a serious reason for a payment refusal

In some cases, courts decided that an indemnity may be granted to the receivable's assignee. They established that, even though the general conditions of the CASCO insurance contract stipulate that the policyholder is expressly prohibited to transfer its rights and obligations arising from the contract in the form of a receivable assignment, the sanction being that of refusing to pay the indemnity to the third party, yet, the sanction does not consist in an invalidation of the receivable assignment contract. This is and remains validly concluded. Moreover, it is also binding on the other party because it has been notified to the latter. The court also established that the provisions of Art. 1570 para. 1 item c of the Civil Code, under which: „ (1) *An assignment that is prohibited or limited by an agreement between the assignor and the debtor does not produce effects for the debtor unless:* ***c)*** *the assignment concerns a receivable the object of which consists in a money amount.",* were applicable in the case. The sanction established by the parties for non-observance of the provisions of Art. 47 para. 1 of the General Terms of the CASCO insurance contract consists in a refusal to pay the amount to the third party assignee, but the insurer failed to justify, based on a well-grounded and unequivocal reasons, its refusal to pay. Hence, in the absence of such reason, the court cannot apply the above-quoted contractual provisions"[15].

1.13. The particular situation deriving from Art. 4 para. 1 item b of Law no. 213/2005

In a different case decision, the supreme court established that, in a particular situation where the court acknowledges the applicability of the provisions of Art. 4 para. 1 item b) of Law no. 213/2005, the category of beneficiaries of indemnity paid through the guarantee fund will include only policyholders, insurance beneficiaries and prejudiced parties. The law does not prohibit the conclusion of legal documents whereby an insurance creditor transfers the insurance receivable held by it, but this situation is not applicable in the relevant case, in which the assignment concerns a receivable arisen under a collaboration agreement, not an insurance contract, and the assignor (the service unit) did not act as insurance creditor. The current legal framework does not include such express provision, as the lawmaker has understood to restrict the category of beneficiaries of compensations paid to policyholders through the guarantee fund.[16]

Form of the assignment contract and proof for its conclusion. In this respect, the opinions of courts were also diverging :

1.14. Assignment versus contract on behalf of third party beneficiary. Requirement regarding the existence of an effectively concluded assignment contract

Some courts decided that, in the absence of a receivable assignment contract effectively concluded, other documents may not stand for such agreement. Such documents may have the effects of a contract concluded on behalf of a third party beneficiary but, if such legal basis is not indicated for the action, the courts of first instance and the courts adjudicating in appeal may not exceed the limits with which they were vested. In this context, the courts established that a receivable assignment required an assignor, an assignee and an assigned debtor and that, in order to deal with a receivable assignment, there should be an agreement, whereby the vehicle owner transfers its receivable right held against the assigned debtor (the MTPL policyholder – the appellee-respondent) to the assignee service unit. The court established that such agreement was not proven in that case, because the indemnity claim relied upon by the appellant-plaintiff included only the agreement of the owner (the presumed assignor) and not that of the service unit (the presumed assignee). At the same time, the indemnity claim was filled in on a form prepared by the assigned debtor and, as it results from its content, was addressed precisely to the debtor. Therefore, this indemnity claim did not

[14] See for this purpose Civil Decision no. 998/11.04.2019 rendered by the Sixth Civil Division of Bucharest Tribunal, involving an obligation to comply. The court decision is available at www.rolii.ro.

[15] See for this purpose Civil Decision no. 639/08.05.2018. The court decision is available at www.rolii.ro.

[16] See for this purpose Decision no. 2852/2019 of 29-May 2019 rendered by Bucharest High Court of Justice-Administrative and Tax Litigation Division. The court decision is available at www.rolii.ro.

contain the agreement of the vehicle owner, in its capacity as assignor, and of the service unit, in its capacity as assignee, in order to be assimilated to a receivable assignment. By this indemnity claim, the policyholder indicated the insurance beneficiary, and, as a result, the legal relations arisen this way fall under the scope of a *contract on behalf of a third party beneficiary* mechanism, based on the following reasoning: the policy owner, through a proxy, acts as policyholder, and requests the promissory party (the MTPL policyholder – the appellee-respondent), which owes the indemnity to the policyholder, to pay it in favor of a third party beneficiary (the service unit). This agreement was valid only between the policyholder and the promissory party, i.e., between the owner's proxy and the MTPL policyholder. The service unit is a third party to this legal relation, and this is the reason why the indemnity claim does not even contain its consent. Through this mechanism, the parties sought to extinguish two legal relations, namely the obligation of the MTPL policyholder to pay the indemnity to the owner and the obligation of the owner to pay the value of repairs to the service unit. By using a contract on behalf of a third party beneficiary, one gets to a situation where the MTPL policyholder would pay directly to the service unit, extinguishing this way both obligations and simplifying the legal relations between the parties. The fact that the MTPL policyholder has paid part of the indemnity is not proof for the receivable assignment but for the performance of the obligation undertaken towards the owner through the agreement that includes a third party beneficiary. Through the mechanism of a contract on behalf of a third party beneficiary, the right arises directly in the estate of the third party beneficiary, which can make use of it, but not through other legal means, but precisely by relying upon the contract on behalf of the third party beneficiary. However, the court established that, in the case at hand, the plaintiff did not invoke as ground for its action a contract on behalf of a third party beneficiary, but the existence of a receivable assignment contract, which, as established previously, was not proven in the case. In conclusion, the admission of the plaintiff's action on a ground other than the indicated one would be a violation of the principle of party disposition, which governs the civil proceedings, being equivalent to a change in the ground for the sue petition (the ground consisting in the legally qualified situation). Since both the court of first instance and the one adjudicating the appeal are bound to the limits of their mandate, including in terms of the ground for the sue petition, and the court established that the existence of a receivable assignment contract between the owner and the service unit had not been proven in the case, it finally established that the plaintiff lacked the standing capacity to sue.[17]

1.15. Absence of a legal relationship between the insurer and the service unit

Other courts have decided in a similar way, in the sense that they have not considered that an assignment had taken place, because the filing of an indemnity claim, in which the indemnity beneficiary specifies the payment manner, is not equivalent to a receivable assignment. Moreover, there is no legal relationship between the service unit and the insurer: "the appellant-plaintiff claimed that its standing capacity to sue was justified for all claim files... These claims of the plaintiff are unfounded, since, as mentioned before, the filing of such indemnity claim, in which the indemnity beneficiary specifies the payment manner, is not equivalent to a receivable assignment. Given that the plaintiff must justify its standing capacity to sue on the date when it files the action, and through the documents lodged with the case file, the plaintiff failed to prove the existence of assignee's indemnity rights deriving from all claim files as of the action registration date, the court believes that the court of first instance correctly dismissed the objection raised to the lack of the plaintiff's standing capacity to sue for claims in an amount of RON ..., deriving from a number of 20 claim files, because there is no legal relationship between the service unit and the insurer, as the latter is not a party to the insurance contract. In fact, under the sue petition, the plaintiff's claims were based on the provisions of Art. 9 and Art. 20 of Law no. 136/1995, which refer to the obligation of insurers to pay the indemnity to the policyholder, the insurance beneficiary or to the prejudiced third party, under the terms of the insurance contract, as well as on the provisions of Art. 969, Art. 989 and Art. 1073 of the 1864 Civil Code. Yet, the plaintiff-appellant does not have the capacity as policyholder, or as insurance beneficiary or as prejudiced third party, and it may sue the respondent for the payment of owed compensations only in cases of a receivable assignment, subrogating itself in the rights of the assignor-indemnity beneficiary. Or the plaintiff unquestionably proved that it had the capacity as assigned party and, therefore, had the standing capacity to sue only for receivables deriving from six claim files".[18]

1.16. Absences of consent to receivable transfers and of proof for price payment

The considerations of other final court decision,[19] also rendered by the Sixth Civil Division of Bucharest Tribunal, plea in favor of the same aspects mentioned above. In this last decision, the court states extremely

[17] See for this purpose Civil Decision no. 364/24.01.2014 rendered by the Sixth Civil Division of Bucharest Tribunal, which is available at www.rolii.ro.

[18] See for this purpose Civil Decision no. 202/03.03.2015 rendered in extraordinary appeal by the Sixth Civil Division of Bucharest Tribunal, which is available at www.rolii.ro.

[19] See for this purpose Civil Decision no. 133/10.01.2014 rendered by the Sixth Civil Division of Bucharest Tribunal, which is also available at www.rolii.ro.

rigorously and convincingly from the perspective of a logical and legal reasoning as follows: "In its extraordinary appeal application, the appellant-plaintiff relied upon a presumed receivable assignment concluded between it and the respondent policyholder, but this assignment was not proven either in front of the first instance or of the court adjudicating the appeal. The fact that, through its indemnity claim, the policyholder requests that this indemnity be paid to the account of the appellant- plaintiff (the service unit having repaired the policyholder's vehicle) is not equivalent, in any case, to the conclusion of a receivable assignment contract. The policyholder's request could be based on other economic reasons and on other relationships existing between it and the appellant. Neither the existence of an agreement regarding the receivable transfer from the policyholder to the appellant-plaintiff nor the price assignment have been proven in the case. The indemnity claim did not amend the insurance contract in terms of the indemnity beneficiary, as claimed by the appellant. The mechanism used in this case is frequently used in insurance relationships, as insurers often pay the value of repairs directly to the account of service units. However, this does not give rise to any right to file an action against the insurers in favor of the service unit. Also, the court believes that the first instance correctly established that the provisions of Art. 9 and Art. 20 of Law no. 136/1995 (in force as of the insurance contract conclusion date) are not applicable in the case, since the obligation to pay the insurance indemnity is regulated basically through the insurance contract and only for the parties indicated by the above-mentioned provisions (the policyholder, the insurance beneficiary or the prejudiced third party), and the appellant-plaintiff does not fall within the category of such parties. Referring to the appellant's claim that, through the partial payment made, the appellee admitted its standing capacity, the court establishes that the payment made to the appellant's account is not proof for the assignment recognition, as claimed by it, but for the fact that the appellee made the payment to the account indicated by its policyholder through the indemnity claim, such payment being made however for the policyholder. There is no legal relationship arising from the insurance contract between the parties in this case. In conclusion, the court establishes that the appellant-plaintiff has failed to prove its capacity as policyholder, insurance beneficiary or prejudiced third party or as their successor in title and, therefore, has failed to justify its standing capacity to sue in this case.

1.17. Valences of indemnity claims signed by indemnity beneficiaries

Contrary to the decision above, some courts stated that, since from the documents lodged with the case file it resulted that the plaintiff and the policy owner concluded a receivable assignment contract, the indemnity claim signed and stamped de by the owner confirming this way the conclusion of a receivable assignment contract. They established that the assignment had been validly concluded based on the parties' agreement and had been mentioned in the indemnity claim signed by the indemnity beneficiary, by expressly specifying that the indemnity would be paid to the plaintiff's account. Moreover, based on the indemnity claim, a partial payment was made to the plaintiff' account. Under the circumstances, the court considered that the requirement to notify the assignment had also been met, since through the indemnity claim, the respondent was asked to make the payment directly to the service unit's account. The respondent also accepted the assignment, a fact proven by the direct payment made to the assignee's account. The conclusion of the relevant court was that the right referred to the court was precisely the right to compensations deriving from the conclusion of an optional insurance contract and from the assignment contract[20].

1.18. Effects of a partial payment. Acknowledgment of the capacity as beneficiary

In another case, the court established that the assignee who took over the right to sue for compensation from the assignor through an assignment contract could receive the indemnity, since through the partial payment made directly to the appellee-assignee's account, the latter's capacity as indemnity beneficiary and, therefore, as author of the recourse action taken over from the assignor under the assignment contract, was acknowledged. The court established that the assignee took over the circumstances of the assignment of the right to sue for compensation exercised by it in the case at hand for the indemnity difference. It considered that the legal act consisting in the partial payment made directly to the assignee's account was of essence in the case, because, this way, its capacity as indemnity beneficiary and, hence, as author of the recourse action taken over from the assignor under the assignment contract, were acknowledged to it. Even though the court vested with the recourse action did not deem itself entitled to examine the cumulative requirements for the assignment validity, it did establish however that this payment confirmed the validity of the legal operation named receivable assignment and highlighted at the same time that a summary examination of the assignment contract revealed the fact that it was an onerous contract, and that it could not be deemed a donation in disguise as long as the assignee undertook to pay the value of the services to the service unit. [21]

[20] See for this purpose Civil Decision no. 437/29.01.2014 rendered by the Sixth Civil Division of Bucharest Tribunal. The court decision is available at www.rolii.ro.

[21] See for this purpose Civil Decision no. 512/03.02.2014 rendered by the Sixth Civil Division of Bucharest Tribunal. The court decision is available at www.rolii.ro.

1.19. Inexistence of an assignment contract. Contract form flaws

For situations where, as a result of form flaws of the contract, the existence of an assignment contract has not been confirmed in a case, the considerations of a recent court decision are also relevant, as the court established as follows: "A receivable assignment is an agreement whereby a creditor transfers a receivable held by it to another person. A receivable assignment is a consensual agreement and, therefore, is validly concluded at the time when the parties reach an agreement. However, to the extent that a receivable assignment represents a donation, it will have to meet the form requirements set forth for it, meaning that it must be in an authentic form, according to Art. 813 of the 1864 Civil Code, applicable to the case, and to Art. 5 of Law no. 71/ 2011. In the case referred to the court, the court established that no receivable assignment contract had been concluded between the appellant-plaintiff and the leasing company. First of all, the court established that, if the receivable assignment relied upon by the appellant was a liberality in favor of the leasing company, it should have met the requirement of authentic form, which is not the case here, as the relied upon documents are deeds under private signature. Secondly, the court ascertained that, if the receivable assignment relied upon by the appellant was a sale and purchase operation, in order to be valid, it should have been performed in exchange for a price set in money. Otherwise, considering that the price setting in the form of a money amount is of essence for sales, the contract is absolutely null, at least in terms of the sale and purchase, since it lacks an essential element in relation to which the parties need to reach an agreement (Art. 1295 of the 1864 Civil Code). On the other hand, the fact that the appellee-respondent was requested to make the payment directly to the appellant-plaintiff's account cannot represent proof for a receivable assignment, as the will of the leasing company is not a univocal one in the meaning claimed by the plaintiff company. Consequently, the court established that the appellant-plaintiff failed to prove the existence of any contractual legal relation with the appellee-respondent, and that the first court correctly admitted the objection raised to the lack of the appellant-plaintiff's standing capacity to sue and dismissed the sue petition as being filed by a party lacking the standing capacity to sue".[22]

1.20. Effects of a payment request submitted by the assignor policyholder's judicial liquidator

Last but not least, in situations where the plaintiff company is subject to insolvency proceedings, it has been decided that the plaintiff company's attempt to be admitted in the list of creditors with the indemnity value is justified, even if the bank unit appears as indemnity beneficiary according to the specification in the insurance policy. Under the circumstances, the court decided that a request sent to insurers by a plaintiff, through its liquidators, in relation to the payment of an insurance indemnity can be qualified as termination of the provisions of the insurance contract regarding the insurance assignment in favor of the bank, the indemnity payment not being made by that date to this beneficiary, so that the objection raised to the lack of the standing capacity to sue is not justified in such case, as the debtor, through its judicial administrator, is entitled under the provisions of Art. 86 para. 1 of Law no. 85/2006 to request the insurers to pay the insurance for the purpose of paying its receivables included in the final list of creditors.[23]

2. Conclusions

We believe that, to the extent that damages caused to an insured asset do not lead to a total economic loss of it, and the policyholder has paid the installments to date, the consent of the indemnity assignee (the bank or the leasing company) will produce effects in the sense of legitimizing the policyholder's standing capacity to sue (in order to obtain the indemnity through judicial means) and the indemnity award/payment directly to the policyholder.

In our opinion, this solution validates an insurance functioning mechanism under which the freedom of parties to agree between themselves who should benefit from the indemnity should prevail.

On the other hand, the proposed solution is in accordance with the opinion expressed in practice, under which, in case of an *assignment affected by a precedent condition requiring the payment of installments to date*, until the fulfillment of this condition, the assignment does not produce effects and, therefore, the Bank's consent is not required. In the case at hand,[24] the court established that the bank had a receivable created for guarantee purposes, regulated by Art. 6 – Title VI ("Legal Status of Security Interests in Real Property") of Law no. 99/1999, which has as effect the creation/preservation of rights resulted from an insurance contract intended to secure the performance of an obligation (the loan contracted by the plaintiff), being about an assignment affected by a condition precedent: non-performance of obligations under the loan agreement. Therefore, until the condition fulfillment, the assignment does not produce effects. The plaintiff has the standing capacity to sue, so the Bank's consent to the filing of an action on its own behalf is not required, and the decision issued by the court of first instance in respect of the objection

raised to the lack of its standing capacity to sue is unlawful. However, we specify that this case concerned a partial loss caused to an insured asset, and the insured company, which was a debtor under the loan agreement, had remedied the loss caused by the insured event with its own financial resources.

At the same time, as long as the insured asset has not been completely destroyed, and the indemnity is affected by the asset repairs, the policyholder – which proves the bank's consent to cash the indemnity and/or to initiate a court action to obtain it – is the one to whom both the standing capacity and the interest must be recognized, since it is the one, not the bank, who will repair the asset in the future.

Our position in respect of the matter brought into discussion is also validated by the practice of the supreme court, which, in a case decision, paid more importance to the standing capacity of the Bank, an institution that, all along the proceedings, claimed its right to request the payment of compensations by the policyholder and claimed that the whole procedure for obtaining compensations from the insurer rested on policyholders. The court stablished also that [25] the mortgagee could claim only an amount equal to the debt owed by the borrower on the date of the indemnity receipt, and only within the loan validity period, while the remaining amount owed by the insurance company would belong to the borrower who was the owner of the insured assets. Only the right to indemnity related to the insurance policy was assigned and, therefore, the appellee-plaintiff continued to be a party to the insurance contract, as such capacity was not taken over by the assignee.

The same reasoning can be found also in another court decision, in which the court, in deciding on an objection raised to the lack of standing capacity, acknowledged that the policy assignment operated only in case of non-performance of obligations by the plaintiff and only within the limits of the receivable held by the bank against it[26].

In another case, in which the caused loss was also partial, the court established that under the policy insurance assignment contract, the ownership right over the crane was not transferred, and that the insurance policy represented only a guarantee for the bank under the loan agreement for a case in which the purchased asset that was bound to guarantee the loan repayment would perish.[27]

The situation would be completely different in case of total destruction of an insured asset, where the indemnity is meant to replace in the bank's estate the value of the insured asset by which the repayment of the granted loan has been guaranteed.

The bank will have all the more a standing capacity in situations where the parties have concluded an insurance contract under the third party beneficiary procedure, doubled by a receivable assignment to the same beneficiary. Thus, in a particular case, the policyholder agreed with the insurer, acting as promissory party, to conclude an insurance contract under a third party beneficiary procedure, whereby it was established that, on the date of the insured risk occurrence, the owed indemnity would be paid to the third party beneficiary (C.R.S. Bank), the right of claim arising in its estate under each of the two insurance contracts concluded between the two litigating parties in this case, under the precedent condition of acceptance by the beneficiary of the contract on behalf of the third party beneficiary pursuant to the provisions of Art. 1286 of the new Civil Code, in force as of the date of the agreement conclusion. In the case, the third party beneficiary mechanism was doubled by a receivable assignment to the same beneficiary (Banca C.R. Suceava) in relation to a policy of 2011. Hence, even though the plaintiff had paid the insurance premiums as he had undertaken under each of the two contracts, the insurance indemnity was not due to it, because it had been stipulated to the creditor institution, Banca C.R., Sucursala S. The specificity of the insurance contract confers a right to third party beneficiary Banca C.R. to collect the insurance indemnity, a right generated by the conclusion of the insurance policy, but which is affected by the condition precedent of the insured risk occurrence until the full repayment of the loan granted by the bank. Practically, the contracting parties understood to conclude those insurance policies under the third party beneficiary procedure based on the interpretation and application of which the plaintiff-policyholder undertook to pay, and paid, the first insurance premiums in favor of the respondent-promissory party, which, in turn, had an obligation to provide the service in favor of the third party beneficiary at the time of the insured risk occurrence, under the terms and clauses agreed and assumed by the contracting parties, which were binding on the latter and mandatory in light of the principles of autonomy of will and on the relative nature of contract effects governing the contractual liability area, as correctly claimed also by the respondent. In other words, third party Banca C.R. Sucursala S., as beneficiary of the insurance policies, a capacity acquired by the loss by the plaintiff of its capacity as creditor of the respondent, has also the capacity as holder of the right to collect the insurance indemnity stipulated in its favor, claimed by it in its capacity as author of a the action for damages, a case in which, the applicability of the objection raised to the lack of the

[27] See for this purpose Civil Decision no. 1118/01.03.2012, rendered by the High Court of Justice Second Civil Division, menționată în Civil Decision no. 2810/25.09.2013 of the High Court of Justice. The court decision is available at www.rolii.ro.

plaintiff's standing capacity to sue was correctly established by the court adjudicating the appeal.[28]

In a different case, the High Court of Justice validated the legal reasoning of the court adjudicating the appeal, stating that the latter correctly interpreted the legal provisions in relation to the leasing contract and to the insurance policy, by establishing that the plaintiff did not have standing capacity under circumstances where the financier, which, according to the provisions of the leasing contract, "was the insurance policy beneficiary" – *did not assign its rights deriving from the contract* and *did not empower the plaintiff to file an action for damages* against the insurance company, the financier being the beneficiary of the insurance policy and the author of the action for damages.[29]

In an atypical case, in which the insured event occurred on a date when the asset was owned by a legal entity – the leasing company, and after this moment, a transfer of the ownership right took place, the considerations presented in another court decision[30] are relevant, considerations from which it results that the user can also have standing capacity and interest in particular situations. Punctually, the court vested to settle the case stated as follows: the court justly noted that the claims to indemnity derived from an insurance contract concluded on a date when BT Leasing IFN S.A. was the owner of the insured asset and, therefore, the policyholder. The insured event occurred at a time when the asset was owned by this company. However, after this moment, there has been a transfer of the ownership right over the asset in favor of the initial user, namely of the appellee company, which filed the sue petition. Of course, this is an atypical situation, in which the concepts of policyholder and of holder of the insured interest do not have the same valences at the time of risk occurrence and at the time when claims were raised in respect of the indemnity. Starting from the definitions of the concepts of policyholder, contracting party and indemnity (policyholder = "a natural person or legal entity having concluded an insurance contract with the insurer and who is the holder of the insurable interest; when the policyholder is one and the same person with the contracting party, the concept of policyholder includes also the content of the concept of contracting party"; "contracting party = "a natural person or legal entity other than the policyholder who signs the insurance policy, undertakes to pay the policyholder's insurance premium and to comply with the obligations resting on it under the contract", "indemnity = the amount owed by the insurer to a holder of an insurable interest in case of an insured event occurrence"), the court correctly established that, together with the transfer of the ownership right over the vehicle from the financier to the appellee user, the appellee, who also paid the insurance premium, became the holder of the insured interest and could validly claim the indemnity. Independently from the existence of a receivable assignment contract between the asset's owner at the time of occurrence of the insured risk and the user, who became the asset owner prior to the finalization of the litigious situation, the court considers that the theoretical right to be a holder of the insured interest at the time when the sue petition was filed, in the person of the former user, is sufficient to justify its processual legitimacy, and this theoretical right derives from the particularities of insurance relationships when an insured asset is held under a leasing regime, when the user undertakes the obligation to pay the insurance premiums, even though the capacity as policyholder belongs to a different person, after which, during the performance of the insurance contract, the ownership is transferred in favor of the user. Contrary to the aspects claimed by the appellant, its obligation to pay the indemnity, contractually assumed, was not exclusively to the policyholder but to the holder of the insurable interest, and, at the time when the sue petition was filed, such holder was the appellee company. The standing capacity to sue results from the substantive law legal relationship referred to the court, and at the time when the sue petition was filed, such litigious legal relationship between the appellant insurance company and the holder of the insured interest and the appellee company included an assessment of the standing capacity to sue, which was correctly conducted by the court adjudicating the appeal. The provisions of Art. 1 and Art. 12 of Government Ordinance no.51/1997 relied upon by the appellant cannot lead to a different conclusion. The provisions of Art. 1 provide for a possibility to transfer an ownership right over an asset at the end of the leasing period, but do not regulate in any way the possibility of realizing a receivable as indemnity when the risk occurs before the date when the transfer of the ownership right over the asset in favor of the user takes place. However, the absence of a regulation in this norm is not equivalent to an impossibility for the former user of the asset to obtain the indemnity. On the other hand, the rights conferred by Art. 12 of Government Ordinance no. 51/1997 to the user relate to the period while the leasing relationship is under progress, but the provisions of Art. 12 do not regulate other rights that can be exercised by the former user after it loses such capacity, namely after it becomes holder of the ownership right over the asset. At the same time, the provisions of Art. 6.7 of the insurance conditions, under which the policyholder's liability ceases on the date of transfer of the ownership over the vehicle to a third party, except for leasing contracts under which the ownership is transferred to

the user, indicated by the court adjudicating the appeal in its decision considerations, are directly applicable in the punctual case referred to the court, contrary to the aspects claimed unjustifiably by the appellant."

Referring to proof for and form of assignment contracts, some courts decided that, in the absence of a receivable assignment contract effectively concluded, other documents may not stand for such agreement. Such documents may have the effects of a contract on behalf of a third party beneficiary but, in the absence of a specification of such *de jure* ground for an action, courts may not exceed the limits of their mandate. At the same time, the filing of an indemnity claim in which the indemnity beneficiary specifies the payment manner is not equivalent to o receivable assignment, since there is no legal relationship between the service unit and the insurer. The (partial) payment by the beneficiary indicated in the indemnity claim can be equivalent to a receivable assignment. If the receivable assignment is a liberality, it must meet the requirement of authentic form. If the receivable assignment is a sale and purchase operation, in order to be valid, it should have been performed in exchange for a price set in money. Otherwise, the contract is absolutely null, at least in terms of the sale and purchase, since it lacks an essential element in relation to which the parties need to reach an agreement (Art. 1295 of the 1864 Civil Code).

MULTIPLE APPROACHES TO THE FOUNDATION SECTOR IN THE BASQUE COUNTRY. THE CASE OF LANTEGI BATUAK

Marta Enciso SANTOCILDES[*]
Ramón Bernal URIBARRENA[**]

Abstract

Foundations have played an important role in social life in the Basque Country. Foundations, that are part of the Social Economy, are non-profit-organizations and apply their assets to the achievement of general interest purposes. This article analyses the Foundational sector in the Basque Country from different approaches: legal, social and economic. Their characteristic features and current challenges will also be analyzed. Finally, a very relevant case study will be developed: Lantegi Batuak Foundation, whose aim is to promote and achieve the social and occupational integration of people with disabilities by creating quality employment opportunities.

Keywords: *Foundations, Social Economy, persons with disability, social integration, labor integration.*

1. Origin and definition of Foundations in the Basque Country

Foundations in the Basque Country have historically had a relevant role in social life due to the activities carried out and their important social effects. Originally, the Foundations appeared together with charitable and welfare activities of a pious nature, associated with the Catholic Church.

With the entry into force of the Civil Code (1889), a new stage began for the Foundations that were conceived as an instrument for the participation of individuals alongside the public powers for the satisfaction of the demands of citizenship through compliance for general interest purposes, replacing the concept of charity with that of public interest. The Spanish Constitution of 1978 included in its article 34 the Right of Foundation for purposes of general interest, within the chapter on Rights and Freedoms.

Foundations can be defined as non-profit organizations which, by the will of their founders, have their assets permanently assigned to the realization of general interest purposes defined by them. The promotion of a purpose of general interest means, on the one hand, that their activity must contribute to human welfare in areas such as human rights, social action, educational, cultural and sporting activities or the promotion of equal opportunities as listed in Article 4-1 of the Basque Law on Foundations (hereinafter BLF).

On the other hand, the founding activity must benefit generic groups of persons, natural or legal, and not with the main purpose of allocating its benefits to the founding person or persons, or to the employers, their spouses or family members. In any case, the selection criteria for the group of beneficiaries must be objective and impartial (art. 4-2 and 3 BLF).

It can be stated that the Foundation generates interesting social advantages, since its unique legal form, together with its mission, allows the Foundation to fulfill a special and unifying role in the promotion of social innovation activities. It serves as a bridge between public and private institutions and NGOs, as a lever in the search for resources and, to a certain extent, as a social entrepreneur, allowing itself - more easily than many other types of organizations - to try new concepts and ways of doing things (ADAM & LINGELBACH, 2015; QUINN et al., 2014)

Foundations are part of the concept of Social Economy (SE), established in Spain by law in 2011 (Law 5/2011, of 29 March, on Social Economy, hereinafter SEL). It is defined as the set of economic and business activities carried out in the private sphere by those entities that, in accordance with the principles set out in article 4, pursue either the collective interest of their members or the general economic or social interest, or both (art. 2 SEL).

From the point of view of legal structures (art. 5-1 LES), the following fall into this category: Cooperatives, Mutual Societies, Foundations and Associations that carry out economic activity, Labor Societies[1], Work Integration Social Enterprise WISE),

[*] Associate Professor, PhD, Faculty of Law, Deusto University, Spain (e-mail: marta.enciso@deusto.es).
[**] Bachelor, Faculty of Law, Deusto University, Spain (e-mail: ramon.bernal@deusto.es).

[1] Labor societies are a legal type existing only in Spain and regulated by Law 44/2015, 14th October on worker-owned companies. Their most relevant characteristic is that the majority of the share capital must belong to workers, admitting a minority equity participation by external investors.

Special Employment Centers[2], Fishermen's guilds[3], Agricultural Transformation Companies[4].

Foundations therefore form part of the Social Economy, although, as in the case of Associations, only those that are independent and carry out economic activities.

Likewise, these entities meet the requirements established in article 4 SEL:

a) Primacy of people and the social purpose over capital, since the assets are placed at the service of a general interest, which must benefit generic collectivities of people, whether natural or legal. Likewise, the model of management that it includes (autonomous and transparent, democratic and participative, which leads to prioritizing decision making more in terms of people) has a correlative in art. 28 "principles of management and operation" (BLF).

b) Application of the results obtained from the economic activity based mainly on the work provided and the service or activity carried out by the members and partners or by their members and, where appropriate, to the corporate purpose of the entity. In the case of Foundations, if asset management generates positive financial returns, a minimum of 70% of these must be applied to the purpose of the Foundation and the remaining 30% to strengthen its economic reserves (Art. 29-2 BLF)

c) Promotion of internal solidarity and with society that favors commitment to local development, equal opportunities between men and women, social cohesion, the insertion of people at risk of social exclusion, the generation of stable employment and quality, the balance of personal, family and work life and sustainability.

d) Independence from public powers. Social Economy organizations are independent from the public powers, and their control should not be subordinated to government agencies or political parties. Foundations, except those created by different agencies of the State or other public administrations, are independent in this sense; thus complying with this autonomy requirement.

2. Legal analysis of Foundations in the Basque Country

As already indicated, the Spanish Constitution of 1978 (SC) included in its article 34 the right of Foundation for general interest purposes. As the State does not have the exclusive competence on Foundations (art. 149 SC), the Basque Statute of Autonomy in its article 10.13 establishes exclusive competence in matters of educational, cultural, artistic, charitable, welfare and similar Foundations and associations , as long as they mainly carry out their functions in the Basque Country. Basque institutions have historically had competence in their regulation, directly linked to the regional competence in matters of charity, and this has been maintained without solution of continuity until its recognition in the Statute of Autonomy.

The first Law on Foundations in the Basque Country dates from 1994 (Law 12/1994 of June 17), and it was the first norm that provided a comprehensive legal regime to the Basque Foundation sector. This law was substantially modified in 2016 (Law 9/2016 of June 2), and is currently in force (hereinafter BLF).

The Protectorate and the Registry of Foundations of the Basque Country are two independent administrative bodies, which exercise in a coordinated way the functions of advising and controlling Foundations, as well as those relating to the registration of acts and legal businesses that must access the Registry and other functions established in the Law of Foundations of the Basque Country (art. 2-2 BLF). At this time, both figures are jointly regulated by a Decree of 2019 (BASQUE COUNTRY 2019), which replaced the existing Decrees dated 2007 and in accordance with the 1994 regulations (BASQUE COUNTRY, 2017 a, BASQUE COUNTRY, 2017 b)The Protectorate of Foundations of the Basque Country is configured as an administrative body of advice and technical support for Foundations, which must facilitate and promote the correct exercise of the right of Foundation, ensuring the legality of the constitution and operation of Foundations, as well as for the effective fulfillment of the will of the founding person or persons, and the Foundational purposes (art. 6.1, BASQUE COUNTRY, 2019)

The registry of Foundations (art. 34, BASQUE COUNTRY, 2019) is a legal registry that is configured as a public service for those who have an interest in knowing the content deposited in it, being its main object the registration of Foundations within the scope of BLF and the acts and legal businesses related to them.

From the point of view of the organization of the Basque Government departments, Foundations are part of the attributions assigned to the Department of Public Governance and Self-government, according to the Decree that establishes the organic and functional structure of that department (BASQUE COUNTRY, 2017). In turn, within said department, this area is assigned to the Vice-Ministry of Institutional Relations (art. 8), and within the Directorate of Relations with Local Administrations and Administrative Records (art. 10-1 section J). Both the Advisory Commission of

[2] Work Integration Social Enterprise (WISE) are non-profit entities that promote the socio-labor inclusion of people with disabilities.

[3] Fishermen's guilds are public law corporations with legal personality and the capacity to act for the fulfilment of their purposes, which are legally established as a participatory and collaborative channel of the fishing sector with the public administrations in defense of the general interest of fishing, shell fishing and aquaculture, and of the organization and marketing of their products.

[4] The Agricultural Transformation Companies are civil societies with an economic and social purpose in relation to the production, transformation and commercialization of agricultural, livestock or forestry products, the improvement of the rural environment, agricultural promotion and development, as well as the provision of common services related to the aforementioned concepts. Therefore, they have their own legal personality and their authorization requires firstly their constitution and secondly their registration in the corresponding register.

the Protectorate of Foundations and the Basque Council of Foundations are attached to or linked to this Department of Public Governance and Self-Government (ex article 61 BLF)

Foundations receive aid and subsidies from the different public administrations (Basque Government, Provincial Councils, Town Councils), not so much because due to their legal status, but because of the general interest activities they carry out: cultural, sports, promotion of employment, etc.

Along with aid and subsidies, Provincial Councils establish a specific tax regime for Foundations and public utility Associations, as well as their federations and associations, due to their non-profit nature and the pursuit of general interest purposes. They also recognize a tax regime for patronage, defined as "private participation in the performance of activities of general interest". (ARABA, 1993 and 2004; BIZKAIA 1992, 2019 a, 2019 b; GIPUZKOA 1993, 2004 a and 2004 b).

The requirements for access to the special taxation regime for both corporate tax and economic activity tax (exemption) are summarized in the following table. The full set of these requirements must be complied with:

Table 1. Eligibility for the special taxation regime

Requirements
Dedicate 70 % of all revenues to the general interest purpose, and reinvest the rest.
Economic activities unrelated to its statutory object or purpose shall not exceed 40% of its total income.
The founders and their immediate family members cannot be direct beneficiaries. Nor can they benefit from the tax regime for personal purposes.
The positions of trustee, statutory representative and member of the governing body are not remunerated
An annual financial report specifying the income and expenditure for the financial year must be drawn up

Source: elaborated by the authors in accordance with provincial tax legislation

With regard to tax incentives for patronage, the provincial regulations establish that these incentives are applicable to donations, gifts and contributions made in favor of non-profit organizations to which the differentiated tax regime they regulate is applicable.

3. Characterizing features of Foundations in the Basque Country

3.1. People-centredness

Foundations are organizations based on the centrality of people. The fact that these types of organizations are non-profit organizations means that the principle of the primacy of people over capital is fulfilled, since the activity (economic or otherwise) that they carry out never seeks to make an investment profitable in order to distribute the profits, but rather the objective is to respond, with the Foundation's assets, to the needs of society in general and of individuals and groups in particular. Moreover, it is usual that the social purpose of Foundations is focused on the development of people (e.g. inclusion of people with disabilities, education, sport, culture, etc.), both for the beneficiaries and in some cases for the employees as well.

3.2. Democratic character

Foundations are structured in organizational models of a democratic nature, which translates into decision-making and transparency practices.

The board of trustees is the supreme body of the Foundations as the governing and representative body of the Foundation (art. 13 BLF). Its function is to fulfil the Foundational purposes and diligently administer the goods and rights that make up the Foundation's assets, and it operates under the principles of democracy. While it is true that only the members of the Foundation's board of trustees are legally entitled to vote in its formal and binding decisions, Foundations are organizations that encourage participation in the management of their workers and seek the informal participation of their beneficiaries, being natural examples of participatory organizations.

3.3. Transparency

On the other hand, transparency in management is another characteristic of Foundations that nourishes their democratic nature. This means that, as part of their own nature and linked to their operating principles, Foundations must be transparent organizations.

From the Foundational sector there is the conviction that transparency is necessary and positive since, among other issues, it allows to establish a better communication with society. Funko[5] promotes and helps Foundations in the implementation of a transparent management. The compliance certification of the Foundations allows improving their transparency and confidentiality, as well as their management structures and processes (WORLD COMPLIANCE ASSOCIATION, 2020). The first to achieve this certification in the Basque Country was the San Prudencio Foundation, which is currently providing a compliance implementation service for companies.

In this realm, there are also numerous examples of good practices in relation to management transparency in Foundations. Some of them have received external recognition for transparent management, such as innovative experiences in the implementation of information systems on the social value they generate, as will be seen in section 6. Thus, for example, in the museum sector, the Basque Country continues being the most transparent of the Spanish Autonomous Communities with its three reference museums: the Bilbao Fine Arts Museum, the Guggenheim Museum Bilbao and the Artium Basque

[5] Funko, the Basque Confederation of Foundations, is the organization that brings together and represents Foundations in the Basque Country. See in this regard point 4.6 below.

Museum of Contemporary Art. Moreover, the latter is recognized as the most transparent museum in Spain (FERNÁNDEZ SABAU, et. al, 2018).

3.4. Business dimension

Although the economic dimension is not the ultimate aim of Foundations, it can be affirmed that their contribution to the economy is relevant. According to the latest official data (Social Economy Statistics, 2018), Foundations generated in 2018 a gross added value of more than 219 million euros, creating 13,045 jobs. They are also characterized by being highly sustainable organizations, with few cases of bankruptcy.

Moreover, there are Foundations in the Basque Country that can be considered sectoral benchmarks. For example, Teknalia is one of the leading research centers or Lantegi Batuak Foundation is one of the most important special employment centers in the region. The most charismatic museums, such as the Guggenheim, the Aquarium in Donostia or the Fine Arts Museum in Bilbao, are also Foundations.

3.5. Community engagement

Foundations are organizations with deep roots in the territory. This rootedness, in addition to their limited relocation, is characterized by their continuous (re)-investment of their assets and results in the community. In fact, the assets of Foundations are obligatorily dedicated to the general interest, so that the investments made are in tune with the needs of society.

Moreover, Foundations are obliged to reinvest at least 70% of the results obtained (in practice this percentage is usually higher) in the Foundational purposes, with the remainder being used to increase reserves. Finally, in the event of liquidation, surplus assets may not be distributed to private individuals and are earmarked for public or private non-profit entities that carry out general interest purposes. These particularities reflect the real commitment of the Foundations to the community.

On the other hand, they are organizations that promote social cohesion (this is the aim of many Foundations that work in the field of culture, social services, or the Basque language...), social capital (they weave relational networks, promoting people's participation and offering guidance to encourage greater commitment to society) and social transformation (in search of a more equitable, inclusive and advanced society).

3.6. Inter-cooperation processes

Foundations are organizations that also seek inter-cooperation. Although there are no inter-cooperation mechanisms that are widely applicable, there are examples that reflect the potential of inter-cooperation for this sector. In fact, there are very powerful collaboration processes at different levels. The organization that brings together and represents Foundations in the Basque Country is called Funko, the Basque Confederation of Foundations. It was created in 2003 on the initiative of a group of 10 people to promote and strengthen the Foundational phenomenon in the region. The aim is to constitute a platform for Basque Foundations to meet and cooperate, developing actions of interest, facilitating the interrelation between its members and creating working groups, conferences and other sectorial projects.

Funko aims to constitute an instrument for joint reflection, decision-making in favor of the sector, and a representative voice before the Public, Regional, Autonomous, State and Community Administrations.

Funko also organizes training and informative events open to all Foundations, providing a forum for the exchange of ideas between Basque Foundations before the Basque Government and other bodies and organizations. It also provides a legal, accounting and tax consultancy service for its members.

Lastly, it promotes collaboration between Foundations, even if they are not members of Funko, as well as with other Foundations. In the same way, it collaborates with other entities that carry out similar tasks, although under a different legal formula, as in the case of the Associations to which it also provides services, especially training services.

4. Socio-economic analysis of the Foundations sector in the Basque Country

According to official data, as of 2018 (latest available data, from 2020), the Basque Country has a total of 605 Foundations, which represent almost 51% of the so-called other forms of social economy (OFSE)[6].

The following table shows all the entities that form part of this OFSE concept and the data on the relative weight of each one with respect to the whole.

Table 2. Number of OFSE entities. Basque Country 2018

Type of entity	Number of entities	% of total OFSE
Foundations	605	51
Public Utility Associations	254	21
Voluntary Mutual Social Entities	155	13
Agricultural Transformation Companies	84	7
Work Integration Social Enterprise (WISE)	43	3,6
Special Employment Centers	37	3,1
Fishermen's guilds	14	1,2

[6] The official statistics on the social economy in the Basque Country are divided into two main sections. On the one hand, Cooperatives and Labor societies are analyzed, and on the other, the rest of the social economy entities, which are called "Other Forms of Social Economy (OFSE): Mutual Societies, Foundations and Associations that carry out economic activity, Work Integration Social Enterprise (WISE), Special Employment Centers, Fishermen's guilds, Agricultural Transformation Companies.

Source: elaborated by the authors in accordance with Social Economy Statistics 2018

Taking the search engine of the Basque Country Foundations Register as a reference, indicates that there are 742 entities. This discrepancy is due to the fact that the register includes all those Foundations registered that have not been extinguished, whether they are operational or not. In fact, a good number of them have been detected in this situation and an analysis is being carried out of those that are still in operation.

With regard to the numerical evolution of Foundations, the official statistics on the social economy include this data since 2010, and the following table shows their progress, representing a growth of 3,5% over the period.

Table 3. Evolution of the number of Foundations and their relative weight within OFSE. Basque Country. 2018-2010

Year	Number of entities	% of total OFSE
2018	605	51
2016	608	50,2
2014	619	51,55
2012	615	50,2
2010	585	53,8

Source: elaborated by the authors in accordance with Social Economy Statistics 2018, 2016, 2014, 2012, 2010.

Within the group of Foundations, there is a wide diversity of entities in terms of the social purpose they pursue, their origin or their size.

Firstly, the variety in the field of Foundations is to be found in the social purpose they develop, in line with the wide range set out in article 4-1 of the BLF, being their common element to serve purposes of general interest. Thus we find Foundations that carry out cultural activities, employment integration, education, promotion of the Basque language, museum activities, development cooperation, business, sports or technological activities, to mention just some of them.

The Basque statistics service, EUSTAT, provides a distribution by area of activity in coherence with the sections into which the Foundations Register is organized:

Table 4. Number of Foundations by area of activity. Basque Country. Year 2018 (last available dated November 20, 2020)

Activity Developed	Number	% of total
Teaching and research	241	35,92
Charitable-welfare and labor	189	28,17
Cultural, youth and sports	141	21,01
Other areas	100	14,90
Total	671	100

Source elaborated by the authors in accordance with DEPARTMENT OF PUBLIC GOVERNANCE AND SELF-GOVERNMENT (2018)

Secondly, there is a wide variety of Foundations depending on the founding persons or entities. Thus, we find companies, financial institutions, sports clubs, the public administration itself or private individuals who wish to endow all or part of their assets for a specific social purpose.

Finally, in terms of size, the average size of Foundations in terms of the number of jobs is 21,4 according to the 2018 social economy statistics. The data is very similar to that of public utility associations (16,2) and insertion companies (16,7), and is far from that of special employment centers, with an average size per job of 269,9. What can be observed in the different statistical records is an increase in the size of Foundations over time, as with the rest of the entities (16,9 in 2014 and 19,4 in 2016).

In terms of employment, 46,2% of paid employment in OFSE is associated with Foundations: 13,045 annualized paid jobs in 2018. In terms of their evolution with respect to the previous statistic (2016), an increase of 10,4% has being registered. By gender, 39,9% are contracts for men and 60,1% for women. Likewise, 76% are permanent jobs and 24% are temporary.

The evolution of these paid employment indicators since the official Social Economy statistics have been recorded (2010) and their segregation by gender or type of contract can be seen in the following table:

Table 5. Number of employment in Foundations segregated by gender and type of contract. Basque Country. 2018-2010

Year	Persons Employed	% by gender	% by type of contract
2018	13.045 46,2% total OFSE	60,1% female 39,9% male	76% permanent 24% temporary
2016	11.811 45,8% total OFSE	57,6 % female 42,4 % male	78,9 % permanent 21,1 % temporary
2014	10.482 45,1% total OFSE	60,9 % female 39,1 % male	82,4 % permanent 17,6 % temporary
2012	12.315 46,6% total OFSE	Not available	Not available
2010	12.448 % total OFSE (Not available)	Not available	Not available

Source: elaborated by the authors in accordance with Social Economy Statistics 2018, 2016, 2014, 2012, 2010.

Along with paid employment, OFSE mobilize an estimated 25.236 volunteers in 2018, of whom 26,6% are structural volunteers and 73,4% are linked to one-off support. In the case of Foundations, they host a total of 5.322 volunteers (21% of all OFSE volunteers), which together with the volunteers of public utility associations (19.878 people, 78,8% of the total), account for 99,8% of all OFSE volunteers in the Basque Country. In the case of Foundations, the majority of

volunteers are women (55,6%), although in the OFSE as a whole, the highest percentage of volunteers are men (62,4%). A good part of the volunteers who collaborate with the Foundations are of a structural nature (48,0%).

In terms of turnover, OFSE had an overall turnover of 2,2 billion euros (9,5% higher than in 2016). Foundations in the same year had a turnover of more than €566 million, 28,2% more than in the previous record of 2016. They also receive a total of grants amounting to some 468,3 million (66% of all grants received by OFSE), which is 34,4% of their turnover.

In terms of economic results, Foundations have generated positive financial results of almost 145 million euros, and a Gross Value Added (GVA) of 219 million euros, which represents 84% of all the GVA generated by the OFSE. The evolution of these concepts can be seen in the following table.

Table 6. Financial data on Foundations. Basque Country. 2018-2010 (data in millions of euros).

Year	Turnover	Grants	Financial Results	GVA
2018	556	468,3	145	219
2016	442	465,6	Not available	158
2014	524	431	Not available	267
2012	610	Not available	-22,8	361
2010	875,6	442	-15,7	360,7

Source: elaborated by the authors in accordance with Social Economy Statistics 2018, 2016, 2014, 2012, 2010.

5. Challenges for Foundations in the Basque Country

5.1. Increase the visibility and social awareness of Foundations

In the Social Economy survey, one of the items measured is the assessment of the external social perception of this type of entities. In last year's survey (2018), "Only one in four social economy enterprises perceives a positive assessment by Basque society in relation to the role it plays and its own contribution to the socio-economic development of the Basque Country". Although this result refers to cooperatives and labor societies, it can be extrapolated to all social economy organizations and therefore to Foundations.

In general, society has heard of Foundations, and could perhaps mention some of them, but it would be very difficult to indicate some of their identifying features, or their fundamental characteristics, i.e. what distinguishes them from other similar figures. Apart perhaps from the case of development cooperation Foundations (Mundukide, Alboan), or banking Foundations through which they channel their social work, or those of sports clubs because of their connection with citizens, perhaps not many other examples can be mentioned. This is despite the fact that citizens are often users or beneficiaries of their work. The image is usually positive, associated with social purpose, with entities that have an impact, that generate social value... But even on this point, it is necessary to transmit to society the social value that Foundations generate, which would help to understand the full dimension of their character as an entity of general interest, which brings us to the next challenge.

5.2. Measuring and disseminating the social value generated by Foundations

Foundations by their very nature are entities with social and general interest purposes. It is therefore essential that they measure their impact beyond the classic statistical dimensions such as employment, income or added value (AV). The fact that economic value and social value are separated poses a problem both in terms of social and internal management, and the fact that social value is not documented means that it is undervalued (RETOLAZA et. al., 2014). It is therefore vital to document the social impacts that Foundations generate, both for the economic activity carried out and for their own specific social value in environmental, social, labor and community issues.

We find different impact measurement systems such as the GRI (Global Reporting Initiative), the SDGs themselves can become a measurement mechanism, or systems for monetising social value. Regardless of which system is used, what is suggested to Foundations is that they learn to "manage impact" which implies managing systems, processes, culture and capacities related to social impact measurement (HEHENBERGER et. al, 2020).

We can find very outstanding examples, such as that of Lantegi Batuak, which will be analyzed later on.

Another relevant example is the Añana Salt Valley Foundation (2018), committed to a model that takes into account current and future economic, heritage, social and environmental repercussions. Its model assumes the principles of the World Charter for Sustainable Tourism (2015), which incorporates the 17 Sustainable Development Goals.

Mundukide, San Sebastian Aquarium, Alboan, Gureak Group or BBK Fundazioa, among others, can be presented as models of good practice.

Some Foundations are obliged to draw up transparency reports as private entities that receive public aid or subsidies of more than €100.000,00 during a year (SPAIN, 2013). These reports and their publication on the websites also serve to know and assess the Foundations in terms of their organization and legal structure, governing bodies and certain economic information.

In the same way, some Foundations will have to prepare the non-financial information report (SPAIN, 2018), just like any company that complies with the requirements established by law. Its objective to contribute to measuring, monitoring and managing the performance of companies and their impact on society, as well as sustainability by combining long-term

profitability with social justice and environmental protection. Its content, as set out in art. 49 of the Commercial Code, establishes that it must generally include the information necessary to understand the evolution, results and situation of the company and the impact of its activity, at least with regard to:

- environmental issues such as pollution, circular economy, waste prevention and management, sustainable use of resources, climate change, or biodiversity.
- social and personnel issues, including measures taken, where appropriate, to promote the principle of equal treatment and equal opportunities for women and men, non-discrimination and inclusion of persons with disabilities and universal accessibility
- respect for human rights, applying due diligence procedures, prevention of risks of human rights violations and, where appropriate, measures to mitigate, manage and remedy possible abuses committed, among other contents.
- the fight against corruption and bribery measures taken to prevent corruption and bribery; measures to combat money laundering, contributions to Foundations and non-profit organisations.
- the company itself in relation to its commitment to sustainability, suppliers and subcontractors, consumers or tax information by country.

A model of this report can be seen, for example, with respect to Gureak group (GUREAK, 2019), and in addition to regulatory compliance, it is highly expressive of the social value it generates.

5.3. Maintain the character of Foundations as key actors for the achievement of the Sustainable Development Goals (SDGs)

The UN General Assembly adopted the 2030 Agenda for Sustainable Development, with 17 Goals and 169 targets, covering the economic, social and environmental spheres. It is a plan of action for people, planet and prosperity, which also aims to strengthen universal peace and access to justice. States are committed to mobilizing the necessary means to achieve it, although this Agenda implies a common and universal commitment. For this reason, together with the administration, businesses and civil society organizations, Foundations are key to advancing the Agenda's objectives.

The United Nations Development Program (UNDP, n.d.) recognizes the indispensable knowledge that Foundations offer to a variety of areas that coincide with the SDGs' proposals. For example, those related to people's well-being (health, education, gender equality, the fight against poverty and hunger), environment (water and sanitation, responsible production and consumption, terrestrial ecosystems and underwater life), decent work, reduction of inequalities or the fight for peace and justice, to name but a few.

Funko promotes the explicit statement of the SDGs, and proposes their integration in the management of Foundations and associations, in all the actions they develop, communicating the results obtained through reports.

We can mention as an example that the Aquarium of Donosti includes the SDGs as part of its strategic planning, establishing its objectives in accordance with its own Foundational essence (Funko 2020):

SDG 14 (underwater life) To raise awareness and sensitize society to respect the marine environment through the exhibition, conservation and research of the flora, fauna and heritage of the different oceans and seas, with special emphasis on the Cantabrian Sea.

SDG 11 (sustainable cities and communities) to disseminate our maritime and fishing traditions and memory by safeguarding, exhibiting and disseminating collections of great historical and emotional value.

6. Lantegi Batuak Foundation

One of the most paradigmatic examples within the ecosystem described above is the case of a Foundation called Lantegi Batuak. It is an outstanding case both for the service provided to society, the innovative way in which it develops the activity and for the real impact on people, their families and the community as a whole.

6.1. Origin and evolution

Lantegi Batuak is a Foundation whose aim is to promote and achieve the social and occupational integration of people with disabilities by creating quality employment opportunities. Its origins date back to 1964, when the first protected work experiences arose under the auspices of Gorabide, the Biscayan Association in Favor of People with Intellectual Disabilities. It was a group of parents and friends of people with intellectual disabilities who set up this association to raise public awareness of this social and family problem, as well as to create assistance centers, which did not exist at the time.

In 1983 the commercial name of Lantegi Batuak was adopted, with the aim of centralizing the management and coordinating the network of workshops created in the Province of Biscay since the late sixties. Subsequently, the doors of Lantegi Batuak were opened to people with physical or sensory disabilities, and in 2001 the group of people with mental illness was incorporated. In January 1998 it was constituted as a Foundation, with its own legal personality.

It is currently the largest business initiative in the field of protected employment in the Province, as it generates job opportunities for more than 2,500 people with intellectual, physical, sensory or mental disabilities, through industrial and service activities.

In the Basque Country, in 2019, there are almost 140,000 people (out of a total population of almost 2.2 million people) who have a recognized disability of more than 33%. Around 47% of whom live in Biscay, where Lantegi Batuak carries out its activities. Of this total group, 44% are women and 56% men. In the working age group, i.e. between 18 and 64 years of age, there are almost 70,000 people in the whole region, of which almost 50% live in the province of Bizkaia. (EHLABE, 2019).

In the Basque Country, in 2018, around 8,000 people with disabilities were employed in a special employment center, around 11.4% of the potentially active group. Of these employed people, 35% are women and 65% men (EHLABE, 2019)[7].

The Lantegi Batuak Foundation currently has 22 centers covering the entire province of Biscay. These centers are organized by activities or areas (industrial and services) and a general support center for all activities. The following map shows the distribution and location of the Lantegi Batuak centers in the province.

Figure 1. Map showing the presence of Lantegi Batuak work centres in the Province of Biscay

Source: Lantegi Batuak

As for the activities they carry out, they are of a diverse nature and are grouped into two areas: industrial and services, as shown in the following table:

Table 7. Economic activities carried out by Lantegi Batuak

Industrial	Services
Wiring	Cleaning
Electromagnetic assemblies	Gardening and environment
Metal transformation	Vending
Electronics	Document management
Logistics solutions	Food delivery

Source: elaborated by authors based on www.lantegibatuak.eus

It is an entity in constant expansion, both by increasing the number of centers in its usual areas of work, such as the opening in 2019 of Sestao Barri, a new center specialized in electronics, and also by new sectors of activity, which aims to create new employment opportunities for people with disabilities.

As a summary, and based on the socio-economic analysis carried out in section 5, Lantegi Batuak has the following characteristics:

- As for the origin, it is an entity generated by the impulse and leadership of a group of families whose objective is the provision of services for their sons and daughters with intellectual disabilities.
- In terms of the specific purpose of the classification in table 4 would be the second: charitable welfare and labor, and specifically would fall within this last dimension, labor.
- In terms of size, while the average employment in Foundations is 21,4 employees in 2018, Lantegi Batuak employs 2,500 people. But it also stands out in terms of size among the special employment centers, whose average employment is 269,9.

6.2. Socio-occupational integration processes

Together with what has already been mentioned in relation to the Foundations in section 3, as well as its belonging to the Social Economy in section 2, a third axis should be added, as Lantegi Batuak is also considered a special employment center.

These centers are regulated by Royal Legislative Decree 1/2013, which defines them as "those whose main objective is to carry out a productive activity of goods or services, participating regularly in market operations, and whose purpose is to ensure paid employment for people with disabilities; at the same time they are a means of inclusion of the greatest number of these people in the ordinary employment regime". Furthermore, it is established that "they must provide, through the support units, the personal and social adjustment services required by disabled workers, according to their circumstances and in accordance with what is determined by regulation.[8]

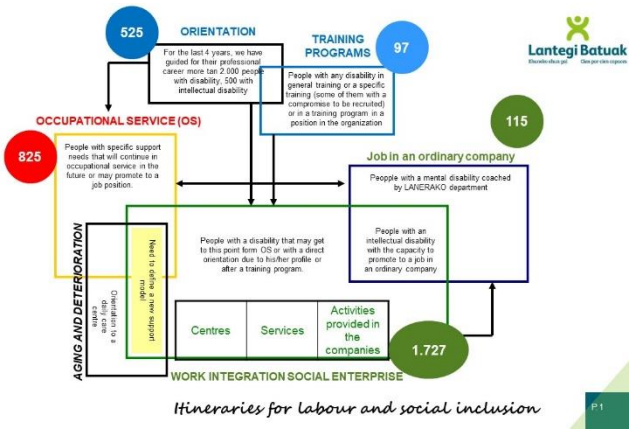
Lantegi Batuak offers each person an individualized socio-occupational insertion itinerary (figure 2), ranging from guidance and training, to incorporation in the Occupational Service, in the Special Employment Centre, in access to Ordinary Employment, or in the processes of return and support for active ageing. In the latter case, the need to design new support systems has been detected. In fact, around 46% of people with disabilities are aged 65 or over (EHLABE, 2019).

The following figure summarizes the inclusion pathways graphically and the inclusion pathways, which are developed further below:

[7] More information about the disability in the Basque Country can be found in EDEKA, BASQUE COORDINATOR OF REPRESENTATIVES OF PEOPLE WITH DISABILITIES (2014), *White Paper on disability in the Basque Country*. http://www.edeka.es/wp-content/uploads/2017/11/Libro-Blanco-de-la-Discapacidad-1.pdf. Año 2014.

[8] More information can be found in BENGOETXEA ALKORTA, Aitor et. al. (2019), *The Basque Model of Social and Labor Inclusion*. https://www.ehlabe.org///upload/memorias/Informe-elmodelo-ISBN-ING.pdf.

Figure 2. Outline of the itineraries for socio-occupational inclusion in Lantegi Batuak



Source: Lantegi Batuak

a) Orientation: first phase to determine the most suitable position for each person, based on their aspirations, skills and expectations, improving their qualifications. In the last 4 years around 2.000 people have received this service.

b) Training: adapted, practical (focused on the development of skills) and professional (oriented towards inclusion in the labor market) The aim is to improve the employability of people with disabilities. In the last year, 57,800 hours of training have taken place, most of them in continuous training (169 actions) and others in occupational training (10). Likewise, since 2016, the *Lan Eskola* program has taken place, through which accredited training is carried out in approved centers of Lantegi Batuak or collaborators. The theoretical, professional and transversal training is complemented with tutored internships and individualized accompaniment. Last year, 79 participants took part in 9 training actions.

c) Occupation: the training and support necessary to improve the skills of people with disabilities, so that they have greater autonomy and a better quality of life. Around 825 people have been users of this itinerary in the last year.

d) Employment: through the Special Employment Center, people with disabilities can develop their work in adapted conditions and in competitive sectors, industrial and service activities. 1.727 people form part of this group.

e) Employment with support: which enables people with disabilities to work in normalized jobs, private or public, for which they seek opportunities, raising awareness and advising companies, positions are analyzed, the right people selected and trained them in situ, guaranteeing continuous monitoring and professional development. In fact, more than 400 visits were made to companies for prospecting, advice on compliance with the law and recruitment, and 55 transitions to regular employment.

6.3. Measuring social value

As a business organization, Lantegi Batuak operates in a global market with increasingly demanding competition, which obliges it to achieve the highest standards of professionalism in each of the different sectors in which it provides services. However, it should be noted that the value generated by Lantegi Batuak is not the same as that of a regular company, as its management is based on values centered on people, sustainability and the search for excellence. For this reason, over the last 10 years Lantegi Batuak has developed, together with the University of the Basque Country and the University of Deusto, a methodology that allows to measure the integral value generated, quantify it and even monetize it (RETOLAZA et. al, 2014). This same methodology is used by other Foundations and social enterprises (AYUSO SIART et al., 2020).

In 2019, the total (integrated) social value generated amounts to 207 million, totaling 1,5 billion in the last 10 years (Lantegi Batuak, 2020). But the impact of Lantegi Batuak in other areas can be seen, as shown in the following figure:

Figure 3. Amount of the total integrated social value and by area. 2019. (data in million euros)

Source: Lantegi Batuak

Lantegi Batuak is also characterized by its involvement in territorial development: with a network of centers and services present in all the counties and its close collaboration with public institutions and social and business entities. In fact, for every public euro received, Lantegi Batuak contributes approximately €13 to society, helping to unite the territory and develop the business and social fabric of Bizkaia (LANTEGI BATUAK, 2020).

Likewise, in the last year, more than 500 actions in the community can be highlighted, the participation in more than 20 conferences and events to present its model, and the reception of around 20 visits for the same purpose.

6.4. Effects of Covid-19 and the pandemic in Lantegi Batuak

The Covid-19 and the effects of the pandemic have meant a great change in daily, personal and professional life, and this effect has also been felt in the daily management of Lantegi Batuak.

The new context has required the adoption of a series of changes in the organization, allowing the

continuity of the business activity to be combined with the prevention and protection of people's health.

A virtual support system has been developed for the users of the occupational service, which allows the service to continue to be provided without employees having to travel to the work centers.

The process of adapting systems to respond to this need to work remotely (VPN, IntraLan, FortiClient, Teams, Support, Communication and exploitation of databases, etc.) has been accelerated, boosting agility in operational decision-making (customer service, maintenance of essential activities, people management, occupational service, funding assurance, dialogue with different administrations, processing of regulatory changes and recommendations, etc.), which have made it possible to respond to the needs of this new context.

This has been made possible by having the support of the Board of Trustees in decision-making, backing up the measures agreed by the management team.

7. Conclusions

Along this research paper, we have argue that Foundations are non-profit organizations whose assets are permanently assigned to the realization of general interest purposes. Their activity must contribute to human welfare in areas such as human rights, social action, educational, cultural and sporting activities or the promotion of equal opportunities.

The Basque Government aware of the positive social effects of these organizations, establishes a legal regime that facilitates and promotes these entities.

Foundations are democratic, transparent and engaged with community entities, but they also stand out for their business dimension. Data show a dynamic and growing sector in terms of employment, volunteers and turnover. But in this realm, among other challenges, Foundations are very interested in measuring and disseminating the social value generated by Foundations to document the social impacts.

Among the fundational sector there is an outstanding case, Lantegi Batuak, whose aim since 1964 is to promote and achieve the social and occupational integration of people with disabilities by creating quality employment opportunities. Now there are nearly 2500 persons employed and has generated a total (integrated) social value totaling 1,5 billion in the last 10 years. Lantegi Batuak is a is an example of how it is possible to combine social action with economic results.

THE LEGAL FRAMEWORK OF SECURITISATION ON THE ROMANIAN CAPITAL MARKET

Cristian GHEORGHE*

Abstract

Securitisation scheme enables credit institutions to refinance a set of loans, exposures or receivables, such as residential loans, auto loans or leases, consumer loans, credit cards or trade receivables. These loans, transferred to a special purpose vehicle, are transformed in tradable securities offered to investors.

The lender organises loans into different risk categories for investors, thus giving them access to investments in loans and other exposures to which they normally would not have direct access. Returns to investors are originated in payments made by debtors of the underlying loans.

Domestic law regarding securitisation (Law no 31/2006) does not meet the market expectations in order to generate securitisation schemes. Moreover, the domestic law came into conflict with European legislation (Regulation UE 2017/2402 laying down a general framework for securitisation and creating a specific framework for simple, transparent and standardised securitisation).

Finally, domestic law has been repealed to leave room for application of the European regulation.

Keywords: *securitisation, capital market, securitisation special purpose entity (SSPE), originator, investment firm.*

1. Introduction

This paper covers the matter of securitisation, a still new topic for Romanian capital market. In traditional Western economies securitisation scheme has proven useful in debt refinancing. In the most common situation securitisation allows credit institutions to refinance a set of loans. Investors acquires tranches of these loans as securities issued by the collectors of these loans, SSPE (securitisation special purpose entity).

Securitisation proved to be an important element of developed financial markets. It allows for a broader distribution of financial risk and can help free up creditors' balance sheets to allow for further lending to the economy. Securitisation creates a bridge between credit institutions and capital markets[1].

We will study the securitisation process in terms of Romanian law. First law in the field was Law no 31/2006) that did not meet the market expectations in order to generate securitisation schemes. Moreover, the domestic law came into conflict with European legislation (Regulation UE 2017/2402 laying down a general framework for securitisation and creating a specific framework for simple, transparent and standardised securitisation). In present the domestic law has been repealed to leave room for application of the European regulation.

2. Concept of securitisation

Securitisation is a mechanism used by the lenders, *originato*rs in terms of securitisation, mainly credit institutions, to refinance a set of loans, exposures or receivables, such as residential loans, auto loans or leases, consumer loans, credit cards or trade receivables.

In principle, these originators' loans are transferred to a SSPE (securitisation special purpose entity), although securitisation may involve the transfer of risk achieved by the use of credit derivatives. In this case the exposures being securitised remain exposures of the originator.

The credit risk associated with exposures is "tranched". 'Tranche' means a segment of the credit risk (associated with an exposure or a pool of exposures). Usually securitisation entity (SSPE) initiates a programme of securitisations. The securities issued by this programme predominantly take the form of asset-backed commercial paper (ABCP) with an original maturity of one year or less.

The lender organises loans into different risk categories for different investors, thus giving investors access to investments in loans to which they normally would not have direct access. Returns to investors are originated in payments made by debtors of the underlying loans.

The selling of a securitisation position is prohibited to a retail client unless the seller of the securitisation position has performed a suitability test[2]

* Associate Professor, PhD, Faculty of Law, "Nicolae Titulescu" University of Bucharest (e-mail: profesordrept@gmail.com).

[1] Regulation (EU) no 2017/2402, Preamble 4. The Regulation recognises the risks of increased interconnectedness and of excessive leverage that securitisation raises, and enhances the microprudential supervision by competent authorities of a financial institution's participation in the securitisation market.

[2] In accordance with Article 25(2) of Directive 2014/65/EU.

with the outcome that the securitisation position is suitable for that retail client.

Regarding institutional investor, European Regulation lay down due-diligence requirements. Prior to holding a securitisation position, an institutional investor shall verify that the originator or original lender grants all the credits (giving rise to the underlying exposures) on the basis of sound and well-defined criteria and clearly established processes for approving, amending, renewing and financing those credits[3].

Risk retention principle applying to a securitisation obliges the originator or sponsor to retain a material net economic interest in the securitisation of not less than 5 %. That interest shall be measured in a manner explained by Regulation[4].

Transparency requirements for originators, sponsors and SSPEs.[5] The originator, sponsor and SSPE of a securitisation shall make certain information available to holders of a securitisation position and competent authorities. Such information includes: information on the underlying exposures on a quarterly basis; all underlying documentation that is essential for the understanding of the transaction; where a prospectus has not been drawn up, a transaction summary or overview of the main features of the securitisation; quarterly investor reports, any inside information relating to the securitisation that the originator, sponsor or SSPE is obliged to make public[6].

Details of a securitisation are collected by a repository. A securitisation repository shall be a legal person established in the Union and shall comply at all times with the conditions for registration. A securitisation repository shall, without undue delay, notify ESMA of any material changes to the conditions for registration[7].

3. Participants to securitisation

SSPE 'securitisation special purpose entity' means a corporation or other legal person which is established for the purpose of carrying out one or more securitisations schemes, the activities of which are limited to those appropriate to accomplishing that objective. SSPE is intended to isolate the obligations of the SSPE from those of the originator who transfers the exposures.

'Originator' means a person which was involved in the original agreement which created the obligations of the debtor giving rise to the exposures being securitized. It can also be the purchaser of a third party's exposures on its own account and then securitises them. *'Original lender'* means an entity which concluded the original agreement which created the obligations of the debtor giving rise to the exposures being securitised[8].

'*Sponsor*' means a credit institution[9], located in the Union or not, or an investment firm[10] other than an originator, that establishes and manages an asset-backed commercial paper programme or other securitisation that purchases exposures from third-party entities. Sponsor can delegates the day-to-day active portfolio management involved in that securitisation to an entity authorised to perform such activity such an undertakings for collective investment in transferable securities (UCITS)[11], an Alternative Investment Fund Managers (AIFM)[12] or investment firm[13].

'*Investor*' means a natural or legal person holding a securitisation position.

Securitisation repository' means a legal person that centrally collects and maintains the records of securitisations[14].

4. Legal framework

Domestic Law. Former internal law regarding securitisation (Law no 31/2006) did not meet the market expectations in order to generate securitisation schemes.

Securitisation was defined as a financial operation initiated by an investment vehicle (IV) that acquires receivables, groups and affects them to guarantee a securities issue. Receivables subject to securitisation can arise from credit agreements (including mortgage credit agreements, credit agreements for the purchase of cars, contracts for the issuance of credit cards), leasing contracts, term payment contracts (including sale-purchase contracts with payment in instalments) and finally any other debt securities provided that the rights they confer may be the subject of an assignment.

Under this domestic law an investment vehicle was an entity set up as a securitisation fund on the basis

[6] In accordance with Article 17 of Regulation (EU) No 596/2014 of the European Parliament and of the Council on insider dealing and market manipulation.
[7] Art. 10-12 Regulation (EU) no 2017/2402.
[8] Art. 2 al. 20 Regulation (EU) no 2017/2402.
[9] As defined in point (1) of Article 4(1) of Regulation (EU) No 575/2013.
[10] As defined in point (1) of Article 4(1) of Directive 2014/65/EU.
[11] In accordance with Directive 2009/65/EC.
[12] Directive 2011/61/EU.
[13] Directive 2014/65/EU.
[14] Art. 2 al. 23 Regulation (EU) no 2017/2402.

of a civil society contract or as a securitisation company organized in the form of a joint stock company.[15]

The administration of funds and securitisation companies was performed by legal entities established in the form of a joint stock company. The registration at the trade register office of a company having as object of activity the administration of investment vehicles was made only with its prior authorization by CNVM.[16]

The above provisions of the domestic law came into conflict with European legislation (Regulation UE 2017/2402 laying down a general framework for securitisation and creating a specific framework for simple, transparent and standardised securitisation)[17]. Still, this conflict has an intrinsic solution. European law takes precedence over the national laws of the Member States. The principle of supremacy applies to all European acts that are binding. Member States may not apply a national rule which is contrary to European law. In EU Court of Justice wording, the law stemming from the treaty could not be overridden by domestic legal provisions[18]. Romanian Constitution states the same principles of the pre-eminence of European law over national law.[19]

The European regulatory act is a regulation [Regulation (EU) 2017/2402]. Such an act is directly applicable in national law, without a national implementation. Moreover, such an implementation would create a normative redundancy because the regulation has general applicability. It shall be binding in its entirety and directly applicable in all Member States (Article 288 of the Treaty on the Functioning of the European Union).

European Law. Regulation (EU) 2017/2402 of the European Parliament and of the Council of 12 December 2017 lay down a general framework for securitisation and creates a specific framework for simple, transparent and standardised securitisation[20].

The Union is striving to improve the legislative framework implemented after the financial crisis. EU aims to address the risks inherent in highly complex, opaque and risky securitisation. EU legislator tries to ensure that rules are adopted to better differentiate simple, transparent and standardised (STS) products from complex, opaque and risky instruments. [21]

Finally, domestic law has been repealed to leave room for application of the European regulation. Now are enacted in domestic law measures implementing Regulation (EU) 2017/2.402 of the European Parliament establishing a general framework for securitisation and creating a specific framework for simple, transparent and standardized securitisation.[22] Romanian Law establishes competent authority in securitisation field (FSA – Financial Supervisory Authority) with particular competencies[23], supervisory powers[24] and powers to apply punishments for the violation of the rules[25]. With these implementing rules the European Regulation is directly applicable on Romanian capital market.

5. Simple, transparent and standardised ('STS') securitisation

European Regulation creates a specific framework for simple, transparent and standardised ('STS') securitisation, a unique defined operation throughout the Union. It should be established a general applicable definition of STS securitisation based on clearly laid down criteria. The implementation of the STS criteria throughout the Union should not lead to divergent approaches that would create potential barriers for cross-border investors. They would not be compelled to familiarize themselves with the details of the Member State frameworks, thereby undermining investor confidence in the STS criteria. A single source of interpretation would facilitate the adoption of the STS criteria by originators, sponsors and investors throughout the Union. The European Regulation and ESMA[26] should play an active role in addressing potential interpretation issues.

Traditional securitisation (true-sale securitisations) in Regulation wording[27] means a securitisation with the transfer of the economic interest in the exposures being securitised through the transfer of ownership of those exposures from the originator to an SSPE. By contrast, *synthetic securitisation* means a securitisation where the transfer of risk is achieved by the use of credit derivatives or guarantees. The

[19] Art. 148 Romanian Constitution: *Following accession, the provisions of the Constitutive Treaties of the European Union, as well as other binding Community regulations, shall take precedence over the contrary provisions of national law, in compliance with the provisions of the Act of Accession.*
[20] Official Journal of the European Union L 347/358, 12.2017.
[21] Regulation (EU) no 2017/2402, Preamble 2.
[22] Law no 158/2020, Chapter XI.
[23] Art. XV Law no 158/2020.
[24] Art. XVII Law no 158/2020.
[25] Art. XX Law no 158/2020.
[26] Regulation (EU) no 1095/2010 of 24 November 2010 establishing a European Supervisory Authority (European Securities and Markets Authority), amending Decision No 716/2009/EC and repealing Commission Decision 2009/77/EC.
[27] Art. 2 al. 9 Regulation (EU) no 2017/2402.

exposures being securitised remain exposures of the originator.

The Regulation only accepts for traditional securitisation to be designated as simple, transparent and standardised STS. The transfer of the underlying exposures to the SSPE should not be subject to clawback provisions.

STS requirements are clearly laid down by the Regulation. In the end ESMA shall maintain on its official website[28] a list of all securitisations which the originators and sponsors have notified to it as meeting the STS requirements. ESMA shall add each securitisation so notified to that list immediately and shall update the list where the securitisations are no longer considered to be STS following a decision of competent authorities.

Requirements relating to simplicity[29] mean the title to the underlying exposures shall be acquired by the SSPE (by means of a true sale) and the transfer of the title to the SSPE shall not be subject to clawback provisions in the event of the seller's insolvency.

Requirements relating to standardisation[30] mean the originator, sponsor or original lender shall satisfy the risk-retention requirement. Thus means they shall retain a material net economic interest in the securitisation of not less than 5 %., measured at the origination (e.g. the retention of not less than 5 % of the nominal value of each of the tranches sold or transferred to investors).

Requirements relating to transparency[31]. The originator and the sponsor shall make available data on static and dynamic historical default and loss performance.

The Regulation edict a ban on resecuritisation. Resecuritisation means securitisation where at least one of the underlying exposures is a securitisation position.[32] The reason for ban is that resecuritisations could hinder the level of transparency that the Regulation seeks to establish.

The Regulation lay down above mentioned requirements regarding non-ABCP[33] securitisation. Further the text deals with ABCP securitisation.

The Regulation allows for the different structural features of long-term securitisations and of short-term securitisations (namely ABCP programmes and ABCP transactions) and there should be two types of STS requirements: one for long term securitisations and one for short-term securitisations corresponding to those two differently functioning market segments[34].

6. Conclusions

Securitisation proved to be an important element of developed financial markets. It can help free up creditors' balance sheets to allow for further lending to the economy. Securitisation creates a bridge between credit and capital markets, giving investors access to investments in loans and other exposures to which they normally would not have direct access. They can use sophisticated financial instruments such as credit derivative but tradeable securities used in traditional securitisations are more accessible.

Still, holding a securitisation position implies many risks. It is important that the interests of originators and sponsors that are involved in a securitisation and investors be aligned. In order to achieve this goal original creditors or other participants in this scheme should retain a significant interest in the underlying exposures of the securitisation. It is therefore important for the originator or sponsor to retain an economic exposure to the underlying risks in question. Any breach of that obligation should be subject to sanctions to be imposed by competent authorities.

The main purpose of the general obligation for the originator, sponsor and the SSPE to make available information on securitisations (via the securitisation repository) is to provide the investors with a source of the data necessary for performing their due diligence. Dissemination of relevant information deter participants to enter into securitisation transactions without disclosing sensitive commercial information on the transaction.

Securitisation scheme are still new for Romanian capital market. These operations should be implemented to provide both investors and institutional creditors with a new financial instrument.

The Romanian authority (FSA) must provide the necessary framework for the use of securitisation on the internal market.

BRIEF CONSIDERATIONS REGARDING RESOLUTION OF SALE PROMISES

Emilian-Constantin MEIU[*]

Abstract

The matter of resolution of sale promises poses practical problems arising from the interpretation of the Civil Code and that we intend to analyze in this study. Among the issues to analyze we can mention: specific aspects of the written stage, such as stamp tax; the criteria for establishing competence; the substantial conditions for the resolution of the promise of sale; the prescription of the material right to action. Regarding the conditions of operation of the resolution, it is necessary to determine what is significant execution in the context of the promise of sale, from what time is considered to be late the contractor of the party wishing to appeal the termination of the contract and what kind of contractual behavior who wishes to terminate contractually, whether or not the notion of contractual fault is incidental or it is sufficient that the adverse party does not prove one of the justified causes of non-performance provided by art. 1555-1557 Civil code. Also concerning the prescription of the substantive law of the action, it is necessary to analyze concretely the moment from which it starts to flow, with possible causes of interruption, taking into account the fact that the resolution usually appears after several steps to execute in nature of the contract, being an extreme solution.

Keywords: *art. 1549, art. 1669, promise of sale, resolution, prescription.*

1. Introduction

The provisions of art. 1516 of the Civil Code offers in the case of the promise of sale, besides the forced execution in kind in the form of pronouncing a decision that takes the place of the contract, the forced execution by equivalent, but also the extreme remedy, of last resort, of the resolution. In the case of the promise of sale, the mechanisms of the resolution remain apparently unchanged, but they have particularities both substantially and procedurally.

The resolution mechanism has a particular application in the field of sales promises given the specific nature of pre-contracts. The action in the resolution provoked discussions over time both on the conditions to be met for accessing this remedy, on the prescription of the material right to action, but also on the procedural level on the establishment of the stamp duty and jurisdiction. We consider it important to analyze the resolution mechanism in terms of sales promises as much as the sales promise is by its nature an intermediate stage and the application of the rules of resolution must be adapted by comparison with a sales contract, for example, the interpretation of applicable rules in the specific context of the pre-contractual phase. Thus, in addition to the difficulties in determining the object of the action in the resolution and its value when we speak of the promise to conclude a contract of sale in the future, there are subsequent difficulties in establishing the material jurisdiction of the court.

With regard to the conditions of operation of the resolution, it is necessary to determine what is significant execution in the context of the promise of sale, from what time is considered to be late the contractor of the party wishing to appeal the termination of the contract and what kind of contractual behavior who wishes to terminate contractually, whether or not the notion of contractual fault is incidental or it is sufficient that the adverse party does not prove one of the justified causes of non-performance provided by art. 1555-1557 Civil code.

Also, from the perspective of the prescription of the substantive law of the action, it is necessary to analyze concretely the moment from which it starts to flow, with possible causes of interruption, taking into account the fact that the resolution usually appears after several steps to execute in nature of the contract, being an extreme solution.

Thus, in the following pages, we will analyze the problems listed above regarding the resolution of sales promises, trying to capture the existing guidelines in judicial practice and legal literature, but also to offer our own solutions, from those already existing or starting from them to identify preferable alternatives.

2. Judicial stamp duty

The judicial stamp duty applicable to the analyzed request is calculated at the value according to art. 3 para. (1) and (2) letter a) of O.UG. no. 80/2013. It is also an incident of art. 31 para. (2) thesis I of O.U.G. no. 80/2013, according to which in the case of fees calculated according to the value of the object of the application, the value at which the judicial stamp duties are calculated is the one provided in the action or in the application.

The request regarding the reinstatement of the parties in the previous situation is exempted from stamp duty if it is ancillary to the action in resolution, according to art. 3 lit. a) Thesis II of O.U.G. 80/2013.

[*] PhD Candidate, Faculty of Law, „Nicolae Titulescu" University of Bucharest (e-mail: meiuemilian@yahoo.com).

According to art. 8 para. (2) of O.U.G. 80/2013, the request for reinstatement of the parties in the previous situation, when it is not ancillary to the action in finding nullity, cancellation or resolution or termination of a legal act is taxed with 50 lei, if the value of the request does not exceed 5,000 lei, and by 300 lei, for applications whose value exceeds 5,000 lei.

Similar to the action for a decision taking the place of a contract, for the resolution of the promise of sale the issue which arises in determining the stamp duty is related to the value of the object of the application. Thus, the action in the resolution of the promise of sale is evaluable in money, the determination of the amount of the judicial stamp duty being made by reference to the value limits established by art. 3 para. (1) of the mentioned normative act. According to art. 31 para. (2) of the O.U.G. no. 80/2013, the value taken into account for establishing the stamp duty is the one indicated in the content of the action (which may or may not coincide with the one indicated in the content of the promise of sale). The same text of the law establishes that if the value is contested or appreciated by the court as clearly derisory, the evaluation is made under the conditions of par. (3) of art. 98 Civil procedure code.

The object of the sale promise is an obligation to make, namely to conclude the sales contract on a date agreed by the parties. Given that the object is an obligation to perform, the difficulty that arises procedurally is to determine whether this obligation is assessable in money and in the case of an affirmative answer which is the actual value by reference to which the stamp duty will be set.

With regard to the first question, both legal doctrine and practice are unanimous in considering that the action for the resolution of a promise to sell is assessable in money. However, there are different opinions about the value to which we must relate.

In a first approach, the circulation value of the good whose sale was promised by the parties through the pre-contract is relevant for determining the stamp duty. This conception is based on the premise that through the promise concluded, the parties established the conclusion of a future contract of sale, and the objective value of this contract is the value of the good. This reasoning is similar to that applied when determining the value of a sales contract, in order to calculate the stamp duty. For the resolution of the sale, the circulating value of the good is considered to be an objective benchmark as opposed to the price set by the parties by contract or the value indicated by the plaintiff in the request, which are subjective, depending on several factors.

A second approach considers the value criterion that enters the patrimony of each of the co-contractors by concluding the contract. This reasoning is applied somewhat by analogy from the termination of a contract of sale. In this case, by resolution, the seller would regain in his patrimony the good, and the buyer, the price paid. Consequently, in the event of the action being taken for the judicial termination of a contract of sale by the buyer, he would pay the judicial stamp duty at the value of the price paid, and if the plaintiff is the seller he will pay the stamp duty at the value of the sale price. This algorithm is also applicable in the case of the resolution of the sale promise insofar as we consider that its value is equivalent to the value of the patrimonial gain predicted by the parties in the event of concluding the sale contract.

Starting from these two approaches, we can observe an overlap, at least apparent, between the object of the promise of sale and the object of the contract of sale. Thus, although the promise of sale is an intermediate stage set by the parties before the sale is concluded, it is equivalent to the sale in terms of the applicable stamp duty treatment. So we have on the one hand the firm commitment of the parties to sell and buy a good, which resulted in the acquisition by each co-contractor of the good, respectively of the price in its patrimony. In this case, it appears natural to tax the share in the resolution either at the taxable value of the good or at the value with which the patrimony of each of the parties is to be increased, the price paid or the value of the good.

However, the reasoning set out is no longer justified in determining the value of the object of the request in the termination of a pre-contract whose legal object is the future conclusion of a sale. In order to determine the value of the object of a pre-contract, the obligation to perform assumed by each of the parties should be effectively assessed. From this perspective, the simple obligation to appear at a certain date for the conclusion of the contract is not assessable in money. On the other hand, the pre-contractual determination of the obligatory elements of the sales contract, such as its object and price, as well as the payment of a price advance or a deposit, is a reason to give the promise of sale a patrimonial value at most equal to the advance. or arvuna paid, because as a result of the resolution they will return to the patrimony of the promising buyer. The action in resolution formulated by the promising seller would be considered invaluable in money because his patrimony will not increase in any way after the resolution, he can win at most the right to alienate the promised good, in case of the existence of a clause of inalienability implied or expressed in the promise.

In conclusion, regarding the way of setting the stamp duty, we identified a problem from the perspective of the value of the request for resolution of the promise of sale. Thus, despite the unanimous practice of setting the stamp duty at the circulating value of the good, this reasoning has the weakness of equating the promise with an actual sale in terms of the value of the object. However, the solution adopted in practice has the advantage of not creating problems, providing a constant criterion for calculating the stamp duty, although from the applicant's point of view it could be seen as an unjustified taxation on the value of the property.

3. Competence of the court

Regarding the material competence of settlement in the first instance, the request in question belongs to the court, as the case may be to the court, by reference to art. 94 pt. 1 lit. k) and art. 95 pt. 1 C. proc. civ, taking into account the establishment of the value of the object of the application, art. 101 para. (2), para. (1) Civil procedure code.

Regarding the territorial competence to solve the mentioned request, this is the one of common law, regulated by art. 107 Civil procedure code or, as the case may be, the alternative one, according to art. 113 para. (1) § 3 Civil procedure code, in the event that the contract expressly provides for a place of execution of the obligation covered by the application.

Discussions concerning jurisdiction overlap almost entirely, with the arguments presented in the analysis of the judicial stamp duty being valid.

From the point of view of substantive competence, an inconvenience would arise if the seller's request for termination of the promise were considered to be invaluable in cash and the buyer's claim would have the value of the price advance paid under the promise. Thus, the request formulated by the seller, according to art. 94 para. (1) Civil procedure code, regarding an obligation to make it invaluable in money, would always be within the material competence of the court, while the request made by the buyer would attract the competence of the court or tribunal, by reference to the amount of the advance paid, according to art. 94 pt. 1 lit. k) and art. 95 pt. 1 Civil procedure code However, in that situation, the termination of the same contract would attract the material jurisdiction of different courts depending on its holder, which would lead to the possibility of mandatory rules governing substantive jurisdiction, which is unacceptable.

Thus, although the logical fracture we identified seems important to us, not being able to equate the value of the object of a promise of sale with the object of a sale, at least for the moment, it seems preferable to establish material competence and stamp duty by reporting. to the circulating value of the good, in the absence of an alternative that does not present shortcomings.

4. The conditions of the judicial resolution of the promise of sale

According to art. 1550 alin. (1) of the Civil Code "the resolution may be ordered by the court, upon request, or, as the case may be, may be declared unilaterally by the entitled party". The second paragraph of the same article also states that "in specific cases provided for by law or if the parties have so agreed, the resolution may operate in its own right". This is the legal classification of the forms of the resolution according to their mode of operation.

Thus, the Civil Code provides the creditor, regarding the resolution, a right of option between resorting to the intervention of the court to terminate the contract as a result of non-performance and declaring himself, by unilateral expression of will, the termination of the contract. Therefore, pursuant to art. 1516 of the Civil Code, the creditor may choose between several consequences of non-performance of contractual obligations. As an exception to this principle, the creditor may choose the resolution only in particular cases, when the non-execution is sufficiently significant.

Pursuant to art. 1550 of the Civil Code, the full resolution is either legal or conventional. Regarding the full resolution of the conventional law, it operates in the presence of an express commission commission agreement regulated by art. 1553 of the Civil Code. The utility of such commissioners' pacts is that they remove the arbitrariness of assessing the significant character of the non-execution; thus, the parties stipulate from the outset which obligations, once violated, give rise to the right to request the resolution.

Finally, the option that the creditor has regarding the application of the resolution results from the very manner of formulating art. 1,549 of the Civil Code. So, according to him, "if he does not demand the forced execution of the contractual obligations, the creditor has the right to resolution". Thus, the exercise of the right to opt enshrined by the phrase "if he does not ask" used in the cited legal text will be exercised by the creditor through the declaration invoking the resolution.

For the hypothesis of inserting a commission pact, art. 1553 of the Civil Code allows the parties to derogate from the rule of the need for delay, in which case the resolution intervenes by "the mere fact of non-execution". The contrast with the variant of the resolution by unilateral declaration is striking and undeniable: when the parties derogate from the rule of the need to delay (the same hypothesis above) the resolution - provides art. 1552 - intervenes by "written notification of the debtor"[1].

By the phrase "by right" we should understand that non-performance gives rise to the possibility of the creditor to prevail or not the termination of the contract - the termination operates automatically, but the creditor can choose whether to proceed with this cancellation that operated automatically or not. The peculiarity compared to the other forms of resolution would be that this option does not imply a declaration of resolution, in the sense of art. 1552 of the Civil Code, but it can be done anyway, as long as it is univocal. In this way, the direct execution regulated by art. 1726 of the Civil Code is a particular application of the full legal resolution. In other words, in the case of full resolution, as in the case of resolution by unilateral

[1] V. Diaconiță, Condițiile substanțiale ale rezoluțiunii în noul Cod civil, Revista Romana de Drept Privat 6 din 2012, p. 9.

declaration, the creditor has full power over the fate of the contract, but, unlike the latter, the option must not be notified in writing to the debtor.

A first condition of the resolution is the significant nature of the non-execution which is considered to be the only substantial condition of the resolution, for all types of resolution. This condition is deduced from the a contrario interpretation of art. 1551 para. (1) It follows from the second sentence of the same article that in the case of contracts with successive execution the termination can be obtained by the creditor for a non-execution that is not serious enough to be considered significant, but is repeated.

A second condition for obtaining the resolution is the delay of the debtor under the conditions of art. 1521 and the following Civil Code, i.e. the granting of an additional term to it by the creditor in order to execute the contractual obligations. Although it is not expressly provided as a condition in the regulation of the judicial resolution, its obligatory character results from several legal texts such as art. 1516 alin. (2) and art. 1522 para. (5) The Civil Code If the debtor has not been granted the additional term for execution, the request for summons itself produces such an effect, and the consequence of the fact that the defendant was not delayed prior to the formulation of the request for summons is the possibility the debtor to execute the obligation within a reasonable time from the date of communication of the summons, as provided by art. 1522 para. (5) of the Civil Code. As an exception, in case the debtor is legally in arrears, the granting of an additional term of execution is no longer necessary and the creditor is entitled to request the resolution directly in court.

4.1. The need for guilt for pronouncing the resolution

The only requirement provided by art. 1516 alin. (2) point 2 of the Civil Code is that the non-execution of the obligation is "without justification". From the evidentiary point of view, the debtor has the task of proving the existence of one of the causes that justify the non-execution, provided by art. 1555-1557 of the Civil Code There is no reason to believe that the phrase "fortuitous event" used in art. 1557 alin. (1) sentence I of the Civil Code would take into account other events than those specified by art. 1634 Civil Code, with reference to art. 1351 and 1352 of the Civil Code, respectively force majeure and fortuitous case, as well as the deed of the victim, the creditor and the deed of a third party, but only if the latter have the characteristics of force majeure or fortuitous event[2].

The verification or not of the debtor's fault exceeds the legal provisions, there being in general rule no coincidence between the non-execution without justification and the culpable non-execution of the obligation, aspect that results even more clearly from the provisions of art. 1530 Civil Code which in its final thesis mentions them alternately.

However, the notion of non-execution without justification, used in art. 1350 alin. 2 Civil Code and in art. 1516 alin. 2 of the Civil Code usually overlaps, in contractual matters, with the notion of culpable non-execution[3].

In this context, there is the problem of identifying those hypotheses that differentiate the scope of the two phrases, i.e. those situations in which non-execution is unjustified and innocent.

In this respect, it was considered that the non-execution without justification no longer expresses the idea of fault whenever, on the basis of an express legal provision or a contractual clause, the fortuitous case does not remove the liability of the debtor. In such a situation, the scope of non-enforcement without justification expands, including cases of non-performance without fault, and the scope of justified non-enforcement is reduced accordingly, excluding cases of non-performance without fault. As long as the fortuitous case justifies non-execution, it means that in the absence of proof, non-execution without justification overlaps with culpable non-execution[4].

4. Prescription of the action in the resolution of the promise of sale

The limitation period of the right to action in the resolution of the sale-purchase promise starts to run only from the moment when the interested party has acquired the certainty that the defendant is unable to fulfill his main obligation.

When the plaintiff requested within the legal term the capitalization of the sale-purchase promise, and after the final settlement of the action he promoted the action in resolution, his entire conduct was an active and diligent one, all these qualities being incompatible with the application, against him, of the sanction of extinctive prescription. Therefore, only from the date of finality of the court decision rejecting the action requesting the execution in kind of the obligation assumed by the promisor-seller, the promisor-buyer has acquired the certainty that the defendant is unable to execute his principal obligation assumed, so that the limitation period of the right to action in the resolution of the sale-purchase promise starts to run only from this moment[5].

Otherwise, the plaintiff would be sanctioned by rejecting the present action as prescribed, although he, proving diligence, requested, within the legal term, the capitalization of the sale-purchase promise, and after the final settlement of the initial action, of the action in resolution.

[5] V. Terzea, Promisiune de vânzare-cumpărare. Acțiune în rezoluțiune. Prescripție, Revista Dreptul nr. 8 din 2020, p. 1.

4.2. Timely application of the extinctive prescription

In order to establish the legal norms applicable to the extinctive prescription, a special relevance is represented, in a first stage, by the determination of the beginning moment of the extinctive prescription term, considering the transitional norm contained in art. 201 of Law no. 71/2011 implementing the Civil Code1, as interpreted by the Decision in the interest of law no. 1/2014, pronounced by the High Court of Cassation and Justice.

Therefore, in the case of prescriptions started to run before the entry into force of the current Civil Code, i.e. before October 1, 2011, fulfilled or not fulfilled on that date, the legal regime applicable to the extinctive prescription will be the one provided by Decree no. 167/1958 regarding the extinctive prescription.

4.3. The moment of beginning for the extinctive prescription

In the case of a pre-contract of sale-purchase concluded prior to the entry into force of the Civil Code, to determine the legal regime of the extinctive prescription it is necessary to establish when the limitation period began to run in which the creditor's right could be exercised.

In this sense, it is worth mentioning that through art. 7 para. (1) thesis I of Decree no. 167/1958 regarding the extinctive prescription, the rule was established according to which the prescription right starts to run from the moment the creditor's right to action arises, and by exception, in case of a suspensive term, the prescription term started to run from the expiration of the term. suspensive, according to art. 7 para. (3) the final thesis from Decree no. 167/1958.

Also, through art. 3 para. (1) of the same normative act established the general duration of the prescription as 3 years.

In the event of concluding a sale-purchase pre-contract, the promisor-buyer acquires a right of claim correlative to the obligation to do what is incumbent on the promisor-buyer and has as object the obligation to transfer the property right either immediately after concluding the sale-purchase pre-contract or at a later date[6].

The term of capitalization of the right to action of the promising-buyer under the incidence of the Decree no. 167/1958 regarding the extinctive prescription was 3 years regardless of the nature of the good that was the object of the pre-contract of sale-purchase, a term that starts to run either from the conclusion of the pre-contract of sale-purchase, or from the fulfillment of the suspensive term in which the promisor-seller had to fulfill its obligation, according to the distinctions provided by art. 7 of the Decree no. 167/1958 regarding the extinctive prescription, in the hypothesis of the pre-contracts concluded before October 1, 2011.

4.4. Interruption of the term of extinctive prescription or extension of the moment of beginning of the term of extinctive prescription

Both in the specialized literature[7] and in the judicial practice[8] it was considered, under the incidence of Decree no. 167/1958, that in the event that the parties have handed over the use of the property, either at the time of concluding the pre-contract, or later, there will be either the extension of the start of the term of extinction, or an interruption of the term of extinction by art. 16 para. (1) lit. a) of Decree no. 167/1958 regarding the extinctive prescription.

If the use of the good was handed over at the time of concluding the pre-sale-purchase contract, extending the beginning of the term of extinctive prescription until after the entry into force of the current Civil Code, the term of extinctive prescription of capitalization of the promisor-buyer began to flow at the moment when the promising seller undoubtedly challenged that right of claim. In such a case, as an effect of the introduction of a first request for a summons requesting the issuance of a court decision to take the place of a sale-purchase contract, there is an interruption of the term of extinctive prescription according to art. 2537 point 2 of the Civil Code reported to art. 2539 Civil Code.

The interruption of the limitation period will maintain its effects even if the first action has been rejected provided that a second action is brought within 6 months from the date when the decision resolving the action remained final and the second action to be admitted, in relation to the provisions of art. 2539 para. (2) final thesis Civil Code.

Furthermore, if the second action having as object the resolution of the pre-sale-purchase contract was formulated within the term of 6 months from the date of finality of the court decision rejecting the action having as object the pronouncement of a court decision place of sale-purchase contract, so that the extinctive prescription did not operate, in relation to the provisions of art. 2539 para. (2) final thesis Civil Code.

Under the current Civil Code it has been argued that since the claim contains a plurality of coercive prerogatives (material rights of action), the object of which is a remedy, there will be a different prescription for each of these material rights to action, which may flow different in relation to each remedy. Regarding the

limitation period for the action in resolution, this is the general term of 3 years according to art. 2501 of the Civil Code, correlated with art. 2517 of the Civil Code and it will begin to flow according to the mechanism analyzed above, from the moment when to the moment when, for example, the promising-seller undoubtedly challenged the right of claim of the promising buyer.

5. Conclusions

The resolution mechanism has a particular application in the field of sales promises given the specific nature of pre-contracts. The action in the resolution provoked discussions over time both on the conditions to be met for accessing this remedy, on the prescription of the material right to action, but also on the procedural level on the establishment of the stamp duty and jurisdiction.

Thus, we analyzed in our study the difficulties in establishing the object of the action in resolution and its value when we talk about the promise to conclude a sales contract in the future, as well as the problems that arise in establishing the material jurisdiction of the court. Regarding the operating conditions of the resolution, the notion of significant execution in the context of the promise of sale was analyzed, from which moment the contractor of the party wishing to appeal the termination of the contract is considered to be late and what kind of contractual behavior the party must have wishes to terminate contractually, whether or not the notion of contractual fault is incidental or it is sufficient that the adverse party does not prove one of the justified causes of non-performance provided by art. 1555-1557 Civil code.

Regarding the value for establishing the stamp duty or the jurisdiction, it is preferable to report the market value of the good. The circulation value of the good is related to the moment of filing the lawsuit. If the value indicated by the plaintiff is contested, the value is established according to the documents submitted and the explanations given by the parties, according to art. 98 para. (3) Civil procedure code, within which the data regarding the taxable value of the good or, as the case may be, the grids of the notaries public could be capitalized.

Regarding the conditions that must be met for the resolution of the promise of sale, these are: the significant character of the non-execution which is considered to be the only substantial condition of the resolution, for all types of resolution; delaying the debtor under the conditions of 1521 and the following Civil Code, i.e. the granting of an additional term to it by the creditor in order to execute the contractual obligations. Although it is not expressly provided as a condition in the regulation of the judicial resolution, its obligatory character results from several legal texts such as art. 1516 alin. (2) and art. 1522 para. (5) Civil Code If the debtor has not been granted the additional term for execution, the request for summons itself produces such an effect.

Of course, in order to operate the resolution, it is necessary to conclude a valid pre-contract, in case of contract the rules on nullity are incidental, which are to be applied with priority over the resolution.

We also showed above that we support the opinion that the verification of the debtor's fault exceeds the legal provisions, there is generally no coincidence between non-execution without justification and culpable non-execution of the obligation, an aspect that results even more clearly from the provisions of art. 1530 Civil Code which in its final thesis mentions them alternately. However, the notion of non-execution without justification, used in art. 1350 alin. 2 Civil Code and in art. 1516 alin. 2 of the Civil Code usually overlaps, in contractual matters, with the notion of culpable non-execution.

Regarding the prescription of the material right to action in the resolution of the promise of sale in case of prescriptions started to run before the entry into force of the current Civil Code, i.e. before October 1, 2011, fulfilled or not fulfilled on that date, the legal regime applicable to the extinctive prescription will be provided by Decree no. 167/1958 regarding the extinctive prescription, being subject to the provisions of the Civil Code the prescriptions started later given on October 1, 2011. On the other hand, the limitation period regarding the action in resolution will not run if the use of the good was handed over at the time of concluding the pre-contract. sale-purchase, operating the extension of the beginning of the term of extinctive prescription until after the entry into force of the current Civil Code, the term of extinctive prescription starting to run at the moment when the promising-seller undoubtedly challenged the respective claim.

CONSIDERATIONS ON THE COORDINATION OF PREVENTIVE RESTRUCTURING MEASURES INTRODUCED BY DIRECTIVE (EU) 2019/1023 OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL OF 20 JUNE 2019 ON PREVENTIVE RESTRUCTURING FRAMEWORKS, ON DISCHARGE OF DEBT AND DISQUALIFICATIONS, AND ON MEASURES TO INCREASE THE EFFICIENCY OF PROCEDURES CONCERNING RESTRUCTURING, INSOLVENCY AND DISCHARGE OF DEBT, AND AMENDING DIRECTIVE (EU) 2017/1132 (DIRECTIVE ON RESTRUCTURING AND INSOLVENCY)

Vasile NEMEȘ[*]
Gabriela FIERBINȚEANU[**]

Abstract

Preventive solutions are a growing trend in insolvency law and approaches that have the aim of saving the companies which are still economically viable are a benefit to the economy. Differences between Member States in relation to procedures concerning restructuring, insolvency and discharge of debt generate additional costs for investors and also lead to uneven conditions for access to credit and to uneven recovery rates. A higher degree of harmonisation in the field of restructuring, insolvency, discharge of debt and disqualifications is thus indispensable for a well-functioning internal market in general and for a working Capital Markets Union in particular. These are only some of the results of the reflection determining the initiative for a new legal framework, as introduced by the Directive (EU) 2019/1023 of 20 June 2019 on preventive restructuring frameworks, on discharge of debt and disqualifications, and on measures to increase the efficiency of procedures concerning restructuring, insolvency and discharge of debt, and amending Directive (EU) 2017/1132 (Directive on restructuring and insolvency).This paper does not aim to offer solutions or to critically analyse the level of ambition of the Directive, but only to provide an examination of the national frameworks in articulation with the new instrument introduced at Union level, indicating new trends foreseen by its provisions and preliminary directions for reflection in the transposition process.

Keywords: *arrangement with creditors, ad-hoc mandate, viability test, early warning tools, classes of creditors, employees' rights.*

1. Introduction

The directive aims at the smooth functioning of the internal market by removing obstacles to the exercise of fundamental freedoms, such as the free movement of capital and the freedom of establishment, resulting from differences between national legal provisions and procedures relating to preventive restructuring, insolvency, debt relief and write-offs. The legislative instrument also ensures that viable businesses and entrepreneurs in financial difficulty have access to effective national preventive restructuring frameworks that allow them to continue to operate, that honest insolvent or over-indebted entrepreneurs can benefit from a full debt write-off after a reasonable period of time has elapsed, thus allowing them a second chance, and last but not least that restructuring, insolvency and debt write-off procedures become more effective, in particular by shortening their duration.

2. Development of the proposed Directive

As is well known, in 2016[1] the Proposal for a Directive on preventive restructuring frameworks, second chance and efficiency enhancing measures for restructuring, insolvency and debt relief procedures and amending Directive 2012/30/EU was launched and in December 2018, the EU Council and the Parliament reached an agreement on the compromise text, the final form of the text being confirmed by the Council on 19 December 2018. The legislative process ends on 6 June 2019, when the legislative proposal was adopted at Justice and Home Affairs Council level. It should be noted that, from the perspective of national legislation, a significant part of the objectives of the Directive are reflected in our legislative system. We have in mind, on the one hand, the common regulation and, on the other hand, the special legislation in the field of banking, of which we will present, below, some aspects of a principled nature.

2.1. Status of restructuring/prevention measures in common regulatory framework

In our legal system, insolvency prevention procedures were regulated for the first time by Law No 381/2009[2] on the introduction of the arrangement with creditors and the ad hoc mandate. This law provided an opportunity for debtors in financial difficulty to avoid insolvency proceedings. The scope of application of Law No 381/2009 was laid down in Article 1 of the Law, according to which the arrangement with creditors and the ad hoc mandate applied to legal persons organising an undertaking in financial difficulty without being in a state of insolvency[3]. It follows that the main addressees of Law No 381/2009 were legal persons organising an undertaking in financial difficulty[4].

Law No 85/2014 introduced a new legal regime for insolvency proceedings which differs from the previous regulation in several respects[5]. One such difference also concerns the scope of these proceedings. In the current regulation, insolvency proceedings apply to debtors in financial difficulty. According to Article 5(27), a debtor in financial difficulty is a debtor who, although performing or capable of performing the obligations due, has a low degree of short-term liquidity and/or a high degree of long-term indebtedness, which may affect the fulfilment of contractual obligations in relation to the resources generated by the operational activity or the resources attracted by the financial activity.

There are therefore two conditions for the application of insolvency proceedings: the status of the debtor and its financial difficulty. Since the law does not specify otherwise, it means that insolvency prevention proceedings are intended for both natural person debtors and legal person debtors, the important thing is to have the legal status of debtor within the meaning of this law.

As regards the debtor's financial difficulty, this may be caused by: a significant drop in the economic profitability of the debtor's business; the loss of important markets, partners, customers or suppliers; the introduction of administrative or legislative measures in the field in which the debtor operates, the bankruptcy of business partners, etc. It is important to note that recourse to the arrangement with creditors, i.e. the ad hoc mandate, does not imply that the debtor is insolvent or insolvent and, even more so, that insolvency proceedings have been opened against him. The financial hardship referred to in the rule under consideration has a different legal meaning from the specific meaning of insolvency, which implies the impossibility of paying the debtor's debts with the money available. While insolvency involves the cessation of payments due to a lack of liquidity, the arrangement with creditors and the ad hoc mandate concern only certain managerial or economic disruptions, but not the non-payment of outstanding debts. At most, they can be regarded as precautionary measures to prevent the debtor from becoming insolvent or insolvent in the future.

If the debtor who owns the business is unable to pay (insolvency), the use of a composition or an ad hoc mandate is excluded, because in such cases, according to Article 66 of the law, the debtor is obliged to apply to the court for insolvency. While the use of composition and the ad hoc mandate is optional, the application for insolvency is mandatory for the debtor. Nor is the commencement of insolvency proceedings conditional on the debtor attempting to use the arrangement with creditors or the ad hoc mandate. The procedures governed by the current legislation are not mandatory preliminary proceedings prior to the opening of insolvency proceedings or the exercise of any action or procedural means of enforcement by creditors, and it is left to the debtor to use them.

Within the meaning of Article 5(17) of Law No 85/2014, a composition agreement is a contract concluded between the debtor in financial difficulty, on the one hand, and the creditors holding at least 75% of the value of the claims accepted and uncontested, on the other hand, approved by the court, whereby the debtor proposes a recovery plan and a plan for the realisation of the claims of these creditors, and the creditors agree to support the debtor's efforts to overcome the difficulties in which it finds itself.

The ad hoc mandate is a confidential procedure, initiated at the request of the debtor in financial difficulty, whereby an ad hoc trustee, appointed by the court, negotiates with creditors with a view to reaching an agreement between one or more of them and the debtor in order to overcome the state of difficulty (Article 5(36) of the Law). The arrangement may provide for measures such as write-offs, rescheduling or partial reduction of debts, continuation or termination of ongoing contracts, staff reductions, etc., with a view to making the economic activity of the debtor's business in difficulty profitable.

Both the arrangement with creditors and the ad hoc mandate are reserved to the debtor, in the sense that they are triggered at his request, but their implementation requires the creditors' consent. Therefore, the procedures and measures regulated by Law No 85/2014 can only be carried out with the express consent of the creditors, materialised in the conclusion of a contract to this effect.

As regards the participants in the two procedures, according to the provisions of Article 7 of Law No

[2] M. Of. no. 870/14 december 2009.

[3] About a similar framework see RPS Submitter, Banque de France and Epaulard, Anne and Zapha, Chloé, *Bankruptcy Costs and the Design of Preventive Restructuring Procedures* (April 2021). Banque de France Working Paper No. 810, available at SSRN: *https://ssrn.com/abstract=3840236*.

[4] V. Nemeș, *Drept comercial*, Ed. Hamangiu, București, 2018, p. 483.

[5] St.D. Cărpenaru, *Tratat de drept comercial român*, ediția a V-a actualizată, Ed. Universul Juridic, București, 2016, p. 705.

85/2014, the bodies applying the ad hoc mandate and composition procedure are the courts, through the president of the court. It follows from the wording of the law that, in practice, the procedures and measures under the ad hoc mandate are ordered by the president of the court, while those specific to the arrangement with creditors fall within the competence of the judge in charge of the proceedings.

From the point of view of territorial jurisdiction, the procedures governed by Title I of Law No 85/2014, the ad hoc mandate and the arrangement with creditors, fall within the ordinary jurisdiction of the court in whose district the debtor's main office or place of business is located. In this regard, Art. 8 para. (1) of Law No 85/2014 provides that the court within whose jurisdiction the debtor's principal place of business or place of business is located shall have jurisdiction to hear the applications referred to in this Title. According to Article 9 of Law No 85/2014, the court of appeal is the court of appeal for judgments delivered by the president of the court or the syndic judge

With regard to the other bodies applying insolvency proceedings, namely the ad hoc trustee and the administrator in composition, the former is present in the ad hoc trustee proceedings and the latter in the proceedings and measures established in the composition proceedings. The rule gives effect to the principle enshrined in Article 4(13), according to which the administration of insolvency prevention and insolvency proceedings must be carried out by insolvency practitioners and their conduct under the control of the court.

In addition to these bodies, creditors and the debtor whose economic enterprise is in financial difficulty also participate in insolvency proceedings.

Creditors participate in the proceedings individually, to the extent permitted by the rights attached to their claim, and collectively, under the conditions laid down by law, through the creditors' meeting and the creditors' representative.

The debtor participates in the procedure mainly through the ad hoc trustee and, in the arrangement with creditors procedure, through the administrator. Moreover, the ad hoc trustee and the administrator in composition are proposed by the debtor, so that they are the contractual representatives of the debtor in financial difficulty.

2.2. Features of prevention/restructuring procedures in the current domestic regulation

Thus, the prevention procedures in the current regulation, which can be used to achieve the objectives of restructuring, have the following characteristics:

a) They are optional procedures because recourse to either of the two instruments (ad hoc mandate and composition) is optional;

b) Both procedures are triggered at the exclusive request of the debtor;

c) Reorganisation and liquidation procedures are not subject to preventive (restructuring) procedures;

d) Both proceedings are collective in the sense that they require the participation of all creditors;

e) Both the ad hoc mandate and the composition procedure are applicable in the event of the debtor's financial difficulties;

f) Both procedures are judicial in nature, in that they presuppose the participation of the judiciary; the ad hoc mandate is granted by the president of the court of the debtor's seat, and the composition procedure is triggered by the syndic judge;

g) Both procedures are primarily aimed at safeguarding the debtor's business and, in the alternative, the interests of creditors;

h) Lastly, both procedures are clearly social in nature, the aim being, as far as possible, to save jobs and, implicitly, to protect employees.

3. The rationale for the new Directive

The rationale of this new architecture reflects the economic and social reality of commercial enterprises at European level. Of these, it is worth mentioning at least those with a particular impact, such as: half of all businesses survive less than five years , 43% of Europeans would not start a business for fear of failure in several EU Member States, viable businesses facing financial problems are more likely to liquidate rather than restructure early.

4. Specific objectives in the context of the co-ordinated preventive restructuring

In terms of structure, the Directive contains: general provisions and early warning tools (Title I), preventive restructuring frameworks (Title II), measures to enhance the efficiency of preventive restructuring, insolvency and debt relief procedures (Title IV).As regards the objectives pursued, the following guidelines deserve attention:

►Access of viable firms in financial distress to national preventive restructuring mechanisms;

►Giving a second chance to honest, over-indebted entrepreneurs by providing full debt relief after a reasonable period of time and limiting the length of time that an insolvency procedure can lapse;

►Increasing the efficiency of preventive restructuring, insolvency and debt write-off procedures including through the introduction of electronic means of communication.

►Avoiding, as far as possible, financial collapse and the use of winding-up proceedings for economic enterprises.

The purpose of the current preventive procedures in domestic law (composition and ad hoc mandate)

The main purpose of the insolvency prevention procedures in our law can be deduced from the

interpretation of the provisions of Article 2, second sentence, of Law 85/2014 and consists in granting "where possible, the opportunity to recover the activity" to the debtor. Also, one of the principles promoted by the aforementioned law is to give the debtors a chance for an efficient and effective recovery of the business through insolvency prevention proceedings (Article 4, paragraph 2 of the law). It follows from the texts of the law to which I have referred that the purpose of the procedures specific to the ad hoc mandate and those specific to the arrangement with creditors is to rescue the debtor in difficulty and, implicitly, to avoid financial collapse by opening insolvency proceedings. But the rules governing insolvency proceedings also have a clear social character, since they are concerned with saving the jobs of the debtor's employees (Article 13(2)).In contrast, by comparison, the main purpose/objective of insolvency proceedings is to apply collective proceedings to cover the debtor's liabilities (Article 2 of the Act). It should be noted that while the ad hoc mandate and the arrangement with creditors are concerned with rescuing the debtor by maintaining its existence and preserving jobs, the insolvency proceedings are primarily concerned with satisfying creditors' claims. Metaphorically but with full practical meaning, it can be argued that insolvency proceedings are "debtor proceedings" and insolvency is "creditor proceedings".

5. Elements of novelty introduced by the Directive[6]

5.1. The 'viability test' in relation to a debtor in financial difficulty

According to Recital 21, Member States should be able to introduce a debtor viability test as a condition for access to the preventive restructuring procedure provided for in this Directive. Such a test must be carried out without prejudice to the debtor's assets, which could take the form, inter alia, of granting an interim stay or carrying out the test without undue delay. However, the absence of prejudice should not prevent Member States from requiring the debtor to prove his viability at his own expense. The operative part of the Directive enshrines in Article 4 this way of conditioning access to preventive restructuring frameworks by stipulating that Member States may maintain or introduce a viability test in national law, provided that this test is aimed at excluding debtors who have no prospect of viability and that it can be carried out without detriment to the debtors' assets.

It should be noted that the Directive does not require the introduction of such a test (it is not a mandatory provision), leaving this option to the national legislator. However, the prescribed way in which such a test could be devised is rather vague, as "no prospect of viability" and "no damage to the debtor's assets" are far from being objective criteria for quantifying an outcome on the basis of which access to a restructuring procedure should be allowed. On the other hand, access to the procedure and the suspension of enforcement could lead to losses of the debtor's assets and, at the same time, to the impossibility of realising creditors' claims.

Provisions of the national Law

In assessing the stage of financial difficulty and the chances of recovery/restructuring, the rules of domestic law differ depending on the procedure used. Thus, in the matter of ad-hoc trusteeship, Article 13 of Law 85/2014 provides that, after hearing the debtor, if it is established that the debtor's financial difficulties are real and the person proposed as ad-hoc trustee meets the legal conditions for exercising this capacity, the president of the court shall appoint, by enforceable decision, the proposed ad-hoc trustee. In this procedure, therefore, the analysis is left to the discretion of the courts through the president of the court, who will decide on the basis of the financial statements submitted by the debtor applicant.

With regard to the arrangement with creditors, Article 24(1) of Law 85/2014 provides that "the draft arrangement agreement must set out in detail: a) the analytical statement of the debtor's assets and liabilities, certified by a chartered accountant or, where applicable, audited by an auditor authorised by law; b) the causes of the state of financial difficulty and, where applicable, the measures taken by the debtor to overcome it by the time the arrangement offer is submitted; c) the projected financial and accounting development over the next 24 months". It is easy to see that the documentation is much more extensive and, moreover, some of the documents are endorsed by specialist experts, in order to make it easier for the official receiver to analyse them.

5.2. Early warning tools

One preventive measure promoted by the Directive is the creation of tools to identify and give early warning of financial distress.

In this respect, it is worth noting Recital (49), which states that, in order to further encourage preventive restructuring, it is important to ensure that directors are not discouraged from exercising reasonable business judgement or taking reasonable commercial risks, in particular where this would improve the prospects of a potentially viable business restructuring. Where the company is in financial difficulty, directors should take steps to minimise losses and avoid insolvency, such as: seeking professional advice, including on restructuring and insolvency, using, for example, early warning tools

[6] Krohn, Axel, Rethinking Priority: The Dawn of the Relative Priority Rule and a New 'Best Interest of Creditors' Test in the European Union (June 20, 2020) available at SSRN: https://ssrn.com/abstract=3554349 or http://dx.doi.org/10.2139/ssrn.3554349.

where they exist; safeguarding the company's assets to maximise value and prevent loss of key assets; considering the structure and functions of the business to examine viability and reduce expenditure; refraining from engaging the company in the types of transaction that could be subject to avoidance action unless there is a proper business justification; continuing to trade where it is appropriate to do so in order to maximise the value of the company as a going concern; negotiating with creditors and entering into pre-emptive restructuring procedures.

As can be seen, the Directive places a very strong (even unprecedented) emphasis on the managers of the company, who are primarily responsible for both identifying future financial difficulties and finding the best measures and solutions to overcome financial crises and avoid the bankruptcy of the businesses they run.

In addition to the increased responsibilities of company managers, it is also worth mentioning the provisions of the Directive on technical early warning instruments and access to information. In this respect, Article 3 of the Directive states that Member States shall ensure that debtors have access to one or more clear and transparent early warning instruments which enable them to detect circumstances which may give rise to the likelihood of insolvency and which may signal to them the need to act without delay.

For the purposes of the first subparagraph, Member States may use up-to-date information technology for notification and communication. Early warning tools may include: (a)alert mechanisms where the debtor has failed to make certain types of payments; (b)advisory services provided by public or private organisations and (c) incentives under national law for third parties holding relevant information about the debtor, such as accountants, tax authorities and social security authorities, to alert the debtor to adverse developments.

Member States shall ensure that debtors and employees' representatives have access to relevant and up-to-date information on the availability of early warning instruments as well as procedures and measures on debt restructuring and debt relief.

5.2.1. Early intervention tools in the current legislative system

As mentioned above, our legal system regulates measures to prevent financial distress in the banking and insurance sectors. These measures are identical, although they are regulated by separate legislation, which is why we will present mainly those in the banking sector. The regulatory act that constitutes the seat of matter in this regard is Law No. 312 / 2015[7] on the recovery and resolution of credit institutions and investment firms, as well as for amending and supplementing certain regulatory acts in the financial sector, which transposes the main European regulations in this area, such as EU Regulation No 575/2013 of the European Parliament and of the Council of 26 June 2013 on prudential requirements for credit institutions and investment firms, Directive 2014/65/EU of the European Parliament and of the Council of 15 May 2014 on markets in financial instruments[8]

5.2.2. Early intervention measures that can be taken in the course of financial resolution

In this regard, Article 149 of the Law provides that if a credit institution breaches or, due to, inter alia, a rapid deterioration of its financial situation is likely to breach, in the near future, the requirements laid down in Regulation (EU) No 575/2013, Government Emergency Ordinance No 99/2006 and the regulations issued by the National Bank of Romania in application thereof, the capital market provisions transposing Title II of Directive 2014/65/EU or any of Articles 3-7, Articles 14-17, Articles 24, 25 and 26 of Regulation (EU) No. 600/2014 of the European Parliament and of the Council of 15 May 2014 on markets may take, as appropriate, at least the following measures: (a) require the management body of the credit institution to implement one or more of the arrangements or measures set out in the recovery plan or to update such recovery plan where the circumstances leading to the early intervention differ from the assumptions set out in the original recovery plan and to implement one or more of the arrangements or measures set out in the updated plan within a certain timeframe to ensure that the negative conditions prescribed by law no longer exist; (b) request the management body of the credit institution to review the situation, identify measures to address any problems identified and develop an action programme to address those problems and a timetable for its implementation; (c) request the management body of the credit institution to convene a general meeting of the shareholders of the credit institution or, if the management body fails to comply with this requirement, to convene such a meeting directly and, in either case, to set the agenda and request that certain decisions be considered for adoption by the shareholders; d) request the replacement of one or more members of the management body or of the senior management of the credit institution; e) request the management body of the credit institution to draw up a plan for the negotiation of a debt restructuring with some or all of the creditors of the credit institution in accordance with the recovery plan, as appropriate; f) request changes to the business strategy of the credit institution; (g) request changes in the legal or operational structure of the credit institution; and (h) obtain, including through on-site inspections, and provide to the National Bank of Romania as resolution authority all information necessary to update the resolution plan and to prepare for a possible resolution of the credit institution, as well as to carry out a

[7] M. Of. no. 920/11 december 2015.
[8] JLO 176 /27.6.2013 and JLO 173 from 12.6.2014.

valuation of the credit institution's assets and liabilities in accordance with legal provisions.

For the purposes of the law (Art.149 para.2), a rapid deterioration in the financial situation of a credit institution includes a deterioration in the liquidity situation, an increase in leverage, non-performing loans or concentration of exposures, assessed on the basis of a set of indicators, which may include the credit institution's own funds requirement plus 1.5 percentage points[9].

One measure that may be used is the appointment of a temporary manager. The temporary administrator is appointed if the replacement of senior management or the management body is insufficient to overcome the distressed situation. In particular, the National Bank of Romania, as the competent authority, may appoint one or more temporary administrators of the credit institution, which may include the Bank Deposit Guarantee Fund. The National Bank of Romania may appoint any temporary administrator, either to temporarily replace the credit institution's management body or to temporarily work with the credit institution's management body.

As mentioned above, identical regulations are also found in the insurance sector, being introduced by Law 246/2015[10] on insurance recovery and resolution. According to the law, early intervention measures are those measures ordered by the Financial Supervisory Authority for the purpose of restoring the financial situation of the insurer and avoiding deterioration of the solvency capital situation, as well as of the own funds covering the solvency capital requirement (Art., item 29 of Law no.246/2015). If the above-mentioned measures do not achieve their purpose or there is a significant deterioration of the financial situation of the insurer or there are serious breaches of the law, the Financial Supervisory Authority may request the replacement of the senior management or the management body of the insurer as a whole or of some of its members (Art. 29). We have presented the principles of early intervention in the financial-banking sector because they can serve as a source of inspiration for the common law legislator when implementing restructuring frameworks in national legislation.

5.3. Possibility of granting a suspension, on request or by law, in order to access a restructuring procedure

Suspension applies to all types of claims (including secured and preferential claims), but Member States may provide that suspension may also be partial (certain creditors or categories of creditors, notified under national law).

Member States may provide for certain exclusions from the applicability of the suspension:

- in well-defined circumstances;
- with appropriate justification; and only if the suspension would unfairly prejudice the holders of the claims concerned enforcement would jeopardise the restructuring.

Employees' claims are excluded from the application of the suspension, but Member States may decide otherwise. The period of suspension is 4 months, with the possibility of extension, under limited conditions, up to a maximum of 12 months). Article 30 of Law no.85/2014, provides "(1)By ordering the approval, the syndic judge shall suspend all enforcement proceedings.(2) At the request of the administrator in composition, subject to the debtor's provision of guarantees to creditors, the syndic judge may impose on non-signatory creditors of the composition with creditors a maximum period of 18 months to postpone the due date of their claim, during which time no interest, penalties or any other expenses related to the claims shall accrue. The provisions relating to the deferment of the due date of the claim shall not apply to qualified financial contracts and bilateral netting transactions under a qualified financial contract or a bilateral netting agreement.(3) The composition shall be enforceable against budget creditors, subject to compliance with the legal provisions on state aid in domestic and European law, as provided for in Article 24(5)."

5.4. Division into "classes" of creditors

Law 85/2014 does not provide for the division of creditors into classes in insolvency proceedings Directive but leaves the possibility that Member States may provide that debtors who are SMEs may choose not to treat affected parties in separate classes.

5.5. Protection of new financing in proceedings

Article 4 of Law 85/2014, Principle 8 provides at this stage for ensuring access to sources of finance in insolvency prevention proceedings, during the observation and reorganisation period, with the creation of an appropriate regime to protect such claims.

5.6. Protection of employees (right to information and consultation, in the spirit of the regulation and not formally versus interference of employees in company decisions, better position of employees' claims)

The Directive proposes, in an effort to increase support for employees and their representatives, that Member States ensure that employees' representatives have access to relevant and up-to-date information on the existence of early warning instruments and that they are offered support in assessing the economic situation of the debtor. It goes without saying that workers will benefit from the full protection of labour law in all preventive restructuring procedures. In this respect, the

[9] It is noted that "rapidly deteriorating financial condition" within the meaning of the financial and banking regulations refers to the state of insolvability of the entity in question.

[10] M. Of. no. 813/2 november 2015.

Directive provides that the obligations relating to the information and consultation of employees under the national provisions transposing those Directives remain unaffected. The same applies to the obligations to inform and consult employees' representatives on the decision to have recourse to a preventive restructuring framework under Directive 2002/14/EC.

However, we draw attention to the possibility of tactical insolvencies, deliberately used to evade the debtor from tax or labour law provisions, to the need to maintain the status of preferential creditor of employees and also to the need to implement rules that prevent the company's assets from being reduced below the level necessary to pay wage claims.

6. Conclusions. Possible guidelines for the transposition process

As it has been observed and also mentioned at the beginning of the study, measures promoted by the Directive (EU) 2019/1023 are to be found already in national law, in the framework of the two preventive procedures, namely the ad hoc mandate and the arrangement with the creditors We have also listed the main features of the two procedures and also need to confirm their effectiveness, without denying however, the need for their improvement. Consequently, inspired by the application of the national existing legal framework , we continue to advocate, in the transposition process, for the preservation of a voluntary, judicial, collective, social and safeguarding character of the proceedings. At the same time, we are convinced that early intervention instruments which are completely lacking in domestic law, should be used with maximum efficiency and, as we have outlined above, the tools used in the banking and insurance sector could serve as a benchmark for the legislator in this area, as well. In concrete terms, as recommended by the Directive and, moreover, banking and insurance regulations, the measures adopted should provide also the responsibility of the directors, especially since, except in certain fairly limited sectors, no special training or experience is required to run the company. We do not rule out the creation of technical instruments, including by involving public authorities in the task of identifying financial difficulties, an early and prompt intervention being necessary in order to find viable solutions for businesses that have a chance of being rescued.

ACQUITTAL OF THE DEFENDANTS IN THE CRIMINAL TRIAL BASED ON ARTICLE 16(1)(B) OF THE CRIMINAL PROCEDURE CODE - HIGHLIGHTS

Sandra Sophie-Elise OLĂNESCU[*]
Alexandru Vladimir OLĂNESCU[**]

Abstract

Civil claims not settled by the criminal court may be brought before civil courts, one of which is the delivery of a settlement of acquittal based on Article 16(1)(b) of the Criminal Procedure Code. It is therefore essential to know how these civil claims can be obtained, i.e., what kind of civil action is to be or may be filed, what are the specific features of the shading of the application and the admissibility aspects of such an application. As is the case in majority practice, actions brought by civil parties in a criminal case, where civil action has remained unresolved by the criminal court, are requests for criminal liability to be held. One should not overlook, however, that such an action for civil liability must comply, inter alia, with the requirements set out in Article 1357 of the Civil Code, i.e., it must be proved that the four essential conditions of liability are met, namely: the existence of unlawful conduct, the taking of injury, the causal link between the unlawful conduct and injury and, ultimately, the guilt of the perpetrator. Throughout this paper, we intend to analyze all these issues in detail, by reference to concrete cases, court rulings which have supported the solutions adopted on these issues, as well as relevant doctrinal views on these matters. At the same time, the work will finally redraw its own conclusions on all the issues addressed.

Keywords: *civil action, claims, unsolved civil action, criminal court, liability, unlawful conduct.*

1. Introduction

1.1. What matter does the paper cover?

This paper addresses a common theme in judicial practice, namely the particularities of civil actions left unresolved by criminal courts, where the criminal trial is finally settled by acquittal of the defendant(s) sent to trial pursuant to Article 16(1)(b) of the Criminal Procedure Code.

1.2. Why is the studied matter important?

The subject chosen by the authors is of particular importance, given the problems encountered in practice by those against whom civil proceedings are brought after the criminal case have been solved, in which civil claims are made by the alleged victims during criminal proceedings for the civil court to resolve them. In fact, in the case of these claims, the civil action brought during the criminal trial is repeated, which the criminal court left unsolved in view of the settlement of the acquittal based on Article 16(1)(b) of the Criminal Procedure Code against the defendant(s).

In addition, the subject is of relevance, given that these cases also raise questions about whether to pay the judicial stamp duty for the civil court request after the criminal court proceedings have been settled. This issue arose as the Constitutional Court of Romania has decided on this matter that is excessively interpreted by the alleged victims who make the civil claims.

1.3. How do the authors intend to answer to this matter?

This paper was chosen by the authors to highlight a number of practical problems which they have experienced in disputes in which they have provided legal assistance and representation to some of the parties, through the initial approach of the legal bases on which claims were made in these particular types of disputes, then by highlighting and analyzing the solutions given by the courts on these issues.

At the same time, the authors make a brief incursion into the majority legal doctrine and practice that has held on these subjects, in order to give readers an overview of some of the obstacles they may face in the case of civil actions left unsolved by the criminal court, where the criminal trial is settled by acquittal of the defendant(s) pursuant to Article 16(1)(b) of the Criminal Procedure Code.

Finally, this paper presents – as a case study –the particularities of a complex criminal file, from which several unsolved civil actions have been brought together with the criminal proceedings, so that judicial problems may be assessed not only from a theoretical but also a practical perspective.

1.4. What is the relation between the paper and the already existent specialized literature?

This paper is related to the already existent specialized literature that addressed the proposed topic in its content by highlighting the different views of professionals who have written on the topics subject matter in this paper. The authors then assess how the various issues are resolved by the courts, and ultimately give their own views on all of the above.

2. Article 16(1)(b) of the Criminal Procedure Code: the unwanted solution from civil parties' point of view

2.1. Preliminary

The Criminal Procedure Code currently applicable in Romania entered into force on 1 February 2014[1]. At this time, there has also been much controversy over the ununified application of many of its provisions in court practice.

However, the Romanian Criminal Procedure Code contains numerous clear legal provisions, which can only be applied *ad litteram*, as they are non-derivative and imperative. One such legal provision is settled by Article 16(1)(b) of the Criminal Procedure Code, which expressly states the following: "*The criminal proceedings cannot be set in motion, and when set in motion, they cannot be exercised if: (b) the act is not provided for by criminal law or has not been committed to the fault prescribed by law;*".

Thus, this text provides the legal basis for a criminal court to settle a case by acquitting the defendant(s), according to the provisions of Article 396(1),(5) of the Criminal Procedure Code, stating that "*The court decides on the accusation against the defendant, by pronouncing, as appropriate, the conviction, the renunciation of the penalty, the postponement of the application of the penalty, the acquittal or the termination of the criminal trial*." "*The acquittal of the defendant shall be decided in the cases provided for in Article 16 (1)(a)-(d).*".

By interpreting of the above-mentioned law texts, it is obvious that the courts do not have a faculty, an option as to the acquittal of the defendant, if the provisions of Article 16(1)(b) of the Criminal Procedure Code are applicable to a certain case. Therefore, in this respect, the courts are obliged to rule on the acquittal solution.

Thus, one of the key issues that this paper aims to appraise and find solutions to is highlighted: What happens to the civil claims made in criminal files by the alleged victims, if the court acquits the defendant according to the provisions of Article 16(1)(b) of the Code of Criminal procedure?

As provided for in Article 397(1) of the Criminal Procedure Code, the civil action must be solved by the same judgement as the criminal action. Nonetheless, Article 25(5) of the Criminal Procedure Code expressly states, *inter alia*, that if the defendant is acquitted on the basis of Article 16(1)(b), first sentence, "*the court shall leave the civil action unresolved*.".

As a result, civil parties in criminal proceedings "*may bring proceedings before the civil court if, by final judgment, the criminal court has left the civil action unresolved. Evidence administered during criminal proceedings may be used before the civil court*"[2].

Last but not least, a key-provision used by the majority of civil parties that bring their claims before civil courts is provided for in Article 28(1) of the Criminal Procedure Code, setting forth that: "*The final decision of the criminal court shall have the force of res judicata before the civil court which is to judge the civil action, concerning the existence of the criminal offense and the person who committed it. The civil court shall not be bound by a final judgment on the acquittal or cessation of criminal proceedings as regards the existence of damage or guilt of the culprit*.". In other words, the final judgement of a criminal court is partially mandatory for the civil court that must settle the unsolved civil action, regarding the unlawful act and on the identity of the person who committed it.

2.2. Payment of the judicial stamp duty: to be or not to be?

One of the main issues that this paper addresses is whether the judicial stamp duty has to be payed by the civil party whose civil action remained unsolved during the criminal trial when his/her claims are brought before civil courts.

This problem arose in light of the provisions of Article 29(1)(i) of the Government Emergency Ordinance No. 80/2013 on judicial stamp duties[3] (hereinafter referred to as "***G.E.O. No. 80/2013***"). According to this legal text, the following actions and claims, including ordinary and extraordinary appeals are exempted from the payment of the stamp duty, if they "*relate to: […] i) criminal cases, including civil compensation for material and moral damage resulting therefrom*".

Despite the fact that the above-mentioned text seems clearly worded, national judicial practice has been ununified in its application to particular cases, so that the Romanian Constitutional Court partially accepted the constitutional challenge of this provision, in the sense that: "*The provisions of Article 29(1)(i) of the Government Emergency Ordinance No. 80/2013 on judicial stamp duties are constitutional in so far as actions and claims relating to civil compensation for material and moral damage resulting from a criminal case are exempted from judicial stamp duties, provided that the causing act at the time the damage was committed, was foreseen as a criminal offense*"[4].

To put it another way, the Romanian Constitutional Court stated that only in those criminal cases where the deed is provided for as a crime by *verbum regens*, one may file for a civil action for damages that is exempted from the payment of any judicial stamp duty.

Nonetheless, if the criminal court settles the case by acquitting the defendant(s) on the basis of Article

[1] Published in the Official Journal of Romania, Part I No. 486 of 15 July 2010, as amended and supplemented thereafter.
[2] According to Article 27(2) of the Criminal Precedure Code.
[3] Published in the Official Journal of Romania, Part I No. 392 of 29 June 2013, as amended and supplemented thereafter.
[4] The Romanian Constitutional Court, Decision No. 387/2015, published in the Official Journal of Romania, Part I No. 555 of 27 July 2015.

16(1)(b) first sentence of the Criminal Procedure Code (*i.e.* the deed is not provided for by the criminal law) the following legitimate question arises: for the possible damages suffered by civil party/parties as a result of the deed (regardless of the fact that the deed shall not be considered crime) the judicial stamp duty must be payed for the action for damages filed for before the civil court?

To answer this question, one has to carefully assess both the provisions of Article 29(1)(i) of the G.E.O. No. 80/2013 and the Decision No. 387/2015 of the Romanian Constitutional Court. Thus, a clear distinction must be drawn between the rule and the exception, in the sense that the rule is the obligation to pay the stamp duty for money-valuable civil actions[5], whereas the provisions of Article 29(1) of the G.E.O. No. 80/2013 are the exception. Consequently, the exceptions are of strict interpretation and application and cannot be extended to situations expressly foreseen by law.

In addition, in relation to the specificities of the civil action left unsolved by the criminal court, the mandatory interpretation of the Romanian Constitutional Court must be considered, so that the following conclusion can be stated: civil actions arising from criminal proceedings **shall not be exempt from the required judicial stamp duty** if the act allegedly giving rise to such damages was not forseen as a criminal offense at the time it was committed. Among other things, one shall note that failure to comply with the procedural obligation laid down in Article 197 of the Civil Procedure Code[6], *i.e.* payment of the judicial stamp fee related to a certain claim, leads to **the annulment of the writ of summons**.

The same conclusion was drawn by the 3rd District Court of Bucharest in its recent judicial practice regarding the case study subject to this paper. Thus, in two similar cases[7], concerning the settlement of the civil claims which remained unsolved by the criminal court, which acquitted the defendants according to Article 16(1)(b) of the Criminal Procedure Code, the 3rd District Court of Bucharest established the obligation to pay the judicial stamp duty on the plaintiffs, as calculated by reference to the amount claimed, as provided for in Article 3(1) of the G.E.O. No. 80/2013.

2.3. Admissibility of the civil action left unsolved by the criminal court: conditions and practical issues

Foremost, it should be reiterated that, in accordance with the provisions of Article 28(1) of the Criminal Procedure Code, it is unequivocally established that the final judgment of the criminal court has the force of *res judicata* before the civil court which settles the civil action, in respect of the existence of the deed and of the person who committed it. In relation to the subject matter of this paper, namely the resolution of the civil action where it remains unresolved by the criminal court because acquittal of the defendant(s) has been ordered pursuant to Article 16(1)(b) first sentence of the Criminal Procedure Code, several issues need to be highlighted:

1) The provision of the deed within the criminal law means "*in principle the identity between the conduct itself and all the conditions of the rule (the «typical» characteristic of the offense)*", whereas the absence of any content of the offense, whether „*objective or subjective, makes the offense not provided for by criminal law*", as indicated in the legal literature[8].

2) The conditions for the filing for civil action in criminal proceedings are those developed in the specialized literature on tort civil liability[9]. Specifically, one shall prove that the four conditions resulting from the text of Article 1357 (1) of the Civil Code[10] governing tort civil liability are cumulatively fulfilled, namely: the perpetration of an unlawful conduct, the occurrence of damages as a result of the unlawful conduct, the existence of a causal link between the conduct and damages and the guilt with which the unlawful conduct was committed. Failure to prove that all of these conditions are fulfilled shall result in the impossibility of triggering ort civil liability.

3) Before the civil court, the plaintiff (*i.e.* the former civil party before the criminal court) must prove the fulfillment of the aforementioned conditions. Practically, the plaintiff needs to prove that the former culprit actually perpetrated an unlawful conduct (although such conduct is not provided as a crime by the applicable criminal law) which lead to damages, as well as the link between the unlawful conduct and damages and his/her guilt.

4) As set forth in Article 28(1) of the Criminal Procedure Code, the Romanian legislator has determined the force of *res judicata* on the existence of the deed and of the person who committed it. In other words, if the criminal court does not establish that a particular deed has been committed by a specific person, we consider that the force of *res judicata* of the final decision of the criminal court before the civil court cannot be called into question.

In light of the above, we deem that unless the criminal court assesses that a particular unlawful conduct has been perpetrated by the culprit(s) although

[5] According to the provisions of Article 3(1) of the G.E.O. No. 80/2013.

[10] In the version of the firts re-publication, in the Official Journal of Romania, Part I No. 505 of 15 July 2011.

it does not fall under the criminal law the civil party/civil parties cannot legitimately exercise their right to file an action form damages before the civil court, as a result of the alleged unlawful conduct. Moreover, one may consider that, in the above-mentioned case, the question arises as to **the inadmissibility of civil action** brought before the civil court which has been left unsolved by the criminal court that issued the acquittal pursuant to Article 16(1) of the Criminal Procedure Code. In this respect, the relevant national courts have ruled within their recent judicial practice, as follows in the section below.

Secondly, we acknowledge that it is necessary to clearly set forth what kind of civil action may be brought before the civil court if the claims requested thereof have originated in a criminal dispute. In principle, it is reasonable that any damage, whether material or moral, should be sought in the course of a tort civil liability action, as mentioned before.

As for any contractual liability claim, we consider that such a civil action could not, as a matter of principle, seek compensation for damage resulting from a criminal act, given that a valid contract concluded cannot provide as purpose the non-observance of the law.

However, depending on the specificities and complexity of the case, we believe that contract liability may not be set aside regardless of circumstances. As a result, the *ipso facto* exclusion of a contract liability claim cannot be justified even if it originates from a criminal trial.

Thirdly, civil parties must note that if they are willing to file for an action for damages before the civil court they must pay attention to the way in which the arguments are made. We stress this precisely because, in practice, there is a tendency to keep the same grounds as in criminal proceedings, omitting proof of the four requirements for the admissibility of claims for civil liability laid down in the provisions of Article 1357(1) of the Civil Code. This may even be the case for the rejection of such claims by the civil court.

3. Case study

For the purpose of a better understanding of the practical part of the issues detailed in this paper, we propose a short analysis of two civil cases arising from the same criminal proceedings, on which the competent courts have recently ruled.

Thus, civil courts empowered to settle these civil proceedings were addressed by several former civil parties in the same criminal trial, claiming material and moral damages that allegedly resulted from the deeds described in the indictment.

Criminal proceedings have been finally settled by the Bucharest Court of Appeals by Decision No. 1165/2019 in which the court ordered the acquittal of all culprits in accordance with the provisions of Article 16(1)(b) of the Criminal Procedure Code for the alleged unlawful deed that led to the claimed damages.

Nonetheless, as stated previously, former civil parties had the right to file for an action for damages before a competent civil court, which they actually did. Both claims were filed with the 3rd District Court of Bucharest, given that this is the court with substantive, territorial and operational jurisdiction in accordance with the provisions of the Civil Procedure Code.

The content of the aforementioned claims is particularly similar, as they reiterate exactly the same grounds as those upheld before the criminal court. Moreover, plaintiffs failed to substantiate and prove the cumulative fulfillment of the four conditions for the admissibility of claims for civil liability provided for in Article 1357(1) of the Civil Code.

Both actions for damages were based on three different legal texts of the Civil Code, namely: Articles 1347, 1349 and Article 1638. In relation to the legal provisions plaintiffs have invoked in the justification for their civil actions, it may be held an obvious contradiction between these grounds of law, given that the institutions governed by them are mutually exclusive and, being excluded from the grounds for the same application for legal action.

In other words, in such dispute, the plaintiffs could have either brought an action for tort civil liability based on the provisions of Article 1349 of the Civil Code; or prevail over the existence of an alleged legal act such as unjust enrichment (of course, if they would have proven the impact of the assumption contained in Article 1345 of the Civil Code), in which sense the application of Article 1347 of the Civil Code may be called into question.

With regard to the last legal provision (*i.e.* Article 1638 of the Civil Code), it alleges a civil liability under contract, resulting from an unlawful cause for the contract(s), in which sense it would be necessary to examine the conditions essential to the validity of the contract(s) as governed by Article 1179(1) of the Civil Code.

Therefore, it may be held that inadmissibility of these civil actions, as they have been filed, is quite clear.

The same opinion has been expressed by the 3rd District Court of Bucharest itself, by Civil judgment No. 6838 of 6 August 2020. In this regard, the court has stated the following:

"It should be specified that the legality of contracts (whether or not they were concluded in compliance with the applicable legal provisions) was not subject to court review, both in criminal proceedings No. [...], or by civil action. As a consequence of this, the court considers that at this point in time contracts enjoy a presumption of legality. In such circumstances, compared with the presumption of legality enjoyed by the contracts, the action filed by the plaintiff appears to be inadmissible as it aims to establish the alleged unlawful nature of the

acts committed by the defendant natural persons [...]"[11].

Accordingly, one may acknowledge that filing for an action for damages before the civil court must comply with the rules thereof, regardless of the fact that the same claims were brought before a criminal court. In relation to the practical cases brought forward, the plaintiffs had to substantiate their claims in accordance with the provisions of Article 1357(1) of the Civil Code in order for their actions to have been accepted by the court.

4. Conclusions

Particularities of civil actions left unsolved by criminal courts present, in judicial practice, a number of issues which we have tried to understand and explain throughout this paper. Thus, a mistake made by the majority of those who bring civil actions left unsolved by the criminal court before civil courts is to omit the justification for meeting the four conditions necessary to attract tort civil liability, namely those laid down in Article 1357 of the Civil Code. As stated above, in accordance with the relevant jurisprudence on the matter, failure to prove the application of article 1357 of the Civil Code shall be sanctioned with the inadmissibility of the civil action.

Moreover, one should note that civil actions resulting from criminal proceedings, which are left unsolved during the criminal trial shall be subject to the legal rules governing the payment of judicial stamp duties if the alleged criminal offence was not provided for by the law at the moment of its perpetration.

Conclusively, the final decision of the criminal court shall benefit from the force of *res judicata* before the civil court to the extent that claims are derived from an act the existence of which has been established by the criminal court and the person who committed it is similarly determined by that court.

PARENTAL AUTHORITY BETWEEN LAW AND PSYCHOLOGY

Ioana PĂDURARIU*

Abstract

The Romanian Civil Code uses the concept of „parental authority", which means all the rights and duties concerning both the child and his/her assets. The rights and duties belong equally to both parents and are exercised in the best interests of the child. It does not matter whether the child's parents are married or not, and whether the child was born during or outside the marriage. When making the decision, the court will consider, first of all, the interest of the child. So the court must observe the personality of the child, the lifestyles of his parents, as well as the emotional orientation and background of the child. The court will also must take into consideration the child's right that the parents care for him, his right to maintain regular personal contact with the parent to whom he has not been entrusted and, for that parent, the right to obtain regular information about the child. Also, the court may also decide to approve an agreement between the parents unless it is clear that this agreement is not in accordance with the principle of the best interest of the child.

The term „parental authority" is an old concept from ancient times where parents were presumed to have power and a sense of ownership over their children, just as they had over their goods or animals. Nowadays, taking into consideration the recognition and acknowledgement of children's rights, this concept of a parent having control or domination over the child's life is seen as being outdated. More appropriate seems to be the term of „parental responsibility" or even „parental responsibilities", in order to refer at the rights and duties „owed" by the parents towards their children. More than authority, the parents have responsibilities and the children are individuals in their own right and should be treated as such. No one has power over another human being, but everyone has responsibilities to others and, most importantly, parents have the obligation to ensure that their children become into responsible and mature adults.

Keywords: *parental authority, parental responsibility, best interests of the child, children's rights, Convention on the Rights of the Child, emotional development of the child, parenting styles.*

„1. Sons, listen to me, father, and behave so that you may redeem yourselves,
2. That the Lord raised the father over the sons and strengthened the mother's judgment over the children."[1]

1. Short considerations about parental authority in the Roman and the Germanic law

In the Roman law, the power („*potestas*") was characterized by absolute rights over the persons and things belonging to the household. The power over the children of the house („*filii*" and „*filiae familias*") was called „*patria potestas*", the power over the wife to whom the „*pater familias*" was married „*cum manu*" was called „*manus*", and the power over slaves was called „*ownership*" (or „*dominicia potestas*").

So, the Roman period placed the children under the „*patria potestas*" and they were, as a rule, under the authority of the head of the family, who could be their father or even their grandfather. Like their mother, the children were considered „*alienii iuris*", there was no age of civil majority, but children could become „*sui iuris*", even at an early age, if, for example, the head of the family was taken prisoner, or lost his citizenship.

On the other hand, in the Germanic law, like the „*patria potestas*" of early Roman law, the „*munt*" was initially a complex of powers. The idea that the head of the family owed duties to those subject to his power developed only later, in the Middle Ages. In Germanic law, legal capacity depended on the capacity to bear arms. Since women and children were not capable of bearing arms, they were subject to „*munt*". The reason for the subordination of women and children was thus the physical helplessness of the woman or child. „*Munt*" had to be exercised in the interests of the woman or child. For this reason, „*munt*" gradually lost his characteristic of power, and became an obligation to care for the woman or for the child.[1]

In ancient roman times, this power was actually limitless, the „*pater familias*" being able to punish children, sell them, abandon, banish, marry or even kill those under his power. So, the content[2] of „*patria potestas*" referred to:

a) the „*ius vitae necisque*" (the power of life and death) was expressly mentioned in the Twelve Tables and it was seen as the core of „*patria potestas*" – domestic discipline implied even the right to kill the child;

b) the power to alienate the child (the authority to sell those under his „*potestas*" into slavery; this authority was abolished in the post-classical period,

[2] See H. Kruger, *op. cit.*, pages 92-93.

however, the „*pater familias*" still had the power to sell new-born children into slavery in case of poverty);

c) the power over the child's estate and juristic acts (almost any acquisitions by those under „*patria potestas*" automatically became the property of the „*pater familias*"; also, the „*pater familias*" had the right to give his children in marriage even without their consent; the „*pater familias*" also had the right to dissolve the marriages of his children);

d) the power to institute proceedings to recover the child against a third party who obtained possession of the child and exercised control over him.

Gradually, this situation of the descendants „*alienii iuris*" improved in classical and postclassical law, the parental power being restricted by many exceptions, but not completely abolished. Only in the age of Justinian, the legal personality of the person under parental power becomes complete.[3]

The patriarchal vision and full powers of the „*pater familias*" can only lead to the conclusion that, in relation to what we understand today by the notion of „parental authority", it was then exercised only by the father or by another ascendant of the child and the mother never had „*potestas*". And how could the mother have had such power, since she herself „benefited" from a diminished civil capacity and was regarded as an „accessory", possibly „good accessory" of the man? It was only in the 4th century that imperial law enshrined the right of the mother to be the legal protector of her child whose father had died, but only if she did not to remarry, in order to watch over the property of the protected child from the possible fraudulent acts of the stepfather.

Unlike the Roman law, in Germanic law the mother enjoyed some authority over her children. In practice, she had considerable say over the care and education of the children, although her position was never equated with that of the father.[4]

In Roman law, in case of divorce, children born during marriage remained under the parental authority of their father. Their mother risked never seeing them again, and this fact weighed heavily when she could only think about dissolving the marriage.

However, in exceptional cases, for reasons related to the depraved nature of the father, the mother could receive physical custody of the child, a term that today would be called *the establishment of the child's residence* with the mother. But, even so, the „*patria potestas*" of the father was not affected in any way.

In case of amiable divorces, the parents could agree, extrajudicially, to share physical custody over their children or, even, for those very young children, to remain with their mother.[5] We can see how the dichotomy between the exercise of parental authority and the concrete establishment of the child's residence after divorce, when the parents no longer lived together, dates back to the era of classical Roman law.

It was only in the age of postclassical Roman law that Justinian's *Novela* 117 established a major, substantial transfer of parental authority over the children to their mother if she had been unjustly repudiated by her husband or if she had obtained a divorce against the father of her children.[6]

As a conclusion, the doctrine[7] noted important differences between Roman and Germanic concepts of parental authority, regarding:

a) the nature of parental authority (*in Roman law* the „*pater familias*" was vested with a kind of quasi-ownership in respect of his children; *in Germanic law*, on the other hand, the reason for the subordination of women and children was the physical helplessness of the woman or child and the parental authority had to be exercised in the interests of the child);

b) the duration of the parental authority (the *Roman* „*patria potestas*" lasted until the death of the father, unless it was terminated before that date by emancipation, adoption or the marriage of a daughter and it was regarded as a kind of perpetual authority; in *Germanic law*, on the other hand, parental authority was exercised for the protection of the child);

c) in *Roman law* „*patria potestas*" was exercised by the „*pater familias*" and the child's mother had no authority in respect of her children — she was herself subject to „*potestas*"; in *Germanic law*, on the other hand, although also subject to her husband's „*munt*", the mother had some authority in respect of her children.

2. Meanings of the expressions „parental authority", „parental responsibility" or „parental responsibilities", between philosophy and law

If there are parental rights, what are their grounds? Many contemporary philosophers (but not only them) reject the notion that the children are there parents' property and reject also the idea that parents have rights to their children and over their children. Some philosophers argue for a biological basis of parental rights, while others focus on the best interests of the children or a social contract as the grounds of

[7] See H. Kruger, *op. cit.*, pages 104-106.

such rights. Still others reject outrightly the notion that parents have rights, as parents. They do so because of the skepticism about the structure of the putative rights of parents, while others reject the idea of parental rights in view of the nature and extent of the rights of children.

Apart from biological, best interests and social contract views, there is also a casual view of parental obligations, which includes the claim that those who bring a child into existence are thereby obligated to care for that child. It is not a simple, theoretical question about parental rights and obligations; we must also focus the attention on practical questions like: making medical decision[8], the autonomy of children, child discipline[9] or the propriety of different forms of moral, political and religious[10] upbringing of children.

Parental responsibilities express a collection of rights and duties in order to promote and protect the rights and the welfare of the children. It should, however, be pointed out that certain States prefer to use the term „parental authority", for example Germany[11] (*elterliche Sorge*), Italy (*potestà genitoriale*), Spain (*patria potestad*) or France (*autorité parentale*), or even „*custody*" as is the case in Canada and the United States. Other countries, the United Kingdom or the Czech Republic for example, use the term „*parental responsibility*". The Swiss legal system has both concepts: „parental responsibility" is used as a generic term referring to all the obligations of parents towards their children and includes both parental authority and the maintenance obligation. In this context, „parental authority" comprises all the rights and duties of parents towards children.

However, it is important to point that in *Canada* and in the *United States*, the term *parental responsibility* refers to the potential or actual liability that may incurred by parents for the behavior of their children.

Parental responsibility legislation has been enacted in three Canadian provinces: Manitoba (1997), Ontario (2000) and British-Columbia (2001). Under the *Parental Responsibility Act*, 2000[12], a *child* is anyone under the age of 18 years and *parent* means either the biological, adoptive or legal guardian parent of the child or the person who has lawful custody of, or a right of access to, the child. This legislation[13] allows victims of theft or property damage to sue the parents of a minor in Small Claims Court for their damages. The parents will be found automatically responsible, unless they can prove they were exercising „reasonable supervision" over the child at the time of the activity in question, and they had made „reasonable efforts" to prevent or discourage the child from engaging in such activity. Secondly, the legislation states that in all other litigation outside of the Small Claims Court, a parent will be assumed to have failed to exercise reasonable supervision and control over the child, unless they can prove otherwise. This is known as a „reverse onus" provision. The consequences of the Parental Responsibility Act may be significant if the child causes an injury to someone else.

All *U.S. states* allow parents to be sued for the various actions of their children. But the idea of a criminal legislation to allow the prosecution of adults for „neglectful" parenting is relatively new.[14] For example, a number of states have enacted or proposed laws that will automatically hold parents financially responsible for all expenses associated with a second false bomb threat or 911 call made by a child; or impose a prison term and order payment of restitution to any victims if the child commits a serious crime; but also if the child uses a gun owned by the parent to commit a crime.

The generally accepted definition of the concept of *parental responsibility*, as given in a recent

[8] Exceptions to parental autonomy are usually made at least in cases where the life of the child is at stake, on the grounds that the right to life exceed the right to privacy, if those rights come into conflict. A different issue arise with respect to medical decision making as it applies to procreative decisions. An increasing number of couples are using reproductive technologies to select the sex of their children (the process of *in vitro* fertilization or the process of sperm sorting). One criticism of this practice is that it transforms children into manufactured products, they become the result, at least in part, of a consumer choice. Similar worries are raised with respect to the future use of human cloning technology. For details, see M. Austin, *Rights and obligations of parents*, *https://iep.utm.edu/parentri/*, point 4, c. Medical Decision Making, website consulted last time on March, 10th, 2021.

[9] Some auhtors argue that punishment in the family should both result from and maintain trust. See D. Hoekema, *Trust and Punishment in the Family. Morals, Marriage and Parenthood*, Laurence Houlgate, ed. Belmont, CA: Wadsworth, 1999, pages 256-260, quoted by M. Austin, *op. cit*., point 4, d. Disciplining Children.

[10] See M. Austin, *op. cit*., point 4, e. The Religious Upbringing of Children.

[11] The term „parental responsibility" refers to all the rights and obligations parents have in relation to a child. An important part of parental responsibility is parental care (custody). Parents have the duty and the right to care for their child. Parental care involves taking care of the child and his/her property, and representing the child; the right to make decisions for the child is therefore in principle associated with parental care. Parental responsibility also includes contact with the child and the duty to provide maintenance for the child. As a general rule, joint parental custody is possible if the child is born to married parents, or the parents marry after the birth of the child, or the parents declare that they wish to care jointly for the child (custody declarations) or if the Family Court (*Familiengericht*) grants them joint custody of the child. For details, see *https://e-justice.europa.eu/content_parental_responsibility-302-de-en.do?member=1*, website consulted last time on March, 15th, 2021.

[13] See *https://oatleyvigmond.com/the-parental-responsibility-act/*, website consulted last time on March, 15th, 2021.

[14] For more information about parental reponsibility in U.S., see E.M. Brank, V. Weisz, *Paying for the crimes of their children: Public support of parental responsibility*, Journal of Criminal Justice, Science Direct. 32 (5), pages 465-475, 2004, *https://digitalcommons.unl.edu/cgi/viewcontent.cgi?article=1551&context=psychfacpub*, website consulted last time on March, 15th, 2021.

Recommendation of the Committee of Ministers[15], identifies this notion like a „collection of duties, rights and powers, which aim to promote and safeguard the rights and welfare of the child in accordance with the child's evolving capacities". This collection of „duties, rights and powers" relate to health and development, personal relationships, education and legal representation, decisions on the habitual place of residence and the administration of the property of the children.

In the *UK's law*, *parental responsibility* seems like an ambiguous and confused concept. In part, this ambiguity is due to the wide statutory definition in that the definition includes all aspects of being a parent: „all the rights, duties, powers, responsibilities and authority which by law a parent of a child has in relation to the child and his property"[16]. Although the statutory definition of parental responsibility and indeed the term itself refers to the rights and responsibilities of a parent, the concept is not synonymous with parentage or parenthood. At the time of the creation of parental responsibility, one of the recommendations of the Law Commission was that the title refer to responsibility instead of rights „it would reflect the everyday reality of being a parent and emphasize the responsibilities of all who are in that position"[17]. It can be seen that the Law Commission wished to underline the functional aspect of the new legal concept of parental responsibility, perhaps due to the greater diversity of family forms in the twentieth century. This was in order to benefit *all* parents, including those who lacked a genetic link with the child (for example, the step-parents, who lack automatic parental responsibility[18]).

Since its creation, judicial interpretation of the concept has tended to focus on the rights aspect rather than functional responsibilities (granting the practical benefit of having parental responsibility for social parents which would include the right to consent to medical treatment on the child's behalf).

The *Danish national concept of „parental responsibilities"*, as defined by the Council of Europe (see above), is *forældremyndighed*, which is best translated as „parental authority".[19] The holder(s) of parental authority have certain duties and powers and decisions must be made from the perspective of the child's interests and needs. The holder(s) of parental authority is/are also the child's guardian(s), which entails a right to act on behalf of the child in legal and financial matters. It has been considered on a number of occasions whether the concept of parental authority should be changed into a concept which better reflects the responsibility of the holder(s). When the Danish Act on parental authority and contact was changed in 1985 the concept of parental authority was retained, the underlying reasoning being that a change in concept would not change the legal content of the concept. It was further stressed that the concept of parental authority entailed not just a right to decide for the child, but also a duty to protect and care for the child. In general it is the parents or one of the parents who is/are the holder(s) of parental authority. Parental authority can be transferred to a non-parent (for example, a step-parent) or to two non-parents (this must be a married couple), but there can never be more than two holder(s) of parental authority at the same time (art. 11 Danish Act on Parental Authority and Contact). If child protection measures are taken, the holder(s) of parental authority retain parental authority but their rights and duties are accordingly restricted. When a child is taken into care as a child protection measure, the local authorities and/or the foster parents with whom the child is placed are not endowed with parental authority.

The Romanian Civil Code uses the concept of *parental authority*. Parental authority means all the rights and duties concerning both the child and his assets. The rights and duties belong equally to both parents and are exercised in the best interests of the child. Parental authority shall be exercised until the child reaches full legal capacity.[20]

According to the Articles 487-499 of the Romanian Civil Code and Law No 272/2004 on the protection and promotion of children's rights, the parental rights and duties include[21]:

---

[15] Recommendation CM/Rec(2015)4 of the Committee of Ministers on preventing and resolving disputes on child relocation, adopted on 11 February 2015, *https://assembly.coe.int/nw/xml/XRef/Xref-XML2HTML-en.asp?fileid=22022&lang=en*, website consulted last time on March, 22th, 2021.

[16] See Children Act 1989, Section 3, (1), *https://www.legislation.gov.uk/ukpga/1989/41/section/3*, website consulted last time on March, 15th, 2021.

[21] *Ibidem*.

- the right and duty to establish and preserve the child's identity;
- the right and duty to raise the child, to care for the health and physical, psychological and intellectual development of the child, of his education, studies and professional training, according to their own beliefs, characteristics and needs of the child;
- the right and duty to provide child supervision;
- the right and duty to provide child support[22];
- the right to take certain disciplinary measures against the child[23];
- the right to ask for the return of the child from any person who holds him with no right;
- the right of the parents to reunite with their child;[24]
- the right of the parent to have personal relations with his child (for example: visiting the child in his home, visiting the child while he is in school, the child spending holiday with each of his parents);
- the right to determine the child's home;[25]
- the right to consent to the engagement and marriage of the child in the case of minors who have reached 16 years of age;
- the right to consent to the child's adoption;
- the right to appeal against the measures taken by the authorities with regard to the child and to make requests and actions in their own names and on behalf of the child.

The parental rights and duties (Article 500-502 of the Romanian Civil Code) as regards the child's assets may include[26]:

- *management of the child's assets*. The parent has no right over the assets of the child, nor has the child over the assets of the parent, apart from the right to inheritance and maintenance. Parents have the right and duty to manage the assets of their minor child and to represent him in legal civil acts or to give their consent to these acts. After the age of 14, the minor shall exercise his rights and shall execute his duties alone, however, with the consent of the parents and of the Court, where appropriate.
- *the right and duty to represent the minor in civil acts or to give one's consent to such acts*. Up to the age of 14, the child shall be represented by the parents in civil acts as he lacks legal capacity entirely. From the age of 14 to 18, the child shall exercise his/her rights and shall execute his/her duties alone, however, the prior consent of the parents is required as she/he has limited legal capacity.

According to the Romanian Civil Code, the rights and duties belong equally to both parents[27] [Article 503 (1)]: if the parents are married; after divorce (Article 397); to the parent whose filiation has been established if the child was born out of wedlock and to both parents if the parents live in domestic partnership [Article 505 (1)].

From my point of view, which is not singular[28], the term *parental authority* is an obsolete concept from olden times where parents were presumed to have power and a sense of ownership over their children, just as they had over their goods or animals. Nowadays, taking into consideration the recognition and acknowledgement of children's rights, this concept of a parent having control or domination over the child's life is seen as being outdated. I find more appropriate using the term of *parental responsibility* or even *parental responsibilities*, in order to refer at the rights and duties „owed" by the parents towards their children. Maybe, in the past, children had no say in familial matters and parental authority was exercised with nothing say to the children's wishes, but the world has moved away from such a drastic measures. More than authority, the parents have responsibilities and the children are individuals in their own right and should be treated as such. No one has power over another human being, but everyone has responsibilities to each other and parents have the obligation to ensure that their children become responsible and mature adults. Parental responsibilities are not static. As the child grows these responsibilities change and adapt, so, the level of responsibility diminishes, like a natural progression, as children grow older.

In decisions such as living arrangements, contracts, or consenting to medical/surgical/dental procedures, the capacity to make decisions and act in the child's best interest was vested in their parent or guardian, because, until this moment, the child was seen as lacking the capacity to express a valid consent,

[22] Parents are obliged, jointly and severally, to provide maintenance for their minor child. Parents are obliged to support their grown-up child until graduation if he is pursuing his studies, but no later than by the age of 26 years.

[23] However, it is forbidden to take certain measures, such as some physical punishment that would impair the physical, mental or emotional state of the child.

[24] This right is correlated with the right of the child to not be separated from his parents other than for exceptional and temporary reasons (for example, placement measures).

[25] The minor child shall live with his parents. If the parents do not live together, they shall decide the child's home by mutual agreement. In case of disagreement between the parents, the Court shall decide.

[26] See, for more information, https://e-justice.europa.eu/content_parental_responsibility-302-ro-en.do?member=1, website consulted last time on March, 22th, 2021.

[27] Parents may agree on the exercise of parental authority or as regards the measures taken to protect the child with the consent of the Court, if it is in the best interest of the child (Article 506 of the Romanian Civil Code). If the parents cannot come to an agreement on the issue of parental responsibility, the alternative means for solving the conflict without going to court is mediation. Mediation is optional before the referral to the Court. During the resolution of the trial, the judicial authorities are obliged to inform the Parties about the possibility and advantages of using mediation. If mediation does not result in an agreement, the disputed issues shall be settled in Court.

See, for more information, https://e-justice.europa.eu/content_parental_responsibility-302-ro-en.do?member=1, website consulted last time on March, 22th, 2021.

[28] See also A.M. Mangion, Is it the end of parental authority?, june 2010, https://timesofmalta.com/articles/view/is-it-the-end-of-parental-authority.310466, website consulted last time on March, 15th, 2021.

until the child attained majority. The current approach establishes that the parental powers are effective only so long as they are needed for the protection of the person and of the property of the child. Therefore, it is no longer accepted the rule that children remain under parental control until they are of certain age.[29]

The principle according to which the extent of the parental responsibilities diminishes was established by *Gillick v West Norfolk & Wisbech Area Health Authority* (1986)[30]. The ruling in this case provides that the child's voice is listened to in court when he reaches a sufficient understanding to be capable of making up his own mind. In practice, the child's ability to make decisions for himself relates to a number of different situations, but the main areas where issues often arise, however, are connected with consent or refusal of medical or psychiatric treatment.

When we have to establish if the child has capacity to consent (his maturity and his understanding), we must determine that they can understand the nature, purpose and possible consequences of investigations or treatments proposed, as well as the consequences of not having treatment. Only if they are able to understand, retain, use and weigh this information, and communicate their decision to others can they provide a valid consent.

If the children are found to have the required level of understanding, their decision could be upheld even if the parents' wishes are different. After the court's decision to uphold the child's view, the parents will not have authority to contradict that decision or even to force their child into the opposite course of action. As Lord Scarman said in the *Gillick case*, „parental right yields to the child's right to make his own decisions when he reaches a sufficient understanding and intelligence to be capable of making up his own mind on the matter requiring decision."[31]

3. „Best interests of the child" and parental authority

The concept of the best interests of the child is defined by the United Nations *Convention on the Rights of the Child – CRC*, but also in the Convention of the Hague on international adoption, seen as a concept that has two „traditional" roles, one that seeks to control and one that finds solutions (criterion of control and criterion of solution[32]). „Best" and „interests", as a whole, mean that the final goal should and must be the well-being of the child, as defined through the Convention, especially in the Preamble and in the Article 3 of the CRC (paragraphs 2 and 3).

This expression is also included in a number of other articles of the CRC[33], as a reference point that must be considered in particular situations.

For example, Article 9 of the CRC put the principle promulgated by Article 3 of CRC in relation to the right of the child to live with his parents, also referring to the rule that the child must maintain personal relationships and direct contact with both parents, unless this threatens the best interests of the child (situations that include an open conflict between the child and one or both parents, or the cases when a child and his parents may become separated as a result of an official decision, necessary in a particular case such as one involving abuse or neglect of the child by the parents, or one where the parents are living separately and a decision must be made as to the child's place of residence, but only when such a decision takes into account the best interests of the child).

Also, Article 18 establishes the principle according to which the two parents must be involved with the education of the child; this is called the common responsibility for education.

We observe that the principle of the best interests of the child is a general principle which must be applied in all activities related to implementation of the entire CRC.[34]

It is important to mention here that child's rights do not eliminate parental responsibilities. Indeed, the Article 5 of CRC[35] provides that „*State parties shall respect the responsibilities, rights and duties of parents* or, where applicable, the members of the extended family or community as provided for by local custom, legal guardians or other persons legally responsible for the child, *to provide, in a manner consistent with the evolving capacities of the child, appropriate direction and guidance in the exercise by the child of the rights recognized* in the present Convention."

This „right" is not the right of parents to control their child but rather the right to guide their child in exercising his or her rights; furthermore, the parents' rights diminish as the child grows in knowledge, experience, and understanding.[36]

We must consider the development of a proper family environment in which children may freely express their views.

The participation right of children is one of the core principles of the CRC. Citizen participation, of course, is a key value of a democracy, and the CRC establish new ground by viewing children as „agents who share the power to shape their own lives" and encouraging them to exercise their own rights as members of society.[37] The CRC[38] grants each child the right to participate in all decision-making processes that affect his life, so that the child might obtain a more equal role in relationships with adults and a greater opportunity to think and act independently.

It is also important to note that under Article 12, children have a right to the information necessary to formulate their views and to choose to not express their views.[39] The CRC does not, however, delineate an unlimited participation right – and decision making powers – of children. The treaty recognizes a right to free expression only for children who are capable of forming independent views, and even then, the weight given to their views depends upon the age and maturity of each child. Even when a child is able to express his or her views, they are not necessarily dispositive—Article 12 merely asks that children's views, if expressed, act as a factor in decisions regarding the children.[40]

The CRC regulates different but yet fundamental principles (best interests of the child and the participation right of the children), and in some cases the principles are in „tension" with each another. For example, Article 12 stands in opposition to another central principle of the CRC: the best interests of a child. The CRC is committed to the protection of the „best interests" of each child, a principle best reflected in its Article 3 (1)[41].

The tension between those principles is due to the fact that Article 3 sees children as vulnerable objects in need of protection from parents or other authority figures, while Article 12 views children as autonomous beings with the right to make their own decisions, whether or not it is in their best interests.

Some critics of the CRC argue that the rights-focused approach of the CRC, a shift away from a purely best-interests-focused approach, has failed to protect either the rights or the best interests of children. After all, a child's preferences may not always coincide with what is in his or her best interests, at least from the government's or parents' point of view. [42]

The initial lack of guidance from the Committee resulted in a wide variety of methods of implementing the CRC into domestic law.[43] However, the *United Kingdom* and *Germany* demonstrate that different approaches to resolving the tension between Article 12 and parental authority have some telling similarities.

The CRC has helped update the language of parental authority to emphasize duties over rights. In *England and Wales*, the Children Act 1989 translated key principles of the CRC, including those of Article 12, into domestic law. The Act „replace[d] the concept of parental rights and duties with the concept of parental responsibility," abandoning such notions as the „right[s] to custody" in favor of the child's interests. This was an acknowledgment of the outdated language of parental „rights" and „authority", incongruous with the modern view that „parenthood is a matter of responsibility rather than of rights."

Germany reflects a similar trend, in which „the child and [his or her] welfare have increasingly become the focal point" in parental authority. Legal reform in 1979 transformed „parental powers" into „parental care," emphasizing both the rights and responsibilities of parents over their children.

The language of *U.S. law*, on the other hand, asserts the right of parents to manage their children's lives on a basis separate from the interests of children. Yet much of the law reflects an underlying rationale grounded in the best interests of a child rather than the liberty interest of parents; in other words, giving parents primary authority and discretion over the upbringing of children is often justified as being in the child's interest.

There is, therefore, an inconsistency between the rhetoric of parental rights and the practice of emphasizing the interests of children to justify parental rights.

Children are not at all the property of their parents. That being the case, we must admit that the term „authority" is a little bit more excessive, redundant. The Convention above mentioned admits that children's capacities are evolving and increase as they grow up. Therefore, parental responsibilities should be exercised in accordance with the children's

[37] *Ibidem.*

[38] Article 12 sets out this right:

„(1) States Parties shall assure to the child who is capable of forming his or her own views the right to express those views freely in all matters affecting the child, the views of the child being given due weight in accordance with the age and maturity of the child.

(2) For this purpose, the child shall in particular be provided the opportunity to be heard in any judicial and administrative proceedings affecting the child, either directly, or through a representative or an appropriate body, in a manner consistent with the procedural rules of national law." [43] *Ibidem.*

evolving capacities. So, it is undeniable that children must be raised by a parent or parents who will best serve their interests. On this subject, parental rights are grounded in the ability of parents to provide the best possible context for childrearing.[44]

4. The psychological component of the concepts „best interests of the child" and „parental authority". Parenting styles and their effects on children

We know very well that the children do not come with instructions, and they certainly do not come with a „pause" button. So the children are not at all easy to raise. What they do come with is an important set of physical and emotional needs that must be met. As it was mentioned before, „failure of the parents to meet these specific needs can have wide-ranging and long-lasting negative effects"[45].

The essential responsibilities that parents must adhere to in order to defend and keep their child's physical and/or emotional well-being are[46]:

1. *provide an environment that is safe* (keep the children free from physical, sexual, and emotional abuse; correct any potential dangers around the house; take safety precautions like use smoke and carbon monoxide detectors, lock doors at night, always wear seatbelts etc.);

2. *provide the children with basic needs* (water, food, shelter, medical care as needed/medicine when ill, clothing that is appropriate for the weather conditions, space / a place where the children can go to be alone);

3. *provide the children with self-esteem needs* (accept the children's uniqueness and respect their individuality, encourage the children to participate in an activity or sport, notice and acknowledge the children's achievements and pro-social behaviors, set expectations for the children that are realistic and age-appropriate, use the children's misbehavior as a time to teach, not to criticize or ridicule);

4. *teach the children morals and values* (honesty, respect, responsibility, compassion, patience, forgiveness, generosity);

5. *develop mutual respect with the children* (use respectful language, respect their feelings, their opinions, their privacy and their individuality);

6. *provide a fair, well structured, predictable and consistent discipline which is effective and appropriate*;

7. *involve in the children's education* (communicate regularly with the children's teachers, make sure that the children are completing their homework, assist the children with their homework, but do not do the homework, talk to the children each day about school, recognize and acknowledge the children's academic achievements);

8. *get to know the children* (spend quality time together, be approachable to the children, ask questions, communicate, communicate and communicate, like Lenin once said[47] „Learn, learn, learn!).

On the other hand, it was also identified *responsibilities* that *parents do not have*: supplying the children with the most expensive designer clothes or shoes available; picking up after the children; cleaning the children's room; dropping everything the parents are doing to give the children a ride somewhere; providing the children with a cell phone, television, computer, or game system; bailing the children out of trouble every time they does something wrong; replacing toys or other items that the children has lost or misplaced; welcoming any or all of the children's friends into the home for social or other activities.[48]

From an emotional point of view, the characteristics of the family environment are dispersed. First of all, we are talking about psychological safety and balance, and secondly, about their opposite characteristics. Family life also includes all the material and spiritual conditions that are offered to the child, especially through psychological security, affection, freedom, independence, intellectual constructivism, appetite for culture and others.[49]

The parenting style can affect everything from how much the child weighs to how he feels about himself. It's important to ensure that the parenting style is supporting healthy growth and development because the way the parents interact with the child and how they discipline him will influence him for the rest of his life. Researchers have identified four types of parenting

[46] *Ibidem*.

[47] Apparently it wasn't Lenin who invented that phrase. That appears in earlier Lenin's writings. For instance, the first time Lenin used this exact phrasing was in his 1899 article „The reverse direction of Russian Social Democracy", published in „Proletarian Revolution" journal, 1924, no. 8-9 (after Lenin's death) [„While educated society loses interest in honest, illegal literature (...) the real heroes emerge from amongst workers who (...) find quite much of character and willpower within themselves *to learn, learn, and learn*, and to develop conscious social democrats from themselves(...)]".

The original of the quote is traced back to Anton Chekhov, who wrote these words in a context almost directly opposite to how Lenin used them. That was first published in a supplement to highly popular „Niva" magazine in 1896. Lenin could absolutely read that and probably did („We must *study, and study, and study* and we must wait a bit with our deep social movements; we are not mature enough for them yet; and to tell the truth, we don't know anything about them." (Anton Chekhov. My Life, Chapter VII).

[49] For more details about the psychological component of the notion „best interests of the child", see M.-M. Pivniceru, C. Luca, *The best interests of the child. Psychological expertise in case of separation / divorce of parents*, Hamangiu Publishing House, Bucharest, 2016, pages 19 et sequens.

styles: authoritarian, authoritative, permissive and uninvolved.[50]

Authoritarian parents[51] believe kids should follow the rules without exception. Those parents are famous for a „because I said so" answer when a child questions the reasons behind a rule. They are not interested in negotiating, their focus is on obedience and they also don't allow kids to get involved in problem-solving challenges or obstacles. They make the rules and enforce the consequences with little regard for a child's opinion, using punishments instead of discipline. So rather than teach a child how to make better choices, they are invested in making kids feel sorry for their mistakes. Children who have authoritarian parents tend to follow rules much of the time. But, their obedience put a higher risk on them, while they may develop self-esteem problems because their opinions aren't valued, or they may also become hostile or aggressive. Rather than think about how to do things better in the future, they often focus on the anger they feel toward their parents and may grow to become good liars in an effort to avoid punishment.

Authoritative parents[52] have rules and they use consequences, but they also take their children's opinions into account. They validate their children's feelings, while also making it clear that the adults are ultimately in charge. Authoritative parents invest time and energy into preventing behavior problems. They also use positive discipline strategies to reinforce good behavior, like praise and reward systems. Researchers have found that kids who have authoritative parents are most likely to become responsible adults who feel comfortable expressing their opinions. Children raised with authoritative discipline tend to be happy and successful. They are also more likely to be good at making decisions and evaluating safety risks on their own.

Permissive parents[53] are indulgent. They are quite forgiving and they adopt an attitude of „kids will be kids". When they do use consequences, they may not make those consequences stick. They might give privileges back if a child begs or they may allow a child to get out of time-out early if he promises to be good. Permissive parents usually take on more of a friend role than a parent role. They often encourage their children to talk with them about their problems, but they usually don't put much effort into discouraging poor choices or bad behavior. So their children may exhibit more behavioral problems as they don't appreciate authority and rules, often have low self-esteem and may report a lot of sadness. They're also at a higher risk for health problems.

Uninvolved parents[54] tend to have little knowledge of what their children are doing. There tend to give few rules. Children may not receive much guidance and parental attention. Uninvolved parents expect children to raise themselves. They don't devote much time or energy into meeting children's basic needs and they are neglectful but it's not always intentional. Children with uninvolved parents are likely to struggle with self-esteem issues. They tend to perform poorly in school. They also exhibit frequent behavior problems and rank low in happiness.

5. Conclusions

The most significant feelings perpetuated in the family are love and intimacy. Both involve accepting and appreciating the other's uniqueness, and observing their mode of consumption within the family substantiates the child's future behavioral pattern regarding love relationships and the manifestation of his own intimacy. The gestation of a human being is a long process and the psycho-emotional development of the child is as relevant as his cognitive or physical development, because the degree of maturity acquired by the child will depend on that, and also his ability to relate authentically or not, as well as the autonomy that the child will assume it in his evolution.[55]

In the absence of „love"[56], the concept of „parental authority" and for sure the whole mechanism that turns the wheels of his profound understanding will become meaningless. Because loving your children is the most important parental „obligation" in the whole world, although some people might say that there is no duty to love. However, parents do have a moral obligation to love their children. A lack of love can harm a child's psychological, social, cognitive and even physical development.

Parents – biological or adoptive – are those who have the strongest and most direct obligation to care for their children, and this obligation is the basis of their „authority" over those children. Just as a mother's womb is the ideal place for physical and psychological gestation during the first nine months of life, so the natural family is the ideal place to complete that gestation, extending it morally and intellectually.[57] That confidence grounds a sense of security that

permits children to develop their independence with the knowledge that someone will be there to pick them up when they fall, literally or metaphorically. As mentioned in the study[58] cited above, «When addressing the rights and obligations of parents in the *Summa Theologiae*, Thomas Aquinas speaks of a child as in some sense „a part" of its parents and as „enfolded in the care of its parents," first physically in the mother's womb, and then in the *„spiritual womb"* of the family. *Aquinas's „spiritual womb" metaphor* profoundly expresses the connection among parental obligations, children's needs, and parental authority.»

It is very important that any cause involving a child can find a solution best suited to his best interests, so that his development will not suffer. It is also clear that the child has rights and he must be heard if he is able to form and communicate his views if the case affects him. Nevertheless, it is evident that the principle of the best interests of the child is, like the concept of „parental authority", most difficult to explain and to settle down. We need to clarify that we cannot see only the rights, but also the responsibilities that the parents have towards their children.

ON THE PRESUMPTION OF PATERNITY AND THE NEGATION OF PATERNITY

Ciprian Raul ROMIȚAN*

Abstract

Paternity is the legal link between the father and the child and results from the fact that a man has conceived the child. Paternity may be either from marriage or from outside marriage. The filiation toward the father in marriage is determined by the effect of the presumption of paternity according to the law, and the paternity filiation toward the father outside the marriage is established, either by the recognition of the father or by the court. In the case of medically assisted human reproduction with a third-party donor, the filiation toward the father shall be based on the consent of the mother's spouse or concubine to be considered the child's father.

In the case of the child in marriage, the presumption of paternity is the only way of establishing the filiation toward the father and operates ope legis. If the mother's husband is impossible to be the father of the child, the paternity can be negated, but only by court.

Keywords: *filiation, paternity, paternity presumption, paternity negation, legal time of the child's conception, mother's husband*.

1. General considerations

In the specialized literature[1], filiation is defined as "biological and legal or only legal connection established between two persons by virtue of the concept and birth, i.e. the legal act of adoption and which generates between them certain non-patrimonial and patrimonial rights and obligations governed by special legal rules". In other words, filiation is the connection between the child and his/her parent. The filiation toward the mother (maternity) is based on the birth fact, and the filiation toward the father (paternity) is based on the fact of conception.

Starting from the above, we can say that the filiation toward the father (paternity) is the legal connection between the father and the child and results from the fact of child's conception by a man. Paternity may be either *from marriage* or *outside marriage*.

Ab initio, we underline that, unlike the establishment of filiation toward the mother, which is done according to the same rules, whether the child is born in or outside the marriage, the establishment of filiation toward the father is regulated differently by the Civil Code.

Thus, if the filiation toward the *father in marriage* is determined by the effect of the *presumption of paternity* according to the provisions of art. 408 par (2) Civ.C., the filiation toward the *father outside the marriage* is established, either by the *recognition of the father* or *by the court*, according to art. 408 par. (3) Civ.C.

But it is important to note that, as it has also been shown in the specialized literature, irrespective of[2]the manner in which the paternity relationship has been established, once paternity has been established, *children will benefit from the same legal situation*, without distinguishing as they are from marriage or from outside it, according to article 260 C.civ and Article 16(1) of the Constitution of Romania, where the *constitutional principle of equality of rights* is consecrated.

According to the provisions of Article 409 (1) C.civ, filiation shall be proved by *the birth document* drawn up in the civil status register and *the birth certificate* issued on the basis thereof, and in the case of the child from the marriage the proof shall be furnished by *the birth document* and *the marriage document* of the parents, entered in the civil status registers as well as the corresponding *civil status certificates* [Article 409(2) Civ.C.].

Therefore, it is noticed from those above-mentioned that in the case of the child in marriage, the *presumption of paternity* is the only way of establishing the filiation toward the father and operates *ope legis.* If the mother's husband is impossible to be the father of the child, the paternity can, on the grounds of art. 414 (2) Civ.C. be *negated*[3], but only *in court*.

2. Legal time of the child's conception

Although for the time being, *the date of conception of a child* cannot be determined with certainty, it is particularly important both in the case of the establishment of paternity in the marriage and the paternity outside it[4].

[2] Emese Florian, *Dreptul familiei. Căsătoria. Regimuri matrimoniale. Filatia*, Edition 6, C.H. Beck Publishing House Bucharest, 2018, p. 397.

[3] According to Article 414(2) Civ.C., "Paternity may be negated, if it is impossible for the mother's husband to be the father of the child."

[4] Marieta Avram, *Drept civil. Familia,* 2nd issue, revised and supplemented, "Hamangiu" Publishing House, Bucharest, 2016, p. 388.

For these reasons, the law established *a presumption* determining *the legal time of the child's conception.* Thus, according to Article 412(1) Civ.C., the time interval between the three hundred and one hundred and eightieth day before the child's birth is the legal time of conception. It shall be calculated day by day. These two time limits have been established on a scientific medical basis, which in fact cover *the delayed birth* and *premature birth* of a child[5].

For example, in a case[6], the court stated that "the term is calculated on a day-by-day basis. It is 121 days, which means that the day of birth, which is the departure day of the term (*dies a quem*), is not taken into account, but the day of fulfillment is counted (*dies a quem*)". Therefore, the court specifies in the same case, "if the mother and the presumed father have maintained only one intimate report but it is proven that this one was within the child's conception period, the action in determining paternity is admissible."

It follows from the interpretation of the above that *the legal time of the child's conception* is a *legal concept* and can be defined as „the period of time during which the conception could have taken place, between the three hundred and one hundred and eightieth day before the birth of a child"[7]. *The legal time of conception* serves to determine the father of the child, whether a child born during the marriage or a child born outside it[8].

According to Article 412 par. (2) Civ.C. *scientific means of proof* of the conception of the child may be produced within a certain period of time within the period referred to in paragraph (1) or even outside that period. As noted, the specified article establishes *a presumption of legal time of conception*, which is a *mixed, intermediate, legal* presumption [9].

3. Presumption of paternity

3.1. Concept and basis of the presumption of paternity

As mentioned above, according to article 408(2) Civ.C., the filiation toward the father is established by the effect *of the presumption of paternity*. In other words, "the father is the one that the marriage shows" (*pater is est quem nuptiae demonstrant*). Therefore, by the effect of the legal presumption, the child is exempt from any other evidence relating to the filial relationship with his/her father[10].

Article 414(1) Civ.C. establishes the rule according to which the child born or conceived during the marriage has as his/her father the husband of the mother. Therefore, as stated in a case-law[11], "a recognition of paternity, which produces legal effects, cannot exist, the status of the child born during the marriage being determined by law". In other words, the paternity of these children cannot be established by voluntary recognition by the father.

In literature, *the presumption of paternity* was defined as "the legal means of establishing filiation toward the father, which indicates as the father of the child the husband of the mother from the marriage during which the fact of conception or birth took place, or[12] "the means provided by law of establishing the paternity of the child from the marriage according to which the mother's husband is the father of the child conceived and/or born of that marriage"[13].

Therefore, it follows from the interpretation of Article 414(1) Civ.C that the presumption of paternity is based on the fact of the child's conception during marriage or that of the child's birth during the mother's marriage[14]. In other words, as the courts have also ruled[15], "the presumption of paternity only works for children born or conceived during the marriage".

Therefore, "*the paternity* of the child outside the marriage cannot be established by extending this presumption to the intimate relationship between the mother of the child and another man outside the marriage"[16].

If the mother was married to a man at the time of the child's conception, and at the time of the child's birth the mother had entered into a new marriage, the presumption of paternity "operates in favor of the man in the subsequent marriage (the one who had the capacity of husband at the time of the child's birth)"[17].

[17] *Idem*.

We should underline that, in the same case, the court stated that ”the presumption does not apply to children who are born out of the long-term relationship of parental cohabitation, even if the parents were married after the birth of the child”.

But, as I mentioned before, *the presumption of paternity is not absolute*, but is *a relative presumption*, which can be overturned by *any means of proof*, even if the mother and the biological father of the child admit that they are his/her parents. Therefore, from the legal nature point of view, the presumption of paternity *has a mixed character*[18], it being possible to be overturned by *way of legal action in negation of paternity* according to article 414 (2) Civ.C. and article 429-433 Civ.C. In this respect, in a case[19] judged under the auspices of the Family Code, which is now repealed, the court has indicated that ”the legal presumption of paternity, on the grounds of which the child born during the marriage has the mother’s husband as a father, can only be removed by an action of negation of paternity and not by the registration of the child at the civil status office in the name of the mother's concubine". In the same sense, in a recent case[20], the court underlined that ”the presumption of paternity takes effect irrespective of the child’s act of birth, which could show, for example, that the child’s father is someone else than the mother’s husband or that the child’s father is unknown. It was decided that the child born during the marriage benefits from a presumption of paternity, even if the father was not registered in the act of birth and did not bring the action in the negation of paternity”. For reason identity, it is stated in the same decision that, ”the child enjoys the presumption of paternity, even if the father was not registered in the act of birth, and the child conceived during the marriage but born after the marriage ceased or was dissolved, and his/her mother did not remarry before the date of birth. If the mother’s husband is not registered in the civil status register as the child’s father, an action may be brought to ascertain the applicability of the provisions of the New Civil Code, which provide for a presumption of paternity, and to ask for the rectification of the act of birth. This presumption creates in favor of the child a status of a child born by a married woman."

The presumption of paternity of the child conceived during the marriage is based on the *obligation of fidelity of the wife*, which is also the logical condition for the establishment of the presumption of paternity. In other words, the presumption of paternity is based on two ideas, namely: ”cohabitation of spouses and the conjugal faith of the wife”[21].

The court has a special and active role in removing the presumption of paternity. Thus, as it has also been shown in a decision of our supreme court[22], judged under the auspices of the Family Code, now repealed, "(...) the court is obliged to proposed all necessary evidence and also to exercise its active role, ordering *ex officio* the administration of evidence, in order to be able to form a certain conviction as to the fact subject to trial. The promotion of action in negation of paternity resulting in a change in the civil status of the child born during the marriage, on which it cannot be transacted, follows that, in the absence of any other evidence, the mere recognition of the defendant-mother, which may constitute an act of connivance between the parties concerned, is not producing any legal effects”.

3.2. Conditions for the application of the presumption of paternity

For the application of the presumption of paternity, a number of conditions must be fulfilled which, if satisfied, according to the provisions of article 414 (1) Civ.C., *the mother’s husband is presumed the father of the child born or conceived during the marriage*:

- determination of the filiation toward the mother, according to the law, which means that from a legal point of view, the determination of the paternity of the child from the marriage can only be made after the determination of filiation toward the mother (maternity);
- mother's marriage;
- conception or birth of the child during the marriage of his/her mother[23].

4. Negation of paternity

4.1. Concept and regulation

The negation of paternity aims to remove the presumption of paternity established by the law between man and child and serves the presumed father to remove from the family the child conceived by his wife from relations with another man[24]. In other words, the negation of paternity means denying it by means of legal proceedings, the aim being to overturn the presumptions of paternity[25].

---

[18] About the mixed nature of the presumption of paternity, the Constitutional Court pronounced under the auspices of the Family Code, now repealed, by decision No 78/1995, published in the Official Gazette no. 294 of December 20, 1995.

[19] Supreme District Court, Decision No. 664/1977 in "Revista română de drept" no. 10/1977, p. 61, *apud* Corneliu Turianu, *op. cit.*, p. 259.

[22] Supreme District Court, Decision no. 261/1988, in "Revista română de drept" no. 1/1989, p. 71, *apud* Corneliu Turianu, *op. cit.*, p. 240, where a note of the author can also be read.

[23] Marieta Avram, *op. cit.* (2016), p. 390.

[24] Constantin Hamangiu, I. Rosetti-Bălănescu, Alexandru Băicoianu, *op. cit.*, volume I, p. 296.

[25] For details see Bogdan Dumitru Moloman, *op. cit.* (2012), p. 32.

For example, in a case[26] concerning the negation of paternity, "the court has held that for the admission of an application in the negation of paternity lodged by the child's mother's husband (at the time of birth of the child, current, former husband), unequivocal circumstances must be established to demonstrate that it is impossible for him to be the father of the minor whose paternity is negated. From the evidence produced in the present case, the court has held that, in the context of the questioning taken on xxx, the defendant A.A. recognized that, prior to the beginning of her relationship with him, she was in a different relationship with a man at whom she actually lived in and that on xxx she moved to the claimant's home.

Witness B.B. stated that the defendant confessed to her about one and a half months after she moved to the claimant's home that she suspected that she was pregnant and that she conceived the child with the X.X. with whom she had a previous relationship. The witness also showed that the mother of the defendant also told her that she suspected the child born by her was not the claimant's. The witness also stated that the defendant hid the pregnancy for almost its entire duration, and shortly after she admitted being pregnant because the pregnancy could no longer be hidden, she also gave birth.

Witness C.C. stated that the parties met each other in August 2013 and in September 2013 the defendant moved to the claimant's home and that prior to her relationship with the claimant, the defendant had a relationship with another man, completed shortly before meeting the claimant. The witness also stated that the defendant hid the pregnancy and told her that she gave birth prematurely at 7 months, but the claimant told the witness that he suspected minor Y.Y. was not his child.

The witness D.D. stated that in early September 2013 the relationship of the parties started and in 2014 he learned that the claimant's mother went with the defendant to the family doctor because she felt sick and, on that occasion, the defendant was found to be pregnant and was to give birth in the immediately following period. The witness also showed that the claimant told him he suspected the child born by the defendant was not his own because he learned that, until a short time before the beginning of their relationship, the defendant was in a relationship with another man.

In that case, the DNA test was carried out by the Forensic Medicine Laboratory (...), in which the biological samples of both parties and those of the minor Y.Y. were analyzed and the result of this test concluded that the claimant was excluded from being the biological father of the child Y.Y. In view of the situation *de facto* presented, which resulted from the evidence produced in this case, the court considers that proof was made that it was impossible for the claimant to be the father of the minor Y.Y. (...)".

As we have already mentioned, the paternity of the child from marriage can only be removed by action in the negation of paternity[27]. In accordance with the provisions of article 429(1) Civ.C., the action in the negation of paternity may be started by the mother's husband, the mother, the biological father, as well as the child. The action in the negation of paternity may be started or, where appropriate, continued by their heirs, under the conditions provided for by law[28].

However, on the grounds of article 92(1) Civ.Proc.C., for the protection of the legitimate rights and interests of minors or of persons placed under a prohibition or of those missing, the prosecutor may also bring an action in the negation of paternity if necessary.

4.2. Limitation of the right of action

According to the provisions of Article 430(1) Civ.C., *the right to action of the mother's husband* is subject to a limitation period of three years, "which runs either from the date on which the husband knew that he was presumed as the child's father or from a later date, when he found that the presumption did not correspond to reality".

For example, in a case[29]the defendant negated the paternity of the minor M.M.D., born on October 26, 2006, and claimed he had no intimated relations with the mother of the minor in the last 21 years the court considered that in this case the limitation period started to run on the child's birth date and was obviously fulfilled until the action in negation of paternity was lodged. The court also states that "the security of family relations cannot be disturbed by ensuring that the action in negation of paternity can be carried out without a time limit and without justifying its start with a delay of almost 14 years. Even if the court would held that the defendant had not known the minor's birth at the time this occurred, according to the defendant's statement in the criminal case no. 3043/P/2015, he had knowledge of the minor's birth at the latest in summer 2007". Thus, the court will reject the claim made by the defendant for the negation o paternity as barred by the statute of limitation.

It should be underlined that, as also stipulated in paragraph 2 of article 430 Civ.c., the term does not run against the husband placed under a judicial prohibition, and he can make use of his right to an action in the negation of paternity within three years from the date of lifting of the prohibition. If the husband is placed

[26] Săveni law court, civil sentence no. 48 of February 3, 2020, available on https://www.jurisprudenta.com/jurisprudenta/speta-167ab1sj/ (accessed on January 14, 2021).

[27] The establishment of filiation, the negation of paternity or any other action concerning filiation is subject to the provisions of the Civil Code and produces the effects it provides only in the case of children born after its entry into force (see Article 47 of Law 71/2011).

[28] In the old regulation, according to Article 54(2), sentence I Civ.C., the action in the negation of paternity could only be started by the mother's husband. These provisions were declared unconstitutional by Decision no. 349 of December 19, 2001 of the Constitutional Court, published in Off.G. no. 240 of April 10, 2002.

[29] Petroşani Law court, civil sentence no.770 of June 17, 2020, available on www.rolii.ro (accessed on l3.01.2021).

under interdiction, the action may be started on his behalf by the guardian and, in the absence of the guardian, by a curator appointed by the court [Article 429(3) Civ.C.].

If the husband died before the expiry of the limitation period of 3 years without the action being started, it may be started by his heirs within one year of the date of death [art.430 par. (3) Civ.C.].

As we have already shown, the action in the negation of paternity can also be started by the mother. Thus, according to article 431(1) Civ.C., *the mother can start the action in the negation of paternity* within three years from the child's birth date. The mother may bring an action in the negation of paternity, as a claimant, against the husband/former husband, and if the latter is deceased, the action may be started, pursuant to article 429(4) Civ.C., against the heirs. If the inheritance is vacant, the art. 439 Civ.C. provides that the action may be brought against the commune, the city or, as the case may be, the municipality at the place of the opening of the estate, and the summoning in court of the waivers, if any, is mandatory.[30].

As for *the right of the child to start an action in the negation of paternity*, according to article 433(2) Civ.C., the right to action is not subject to prescription during the child's life. Thus, according to the provisions of article 433(1) Civ.C., the action in negation of paternity is brought by the child, during his/her minority, through his/her legal representative. The child may bring the action in negation of paternity against the alleged father (the husband of the mother or her former husband) or against his heirs [art.429 par.(4) Civ.C.]. If the inheritance is vacant, the action may be brought against the commune, the city or, as the case may be, the municipality at the place of the opening of the estate, the summoning in court of the denouncers, if any, being mandatory[31].

Finally, *the action in the negation of paternity can also be introduced by the alleged biological father*. Thus, according to article 432(1) Civ.C., "the action in negation of paternity introduced by the person claiming to be the biological father can only be allowed if he provides proof of his paternity toward the child". As it can be seen, the lawmaker established a special condition of admissibility of the action in the negation of paternity, in the sense that the alleged father must prove that he is the child's father and not the mother's husband or former husband. The right of action shall not be subject to prescription during the life of the biological father. After his death, the action may be brought by his heirs not later than one year after his death [art.432 par.(2) Civ.C.].

The establishment of the right of action of the alleged biological father, although considered to be an "avant-garde measure"[32], is regarded in the specialized literature[33] as "excessive and unjustified", and at the same time some reservations have been expressed, because in practice, it has been found that the interests of the child often do not match the interests of the alleged father.

4.3. Cases in which paternity may be negated

The law does not list the cases in which the husband of the mother may deny paternity, but merely states, in Article 414(2) Civ.C., the general rule according to which "*Paternity may be negated, if it is impossible for the mother's husband to be the father of the child"*. It is therefore up to the courts to decide on a case-by-case basis.

The concept of "impossible", regulated in Article 414(2) Civ.C., the courts have shown[34]that it means not only the physical or biological impossibility to procreate, but also objective situations or circumstances which make the child's conception impossible in the relations of the spouses, such as the absence of the husband from the country or other circumstances which prevented the existence of intimate relations between the spouses following conflicts which effectively led to the moral impossibility of cohabitation.

In a case[35], in the grounds of the petition for negation of paternity, the claimant showed that it was impossible for him to be the father of the minor because, at the time when the defendant found out that she was pregnant, he was on a mission to Afghanistan, so that, on the date when the child's conception should have taken place, he was not in the country. Thus, as the court found, "(...) the defendant-claimant shows that the claimant-defendant was on a mission to Afghanistan as of 05.09.2010, but before leaving, he insisted on conceiving a child. Thus, in July 2010, both parents carried out the blood tests necessary before a pregnancy and decided to conceive a child in the next fertile period.

The minor EMS was born on 18.05.2011, and according to the ultrasound and discharge note the pregnancy was 40 weeks, so the date of conception was 11.08.2010 when the defendant was in the country. The defendant-claimant also shows that when the claimant-defendant came to the country on a permission he

accompanied her to the regular medical visit to see the girl and also signed the contract on stem cell collection in the child's father section (...).

In the file, DNA forensic expertise was ordered, and its conclusions were that the SMA is the biological father of the SEM minor, with a probability of 99.99%. Therefore, in public session of 15.12. 2011, the claimant-defendant SMA asked the court to take note of his waiver at the judging of the petition in negation of paternity".

In another case[36], judged also under the auspices of the old rules in this field, the court underlined that "the mere circumstance that the spouses have lived separated in fact is not such as to lead to the conclusion that the mother's husband is the father of the child born during the marriage, if it turns out that their intimate relations continued during the period when they did not live together."

The courts[37] also considered that 'the mere recognition of the mother of the child that her husband is not the father of the child is not enough, so it is necessary to corroborate this with other means of proof showing that, during the child's conception period, the father was in impossibility to maintain intimate relations with his wife." In another case[38] in which from the marriage of the parties and during the marriage a minor resulted, born on 26.10.2010, the court found that "the birth certificate of the girl shows the filiation toward both parents. Being a minor born during the marriage, filiation is determined on the basis of the presumption of paternity of the spouses.

In the meantime, the parties have separated, with a civil divorce sentence no 2963 of 7.12.2010, in action, with the claimant showing that he was separated *de facto* from his wife, the mother of the minor in question, and that it is impossible for him to be the father of the minor.

In the case, the defendant, by authentic notarial statement, no 250 of 15.02.2011, recognizes that the minor is not the daughter of her former husband, the defendant in question. The defendant also submits to the file a memo showing the status of *de facto* separation from her husband, the fact that the minor is not the child of the defendant and that the minor was registered with the filiation of the father - the mother's husband as at the date of birth she was married to the claimant.

The court, as compared to the positions of the two parties, considers that the minor in question is not the daughter of the claimant, which is why it will admit the action and establish this state of affairs, in relation to the provisions of Article 54 family code, and to the fact that any person interested may challenge the recognition of paternity where it does not correspond to the truth, and in the present case, by the defendant's position, this situation *de facto* has been established. Consequently, the court is to cease the effects of the civil divorce sentence no. 293/2010 in respect of the alimony for the minor I., born on 26.10.2010".

The proof that the mother's husband is not the father of the child can be made, as we mentioned before, by any means of proof. Thus, the judge, a decision of the Supreme Court specifies[39], "*has the duty to produce all proofs with a view to establishing the correct situation de facto, for the purpose of establishing by proofs whether or not the claimant is the father of the child*". In another case[40], the court considered that "the age of the pregnancy at the time of birth can also be determined by the length of the fetus, his/her weight, by the weight of the placenta, as well as by other morphological features. If in relation to these data, established for sure, it is established that it is impossible for the mother's husband to be the father of the child, the action in negation of paternity is to be allowed".

Also, a particular role in proving that the mother's husband is not the child's father is to carry out DNA-type forensic expertise, whereby, as a result of the establishment and comparison of the genetic profiles of the child and the mother's husband, to be proved that it is impossible for him to be the child's biological father[41]. In a particular case[42] where DNA expertise was ordered and carried out[43], the court considered that "DNA expertise is the most complete and most likely modality of genetic expertise, which in no way depends on the prior carrying out of serological or HLA experts examinations (human leukocyte antigen, n.a.). And this is because serological and HLA expertise are also methods of research of paternity or filiation in general, which, as the appellant misunderstood, do not present steps prior to the administration of the proof with DNA expertise. These expertises, serological, HLA and DNA, do not depend on each other, but they may, even if they are independent and may be carried out independently, be used successively to establish filiation and if the serological or HLA expertises are not conclusive, given their lower probability, one can resort to DNA expertise, which has a very high degree of

probability and makes any other expertise on the matter superfluous".

In a case[44] in which the minor's mother refused to submit the minor to a specialized expert examination, the court considered that "it cannot be ignored that, although legally there was no pre-established hierarchy of means of proof, while remaining to the judge to judge in concrete terms the extent to which he can trust them, in a civil action such as the one of negation of paternity, scientific proofs, as the expertise to determine the likely date of conception, the serological and dermatoglific expertise can highlight more rigorously and with greater certainty elements that will allow judges to form conviction regarding the real situation *de facto*. Such scientific proofs, although useful, are not the only one that can be produced, and formation of judges' opinion can be done taking into account the whole evidence produced in the case. Moreover, it is not illegal to decide, when any proofs other than a forensic expertise has been proposed and produced that the mother's husband may not be the child's father, that the court should reject the proof with expertise, considering that there are no indications that such proofs are useful. It should also be noted that, where the producing of the proof with expertise necessarily involves the presence of the parties, such as in the case of serological and dermatoglific expertise, the law does not mean to give any particular value to the behavior of the party refusing to appear before the specialist laboratory or institute, as in the case of refusal of the party to reply to the questioning or to appear proposed and agreed questioning. In the absence of such a legal provision, the judge could only, beyond his/her own prerogatives, give, even with limited effects on the case judged, a certain value or significance of a party's refusal to allow forensic expertise to be carried out, but it remains the possibility of investigating the merits by other means of proof. Finally, although evidence of legal facts can in principle also be provided by presumptions, the basis for the solution of admitting an action in the negation of paternity solely on the mother's refusal to allow the forensic expertise to be carried out makes groundless the decision which would be given, for the law allows the judge to rely on the presumptions only when they have "a certain weight". But such a refusal of the mother could not be considered to permit such a serious conclusion as that her husband is not the father of the child, the interest to be protected-the one of the minor - requiring verifications and the producing of proofs that unequivocally makes the court's conclusion".

Finally, it should be noted that in a case where[45]an out-of-court expertise has been carried out, the court has indicated that "in settling the action in negation of paternity, the case cannot be settled on the basis of an out-of-court proof (DNA expertise carried out to challenge the recognition of paternity), what was not directly produced in the trial of negation of paternity".

5. Conclusions

Our study shows that the purpose of the action in negation of paternity is to remove the presumption of paternity established by the law between man and child and serves the presumed father to remove from the family the child conceived by his wife from relations with another man. In other words, the negation of paternity means denying it by legal action, with the aim of overturning the presumptions of paternity.

The Romanian law, respectively the Civil Code, does not list the cases in which the mother's husband can negate the paternity, but only lays down a general rule, with the courts having this extremely important duty, to decide on a case-by-case basis.

PARENTS' RIGHT AND DUTY TO CARE FOR THE CHILD

Ciprian Raul ROMIȚAN*

Abstract

In order to fulfill the obligation to raise the child, parents have a series of rights and duties, among which, the right and duty to care for the child. Both internationally and Europeanly or in national law, the fundamental right of the child to maintain regular personal relationships and direct contacts with both parents, as well as that of the parent of having personal connections (relations) with the minor, his/her child is provided. At the same time, the child has the right to grow up with his/her parents. In this respect, the law provides the rule according to which the minor child lives with his/her parents but does not distinguish between how the parents are married with each other or not.

The forms of accomplishment of the right to have personal relations with the minor child are complex, these being detailed as an example in the laws in this field, among them the right to visit being specified. In the event that the parents do not live together, they will, by mutual agreement, establish the child's home and in case of disagreement between them, the child's home will be established by the decision of the guardianship court, taking into account the best interests of the child. As this study will show, it is in the child's best interest to maintain and consolidate personal relations, not only with the parent at which child does not live permanently, but also with other family members, in a broader sense, with all persons who descend from one another or from one common author, among whom there is a blood community, such as grandparents.

Keywords: *child's right, parents' right, parents' duty, right to have personal relations with the child, best interests of the child, right to visit, family home.*

1. Introduction

Video provides a powerful way to help you Internally, the child's right are observed and guaranteed pursuant to the provisions of the Civil Law and of the Law no. 272/2004 **on safeguarding and promoting the child's rights, republished[1], a normative act regarded as "*an actual code of the child's rights*"**[2] **because it transposed in the Romanian law many of the provisions in the** UN Convention regarding the child's rights[3].

The Civil Law regulates the *parental authority* under Title IV, Book II (On Family), Chapter I (General Provisions), art. 487-502; in Chapter III (The Exercise of Parental Authority), in art. 503-507 and in Chapter IV (Termination of Parental Rights), art. 508-512.

At an international and European level[4], the most significant acts regarding the promotion and safeguarding of the child's rights that Romania is a party to, are the UN Convention of 1989 on Rights of the Child, regarded as "*the act of birth of the protection of the rights of the child*"[5] and the European Convention on the fundamental rights and freedoms[6].

One of the most important components of the protection of the child is the *parental authority*[7], because this protection must be guaranteed, first and foremost, by the *parents.* In this respect, art.487 of the Civil Law stipulates that "parents hold the right and the duty to raise the child, fostering their health and physical, mental and intellectual development, education, learning and professional training, according to the child's own options, treats and needs; they are bound to offer the child the guidance and advice required for a proper realization of the rights granted to the same under the law".

Moreover, art. 36(1) of the Law no. 272/2004 on the safeguarding and promotion of the rights of the child, as republished, stipulates that "both parents are responsible for the raising of their child", while paragraph (2) of the same article states that "the exercise of the rights and the fulfilment of the parental duties should take into account the higher interest of the

[3] Adopted by the General Assembly of the United Nations on November 20th 1989 and ratified by Romania by Law no.18/1990, republished in the Official Gazette no.109 of September 28th 1989.

[4] At a European level, the Recommendation no. R (84) 4 of the Member State Committee of Ministers on parental responsibilities adopted by the Committee of Ministers of the Council of Europe on February 28th 1984, upon the 367th reunion of the minister delegates was the first European instrument specifically addressing the parental rights and, especially, the responsibilities. For an unofficial translation of the document, see https://cristidanilet.wordpress.com/ (accessed on 19.12.2020).

[5] Marieta Avram, *op. cit.* (2016), pp. 475-476.

[6] The Convention was concluded on November 4th 1950 in Rome and ratified by Romania by Law no. 30/1994 on ratifying the Convention for the Protection of Human Rights and Fundamental Freedoms and of the Additional Protocols thereto, published with the Official Gazette no. 135 of May 31st 1994.

[7] It should be highlighted that the notion of *parental authority* is distinct from that of *parental rights and duties*, which, even though encompassed by this notion, are independent and have a distinct structure [Adina R. Motica, *Aspecte generale privind autoritatea părintească*, in Emese Florian, Marieta Avram (coord.), *Dreptul familiei. Fișe de drept civil*, Universul Juridic Printing House, Bucharest, 2018, p. 221].

child and guarantee the material and spiritual welfare of the child, especially through the care provided, through the maintenance of the ***personal relations*** with the child, the assurance of the raising and education of the child, as well as through the legal representation and management of their patrimony" (emphasis added)[8].

The interpretation of these legal provisions, as well as the review of the various opinions expressed in the specialized literature published after[9] or before[10] the adoption of the Civil Law currently in force it follows that, in order to fulfill their obligation to raise the child, the parents have several rights and obligations (duties), including the right and duty of the parents to care for the child[11], which we will analyze in theoretical and practical terms herein below.

2. The Child's Residence

According to the provisions in art. 35(1) of the Law no. 272/2004, republished, the child is entitled *to grow up with his parents.* In this respect, as stipulated in art. 496(1) of the Civil Law, the minor child *resides with the parents*.

Hence, as stipulated in the specialized literature[12], this *is the rule* that applies and, as it may be noticed, the law does not distinguish as to whether the parents are married or not.

In case the parents do not reside together, they will jointly agree on the **child's residence** [art. 496(2) of the Civil Law]. In case the parents are unable to agree on the matter, paragraph (3) of the same article stipulates that the child's residence is established by the custody court's order, after hearing the parents and the child, if the latter is 10 years of age, and subject to the conclusions of the psychological and social security investigation report. Moreover, according to art.2(6) of the Law no.272/2004, republished, in determining the higher interest of the child, the court shall take into account "the child's physical and psychological development, education and health, security and stability, and family belonging needs; the child's opinion, depending on their age and degree of maturity; the child's history, especially considering the situations of abuse, neglect, exploitation or any other forms of bodily violence, as well as the potential risk situations that may occur in the future; the ability of the parents or of the persons undertaking the raising of and caring for the child to respond to the latter's concrete needs; the maintenance of the personal relations with the persons the child is attached to".

Similarly, in a case[13], the court stated that "The decisions made with regards to the minor child must consider the latter's higher interest, stated as a legal principle in Law no. 272/2004. The purpose of the notion is "the full and harmonious development of the personality" of the child, the provision of a "family environment, in a happy, loving and harmonious atmosphere", the preparation for an "independent life in society" and the education in the spirit of the ideals of "peace, dignity, freedom, tolerance, equality and solidarity", principles deriving from the recitals to the UN Convention on the child's rights, ratified pursuant to the Law no. 18/1990".

At the same time, as stipulated in art. 21(1) of the Law no.272/2004, as republished, in addition to the elements stipulated under art. 2(6), the court will also consider aspects such as:

a) each parent's willingness to involve the other parent in the decisions affecting the child and to observe the other parent's parental rights;

b) each parent's willingness to allow the other one to maintain personal relations;

c) the residential status of each of the parents over the past 3 years;

d) the history regarding the parents' acts of violence against the child or other persons;

e) the distance between each dwelling and the educational institution the child attends.

---

[11] From amongst the wordings of this right available in the specialized literature, we have opted for this one, regarded as the most suitable one for our study, mentioned by Professor Emese Florian, op. cit., (2018), pp. 538-539.

[12] Emese Florian, op. cit., (2018), p. 539.

[13] Cluj District Court, Civil Division, civil decision no. 113/A of 31 January 2020, available [online] at www.rolii.ro (accessed on 10.04.2020).

Last but not least, as shown in a case[14], "from amongst the relevant criteria, the child's affective relations with each of the parents must be considered, because the parent hosting the child does not simply provide a living area, but must also offer the affective and cognitive environment the child needs. The affective relation between the parent hosting the child and the latter is very important, because the parent is to provide the cognitive, moral and education guidance, which claims for availability, safeguarding, responsibility, attention, valuing, mortal support, affective and intellectual presence". In a different case, it was stated[15] that "the minor child requires a high level of stability, an organized environment for the deployment of his/her daily activity, and the close relation to the mother must be protected, as she is the person able to promptly and fully respond to the child's age-inherent needs. Moreover, the mother must observe the father's connection with the child, which is of essence for the normal development. By establishing the minor's residence at the mother the court appreciates that the child will benefit from a stable family environment, from proper care and education. Even if there are no clues leading to the conclusion that the father is not a responsible person in this regard, considering the growth and development stage of the minor, his higher interest is to create a stable and organized environment, which, hence, triggers the risk of a possible failure to understand and acknowledge the mother's authority".

As stipulated in art. 496(4) of the Civil Law, whether established following the mutual consent of the parents, or through a court order, *the child's residence*, set according to the provisions herein, cannot be changed without the consent of the parents unless the law specifically stipulates otherwise.

3. The right of the child and of the parent to maintain personal relations

Internationally, *the fundamental right of the child* to regularly maintain *personal relations* and direct contacts with both parents *and of the parent* to maintain *personal relations (connections)* with the minor, who is his/her child, was consecrated by art. 21 of the Hague Convention on Civil Aspects of International Child Abduction, of 25 October 1980[16], according to which "the central authorities are bound by the cooperation obligations stipulated under art. 7, in order to ensure the free enforcement of the visiting right and the fulfilment of all requirements applicable to the exercising of this right and in order to remove, as much as possible, the possible obstacles arising in this respect"[17], and it was also taken over in the Convention on Contact concerning Children[18], which, in art. 4, stipulates that the parents and their child "are entitled to constantly obtain and maintain personal relations. These personal relations can only be restricted or excluded if required for the higher interest of the child".

At the same time, at a European level, art. 24(3) of the Charter of Fundamental Rights of the European Union[19] stipulates the *right of any child* to regularly maintain *personal relations* and direct contacts with both parents, unless they are contrary to the child's interest.

In the domestic law, according to art. 496(5) of the Civil Law, the parent the child *does not regularly live with* is entitled to maintain *personal relations (connections)* with the minor, at the respective parent's residence. Nonetheless, *the custody court may limit* the enforcement of this right, of such limitation is in the child's higher interest.

In a case[20] having as subject the limitation of the parent's right to maintain personal relations with the child, the court ordered that "the right to personal relations should by no means be regarded as a right exclusively stipulated under the law in favor of the parent who does not have the same residence as the child. Quite on the contrary, the right to personal relations is a right stipulated in the child's favor, who must be allowed to maintain the personal relations with each of the parents. The refusal of the child as such does not constitute a serious reason for the limitation of the parent's right to personal relations, if the minor does

[16] The Convention was ratified by Romania by Law no. 100/1992, published with the Official Gazette no. 243 of 30 September 1992.

[17] According to art.7 of the Hague Convention on Civil Aspects of International Child Abduction, starting 25 October 1980, "central authorities are to cooperate and promote the collaboration among the competent authorities in their respective states, so as to guarantee the immediate return of the children and enforce the other objectives hereof. Specifically, they are to implement all suitable measures, either directly or through any and all intermediaries: a) to locate children that are illicitly removed or detained; b) to prevent new perils for the child or damages for the interested parties, by implementing or making sure that suitable provisional measures are taken; c) to ensure the willful return of the child or foster amicable settlement; d) for the exchange of information, if found to be useful, regarding the social status of the child; e) in order to provide general information regarding their state's law as to the enforcement of the Convention; f) in order to lodge or facilitate the lodging of legal or administrative proceedings meant to guarantee the return of the child and, if applicable, allow for the organization or actual exercising of the visiting right; g) on order to grant or facilitate, if applicable, the obtaining of legal and judiciary assistance, including the participation of an attorney; h) in order to ensure, in administrative terms, if necessary and advisable, the peril-free return of the child; i) in order to keep each other up to date on the enforcement of the convention and, if possible, to remove the possible perils triggered by such enforcement".

[18] The Convention was signed in Strassbourg on 15 May 2003 and it wass ratified by Romania by Law no. 87/2007, published with the Official Gazette no. 257 of 7 April 2007.

[19] Published in JOUE no. C -326/391 of 26 October 2012.

[20] Satu Mare County, civil division, civil decision no. 1557/23.04.2015, final since no appeal entered, at portal.just.ro, available [online] in summary at https://www.legal-land.ro/restrangerea-dreptului-parintelui-la-legaturi-personale-cu-copilul/ 9 (accessed on 04.12.2020).

not yet hold the required maturity to discern between the advantages and the disadvantages of the maintenance of the personal relations between himself and the parent he/she lives with. The failure to observer the obligation to contribute to the expenses for the raising and education of the minor cannot justify the limitation of the parent's right to maintain personal relations with the minor, other legal remedies being stipulated for such cases under the law. Without minimizing the importance of the children's extracurricular activities, they cannot, as such, justify the limitation of the parent's visiting right, respectively the exertion of this right under improper conditions, because, in the light of the provisions in art. 262(2) of the Civil Law, the exertion of this right can only be limited for sound reasons, taking into account the higher interest of the child".

In another case[21], the court appreciated that "the defendant is not entitled to refuse the relation between the minor and the claimant or to encourage the child's refusal to maintain relations with the claimant, because such relations are entirely natural and, as correctly appreciated by the district court, their absence leads to an emotional unbalance in the child. The defendant's allegations regarding the claimant's ethnicity are both groundless and discriminating, considering that she was married to the claimant and they should together contribute to the cultivation of the minor's personality. The Court reiterated that the divorce of the parties should not affect the relation between the minor and the claimant, in any way whatsoever, and that the claimant's parent capacity is not terminated following the divorce, the latter holding not only the legal obligation to financially contribute to the expenses required for the raising of the child, but also the right and the obligation to be actively involved in the raising of his child and that the cooperation between parents is of essence for the development of a balanced personality of the minor, so that the latter can maintain the natural relations with the father as stipulated under the law".

There are multiple ways in which the *right to maintain personal relations* with the minor child may be realized. They are non-exhaustively detailed in the provisions of art. 18(1) of the Law no. 272/2004, republished, where it is mentioned that letter b) also stipulates the *visiting right*[22]. As also shown in the specialized literature[23], in the observance of the higher interest of the child, *the court of law holds sovereignty* in establishing the most suitable alternative for the minor in the realization of the visiting schedule set in the favor of the parent who does not reside with the minor.

In this respect, for instance, in a case[24] having as subject the dissolution of marriage, the court established the following *visiting schedule* for the father regarding the minor child: 1). Up to the age of 3: every Sunday starting 10am, the minor being picked up from the residence of the mother, and up to 6pm, the father being bound to bring him back to the mother's residence by the indicated hour.

2). After the age of 3: in the odd weeks of the month: starting Friday 6pm and until Sunday 6pm, the father picking up the minor from the mother's residence, and then bringing him back before the indicated hour.

In the odd years: 1) Holy Week (last one) of the Lent (according to the Christian-Orthodox calendar) and the New Year's Eve week, the father picking up the child at 10am on Monday morning and being bound to bring him back to the mother's residence by 6pm on the Sunday of the respective week; 2) during summers, the month of July, the minor being picked up by the father on the first day of the month at 10am and then bringing him back at 6pm on the last day of July.

In the even years: 1) the week prior to the first Easter Day (according to the Christian-Orthodox calendar) and the Christmas week, the father picking up the child at 10am on Monday morning and being bound to bring him back to the mother's residence by 6pm on the Sunday of the respective week; 2) during summers, the month of August, the minor being picked up by the father on the first day of the month at 10am and then bringing him back at 6pm on the last day of August."

In another case[25] where the minors were entrusted to the father for raising and education pursuant to the divorce decision, and the latter did not agree to the mother's travel with the children to her residence

[22] According to art.18(1) of the Law no.272/2004, republished, for the purposes of this law, the personal relations may be achieved through: "a) meetings of the child with the parent or with another person holding, according to this law, the right to maintain personal relations with the child; b) the visiting of the child at the latter's domicile; c) the hosting of the child, for a determined period of time, by the parent or by another person the child does not customarily reside with, with or without the supervision of the manner in which the personal relations are maintained, depending on the higher interest of the child; d) correspondence or any other form of communication with the child; e) the transmission of information to the child regarding the parent or other persons who, according to this law, hold the right to maintain personal relations with the child; f) the sharing by the person residing with the child of certain information regarding the child, including recent pictures, medical or school assessments, to the parent or to other persons holding the right to maintain personal relations with the child; g) meetings of the child with the parent or with another person with whom the child developed attachment relations in a neutral location for the child, with or without the supervision of the manner in which the personal relations are maintained, according to the higher interest of the child". (emphasis added).

[25] Alba Iulia Court of Appeal, minors and family division, civil decision no.24 of 23 February 2009, at www.portal.just.ro, *apud* Elena Roșu, Daniel Andrei T. Rădulescu, *op. cit.*, pp. 156-159.

abroad, according to the visiting schedule set by the tribunal, "the court appreciated that as long as no evidence was submitted in the case as to the fact that the minors' travel to the mother's residence would be detrimental to their interests, she is entitled to maintain personal relations with her children. (...). Hence, the court ordered the defendant to allow the claimant to take the minors to her residence in Spain, between July 1st and 31st during the holidays, as well as to her domicile in Romania during the first winter holiday week. In deciding as such, the court held, in essence, in the light of the evidence submitted in the case, that the claimant does offer the moral and material guarantees required in order for the two minors to spend a month at her residence in Spain during the summer holiday and that the two minors want to visit their mother in Spain, so that the claimant's appeal was judged as grounded".

However, as stipulated under the Law no. 272/2004 on the safekeeping and promotion of the child's rights, as republished, it is in *the minor's interest* to maintain and consolidate his/her *personal relations*, not only with the parent the child does not reside with, but also with the *other members of the family*, and, more broadly, with all the persons descending one from the other or from a common predecessor, with whom they share family relations, such as, for instance *the grandparents*. Similar provisions are included in art.5(1) of the Convention on the personal relations concerning the children of 2003, according to which, "subject to the higher interest of the, personal relations may be established between the child and other parties than the parents, with whom they hold family relations".

In this regard, in a case[26] judged before the court of appeal, the court has shown that "the court on the merits properly concluded that the minor is entitled to maintain personal relations not only with the parent to whom the minor was entrusted, i.e. the mother, but also with the close relatives, by virtue of the family relations, it being in the minor's interest to maintain and consolidate her family relations and considering that the maternal grandmother is a direct relative (...). This is required the more so since the absence of these relations can actually cause emotional unbalances in the minor and in order to provide her with a balanced and normal environment, by encouraging the relations with the biological family".

The Court of Justice of the European Union also ruled on the right of the child to keep, maintain and consolidate the personal relations with the other family members, appreciating that the notion of "*visiting rights*" not only concerns the parents' visiting rights with regards to the child, but also with regards to other persons with whom it is important for the child to *maintain personal relations*, including the *grandparents*. Thus, in a case[27] having as subject a "request submitted by a grandmother in Bulgaria who mentioned that she was unable to maintain quality contact with her grandson, residing at the father's domicile in Greece, and after she had requested, in vain, the support of the Greek authorities, she informed the Bulgarian courts of law requesting them to establish the manner for her to be able to exert her visiting rights in relation to her grandson. She requested to see him periodically, one weekend a month, and to receive him, at her residence, twice a year for two or three weeks during the child's holidays. The first degree and appeal competent courts in Bulgarian rejected the request for lack of jurisdiction, because a regulation of the European Union (Brussels Regulation II a)[28] stipulates that the competency rests with the courts of the child's customary residency member state (in this case, the Greek Courts).

Notified as last instance, Varhoven kasatsionen sad (The Supreme Court of Cassation, Bulgaria) holds that, in order to determine the competent court, it must be set whether the Regulation Brussels II a applies to the grandparents' visiting rights.

In the decision passed, the Court of Justice first finds that the notion of "visiting right" according to the provisions in the Regulation Brussels II, a should be autonomously construed. After reminding that this regulation concerns all the decisions in the field of parental responsibility and that the visiting right is regarded as a priority, the Court shows that the EU legislator choose not to restrict the number of persons susceptible of exerting the parental authority or of benefiting from visiting rights. Thus, according to the Court, the notion of "visiting right" concerns the visiting right not only of the parents in relation to the child, but also of other persons it is important for that child to hold personal relations with, including the grandparents.

The Court further mentions that, in order to avoid the adoption by the various courts of contradictory measures and in the higher interest of the child, the same court should also rule on the visiting right, in principle, the one at the customary residence of the child."

4. Conclusions

To conclude, we emphasize that the *personal relations* between the minor and the parent the child does not customarily live with should always place the

[26] Craiova Court of Appeal, 1st Civil division I, civil decision no. 24 of 21 January 2009, at www.portal.just.ro, *apud* Elena Roșu, Daniel Andrei T. Rădulescu, *op. cit.*, pp. 167-168.

[28] Council Regulation (EC) No 2201/2003 of 27 November 2003 concerning jurisdiction and the recognition and enforcement of judgments in matrimonial matters and the matters of parental responsibility, repealing Regulation (EC) No 1347/2000 (JO 2003, L 338, p. 1, Special edition, 19/vol. 6, p. 183).

higher interest of the minor first. This means that the minor must have *balanced relations with both parents*, so that their separation and the possible tensions between them affect him as little as possible. Each parent is under the obligation to place the *higher interest of the child first* when exerting the right, respectively the obligations deriving from the same.

The European Court of Human Rights[29] ruled in a similar way, showing, in the case *Monory v. Romania and Hungary* "the possibility of the parent and of the child to mutually enjoy each other's company is a fundamental element of the family life, and the national measures restricting this possibility represent an interference with the right to family life protected by art.8, the states being bound to guarantee the reunion between the children and their parents".

Moreover, in the case *Mustafa and Armağan Akin/*Turkey, no. 4694/03, of 6 April 2010[30], ECHR held that "the claimants – father and son – stated that the terms of an entrusting decision passed by the national court infringed their rights granted under article 8 of the Convention. These terms hindered the son's contact with his sister, who was entrusted to the mother. Moreover, the father was unable to maintain personal relations with both his children together, because the period spent by his son with the mother coincided with the period he spent with the daughter. ECHR regarded the decision of the court to separate the two siblings as an infringement of the claimants' entitlement to the observance of their family right, because it not only prevented them from seeing each other, but it actually made it impossible for the father to enjoy the company of both of his children at the same time".

THE PRIORITY OF PUBLIC INTEREST PRINCIPLE IN THE PUBLIC PROCUREMENT CONTRACTS

Viorel ROȘ*
Andreea LIVĂDARIU**

Abstract

Important by object, value and general interest for which they are concluded, the public procurement contracts have a dual nature, although they are most often qualified as administrative contracts, with particular characteristics. Based on models known as FIDIC contracts, they contain standard clauses, but also clauses in accordance with the specifics of the contracted works and the need to adapt them to the problems that arise during execution. Terminating them is the last resort the parties should make use, but this can sometimes be inevitable. In such cases, the damages suffered both by the contracting authority and the entrepreneur may be significant.

The concept of "public interest" is assigned a supernatural aura of something that goes beyond the power of understanding of ordinary people, that is, those at whose service state administration should be in its broadest sense. The concept of "public interest", although overused in and by public administration, seems as difficult to define as the concept of "freedom". The "public interest" is for many people just like freedom: we all know what it is until we have to define it, explain it, apply it in concrete circumstances. The "public interest" seems to us, by its very nature, to be an imprecise, evolutionary and random notion. But in all cases, it is subsumed to the idea of the well-being of the public, not of the arbitrary will of the public authority, not of the eventual limited interest of such an entity.

In public administration "public interest" is so often mentioned and invoked that it can be said that it has already become a kind of legal institution but... without rules or with rules hard to identify! But an institution in law may be defined, as is well known, as a set of rules, substantive and procedural rules, set up to regulate legal relations, behaviours, and to take appropriate decisions in specific situations and penalize violations of accepted and known rules. Or shorter: the institution is a uniform set of legal rules that are joined together by object and purpose.

Keywords: *public interest, public procurement, contract, public authorities, contracting authority.*

1. The origins of the concept of "public interest"

Etymologically, the concept of "public interest" comes from English law, whereas that of "general interest" comes from French legal language. Despite what is sometimes claimed, namely that the "public interest" would be an "invention" from the beginning of the last century of an American lawyer named Louis Brandeis[1], it appears to be more like an "invention" of Aristotle. Anyway, we believe that this cannot be considered a serious deed compared to many others that have occurred in the history of intellectual property[2]. We could even add that the "public interest", taken as such, is just an idea. And like any idea, is free, that is to say, it doesn`t belong to no one and it is free for everyone at the same time, so it can be resumed and developed by anyone. But as Law No. 206/2004 on good conduct in research activity considers plagiarism as being also the appropriation of ideas from another person, we have to remember the one who has the right of priority in its formulation, more than 23 centuries ago.

In fact, Aristotle, in his book named ***Politics***, when referring to state revenue and expenditure (which are of general interest), he claimed that for the distribution of public works - jobs or services – it should not be taken into account the principle of quid pro quo, because the state has social policy considerations that have to change the prevailing principle in the private economy. Aristotle also stated that ***"the good is justice, that is, the general interest"***.

In the absoluble monarchies, the king and the state were one, according to the famous and synthical definition of Ludovic's 14th of France autocracy. But the sunset of this perspective on the relationship

[1] Louis Brandeis (1856-1941), has been a lawyer in Boston (quality in which he has been noted as a defender of the progressive cases and a *pro bono* defender which brought him the "Ombudsman" and the "Robin Hood of Justice" names), the parent of the concept of "right to privacy", his work on the subject, inspired by the new fashion of photography (being appreciated as one that added a new chapter in US law) and then a judge at the US Supreme Court between 1916 and 1939. It has been a critic of monopolies, all-powerful corporations and public corruption.

[2] In the context, we have to remember here that the famous statement attributed to J. B. Kennedy, made by him in his speech from 1961, when he took oath of office: *"Don't ask yourself what the country did for you, ask yourself what you did for the country"* belongs in reality to the Lebanese-American poet and philosopher Khalil Giban, being written more than 30 years before, to encourage their compatriots in their fight against the Ottomans. But it also belongs to Nicolae Iorga, assassinated in 1940, who in one of his writings urged: *"At the end of each day consider not what others have done toward you, but what you have done toward others."* Attributed unfairly, but with obsession to J.F. Kennedy, this had the effect of much repeated lies coming from an authority, which have been accepted as truths since it is useless to be contested!

between the state and the sovereign and on that between the state and its subjects was not far from the moment when it was made, Enlighteners such as Jean-Jacques Rousseau[3] supporting in their works the supreme value of the **general will** (of the sovereign people) and **the general interest by which he understood the common good** and the general act, that is the law. The same Jean-Jacques Rousseau, considered by Edmund Burke[4] as the principal ideologist of the French Revolution, argues that *"**since no man has a natural authority over his fellow human beings, no authority is legitimate unless it is based on the consent of those who submit to him.** Social order is a holy right that underpins all others. This right does not come at all from nature, but is based on agreements (...). Each of us shares the person and all his power under the supreme leadership of the general will; and we receive each as an indivisible part of the whole."*

That J-J Rousseau influenced the revolutionaries is also demonstrated by Le Chapelier[5], who had the initiative, in 1791, to disband the corporations. In his report on the law stated that *"there are no more corporations in the state, **there is only the individual's particular interest and general interest**"*. Interests that are not excluded one from each other. On the contrary, they are enhancing each other.

It is therefore not fair to attribute neither to John Stuart Mill[6] nor to his mentor, Jeremy Bentham[7], the "invention" of this concept of "public interest". But it can`t be excluded their important contribution to its development. However, the one who is considered to have influenced with his ideas regarding the "public interest" the case law is, indeed, Louis Brandies who invoked the concept in 1905 in a work in which he deplored the fact that good lawyers abdicated their duty to use their knowledge and skills for the protection of human beings, to protect the interests of big corporations. In other words, L. Brandies claimed that the public interest was about defending and protecting people, not corporations, whose interests are limited to profit and a small number of beneficiaries. But it was only more than 50 years after Brandies's work that young US law graduates started to define themselves as "**public interest lawyers**" to distinguish themselves from **corporate lawyers**. The concept was meant to warn that **they chose not to represent the interests of strong companies, but to be lawyers of those living in poverty, of the vulnerable**.

However, the concept of "public interest" is also found in the US press legislation of the '20s and this is perhaps the area that best demonstrates that **the "public interest" is imprecise, evolutionary and random**. Thus, for example, a few decades ago, of "public interest" was considered to be informing the public that one or another MP was homosexual or drug-consuming, being irrelevant his possible violent behavior in the family or to people of other colors, or to the fact that an accident has been committed in a state of inebriation. However, nowadays the vision of these types of behavior is completely different and it can be said that if "public policy" and "public interest" are not identical concepts, there is a close connection between them.

Little by little, along with principles such as "transparency" or "accountability", and later "economicity" or "efficient spending of public money", which are seen as the yardsticks of democracy and of the public economies of States (public finances) and rules of law and behaviour in actions without which the administration is not democratic and/or efficient, the concept of "public interest" has become... a principle of public administration and is now considered a foundation of public law. An area in which, although one of the most used terms, the concept of "public interest" is neither defined nor correctly understood.

While in the press, in morals or in pure politics, the concept of "public interest" is by definition evolutionary and non-homogeneous, it is not and cannot be the same in the public administration, a legal definition with a high degree of generality being welcome. Even if in the administration, it must be interpreted and applied in accordance with concrete circumstances. In other words, it's a case-by-case fact. However, it is not easy to define the concept of "public interest". And we believe that understanding and applying it correctly to each case in which it is invoked also involves taking into account the "general interest" and the "private interest".

---

[3] Jean Jacques Rousseau (1712 - 1778) became famous in France with an essay about the damaging consequences of the progress of arts and sciences on public morals. Its works "The Social Contract", "Emile" and "Encyclopedia" for which he worked with Diderot and, after writing and publication, have been banned in France, are considered fundamental to the 1789 French Revolution.

[4] Edmund Burke (1729-1797) detested J.-J. Rousseau, accusing him of never practicing a single virtue (there are enough arguments) and named him "*Socrates lunatic of the National Assembly*" (French, n.n).

[5] Isaac René Guy Le Chapier or Jean le Chapier (1754-1794), a French lawyer and a revolutionary politician, was a Member of the National Constituent Assembly and its first president for a short period (3-16 August 1789), dedicated to preparing important laws. Among those that were adopted with his contribution was the law against corporations, guilts, workers' organizations and the right to strike. Suspected of wanting to reinstate Royal Authority, also because of fear of terror fled to London (from where he came back to avoid the seizure of his property), he was charged with espionage, sentenced to death and guillotine on the same day as Malesherbes (lawyer of King Ludovic XVI, With Raymond de Seze).(*http://en.wikipedia.org/wiki/Isaac_Ren%C3%A9_Guy_le_Chapelier*).

[6] John Stuart Mill (1806-1873), utilitarian phylosopher.

[7] Jeremy Bentham (1748-1832) lawyer and philosopher with ideas of amazing timeliness. He promoted individual freedom and free initiative, separation of religion from the state, freedom of expression, universal suffrage, equal rights for women, the right to divorce, decriminalization of homosexuality, abolition of slavery and death penalty, the abolition of corporal punishment, including for children and animal rights.

2. "Public interest" and/or „general interest" and „private interest"

The "Public interest" and "general interest" are often considered in doctrine, especially administrative one, as they appear to be equivalent in terms of one and the same. In this view of the two concepts, the difference between them would only be of a semantic nature, so their different expression would seem to have no consequences in terms of substance. We believe that a difference between these notions, which are, however, interrelated, exists, it is obvious and important. The link is that both are considering an interest belonging to a large number of people. But the differences are not just about semantics. In particular, we do not believe that the terms "public" and "general", or those of "public interest" and "general interest", are equivalent and (always) interchangeable. The public interest is seen from the perspective of the authority. General, from a crowd perspective. This differentiation criterion is not enough either, but it still seems important to us: we do not have general institutions, we have public institutions and even the legal fiction called the Public Ministry.

As regards the "private interest" or "personal interest", it is most often seen in opposition to the "public interest" and/or the "general interest". Here things are relatively simple: the "private interest" and "public interest" or "general interest" cannot be in conflict or should not be in conflict. When the two categories of interest are fundamentally to the contrary, either the "private interest" is illegitimate, or the alleged "public interest" or the alleged "general interest" is contrary to the constitutional order, fundamental rights and freedoms of citizens, and in this case, it ceases to be a real "public interest" or a "general interest".

The concept of "public" itself has multiple meanings in law depending on the various branches of law. And within the same field, it depends on the context in which it is used. For example, the concept of "public" in criminal law is very distant from that of the public in administrative law, but it has no single meaning under criminal law either.

The most general meaning is the term "public" and "public interest" in administrative law (in which it is also considered to be the most important[8]), but also here the nuances may differ. In general, in administrative law, the term "public" refers to the state, to the whole population, to what is made available to all. However, public institutions do not only work to satisfy "general interests" or "public interests". Whenever they act, they also follow, even if only mediated, a private interest. And when all legitimate private interests are satisfied, the action of the public entity is of a "general interest" or a "public interest".

Public law (never called a general law) governs relations between public entities and between such entities and individuals, whereas private law consists of rules governing relations between individuals, understanding by private individuals, all those who do not hold a public office or are not in the exercise of public office. However, we note that the public interest and the general interest are protected both by rules under public law and by rules under private law. That the limitation of the rights of the data subject is justified by the need to protect the legitimate interests of all, i.e., the general interests, and that these general interests are implemented and protected by public institutions. But these entities are not called upon to defend only the general interests of the population, but also the individual interests, and when such an entity acts to protect an individual interest, its action also aims at protecting the general interest.

However, we do not believe that the concepts of "public interest" and "general interest" are equivalent and interchangeable, and the distinction between the two concepts can be easily seen and achieved when it comes to rights and freedoms, to the interests that are protected by the law: general interests by public law rules, legitimate interests of individuals under private law rules.

For the proper assessment of the relationship between the public interest and the private interest, we have to remember here that it is also a principle of law that which states that the authority acting in the name of the achievement of the "public interest", even when its action is intended to protect or penalize the rights of a private individual, is allowed only what the law expressly allows it, while the individual is allowed everything that the law does not expressly prohibit him.

3. The public interest and the priority of the public interest in public procurement contracts.

Europe's fallen behind at the number of kilometers of highways achieved over the last 30 years (we are last among EU Member States) but first in terms of the price per kilometer of highway built, Romania has paid huge amounts of money in compensation to contractors with whom it has contracted highway works and this cannot be in line with the public interest, the general interest or the particular interest. We believe that the (multiple) reasons of this state of affairs are also a wrong vision of the administration and of the entity representing the Romanian state in contracting for such works and as far as the public interest is concerned, the way in which it is intended to be truly accomplished.

The factual situation which led to the applied research from which this Paper was born is as follows (it comes as a study-case):

The BBB – Beneficiary (a contracting authority) announced in 2015 the organization of a tender for the construction of a highway segment and made available

[8] C. Clipa, "The concept of public interest, between legal definitions and economic speculation", *Romanian Magazine of Private Law* (Universul Juridic) no. 1/2019.

to bidders, inter alia, a geotechnical study carried out in 2007 and updated in 2011. The Geotechnical study classified the location of the auctioned segment of the highway as having a moderate geotechnical risk. The maps provided were not in line with the situation on the ground at the time of the tender. In addition, at the time of the tender, the beneficiary had not completed the procedures for expropriation of all the land necessary for the construction of the highway.

The tender was won in 2016 by the contractor AAA, with an agreed execution deadline of 18 months, of which 6 months for the design work and 12 months for the actual execution of the construction works. Under the contract, the works were scheduled to be completed by summer 2017.

After the conclusion of the contract for the execution of works, which also stipulated the time limits for the land to be given and the order to start works to be issued, the beneficiary requested twice to extend the date for the start of works by more than 5 months, the reason invoked being that the beneficiary was not provided with the funds (for the first 4-month extension) and that of non-completion of the expropriation procedures (for the second extension). The contractor accepted the beneficiary's requests and undertook (by the signed amendment) not to request penalties from the beneficiary for these extensions to the date of the location's handover and of the start of the works.

By conducting the geotechnical studies related to the design phase of the works, the contractor has found that the geotechnical risk level of the site is high and not moderate, as established by the beneficiary study of 2007/2011, that construction works and archaeological works were necessary in addition to those envisaged at the time of the conclusion of the contract and that those new elements involved a significant extension of time but also higher costs, given their scale and difficulty. The beneficiary, however, refused to grant the requested time extensions (the cost extensions being also rejected) and penalized the contractor's failure to implement the work schedule by terminating the contract.

Upon termination of the contract, the **contractor AAA**:

(i) has sued the contracting authority because the contracting authority has unduly terminated the contract;

(ii) has requested that the contract be terminated by judicial decision on the fault of the contracting authority;

(iii) has claimed damages of 60 million lei from the contracting authority and a significant amount of money as costs.

In turn, the Beneficiary BBB:

(i) has made a counterclaim requiring the contractor to pay interest for not fulfilling the obligations on term and to pay a half (1/2) of the costs of advice paid in the course of the performance of the contract;

(ii) resumed in 2020 the procedure for tendering and awarding works, completed in 2021 at a price of 9 million lei per kilometer higher than the one contracted with AAA.

By the judgment delivered in December 2020, both the AAA's main claim and the BBB's counterclaim were accepted by the court, a common fault was found in the failure of the contract and the beneficiary was forced the entrepreneur to pay damages of 20 million lei, whereas the entrepreneur had to pay damages of 3 million lei to the beneficiary. The court held that the beneficiary limited its claims to the payment of penalties and part of the advice given during the execution by the engineer, although the damage suffered as a result of the failure of the contract was higher.

One of the defenses of the Beneficiary during the process was that the termination of the contract was justified by the principle of priority of the public interest and of its primacy over the principle of freedom of contract.

The beneficiary has thus indicated that:

(i) ***in the settlement of disputes relating to the entering, execution and termination of an administrative contract, shall be taken into account the rule that the principle of freedom of contract is subordinate to the principle of priority in the public interest***;

(ii) ***while the principle of "contract is the law of the parties" applies to private contracts****, the administrative contract* ***contains four types of powers exercised by the public authority****, namely: (A) the power of direction and control which may be shown in instructions and orders; (B) the right to impose penalties for delays; (C) unilateral modification power under the public interest which is one of the fundamental characteristics of the administrative contract and (D) unilateral termination of the contract*;

(iii) ***the parties are not on an equal position in public procurement contracts***, as this is manifested in *the right of the administration to lay down, as a matter of principle, certain contractual terms (the so-called regulatory part of the contract) which cannot be negotiated with the entrepreneur and subsequently to unilaterally amend the terms imposed on the entrepreneur, in accordance with the public interest*;

(iv) that ***works on the public infrastructure of the state serve the public interest and aim at developing infrastructure in line with current needs and EU requirements****, so that they must have* ***the shortest possible deadlines for completion, that does not go far beyond the term assumed by entrepreneurs when signing the contracts***;

(v) that in public procurement contracts *the parties are obliged to accept certain regulatory clauses laid down by law or subsequent regulatory acts, but also have the power to negotiate other contractual clauses, however,* ***where the public interest so requires****, or where the performance of the contract is*

too difficult for particular, or has failed to perform his obligations as a result of default, the contract can be terminated unilaterally without recourse to justice;

(vi) that public procurement contracts *are also characterized by the special forms necessary for their conclusion, i.e., the specifications which contain some of the terms of the contract to be concluded, **with entrepreneur having only the possibility of accepting or refusing to conclude the contract***;

(vii) that *contracts for the design and execution of road infrastructure works are financed from public and European funds, which are strictly monitored and that any application by the contractor must be duly substantiated*;

(viii) *as a general rule, entrepreneurs do not respect the deadlines to which they commit and, during the execution of the contract, they seek to make use of any situation arising during the execution of the contract in order to obtain the extension of the execution period and the related additional costs*;

The court, it has rightly examined, this defense of the beneficiary, noting and expressing observations, judgments and arguments which can be summarized as follows:

(A) The public procurement contract has indeed the characteristics and characteristics shown by the beneficiary. However, the court added, *these contracts are concluded for **the purpose of meeting general needs** and it is undeniable that the road infrastructure is of **major public interest***, the special regulation of this type of contract being justified by the method of financing and the high value of the infrastructure, the need for public funds to be spent economically and effectively, whether from state budget or European funds;

(B) In the light of their value and importance, and of the needs to be satisfied by the performance of the contracts, the conclusion of the contracts requires that the public authority draw up complete, accurate and updated documentation, such that the tenders and the appointment of the successful tenderer make it possible to carry out the contracts **in line with the need to achieve public interest objectives**.

(C)The fact that **the parties are not on an equal footing in public procurement contracts does not mean that the procuring entities may abuse their position and that the principle of contractual balance, involving related rights and obligations, can be ignored**. This does not mean that the public authority is entitled to impose the performance of the contract on a timely basis and to impose sanctions, including that of termination of the contract, where the non-performance according to the terms of the contract or non-performance of a contractual obligation by the performer is also due to fault (higher, lower or exclusive) of the public authority.

(D) In public contracts, too, the rights and obligations of the parties to the contract must be established in a manner which respects the principle of contractual equilibrium but also which makes it possible both for the contracting authority and the entrepreneur to fulfill their obligations.

(E) the inequality between the parties in public procurement contracts and the way in which they are financed *does not transform the contractual relationship of public procurement contracts into one of subordination. On the contrary, their value and the public interest call for deeper cooperation by contracting parties even in the case of private contracts, because both the public authority and the entrepreneurs have to work together to satisfy the public interest.*

In our opinion, other arguments can be added to the those of the court. And we begin here by mentioning the contractual imbalance, to the extent that it exists and makes it impossible to perform the works, to carry out the contract and thus to carry out the public interest. Obligations which cannot be met by entrepreneurs cannot be imposed in the name of the public interest and contractual balance must also exist in such contracts. The contractual imbalance exists whenever the real costs of the contractor would be higher than the real value of the works performed. The contractual imbalance, whether it does exist, it makes impossible to carry out the contract and to satisfy the public interest, because it does not meet the public interest that the entrepreneur is unable to fulfill his obligations, whose effects are propagated in the chain. However, this does not create wealth: the benchmark of "public interest" is ultimately the well-being of all.

However, despite its importance, public procurement laws have not defined the "public interest" and do not provide criteria for its assessment. By trying to identify such criteria, we should first recall that the "public interest" must be identified, as "public order" by the judge, on a case-by-case basis, obviously with due regard for the general principles of law, the rules of law relating to incidents and the particular case in which they apply.

Indeed, despite its importance, neither Ordinance no. 34/2006, which governs the contract from which the rose the dispute which is subject to our comments, nor Law no. 98/2016 (applicable to award procedures initiated after the date of its entry into force), defines the “public interest” or the “public interest priority”.

A legal definition of the "public interest priority" is, however, stated in the Law no. 477/2004 on the Code of Conduct for contracting staff of public authorities and institutions, which states that ***“the priority of the public interest is a principle that contractual staff have the duty to consider the public interest above the personal interest in the performance of their duties”***. Form this definition we understand that **although the public interest is superior to the personal interest, these interests are not mutually exclusive and are interrelated**.

The doctrine, in the few dedicated works, defines the "public interest", similar to the definition of "legitimate public interest" met in the law on administrative litigation, as ***"that interest which aims***

***at the rule of law and constitutional democracy, and this implies the guarantee and observance by the institutions and public authorities of the legitimate rights, freedoms and interests of citizens, meeting community needs, carrying out the competence of public authorities" and/or "performing the service tasks in accordance with the principles of efficiency, effectiveness and cost-effectiveness of resource spending"* (article 2 (1)(r) of the Law no. 554/2004)[9].**

It follows that even according to the administrative law and doctrine:

(1) the public interest aims at **guaranteeing and respecting citizens' rights and freedoms**;

(2) **the public interest does not annihilate the private interest**, on the contrary, it is intended **to guarantee and leverage it**;

(3) achieving the public interest means **satisfying the general interest, the needs of the population** and

(4) the public interest obliges the beneficiaries of budget funds and public money, to spend them in accordance with the principles of transparency, efficiency and cost-effectiveness. However, as the **"resources"** (public money) are made up of and on the basis of contributions from the public, private persons, it follows that the aim pursued and the obligation of the authority to make transparent and effective use of financial resources is also imposed in respect of the legitimate interests of citizens.

These conclusions are not, however, sufficient where the public interest is called into question for a decision to terminate public procurement contracts, in particular those of the type from which the dispute analysed in the present paper arose, that is to say, contracts of high value and the realization of which the public authority is interested and which involve not only substantial material resources. Then it is necessary to examine the practical application of the principle to the present case.

In contractual matters, the common sense of interest obliges all participants in the legal life to be bound by the contractual rules they have themselves agreed, the fact that these rules are laid down in purely civil law contracts (the rules of which are, however, to a large extent applicable), either of administrative law being devoid of special legal significance.

Generally seen, **the interest** appears to be **a concern to obtain success, advantage**. Nor from this point of view the two categories of interest (public and private) does not exclude each other: the public interest can only be that of gaining an advantage for the general population, **but neither should the particular interest be seen as merely to obtain advantages or profits for personal purposes, and this is because part of the profit (and not only part of the profit itself) is the source of revenue to the state budget or, where appropriate, local budgets, by compulsory levies (taxes and duties) due according to the law**. In other words, the realization of the private interest, of the profit, part of which is to be paid as taxes on the state budget in order to secure the funds necessary for the realization of the general interest expenses.

In the case of public procurement contracts, the interest, satisfaction of the interest is also the reason for the **selection** of any legal entity **between two or more options** available to that entity and is the reason for **reasonable, profitable** (material and moral) **actions**, which is the reason why **any decision maker makes a decision, an act or commits an action**. And in the case of public authorities, who do not have their own interest in what they do, and who work and act not for themselves but in the general interest, their decisions must take this interest into account as a matter of priority. The correct decision of the acquiring authority depends on the correct identification and determination of the general interest and in determining it, the criterion of opportunity is one of those which even determines the legality of the decision.

In this respect, it should be noted that the Ordinance no. 34/2006, in article 287^7 (2) (introduced by the Ordinance no. 19/2009), provides when decisions must be taken as to whether or not such contracts are to be maintained. The provisions contained therein, although concern requests for **suspension and interim measures** which may be ordered by the courts in the event of such requests, are to be considered as being of principle for public contracts and, *mutatis mutandis*, they shall apply in all those circumstances in which the fate of such contracts is called into question.

According to this law:

(1) when dealing with an application for suspension or interim measures, the court must take into account **the likely consequences of the measure for all categories of interests likely to be harmed, including that of the public interest**;

(2) the court **may not order** the measure of suspension or interim measures if **their negative consequences could be greater than their benefits**; and

(3) that a decision **not to take provisional measures must not prejudice any other rights** of the person making the request for suspension or for interim measures.

We believe that if the legislator has provided for **provisional measures**, by definition, that they have to be time-limited, reduced and revisable (such strict rules) and made their adoption/disposal conditional on **any possible consequences**, requiring that **losses should not be greater than the benefits**, even more so, **these rules are applicable when the very existence and/or performance of public contracts is at issue**, i.e. when decisions are much more important than the time-limited measures, as is the case with termination of contracts. Such measures may be

[9] For the interpretation of article 2 (1)(r) of the Law no. 554/2004: E. Marin, *The administrative law no. 554/2004. Comments on articles*, Bucharest (Hamangiu, 2020), p. 30 and G. Bogasiu, *The administrative law commented and annotated*, Bucharest (Universul Juridic, 2018), pp. 58-134.

decided and/or ordered only with due regard for all interests and not only for the public interest, and in particular with due regard for, on the one hand, **the fact that measures with negative consequences greater than the benefits may not be ordered in the name of public interest**, and, on the other hand, the fact that measures taken on the grounds of the public interest cannot harm the rights and legitimate interests of other participants in the legal life.

4. Conclusions

We believe that the legislator has imposed an opportunity criterion not only for the provision of an investment in the budget and for the conclusion of public procurement contracts (article 42 of Law no. 500/2002 on public finances), but also when a measure is to be taken by the public authority concerning the termination of a public contract, because the main public interest is that of the performance of the contract, the public interest being satisfied by the achievement of the objective (obviously respecting the rules governing spending public money), and not by abolishing the contract that causes substantial material damage and extends the time required to achieve the goal. And where the losses resulting from such a measure taken by the contracting authority outweigh the benefits, the measure giving rise to such effects cannot be considered appropriate, cannot be considered to be in line with the "public interest".

We are, of course, convinced that the identification of the real public interest in public procurement contracts, in particular highway construction contracts, is a delicate matter, the good decision, the desirable decision involving complete information, the correct and fair assessment of these contracts, taking into account the concrete circumstances of the execution and problems arising during the performance of the contract, establishing whether or not there is justification for the performance of the obligations, interpreting the terms of the contract to the extent necessary to produce the useful effects for which the contract has been concluded, **assessment by the decision maker of the direct cost and time impact of its decision and the subsequent impact arising from the postponement of meeting the general interest which is the achievement of the objective.**

In addition, it is necessary to analyze and assess objectively the fulfillment of its obligations by the decision-maker (authority). It is necessary that the decision-maker not having fault in performing the contract, or contributing by his actions or inactions to the failure of the contract, the public interest – because in such situation, the parties' unequal position, the decision-making and supervisory powers of the authority may not be invoked by the authority to cover possible non-compliance with its contractual obligations or factual circumstances having an impact on the ability to fulfill obligations which were not fully and correctly addressed by the authority at the auction stage and at the time of the conclusion of the contract.

In the present situation, we believe that **the criterion of opportunity for termination of the contract was not fulfilled either**, given that the realization of the section of highway contracted with the entrepreneur whose contract was terminated was not recontracted until 2021 and that the financial losses are also significant, even taking into account only the price differences per kilometer of highway between the contract that was terminated and the contract concluded in 2021. However, as regards public expenditure, opportunity is also a criterion of legality: in the present case, the losses resulting from termination of the contract are high (in our view huge and difficult to identify in full), plus those necessary to conclude the new contract at a much higher price, which means that the termination measure was not legal in this respect.

It is true, however, that comparing and weighing the benefits and losses of such decisions is not easy. But it is in the public interest that this should happen. In the public interest it is also the obligation that the tenders for highway works be carried out on the basis of complete and correct documentation.

Termination of public contracts should be an extreme measure, desirable only in those situations where the breach of contractual obligations by any co-contractor has no other remedy given its severity.

SMART CONTRACTS TECHNOLOGY AND AVOIDANCE OF DISPUTES IN CONSTRUCTION CONTRACTS

Cristian Răzvan RUGINĂ*

Abstract

Claims and disputes had become endemic in the construction industry and, in spite of the continuous developments of the standard forms of contracts and consensual dispute resolution schemes from the past years, there is no indication that the incidence of claims and disputes is decreasing. Traditionally it is considered that the most often contractual disputes result from inappropriate or unclear risk allocation in the contract, or from breach of contract. However, recent studies suggest that these are only the apparent causes of disputes, the most profound one being the improper behavior of the parties involved in the contract determined by their asymmetric information and conflicting interests regarding the contract. This paper analyzes the most popular disputes avoidance methods and techniques currently used in construction industry, the most common causes of construction disputes, the behavioral risk as the main source of construction disputes, and how the available information and digital technologies would be embraced in the near future to prevent the disputes in construction contracts in an efficient manner.

Keywords: *construction contracts, avoidance of disputes, technology, smart contracts, blockchain, Building Information Modeling (BIM).*

1. Introduction

Prevention of claims and disputes is a constant preoccupation of the professionals involved in the construction industry, an industry known, *inter alia*, for its adversarial culture. In spite of the continuous development of methods and techniques used for avoidance of such claims and disputes, their number remain significant, involving substantial resources for their settlement.

This paper analyses the methods and techniques currently used in the construction industry for avoidance of contractual disputes, the most common causes of these disputes, and how the information technologies developed in the recent years may help the contracting parties to prevent the disputes in construction contracts in the near future.

2. Methods and techniques currently used in the construction industry for avoidance of contractual disputes

2.1. Standardisation of construction contracts and balanced allocation of risks

The practice of using standard forms of contract for construction and engineering projects is credited to have its origins in the nineteenth century in England. The early editions of *Hudson's Law of Building, Engineering and Ship Building Contracts*, such as the one published in 1895, contained standard forms of construction and engineering contract prepared by the War Department, the Builders' Association and the Institute of British Architects, and the London County Council[1].

In the UK standard forms of construction and engineering contracts are produced by a number of industry bodies. The most widely used form of construction contracts are the contracts in the Joint Contract Tribunal ("JCT") suite, the New Engineering Contract ("NEC) suite, and the suite of contracts published by the Institution of Civil Engineers ("ICE")[2]. Standard forms of contract are also produced by other English industry bodies including the Association for Consulting and Engineering ("ACE"), the Royal Institute of British Architects (the "RIBA"), the Institution of Chemical Engineers ("IChemE"), the Institution of Mechanical Engineers ("IMechE"), and the Royal Institute of Chartered Surveyors ("RICS"). Domestic government contracts are often in a form from the General Conditions for Works Contracts suite ("GC/Works")[3].

In international construction and engineering projects it is common for parties to use standard forms of contract produced by the International Federation of Consulting Engineers ("FIDIC"). Moreover, in several countries from Central and Eastern Europe (including Romania), the FIDIC standardised conditions of contracts became mandatory elements of local public procurement law[4].

In addition to the standard forms produced by the aforementioned entities, it may be noted that there are

[4] L. Klee at al., "International Construction Contract Law", Wiley Blackwell, 2015, page 93.

a number of institutional bodies or governments which produce standard form construction and engineering contracts that are used widely in those jurisdictions. These include (among many others) the European International Contractors ("EIC"), the Canadian Construction Documents Committee, the Swiss Society of Engineers and Architects, the Swedish Construction Contracts Committee, the Danish Construction Association, the German DVA, the Joint Contracts Working Committee (Hong Kong), the Hong Kong government itself, the Singapore Institute of Architects ("SIA"), the Engineering Advancement Association of Japan ("ENAA"), the International Chamber of Commerce, and the World Bank.

The most widely used form of construction contracts in Romania in both private and public projects are the contracts in the FIDIC suite. For a certain period the use of FIDIC conditions of contracts for public works was mandatory for the public authorities[5]. However, the FIDIC standardised forms were replaced in 2018 by the national standard construction contracts conceived by the Romanian Government[6].

The common purpose of standard construction and engineering contracts is to provide a coherent and predictable framework for the performance of the contract works, the making of payments, the administration of the contract and the project, and the determination or adjustment of the parties' respective rights and obligations. In this regard the issuing professional bodies put a great emphasis on the clarity of contractual provisions and procedures concerning such matters as the contractor's scope of works (and the quality of works required), the contract price and the timing and amount of payments, the contractor's time for completion and the effects of delay, the ordering and performance of variations, insurance, taking-over, guarantees and dispute resolution.

The cornerstone of the said standard construction and engineering contracts is the idea that a clear and balanced pre-allocation of responsibilities between parties in respect of certain risks that may transpire during the contract's execution is determinant for the avoidance of prolongation of construction completion times, of wastage of resources, and of disputes.

In this respect in the construction literature it was emphasized that[7]: *"Proper risk identification and equitable distribution of risk is the essential ingredient to increasing the effective, timely and efficient design and construction of projects. If the parties to the construction process can stop thinking in an adversarial manner and work in a cooperative effort towards obtaining an equitable sharing of risks based upon realistic expectations, the incidence of construction disputes will be significantly reduced."*

In the same manner, pursuant to another opinion[8]: *"In practice, an inefficient allocation (of an unclear risk or of a risk that the party is not able to control) will result in speculative claims, disputes, or even contractor bankruptcy."*

From this perspective, it is considered[9] that, *"provided they are not significantly altered"* by the parties, the standard construction and engineering contracts *"guarantee a balanced and efficient risk allocation"* and, thus, a reduced likelihood of disputes to the benefit of the parties.

Standard contracts provide risk allocation solutions for, *inter alia*, natural risks (such as unforeseeable physical conditions, exceptionally adverse climatic conditions or natural catastrophes such as earthquake, hurricane, typhoon or volcanic activity), political and social risks (such as war, hostilities, invasion, rebellion, terrorism, revolution, insurrection, civil war, riot, commotion, disorder, strike, or lockout), economic and legal risks (inflation, shortage of materials, equipment or labor, changes in legislation), assigning responsibilities and liabilities to each contracting party regarding performance of works, organisation, time frames, guarantees, insurance, errors in technical documentations and payment.

2.2. Consensual forms of dispute resolution

For a significant period, the disputes resulted from construction and engineering contracts used to be referred to courts or arbitration.

The substantial length and costs related to these dispute resolution processes made the parties to resort to them only towards the end of a construction project, when the works were completed or nearing completion. As it was noted in the construction literature[10]: *"To invoke a formal dispute resolution procedure mid-way through a project has the potential to divert vital*

[5] The obligation for public authorities to use the FIDIC conditions of contracts for public works was firstly introduced in the Romanian public procurement law by the Common Order no. 915/465/415/2008 for the approval of general and particular conditions of contracts at the conclusion of the contracts of works issued by the Ministry of Economy and Finance, Ministry of Transporation and Ministry of Development, Public Works and Houses, subsequently abrogated by Order no. 1059/2009 issued by the Romanian Ministry of Public Finance. The obligation to use the FIDIC conditions of contracts was reintroduced by the Government Decision no. 1405/2010 regarding the approval for the use of some conditions of contract of the International Federation of Consulting Engineers (FIDIC) for the investment objectives from the field of transportation infrastructure of national interest financed by public funds.

[6] The Government Decision no. 1/2018 for the approval of general and particular conditions of contract for certain categories of public procurement contracts related to the investment objectives financed by public funds replaced the former standardised public procurement contracts based on FIDIC conditions of contract, previously mandatory for the road and railway infrastructure works only, with new ones, extending in the same time their applicability to all the investment objectives financed by public funds.

[7] B. Shapiro, "Transferring Risks in Construction Contracts", 2010, page 5, available at: http://www.shk.ca/wp-content/uploads/2013/02/Transferring-Risks-in-Construction-Contracts-BSS.pdf.

[9] L. Klee et al., op.cit., page 18.

[10] J. Bailey, *op. cit.*, page 1422.

resources from the continuation of the project works, at the expense of progress."

On a different note, in the same time, in the construction projects with a higher degree of complexity, the parties were often confronted with the lack of an efficient tool for the settlement in due course of the various contractual disagreements affecting the contemplated progress of works.

This situation led to the development in the last decades of consensual forms of dispute resolution that seek to achieve a consensual resolution of a dispute, rather than a resolution of a dispute through the determination or assessment of the parties' rights and obligations by a court or an arbitral tribunal. It was believed that a resolution of disputes by non-adversarial means or, at least, by adversarial process of a kind pre-agreed by parties, conducted by experienced construction and engineering specialists instead of persons not so familiar with technical matters (*e.g.* by judges or lawyers), will lead to the voluntary and quick compliance of the parties with the solutions established by consensus and/or with the decisions issued by the said specialists to the benefit of the contract.

In this respect, these days, the construction and engineering contracts contain dispute resolution provisions that regulate the conditions, steps, procedures and timelines which must be observed by parties for settlement of their disagreements. Such provisions commonly involve the notification of a dispute by an aggrieved party, followed by participation of the parties in a non-adversarial process (*e.g.* negotiation, conciliation, or some other form of attempted resolution), and in case the dispute is not resolved by agreement, the dispute is then to be resolved by an adversarial form of dispute resolution (*e.g.* expert determination, dispute board, arbitration or litigation).

For instance, FIDIC conditions of contracts provide that all contractual disputes are to be adjudicated in the first instance by a dispute board. The dispute board, called the "Dispute Ajudication Board (DAB)", "Dispute Board (DB)" or "Dispute Avoidance/Adjudication Board (DAAB)", normally comprises three (3) independent and impartial highly experienced engineers appointed by parties at the beginning of the contract. The scope of the DAB/DB/DAAB is to maintain the awareness of progress and potential problems by regular visits on site, as well as to ensure the resolution of disputes at an early stage. The DAB/DB/DAAB's decision on a dispute is obtainable within 84 days from reference to decision, is contractually binding with immediate effect, and becomes final and binding unless at least one of the parties challenges it by giving the other party notice of its dissatisfaction with the decision within 28 days from the issue of the decision. If the decision becomes final, it cannot be further challenged by either party at arbitration.

Thereafter, pursuant to FIDIC conditions of contracts, before commencement of arbitration, the parties shall attempt to settle their dispute amicably. As far as the scope of the amicable settlement stage is concerned, the construction literature[11] noted that this is mainly: *"to ascertain whether there is sufficient common intention to try to avoid the necessity of arbitration by seeking a mutually acceptable settlement."* Since at this stage the parties have already a determination of their dispute by the DAB/DB/DAAB, it is supposed that they have sufficient elements to negotiate and reach an agreement in good faith.

The final stage of dispute resolution mechanism provided by FIDIC conditions of contracts is the referral of dispute to arbitration.

Last but not least, it is noteworthy that by the Romanian national standard construction contracts, which replaced the FIDIC conditions of contracts in public works in 2018, the dispute resolution provisions switched from the FIDIC philosophy of dispute resolution back to the classical pattern, involving the notification of dispute by the aggrieved party (by a so-called "notice of disagreement"), followed by parties' attempt to settle the dispute by a non-adversarial process (by direct negotiation or by mediation), and in case the dispute remain unresolved, its referral to arbitration.

2.3. Relational contracting. Alliancing contracts

Relational contracting or relationship contracting arrangements aim to minimize disputes by recognizing and developing common interests among contracting parties. Project participants are encouraged to proactively manage and resolve conflicts and problems, targeting common objectives and reduced transaction costs.[12]

One of the most recognized modes of relational contracting is alliancing.

As it was noted in the construction literature[13]: *"In an alliancing model, the parties effectively abandon traditional rights of action, other than in limited circumstances. Their interests are aligned by a preagreed equitable sharing of risks and rewards in such a way that the parties are stimulated to collaborate to achieve maximum profit in relation to the delivered value."*

The key difference between traditional contracting methods and alliance contracting is that while the traditional contracting methods are based on the philosophy of fair and balanced allocation of risk to

[11] E. Baker, B. Mellors, S. Chalmers, A. Lavers, *"FIDIC Contracts: Law and Practice",* Informa Law, 2009, page 541.

[12] M.M. Rahman, M.M. Kumaraswamy, *"Joint risk management through transactionally efficient relational contracting"* in *Construction Management and Economics (online)*, Taylor & Francis (Routledge), vol. 20(1), pages 45-54.

[13] J.S.J. Koolwijk, "*Alternative Dispute Resolution Methods Used in Alliance Contracts"* in *Journal of Professional Issues in Engineering Education and Practice*, January 2006, page 44.

the parties, specific risks being allocated to parties who are individually responsible for managing the risk and bearing the risk outcome, in alliancing all project risk management and outcomes are collectively shared by the participants.

Alliance contracts generally include a so-called "no-blame" or "no disputes" clause where the parties agree not to litigate, except in limited circumstances. The intention of this approach is to avoid the adversarial or "claims-based" culture of the traditional construction and engineering contract, and in turn encourage the parties to find solutions to problems, rather than to deny responsibility and seek to blame others. To give effect to this, alliance contracts have traditionally not included a formal dispute resolution procedure but sets up a model of agreed behavioural principles to drive decision-making processes and issue resolution instead, serving to align the parties' objectives in relation to the project and reduce the risk of litigious disputes between the parties.

Generally, the alliance disagreements and disputes are resolved exclusively by the alliance leadership team, the emphasis being put on resolution by agreement, and not by resolution by reference to an independent person (*i.e.* a judge, arbitrator or expert). In this manner, the absence of an independent dispute resolution mechanism and, in particular, of a dedlock-breaking contractual mechanism compels the members of alliance leadership team to make their best endeavours to resolve disagreements themselves. In the exceptional circumstances in which the alliance leadership team is unable to resolve a disagreement, despite pursuing all reasonable opportunities to remedy it, the parties to the alliance may agree to termination.

The alliance cases analyzed in the construction law literature[14] revealed that parties to a project alliance adopted various approaches in their attempt to prevent disputes and motivate the alliance parties working together to achieve the same goals.

For instance, the *Acton Peninsula Alliance* was formed for the construction of the National Museum of Australia in the city of Canberra, Australia. In this project the parties have agreed to use a "no-blame" clause, waiving their rights to go to court or arbitration over a dispute. Only in case of an event of willful default by an alliance partner the "no-blame" clause could have been bypassed. However, no disputes were actually brought in front of a court or referred to arbitration in connection with the said project.

Another alliance, the *Waardse Alliantie*, was formed for the construction of a railroad project in the south of the Netherlands. In this project, when a dispute came up it was referred to the alliance leadership team to be resolved by negotiations. Whenever the alliance leadership team was unable to resolve a disagreement, the dispute was referred to minitrial, judged by a panel of "wise men" appointed by the alliance parties. The decision taken in this regard by the panel was non-binding for the parties, yet it was further discussed by the alliance leadership team, which subsequently tried to solve the dispute internally. If one of the alliance parties could not agree with the non-binding resolution, that party could refer the dispute to arbitration, seeking a binding solution. No disputes were referred to arbitration in this project.

Unlike traditional contracting, only a limited number of standard form alliancing contracts are available, including the NEC4 Alliancing Contract, TAC-1 (Term Alliance Contract) and FAC-1 (Framework Alliance Contract)[15], the last two being published by the Association of Consultant Architects and King's College London.

3. The most common causes of construction disputes in the recent years

Claims and disputes had become endemic in the construction industry and, in spite of the continuous developments of the standard forms of contracts and consensual dispute resolution schemes from the past years, there is no indication that the incidence of claims and disputes is decreasing.

In the attempts to identify the most proeminent causes of disputes, exhaustive studies and research into causes of disputes were conducted in the construction literature, being considered[16] that: *"Identifying common causes and consequences of unresolved conflicts and claims would allow for more effective dispute avoidance as well as more efficient resolution of 'unavoided and unavoidable disputes'"*. The results of these studies were centralized by P. Fenn[17] (please refer to Figure 1 below).

However, as noted by another author[18], the direct comparison of these results is "neither possible nor useful, because of the diverse industry cultures and differing methodologies and terminologies used in data collection, analysis and outcome presentation".

Emphasizing the need for a deeper analysis of the causal connection between conflicts, claims and disputes, in 1997 M.H. Kumaraswamy conducted a questionnaire survey on sixty-one (61) contemporary construction projects in Hong Kong[19], identifying the root and proximate causes of construction claims and disputes (please refer to Figure 2 below). The findings of the survey revealed a new perspective over the causes of disputes, *i.e.* that the behaviour and actions of the contracting parties play a major role in the apparition of disputes.

Last but not least, other authors as G. Younis, G. Wood, and M.A.A. Malak[20], and P. Mitropoulos and G. Howell[21] structured the causes of disputes in three (3) basic elements: project uncertainty, contractual issues and opportunistic behaviour.

While the project uncertainty is trying to be mitigated by the pre-allocation of risks between contracting parties, and the disagreements resulted from imperfections of contracts are expected to be mitigated by the multi-tiered contractual dispute resolution schemes, there are little remedies against the opportunistic behaviour of the contracting parties.

Figure 1 - Categorising Causes of Dispute (adapted by G. Younis et al. from P. Fenn)

Al Momani [15]	Causes of delay: poor design, change orders, weather, site conditions, late delivery, economic conditions, and increase in quantity.
Alkass *et al.* [16]	Strikes, rework, poor organization, material shortage, equipment failure, change orders, act of God.
Bristow and Vasilopoulous [17]	Five areas unrealistic expectations: contract documents, communication lack of team spirit and change.
Colin *et al.*[18]	Six areas: payment, performance, delay, negligence, quality and administration.
Diekmann *et al.* [19]	Three areas: people, process and product.
Heath *et al.* [20]	Seven areas: contract terms, payment, variation, time nomination, re-nomination and information.
Hewit [21]	Six areas: change of scope change conditions, delay, disruption, acceleration and termination.
Kululanga *et al.* [22]	Four sources of dispute: (1) errors, defects and omissions in the contract documents, (2) underestimating the real cost of the project in the beginning, (3) changed conditions and (4) stakeholders involved in the project.
Madden [23]	Three categories: legal, technical and quantum.
Molenaar *et al.* [24]	Three categories: people issue, process issue and project issues.
Rhys Jones [25]	Ten areas: management, culture, communications, design, economics, tendering pressures, lay, unrealistic expectations, contracts and workmanship.
Semple *et al.* [26]	Four areas: acceleration, access, weather, and changes.
Sykes [27]	Two areas: misunderstandings and unpredictability.

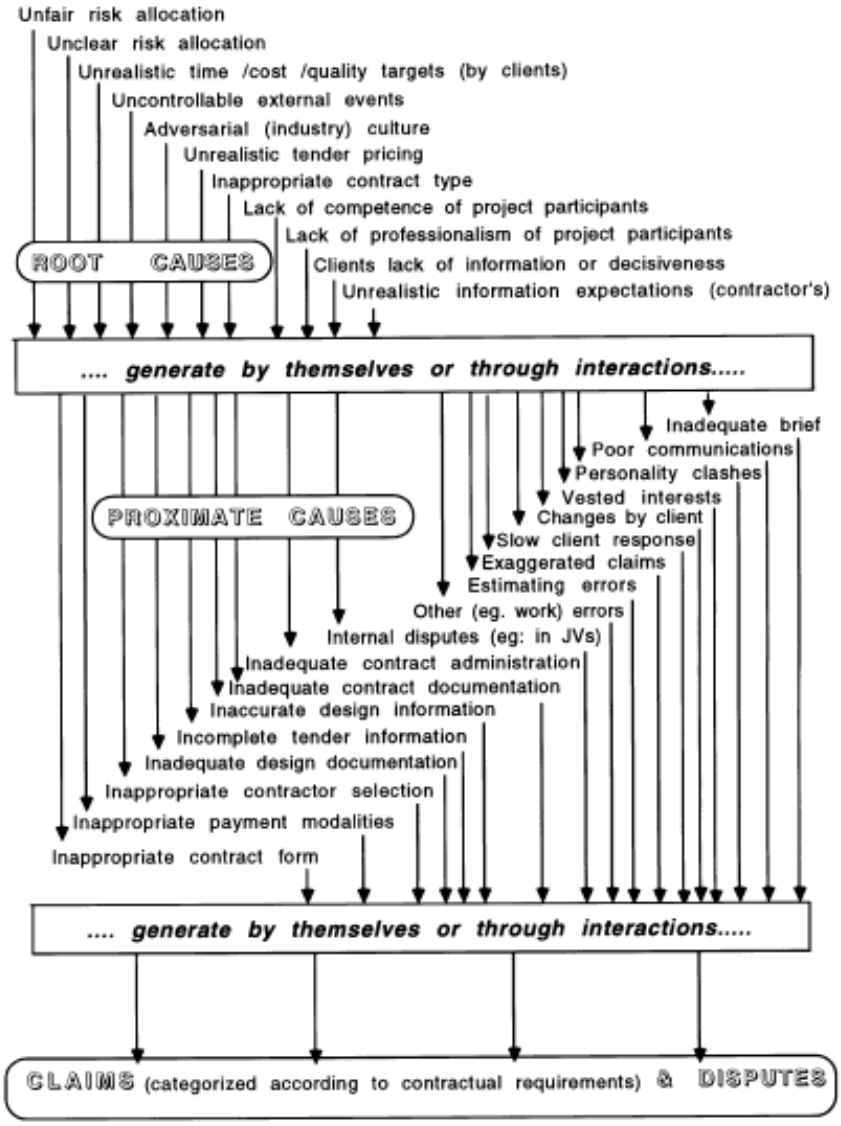
4. Opportunistic behaviour in construction contracts. The agent-principal theory

Figure 2 - The Root and Proximate Causes of Disputes (pursuant to M.H. Kumaraswamy)



From the legal perspective, the contracts are governed by the principle of *Pacta sunt servanda* according to which any agreement based on the consent of the parties to it, is binding, and must be executed in good faith.

However, as construction and engineering literature noted[1], once a contract is concluded the situation of the parties changes in one of bilateral dependence. This bilateral dependence together with the cost of using the legal system to arbitrate contractual disputes and the cost of an eventual termination of the contract favours the apparition of opportunistic behaviour whereby the parties pursue to improve their economic position, deviating from the initial understanding from the conclusion of contract[2].

The academic literature defined the "opportunistic behaviour" as *"an act or behaviour of partnership motivated by the maximization of economic self-interest and occasioned loss of the other partners"*[3], or as "*the behaviour when the agent can*

[1] C.Y. Chang, G. Ive, "Reversal of bargaining power in construction projects: meaning, existence and implications", in Construction Management and Economics, Routledge Taylor & Francis Group, 2007, vol. 25(8), page 846.

provide the principal with incomplete or distorted information, can pursue self-interests notwithstanding formal and conventional norms, and make profit regardless the owner's interests"[4].

The reasons and circumstances that favours the opportunistic behaviour of the contracting parties have been extensively studied by the economic literature within the so-called "principal-agent theory".

Agency relationships, in which one party (the principal) delegates work to another (agent), are the cornerstone of economic life. In construction field common examples of agency relationships include employer (principal) and contractor (agent), employer (principal) and engineer (agent), contractor (principal) and subcontractors (agents), employer/ engineer/ contractor (principals) and their employees (agents).

The principal-agent problem (also known as "agency dilemma" or the "agency problem") typically arises where, due to the contrary interests and information asymmetry of the parties, the agent does not act in the best interest of the principal. The information asymmetry, defined as any situation where *"the principal and the agent are not in possession of the same information at the same time"*[5], include hidden characteristics, hidden information, and hidden intentions.

Generally, the literature[6] considers that there are two (2) types of opportunism: (i) the "ex-ante opportunism" which may occur when an agent misrepresents its qualifications or abilities, or submit abnormally low bids before entering into the desired principal-agent relationship, normally referred to as "adverse selection", and (ii) the "ex-post opportunism" which may occur after the contract conclusion where the agent is not putting in the agreed effort, typically referred to as "moral hazard".

In order to cope with the agent opportunism, it is considered[7] that the principal has two (2) main options: (i) to invest in information systems to control the agent opportunism, or (ii) to try to align the interests of the agent with its own interests by providing suitable incentives.

While the economic literature has traditionally analyzed the principal-agent relationship from the perspective of the opportunistic behaviour of the agent only, usually defined as "*self-interest seeking with guile"*[8] , recent studies[9] have also taken into consideration the opportunistic behaviour of the principal, describing it as *"self-interest seeking with dominance"*.

In this respect it was noted[10] that: *"self-interest seeking with dominance is facilitated by the authority relationship between the principal and the agent. It is an asymmetric distribution of power and transaction specific investments which give rise to opportunistic principal behavior, leading to situations where an abuse of authority can be observed, resulting in distorted economic performance".*

Same as in case of the opportunistic behaviour of the agent, there are also two (2) types of opportunistic behaviour of the principal: (i) the "ex-ante opportunism" may occur when the principal misrepresents the contractual situation, e.g. in terms of the quantum and nature of works, completeness or correctness of design, available permits and authorizations, site and underground conditions, production pressures, adequacy of equipment, construction costs, allocated budget, expected price adjustments, etc., leading to "adverse selection", and (ii) the "ex-post opportunism" where after the contract conclusion the principal illegally interferes with the autonomy of the agent, undermining the performance of the contract by its instructions and control activities.

Even though standardized forms of contracts provide contractual mechanisms and guarantees to limit the opportunistic behaviour of the parties, the enforcement of such mechanisms and guarantees fundamentally depend upon the good faith of the parties as well as the efficiency of judicial system and discretion of courts[11] .

Under these circumstances the questions arises whether the new information technologies developed in the past years may be of use in preventing and mitigating the opportunistic behaviour of parties in construction and engineering contracts, and thus to prevent the disputes that may occur in such contracts.

5. Using information technology to prevent the disputes in construction contracts

5.1. What are smart contracts

"Smart contract" is a concept used to describe a computer code that automatically executes all or parts of an agreement and is stored on a blockchain-based platform[12].

[4] D.A. Zhdanov, *"Agency Cost Management in the Digital Economy"*, in M. Y. Kuznetsov *et al.*, "Challenges and Opportunities of Corporate Governance Transformation in the Digital Era", IGI Global, 2019, pages 130-151.

[9] D.N. Wagner, *op. cit*., page 6.

[10] D.N. Wagner, *op. cit*., page 6.

[11] C. D'Alpaos *et al.*, *"Time overruns as opportunistic behavior in public procurement"* in *Journal of Economics*, Springer-Verlag Wien, 2013.

[12] S.D. Levi et al., "An Introduction to Smart Contracts and Their Potential and Inherent Limitations", in Harvard Law School Forum on Corporate Governance, 2018, page 1.

In a more comprehensive definition[13] "smart contract" was described as *"a computerized transaction protocol that executes the terms of a contract. The general objectives of smart contract design are to satisfy common contractual conditions (such as payment terms, liens, confidentiality, and even enforcement), minimize exceptions both malicious and accidental, and minimize the need for trusted intermediaries. Related economic goals include lowering fraud loss, arbitration and enforcement costs, and other transactions cost".*

Utilizing a smart contract, contractual terms agreed by the parties can be converted into a programming language and be verified and enforced by a decentralized verification system, without the intervention of the contracting parties. Thus, during the performance of the contract, the agreed transaction, exchange or contractual action will automatically be executed after the occurrence of an event or after a specified time period, exactly as it was agreed by the parties at the conclusion of the contract.

5.2. Smart contracts and the blockchain technology

A blockchain, sometimes referred to as "Distributed Ledger Technology (DLT)", is essentially a digital ledger of transactions that is duplicated and distributed across a network of computer systems (the "nodes"). Each block in the chain contains a number of transactions, and every time a new transaction occurs on the blockchain, a record of that transaction is added to every participant's ledger. The records are immutable, meaning that no participant can alter a transaction after it has been recorded to the shared ledger. If a record includes an error, a new transaction must be added to reverse the error, both transactions remaining thereafter recorded in the shared ledger.

As it was noted in the literature[14], the blockchain *"acts as infrastructure for smart contracts to be executed across a distributed network (those nodes validating and updating the distributed ledger) rather than being executed and adjudicated by centralized organizations (such as a judicial system). Furthermore, information stored in blockchains are a new potential trusted source of information to trigger those contracts […]. Because the contractual obligations of smart contracts are written into code - and will be enforced in a decentralized way across a blockchain network - contracting parties can have greater confidence that performance will be carried out."*

5.3. Smart contracts and Building Information Modeling (BIM)

In some situation in order to trigger the execution of contract the smart contracts as computer code might have to refer to external data, provided by a third-party information source (generally referred to as an "oracle"). As it was noted in the literature[15]: *"Preferably those oracles - including temperature readings, prices of other goods or any other event relating to the contract - are reliable and can be predetermined in contract negotiation".*

In construction industry, the common data environment (CDE) used in Building Information Modelling (BIM) might be such third-party information source, playing the role of the oracle for the construction smart contracts.

Building Information Modelling (BIM) is often described as a highly collaborative process that allows architects, engineers, real estate developers, contractors, manufacturers, and other construction professionals to plan, design, and construct a structure or building within one 3D model. The cornerstone of BIM is that all the parties involved in the construction and lifecycle management of constructed assets are brought to the same platform, working collaboratively and sharing data (information).

These data (information) in a BIM model are shared through a mutually accessible online space known as a common data environment (CDE), and can be used to improve accuracy, express design intent from the office to the field, improve knowledge transfer between the involved parties, reduce variation orders and field coordination problems, and provide insight into existing construction for other related projects later on.

Being available in real-time to all the involved parties, these data (information) reduce the information asymmetry and prevent disagreements and disputes resulted from the incomplete or delayed availability of information. Last but not least, BIM is usually seen as an effective tool to support claims and disputes under the contract, being able to provide reliable contemporary records, created, obtained or produced at the same time with the facts or events upon which the claim or dispute is based.

Depending on how much information is being shared and managed throughout the entire construction process, there are different levels of BIM that can be achieved for various types of projects:

a) *Level 0 BIM: Using paper-based drawings and/or digital prints, zero collaboration between parties.*

b) *Level 1 BIM: Using 2D construction drawings and some 3D modelling* - this level implies the electronic sharing of data carried out from a common data environment (CDE) usually managed by the contractor. Level 1 BIM doesn't involve much collaboration, each party publishing and managing their own data.

---

[13] N. Szabo, "Smart Contracts", 1994, cited in F. Möslein, "Legal Boundaries of Blockchain Technologies: Smart Contracts as Self-Help?", Philipps-Universität Marburg, pg. 2, available online at: https://ssrn.com/abstract=3267852.

[14] D.W.E. Allen et. al, "The Governance of Blockchain Dispute Resolution", in Harvard Negotiation Law Review, vol. 25:75, 2019, page 79.

[15] D.W.E. Allen et. al, op. cit., page 81.

c) *Level 2 BIM: Teams work in their own 3D models* - at this level all parties use 3D CAD models but sometimes not in the same model. However, the way in which parties exchange information differentiates it from other levels. Information about the design of a built environment is shared through a common file format.

d) *Level 3 BIM: Teams work with a shared 3D model* - at this level everyone involved in the project uses a single, shared project model. The model exists in a "central" environment and can be accessed and modified by everyone. This is called Open BIM, meaning that another layer of protection is added against clashes, adding value to the project at every stage.

e) *Level 4 BIM: Time* - this level adds to the information model comprised by BIM the element of "time". Thus, this level includes scheduling data that helps outline how much time each phase of the project will take or sequencing of various components.

f) *Level 5 BIM* adds cost estimations, budget analysis, and budget tracking to the information model. When working at this level of BIM, project owners can track and determine what costs will be incurred during the length of the project.

g) *Level 6 BIM* ensures accurate predictions of energy consumption requirements and empowers parties to build structures that are sustainable.

5.4. Using the smart contracts technology in enforcing the contractual will of the parties expressed at the conclusion of contract

The experience acquired so far by the international construction industry shows that the actual tools, mechanisms and procedures used to prevent the disputes in construction and engineering contracts are insufficient, not being any indication that the incidence of claims and disputes would have decrease in the past years as a result of using such tools, mechanisms and procedures. Irrespective of the clarity of contractual provisions regarding allocation of risks and of the multi-tiered contractual dispute resolution schemes, any attempt to prevent claims and disputes by bureaucratic measures (contractual procedures) of which enforcement depend at the end of the day exclusively upon the good faith of the parties, proved to be not enough to ensure the voluntary compliance of the parties with their own contractual will as recorded at the date of contract conclusion.

The adversarial culture of construction industry, the cost of using the legal system and the substantial time needed to arbitrate contractual disputes transformed the tools, mechanisms and procedures initially intended to prevent the claims and disputes in construction contracts into efficient weapons of opportunistic behaviour, used by the parties to deviate from the initial understanding from the conclusion of contract and to dishonestly improve their economic position within the contract.

Illustrative in this regard are the experience encountered in the recent years with the use of contractual adjudication in prevention of construction disputes in civil law countries, including Romania. Initially intended to ensure the speedy resolution of disputes by a board of experienced construction specialists, adjudication shortly became itself a major source of disputes between the contracting parties. Matters as appointment of dispute boards' members, consequences created by this type of dispute resolution mechanism over limitation, the duration and costs of adjudication proceedings, and enforcement of dispute boards decision were opportunistically used by the contracting parties to delay and even block the resolution of contractual disputes by their referral to arbitration for an indefinite period. It is noteworthy that in Romania these problems have been solved only by removal of adjudication as mandatory condition precedent to arbitration from the applicable standardised construction contracts starting with 2017.

From the opportunistic behaviour perspective, the complexity of construction projects is currently given by the number of individuals involved in development of respective projects and, respectively, in management of contractual obligations. The more individuals involved, the more contrary interests, both contractual and personal, that are needed to be harmonized. While theoretically it is widely recognized that establishing a collaborative culture and aligning the involved parties' contrary interests are the best ways to ensure the smooth performance of a contract, implementing these principles into construction projects proved to be extremely difficult and time-consuming.

Under these circumstances the necessity of identifying new ways to ensure the voluntary compliance of the contracting parties with their own will as recorded at the date of contract conclusion, while disciplining their contractual behaviour appears to be evident. In this regard, smart contracts technology, in conjunction with blockchain technology and Building Information Modelling (BIM) present undeniable advantages to become the next generation of dispute avoidance tools and mechanisms used in construction and engineering projects.

As to how these technologies could be implemented in construction projects, it is noteworthy that the construction and engineering industry is currently one of the most prepared for a quick switch to the digital management of contracts. The use of standardised detailed contracts (which may be easily translated into smart contracts/computer codes) is already a common practice in the industry both in common and civil law countries. In the same time the use of Building Information Modelling (BIM) is spreading throughout the industry, many countries already mandating the use of BIM in all major infrastructure projects that receives central public funding.

It is not hard to imagine how these technologies will work in the real life. Once a construction and

engineering contract will be concluded in writing, a corresponding smart contract, translating the will of the contracting parties in computer codes will be created. Thereafter, the contract will automatically execute the contractual actions based on the contemporary, real-time data (information) received from the common data environment (CDE) created within the BIM process. The security and immutability of records and contractual actions will be ensured by the blockchain technology.

The most important advantage of smart contracts technology is that, once the required conditions are fulfilled (pursuant to data shared by the involved parties in CDE), the contractual obligations are executed automatically, in seconds, without human intervention. This means that all contractual procedures, which under traditional construction contracts depend by the will of a certain individual, *e.g.* application for an interim certificate, certification of works, determination, payment, contractual notices, etc., and usually take significant time to be concluded, will be executed instantly, without the delays usually generated by human behaviours and their opportunistic interests.

Adoption of smart contracts technology in construction and engineering contracts is not without challenges and risks for the contracting parties.

For instance, one of such challenges would be how quick the amendments made to the text-based version of the contract might be included in the computer codes of the same contract. Having in mind that the blockchains are immutable, amending a smart contract will be far more complicated than modifying a traditional text-based contract, or a standard software code that does not reside on a blockchain. In this regard in the literature[16] it was emphasized that: *"amending a smart contract may yield higher transaction costs than amending a text-based contract, and increases the margin of error that the parties will not accurately reflect the modifications they want to make"*.

Other matters of concern may include the allocation of risks and liabilities between the contracting parties for coding errors, and for the situations where the common data environment (CDE) would be unable to supply the data (information) necessary for self-execution of contract, would provide erroneous data or simply it would go out of business.

Last but not least, even though it is expected that implementation of smart contracts technology to discipline the contractual behaviour of the parties, reducing the disputes generated by their opportunistic behaviour, it is also expected that these types of disputes to be replaced by disputes in relation to the computer codes corresponding to the text-based contract.

6. Conclusions

The disputes which occurred in construction projects are usually caused by one or more of the following three (3) elements: project uncertainty, contractual imperfections, and opportunistic behaviour of the contracting parties and their representatives.

While the matter of project uncertainty was traditionally mitigated by the pre-allocation of risks between the contracting parties, and the disagreements resulted from imperfections of contracts by the multi-tiered contractual dispute resolution schemes, so far there were little remedies against the opportunistic behaviour of the contracting parties meant to ensure the voluntary compliance of the parties with their own will as expressed at the conclusion of the contract.

The development in the recent years of new information technology tools like smart contracts, blockchain and Building Information Modelling (BIM) will provide in the near future an efficient remedy against the disputes resulted due to the opportunistic behaviour of the contracting parties.

However, as it was emphasized within this research, this remedy comes with its own challenges and risks which must be taken into consideration by the contracting parties at the conclusion of the contract accordingly.

INTERIM RELIEFS IN THE AGE OF SMART CONTRACTS TECHNOLOGY

Cristian Răzvan RUGINĂ*

Abstract

Contractual behaviour of the parties in construction contracts is fundamentally influenced by the availability and effectiveness of the remedies which might be obtained during the contract in court or by arbitral proceedings to ensure the proper and timely performance of the contractual obligations. In particular, the interim reliefs can play an important role in preventing and correcting any possibly abusive behaviour of the parties, as well as in maintaining throughout the contracts of the contractual balance established by the parties at the outset of the construction contracts. The paper analyses the interim reliefs currently used in construction contracts in Romania, the relation between the contractual behaviour of the parties and the length of interim reliefs proceedings, and how the interim reliefs might look in the near future, in the age of smart contracts technology.

Keywords: *construction contracts, interim reliefs, first demand guarantees, smart contracts technology, online dispute resolution (ODR).*

1. Introduction

Contractual behaviour of the parties in construction contracts is fundamentally influenced by the availability and effectiveness of the remedies which might be obtained during the contract in court or by arbitral proceedings to ensure the proper and timely performance of the contractual obligations. In particular, the interim reliefs can play an important role in preventing and correcting any possibly abusive behaviour of the parties, as well as in maintaining throughout the contracts of the contractual balance established by the parties at the outset of the construction contracts.

This paper analyses the jurisdiction of courts to settle the disputes resulted from the standard construction and engineering contracts currently used in Romania**,** the available interim reliefs procedures, the correlation between the duration of the proceedings and efficiency of the interim measures procedures, and how interim reliefs would be adapted in order to respond to the new needs and challenges created by the adoption of new technologies in the construction industry.

2. Standard construction and engineering contracts currently used in Romania and jurisdiction of courts to settle the disputes resulted therefrom

The most widely used form of construction contracts in Romania in private construction and engineering projects are the contracts in the FIDIC suite 1st Edition (1999) and 2nd Edition (2017), in particular the Conditions of Contract for Construction for Building and Engineering Works Designed by the Employer (the "Red Book"), and Conditions of Contract for Plant and Design-Build for Electrical and Mechanical Plant and for Building and Engineering Works Designed by the Contractor (the "Yellow Book").

In public projects the use of FIDIC conditions of contracts was mandatory for the public authorities for a certain period.

By the Government Decision no. 1405/2010 *regarding the approval for the use of some conditions of contract of the International Federation of Consulting Engineers (FIDIC) for the investment objectives from the field of transportation infrastructure of national interest financed by public funds* ("G.D. no. 1405/2010") it was imposed to all the units subordinated or under the authority of the Ministry of Transportation and Infrastructure the obligation to use the General Conditions of Contract of FIDIC Yellow Book or Red Book at the execution of public works.

On 1 March 2011, the Ministry of Transportation and Infrastructure issued Order no. 146/2011 *regarding the approval of particular conditions of contract for plant and design build, and for building and engineering works designed by the employer of the International Federation of Consulting Engineers (FIDIC) for the investment objectives from the field of transportation road infrastructure of national interest financed by public funds* ("Order no. 146/2011"), whereby it approved standard forms of particular conditions of contract, appendix to tender and contract agreement for execution of public works. Later on, Order no. 146/2011 was amended by Order no. 600/2017 *for the amendment of annex no. 1 of the Ministry of Transportation and Infrastructure's Order no. 146/2011 regarding the approval of particular conditions of contract for plant and design build, and for building and engineering works designed by the employer of the International Federation of Consulting Engineers (FIDIC) for the investment objectives from*

* PhD Candidate, Faculty of Law, "Nicolae Titulescu" University (e-mail: razvanrugina@gmail.com).

the field of transportation road infrastructure of national interest financed by public funds, issued by the Ministry of Transportation on 13 May 2017, effective as of 13 June 2017.

However, the FIDIC standardised forms were replaced in 2018 by the national standard construction contracts conceived by the Romanian Government, by the Government Decision no. 1/2018 *for the approval of general and particular conditions of contract for certain categories of public procurement contracts related to the investment objectives financed by public funds.* These construction and engineering forms of contracts not only replaced the former standardised public procurement contracts based on FIDIC conditions of contract, which were mandatory for the road and railway infrastructure works only, but also extended their applicability to all the investment objectives financed by public funds.

As far as the courts which have jurisdiction to settle the disputes resulted from such standard construction and engineering contracts is concerned, three (3) situations can be encountered:

a) The dispute shall be finally settled under the Rules of Arbitration of the International Chamber of Commerce (the "ICC"), the court vested with the administration of the arbitral cases being the ICC International Court of Arbitration;

b) The dispute shall be finally settled under the Rules of Arbitration of the Court of International Commercial Arbitration attached to the Chamber of Commerce and Industry of Romania;

c) The dispute shall be finally settled under the rules of Law no. 101/2016 *regarding the remedies and ways of appeals in the field of the award of public procurement contracts, sectoral contracts and works and service concession contracts, as well as for the organization and functioning of the National Council for Complaints Settlement* ("Law no. 101/2016") and Romanian Civil Procedure Code by the civil sections of state tribunals.

It is noteworthy that, in principle, jurisdiction to settle the applications for interim reliefs lies with the courts which, according to the contract, have jurisdictions to settle the substantive merits of the disputes.

3. Interim reliefs procedures currently available in Romania for the matters resulted from performance of standard construction and engineering contracts

3.1. The emergency arbitrator procedure under the Rules of Arbitration of the International Chamber of Commerce

Pursuant to Article 29 and Appendix V – *Emergency Arbitrator Rules* of the ICC Rules of Arbitration entered into force on 1 January 2021, a party that need urgent temporary relief that cannot await the constitution of an arbitral tribunal may make an application in this regard to the Secretariat of the ICC International Court of Arbitration.

Only parties that are signatories to the arbitration agreement that is relied upon for the application or successors to such signatories may recourse to the emergency arbitrator procedure. The emergency arbitrator procedure cannot be used if: (i) the arbitration agreement under the ICC Rules of Arbitration was concluded before 1 January 2012, (ii) the parties have opted out of the emergency arbitrator procedure; or (iii) the parties have agreed to another pre-arbitral procedure that provides for the granting of conservatory, interim or similar measures.

If and to the extent that the President of the ICC International Court of Arbitration considers, on the basis of the information contained in the application for interim measures, that the conditions required by the ICC Rules of Arbitration for recourse to emergency arbitrator procedure are satisfied, the Secretariat of the ICC International Court of Arbitration shall transmit a copy of the Application and the documents annexed thereto to the responding party.

Thereafter, the President of the ICC International Court of Arbitration shall appoint an emergency arbitrator within as short a time as possible, normally within two (2) days from the receipt of the application for interim measures by the Secretariat of the ICC International Court of Arbitration.

Once the emergency arbitrator has been appointed, the Secretariat shall so notify the parties and shall transmit the file to the emergency arbitrator.

The emergency arbitrator shall establish a procedural timetable for the emergency arbitrator proceedings within as short a time as possible, normally within two (2) days from the receipt of the file from the Secretariat.

The emergency arbitrator shall conduct the proceedings in the manner which the emergency arbitrator considers to be appropriate, taking into account the nature and the urgency of the application. In all cases, the emergency arbitrator shall act fairly and impartially and ensure that each party has a reasonable opportunity to present its case.

Pursuant to Article 29 para. (2) of the ICC Rules of Arbitration, the emergency arbitrator's decision shall take the form of an order. The order shall be made no later than fifteen (15) days from the date on which the file was received by the emergency arbitrator. The President of the ICC International Court of Arbitration may extend the time limit pursuant to a reasoned request from the emergency arbitrator or on the President's own initiative if the President decides it is necessary to do so.

According to Article 29 para. (3) of the ICC Rules of Arbitration: *"The emergency arbitrator's order shall not bind the arbitral tribunal with respect to any question, issue or dispute determined in the order. The arbitral tribunal may modify, terminate or annul the order or any modification thereto made by the emergency arbitrator."*

3.2. The emergency arbitrator procedure under the Rules of Arbitration of the Court of International Commercial Arbitration attached to the Chamber of Commerce and Industry of Romania

Pursuant to Article 40 para. (3) and Annex II – *Emergency Arbitrator* of the Arbitration Rules of the Court of International Commercial Arbitration of the Chamber of Commerce and Industry of Romania entered into force on 1 January 2018 ("CCIR Rules of Arbitration"), a party that need urgent temporary relief that cannot await the constitution of an arbitral tribunal may apply for appointment of an emergency arbitrator.

After the receipt of an application for the appointment of an emergency arbitrator, the Secretariat of the International Commercial Arbitration of the Chamber of Commerce and Industry of Romania shall send the application to the other party.

The President of the Court of International Commercial Arbitration of the Chamber of Commerce and Industry of Romania shall appoint an emergency arbitrator within 48 hours from receipt of the application by the Secretariat of the said Court.

Once an emergency arbitrator has been appointed, the Secretariat shall promptly inform him about this circumstance and shall refer the file to the emergency arbitrator.

According to Article 7 of Annex II – *Emergency Arbitrator* of the CCIR Rules of Arbitration, within two days from its appointment, the emergency arbitrator shall establish an interim procedural timetable and also decide with respect to the need to provide security, as well as with respect to the period in which the party against which the interim or conservatory measure is requested may submit its answer to the request.

Pursuant to Article 7 of Annex II – *Emergency Arbitrator* of the CCIR Rules of Arbitration, the emergency arbitrator's decision shall take the form of a procedural order.

Any procedural order with respect to the interim or conservatory measures shall be issued no later than ten (10) days from the date when the appointment was communicated to the emergency arbitrator by the Secretariat. The President of the of International Commercial Arbitration of the Chamber of Commerce and Industry of Romania may extend this period upon the reasoned request of the emergency arbitrator.

The procedural order of the emergency arbitrator shall be binding upon the parties when rendered.

The arbitral tribunal is not bound by the procedural order or by the reasons held by an emergency arbitrator and may amend or cancel the interim or conservatory measures taken by the emergency arbitrator.

3.3. Inadmissibility of the emergency arbitrator procedure under the Romanian law (Civil Decision no. 76/2019 of the Bucharest Court of Appeals)

In 2019, the Bucharest Court of Appeals rendered the Civil Decision no. 76[1] whereby it annulled a procedural order issued by an emergency arbitrator under the CCIR Rules of Arbitration, considering that the emergency arbitrator procedure contravenes to the Romanian imperative legal provisions and public policy, pursuant to the Romanian Code of Civil Procedure the state courts having exclusive jurisdiction to hear requests for provisional measures and interim reliefs before the constitution of an arbitral tribunal.

In this regard, the Court found that, in principle, the parties are free to establish procedural rules for conducting the arbitration proceedings, as long as such rules do not contradict imperative legal provisions or public policy.

However, as it results from the provisions of Article 585 of the Romanian Civil Procedure Code, before or during the arbitration proceedings, the jurisdiction to settle the applications for interim or conservatory measures belongs to the state tribunal in whose area the arbitral tribunal is seated, while during the arbitration proceedings, such applications can be settled either by the state tribunals or arbitral tribunals, at the claimant's choice.

In view of the aforementioned arguments, the Bucharest Court of Appeals emphasized that *"establishment of a special proceeding which would allow to an emergency arbitrator to settle the applications having as object interim measures/conservatory measures before the initiation of the arbitration proceedings represents a derogation from the imperative provisions of art. 585 para. 1 and 4 of the Civil Procedure Code, which is forbidden by the provisions of art. 541 para. 2 of the Civil Procedure Code."*

It is noteworthy that the considerations of the Bucharest Court of Appeals' Decision no. 76/2019 are applicable not only to the procedural orders issued by an emergency arbitrator under the CCIR Rules of Arbitration, but also to any other orders issued by an emergency arbitrator under any other rules of arbitration, whenever by the arbitral agreement the seat of arbitration has been chosen to be in Romania.

3.4. Interim and conservatory measures adopted during the arbitration proceedings under the Rules of Arbitration of the International Chamber of Commerce

Pursuant to Article 28 of the ICC Rules of Arbitration entered into force on 1 January 2021, once the arbitration proceedings have started, and the arbitration tribunal received the file from the Secretariat, at the request of any party, the arbitral

[1] Please refer to Court case no. 2739/2/2019 - National Company for Administration of Roads Infrastructure v. JV Copisa Constructora Pirenaica S.A. - Copisa Construcţii S.R.L.

tribunal may order any interim or conservatory measures it deems appropriate and may make the granting of any such measure subject to appropriate security being furnished by the requesting party.

Any such measure shall take the form of a reasoned order, or of an award, as the arbitral tribunal considers appropriate.

During the arbitration proceedings, the parties may also apply for interim or conservatory measures to any competent judicial authority.

The ICC Rules of Arbitration do not provide a mandatory time frame in which the arbitral tribunal should issue the order/award regarding the interim or conservatory measures, the length of such procedure depending mainly on the availability of arbitrators.

3.5. Interim and conservatory measures adopted during the arbitration proceedings under the Rules of Arbitration of the Court of International Commercial Arbitration attached to the Chamber of Commerce and Industry of Romania

Same as in situation of the ICC Rules of Arbitration, the arbitral tribunals constituted under the CCIR Rules of Arbitration may grant at the request of any interested party any interim or conservatory measures that it deems appropriate. In this regard, the arbitral tribunals have the power to order the party requesting an interim or conservatory measure to provide the necessary security in connection with the measure requested.

In any case, pursuant to the provisions of Article 40 para. (4) of the CCIR Rules of Arbitration, a request for interim or conservatory measures referred by a party to a state court is not incompatible with the arbitration agreement or with the CCIR Rules of Arbitration.

Similar to the ICC Rules of Arbitration, the CCIR Rules of Arbitration do not provide a mandatory time frame in which the arbitral tribunal should issue the order/award regarding the interim or conservatory measures, the length of such procedure depending on the availability of arbitrators.

3.6. Injunction order issued by the state courts

Pursuant to Article 585 of the Romanian Civil Procedure Code before or during the arbitration proceedings, the parties may request to the tribunal in whose area the arbitral tribunal is seated to grant interim or conservatory measures by way of an application for injunction order (in Romanian *"Ordonanță președințială"*). The parties may also recourse to such an application for an injunction order whenever pursuant to the contractual provisions the state courts have jurisdiction to settle the disputes resulted from the construction and engineering contracts.

According to Article 997 of the Civil Procedure Code there are several conditions which need to be fulfilled to application to an injunction order to be approved:

a) Likelihood of success on the merits (*fumus boni iuris*) - which requires the party requesting interim relief to show a reasonably arguable case or a reasonable probability of prevailing on the merits;

b) Risk of irreparable harm (*periculum in mora*) - this condition requires that relief may be granted only if the applicant demonstrates that it may suffer "irreparable" damage or injury in the absence of such injunction order;

c) Emergency of matter which led to the application for injunction order;

d) No prejudgment on the merits of the dispute - the application for an injunction order cannot deal with the substantive merits of the case.

The parties will be summoned in accordance with the rules on summons in urgent proceedings, and the defendant shall be provided with a copy of the application and of the supporting documents. However, the Civil Procedure Code do not set a mandatory, fixed time frame for such summons in urgent proceedings, the urgency of the matter being determined by the judge on a case-by-case basis.

In situations of extreme urgency, the injunction order may be rendered on the same day the application is received by the court, with the court issuing its decision in writing, *ex-parte*, without a hearing.

Pursuant to the provisions of Article 999 para. (3) of the Civil Procedure Code, the application must be settled "urgently" and "with priority", not being admissible the evidence whose administration requires a long time. The issuance of the injunction order may be postponed for a maximum of 24 hours, while the reasoning of the injunction order must be issued in no more than 48 hours from the order.

The injunction order is subject to appeal which must be filed in no more than five (5) days from the order was rendered if the parties were summoned, or, alternatively, from receipt of the reasoned decision in writing by the parties if the injunction order was issued *ex parte*.

3.7. Inadmissibility of the injunction relief in disputes regarding the first demand guarantee resulted from public procurement contracts (Decision no. 27/2020 of the High Court of Cassation and Justice – The Panel for Resolution of the Matters of Law)

By the Decision no. 27/2020, rendered on 2 March 2020, the High Court of Cassation and Justice decided that: *"In application of the provisions of Article 997 of the Civil Procedure Code and Article 53 pars. (2) of Law no. 101/2016 regarding the remedies and ways of appeals in the field of the award of public procurement contracts, sectoral contracts and works and service concession contracts, as well as for the organization and functioning of the National Council for Complaints Settlement, with the subsequent amendments and subsequent additions, establishes that the procedure of the injunction order is not admissible*

in the matter of suspension of the execution of a performance guarantee related to a public procurement contract."

In deciding so, the High Court of Cassation and Justice considered that, being an annex to the public procurement contract, the performance guarantee is an integral part of it, and the applications and actions to which the parties are entitled are those provided by the special law, respectively Law no. 101/2016, which refers to settlement of disputes resulted from public procurement contracts.

Under these circumstances, the existence of the special law – Law no. 101/2016 – which provides for the possibility to file an application for suspension of the execution of performance guarantee until the settlement of the substantive merits of the dispute based on Article 53 para. (2), allow for the interested party to use this procedural way only.

4. Suspension of the execution of first demand guarantees – the most frequent object of the applications for interim reliefs

All the construction and engineering standard forms of contracts used in Romania contains provisions regarding the obligation of the Contractor to provide to the Employer first demand letter of guarantee to ensure its contractual obligations (i) to repay the advance payment received from the Employer at the outset of the contract, (ii) to perform its obligations in a proper and timely manner, and (iii) to constitute the retention money guarantee.

All such first demand letters of guarantee are subject to the Romanian Civil Code and Uniform Rules for Demand Guarantees, 2010 Revision, ICC Publication No. 758 ("URDG").

Pursuant to Art. 2321of the Civil Code, the letter of guarantee is defined as *"the irrevocable and unconditional commitment by which a person, called the issuer, undertakes, at the request of a person named authorizing officer, in consideration of a pre-existent obligational relation, but independent of it, to pay a sum of money to a third party, named the beneficiary, in accordance with the terms of the assumed undertake."* The so-assumed commitment is executed at the first and simple request of the beneficiary, if the text of the letter of guarantee does not provide otherwise. The issuer of the letter of guarantee may not oppose to the beneficiary the exceptions based on the pre-existent obligational relation and cannot be held to pay in case of abuse or obvious fraud.

However, pursuant to Article 20 of the URDG, the issuer of the letter of guarantee (*i.e.*, the guarantor) has the obligation to examine any demand of payment received under the guarantee if it is a complying demand and to ensure the requested payment under the guarantee in no more than five (5) days after the receipt of the respective demand form the beneficiary (*i.e.*, the Employer).

Given the short period in which the authorizing officer (*i.e.* the Contractor) may resort to the interim reliefs in order to suspend an eventual abusive demand of the beneficiary regarding the payment under the letter of guarantee for a temporary period, and the numerous applications for interim reliefs related to the execution of such letter of guarantees issued under the construction and engineering forms of contracts, a question was raised as to the efficiency of the procedural means available to the Contractor in this regard.

5. The results of the research regarding the efficiency of the procedural means available to the Contractor to suspend an eventual abusive payment requested by the Employer under the letter of guarantee

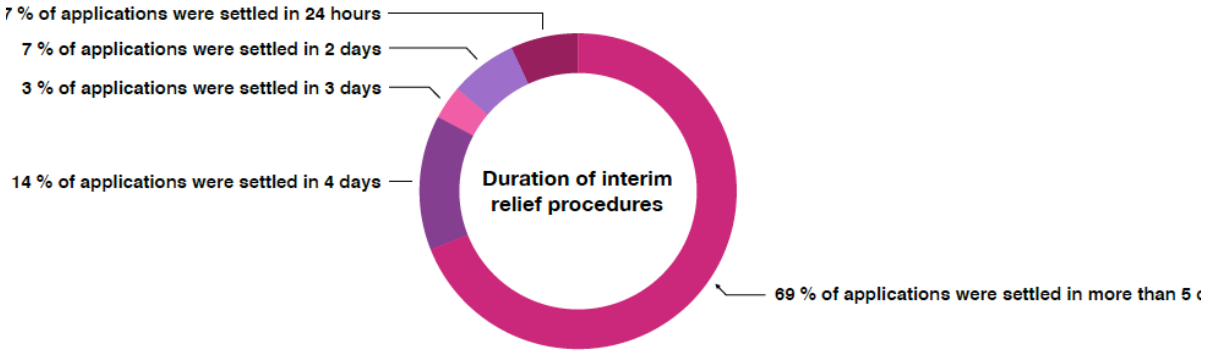
In order to analyze if the existent procedural means are sufficient to ensure a proper and timely juridical protection for a Contractor confronted with the abusive demands of payments made by the Employer under the standard construction and engineering forms of contracts applicable in Romania, we performed a research, taking into consideration the applications for interim reliefs registered with the Court of International Commercial Arbitration attached to the Chamber of Commerce and Industry of Romania and Bucharest Tribunal, and settled by the aforementioned institutions in 2019.

2019 was an extremely relevant year for such a study, because the number of applications for suspension of demands made by the Employer under the standard construction and engineering forms of contracts applicable in Romania was relatively high. This was due to the fact in 2019 it was encountered an important number of disputes between contractors and their employers, generated especially in connection with the construction of large public infrastructure projects like motorways, railways and civil buildings.

The study has taken into consideration the applications for interim reliefs by way of: (i) the emergency arbitrator procedure under the Rules of Arbitration of the Court of International Commercial Arbitration attached to the Chamber of Commerce and Industry of Romania, (ii) interim and conservatory measures adopted during the arbitration proceedings under the Rules of Arbitration of the Court of International Commercial Arbitration attached to the Chamber of Commerce and Industry of Romania, and (iii) injunction procedures in front of the state courts, by reference to the period of no more than five (5) days in which the issuer of the letter of guarantee (*i.e.*, the guarantor) has the obligation to examine any demand of payment received under the guarantee if it is a complying demand and to ensure the requested payment to the beneficiary (*i.e.*, the Employer), pursuant to the provisions of Article 20 of the URDG.

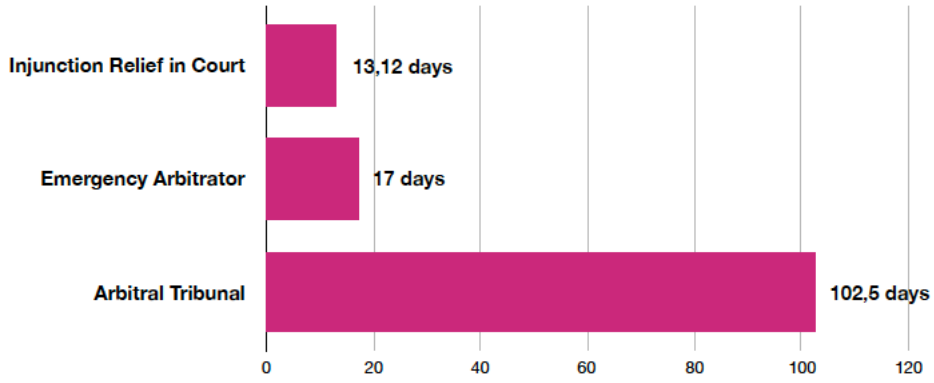
The results of the research revealed that 7% of the applications were settled by way of an *ex parte* proceedings in 24 hours. A total amount of 24% of the applications were settled in less than five (5) days, while in 69% of the cases, the interim relief proceedings exceeded five (5) days (please refer to Figure 1).

Figure 1 – Duration of the interim relief procedures



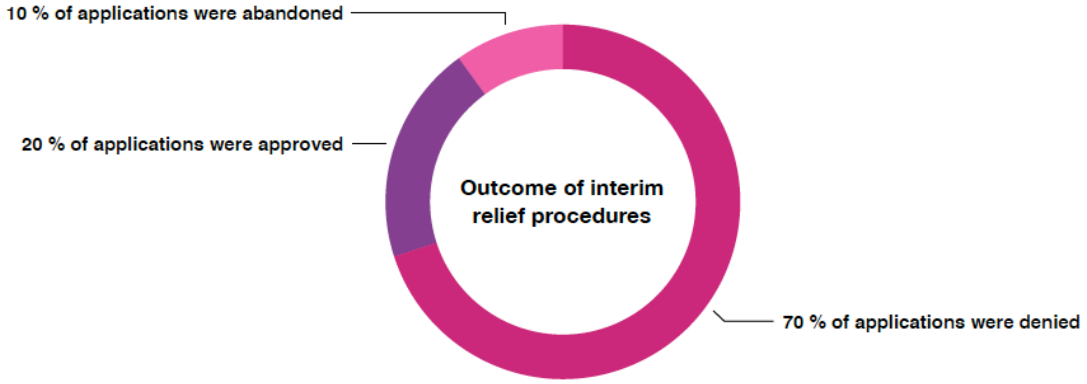
As far as the average duration of the interim relief procedures is concerned, in all three (3) types of procedural mechanisms, the average period needed for settlement of the applications were far above the five (5) business days provided by Article 20 of the URDG (please refer to Figure 2).

Figure 2 – Average duration of the interim relief procedures



From the perspective of the decisions adopted by the relevant courts with regard to the applications for interim reliefs, only 20% of the applications were

Figure 3 – Outcome of the interim relief procedures



approved, 70% being denied. Another 10% of the applications were abandoned because they remained without their object due to the excessive length of the proceedings, the letters of guarantee being executed within the five (5) business days period (please refer to Figure 3 below).

As a preliminary conclusion, it has to be noted that in practical life the effective duration of the interim relief proceedings is not aligned with the urgency imposed by the tight term provided by Article 20 of the URDG for payments to be made under first demand guarantees.

Other causes which delay the timely settlement of applications for interim reliefs lies in the constraints of the internal administrative proceedings of the courts, limited availability of arbitrators and judges, or in the insufficient understanding of the emergency of the matters referred to the relevant courts.

6. The necessity to align the dispute resolution proceedings with the new needs and challenges created by the adoption of new technologies in the construction industry

The experience acquired so far by the international construction industry shows that in many cases the management of the applicable dispute resolution procedures is not coordinated with the particular needs and requirements of the parties involved in construction and engineering contracts.

This circumstance, together with the adversarial culture of construction industry, the cost of using the legal system and the substantial time needed to arbitrate contractual disputes nurture the opportunistic behaviour of the parties materialized in deviation from the initial understanding recorded at the conclusion of contract to dishonestly improve their economic position within the contract[1].

Under these circumstances a careful adaptation of the existent dispute resolution procedures to the actual speed of the contractual mechanisms and economic exchanges specific to the construction industry is highly needed.

It is also noteworthy that the new information technologies like smart contracts, Building Information Modelling (BIM) and blockchain, expected to be fully implemented in the following years in construction projects, will come with their own legal risks and challenges which will require a re-design of the existent dispute resolution means and procedures in order to be addressed accordingly.

"Smart contract" is a concept used to describe a computer code that automatically executes all or parts of an agreement and is stored on a blockchain-based platform[2]. Once a construction and engineering contract will be concluded in writing, a corresponding smart contract, translating the will of the contracting parties in computer codes will be created. Thereafter, the contract will automatically execute the contractual actions based on the contemporary, real-time data (information) received from the common data environment (CDE) created within the Building Information Modelling (BIM) process. The security and immutability of records and contractual actions will be ensured by the blockchain technology.

The most important advantage of smart contracts technology is that, once the required conditions are fulfilled (pursuant to data shared by the involved parties in the CDE), the contractual obligations are executed automatically, in seconds, without human intervention. This means that all contractual procedures, which under traditional construction contracts depend by the will of a certain individual, *e.g.* application for an interim certificate, certification of works, determination, payment, contractual notices, etc., and usually take significant time to be concluded, will be executed instantly, without the delays usually generated by human behaviours and their opportunistic interests[3].

Automatic, instantaneous execution of contractual obligations will need adapted dispute resolution means and procedures, including new ways to obtain interim reliefs if necessary.

The analysis of the online dispute resolution systems and processes (commonly known as "ODR") developed in the recent years for blockchain dispute resolution can provide an accurate picture on how application for interim reliefs related to smart contracts would be settled in the near future.

a) **Juris** - The Juris framework operates where the parties adopted the Juris code in their smart contract. Once a dispute arises, the parties can suspend the contract and access the system through the Juris dashboard.

Same as in cases of dispute resolution clauses included in the traditional construction contracts, Juris comprise a multi-tiered dispute resolution process starting with a stage of mediation that can help the parties to reach a consensual agreement, called "SELF Mediation".

If parties are unable to reach an agreement, they can access the next stage of the process, *i.e.* "SNAP" (Simple Neutral Arbitrator Pool) where the parties receive a judgment by neutral jurors who anonymously vote on the case, and also provides a brief opinion on the case. After receiving the jurors' decision, the parties may return to the SELF stage and reach a consensual agreement.

---

[1] For supplementary information regarding the opportunistic behaviour of the parties to a construction and engineering contract, and the implementation of smart contracts, Building Information Modelling (BIM) and blockchain technologies into construction industry, please refer to C.R. Rugină, *"Smart contracts technology and avoidance of disputes in construction contracts"*, 2021, page 10.

[2] S.D. Levi *et al.*, *"An Introduction to Smart Contracts and Their Potential and Inherent Limitations"*, in Harvard Law School Forum on Corporate Governance, 2018, page 1.

[3] C.R. Rugină, op. cit., page 10.

The final stage is the PANEL (Preemptory Agreement for Neutral Expert Litigation), provided for complex disputes that require the most experienced jurors (High Jurists) or for those disputes in which parties would like to reach a legally binding award under the N.Y. Convention. The decision of the PANEL must be reached within thirty days and once rendered, the smart contract between the parties will be rescinded, and the award will be automatically enforced.

It is noteworthy that on Juris platform the disputes are settled by three (3) types of jurors: (i) novice jurists (new users who can participate in discussions and evaluate disputes in SNAP stage but cannot decide cases), (ii) good standing jurists (jurors who vote on SNAP) and (iii) high jurists (professional arbitrators with high experience on Juris platform). The jurors may advance from one category to another based on the experience acquired on the platform and the quality of their decision-making which are evaluated by Juris by its reputational system for jurors.

b) **Sagewise** – The platform is able to identify the flaws of a smart contract (*e.g.*, coding error, security issues, contract does not reflect parties' will recorded at the conclusion of the contract), to suspend its execution allowing a dispute resolution process to take place, and to ensure the enforcement of the resolution.

In order to benefit of the services provided by Sagewise platform, the parties are required to include in their smart contract the "Sagewise SDK", a coded contractual clause which is the equivalent of the traditional dispute resolution clause.

Sagewise operates as a facilitator between the parties, using a combination of tools like suspension of the smart contract, time blocks and alerts which warn the parties on coding errors or other unforeseen events, contract allow the parties to prevent its execution prior to the occurrence of the imminent default. Sagewise also allows the parties to amend the contract and resolve the dispute through a resolution process conducted via a smart contract.

In the first stage of the resolution process parties are given the opportunity to resolve the dispute by reaching a consensual agreement by amending the code, changing the terms of the contract, etc. This interaction takes place while the execution of the smart contract has been suspended.

If this stage is unsuccessful, the smart contract will move on to the next phase, involving a human third-party facilitator, and expert advice on choosing a dispute resolution provider among those offered through Sagewise. It has to be emphasized that Sagewise does not itself provide dispute resolution services.

The resolution of disputes reached through the provider can be enforced by creating a new smart contract.

c) **RHUbarb/PeopleClaim** – This platform is based on the contribution of a numerous community of users, allowing people to submit claims and have the community resolve them based on the wisdom of the crowds.

The dispute resolution process is public, the parties being allowed to invite experts from the community (e.g., lawyers, doctors) to offer feedback on their case.

The RHUbarb dispute resolution mechanism is based on "poll verdicts". As it was noted in the literature: *"Conducting polls is a quick, inexpensive and democratic avenue for reaching decisions that are based on a broad consensus"*[4]. In any case, jurors whose vote was in the minority will be penalized. The results of the poll can serve either as a binding arbitral decision or as an expert opinion to be used by the parties in their negotiation or mediation endeavors or be submitted in court or arbitration.

Another avenue which may be used for dispute resolution on RHUbarb is the so-called "self-funding processes" in which jurors are rewarded for being collaborative and innovative in proposing creative solutions to the benefit of the parties.

There are also several other ODR platforms like Kleros, ECAF, Jury Online, Mattereum, Aragon, Jur which proposed various methods for resolution of disputes resulted from the performance of smart contracts.

Irrespective of the method used for dispute resolution, it is noteworthy that in the majority of situations, once a dispute has arisen, such platforms ensure the suspension of the performance of smart contracts until the merits of the dispute is settled, either by the consensual agreement of the parties, by vote of jurors, or otherwise. However, in all cases the resolution on the merits of the dispute cannot exceed thirty (30) days.

7. Conclusions

The experience acquired so far by the international construction industry and the research performed in 2019 with regard to applications for interim reliefs by way of: (i) the emergency arbitrator procedure under the Rules of Arbitration of the Court of International Commercial Arbitration attached to the Chamber of Commerce and Industry of Romania, (ii) interim and conservatory measures adopted during the arbitration proceedings under the Rules of Arbitration of the Court of International Commercial Arbitration attached to the Chamber of Commerce and Industry of Romania, and (iii) injunction procedures in front of the state courts, reveals that in many cases the management of the applicable dispute resolution procedures is not coordinated with the particular needs and requirements

[4] O. Rabinovich-Einy, E. Katsch, *"Blockchain and the Inevitability of Disputes: The Role for Online Dispute Resolution"*, in *Journal of Dispute Resolution*, Vol. 2019, page 68.

of the parties involved in construction and engineering contracts.

In the same time the new information technologies like smart contracts, Building Information Modelling (BIM) and blockchain, expected to be fully implemented in the following years in construction projects, will come with their own legal risks and challenges which will require a re-design of the existent dispute resolution means and procedures in order to be addressed accordingly.

Under these circumstances a careful adaptation of the existent dispute resolution procedures to the actual speed of the contractual mechanisms and economic exchanges specific to the construction industry is highly needed.

The online dispute resolution systems and processes (ODR) like Juris, Sagewise, RHUbarb, Kleros, ECAF, Jury Online, Mattereum, Aragon, Jur, developed in the recent years for blockchain dispute resolution, provide valuable insights on how application for interim reliefs related to smart contracts would be settled in the near future in order to ensure the best juridical protection for the parties to a construction and engineering contract.

TACIT COLLUSION UNDER COMPETITION LAW: PRICING ALGORITHMS

Stella Solernou SANZ*

Abstract

A great level of transparency, resulting from data sharing (exchange of information), combined with use of algorithms may lead to reciprocal price or production control by competitors. Algorithms eliminate elements of spontaneity in market and may result in supracompetitive prices. But the collusive effect can also occur even if economic operators do not have this intention. Not always there is an express or implied agreement that fits within the concept of "restriction of competition", as traditionally delimited by European case law in the sense that companies agree to eliminate their independence or freedom to defining their business strategy. In these cases, there may not even have been any concerted practice; each operator, using specific algorithms, which observe and analyse competitors' historical price data, sets its own prices and determines those of rivals. According to the European Commission, in the context of e-commerce, European retailers are already starting to set their prices on the basis of those set by their competitors, using automatic computer developments.

In this way it unilaterally provokes collusion (higher prices). This makes it difficult to apply article 101 TFEU, since it requires some kind of concerted practice involving the idea of agreement. It is necessary to analyse whether it is possible to reinterpret the rule in such a way as to include the phenomenon of tacit collusion.

Keywords: *Pricing Algorithms – Restriction of Competition - Tacit Collusion*.

1. Introduction: Is Tacit Collusion a new phenomenon?

Tacit or implicit collusion refers to the behaviour of a number of undertakings which, as a result of observing each other, but taking their decisions independently, align their business strategy and apply supra-competitive (restrictive) prices. In short, they give up competing with each other, without having agreed to do so.

Tacit collusion is not a new phenomenon, but what is new is the economic context in which it can occur today. Parallel behaviour has been common in duopolies or oligopolies: the small number of competing companies facilitates a high level of transparency in market and thus the risk of price uniformity increases[1]. That is the case of gas station markets, with a small number of suppliers and a high degree of homogeneity in the product offered[2].

Despite its negative effects (those of explicit collusion), it has not generated as much concern (neither for competition authorities nor for legal literature) as it does today with the digital markets and artificial intelligence. The degree of transparency that can be achieved in the new technological environment extends tacit collusion to markets with a large number of competitors, even with a not-so-homogeneous supply. What used to be anecdotal can now become the general rule.

This raises the question of whether existing Competition Law provides a solution to tacit collusion and, if not, whether there is a need to address its regulation. Some of the studies on the subject (doctrinal and institutional) conclude that current law does not provide answers to this problem.

This paper aims to identify and clarify these legal gaps. However and at the same time, we can also find arguments in existing Competition Law to counteract the collusive effect of algorithms, with particular emphasis on the case law of the Court of Justice of the European Union. Finally, some legal solutions are proposed, with the aim of preventing the existence of algorithms with harmful effects on the market: to extend liability for collusive effects to those agents who have an obligation to monitor the algorithm («*culpa in vigilando*» doctrine).

2. What is an Algorithm?

The study of competition law has always required a balance between legal and economic aspects. But in recent times new disciplines, and the need for their understanding, have been introduced into our field: mathematical and computational sciences. It is therefore necessary to introduce, even in a very basic way, what an algorithm consists of.

Competition authorities have begun to familiarize themselves with these concepts, trying to understand how they work. The Competition and Markets Authority of the United Kingdom defines them as a very precise computational calculation procedure, where a value or set of values is taken as a starting value or set of values (in the case of pricing algorithms they take a given price as an input) and, after a process, this

* Associate Professor in Commercial Law, PhD, Faculty of Law, University of Deusto (Spain), (e-mail: stella.solernou@deusto.es).

This study was carried out within the framework of the research project "New Technologies, Market Transformation and Competition Law" (Ref. RTI2018-094 201-B-C21), funded by the Spanish Ministry of Science, Innovation and Universities.

[2] Weche / Weck (2021), 5.

results in a value or set of values as an output (final price)[3].

For its part, the German authority (Budendeskartellamt) considered it necessary to break down the different classes of algorithms from a technical point of view, in order to be able to determine the level of human involvement in the final price determination process[4]. And so, it distinguishes between static algorithms and self-learning algorithms, depending on the degree of autonomy they develop. The former are simpler; its behavioral parameters are initially designed and do not change, they remain over time, even though it is nourished by new information. What does vary is the final price if the entry price (that of a competitor, which has been observed by the algorithm itself) changes. It is said that these algorithms are easily interpretable by humans, since their descriptive nature allows to deduce the strategy and the final result of the algorithm itself.

On the contrary, self-learning algorithms develop a more complex computational process that improves their performance as more tasks they perform, as they gain more experience from more data, from more information. In fact, they are changing their own parameters, to the point of being able to move away from the rules originally designed, making it more difficult to predict their behaviour. The mathematical process is the one that makes the decision about the result that it understands most optimal. There are three types: "unsupervised learning", "supervised learning" and "reinforcement learning"[5]. These are the so-called Black Box algorithms, because it is hard to figure out how they get to a certain result[6].

3. Relationship between transparency and algorithms

3.1. Secrecy or Transparency in Competition

Information is an essential element of the competitive process. It is difficult to develop an economic activity in market without taking into account certain data: prices, customers, levels of demand, competitors' reactions or lack of reaction to any competitive effort, etc. To the extent that information has special relevance for economic life, it acquires its significance for competition. These circumstances justify that the disclosure or exchange of data between competitors must be analysed from an Antitrust Law perspective. In order to determine whether the communication of data between undertakings competing in the same market is restrictive of competition, a preliminary question must be resolved. To the extent that information entails transparency in market, it will be necessary to analyse whether it is beneficial or detrimental to it.

This question was discussed in Germany last century in connection with the so-called "doctrine of Hidden Competition" (Geheimwettbewerb). According to it, each company must autonomously set the strategy it intends to follow in market. Faced with the uncertainty of the competitors' offer, the entrepreneur will try to adjust his overall service as much as possible, both in terms of price and the content of his ancillary services. The strictest interpretation of this principle is that effective competition requires the prohibition of any transmission of data and exchange of information among competitors[7].

However, the idea that any level of market transparency is restrictive of competition and detrimental, and should therefore be prohibited, was criticized by many authors[8]. Certainly, it is not possible to support a general principle of Hidden Competition when there are so many rules in the current legal systems that establish transparency obligations. Today it is understood that effective competition requires a situation of perfect information[9]. A well-informed customer will have the necessary elements to choose the product or service best suited to his needs, which will lead to a higher level of demand with regard to the offers presented to him. In turn, the more data the entrepreneur has about his competitors' products or services, the more possibilities he will have to improve his performance compared to those of his competitors. Consequently, the production and dissemination of information can represent a positive activity for the consumer and for a proper functioning of market. But at the same time transparency can have restrictive effects on competition. Under certain circumstances, the exchange of information may be a collusive practice because it encourages and even incentivizes the standardization of competitors' conduct; in some cases, it may be used as a necessary tool for the implementation or reinforcement of a collusive agreement.

Thus, it can be concluded that information is characterized by its ambivalent nature in relation to the competitive process, since, depending on the context in which it is given, it will entail a benefit or a restriction of competition[10]. The criteria for distinguishing when

these positive or negative effects occur can be drawn mainly from resolution of the European Union institutions.

3.2. Market transparency in the context of algorithms

A great level of transparency, resulting from data sharing (exchange of information), combined with use of algorithms may lead to reciprocal price or production control by competitors. Algorithms eliminate elements of spontaneity in market and may result in supracompetitive prices. This is what happened in the UK between two competitors selling posters and frames online through Amazon's platform. Both companies agreed not to sell below the price of the other; they used software that automatically checked the prices, controlled them and adjusted them to the competitor. In this case algorithms were used not (or not only) to determine price, but to monitor compliance with a prior collusive agreement and to correct any deviation from that agreement.

But the collusive effect can also occur even if economic operators do not have this intention. Not always there is an express or implied agreement that fits within the concept of "restriction of competition" (art. 101 TFEU), as traditionally delimited by European case law in the sense that companies agree to eliminate their independence or freedom to defining their business strategy. In these cases there may not even have been any concerted practice; each operator, using specific algorithms, which observe and analyse competitors' historical price data, sets its own prices and determines those of rivals. According to the European Commission, in the context of e-commerce, European retailers are already starting to set their prices on the basis of those set by their competitors, using automatic computer developments.

4. Algorithms and collusion

4.1. Concept of collusion

The concept of collusion has always been associated with supra-competitive pricing by competing firms. But this result, without any additional requirements, does not fit into the classic legal-economic concept of collusion. In this regard, it has been said[11]:

"… [c]ollusion is difficult to grasp by law. Liability concerns market conduct (possibly with structural consequences), and can only be attributed to market participants. This is why, whereas cartels and joint dominant position are prohibited, collusion as a market outcome is not."

The economic theory of collusion revolves around one idea: to induce competing firms to set supra-competitive prices. To that end, undertakings apply patterns of reward and punishment towards their competitors. Competitors who maintain a more profitable outcome (higher prices) than under competitive conditions are rewarded. On the contrary, competitors who deviate from that result are penalized[12].

Based on economic theories, the legal concept of "collusion" has always been based on the idea of "concertated practice", where there is a fundamental volitional component, some kind of consent (concurrences of wills - meeting of minds). In this sense, undertakings can simply adapt their own behaviour unilaterally to the current or expected behaviour of their competitors, adjusting or aligning their prices (Judgments ECJ of 16 December 1975, case 40/73, Suiker Unie; of 8 July 1999, case C-49/92 P; Com. v. Anic Partecipazioni SpA; of 4 June 2009, case C-8/08, T-Mobile Netherlands; of 26 January 2017, case C-609/13, P Duravit)[13]. Within the framework of Unfair Competition Law, it has always been said that imitation is a natural response of the market. In other words, it is recognised that there is a natural interdependence among competitors which should not be penalised[14]. According to this idea, tacit collusion is not prosecutable by legal operators.

4.2. Analysis of Algorithms from a Competition Law point of view

There are a variety of scenarios regarding the use of algorithms and collusion. A first approach allows us to see to what extent Competition Law is applicable or not.

4.2.1. Algorithms that help to enforce and monitor a collusive agreement

Under this context, the algorithm does not affect the existence of collusive coordination, since it already exists. On the contrary, it does affect the effectiveness of the collusion. The use of this algorithm does not affect the mandatory application of article 101 Treaty on the Functioning of the European Union (or article 1 Spanish Competition Law – LDC-). Its importance for Competition Law becomes apparent when fixing the sanctions by competition authorities, given the increased anti-competitive effects.

This is what happened in the UK between two competitors selling posters and frames online through Amazon's platform. Both companies agreed not to sell below the price of the other; they used software that automatically checked the prices, controlled them and adjusted them to the competitor. In this case algorithms were used not (or not only) to determine price, but to monitor compliance with a prior collusive agreement and to correct any deviation from that agreement (Decision of the Competition and Markets Authority, case 50223, 12th August 2016).

[11] Weche / Weck (2021), 4.
[12] Harrington (2018), 6; Bundeskartellamt (2020), 4.
[13] Weche / Weck (2021), 5.
[14] Robles Martín-Laborda (2018), 93.

It is also possible to find examples in relation to vertical agreements. That was the case Asus, Denon & Marantz, Philips and Pioneer (European Commission Decision of 24 July 2018). Manufacturers imposed minimum prices on online distributors of their products; if they did not comply, they stopped supplying them. Manufacturers used sophisticated monitoring tools to control the resale price setting in the distribution network and to intervene quickly in the event of price falls.

In these cases, whether the algorithm is static or self-learning does not affect the existence of the collusive agreement itself. But it can be relevant for determining the sanction, trying to assess how it has increased the chances of effectiveness of the agreement and, therefore, with a more or less damaging result.

4.2.2. Use of the same algorithm by competitors involving price alignment

The legal assessment is different depending on whether competitors are aware or not that they are using the same algorithm.

If they are aware, but they have not agreed to use the same algorithm, there are difficulties in applying art. 101 TFEU, since the idea that this provision requires concertation seems to be unanimous.

However, the Spanish Competition Law expressly prohibits consciously parallel practices (art. 1 LDC). This aspect of the Spanish Act has hardly been applied in practice by competition authorities, but it is now relevant within the framework of algorithms. It is questionable whether this type of tacit collusion is punishable under Spanish Law when the Treaty on the Functioning of the European Union does not prohibit it. It should be recalled that Regulation (EC) 1/2003 (art. 3. 2) precludes the application of national law that prohibits agreements, decisions by associations of undertakings or concerted practices which may affect trade between Member States but which do not restrict competition within the meaning of Article 101(1) of the Treaty. The answer to that question must be affirmative, because prohibiting consciously parallel conduct does not frustrate the objectives of European competition law, but rather strengthens them.

The issue is different when the algorithm was designed to use self-learning methods and when implemented autonomously, it came to set prices on a par with those of competitors. It has been said that there is "algorithmic communication"[15]. In this scenario, it is more difficult to find the volitional element. It does not seem to be enough to solve it with a "more economic approach".

If the collusive outcome is to be avoided, a prior firewall must be established. It should therefore be considered to make the economic operator liable for the risk of the activity it carries out, so that, in its contractual relationship with the designer or developer of the algorithm, the latter would assume obligations to supervise its operation. The technical possibilities of supervision and the costs of such a system should be analysed.

On the other hand, it is possible that the algorithm is sold indiscriminately and that the buyer is unaware that its competitors are using it and may lead to a standardization of commercial conduct. Moreover, they may conclude that price alignment is a natural response. In those cases, it would not even be possible to speak of consciously parallel conduct under Spanish Competition Law. Would it be possible to hold them liable in the sense described above?

Conversely, if competitors have somehow agreed to use the same algorithm, they are certainly looking to coordinate their behaviour. It is called "Hub and Spoke" and fits into the traditional legal concept of collusion: competitors are actually giving up unilaterally determining their business strategy. As soon as some complicity is revealed, even through passivity, the case law of the EU Court of Justice fits it into the concept of concertation (Judgment of 22 October 2015, C-194/14, AC-Treuhand AG v. European Commission).

4.2.3. Algorithm Developer's Responsibility

Competitors may be unaware that they use the same algorithm, unlike the algorithm developer. The latter may benefit from the collusive result, provided that the algorithm succeeds in increasing the turnover of each competitor (his customers) through price parallelism. The developer of the algorithm finds incentives in this behavior. The question therefore arises as to whether he can be held responsible for the collusive effect or outcome.

The European Court of Justice has held that an undertaking may be held liable for agreements or concerted practices having an anti-competitive object when it intended to contribute by its own conduct to the common objectives pursued by all the participants and was aware of the actual conduct planned or put into effect by other undertakings in pursuit of the same objectives or that it could reasonably have foreseen it and was prepared to accept the risk (Judgment of 8 July 1999, Commission v Anic Partecipazioni, C-49/92; Judgment of 21 July 2016, VM Remonts, C-542/14).

On other occasions, the Court has used the role of facilitator for restrictive conducts. The company does not participate in the market in which the collusion occurred, but its participation was necessary to implement the cartel (Judgment of 22 October 2015, AC-Treuhand AG, C-195/14 P).

It remains doubtful whether the algorithm developer alone can be held liable, even if competitors are not responsible because eventhough they also benefit of collusion, they are unaware of it.

4.2.4. Adjusting the price to competitors by using my own algorithm

In this case, an undertaking individually uses a custom-designed algorithm that aligns its prices with

[15] Schwalbe (2018), 594.

those of the competitor. Consciously parallel conduct falls on only one subject and not on his competitors. This is a case of unilateral collusion. But it is questionable whether there is a damaging result for the market, in the sense of supra-competitive prices. As the European Court of Justice has traditionally said (Judgment of 16 December 1975, cases 40 to 48, 50, 54 to 56, 111, 113 and 114/73, Suiker Unie v. Com.):

"(…) it is correct to say that this requirement of independence does not deprive economic operators of the right to adapt themselves intelligently to the existing and anticipated conduct of their competitors (…)".

5. Conclusions

1. Collusive effect alone is not prohibited. Both the economic and legal concepts of collusion require a common strategy aimed at obtaining supra-competitive prices. The absence of such association has traditionally been an obstacle to the punishment of so-called tacit collusion. The problem may have been anecdotal so far. But with the digital revolution and the use of increasingly precise algorithms, competitors can dispense with any contact. They can collude without any prior agreement.

2. Only the Spanish Competition Law (article 1) makes it possible to prosecute some of these conducts, by prohibiting consciously parallel practices. But it also does not solve all possible anti-competitive scenarios.

3. Part of the literature begins to propose measures to sanction collusion where supra-competitive prices (harmful to the market and consumers) are proven to exist, without any additional requirements[16]. In this way, the problems of tacit collusion would be overcome.

4. It would also be desirable to consider whether responsibility for the collusive effect should be attributed to the company developing the algorithm and the company using it. It would be part of the liability rules for risky activities.

PATERNALISM IN CONSUMER LAW

Andreea-Mădălina STĂNESCU-SAS*

Abstract

When carried out by the state, paternalism was often decried as coercive, questioning in itself the liberty of the individual and always alluding to the latter's presumed incapacity to decide and to choose. Paternalism claims that most individuals are not capable to decide for themselves and argues that authority should take much of this burden off their shoulders.

At its most basic level, consumer law is a special area of law dealing with protection of a universal status and that is why many of the protective measures can be seen as paternalistic, although even a kernel of truth couldn't resist to a real analysis.

The paper starts from the observation that both opponents of the idea of protection, and ardent followers of paternalism extended to the widest possible area, has the same tendency to wrongly generalize the paternalistic qualification of almost any element of protection.

The paper addresses three issues: paternalism – coercive and non-coercive, libertarian paternalism and paternalistic libertarian nudges, consumer law and its specific protection with special regard to consumer status, and the crossing area between consumer law and paternalism.

The main purpose of this study is to convey an objective clear method to distinguish this crossing area between consumer law and paternalism and what exactly in this area is actually of a real paternalistic substance and what is not genuine.

Keywords: *consumer protection, paternalism, freedom to choose/ of choice, free will, incentive.*

1. Introduction

This paper starts from an observation justified by the need to understand the importance of clearly establishing the meaning of paternalism, from the perspective of consumer protection.

As a rule, no clear distinction is made between the paternalistic or non-paternalistic nature of a protection measure, the tendency being always to extend the qualification, for instance of considering as paternalistic some acts or policies that cannot be included in this category.

A paradox is that the same tendency to wrongly generalize an extended paternalistic qualification of almost any element of protection, belongs to both opponents of the idea of protection itself, detractors of paternalism and the principle of equity, and ardent followers of paternalism, expanded to the widest possible area, who claim that this would provide the strongest possible protection.

Thus, the supporters of libertarian ideology[1], or those who consider any idea of protection unnecessary, but also those who want to denigrate protection, otherwise of a completely different nature, conferred by consumer law, show an interest in qualifying any policy or act as paternalistic in nature, precisely in order to compromise the idea of paternalism itself, to present it as an exaggeration, either as a violation of individual freedom or as something simply out of place.

Proponents of paternalism[2], on the other hand, wishing to emphasize how useful such widespread protection would be, end up ignoring the real significance of paternalism, its well-defined role, and probably not intending, puts it into the very hands of the opponents of paternalism, deriding the precise importance of this ideology.

Given that elements of paternalistic ideology have penetrated consumer law, the importance of the approach lies in following the true sense of paternalism, so that it fulfills its purpose properly, without being unnecessarily extended for either praise or denigration, keeping the purpose of consumer protection clear.

Paternalistic protection should not be confused with the protection specific to consumer law, as they refer to dangers of a different nature.

This paper compares an ideology and a branch of law both having in common the ideal of protection.

As paternalism is concerned, this ideal comes with a price. It can be the price of free choice of the one who is protected. Free will is the "starting point" of law, and freedom represents the "substance and determination" of law and the determination of will.[3]

* PhD Candidate, Faculty of Law, University of Bucharest; attorney, Bucharest Bar Association (e-mail: stanescu-sas.andreea@drept.unibuc.ro). This paper is the result of a research conducted during the author's doctoral programme within the University of Bucharest – Faculty of Law – Doctoral School of Law.

[1] A reference work for the ideology that the state is not entitled to impose hierarchies of values on individuals is Friedrich A. Hayek, *Drumul către servitute*, [The Road to Serfdom], translated by Eugen B. Marian, fourth edition, (Bucureşti: Humanitas, 2014).

[2] For example, the phrase „libertarian paternalism" was coined in Richard H. Thaler, Cass R. Sunstein, *Nudge: Cartea ghionturilor pentru decizii mai bune legate de sănătate, bogăţie şi fericire* [Nudge: Improving Decisions About Health, Wealth, and Happiness], translated by Smaranda Nistor, (Bucureşti, Publica, 2016), 19.

[3] Georg Wilhelm Friedrich Hegel, *Principiile filosofiei dreptului sau Elemente de drept natural şi de ştiinţă a statului* [Elements of the Philosophy of Right], translated by Virgil Bogdan and Constantin Floru, (Bucureşti: Univers Enciclopedic Gold, 2015), (my English translation), 28.

The legal science was qualified as "a part of philosophy"[4] and the philosophy of consumption must search and define the justification and nature of protection provided to the consumer.

The paper is structured in three chapters.

The first chapter (no. 2) deals with paternalism, intending, in its first part, to identify the basic features of this ideology, both when it comes to coercive paternalism and "recommendation" paternalism, and to explain libertarian paternalism in its second part. Also, the libertarian paternalism section contains brief considerations on libertarianism, an explanation of the concept of libertarian paternalism, and in particular a detailed examination and also a classification of libertarian nudges, as exemplified in the reference doctrine.

The second chapter (no. 3) is dedicated to consumer law, dealing with its fundamental institutions and considerations concerning the consumer, in order to highlight the latter's relationship with two different types of protection.

The third chapter (no. 4) defines the crossing area between consumer law and paternalism, pointing out the need for a clear distinction between the protection specific to consumer law and that specific to paternalism, and the criteria that consumer paternalism must meet in order to be considered genuine and beneficial.

2. On Paternalism

2.1. Paternalism and its main features

Paternalism is a land of perpetual non-emancipation. The individual placed in the group targeted by paternalistic policies is always thought to be incapable to take proper choices, just because in that group there are, indeed, many individuals who cannot decide. Therefore, the rule of majority applies to this individual, remaining of too less importance how capable to decide he might be.

The basic feature of paternalism is the protection of the individual from himself.

I use the term "authority" as a general concept meant to represent the party in power, who can retrieve somebody's freedom of choice, decide for the latter and impose its decision. This authority can be a public institution or a private entity or simply a person in a leadership position entitling it to decide for other people. The act of authority materializes in paternalistic policies or acts which either dictate certain behaviours or influence towards them.

Paternalism is an ideology that claims that, in certain circumstances, an institution, public or private, a person in power, could and should either decide and choose instead of other individuals placed under its influence, on the grounds that the latter would not be able to take appropriate decisions for themselves, or try to influence, to persuade them to take decisions that are considered favourable, without depriving them of their freedom of choice.

The first type of paternalism is therefore more brutal, when the authority takes over the freedom of choice of those under its power, in order to protect them from the likelihood of acting wrongly about themselves.

In the second form of paternalism, the freedom of choice stays with the individual, but the authority claims the power to influence him to decide in a certain way. In this regard, it has been noticed that „paternalism is no longer a political or a moral issue, it is an element of individual deliberation."[5]

Regardless of the type of paternalism, the premise on the one hand is the individual not being able to take the right decisions, to discern what is good for himself and, on the other hand, that the authority is considered more rational than him, more qualified to realise how he should act.

When referring to paternalism, we must establish why is the authority the one that always knows better, why the paternalistic policy or act should be applicable to individuals otherwise perfectly responsible just because there are many others who are not, what exactly is the reason of the incapacity to take the right decision, what is the significance of a right decision, what is the protected interest and whose interest is protected, when paternalism is genuine, when it is good or bad. Three elements are concerned: the authority, the individual and the decision.

The fundamentals of paternalism are based on the assumption that, in certain circumstances, people prove not to be so rational and mature as they should, and consequently either their freedom to choose needs to be confiscated, or they simply ought to be guided, but not coerced, towards the most favourable choice. But in exchange to their liberty, the authority should return something even more valuable, as an expression of a principle of fairness and ethics.

The coercive paternalism could be summarized in an old sentence: „Try and convince them, but do act even against their will, when the reason of justice demands it."[6] Therefore, it is the mere interest of the individual that compells the authority to limit his liberty of choice and to assume taking decisions on his behalf. The choice belongs to an authority that is entitled to impose it on others. The reason why the authority chooses is that it would be too dangerous for the protected person to decide for himself, and, on the other hand, the consequences could be harmful to others.

[4] Idem, 22.

[5] Christophe Salvat, *Is Libertarian Paternalism an Oxymoron? A Comment on Sunstein and Thaler (2003)*, https://hal.archives-ouvertes.fr/hal-00336528, 2.

[6] Marcus Aurelius, *Gânduri către sine însuşi* [*Meditations*], translated by Cristian Bejan, bilingual editon, (București: Humanitas, 2018), (my English translation), 199.

The presumed lack of discernment in taking decisions, stemming either from the experience of observing the numerous cases in which individuals could not properly decide for themselves, or from the consequences generated by their unthoughtful behaviour, lays the foundation of paternalism. Therefore, the authority is thought to be more rational, more responsible than the individual, just because in so many cases the latter couldn't prove himself dilligent enough. In other words, somebody needs to be considered mature enough to decide and to impose that decision. It was assumed that the one who exercise paternalism over others is the one who knows well enough the „ends, values and interests" of the one who is paternalized.[7] Paternalism is a materialization of the prediction that people and humanity as a whole will have to be protected from the dangers entailed by their own power.[8]

We already know that the protected party is presumed incapable to decide what is favorable to him. The choice is made for the paternalized and the result of this choice is imposed on him. In coercive paternalism, the protected person cannot choose to disobey what the authority had decided for him.

It was observed that people do not know what they want or what is good for them, that they cannot create a legislative system and that they have to be tought what to desire.[9] But what is the significance of a right decision, and what makes a decision right or wrong? Is it imperative for the paternalistic policy or act to be understood as good and useful for the one whose liberty to choose was taken away, or only the mere compliance will do? When talking about what can be considered good or bad for someone, we must admit that the notion is relative. What a certain person would consider as good for himself, another individual could see it as not so good, or even bad. The kind of benevolence that could be accepted in paternalististic matters is the one that keeps the individual safe, not necessarily happy, because happiness is relative, but safe, safe from injuries, from sickness or from poverty.

It is generally accepted that the role of the state, for „as much as it is able", is to ensure a good life for all citizens and to create the material conditions for it.[10] The state was thought to be a product of art, compared to Leviathan, an „artificial man", of superior strength, designed to protect man, and invested with an artificial soul, namely sovereignty.[11] Its duty is to ensure safety for the people.[12] The state has an obligation to protect citizens from accidents.[13] The state is not allowed to abdicate from the call of giving its citizens the best protection, and this duty cannot fall into abeyance.

Self-advertised as paternalists, certain authors emphasized that the state has a duty to promote the best ways of life among the people, beyond their preferences or beliefs.[14]

As for the individuals, they must help each other in choosing right from wrong.[15] But what if a coercive paternalistic policy or law comes to be imposed on individuals otherwise perfectly rational and precisely informed in respect to a certain problem targeted by the paternalistic measure? They will have to accept the measure just because it provides protection to other individuals, not so responsible. The responsible individual will take advantages from the behaviour imposed on others, since, if they had been left free to choose, they might have compromised the efficacy of the responsible individual's decision.

It may be considered incorrect by some people to be unable to reach their goals or sometimes to even abnegate their hopes, because there are some who would not exhibit self-discipline and realism and then they should be protected from the consequences of their own faults.[16] The individual's inability to choose should derive not from the very misinformation by the authority, but only from natural human limits. Anyway, even these limits are doubtful and relative, if we are to consider the long-standing process of infantilizing adult consumers.

For a policy or law to be considered genuinely paternalistic, the protection must be channeled primarily to the individual's best interest, and secondly to others' interests. In other words, it must be in the best interest of the individuals to follow an advantageous path, even dictated or suggested by someone else. Authority's best interest is to ensure that individuals do not go astray.

One should not smirk about paternalism, for sometimes it could be of essence. To analyze it deprecatingly would mean ignoring the evidence of the individual's natural inclination to act to his detriment, to ruin good occasions in a moment of aberration. An intelligently oriented policy could help in abating and alleviating the negative consequences of a chaotic and uninspired freedom of choice.

Also, to ignore paternalism's dark side, and to accept uncritically an authority's coercive act, would mean to abjure the principles of individual liberty and freedom of choice.

One can be taken aback by the apparent contradiction between the two perspectives, but an abiding theory calls for strong, although perhaps not apodictic arguments.

One opinion highlights that, when the understanding capability of an ordinary adult is not enough „for a heathy decision", legal paternalism can be seen as acceptable.[17] In this regard, another argument states that „most people have not yet reached maturity to be independent" and the degree of emotional development is much lower then the degree of technical and intellectual development.[18]

A balanced, moderated opinion concluded that it is wrong not to interfere in individual choices at all, but the interference must be performed with caution, doubt and a critical sense.[19]

Some laws and policies, as those mentioned below, are considered paternalistic, and therefore are regarded as controversial.[20]

Thus, a law that requires motorcyclists to wear helmets or passengers in cars to wear seatbelts is, indeed, an example of genuine paternalism. On the other hand, taxes on cigarettes could not be considered paternalistic, because high taxes never apply only to harmful products. Taxation policies cannot be examples of genuine paternalism, higher taxes being based, in fact, on pragmatic reasons, mainly targeting reliable sources. It applies arbitrarily to alcohol as to common fuels. Nor bans on trans-fats could be considered paternalistic because the consumer can always choose between the products present on market and is able to freely consume unhealthy food. Regulations on prescription of medical drugs could be considered paternalistic because consumer can be mislead in their use. Regulations on recreational drugs are not paternalistic, because their use is always harmful, both to the consumer and to others.

2.2. Libertarian Paternalism

2.2.1. Brief considerations about libertarianism

To narrow the debate on the subject of paternalism to a mere sentence, libertarianism is an utterly distinct ideology, abhorrent to coercive paternalism and abhorrent from any restraint on the individual liberty of choice.

The consequences entailed by state interference with individual freedom of choice, would lead, in libertarian view, to an encroachment upon the very essence of human existence.

If state and individual interests fight for supremacy, each party conceitedly claiming its superiority with lack of clairvoyance and a merely obstinate determination never to concede defeat, the social landscape would encompass just the accumulated frictions and is never to improve.

Libertarian „*laissez-faire*" ideology means that the common man is allowed „to choose and act freely" without being subjected to an external, dictatorial will.[21] In this regard, it has been asserted that man must be free to pursue his interest.[22] He must, also, receive useful advice in his choices, but the final decision must belong to him.[23] Therefore, this „useful advice" must be a proper instrument to make it possible for the individual to realize his own interest. But what if, despite following this useful advice, his interest still remains unfulfilled? Can the individual blame the adviser for not giving him the proper counsel or we'll have to establish the duty of the counselor as a mere gesture of generosity or, at the most, as an obligation of diligence? It can be noticed that, even the libertarian ideology admits the importance of appropriate counseling of individuals, to ensure achieving the goal of their full freedom.

On the other hand, if society encourages the infantilization of man, it is to blame for the consequences of its policy.[24] This opinion asseverates that the authority can easily take advantages from the individual's gullible nature, all the more naive as the state himself finds appropriate to cultivate this state of perpetual childhood of the mind.

Furthermore, when the authorities offer help recklessly and without balance, accustoming individuals to always count on others, and never on themselves, the authorities contribute to the abandonment of morality and the accentuation of neglect.[25]

The state must make people „no longer need its help"[26], must cultivate the independent spirit in his citizens. Also, the state must not discriminate his citizens, must not dictate a certain hierarchy of values

and impose them upon individuals, thus favoring some of them.[27]

A controversial libertarian idea is that when individual harm is only probable, and not certain, he is to decide whether or not to face the danger of such harm, so he must only be warned, but not prevented from exposing himself. [28]

Therefore, the common denominator of these two ideologies, paternalism and libertarianism, is the individual's need for guidance, even though the solutions to this need are utterly different.

2.2.2. The concept of "libertarian paternalism"

As far as we can admit that paternalism can exist without restricting the individual freedom of choice, the concept of libertarian paternalism could be accepted as a part of the paternalistic ideology.

Libertarian paternalism was created as a happy medium between two opposite ideologies: paternalism and libertarianism.

The proponents of libertarian paternalism ideology set forth their theories from the ideas that the influence on people's choices cannot be avoided[29] and that paternalism does not always involve coercion[30].

As for the individual, this ideology highlights that „in many domains, people lack clear, stable, or well-ordered preferences"[31] and consumers should nor feel abashed by their need of help. Thus, „[w]e're more likely to need help choosing the right mortgage than choosing the right bread."[32]

Man was said to be „a creature of strong and irrational drives, credulous, untutored, ritualistic."[33] In this angle, paternalism was seen as a logical response to man's natural incapacity to act with a proper degree of caution; „Paternalism is not morally good or wrong, it is a logical consequence of individuals' bounded rationality."[34]

It has been asserted that „paternalism" exists when the choice is influenced in such a way that it helps those concerned „to live better, according to their own assessments".[35] The authors recommend libertarian paternalism, which they describe as „relative, diffuse, malleable, and non-intrusive"[36], the choice residing with those influenced by the paternalistic policy and being not restricted by the person in power.

Libertarian paternalism does not constrain individuals to act in a certain way, and only guides them to take the best decisions. Individuals do not constrainedly comply with the rules dictated by some authority, planner or person in power, but they are invited to consider options that could grant them a frame of reference in acting more rationally.

The suggestion made by the planner should not be an abasement for the consumer, the latter being perfectly free not to follow the planner's nudge.

In paternalistic libertarian view, the planner is always benevolent and always unselfish. It has been observed that being benevolent is just the choice of the planners, paternalism being just one option among others[37] and, consequently, we should distinguish between the choice that is made by a person as a planner and the choice that is made by a person as a person.[38]. The authority does not have to be presented as someone who gives of its selfless care to help the individual, because some interest must always be the cause of any act.

The libertarian paternalism does indeed constitute the perfect way to understand how paternalism penetrates consumer law and how probably it becomes to mistake the genuine for the false paternalism.

Comparing the nudgee with a novice chess player playing against someone more experienced and loosing because of his inferior choices, without the helpful hints[39], it could be relatively uninspired if we help ourselves regarding sellers and suppliers as consumers'oponents, even enemies. Chess players are opponents, rivals in a fair game, but we could not state the same about the relationship between a seller or a supplier and a consumer, where the latter should aim to satisfy consumer's expectations, not to defeat him. Consumer is not playing games with every seller or supplier he meets, he buys things not to compete with anybody, but only because he needs products and services, for which he pays, therefore he is entitled to be treated with respect.

A mandatory cooling-off period for door-to-door sales was offered as an example of libertarian

paternalism.[40] Actually, this time frame, was not granted to the consumer to think if he really needs the product he just bought, but personally and peacefully to check the quality and the features of the product. A paternalistic measure would have meant the possibility for the consumer to simply change his mind, completely unrelately to the assessment of the product.

If libertarian paternalism is, indeed a form of paternalism, then it should keep intact its basic principle of protecting individual from himself.

For libertarian paternalism to fulfill its guiding function, the information offered to the individuals must be abundant and relevant and the options must be numerous. Thus, when information is limited, „countless options increase the costs of decisions without increasing the likelihood of accuracy", and „when choosers are highly informed, the availability of numerous options decreases the likelihood of error and does not greatly increase decision costs".[41]

Libertarian paternalism was said to have „made the mistake of making rational people pay for the irrational" by guiding their choice.[42]

It was also shown that the most adapted to the real needs of the people is „the doctrine of the well-understood interest".[43] Exactly this kind of understanding is the essence of ideologies such as paternalism, libertarianism and libertarian paternalism.

2.2.3. The libertarian paternalistic nudges

The instruments recommended and used by the libertarian paternalist ideology are called nudges[44], namely suggestions issued by an authority, acting as a planner, meant to guide the choice of somebody that can be subjected to this influence, towards a self-advantageous and always free decision. Libertarian paternalistic nudges are instruments meant to protect the individual from himself, by guiding his choice, with or without indicating to the latter what exactly to choose, in matters in which he can always decide what is best for him.

Although the authors of libertarian paternalism are displaying a wide range of examples as nudges, other opinion tends to narrow the sphere of libertarian nudges, so only choice-independent nudges can be truly called libertarian nudges, when the person in power, the choice builder, increases the rationality of the person's decision, providing useful information, „while remaining agnostic about what choice should be made".[45]

At the same time, the choice-dependent nudges, meaning nudges that seek to steer decision in particular ways, should allow an easy escape of the choice favoured by the authority or the person in power.[46] A choice-dependent nudge is when the nudger, by taking advantages on the irrational tendencies, drives the nudgee „toward a particular outcome".[47]

According to this opinion, choice-independent nudges do not favour a particular choice and „are agnostic" as to the „right" choice to make. Their goal could be, for example, to provide consumers with nutritional informations, favouring individual rational choice.[48] A choice-independent nudge is designed to reduce costs, to provide more comprehensible informations or that encourage care when choosing.[49] In this opinion three types of nudges are acceptable, being choice-independent nudges: „educative, simplifying, and deliberative".[50] Only deliberative nudges could raise „epistemic paternalism concern".[51] This opinion is questioning the libertarian character of nudges created to indicate the way to follow to the nudgee. A libertarian nudge cannot, according to this opinion, hide any suggestion as to how the individual should act.

It is perfectly true that selfless proper information is the most elegant and correct way to guide somebody towards rational behaviour, without suggesting a certain choice, but libertarian paternalism claims the very legitimacy of the planner's right to influence the nudgee, starting from the premise that this kind of influence cannot be avoided. It is about the right of the nudger to indicate the best choice for the nudgee, so as the latter to come to enjoy a better happier existence.

In fact, all ideologies are fighting a perpetual battle to influence and to guide, and we should allow for it when objectively analyzing their purposes. In any ideology, informing, no matter how important and essential it would be for the individual, cannot be other than a tool to facilitate influence, an excuse meant to legitimate a subtle orientation of some people towards something.

Not only libertarian character should be questioned in certain examples, but mostly the paternalistic character of some nudges.

The examples of nudges founded in the reference work on this topic, must be carefully analized and classified according to the alleged danger that the individual must avoid.

Nudges destined to protect individual from lack of self-control:

An example of alimentary lack of self-control regards the design of the school cafeteria. Promoting the consumption of foods considered healthier and displaying them in places where they can be more easily observed, is made while placing foods considered less healthy in places that are more difficult to access and more difficult to observe.[52] At the same time, banning food with additives is presented not to be a nudge.[53] Another observation in this regard is that people buy more muffins than yogurt.[54] Therefore, people's otherwise well-known self-control issues related to what they are usually craving for, generates an impressive emotional response from the nudgers who aim to educate them towards a healthy lifestyle. For this purpose, another nudge is given by the municipality that encourages people to exercise.[55]

The cafeteria school example is not relevant with respect to the paternalistic nature analysis, because the nudgees are children and paternalistic ideology regards adults treated as incapable.

Nevertheless, it is undisputable that the planner can organise the food presentation as he sees fit, but, in such matters, as eating and selecting food, it is nor wise or mature to waste money and, under any circumstances, public money. A very useful nudge would be the mere advice not to exaggerate with food, but this nudge is avoided, and is never not to consume. The very idea, that it is too hard for a person not to be greedy or to choose food with care, is childish, and nudgers should show maturity.

Another category of lack of self control nudges is about people inclination to spend too much on useless things. For example, an unintentional employer nudge by half month salary payment instead of monthly payment, which helps with better savings.[56] It is, indeed an example of genuine nudge, that can be either intentional or unintentional, as a consequence and a compensation for small wages policy.

A bitter example is the bank account deposited all year round which one cannot withdraw, so to have money for holiday gifts.[57] This sad example shows how poor consumers are manipulated to refrain from consuming even essential goods as to meet their purpose in the high holiday sales, under the pretext of mandatory compliance with a deliberately fabricated habit of offering holiday gifts, as the only way to feel honorable and satisfied. Such a bank account is more an expression of the sellers and suppliers needs to stimulate trade, than to protect consumers from themselves.

Nudges meant to stimulate common sense:

The urinal engraved with the image of a fly[58], is, in fact, just an innovation based on the conjecture that this object is supposed to better serve the man. Innovation is not necessarily paternalism. It is not about a choice of begriming a public place, but an approach to the lack of common sense, which should not be an option. It can also be interpreted as an offensive allusion, being more than disrespectful to an animal species.

The campaign discouraging road littering[59] using commercials with personalities, can only serve trade purposes and can be a "good" occasion to waste money. Apart from not being a genuine libertarian paternalistic nudge, because a person is never allowed to litter, never has this choice, so there is no point to be convinced not to do it, such a campaign is not meant to protect the individual from himself. By littering, he hurts the environment and the others, and the only thing it could nudge him, would be civic education and an appropriate penalty. A real nudge could never recommend wasting money for the mere hope to convince no common sense individuals to turn elegant and clean.

The example of the teenagers having a child who receive a dollar for each day they are not pregnant[60] cannot be a paternalistic nudge because teenagers are minors, not adults to be subjected to paternalism in the real sense of the term. Moreover, teenagers get pregnant, usually not because they choose so, but because a lack in education, or morality, or the inherited way of life. They can be, also, confused by authority's double speech suggesting that something forbidden at sixteen becomes absolutely commendable and even rewardable at twenty. It is not very inspired, moral or equitable to pay someone to do act normal, just because in the past she acted otherwise.

In this category, informing that the degree of compliance in filling out tax returns forms is high, that is suppose to make individuals less inclined to cheat[61] is a good thing, only that individuals were never entitled to cheat, they were all the time constrained to abide by the law, so there was no place for a nudge.

A nudge for not wasting energy is intended by smiling or frowning emoticons attached to power

consumption information.[62] This is a bit infantile but welcome and perhaps amusing method to convince. The little globe that flashes when the person consumes too much electric energy[63] is an example of how, in many cases, such awareness campaigns end up to be just another incentives to consume more, instead of consuming less, especially if we consider the energy and resources wasted on such totally useless objects.

In the case of stimulations to less polluting[64], the consumer who is allowed to harm the environment would be asked to refrain as much as possible from doing it and is rewarded for not doing the harm he is allowed to do. It is a case of genuine paternalistic nudge.

The reminder nudges form another category applicable, for example, to those who have forgotten to renew their private health insurance. In these cases the employee's presumed choice is not to cancel the employer-subsidized insurance, so it must be kept as it was.[65]

Also, when setting up a "flexible expense account" with a salary retention, it will be assumed that the default option is to no longer withhold money.[66] These are situations in which it is considered that the employee does not have to end up spending money simply because he neglected some details.

The alarm clock that hides to force the owner to wake up[67] could be considered to be more like an amusing innovation.

Light admonitory nudges to giving up vices:

An example is the advertising message that most students do not exceed four alcoholic drinks a week, supposed to discourage alcohol abuse in educational institutions.[68] In other words, the authors of the message grant that four alcoholic drinks a week is perfectly alright, so you shouldn't miss four drinks a week.

Including a screen with pressure sensor in the urinal to connect with driving under the influence[69] is another urinal example, displaying an innovation. This is not a paternalistic nudge, because nobody can choose to drive while intoxicated, this being rightly forbidden by the law.

Many examples indicates too much indulgence towards vices. In this regard, some organizations helping people quit smoking advise smokers to put unspent cash on an account and to withdraw it when scheduled.[70] The same goes with refraining from gambling[71].

Bitter nail polish to stop people biting their nails[72] is another case of innovation with naive innocent purposes that could hardly be put as a paternalistic nudge.

Persuasion nudges:

Some relevant examples are automatic submissions to pension plans[73], or simplifying of the enrollment process[74]. Also, informing that the vote participating is high, encouraged people to come to vote.[75]

It was also considered as a nudge the technique of asking questions about people's intention to buy an object, to floss or to eat something, stimulating them to do so more often.[76]

Those who were also given the place of vaccination and were asked to make a plan for the date of vaccination were more determined to go with it.[77]

Other examples are asking people if they would like to donate to charities, and then commit to increasing their donations each year[78]; debit card for donations and tax deductions, or to keep track of donations[79] could be a nudge, but then again is more like a mere innovation.

The simple innovations destined to ensure smooth operation of an object are not nudges. Relevant examples of such innovations presented as nudges are: the lock button of dangerous machine tools[80], the warning sounds for seat belt, petrol, oil change etc.[81], the obligation to remove the card from the ATM first, so as not to forget it[82], signs of looking to the right or left in the U.K.[83], feedback from digital cameras that reproduce the image or the sound of classic cameras, mobile phones that sound like landlines or the battery

discharge warning[84], the paint that changes colour after it has dried so that those who use it do not leave uncovered parts[85], the red light reminding to change the air conditioning filter[86], the display of food that the user of a fitness device deserves, as an incentive to exercise more[87].

The instructions for use and prevention of mistakes when using a product is not paternalism, as it doesn't involve choice.

Privatization of marriage[88] cannot be a nudge, because marriage should not be seen as a mercantile institution, and should be based solely on love and respect.

Apart from the basic, coercive paternalism, that always compels, and does not recommend, the libertarian paternalism is suggesting the answer in the sense that the consumer seems to want to choose exactly what the one who suggests it wants, creating the impression that the consumer wants exactly that thing, but does not know how to express it.

3. Considerations on consumer law

3.1. Pillars of consumer law

Critics of consumer law view this branch of law as a form of paternalism[89]. That is why it's of a great importance to show a clear distinction between the protection provided by paternalism and the protection conferred by consumer law.

The main function of law is to protect the individual from the harmful conduct of others. The aim of paternalism is to protect the individual from himself.

Consumer protection legislation covers four main themes: "prompt, fair and complete information to consumers", "the right balance of obligations [...] and the protection of consumers' economic interests against the abuse of economic power of sellers and suppliers, the prevention and rejection of unfair commercial practices and the liability of sellers and suppliers for damages caused to consumers by the products or services sold"[90].

The consumer protection against the abuse of sellers and suppliers' economic power could never be considered as a form of paternalism, because it shields the consumer against the disproportionately high power of the seller and supplier, who may impose abusive clauses on the consumer. Therefore, the protection is not meant to protect the consumer from something he might be tempted to do, but only from an external harm.

The unfair commercial practices are also forms of external harm, and it is perfectly normal for the law to protect any part in a contract from an incorrect practice of the other. The protection against the unfair commercial practices is not a form of paternalism.

The liability of sellers and suppliers for damages caused to consumers by their products or services is perfectly justified as it is, designed to compensate the harm caused by improper products, and it has nothing to do with paternalistic protection.

As for the consumer's right to information, it must be pointed out that a paternalistic measure could consist in providing information, but always independently by the seller or supplier's obligation to inform the consumer. The paternalistic information acts as a nudge meant to channel the individual's decision, at the same time protecting him against possible mistakes he might make due to lack of knowledge of some details, relevant for a good choice. The paternalistic information is a totally different thing from the professional's duty to inform the consumer.

Therefore, the fundamental pillars of consumer law are based on different reasons and principles than paternalistic ideology. The law is meant to protect from any external harm that could affect one party in a contract as a result of the other part's conduct. The protection granted by the law is not a result of the gullible or weak nature of the consumer, but is the consequence of the principles of fairness and equity.

3.2. About consumers

Consumers are not a class. They could never be a class, because everyone is a consumer.

We hear very often that the consumer is considered the weak part in a contract with a professional. In fact, whether a certain consumer is weak or not is totally unimportant, because a person, acting as a consumer, can be sometimes weak and, in other occasions, quite strong, this aspect being irrelevant from the point of view of consumer law. Consumer law is destined to protect the status of being a consumer in a relation with a seller or supplier, not a person or a class. It is the condition of consumer that is protected by consumer law, not classes or persons. When we say "consumer" in this context, we mean the person in the position of consumer, not a weak, ignorant or gullible person or class. What is always vulnerable is only everyone's status of consumer, the ever changing position exposing everyone in one way or another in relation to a professional. To be a consumer is to be in a vulnerable status.

---

[84] Idem, 150.
[85] Idem, 151.
[86] Idem, 337.
[87] Idem, 163.
[88] Idem, 307.

Easy money. About Irrational and Oligo-Rational in Commercial Contracts], (București: C.H. Beck, 2018), (my English translation), 5.

It would be utterly wrong to regard consumers as the always incapable or helpless class, always crying for help and always favored. Such insinuations belong to those who tend to discredit the protection conferred by consumer law and who would prefer sellers and suppliers to be exempt from any liability for the activity they carry out. So, all individuals, as producers, „are responsible to the consumer", as a feature of the free market.[91]

4. The crossing area between consumer law and paternalism

4.1. The importance of a clear distinction between the protection specific to consumer law and the protection specific to paternalism

Consumer law is, in some cases, penetrated by paternalism, but in reality these cases are much smaller in number and scope than one might think.

Unfortunately, both those who support consumer rights and those who denigrate consumer protection tend to exaggerate, by suggesting that clarification, improvement, innovation etc., would be paternalistic. Even the normal protection against deception and abuse is presented as paternalistic by the opponents of consumer law, and of equity, in general. At the same time, ardent supporters of paternalism tend to say that no matter how much, and to what extent, paternalism is welcome, so that the individual can be better protected, even from himself.

Paternalism is basically a good theory, if used correctly and balanced, exactly where is needed.

The danger of over-extending the use of paternalistic policies is the infantilization of those protected, by preventing them to develop the capacity to think freely and take decisions for themselves.

The danger of misperception of some measures as paternalistic, when in fact they are something else, is the trivialization, the demonetization of the idea of paternalism, facilitating the activity of denigrating the very idea of protection, even protection of a completely different nature, such as that conferred by consumer law.

Consumer protection stands out as special from other branches of law, but this seemingly special character is justified by its concern with the universal status of consumer, which is the ever weaker side of every one of us.

The Romanian Supreme Court of Justice and Cassation had also rightly remarked in previous decisions that it was wrong to consider as "clear and intelligible a contractual clause for the understanding of which no specialized knowledge is required, in the field of consumer protection things being different."[92]

The interplay area between consumer law and paternalism must be very well known and understood, on the one hand, so as not to infringe on consumer protection, and, on the other hand, for the cases of paternalism to be genuine and useful to the consumer.

Both consumer law and paternalism have protection in common, but they should not be confused. They must be differentiated so that the normal protection the law must offer does not appear as a favor, an exaggeration springing from the generosity of an authority, and, on the other hand, so that the reason for the paternalistic act should not be diluted.

The protection conferred by law is continuous and applicable to all, while paternalism is an exception to the rule of freedom of choice and applicable to specific situations.

It has been said that advertising would be useful to consumers for making "better and smarter choices".[93] It is not paternalism the legal obligation incumbent on the seller and supplier to state within an advertising material regarding the provision of loans that a loan involves the obligation to repay and that, before contracting for a loan, the consumer must check his ability to repay.

We should also not mistake banning consumer deception for paternalism.

It has been remarked that people are often unable to assess the consequences of their own decisions.[94]

In fact, transparency in lending[95] is not paternalism at all, but a mere elementary measure to ensure contractual balance and equity.

The idea that there should be fewer types of credit for consumers to make better choices[96] is inconsistent with the freedom of banks to offer any type of loan as long as they meet the appropriate requirements. The consumer does not choose better or worse depending on the number of types of loans offered, but on how correctly these offers are presented to him, how fairly the bank acts in his regard.

The fact that credit card companies are required to disclose to their customers the total of commissions and fees[97] is nothing but a fair and common sense requirement, to ensure a good evidence and permanent control of these costs.

[96] Idem, 215.

[97] Idem, 220.

4.2. Paternalism concerning the consumer: genuine or false, good or bad. The criteria for good consumer paternalism

The mechanism for assessing the opportunity and justification of a paternalistic measure applied to consumers must allow for the specific circumstances involved by the specifics of consumer law relationships. Thus, the status of consumer in itself places the consumer in a vulnerable position, as he is compelled to consume, and consequently he is always dependent upon the seller's honesty. No matter how informed a particular consumer may be in a particular regard, he will not be able to have equal knowledge of all aspects of his consumption, and even if, absurdly, he was, he would never have the time and energy to analyze each product he buys with the greatest accuracy.

It must be kept in mind that, if the state of vulnerability of the consumer is created by the very act of the seller or supplier himself, a protective measure of the former cannot be considered paternalistic and it will only be a legal protection against an external harm.

Paternalism protects only against the natural vulnerability which can make the consumer to act against his own interests, because of his own fallibility, and not because he was deceived by someone else.

Paternalism should not be confused with equity, the latter being the ultimate reason for any legal system. Equity replaces the arbitrariness of force, protecting the weak from the abuses of the strong, and the idea of justice.

Genuine paternalism either withdraws freedom of choice or guides the choice, with or without indicating the specific path for the consumer.

One may qualify a paternalistic measure as good, when it meets two cumulative criteria: to be designed to serve the interests of the consumer and to be really useful to the consumer.

The first criterion points out that this measure should only have been aimed to ensuring greater consumer protection and not other reasons, such as favoring certain sellers or suppliers or certain products.

The argument of the need to protect consumers was used for states to block access to certain foreign products. Thus, in the cause C-178/84 Commision v. Germany (German beer)[98], the German government motivated the refusal of access to the German market of beers containing ingredients not permitted by German law, with the intention to protect German consumers from being deceived. It was considered that the measure was disproportionate, as consumers could be protected by the information on the product label.[99]

The second criterion in assessing the legitimacy of the paternalistic act is the consumer's benefit.

The consumer must have more to gain than if he had enjoyed full freedom of choice or, respectively, if he had ignored the planner's suggestions.

As a limitation of freedom for both the consumer and the seller or supplier, paternalistic measures must be proportionate to the legitimate purpose, to the interest pursued. Also, the paternalistic measure should last only as long as it is necessary.

An example of justified paternalism in consumer law is capping credit to avoid over-indebtedness. The control of the degree of indebtedness for the individual[100] it was also appreciated as an example of justified paternalism.

5. Conclusions

Notwithstanding the importance of comprehend the idea of protection as clearly as possible, confusion, which could sometimes be interpreted as intentional, continues to exist.

Paternalism, applied in cases where it is really necessary, is definitely a good thing.

Like any restriction of liberty, it must be justified, proportionate and limited to cases where it is necessary.

There are clear situations in which only through paternalism can adequate protection be provided to the consumer, so that it does not need to be extended to situations in which protection can be achieved otherwise, nor to claim that it exists when the protection comes from elsewhere. That is why we must always keep in mind the basic feature of paternalism, which is the protection of the individual from himself.

Regardless of the form of paternalism, coercive or exclusively "influencing", the authority is the one that always knows better and is entitled either to impose a certain decision, or to exercise influence on individuals, with or without indicating a precise choice to follow.

Paternalism starts from the presumed lack of discernment in decision-making, in the case of people with full legal capacity. It is important to be retained that the individual's inability to choose should not derive from the very misinformation of the authority, and can only be a result of the natural human limits.

A policy or an act can be qualified as genuinely paternalistic only if the protection is channeled primarily to the individual's best interest, and secondly to the others' interests.

Even the libertarian ideology admits the importance of appropriate counseling of individuals, to ensure achieving the goal of their freedom. Libertarian paternalism ideology starts from the ideas that the influence of people's choices cannot be avoided and that paternalism does not always involve coercion. Libertarian paternalism does not constrain individuals

[98] Damian Chalmers, Gareth Davies & Giorgio Monti, *European Union Law. Cases and Materials*, second edition, (Cambridge: Cambridge University Press, 2010), 767. In this regard, art. 114 TFEU provides that consumer protection must benefit from a high level of protection.

[99] Idem, 768.

[100] Russell Blackford, *op. cit.*, 25.

to act in a certain way, dictated by planners, but only guides them to take the best decisions.

The libertarian paternalism is the ideal way to understand how paternalism penetrates consumer law and how probably it becomes to confound genuine and false paternalism.

Libertarian paternalistic nudges, which are instruments meant to protect the individual from himself, by guiding his choice, with or without indicating what exactly to choose, can be grouped into several categories, such as: nudges destined to protect the individual from lack of self-control, nudges meant to stimulate common sense, reminder nudges, nudges to giving up vices, persuasion nudges.

It is of a great importance to offer a clear distinction between the protection provided by paternalism in itself and the protection conferred by the consumer law. Without this clear distinction, it would be a great mistake and extremely dangerous to conclude that the protection afforded by law is a form of paternalism.

The main function of law, the enforcement of equity, protects the individual from the injustices he might suffer from others.

Paternalism, protecting the individual from himself, even if it penetrates the law, has a completely different nature and a different function.

Consumers are not a class, because every one of us is a consumer. It is the status of consumer that is protected by consumer law, not classes or persons. "Consumer", in this context, is the person in the position of consumer, not a weak, ignorant or gullible person or class.

Consumer law is, in some cases, penetrated by paternalism, but these cases are much fewer than usually presented.

In order to preserve both the beneficial effect that properly applied paternalism must have and the basic rationale of the law, namely the protection of the individual from the injustice caused by others, the interplay area between consumer law and paternalism must be rightly understood.

A paternalistic measure is good when it serves the interests of the consumer and is really useful to him.

Any misqualification as paternalistic of a consumer measure can lead to the dilution of the beneficial effect that this ideology must have, but also to the erosion in understanding the purpose of consumer law. Consequently, in order to prevent this misqualification, an objective and balanced analysis of each consumer protection measure is needed, so that the consumer status may enjoy due respect.

A ROMANIAN PERSPECTIVE ON DETERMINING THE COMPETENT COURT FOR THE SHARING-OUT OF THE ESTATE IN THE LIGHT OF REGULATION (EU) NO. 650/2012

Silviu-Dorin ŞCHIOPU[*]

Abstract

The Treaty on the Functioning of the European Union provides that the Union shall develop judicial cooperation in civil matters having cross-border implications and, for this purpose, the European Parliament and the Council shall adopt measures for the proper functioning of the internal market, aimed at ensuring the compatibility of the rules applicable in the Member States concerning conflict of laws and of jurisdiction. To this end, the European Parliament and the Council of the European Union have adopted Regulation (EU) no. 650/2012 on jurisdiction, applicable law, recognition and enforcement of decisions and acceptance and enforcement of authentic instruments in matters of succession and on the creation of a European Certificate of Succession, which applies to successions of natural persons who died on or after 17 August 2015.

There are more than a few cases in which the increasing mobility of private individuals, in particular within the European Union, gives rise to matters of succession with cross-border implications, such as when the deceased was the national of a state other than the state of their habitual residence at the time of death or when the assets forming part of the estate are located in the territory of several states. Thus, the inheritance, including the sharing-out of the estate, may fall under the scope of several legal systems. Under such circumstances, in the case of a judicial sharing-out of the estate, we are dealing with a private law matter having cross-border implications, which could result in a conflict of law, within the meaning that the dispute could be settled by courts from several states.

In light of the above, this short overview aims to analyse, on the one hand, the rules applicable in order to determine the court or courts of law competent to settle the sharing out of the estate, or the international jurisdiction of Romanian courts over foreign ones, without overlooking the correlation between the jurisdiction and the law applicable to the succession as a whole. After determining the state the courts of law of which hold jurisdiction, we will refer to internal jurisdiction, both in territorial and substantive terms, in line with the rules of the domestic civil procedural law.

One of the conclusions of our overview is that, although the regulation aims to ensure that the court of law ruling in connection with the sharing-out of the estate will enforce, in most of the cases, its own law, in practice, there will also be instances where the rules of procedural law will pertain to the legal system of one Member State which was party to the adoption of the Regulation, while the rules of substantive law will pertain to a third country. Thus, it is not impossible for the Romanian courts of law to enforce rules of substantive law pertaining to another legal system, all the more as, in accordance with Article 23 paragraph (2) letter j) of Regulation (EU) no. 650/2012, the scope of the applicable law also encompasses the sharing-out of the estate.

Keywords: *Regulation (EU) 650/2012, Romanian Code of Civil Procedure, succession, sharing-out of the estate, inheritance distribution (division), competent national court.*

1. Preliminary considerations

There are more than a few cases in which the increasing mobility of private individuals, in particular within the European Union, gives rise to matters of succession with cross-border implications, such as when the deceased was the national of a state other than the state of their habitual residence at the time of death or when the assets forming part of the estate are located in the territory of several states. Thus, the inheritance, including the sharing-out of the estate, may fall under the scope of several legal systems.

Under such circumstances, in the case of a judicial sharing-out of the estate, we are dealing with a private law matter having cross-border implications, which could result in a conflict of law, within the meaning that the dispute could be settled by courts from several states[1].

Therefore, first of all, we ought to detect the rules applicable in order to determine the competent court or courts of law in matters of sharing out of the estate, more specifically, the *international* jurisdiction of Romanian courts over foreign courts. After determining the state the courts of law of which hold jurisdiction, we will determine the *internal* jurisdiction, both in territorial, and substantive terms, in line with the rules of the domestic civil procedural law[2].

Filipescu, *Tratat de drept internațional privat* (Treatise on private international law) (București: Universul Juridic, 2007), 33; Ioan Macovei, *Tratat de drept internațional privat* (Treatise of Private International Law) (București: Universul Juridic, 2017), 14.

[2] See Flavius George Păncescu in *Noul Cod de procedură civilă: comentariu pe articole* (Code of Civil Procedure: commentary on articles), vol. II: art. 527-1133, coordinated by Gabriel Boroi, second edition (București: Hamangiu, 2016), 998; Șerban-Alexandru Stănescu in Noul Cod de procedură civilă comentat și adnotat (The new Code of Civil Procedure commented and annotated), coordinated by Viorel Mihai Ciobanu and Marian Nicolae, vol. II (București: Universul Juridic, 2016), 1650.

Within the European Union, as far as successions with cross-border implications are concerned, it is Regulation (EU) no. 650/2012[3] which determines, as a matter of rule, the state the courts of law of which are competent to review the succession on the merits[4], and consequently, including the sharing-out of the estate.

In terms of territory, the regulation applies in all Member States, with the exception of Denmark (according to Articles 1 and 2 of Protocol no. 22 on the position of Denmark[5], annexed to the Treaty on European Union and to the Treaty on the Functioning of the European Union) and Ireland (according to Articles 1 and 2 of Protocol No 21 on the position of the United Kingdom and Ireland in respect of the Area of Freedom, Security and Justice[6], annexed to the Treaty on European Union and to the Treaty on the Functioning of the European Union)[7].

Although there is no express stipulation in the Regulation within the meaning that the Member States which did not take part in its adoption are construed as third countries, Denmark and Ireland should be considered as *third countries* for the purposes of this Regulation[8] given that the Regulation cannot be enforced in a state which was not taking part in the adoption of this Regulation and is not bound by it or subject to its application.

As regards the *application in time*, in accordance with Article 83 paragraph (1), the Regulation shall apply to the succession of persons who died on or after 17 August 2015, in particular, to the legal sharing-out of the estate concerning successions opened from and including 17 August 2015.

In connection with successions opened before the above-mentioned date, the internal rules of conflict of each Member State will apply, rules which, in the case of Romania, are contained in the Code of Civil Procedure[9], Book VII "International Civil Proceedings" (Articles 1064-1109).

In respect of the relationship with international conventions in effect at the time of its adoption, Article 75 paragraph (1) of Regulation (EU) no. 650/2012 provides that it shall not affect the application of international conventions to which one or more Member States are party at the time of adoption of this Regulation and which concern matters covered by this Regulation, nevertheless, in accordance with paragraph (2), this Regulation shall take precedence over conventions concluded exclusively between two or more Member States which are party to its adoption, in so far as such conventions concern matters governed by this Regulation.

Thus, with a view to fulfilling the international commitments undertaken to third states by the Member States before the enforcement of this Regulation, in so far as a Member State has concluded with a third state a convention on matters governed by the Regulation, the said convention will continue to apply in relationships between the contracting states. The Regulation shall only take precedence over the international convention where the latter was concluded exclusively between states which were part in the adoption of the Regulation.

Although Article 75 paragraph (1) of Regulation (EU) no. 650/2012 only refers to international conventions concluded before the adoption of the Regulation on 4 July 2012, the doctrine emphasized the fact that the European Union hold, from this point forward, exclusive jurisdiction over the negotiation and conclusion of international treaties comprising rules of international private law in matters of succession, which means that the Member States which were part in the adoption of the Regulation can no longer conclude such conventions among them, because this would impair the enforcement of the Regulation[10].

Hence, further to the transfer of jurisdiction from the Member States to the European Union in respect of the conclusion of international conventions on the matters covered by Regulation (EU) no. 650/2012, Romania could only enter into such conventions comprising rules of international private law in matters of succession subject to the Commission's consent[11].

Please find below, first of all, an overview of the main rules for determining the *international* jurisdiction of Member States in the matter of legal sharing-out of the estate, in observance of Regulation (EU) no. 650/2012, also having regard to the correlation between *the jurisdiction and the applicable law to the succession as a whole*. Then, we will focus on *internal* jurisdiction, both in territorial and

substantive terms, in line with the rules of Romanian civil procedural law.

2. Regulation (EU) no. 650/2012

A. *The habitual residence of the deceased at the time of death was located in a Member State* (general jurisdiction)

According to recital (23) "In view of the increasing mobility of citizens and in order to ensure the proper administration of justice within the Union and to ensure that a genuine connecting factor exists between the succession and the Member State in which jurisdiction is exercised, this Regulation should provide that the general connecting factor for the purposes of determining both jurisdiction and the applicable law should be the habitual residence of the deceased at the time of death".

In that respect, *the general jurisdiction rule* is laid down in Article 4 of the Regulation, reading as follows "(t)he courts of the Member State in which the deceased had his habitual residence at the time of death shall have jurisdiction to rule on the succession as a whole". In enforcing this article, the nationality of the deceased is irrelevant[12].

In accordance with abstract (23), in order to determine the *habitual residence*, the court of law should make an overall assessment of the circumstances of the life of the deceased during the years preceding his death and at the time of his death, taking account of all relevant factual elements, in particular the duration and regularity of the deceased's presence in the State concerned and the conditions and reasons for that presence. The habitual residence thus determined should reveal a close and stable connection with the State concerned taking into account the specific aims of Regulation (EU) no. 650/2012.

Moreover, abstract (24) specifies that, in certain cases, determining the deceased's habitual residence may prove complex. Such a case may arise, in particular, where the deceased for professional or economic reasons had gone to live abroad to work there, sometimes for a long time, but had maintained a close and stable connection with his State of origin. In such a case, the deceased could, depending on the circumstances of the case, be considered still to have his habitual residence in his State of origin in which the centre of interests of his family and his social life was located.

Other complex cases may arise where the deceased lived in several States alternately or travelled from one State to another without settling permanently in any of them. If the deceased was a national of one of those States or had all his main assets in one of those States, his nationality or the location of those assets could be a special factor in the overall assessment of all the factual circumstances.

The provisions of the Regulation were devised in such a manner as to ensure that the court of law ruling on the sharing-out of the estate will enforce, in most cases, its own law. Therefore, with a view to ensuring the *unity of the succession*, in accordance with Article 21 paragraph (1), "(u)nless otherwise provided for in this Regulation, the law applicable to the succession as a whole shall be the law of the State in which the deceased had his habitual residence at the time of death".

However, as also specified in abstract (43), the rules of jurisdiction laid down by the Regulation may, in certain cases, lead to a situation where the court having jurisdiction to rule on the succession will not be applying its own law.

In order to narrow such a possibility, the regulation lays down several mechanisms which may be triggered when the deceased opted, in accordance with Article 22 paragraph (1), for his succession to be governed by the law of *another state* (than the state of his last habitual residence) the nationality of which he possessed[13]. In this case, the competent courts would be the courts of the Member State in which the deceased had his habitual residence at the time of death, and which should enforce the rules of substantive law of another state, irrespective of whether it is the law of a Member State or not.

Hence, Article 5 paragraph (1) reads as follows "(w)here the law chosen by the deceased to govern his succession pursuant to Article 22 is the law of a Member State, the parties concerned may agree that a court or the courts of that Member State are to have exclusive jurisdiction to rule on any succession matter".

Consequently, in this case, the heirs may enter into a *choice-of-court agreement*, so that jurisdiction will be assigned to the courts of law of the Member State the law of which was chosen by the deceased to govern his succession as a whole, thus ensuring the unity between the rules of substantive law and procedural law, meaning the unity between the applicable law and jurisdiction.

B. *The habitual residence of the deceased at the time of death was located in a third-country* (subsidiary jurisdiction)

In accordance with Article 10 paragraph (1) of the Regulation, there are two instances where the courts of a Member State, such as Romania, nevertheless have jurisdiction to rule on the succession as a whole,

[12] See Dan Andrei Popescu, „Domeniul de aplicare al Regulamentului (UE) 650/2012. Regulile de competență internațională" (Scope of Regulation (EU) 650/2012 on Jurisdiction, Applicable Law, Recognition and Enforcement of Decisions and Acceptance and Enforcement of Authentic Instruments in Matters of Succession and on the Creation of a European Certificate of Succession. International Competency Rules), *Revista română de drept privat* no. 5 (2014): 167.

[13] Article 22 paragraph (1): A person may choose as the law to govern his succession as a whole the law of the State whose nationality he possesses at the time of making the choice or at the time of death. A person possessing multiple nationalities may choose the law of any of the States whose nationality he possesses at the time of making the choice or at the time of death.

although the habitual residence of the deceased at the time of death was not located in a Member State.

The former concerns the case where the *deceased had the nationality of that Member State at the time of death* (jurisdiction based on nationality). The latter refers to the case where the *deceased had his previous habitual residence in that Member State*, provided that, at the time the court is seized, a period of not more than five years has elapsed since that habitual residence changed (jurisdiction based on previous habitual residence).

In all cases falling under the scope of Article 10 of Regulation (EU) no. 650/2012, recognition of subsidiary jurisdiction of the courts of a Member State is conditional upon the existence of assets forming part of the estate in the territory of that Member State, which was party to the adoption of the Regulation.

If the factual background does not fall under the scope of any of the cases described above, meaning that no court of law of a Member State has jurisdiction pursuant to Article 10 paragraph (1), the courts of the Member State in which assets forming part of the estate are located nevertheless have jurisdiction to rule not on the succession as a whole, but *only on those assets* (*forum necessitatis*).

Although the regulation aims to ensure that the court of law ruling in connection with the sharing-out of the estate will enforce, in most of the cases, its own law, in practice, there will also be instances where the rules of procedural law will pertain to the legal system of one Member State which was party to the adoption of the Regulation, while the rules of substantive law will pertain to a third country.

Thus, it is not impossible for the Romanian courts of law to enforce rules of substantive law pertaining to another legal system, all the more as, in accordance with Article 23 paragraph (2) letter j) of Regulation (EU) no. 650/2012, the scope of the applicable law also encompasses the sharing-out of the estate.

3. Territorial jurisdiction of the Romanian courts

As already specified above, upon determining the state the courts of which hold jurisdiction in accordance with Regulation (EU) no. 650/2012, we will determine the *internal* jurisdiction, both in territorial, and substantive terms, in line with the rules of the domestic civil procedural law.

In the case of Romania, in respect of the territorial jurisdiction, the Civil Procedure Code stipulates, in Article 118 paragraph (1) that, in inheritance matters, pending the severance of joint ownership, the following shall fall under the exclusive jurisdiction of the court assigned to the last residence of the deceased: motions on the validity or enforceability of testamentary dispositions; motions on the estate and its encumbrances, as well as motions on any claims which one heir might raise against another; motions of the deceased's legatees or creditors against any of the heirs or against the executor of the will.

Furthermore, Article 118 paragraph (2) clarify that the motions concerning estates relating to several successively opened successions fall under the exclusive jurisdiction of the court assigned to the last residence of any of the deceased.

A. *Exclusive jurisdiction of the court assigned to the last residence of the deceased*

In accordance with Article 118 paragraph (1) of the Civil Procedure Code, the court of law assigned to the last residence of the deceased, pending the severance of joint ownership[14], holds exclusive jurisdiction to rule on:

a) motions on the validity or enforceability of testamentary dispositions, such as motions to invalidate or ascertain the validity of a will or motions for the enforcement of a will, when the validity of the latter is not challenged [e.g., the universal legatee requests forced heirs to take actual possession of the estate, in accordance with Article 1128 paragraph (1) of the Civil Code][15];

b) motions on the estate and its encumbrances, as well as motions on any claims which one heir might raise against another, such as the motion for cancellation of the heir certificate, motion for reduction of gifts in excess of the freely disposable portion of the estate, motions on the conservation or administration of assets during the status of shared ownership, motion for the cancellation or termination of a sale of inheritance rights, *the request for the sharing-out of the estate* (including when the estate consists of real estate assets), inheritance claim, as well as the motion or any other motions whereby the heirs raise claims against one another, however, only in so far as such claims relate to the estate[16] (for instance, the motion of warranty against eviction and hidden flaws, submitted by one of the heir against the other heirs, in accordance with Article 683 of the Civil Code, or the motion to set aside the sharing out, by mutual consent, in accordance with Article 684 of the Civil Code)];

c) motions of the legatees or creditors of the deceased (estate) against any of the heirs or against the executor of the will, such as the motion for delivery of a particular devisee, motions whereby the personal creditors of the deceased exercise rights deriving from agreements concluded with the latter, motions whereby the creditors of the estate raise claims in reliance upon a title subsequent to the opening of the succession (e.g.,

[14] Nevertheless, "the jurisdiction is vested to the court holding powers over the last residence of the deceased, even where the succession was settled and the assets specified in the heir certificate were distributed, however, the distribution of other inherited real estate is sought, for which an ownership deed was issued after the sharing out" – Romanian High Court of Cassation and Justice, Civil Section I, *Decision no. 212/2016*, available on http://www.scj.ro.

[15] Gabriel Boroi, Mirela Stancu, *Drept procesual civil* (Civil procedural law), fifth edition (Bucureşti: Hamangiu, 2020), 290.

[16] Ibidem.

requests for expenses relating to the deceased's burial or expenses required for the conservation and administration of assets forming part of the estate[17]);

d) motions concerning the cancellation of the heir certificate and for determining the rights of persons claiming infringement of their rights as a result of issuance of the heir certificate.

Mention is to be made that, in the following cases, the jurisdiction of the court is determined not in reliance upon Article 118 paragraph (1) of the Civil Procedure Code, but in accordance with the general rule[18]:

a) motions whereby heirs exercise rights collected from the succession against third parties, debtors of the deceased;

b) motions whereby heirs bring suit against a creditor of the estate (e.g., in order for the court to ascertain the statute of limitations in respect of the creditor's right to claim and be granted foreclosure for a debt, for the termination or rescission of an agreement concluded by it *de cuius*);

c) motion whereby the third-party plaintiff does not intend to exercise a right of receivable over the estate, such as filing a real estate motion against the heirs or the heirs claiming a real estate to be returned by a third party, who does not challenge their capacity as his heirs *de cuius*, fall under the jurisdiction of the court assigned to the location of the real estate;

d) motions submitted by creditors of the estate, when there is only one heir, because there is no joint ownership, shall be settled by the court having jurisdiction over the heir's domicile[19].

B. *Jurisdiction in the case of successive successions*

In accordance with Article 118 paragraph (2) of the Civil Procedure Code, where several successions are opened successively, the court having jurisdiction over the last residence of any of the deceased shall have exclusive jurisdiction to rule on motions concerning the estate. This provision only applies when the persons who died successively are heirs of one another[20].

The considerations above reveal that the request for the sharing-out of the estate, including when the estate consists of real estate, falls under the exclusive jurisdiction of the court assigned to the last residence of the deceased.

Where the last residence of the deceased is not located in the territory of Romania, which means that the court having jurisdiction to rule in the case cannot be identified, the request for the sharing-out of the estate shall be forwarded, in accordance with Article 1072 of the Civil Procedure Code, in observance of the rules governing the substantive jurisdiction, to the Local Court of 1st District of Bucharest, or to the Tribunal of Bucharest.

That is why it is still necessary to determine the *internal* jurisdiction, in substantive terms, in accordance with the rules of Romanian civil procedural law, both when the last residence of the deceased is located in the Romanian territory, and when *de cuius* could have his residence abroad.

4. Substantive jurisdiction of the Romanian Courts

Before the Civil Procedure Code was amended by means of Law no. 310/2018[21], in accordance with Article 94 section 1 letter j), local courts used to rule, as courts of first instance, on *motions for legal distribution, irrespective of the value* and irrespective of the nature of the sharing-out, therefore, including on the sharing-out of the estate. On the other side, Article 105 of the Civil Procedure Code (currently repealed) stipulated that, *in matters of succession, jurisdiction depending on value was determined without subtracting the encumbrances or debts relating to the estate*.

When the motion for sharing-out of the estate was accompanied by motions such as for ascertaining the opening of the succession, the capacity and shares to which the heirs were entitled or the composition of the estate, it was deemed that this was a *main single motion for sharing-out*, because such motions are inherent to any sharing-out of estates, and the competent court was the local court, in accordance with Article 123 paragraph (1)[22] and Article 94 section 1 letter j) of the Civil Procedure Code[23].

In respect of other motions concerning matters of succession, such as the inheritance claim, cancellation of heir certificates or reduction of gifts in excess of the freely disposable portion of the estate, the court having jurisdiction to settle the sharing-out motion was disputed.

[18] See G. Boroi, M. Stancu, *Drept procesual civil* (Civil procedural law), fifth edition, 290 et seq.

[19] Exception: motions concerning the enforcement of testamentary dispositions falling under the scope of the court having jurisdiction over the location where the succession was opened, when the sole heir is the universal legatee, and the testator appointed a third party as his executor. See G. Boroi, M. Stancu, *Drept procesual civil* (Civil procedural law), fifth edition, 291.

[20] M. Tăbârcă, *Drept procesual civil* (Civil procedural law), vol. I, 676. See also Romanian High Court of Cassation and Justice, Civil Section I, *Decision no. 212/2016*, aforesaid.

[21] *Law no. 310/2018* for amending and supplementing the Law no. 134/2010 on the Code of Civil Procedure, as well as for amending and supplementing other normative acts, published in the Official Gazette of Romania no. 1074 from 18 December 2018.

[22] Article 123 paragraph (1) of the Civil Procedure Code: Additional motions, ancillary motions, as well as incidental motions shall be settled by the court having jurisdiction over the underlying motion, even if substantive or territorial jurisdiction would lie with another court of law, save for the motions listed in Article 120.

[23] See G. Boroi, M. Stancu, *Drept procesual civil* (Civil procedural law), third edition, 205; Gheorghe Liviu Zidaru, *Competenţa instanţelor judecătoreşti în dreptul procesual civil român şi german* (The jurisdiction of the courts in Romanian and German civil procedural law) (Bucureşti: Universul Juridic, 2015), 342.

On the one hand, it was argued that, in cases of sharing-out of the estate, jurisdiction did not have to be split between the local court and the tribunal, "given that all motions […] concern, in the end, the sharing-out of the estate, will form a common part of it and will be tried before the local court, as first instance"[24].

On the other hand, save for the case where other motions in matters of succession were submitted on a subsidiary basis, during the proceedings for sharing out of the estate[25], it was deemed necessary, in each and every case, to determine the underlying claim, and, depending on it, to determine the rule of jurisdiction depending on which the substantive jurisdiction was to be decided[26].

Article I section 9 of Law no. 310/2018 added, in the Civil Procedure Code, in Article 94 section 1, after letter j), a new letter, j^1, reading as follows: "motions relating to matters of succession, irrespective of their value". In addition, Article I section 12 of Law no. 310/2018 repealed Article 105 of the Civil Procedure Code and, therefore, jurisdiction in matters of succession is no longer determined depending on the value, which means that the value of the object of such motions is no longer relevant in determining the substantive jurisdiction, and the motions relating to matters of succession fall under the jurisdiction of local courts, as first instance.

Consequently, as emphasized in the doctrine, at present, "motions for sharing-out of the estate fall under the substantive jurisdiction of local courts, irrespective of the value of the divisible property to be shared out and of whether it is submitted as underlying, ancillary or incidental motion, within another motion relating to matters of succession"[27]. If, in accordance with the law, other motions were also submitted in connection with the sharing-out of the estate and on the settlement of which depends the performance thereof, such as motions for the reduction of gifts in excess of the freely disposable portion of the estate, motions for the summary of donations to be included in the estate and others similar, in accordance with Article 985 paragraph (2) of the Civil Procedure Code, the local court shall further rule, in first instance, on such motions forming common part with the sharing-out of the estate[28].

Pursuant to an opinion expressed before the amendment of the Civil Procedure Code, "the thesis of predominant finality of the sharing-out of the estate cannot be adopted, irrespective of the particulars of each and every case, or of the nature of motions brought before the court"[29]. Thus, in light of the Civil Procedure Code, in the wording preceding the amendments enforced by Law no. 310/2018, in the case of motions not strictly connected with the legal relationships between presumptive heirs, but legal relationships also having as subjects parties not connected with the estate, as it happens in the case of motions concerning the ascertainment of absolute nullity of donation agreements concluded with third parties, such motion may not be construed as ancillary to the sharing-out of the estate, but a main claim in its own right, and therefore the criteria of value will be applied[30] in determining the court having substantive jurisdiction.

Since the ascertainment of the nullity of donations is aimed at replenishing the estate, and the motion for sharing-out of the estate falls under the substantive jurisdiction of the local court, whether it is submitted as an underlying claim or as an ancillary or incidental one, we believe that, at present, ascertainment of the absolute nullity of donation agreements concluded by *de cuius* with third parties will also fall under the jurisdiction of the local court, as first instance. Such motions will form common part with the sharing-out of the estate, as it also happens in the case of reduction of the gifts in excess of the freely disposable portion of the estate, or the quashing of donations, in so far as necessary for replenishing the forced heirship, all the more as reduction applies not only to donations benefiting heirs, but also to donations benefiting third parties to the estate.

5. Instead of a Conclusions

The interaction between elements such as the habitual residence of *de cuius* at the time of death, the choice-of-court agreement concluded by the heirs, the choice of law to be applied to the succession and the location of the assets forming part of the estate, leads to different results in terms of determining the Member State the courts of which have the power to rule on the succession as a whole, therefore, including in respect of the sharing-out of the estate. Thus, the fact that the deceased was a Romanian national or that he had chosen the Romanian law as the governing law or Romania as the venue where the assets forming part of the estate are located is not a guarantee of the fact that the Romanian courts will have jurisdiction, in accordance with Regulation (EU) no. 650/2012 to rule on the request for the sharing-out of the estate.

[30] In accordance with Article 94 section 1 letter k) of the Civil Procedure Code: Local courts rule […] on any other motions which may be measurable in money, amounting up to and including RON 200,000, irrespective of the parties' capacities, whether they are professionals or not.

Furthermore, although the regulation aims to ensure that the court of law ruling in connection with the sharing-out of the estate will enforce, in most of the cases, its own law, in practice, there will also be instances where the rules of procedural law will pertain to the legal system of one Member State which was party to the adoption of the Regulation, while the rules of substantive law will pertain to a third country.

As such, we may be faced with the situation where the Romanian courts, competent to rule on the sharing-out of the estate, will enforce rules of substantive law pertaining to another legal system, all the more as, in accordance with Article 23 paragraph (2) letter j) of Regulation (EU) no. 650/2012, the scope of the applicable law also encompasses the sharing-out of the estate.

HUMAN RIGHTS AND INHERITANCE LAW: A MIRRORED PERSPECTIVE

Aniela TICAU SUDITU*

Abstract

The enforcement of fundamental human rights in the spectrum of inheritance law has a lengthy history. From a modern perspective, we confront with a divergent dynamism: the inheritance law has a static dimension, being considered the traditional area of private law. On the other hand, the human rights are more dynamic, and urge to find themselves respected in all the areas of law.

The article unfolds from two perspectives: a syncretic, at a national level point of view and a diachronic, evolutionary one, at a supernational level, of the way the jurisprudence on human rights led towards the legislative changes. As part of the national civil law system, as an anchor in private law, inheritance law is ruled according to internal provisions, making harmonizing the law a challenging endeavor. Despite mutual socio-historical heritage and Roman law origins, there are plenty differences within the substantive succession laws of Member States. Due to the intra-community right to free movement, the patterns of life changed, both from the perspective of the European Union and from the Member States' point of view. As a corollary, transforming life also means shifting the mortis causa legal approach, mainly by considering the succession law.

The aim of this article is to examine the influence of human rights in the area of inheritance law, mainly in family law and property law, across different jurisdictions. Its structure will follow the paradigm of outlining the influence of fundamental human rights in contrast with the general principles of inheritance national laws. The article concludes by exploring the legislative impact and the limits that human rights have from the inheritance law perspective.

Keywords: *inheritance law, human rights, succession law, harmonization*.

1. Introduction

This article seeks to address an analytical overview of critical issues concerning the interpretation and application of fundamental rights, observing that the major impact of fundamental rights, from the private law perspective, is not on the legislation, but on the case-law. This happens as a consequence of interpreting fundamental rights in an appropriate manner in order to apply them to private law rules. In fact, by ricochet, the impact transfers towards the legislation in time, that has to encompass the updated case-law. Therefore, the legal literature points towards an indirect horizontal effect, noting that basic human rights have only a limited influence on inheritance law. As a consequence, it is brought forward the concept of '*subsidiarity in reasoning'*, by interpreting private law using fundamental rights principles and patterns, even though national private law has priority[1].

Inheritance rights are traditionally considered constitutional rights, as most states' constitutions guarantee a specific right of inheritance. Accordingly, there are some principles that encompass these rights. Throughout this paper, we will only discuss the most important ones. For example, the principle of equality, which entails that each natural person is equal in case of succession, with the same rules and conditions applying to all civil rapports. Also, it implies that men or women, legitimate and illegitimate children, as participants to civil relationships, must all be treated the same.

Initially, the rationale of asserting human rights involved vertical relationships. These rapports had the specific attributes that made the object of public law, thus regulating the relationship between the states and individuals by striving for the protection of individuals versus state interference in the area of fundamental rights. The objective is accomplished primarily by enforcing both negative and positive obligations for the states.

Subsequently, that rationale of asserting human rights is continuously expanded, merging in the process the area of private law. Due to the influence on horizontal relationships, this impacts the way that legislators establish and regulate these bonds between individuals.

2. Legal Sources of Human Rights

For a better approach, we will highlight the sources or instruments of human rights, on their different levels. At an international level, the human rights are defined and theoretically protected[2] by treaties, such as the *United Nations' Universal Declaration of Human Rights*, proclaimed by the *United Nations General Assembly* in Paris, in 1948[3].

* Judge, PhD Candidate, Bucharest University of Economic Studies (e-mail: aniela.suditu@yahoo.com).

[1] Verica Trstenjak, Petra Weingerl (eds.), *The Influence of Human Rights and Basic Rights in Private Law,* Ius Comparatum- Global Studies in Comparative Law, Springer, Switzerland, 2016, p. 9.

[2] It is only a theoretical protection due to the fact that the treaty is a non-binding legal instrument. As a consequence, there is no particular court, either at national or international level, that is bound to protect the human rights, as stated in the Treaty.

[3] Available at, https://www.un.org/en/about-us/universal-declaration-of-human-rights, accessed at 24.03.2021.

At a regional level, the instruments become more effective: the *European Convention on Human Rights*, formally the *Convention for the Protection of Human Rights and Fundamental Freedoms*[4] is recognized by the signing parties: member states and the Union itself. As a consequence, the *European Court of Human Rights* protects the human rights stated in the Convention. Another regional instrument is the *European Charter of Human Rights*[5], enacted in 2000. In addition to these instruments, general principles regarding human rights might be found in the *Treaty on the European Union*[6], *Treaty on the Functioning of the European Union*[7] and in the jurisprudence of the *Court of Justice of the European Union.*

Besides the instruments listed above, we also distinguish national-level instruments or sources, such as national constitutions and the rulings of constitutional courts or other national courts that impact by their jurisprudence not only the ruling of other courts, but also the legislative perspective. However, there is a constant dynamism regarding the interpretation of the concept of human rights, due both to social and economic progress. In this respect, the development of private law protection of human rights enables reducing discrimination by protecting weaker parties[8].

Enabling human rights provisions is in close connection with the harmonization or adaptation of Member States' legislations. The purpose of unifying inheritance law in the European Union led towards the enactment of *Regulation (EU) No 650/2012*[9] *and* the implementation of the *European Certificate of Succession*. The regulation was met with great confidence, as being a proof of institutional harmonization of succession law among the Member states of European Union, concurrently establishing a better integration within the European Union and its principles.

The ideal scenario for best implementing human rights, as they are provided for by the sources indicated, implies reducing the divergences of Member states' national regulation concerning inheritance law. This is best achieved by unifying the rules of conflicts of law, mainly involving technical aspects, such as the procedure of determining the variables of inheritance, like heirs, estate portions, reserved estate portions et alii.

In case of cross-border inheritance procedures, because of the different inheritance laws that might apply, the context increases the difficulty, generating concerns not only regarding the lack of legal uniformity, but also in relation with the legal incompatibility. Therefore, the exercise of harmonizing succession laws is welcomed at European level. Moreover, the tendency leans towards creating a common European succession law framework. In this regard, *Regulation No. 650/2012* represents a first step towards harmonization, addressing cross-border juridical matters in a dual manner, by observing both legal and jurisprudential features. Also, the *Regulation No. 650/2012* founds the *European Certificate of Succession* that scrutinizes succession related rights from the Member States.

The *Regulation*'s prime purpose from the European Union's standpoint was the removal of internal Member states' legal inheritance-related obstacles, as they were encountered while exerting the right to free movement of persons[10]. In other words, the *Regulation*'s aim involved the '*collision uniformity of the succession*', as a first step towards harmonization. This concept entails that the applicable inheritance law involves a single connector, and as a consequence, the estate can be entirely inherited under a single substantive national law. By contrast, in case of inheritance disputes that involve more connectors, such as nationality or category of assets, the determination of applicable law can lead towards *'collision divisibility of the succession'*, enabling the divergent jurisdiction of national substantive laws over distinct inheritance assets.

This purpose would be accomplished in a dual manner. Firstly, the *Regulation* was intended to support the procedures of recognition and enforcement at intranational level. Therefore, the judgments delivered by a Member State could be easily recognized by a different Member State, thus reducing the incidence of inheritance-related incoherent case-law and jurisdictional disagreements involving a cross-border element. Secondly, the *Regulation* provided for the *European Certificate of Succession*, thus enabling a prompt assessment of inheritance cases involving a cross-border element, without altering the Member states internal substantive succession legislation.

[9] *Regulation (EU) No 650/2012 of the European Parliament and of the Council of 4 July 2012 on jurisdiction, applicable law, recognition and enforcement of decisions and acceptance and enforcement of authentic instruments in matters of succession and on the creation of a European Certificate of Succession*, available at https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=CELEX%3A32012R0650, accessed at 24.03.2021.
[10] recital 9 of the *Regulation* provides that it applies to '*all civil law aspects of succession to the estate of a deceased person, namely all forms of transfer of assets, rights and obligations by reason of death, whether by way of a voluntary transfer under a disposition of property upon death or a transfer through intestate succession*.", available at https://eur-lex.europa.eu/legal-content/EN/ALL/?uri=CELEX%3A62016CJ0558, accessed at 24.03.2021.

One of the main features of the *Regulation* is the establishing as a general principle[11] the jurisdiction of the Member State where *de cuius* had the last *habitual residence*[12]. Therefore, the *habitual residence* at the time of death is a main connector that is provided by the *Regulation.* Nevertheless, the *Regulation* does not impose this connector unto its recipients. For example, *de cuius* can indicate the applicable law, and as a result, the choice of law is a connector itself.

Therefore, even though the *Regulation* could not be a silver bullet for the legal harmonization issue, delivered an efficient solution for the applicable legislation. In time, this process will eventually help reducing the legislative divergence by enabling the juridical communication among Member states and by decreasing the discrepancies and conflicts encountered in the process of applying the law, that led towards the above mentioned "*collision fragmentation of the estate"*[13].

3. The legislative impact of human rights in the inheritance law

The *European Court of Human Rights*, by its jurisprudence, recognized in an indirect manner the fundamental human rights, in this purpose presenting a synthesis of the constitutional laws and traditions established by the Member states. Likewise, The *Charter of Fundamental Rights* represents a significant landmark for the Union's legislation, because it represents a written bill of rights, whereas *European Convention on Human Rights* embodies an outward bill of rights, generating a possible blunder regarding the legislative origin or legal source of fundamental rights. However, most fundamental rights are not considered absolute rights, recognizing that they can be limited accordingly with the public interest and the principle of proportionality.[14]

Even though the *European Convention on Human Rights* has impacted just a few cases regarding inheritance issues, it remains an important instrument invoked by parties involved in an inheritance dispute. The main provisions that are raised in order to settle the disputes are articles 6, 8, 14 of the Convention and article 1 of Protocol No. 1. The principle of '*the right to enjoy a possession'* and its protection according to *European Convention of Human Rights*, has been an unsettled odyssey. Allegedly, this particular bill of rights is not very resourceful in the inheritance-related issues. This being said, we will examine inheritance-related rights recognized by the Convention. For example, the right to inheritance is considered, according to *European Convention of Human Rights*, a possession within the scope of Article 1 of Protocol No 1. The European Court established a judicial divergence between two type of rights: on one hand, a settled right, and on the other hand, an expectation of inheritance. In order to have a consistent perspective, we shall examine some of the relevant case-law[15] in the following pages.

As a parenthesis, the consequences of discrimination are plenty and deceptive. In some legislations around the globe, the discrimination is mirrored by the failure of enacting the principle of equality. In such countries, the right to own property is not guaranteed by law for women[16]. However, the right of every person to equality before the law and enjoy the right to own property or the right to inherit, is still an unattained purpose. For example, in a decision from Kenya,[17] regarding the inheritance of land, the Court observed the violation of article 1 of the *Convention on the Elimination of All Forms of Discrimination against Women.* In the cited case, because of the gendered-biased customary law, the daughters-heirs were entitled to a smaller portion of land than the sons-heirs, based expressly on their gender, thus infringing on basic human rights.

3.1. Property and inheritance as human rights

As stated in the legal literature, inheritance law '*deals with the passing on of property and rights and obligations, upon the death of an individual'*[18]. The legal research indicates that more than half a million legal cases encompass every year cross-border inheritances. Moreover, the percentage of cross-border inheritances amongst all the inheritance legal cases in the member states reaches the value of 10%[19]. It is a general rule that, at a European Union's level, the differences among the national inheritance laws generate insecurity and uncertainty, rendering the difficulty both for de cuius and for the heirs to

acknowledge their rights to leave and to receive inheritance in different countries[20]. Undoubtedly, this divergence of Member states' national regulation is an important obstacle in achieving real harmony in the area of human rights. In the following lines we will analyze the circumstances of forced heirship and disinheritance from a human rights standpoint.

Some Member States' legislations provide that one portion of the deceased's estate must be granted, to a class of heirs titled forced heirs. This provision is effective no matter the deceased's will and is applied both to donations and testaments. But even if the provisions are well established in the national legislations, they are, nevertheless, constraining the right to property. As a consequence, the deceased cannot freely dispose of the property, thus disregarding the right to protection of property, as stated in the *European Convention on Human Rights*, Article 1 of Protocol no. 1. From this perspective, the legal provisions on forced heirship interfere with the right to protection of property as stated in the *European Convention on Human Rights*, Article 1 of Protocol no. 1, although the institution itself theoretically pursues a legitimate purpose.

Another aspect is to distinguish if this particular interference is needed and appropriate in a democratic society and if the margin of appreciation, the way it is recognized to each Member State, is not distorted from its purpose. According to the margin of appreciation principle, member states have a certain autonomy regarding legislative policies related to controversial human rights, although guaranteed by the *European Convention on Human Rights.*

As stated by the legal provisions, part of the deceased's estate is granted de iure to the designated class of forced heirs. In order to achieve that, the legislator envisioned two portions of the estate: the non-reserved portion, of which de cuius can dispose of without restrictions, and the reserved portion, that entitles the reducing of both donations and wills that surpass the non-reserved portion; nevertheless, the reduction only operates after the death of *de cuius*, but the effects can retroactivate in the case of the donations.

As a principle, *de cuius* has the right to dispose *animus donandi* of his property. In order to do so, one can make donations during his or her lifetime, or a will, that has effect in devising the estate *post mortem*. From this point of view, the limitations concerning the right to decide the outcome of one's property, are in fact limitations of the right to property[21]. The rules concerning forced heirship are somehow disregarding the right to property as a fundamental human right, as stated in the *European Convention on Human Rights*, Article 1 of Protocol no. 1. In fact, Article 1 of Protocol no. 1 of the Convention, is applicable to more situations, that span from full enjoyment of possessions to control of the use of property and the guarantee of not being deprived of property.

Even though *de cuius* has the right to decide to do whatever he wants with the property during his or her lifetime, if the arrangements involve the reserved portion of the estate, they will be annulled. In other words, the right to inherit the reserved portion is shieled better than the right to protection of property, as stated in the *European Convention on Human Rights,* Article 1 of Protocol no. 1. As a consequence, it is obvious the interference with the aforementioned fundamental right.

From our point of view, the legal mechanism of forced heirship is not only obsolete, but also detrimental to the legal order. Moreover, it does not appear necessary for the society's wellbeing, enabling to believe that the legislator does not trust the law's recipients to make the right choices in protecting their family. Because of that, the legislator decides for the citizens, taking away a part of their freedom of choice by imposing limitations regarding the protection of property, but delivering a greater protection to heirs by imposing the forced heirship mechanism, thus carrying out a legitimate purpose.

Another important matter is the possibility or impossibility of disinheriting the successors by *de cuius.* The connection with the human rights issue resides in the blurry lines designating the recipient of this protection: the deceased's will or the designated heirs.

The deceased's choice of disinheriting an heir is stipulated distinctly across the member states legal systems. Besides the fact that some Member States lack entirely the provisions regarding disinheritance, the ones that provide a legal framework, also specify different legal treatments, both substantive and procedural. As a consequence, enabling a homogenous treatment as provided by the Regulation is not a realistic choice, considering that protecting the deceased's will over the protection of the designated heirs might not be applicable.

Nonetheless, due to the concept of margin of appreciation recognized to member states by the Convention, for the time being, a claim brought up to the *European Court of Human Rights* concerning the violation of Article 1 of Protocol no. 1 of the Convention, by the mechanism of forced heirship or disinheritance, will probably be dismissed by invoking the Member State's margin of appreciation doubled by the juridical consistency of the Member states' legislation[22].

For better understanding the essence of the protected right, we will cite the Court's caselaw,

[20] Mariusz Zatucki, "*Attempts to Harmonize the Inheritance Law in Europe: Past, Present, and Future*," Iowa Law Review 103, no. 5 (July 2018): 2317-2342.

[21] As stated in the case *Marckx v. Belgium*, application No. 6833/74, 1979, available at hudoc.echr.coe.int, accessed at 24.03.2021.

[22] Dimitris Liakopoulos, 'Interactions between European Court of Human Rights and Private International Law of European Union' (2018) 10(1) Cuadernos de Derecho Transnacional 248.

pointing out the provisions taken into consideration for the protection of fundamental human rights.

In the case *Slivenko v Latvia*[23], the court stated that the Article 1 of Protocol No. 1 can be applied when the protection of the right to peacefully enjoy a possession deals with already existing possessions, not future or potential possessions. Therefore, the Convention does not provide any assurances related to the right to attain possessions. However, the Convention does provide a certain protection when the circumstances indicate a legitimate expectation of enjoying a possession.

Following the same rationale, in *Saghindaze and others v Georgia*,[24], the Court stated that the notion of 'possession' envisioned by art.1 of Protocol No.1, is an autonomous concept, surpassing the limitations of physical goods, including rights, interests, and even claims, as long as they are under the '*legitimate expectation'* umbrella.

Likewise, in *Fabris v France*[25], the Court stated that even though Article 1 of Protocol No. 1 of the Convention does not provide assurances related to the right to attain possessions, they do offer a certain protection when the circumstances indicate a legitimate expectation, as well as claims based on a legitimate expectation[26] of enjoying a possession. Also, the court stated that the autonomous concept of 'p*ossession*' might also encompass an advantage as a consequence of discriminatory provisions or circumstances.

The case unfolds as it follows: Mr. Fabris, a French citizen, was considered an illegitimate child, given the fact that he was '*born of adultery'*. As a consequence, he was entitled to only a half of the share a legitimate child would receive. Later on, France passed amendments to the obsolete legislation from 1972, that was deemed discriminatory, and as a consequence, illegitimate children were granted the same inheritance rights like legitimate children. However, the amendments did not have retrospective effect, and Mr. Fabris was only entitled to half of his legitimate brothers' inheritance shares, being considered illegitimate.

The Court solved the cause by applying Article 1 of Protocol No. 1 of the Convention, that provided: '*Every natural or legal person is entitled to peaceful enjoyment of his possessions. No one shall be deprived of his possessions except in the public interest and subject to the conditions provided for by law and by the general principles of international law*.' and article 14 of the Convention, that provided the '*enjoyment of the rights and freedoms set forth in Convention shall be secured without discrimination on any ground such as (…) birth'*. In this context, it was underlined the principle of equality, as a human right, and its impact on the right to inherit, and as a consequence, on the right to peacefully enjoy property.

Another interesting case is represented by *Re Land*[27], in which the claimant, the sole beneficiary under his mother's will, had been found guilty for her death by manslaughter, and as a consequence was applicable the forfeiture rule. The court interpreted the right to inherit as a right to enjoy a possession by itself, according to Article 1 of Protocol No 1 of the Convention. Therefore, it is expected of the national courts to give effect to primary legislation by considering the human rights enshrined in the Convention.

3.2. Family life: children rights and different types of union

Until recently, inheritance laws that violated the rights of the children considered illegitimate were not regarded as discriminatory. There is a certain concern at European level that substantive family law continues to remain in the exclusive competence of Member states, interim enabling European institutions to take measures concerning family law with cross-border implications.

It is an undeniable fact that the main interest of children is to have legal provision that would protect them. The lack of legislation to address the most important rapports regarding the rights and obligations that are particular to family life can be extremely harmful for children, regardless of the rationale that was counted for the lack of legislative protection, such as the parents gender identity, ethnicity or sexual orientation[28].

The *European Court of Human Rights* handed down an ample case-law that acknowledged the violation of article 14 of the *Convention* where children '*born of adultery'* and as a consequence considered illegitimate, were denied the right to inherit an equal share of their parent's estate, due to the national legislations.

In *Marckx v Belgium*[29], the Court stated that its provisions, namely Article 1, Protocol No. 1, expresses the protection of the right to peacefully enjoy one's possessions. As a result, it applies only to existing possessions without guaranteeing the right of mortis

causa acquiring possessions, that is only a potential right. Also, in the same case the Court stated not only that the concept of '*family life'* is an autonomous one, but that one cannot make any proper difference in the human rights area between the legal status of a family: legitimate or illegitimate. The legal reason points towards article 8 of the Convention, that uses the word '*Everyone*'[30], in relation with the law's beneficiaries. As a paradigm, the Court stated that the right of succession between children and parents, and in general between ascendants and descendants, is closely linked to *'family life'.*

In *Paradiso and Campanelli v Italy*[31], the concept of '*family life'* is recognized in relation with the presence of close personal ties, the latter being a sine qua non condition for the acknowledgment of '*family life'*. Moreover, the concept is considered lato sensu, encompassing not only immaterial and non-patrimonial relationships, such as social, cultural or emotional bonds, but also patrimonial and pecuniary relationships, for instance child and spousal support, joint use of property or even the right to inherit property among the individuals of a family, that may have the legal basis of the institution of the forced heirship or the right to a reserved portion of an estate. The same issues were taken into consideration by the Court in the cases *Munioz Diaz v. Spain*[32], *Kroon and Others v. the Netherlands*[33].

Analogously to the circumstances of illegitimate children, the Court noticed human rights violations in the case of adopted children. For instance, in the cases *Hand v George*[34] or *Pla and Puncernau v Andorra*[35], the Court restated its position towards the right of adopted children to be considered equal to natural children, concluding that discriminating against them would violate the provisions of articles 8 and 14 of the Convention. The Court admitted that even though it is not vested to settle disputes of private nature, it cannot remain passive in case of infringement on the prohibition of discrimination, provided by article 8, 14 and the principles underlying the *European Convention on Human rights*, such as the right to respect for private and family life.

The problem of unequal treatment of adopted children or born out of wedlock is amplified by the sexual orientation discrimination that impacts the right to succeed. This is mainly because an important number of Member states do not recognize same-sex marriages and do not provide extra-marital partners the same inheritance rights as provided to spouses.

An unequal development at European level of family law and inheritance law generates many family relationships disputes. These are mostly caused by the fact that these relationships are legally recognized only in some countries. For example, same-sex couples, married in gender-neutral marriage legislations, fear that they would be deprived of their inherent rights as a consequence of the contradictory legal framework. In this respect, the Court paved the way by its case-law, towards the endorsement and the acquiescence of this highly debated human rights.

The cases did not specifically address the issue of substantial marriage validity. However, interpreting the European Court's case-law, renders that the internal recognition of a same-sex marriage, requested for a precise purpose, does not pose the peril of violating the public national order, albeit one of the spouses is a citizen of that Member state. Also, the case-law projected an emerging European public order that provides its own conformity agenda.[36]

The case *Coman and others v Romania*[37] involved a same-sex married couple, with spouses of different nationalities. One spouse was a Romanian national, hence a European Union citizen. According to the European Union legislation, the European Union citizens have the right to move freely, together with their family members. In the Coman v Romania case, the spouse that was not an European Union citizen was not allowed to move freely, as a consequence of applying the principles of national identity and public order, Romania being one of the member states that do not recognize same-sex marriages. As a result, the legislation fails to offer the legal protection implied traditionally by family rights, both for the spouses, and for the eventual children, such as inheritance rights. Although the case was decided solely in relation to the requirement of recognizing the right to move freely as distinct, autonomous right of the national identity principle, the case could also entail the patrimonial aspects of the family rights, such as inheritance rights.

---

[30] Article 8 of the Convention states: '1. *Everyone has the right to respect for his private and family life, his home and his correspondence. 2. There shall be no interference by a public authority with the exercise of this right except such as is in accordance with the law and is necessary in a democratic society in the interests of national security, public safety or the economic well-being of the country, for the prevention of disorder or crime, for the protection of health or morals, or for the protection of the rights and freedoms of others.*'.

[37] Case C-673/16, *Coman and Others v Romania*, 2018 (Grand Chamber), available at https://curia.europa.eu/juris/document/document.jsf?text=&docid=202542&doclang=EN, accessed at 24.03.2021.

Likewise, the case *Orlandi and others v Italy*[38] involved more same-sex married couples that were denied family rights by the Italian authorities, on the basis that such unions cannot be recognized by registering into the civil records office, despite the fact that they are legally concluded in a different state, because the national law only provided rules for the traditional families. The Court stated that Italy disregarded fundamental human rights as they are enshrined in article 8 of the *European Convention on Human Rights*.

Despite the fact the Court stated that Member States have the freedom of constraining access to marriage for same-sex couples, having a wide margin of appreciation in this respect, most domestic cases are decided by invoking the principle of public order, that blocks the application of legal provisions and instruments that seem discordant with the national legislation.

For some member states, the concept of marriage is enshrined in the Constitution, as a traditional, different-sex union. As a consequence, an eventual registration or transcription of same-sex parenthood or marriage, might be considered as disregarding the public order. Such Member States do not provide legal protection of same-sex couples family rights, or state same-sex marriages exclusion, defining the legal union only from a heterosexual perspective[39].

The difficulty lays within the outcome of the substantial legitimacy of the legal status of same-sex couples whether they need the legal recognition of their *status quo* in a country that does not give legal effect to such unions, nor recognize as legitimate the children of such spouses. For example, in an internal decision of one Member state[40], the court had to decide the outcome of the legal status of a child whose parents were of the same sex. The object of the case was the transcription of the child's birth certificate in conformity with a legal birth certificate from Great Britain. The court considered the child's best interest and the principle of equality and non-discrimination in order to issue a decision. Also, the court acknowledged the fact that the child' s rights could only be protected by recognizing the legal status in relation with his family.

However, besides the direct application of some European Union' Regulations, the optimum manner of providing certain effects of same-sex marriages in the Member States that would not legally recognize these types of unions, implies the acknowledgment, and as a consequence, the recognition, of the case-law provided by the *European Court of Human Rights.*

4. Conclusions

Analyzing the jurisprudence of the *European Court of Human Rights* is one way of understanding the impact of fundamental rights in this specific area of private international law, namely the succession law. In this respect, it is a critical role the was taken up by the *European Court of Human Rights* from the perspective of protecting fundamental rights as a top priority.

Moreover, the development of implementing uniform rules by the European Union, aims towards the methodical elimination of the legal boundaries between the Member States, hence providing superior protection to fundamental rights in comparison to the one provided by the national legislation. Among the effects of implementing human rights in national legislations, one can identify the decreased impact of national public order, on one hand, and the augmented role of the European Union's public order, on the other hand, and, as a consequence, improved legal certainty and predictability for the legal issues that are bound to arise in the context of human rights protection.

Inheritance law harmonization finds itself at the stage of work in progress. A modern Europe cannot and should not withdraw from this project. Obviously, the policy of small steps applies best in this scenario. Therefore, doctrinal harmonization through comparative studies of legislation and case-law dynamics is a first necessary step, leading towards the so-called "*spontaneous harmonization"*[41]. Once achieved this stage, it enables the synchronization at the European institutional level.

Rendering human rights reasonable entails finding the accurate balance amongst different types of protection. Mutually conflicting human rights are frequently debated. For example, the forced heir's right to a portion of the estate might infringe the testator's right to dispose mortis causa of the property, according to the personal will; the debtor's right to a home might infringe the buyer's right to property, the child's right to protection might impact the public order of the Member state that would not provide legal effects for the same-sex marriage of the child's parents, and so on.

In the judgments referred to above, the European Court focused on basic principles like the right to inherit as a fundamental element of family life. Although there is a divergent application and lack of

harmonization between private international law and basic human rights, in time, due to the continuously expanding case-law of the European supranational courts, the Member States' legislation will surely find the proper balance, adjusting the legal provisions in order to comply with the supranational legislation concerning human rights

CERTAIN ASPECTS REGARDING THE PARTIES' AGREEMENT IN CIVIL PROCEDURE

Nicolae-Horia ȚIȚ [*]

Abstract

The article examines how the agreement of the parties' may be relevant at various stages of the procedure, during the civil process. The provisions of the Romanian Code of Civil Procedure are analyzed in relation to the Model European Rules of Civil Procedure developed by the European Law Institute and UNIDROIT. Specifically, two situations in which the agreement of the parties takes effect in the procedural plan are herein being analyzed: (i) the establishment of the legal qualification concerning the acts and facts brought before in court and (ii) the agreement that may intervene in connection with certain aspects of evidence (their request after the deadline provided by the law, the conventions on evidence). The relationship between the principle of the judge's role in finding the truth and the principle of availability is being examined. The limits within which the parties may dispose by way of their agreement in the analyzed situations and the way in which the judge must relate to this manifestation of the principle of availability are also being further examined. The analysis intends to highlight the components of these principles and the development of a concept which targets the cooperation of the parties during the civil process is being proposed, highlighting the role of lawyers in identifying and applying appropriate procedural means for the court to resolve the matters that concern, in fact, the dispute between the parties.

Keywords*: civil procedure, agreement, parties, legal characterization, evidence, judicial remedies*.

1. Introduction

The unfolding of the civil process is marked by an intertwinement of the principle of availability with that of the role of the judge in finding the truth. Article 9 C. pr. civ., under its marginal name „the disposition right of the parties" regulates several facets concerning availability in civil proceedings, starting with bringing an action before the court, continuing with establishing the object and limits of the process and ending with the inventory of "classic" procedural acts: waiving the judgment of the summons, the waiver of the alleged claim, the recognition of the claims made by the opposing party, the court settlement, the adherence to the court decision (waiver of the right to appeal), the waiver of the court decision's execution[1]. In addition to these ways of disposing by the initiation, continuation, completion of the process, respectively the execution of the court decision, art. 9 para. (3) final thesis C. pr. civ. provides that the parties may dispose of their rights „in any other manner permitted by law"; this provision implies, on the one hand, that the will of the parties may yield various effects during the civil proceedings, throughout various stages of the procedure, and on the other hand, that they may occur only to the extent that there are legal provisions allowing the parties to dispose in respect to certain procedural institutions.

The rule established by art. 9 C. pr. must be interpreted in relation to the provisions of art. 22 C. pr. civ., which regulates the principle of the judge's role in the civil process. It should be noted that its marginal name no longer uses the established phrase „active role", this being preserved, in the current legislation, only regarding the bailiff (art. 627 of the C. pr. civ.)[2]. However, this option concerning the marginal designation must not lead to the conclusion of a reduction in the judge's prerogatives during a trial; by analyzing the provisions of art. 22, especially of par. (2), (3) and (4), it follows that the judge has numerous prerogatives enabling him to examine the case in all respects, including putting before the parties for debate factual and legal matters that are not covered by their summons or statements of defense, adducing the evidence necessary to fully clarify the factual situation and to establish or, as the case may be, to restore the legal qualification of the acts and facts brought before the court. The role of the judge in finding out the truth is combined, in principle, with the availability of the parties, because the court is bound by the procedural framework established by them, the judge being required to rule on everything that is therein requested, without exceeding the investment limits expressly provided by the law [art. 22 para. (6) and art. 397 para. (1) C. pr. civ.]. The procedural framework established before the first court will be kept, of course, before the appellate court, compared to the limits of its devolution effect established by art. 478 para. (1) and (3) C. pr. civ.

The role of the judge can also be manifested through the steps taken by him to settle the dispute amicably, the court being able, for this purpose, to order the personal appearance of the parties, under the conditions of art. 227 para. (1) C. pr. civ. This prerogative of the court is also mentioned in Rule 10

(1) of the Model European Rules of Civil Procedure[3]. Although the Romanian legislator has established this prerogative of the judge, it is not seconded by a regulation of an obligation for the parties to try to resolve the dispute amicably[4] or aiming at the role of the parties in this matter. The provisions of art. 10 C. pr. civ., that regulate the procedural obligations of the parties, refer only to the general obligation to contribute „to the smooth conduct of the process, thus seeking its completion", which does not necessarily imply the obligation to try the amicable settlement of the dispute or accessing certain procedural means in this regard.

The Model European Rules of Civil Procedure[5] contains provisions that shape, on the one hand, the principle of cooperation between the parties in the amicable settlement of the dispute, and, on the other hand, the role that they and their lawyers play in this regard. Rule 9 provides, in this regard, in the first paragraph that „parties must co-operate, in seeking to resolve their disputes consensually, both before and after proceedings begin". The cooperation of the parties is therefore seen as a procedural obligation between them, which can be transposed both in setting up a way to settle the dispute amicably and in reaching an agreement on various aspects of the procedure. In this regard, Rule 9 (4) provides that „when a consensual settlement as a whole cannot be reached, parties must take all reasonable opportunities to reduce the number of contested issues prior to adjudication". The role of the will of the parties is therefore important throughout the entire proceedings, as the parties may, through their cooperation, set up small transactions as to remove certain issues relating to the resolution of the case from the jurisdiction of the judge; In this way, the judge's attention can be focused on the issues that remain in dispute and the length of the proceedings can be significantly reduced.

Rule 9 (2) mentions the obligation of the parties' lawyers to identify possible alternative methods of resolving the dispute and to inform and encourage the parties about them, as well as to use these methods, when they are binding[6]. Rule 10 (2) also requires the court to inform the parties „about the availability of different types of settlement methods" and to recommend them „the use of specific consensual dispute resolution methods".

Starting from the Rule 9 (4) of the European Model Rules of Civil Procedure, which stipulates the obligation of the parties to reduce the issues to be resolved by the judge by their agreement of will, using in this respect all available procedural means, we will further analyze two procedural institutions which were novel elements at the time of the adoption of the current Code of Civil Procedure and which configure the role of the parties' agreement, displayed prior or during the judicial procedure, in relation to certain aspects of the trial: (**i**) the possibility conferred by art. 22 para. (5) for the parties to establish, by express agreement of will, the legal qualification and the legal reasons that the court shall consider when resolving the case; (**ii**) the role of the parties' agreement in the matter of evidence, respectively the possibility for the parties to agree on waiving the fulfillment of the limitation period stipulated for the right to propose evidence for one of the parties [art. 254 para. (2) § 5 C. pr. civ.] and the possibility to conclude a convention on the admissibility, object, or burden of proof (conventions on evidence - art. 256 C. pr. civ.).

2. The parties' agreement on the legal qualification of the acts and facts brought before the court

The regulation dedicated to the role of the judge in finding the truth in the civil process includes an important rule according to which the manner this principle operates is configured; representing a consecration of the Latin adage "*da mihi factum, dabo tibi ius*", the rule established by art. 22 para. (4) C. pr. civ. provides that the judge has the obligation to give or to restore, as the case may be, the qualification of the acts and facts brought to the court. This prerogative of the judge must be exercised by reference to the guarantees provided by art. 14 C. pr. civ. regarding the finding of the truth and it is applicable regardless of whether or not the parties have given a legal qualification to the factual situation described in their requests[7].

[3] These provide that „The court must facilitate settlement at any stage of the proceedings. Particularly, it must ensure that the parties consider settlement in the preparatory stage of proceedings and at case management conferences. If necessary, for furthering the settlement process, it may order the parties to appear before it in person."

[4] The Romanian law provides for relatively few situations in which the parties must initiate, prior to bringing an action before the court, a preliminary procedure meant to facilitate a possible amicable settlement of the dispute. Such a situation is provided by art. 1015 C. pr. civ., in the matter of the payment order. Also, according to art. 60^1 of Law no. 192/2006 on mediation and the organization of the mediator profession, there are a number of matters in which proof of participation in an information hearing on the benefits of mediation must be provided, but the lack of such evidence cannot lead to the rejection of the action as inadmissible.

[5] Model European Rules of Civil Procedure were produced by the European Law Institute and Unidroit and may be consulted on https://www.unidroit.org/instruments/civil-procedure/eli-unidroit-rules (accessed on 20.03.2021).

[6] In Romanian legislation, according to art. 2 para. (1^3) of Law no. 192/2006 on mediation and the advantages of mediation, „the information procedure on the advantages of mediation may be performed by the judge, prosecutor, legal counsel, lawyer, notary, in which case it is attested in writing".

[7] Even if the plaintiff has the obligation to indicate within the writ of summons both the factual and the legal reasons, according to art. 194 lit. d) C. pr. civ., only the factual reasons constitute a mandatory element of the summons, provided by law under the sanction of nullity [art. 196 para. (1) C. pr. civ.], and in the procedure of regularization of the summons, it can be annulled solely for lacking the factual reasons, according to art. 200 para. (4) C. pr. civ., as amended by Law no. 310/2018. See, for details, N.-H. Țiț, R. Staciu, Legea 310/2018 pentru

The parties are required to state the factual grounds of their writ of summons, thereby setting out the cause of action brought before the court, and to prove the factual aspects to which they refer in support of their claims or defenses; also, the parties may propose a legal qualification of the acts and facts deduced to the court, of which, however, the court is not bound, the judge being the one who must establish the legal qualification, after putting it in the contradictory debate of the parties.

The provisions of art. 22 para. (5) C. pr. civ. establish an important derogation from this rule, allowing the parties, by express agreement of will, to impose on the judge a certain legal qualification, insofar as the dispute concerns rights that the parties may dispose of and if by this manner the rights or legitimate interests of third parties are not being infringed. These legal provisions represent a premiere in the Romanian legislative landscape, configuring a balance between the parties' right of disposition and the principle of the judge's role in finding the truth. The parties have the right to settle on the legal qualification of the acts and facts brought before the court, within the limits provided by law, the judge being compelled to resolve the dispute starting from such qualification, that he cannot amend.

The provision of the law uses the phrase „limitation of debates", which means that the express agreement of the parties in this regard has the effect of removing from the legal debates the legal issues on which they have expressly agreed upon, the purpose of such an agreement being to give within the jurisdiction of the judge exclusively those matters on which there is a conflict between the parties. For example, the parties may agree upon the legal nature of the act concluded between them but may disagree as to the execution of the obligations falling within the content of the legal relationship arising from such act; the parties may expressly agree on the legal nature of a condition, the dispute concerning whether or not such condition was fulfilled. Concluding an agreement by which the legal qualification of the acts and facts brought before the court is established has important implications regarding the development of the procedure. Compared to Rule (4) of the Model European Rules of Civil Procedure, the parties reduce the litigious issues that the judge has to resolve, which is likely to streamline the judicial activity and significantly reduce its duration. Specifically, Rule 26 (4) provides that „where parties are free to dispose of their rights, they may agree on the legal basis of the claim or on specific issues in the claim". Accordingly, the Romanian Code of Civil Procedure stipulates that the parties' agreement may concern the legal grounds of the request or the legal qualification of a certain factual aspect, matters which, once agreed by the parties, will no longer be the subject of judicial debates and, therefore, they will be found in the motivation of the decision as such.

This manifestation of procedural availability is allowed by law only if the parties' agreement of will concern rights that they may dispose of, aspect that is retained both by the provisions of art. 22 para. (5) C. pr. civ., as well as by Rule 26 (3). Romanian civil procedural law also knows, in addition to this limitation, the one related to the protection of the rights or legitimate interests of third parties, a limitation that neither the French procedural law nor the European Model Rules of Civil Procedure mention. The court to which such an agreement of will is presented must therefore examine, first of all, whether the subject-matter of the agreement concerns rights that the parties may dispose of, which implies that the judge is well acquainted with the elements of the legal relationship brought before the court, having as starting point the factual situation described by the parties in their requests; secondly, the judge must assess the potential effects that the settlement of the case made on the basis of the legal qualification given by the parties through their agreement of will could have on the rights or interests of third parties, related to the opposability of the court decision, under art. 435 para. (2) C. pr. civ. The role of the judge is, in this situation, oriented not to identify the correct legal qualification, but to verify the effects that the decision he would pronounce according to the legal qualification established by the agreement of the parties would have throughout the civil circuit. This position of the judge is a unique one in the Romanian civil procedural law, as the Romanian judge is being called not only to settle the actual dispute between the parties, but also to evaluate the consequences that the solution he would pronounce could generate in relation to the rights and the interests of others. The judge must therefore ask himself and assess whether the manner in which the parties agree to settle on the legal qualification of the acts and facts brought before the court is prone to have an indirect effect on a third party.

Article 22 para. (5) C. pr. civ. inflicts an express agreement of will in connection with the prerogative of the parties to establish the legal qualification of the acts and facts deduced in court; therefore, the mere non-challenge by the opposing party of a legal qualification cannot lead the court to the conclusion of the existence of such agreement and cannot exclude the judge's prerogative to put for debate a potential requalification. The manifestation of the parties' will must be clear and unequivocal, as expressing their agreement will not only give a certain legal qualification to a factual aspect present in the case, but also will impose that qualification on the judge. Being a regulation by way of exception [the rule is represented by the prerogative of the court in the sense of giving or restoring the legal qualification of the acts and facts brought to the court,

modificarea și completarea Legii nr. 134/2010 privind Codul de procedura, comentarii, explicații, jurisprudență relevantă, Hamangiu Publishing House, Bucharest, 2019, pp. 48-49.

according to art. 22 para. (4) C. pr. civ], it must be interpreted restrictively, and the judge must ensure that the express agreement of the parties exists and that their intention is to exclude a certain qualification from the debates. This is all the more so as the Romanian civil procedural law has not established a specific procedural vehicle, as is the joint application provided by Rule 57 of the European Model Rules of Civil Procedure[8].

The regulation of such a procedural means would have facilitated the application of the provisions consisting in art. 22 para. (5) C. pr. civ., all the more so as it is also present in the French legislation, at art. 57 of the Code of Civil Procedure (la requête conjointe). We consider that, *de lege ferenda*, an express regulation is required in this respect, as the submission of the joint request is likely to facilitate the establishment by the judge of the limits of the trial. Such request would clearly identify the issues upon which there is an agreement of the parties and the ones being disputed, the judge thus knowing, as of the time of his investiture, that the parties had concluded an agreement on the legal qualification.

3. The agreement of the parties in the matter of evidence

Another procedural institution in respect of which the agreement of the parties may have legal effects is that of evidence. In connection to this, we note that the parties may agree on two categories of issues: (**i**) waiving the fulfillment of the limitation period triggered as a result of exceeding the procedural moment until which evidence can be requested [art. 254 para. (2) § 5 C. pr. civ.] and (**ii**) the conventions on the admissibility, object, or burden of proof [art. 256 C. pr. civ.].

The first situation concerns a rule of an exclusively procedural nature, referring to the trial phase in which the means of proof can be proposed. The rule in this matter is that the evidence must be requested, under the sanction of extinguishment of such right, through the writ of summons or statement of defense [art. 254 para. (1) C. pr. civ.], thus in an early stage of the procedure, more precisely in the written phase. However, the extinguishment of the right does not operate if there is an express agreement of all parties regarding the proposal of the evidence during the judicial inquiry or even during the debates phase of the trial, according to art. 254 para. (2) § 5 C. pr. civ[9]. Such a manifestation of procedural availability concerns exclusively the moment when the evidence may be proposed, and not its admissibility; in other words, if an express agreement of will is conveyed pursuant to art. 254 para. (2) § 5 C. pr. civ., this will not automatically lead to the administration of the evidence, the court being still required to assess its admissibility, by reference to both the provisions of art. 255 para. (1) C. pr. civ. and the conditions of admissibility provided by law, as the case may be. The agreement of the parties removes, in this case, only the procedural sanction of extinguishment, without having consequences in the field of admissibility of evidence.

The second situation subject to analysis is that of concluding a convention on the admissibility, object, or burden of proof (art. 256 C. pr. civ.). In this situation, the agreement of the parties concerns issues with direct implications on the merits, as it implies a derogation from the rules prescribed by the legislator in this matter. Although the provisions of art. 256 C. pr. civ. Have no mention in this regard, we consider that the agreement of the parties must be an express one, as the mere silence of the opposing party cannot be deemed as enough to establish that such party agrees, for example, with the administration of a piece of evidence that the law does not permit[10]. For the situations in which the legislator intended for a tacit agreement to produce effects on the admissibility of the evidence, it expressly stated as such; this is the case, for example, in art. 309 para. (4) § 4 C. pr. civ., regarding the admissibility of the evidence with witnesses, if the reason for using such evidence is to prove the existence of a legal act for which the law requires the written form *ad probationem*, provided the agreement of the parties concerns rights they may dispose of.

The agreement of the parties may concern only the matters relating to the admissibility of the evidence, its subject-matter and the burden of proof; therefore, it is not allowed to derogate from the rules provided by law regarding evidence-taking, even if there is an agreement of the parties in this respect[11]. The potential cases in which the parties may derogate by their agreement of will from the rules concerning evidence-taking are expressly provided for by law and, therefore, are of strict interpretation; this is the case, for example, in art. 315 para. (2) C. pr. civ., regarding the express or tacit agreement of the parties to call as witnesses the persons indicated in art. 315 para. (1) § 1-3 C. pr. civ. An agreement of the parties expressed in other situations regarding evidence-taking may not produce legal effects; for example, a convention of the parties for the purpose of calling as a witness a person placed

[8] Rule 57 (1) provides that „a joint application is a statemen of claim in which parties jointly may submit to the court their agreement according to Rule 26, their respective claims and defenses, the issues on which they disagree, and which are to be determined by the court, and their respective arguments on those disputed issues".

[9] In respect to this regulation, it has been correctly stated in the doctrine that the limitation period for the right to propose evidence is a mixed one, its establishment being aimed to ensure swiftness of procedures and to impose procedural discipline on the parties, as well as to protect their private interest, which makes it possible to waive the effects of the extinguishment term by the parties express consent (see Gh.-L. Zidaru, P. Pop, *Drept procesual civil. Procedura în fața primei instanțe și în căile de atac*, Solomon Publishing House, Bucharest, 2020, pp. 161-162.

[10] V. Dănăilă, *Comentariu sub art. 256 C. pr. civ*., in G. Boroi (coord.), *Noul Cod de procedură civilă. Comentariu pe articole. Vol. I. Art. 1-455*, Hamangiu Publishing House, Bucharest, 2016, p. 681.

[11] See M. Fodor, *Comentariu sub art. 256 C. pr. civ*., in V. M. Ciobanu, M. Nicolae, *op. cit.*, pp. 869-870.

under court interdiction or who has previously been convicted of perjury, or an agreement concerning the taking of witnesses evidence before the appellate court. Also, an agreement regarding the probative force of the evidence is not admissible; for example, the parties could not agree that a commencement written proof should be given the probative force of a document under private signature.

Conventions regarding evidence should not be confused with the situation in which, in assessing the admissibility of evidence and its usefulness, the court considers that a fact is uncontested and no longer needs to be established. In case the parties conclude conventions on evidence, they shall enter into an express agreement by way of derogation from a certain aspect relating to the admissibility, object or burden of proof, following which the evidence will be taken and the court shall assess it, with a view to settle the merits of the cause. In the event of uncontested facts, the judge is the one who considers, in relation to the circumstances of the case, that a means of proof should no longer be taken, for the reason that the evidentiary fact claimed by one of the parties has not been challenged by the opposing party.

Article 256 C. pr. establishes three categories of limitations regarding the right of the parties to conclude a convention on evidence. The first one concerns the nature of the rights that fall within the content of the legal relationship brought to the court, respectively that the parties can dispose of such rights. This type of constraint, encountered also, in art. 22 para. (5) C. pr. civ., as showed above, takes into account the extension of the dispositive nature of the rules governing the legal relationship between the parties on certain procedural rules or which would have procedural implications, in case such legal relationship becomes litigious. The second type of limitation concerns the situations in which the conventions on evidence would restrict or even eliminate the possibility of proving legal acts and facts; the court may disregard such a convention and allow the evidence which, in the absence of an agreement of the parties, would have been admissible, if such agreement would have restricted or even eliminated the possibility of a party to prove an alleged fact. Finally, the third limitation concerns a general condition of any agreement, namely, to not contravene public order or morals; for example, a convention by which the parties establish that it is permitted to administer a material means of proof which had been obtained in breach of the law or of good morals could not produce legal effects in procedural terms [art. 341 para. (2) C. pr. civ.].

Therefore, the agreement of the parties may have effect in the realm of evidence in what concerns their proposal, by removing the extinguishment of rights that would occur if the evidence would not be requested through the writ of summons or the statement of defense, respectively on the admissibility, object or the burden of proof, by concluding a convention on these matters relating to evidence, before or during the trial. These manifestations of procedural availability may have important effects on the solution to be pronounced by the judge; however, the conclusion of such an agreement does not eliminate the active role of the court, the judge being able to order *ex officio* the taking of additional evidence, under the conditions of art. 254 para. (5) C. pr. civ., in order to establish the relevant factual elements in question, by way of an exact and thorough manner.

4. Conclusions

The provisions of the Code of Civil Procedure provide the possibility for the parties to conclude agreements on various aspects of the procedure, thus setting up a side of the principle of availability which allows the parties, even if they are in dispute on certain issues, to resort to conventions before or during the trial, allowing them to remove from the jurisdiction of the court matters on which there is no disagreement and to entrust the judge with the task of pronouncing a solution solely in relation to the disputed matters. The Model European Rules of Civil Procedure provide in Rule 9 (4) that in the event a transaction which does not resolve the dispute in full cannot be concluded, conventions on certain aspects of the procedure must be concluded whenever it is possible, given that such procedural manifestation of the parties may significantly lead to the settlement of the case within a reasonable period of time. According to the Romanian Code of Civil Procedure, the agreement of the parties is allowed in respect to the establishment of the legal qualification of the acts and facts brought to the court, as well as regarding certain aspects related to the evidence. In both cases, the agreement of the parties may generate procedural effects provided that it concerns rights which the parties may dispose of. The procedural effects of the legal nature regarding the rules governing the legal relationship of subjective rights are therefore being distinguished; if the parties may derogate from the rules laid down by law when entering into a contract, they may derogate as well from the rules laid down by law at the moment when they are in litigation, in respect to the qualification of acts and facts brought before the court, respectively as regards admissibility, the object or burden of proof.

It should be noted the importance of the involvement of lawyers in the identification and access by the parties they represent to these means by which certain aspects of the procedure can be agreed upon. Rule 9 (2) of the Model European Rules of Civil Procedure requires lawyers to inform their clients of these means, to encourage them to use them and to assist them in concluding the necessary conventions for this purpose. In addition, the court has an important role in facilitating a possible understanding of the parties and to inform them about the various procedural aspects in connection to which an agreement could intervene, as provided by art. 227 C. pr. civ. and Rule 10 of the European Model Rules of Civil Procedure.

However, the Romanian law does not provide for any specific procedural means by which the judicial cooperation of the parties can materialize. *De lege ferenda*, we appreciate that it would be useful to transpose into Romanian legislation a legislative solution such as the one provided by Rule 57 of the European Rules of Civil Procedure, namely that of a joint application.

THEORETICHAL AND PRACTICAL ASPECTS REGARDING THE CONTENT OF THE DISMISSAL DECISION

Aurelian Gabriel ULUITU*

Abstract

Even if 18 years have passed since the adoption of the Romanian Labor Code, in the practice of legal labor relations there are many situations in which employers have major difficulties in establishing the correct content of dismissal decisions. Irregularities in the resolution of individual labor disputes often lead to the annulment of dismissal decisions by the courts. We have proposed that, in the content of this material, we identify and analyze the conditions under which a dismissal decision can be drawn up under legal conditions.

Keywords: *individual employment contract, legal employment relationship, termination of the individual employment contract, dismissal, dismissal decision, motivation of the dismissal decision, annulment of the dismissal decision, individual labor dispute*.

1. Introduction

The dismissal of employees is regulated by the Romanian Labor Code (Law no. 53/2003, republished[1], with subsequent amendments and completions[2]), from the perspective of manifesting the principle of legality, the legislator's option being to allow the employer to dispose unilaterally (as an exclusive expression of his will legal) termination of the individual employment contract only in the cases and under legally defined conditions[3].

In this context, the application of the rules of common law regarding the general regime of termination of the civil contract by unilateral termination (art. 1.321, art. 1.276-1.277, art. 1.552 of the Civil Code) is, in principle, excluded. This is because the specific requirement deduced from art. 278 para. (1) of the Labor Code, regarding the possibility of "completing" the provisions of the Labor Code (and, by extension, of labor law as a whole) with those of civil law only if there is a compatibility of the latter with the specifics of labor relations[4].

It is therefore necessary, both in the course of the procedural steps specific to each dismissal case and in the process of concretely establishing the content of the dismissal decision (by reference to the operating dismissal case)[5], that the employer complies exactly with the substantive and formal requirements provided by the Labor Code, the lack of fulfillment of any procedural condition or its non-compliant fulfillment may lead, as a rule, to the annulment of the dismissal decision.

There is thus a strong need in the practice of employment relationships to identify, in an analytical way, all the content elements of the dismissal decision, depending on the operating hypothesis, and to explain, in a complete way, the reasons whose manifestation determined the employer to finally order the termination of the individual employment contract by dismissal.

2. Legal characterization of the dismissal institution

A. We consider as useful the legal characterization of the dismissal institution from a theoretical perspective, starting from the overall observation of the regulatory solutions retained by the legislator[6]. As a starting point in this approach, art. 58 para. (1) of the Labor Code, defines dismissal as

[1] In the "Official Gazette of Romania", part I, no. 345 of May 18, 2011.

[2] The last legislative intervention in this regard (by reporting at the time of finalizing the drafting of this material – 22nd of April 2021) was made by Law no. 298/2020 for the amendment and completion of Law no. 53/2003 - Labor Code, published in the "Official Gazette of Romania", part I, no. 1293 of December 24, 2020.

[3] See I.T. Ștefănescu, Theoretical and Practical Treaty on Labor Law, 4th edition, revised and added, „Universul Juridic" Publishing House, Bucharest, 2017, p. 464.

[4] From the strict perspective of the possibility of revoking the dismissal decision by the employer, the High Court of Cassation and Justice retained, by Decision no. 18/2016 (published in the "Official Gazette of Romania", part I, no. 767 of September 30, 2016), that in the interpretation and application of the provisions of art. 278 para. (1) of Law no. 53/2003 - Labor Code, republished, with subsequent amendments and completions, the provisions of art. 1,324, 1,325 and 1,326 of the Civil Code, republished, can be applied in full of the provisions of the Labor Code, being compatible with the specifics of labor relations; in the interpretation of art. 55 lit. c) and art. 77 of the Labor Code, the dismissal decision may be revoked until the date of its communication to the employee, the act of revocation being subject to the communication requirements corresponding to the act it revokes (dismissal decision).

[5] A. Țiclea, Dismissal Decision, in "Romanian Journal of Labor Law" no. 3/2003, pp. 13-17.

[6] Normative solutions that, during the last 18 years since the entry into force of Law no. 53/2003 - Labor Code, remained almost unchanged, proving in this way, against the background of the strong manifestation in practice of some hesitations and doubts, the difficulty for the legislator to intervene to remedy a series of obvious inaccuracies.

representing the termination of the individual employment contract at the initiative of the employer.

The characteristic legal features of the dismissal institution are, in our opinion, the following:

a) dismissal is a unilateral legal act subject to communication (the provisions of art. 1326 of the Civil Code, which are applicable as a common law being incidental), its author being exclusively the employer;

b) dismissal is a causal legal act[7]; the measure ordered by the employer, having as specific result the termination of the individual employment contract on his own initiative, it implies the existence of the cause by necessary reporting to the reasons for dismissal;

c) the legislator's option is to regulate in the Labor Code imperative and restrictive (limiting) the hypotheses in which the employer can order the dismissal and the conditions in which the dismissal can be ordered; this way of regulating constitutes an embodiment, in the matter of the termination of the individual employment contract, of the stability in work and of the legal protection of the right to work;

d) no other situations of unilateral termination of the contract are applicable, among those resulting from the corroboration of art. 1321 C.civ. with art. 1552 para. (1) C.civ. (unilateral termination of the civil contracts); It should be emphasized that the parties to the individual employment contract may not agree - by contract, at its conclusion, or by an addendum concluded during the existence of the contract - that the employer be granted the legal possibility to order the unilateral termination of the individual employment contract in other situations than those expressly and exhaustively provided by the Labor Code;

e) regardless of the case of dismissal and the number of employees affected by the measure ordered by the employer, the dismissal decision is an individual act; how many employees are fired, as many dismissal decisions will have to be issued by the employer;

f) the dismissal must meet, cumulatively: the general substantive conditions regarding capacity, consent, object and cause; the special requirements provided by the Labor Code; the specific condition of form - the written form of the dismissal decision - is an *ad validitatem* requirement;

g) as a rule, for dismissal cases that do not imply the existence of the employee's guilt condition, legal measures are established to protect employees, such as: providing a vacancy corresponding to the employee's training or, as the case may be, with his work capacity; the request by the employer, prior to the issuance of the dismissal decision, of the support of the territorial employment agencies in order to redistribute the employee; active measures to combat unemployment; a notice period, which may not be less than 20 working days; money (or other material) compensations;

h) regardless of the dismissal hypothesis, the (former) employee is entitled to challenge in court the measure ordered by the employer; the employee may request, within this procedural step, the annulment of the dismissal decision, the restoration of the parties to the situation prior to the communication of the dismissal decision, the payment by the employer of some compensations (material, as a rule, but also possible to repair a non-pecuniary damage).

B. There is no perfect overlap between "dismissal" as *negotium iuris* and "dismissal decision", given that the issuance of the dismissal decision by the employer is only the final (and formal) stage of expressing the legal will of the author of the act. The dismissal thus corresponds, in all cases, to a time interval between the moment when the employer was notified about the circumstance (manifestation of a factual situation) that can be included in one of the dismissal hypotheses provided by art. 61 or, as the case may be, art. 65 of the Labor Code.

Concretely and concisely presented, these factual situations are the following:

- the possible commission by the employee of an act which may be qualified as a serious disciplinary offense or the commission by the employee of several acts which may be qualified as repeated disciplinary offenses;

- the employee is absent from work for more than 30 calendar days, due to the disposition of the measure of pre-trial detention or house arrest;

- the non-compliant conduct of the employee in the exercise of his/her duties, possibly determined by the manifestation of a physical and/or mental incapacity, such as to no longer allow him/her to fulfill his/her duties corresponding to the job occupied;

- the non-compliant conduct of the employee in the exercise of his/her duties, possibly due to the manifestation of a professional misconduct;

- the existence of one or more reasons, unrelated to the person of the employee, which would justify the termination of the job held by that employee.

We referred to these circumstances because the employer, in the motivation of the dismissal decision, will have to highlight in the content of the act (as a rule) detailed references in relation to the factual situation of which he became aware and, if applicable, which he analyzed it in a specific legally established procedural framework.

3. Motivation of the dismissal decision

A. The motivation of the dismissal decision is similar, from the perspective of the logical-legal operations necessary to be performed in order to establish the final form of the act, with the motivation of the court decision. Like the judge in drafting the jurisdictional act we referred to, the employer is legally obliged to comply with the requirements regarding the structuring of the content of the dismissal decision (as a formal step) and to indicate the factual and legal

[7] G. Boroi, C.A. Anghelescu, *Civil Law Course. General Part*, 2nd Edition revised and added, "Hamangiu" Publishing House, 2012, p. 125.

reasons that determined the dismissal "solution" (as a substantive element).

Among the content elements of the dismissal decision, common to any hypothesis of dismissal among the five regulated by the Labor Code, the factual motivation of the decision and, in many cases, the correlation of the factual reasons with their legal classification proved to be for employers some of the most problematic steps specific to the proper management of labor relations.

The errors which manifested themselves - and which, in a significant number, still manifest themselves - led, in the event that the decision was challenged in court, to the annulment of the act and, hence, to the most unpleasant consequences for employers, especially when the issue of restoring the parties to the previous situation was raised by reassigning the illegally or unfounded dismissed employee to the position held prior to the disposition of the measure of termination of the individual employment contract.

B. From a practical perspective, the factual motivation of the dismissal decision is necessary to include all the elements specific to the manifestation of that circumstance which may represent one of the causes of dismissal provided by art. 61 and art. 65 of the Labor Code.

a) In the case of disciplinary dismissal, based on the provisions of art. 61 and art. 248 para. (1) lit. e) of the Labor Code, it is necessary to point out that, according to art. 252 para. (2) lit. a) of the same Code, in the content of the decision there must be the very "description of the deed that constitutes a disciplinary violation".

This option of the legislator, different from the one found in the factual motivation of the other types of dismissal decision, presupposes that the employer does not save in presenting all the specific coordinates specific to the occurrence of the misconduct or, as the case may be, to disciplinary misconducts (if the employer has found that the employee has committed two or more acts which constitute culpable breaches of his obligations).

Both the doctrine[8] and the jurisprudence have consistently held that the "description of the deed" in a consistent manner presupposes:

- indication of the factual situation in its materiality, and not in the form of generalities or vague, unverifiable statements, which correspond to a detail of the imputed deed/deeds;

- the explicit presentation of those aspects that may lead to the conclusion that the act of the employee represents a violation of the norms of work discipline;

- individualization in time of the disciplinary violation, otherwise the court cannot verify the observance by the employer of the legal provisions regarding the terms provided by art. 252 para. (2) of the Labor Code;

- indication of the essential elements for individualizing the act imputed to the employee, the date or period of time in which it was committed, knowing that any act of a person takes place in a certain time and place, the spatial and temporal limits characterizing any action, or human inaction, in their absence the existence of a deed cannot be conceived[9].

Along with these useful landmarks, the description of the deed that constitutes a disciplinary violation may also involve:

- specifying that the act constituting a disciplinary violation was committed through a singular manifestation, which corresponds to the possibility of fixing in time and space its production, or, as the case may be, the disciplinary violation is presented as an act committed in a continuous form;

- the fact that the act was committed by the employee as the sole perpetrator or that the act was committed by the sanctioned employee together with one or more colleagues, or with one or more persons who do not have the status of employee of the employer ordering the measure;

- an indication of all the elements and circumstances which, in connection with the manifestation of the factual situation, justify the employer's choice to classify the disciplinary misconduct as a serious one (in which case it is legally possible to apply the most severe disciplinary sanction);

- correlation of the determination of the concrete content of this structural element of the disciplinary sanction decision - "description of the deed" - with the objective circumstantial landmarks (those provided by art. 250 of the Labor Code and, possibly, others established by the applicable collective labor agreement or, in its absence, by the internal regulation); we refer to the "circumstances in which the act was committed" and the "consequences of the disciplinary violation";

- highlighting those factual circumstances that justify the retention by the employer of a certain form of guilt with which the employee committed the disciplinary offense (intent or fault).

The following options do not comply with the requirements of making a proper description of the act that constitutes a disciplinary offense:

- the presentation in the decision exclusively of the statement that the act imputed to the employee consists in breach of one or more provisions of labor law, of the applicable internal regulations or collective bargaining agreement, or non-compliance with one or more obligations arising from the individual employment contract, orders and the legal provisions of the hierarchical managers (in the form of expressions

[8] I.T. Ștefănescu, *op. cit.*, p. 523 and p. 857; A. Țiclea, *Labor Law Treaty. Legislation. Doctrine. Jurisprudence*, 8th Edition, revised and added, "Universul Juridic" Publishing House, Bucharest, 2014, pp. 777-779.

[9] Bucharest Court of Appeal, Section VII for cases regarding labor disputes and social insurance, Civil Decision no. 1180/2020, in the "Romanian Journal of Labor Law" no. 3/2020, pp. 220.

such as: “Disciplinary violation consists in non-compliance by the employee with art. 112 of the Labor Code”, given that the employer had found that the employee did not comply with the work schedule);

- the use of generic and in no way circumstantial wording, such as the employee's manifestation of a "non-compliant attitude towards the direct hierarchical boss" or of an "irreverent attitude towards another person" or "repeated non-performance of duties";

- a description - even in detail - of an act which cannot constitute a disciplinary offense (for example, the employer has retained as a disciplinary offense an act of the employee who, outside the actual course of work, gave an interview in which, the right to an opinion, referred to some negative aspects that manifest themselves in the field of activity to which the employer belongs[10]).

From a documentary point of view, we share the opinion according to which the requirement established by art. 252 para. (2) lit. a) of the Labor Code is complied with by the employer in the situation where the dismissed person has become concretely and certainly aware of the facts invoked for dismissal (such as a report or report)[11]. We specify that, at present, it is necessary to attach that document to the dismissal decision and that this mode of operation is mentioned in the decision itself (using, for example, a formula such as: "The description of the act which constitutes a disciplinary presented in the report annexed hereto, by which the undersigned was notified in connection with the deeds committed by the employee”).

The requirement to describe the act constituting a disciplinary offense as a mandatory content element of the disciplinary dismissal decision must be correlated with the content of the final report of the disciplinary investigation (the act of "disinvestment" of the person who has been appointed to carry out the disciplinary investigation or of the disciplinary investigation commission). We refer to the need for the deed described in the content of the decision to be identical to the one that was investigated disciplinary. One or more facts that have not been the subject of disciplinary investigation cannot substantiate the application of the sanction consisting in the disciplinary termination of the individual employment contract, given the violation of art. 251 para. (1) of the Labor Code, even if regarding this or these (uninvestigated) facts the employer would comply with all the requirements corresponding to a compliant description.

b) If the employee is fired as a result of pre-trial detention or house arrest for a period longer than 30 days, under the Code of Criminal Procedure [hypothesis regulated by art. 61 lit. b) of the Labor Code], the content of the dismissal decision is established according to art. 62 para. (3) of the Labor Code. As such, the decision "must be motivated in fact".

The motivation in fact in this situation is limited to the indication by the employer of the interval in which the employee was absent (thus justifying compliance with the requirement that the employee's absence be longer than 30 calendar days) and the manner in which the employer became aware, concretely, of the preventive measure ordered in connection with the employee in question.

The fact of arrest of the employee or his house arrest may be brought to the notice of the employer by using any means of proof to this effect, including by indicating by the employer the information available to any interested person on the court portal (portal. just.ro).

c) The motivation in fact within the dismissal decision ordered pursuant to art. 61 lit. c) of the Labor Code (when, by decision of the competent bodies of medical expertise, the physical and/or mental incapacity of the employee is found, which does not allow him to fulfill his duties corresponding to the job) is a well-founded requirement on the provisions of art. 62 para. (3) of the Labor Code.

Considering also the resolutions given by the High Court of Cassation and Justice by Decision no. 7/2016[12], according to which in interpreting the provisions of art. 61 lit. c) of Law no. 53/2003 - Labor Code, republished, with subsequent amendments and completions, by decision of the medical expertise bodies (which establishes the physical and/or mental incapacity of the employee) is understood the result of the evaluation of the occupational medicine specialist on fitness for work, consisting in the aptitude sheet, uncontested or become final after the appeal, by issuing the decision by the entity with legal attributions in this respect, the factual motivation of the dismissal decision implies in this situation:

- the indication (without the need for detailing) by the employer of the medical condition from which the employee suffers, according to the findings made following the occupational medicine specialist's assessment of occupational fitness, highlighted in the aptitude sheet or in the aptitude sheet and in the issued decision by the county or Bucharest public health directorate, following the contestation of the aptitude file by the employee, pursuant to art. 30 of Government Decision no. 355/2007 on the surveillance of workers' health[13], with subsequent amendments and completions;

- a specific indication of the duties established by the employee's job description, which can no longer be performed properly, and the causal link between the employee's state of health and the fact that his existence no longer allows him to perform those duties.

[10] Bucharest Court of Appeal, Section VII for cases regarding labor disputes and social insurance, Civil Decision no. 1203/2019 (unpublished).

[11] I.T. Ștefănescu, *op. cit.*, p. 523.

[12] Published in the "Official Gazette of Romania", part I, no. 399 of May 26, 2016.

[13] Published in the "Official Gazette of Romania", part I, no. 332 of May 17, 2007.

It is also possible, in this case, for the employer to comply with the requirement to include in the content of the dismissal decision the factual motivation of the measure by attaching to the decision the aptitude sheet or, as the case may be, the aptitude sheet and the decision issued by the management. of public health of the county or of the municipality of Bucharest pursuant to art. 33 of Government Decision no. 355/2007, specifying in the dismissal decision that the document or documents in question constitute its annex.

d) In the case of the dismissal decision based on the provisions of art. 61 lit. d) of the Labor Code (professional misconduct), being applicable accordingly art. 62 para. (3), it is necessary that the employer actually motivates his measure.

The motivation in fact in this situation will include:

- the manner in which the employer became aware of the fact that, as regards the dismissed employee, indications were received that he no longer professionally corresponded to the job in which he was employed, which led to the prior professional assessment procedure [the one in which refers to art. 63 para. (2) of the Labor Code and which is normatively developed by the applicable collective labor contract or, in its absence, by the internal regulation, or - in the absence of both regulatory landmarks - is established by the employer in an *ad hoc* manner];

- how the professional mismatch manifested itself in a concrete way (as the case may be: possible: non-fulfillment of the work norm, defective development of the activity, accomplishment of some works of poor quality[14]); what were the attributions, established by the job description, that the employee did not fulfill in a compliant way and how the result of these non-conformities was manifested;

- what was the time interval in which this non-conformity manifested itself;

- presentation of the way in which the prior professional evaluation procedure was organized and the concrete way in which it was carried out; in this respect, the decision must include references to the person appointed to carry out the professional evaluation or, as the case may be, to the composition of the evaluation committee, the evaluation criteria used, the evaluation method or methods used, the result of the evaluation. and the explanations given by the employee on the occasion of the evaluation and/or on the communication of the result of this approach;

- justification of the impossibility of maintaining the employment relationship, given the serious or significant nature of the professional misconduct in relation to the volume and/or importance of specific tasks that the employee, due to professional misconduct found after the assessment, can no longer perform properly.

e) The content of the decision to dismiss the employee for reasons not related to his person is regulated by art. 76 and art. 63 para. (2) of the Labor Code. According to lit. a) in art. 76, the dismissal decision must contain "the reasons for the dismissal". Correlating this formal requirement with the provisions of art. 65 of the Code, it follows that the reasoning in fact in this case of dismissal implies that the employer has to:

- indicate in detail the reason or reasons unrelated to the employee's person that led to the termination of his / her employment (usually circumstances in the general sphere of economic difficulties, technological changes or reorganization of activity), as well as the causal and temporal landmarks related to the manifestation of the reason or motives in question (why did the respective situations appear, when their manifestation started, the interval in which they manifested, the fact that a moment of the cessation of the manifestation cannot be anticipated their circumstance that they have an irreversible effect);

- specify the manner in which he was informed of the circumstances which manifested itself on the basis of the disposition of the post occupied by the employee (note or report of the functional compartment in which the post was abolished; note or report of the financial department or the human resources department, etc.);

- concretely justify the necessary relationship between the manifestation of the reason or reasons unrelated to the employee and the termination of employment, from the perspective of fulfilling the requirement of the existence of a real and serious cause;

- indicate the internal act (decision or decision of the person or body which has the power to institute measures concerning the organizational and functional structure of the employer's entity) by which the employment has been abolished and by which the establishment plan has been amended accordingly and the employment status of that employer.

4. Conclusions

From the point of view of compliance with the rules on the content of the dismissal decision, an employer must act with the utmost diligence in motivating the dismissal decision and, in general, in drawing up this document on which the existence of the legal employment relationship depends. A possible reserve of economy or detail is not justified in any situation.

NEUROMARKETING IN INTERNATIONAL COMMERCIAL LAW

Carmen Tamara UNGUREANU[*]
Aura Elena AMIRONESEI[**]

Abstract

Commercial advertising is absolutely necessary for traders who promote their products and services in order to attract consumers and to succeed on the market at the expense of their competitors. As consumers have developed resistance to traditional marketing practices, traders may make use of neuromarketing techniques while searching for other efficient tools.

Neuromarketing is a field that combines neurology, behavioral psychology and notions of economy and traditional marketing for the purpose of analyzing and understanding the processes that take place in the human brain when it is exposed to marketing stimuli.

Neuromarketing raises certain ethical and legal issues. On the one hand, there are concerns related to the protection of the persons involved in neuromarketing research. On the other hand, applying in commercial advertising the solutions offered by neuromarketing poses a series of problems, since these solutions have been qualified as techniques that distort the rational consumer's choice of products and services.

Given that on the background of the technological revolution the consumer (of advertising) has become an international one, the paper will be structured in three parts. First, we will tackle the meaning of neuromarketing and how its techniques are used in commercial advertising, particularly in online advertising. In the second part, we will reveal the mechanism of online and offline neuromarketing, highlighting the legal issues stemmed from the neuromarketing research, especially from the participants data protection. In the last part, we will analyze the effects of neuromarketing on the single European market. Within this framework, we will establish the effects of neuromarketing on competition and consumers' rights, determining the competent authority and the applicable law for dispute resolution.

Keywords: *neuromarketing, advertising, international trade law, unfair commercial practices, competition*.

1. Introduction

We live in a fast-growing economy that requires constant innovation from all of its participants in order to survive on the market. The fierce competition, together with the 'sophistication' of the consumer, has led to the necessity of using more advanced techniques. These techniques are meant to surpass the shortcomings of traditional marketing studies, being entirely focused on the consumer, from both physical and mental point of view.

In this framework, we aim at discussing the concept of neuromarketing and its role in the international commercial advertising. Neuromarketing is a field that combines neurology, behavioural psychology and notions of economy and traditional marketing for the purpose of analysing and understanding the processes that take place in the human brain when it is exposed to marketing stimuli. We are going to touch upon a few aspects related to these disciplines, from a legal standpoint. Our intention is to raise awareness about these sensible issues with pluridisciplinary connections, as, eventually, affect us all.

After clarifying the concept of neuromarketing, we will analyse its impact on participants to both neuromarketing studies and international trade. The issues raised by the violation of privacy and the concerns related to data protection will be examined. Based on the quite technical portrayal of neuromarketing, in the second part of the paper we will focus on the dimension of advertising generated by neuromarketing. In the last part we are going to determine the path for counteracting the negative effects of neuromarketing, both on consumers and traders, having in mind the space of the European Single Market.

We consider that neuromarketing is a domain less analysed in legal studies. Based on our knowledge at this moment no domestic legal study on neuromarketing exists. In the attempt to draw attention to this subject, especially in the field of Romanian legal studies, a few tools at the disposal of legal practitioners are brought into light. As legal provisions do not keep pace with the rhythm of neuromarketing's development, legal analyses are needed for providing efficient legal ideas to neutralize the neuromarketing undesirable outcomes and our study is one of them.

2. Today's market and neuromarketing[1]

The today's economy is rooted in a driven by profit society in which all its participants are searching for new and effective ways of increasing their earnings and putting competitors out of business. Meanwhile, technology passes through an unprecedented development as it starts to make use of human-applied

research that provide precious knowledge for improving services and products for consumers. In addition, the nowadays competitive market requires more efficient advertising. Along these lines, had emerged, within marketing strategies, the use of consumer neuroscience which combines consumer research with modern neuroscience. Neuroscience is considered to bring an improvement in the field of consumer behaviour and marketing[2] and it comes as a refining tool for traditional marketing, leading to the development of a new field called neuromarketing.

The base for neuromarketing is consumer neuroscience[3] which tries to recognize the primordial neural processes which determine the judgement of a consumer and the brain mechanisms that determine decision making. Neuromarketing focuses on identifying and extracting into data brain response to marketing stimuli. Neuromarketing went beyond the primordial scientific purpose and had become a model of business, as well as a tool for businesses. Within companies have been created special departments that deal with neuromarketing studies, while other companies have specialized[4] themselves in running neuromarketing research[5] and then selling and/or giving access to the findings. The specialized companies have reunited into the Neuromarketing, science & business association[6] (hereinafter, 'NMSBA').

2.1. Neuromarketing: concept and scope

Neuromarketing has appeared as a field of research within neuroeconomics[7] and it is founded on neurotechniques[8]. It has to be underlined that neuromarketing differs from consumer neuroscience, even if they are often presented as equivalents[9]. Neuromarketing is a separate field that uses consumer neuroscience for developing marketing strategies, while consumer neuroscience is a much broader concept within neuroeconomics that encompasses marketing decisions and leverages given by neurological data[10].

Various companies started to use neuromarketing within their marketing activity. It is noticeable that most of them are multinationals[11], which can be put forward reasonable presumptions regarding the considerable costs of using neuromarketing.

Neuromarketing is founded on neurobehavioral studies[12] and consequently it outperforms conventional marketing research[13], as the latter is based on self-reports, while neuromarketing uses data collected through high state of art technology means. Neuromarketing compensates most of the downsides of traditional marketing research[14] and it is also an important tool for validating, refining or extending the traditional marketing theories[15] and techniques as it can be successfully used on persons already exposed to traditional marketing. Neuromarketing is suitable for identifying strengths and weaknesses of traditional marketing and providing methods to correct its errors[16]. It is considered that neuromarketing does not represent a substitute for the traditional research methods already used in marketing, but it would rather provide supplementary tools[17] with the scope of improving and getting better results. One of the uses for neuromarketing in the area of traditional marketing that support its complementary nature is the assessment of the interpersonal mentalizing skills of salespeople[18],

skills that refer to their ability to project mental states[19] to consumers.

Amongst neuromarketing pledges is revealing the content of the human mind's 'black box'[20] and finding the legendary 'buy button'[21]. Even if there is no certain proof concerning the existence of a *buy button*, it is considered that knowledge provided by neuromarketing research can be used for inducing a certain consumer behaviour or for seeding memories and ideas in the brain that can later affect the decisional process and turn into an unconscious decision of buying a product that has been advertised[22]. Some argue that the scope of neuromarketing is influencing people`s[23] brains at an unconscious level. Nevertheless, the current state of neuromarketing cannot provide means for completely manipulating consumers` behaviour[24].

Neuromarketing goes beyond advertising as marketing also implies market research, product creations and testing, price establishing, strategies of promoting[25] and so on. Neuromarketing is used in product design and packaging, pricing, store design, professional services and advertising[26], as it studies consumer attention, consumer arousal, product/brand appraisal, product/brand preference, purchase behaviour, memory and brand extension[27].

As to neuromarketing techniques, they are meant to identify physical changes and or psychological arousal[28] that are caused by the exposure of a consumer to particular advertisements[29], products or commercial contexts. They are also meant to recognize the moments of attention[30] of a consumer and to detect and record changes in brain activity. The main techniques of neuromarketing research are functional magnetic resonance imaging (fMRI), qualified electroencephalography (EEG), eye tracking and galvanic skin response. Researchers are trying to expand neuromarketing's horizons by bringing new methods and techniques. A quite relevant example are the studies based on measuring the level of glucose in blood for analysing the brain processes implied in self-control and willpower[31]. Another innovative field is nanomarketing which interferes with neuromarketing.

2.2. Advertising as a scope of neuromarketing

The general aim of marketing is to create commercials that are appealing to consumers. Neuromarketing offers methods for increasing the attractiveness of commercials based on human instincts and emotions[32] and it subsequently increases the probability of making purchases[33].

Neuromarketing is used mainly for determining and measuring consumers' response to different types of advertising[34] and products design. Neuromarketing has also the role of quantifying the impact of specific marketing strategies on the consumers[35] that are test subjects in the research studies. In doing so, it reveals human perceptions and emotions related to certain advertised products or advertisements and it identifies the mental mechanisms that shape the emotional and unconscious elements of decision making.

What can be firmly stated is that neuromarketing represents an extraordinary tool for optimizing advertising[36] both in online and offline environments. It can be used for predicting consumer`s behaviour[37] and even manipulate it as the consumer is not aware of his decision because of unconscious processes[38] or cannot consciously explain the reasoning behind his

decisions[39]. In addition, neuromarketing identifies consumer preferences and impressions on both products and advertisements[40], giving an insight into people`s views and intentions[41] and offering understanding of the effects of online and offline ads on consumers[42]. Neuromarketing companies that activate in the field of advertising promise that their services help the client understand what catches the attention when viewing an ad. Among the services they provide are tests of the ads in online contexts, second-by-second analysis of an ad, determination of brand perception, tests of the emotional reaction to an ad, and reports with recommendations for improving the ads[43]. Briefly, they promise to their client that they improve the effectiveness of the ads and reveal the real consumer's insights[44]. The promise may actually be one to keep as it is considered that preferences are automatically retrieved, without a conscious control from the consumer[45] as the brain continuously encodes them even when the consumer is not aware. This is where neuromarketing steps in for mapping, predicting[46] and then building preferences with the help of ads.

2.3. Neuromarketing among pros and cons

Neuromarketing is constantly perceived different, through a dual pros-and-cons perspective.

With respect to the pros that plead in favour of neuromarketing, the accuracy and objectivity of the research results concerning consumer behaviour is higher than in the case of traditional marketing research, because data is collected in a controlled and technological environment, by a specialist, and is not offered by the consumer itself. Through neuromarketing, marketing researchers can access the unconscious reactions and decisions in the human brain, which cannot be recognized and verbalized consciously by consumers. On the grounds of this, neuromarketing is considered to be a method for better understanding the client and thus delivering him products and services in order to perfectly meet his needs[47]. In this way, neuromarketing may also serve consumers' interests. Moreover, by accessing the neuroscientific knowledge laid down in literature, consumers may get to understand their own decisional mechanisms[48] and recognize eventual persuasion tactic slipped unnoticed in advertisements.

Unfortunately, the balance is tipped against neuromarketing. More than a few cons have been highlighted in literature. The foundation of most of them is laid by ethical considerations.

To begin with, economist and behavioural researchers claim that neuromarketing, as it uses neuroscience, provides an insight into the consumer brain, but not necessarily into the consumer behaviour[49]. Consequently, it may not serve the purpose of marketing. As brain function may be irrelevant in depicting behaviour, it is stated that neuroscientific techniques may not have the expected results in terms of improving marketing strategies because they identify only the brain functions which may not be that helpful in the matter of behavioural influence.

In addition, another similar drawback is represented by the limited possibility of inferring psychological processes from neural data[50]. It implies the difficulty to apply a reverse inference approach in order to determine if a certain brain response is inferred from an activity that involves a particular psychological process[51]. Due to not having previous information regarding the brain regions studied when exposed to a certain stimulus, reverse inference tends to pose problems to researchers[52].

Furthermore, neuromarketing may affect personal autonomy[53], particularly the autonomy of will, potentially causing an interference with the right to respect for private life[54] and in certain circumstances, even with the right to respect for physical and mental integrity[55]. There are several concerns regarding not necessarily the unlawful processing of data, but related to the unethical processing of data.

Finally, neuroimaging studies, thus neuromarketing through fMRI (a technique which is to be described below), are considered less reliable and generalizable compared to traditional marketing

studies[56] as it uses small samples of consumers that are not necessarily representative. The greatest issue put forward is the opportunistic findings, also known as false positives[57] because of small samples of test subjects.

3. Neuromarketing's mechanism. Scientific and commercial marketing[58]

Neuromarketing mechanism has slight variations depending on its type: scientific or commercial, online or offline. In general, it implies high costs[59] which are not public-funded[60], notwithstanding it is done for economic or scientific purposes.

Each company or research laboratory adopts an internal general research policy, also called 'protocol'[61]. This protocol provides primarily guidelines regarding the enrolment practices for test subjects. Most of the companies adopt, as well, methodologies that encompass the conditions and activities undertaken by the company, which basically depicts the established mechanism.

3.1. Types of neuromarketing

Scientific or commercial neuromarketing can be both online or offline. The difference between scientific and commercial neuromarketing is first given by their dissimilar aim. While scientific researchers use neuromarketing techniques for research and findings to be transformed in literature for academic attainment, company researchers are oriented toward monetizing the findings. These differences further generate distinct structures of the mechanisms.

Offline neuromarketing is the one conducted within the companies and special labs, in real life. They imply all the techniques detailed in paragraph 1.2. and more. Online neuromarketing has recently emerged. In advertising, it focuses on testing ads '*with online panels for customer attention, emotions, and memory*'[62]. In the context of the social media's boom, neuromarketing companies have also explored this new source of earning and have created special service. Therefore, they provide solutions for testing and boosting ads on social media, particularly Facebook, Twitter, Instagram, YouTube and Pinterest[63].

There have also emerged neuromarketing online tests[64], mainly as a result of the pandemic times that require social isolation. These online tests can measure emotional reactions and continue to do eye tracking on users[65].

3.2. Human test subjects for the research neuromarketing studies

Neuromarketing research implies individuals[66] that are subjected to the investigative techniques. Depending on the type of neuromarketing (scientific or commercial), studies are conducted with a small number of people, an average of 25-30[67] persons, or with a larger number of people, ~~with~~ a minimum of 30 participants and a maximum of hundreds[68]. In general, regardless of the type of neuromarketing, it is preferable a diverse group of people to be chosen, but it must be kept in mind that as diversity increases, the number of people would also increase[69]. Test subjects are carefully selected and treated[70] during the studies. As a rule, minors cannot be included in such studies[71]; nevertheless, if the company conducting the research is interested in minors' behaviour, the studies cannot begin without the parental consent.

Participants are recruited long before starting the research study, because a certain degree of training is crucial[72], mainly due to the biases (misconceptions) related to neuromarketing[73]. Test subjects are requested to provide explicit consent under the personal data protection legislation[74]. The participants are requested to go through procedures for informed consent[75] and are given disclosure of benefits and rights they are able to exercise during the studies, including the right to

withdraw at any time without any repercussion[76]. The participants are also given explicit and detail information regarding the scope of the research, the possible outcomes and the publication of the results, the incidental findings policy, privacy and confidentiality of their data[77], the techniques that are going to be used, the concrete steps taken during the studies, and any eventual risk[78], regardless of its chances to occur. Test subjects receive enough information in order to be able to make a conscious and valid choice[79].

Test subjects do not sign up without the promise of a reward. Even if they participate on a voluntarily basis, they receive sums of money in exchange for they data. There is no standard established concerning the incentives awarded to participants or rules for determining them. Therefore, each company regulates its own rules on test subjects' remuneration.

3.3. Running the research studies

Every neuromarketing study starts with an idea that leads to a research question which incorporates a hypothesis, preferably a directional one[80]. Subsequently, the question is fragmented according to the used techniques[81]. For example, if the question is whether a second ad is better than the first one, the researcher also puts the question whether during watching the second ad the test subject produces higher frequency brainwaves or has a more intense electrical brain activity. Based on the research question, it is decided the type of respondent that is needed[82].

The next step is to take a decision on the structure and content of the test[83]. Neuromarketing studies are likely to present a high level of complexity[84]. It has be decided, accordingly, the proper approach together with the neuroscience methods to be used[85]. Before conducting the real study, a few pilot sessions may be taken into account[86].

For a research study, the company needs to have a neuromarketing team[87] carefully chosen. Some of the roles given to the members of the team are: account owner, project manager, researcher, marking teams, coder, and analyst[88]. It is of utmost importance to have science staff[89].

In contrast to traditional marketing studies in which test subjects are required to voluntarily self-complete questionnaires, in neuromarketing data is collected without being consciously given. Furthermore, the test subject is not even aware of the data he or she is delivering to the researchers, whereas in traditional marketing the subject has control over the information he or she provides[90]. Data is collected by technologies that electronically read, collect and process biometric data provided during the studies by the test subjects. These technologies are generally named biometric systems[91].

A proposed improvement for neuromarketing studies is to conduct them in two different environments, a social and an isolated one, and then to identify the differences[92]. This means that test subjects shall see the advertisements in two opposite contexts: surrounded by people and in social isolation. Such a proposal is of extreme importance particularly in these pandemic times.

Finally, during the running of the studies, the research team should avoid or at least minimize the harm done to participants[93] as neuromarketing tools may physically and psychologically affect them. Subsequently, companies shall take the appropriate measures for their protection.

3.4. Neuromarketing results and findings

Neuromarketing studies deliver knowledge derived from brain functioning analyses that may be used by marketers[94]. The purpose of neuromarketing is to obtain general principles regarding brain functioning that can be applied when designing advertisements[95] in order to make them extremely attractive and effective.

[95] Ibid, 47.

Neuromarketing has at its core the processing of data collected during the research studies performed on the test subjects. The data collected is unique to individuals and consists mainly in information about their neurological processes[96], information which is designated as biometric data[97].

Raw data collected needs to be interpreted for reaching the actual findings that serve commercial or scientific purposes. During interpretation, errors may occur in the final findings due to misinterpreted data[98]. There is the possibility for the results to be interpreted by artificial intelligence, especially when it comes to fMRI scans of test subjects[99] watching advertising. Regarding the accuracy of the raw results, considering the use of biometric systems which cannot generate 100% error-free results[100], there is a possibility that some of the results may not be fully-relied on. 'Breaches' in the accuracy of the raw results may afterwards reflect in research findings.

Internal validity tests should be performed on neuromarketing results to ensure their validity and effectiveness[101] for the clients (interested companies) as there is a certain responsibility towards the clients that have entered into contracts for being delivered findings of neuromarketing research.

3.5. Neuromarketing: mining Big Data?

Primarily, it can be affirmed without a shadow of doubt that neuromarketing implies 'mining the mind'[102]. But does it also involve mining Big Data[103]?

Big Data refers to gigantic sets of data that cannot be processed simultaneously by traditional technology because of their volume[104]. Big Data is made of every single digital print and information about a consumer and it is mined for isolating his or her preferences and commercial behaviour. Neuromarketing and Big Data share the same purpose: to contribute in designing strategies as a means to attract and influence consumers. They can also form a team by completing each other and giving rise to state-of-the-art business and marketing ideas. Both are meant to analyse consumer's behaviour[105], especially customer purchase process and reaction to ads, opening the way for predicting purchase behaviour[106]. The nowadays trend is to either pass from big data analysis to neuromarketing studies in business activity [107] or to use neuromarketing in order to add a persuasion layer to the big data results[108].

Neuromarketing does not imply mining Big Data, there is no inclusion relation between these two, but rather a possible complementary relationship. While knowledge derived from Big Data mining targets identifiable consumers, neuromarketing generates general-applicable findings meant to be used on a larger segment of population.

With or without completing Big Data, neuromarketing knowledge is considered to lead to manipulative advertising which, in terms of European legislation, may represent misleading or aggressive commercial practices[109]. The subject will be further developed in the part 3 of this article.

3.6. Personal data

Personal data is undoubtedly involved in neuromarketing, as the test subjects have to be identified first, to be asked for full and informed consent, and eventually ~~to~~ for providing supplementary information necessary for the study, including contact information and medicines or previous health issues or conditions. Moreover, the data collected during running the studies is biometric data, as detailed *supra*.

By means of neuromarketing is done a form of brain-reading and storage of data 'bleed' by the human body[110]. The data collected represents biometric data and within the territory of EU falls under the protection of GDPR[111]. Through neuromarketing techniques are

identified and measured the physiological characteristics of the test subject, as well as his or her behaviour.

Particular attention should be paid to storing the raw data in cloud for the neuromarketing companies that have concluded cloud computing contracts. Data protection policy and protocols should be adopted. In such documents should be included the identities of the persons who have access to the data, the persons who process and work with the data on the basis of authentication and authorization, a contingency plan for cases of confidentiality breaches[112].

3.6.1. Complying with data protection regulations. Anonymization

As data collected during the studies represents biometric data and some of the results of neuromarketing may take the form of biometric templates, which contain key features extracted from the collected raw biometric data, stored for later use[113], its processing falls under the protection of GDPR.

Companies and scientists could comply with data protection regulations by using techniques of anonymization[114]. Neuromarketing has no interest in future identification of the test subjects, especially as the aim is to obtain generalizable findings following the processing of data. The identity of test subjects is of no interest for either the neuromarketing company or the buying company.

Neuromarketing companies could opt for anonymous interpretation of the data or apply other procedures that impede test subjects' identification after their data having been collected[115]. In certain cases, if needed, companies or scientists could use pseudonymization[116].

3.7. 'Disseminating the results' among interested companies for commercial purposes

After processing the collected data, in commercial neuromarketing, the findings of the researchers have economic value and represent the 'product' that is further 'disseminated' to interested companies. In general, the initial data collected is of no value to such companies, because for drawing conclusions there are needed specialists in neuroscience that can interpret the data. Exceptions may exist when the companies have their own specialists and prefer to receive 'raw' data.

An important aspect that governs the B2B (business-to-business) relation between the neuromarketing company and the company interested in its research findings is transparency[117], in particular when it comes to the dissemination. There is a fear of possibly sharing the knowledge with their competitors[118]. If the study has been performed at a client's particular behest, as an *ad hoc task force*[119], then the results would probably be available and disclosed only to that client. Neuromarketing companies should be more transparent to their business clients with regard to what is not possible to be obtained as a result of the research findings. Furthermore, they should inform their contractors about the used techniques and methodologies, because most of the companies tend to present the procedure as a mystery fulfilled with the best and miraculous methods that are extremely efficient[120]. This 'mystery' also impedes any third-party evaluation as the used tools are unknown.

Besides disseminating the findings, there are companies offering marketing advice based on their own findings[121]. Most of the companies provide both findings and consultancy[122]. In the field of scientific neuromarketing, scholars argue that the results should be shared or sold anonymously[123].

3.8. Neuromarketing and privacy. Neurolaw. Nanomarketing

The results of neuromarketing are said to be a key[124] for entering into the human brain in order to control mental mechanisms and determine commercial decisions. As the right to privacy (or the right 'to be let alone'[125]) includes aspects related to the interior privacy of an individual, using the results in marketing

[125] For further details, see Sabah S. Al-Fedaghi, "The "Right to be let alone" and private Information", in *Enterprise Information Systems VII* (Springer, 2007), https://doi.org/10.1007/978-1-4020-5347-4_18.

may represent a breach of mental privacy. Once again, we mention that consumers have no proper control over the data they offer during studies. Thus, they may give unintended information which may infringe the privacy of their mind and thoughts. The right to freedom of thought[126] with his internal dimension[127] (the *forum internum*[128]) is guaranteed by ECHR. Thought is also found in the UN Declaration [129] in Article 18 which protects 'free thinking'[130].

Mining the mind can also lead to gaining enough information in order to be able to prime or trigger consumer's preferences[131], which would weaken his or her will autonomy, affecting the physical and mental integrity.

It is debatable if the present rights in the sphere of individual privacy have the strength to cope with the emerging neurotechnologies, as brain data has a direct link to someone`s inner life and personhood[132]. Some argue that there should be regulated a new and individual rights, namely right to mental privacy[133] and cognitive liberty[134], known as neurorights[135]. This right shall protect every single individual from intrusions into his brain processes and decisional mechanisms, and his ultimate aim would be the protection of freedom of thought (FoT) which includes the right not to have the thoughts manipulated[136].

Considering the danger posed by neuroscientific techniques, there have been made a few attempts to introduce neurorights as human rights, including *inter alia* the right to cognitive freedom, the right to psychological continuity, and the right to mental integrity[137]. The umbrella term used to for naming the new field of law that encompasses all of the provisions related to neurorights is 'neurolaw'[138] and the case-law based on it would represent 'jurisprudence of the mind'[139]. Until legally binding set of norms will be enacted, moral rules provided in the field of ethics governs for the moment the theoretical neurorights[140] and tend to protect even the right to human dignity. There has also been proposed to be founded a 'monitoring gatekeeper'[141] in order to supervise the process and use of neuromarketing studies. Future legally binding regulations in the field of neuromarketing and marketing in general, applicable to companies, shall ensure and secure mental autonomy of the consumers.

4. Legal considerations on neuromarketing and advertising based on it. Liability for use of neuromarketing techniques[142]

Commercial advertising, particularly online advertising, has transnational effects. Both consumers and traders are exposed to and affected by neuromarketing. In order to determine the path for counteracting the negative effects of neuromarketing, the legal characterization of this new type of advertising is first to be done and, afterwards, it is argued whether and in which manner it is to be sanctioned, having in mind the space of the European Single Market.

4.1. Legal classification of commercial advertising based on neuromarketing techniques

In the European Union (hereinafter, EU), the main regulations that cover commercial advertising, including advertising based on neuromarketing techniques, are:

- Directive 2006/114/EC concerning misleading and comparative advertising[143] (hereinafter, Directive 2006/114), transposed into Romanian legislation by the Law no. 158/2008 concerning misleading and

[143] Directive 2006/114/EC of the European Parliament and of the Council of 12 December 2006 concerning misleading and comparative advertising, OJ, L 376/21, (December 2016), https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=celex%3A32006L0114.

comparative advertising[144];

- Directive 2010/13/EU concerning the provision of audiovisual media services[145] (hereinafter, Audiovisual Directive), transposed into Romanian legislation by the Audiovisual law no. 504/2002, as amended and supplemented[146]; Audiovisual Directive has been recently amended by Directive (EU) 2018/1808 (which is to be transposed into Romanian legislation[147]);
- Directive 2005/29/EC concerning unfair business-to-consumer commercial practices in the internal market[148] (hereinafter, Directive 2005/29), transposed into Romanian legislation by the Law no. 363/2007 on unfair traders' practices towards consumers and harmonization with European consumer protection legislation[149].

Commercial advertising based on neuromarketing/neuroscience research findings has been characterized in the legal literature as *subliminal advertising*, which makes use of techniques that distorts consumer rational choice of products and services[150]. Subliminal advertising leads to changes in preferences, opinions and consumers wishes by using stimuli that influence and even manipulates consumers' decisions, having direct effects on market competition, as well.

If the advertising founded on neuromarketing techniques equates with subliminal advertising, it should be banned. Subliminal advertising is already prohibited according to EU regulations and Member States national laws. The things, though, are not as simple as they seem. Subliminal advertising is sneaky and putting this label on advertising based on neuromarketing techniques is not an easy task.

The meaning of subliminal advertising is not explained in the Audiovisual Directive, the Member States undertaking the burden of providing a definition in their national legislation that transposes the directive. The Audiovisual Directive (as revised) bans subliminal advertising for any products or services, the provider of audiovisual services being prohibited from using surreptitious audiovisual commercial communication [art. 9(1)(b)]. According to art. 4 (d) of the Romanian Advertising Law[151], subliminal advertising is considered „any type of advertising that uses stimuli too weak for being consciously perceived, but which can influence the economic behavior of an individual". A similar definition is provided in art. 1.18 of the Audiovisual Law.

The provisions of the Audiovisual Directive are supplemented by the ones from Directive 2005/29, which aims at protecting consumers against traders' unfair commercial practices. The Directive is applicable to both B2B and B2C (business-to-consumer) relations. It explicitly prohibits unfair advertising as it is being considered an unfair commercial practice.

'Commercial practice' means any act, omission, course of conduct, proceeding or commercial communication, including marketing and advertising, done by a trader directly linked with the promotion, sale or supply of a product to consumers [art. 2 (d)]. According to art. 5(2), a commercial practice is unfair if it is contrary to the requirements of professional diligence and if it distorts or may significantly distort the economic behavior regarding a product of the average consumer whom it reaches or to whom it is addressed. To significantly distort the economic behavior means to make use of an unfair commercial practice in order to appreciably affect consumer's ability to make an informed decision, causing the consumer to take a commercial decision that he or she would not have taken otherwise [art. 2 (e)]. The notion of average consumer is not explained; it is left to national courts and authorities the mission of interpreting the typical response of an average consumer in a certain given situation, according to CJEU case-law[152].

Unfair advertising may take different forms. Pursuant to art. 5(4), misleading and aggressive commercial practices are particularly labelled as unfair. Could neuromarketing techniques be considered unfair advertising? The consumer exposed to neuromarketing techniques is not aware of their use and neither of their influence, thus the consumer may mistakenly believe that he or she has control over his/hers own decisions. The consumer is not, in essence, deceived, but seduced, persuaded through subconscious methods. Neuromarketing does not represent mind-control, but change-thoughts, as it bypasses consumer's rational

control[153]. Consequently, consumer's consent is altered[154], but it is questionable whether the lack of consent or the vitiated consent falls under the meaning of any defects of consent (error, fraud, or violence/fear) regulated in Romanian Civil Code[155]. Even supposing a consumer would admit the idea of being manipulated and, as a result, he would invoke an error induced by fraud, it would be incredibly difficult for him to prove it[156].

Could advertising based on neuromarketing represent another unfair commercial practice, different from a misleading or aggressive one? On the grounds of considering as unfair *in particular* the misleading and aggressive commercial practices, the Directive 2005/29 leaves room for other types of unfair commercial practices, as well.

In the Directive 2006/114, which aims at protecting, mainly, the traders against misleading advertising (with beneficial consequences on consumers), misleading advertising is forbidden. As pointed out before, to invoke the misleading nature of the advertising which is based on neuromarketing may not represent a viable solution. Nevertheless, if a competitor is affected by other competitors' practices, which fall under the categories listed in art. 101 or 102 from the Treaty on the Functioning of the European Union[157], then the first competitor may seek compensation for damages according to Directive 2014/104/EU on certain rules governing actions for damages under national law for infringements of the competition law provisions of the Member States and of the European Union[158].

In the light of the above, when the criterion of manner of delivery to the recipient is used, the commercial advertising based on neuromarketing techniques may be characterized as *subliminal advertising*; when the criterion of the result achieved comes into play, it can be qualified as *unfair commercial practice*, which could result in violating EU competition rules.

4.2. How could be the traders held responsible for promoting their products and services by means of neuromarketing?

There are no provisions in EU regulations referring to the persons to be held responsible for unlawful advertising. Pursuant to art. 18 of Romanian Advertising Law, *the author, the advertising director and the legal representative of the means through which the ads are disseminated* are jointly held responsible with the trader who advertises his/hers products or services.

According to art. 19 of Romanian Advertising Law, if the person that advertises is not based in Romania or cannot be identified, the liability should be borne by, where appropriate, her legal representative in Romania, the author, the advertising director or the legal representative of the means of disseminating advertising.

Moreover, in accordance with art. 1(a) and (aa) of the Audiovisual Directive (as revised), which represents a special law in relation to the Romanian Advertising Law, the provider of a video materials sharing media has no editorial responsibility.

4.2.1. Types of liabilities for unlawful advertising through neuromarketing techniques

There are two types of liability for unlawful advertising: administrative liability and civil liability.

Unlawful commercial advertising, whether subliminal or an unfair commercial practice, generally triggers administrative liability. The competent bodies of each EU Member State can impose fines and other additional administrative penalties[159]. Imposing sanctions that are characteristic to this particular field is based on the principle of territoriality. Even if the practices of commercial advertising that attract liability incorporate cross-border elements, the law applicable to the administrative liability stays the law of the Member State in which the competent bodies operate.

The facts which constitute contraventions according to the administrative law could be considered delicts/torts in civil and commercial law, attracting thus civil liability, if its conditions are fulfilled[160]. Civil liability may occur especially in the field of unfair competition following unlawful commercial advertising. It can also occur when consumer rights are violated having as a result individual or collective damages.

If the civil delicts/torts contain cross-border elements, it is necessary to determine the competent court for dispute resolution, and the applicable law. In

[157] Consolidated versions of the Treaty on European Union and the Treaty on the Functioning of the European Union, Official Journal C 326 , 26/10/2012, 0001 – 0390 (October 26, 2012), https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=celex%3A12012E%2FTXT.

[158] OJ L 349 (December 5, 2014); the directive was transposed in the national legislation by Government Emergency Ordinance no. 39/2017 on actions for damages in cases of violation of the provisions of competition law, as well as for amending and supplementing the Competition Law no. 21/1996, published in Official Journal of Romania no. 422 (June 8, 2017).

[159] For a detailed analysis, see Carmen Tamara Ungureanu, *Drept internațional privat european în raporturi de comerț internațional* [European Private International Law in International Commercial Relations] (Hamangiu Publishing House, Bucharest, 202), 386-388.

[160] See also, Christine Riefa, "Séverine Saintier, Unfair Commercial Practices Directive: remedying economic torts?", in *Research Handbook on EU Tort Law*, ed. Paula Giliker (ed.), (Edward Elgar Publishing, UK, 2017), 293- 297.

the EU, the provisions of Brussels I bis Regulation[161] and Rome II Regulation[162] are mainly applicable, to which may be added conflict rules from a few European directives[163].

According to art. 1 (1) of the Brussels I bis Regulation, its provisions do not apply to administrative matters. In tort liability matters, the plaintiff can choose between the court at the defendant's domicile (art. 4) and the court at the place where the harmful event occurred or may occur (art. 7.2).

The place where the harmful event occurred is, according to the case-law of the CJEU, either the place of the causal event or the place of the direct and immediate damage suffered by the direct, immediate victim. In the case of a plurality of damages, the place where the harmful event occurred is either the place of the causal event for the full reparation of the damage, or the place of the damage occurring in each Member State for the reparation of the damage in that State, or the place where the centre of the victim's interests is located. The plaintiff may choose any of the competent courts according to these criteria.

As to the applicable law, the Rome II Regulation does not apply to administrative matters [art. 1(1)]. In civil liability for torts/delicts, the general rule is included in art. 4(1) according to which the law applicable to non-contractual obligations arising out of an unlawful act is the law of the country in which the damage occurred (*lex loci damni*), irrespective of the country in which the event giving rise to the damage occurred or in which the indirect consequences of that event occur. This rule does not apply if the situation falls within the exceptions to the general rule or into categories for which special rules of conflict have been established.

When an information society service provider is held liable for unlawful commercial advertising, the *law of the country of origin* is the applicable law, meaning the law of the country where the provider is based/has its seat[164]. The rules of conflict from the Rome II Regulation are not applicable at the matters that fall within the regulatory field of the Directive on Electronic Commerce, as it results from art. 27 Rome II Regulation. The same rule (the law of the country of origin) applies to situations, which fall within the scope of the European directives concerning commercial advertising.

As to the unfair competition, the market effects principle is used. According to art. 6(1) of the Rome II Regulation, the law applicable to non-contractual obligations arising out of an act of unfair competition is the law of the country in which the competitive relations or collective interests of consumers are or may be affected. For non-contractual obligations arising out of restrictions of competition the applicable law is the law of the country in which the market is or may be affected [art. 6(3) of the Rome II Regulation]. Yet, when an unlawful commercial advertising produces effects in several countries, the market effects principle leads to the application of different laws, one for each affected market. In order to avoid such a situation and taking into account the provisions of art. 27 of the Rome II Regulation, the country of origin principle is used instead.

4.3. Class actions

In view of the fact that subliminal advertising cannot be easily recognized and invoked, it seems that class actions, named representative actions, could be an efficient remedy made available to consumers by the Directive 2020/1828 on representative actions for the protection of the collective interests of consumers[165] (hereinafter, Directive 2020/1828), which is to be transposed into national legislations[166].

According to art. 2(1) of Directive 2020/1828, its provisions apply to representative actions lodged against violations of the EU law committed by traders, including with respect to commercial advertising[167]. Such violations harm or have the potential to harm the collective interests of consumers.

For the purpose of bringing representative actions, there are designated qualified entities, such as

[161] Regulation (EU) No 1215/2012 of the European Parliament and of the Council of 12 December 2012 on jurisdiction and the recognition and enforcement of judgments in civil and commercial matters, OJ L 351/1, (December 12, 2012), https://eur-lex.europa.eu/legal-content/EN/ALL/?uri=celex%3A32012R1215.

[162] Regulation (EC) No 864/2007 of the European Parliament and of the Council of 11 July 2007 on the law applicable to non-contractual obligations (Rome II), OJ L 199/40, (July 31, 2007), https://eur-lex.europa.eu/legal-content/en/ALL/?uri=CELEX%3A32007R0864.

[163] For example, from the Directive 2000/31/EC of the European Parliament and of the Council of 8 June 2000 on certain legal aspects of information society services, in particular electronic commerce, in the Internal Market ('Directive on electronic commerce'), OJ L 178/1 (July 17, 2000), https://eur-lex.europa.eu/legal-content/EN/ALL/?uri=celex%3A32000L0031. For details, see Ungureanu, *Drept internațional privat european în raporturi de comerț internațional,* 390-392.

[164] For a detailed analysis, see Ungureanu, Drept international privat european în raporturi de comerț internațional, 390-392.

[165] Directive (EU) 2020/1828 of the European Parliament and of the Council of 25 November 2020 on representative actions for the protection of the collective interests of consumers and repealing Directive 2009/22/EC, OJ L 409/1 (December 4, 2020), https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=uriserv:OJ.L_.2020.409.01.0001.01.ENG.

[166] The directive is to be transposed in national legislations by 25 December 2022. The provisions adopted are to be applied from 25 June 2023 (art. 24).

[167] As provided in the annex of the directive, points 14 and 33, referring to the Directive 2005/29/EC of the European Parliament and of the Council of 11 May 2005 concerning unfair business-to-consumer commercial practices in the internal market and amending Council Directive 84/450/EEC, Directives 97/7/EC, 98/27/EC and 2002/65/EC of the European Parliament and of the Council and Regulation (EC) No 2006/2004 of the European Parliament and of the Council ('Unfair Commercial Practices Directive'), OJ L 149, (June 11, 2005): 22, https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=celex%3A32005L0029, and the Directive 2010/13/EU of the European Parliament and of the Council of 10 March 2010 on the coordination of certain provisions laid down by law, regulation or administrative action in Member States concerning the provision of audiovisual media services (Audiovisual Media Services Directive), OJ L 95, (April 15, 2010) : Articles 9-11, 19-26 and 28b.

NGOs for consumers' protection. Qualified entities can bring both domestic and cross-border representative actions (art. 3.5) and they may lodge, on behalf of consumers, actions for injunction or for redress before a court or an administrative or civil/commercial authority.

Pursuant to art. 8(3) of Directive 2020/1828, a qualified entity may seek an injunctive measure, *e.g.* to cease the display of an advertisement based on neuromarketing techniques, without the consent of the consumers represented, without the existence of an actual loss or damage and in the absence of a proven intent or negligence on the part of the liable trader. The injunction measures are meant to protect the collective interests of consumers, regardless of the existence of an actual loss or damage at an individual level.

For being granted redress measures, such as compensations, contract termination, reimbursement of the price paid and so on, it follows from art. 9 that there is needed the existence of an injury/harm.

As to the traders damaged through neuromarketing techniques, they should rely on the unfair competition laws[168].

4.4. Liability for breach of fundamental human rights, the right to freedom of thought

Until the transposition of Directive 2020/1828 into domestic legislations, a solution that could be taken into consideration is the use of human rights mechanism. Hence, in legal literature[169], there has been put forward the idea of invoking art. 9 of the European Convention on Human Rights[170] (on the right to freedom of thought). Even if courts and doctrine[171] do not deal with the freedom of thought, taking for granted the idea that thoughts are intangible and beyond the possibility of control, neuromarketing threatens it by using stimuli that exceed the sphere of commercial information and enter into the sphere of manipulation.

In order to make use of this mechanism, first there should be exhausted all national channels of appeal that the person whose freedom of thought has been violated is entitled to. In Romania, this sort of action could be founded on the provisions of art. 29 (1) of Romanian Constitution ('Freedom of thought, opinion, and religious beliefs may not be restricted in any form whatsoever. No one may be forced to adopt an opinion or to adhere to a religious belief contrary to his or her beliefs'). Nonetheless, it would be hard to prove such a violation. In the legal literature[172], it is affirmed that for proving the negative effects of neuromarketing there might be used means of proof provided by neuroscience.

Some authors argue, furthermore, that there should also be recognized other human rights in the context of neuroscience's development, namely the right to cognitive liberty, the right to mental privacy, the right to mental integrity, and the right to psychological continuity[173] for the reasons already discussed in paragraph 2.8.

5. Conclusions

Neuromarketing is still in its infancy[174], being labelled as an emerging field[175]. Despite its relative incipient stage, it plays a major role in international trade as its main aim is to contribute to the improvement of marketing, particularly to the persuasive effect of advertising upon worldwide consumers. It is a great and innovative tool for traders, but it may result in competitive advantages that are likely to cause disruptions on the market, affecting traders with more reduced financial resources as neuromarketing is highly-costing.

From the consumers' perspective, neuromarketing is sketched mainly as a harmful instrument meant to alter their will autonomy and consequently to influence economic decisions in favour of traders. The literature seems to be constantly working on the subject for discussing means of protecting the individuals, but the proposals that have been put forward appear to be utopic for the moment, especially the regulation of neurorights. In these circumstances, both consumers and the organisms that act on their behalf, along with the traders less powerful and disadvantaged on the market have to rely on the existing European instruments that have been considered in the third part of the article.

The reader of this article should be aware of the fact that '*Neuromarketing is here to stay; it's not a summer fashion'*[176]. It will continue to develop itself and pose new legal issues for all the participants to international trade, as well as for consumers.

CONTRACTOR AGREEMENT UNDER THE NEW ROMANIAN CIVIL CODE

Dan VELICU[*]

Abstract

Traditionally, the contractor agreement was considered a variety of the leasing contract. If in the case of the lease contract the owner transferred the right to use a good for a certain period of time and the tenant undertook to pay a rent calculated according to the period of use of the property in the case of the contractor agreement, he undertakes to make his work available to the client for a period of time so that at a certain point the work requested by the client is completed. At first glance the two contracts seemed to have a similar structure and mechanisms. In both cases, the client pays a sum of money. While in the case of the lease the lessor cedes the use of a good in the second case the contractor cedes his work. Nowadays, such a vision is found in the regulation provided by the Napoleonic civil code which was strongly influenced by the principles of Roman civil law. Thus, the chapter entitled "Du louage d'ouvrage et d'industrie" is placed in the section entitled "Du contrat de louage" which mainly regulates the types of rent. The Napoleonic civil code does not regulate very clearly the figure of the entrepreneur either. Also, the same regulation confuses the contractor contract with the employment contract for which it establishes some specific rules although the latter is a contract with a clearly distinct profile. The Italian Civil Code of 1942 went beyond this anachronistic vision and regulated the contractor contract as any contract with its own autonomy. The new Romanian civil code has largely taken over the provisions of the Italian code, considering similarly the contract as distinct from the lease agreement. This study aims to study the regulation offered by the Romanian civil code entered into force in 2011 in order to observe similarity with the Italian civil code and the principles underlying the regulation.

Keywords: *commercial contract, contractor agreement, contractor obligations, client`s obligations, risks.*

1. Introduction

Economic relations are based on the production of goods and the provision of services. One of the legal forms of these social relations is the contractor agreement.

Traditionally, the contractor agreement was considered a variety of the leasing contract. According to the art. 1708 of the Napoleonic Civil Code, "il y a deux sortes de contrats de louage:

Celui des choses,

Et celui d'*ouvrage*".

In the case of the contractor agreement, the contractor undertakes to make his work available to the client for a period of time so that at a certain point the work requested by the client is completed.

While in the case of the lease the lessor cedes the use of a good in the second case the contractor cedes his work. Such a vision is found as we saw in the regulation provided by the Napoleonic Civil Code which was strongly influenced by the principles of Roman civil law[1].

This study aims to analyze the current regulation and to observe if the contract has acquired autonomy.

Unlike the old Civil Code of 1864, which briefly mentioned the lease of things, the new Romanian Code provides a much clearer definition of the contractor agreement.

Therefore, according to the provisions of Art. 1851 by concluding this Agreement, "the contractor undertakes, at his own risk, to perform a certain work, material or intellectual, or to provide a certain service to the beneficiary, in exchange for a price".

The legal text is inspired by the Italian Civil Code which provides in Art.1655 that "l'appalto è il contratto col quale una parte assume, con organizzazione dei mezzi necessari e con gestione a proprio rischio, il compimento di una opera o di un servizio verso un corrispettivo in danaro"[2].

Despite a similarity, the regulation in the Romanian Civil Code does not retain the phrase "by organizing the necessary means", which together with the assumption of risks and the performance of a work or the provision of a service for a price outline the substance of the agreement.

It is also noteworthy that the text of the Romanian Civil Code details the fact that the work can be material or intellectual, a specification that we do not find in the Italian Code.

As regulated, the contractor agreement is one of the agreements in which the involvement of the entrepreneur as a production organizer providing goods or services to customers stands out, so we can consider the agreement as a typical commercial agreement.

2. Its Delimitation from Other Agreements

As the contractor agreement generates an obligation to do a work or thing against a price that will be paid by the beneficiary of the work, it is necessary to differentiate it from other similar contractual

[*] Lecturer, PhD, Faculty of International Relations and Administration, "Nicolae Titulescu" University (e-mail: dan.velicu@univnt.ro).

[2] See A. Frondrieschi, "L'appalto d'opera" in Gregorio Gitti, *I contratti per l'impresa* (Bologna: Il Mulino, 2012), 141.

profiles. The purpose of the delimitation is to remove any doubt as to the nature of the agreement in view of the fact that it has a special regulation in terms of price, warranty against defects or risks.

Delimitation from the sales agreement. Undoubtedly, the contractor agreement can often be confused with the sales agreement, especially regarding the sale of future goods[3].

In Italian case-law, a contract whose parties have taken into account the intervention of the contractor, even when the raw material is supplied to him, is considered to be a contractor agreement: „si ha appalto quando la prestazione della materia costituisce un mezzo per la produzione dell'opera e il lavoro é il scopo esenziale del negozio, in modo che le modifiche da aportare alle cose, pur rientranti nella normale attivita produttiva dell'imprenditore che si obbliga a fornire ad altri, consistono non gia in accorgimenti marginali e secondari diretti ad adattarle ale specifiche esigenze del destinatario della prestazione, ma sono tali da dare luogo ad un *opus perfectum*, inteso come effectivo e voluto risultato della prestazione"[4] .

The Italian Civil Code does not regulate assessment criteria, therefore the authors of the Romanian Code innovated by drafting art. 1855. According to it, the agreement is a sale one and not a contractor one 'when, according to the intention of the parties, the execution of the work does not constitute the main purpose of the agreement, taking also into account the value of the goods supplied'[5].

Delimitation from the employment agreement. We must add on the other hand that the contractor agreement can be confused with the employment agreement. We remember that the old Civil Code confused the contracts and the employment agreement was considered a variety of the contractor agreement. Thus, according to art. 10 from the Working Code, the individual employment agreement is the contract under which a natural person, referred to as an employee, undertakes to perform work for and under the authority of an employer, natural or legal person, in exchange for a remuneration referred to as a salary. Therefore, the employment agreement presupposes a legal link of subordination between the party who pays the employee's remuneration and the employee, subordination that is not found in the Contractor Agreement.

Delimitation from the Lease Agreement. According to art. 1777 NCC lease is the contract by which one party, called the lessor, undertakes to insure the other party, called the lessee, the use of a good for a certain period, in exchange for a price called rent.

Thereby, although the lease agreement is a contract with successive services and the lessee pays a sum of money as rent, what the lessee actually conveys is the right to use a property, whether it be movable or immovable.

Delimitation from the Mandate Agreement. According to art. 2009, the mandate is the contract by which a party, called the trustee, undertakes to conclude one or more legal documents on behalf of the other party, called the principal. It seems that there are some similarities but in fact the object is different.

Delimitation from the Deposit Agreement. Since the contractor agreement may assume that the work or service performed by the contractor could be performed on goods handed over by the customer or the principal, the contractor agreement may be confused with the deposit one. According to art. 2103 paragraph 1, the deposit agreement is the contract by which the depositary receives from the depositor a movable property, with the obligation to keep it for a period of time and to return it in kind.

In other words, the deposit agreement involves the preservation of the good received and its return as received, or, within the contractor agreement, the contractor intervenes on the substance of the good by making changes.

As we observed in the case of mandate the object is different even the depositary assume an obligation to do.

3. Legal Characteristics

The contractor agreement can be characterized by being bilateral and synallagmatic, as it is concluded between two parties, each assuming obligations towards the co-contractor[6].

It is onerous and commutative because the main obligation of the beneficiary is to pay the agreed price. It provides successive execution and, from a contractual point of view, it is consensual because in the absence of a legal provision imposing the authentic form, the principle of consensualism shall be applied.

Unlike the provisions of the old Civil Code, the new Code imposes certain limitations called incapacities. Thus, Art. 1853 refers to the provisions of Art. 1655 paragraph 1 providing that they apply accordingly to the contractor agreement.

4. Validity Conditions

Thus, the trustees, for the goods they are entrusted to sell, the parents, the guardian, the curator, the

provisional administrator, for the goods of the persons they represent, the civil servants, the syndic judges, the insolvency practitioners, the executors, as well as other such persons, which could influence the conditions of the contractor agreement made through them or which has as its object the goods which they administer or whose administration they supervise, cannot also conclude a contractor agreement for their own goods for a price consisting of a sum of money derived from the sale or exploitation of the good or patrimony that they administer or whose administration they supervise, as appropriate[7].

All these incapacities are regulated by the law in order to impose a fair behaviour of the contractor and the beneficiary.

5. Object of Agreement

As we have noted above, the performance of a work or the provision of a service is the main obligation of the contractor.

With regard to the price, Art. 1854 NCC paragraph 1 provides that it "may consist of a sum of money or any other goods or services".

Similar to the regulation of the sales agreement, the price must be significant and determined, or at least determinable[8].

In this sense, when the agreement does not include price clauses, the beneficiary owes the price provided by law or calculated according to law or, in the absence of such legal provisions, the price set in relation to the work performed and the expenses necessary to perform the work or service, taking into account the existing protocols as well (Art. 1854 NCC paragraph 3).

The norm is different from the Italian regulation which provides the following in Art. 1657: „Se le parti non hanno determinato la misura del corrispettivo né hanno stabilito il modo di determinarla, essa è calcolata con riferimento alle tariffe esistenti o agli usi; in mancanza, è determinata dal giudice".

That rule is necessary; without it the agreement has no object.

The Civil Code permits three ways to determine the price in order that one of this be compatible with the context and the parties' will.

The beneficiary is only required to pay this increase to the extent that it results from works or services that could not have been provided by the contractor at the time of the conclusion of the agreement.

The parties agree that the contractor agreement will rely on estimate prices, namely a provisional price. In this case, the total price may change depending on the evolution of material prices, labour required and additional works added.

If upon the conclusion of the agreement, the price of works or services has been estimated, the contractor must justify any increase in price (Art. 1865 paragraph 1).

If the price is set according to the value of the works performed, the services provided or the goods supplied, the contractor is required, at the request of the beneficiary, to account for the status of works, services already provided and expenses already incurred (Art. 1866).

On the other hand, the parties may agree on a price for the whole work or service - called a flat rate - without taking into account the amounts that make up the price.

Despite the various innovations brought to the old regulation, in the Romanian Civil Code there are no important provisions regarding various incidents or amendments to the initial agreement.

Thus, the amendments of the Italian Civil Code are as follows:

- amendments made by convention of the Parties,
- necessary changes and amendments ordered by the Beneficiary.

The first case is regulated by the provisions of Art. 1659. According to these, "l'appaltatore non può apportare variazioni alle modalità convenute dell'opera se il committente non le ha autorizzate.

L'autorizzazione si deve provare per iscritto.

Anche quando le modificazioni sono state autorizzate, l'appaltatore, se il prezzo dell'intera opera è stato determinato globalmente, non ha diritto a compenso per le variazioni o per le aggiunte, salvo diversa pattuizione"[9].

The second case is regulated by the provisions of Art. 1660. Thus, „se per l'esecuzione dell'opera a regola d'arte è necessario apportare variazioni al progetto e le parti non si accordano, spetta al giudice di determinare le variazioni da introdurre e le correlative variazioni del prezzo.

Se l'importo delle variazioni supera il sesto del prezzo complessivo convenuto, l'appaltatore può recedere dal contratto e può ottenere, secondo le circostanze un'equa indennità.

Se le variazioni sono di notevole entità, il committente può recedere dal contratto ed è tenuto a corrispondere un equo indennizzo".

Finally, the third case is covered by Art. 1661: „Il committente può apportare variazioni al progetto, purché il loro ammontare non superi il sesto del prezzo complessivo convenuto. L'appaltatore ha diritto al compenso per i maggiori lavori eseguiti, anche se il prezzo dell'opera era stato determinato globalmente.

9 See D. Rubino and G. Iudica, Dell'appalto, (Bologna: Zanichelli, 1992), 405-406; O. Cagnasso, Il contratto di appalto, in G. Cottino, Contratti commerciali (Padova: CEDAM, 1991), 690-691.

La disposizione del comma precedente non si applica quando le variazioni, pur essendo contenute nei limiti suddetti, importano notevoli modificazioni della natura dell'opera o dei quantitativi nelle singole categorie di lavori previste nel contratto per l'esecuzione dell'opera medesima"[10].

In this case, when the agreement is concluded for a global price, the beneficiary must pay the agreed price and cannot request a reduction thereof, motivating that the work or service required less work or cost less than provided (Art. 1867 paragraph 1).

Likewise, the contractor cannot claim a price increase for reasons contrary to those mentioned.

The flat rate remains unchanged, although changes have been made to the execution conditions initially provided, unless the parties have agreed otherwise.

6. Obligations of Parties

6.1. Contractor's obligations

The contractor has the duty to do the work and surrender it when finished to the beneficiary.

In principle, in the execution of the work the contractor can work with his materials or with those procured by the beneficiary.

Unlike the previous Code, which only mentioned the two alternatives, the current Code imposes a presumption, namely that the contractor is obliged to execute the work with his materials in the absence of a contrary legal or conventional provision (Art. 1857 paragraph 1)[11].

When the beneficiary hands over the materials to the contractor, the latter is obliged:

a. to store and use them according to their destination, according to the applicable technical rules,

b. to justify how they have been used; and

c. to return what has not been used for the execution of the work (Art. 1857 paragraph 3 NCC).

A new obligation for the contractor comprised within the current Code is that of information[12]. That made the contractor careful regarding the materials.

In the Italian Code, the information obligation only takes into account the defects of the materials provided by the beneficiary: L'appaltatore è tenuto a dare pronto avviso al committente dei difetti della materia da questo fornita, se si scoprono nel corso dell'opera e possono comprometterne la regolare esecuzione (Art. 1663)[13].

Therefore, according to Art. 1858 the Contractor is obliged to inform without delay the Beneficiary if the normal execution of the work, its durability or its use according to its destination would be endangered due to:

a) the procured materials or other means that, according to the Agreement, the beneficiary made available;

b) inadequate instructions given by the beneficiary;

c) the existence or emergence of circumstances for which the contractor is not liable[14].

In the other case, the contractor working with his materials is responsible for their quality, according to the provisions of the sales agreement.

Since the contractor actually hands over the good in a similar way to the seller, he is obliged to guarantee against the defects of the work and for the qualities agreed pursuant to Art. 1863 which refers to the regulation of the warranty against latent defects in the thing sold[15].

The Italian code contains a special regulation regarding the guarantee against the defects.

The first paragraph of art.1667 is similar to the regulation from the sale contract: L'appaltatore è tenuto alla garanzia per le difformità e i vizi dell'opera. La garanzia non è dovuta se il committente ha accettato l'opera e le difformità o i vizi erano da lui conosciuti o erano riconoscibili, purché, in questo caso, non siano stati in mala fede taciuti dall'appaltatore.

The second paragraph impose to the beneficiary a special term to point out the defects: Il committente deve, a pena di decadenza, denunziare all'appaltatore le difformità o i vizi entro sessanta giorni dalla scoperta. La denunzia non è necessaria se l'appaltatore ha riconosciuto le difformità o i vizi o se li ha occultati.

Finally, the third paragraph impose a special term for the beneficary's action: L'azione contro l'appaltatore si prescrive in *due anni* dal giorno della consegna dell'opera. Il committente convenuto per il pagamento può sempre far valere la garanzia, purché le difformità o i vizi siano stati denunziati entro sessanta giorni dalla scoperta e prima che siano decorsi i due anni dalla consegna.

6.2. Beneficiary's Obligations

The beneficiary has two main obligations.

Beck, 2014), 2022.

[15] Gh. Gheorghiu, Contractul de antrepriză in Flavius-Antoniu Baias, *Noul Cod civil: comentariu pe articole: art. 1-2664*, (Bucharest: C.H. Beck, 2014), 1888 et seq.

Like the buyer, he has the obligation to participate in the acceptance of the work.

Thus, according to Art. 1862 paragraph 1 immediately after receiving the communication by which the contractor notifies him that the work is completed, the beneficiary has the obligation to verify it, within a reasonable time according to the nature of the work and protocols in the field, and, if it meets the conditions established by contract, to accept it, and, where appropriate, to retrieve it.

If, without good reasons, the beneficiary fails to appear or does not communicate without delay to the contractor the result of the verification, the work is considered accepted without reservations[16].

The beneficiary who has accepted the work without reservations no longer has the right to invoke the apparent defects of the work or the apparent lack of agreed qualities.

Art. 1862 is inspired by Art.1665 from the Italian Code. According to the latter ”il committente, prima di ricevere la consegna, *ha diritto di verificare l'opera compiuta*.

La verifica deve essere fatta dal committente appena l'appaltatore lo mette in condizione di poterla eseguire.

Se, nonostante l'invito fattogli dall'appaltatore, il committente tralascia di procedere alla verifica senza giusti motivi, ovvero non ne comunica il risultato entro un breve termine, l'opera si considera accettata.

Se il committente riceve senza riserve la consegna dell'opera, questa si considera accettata ancorche' non si sia proceduto alla verifica”.

Regarding the payment of the price, the new Code introduces a rule linking the payment to the acceptance of the good.

The Italian Code provided that rule: ”Salvo diversa pattuizione o uso contrario, l'appaltatore ha diritto al pagamento del corrispettivo quando l'opera e' accettata dal committente”.

Therefore, according to Art. 1864 paragraph 1 when the object of the agreement is a work, the Beneficiary is obliged to pay the Contractor the price on the date and place of acceptance of the entire work, unless otherwise provided by law or agreement.

7. Legal Mortgage

Sometimes, the beneficiary may not pay the price. This is a major risk for the contractor because he has to pay the pice of materials and surely the salaries of his employees.

In order to guarantee the payment of the price due for the work, the contractor benefits from a legal mortgage on the work, constituted and preserved in accordance with the law.

In comparison with the Italian Code the choice of the Romanian Code authors’ is innovative.

8. Incidents during the Performance of Agreement. Good Risks and Agreement Risks

Sometimes, the work may be in danger without one of the parties’ fault.

That’s why the law intervenes: If the beneficiary, although notified by the contractor under the conditions of Art. 1858, does not take the necessary measures within a period appropriate to the circumstances, the contractor may terminate the agreement or may continue its execution at the risk of the beneficiary, notifying him in this regard (Art. 1859 paragraph 1).

Art. 1859 paragraph 2 is innovative also. The contractor is obliged to request the termination of the agreement, under the sanction of taking over the risk and being liable for the damages caused, including to third parties, when the work would be likely to threaten a person’s health or bodily integrity.

An aspect related to the specifics of the contractor agreement regulation is related to the loss of the work before acceptance. The regulation is found in Article 1860.

According to this norm, if prior to the acceptance the work is lost or damaged due to causes not attributable to the beneficiary, the contractor who purchased the material is obliged to restore it at his own expense and in compliance with the initial conditions and terms, taking into account, if necessary, the rules on the fortuitous suspension of the execution of obligations.

Basically, the risk of losing the goods is the contractor’s responsibility. It is normally because the goods are in the contractor’s possession.

The law impose to the contractor to assume the agreement risk. According to Art.1864 paragraph 2 if the work perished or deteriorated before acceptance, without the fault of the beneficiary, the contractor is not entitled to the price if he gave the material or if the loss or damage had a cause other than defects of the material given by the beneficiary. In this case, the agreement remains in force, with the provisions of Art. 1860 applicable.

A particular situation is when the material belongs to the beneficiary and is handed over to the contractor for processing. A special rule establishes the person who assumes the agreement risk.

In this case according to Art. 1860 paragraph 2, when the material was purchased by the beneficiary, he is required to bear the costs of restoring the work only if the loss was due to a defect in the materials. In other cases, the beneficiary is obliged to provide the materials again, if the loss or damage is not attributable to the contractor.

The provisions of this Article do not apply when the loss or damage occurs after the acceptance of the work, in which case the contractor remains liable, if applicable, under the warranty against latent defects and for the agreed qualities.

[16] V. Nemeș and G. Fierbințeanu, *Dreptul contractelor civile si comerciale. Teorie, jurisprudenta, modele*, (Bucharest: Hamangiu, 2020), 244-45.

9. Work Control and Execution

The work must be done as the parties agreed.

In order to prevent some execution defects and to be able to exercise the rights specified above, Art. 1861 of the NCC recognizes the beneficiary's right, at his own expense, to control the work during its execution, without unduly embarrassing the contractor, and to communicate his observations to the latter.

So defects can be avoid and the work will be as the parties conceived it.

According to the Italian Code, namely Art. 1662. Verifica nel corso di esecuzione dell'opera "il committente ha diritto di controllare lo svolgimento dei lavori e di verificarne a proprie spese lo stato. Quando, nel corso dell'opera, si accerta che la sua esecuzione non procede secondo le condizioni stabilite dal contratto e a regola d'arte, il committente può fissare un congruo termine entro il quale l'appaltatore si deve conformare a tali condizioni; trascorso inutilmente il termine stabilito, il contratto è risoluto, salvo il diritto del committente al risarcimento del danno".

It means that the contractor has a term within he must do the work according to the agreement.

10. Direct Action of Workers

Sometimes the workers of the contractor are not paid in time. That's why it was necessary a rule to protect them.

According to the Art.1856 to the extent that they have not been paid by the contractor, the persons who, under an agreement concluded with him, have carried out an activity for the provision of services or the execution of the contracted work, have direct action against the beneficiary, up to the amount owed by the latter the contractor at the time of commencement of the proceedings[17].

This action assures the payment in time of the salaries.

11. Termination of Agreement

Obviously, like any bilateral and synallagmatic agreement, the contractor Agreement can be terminated by an event that makes the obligation impossible to perform or by termination of the agreement due to the fault of one of the parties (art.1871-1872 NCC).

Assuming that the contractor was a natural person, the possibility of agreement termination is traditionally recognized when he dies during the performance of the contract, as the contract was considered an *intuitu personae* legal act[18]. It was therefore presumed that since the qualities of the contractor or handyman were the basis for concluding the contract, it was natural that by the death of the handyman, architect or contractor - as provided in Art. 1485 of the old Code - the Lease Agreement to be terminated.

The rule is also taken over by the new Civil Code which states that when the contractor dies or becomes, without any fault of his own, unable to complete the work or provide the service, the contract terminates if it was concluded in consideration of the contractor's personal skills (Art.1871 paragraph 1)[19].

The regulation of the Romanian Code follows that of the Italian Code which stipulates that „il contratto di appalto non si scioglie per la morte dell'appaltatore, salvo che la considerazione della sua persona sia stata motivo determinante del contratto (Art. 1674).

12. Conclusions

The new regulation of the contractor agreement from the Romanian Civil Code can only be welcomed. Through it, the Company agreement has acquired a special regulation and the forced similarities with the lease agreement have been removed. Even if by this new regulation the contractor agreement exceeds the influence of Roman law, clearer and more specific rules were necessary for various situations in practice and the choice of the Italian Civil Code as a source of inspiration can only be a realistic one.

PREVENTIVE MEASURES UNDER ENVIRONMENTAL LAW APPLICABLE TO COMPANIES GOVERNED BY LAW NO. 85/2014

Candit Valentin VERNEA*

Abstract

This article addresses the relationship between environmental law and insolvent companies. The author will analyze the incidence of preventive measures in current national legislation and will identify its applicability in regards to insolvency proceedings.

The article is structured in two parts. The first part aims to define and identify the particularities of preventive measures under environmental law as well as the environmental liability of companies, followed by the second part that highlights the obligations that insolvent companies have in order to prevent environmental damage by linking the provisions of Law No. 85/2014 on insolvency prevention and insolvency procedures with the provisions of the Government Emergency Ordinance No. 68/2007 on environmental liability with regard to the prevention and repair of environmental damage.

Keywords: *insolvency proceedings, environmental damage, preventive actions, environmental liability, environmental protection, environmental law, commercial law, company law, insolvency procedures, insolvency practitioner, judicial administrator, judicial liquidator.*

1. Preventive measures provided for by environmental law

As a legal institution, environmental liability is governed by the general framework established by the Government Emergency Ordinance No. 195/2005 on environmental protection, with its subsequent amendments. A more detailed legal framework is established by the Government Emergency Ordinance No. 68/2007 regarding preventing and remedying environmental damage, as amended, which transposed and implemented in full Directive No. 2004/35/EC[1].

The main objective of Government Emergency Ordinance No. 68/2007, with its subsequent amendments, is to emphasize the preventive nature of its provisions and to promote caution as a core principle. By means of this ordinance, an important role was given to the positive obligation of the State to guarantee the fundamental right to a healthy and a balanced environment.

The fundamental right to a healthy environment is established by European conventional law and constitutionally recognized, requiring the creation of an administrative and legislative framework with the aim of preventing damage to the environment and human health[2].

In legal specialty literature it was pointed out that without the prospects of genuine liability, adapted to the particularities of the field and efficiency, in the sense of using legal means and instruments to ensure that the damage is repaired as fully as possible and appropriately and in a reasonable time, environmental law cannot be either effective or credible".[3]

Liability in environmental law is a specific type of responsibility based on principles that combine elements of environmental law with elements of administrative and civil law. Administrative law prescribes that environmental protection is an objective of major public interest, determining the possibility of establishing reparatory measures, but also the assessment of the significance of the damages done to the environment by public administration authorities for the protection of the environment.

The failure of economic operators to comply with environmental obligations regarding the prevention or mitigation of environmental damage and failure to communicate information to the competent authorities for the protection of the environment may even result in contraventional sanction.

The aforementioned environmental responsibility is based on principles specific to environmental law such as: the principle of preventive action, the principle of sustainable development, the principle of the conservation of biodiversity and ecosystems specific to the natural biogeographical framework and also the principle of the "polluter pays".

As stipulated, environmental liability occurs in the event of environmental damage, which implies that an economic operator is negatively affecting the environment through actions or inactions in the course of its activity. In order for responsibility to exist, there are certain conditions that must be cumulatively met, as follows: the committing an illicit act, causing

[3] Mircea Dutu and Andrei Dutu, *Liability in environmental law,* Romanian Academy Publishing House, Bucharest, 2015, pg. 117.

environmental damage and the existence of a causal link between them[4].

In legal specialty literature it has been stated that while in the case of minor damages to the environment, the damages can be pecuniary assessed, i.e. the costs of restoring the damaged natural balance can be evaluated, in the case of significant damage to the environment, i.e. irreversible or long-term damage, caused in any way to the environment or which has caused or is likely to cause death or serious injury to the bodily integrity or health of a person, the damages may or may not be quantifiable[5].

However, it is essential to distinguish between the different meanings of the term damages, as it can mean two different notions with distinct legal regimes. The first meaning of the term is corresponding to term "damnum", which comes Latin, meaning a simple injury, harm or impairment of personality rights. The second meaning of the term is corresponding to the Latin term of "praejudicium", which refers to a material or moral loss caused by someone. Taking into consideration the different meanings of the two terms, we consider that "damnum" is a primary injury, while "praejudicium" represents the consequences of said injury. While there could be "damnum" without "praejudicium", there cannot be any "praejudicium" without "damnum".

With these said, in Romanian legal literature, the notion of "ecological damage" was borrowed from its French counterpart, in order for it to express the particularities of indirect damage resulting from harm done to the environment[6].

The notion of ecological damage has been defined as "the harm which affects the environment as a whole, or the elements of a system, which, because of its indirect and diffuse nature, does not permit the establishment of a right to compensation'. [7]

In legal literature, some authors considered that ecological damage is the one that causes harm to people and goods, the environment being considered to be a cause and not the victim, while other authors have considered that ecological damage causes damage to the environment, shaping the concept of the extent of an ecological damage[8].

Also, it was pointed out that "in the notion of 'environmental damage' were included both the damages suffered because of pollution, done to the environment, and the damages suffered by humans or goods, the environment being defined in the legislation prior to Law No. 137/1995 on environmental protection, as consisting of all natural and human created factors, civil liability regulations making no distinctions between different elements of the environment"[9].

Government Emergency Ordinance No. 195/2005 on environmental protection, as amended, keeps the notion of "damages done to the environment" in the dispositions regarding liability in Article 95(2)[10].

In matters regarding damages done to the environment, humans are the ones that cause most of the damages, including the most serious of them. If environmental damage has been caused, it will be assessed from a pecuniary point of view, in order to estimate the necessary expenditures needed to restore the damaged natural balance. In this field, environmental damage could also be irreversible, so the persons responsible will be compelled to bear the costs related to the removal of the negative consequences, as for of restitutio in integrum. Also, those responsible for environmental damage have to bear both the costs of reparation of the damages caused and the costs for preventing and restoring the ecological balance[11].

In accordance with the 'polluter pays' principle, economic operators that cause environmental damage will have to bear all the costs necessary to prevent and repair environmental damage. The person responsible could be held liable if, through his own actions or inactions, he has caused certain, direct and personal damage to the environment which has not been repaired by another person. Environmental damage is certain when its existence is proven and its extent is established.

Another principle regarding liability, for environmental damage, is that of solidarity in the case of plurality of authors. The Government Emergency Ordinance No.195/2005 on environmental protection, as amended, provides in Article 95(1) solidary liability in case of plurality of authors. In such cases, the burden of reparation can be divided proportionally by analyzing the culpability of each person, and, if the person's participation cannot be exactly established, those responsible will be equally liable for compensation for the damages done to the environment.

Economic operators, whose activities are carried out under environmental agreements or environmental authorizations, which are in insolvency proceedings, will be required to comply with all environmental legal dispositions. For environmental damages, insolvent economic operators may be required to repair any

[4] The term "damage" is defined in Article 2 Pc. 12 of G.E.O. No. 68/2007 as "a measurable negative change in a natural resource or a measurable deterioration of a service linked to natural resources, which may occur directly or indirectly'.

[10] Article 95 (1) of the G.E.O. No. 195/2005 on environmental protection, as amended, stipulates: *Liability for environmental damage shall be objective, independent of fault. In the case of plurality of authors, liability shall be joint*.

[11] This results from the corroboration of the provisions of Articles 6 and 94 of the G.E.O. No. 195/2005 on environmental protection, with amendments.

damages caused, as Law No. 85/2014 on insolvency prevention and insolvency procedures provides the possibility for injured creditors to have said damages repaired.

For the purpose of finding any breaches of environmental obligations, the County Environmental Protection Agency is the competent authority in the field which operates under the authority of the National Environmental Protection Agency, and which can establish preventive and reparatory measures. Furthermore, the County Environmental Protection Agency also has the power to assess damages done to the environment[12].

The assessment of environmental damage is very important in the case of an insolvent company, taking into consideration the legal dispositions of Law No. 85/2014, as amended, which impose certain obligations that the affected creditors must comply with. Thus, following an assessment carried out by it, the County Environmental Protection Agency may request the its registration in the bankrupt's estate of the insolvent debtor, or may ask the Syndic Judge to order the debtor to pay the damages caused and assessed, as well as to repair any damage done to the environment or to persons. Depending on the time and involvement of the insolvent company in causing the environmental damage, the County Environmental Protection Agency may establish obligations for the insolvent company to take preventive or reparatory measures leading to the prevention of any further environmental damages.

In order to establish preventive measures, the County Environmental Protection Agency may consult with the county commissariat of the National Environmental Guard or with other authorities responsible for environmental law that can offer support in making such decisions.

In the event of environmental damage done by an economic operator, the County Environmental Protection Agency will assess the significant nature of the environmental damage in consultation with the environmental authorities involved as well as the National Environmental Protection Agency. [13]

After drafting the assessment on the significant nature of the environmental damage, the County Environmental Protection Agency will inform the economic operator of the outcome of the assessment and, based on the conclusions of the assessment, it will impose measures to repair the environmental damage that was caused. In the case of insolvent companies, the assessment of the significant nature of the environmental damage can constitute proof for registration in the bankrupt's estate of the insolvent debtor.

Article 7 (1) of the Government Emergency Ordinance No. 68/2007, as amended, imposes that for the performing of its tasks, the County Environmental Protection Agency may:

"(a) to carry out the preventive or reparatory measures established, in accordance with the provisions of Article 11 (d), Article 12 (1), Article 15 (d) and Article 16 (1), respectively, directly or through the conclusion of contracts with natural or legal persons, in accordance with the provisions of the Government Emergency Ordinance No. 34/2006 on the assignment of public procurement contracts, public works concession contracts and service concession contracts, approved with amendments by Law No. 337/2006, as amended.

(b) order the necessary preventive or reparatory measures to be taken on the property of a third party;

(c) request the operator to carry out his own assessment and to provide any information and data necessary in the event of causing damages;'

Judicial practice at national level has concluded that the National Environmental Protection Agency together with the County Environmental Protection Agencies are obliged to take all necessary measures to prevent and repair any environmental damage. The expenditures, for measures that will be taken by the Environmental Protection Agencies, can be advanced by them and eventually recovered from the economic operators. Thus, Decision No. 3196/30.05.2016 of the Bucharest Court of Appeal judged the appeal put forward by the County Environmental Protection Agency against Civil Sentence No. 3779/ 20.05.2015 of the Bucharest Tribunal, in which the action was guaranteed and the defendant was ordered to take over the entire quantity of waste under the applicant's legal guard. The expenditures necessary to take legal measures for the disposal or recovery of waste will be advanced by the County Environmental Protection Agency[14].

Government Emergency Ordinance No. 68/2007, with amendments, imposes a time limit in which a claim ca be brough of 5 years for the recovery of the expenditures advanced by the County Environmental Protection Agency for carrying out the measures to repair environmental damage. In the case of insolvent companies, that limitation period will be suspended once the proceedings have been opened, in accordance to Article 90 of Law No. 85/2014 on insolvency prevention and insolvency procedures[15].

[12] According to Article 6 (1) of the G.E.O. No. 68/2007, the County Environmental Protection Agency is the competent authority for establishing and taking preventive and remedial measures, and for assessing the significant nature of environmental damage.

[13] According to Article 6 (3) of the G.E.O. No. 68/2007, in assessing the significant nature of the environmental damage and in determining remedial measures, the County Environmental Protection Agency shall consult the National Environmental Protection Agency, besides the authorities mentioned at (2).

[14] Decision No. 3196/30.05.2016 of the Bucharest Court of Appeal available at https://idrept.ro/Document View.aspx? DocumentId=81506204 consulted on 28.02.2021 on the website idrept.ro.

[15] Article 32(2) of the G.E.O. No. 68/2007, stipulates that the right of the County Environmental Protection Agency to file a claim against the operator for the recovery of costs shall has a statute of limitation of 5 years from the date on which those measures were carried out or from the date on which the responsible operator or third person was identified.

The decisions for establishing preventive or reparatory measures that the County Environmental Protection Agencies take can be contested by the persons concerned, in accordance with the provisions of the Law on Administrative Disputes[16].

In accordance to the provisions of Article 8(2) of the Government Emergency Ordinance No. 68/2007 on environmental liability with regard to the prevention and repair of environmental damage, the decisions of the County Environmental Protection Agency will be notified to the operator within 24 hours.

The National Environmental Protection Agency is involved in the development of sustainable development plans at all levels by actively participating in the process of integrating environmental policies into other sectors. The County Environmental Protection Agencies, under the supervision of the National Environmental Protection Agency, perform the tasks of implementing policies, legislation and strategies in the field of environmental protection at the county level.

In matters regarding the discovery of environmental damage as well as of imminent threats of such harm is the responsibility of the National Environmental Guard, through county commissioners[17].

The National Environmental Guard is the public inspection and control institution in the field of environmental protection, being the competent authority for conformity verification, which operates as a specialized body of the central public administration. The National Environmental Guard is responsible for the discovery, prevention and sanctioning of operators in breach of the legal provisions on environmental protection[18].

2. Preventive actions applicable to insolvent companies

Government Emergency Ordinance No. 68/2007 on environmental liability with regard to the prevention and repair of environmental damage, devotes an entire chapter to preventive actions, since imminent threats of environmental damage are easier to prevent than to repair.

Economic operators operating on the basis of an environmental agreement or authorization will be required to take all necessary measures to prevent any incidents with environmental consequences. Imminent threats of environmental harm will have to be reported by the operator within 2 hours of being made aware of the occurrence of such threats. The information will be transmitted by the operator, with regard to imminent threats of environmental damage, to the County Environmental Protection Agency and to the county commissioners of the National Environmental Guard, from where the activity is carried out[19].

In the case of operators covered by the Insolvency Act, the duty to inform of imminent threats of environmental harm lie with the special or judicial administrators, depending on the situation. The activity of the insolvent company is coordinated and led by the special administrator, appointed in the proceedings, under the supervision of the judicial administrator, if the right of administration has not been lifted by the opening judgment of the proceedings. In this case, the person responsible to communicate any threats of damage to the environment to the authorities is the special administrator of the company, which also directs its economic activity. The special administrator, appointed in the proceedings, is also the person responsible for taking all measures to prevent such threats of harm which may be caused to the environment.

The duty of the judicial administrator or liquidator to communicate to the authorities of any threats of damage to the environment, will be his, respectively hers, from the date of the lifting of the right of administration of the insolvent operator, respectively from the date of the opening of bankruptcy proceedings. The opening of bankruptcy proceedings of the operator has the consequence of lifting the right of administration and the appointment of a judicial liquidator, as well as stopping the company's activity in order to liquidate its assets.

We consider that the judicial liquidator appointed in bankruptcy proceedings is the person responsible for fulfilling all the obligations regulated by Article 10 (1) of the Government Emergency Ordinance No. 68/2007 on environmental liability, since he is the person designated by the Court for the representation of the insolvent company. Furthermore, the judicial liquidator is also the person responsible to take all necessary preventive measures to remove the threat to the environment.

Regarding the preventive measures necessary to avoid environmental damage taken in the context of insolvency proceedings, we consider that they are part of the company's current business and the approval of the creditors' committee is not necessary. These measures may be taken by the special administrator of the insolvent debtor, with the prior opinion of the judicial administrator.

---

[16] Law No. 554/2004, on administrative litigation, with amendments, published in M.Of. No. 1154 from 7 December 2004.

[17] Article 9 of the G.E.O. No. 68/2007 stipulates that the competent authority for the assessment of environmental damage, of an imminent threat of such damage and the identification of the operator responsible shall be the National Environmental Guard, through the county commissariats.

[18] Article 2 (2) of Government Decision No. 1005/2012 on the organization and functioning of the Environmental Guard, with amendments, published in M.Of. No. 352 from 22 October 2012.

[19] Article 10 (1) of G.E.O. No. 68/2007 stipulates that in the event of an imminent threat of environmental damage, the operator shall immediately take the necessary preventive measures and, within 2 hours of becoming aware of the threat, inform the County Environmental Protection Agency and the county commissariat of the National Environmental Guard.

Preventive measures, in insolvency proceedings, for which costs cannot be covered by the insolvent company, can be requested from the creditors by the judicial administrator by holding a general meeting of the creditors, organized by the judicial administrator. If such a request is approved, creditors who have incurred the costs of the preventive measures can take precedence in recovering the allocated money and may even request to have a charge be born on certain assets of the insolvent debtor.

What must be mentioned is that the nature of the obligation, which the operator must comply with in order to prevent an imminent threat of environmental damage, is a personal one. The County Environmental Protection Agency may force the operator to do something or abstain from certain activities in order to prevent environmental damage in the event of such an imminent threat.

In the case of companies covered by Law No. 85/2014 on insolvency prevention and insolvency procedures, the County Environmental Protection Agencies may order the operator represented by a special or judicial administrator, to take certain measures to prevent possible environmental damage, as it deems appropriate. The responsibility for carrying out these measures lies primarily with the person who carries out the company's business, i.e. the special administrator, in the case in which the right of administration has not been lifted by the Syndic Judge.

Enforcement in insolvency proceedings is not possible, so the only possibility for the County Environmental Protection Agency for compelling the debtor to carry out preventive measures in order to avoid environmental damage remains the request that he can put forward to the Syndic Judge. By analyzing the request of the County Environmental Protection Agency, the judicial administrator may find that the request is well founded and request the Judge to order the debtor to fulfil his obligations.

The preventive measures which any operator must take need to be proportional to the threat, with the main aim being the avoiding of environmental damage. These measures will be taken in accordance with the precautionary principle in decision-making[20].

This principle seeks to prevent irreversible decisions with the purpose of avoiding any form of pollution. It also is a principle of anticipating any alleged damage even if it is not unquestionably demonstrated. If the risk of environmental degradation exists or is plausible, then the precautionary principle is activated to protect the environment.

In the event of an imminent threat of environmental damage, in which preventive measures have been taken, which have been proved to be ineffective, the operator must notify the County Environmental Protection Agency and the county commissariat of the National Environmental Guard in order for new preventive measures to be established.[21]

The County Environmental Protection Agency can request the operator to provide information on any imminent threat of environmental damage. The County Environmental Protection Agency can also request information from operators whenever it considers that there may be threats of environmental damage.

In the event that a threat is found by the County Environmental Protection Agency, it can request the operator to take the necessary measures to prevent environmental damage. The County Environmental Protection Agency may also direct the operator in choosing the best approach in order to prevent imminent environmental damage, but it may also take the necessary preventive measures on its own[22], with the costs being incurred by the operator's estate.[23]

In case of operators that are debtors in insolvency proceedings, requests from public authorities for the protection of the environment will have to be communicated at both the company's headquarter and at the headquarter of the judicial administrator or liquidator. Any requests for information or measures taken by public authorities for the protection of the environment will have to be communicated to judicial administrators or liquidators as the insolvency proceedings of the operator are supervised or even run by the insolvency practitioner appointed by the Court.

The County Environmental Protection Agency has the legal possibility to take the necessary preventive measures in order to avoid environmental damage, but only after these preventive measures have been requested from the operator, which remained passive and has not complied with the request. In general, the operator is the person entitled to take all the preventive measures necessary in order to avoid environmental damage. If the operator does not take any measure, the County Environmental Protection Agency will have to

[20] Article 10 (3) of G.E.O. No. 68/2007 stipulates that the preventive measures referred to in paragraph (1) must be proportionate to the imminent threat and lead to the avoidance of the damage, taking into account the precautionary principle in decision-making.

[21] Article 10 (5) of G.E.O. No. 68/2007 stipulates that if the imminent threat persists despite the preventive measures taken, the operator shall inform, within 6 hours from the moment it has observed the ineffectiveness of the measures taken, the County Environmental Protection Agency and the county commissariat of the National Environmental Guard of: a) the measures taken to prevent the damages; (b) the evolution of the situation following the application of the preventive measures; c) other additional measures necessary to be taken to prevent the deterioration of the situation, depending on the facts.

[22] Article 11 of the Government Emergency Ordinance No. 68/2007 provides that at any time the County Environmental Protection Agency may exercise the following powers: (a) to require the operator to provide information on any imminent threat of environmental damage or any suspected case of imminent threat; (b) ask the operator to take the necessary preventive measures; (c) give the operator instructions on the preventive measures needed to be taken; (d) take the necessary preventive measures.

[23] Article 26 of G.E.O. No. 68/2007 stipulates that the operator incurs the costs of the preventive and remedial actions, including the situations in which these costs were forwarded by the County Environmental Protection Agency.

take preventive measures in its stead, with the costs being incurred by the operator's estate[24].

We consider that companies covered by Law No. 85/2014 on insolvency prevention and insolvency procedures, the County Environmental Protection Agency can request the operator to take certain measures to prevent an imminent threat of environmental damage, without any limitation. If the County Environmental Protection Agency requests the insolvent operator to take certain preventive measures, the operator is required to comply with them, and if the measures exceed the current activity of the operator, the insolvent debtor will have to request, pursuant to Article 87 (2) of Law No. 85/2014, the approval of the creditors' committee. After the meeting of the creditors' committee has taken place, the judicial administrator will authorize the submitted preventive measures to be carried out by the special administrator of the debtor[25].

If the operator's right of administration is lifted, following the approval by the creditors' committee of the proposed preventive measures, the judicial administrator will be the one to carry out all proposed and approved operations.

Paragraph 2 of Article 12 of the Government Emergency Ordinance No. 68/2007 with regard to preventing and remedying environmental damage stipulates three exceptions in which the head of the County Environmental Protection Agency may take preventive measures:

"(a) has not fulfilled the obligations stipulated in Article 10 (1) or has not complied with the provisions of Article 11(b) or (c);

(b) cannot be identified;

(c) is not required to incur the costs under this Emergency Ordinance."

Whereas for the cases referred to in points (b) and (c) the situation is simple, and the head of the County Environmental Protection Agency can decide to take preventive measures much more easily, in case of operators which have not complied, although they have been requested to take preventive measures, the decision to advance the necessary costs for taking preventive actions by the Agency will always have to be justified. One of the risks that will have to be accounted for in taking these decisions is the possibility that the County Environmental Protection Agency will not be able to recover the expenditures made in order to take the preventive measures in place of the operator.

We consider that a high risk for non-compliance with the provisions of the County Environmental Protection Agency comes from those operators who are on the verge of insolvency or against whom insolvency proceedings have already been opened.

The heads of the County Environmental Protection Agencies should pay close attention to these types of insolvent operators, since any action to prevent environmental damage requires that the operator allocate a certain amount of money, which is usually not earmarked. If the operator fails to fulfil its obligations to take preventive measures in the event of imminent environmental damage, the County Environmental Protection Agency will be able to carry out these measures, at the operator's expense.

Unfortunately, Law No. 85/2014 on insolvency prevention and insolvency procedures does not have any stipulations that require the debtor to prioritize, in any way, the fulfilment of environmental obligations, even if they are actions in order to prevent the imminent damage which may be caused to the environment. The insolvent company operates, in accordance with the Code on classification of activities in the National Economy, from the opening of the insolvency proceedings until the eventual opening of bankruptcy proceedings, when its activity will be preserved, and the assets recovered. Preventive measures, in the case of companies covered by the Insolvency Law, are often transactions that exceed the debtor's current activity, which, to be carried out, require the meeting if the creditors' committee.

Government Emergency Ordinance No. 68/2007 regarding preventing and remedying environmental damage, stipulates that in the event of imminent threats of environmental damage, the operator is required to take the necessary preventive measures within 2 hours. In the case of insolvent operators, the taking of such measures would not be feasible, considering that the judicial administrator would have to present the measures that were taken to the creditors' committee, as required.

Considering that the creditors' committee can be convoked by the judicial administrator after at least 5 days from the date on which the notice appears in the Insolvency Proceedings Bulletin, meaning that the 2-hour deadline can never be met. In these circumstances, the operator cannot take the necessary preventive measures on the grounds that he does not have the

[24] Article 12 of G.E.O. No. 68/2007 states that, before carrying out the tasks referred to in Article 11 (d), the head of the County Environmental Protection Agency will request that the operator take preventive measures. (2) By way of exception to the provisions of paragraph 1, the head of the County Environmental Protection Agency may take the necessary preventive measures in case the operator: (a) has not fulfilled the obligations stated by Article 10 (1) or has not complied with the provisions of Article 11 (b) or (c); (b) cannot be identified; c) is not required to incur the costs under this G.E.O.

[25] Actions, processes and payments which exceed the conditions stipulated by paragraph (1) can be authorized in the exercise of the supervisory powers by the judicial administrator; the judicial administrator will convoke a meeting of the creditors' committee in order for the committee to cast a vote on the request of the special administrator for approval, within 5 days from the date of its receipt. If a particular operation exceeding the current activity is recommended by the judicial administrator and the proposal is approved by the creditors' committee, it will be carried out by the special administrator. If the activity is conducted by the judicial administrator, the operation will be carried out by him with the approval of the creditors' committee, without the need for the special administrator's request, in accordance with Article 87 (2) of Law No. 85/2014 on insolvency prevention and insolvency procedures, with amendments.

opinions of the judicial administrator and the creditors' committee.

This being the case, we propose a harmonization of the provisions of the Government Emergency Ordinance No. 68/2007 Law No. 85/2014, by introducing an article, which would enable quick and essential decisions to be taken to prevent an imminent threat of damage to the environment. This article would provide the right of the judicial administrator or liquidator to take the necessary measures to prevent an environmental threat without the approval of any other body, such as the creditors' committee.

We also consider that Article 5 (2) of Law No. 85/2014 could be amended to ensure that the current activity also includes any acts made to prevent environmental damage. Thus, by lege ferenda, Article 5 (2) of Law No. 85/2014 should also contain a letter (d), its content being as follows:[26]

(d) ensuring that obligations to prevent imminent threats of environmental damage are fulfilled.

We consider that the introduction of this obligation in the debtor's current activity will make it possible for the debtor to comply with all the deadlines stipulated by Government Emergency Ordinance No. 68/2007 without the need to obtain a prior opinion from the creditors' committee.

Such actions constitute a concrete expression of the principle of preventive action, based on a practical element, *i.e.* the prevention of environmental degradation through actions with polluting potential.

By amending the definition of "current activity" measures to prevent environmental damage, one can avoid the sanctions stipulated by Government Emergency Ordinance No. 68/2007.[27]

[26] Article 5 (2) of Law No. 85/2014 on insolvency prevention and insolvency procedures, as amended, states that current activities represent those activities of production, trade or providal of services and financial transactions, proposed to be carried out by the debtor during the observation period and during the reorganization period, in the normal course of his activity, such as: (a) the continuation of contracted activities and the conclusion of new contracts, according to the object of activity; (b) the carrying out of collection operations and payments relating to them; (c) ensuring the financing of the work capital, within current limits.

[27] Article 40 (1) of G.E.O. No. 68/2007 states that (1) The following actions constitute infringements and shall be punished as follows: (a) failure to comply with the provisions of Article 7 (2) and Article 10 (5) with a fine of between 5.000 lei and 10.000 lei for individuals and between 10.000 lei and 20.000 lei for legal persons; (b) failure to comply with the provisions of Article 10 (1) second part, 13 and 14 (1) (a) with a fine of between 25.000 lei and 40.000 lei for individuals and between 50.000 lei and 80.000 lei for legal persons; (c) failure to comply with the provisions of Article 7 (3), Article 10 (1) first part, and 17 (1) with a fine of between 40.000 lei and 50.000 lei for individuals and between 80.000 lei and 100.000 lei for legal persons; (d) failure to comply with the provisions of Articles 11 (a) to (c) and 15 (a) to (d) with a fine of between 40.000 lei and 50.000 lei for individuals and between 80.000 lei and 100.000 lei for legal persons.

STILL IN DISCUSSION: HABITUAL RESIDENCE OF THE CHILD

Anca Magda VOICULESCU*

Abstract

The notion of "habitual residence" of the child is reffered to in different juridical instruments, belonging to both national and international areas, which nevertheless do not define the notion. Given that the habitual residence must be determined in concreto in case of litigations, courts worldwide (national and international) have been forced to shape their own standards.

The purpose of the article is to analyse this notion in the particular situation of international child abduction, given the continuously increasing number of cases where children are moved from one state to another, in the context of both free movement of citizens, but also respect for family life.

Hence, the objectives of the present study are to identify legal instruments applying in case of an international child abduction and also the case law of both national and international courts, relevant in connection to the notion of "habitual residence".

Furthermore, in the context of lack of definition, absent juridical criteria and divided case-law, the study aims to identify the criteria that should be taken into consideration by national courts when establishing the state of habitual residence of the child.

Keywords: *best interests of the child, parental authority, domicile of the child, habitual residence of the child, respect for family life.*

1. Introduction

Starting from the increase of international abduction cases and the difficulties encompassed by courts in solving them, the present study aims to make an inquiry into the relevant juridical texts and also the case-law, in order to identify a definition of the notion of "habitual residence" of the child, or at least the criteria upon which to rely in order to determine it.

The subject has great importance, as the principle in case of international child abductions stipulates the prompt return of children who have been wrongfully taken from their state of habitual residence or wrongfully retained outside the state of their habitual residence.

In this context, establishment of the habitual residence of the child is a key element in solving these cases.

To reach this aim, the study will concentrate on legal provisions relevant for cases of international child abduction and also the case – law, both national and international, as lack of legal definition led to a consistent body jurisprudence of overwhelming importance in shaping the standards to be considered when establishing the habitual residence of the child.

Doctrinal opinions will also be identified and presented, with the necessary note that preponderence goes to studies from abroad, as in Romanian juridical literature the subject has not yet been discussed.

2. Content

2.1. Juridical instruments

From the investigation in the legal area, it results that the notion of "habitual residence" of the child is referred to (but not defined such as) in a multitude of juridical instruments, which are different in nature.

These legal instruments can be organized in three main categories, belonging to the area of international private law, EU law, respectively national law.

The present study does not aim to present an exhaustive list of all juridical instruments, but only the most significant for the topic in discussion[1].

2.1.1. Private international law instruments

The most important juridical instrument of private international law is the **Hague Convention of 25 October 1980 on the Civil Aspects of International Child Abduction**[2], to which Romania is a member state[3].

Although the Convention does not provide a clear definition of the notion of "habitual residence" of the child, the concept is at the very heart of the return mechanism provided for in the Convention and several

[1] For a list of juridical instrument applicable in international child abduction cases, see ECtHR, Decision adopted on 26 November 2013, Application no. 27853/09, case *X v. Latvia*.

[2] Intergovernmental agreement concluded at The Hague on October 25, 1980, during the 14th Session of the Hague Conference on Private International Law, which entered into force on December 1, 1983.

[3] Law no. 100/1992 for Romania's accession to 1980 Hague Convention on the Civil Aspects of International Child Abduction, published in the Official Gazette of Romania no. 243/30.09.1992.

articles repeatedly make explicit referrence to the notion[4].

Juridical literature[5] underlined that "Despite the importance that determining a child's habitual residence plays in Child Abduction Convention proceedings, it is a tradition of the Hague Conferences not to define this term."

Given the variety of national laws and traditions of states, it would indeed have been a very difficult task to formulate a precise definition. Also, it seemed more appropriate to leave a margin of appreciation to contracting states. In addition, the diversity of circumstances that may occur in every specific case resulted in failure of any attempt to establish a precise definition.

The Explanatory Report on the 1980 Hague Child Abduction Convention[6] seeks to underline and explain the principles which form the basis of the 1980 Hague Convention and also provides a detailed commentary on its provisions.

Nor in this Explanatory Report is to be found any definition of the notion in discussion, the author explaining in para. 66 of the same report that a definition was not necessary, as the notion of habitual residence was already a "well-established concept": "(...) the notion of habitual residence, a well-established concept in the Hague Conference, which regards it as a question of pure fact, differing in that respect from domicile"[7].

Although the report provided no definition, it underlined an important principle, namely that habitual residence was always a question of fact, to be established individually from case to case.

Also, the Report identified another crucial principle to be taken into consideration, namely the bests interests of the child (paras. 21-25).

Still, no clues were construed regarding the standards to be considered when applying these principles for establishing the habitual residence of the child.

Another important private international law instrument, the **Convention on the Rights of the Child**[8]**,** does not make any explicit reference to the notion of "habitual residence", acknowledging nevertheless in a implicit manner the main elements in discussion in case of international child abduction and habitual residence of the child.

The UN Convention stipulates that any child "should grow up in a family environment, in an atmosphere of happiness, love and understanding"[9] and stress the idea that both parents have common responsibilities for the upbringing and development of the child, who shall not be separated from his or her parents against their will[10].

Neither does the **European Convention for the Protection of Human Rights and Fundamental Freedoms** [11] contain any definition or even reference to the notion of "habitual residence".

The inquiry in the texts of this Convention is justified, as the ECHR case law points out the close connection between the Hague Convention 1980, the Convention on the Rights of the Child and the ECHR Convention (particularly art. 8 of ECHR Convention – respect for family life).

As to the „relationship between the Convention and the Hague Convention on the Civil Aspects of International Child Abduction of 25 October 1980, the Court reiterates that *in the area of international child abduction the obligations imposed by Article 8 on the Contracting States must be interpreted in the light of the requirements of the Hague Convention (…) and those of the Convention on the Rights of the Child of 20 November 1989* (…), and of the relevant rules and principles of international law applicable in relations between the Contracting Parties (…)"[12] (our underline).

Conclusion is to be drawn that private international law offers neither a definition of the notion, nor criteria upon which it is to be established.

2.1.2. EU instruments

Council Regulation (EC) no. 2201/2003 of 27 November 2003[13], known as "the Brussels II bis

[13] Council Regulation (EC) no. 2201/2003 concerning Jurisdiction and the Recognition and Enforcement of Judgments in Matrimonial Matters and the Matters of Parental Responsibility, repealing Regulation (EC) no. 1347/2000, published in the Official Journal L 338/1, 23 December 2003.

Regulation" is of the highest significance in the area of EU law instruments.

Similar to the conventions in the area of international law, the Regulation does not include any definition for the notion of "habitual residence".

Although not providing a definition, it makes references to it in Article 10 and Article 11, thus explicitly acknowledging the term.

Charter of Fundamental Rights of the European Union[14], by contrast, contains only indirect references to elements specific for the notion of "habitual residence", namely respect for family life[15] and the right of the child to maintain on a regular basis a personal relationship and direct contact with both his or her parents, unless that is contrary to his or her interests [16].

Therefore, the conclusion is the same as in case on texts of private international law: no definition or legal criteria.

2.1.3. National instruments

In Romanian law, references to the notion of "habitual residence" appear in provisions of Law no. 369/2004 on the enforcement of the Hague Convention[17], respectively Article 11 (3) and Article 14.

Such as in case of the juridical instruments of private international law and EU law, this national legal instrument does not provide a definition of the notion in discussion or even criteria to be considered when applying the notion.

2.2. Case-law

As research into the relevant legislation has not led to any conclusive result as to the notion or even guiding criteria, an investigation of the jurisprudence may prove useful.

To this respect, the study will take into discussion the case-law pronounced in contracting states under Hague Convention 1980, jurisprudence of European Court of Justice and the European Court for Human Rights, and also national decisions (including Romanian decisions).

2.2.1. Case-law in contracting states of 1980 Hague Convention

Although the drafters of the 1980 Hague Convention considered that a flexible approach would ensure a reasonable margin of appreciation for the courts, the lack of definition lead in practice to ambiguity and uncertainty.

In these circumstances, a consistent case-law had to be developed regarding not a precise definition, but criteria upon which a court should determine a child's habitual residence[18].

Moreover, as there was no international court invested with interpretive powers, this difficult task had to be accomplished by national courts of signatory countries during the years that followed the conclusion of the 1980 Hague Convention.

Unfortunately, this resulted in a divided case-law and a variety of factors taken into consideration.

In United States, jurisprudence[19] based either on subjective criteria in relation to the parents' last common intention in establishing the child's residence[20], or on objective indicators of the child's acclimatization[21]. Common or "middle" approach was difficult[22].

Analisying the case-law of other states, it is clear that, generally, the objective approach was considered better suited to meet the need for uniformity in application among contracting states.

To this end, a part of juridical literature[23] pointed out that few jurisdictions place much emphasis on

[23] Morgan McDonald, Home Sweet Home? Determining Habitual Residence Within the Meaning of the Hague Convention, in Boston College Law Review, Law Journals at Digital Commons @ Boston College Law School, vol. 59, no. 9/2018, pp. 427 – 443, p. 442, available at the following link: http://lawdigitalcommons.bc.edu/bclr?utm_source=lawdigitalcommons.bc.edu%2Fbclr%2Fvol59%2Fiss9%2F24&utm_medium=PDF&utm_campaign=PDFCoverPages, last accession on 21.01.2021, 14,53.

parental intent. "Generally, other common law countries focus on objective evidence. (...) Many civil law jurisdictions also use an objective, child-centered method of analysis. Argentinian courts have defined habitual residence as the place that provides the child with stability and permanence. In Sweden, courts have held that the analysis requires an examination of all objective evidence that would show a permanent attachment to a nation. Finally, Italian courts have found that habitual residence is the place where the child spends most of his or her time."

Another part of doctrine[24] opposed to the subjective approach in very categorical terms: „Any analysis that focuses on the shared subjective intentions of parents is not only illogical, but rigid, inconsistent, and wrought with uncertainty. Where a court is presented with a Child Abduction Convention proceeding, it must act with restraint, focusing only on the objective evidence, and avoid reverting to more comfortable concepts, such as best interests."

The best interests of the child are though the main directing vector in any decision concerning children and could therefore not easily be ignored.

In spite of the various concrete manifestations of the principle of best interests of the child, we are of the opinion that it should always be considered and, due to its broadness, may encompass both objective and subjective factors.

Supreme Court of Canada has emphasised to this respect that the "hybrid" approach is to be preferred to the approach focused solely either on the acclimatisation of the child or the parental intention[25].

Even US jurisprudence has recently changed divided criteria for a uniform legal standard, as the US Supreme Court held for the first time in a decision pronounced on 2018 that a child's habitual residence depends on the totality of the circumstances specific to the case.[26]

As part of the 1980 Hague Convention, Romania has at present a unified case-law, based on a unified jurisdiction[27], which supports the opinion expressed above focusing on the "hybrid approach".

Romanian jurisprudence[28] establishes the habitual residence of the child based on both subjective and objective factors, which are considered and weighed *in concreto* depending on the specificity of the case.

2.2.2. Court of Justice of the European Union

Court of Justice of the European Union (CJEU) first analised the notion of "habitual residence" in the context of assessment of the habitual residence of children for the purposes of Article 8 (1) of the Regulation in case *A*[29].

CJEU appreciated that the concept of "habitual residence" must be interpreted as meaning that it corresponds to "the place which reflects some degree of **integration by the child in a social and family environment.** To that end, in particular the **duration**, **regularity**, **conditions and reasons for the stay** on the territory of a Member State and the family's move to that State, the **child's nationality**, the place and conditions of attendance at **school**, **linguistic knowledge** and the family and social **relationships of the child** in that State must be taken into consideration"[30].

These considerations were reiterated and developed in the well-known *Mercredi* case[31], of which the most relevant considerations are to be found in the following.

"To ensure that the **best interests of the child** are given the utmost consideration, the Court has previously ruled that the concept of 'habitual residence' under Article 8 (1) of the Regulation corresponds to the place which reflects some **degree of integration by the child in a social and family environment**. That place must be established by the national court, taking account of **all the circumstances of fact specific to each individual case** (see *A*, paragraph 44).

Among the tests which should be applied by the national court to establish the place where a child is habitually resident, particular mention should be made of the **conditions and reasons for the child's stay on the territory of a Member State**, and the **child's nationality** (see *A*, paragraph 44).

As the Court explained, moreover, in paragraph 38 of *A*, in order to determine where a child is habitually resident, in addition to the **physical presence of the child** in a Member State, other factors must also make it clear that that **presence is not in any way temporary or intermittent**.

In that context, the Court has stated that the **intention of the person with parental responsibility** to settle permanently with the child in another Member State, manifested by certain tangible steps such as the

[24] Tai Vivatvaraphol, Back to Basics: Determining a Child's Habitual Residence in International Child Abduction Cases Under the Hague Convention, op. cit., pp. 3325 – 3369, p. 3365.

[25] Supreme Court of Canada, decision pronounced on 20 April 2018, case Balev, paragraphs 50 to 57.

[26] US Supreme Court, decision pronounced on 25 February 2020, case Monasky v. Taglieri.

[27] Romania has unified territorial competence on international abduction cases by Law no. 369/2004 (Bucharest Tribunal – first instance court and Bucharest Court of Appeal – recourse court).

[28] Bucharest Tribunal, Fourth Civil Section, decision no. 1272/11.09.2020, case no. 19673/3/2020, definitive, not published ("The Tribunal notes that the common intention of both parties was to establish with the child in France (…) the parties lived in France at the time of the birth of the child and throughout the period following this time and until August 2019 (…) the minor was enrolled in kindergarten (…) benefited from the medical service repeatedly (…) the plaintiff is employed in France").

[29] ECJ, Decision adopted on 02.04.2009, C-523/07, case *A* ("the case-law of the Court relating to the concept of habitual residence in other areas of European Union law (…) cannot be directly transposed in the context of the assessment of the habitual residence of children for the purposes of Article 8(1) of the Regulation.")

[30] Para. 44.

[31] ECJ, Decision adopted on 22.12.2010, C-497/10 PPU, case *Barbara Mercredi v. Richard Chaffe*, paragraphs 47 to 57.

purchase or rental of accommodation in the host Member State, may constitute an indicator of the transfer of the habitual residence (see *A*, paragraph 40).

In that regard, it must be stated that, in order to distinguish habitual residence from mere temporary presence, the former must as a general rule have a **certain duration which reflects an adequate degree of permanence**. However, the Regulation does not lay down any minimum duration. Before habitual residence can be transferred to the host State, it is of paramount importance that the person concerned has it in mind to establish there the permanent or habitual centre of his interests, with the intention that it should be of a lasting character.

(…)

The social and family environment of the child, which is fundamental in determining the place where the child is habitually resident, comprises various factors which vary according to the **age of the child**.

(…)

An infant necessarily shares the social and family environment of the circle of people on whom he or she is dependent. Consequently (…) it is necessary to assess **the mother's integration in her social and family environment**.

(…)

If the application of the abovementioned tests were (…) to lead to the conclusion that the child's habitual residence cannot be established, which court has jurisdiction would have to be determined on the basis of the criterion of the **child's presence**, under Article 13 of the Regulation". (our underline)

It appears from considerations presented that the European Court of Justice favours the "hybrid approach". Also, the principle of best interests of the child was referred to as of the "utmost consideration" at the very beginning of the reasoning, thus encompassing both subjective and objective factors discussed further on by the Court.

2.2.3. European Court of Human Rights

In the recent case *Michnea v. Romania*[32], the ECHR firmly supported the principle of **bests interests of the child** as paramount in all decisions concerning children, aligning with the drafters of the 1980 Hague Convention and the EU case-law.

The Court stated that there was no indication in the national court's decision in case under discussion that "court identified the best interests of the child and appropriately took them into account in making its assessment of the family situation, as required by Article 8 of the Convention".

Also, the Court underlined that "article 8 of the Convention imposes on the domestic authorities a particular procedural obligation in this respect: when assessing an application for a child's return, the courts must make a ruling giving specific **reasons in the light of the circumstances of the case**".

Again, the pattern adopted by 1980 Hague Convention and ECJ was followed, as habitual residence was explained as a factual element, to be established after consideration of the circumstances of the case.

Subsequently, the Court argued the breach of Article 8 of the Convention as follows: "it appears that the Court of Appeal relied on the CJEU findings in the *Barbara Mercredi* judgment without making any assessment of the contextual difference between that case and the case brought before it by the applicant. (…) The Court considers that the particular circumstances of that case, which were significantly different than those of the case currently under examination, did call for a more in depth examination".

Also, the Court had obviously in mind the **parents' shared intention** to establish their and the child's residence in Italy (subjective factors) when pointing out that "the family had been living in Italy at the time of the child's birth and until her removal and had made all the arrangements upon her birth to register her in Italy and to allow her to benefit from the Italian welfare system".

Furthermore, reiterated that "draws inspiration from the principles of the Brussels II bis Regulation as interpreted by the CJEU in its case-law and cannot but note that prior to her removal from Italy, the child had been, at least to a certain degree, **integrated in a social and family environment**" in Italy (objective factors).

For reasons above presented, the Court concluded that the interpretation and application of the provisions of the Hague Convention and of the Brussels II bis Regulation by the Romanian national court failed to secure the guarantees of Article 8 of the Convention and that the interference with the applicant's right to respect for his family life had not been "necessary in a democratic society" within the meaning of Article 8 § 2 of the Convention.

2.3. Going deeper: determination of the habitual residence of the child

2.3.1. Criteria

As it resulted from ECJ and ECHR case-law presented before, it is for the national court to establish the habitual residence of the child, taking account of two sets of factors, both subjective and objective.

Neither one set of factors or yet one factor alone is decisive, and therefore national courts should pay attention to multiple (and often conflicting) indicators, both subjective and objective, when making a decision on habitual residence.

Nevertheless, it should be kept in mind that all these different factors are acting under the common and large umbrella of the concept of the best interests of the child, and therefore this concept should be the standard

[32] ECtHR, Decision adopted on 07 July 2020, Application no. 10395/19, case *Michnea v. Romania*, already cited.

vector when determining the habitual residence of the child[33].

Also, the list of factors to be presented and discussed as follows is not exhausting and courts should take account of all the circumstances of fact specific to each individual case[34].

Not least, it is important to bear in mind the proximity criterion, which means that the courts of the child's habitual residence are, owing to their proximity to the child's environment, the best placed to assess its situation.

Subjective criteria

This category refers to the parents' shared intention in establishing the child's residence in one state (or transfer it to another).

Generally, the importance of the subjective criteria was argued in the sense that children lack the material and psychological background to decide where they will reside, and therefore a child's habitual residence is consistent with the intentions of those entitled to exercise parental authority (which includes fixing the residence of the child).

In making the appreciation upon the intent, the courts should look not only (and primarily) at declarations, but also at actions and facts.

Juridical literature[35] and case-law included in this area factors such as:

- ***parental employment*** – decision to maintain a job in a state after divorce was appreciated as indicating the intent of holding to the preexisting habitual residence[36]; on the contrary, decision to leave an employment in a state and gain of a job in another was considered a factor showing the intent to permanently move to another state;
- ***purchase of home*** – more likely to express a long-term stay, in opposition to rental of a lodging;
- ***moving of belongings*** – partial moving of belongings may nevertheless express incertitude towars the internt of a permanent movement to another state;
- ***citizenship*** - if parents and child come to a country on a tourist visa and do not ask for a more permanent residency status, the habitual residence in the prior country may not have been abandoned;
- ***location of bank accounts*** – importance of this factor is diminished, as at present on-line transactions may easily be activated and option to have accounts in different states may also be taken in relation to financial opportunities;
- ***purpose of movement to the new state*** –journeys for vacations do not express the intent to change the habitual residence and are considered temporary[37];
- ***obtaining professional licenses*** specific to the new state is a factor that indicates intention to gain a new habitual residence.

Objective criteria

This set of criteria ponder generally on inquiry whether children have "gained roots" in the new environment (the degree of the child's integration in a social and family environment).

It looks for indicia of the child's connectivity to a place through criteria such as school, extracurricular activities, social activities, significant relationships with people in that place, registrations concerning the child, physical presence of the child.

- ***school enrollment*** is considered a key factor in determining if the child has acclimated to a new residence[38]
- ***medical enrollment*** usually accompanies school inscription[39]
- ***registration of birth*** in official registers[40]
- ***participation in social activities*** – social life at school or outside is also considered as an indicator that the child has adapted to the new surroundings
- ***length of stay in the country*** - the length of time is not fixed and the courts appreciate depending to the specific circumstances in each case[41]
- ***the age of the child*** - different nuances are to be considered related to the child's age.

On the one hand, the age of the child is closely connected to the degree of maturity.

On the other hand, the factors to be taken into account in the case of a child of school age are not the same as those relevant for an infant. The environment

of an infant (or even young) child is essentially a family environment, determined by the reference person(s)[42].

▪ ***integration of the child's person(s) of reference*** – depends on the degree of the child's dependence (which varies according to his or her age), and also languages spoken by parents, geographic and family origins[43]

▪ ***child's physical presence*** - if the child's habitual residence cannot be established by applying the tests above-mentioned, under Article 13 of the Regulation, the physical presence of the child should be taken into consideration (although it is not sufficient by itself to establish the habitual residence of the child[44]).

2.3.2. (More) habitual residences

It is generally agreed that one person can have only one habitual residence at a time.

To this respect, Article 2570 of Romanian Civil Code stipulates for general relations under private international law that: "the habitual residence of a natural person is in the state where the person has his principal place of residence, even if he has not fulfilled the legal registration formalities. (…) For the determination of the main dwelling, account shall be taken of those personal and professional circumstances which indicate lasting connections with the state concerned or the intention to establish such connections"[45].

Albeit the case-law in this respect is also divided, practical experience has proved that there are situations when an alternate habitual residence was considered (persons who split time more or less evenly between two locations).

Juridical literature[46] underlined that the approach of the courts differs in how they handle cases in which there are elements which may lead to the conclusion that the child has more than one residence.

Reference was made to decisions pronounced by Australian courts (which agreed that the notion of dual habitual residence was inconsistent with the wording and the spirit of 1980 Hague Convention), whereas courts from United Kingdom found it was possible for habitual residence to change periodically if "that should be the intended regular order of life for parents and children".

We share the opinion already expressed by the doctrine that the Hague Convention "does not contemplate more than one habitual residence and was not intended to deal with such a circumstance"[47].

Similarly, case-law considered that "the Hague Convention enshrines the principle of exclusive recourse to the attachment to the child's habitual residence, which prevents a child from having several simultaneous habitual residences."[48]

Nevertheless, as cases where courts accepted a dual residence have already appeared, we consider that an amendment of the Hague Convention and the Regulation might be taken into consideration, so that a legal solution should be agreed upon.

In absence of a legal solution, situations of alternate habitual residences of the child are very difficult to be solved in the framework of international child abduction in case of transfer of the child between two (or more) states of habitual residence.

Indeed, one might easily consider that no international child abduction occurred at all, since no wrongful movement or retain of the child could be argued, as both states are considered habitual residences.

3. Conclusions

Following the adoption of the 1980 Hague Convention and even after the Brussels II bis Regulation, as no legal definition was provided for the notion of "habitual residence", courts all over the world have struggled to structure the criteria upon which to establish the habitual residence of a child in international abduction cases.

The omission to provide a definition was indeed intentional, aimed to ensure a margin of appreciation for the courts and avoid rigid and formal determinations, which might have excluded circumstances specific to each case.

On the contrast to these "good intentions", the lack of clarity resulted in divergent views of jurisprudence, emphasizing solely either the child's (objective) or the parents' (subjective) perspective.

We argue that a "hybrid perspective" is more fitted to serve the bests interests of the child, as the question of the child's habitual residence is far more complex than a simple application of tests ellaborated

---

[42] Bucharest Court of Appeal, Third Section Civil and for minors and family matters, decision no. 753/07.12.2020, already cited: "In relation to the age of the child at the time when the father brought him to Romania, respectively 11 months, it is clear that the integration of the child targets the family and social environment determined by the reference persons in whose care the minor is (in the case, the mother) and assumes as such the evaluation of the integration of the reference persons"

[43] The logic of this approach is most evident when the habitual residence of a newly-born child is involved, who by definition had no time to become himself/herself integrated in any place at all and would be deprived of an habitual residence.

[44] ECJ, Decision adopted on 02.04.2009, C-523/07, case *A*, already cited, para. 33. Also, Bucharest Tribunal, Fourth Civil Section, decision no. 857/25.06.2015, case no. 40891/3/2014, definitive, not published. Related to this factor, there were also argued opposed opinions that a child's physical presence in a particular state is not even a prerequisite for determining that it is habitually resident in that state (Advocate General Saugmandsgaard Øe, Opinion delivered on 20 September 2018, C-393/18 PPU, case *UD v XB*).

[45] From the wording of the text, it follows that the legislator took into account both subjective and objective factors.

on the basis of case-law criteria (which are exemplificative and non-exhaustive).

Both the child's acclimatization and the parents' intention are important factors, albeit the weight given in particular to objective or subjective factors can vary from case to case.

The use of multiple factors from both perspectives, without pre-assigned weight, would also be consistent with the 1980 Hague Convention's and the Regulation's approach not to have a precise definition of "habitual residence".

Analyse of all factors related to the issue of habitual residence should be explored and settled by national courts taking into account the principle of bests interests of the child and also all circumstances of the case.

Amendment of the 1980 Hague Convention and the Regulation would be a solution for cases where dual (or more) habitual residences of the child are accepted.

Finally, as case-law is (still) divided, greater importance should be attached to a consistent and uniform application of the criteria of habitual residence both within the European Union and all the states signatories to the 1980 Hague Convention.

PROTECTION ORDER VERSUS (?) PARENTAL AUTHORITY

Anca Magda VOICULESCU*

Abstract

Parental authority includes in its scope important decisions related to minors, as identified by Article 36 of Law no. 272/2004 (form of education and professional training, complex medical treatments and surgery, residence of the child or administration of property), which are by consequence to be taken only by agreement of both parents. It is an institution which is genuinely based on collaboration of parents.

Apparently a totally distinct institution, protection order is provided for by Law no. 217/2003 as a legal instrument to ensure the protection of victims against domestic violence. It is often used by one parent against the other, in the larger context of juridical disputes generated by divorce, and implies categorical opposition.

Although the two legal institutions are distinguished and the premises on which they act are indeed different, case-law has revealed the existence of significant interferences, which exceed simple terminological differences and arise problematic issues both in substance, as in procedure.

The purpose of this article is to examine these interconnections from a double perspective, both theoretical and practical, starting from a natural question: does the existence of a protection order interfere (and in the affirmative, to what extent) with the exercise of parental authority?

Therefore, the objectives of this study are to examine relevant procedural and substantial matters as they derive from the experience so far and propose solutions, in an attempt to demonstrate that these two institutions may function together.

Keywords: *protection order, parental authority, important decisions, parental disagreement, juridical interferences*.

1. Introduction

The area of family law comprises a large variety of issues, which are inevitably connected to one another from multiple and intricate perspectives, as they all cover the same main subject: family and interconnections among its members.

The present study will only ponder on two of the most significant and actual subjects in family law, respectively parental authority and protection orders.

As these two institutions generally function on different premises (collaboration of parents in case of parental authority/conflict in case of protection orders), but in the common context of issues concerning the same family, the question arises if existence of protection orders affects the exercise of parental authority.

This question presents both substantial and procedural valences and implies great practical and theoretical importance, as it is often the case that procedures concerning parental authority and protection orders are pending at the same time/in short periods of time, and solutions to be pronounced influence one another.

In this context, the purpose of this article is to examine the interconnections between these two institutions, as they derive from the practical experience so far.

To reach this aim, the study will examine the interferences from a double perspective, both substantial and procedural.

Also, solutions are to be proposed, in an attempt to demonstrate that these two institutions, although starting from different premises, may function together.

Doctrinal opinions, where identified, will also be presented, with the necessary note that in Romanian juridical literature the topic has scarcely been discussed.

2. Content

2.1. Parental authority

Parental authority is a notion common to many legal systems (national laws, EU law[1], private international law[2]) and generally features the same characteristics as they are synthetically to be presented in case of Romanian legislation.

In the framework of this article, it will only be pointed out that parental authority is clearly to be differentiated from custody[3].

* PhD, Judge at Bucharest Tribunal, trainer in family law at Romanian National Institute of Magistracy, Romanian designated judge in International Network of Hague Judges for 1980 Hague Convention on the Civil Aspects of International Child Abduction (e-mail: ancamagda.voiculescu@gmail.com).

[1] The most important EU legal instrument is Council Regulation (EC) no. 2201/2003 concerning Jurisdiction and the Recognition and Enforcement of Judgments in Matrimonial Matters and the Matters of Parental Responsibility, repealing Regulation (EC) no. 1347/2000, published in the Official Journal L 338/1, 23 December 2003 (Article 2).

[2] E.g., Convention on the Rights of the Child, adopted by United Nations General Assembly, signed in New York on November 20, 1989, which entered into force on September 2nd, 1990 (Article 18 Para. 1).

[3] S.P. Gavrilă, *Instituții de dreptul familiei în reglementarea Noului Cod Civil*, Hamangiu Publishing House, 2012, p. 205: „ (…) notion borrowed from other legal systems, which does not overlap identically to exercise of parental authority (…)". For a comparative perspective

2.1.1. Notion, forms and premises

In Romanian legislation, the general provisions of Romanian Civil Code[4] are to be corroborated to the special provisions comprised in Law no. 272/2004[5].

The definition and main characteristics of the notion of parental authority are to be found in Article 483 of Romanian Civil Code („Parental Authority")[6], whereas Article 487 of the same legislative act („Content of parental authority")[7] details the content of the same concept.

It results from the above-mentioned articles that, in essence, parental authority is a set of rights and obligations concerning both person, and property of the child.

In case of divorce, the general rule is represented by common parental authority (Article 397 of Romanian Civil Code[8]), whereas exclusive/sole parental authority is the exception.

Exceptions referred to are either objective (expressly prescribed by Romanian Civil Code[9]), or subjective (Romanian Civil Code and Law no. 272/2004[10] - courts have the possibility to appreciate upon sole parental authority in subjective situations, given circumstances specific to each case).

As the standard is represented by common parental authority, which imposes consent of both parents in taking (important) decisisons concerning children, it can be concluded that the premise on which parental authority operates is collaboration of parents.

2.1.2. Area of application

At present, Article 36 Para 3 of Law no. 272/2004[11] clearly defines the area of important decisions belonging to the sphere of common parental authority, which must achieve joint consent[12].

These decisions are related *in concreto* to type of education or training, complex medical treatment or surgery, residence of the child or administration of property.

As in these cases common consent is mandatory by law (but nevertheless the law does not offer a solution in case of disagreement between parents), the solution conceived by jurisprudence was substitution of consent of the opposant parent[13].

Generally, important decisions reffered to above are discussed in opposition to routine (day-to-day) decisions. The first must be agreed upon by parents, whereas the latter are to be made individually by the parent who is currently taking care of the child.

2.2. Protection orders

Similar to parental authority, protection order is an institution which appears in different legal systems

between parental authority and custody, A.M. Voiculescu, *Parental authority versus common custody*, Lex et Scientia International Journal, no. XXV, vol. 1/2018, published by Nicolae Titulescu University and Foundation of Law and International Relations Niculae Titulescu, Nicolae Titulescu Publishing House, pp. 43 – 44.

[4] Law no. 287/2009, published in the Official Gazette of Romania no. 511/24.07.2009 and republished per Article 218 from Law no. 711/2011, published in the Official Gazette of Romania no. 409/10.06.2011.

[5] Law no. 272/2004 concerning protection and promotion of children's rights, published in the Official Gazette of Romania no. 557/23.06.2004, successively modified and lastly republished in the Official Gazette of Romania no. 159/05.03.2014.

[6] "(1) *Parental authority is the set of rights and obligations concerning both person and property of the child which belong equally to both parents.* (2) Parents exercise parental authority only in the best interests of the child, with due respect to his person, and associate the child in all decisions affecting him, considering the age and maturity of the child. (3) Both parents are responsible for bringing up their minor children" (our underline).

[7] "Parents have the right and duty to raise the child, taking care of the child's health, physical, mental and intellectual upbringing, and also the child's education and training, according to their own beliefs, characteristics and needs of the child; they are bound to give the child guidance and advice needed in order to properly exercise the rights granted by the law".

[8] "After divorce, parental authority rests jointly to both parents, unless the court decides otherwise".

[9] Article 507 of Romanian Civil Code ("Exclusive parental authority") stipulates an exhaustive list: "If one parent is *deceased*, *declared dead* by judgment, under *interdiction*, *deprived of the exercise of parental rights* or if, for any reason, it is *impossible* for him or her to express his or her will, the other parent exercises parental authority alone" (our underline).

[10] Article 398 of Romanian Civil Code ("Exclusive parental authority"): "For *serious reasons*, given the interests of the child, the court decides that parental authority is exercised exclusively by a parent. (2) The other parent retains the right to watch over the child's care and education and the right to consent to adoption" (our underline). Subsequently, Article 36 Para 7 of Law no. 272/2004 exemplifies in a nonexhaustive list the subjective reasons mentioned by Civil Code in a general manner, as follows: "There are considered serious grounds for the court to decide that parental authority is exercised by a single parent *alcoholism*, *mental illness*, *drug addiction* of the other parent, *violence* against children or against the other parent, convictions for human trafficking, drug trafficking, crimes concerning sexual life, crimes of violence, as well as any other reason related to risks for the child that would derive from the exercise by that parent of parental authority" (our underline).

[11] "If both parents exercise parental authority, but do not live together, important decisions, such as type of education or training, complex medical treatment or surgery, residence of the child or administration of property shall be taken only with the consent of both parents."

[12] The initial form of Law no. 272/2004 did not prescribe either types of important decisions, or at least general criteria upon which to determine them.

[13] In case of disagreement, Article 486 of Romanian Civil Code offers solutions formulated in a very general manner (the court decides according to the best interests of the child), nevertheless without defining *in concreto* the juridical mechanism that courts should take into account.

belonging both to national[14], EU[15] and private international[16] law sphere of application.

2.2.1. Notion, forms and premises

Protection order was conceived as an instrument to provide protection for victims of domestic violence.

According to Law no. 217/2003[17], preventing and combating domestic violence is part of the integrated family care and support policy, considered an important public health issue.

At present, Romanian legislation offers two forms of this legal instrument: protection order (issued by the court) and provisional protection order (issued by police forces).

As it derives from the very reason leading to adoption of this instrument (safeguarding victims of violence), protection order functions on premises of violence and conflict (generally among members of the same family).

2.2.2. Area of application

The law acknowledged for protection orders a larger sphere of application compared to provisional protection orders.

In terms of provisional protection orders, Article 31 Para. 1 opens possibility to take one/more of the following measures: temporary eviction of the abuser from the common dwelling, reintegration into the common dwelling of the victim and the children, obligation for the aggressor to maintain a specified minimum distance, obligation for the abuser to wear an electronic surveillance system at all times, order to the aggressor to hand over the weapons held to the police.

By comparison, Article 38 Para. 1 regulating protection orders prescribes all the measures above mentioned in case of provisional protection orders, and in addition: limitation of the aggressor's right of use of only a part of the common dwelling, accommodation/placement of the victim and children in a support center, prohibition for the abuser to travel to certain specific localities or areas, prohibition of any contact with the victim, including telephone, mail or otherwise, entrusting minor children or establishing their residence.

Indeed, measures available in the framework of protection orders are more diversified in number and nature, and therefore may be better adapted to particular circumstances of each case.

This disctinction may be explained both in relation to the authority taking the measures (courts are given extended competences compared to police forces), but also to the speediness of the procedure (provisional protection orders are issued promptly in case of imminent risk, whereas adoption of protection orders is made in case of a risk only after a trial before a court).

2.3. Interferences between parental authority and protection orders

None of the measures to be taken by provisional protection orders interfere in any way to parental authority.

By contrast, two of the measures provided in the framework of protection orders issued by courts are relevant for the topic in discussion, respectively: "prohibition of any contact, including by telephone, by mail or in any other way, with the victim"[18] and "entrusting minor children or establishing their residence"[19].

Although not in an obvious manner, prohibition of *any* type of contact in case the victim and the aggressor are also acting as parents interferes with the joint exercise of parental authority, as parents have to be in a *minimum* contact (in whatever form) in order to take important decisions.

On the other hand, the measure of entrusting the child ("încredinţare") available in the procedure of protection orders has obvious interconnections with parental authority, as the first implies both domicile of the child, and also the right to make decisions concerning the child's life (and this aspect belongs to the area of parental authority).

In these two cases, the institutions of parental authority and protection orders present more or less obvious interferences, which start from simple terminological differences and develop in problematic issues both in procedure and substance, as it will be further discussed.

2.3.1. Terminological differences

It can easily be noticed that the Civil Code and Law no. 272/2004 operate with the notion of "**parental authority**", whereas Law no. 217/2003 uses the notion of "**încredinţare**".

This terminological difference is of significant importance, as there is a major distinction between the notion of "parental authority" (introduced by Romanian

[14] The "POEMS" project, co-funded by the Daphne program of the European Union, focused on analysing the law on protection orders in 27 EU Member States. This project and its final report are available along with the country fiches at the following link: http://poems-project.com/results/country-data, last accession on 08.03.2021, 18,46.

[15] There are two EU legal instruments, one applying in civil matters (Regulation (EU) no. 606/2013 of 12 June 2013 on mutual recognition of protection measures in civil matters of the European Parliament and of the Council, published in the Official Journal L 181, 29 June 2013), and the other one in criminal area (Directive 2011/99/EU of the European Parliament and the Council of 13 December 2011 on the European protection order, published in the Official Journal L 338, 21 December 2011).

[16] Council of Europe Convention on preventing and combating violence against women and domestic violence (*Istanbul Convention*), adopted in Istanbul, Turkey on 11 May 2011, into force on 1 August 2014.

[17] Law no. 217/2003 on the prevention and combating of domestic violence, published in the Official Gazzette of Romania no. 367/29.05.2003, republished in the Official Gazzette of Romania no. 365/30.05.2012, no. 205/24.03.2014 and no. 758/19.08.2020.

[18] Article 38 Para. 1 h) of Law. no. 217/2003.

[19] Article 38 Para. 1 j) of Law. no. 217/2003.

Civil Code in 2011) and the notion of "încredințare" (legiferated by the former Romanian Family Code[20]).

The notion of "încredințare" implied domicile of the child, and also the right to make unilaterally decisions with respect to all aspects of the child's life, both in favour of the parent who had the domicile of the child.

In opposition, the notion of "parental authority" stipulated in the present legislation encompasses only the right to make decisions (jointly or exclusively), without including the domicile of the child (which is to be decided in favour of one of the parents, based on different criteria from those taken in consideration when deciding the form of parental authority – sole or common).

This difference in terminology (and also substance) was indeed justifiable in the beginning, as at the time of adoption of Law no. 217/2003 the former Family Code was still in force, and therefore it seemed natural to take over its terminology and notions.

Nevertheless, maintenance of this difference can no longer be explained at present, 10 years after entry into force of the Civil Code and successive amendments of Law no. 217/2003 (the last one by Law no. 106/2020[21]).

This "prolongement" of notions which are no longer actual resulted sometimes in conflicting case-law.

Thus, when issuing a protection order under the form stipulated by Article 38 Para. 1 j), some courts decided only on domicile of the child[22], whereas others decided both on domicile and exercise of parental authority (exclusive/common)[23].

This distinction has of course practical implications, as parental authority and domicile are currently different notions and cover different aspects, and it is therefore of importance if both/only one of them can be decided in the framework of protection orders procedure.

On the other hand, it should also be pointed out that, in the same Article 38 Para. 1 j), Law no. 217/2003 uses the notion of "**residence**" of minor children.

In our opinion, the legislator had in mind the "**domicile**" of the child, as reffered to by the Civil Code and Law no. 272/2004, which is a notion distinct from „residence".

Our opinion is supported by the case-law, where the quasimajority of jurisprudence disposed (when adopting protection orders under Article 38 Para. 1 j) of Law no. 272/2004) upon domicile, and not residence of the child[24].

This divided case-law, but also the necessity to adapt terminology to the actual legislation justify in our opinion, *de lege ferenda*, new amendments on Law no. 217/2003, in order to replace the notions of "încredințare" and "residence" with the notions of "parental authority" and "domicile" of the child.

2.3.2. Procedural interferences

In the broader context created by divorce, it is often common that there are litigations pending at the same time, where practically the same measures are requested, but following different procedural ways.

Exemplifying one of these situations relevant to the subject in discussion, it is a rather frequent case where one parent claims existence of acts of violence against the minor exercised by the other parent.

In this case, the parent asks for single parental authority and establishment of the minor's domicile using the special procedural path of presidential order ("ordonanță președințială").

In parallel, by another special procedure consisting in protection order, the same parent requests entrustment of the child and establishment of the residence of the child.

As the same measures are asked for by two different special procedures, the question arises whether these two procedures may coexist and, if so, which takes precedence[25].

We are of the opinion that procedural coexistence cannot be denied, and therefore concomitent pending of

---

[20] Law no. 4/1953, published in the Official Gazette of Romania no. 4/04.01.1954, amended by Law no. 4/1956 published in the Official Gazette of Romania no. 11/ 04.04.1956, republished in the Official Gazette of Romania no. 13/18.04.1956, succesively amended, lastly by Law no. 59/1993, published in the Official Gazette of Romania no. 177/26.07.1993.

[21] Law no. 106/2020 on amending and supplementing Law no. 217/2003 for preventing and combating domestic violence, published in the Official Gazette of Romania no. 588/06.07.2020.

[22] Judecătoria Sector 5 București, decision no. 194/16.01.2019, case no. 782/302/2019, definitive on the aspect under discussion by Bucharest Tribunal, Fourth Civil Section, decision no. 670A/25.02.2019, not published (the appeal was approved on aspects different from the one in discussion). The courts decided in this case only on domicile of the child.

[23] Judecătoria Sector 3 București, decision no. 5463/03.05.2018, case no. 9490/301/2018, definitive by Bucharest Tribunal, Fourth Civil Section, decision no. 2321A/11.06.2018, not published. The courts decided in this case both on domicile of the child, and exclusive parental authority in favour of the mother.

[24] E.g., Judecătoria Sector 3 București, decision no. 9014/17.08.2017, case no. 20207/301/2017, definitive by Bucharest Tribunal, Fourth Civil Section, decision no. 2971A/25.09.2017, not published. For an exception, Judecătoria Sector 5 București, decision no. 3454/13.05.2019, case no. 11039/302/2019, not published, which decided establishment of residence of the children.

[25] Protection order was considered a variety of presidential ordinance (O. Ghiță, *Ordinul de protecţie – varietate a ordonanţei preşedinţiale*, available online at the following link: https://www.unbr.ro/ordinul de protecţie – varietate a ordonanţei preşedinţiale - UNBR, last accession on 23.03.2021, 18,51).

the procedures mentioned above cannot result in inadmissibility[26] or suspension[27] of the either of them.

Indeed, both procedures have "equal status": they are special in nature, have urgent character, and the measures adopted have limited function in time (in case of presidential order measures last at most until the litigation on the merits is solved in first instance[28], whereas in case of the protection order measures take effect for a period of maximum 6 months[29]).

At the same time, judgements pronounced by courts of first instance are executory in both procedures and it is not possible to assess which will be solved first.

Given the reasons presented, we argue that nor protection order or presidential order should take *de plano* procedural precedence (by means either of inadmissibility, or suspension).

On the other hand, it is obvious that connection between procedures cannot be ignored, as long as the same measures are at stake on the merits in both cases and the solutions to be pronounced should not be contradictorial.

It is the reason why we opinate that this interference should be regulated not by way of procedural inadmissibility or suspension, but by way of another procedural solution, consisting in the exception of "lack of interest".

In this line of reasoning, as soon as one of the procedures is solved by an executory decision of the first instance, the other procedure *may remain* without interest.

Thus, if measures requested are granted (either by way of presidential order or protection order), the interest in continuing the other procedure (although existing at the time of registering the procedure) no longer subsists.

If measures requested are rejected by the court that first decides on one of the procedures, the interest in maintaining the other procedure still subsists.

2.3.3. Substantial interferences

As already underlined, substantial interconnections appear in case of two of the measures available by way of protection orders, respectively prohibition of any contact between the victim and the aggressor and entrusting minor children or establishing their residence.

Whether "prohibition of any contact" does not raise any problems in case of sole parental authority, further caution is to be taken in case of common parental authority.

Indeed, the juridical difference between exclusive and joint parental authority is (mandatory) collaboration and communication between parents.

Thus, where parents are totally independent in taking all types of decisions concerning children in case of sole parental authority, they must communicate and collaborate on important decisions in case of common parental authority.

Consequently, from a practical point of view, important decisions concerning minors may be agreed upon only in a context of parental discussions, which obviously imply existence of at least a *minimum contact* between parents.

Therefore, we opinate that, in case of joint parental authority, prohibition by the court of *any contact* should be avoided, so that the minimum contact necessary for taking important decision should be preserved.

We argue that Article 38 Para 1 j) of Law no. 217/2003 leaves courts a large margin of appreciation, as it defines prohibition of any contact in a generous manner: including *telephone*, *mail* or *any other way*.

Depending on the circumstances of each individual case, when issuing a protection order in the form of prohibition of contact between parents, courts may allow certain easily controllable forms of contact e.g., exclusively by mail and only when important decisions as prescribed by law must be taken.

This is the case, for example, when parents must decide *in due time* on the school the child is to be enrolled to, or *promptly* on performing a complex medical surgery on the child. In case these decisions are not taken in sometimes a very limited period of time, the child's right to education/health/life might be endangered.

Should these situations appear inside the period the protection order is in force, interdiction of any contact will result in no possibility to take the decision at the time it is needed.

To this respect, it should carefully be considered that compliance with the protection order is mandatory

[26] Which might be argued following the reasoning that relation between protection order or presidential order is to be determined by the principle *lex generalia – lex specialia*.

[27] Which might be taken into consideration as the same measures are asked in both procedures, according to Article 413 Para. 1 of Romanian Procedural Civil Code ("1. The court may suspend the judgment: 1. where solving the case depends, in whole or in part, on the existence or non-existence of a right which is the subject of another judgment").

[28] Corroboration of Article 997 and Article 448 of Romanian Procedural Civil Code. According to Article 997: "The order is provisional and executory. *If the judgment does not include any mention of its duration and the factual circumstances envisaged have not changed, the measures ordered shall take effect until the dispute over the substance has been resolved*." On the other hand, Article 448 Para. 1 provides that: "The judgments of the first court shall be *executory by law* where they concern: 1. establishing the *exercise of parental authority, establishing the residence of the minor*, and how to exercise the right to have personal ties with the minor" (our underline).

[29] According to Article 39 of Law no. 217/2003: "1. The duration of the measures ordered by the protection order shall be determined by the judge, not exceeding 6 months from the date of issue of the order.

2. *If the judgment does not include any mention of the duration of the measures ordered, they shall take effect for a period of 6 months from the date of issue*" (our underline).

by law both for the offeder (Article 47 Para. 1[30]), and also for the person protected by it (Article 44 Para 3[31]).

Prohibition of any contact by way of protection orders might therefore create an impossibility to exercise common parental authority as long as the protection order is in force.

This will ultimately directly affect the child, although the bests interests of the child are at the very heart and protected by all institutions belonging to the area of family law.

Nevertheless, the "collision" between protection orders and parental authority may be avoided by the way courts formulate *in concreto* the interdiction of contact, as the margin of appreciation granted by the legislator allows harmonization of institutions.

As far as the measure of entrusting minor children or establishing their residence is concerned by way of protection order, we consider a special attention should be taken in formulating the measure according to the actual terminology used by Romanian Civil Code and Law no. 272/2004.

Therefore, courts should precise if the measure refers only to exercise of parental authority (joint or exclusive)/establishment of the domicile of the child/both of them, instead of using the imprecise terminology used by Law no. 217/2003.

If not, discrepancies and collisions might appear if different procedures concerning the same family are pending or succeeding, as imprecise previous judgements might create misjudgements for those following.

3. Conclusions

Although a long period of time has elapsed since the adoption of the new Romanian Civil Code which represents the general framework, there are still situations where specific legislation has not been adapted to its new terminology and institutions.

Such is the case of Law no. 217/2003, which should be further amended in order to take over the notions provided for in the Civil Code, as it still operates with the notion of "încredinţare", different both in terminology, as in content, from the notion of "parental authority" introduced by the Civil Code.

This inadequacy has consequences not only from a theoretical point of view, but also practically, as it sometimes resulted in divided case-law concerning measures to be taken in the procedure of protection orders (parental authority/domicile of the child/both).

Apparently, the institutions of parental authority and protection orders are totally distinct, as they function on different premises (collaboration/conflict) and are designed to offer solutions to different situations (adoption of important decisions concerning children/protection and safeguarding from violence).

Nevertheless, there are important interconnections between these institutions from a double perspective, both theoretical and practical, as the existence of a protection order may interfere (in procedure, as well as in substance) with the exercise of common parental authority.

As they serve different goals, it is important that these two institutions may function together, in spite of terminological discrepancies and a process of legislation harmonising still to be done.

Although conceived to solve different problematics, the institutions of parental authority and protection orders may (and must) coexist, and it is the task of the courts to practically ensure their concomitent and proper functioning.

This conclusion represents once more the reason to reiterate an opinion we already expressed that the legislator should seriously consider the idea of a reasonable number of courts in Romania specialised in family law (following the pattern of Braşov Family and Minors Tribunal) by way of ensuring the actual functioning of the so called "instanțe de tutelă".

EMERGENCE AND EVOLUTION OF THE ECONOMIC AND MONETARY UNION: OVERLOOK AT THE DECISION-MAKING PROCESS AND THE LEGAL INSTRUMENTS USED (FROM ITS ORIGINS TO THE MAASTRICHT TREATY)

Dragoș–Adrian BANTAȘ[*]
Diana Elena CĂPRIȚĂ[**]

Abstract

As we write this, the Economic and Monetary Union seems to have overcome the crisis that has affected its credibility since 2009, continuing to present itself as the most successful monetary integration initiative in the world. This impression cannot be considered unfounded, as although economic and monetary unions existed before (such as those between England and Scotland in the 18th century, Belgium and Luxembourg or, ultimately, between the former British colonies that made up the United States of America), the Economic and Monetary Union to which we refer is the only such construction that brings together a number of 27 states, of which 19 have adopted a single currency (Euro), 27 states between which there have been and can still be found numerous differences in language, culture, level of development and values of the main economic indicators. Like any legal construction of this magnitude, Economic and Monetary Union did not emerge suddenly, but is the result of several decades of efforts, creative interpretations of the Community / Union and public international law, including an original but no less efficient use of mixed legal instruments. To these aspects we will refer in the approach we submit to your attention, consisting of two researches that address the evolution of Economic and Monetary Union from its premises to the present. Thus, in the first of these, which is the subject of this study, we will refer to the main moments that defined the development of the future Economic and Monetary Union even before its consecration at the level of European Union primary law, using, in the absence of other legal grounds, both a set of provisions of primary law which led, by way of interpretation, to the possibility of establishing a monetary cooperation between Member States, and a number of instruments specific to public international law rather than Community law but which, nevertheless, by way of the member states voluntarily assuming the application of their provisions, have produced the desired effects in the legal order of the Communities, notwithstanding the absence of an obligation to that effect.

Keywords: *European Union, Economic and Monetary Union, Euro, Werner Report, the snake, the European Monetary System, the ECU.*

1. Introductory considerations

Whether we support the Union project or not and whether we sympathize with the Economic and Monetary Union project or not, both of them are the realities that define not only the framework for the development of international relations, but also, in more and more situations, the legal relations between the subjects of law (public and private alike) in the Member States. And perhaps not only that, because the existence of the European Union, its economic force, its political role and, above all, its legal personality each have legal and / or political effects, including on third countries which, in their external action and even in their internal affairs, not only cannot ignore the existence of the Union, but also find themselves, in no few situations, forced to establish relations with it.

This reality, however, has one more defining characteristic: it is unique in human history. Of course, empires existed, expanded and collapsed before, but they were built and maintained only by armed force. State unions also existed before. Some of them have evolved from personal or other types of unions to federal or unitary states and time has proven them sustainable. Most, however, felt apart. There was also an example in which a large number of state entities formed a confederation and then a federal state, and they are still a successful example today. We are referring, of course, to the United States of America. But those states, when they began the journey that would turn them into a single federal state, shared a common past, a common language, and a set of similar socio-economic conditions. However, an example in which 27 states with such different historical, linguistic, social, economic, political conditions, as those that today make up the European Union managed to build up a construction with characteristics so close to a federal state of their own wills, without the use of force, we do not consider to be identifiable outside the Union. For this reason, the way in which these states have reached today's level of integration and, in this context, the way in which 19 of them have come to share the same currency may seem almost incomprehensible without the use of evolutionary analysis.

In this sense, it seems essential to remember that, although the process of establishing the European

[*] PhD in Intelligence and National Security („Carol I" National Defence University) and PhD Candidate in European Union Law, „Nicolae Titulescu" University of Bucharest (e-mail: adrian.bantas@gmail.com).
[**] PhD in Economics Bucharest Academy of Economic Studies. (e-mail: diana.caprita@gmail.com).

Communities was initially justified by security concerns, in the view of the Founding Fathers, it was never limited to them, but has always had a political finality, and we could even say a federal one. Or, as the literature states, "*the history of European integration is marked by two main political aims: the first focuses on the internal functions of integration, such as creating favorable conditions for economic and social development or equalizing living and working conditions in the Member States. The second is characterized by the affirmation of the European identity and the role of Europe in the world, being understood the fact that the European action oriented towards the outside must presuppose the existence of an economic force and an internal political stability. These two dimensions have been present since the beginning of the integration process, but have never been equivalent, neither in European policy, nor in the thinking or the action of the Member States. They are successive stages, as economic integration must sooner or later lead to political integration*"[1].

Beyond the use of the historical method of legal research, illustrated by the aforementioned references to the evolutionary analysis of the emergence and development of Economic and Monetary Union, our research cannot carry on, given the many economic aspects it addresses, without the use of the economic approach to law or, as understood in the specialized doctrine, the "*may include any analysis of the law, of its institutions and norms, which uses the conceptual instruments of the science of economics*"[2].

In this framework, which from the very beginning was intended to be integrative, in the sense of transferring more and more state competences to the supra-state level, we must also understand the emergence of an Economic and Monetary Union that finds its true role only in such a context, being almost inconceivable within a classical international, cooperative organization.

2. Emergence of the economic and monetary union project – main premises

The analysis of the emergence and development of Economic and Monetary Union, carried out within the natural limits of a scientific article, cannot in any case aspire to the status of an exhaustive presentation, nor do we intend to do so. However, in order to be at least reasonably complete, it must include some indispensable references to the political-economic-legal system in the context of which the project of this Union was developed, since its imperatives also gave rise to legal solutions that gave birth to the current EMU.

2.1. The post-war world and the Bretton Woods system

Thus, the post-war world was governed, from a monetary point of view, by the effects of the Bretton Woods Agreements, concluded by the representatives of 44 states, allied in the war effort against the Axis powers, on the occasion of the United Nations Financial and Monetary Conference that took place New Hampshire (United States), July 1-22, 1944.

Of course, a detailed analysis of the provisions of the Bretton Woods Agreements is not one of the objectives of our approach. However, we find it useful to note that, in addition to the establishment of the International Monetary Fund and the World Bank, the provisions of the agreements in question "*once implemented (in a gradual process completed in 1958), required the connection of the value of the US Dollar with that of gold. Moreover, the value of all the other currencies in the system was, in the same idea, related to that of the American Dollar*"[3].

For the operation of this system, "Member States (...) have agreed on (...) permitted fluctuations (of each currency) of up to 1%, relative to the value of the Dollar. States were required to monitor and maintain the exchange rates of their currencies, an objective achieved mainly by using their own currencies to buy or sell dollars, as appropriate. Therefore, the Bretton Woods System minimized the volatility of international monetary exchange (...)"[4].

Around the same time, a number of states on the European continent were laying the foundations for a series of agreements that, while not decisive in this regard, have at least contributed to building a culture of cooperation in the area under analysis. These, as the specialized doctrine put it, "*had as their initial purpose that of liberalizing payments between the states of the old continent and of building a system of multilateral agreements between central banks*"[5]. In this regard, "*the first Agreement on Intra-European Payments and Compensation was signed in 1948, the European Payments Union was established in 1950, and the European Monetary Agreement was formulated in 1955*"[6].

The common feature of all these agreements was, from our perspective, that they can be seen as specific to the public international law, as they functioned and

instituted mechanisms typical of it and therefore they do not make the transition to an entity with a specific specific decision-making process, similar to that of the Member States.

Back the gold standard and the dollar's exchange rate, experts could argue for or against its existence, but from our perspective, what is interesting is that, "*in 1971, concerned that the gold reserve of the States United States was no longer enough to cover the amount of dollars in circulation, President Richard M. Nixon announced the temporary suspension of the convertibility of the dollar into gold*"[7], a suspension that ultimately remained final, as "*from 1973, the Bretton Woods system it collapsed, making the states free to choose whatever exchange method they would want for their currencies, except to link their exchange rate to the price of gold. For example, states became free to link their exchange rates to those of other states or to the value of a coin basket, or to allow them to fluctuate freely, leaving their value in relation to other currencies to be determined by market forces*"[8].

2.2. Relevant provisions for the establishment of Economic and Monetary Union in the Treaty establishing the European Economic Community

As regards the Treaty establishing the European Community, first of all, we see as relevant the fact that it contained, in its Article 2, the objectives (missions) of the Community, established as follows: "*establishing a Common Market and progressively approximating the economic policies of Member States, to promote throughout the Community a harmonious development of economic activities, a continuous and balanced expansion, an increased stability, an accelerated raising of the standard of living and closer relations between its Member States*"[9]. In order to achieve these objectives, art. 3 TEEC provided, inter alia, "*the application of procedures which shall make it possible to co-ordinate the economic policies of Member States and to remedy disequilibria in their balances of payments*"[10] as well as "*the establishment of a European Investment Bank intended to facilitate the economic expansion of the Community through the creation of new resources*"[11].

In the same idea, art. 6 TEEC stipulated that "Member States, acting in close collaboration with the institutions of the Community, shall co-ordinate their respective economic policies to the extent that is necessary to attain the objectives of this Treaty"[12] and that "the institutions of the Community shall take care not to prejudice the internal and external financial stability of Member States"[13]

Furthermore, art. 105 TEEC provided that "in order to facilitate the attainment of the objectives stated in Article 104[14], Member States shall coordinate their economic policies. They shall for this purpose institute a collaboration between the competent services of their administrative departments and between their central banks"[15]. The respective coordination of economic policies was ensured, according to art. 145 TCEE, by the Council.

Also, art. 107 of the same Treaty provided that "Each Member State shall treat its policy with regard to exchange rates as a matter of common interest"[16] and that "if a Member State alters its exchange rate in a manner which is incompatible with the objectives laid down in Article 104 and which seriously distorts the conditions of competition, the Commission may, after consulting the Monetary Committee, authorise other Member States to take for a strictly limited period the necessary measures, of which it shall determine the conditions and particulars, in order to deal with the consequences of such alteration"[17].

As regards the institutional framework created by the Treaty establishing the European Economic Community, it consisted of an Assembly (the forerunner of the current European Parliament), a Council, a Commission and a Court of Justice, which were responsible for carrying out the tasks set by the Treaty in order to achieve the objectives also set by it. Between these institutions a permanent dialogue was carried on, organized, according to the specialized doctrine, "*on the basis of collaboration and not of subordination, each of the institutions exercising its own functions within a complete decision-making system of a pre-federal nature*"[18]. In addition, a Monetary Committee was added to the institutions concerned, composed of two members appointed by each Member State, in order to "*keep under review the monetary and financial situation of Member States and of the Community and also the general payments system of Member States and to report regularly thereon to the Council and to the Commission* (...) *and to formulate opinions, at the request of the Council or*

of the Commission or on its own initiative, for submission to the said institutions"[19].

From all these facts and treaty provisions we can conclude that, although the Treaty establishing the European Economic Community established an institutional and regulatory framework conducive to the coordination of the economic policies of the Member States, it did not include neither the legal basis for establishing an Economic and Monetary Union, nor the means to achieve that coordination. But, as we will see during this study, these obstacles were overcomed thanks to the fact that "*the drafters of the TEC have set up a <<valve>> through which to cover possible new areas of community cooperation; we are talking about art. 352 (ex 235), which states: <<If EC action is required for the achievement of one of the objectives of the EC within the framework of the functioning of the common market, without unanimously, on a proposal from the Commission and after consulting the European Parliament, shall take appropriate action* >>"[20] and through the creative use of instruments of public international law, in conjunction with those specific to Community law (at that time, of the European Union, after the entry into force of the Treaty of Lisbon).

At the end of this section, we would also like to mention that a Committee of Governors of the Central Banks of the Member States of the EEC Member States was added to the above institutional framework, starting with 1964 (by Decision of the Council of Ministers of 8 May 1964), in order to promote the cooperation between them, by organizing consultations and facilitating the exchange of information on monetary policies and other relevant measures, with a special focus on lending and foreign exchange markets. The committee met mainly in Basel, at the headquarters of the Bank for International Settlements, which provided logistical support and secretarial services. In accordance with its Rules of Procedure, the Committee could adopt opinions by a majority of its members, divergent views being allowed, and could draw up memoranda to be sent to the entities concerned.

3. Difficulties in identifying alternatives to the Bretton Woods system. The Monetary Snake

Before actually starting this section, we would like to point out that almost all the moments highlighted in it take place against the background of the oil shocks of 1970-1980, with their multiple causes (OPEC actions between 1973-1974, the Iranian Revolution, etc.), which not only supported the development of monetary cooperation at Community level, by highlighting the potentially catastrophic consequences of major and untimely monetary fluctuations, but can also be seen by the modern observer as an almost perfect argument in favor of the importance of the globalization process on the evolution of legal systems, a phenomenon that "*is not* (...) *unidirectional, coming only from the western civilization, but a multidirectional one, of reciprocity,* [in which] (...) *several tendencies* [can be identified (...) *coming from the western world, Islam and Asia* "[21].

So, the United States' renunciation of the gold standard and the turmoil it has created have necessitated the development of a new cartel to make up, as far as possible, for the instability caused by the act in question. In this context, during the year 1971, a temporary agreement was negotiated and concluded (known as the Smithsonian Agreement, after the headquarters of the Smithsonian Institution in Washington, where it was signed) "*between the ten most developed nations in the world, namely Belgium, Canada, France, Germany, Italy, Japan, the Netherlands, Sweden, the United Kingdom of Great Britain and Northern Ireland, respectively the United States*"[22].

A brief overview of the main provisions of the Agreement in question could include, in our opinion, that it "*devalued the US dollar by 8.5% against gold, lowering the price of an ounce of gold from US $ 35 to US $ 38* [while] *the other G10 states* [listed above] *agreed to revalue their currencies accordingly against the dollar*"[23].

Also, along with the appreciation of the other major currencies, in addition to the US Dollar, the Smithsonian Agreement introduced "*the establishment of a margin for their fluctuation in relation to the Dollar of +/- 2.25%. However, they could create significant fluctuations between the currencies of the currencies of the EEC Member States that were parties to that Agreement, which could reach a maximum of 4.5%, which* (…) *created major risks for common policies such as the CAP. To address this issue, the EEC Member States have decided to reconfigure their monetary policy concerns towards reducing the links of their currencies with the US Dollar and at the same time reducing intra-Community fluctuation margins*"[24].

To this end, the Governors of the central banks of the Member States of the European Economic

[23] Ibidem.

[24] Angelos Delivorias, *A history of European monetary integration*, European Parliamentary Research Service, www.europarl.europa.eu, 2015, p. 3.

Community signed the so-called *Basel Agreement* on 24 April 1972, which laid the foundations of the mechanism known as the *snake in the tunnel*. Under it, "*Member States' currencies could fluctuate (like a snake) within tight limits against the US Dollar, and Member States' central banks could buy or sell any amount of other Member States' currencies, subject to the margin of fluctuation of 2.25%. The Member States that have participated in this mechanism since its inception have been France, Germany, Italy, Luxembourg and the Netherlands, and Denmark, Norway and the United Kingdom have joined soon*"[25].

Thus began the first of the three stages identified by the author Liviu C. Andrei, of monetary integration in the Community and, subsequently, Union, respectively: "*The Monetary Snake, the European Monetary System and, finally, the single currency*"[26].

What we observe from the presentation of this mechanism is, first of all, the fact that it was established by an instrument of public international law, namely an agreement between the Governors of the participating Member States (thus placing itself somewhat outside the Community law at the time) and, secondly, both the lack of common obligations imposed to all Member States (as evidenced by the absence of Belgium) and the possibility of accession to the provisions of the Agreement by States not then part of the European Communities, namely Norway.

Despite its theoretical viability, we can retrospectively say that the system in question, established by the Smithsonian Agreement and the Basel Agreement was not a successful one. For example, "*in mid-1972, the German mark, the Dutch guilder, the Belgian franc and the pound sterling fell prey to a speculative attack that pushed their exchange rates to the allowed limits. Consequently, on 23 June, the British Government decided to suspend the application of the exchange rate margin mechanism and to allow the exchange rate of its currency to fluctuate freely on the market, which meant that the pound was leaving the tunnel in practice. Subsequently, in January 1973, Italy, which was in a similar situation as the United Kingdom, also abandoned the* snake in the tunnel *mechanism, although the State concerned had obtained a derogation from the intervention arrangements provided for in The Basel Accord, allowing it, first of all, not to make repayments on the basis of the composition of the monetary reserves for the credits it had already obtained through the short-term support mechanism, although the procedure in question would have forced Italy to make gold transfers at its official exchange rate and, secondly, by allowing its central bank to use US dollars for further market interventions, instead of the currencies of the EEC Member States*"[27].

"At the same time, the economic situation in the United States continued to deteriorate, necessitating a further 10% depreciation of the dollar on February 13, 1973. This devaluation and the strong and widespread fluctuations it caused marked the irrevocable collapse. of the Bretton Woods System in March the same year"[28].

It is also noteworthy that "the depreciation of the dollar led to the closure of foreign exchange markets within the Community. In the light of these difficulties, the Commission has reaffirmed its position in favor of an international monetary system based on fixed but adjustable currency parities, the convertibility of national currencies and an effective adjustment tool, and therefore proposed a system in which national currencies of Member States fluctuated in unison against the dollar. Consequently, the Council met on 3 successive occasions, on 4, 8 and 11-12 March 1973, to discuss monetary issues"[29].

Following these meetings, the Council adopted a Statement agreeing to the following decisions (NB): "to maintain the maximum variation in the exchange rate of the German mark, the Danish krone, the guilder, the Belgian franc, the Luxembourg franc and the French franc within the limit of 2.25% and, respectively, to release the National Banks of the Member States from the obligation to intervene in order to maintain the fluctuation margins against the US dollar"[30].

What we notice in this act and in its content is its mixed and innovative character at the same time, which could almost be considered sui generis. More precisely, it is an act adopted by an institution of the European Communities (Council), but which is not found in the enumeration from art. 43 pt. 2 TEEC, which listed the acts which the institutions of the Union could adopt, namely *regulations*, *directives* and *decisions*. In other words, we can consider that we are at most facing a complementary source of Community law, the binding legal force of which can be called into question. Rather, its legal basis could be found in art. 105 of the Treaty establishing the European Economic Community, which stipulated that "*in order to facilitate the fulfillment of the objectives provided in art. 104*[31], *Member States shall coordinate their economic policies* (...) *and, to this end, lay the foundations for cooperation between the relevant administrative structures and*

[31] *Each Member State shall pursue the economic policy necessary to ensure the equilibrium of its overall balance of payments and to maintain confidence in its currency, while ensuring a high level of employment and the stability of the level of prices.*

between their central banks"[32]. Even so, the establishment or elimination of obligations for central banks goes beyond the concept of consultation, but as long as the states and the Central Banks have assumed the obligations of that act as obligations, they have produced in practice the binding legal effects that they could theoretically not have had. In other words, in this case, the political will of the Member States and the institutions within them has created obligations where the law would have been insufficient to impose them.

In this situation, Germany, France, Denmark and the Benelux states decided to allow their currencies to fluctuate freely in the *snake*. At the same time, the Italian pound, the pound sterling and the Irish pound were too weak to do so, and therefore the Member States decided to allow them to fluctuate separately, instead of entering the *snake* mechanism, until economic conditions would have allowed this. As a result of these developments, a stable monetary area was established between the Benelux states, France and Germany, which also encouraged non-member states (at least then), such as Norway (which has retained its non-member status to this day), and Sweden to join the Snake, soon followed by Austria, which unilaterally decided to submit to the same mechanism[33].

4. Establishment of the European Monetary fund

However, the year 1973 did not pass without any progress in terms of economic and monetary integration. More specifically, the Resolution adopted by the Council of Ministers on 22 March 1971 provided for the establishment of a European Monetary Cooperation Fund. Subsequently, on 21 March 1972, the Council of Ministers requested the Monetary Committee and the Board of Governors of the Central Banks to draw up, by 30 June 1972 at the latest, a report on the organization, operation and status of a European Monetary Cooperation Fund. Under this mandate, the Committees concerned set up a group of experts to draw up a report on the main options available to policy makers for setting up the Fund. The draft, adopted by the Council and the Commission, was the basis for reaching a consensus on the need for a meeting of the Ministers of Finance and Foreign Affairs of the nine Member States of the Community, held in Rome from 10 to 11 September 1972, for the establishment of the European Monetary Co-operation Fund, even since the start of the first stage of Economic and Monetary Union.

At the Meeting of the Heads of State and Government in Paris from 19 to 21 October 1972, they also reached an agreement, as set out in the *Conclusions* of that meeting, on the establishment of the EMCF by 1 April 1973 at the latest. and, which is of interest from the perspective of the decision-making process, the aforementioned Fund to be administered by the Board of Governors of the Central Banks of the Member States. Generally speaking, the objectives and prerogatives of the Fund were to develop accounting procedures for operating of credit and intervention mechanisms, under foreign exchange mechanisms, as well as to manage the various short- and medium-term support mechanisms. In practice, the Fund's transactions were conducted through the Bank for International Settlements, and no control mechanisms were introduced over its capital movements, in particular over transactions in Eurodollars on that occasion.

5. The role of the European Council in deepening and building the mechanisms preceding the Economic and Monetary Union

The Heads of State and Government of the Member States of the European Union have agreed, on the basis of preparatory acts carried out by the Council, the Monetary Committee and the Board of Governors of the Central Banks, on the establishment of a European Monetary System with effect from 1 January 1979.

The objective of the system in question was to contribute to greater monetary stability within the Community. The system should also be seen, in the view of the same Heads of State and Government, as a "*fundamental component of a more comprehensive strategy to ensure sustainable development and stability, the gradual return to full employment, the harmonization of employment levels, living and reducing regional disparities within the Community*"[34]. Moreover, the European Monetary System was to "*facilitate the convergence of the development of Member States' economies and give a new impetus to the process of building the European Union*"[35]. To this end, "*the Council expected the European Monetary System to have a stabilizing effect on international relations in the economic and monetary fields*"[36] and to serve, at the same time, the interests of "*industrialized and developing countries*"[37].

With regard to the proper functioning of the European Monetary System, it seems of interest to specify that, in accordance with the Resolution of the European Council of 5 December 1978, annexed to the Conclusions of this meeting and which therefore takes over its legal value, which however, in the absence of a

[32] Art. 105 alin. (1) TEEC.

[34] Statement from the Paris Summit (19 to 21 October 1972), Bulletin of the European Communities. October 1972, No 10. Luxembourg: Office for official publications of the European Communities, p. 14-26.
[35] Idem.
[36] Idem.
[37] Idem.

consecration in Community primary law, it remains that of a legal act of public international law, it was composed of a scriptural monetary unit called ECU (European Currency Unit), an Exchange Rate Mechanism, under which the exchange rate currency exchange rate of the participating States was expressed in ECU, and an intervention mechanism, related to the Exchange Rate Mechanism, which obliges the participating States to ensure that the fluctuation margins of the exchange rate of their currencies are kept within a limit of +/- 2, 25% of the ECU.

As for the decision-making process that made it possible to fulfill these obligations, it presupposed, at least as regards the exchange rate adjustment, the common agreement of the participating States and the Commission and the mutual consultations within the Community institutional framework on the most important exchange rates policy decisions between the participating States and third countries.

In other words, the decision-making process within the SME had, we might say, a mixed character, of public international law (through the provisions related to the need for the agreement of the Member States, on matters not enshrined at least in the primary law of the Communities at that time, but also of Community law, by using the institutional framework provided by the Institutional and Amending Treaties.

Consultations could also be held within Community institutions, bodies, offices and agencies, including the Council, whenever deemed necessary.

As it progresses, the European Council Resolution continues in a different register, shifting the preponderance to the use of Community law instruments. Specifically, for the implementation of the decisions set out in Annex A (of the aforementioned Resolution), the European Council requested the Council to examine by 18 December 1978 at the latest, the Commission's proposals for a Regulation amending the unit of account used by the European Monetary Cooperation Fund (in ECU), on the Regulation allowing the European Cooperation Fund to receive monetary reserves and issue ECUs to the monetary authorities of the Member States, of the proposal for a Regulation on the impact of the European Monetary System on Common Agricultural Policy etc. and also calls on the Commission to issue, within a reasonable time, a proposal for an act amending the Council Decision of 22 March 1971 establishing a medium-term financial assistance mechanism to allow the Council to take a decision on those proposals by not later than 18 December 1978. The European Council also requested the Central Banks of the Member States to amend their Agreement of 10 April 1972 on the reduction of fluctuations in the currencies of the countries of origin in order to comply with the provisions of the Resolution under consideration and to amend the mechanisms for the short - term monetary support mechanism by 1 January 1979 at the latest.

Therefore, we are dealing with a decision-making process with a character that we can characterize as mixed or sui generis, in which international agreements specific to public international law, concluded between states or between structures within states, coexist with legal acts of institutions in order to build together an innovative but effective system for achieving the proposed objectives. Moreover, a new element seems to us to be the imposition, by agreement of the Heads of State and Government of the participating States, of obligations on the Community institutions, which they might have considered unfounded under primary Community law (consisting of the institutive and amending Treaties), but those institutions have chosen not to do so and to assume their fulfillment, in a manner similar to natural obligations, giving them legal effects by their own will.

Pursuant to the Conclusions of the Meeting of the European Council of 5 December 1978, on 13 March 1979, the Representatives of the Central Banks of the Member States of the European Economic Community concluded an Agreement on the Functioning of the European Monetary System in Basel (Switzerland) on 13 March 1979 (in other words, another instrument of public international law).

Regarding the decision-making process, the main aspects of its content which we consider useful should be the communication, by each participating Central Bank, to the Secretariat of the Board of Governors of a pivot rate of its currency, expressed in ECU, the Committee on informing the other central banks of that exchange rate, and those relating to the setting of mandatory intervention rates, expressed in national currencies, to the same Secretariat.

Therefore, even in this situation, we are witnessing the same mixed use of instruments of public international law and institutions of Community law and, therefore, of the decision-making processes specific to these two paradigms.

The following Conclusions addressing the issue of Economic and Monetary Union are those of the European Council in Hanover of 27-28 June 1988. It reaffirms that, with the adoption of the Single European Act, Member States have confirmed the objective of the progressive achievement of an Economic and Monetary Affairs and, in this context, the representatives of the Member States, meeting within the European Council, decided to examine, at the next meeting of the European Council, in Madrid in June 1989, the means of achieving the objective of this Union. To this end, they decided to entrust a special Committee set up to study and propose a series of concrete steps leading to the achievement of EMU, (...) chaired by Jacques Delors, President of the European Commission. The Heads of State and Government also agreed to invite the Presidents or Governors of the Central Banks of the Member States to take part, in their personal names, in the work of the Committee, together with three

personalities appointed by common accord of the Heads of State or Governments[38].

The report resulting from the Committee's work, also known as the "Delors Report", addresses a wide range of issues, covering both economic and monetary issues.

From its inception, the Report noted that a possible Economic and Monetary Union would imply complete freedom of movement for persons, goods, services and capital, as well as an irrevocably fixed exchange rate between national currencies and, finally, a single currency. They would also imply a common monetary policy, would require a high degree of compatibility between economic policies and would involve a high degree of convergence in a number of other policy areas, in particular fiscal policy. Those policies needed to be geared towards ensuring price stability, balanced growth, convergence of living standards, ensuring a high level of employment and external balance. In practice, Economic and Monetary Union would be the end result of the process of progressive economic integration in Europe[39].

However, the Report also stated that even after achieving the objective of Economic and Monetary Union, the Community would continue to be made up of individual states with a number of different economic, social, cultural and political characteristics. The existence and maintenance of such a plurality would mean maintaining a degree of autonomy in economic decision-making at national level and ensuring a balance between Community and State competences. For this reason, (**and we would like to emphasize the following statements**), it would not be possible to take the example of the federal states, but it would be necessary to develop an innovative and unique approach[40].

But the authors of the Delors Report also pointed out the lack of sufficient legal grounds in the institutive and amending Treaties in order to achieve the aforementioned objectives.

Thus, the Report in question stated that, although the Treaty of Rome, as amended by the Single European Act, provided the legal basis for many of the stages necessary for economic integration, it is not sufficient for the creation of an Economic and Monetary Union. Achieving this goal would require new arrangements, which could only be established through the revision of the Treaties and subsequent amendments to national legislation. For this reason, EMU should be enshrined in a Treaty that clearly sets out the necessary functional and institutional arrangements, as well as the provisions on their gradual implementation[41].

In roughly the same vein, the Report noted that in view of the aspects already provided for in the Treaties, the need for a transfer of decision-making powers from Member States to the Community as a whole could arise in particular in a Monetary union that would imply a single monetary policy, and the responsibility for formulating this policy should be assigned to a single institutional decision-making center. In the economic field, a wide range of decisions would remain reserved for national and regional authorities. However, given their potential impact on the internal and external economic situation of the Community and their implications for the conduct of a common monetary policy, such decisions should be placed within a specially agreed macroeconomic framework and should be subject to rules, regulations and mandatory procedures[42].

The Report further specifies that the management of Economic and Monetary Union would require an institutional framework to enable the adoption and implementation of policies at Community level, in those areas which would be of direct relevance to the functioning of EMU, which should ensure an efficient economic management, properly anchored in the democratic process. Economic and Monetary Union would also necessitate the creation of a new monetary institution, placed within the framework of the Community institutions (...), and the formulation and implementation of common policies in non-monetary areas, as well as the coordination of policies remaining under national competence would not only require a new institution, but a review and, possibly, a restructuring of existing Community institutions, bodies, offices and agencies, including any delegations of powers. Also, a new monetary institution would be necessary because a single monetary policy cannot result from independent decisions or actions of the various central banks. Moreover, day-to-day monetary policy operations can only respond quickly to changing market conditions when they are decided centrally. Given the political structure of the Community and the advantages of making existing central banks part of a new system, the Community's domestic and international monetary decision-making process should be organized in a federal form, as far as possible. called the European System of Central Banks. This new system should have the full status of a Community institution and should act in accordance with the provisions of the Treaty, consisting of a central institution and national central banks. Finally, in the last stage of EMU, the ESCB, acting through the Council, would be responsible for the formulation and implementation of monetary policies, as well as for the management of the exchange rate of the single currency in relation to those of third countries. The Central Banks of the Member States would also be entrusted with the implementation of those policies, in

[38] According to www.cvce.eu, Report on economic and monetary union in the European Community, 30.06.2014, accessed 10.11.2019.
[39] Idem.
[40] Idem.
[41] Idem.
[42] Idem.

accordance with the guidelines established by the ESCB Council and the instructions issued by the central institution[43].

As regards the structure and organization of the ESCB, they should, in accordance with the Delors Report, have had a federal structure, which would best correspond to the political diversity of the Community, with the establishment of an ESCB Council, composed of the Governors of the Central Banks and of members of an Executive Committee, appointed by the European Council and who were to be responsible for formulating and implementing monetary policy decisions, in accordance with the voting arrangements laid down in the Treaty, of a Committee to monitor developments in the field of monetary policy and to supervise the implementation of the common monetary policy, as well as in the national central banks, which were to carry out various monetary operations in accordance with the decisions of the ESCB Council[44].

Significant emphasis was placed on the independent status of the ESCB. Specifically, the Report stated that the ESCB should be independent of instructions issued by national governments and Community institutions, bodies, offices or agencies, to that end, members of the ESCB Council (both Governors and members of the Committee) should be provided with appropriate safeguards, but also made responsible, in the form of an annual report submitted by the ESCB to the European Parliament and the European Council; moreover, the President of the ESCB could be invited to report to these institutions. The supervision of the administration of the System was to be carried out by independent Community institutions, bodies, offices or agencies, such as, for example, a supervisory board or a committee of independent auditors[45].

The Report further emphasized the need to develop legally binding rules and procedures in the field of budgetary policies, involving upper limits of budget deficits for Member States, excluding access to credit from central banks or other forms of financing, monetary policy, restrictions on lending in non-EU currencies, definition of general coordinates of medium-term fiscal policies, including limits and financing of budget deficits.

With regard to the prospects for the establishment of a single currency, the Committee expressed in its Report that although a monetary union does not necessarily require a single currency, it would be a beneficial feature of such a Union (...), being, at the same time), of the opinion that the ECU had the potential to develop into such a single currency, which would involve its transformation from a basket to a currency in itself. Moreover, the irrevocable setting of exchange rates would imply the absence of a discontinuity between the ECU and the single currency, as well as the fact that payment obligations contracted in ECU could be paid at the same value in that currency, until the moment of their maturation[46].

Also from a procedural point of view, the Report recommends revising the 1974 Council Decision on achieving economic convergence, inter alia to clarify that the task of coordinating economic policies would belong to the Council, in the ECOFIN formation, and that convergence between economic and monetary policies would be facilitated by the participation of the Chairman of the Board of Governors of the Central Banks in the meetings of the Council. It was also proposed to establish a multilateral mechanism for monitoring economic developments and compliance with agreed indicators, with the possibility of formulating recommendations for their correction.

In conclusion, in our view, from all the proposals made by the Delors Report, one can see the transition it wanted to make from a system based on the coordination of the action of Member States and central banks through instruments of international law complemented by instruments of law, using the Community institutional infrastructure, but the implementation of which was largely based on the good faith of the States concerned, to a Community system based on instruments of Community law (legal acts of the Community institutions, including newly established ones) , such as the ESCB, with binding legal force and adopted following a series of decision-making procedures that would have important similarities with those specific to federal states.

As regards the Delors Report, it was approved by the Commission and submitted to the European Council on 12 April 1989[47] for consideration at its meeting in Madrid, scheduled for June 1989.

In its Conclusions, the members of the European Council reaffirmed their determination to progressively build the projected Economic and Monetary Union, mentioned in the Single European Act, with a view to completing the construction of the Internal Market and achieving the strongest economic and social cohesion possible. In this context, the European Council recommended using the Delors Report as a basis for future developments in the field and decided that the first stage of achieving Economic and Monetary Union should begin on 1 July 1990.

To this end, the European Council called on the Council, in the General Affairs and ECOFIN formations, as well as on the Commission, the Board of Governors of the Central Banks and the Monetary Committee to adopt the legal acts necessary to start the first stage of EMU and to draw the coordinates of the later stages. We note, therefore, that the decision-making process involves, in the same way as before, the

European Council, the Community institutions and the Member States, in particular their Central Banks, but given the consecration of the European Council in the Single European Act, its conclusions can no longer be considered only acts of public international law, but have thus acquired a Community component.

6. Conclusions

In the face of this unique and not at all simple course of the future Economic and Monetary Union, before consecrating its legal bases in the primary Community law, we can ask ourselves what was the legal nature of this construction, as long as it does not seem to belong completely to the public international or Community law. Looking at this inextricable picture, some observers might place it somewhere in the middle of the distance between "*the absence of codifications* [specific to Brican law and a true] *mass codified by abstract general principles*"[48] contained in a multitude of instruments of different natures and legal forces. In any case, without being able to establish with certainty what this legal construction consisted of, the absence of its express enshrinement in the basic constitutional charter of Community law at the time prevents us from considering it of a federal nature, even if in practice it tended towards a such a *modus operandi*. In order to be able to draw such a parallel, we will have to wait for the reforms carried out by the Maastricht Treaty and the new configuration of the Economic and Monetary Union enshrined in it.

EMERGENCE AND EVOLUTION OF THE ECONOMIC AND MONETARY UNION: OVERLOOK AT THE DECISION-MAKING PROCESS AND THE LEGAL INSTRUMENTS USED (FROM THE MAASTRICHT TREATY TO THE PRESENT DAY)

Dragoș–Adrian BANTAȘ[*]
Diana Elena CĂPRIȚĂ[**]

Abstract

While in the previous study we presented the premises of the emergence of what is the economic and monetary Union today, and we demonstrated that in this process the European Council had a fundamental role to play even before it was enshrined in primary Community law, whose manifestation of will takes the form of public international law acts, in the present study we will address the economic and monetary Union after its consecration in the Maastricht Treaty. Normally, this approach should lead us to analyze the institutional structure of EMU in accordance with the Treaties on which the European Union is founded, but, apparently paradoxically, careful analysis shows that even after the said consecration, the mixed use of instruments of international law to fill possible gaps in union law has not been completely abandoned.

Keywords: *European Union, Economic and Monetary Union, Euro, Maastricht Treaty, Lisbon Treaty, European Central Bank, excessive deficit, stability, growth.*

1. Maastricht Treaty and the establishment of the Economic and Monetary Union. Current institutional framework of the EMU

Undoubtedly, one of the most important moments in the development of Community construction (in the middle, Union) since the end of the 20th century is the signing, followed by its entry into force, of the Maastricht Treaty. Of course, this is neither the place nor the time to discuss this Treaty in depth, but what we want to explain, as a follow-up to the previous study and before we discuss its implications for EMU, is the context of its emergence. More specifically, we want to remember two of the historic crucial moments preceding the appearance of that Treaty, namely the break-up of the Soviet block of influence and the unification of Germany, which is the latter putting France in the face of possible future economic dominance of Europe By Germany, which, like a possible German resurgence after the second World War, could only be managed and accepted within a supranational framework defined in the first case by the European Coal and Steel Community and, secondly, by the Economic and Monetary Union. These connections further underscore the fact that "*the accelerated opening up of the world economy following the end of the cold War and the collapse of the communist block was accompanied by unprecedented mobility of the law itself*"[1], together with the anchoring of law in the social and political realities of its time, without the understanding of which the evolution of law cannot be explained either.

Given the fact that the decision-making process within the Economic and Monetary Union, in its aspects involving the institutions of the Council, the European Parliament and even the European Central Bank, has a pronounced technical character and is still the subject of another research, we consider it more appropriate to present, in these lines, the general features of the composition and functioning of the European System of Central Banks, with each of its components, the distribution of competencies and the relations between them.

Thus, the Maastricht Treaty provided for the establishment of a European System of Central Banks and a European Central Bank (following a transitional process that involved the establishment of a European Monetary Institute and its subsequent transformation into the European Central Bank). As an application of the principle of conferral, both the ESCB and the ECB could act only within the limits set by the Treaties.

A particularly important feature of the new European Central Bank was its independence, enshrined from the outset in the Treaty which provided that "*in the exercise of its powers and in the performance of the tasks and duties conferred upon it* (…) *the national central bank and no member of any of their decision-making bodies may seek or accept instructions from the Community institutions or bodies, the governments of the Member States or any other*

[1] Monica Florentina Popa, *Tipologiile juridice între pragmatism și ciocnirea civilizațiilor (Legal Taxonomies between Pragmatism and the Clash of Civilizations)*, Revista de Drept Public Magazine, No. 1/2016, Universul Juridic Publishing House, Bucharest, 2016, pp. 58-67.

body [and] *the Community institutions and bodies and the governments of the Member States are to respect this principle and not to try to influence the members of the decision-making bodies of the ECB or of the national central banks in carrying out their mission*"[2]. The ESCB was, and is still, "*made up of the European Central Bank and the central banks of the Member States* [the national central banks]. *The main objective of this System* [was] *to maintain price stability. The ESCB* [supported] *the general economic policies of the Community in order to contribute to the achievement of the objectives of the Community* (…). [Also], *the ESCB* [acted] *in accordance with the principle of an open market economy in which competition is free, promoting an efficient allocation of resources and respecting the principles set out in the* (…) *Treaty*"[3].

From that moment on, given the fact that the changes brought about by the successive reforms that have taken place since the entry into force of the Maastricht Treaty to date are minimal, we prefer to present the provisions under our study directly in their current form, so as not to it made our research unnecessarily difficult to read. For the same reason, in those cases where the provisions of the TEU / TFEU and the Protocol on the Statute of the ESCB duplicate each other, we will refer to only one of these instruments.

As for the missions of the ESCB, they are, in today's wording of its Statute, those mentioned in art. 127 (2) TFEU, "respectively to define and implement the monetary policy of the Union, to conduct foreign-exchange operations consistent with the provisions of Article 219[4], to hold and manage the official foreign reserves of the Member States [and] to promote the smooth operation of payment systems"[5].

Thus, as regards the ECB, the Treaties and the Statute state that "[t]he European Central Bank, together with the national central banks, shall constitute the European System of Central Banks (ESCB) [while] [t]he European Central Bank, together with the national central banks of the Member States whose currency is the euro, which constitute the Eurosystem, shall conduct the monetary policy of the Union"[6].

As for the European Central Bank, it shall be consulted on any draft Union act as well as on any draft regulation at national level and may issue opinions in the areas in which it has responsibilities. The ECB shall also decide on the representation of the ESCB in the field of international cooperation on tasks entrusted to the ESCB. Both the ECB and the national central banks, subject to the agreement of the ECB, are empowered to participate in international monetary institutions. The ECB also "*lays down the general principles for financial market and credit operations carried out by itself or by national central banks, including those relating to the communication of the conditions under which they are willing to participate in such operations. For the purposes of applying this Article, the Council shall define, in accordance with the procedure laid down in Article 41*[7]*, the basis for calculating the minimum required reserves and the maximum permissible ratio between those reserves and their basis of calculation, as well as the corresponding penalties for non-compliance*"[8]. Moreover, "*in accordance with any regulation adopted by the Council pursuant to Article 127 (6) of the Treaty on the Functioning of the European Union, the ECB may carry out specific tasks relating to the prudential supervision of credit institutions and other financial institutions, with the exception of insurance undertakings. In accordance with Article 132 of the Treaty on the Functioning of the European Union, the ECB shall adopt: regulations, to the extent necessary for the fulfillment of the tasks set out in the first indent*

[2] Art. 7 of the Protocol regarding the on the Statute of the European System of Central Banks and of the European Central Bank, attached to the Treaty on European Union, Official Journal C 191, 29/07/1992 P. 0001 – 0110.

[3] Idem.

[4] 1. By way of derogation from Article 218, the Council, either on a recommendation from the European Central Bank or on a recommendation from the Commission and after consulting the European Central Bank, in an endeavour to reach a consensus consistent with the objective of price stability, may conclude formal agreements on an exchange-rate system for the euro in relation to the currencies of third States. The Council shall act unanimously after consulting the European Parliament and in accordance with the procedure provided for in paragraph 3. The Council may, either on a recommendation from the European Central Bank or on a recommendation from the Commission, and after consulting the European Central Bank, in an endeavour to reach a consensus consistent with the objective of price stability, adopt, adjust or abandon the central rates of the euro within the exchange-rate system. The President of the Council shall inform the European Parliament of the adoption, adjustment or abandonment of the euro central rates.

2. In the absence of an exchange-rate system in relation to one or more currencies of third States as referred to in paragraph 1, the Council, either on a recommendation from the Commission and after consulting the European Central Bank or on a recommendation from the European Central Bank, may formulate general orientations for exchange-rate policy in relation to these currencies. These general orientations shall be without prejudice to the primary objective of the ESCB to maintain price stability.

3. By way of derogation from Article 218, where agreements concerning monetary or foreign exchange regime matters need to be negotiated by the Union with one or more third States or international organisations, the Council, on a recommendation from the Commission and after consulting the European Central Bank, shall decide the arrangements for the negotiation and for the conclusion of such agreements. These arrangements shall ensure that the Union expresses a single position. The Commission shall be fully associated with the negotiations.

4. Without prejudice to Union competence and Union agreements as regards economic and monetary union, Member States may negotiate in international bodies and conclude international agreements.

[5] Art. 127 alin. (2) TFEU.

[6] Art. 282 alin. (1) TFEU.

[7] In accordance with Article 129 (4) of the Treaty on the Functioning of the European Union, the Council, acting on a proposal from the Commission and after consulting the European Parliament and the ECB or on a recommendation from the ECB and after consulting the European Parliament and the Commission, shall adopt the provisions referred to in Articles 4, 5.4, 19.2, 20, 28.1, 29.2, 30.4 and 34.3 of this statute.

[8] Art. 18 of the Protocol (no. 4) on the Statute of the European System of Central Banks and of the European Central Bank.

of Article 3.1[9]*, Articles 19.1*[10]*, 22*[11] *or 25.2*[12] *and in the cases provided for in Council acts referred to in Article 41*[13]*; the decisions necessary for carrying out the tasks entrusted to the ESCB in accordance with the Treaties and the Statute of the ESCB and of the ECB; recommendations and opinions*"[14].

The ECB may also decide whether to publish its decisions, recommendations and opinions.

Also, regarding the decision-making process, it may be interesting to mention that "[i]n accordance with Article 129(4) of the Treaty on the Functioning of the European Union, the Council, either on a proposal from the Commission and after consulting the European Parliament and the ECB or on a recommendation from the ECB and after consulting the European Parliament and the Commission, shall adopt the provisions referred to in Articles 4, 5.4, 19.2, 20, 28.1, 29.2, 30.4 and 34.3 of this Statute"[15].

From an organizational point of view, according to the Statute, „[t]he ESCB shall be governed by the decision-making bodies of the ECB"[16], namely The Board of Governors and the Executive Committee (according to art. 9 of the Statute) and the General Council (according to art. 44 of the same Statute). We will carry on our paper by presenting each one of them.

2. The decision –making bodies of the ECSB and their functioning

2.1. President and Vicepresidents

According to the Statute, "[t]he President or, in his absence, the Vice-President shall chair the Governing Council and the Executive Board of the ECB [and] [w]ithout prejudice to Article 38[17], the President or his nominee shall [also] represent the ECB externally"[18] He or, in his absence, the Vice-President shall also chair the General Council, the work of which he shall prepare.

2.2. The Executive Board

It consists of a president, a vice-president and four other members, "appointed by the European Council, acting by a qualified majority, from among persons of recognised standing and professional experience in monetary or banking matters, on a recommendation from the Council after it has consulted the European Parliament and the Governing Council"[19] for a term of 8 years, which may not be renewed. From a procedural point of view, it should be noted that each member of the Executive Committee present at the meetings has one vote, the Committee deciding by a simple majority of the votes cast. In the event of a tie, the President shall decide. Several matters relating to the voting procedure applicable to the Executive Board may also be determined by the Rules of Procedure of the ECB and its decision-making bodies.

With regard to the prerogatives of the Executive Committee, according to the Statute, it "*is responsible for the day-to-day administration of the ECB*"[20], "*implements the monetary policy in accordance with the guidelines and decisions adopted by the Governing Council*"[21] framework in which it provides the necessary instructions to the national central banks and, where appropriate, the "*decisions on intermediate monetary targets, reference interest rates and the establishment of reserves under the ESCB, and lays down guidelines for their application*"[22]. The Executive Board may also be delegated "*certain powers by decision of the Governing Council*"[23] It is also "*responsible for the preparation of Governing Council meetings*"[24]

[9] Definition and application of the Union's monetary policy

[10] Subject to Article 2, the ECB shall be empowered to impose on credit institutions established in the Member States the obligation to make minimum minimum reserves with the ECB and national central banks in accordance with monetary policy objectives. The Council of Governors may adopt regulations for the calculation and determination of minimum reserves. In the event of non-compliance with this obligation, the ECB has the right to charge penalty interest or to impose other sanctions with similar effect.

[11] The ECB and the national central banks may provide facilities, and the ECB may adopt regulations to ensure the efficiency and soundness of clearing and payment systems within the Union and in its relations with third countries.

[12] In accordance with any regulation adopted by the Council pursuant to Article 127 (6) of the Treaty on the Functioning of the European Union, the ECB may carry out specific tasks relating to the prudential supervision of credit institutions and other financial institutions, with the exception of insurance institutions.

[13] In accordance with Article 129 (4) of the Treaty on the Functioning of the European Union, the Council, acting on a proposal from the Commission and after consulting the European Parliament and the ECB or on a recommendation from the ECB and after consulting the European Parliament and the Commission, shall adopt the provisions referred to in Articles 4 , 5.4, 19.2, 20, 28.1, 29.2, 30.4 and 34.3 of this statute.

[14] Art. 25 and 34 of the Protocol (no. 4) on the Statute of the European System of Central Banks and of the European Central Bank (ECB Statute as follows).

[15] Art. 41 of the ECB Statute.

[16] Art. 8 of the ECB Statute.

[17] The ECB shall be legally committed to third parties by the President or by two members of the Executive Board or by the signatures of two members of the staff of the ECB who have been duly authorised by the President to sign on behalf of the ECB.

[18] Art. 13.1 of the ECB Statute.

[19] Art. 283 TFEU and art. 11 of the ECB Statute.

[20] Art. 11.6 of the ECB Statute.

[21] Art. 12.1 of the ECB Statute.

[22] Idem.

[23] Idem.

[24] Idem.

2.3. The Governing Council

As regards the Governing Council, it shall „*comprise the members of the Executive Board of the ECB and the governors of the national central banks of the Member States whose currency is the euro*"[25] Within the Governing Council, each member shall have one vote, but from the date on which the number of members of the Board of Governors exceeds twenty-one, each member of the Executive Committee shall have one vote and the number of governors with voting rights shall be fifteen, the vote shall be taken in accordance with a procedure laid down for that purpose by the Statute. According to the Statute, the right to vote is exercised in person, but the rules of procedure establishing the internal organization of the ECB and its decision-making bodies may provide that members of the Governing Council may exercise their right to vote by teleconference. The same rules may also provide that a member of the Board of Governors who is unable to attend meetings of that Board for a long period may appoint an alternate as a member of the Board of Governors. Other matters relating to the functioning of the Governing Council include the establishment of a quorum for voting by two-thirds of the members with the right to vote, in the event of failure to do so The statutes shall also establish the confidentiality of meetings, provided that the same Board of Governors may make public the outcome of its deliberations.

In addition, "*the Governing Council shall adopt rules of procedure which establish the internal organization of the ECB and its decision-making bodies*"[26][,] *shall exercise the advisory functions referred to in Art. 4*[27] [,] *shall adopt the decisions referred to in Article 6*[28], [and] *shall be the sole power to authorize the issue of euro banknotes within the Union*"[29].

The Governing Council may decide, by a two-thirds majority of the votes cast, to use other operational methods of monetary control which it considers appropriate, in compliance with Article 2 (on Objectives).

2.4. The General Council

The General Council "shall be constituted as a third decision-making body of the ECB"[30]. It is composed of "the President and Vice-President of the ECB and the Governors of the national central banks"[31] noting that the other members of the Executive Committee as well as the President of the Council (who may propose motions for deliberation to the General Council) "may participate, without having the right to vote, in meetings of the General Council"[32].

Its prerogatives are exhaustively listed by art. 46 of the Statute. Of these, we mention the fulfillment of the missions mentioned in art. 43[33], contributing to the performance of the advisory functions referred to in Articles 4 and 25.1[34], when collecting the statistical information mentioned in art. 5, when drawing up the ECB's activity reports referred to in Article 15, [35]when establishing the norms necessary for the application of art. Article 26 of the Staff Regulations (entitled 'Financial accounts'), the adoption of the measures necessary for the application of Article 29 (concerning the Allocation Schedule for the subscription of capital), the establishment of the arrangements applicable to the staff of the ECB and contribute to the currencies of the Member States which are subject to a derogation in relation to the euro, as provided for in Article 140 (3) of the Treaty on the Functioning of the European Union, while being informed by the President of the ECB of the decisions of the Governing Council. The General Council shall also adopt its own rules of procedure, the secretariat of which shall be provided by the ECB.

Finally, after analyzing the governing bodies of the ESCB and their functioning, we will also analyze the framework of relations between the European Central Bank and the other Union institutions involved

[25] Art. 10.1 of the ECB Statute.
[26] Art. 12.3 of the ECB Statute.
[27] In accordance with Article 127(4) of the Treaty on the Functioning of the European Union: (a)
the ECB shall be consulted: on any proposed Union act in its fields of competence; by national authorities regarding any draft legislative provision in its fields of competence, but within the limits and under the conditions set out by the Council in accordance with the procedure laid down in Article 41; (b) the ECB may submit opinions to the Union institutions, bodies, offices or agencies or to national authorities on matters in its fields of competence.
[28] Regarding international cooperation.
[29] Art. 16 of the ECB Statute.
[30] Art. 44.1 of the ECB Statute.
[31] Art. 44.2 of the ECB Statute.
[32] Idem.
[33] The ECB shall take over the former tasks of the EMI referred to in Article 141(2) of the Treaty on the Functioning of the European Union which, because of the derogations of one or more Member States, still have to be performed after the introduction of the euro. The ECB shall give advice in the preparations for the abrogation of the derogations specified in Article 140 of the Treaty on the Functioning of the European Union.
[34] In accordance with Article 127(4) of the Treaty on the Functioning of the European Union: (a) the ECB shall be consulted: on any proposed Union act in its fields of competence; by national authorities regarding any draft legislative provision in its fields of competence, but within the limits and under the conditions set out by the Council in accordance with the procedure laid down in Article 41; (b) the ECB may submit opinions to the Union institutions, bodies, offices or agencies or to national authorities on matters in its fields of competence.
The ECB may offer advice to and be consulted by the Council, the Commission and the competent authorities of the Member States on the scope and implementation of Union legislation relating to the prudential supervision of credit institutions and to the stability of the financial system.
[35] The ECB shall draw up and publish reports on the activities of the ESCB at least quarterly.

in the decision-making process, such as the European Parliament and the Council of the European Union.

3. Relations between the ECB and the other Union institutions

According to art. 284 TFEU, "[t]he President of the Council and a Member of the Commission may participate, without having the right to vote, in meetings of the Governing Council of the European Central Bank [while] [t]he President of the Council may submit a motion for deliberation to the Governing Council of the European Central Bank"[36] Also, "[t]he European Central Bank shall address an annual report on the activities of the ESCB and on the monetary policy of both the previous and current year to the European Parliament, the Council and the Commission, and also to the European Council. The President of the European Central Bank shall present this report to the Council and to the European Parliament, which may hold a general debate on that basis. The President of the European Central Bank and the other members of the Executive Board may, at the request of the European Parliament or on their own initiative, be heard by the competent committees of the European Parliament"[37].

4. Continued use of the mixed use of public international law and European Union instruments. Excessive deficit procedure

Despite the enshrinement of Economic and Monetary Union in the primary law of the European Union and, alongside it, the institutional aspects necessary for its functioning, the subsequent realities of Union and world economic life have shown the inadequacy of the rules laid down in the Treaties on which the Communities were founded, respectively on which the Union is founded (at present) and have brought up to date the need to supplement them with elements of public international law.

In this direction, our analysis starts from the provisions of the former article 104c of the Treaty establishing the European Community (resulting from the revisions made by the Maastricht Treaty), the current art. 126 of the TFEU, which stipulates, in a seemingly simple way, that "*Member States shall avoid excessive government deficits*"[38]. In order to clarify the notions used by him, art. 104c of the TEC and the current art. 126 TFEU referred, respectively, to the Protocol on the excessive deficit procedure, annexed to the Treaties and drawn up on the occasion of the same Maastricht Treaty. It, in turn, states that the values in question are "*3 % for the ratio of the planned or actual government deficit to gross domestic product at market prices* (...) [and] *60 % for the ratio of government debt to gross domestic product at market prices*"[39].

However, this enshrinement of the prohibition of excessive deficits and the significance of the terms used in the rules imposing the ban in question only seemingly simplifies economic governance in the European Union. Precisely because a number of important procedures had not yet been set up at the Madrid European Council in December 1995, it (through the Conclusions of that meeting) confirmed the crucial importance of establishing adequate budgetary discipline in the third stage of Economic and Monetary Union, and at the meeting of the European Council in Florence in 1996, it reiterated the above-mentioned goal of reaching an agreement on the main elements of the Stability and Growth Pact. More specifically, it stated that the fact that the avoidance of excessive deficits in the third stage of EMU is a clear obligation established by the Treaties. The conclusions of that European Council meeting also emphasized the importance of maintaining good economic governance, seen as a means of strengthening the preconditions for ensuring sustainable development and a source of job creation. The European Council also considered it necessary for national budgetary policies to support stability-oriented monetary policies, as adherence to the objective of a budget positioned in close proximity to the coordinates established by the Treaties or even with a surplus would allow Member States to cope with cyclical effects of the economy fluctuations, without the budget deficit reaching the 3% reference value[40].

4.1. Convergence criteria – defining elements of economic sustainability

The convergence criteria, also known as the Maastricht criteria, are a number of relevant macro-economic indicators, against which an objective assessment can be made of the level of sustainable economic convergence of a Member State. According to article 140 TFEU, "*at least once every two years, or at the request of a Member State with a derogation, the Commission and the European Central Bank shall report to the Council on the progress made by the Member States with a derogation in fulfilling their obligations regarding the achievement of economic and monetary union. These reports shall include an examination of the compatibility between the national legislation of each of these Member States, including the statutes of its national central bank, and Articles 130 and 131 and the Statute of the ESCB and of the ECB*"[41]. Equally, for objective assessment purposes, the same Article defines the four criteria under which

[36] Art. 284 alin. (1) TFEU.
[37] Art. 284 alin. (3) TFEU.
[38] Art. 126 alin. (1) TFEU.
[39] Art. 1 of the Protocol (No 12) on the excessive deficit procedure.
[40] In accordance with the Resolution of the European Council on the Stability and Growth Pact, Official Journal of the European Communities, no. C236 / 1 of 02.08.1997.
[41] Art. 140 alin. (1) TFEU.

the degree of sustainable convergence of each state is analyzed, namely:

1. *the achievement of a high degree of price stability; this will be apparent from a rate of inflation which is close to that of, at most, the three best performing Member States in terms of price stability*;

2. the sustainability of the government financial position; this will be apparent from having achieved a government budgetary position without a deficit that is excessive as determined in accordance with Article 126(6)[42]*;*

3. the observance of the normal fluctuation margins provided for by the exchange-rate mechanism of the European Monetary System, for at least two years, without devaluing against the euro;

4. the durability of convergence achieved by the Member State with a derogation and of its participation in the exchange-rate mechanism being reflected in the long-term interest-rate levels[43].

As regards the periods of time included in the analysis of the four criteria, additional information is provided for in a Protocol annexed to the Treaty. Protocol 13 thus clarifies the manner in which the macro-economic indicators used in the application of the four convergence criteria are defined and calculated.

In particular, the criterion of price stability is explained in the first Article of Protocol No 13 on the convergence criteria. Thus, sustainable price stability in a Member State is determined when the average inflation rate, during the one-year period preceding the review, shall not exceed by more than 1,5% the inflation rate of no more than three member states that have achieved the best results according to this criterion. In this analysis, the rate of inflation shall be calculated on the basis of the change in the latest available annual average of the harmonized Index of Consumer prices (HICP) as compared to the previous annual average, While the inflation rate of up to three Member States will be calculated as the unweighted arithmetic average of the inflation rate of the three countries with the lowest inflation rates (unless extreme values exist). If the price evolution in one country is significantly lower than those recorded by the other Member States as a result of the accumulation of country-specific factors, that value shall be considered to be extreme and shall not be taken into account.

The second criterion, which concerns the sound nature of public finances, is explained by Article 2 of Protocol 13. Thus, the criterion stated implies that, at the time of the examination, the Member State is not in the power of excessive deficit, as defined in Article 3(1) of the Treaty. Article 126 (6) of the Treaty.

On the application of the criterion for participation in the exchange-rate mechanism of the European Monetary System, it shall be deemed to be fulfilled where the member state examined has not exceeded the normal fluctuation margins provided for by the mechanism and has not experienced serious tensions for a period of at least two years prior to the examination. At the same time, it must be a condition that the examined state has not deliberately devalued its currency's exchange rate against the euro. The analysis of serious tensions actually implies examining the degree of deviation of exchange rates from the euro in the ERM II. The main indicators used in this analysis are exchange rate volatility against the euro, short-term interest differentials (compared to the euro area) and their evolution, but also an analysis of the extent to which currency interventions and international financial assistance programs have served to stabilize the currency[44].

Last but not least, the fourth criterion relating to the level of long-term interest rates is applied by comparing the average nominal interest rates recorded by the State in the last year before the review, with the average interest rate of no more than three member states that have achieved the best results in the field of price stability. Thus, the average nominal interest rate for the Member State may not exceed by more than 2 percentage points the arithmetical average interest rate for the three Member States that perform best according to price stability. In practice, the non-weighted arithmetic average of the long-term interest rates of the same three Member States used to calculate the benchmark for the price stability criterion will be calculated. It should be noted that interest rates are calculated on the basis of long-term government bonds or comparable securities, taking into account differences in national definitions.

Table 1: Convergence criteria/Maastricht criteria

No.	Criterion	Method for the calculation	Explanation
1.	Price stability	The inflation rate will be measured according to the prices of consumption	Price stability will translate into an average inflation rate over the 12-month period prior to the review not exceeding by more than 1.5% the average inflation rate in the 3 EU Member States with the most stable prices.
2.	Stability of public finances	Two relevant macroeconomic indicators will be analyzed: Government debt and deficit	The excessive deficit procedure has not been initiated

[42] Which states that „*the Council shall, on a proposal from the Commission, and having considered any observations which the Member State concerned may wish to make, decide after an overall assessment whether an excessive deficit exists*".

[43] Art. 140 alin. (1) TFEU.

[44] According to European Central Bank- Convergence Criteria.

3.	Exchange rate stability	The evolution of the exchange rate under the Exchange Rate Mechanism will be analyzed	ERM over a period of 2 years
4.	Durability of convergence	The long-term interest rate will be analyzed	12 months before the review, the long-term interest rate should not exceed the average of the top 3 EU countries by more than 2%, with the best performing according to this criterion

Source: Based on data provided by the European Commission

If the convergence criteria are satisfied, the Member State examined will have access to the euro area on the basis of a relatively simple procedure. Thus, the European Commission, on the basis of the Convergence report, will submit the proposal to the Ecofin Council, which, following consultations with the European Parliament, as well as with the Heads of State and Government of the Member States, will decide whether this decision is appropriate. In a favorable case, Ecofin will consult the ECB on the exchange rate at which the replacement of the euro by the national currency will take place.

Of the 12 Member States that joined the EU in 2003 and 2007, only 7 adopted the euro: Slovenia (2007), Cyprus and Malta (2008), Slovakia (2009), Estonia (2011), Latvia (2014) and Lithuania (2015). Totally, the euro area has 19 Member States, totaling some 338 million citizens. The rest of the States, with the exception of Denmark, whose Accession Treaty provides for a number of non-participation periods, are in the process of joining the euro area without, however, having any specific timetable, as they were previously defined and explained.

In this respect, the data in Table 2 are relevant:

Table 2: Degree of convergence achieved by non-euro area Member States

Member State	Price stability	Stability of public finances	Stability of exchange rate	Durability of convergence
Bulgaria	2.6% (> 1.8% average)	Deficit/surplus: +2% Public debt (at the end of 2019): 20.2% of GDP	Since 29 June 2018 the Bulgarian authorities have expressed their intention to include the leva in ERM II. During the reference period (1 April 2018 to 31 March 2020), Cursulam 1,95583 BGN/1 EUR	Between April 2019 and March 2020, long-term interest rates (12 months) were on average 0,3%, net of the reference rate (2,9%).
Czech Republic	2.9% (> 1.8%)	Deficit/surplus +0.3% Government debt (at the end of 2019) <60% (30.2%)	In the two-year reference period (1 April 2018 to 31 March 2020, the Czech koruna did not participate in ERM II but was traded under a flexible exchange rate regime. Rate as at 31 March 2020: 27,312 kroons per euro (7,7% less than average April 2018)	Between April 2019 and March 2020, long-term interest rates stood at 1,5% on average, the 2,9% reference value for the convergence criterion on interest rates.
Croatia	0.9%(<1.8%)	Deficit/surplus +0.4% Government debt > 60% (end of 2019-72.7%)	During the 2-year reference period (1 April 2018 to 31 March 2020), the Croatian kuna did not participate in the ERM II but was traded under a closely controlled exchange rate regime. Since July 2019, Croatian authorities have expressed their intention to include kuna in ERM II. Exchange rate as of 31 March 2020: 7,6255 kunas/euro (2,8% less than the average level of April 2018).	Between April 2019 and March 2020, long-term interest rates stood at 0,9% on average, thus remaining well below the 2,9% reference rate.
Hungary	3.7% (>1.8%)	Deficit/surplus 2% Government debt (at end 2019) 65.5% >60%	Between 1 April 2018 and 31 March 2020, the Hungarian Forint did not participate in ERM II but was traded under a flexible exchange rate regime. Exchange rate on 31 March 2020: 360,02 forints for one euro, 15,5% more depreciated compared to the average level in April 2018.	Between 1 April 2018 and 31 March 2020, the Hungarian Forint did not participate in ERM II but was traded under a flexible exchange rate regime. Exchange rate on 31 March 2020: 360,02 forints for one euro, 15,5% more depreciated compared to the average level in April 2018.
Poland	2.8% (>1.8%)	Deficit/surplus -0.7% Public debt (end of 2019) 45.7% < 60%	In the period from 1 April 2018 to 31 March 2020, the Polish zloty did not participate in ERM II but was traded under flexible exchange rate arrangements. Rate on 31 March 2020: 4,5506 zlots for one euro, 8,5% more depreciated	In the reference period April 2019 to March 2020, Poland's long-term interest rates were on average 2,2 %, lower than the 2,9 % reference rate

			compared to the average level in April 2018.	
România	3.7% (>1.8%)	Excessive deficit procedure initiated in April 2020 (deficit >3%). Deadline for correction: 2022 The budget deficit in 2019: -4.4% Government debt (December 2019): 35.3%	In the two years analyzed (April 1, 2018 and March 31, 2020) the Romanian leu did not participate in the MCS II, but was traded under a flexible exchange rate regime with controlled flotation. Exchange rate on March 31, 2020: Lei 4,8238/ euro, 3,7% more depreciated compared to the average level in April 2018.	Between April 2019 and March 2020, Romania's long-term interest rates stood on average at 4,4% > the 2,9% reference rate in line with the convergence criterion on interest rates.
Sweden	1.6% (<1.8%)	Deficit/surplus +0.5% Government debt: 35.1%	In the 2-year reference period (1 April 2018 to 31 March 2020), the Swedish krona did not participate in ERM II but was traded under flexible exchange rate arrangements. Exchange rate on 31 March 2020: 11,0613 kroons/euro, 6,6% more depreciated compared to the average level in April 2018.	Between April 2019 and March 2020, long-term interest rates in Sweden were on average -0,1%, thus remaining well below the 2,9% reference rate.

Table 3: Government debt evolution in Q3-2020 compared to Q3-2019

Member state	Government debt - Q3 2019	Government debt – Q3 2020
Bulgaria	20.5%	25.3%
Czech Republic	31.5%	38.4%
Croatia	74.4%	86.4%
Hungary	67.2%	74.3%
Poland	47%	56.7%
Romania	35.2%	43.1%
Sweden	35.2%	38.4%

Source: Processing based on Eurostat data

In the context of activity restrictions imposed by the Covid 19 pandemic, during 2020 Member States experienced a deterioration of the relevant macroeconomic indicators in the convergence process. Thus, without exception, the stability of public finances has been severely affected, so that both budget deficits and public debt have increased. Table 3 provides comparative data on the level of government debt in the third quarter of 2020 compared to the similar period of the previous year.

The impact of the pandemic was also felt in what was the volatility of the exchange rate in terms of the depreciation of national currencies against the euro. Long-term interest rates are starting to experience significant fluctuations since April 2020 as a result of the impact of the pandemic on the financial markets. It is therefore easy to understand that the process of joining the euro area will be delayed by the continuing economic effects of the health crisis.

4.2. Public international law instruments related to Economic and Monetary Union

In order to better fulfill the objectives of the EMU, at the Dublin meeting of December 1996, the members of the European Council called for the preparation of a Stability and Growth Pact, in accordance with the principles and procedures established by the Treaties and which could in no way be amended, neither the criteria for participation in stage III of EMU, nor the fact that Member States remained responsible for national budgetary policies, subject, however, to compliance with the conditions laid down by primary law of the European Union[1].

Thus, the Stability and Growth Pact, which provides for both preventive measures and sanctions, consists of a European Council Resolution and two Council Regulations, one on strengthening budgetary surveillance and surveillance of economic policy coordination, and another on to accelerate and clarify the implementation of the excessive deficit procedure[2].

The resolution contained obligations for the Member States, the Commission and the Council. Even if we do not analyze those that fell to the Member States in our research, those relating to the Commission and the Council will be presented below.

Thus, the Commission exercises its right of initiative enshrined in the Treaties in a manner that facilitates the strict, timely and efficient implementation of the Stability and Growth Pact; presents, without delay, the necessary reports, opinions and recommendations to enable the Council to take decisions (...) (enshrined in the Treaty provisions on the avoidance of excessive deficits), which will facilitate the effective operation of the early warning mechanism

[1] European Central Bank- Convergence Raport 2020
[1] According to the European Council Resolution on the Stability Pact and Growth
[2] *** Stability and growth pact, www.eurlex.europa.eu, f.a., accessed 21.03.2021.

and the rapid and strict launch the excessive deficit procedure; undertakes to draw up, without delay, a report on the existence of a risk of an excessive deficit whenever the existing or projected deficit of a State exceeds the 3% of GDP reference value; undertakes that, in the event that the Commission considers that a deficit exceeding 3% of GDP was not classified as excessive and that its opinion differs from that of the Economic and Financial Committee, it shall submit to the Council the reasons for its position and that, at the request of the Council (...), it draw up a recommendation to the Council on a decision on the existence of an excessive deficit[3] in a Member State

For its part, the Council stated its commitment to rigorously and timely implement all elements of the Stability and Growth Pact that fell within its competence (...), to consider the deadlines for the application of excessive deficit procedures as maximum deadlines and, in particular, to recommend that excessive deficits be corrected as soon as possible after their occurrence, and in no case later than one year after their identification, unless special circumstances exist; was called upon to always impose sanctions in the event that a participating Member State does not comply with the obligation to take the necessary measures to put an end to an excessive deficit situation, on the recommendation of the Council; was urged to always consider imposing a non-interest-bearing deposit creation whenever it decided to impose sanctions on a participating Member State (...); was urged to always convert a non-interest-bearing deposit into a fine applicable to the Member State concerned, two years after the decision to impose sanctions in accordance with (the provisions of the Treaties on the prohibition of excessive deficits), unless considers that the identified excessive deficit has been corrected; respectively always state in writing the reasons for a decision not to act at any stage of the procedures applicable to the excessive deficit or the supervision of budgetary discipline, provided that there is a Commission recommendation to act and, in the same situation, to make public the votes cast by the representatives of each Member State[4].

Following these recommendations of the European Council, the Council adopted. Regulation (EC) No 146/97 of 7 July 1997 on the acceleration and clarification of the implementation of the excessive deficit procedure and Regulation (EC) No 1466/97 of 7 July 1997 on the strengthening of budgetary surveillance and the surveillance and coordination of economic policies.

Later, in 2005, the Stability and Growth Pact was revised, with the amendments being made to "allow it to take better account of national circumstances and to add additional elements of economic reasoning to the rules imposing obligations on Member States"[5].

To these, in 2011 were added, against the background of the sovereign debt crisis affecting the Eurozone, the measures within the "Package of Six", respectively: Regulation (EU) no. Regulation (EC) No 1173/2011 of the European Parliament and of the Council of 16 November 2011 on the effective application of budgetary surveillance in the euro area; Regulation (EC) No 1174/2011 of the European Parliament and of the Council of 16 November 2011 on implementing measures to correct excessive macroeconomic imbalances in the euro area;. Regulation (EC) No 1175/2011 of the European Parliament and of the Council of 16 November 2011 amending Regulation (EC) No Council Regulation (EC) No 1466/97 on strengthening the surveillance of budgetary positions and the surveillance and coordination of economic policies; Regulation (EC) No 1176/2011 of the European Parliament and of the Council of 16 November 2011 on the prevention and correction of macroeconomic imbalances; Council Regulation (EC) No 1177/2011 of 8 November 2011 Amending Regulation (EC) No 1467/97 accelerating and clarifying the application of the excessive deficit procedure and Council Directive 2011/85 / EU of 8 November 2011 on requirements relating to the budgetary frameworks of the Member States.

However, against the background of the economic and financial crisis that has hit the humanity since 2008 and the debt crisis that has ravaged the Eurozone as a result, in 2012, to the EU monetary policy edifice based on the TFEU (which, following the entry into force of the Maastricht Treaty, replaced by the TEC in 2009), including the Protocol on the excessive deficit procedure, the Stability and Growth Pact and the derivative instruments mentioned, another element was added, this time a public international law agreement. Specifically, it is the Treaty on Stability, Coordination and Governance within the Economic and Monetary Union.

In that Treaty, the Contracting Parties have agreed, "as Member States of the European Union, to strengthen the economic pillar of economic and monetary union by adopting a set of rules aimed at promoting budgetary discipline by means of a budgetary pact, Strengthening the coordination of their economic policies and improving governance in the euro area, thereby supporting the achievement of the European Union's objectives of sustainable growth, employment, competitiveness and social cohesion"[6].

As regards the possibility of new members being admitted, the Treaty in question, although primarily addressed to euro area Member States, can be considered to be open or at least semi-open, "*it shall apply in full to the contracting parties whose currency is the euro* (…) *and to the other contracting parties to*

[3] In accordance with the Resolution of the European Council on the Stability and Growth Pact.
[4] Idem.
[5] www.ec.europa.eu, *History of the Stability and Growth Pact*, f.a., accessed 09.11.2019.
[6] Article 1 of the Treaty on Stability, coordination and governance in the Economic and Monetary Union (TSCG as follows).

the extent and under the conditions laid down in article 14"[7].

Most interestingly, the Treaty in its Article 2 sets out its relationship with the instruments of European Union law. In particular, it States that "*it shall apply and be interpreted by the Contracting Parties in accordance with the Treaties on which the European Union is founded, in particular Article 4(3) of the Treaty on European Union, and in accordance with the law of the European Union, including procedural law where secondary legislation is required [and] applies in so far as it is compatible with the Treaties on which the European Union is founded and with EU law* (...) *without prejudice to the competences of the Union to act in the field of economic union*"[8].

With regard to matters of an institutional nature, article 10 of the Treaty stated that "in accordance with the requirements laid down in the Treaties on which the European Union is founded, the Contracting Parties were prepared to make use, whenever appropriate and necessary, of specific measures for the Member States whose currency is the euro, as laid down in Article 136 of the Treaty on the Functioning of the European Union, and enhanced cooperation as provided for in Article 20 of the Treaty on European Union and Articles 326-334 to 300 of the Treaty on the Functioning of the European Union, as regards issues that are essential for the smooth functioning of the euro area, without prejudice to the internal market"[9] In the same idea, for comparative assessment purposes aimed at "the best practices and cooperation toward closer economic policy coordination, the contracting parties shall ensure that all major economic policy reforms they plan will be discussed ex ante and, where appropriate, coordinated between the parties. That coordination shall involve the institutions of the European Union in accordance with European Union law"[10]

From the decision-making point of view, article 12 of the Treaty States that "the Heads of State or Government of the Contracting Parties whose currency is the euro shall meet informally at euro area summits, together with the President of the European Commission. The President of the European Central Bank shall be invited to attend these meetings [and] the President of the Euro Summit shall be designated by the Heads of State or Government of the Contracting Parties whose currency is the euro by simple majority at the same time as the election of its President by the European Council and for the same period of office"[11].

As regards euro area meetings, they "shall be organized when necessary and at least twice a year so that the Contracting Parties whose currency is the euro discuss issues related to their specific responsibilities with regard to the single currency, other issues related to euro area governance and its rules, as well as strategic guidelines for the delivery of economic policies with a view to increasing convergence in the euro area"[12]. In the same idea, "the Heads of State or Government of the Contracting Parties, other than those whose currency is the euro, which have ratified this Treaty, shall also participate in the discussions at the Euro Summit on the competitiveness of Contracting Parties, changing the overall architecture of the euro area and the fundamental rules that will apply to it in the future and, where appropriate and at least once a year, in discussions on specific issues related to the implementation of this treaty on stability, coordination and governance in the economic and monetary union"[13].

From the point of view of the relations between the Summit provided for by the Treaty and the institutions of the Union, it should be noted that "*the President of the Euro Summit shall ensure the preparation and continuity of euro area summits, in close cooperation with the President of the European Commission. The body in charge of preparing and following up the results of the Euro Summit shall be the Eurogroup and its Chair may be invited to attend these meetings for that purpose*"[14]. In the same vein, "*the President of the European Parliament may be invited to be heard. The President of the Euro Summit shall report to the European Parliament after each Euro Summit*"[15], while "*the President of the Euro Summit shall closely inform contracting parties other than those whose currency is the euro and the other Member States of the European Union on preparation and results of euro area summits*"[16]. We also consider it important to note that "*as provided for in Title II of the Protocol (No 1) on the role of national parliaments in the European Union annexed to the Treaties of the European Union, the European Parliament and the national parliaments of the Contracting Parties will jointly decide to organize and promote a conference of representatives of the relevant committees of the European Parliament and of the representatives of the relevant committees of national parliaments, in order to discuss budgetary policies and other matters covered by this Treaty*"[17].

5. Conclusions

In the conclusion of this study, we note that, since its inception, the political and legal construction that led to the establishment of Economic and Monetary Union has faced and had to overcome the inadequacy of the legal bases identified in the institutive or amending Treaties. Although complex and not always linear (being defined, as the whole evolution of the Union construction, of crises and failures which, far from undermining the project arising from Robert Schuman's Declaration, defined and consolidated it[18]), the progress of economic and monetary Union once again shows that "*from the point of view of the evolution of competences within the Communities and the European Union, (...) initially, the responsibility of the European Community involved only in economic and commercial matters. As the EU becomes a political partner, Member States give it more powers, realizing that certain issues are better coordinated at supranational level*"[19]. This supranational nature implies, of course, some sovereignty sharing but, in the economic field that our study touches and not only, "*the question is* [always] *that of the first national sovereignty and that of the economy*", which essentially depends on political will. However, this has not always been done by means typical to European Union law, but also by using the public international law creatively and as an expression of the said political will. And it is precisely in this political will that, we believe, lies the future of Economic and Monetary Union, because the financial crisis that the world experienced in 2008-2012 demonstrated that the eternal problem of "*the quest for legal and ethical grounding of the decisions to be made by public authorities in case of a crisis continues unabated*"[20], particularly in an area where technical and cold criteria and the desiderate of macroeconomic stability are faced with the need to safeguard the values on which both the Union and the societies of which it is composed, of which human dignity must always be at the forefront.

THE INFLUENCE OF THE EUROPEAN LAW AND OF THE CASE LAW DEVELOPED BY THE COURT OF JUSTICE OF THE EUROPEAN UNION ON THE CONSTITUTIONAL REVIEW IN ROMANIA

Valentina BĂRBĂȚEANU[*]

Abstract

The paper intends to highlight the complex influences that are inherent to the interaction of the European law and domestic law, from the perspective of the constitutional review. Constitutional adjudication is one of the most effective instruments of the rule of law, but usually the reference norm is the national Basic Law. Nevertheless, as a Member State of the European Union, Romania has recognized the guiding principles developed by the Court of Justice of the European Union Democratic in its case law, namely the direct effect and the precedence of European law in case of inconsistency of domestic law. Thus, under certain conditions, the Constitutional Court of Romania had to extend the reference norms in order to take into consideration the European law, as well. Hence, one of the consequences of Romania's accession to the European Union was that certain norms of European Union law became a reference tool for exercising constitutional review through the glass of Article 148 of the Romanian Basic Law which enshrines the prevalence of the founding treaties of the European Union and of other binding Community (European) regulations over contrary provisions of national law. Furthermore, CJEU-s case law gained an important place in the reasoning of the Romanian Constitutional Court-s decisions. Last, but not least, the paper will present the interaction of the two fore mentioned courts in relation with the preliminary rulings rendered by CJEU in accordance with Article 267 of the Treaty on the Functioning of the European Union.

Keywords: *Review of constitutionality, European law, binding European regulations, preliminary rulings procedure, CJUE case-law.*

1. Introduction

The paper is focused on the complex interactions between the national and European law. The interplay of the two normative systems leads to situations that are sometimes rather difficult to manage and rests to ordinary courts the delicate task to find the proper solution. Since the accession of Romania to the European Union, the Constitutional Court was also often asked to bring its contribution in this context. The issue was brought to the attention of the Constitutional Court even prior to this moment, in 2003, when it had to adjudicate over the constitutionality of amending the Romanian Basic Law, initiated with the declared intention to harmonize it with the European standards and values. After that, in numerous cases the review of constitutionality proved its importance in what concerns the process of accurate understanding and integrating the European law in the Romanian legal system. The purpose of this paper also consists in showing the influence of the case law developed by the Court of Justice the European Union which acquired a quasi-normative function, that redefined the position of domestic law in relation with the provisions of the founding treaties and other binding normative acts at the level of the European Union. The Constitutional Court of Romania often invokes the assessments of the CJEU in the reasoning of its decisions. The paper will bring into light the relevant case law of the Constitutional Court and will use it in order to prove its contribution in implementing European law into the national legal system. Due to its impact on various fields of law, the issue was taken into consideration by certain scholars[1], but the complexity of the topic offers a very wide range of approaches, including the one emerged from the present study.

2. The relationship between the constitutionality review exercised by the Romanian Constitutional Court and the European law

Accession to the European Union - international entity based on its own legal order, which is, in the same time, a specific and an integrative one - requires a constant effort to harmonize the national legislation of each Member State with the European standards and to adapt to the normative requirements of this supranational structure.

The purpose of this constant approach is the unification of national legal systems, the achievement of a single European order, as an implicit objective, negotiated by the Member States and enshrined in the

founding treaties[2]. During this process, the interplay of national and supranational law can sometimes be problematic, involving complex legal analyzes that should take into account both the supremacy of the Member States' Basic Laws and the specific effects of the European law over their national legal systems.

In what concerns Romania, its intention to acquire the status of full member of the European Union[3] required a multitude of changes in order to adapt its legal system at the values imposed by the European Union. The most significant change took place in 2003, when its Basic Law was amended at the end of a long process, concluded with the popular approval given by the Romanian citizens throughout a referendum[4]. On that occasion, the Basic Law was supplemented with numerous new provisions in order to elevate the standard of protection of fundamental human rights and to enforce the guarantees of the rule of law.

In the context of the topic approached in the present paper, Article 148 of the revised Basic Law has a particular significance because it clarifies the relationship between domestic law and the European Union's law. According to paragraph (2) of the said article, following accession, the provisions of the founding treaties of the European Union, as well as the other mandatory community [European][5] regulations shall take precedence over the opposite provisions of the national laws, in compliance with the provisions of the accession act.

Due to its power provided by the Basic Law[6], the Constitutional Court of Romania adjudicates *ex officio* on initiatives to revise the Constitution. Analyzing the initiative that lead to the 2003 revision of the Basic Law, the Court stated[7] that accession to the European Union, once achieved, implies a series of consequences that could not occur without proper regulation, including those of constitutional rank. The Court stated that the first of these consequences requires the integration into the domestic law of the *acquis communautaire*, as well as the precise determination of the relationship between European normative acts and domestic law. In this respect, the Romanian Constitutional Court noted that the solution proposed by the authors of the amending initiative took into account the implementation of European law in the national space and the establishment of the rule of prevalent application of European law over contrary provisions of domestic law, in accordance with the provisions of the act of accession.

The Court emphasized that the Member States of the European Union have decided to place the *acquis communautaire*, the founding treaties of the European Union and the regulations derived from them, on an intermediate level, right between the Constitution and other laws, when it comes to binding European normative acts. The Court considered that such a rule does not prejudice the constitutional provisions regarding the limits of revision, nor other provisions of the Fundamental Law, being a particular application of Article 11 Paragraph (2) of the Basic Law, according to which "Once ratified by Parliament, according to the law, treaties are part of domestic law".

The issue of the relationship between national and European law was again brought to the attention of the Constitutional Court in 2014, when a new proposal to revise the Basic Law was verified *ex officio*. According to the initiators, Article 148 paragraph (2) of the Constitution was to be amended and to provide that "Romania ensures the observance, within the national legal order, of the European Union's law, according to the obligations assumed by the act of accession and by the other treaties signed within the Union ".

The Court found[8] that this new wording violates the constitutional limits on matters of revision[9]. Thus, establishing that European Union's law applies without any circumstances within the national legal order and not distinguishing, in this regard, between the

[3] In 1995, Romania applied to join the European Union. Accession negotiations were launched in December 1999 and officially opened in February 2000. The Treaty of Accession to the European Union was signed by the President of Romania on April 25, 2005, in an official ceremony held at the Neumunster Abbey in Luxembourg. On January 1, 2007, Romania became a member state of the European Union (https://ec.europa.eu/romania/about-us/eu_romania_ro).

[4] The law on the revision of the Romanian Constitution was approved by the national referendum of October 18-19, 2003 and entered into force on October 29, 2003, the date of publication in the Official Gazette of Romania of the Decision of the Constitutional Court no. 3 of October 22, 2003 for the confirmation of the result of the national referendum of October 18-19, 2003 regarding the Law on the revision of the Romanian Constitution.

[5] The institutional reform implemented by the Treaty of Lisbon, which entered into force on 1 December 2009, has changed the term "Community law" and replaced it with "European law". Prior to that Treaty, the term "Community law" was used due to the fact that the European Communities (European Economic Community - EEC, European Coal and Steel Community - ECSC and Euratom) were one of the three pillars of European construction, along with Member States' cooperation in common foreign and security policy (CFSP) and Member States' cooperation in areas such as justice and home affairs (JHA).

[8] Decision no. 80 of February 16, 2014, paragraphs 455, 456, published in the Official Gazette of Romania no. 246 of April 7, 2014.

[9] There are several fundamental values that are considered the "hard core" of the Fundamental Law of Romania. These values are provided by Article 152 according to which "(1) None of the provisions of this Constitution with regard to the national, independent, unitary and indivisible character of the Romanian State, the republican form of government, territorial integrity, independence of justice, political pluralism and official language shall be subject to revision. (2) Likewise, no revision shall be made if it results in the suppression of the citizens' fundamental rights and freedoms or of the safeguards thereof".

Constitution and other domestic laws, the new normative content of the provisions of Article 148 paragraph (2) of the Constitution is equivalent to placing the Basic Law on a secondary level toward the legal order of the European Union. From this perspective, the Court noted that the fundamental law of the state - the Constitution - is the expression of the sovereign will of the people, which means that it cannot lose its binding force only by the existence of an inconsistency between its provisions and those of the European law. In assessing this statement, one has to keep in mind the essential detail that the current Romanian Basic Law is already the result of a major amending process, concluded in 2003, which was focused on bringing it in accordance with the values enshrined in the European law. Also, the Court stated that the accession to the European Union cannot affect the supremacy of the Constitution over the entire legal order.

Subsequently, the Court deepened and detailed the reasoning. Thus, it stressed[10] that the legislator has a constitutional obligation to guarantee, within the enacted normative acts, at least the same level of protection of rights as that provided by the binding acts of the European Union[11], as well as to bring national legislation in line with the binding acts of the European Union, as a permanent and continuous concern regarding the content of legislative activity. This is the interpretation of Article148 paragraph (4) of the Basic Law, according to which the Parliament, the President of Romania, the Government and the judicial authority guarantee the fulfillment of the obligations resulting from the accession act and from the principle of precedence of the European Union's constitutive treaties and other binding European regulations.

In order to properly present the subject matter of this paper, it is necessary to bear in mind that the European Union has developed its own, specific and special legal order both in relation with the internal legal orders of the Member States and in relation with the international legal order. Within it, several categories of sources of law governing the interplay between the European Union and the Member States and various other international organizations, as well as between natural and legal persons, nationals or foreigners, have been identified[12]. First of all, there are the norms with fundamental, constitutional value, which form the sources of primary European law. These are represented by the constitutive and amending European treaties. Then, there is the secondary European law that consists of all unilateral acts issued by the institutions of the European Union. The scholars[13] noticed that one of the consequences of Romania's accession to the European Union consisted in the fact that the norms of European Union law became a reference tool for exercising constitutional review through the glass of Article 148 of the Romanian Basic Law.

The Constitutional Court has developed a rich case-law in this regard. Moreover, it was said[14] that it has built a genuine "doctrine" of the incidence / use of European law in constitutional review, which is necessary to be taken into account in motivating the decisions rendered with regard of the exceptions of unconstitutionality were Article 148 of the Fundamental law is invoked. The Court specified under what conditions European acts - others then constitutive treaties - may be invoked. These conditions were established for the first time in Decision no. 668 of May 18th 2011[15]. The Court specified that the use of a norm of European law within the review of constitutionality as a norm interposed to the reference one[16] implies, based on Article 148 paragraph (2) and (4) of the Constitution, a cumulative conditionality: on one hand, this rule must be sufficiently clear, precise and unequivocal in itself or its meaning has been clearly, precisely and unequivocally established by the Court of Justice of the European Union. On the other hand, the norm must be limited to a certain level of constitutional relevance, so that its normative content to sustain the check of a possible violation of the Constitution by the national law – keeping in mind the decisive fact that the national Basic Law in the only direct reference norm in the review of constitutionality[17].

However, it has to be once again highlighted that these are not provisions contained in the founding or amending European treaties. The Romanian Constitutional Court firmly stated that it is not within its competence to analyze the consistency of a provision of national law with the texts of these treaties, in the light of Article 148 of the Romanian Basic Law. Such power rests with the regular courts, which, in order to reach an accurate conclusion as to the resolution of the dispute before it, may formulate - *ex officio* or at the request of one of the parties - a preliminary question within the scope of Article 267 of the Treaty on the Functioning of the European Union,

addressed to the Court of Justice of the European Union. If the Constitutional Court considers itself competent to rule on the consistency of national legislation with the European law, there would be a possible conflict of jurisdictions between the two courts, which, at this level, would be unacceptable[18].

In this regard, the Court decided[19] that the exceptions of unconstitutionality where the argument of unconstitutionality is made with reference to the provisions of Article 148 paragraph (2) of the Constitution - which enshrines the primacy of the provisions of the founding treaties of the European Union and other binding Community (European) regulations over contrary provisions of national law - to be rejected as inadmissible, because they raise issues related to the application of the law, which does not fall within the scope of the Constitutional Court's power, but of the regular courts'.

The Constitutional Court also stated[20] that it does not have the power to interpret the European rules in order to clarify or establish their content, as that task rests with the Court of Justice of the European Union. However, taking into consideration the place that the Community (European) regulations occupy in relation to domestic law, according to Article 148 paragraph (2) of the Constitution, the Court has to invoke, in its reasoning, the binding acts of the European Union, whenever they are relevant to the case, as long as their content is not unequivocal and as long as they do not require any interpretation whatsoever.

Finally, with regard to the reference to European acts, the Court stated[21] that it has no jurisdiction to review the consistency of a national law transposing a directive and the respective directive. Moreover, a possible inconsistency of the national act with the European one does not implicitly attract the unconstitutionality of the national transposition act. Thus, there is nothing to prevent the national legislature from granting or providing a higher level of protection in national law than in the European law[22].

From the perspective of constitutional review, an interesting aftermath of Romania's accession to the European Union is the arising of a new justification for the Government emergency ordinances, consisting in the intention to avoid sanctions imposed on Romania by the European Commission for not fulfilling its obligations at European level. Thus, the Court examined[23] the pleas of extrinsic constitutionality regarding a Government emergency ordinance, in view of the alleged violation of the provisions of Article 115 paragraph (4) of the Romanian Constitution, according to which the emergency ordinances can only be adopted in extraordinary situations, the regulation of which cannot be postponed. The Constitutional Court held[24] that the criticized emergency ordinance was adopted in the context of the opening of the infringement procedure against Romania by the European Commission, pursuant to Article 226 of the Treaty establishing the European Community. The Government issued the said emergency ordinance in order to avoid a possible procedure before the Court of Justice of the European Union. In the explanatory memorandum, the extraordinary situation as well as the urgency of the regulation were motivated on the imperative need to take legal measures to ensure compliance with the applicable rules of Community (European) law, including the case-law of the Court of Justice of the European Communities (Union). The Court also found that, in accordance with the provisions of Article 148 paragraph (4) of the Constitution, the Romanian authorities have undertaken to guarantee the fulfillment of the obligations resulting from the founding treaties of the European Union, from the binding Community (European) regulations and from the act of accession. To this end, the Government is empowered, at a constitutional level, to guarantee the fulfillment of Romania's obligations towards the European Union. Accordingly, the Court considered fully constitutional the use of emergency ordinances when it is necessary to render the domestic legislation consistent with the European law, especially when there is the menace of imminent initiation of infringement proceedings before the Court of Justice of European Union.

A special mention should be made in what concerns the review of constitutionality in the Romanian legal system with reference to the provisions of the Charter of Fundamental Rights of the European Union, given the fact that there is an interference, from the point of view of human rights protection, between the European Union legal order and the legal framework established by the Convention for the Protection of Human Rights and Fundamental Freedoms, as essential normative document of the Council of Europe. Thus, regarding the incidence of the provisions of Article 47 of the Charter of Fundamental Rights of the European Union, comprising the right to an effective remedy and to a fair trial, the Constitutional

[23] Government Emergency Ordinance no. 50/2008 for the establishment of the pollution tax for motor vehicles, published in the Official Gazette of Romania, Part I, no. 327 of April 25, 2008.

[24] Decision no. 1596 of November 26, 2009, cited above, Decision no. 802/2009, published in the Official Gazette no. 428 of June 23, 2009.

Court noticed[25] that in the case law of the Court of Justice of the European Union, for example, the Judgment of 22 December 2010 in Case C-279/09 - *DEB Deutsche Energiehandels und Beratungsgesellschaft mbH v Bundesrepublik Deutschland*, paragraph 35, it was held that, according to Article 52 paragraph (3) of the Charter, insofar as it contains rights corresponding to those guaranteed by the Convention for the Protection of Human Rights and Fundamental Freedoms, their meaning and scope are the same as those provided for in the Convention.

The meaning and extent of the guaranteed rights are determined not only by the text of the Convention, but also, in particular, by the case law of the European Court of Human Rights. Article 52 paragraph (3) the second sentence of the Charter provides that the first sentence of the same paragraph shall not preclude Union law from conferring wider protection. Therefore, regarding the content of the right to an effective appeal and to a fair trial provided by Article 47 of the Charter, the Court from Luxembourg held in its Judgment of 26 February 2013 rendered in Case C-311/11 - *Stefano Melloni v. Prosecutor's Office*, paragraph 50, that it corresponds to the content that the case law of the European Court of Human Rights recognizes to the rights guaranteed by art. 6 paragraphs 1 and 3 of the Convention for the Protection of Human Rights and Fundamental Freedoms (see the judgments of the European Court of Human Rights of 14 June 2001, 1 March 2006 and 24 April 2012 in *Medenica v. Switzerland*, paragraphs 56-59, *Sejdovic v. Italy*, paragraphs 84, 86 and 98, and *Haralampiev v. Bulgaria*, paragraphs 32 and 33).

In the same time, the Constitutional Court held[26] that, as a principle, the provisions of the Charter of Fundamental Rights of the European Union are applicable in constitutional review insofar as they ensure, guarantee and develop constitutional provisions on fundamental rights, in other words, insofar as their level of protection is at least at the level of constitutional norms in the field of human rights[27]. This view corresponds to that outlined in the practice of the most representative authorities of constitutional jurisdiction in Europe[28], which, in view of the principle of the supremacy of the Constitution, considered that, in the field of the human rights, European law cannot take precedence if the level of protection granted by the national fundamental laws is superior to that offered by European legislation[29].

3. Relationship between the case law of the Court of Justice of the European Union and the review of constitutionality exercised by the Constitutional Court of Romania
